The total of orders received from at home and abroad has risen somewhat in March: 4.48 million tons as compared with 4.37 million tons on a monthly average in 1960. This slight increase shows, in the opinion of the High Authority, that the greater number of orders received from at home has more than set off the recession that has taken place in the export markets. A similar situation was noticed in regard to the year 1960. Orders for rolled steel products from the area of the Community of the six countries were 11 per cent higher during this period than during the preceding year. Orders from third countries, on the other hand, had decreased by 19 per cent. As the demand from third countries on the European Coal and Steel Community is only one-fifth of the total requirements, there was nevertheless an overall increase by 5 per cent.

The demands of the processing industries, especially in Germany, Belgium and Italy, have increased within the Community recently. This increase is above all due to an increased demand for reinforced concrete rounds, which is the result of greater seasonable building activities. On the sheet market, however, the weakness already observed during earlier months has continued. This development is thought to be mainly connected with the reserve shown by the motor-car factories. Thus the production of motor cars in France in February of this year has clearly fallen below production during the same month the year before. Although it was still above the level of February 1960 in the Federal Republic of Germany, it had receded by 9 per cent when compared with the January figures.

The High Authority considers the fact that the substantial expansion of the steel market of the Community has hardly produced any tensions as in prices and the terms of delivery have remained within reasonable limits. List prices were fairly stable in the European Coal and Steel Community during 1960. But as orders have been received slowly in the export markets recently, this had led to a fall in prices. The prices of sheet, wire rod and reinforced concrete rounds have declined most of all. In the Federal Republic of Germany most changes in prices are due to lower costs in the

NEW PRODUCTS AND PROCESSES

Air-ioniser to Prevent Weariness

A NEW compact air filter and energiser—which is claimed to prevent lethargy, weariness and flagging concentration among people who work indoors—was introduced in Britain recently. This was developed by Winston Electronics, Middlesex, England. The equipment's development stems from the contention that negatively ionised air combats headaches, fatigue and feeling of depression in people. It has been proved, for instance, that the freshness of mountain air is due to irradiation—the creation of negative ions in the atmosphere by ultra-violet radiation from the sun. At lower levels, however, the greater part of this radiation is absorbed by impurities in the atmosphere. The machine, which is about the size of a table radio, continually filters the air in a room and irradiates it after filtration so that, on re-entering the atmosphere, it is dust-free, clear of odours and energised with several million negative ions per cubic inch. The equipment is particularly suited for use in homes, offices, workshops and hospitals, and each unit can handle about 4,000 c.ft. (113.2 c. metres) of air (a room 20 ft. x 16 ft. x 10 ft.) (6 m. x 4.8 m. x 3 m.). The equipment is 14 ins. (35.5 cms.) by 6 ins. (15.2 cms.) by 7¾ ins. (19.7 cms.) in size and weighs less than 5 lbs. (2.2 Kg.). It operates on a voltage of 220-250 A.C. and uses one unit of electricity every 12 hours.

Hot-dip Aluminising of Ferrous Materials

Aluminising provides steel surface with corrosion resistance, heat resistance and reflectivity and acts as a protective layer on the iron or steel bases like galvanising or tinning. Aluminisation of steel though relatively of recent origin, is rapidly becoming popular. National Metallurgical Laboratory, Jamshedpur, has been working on various fluxes to minimise the drawbacks in the process of aluminising. As a result, three different types of fluxes have been developed. The molten flux process consists in using a flux of zinc chloride, sodium chloride, potassium chloride, aluminium fluoride, cryolite and barium chloride mixed in suitable proportions. The flux mixture is fluid at 600°C. and gives adequate fluxing action without any blemishes in the coating of aluminium. The aqueous flux process involves the use of a hot concentrated aqueous solution of potassium fluoride as a flux. Steel articles are dipped in the solution and dried after taking out. The thin film of the salt left on the article acts as a flux for the next operation of hot-dipping in molten aluminium. Use of linseed oil as a fluxing agent is another novel approach to the pre-treatment of steel. Linseed oil film because of its unsaturation and consequent oxygen absorption has been found to possess fluxing properties towards oxide film formed on drying steel after pickling and washing.

Polythene Pattern Letters

The successful introduction of Polythene pattern letters for the foundry trade by A.E.I. Plastics (Aldridge) Ltd. is now followed by a new range of sharp faced pattern letters for the small sizes (below ½") which have the advantage of producing an improved impression on all types of castings. These letters are immediately available. In common with the range of larger pattern letters, the new type are only half the price of equivalent metal characters yet maintain all the advantages. Polythene characters are extremely resilient—direct hammer blows cause only momentary distortion and the most rigorous hand or machine ramming is withstood without burring. The irritating and often costly waste of time that occurs through damaged lettering on a moulding (only discovered when the moulding has been withdrawn) is thus eliminated. In addition, polythene has good "non-stick" properties and the useful characteristics associated with lead. It is pliable and can be easily moulded to any contour; it can be pinned or glued to a pattern without difficulty ('Evo-Stik' Impact Adhesive 528 is recommended for both wood and metal patterns); it is unaffected by water. The characters are normally supplied in light grey to contrast with the conventional red, yellow and black used for pattern identification.

Fire-extinguishing Powder

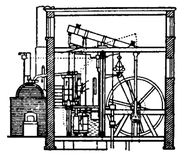
Finely-divided uranium, plutonium and, especially, thorium metal is pyrophoric when finely divided—it can ignite spontaneously in air. Now metallurgists of the U.K. Atomic Energy Authority at Dounreay, have produced a fire-extinguishing medium for these circumstances. It is a eutectic mixture of dry powdered inorganic chlorides and fluorides (or fluorides alone) which are inert towards the metal involved. The mixture is so chosen that its melting point is below the melting point of the burning metal. This produces two important effects, says the U.K.A.E.A.: (1) Fusion of the powder takes place locally where it is in contact with the burning metal; a fused skin forms around the metal and this excludes the surrounding air from contact with it. (2) Absorption of latent heat by fusion of the powder exerts a cooling effect on the metal.

New Uses for Linen

Scientific research is leading to new uses for linen. This traditional textile is now being successfully blended with man-made fibres, says the U.K. Department of Scientific and Industrial Research, and it produces new fabrics with all the inherent qualities of both basic products. Research carried out by the Linen Industry Research Association has developed techniques for combining linen and man-made fibres to produce these new fabrics with the advantages of both basic materials. It has also taken account of the fact that both linen and man-made fibres have one thing in common—long fibres. The linen industry alone of the traditional textile industries has the machinery, the experience, and the skill for dealing with long fine fibres, and these advantages can now be turned to good account in the intelligent use of man-made fibres.

Steam...

Industry's greatest power

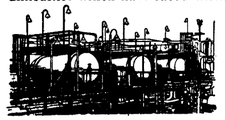


SINCE 1782, when the first Rotative Steam Engine enabled the use of steam power to motivate machinery, steam has played an ever increasing part in industry throughout the world.

Not only is steam today's most important source of power for the civilised world, but it must remain so for many years to come. Even atomic power is yet in its infancy and can only be applied as an alternative source of heat. Steam is indeed the real power of industry.

While this is but an outline of the extensive and continually growing part that steam plays in power generation and industry throughout the world, it indicates quite clearly the unparalleled importance of steam power in the industrial growth of India... and, therefore, the urgent need to manufacture vital steam-raising plant in this country to meet the demands of expanding industry.

This is one of the needs which has led to the formation of a new and powerful industrial group, ACC-Vickers-Babcock Limited (AVB). The vast technical knowledge and extensive practical experience available to it will enable the new company to make an important contribution to Indian industry—and help Indian engineers overcome some of the difficulties which have faced them for so long.



The new AVB plant is nearing completion on a 700-acre site at Durgapur. The workshops, designed on modern lines, will have built into the structure electric overhead travelling cranes with 70 tons lifting capacity.

All workshops have been designed to allow for progressive expansion so that it will be possible to lift 200 tons without making structural alterations. Up-to-date machine tools are being installed. When completed, they will include a 3000 ton hydraulic press capable of bending steel plates up to 5" thick for use in the manufacture of high pressure boiler drums, and pressure vessels required for the fertiliser, chemicals and oil refining industries. The new plant will make it possible to manufacture steam-raising equipment in the high pressure range—for the first time in India.

ACC-VICKERS-BABCOCK LTD. offers the industrialist his best chance to ensure a fully *integrated* installation comprising the boiler plant itself and a wide range of equipment from the fuel handling and preparation plant to the ash plant and dust disposal installation.

Besides, the industrialist has the confidence that he will get after-sales service of the highest quality from AVB!

MAHINDRA AND MAHINDRA LTD.

CHAIRMAN, MR. K. C. MAHINDRA'S SPEECH AT ANNUAL MEETING

PREREQUISITES FOR EXPORT SUCCESS ARE QUALITY AND COMPETITIVE PRICE

IN his speech at the Fifteenth Annual Meeting of Mahindra and Mahindra Ltd., held at Bombay on Wednesday, 24th May, 1961, Mr. K. C. Mahindra, Chairman of the Company, dwelt at length on the prerequisites for better performance on the export front. These, in his view, were quality goods and competitive price. He stated that sufficient emphasis was not being laid on these aspects and that the main preoccupation of authorities as well as exporters was with export incentives. Characterising this as an entirely wrong approach, Mr. Mahindra urged that the main objective should be to produce and export something, which the overseas buyer would want to buy and at the seller's price. How the domestic industry could be geared up for the task, he said, must be the primary concern of producers assisted, no doubt, by the Government. Maximum production, quality which the buyers like and co-operative endeavour with Government prodding, and Government assistance to sell abroad, he emphasised, were the *sine qua non* for finding a place in the overseas markets.

The following is the full text of Mr. Mahindra's speech:

"While my welcome to you to this, the fifteenth annual general meeting of the Company, is as genuine and sincere as in previous years, shareholders will perhaps wish me to enlighten them on several counts. First is the inordinate delay in holding this meeting. The reason is not any sluggishness in the preparation of accounts, but the Companies (Amendment) Act, which came into force from the end of December 1960, posed certain problems on which the legal advisers of the Company could not provide a straight answer. One concrete recommendation is a complete revision of the Articles of Association of the Company. This has been taken in hand and I expect shareholders will be asked to approve the new set of Articles during the current year.

Fall in Profits

"Next in order of explanation should be your question about the fall in profits. Reasons have been succinctly given in the Directors' report. I may offer here some elaboration. It is normal for a manufacturing concern employing nearly 3,000 men that standards and categories of staff employment run along prescribed lines of promotion and specific defined increments in remuneration. Under the present labour laws of the country, it is more or less incumbent to follow, for the factory workers, the practices laid down in detail by various tribunals and associations: these prominently involve an enhancing pattern of cost which ranges between 8 and 10 per cent every year, without any increase in the work-load.

"In an engineering complex like the automobile production where vendor/suppliers play a significant part, there can be no stable wage level or a stable cost of production level. This is particularly true when raw materials become scarce and there is an intense struggle for scant supplies between competing engineering groups. Inevitably this is reflected in high materials cost.

Rise in Sales

"There has been a 38 per cent increase in the sales of vehicles over the past year. Throughout the year, there was Government pressure to maintain the price line, despite increased costs of imported components, and a substantial increase in the local costs of production. From July 1960 a further reduction of Rs. 200 in the retail price of the jeep was made at the special insistence of Government authorities. The increase in the sales volume did not prove sufficient to compensate for the increased cost. The Directors, in their report, have referred to the proportionally larger costs of components as the Company gets into the phase of producing more complicated parts. We have reached that stage, and every new development in further production of indigenous components will mean *pro rata* a higher production cost.

"With larger number of vehicles coming out of the production line, there has been an increase in the number of staff employed, but I am glad to say that a continuous realignment of manufacturing and assembly lines has resulted in a better productivity coefficient and the increase in strength is therefore not proportionate to the increase in production.

"The other major activity of the Company is the import and distribution of steel. Profit margins in the steel division also contracted during the year. This was anticipated. The fall in surplus is partially due to a large carry-over, as there is considerable more tonnage which has remained unshipped at the close of our accounting period in contrast to last year, and this of course does not figure in the accounts. As stated in the Directors' report, the import business in steel might now rapidly diminish, but we hope it will be replaced by larger internal distribution. The Company's organisation has been reshaped to meet such demands.

Delay in Settlement of Bills

"In this connection it will not be inappropriate to mention the long delays in settlement of our steel bills by Government. The procedure is about the most cumbersome and time and money consuming known under any regulatory agency of the Government, and there is no way of speeding it up. As an illustration, I may instance the case of certain supplies made three years ago; the final settlement of our bills on this account is still pending. Approximately Rs. 30 lakhs are involved, and, naturally, interest charges for financing such delays are a growing burden on the Company.

"Profit-wise, therefore, the operations of the Company during 1959-60 have not been satisfactory, despite the utmost vigilance in expenditure and despite increased turnovers.

Small Car Project

"The year 1960 also provided certain disillusionment to the Company's management. I have consistently held the view that a progressive business concern must adopt and sustain an expansionist outlook. The Dauphinoise project for a small car was one such exercise. Government in its wisdom has decided to build the small car in the public sector. It is some satisfaction, however, that, according to recent Press reports, arrangements are likely to be concluded with Renaults of France, who were our principal collaborators, for the manufacture of the proposed small car, and the Pande Committee is reported to have recommended the Renault car for the purpose. It is also interesting to observe that collaboration terms offered by Renaults appear to be similar to those offered to your Company. This indicates to me that your management was working on correct lines and obtained the most practicable and valuable collaboration available to entrepreneurs in India. I wonder what Government has gained by this process of examination of committee over committee; on the contrary, eighteen valuable months have been lost.

Agricultural Tractors

"Another point of disillusion was the breakdown of our negotiations regarding manufacture of agricultural tractors. Considerable amount of time and effort was devoted to the working out of a detailed collaboration agreement with the British manufacturers, who had initially offered to invest nearly £480,000 in the Indian project. Towards the later end of the final negotiations, it was found that serious differences of opinion remained about the pricing policy which the British manufacturers desired to adopt. This policy was in direct contradiction of their original understandings with us, and would have involved an additional exchange burden in respect of the costs of tractors and components to be brought into India. Trust and mutual confidence was involved and we decided to terminate this association. Negotiations are at present afoot for manufacture of another make of tractor in the country. Government has been kept fully informed on the subject, and it is with their approval that fresh negotiations are being undertaken.

"Another point of disillusion was the reversal of a major policy decision of the Board to shift our jeep manufacturing facilities to Baroda. Inordinate delay in the acquisition of property in Baroda led to considerable difficulties in the matter of installation of major machine tools which had arrived in the country. We could not keep them in packing cases for long, otherwise the manufacturing programme would have suffered considerably. Besides, majority of our skilled workers showed a disinclination to move to Baroda. The management gave considerable thought to this matter and reluctantly came to the conclusion that the original decision to shift to Baroda must be reversed. Negotiations have been concluded for the purchase of a suitable area in Greater Bombay, and it is hoped to consolidate all our manufacturing activities in this area in course of time.

"Disappointment and disillusion are, however, the stock-in-trade of a realistic approach in business and it is not all gloom and darkness. We have received permission to expand production of jeep-type vehicles to 10,000 units a year, and I am glad to be able to tell you that we have just received advice from Delhi that our application for setting up an alloy steel project has been approved by the Licensing Committee. This is going to be a major undertaking.

Trading—Bread-and-butter Line

"There have been some doubts expressed in financial journals that your Company is essentially a trading organisation and hence the wide fluctuations in its earnings. I should like to belie this comment: the Company was started with the specific purpose of participating and helping in the constructive development of the economy of the country. Within a year or so we were able to launch the first undertaking (Machinery Manufacturers Corporation Ltd.) to engage in building textile machinery. In addition to this the Company has promoted manufacture of jeeps and trucks, diesel engines, instruments, synthetic enamels and varnishes for the electrical industry, agricultural and industrial trailers, water meters, sintered bearings, lifts, etc. It has been my experience that manufacturing lines take a long time to mature and are peculiarly subject to cyclical fluctuations. Trading for this Company became therefore a sort of bread-and-butter line—a division to provide the cushion against adverse winds. If, in the past years, trading has provided the major portion of our profits, it is a measure of our success in pursuing the Company's primary purposes and providing incidentally the wherewithal for expansion.

"I have referred earlier in this address to the thesis of expansion. I firmly believe that for a country like ours, we cannot afford to remain static or even sit on our oars in the name of consolidation. I do not like to think backward. When an organisation stops thinking forward it becomes stagnant. There are no doubt grave problems—problems which demand urgent tackling, but if we are to survive as a potential and economically free entity, the economy of the country must 'thrust its way through the stifling blanket of overpopulation and inflation.' In the words of a well-known British economist, Indian people must, like the Red Queen, run fast even to stay where they are.

State and Private Enterprise

"To people critical of economic planning it will perhaps come as a great surprise that it is being more and more increasingly recognised that State planning must come first if private enterprise is to fulfil its own dynamic task: this is from Dr. Prebisch, President of the United Nations' Economic Commission for Latin America. Do we know that in the United States of America—the home of free enterprise—one in every six employed Americans is on a Government payroll? Since the beginning of this century non-Government employment has increased about 100 per cent, while Government employment—Federal, State and local—has increased about 650 per cent. The twenty major U.S. Government guaranteed corporations possess assets over 29 billion dollars (about Rs. 14,000 crores); U.S. Government interest in these assets amounted to over 25 billion dollars.

"What we should really quarrel about is that our Government doesn't seem to realise that planning and achievement are horses of two different categories; one cannot win a thoroughbreds' race by running a hackney animal. Priorities were once said by the late Mr. Aneurin Bevin to be 'the religion of socialism—implicitly or explicitly they have become the theology of all bureaucracies' and yet despite a host of Evaluation Reports, a very low priority is being given to performance of the various public sector undertakings. Then there is the 'closed' shop practice amongst civil servants. According to a prescient but sympathetic observer, 'A game of musical chairs seems to be developing in which senior bureaucrats move with disconcerting speed from post to post in the public sector.' Urgent attention to the lack in performance is needed, if plans are to form a solid base for a self-sustaining economy.

Main Objective

"For industrial growth, and as a matter of fact, for development of an agriculture-based economy as in India, expansion cannot be got under way without substantial foreign exchange resources and foreign exchange, it is said, cannot be produced domestically. That may be so, but it is only by the fullness of domestic production that foreign exchange can be earned. Since 1957, and possibly earlier, there have been diverse but disparate efforts to engage the interest of people in the export business. A dozen or so export promotion councils have been set up; every year there is a round of talks with the Central Advisory Committee on exports; and associations and chambers of commerce have devoted considerable time in turning out codes of conduct and methods of behaviour for exporters. The basic requisites of export trade are no doubt included in the list, but I do not see the emphasis on prerequisites which must be placed if our economy is to increasingly send its products to other markets. These prerequisites are extraordinarily simple: your product must be good, quality-wise, and the buyer should want to purchase it at your price. Export promotion councils have no doubt succeeded in sending out a plethora of delegations abroad. Free trips are usually enjoyable, particularly when the reporting need not rise above the platitudinous level. I do not see any other talk except that of *incentives* required to export a product. It is surely an entirely wrong track to follow. Incentives are all right for removing the bottlenecks in production, but the main objective should be to produce for export something which the overseas buyer would want to buy and at your price. How can the local industry be geared up for the purpose? This should be the engaging task primarily for the producers, assisted no doubt by a guiding hand from executive authority.

Tale of Two Sales

"Let me give two examples: one in the 30's and the other post-war, of which I have personal experience. I believe it was in 1949 or 1950 when a German engineering concern secured a substantial order for railway wagons amounting to about six million pounds sterling. The moment the acceptance of their tender was received in Germany, the management got together, arrived at the gross margins they would be earning on this order, and decided to spend the entire gross margin in sending out delegations of 27 engineers to India. These engineers, apart from their technical proficiency, were superb salesmen. They were given *carte blanche* about quotations pertaining to prices, deliveries, etc. Various groups toured the whole of India for periods ranging from three weeks to eight months. These delegations went back with new orders totalling over £11 million sterling.

"A pre-war example which comes to my mind is the Japanese drive to sell cement in India in the thirties. The markets they attacked were Burma and the Calcutta region. Wherever Indian cement was being sold, a Japanese bag of cement was available at a lower price. If the Indian cement bag had one red or blue circle in the middle, the Japanese bag showed two red or blue circles. The competition became so severe that Indian cement manufacturers brought down their prices to the rockbottom cost and yet the Japanese cement was still available at a price lower than theirs, despite a 30 per cent import custom duty. On detailed investigation in Japan and an examination of the methods and processes employed by the Japanese exporter, it came as a great surprise that the ex-factory price of the Japanese cement for export was so ridiculously low that there was no hope on earth in India to meet such competition. In those days one could use the word 'dumping' in an authentic manner and approach the Government to take some action. How otherwise could the Japanese afford to send substantial quantity of cement into a protected market? We learned that, after a decision was made to attack a certain market, the Japanese manufacturers were got together and, on the basis of their pre-export production, it was agreed between them that utilisation of 60 per cent of their installed manufacturing capacity for the home market was sufficient to give the manufacturers a reasonable return on the capital employed. The associated group then decided to ask each manufacturer to step up production to the maximum and under Government direction production over the 60 per cent level was to be handed over to the export associations at prime cost. I emphasise the words 'prime cost' which meant the cost of raw materials and direct labour only. This gave the associations a fine start to programme the export drive. Export groups in other industries joined in and surpluses were pooled in order to help in the export drive for the new entrant, namely, cement.

"In these two examples there is a moral to be learnt by manufacturers, by export councils and by the Government. Maximum production, quality which the buyers like and co-operative endeavour with Government prodding and Government assistance to sell abroad are the *sine qua non* for finding a place in the overseas markets. I suggest a combination of the Japanese and the German examples cited above, but of course local prime costs—direct labour and materials—must be kept level under restraint if necessary. Businessmen should be prepared to give serious consideration to such proposals, for over the next decade it is imperative that our country's exports should advance materially year by year to the level that present imbalance in overseas trade is corrected, and a surplus is earned to pay for servicing the foreign loans and grants now being negotiated.

Current Trends

"Turning now to current affairs of the Company, I am glad to report that for the six-month period ended 30th April 1961, the Company's sales of jeep vehicles and spares are ahead of the previous year's rate—a total of 3,563 vehicles sold in six months, as against 6,499 units in 1959-60. Steel bookings this half-year are also satisfactory—being about 98,000 tons, as against 201,000 tons in 1959-60. But I must also report that our endeavours to engage in the export trade in steel have not met with any success yet. Deliveries available from the new steel works are still not firm and it is not desirable to speculate on world price in this respect where overseas sales are concerned. We will continue however in efforts to develop the export business.

"To the growing number of staff and workers our thanks are due for their hard work throughout and for the loyal co-operation they have given to the management in this difficult year."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

FIRE — MARINE — ACCIDENT

70,00,000
FIRESTONE TYRES!

The Firestone factory in Bombay has now passed another landmark in its 21-year existence. The production of Firestone tyres in India has topped the figure of 70 lakhs. From a small beginning, through successive expansions, production has now reached around 2,000 tyres daily, covering a vast array of different sizes, ranging from 3.50-10 for Motor Scooters to 21.00-25 28 Ply Rating for Heavy Earthmoving Vehicles.

But the overall demand for tyres of all types is still so far in excess of output in India that, in spite of equitable distribution arrangements, there is a severe shortage which is felt throughout the country. Expansion schemes are afoot, but it will be some time before supply catches up with demand.

***WE BELIEVE** that the ill-effects of this prolonged scarcity can be kept within limits if every truck tyre user does what he can to extend the life of his tyres. Follow the 3-Point Programme —*

JOINT CONSULTATION IN INDUSTRY—I

FACTORS RESPONSIBLE FOR SLOW PROGRESS HIGHLIGHTED

By Prof. B. N. Mehrotra

THE term "joint consultation" has been much publicised in the context of labour policy in India during the last few years. It is difficult to give a generally acceptable meaning to it, but, for our purpose, we may define joint consultation as an internal arrangement in an enterprise for a regular and systematic exchange of views (not necessarily implying decision or executive action) between the workers' and employers' representatives on matters relating to production, efficiency, welfare and other problems of mutual interest.

In Indian industry, joint consultation is of recent origin. Although this aspect of labour-management relations received the attention of Government and industry as early as 1920, yet precious little was done till 1947. After World War I, a few joint committees were set up on the Whitley Model of the U.K., but, due to their prematurity in the prevailing Indian conditions, soon fell into disuse. The Royal Commission on Labour frankly admitted that, "generally speaking, the results achieved have been disappointing." Yet undeterred by these initial failures, the Commission pleaded that, "if they are given proper encouragement and past errors are avoided, works committees can play a useful part in the industrial system." The Commission's recommendations fell on deaf ears and the Government did nothing in the matter.

The first substantial measure for consultation at the plant level was the Industrial Disputes Act 1947 which provided for the formation of works committees to promote "measures for securing and preserving amity and good relations between employers and workmen and to that end comment upon matters of their common interest or concern and endeavour to compose any material differences of opinion in respect of such matters. "The structure composition and other procedures were laid down by the Act. The State Governments took necessary steps to implement the scheme and, by 1950, 1,100 works committees had been constituted covering practically all the States of India. At present, 2,633 works committees are reported to be functioning. The progress has been slow, as is evident from the following figures relating to the number of committees actually formed and functioning in the Central sphere:

Year	Number
1954-55	650
1955-56	715
1956-57	725
1957-58	719
1958-59	701
1959-60	744
1960-61	846

Figures are not comparable, as the information supplied by State Governments is not complete in all cases.

Real Purpose Not Realised

Besides the slow growth, the committees were reported to have failed to realise the purpose for which they were constituted. The usual experience was that they were of little practical use and large numbers ceased to meet. As was acknowledged by a management representative, "many firms have either given up trying or continue to have them on sufferance." Various reasons have been given for their failure, but the real reason, as Mr. V. V. Giri rightly observed, is "that, while there is no change of heart or outlook on the part of either party, the constitution of works committees has been made a statutory obligation." A good many employers considered it below their dignity to sit with their employees and discuss matters with them. In many cases, they considered the committees as merely a formalised agency for disposing of workers' comp'aints. Some employers regarded joint consultation as a substitute for collective bargaining and began to bypass the trade union. There are many cases on record, some of which have been cited by Charles Myers (*Industrial Relations in India*) where the employers refused to recognise a union because of its (union's) political affiliation and negotiated with the works committee agreements on wage scales, bonus, new leave rules, etc. This was naturally interpreted by the unions as a threat to their very existence and they lost interest in the institution of works committees. Delay in the implementation of the committee's decisions also damped the enthusiasm of workers. If the management is not sincere about joint consultation, it is futile to expect workers' co-operation.

Trade union rivalry has also been a major cause of many a breakdown. For example, in U.P., the committees had to be dissolved within two years of their formation, due to the rivalry between different unions which made it almost impossible for the management to have the workers' representatives on the committee. Difficulty was also caused due to the fact that the statutory regulation that the employees' representatives should be selected in consultation with the trade union concerned was not always adhered to. In one establishment where the open election system was adopted, a rival faction within the union managed to capture the committee and repudiated the working arrangements reached earlier by the management and the former committee. Too much control by the union which completely fettered the discretion of their representatives on the committee has also complicated matters in a number of cases. Irresponsible trade union leaders used consultation machinery as a platform to emphasise their claims and rights and took no interest in the general problems affecting the enterprise. Confusion has also been created by the improper understanding of the role and functions of works committees. The committees have been used for a variety of purposes. They have dealt with actual production problems, problems of discipline, methods of wage payment, distribution of working hours, prevention of accidents, welfare measures, etc. They have negotiated agreements on issues normally reserved for collective bargaining and settled workers' grievances. This wide range of the functions of the committee created uncertainty and gave the impression that anything and everything could be discussed there. The proper perspective in which the committees were expected to function was thus lost.

Works Committees

During the last three years, there has been some rethinking on the role and performance of works committees. A critical analysis on the functioning of the committees in the public sector was made by the Chief Labour Commissioner (Central) in 1958-59. At the instance of the Ministry of Labour and Employment, the N.C. Corporation (P) Ltd., Bombay, undertook an analytical study of works committees in Bombay City. A study team appointed by the Ahmedabad Textile Industry Research Association also surveyed the working of a few works committees in Ahmedabad. From all these reports, the conclusion seems to emerge that the committees did not fare so badly as was generally believed. An officer of the Indian Jute Mills Association expressed a similar view about the performance of works committees in West Bengal. He rather told me that, "instead of launching the new scheme of worker participation, it would have been better to strengthen the works committees and improve their working." Probably what happened was that the initial difficulties with which some of them were faced and the failure of some others created a negative attitude and the conclusion that they had been a complete failure and absolutely ineffective was based on insufficient data. The later studies are, however, also inadequate to take a positive line and more case studies are required to determine conclusively the part played by works committees in the industrial system.

The next stage in joint consultation was reached with the acceptance of the scheme of worker-participation in management as a major plank of the Government's labour policy in the second Plan. The Government set out with a missionary zeal to implement the scheme. The first step was to send a study team abroad to study the working of labour participation in some European countries. The Study Group submitted its report in 1957. It contains useful information about the working of joint consultation in those countries, but whether it provides adequate helpful guidance for the introduction of the scheme in India is doubtful. Commenting on the report, Mr. A. H. Hanson observed "poor quality report hardly warranted such extensive and expensive foreign travel." The report was considered at the 15th session of the Indian Labour Conference which decided that, at least for two years, "worker-participation should be tried on a voluntary basis. It appointed a tripartite sub-committee to advise on the exact form of the participation machinery. The sub-committee recommended that the experiment should be confined to the level of the undertaking and tentatively suggested that it may be introduced, to begin with, in 50 undertakings—20 in the public sector and 30 in the private sector—selected on the basis of a definite criteria. The sub-committee also laid down the size, constitution, functions and other procedural details of the Joint Management Council and prepared a Draft Model Agreement for the guidance of employers and trade unions. The functions of the Council were divided in three categories, namely, consultative, the right to receive information and give suggestions, and administrative. Matters which are subjects for collective bargaining and individual grievances are excluded from the scope of the Council. These recommendations were considered and with minor changes approved by the first seminar on Labour-Management Co-operation held in New Delhi on 31st January and 1st February 1958.

Progress Not Satisfactory

By January 1958, 30 undertakings had offered to try the experiment, but, so far, only 23 joint councils have been set up—six in the public sector and 17 in the private sector. The progress of the scheme in quantitative terms leaving aside the qualitative aspect for the present, is far from satisfactory. Not only no fresh 'offers' have been received during these years even some of those who had volunteered themselves have backed out on one excuse or another. There is a tendency to attribute this slow progress to the "narrow-mindedness and conservatism" of the employers. It is probably true that the employers are watching with interest the progress of the councils and will like to be assured that the councils are functioning effectively and doing useful work. This is certainly a cautious approach, but I wonder if 'caution' has to be 'condemned.' The term "worker participation" has also discouraged quite a few employers. As a spokesman of an employers' association observed: "This term is frightening. The management feels that it is a device to take away its prerogative and undermine its authority. If instead, we use the term 'joint consultation' and impress upon the employers that the idea is *not* to oust the management but establish close co-operation between employers and employees, many more will be forthcoming." It is unfair to put the entire blame on the employers. The charge could be justified only if it could be shown that the employers have, by and large, turned down the demand of the trade unions to constitute joint councils. I do not think there have been many cases of this type, if any at all.

Government as Employer

What about the Government as employer? Why has the Government not established the councils in all its undertakings? Public sector which is expected to set an example for the private sector cannot congratulate itself for its performance in this field. Its share in the number of councils set up comes to only 26 per cent, as against 66 per cent originally agreed. It is common knowledge that the Life Insurance Corporation in India, river valley projects and defence establishments evaded the formation of councils on one plea or another. According to a list drawn by the Labour Ministry more than a year ago, nine public undertakings had either set up the councils or were preparing to do so. Out of these nine, three units—Travancore Rubber Works, Shri Ganganagar Sugar Mills and Nahan Foundry—had not constituted the councils till as late as February 1961. In the Argada Colliery, Hazaribagh, certain technical difficulties had been raised by the management to the setting up of the council. The joint council at the Hindustan Machine Tools, Bangalore, which was inaugurated with great fanfare and publicity, is in abeyance for the last about 20 months, so much so that, at the second seminar held in March 1960, the representatives from the H.M.T. were not even invited. This is a poor record for the public sector, but it only shows that there are other factors besides the willingness and enthusiasm of the employers on which the progress depends.

What is the attitude of the trade unions in this matter? At the second seminar, the workers' representatives "wished to emphasise that they were solidly in favour of the joint councils and appreciated the initiative taken by the Government." This contention is not borne out by actual experience. The All-India Trade Union Congress is avowedly indifferent to it. Their point of view is that, as long as means of production are in private hands, industrial democracy is a myth or a fraud. The workers, they point out, can never acquire the status of partner in industry under the capitalistic system. Their attitude, however, cannot be described as positively hostile. The A.I.T.U.C. affiliated unions did participate in a few joint councils. The Indian National Trade Union Congress has been the most active to campaign for the goal of 'worker-participation.' As early as 1955, the *Indian Worker* had advocated that "progressive steps for workers' participation in the management of the industry should be taken." Mr. Michael John reiterated this demand in his presidential address to the 12th annual session of the I.N.T.U.C. (April 1961). In fact, the I.N.T.U.C. has profoundly affected the Government's labour policy and has been mainly instrumental in the Government's acceptance of 'worker-participation' as a major objective. In the light of this the approach of the I.N.T.U.C. to the institution of joint councils is not understandable. It is taking very little genuine interest. Two textile mills in Bombay wrote a number of letters to the trade union affiliated to the I.N.T.U.C. to nominate their representatives on the council but no formal reply was ever received. The management was informally told that the union was not interested. Consequently the joint councils could not be set up. A prominent I.N.T.U.C. leader frankly told me: "The scheme is too elementary to arouse any enthusiasm on our part. I do not want my workers to waste their time in discussing minor issues such as the location of the canteen, the working hours of the dispensary and the celebration of a religious festival. Unless the scheme can give the workers an effective share in management and some definite powers, it is worse than useless."

The idea of worker-participation is quite ambitious. It believes that "labour and management are co-trustees; labour should have a right to participate in management on equal terms which cannot be the prerogative of capital alone. Labour must be accepted as an effective partner and must be given all the rights of a partner." (*I.N.T.U.C.—Labour Policy In the Third Plan, Memorandum.*) Admittedly, the present scheme is too elementary to satisfy these ambitions, but it may be remembered that the I.N.T.U.C. was a party to all the decisions and the present pattern was determined with its full and free consent and it is unfair to let it fail now. Lack of interest on the part of the I.N.T.U.C. may also be due to the fact that "they have too many problems on their hands" and do not have a sufficient number of trained personnel to act as their representatives on the councils. The I.N.T.U.C. has a strong hold of the textile industry at Ahmedabad and Indore but there are only three councils in these two centres. I asked an I.N.T.U.C. leader at Indore as to why the scheme was not being extended to other units. He replied: "I do not want the same persons to work on different councils because that is likely to raise complications and we do not have extra hands to represent us on new councils if we constitute them." It may be noted that he did not say that the employers were unwilling. Rather a couple of employers expressed the view that the "unions do not really want the councils to be set up. They have the lurking suspicion that the success of labour-management co-operation at the unit level would weaken their position and slacken their hold on the workers." This suspicion is based on a misunderstanding of the concept of joint consultation and functions of the councils.

Disappointed by this slow progress, certain sections have demanded legislation. The consensus of opinion, however, is that the decision to try the scheme on a voluntary basis was a sound one. The success of such a measure depends on the willing and enthusiastic co-operation between labour and management. No amount of compulsion can infuse that spirit. The machinery for joint consultation has to be 'inbuilt'. One can take the horse to the water but cannot make it drink. Compulsion may at the most establish only the semblance of it by setting up compulsory councils but as the climate for their functioning will be absent, they will be useless. Rather there is a risk in making the scheme compulsory without making adequate preparations for it. If the council's are forced down the throats of unwilling employers and unions, the large-scale failure, which is but certain, might create such a prejudice against worker-participation that the entire scheme may have to be shelved for some time to come.

(*To be continued*)

L.I.C.'S TARGETS OF NEW BUSINESS

ESTIMATES COMMITTEE'S FEAR OF SHORTFALL IN ACHIEVEMENT MAY COME TRUE

FIGURES of new business done by the Life Insurance Corporation of India during the first quarter of 1961 do not warrant the optimistic hope that the target of Rs. 665 crores fixed for the year under the Corporation's five-year Plan would be reached. The actual performance in 1960, it may be recalled here by way of comparison, fell short of that year's target of Rs. 525 crores by about Rs. 28 crores. New business introduced during the first quarter of 1961, though it is 16 per cent higher, as compared with the corresponding period of 1960, is far short of the increase required to make good the shortfall in business last year and to fulfil this year's target. The following table indicates the trend of new business during the first quarter of 1961, as compared with that in 1960 and 1959:

	Introduced		Completed	
	No. of proposals	Amount (Rs. in crores)	No. of policies	Amount (Rs. in crores)
Business as at—				
31-3-1959	177,257	61.23	91,117	30.09
31-3-1960	164,721	60.88	74,094	26.65
31-3-1961	187,671	70.72	83,431	29.81

Apart from the shortfall there is another aspect of new business which calls for comment. Past experience has shown—this was true of 1959 and 1960—that there is an unhealthy concentration of business towards the end of every year. The dangers of lopsided development of servicing inherent in this has been recognised by the Corporation and the Agents and Field Officers were advised to spread their business as far as possible evenly over the whole year. New business during the first quarter of this year shows that this has yet to materialise.

Rush Business

It may be recalled here that these aspects of new business came in for examination by the Estimates Committee in its 134th report on the Life Insurance Corporation of India. The Committee held that the rush of business towards the end of the year was undesirable. It noted that 52 per cent of the total new business done by the Corporation in 1959 was written in the months of November and December. The percentage of business done during the last two months of the year to the total increased from 36 per cent in 1957 to 50 per cent in 1958 and 52 per cent in 1959. The Committee compared the percentage distribution of the Corporation's business from month to month with that of leading life insurance companies in the U.S. and found that the over-concentration of a major portion of new business in the last months of the year in the L.I.C. was in striking contrast to the corresponding distribution in the U.S.A.

The following table illustrates the point:

	L. I. C.	U.S. Companies
1959	%	%
January	0.5	6.7
February	5.6	7.4
March	4.1	8.5
April	4.7	8.8
May	5.1	8.1
June	5.7	8.6
July	6.0	7.9
August	6.1	7.9
September	6.5	7.7
October	8.4	8.4
November	8.0	8.8
December	44.4	11.3

It was stated before the Committee by the Chairman of the L.I.C. that the rush of business towards the end of the year was due mainly to the field staff trying to complete the annual quota of business in the last two months as their increments or continuation of agency depended on it. The Committee was informed that the Corporation was taking steps to spread the business more evenly by holding competitions between the Field Officers and Agents on the basis of business secured during the early months of the year. The Corporation had also issued instructions that if a Field Officer was able to complete a certain percentage of business by the end of August he would get an increment even though his outturn for the entire year did not warrant it. The Chairman of the L.I.C. agreed that the concentration of business towards the end of the year imposed a severe strain on the organisation. Besides, there was greater likelihood of unsound business being written during the rush period resulting in a higher lapse ratio and consequently higher expenses.

The Estimates Committee was of the opinion that the situation demanded much more effective remedial steps than hitherto. One way of doing so, according to it, would be to fix the targets for the field staff on a quarterly basis instead of the present annual basis. It also suggested that, in order to encourage the field staff to pay more attention to the quality of business procured, prizes may be awarded on the basis of the business which continues to be in force for two years after its introduction instead of the present practice of awarding such prizes on the volume of business procured during the year. It was further suggested that lapses from the business written in the last quarter of the year should be worked out separately for each month and published in the annual reports of the Corporation. It was also desirable for the L.I.C. to give in the annual reports figures of new business written during each month of the year zone-wise.

Plan Targets

The Committee also made some suggestions for the fixation of targets under the third Plan. The Plan, as is common knowledge, aims at a new business of Rs. 1,000 crores a year to be reached by 1963. The targets for each year and the actual performance upto 1960 are as under:

(Rs. in crores)

Year	Targets	New Business	Increase+ or decrease—
1957	260	288.07	+28.07
1958	325	344.68	+19.68
Five-Year Plan—			
1959	415	429.17	+14.17
1960	525	497.54	—64.94
1961	655	..	..
1962	820	..	..
1963	1,000	..	..

The Committee was informed that the targets were fixed on an *ad-hoc* basis, keeping in view past performance, strength and quality of field force available and potentiality for life insurance in the country. No precise statistical data had been collected for this purpose but steps were being taken to build up the necessary statistics through Field Officers in various areas.

The Committee noted with satisfaction that the Corporation exceeded the targets of new business during the first three years of its working. It, however, could not understand why there has been a shortfall in achievement in 1960. The targeted increase in new business is Rs. 130 crores from 1960 to 1961, Rs. 165 crores from 1961 to 1962 and Rs. 180 crores from 1962-63. This, on an average for three years, works out to Rs. 158 crores per year. The actual increase for the previous three years 1957 to 1960 had been, on an average, Rs. 59 crores a year, that is, only a third of the increase anticipated in the next three years. In the Committee's opinion, unless the Corporation improves its present performance and secures new business by about three times, the targets of business fixed for 1963 cannot be fulfilled. The likelihood of the Life Insurance Corporation even bettering this target, as indicated by the Finance Minister in the Lok Sabha, on the 8th August 1959, is also, according to it, doubtful. New business done during the first three months of the current year seems to bear out the apprehension of the Committee. The L.I.C. would, therefore, be well advised to examine the Committee's recommendations with a view to implementing forthwith such of them as will help the realisation of the Plan targets.

Notices

THE CHAMPDANY JUTE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting (being the Seventy-first Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 2, Netaji Subhas Road, Calcutta, on 16th June, 1961, at 12 noon, to transact the following business:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1961, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To declare a Dividend.

(3) To appoint a Director in the place of the Director retiring.

(4) To consider, and if thought fit, to pass the following Special Resolution for which special notice as required under Section 261 (2) of the Companies Act, 1956, has been received by the Company.

AS A SPECIAL RESOLUTION

"That Mr. N. S. Coldwell be and is hereby appointed a Director of the Company."

(5) To appoint Auditors for the current year and to fix their remuneration.

The Share Register of the Company will be closed from 5th June to 16th June, 1961, both days inclusive.

Dividend Warrants will be issued and posted to Registered Shareholders only. Persons holding shares on blank transfers are advised to effect registration of scrip in their names before 5th June, 1961.

By Order of the Board,
JAMES FINLAY & CO., LIMITED,
Managing Agents.

2, NETAJI SUBHAS ROAD,
CALCUTTA, 23rd *May*, 1961.

Notes:—(1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

(2) The dividend, if declared, will be paid on or after the 16th June, 1961, to those shareholders so entitled, whose names appear in the Company's books on 16th June, 1961, or to their mandatees.

(3) *Explanatory statement regarding Item* (4):

Mr. J. H. H. Ross who was appointed a Director of the Company by Special Resolution of the Shareholders passed at the Extra-ordinary General Meeting of the Company held on 24th January, 1961, has resigned from the Board with effect from 19th April, 1961 on his proceeding on leave outwith India. Special notice dated 15th May, 1961, of the intention to propose the above resolution as a Special Resolution has been received by the Company. Special notice has been given in order to comply with the provisions of Sections 190 and 261 of the Companies Act, 1956, as Mr. N. S. Coldwell is an officer in the employment of the Managing Agents.

Interest of Directors and Managing Agents

The Directors and Managing Agents of the Company are interested to the extent of their shareholdings in the Company as set out below:

Mr. A. I. Murison	10	shares
„ B. Gill	10	shares
„ R. G. Edwards	10	shares
„ K. P. Goenka	100	shares
James Finlay & Co., Ltd. ...	27,315	shares

THE CHURULIA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE CHURULIA COAL COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Tuesday, the 27th June, 1961, at 10.30 a.m., for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1960 and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit, to pass with or without modification the following Resolution of which a notice has been received by the Company from a Shareholder under Section 257 of the Companies Act, 1956, which will be proposed as an ordinary Resolution.

"That Sir Walter Michelmore be and is hereby appointed a Director of the Company."

6. To consider and, if thought fit, to pass with or without modification the following Resolutions which will be proposed as Special Resolutions, namely:—

(i) "Resolved that the Company may borrow money from time to time from its Secretaries and Treasurers provided the Secretaries and Treasurers are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may be agreed upon between the Secretaries and Treasurers, and the Directors of the Company, but so that the money lent shall not at any time exceed Rupees One lac in the aggregate, which may be repaid by the Company without notice and shall be repaid within three days of demand by the Secretaries and Treasurers."

(ii) "Resolved that, pursuant to Section 370 of the Companies Act, 1956, the Company doth hereby authorise the Board of Directors of the Company to grant a loan or loans of a sum or sums not exceeding in the aggregate Rs. 1,50,000 to the Firm of The Karanpura Mining Syndicate carrying on business at Chartered Bank Buildings, Calcutta, on terms that the said loan shall be secured by a promissory note or promissory notes payable on demand and shall carry interest at the rate of 6½ per cent per annum from the date of advance until repayment."

The Share Transfer Register of the Company will be closed from the 14th to the 27th June, 1961, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Secretaries and Treasurers.

CHARTERED BANK BUILDINGS,
CALCUTTA, 29*th May*, 1961.

Notes: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The relative Explanatory Statements pursuant to Section 173 of the Companies Act, 1956, in respect of the Special Business set out above are being sent to the shareholders.

(c) The Dividend, if declared, will be paid on or after 12th July, 1961 to those members, so entitled whose names appear in the Company's Books on the 27th June, 1961 or to their mandatees. No application for Dividend Warrants will be necessary.

CALCUTTA STEEL COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Second Annual General Meeting of the Members of the Company will be held at the Registered Office of the Company at 4, Old Court House Street, Calcutta, on Tuesday, the 27th June, 1961, at 4 p.m., to transact the following business:—

ORDINARY BUSINESS

1. To receive, consider and adopt the Directors' Report and the Audited Balance Sheet as on 31st March, 1961 and Profit and Loss Accounts for the year ended 31st March, 1961.
2. To declare dividend.
3. To appoint a Director in place of Shri D. P. Goenka who retires by rotation but being eligible offers himself for re-appointment.
4. To appoint a Director in place of Shri B. P. Khaitan who retires by rotation but being eligible offers himself for re-appointment.
5. To appoint Auditors in place of Messrs. K. Prasad & Co. who will retire at the Annual General Meeting but being eligible have offered themselves for re-appointment, and to fix their remuneration.
6. To transact any other ordinary business of the Company.

SPECIAL BUSINESS

7. To consider and if thought fit to pass with or without modification the following resolution to be proposed as a Special Resolution

"RESOLVED that payment to the Directors of commission at 1 per cent on the net profits of the Company as provided for in Article 94(2) of the Articles of Association of the Company be and is hereby ratified, approved and authorised."

By Order of the Board,
R. N. BHOTIKA,
Secretary.

4, OLD COURT HOUSE STREET,
CALCUTTA, *dated* 10*th May*, 1961.

N.B.—(1) The Register of Members and Share Transfer Books of the Company will remain closed from 17th June, 1961 to 27th June, 1961 both days inclusive.

(2) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(3) The Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 in respect of the Special Business under agenda No. 7 has been forwarded to the members of the Company.

ASHOK LEYLAND LIMITED
ENNORE, MADRAS

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twelfth Annual General Meeting of the Company will be held at the registered office of the Company at Ennore, near Madras on Thursday, the 15th of June, 1961, at 4.30 p.m., to transact ordinary and special business, particulars of which have been given in the notice along with the explanatory statement posted individually to the shareholders of the Company.

The Share Transfer Book of the Company will be closed from 27th May, 1961 to 14th June, 1961, both days inclusive.

(By Order of the Board),
For ASHOK LEYLAND LIMITED,
A. E. L. COLLINS,
Managing Director.

ENNORE,
MADRAS, 29*th April*, 1961.

Note: A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

HARINAGAR SUGAR MILLS, LIMITED
BOMBAY

NOTICE IS HEREBY GIVEN THAT THE Twenty-ninth Annual General Meeting of the Shareholders of the Company will be held at 207 Kalbadevi Road, Bombay, on Friday, the 30th June 1961, at 4 p.m. (S.T.), to transact the business as mentioned in the Notice posted to the Shareholders today.

The Share Transfer Books will remain closed from 23rd June, 1961 to 7th July, 1961, both days inclusive.

For HARINAGAR SUGAR MILLS, LTD.,
NARAYANLAL BANSILAL,
Chairman.

207 KALBADEVI ROAD,
BOMBAY,
MAY 30, 1961.

S.T.C.'S EXPORT PERFORMANCE
ECONOMIST INTELLIGENCE UNIT'S OBJECTIVE EVALUATION

THE State Trading Corporation is once again in the news, with fresh amendments to its original Memorandum of Association on the anvil. The revised memorandum, on which a note appeared in last week's *Commerce* (*vide* page 982), seeks to enable the S.T.C. to expand and diversify its activities, apart from defining in precise terms some of its principal objectives. In this context, an objective assessment of the activities of the Corporation, ever since its inception in 1956, will certainly not be out of place. This indeed is what has been done in a new publication, entitled *The State Trading Corporation—A Report on India's Export Performance*, prepared by the Economist Intelligence Unit, London, at the request of the Council for Economic Education, Bombay.

There are, of course, many who are rightly critical of the activities of the Corporation in India. But, it is not always possible for us to get a firsthand knowledge of the opinions of overseas buyers on the trading activities of India. It is, therefore, gratifying that the Economist Intelligence Unit has, through its overseas staff, interviewed buyers of various Indian products in several foreign countries, including the U.K., the U.S., West Germany and Japan, and brought together in one volume their reactions to India's trading activities, with particular reference to those of the Corporation. The publication constitutes neither a biased condemnation of the State-owned Corporation nor an unmixed adulation of its activities. The E.I.U. has, no doubt, brought to light several defects in the working of the Corporation. But it is not in favour of ending the institution outright. On the other hand, it is in favour of mending it and possibly limiting its activities to only selected spheres where they are of decisive advantage. Several useful suggestions have also been made to improve the working of the Corporation.

Analysing India's trade during the last decade, the Report opines that the deterioration of India's trade during this period is the inevitable result of circumstances beyond the Corporation's control, including fluctuations in the world demand and supply position. But the Corporation, it adds, has further damaged India's position by "serious mismanagement." In the final analysis, according to the Report, "the S.T.C. is neither to be praised for the growth of Indian exports of iron ore nor blamed for the decline in India's share of world manganese ore exports; it is the beneficiary, or the victim, of circumstances." In other words, the influence the S.T.C. could bring to bear on the course of India's trade has been quite limited. The S.T.C. has, on balance, probably raised the total volume and value of Indian exports slightly, the gains it has secured in exports of iron ore and sales to Communist countries a little more than offsetting the damage it has done to India's trade in manganese ore and the risks it is running in developing barter trade with the West.

Long-term Contracts

The Corporation has acquired a monopoly of Indian iron ore export and a partial monopoly of manganese ore sales, the rest of its export trade being conducted principally with Communist countries. Each of these activities has come in for detailed consideration in the Report. Indian exports of iron ore rose from only 80,000 tons (or 0.2 per cent of world trade in iron ore) in 1950 to 3.04 million tons (3 per cent of world trade) in 1959. This increase in exports has been made possible mainly as a result of the large-scale bulk-purchase contracts entered into by the S.T.C. with Japanese steel mills, as also Czechoslovakia, Poland, Yugoslavia, Hungary and Italy. The S.T.C., on the face of things, succeeded in its prime objectives of increasing and regularising India's exports of iron ore. But how much this success is due to the efforts of the Corporation and how much to a fortunate concatenation of circumstances is another matter. The volume of Indian iron ore exports and their share in world exports were actually rising rapidly, even before the S.T.C. was established, and have continued to do so. The reason for this growth are to be found in the great increase in Japanese demand, which India is geographically well fitted to satisfy, and in the gap between Eastern European demand and Russian and Chinese ore supplies. The S.T.C., according to the Report, is not thus responsible for the rise in the volume of Indian exports to these areas. Similarly, it is not responsible for the fall in imports of Indian iron ore into Western Europe where India is only a marginal supplier.

In this connection, the Report seems to stress that the long-term contracts cannot alone be said to have contributed to the increase in exports of iron ore. Important as the long-term contracts are in ensuring more regularity in the flow of Indian ore to Japan—in 1958, for example, when total Japanese imports of ore fell, purchases from India rose slightly, thanks to the contractual arrangements—it is at least doubtful if they have secured to India a larger share of the market than it would otherwise have obtained. This doubt is strengthened by two circumstances; first, India's share of Japanese imports has grown less, not more, rapidly since 1956 than it did between 1953 and 1956; and secondly, Malayan and Goan shares in the Japanese import market have increased proportionately with India's. Comparing 1956 and 1959, India supplied 16.5 and 18.4 per cent of imports, Malaya 29.6 and 35.8 per cent and Goa 11.0 and 13.4 per cent. It is the Philippines and the smaller suppliers that have lost ground. In short, the one certain gain to India from the S.T.C.'s long-term contract with Japan is greater regularity of trade.

Specific Charges

Although the S.T.C. is instrumental in ensuring regularity of trade, it is open to doubt whether a private consortium of iron ore exporters would not have achieved the same object, probably with better results. According to the Japanese importers, the S.T.C. has been a reliable trading partner in the sense that it has delivered iron ore at the agreed prices and specifications; but, on the other hand, deliveries have been consistently behind schedule. Again, the S.T.C. has not sought to exploit its position at the expense of importers by imposing other than normal commercial terms, and its personnel have shown themselves to be honest. The price paid for these virtues is, however, high. The specific charges brought against the S.T.C. are: (1) It is extremely slow to make decisions and translate them into action. (2) Since it is neither a mine-owner nor operator, it does not have direct control over production and deliveries. (3) It is not responsible in a technical sense, and does not work with the buyer and the producer to solve technical problems. (4) It is not responsive to market conditions with respect to demand, supply and price. (5) The Corporation does not have a business point of view. Actions are governed by bureaucratic attitudes and procedures; civil servants tend to operate by the book; they do not display initiative; and they are not sufficiently concerned with gaining and keeping a satisfied customer. Indeed, there sometimes seems to be a tendency to regard buyers as "colonial exploiters." (6) Periodically the top staff members of the S.T.C. are reshuffled and new civil servants appointed. The new appointees give insufficient regard to actions taken or commitments made by their predecessors, which interferes with a consistent and continuing development of business. It is thus abundantly clear that the bureaucratic methods of the S.T.C. have damaged its reputation and its chances of success. The same inference appears to be true with regard to other foreign buyers of Indian ore as well.

Manganese Ore

Unlike in the case of iron ore, the volume of India's exports of manganese ore is now considerably smaller than during the early 1950's and its share in world exports is shrinking. This trend, which was developing before the S.T.C. was established, is due to the emergence of new and cheaper sources of supply. Indian ore has been displaced by Brazilian manganese (the production of which is partly financed by U.S. capital) in the American market; it is being replaced by Indonesian and Australian ore in Japan, and by Russian and African supplies in Western Europe. A further depressing influence on the volume of Indian sales is the slow and fitful growth of demand in the world's major import markets. The emergence of the S.T.C. only served to make bad worse, says the Report, and was not helpful in withstanding the new forces of competition. The Report reveals that the Corporation is "almost invariably bureaucratic and dilatory," waiting for trade to come to it, instead of seeking it out, and has on occasion been "both arrogant and apparently suspicious and resentful of its customers." Besides, the S.T.C. has been "unreliable in its deliveries, failing to ship ore as promised, shipping it where and when it pleased, holding up loading for no adequate reason."

Some of the overseas buyers are particularly resentful of the canalisation system for manganese exports, whereby the S.T.C. makes part of its export quota available to private traders in India, accepting a fee in return. Dilating on the canalisation system, the Report adds, "Most of the S.T.C.'s faults could be put down to inexperience and ignorance, but not this: and even here, where its active role is limited to accepting a fee, the Corporation has been obstructive, refusing to approve contracts, withholding rail quotas and so on." Unless the atmosphere changes for the better, the Report warns, India's sales would fall further. The Report stresses that the Corporation's manganese ore business needs a fairly radical overhaul, judging by the views of its customers.

Communist Countries

In respect of trade with Communist countries, however, the S.T.C.'s performance is not altogether discouraging. India's exports to Communist countries have risen extremely rapidly in the past seven or eight years. There is nothing exceptional in this; other countries in a similar position have achieved similar results. The S.T.C.'s exports account, probably, for less than one-fifth of total Indian exports to the Communist bloc. Moreover, the S.T.C. does not sell most of the commodities which have contributed to the increase in total Indian exports to this area. Indeed, in one instance—shoes—the S.T.C.'s activities have simply resulted in a diversion of trade from existing channels and a decline in total sales. But it has created new flows of trade in woollen textiles and tobacco, besides regularising trade in iron ore, so that on balance this aspect of its activities can be held to have benefited India's exports.

The Economist Intelligence Unit has been particularly doubtful about the value of the S.T.C.'s recent efforts to promote canalised barter deals with private firms in the West. "Whether or not they increase the volume of Indian exports and it is unlikely that they will do so," the Report observes, "India loses on these barter deals." For the price of Indian goods concerned must be reduced or the price of imported goods raised above the normal level, if the foreign partner to the transaction is to make his legitimate profit. Thus under the barter system, India either exports more for a given volume of imports or pays more than it normally would. The Report makes it abundantly clear that there is no economic and logical justification for the canalisation of barter or other transactions through the S.T.C., nor yet any for a trading body to act in an advisory capacity or as a middleman for other traders.

The Report reminds the powers-that-be that the Corporation's advantage, as compared with the private sector, lies in its size, which makes it particularly well fitted to handle large-scale transactions and ill suited to small dealings with numerous scattered purchasers. It suggests that the Corporation should concentrate on such business in which this advantage can be fully deployed. In its export trade with Communist countries, the Report suggests, the Corporation should avoid merely diverting trade from its existing channels. It is necessary to have sufficient reserves of production capacity in hand to meet a large demand. Another suggestion is that the S.T.C. should appoint along with the existing civil servants, people who have firsthand knowledge of the technical aspects of the business in which the Corporation is engaged. While these suggestions deserve early consideration by the authorities concerned, it may be noted here that some of the charges levelled against the S.T.C. in the book are too serious to be overlooked. These charges are also claimed to be based on verifiable facts. Either the recently constituted Mudaliar Committee on exports or another special committee should go into the administrative and technical aspects of the working of the S.T.C. in the interests of safeguarding India's foreign trade.

A DIFFICULT YEAR FOR KAMARHATTY AND KANKNARRAH

PROFITS DECLINE APPRECIABLY

THE annual reports of the Kamarhatty Company Ltd. and the Kanknarrah Company Ltd., both belonging to the Jardine Henderson group, for the year ended 31st December 1960, bear eloquent testimony to the extremely adverse trading conditions facing the jute mill industry in India today. The persistent short supply of raw jute and the consequent disproportionate rise in its price have forced the sealing of a percentage of looms and a cut in working hours. Whereas at the commencement of *1960 the mills were working* single shift of 48 hours a week with 10 per cent loomage sealed, the mills have now been compelled to reduce working hours to 42½ per week with 12 per cent sealing. It is no wonder, therefore, that the earnings of jute mill companies have suffered a distinct setback. The salient features of the two aforesaid Companies' operations in the past four years are given in the comparative table at the bottom.

Kamarhatty Company

In spite of an increase of Rs. 32.00 lakhs to Rs. 409.73 lakhs in turnover and a rise of over Rs. 30 lakhs in closing stocks of jute, work-in-progress and finished goods, the gross profit of the Kamarhatty Company has declined sharply by Rs. 30.56 lakhs to Rs. 9.61 lakhs. In view of the appreciably low level of profit after depreciation, only a nominal amount of Rs. 50,000 has been found sufficient to cover the Managing Agents' commission. Provision for taxation has also been reduced from Rs. 5.50 lakhs to just Rs. 72,000 and that for depreciation from Rs. 8.77 lakhs to Rs. 7.88 lakhs. With these adjustments, the net profit has gone down by as much as Rs. 22.27 lakhs to Rs. 51,000. This profit, together with the previous year's carry-forward of Rs. 2.66 lakhs and the Rs. 8,000 excess provision written back, gives a total of Rs. 3.25 lakhs. The Company is obliged, in accordance with the terms and conditions attached to the issue in 1955 of 5½ per cent debenture-stock, to set aside out of the profit for 1960 and subsequent years a sum of Rs. 1 lakh per annum to a sinking fund. If the profits of any one year failed to exceed Rs. 1 lakh, the entire amount of the available profit is to be transferred to the fund. The Company has fulfilled its obligations under this condition by transferring to the debentures sinking fund a further sum of Rs. 1 lakh.

After the above adjustment and the transfer of Rs. 36,000 to development rebate reserve, there is left a distributable profit of Rs. 1.89 lakh which has been supplemented by Rs. 2 lakhs transferred from the reserves. Out of the total of Rs. 3.89 lakhs thus available, Rs. 8,000 have been set aside as additional preference dividends for prior years and Rs. 1.26 lakh as the preferred dividends for the year under review. Although there has been a drastic cut in the rate of dividend on shares from 15 per cent in 1959 to 5 per cent in 1960, both subject to deduction of tax, the dividend is still to be considered as reasonable taking into account the exceptionally difficult operating conditions for the Company.

The financial position of the Company as disclosed by its balance-sheet as at 31st December 1960 is fairly strong. The share capital of Rs. 59.20 lakhs—Rs. 16 lakhs in preference shares and Rs. 43.20 lakhs in ordinary shares—is supported by Rs. 27.60 lakhs in reserves. Other liabilities amount to Rs. 126.10 lakhs consisting of Rs. 13.04 lakhs in debenture-stock, Rs. 78.04 lakhs in secured and unsecured loans, and Rs. 35.02 lakhs in current liabilities. On the assets side, fixed assets at their written-down value are worth Rs. 59.91 lakhs as against a cost of Rs. 200.49 lakhs. Current assets amount to Rs. 152.99 lakhs, inclusive of Rs. 26.99 lakhs investments and Rs. 2.15 lakhs loans and advances.

Kanknarrah Company

The upward trend in the earnings of Kanknarrah, noted during 1958 and 1959, was reversed during the year ended 31st December 1960, notwithstanding the increase of Rs. 39.29 lakhs to Rs. 366.58 lakhs in sales. The gross profit has declined by Rs. 21 lakhs to Rs. 6.57 lakhs. The balance on the profit and loss account after providing Rs. 50,000 as managing agency commission and Rs. 6.88 lakhs towards depreciation shows a net loss of Rs. 81,000, in contrast to the net profit of Rs. 17.83 lakhs for 1959 and Rs. 9.83 lakhs for 1958. In view of the loss sustained, no provision for taxation has been found necessary. After adjusting Rs. 6,000 as excess provisions written back and transferring Rs. 36,000 to development rebate reserve, Rs. 14.78 lakhs have been carried forward as a debit balance to the current year's account. No dividend has been proposed for the fifth year in succession.

The continuous and substantial losses suffered by the Company in the years prior to 1958 have seriously weakened its financial position despite the handsome profits earned during 1958 and 1959. The balance-sheet as at 31st December 1960 shows the amount standing to the credit of various reserves as Rs. 9.44 lakhs which fall short of the loss brought forward from the profit and loss account by Rs. 5.35 lakhs. Since this shortfall is adjustable against the equity, the book value of the ordinary shares of the Company works out to less than the face value.

The management has long recognised the need for modernising the Company's manufacturing facilities as a step to improve its profitability. It has, therefore, introduced renovation schemes. Owing to paucity of internal financial resources, the management has been forced to finance these schemes from loans, which, as at the date of the balance-sheet, amount to Rs. 81.11 lakhs including Rs. 12.69 lakhs in debenture-stock, besides the addition of Rs. 15.17 lakhs to current liabilities.

The gross block of the Company is valued in its books at Rs. 178.03 lakhs, inclusive of Rs. 1.94 lakh added during the year. After deducting from this the accumulated depreciation of Rs. 119.38 lakhs, the net block works out to Rs. 58.65 lakhs. Current assets, investments, and loans and advances together amount to Rs. 105.86 lakhs.

The Rs. 100 paid ordinary shares of the Kamarhatty Company are quoted at Rs. 137 *cum-div.* and fetch a net yield of 2.63 per cent per annum on an *ex-div.* basis.

The current market quotation for the Rs. 100 fully paid ordinary shares of the Kanknarrah Company is Rs. 76.50.

MARKED RISE IN PROFIT OF I. B. PETROLEUM

RESERVES STRENGTHENED

THE financial results of the Indo-Burma Petroleum Company Ltd. (Managing Agents: Steel Brothers & Co. Ltd., Calcutta) for the year ended 31st December 1960 are quite satisfactory. Thus, sales proceeds and commission earned have jumped up from Rs. 181.74 lakhs in 1959 to Rs. 201.89 lakhs and other income from Rs. 146.69 lakhs to Rs. 194.76 lakhs. The latter includes the surplus of Rs. 34.41 lakhs resulting from the disposal of a part of the Company's holdings in the Burma Oil Company Ltd. These increases have more than offset the rise in expenses from Rs. 261.83 lakhs to Rs. 292.11 lakhs, so that the gross earnings of the Company for the year under review show a substantial improvement of Rs. 37.93 lakhs to stand at the all-time peak level of Rs. 104.54 lakhs.

Out of the markedly higher gross earnings the Directors have provided Rs. 7.38 lakhs for Managing Agents' remuneration, as against Rs. 6.96 lakhs in 1959, and Rs. 4.51 lakhs for depreciation, as against Rs. 4.07 lakhs. The sum allocated for purposes of taxation is higher at Rs. 43.26 lakhs, as against Rs. 31.40 lakhs. But the rise has been due entirely to meet the tax contingencies of previous years. In other words the Company's tax liability for 1960 is only Rs. 31.11 lakhs. After deducting these necessary provisions from the gross profit, the net profit comes to Rs. 49.39 lakhs which is more than double that earned in 1959, namely, Rs. 24.18 lakhs. The amount actually available for distribution is much larger at Rs. 69.02 lakhs as the net profit is supplemented by (*a*) Rs. 8.58 lakhs representing adjustments relating to previous years, (*b*) Rs. 6.57 lakhs being the excess provision for taxation and development rebate reserve made in previous years, and (*c*) higher balance of Rs. 4.48 lakhs brought forward from the last year (Rs. 3.29 lakhs for 1958). The Directors have set aside Rs. 23,000 for doubtful debts (Rs. 31,000 in 1959), Rs. 29,000 for Port Trust charges (Rs. 31,000), Rs. 2 lakhs for terminal gratuities (Rs. 1 lakh). They have also transferred Rs. 27.50 lakhs to general reserves (Rs. 9 lakhs in 1959) and a sum of Rs. 85,000 to development rebate reserves. The allocations, it may be noted here, to reserves are in addition to the Rs. 71.86 lakhs transferred to capital reserves; this amount is the surplus arising from the revaluation of investments held by the Company.

The following comparative table shows at a glance the progress of the Company in the last four years.

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds and commission earned	2,01.89	1,81.74	1,67.99	2,04.45

* Includes Rs. 71.86 lakhs, being the surplus arising on revaluation of investments, transferred to capital reserve.
† Subject to deduction of tax.

The Directors have recommended a final dividend of Re. 1.50 per share and a special distribution of 50 nP per share in addition to the interim dividend of Re. 1 paid on 28th November 1960. The proposed special distribution of 50 nP per share has been rendered possible by the surplus of Rs. 34.42 lakhs derived from the disposal of a part of the Company's shareholdings in the Burma Oil Company (1954) Ltd. During 1960, the Government of Burma completed purchase of control (51 per cent) in the Burma Oil Company (1954) Ltd. by paying the amounts till then due on account of their original 33⅓ per cent shareholding and thereafter purchasing the additional 17⅔ per cent shareholding necessary to give it the 51 per cent control holding in that Company. Altogether the dividend absorption for the year under review amounts to Rs. 33.50 lakhs as against Rs. 28.30 lakhs in 1959. The net dividend of 21 per cent is slightly higher than

(Continued on ...)

ASHOK LEYLAND'S SALES IMPROVE

HANDSOME RISE IN PROFIT

THANKS to the high reputation carried by Leyland trucks in general and sustained domestic demand for its products, the sales of Ashok Leyland Ltd., Madras (Secretary: Mr. K. N. Gopalan), continue to maintain the upward trend. The actual sales for the year ended 31st December 1960 stand at the impressively high level of Rs. 762.04 lakhs, representing a rise of as much as Rs. 179.22 lakhs as compared with the previous year. A large part of the improvement in sales has, of course, been offset by enhanced cost of operations, the value of raw materials, etc. consumed rising by Rs. 187.93 lakhs, salaries and wages by Rs. 15.84 lakhs, and other expenses by Rs. 8.09 lakhs. Nevertheless, the gross profit has increased by Rs. 17.01 lakhs to Rs. 71.18 lakhs. In view of the large-scale additions to fixed assets made during the past two years, the provision for depreciation has been stepped up from Rs. 17.95 lakhs to Rs. 25.32 lakhs. A higher provision has also been made for taxation, namely, Rs. 11 lakhs, as against Rs. 8.50 lakhs, because of higher taxable profits. Despite these higher provisions, the net profit shows a rise of Rs. 6.60 lakhs to Rs. 34.86 lakhs.

Since the initiation of its expansion programme two years ago, the Company has followed a farsighted policy of keeping its tax liabilities to a minimum by claiming the maximum rebate allowable under the Income-tax Act on account of the net additions to plant and machinery. In order to claim this concession, the Company is obliged to set aside out of available profits proportionate amounts towards development rebate reserve which, as readers are aware, is not available for purposes of dividend distribution. For 1960, the Company has transferred to this reserve Rs. 10.72 lakhs from the net profit, thus reducing the distributable profit to Rs. 24.34 lakhs, including Rs. 20,000 brought forward from the previous accounting period. The Directors have maintained the rate of dividend at the previous year's level of 8 per cent subject to tax, but the dividend is on enhanced capital. It will be recalled that, last year, the Company made a call of Rs. 2.50 per share on 2,500,000 shares with a view to providing necessary funds for the implementation of manufacturing programme and expansion project. The total dividend absorption is Rs. 24.23 lakhs. The balance of Rs. 12,000 has been carried forward.

An idea of the substantial progress made by the Company in the past four years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales (gross)	7,62.01	5,82.82	5,01.49	4,30.69

* Subject to deduction of tax.

The balance-sheet as at 31st December 1960 discloses that the financial position of the Company has been considerably strained consequent on the expansion scheme it has undertaken lately and the need to maintain larger inventories to cater to a bigger demand. The Company has had to supplement its internal resources by substantial borrowings from banks on open mortgage accounts. The increase in the liability under this head during the year has, therefore, been phenomenal, from Rs. 52.18 lakhs to Rs. 135.63 lakhs. There is, however, nothing untoward in this situation, as most of the other units in the industry have also made similar provisions. A corresponding increase has occurred in current liabilities which stand at Rs. 186.96 lakhs.

The gross block of the Company, inclusive of additions during the year, amounts to Rs. 286.28 lakhs. The aggregate depreciation provided to date is Rs. 85.85 lakhs, so that the net block is Rs. 200.43 lakhs as at the end of 1960. Buildings under construction are valued at Rs. 38.16 lakhs. A further sum of Rs. 24.11 lakhs is shown under plant and machinery either in transit or in stock. Current assets, including investment in subsidiaries, aggregate Rs. 399.24 lakhs which more than balance the total of current liabilities and bank loans.

As an adjunct to its engineering capacities, the Company has set up, in collaboration with its foreign associates, a foundry project under the name of Ennore Foundries Private Ltd. This project continued to make steady progress during the year and the total investments by the Company in its shares up to the end of 1960 amounted to Rs. 5.35 lakhs.

The Rs. 5 fully paid ordinary shares of the Company are currently quoted at Rs. 9.30 *cum-div.* The net yield on *ex-div.* basis works out to 3.1 per cent per annum.

GOODYEAR INDIA

At a meeting of the Board of Directors of Goodyear India Limited, the preliminaries in connection with the Company's new share issue were completed, and it is expected that mailing of letters of allotment and refund cheques will commence in another two weeks. Mechanised equipment, working incessantly, has been able to handle the voluminous and record number of applications in this record period of time. Indicative of the tremendous public response to this offering, as well as the interest the small investor has had in this issue is the fact that, as against the 400,000 shares (at Rs. 17 each including premium) offered to the public, as many as 88,778 applications were received for 10,184,501 shares representing a sum of Rs. 17.3 crores—the shares being oversubscribed by more than twenty-five times. Of this, 84.57 per cent applicants are in 50 and 100 share groups, representing 43.24 per cent of the total number of shares applied for.

The Directors have decided to allot 44.41 per cent of the total to the group of applicants for 50 and 100 shares, and allotment in the group will, of necessity be by ballot, each successful allottee receiving five shares. All other applicants will receive an allotment, for example: 10 shares to each applicant of the 150-400 group, 40 shares to each applicant of 1,000 shares, 55 shares to each applicant of 1,500 shares and so on in this manner for the larger subscribers with the highest allotment being 800 shares for an application of 20,000 shares.

An interesting feature of this issue is that, after the shares have been allotted, there will be a total of 49,231 allottees—a record figure by any standards. As a matter of comparative interest, it may be noted that the Goodyear parent corporation in the U.S.A. and its foreign subsidiaries had 46,988 shareholders in 1959.

I.C.I. INDIAN FACTORIES

All the Imperial Chemical Industries associate factories in India have maintained good progress, according to the speech of Mr. S. P. Chambers, Chairman of the Company, at the 34th annual general meeting held at London recently. In the factory at Rishra near Calcutta, the polythene plant is working well above design capacity, and extensions are being made to the plants and other plants there. Mr. Chambers said: "All this manufacture is efficient and profitable. I visited the factory in February of this year and found the team there energetic, enthusiastic and competent; they are all Indian with the exception of the factory manager." The Chairman paid a special tribute to the explosives plant at Gomia, Bihar, which was working, at over 50 per cent above design capacity. It had only two Europeans left on its staff. "This industrial explosives plant," he said, "has been set up in co-operation with the Government of India, which owns 20 per cent of the ordinary share capital. It is an interesting example of co-operation between a large private company and a Government whose policy is to have a mixed economy." And he added that the plant was being extended and would, in a year or two, supply practically the whole of the industrial explosives requirements of India. There were also, he reported, plans to produce polyester fibre in India and to develop a site near Bombay for the manufacture of polyester fibre and other products.

EARNINGS OF ARVIND MILLS RISE

DIVIDEND STEPPED UP

1960 was quite a favourable one for the Arvind Mills Limited (Managing Agents: Narottam Lalbhai & Co., Ahmedabad). The Company stepped up its production by running a third shift (about 450 looms) in the second half of the year. The rise in output has been accompanied by higher realisations from sales of cloth, yarn and waste for the year 1960 amounting to Rs. 373.87 lakhs as against Rs. 342.23 lakhs for the previous year, thus recording an increase of Rs. 31.64 lakhs or 9.2 per cent. Consequent on the improvement in sales proceeds, the gross profit of the Company has recorded a further increase of 17.5 per cent from Rs. 91.63 lakhs to Rs. 107.73 lakhs. Increase in profit would have been more marked but for (*a*) the drop of Rs. 6.14 lakhs to Rs. 15.91 lakhs in receipts from cloth processing charges, etc., (*b*) lower receipts from bank and other interest following the utilisation of fixed deposits, and the voluntary price controls adopted since September 1960. The Company which manufactures fine and superfine goods had effected a further cut of 4 per cent in its prices with effect from January 1961.

On the expenditure side, consumption of raw materials has increased from Rs. 95.89 lakhs to Rs. 115.04 lakhs. Other expenses have risen from Rs. 179.59 lakhs to Rs. 192.59 lakhs mostly on account of the rise in wages from Rs. 87.18 lakhs to Rs. 98.46 lakhs.

In view of better working results and sound financial position, the dividend on ordinary shares (subject to tax) has been increased from Rs. 40 to Rs. 45 or an increase in net dividend from Rs. 28 to Rs. 31.50. On this basis, the Rs. 100 paid-up ordinary shares give a net yield of 1.73 per cent on the current market rate of Rs. 1,815.

The following comparative table shows at a glance the progress of the Company in the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales	3,73.87	3,42.23	3,58.63	3,35.20
Closing stock	49.69	35.74	44.98	54.98

Carry forward	0.82	1.58	1.28	0.29

* On increased capital of Rs. 60 lakhs, raised by capitalising Rs. 20 lakhs.
† Subject to deduction of tax. B=Bonus.

The reorganisation and renovation programme of the Company is in full swing, with the addition of Rs. 67.50 lakhs in the block account over and above the Rs. 51.07 lakhs spent in the previous year. This brings the total of gross block at the end of the year to Rs. 351.43 lakhs, which stands depreciated to Rs. 193.55 lakhs after providing Rs. 157.88 lakhs for depreciation. The additional plant of 192 automatic looms is under erection. Though considerable delay has occurred owing to difficulties in obtaining cement for buildings and other machinery and equipment, it is hoped that this new plant will go into production by June 1961. The cost of the plant is put at Rs. 120 lakhs. The programme of modernisation is still being pursued with vigour and the Company has received permission to install 144 automatic looms in replacement of existing ones. Orders have already been placed for 48 automatic looms. Orders have also been placed for high draft spinning frames with preparatory machines for spinning. The programme, which is estimated to involve an additional outlay of Rs. 125 lakhs, will start in the third quarter of the current year and continue till the end of 1962.

The financial position of the Company is very sound. As against the paid-up capital of Rs. 86.25 lakhs, reserves and surplus stand at Rs. 312.87 lakhs. The paid-up capital consists of Rs. 5.25 lakhs in 5 per cent preference shares, Rs. 10.50 lakhs in 4½ per cent preference

(*Continued in previous column*)

(*Concluded from next column*)

shares, Rs. 5.25 lakhs in 4½ per cent B preference shares and Rs. 5.25 lakhs in 4½ per cent C preference shares and Rs. 60 lakhs in ordinary shares of Rs. 100 each. The total reserves and surplus, Rs. 312.87 lakhs, is more than three and a half times the total paid-up capital or more than five times the equity capital. This has prompted the Directors to declare a bonus issue in the ratio of two shares for every three shares held.

The total investments of Rs. 115.97 lakhs consists of Rs. 6.32 lakhs in unquoted investments and Rs. 109.65 lakhs in quoted investments (market value is Rs. 140.75 lakhs). Current assets, exclusive of investments, aggregate Rs. 246.87 lakhs which are well above the current liabilities of Rs. 157.27 lakhs, showing a margin of Rs. 89.60 lakhs.

AMAR DYE EARNS MORE

RESERVES STRENGTHENED

THE shares of Amar Dye-Chem Limited (Managing Agents: Amritlal & Co. Private Ltd., Bombay) have been quite active in the cash list of the chemical group during the last two years. The Rs. 100 paid-up ordinary shares, which were neglected at Rs. 110 in January 1959, now stand at Rs. 410, after registering a peak of Rs. 527.50 on 21st July 1960.

The sales of the Company have improved, albeit slightly, from Rs. 172.40 lakhs in 1959 to Rs. 176.15 lakhs in 1960. The improvement is significant considering that it has been achieved despite liberal import policy of the Government and reduction in the prices of many items effected in order to meet the competition from imported products. The profit margin, as a result, has increased only slightly from 37.4 per cent to 38.4 per cent with the rise in gross profits from Rs. 64.63 lakhs to Rs. 67.72 lakhs. The enhanced ratio of profit to sales has been maintained in spite of a sizable increase in other expenses from Rs. 31.08 lakhs to Rs. 39.45 lakhs mostly on account of higher wages bill and expenses for repairs. While the Managing Agents' remuneration is lower at Rs. 5.61 lakhs (as against Rs. 5.82 lakhs for 1959) and provision for depreciation at Rs. 7.87 lakhs (Rs. 9.94 lakhs), the heavier tax liability of the Company has resulted in enlarged provision of Rs. 21 lakhs for taxation, as against Rs. 11 lakhs. The net profit, therefore, is lower by Rs. 4.63 lakhs at Rs. 33.24 lakhs. The whole of this profit and the sum of Rs. 2.37 lakhs for claims received in respect of previous year as well as a part of the brought forward balance have been transferred to reserves.

The table below gives the working results of the Company for 1960, as compared with those for the three years preceding it.

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

† Subject to deduction of tax.
* Dividend for five years.
‡ On enlarged capital.

The paid-up capital of the Company has increased from Rs. 80 lakhs to Rs. 99.97 lakhs with the right issue as stated above. The reserves and surplus amount to Rs. 56.08 lakhs. The total of secured and unsecured loans as at 31st December 1960 is only Rs. 2,000, as against Rs. 1.70 lakh a year before. The gross block of Rs. 104.55 lakhs is written down to Rs. 75.67 lakhs after providing Rs. 28.88 lakhs for depreciation. The total of current assets at Rs. 142.29 lakhs exceed current liabilities at Rs. 61.98 lakhs by Rs. 80.31 lakhs.

The Company which manufactures dyes of naphthol series, fast bases and stabilised azoics has been granted permission for several expansion programmes of basic and acid dyes, naphthols and fast bases. The implementation of these programmes naturally requires increased capital. The Company had sought official consent last year for the issue of 80,000 new equity shares of Rs. 100 each. But, as the rights issues are now permitted at a substantial premium in conformity with the recent policy of the Controller of Capital Issues, the Directors have considered it proper to issue at present only 10,000 new equity shares of Rs. 100 each on the basis of one share for every eight shares.

The bon acid plant is likely to be ready by the end of this year or early next year. The work has been slightly held up due to the late delivery of detailed design and the consequent delay in placing orders for equipment. The reorganisation of naphthol and fast base plants has been completed. A new plant for manufacturing naphthol ASG has also been erected and commissioned into production. A two-storeyed building connecting the naphthol plant and fast base plant is under construction. This will, when completed, create special plant facilities for standardising and drying. Once these changes are effected, the Company will be in a position to reach comfortably the target of the full licensed capacity of 650 tons each, provided sufficient quantity of raw materials are available.

The progress made in the implementation of the various expansion programme as indicated in the Directors' report is given below:

"The Company has obtained a loan of Rs. 15 lakhs in foreign currency for expansion programme. An import application for capital goods required for the T.P.M. plant has been submitted and licence is expected shortly. The work of constructing buildings is in progress. Further, the Company has been granted licence to manufacture 250 tons of reactive dyes and 260 tons of pigment colours. The Licensing Committee has approved of the Company's application for manufacture of 2,155 tons of intermediates and has recommended the issue of a manufacturing licence to the Company. The quantities of various intermediates included in the Central Government plant were found by the Government to be inadequate after careful study to meet the demands of the dyestuff industries by 1965. It was, therefore, decided by the Government to grant licence to private enterprises to make similar products in order to meet the shortfall. This scheme, when implemented fully, will not only save foreign exchange but will make the Company fully independent of imports regarding intermediates. A capital outlay of Rs. 2½ crores approximately is said to be involved on the project of intermediates. The Company was granted a licence in 1954 to manufacture 1,000 tons of beta-naphthol. The Government has clarified the position that the licence holds valid even to this day. Beta-naphthol is a basic intermediate used in the manufacture of beta-oxy-naphthoic acid and it is proposed to take up this project on hand and negotiations for technical know-how are in progress."

The current quotation of Rs. 100 paid-up ordinary shares is Rs. 410 *cum-div.* On *ex-div.* basis and taking the net dividend as Rs. 12 per share, the yield works out to 3 per cent.

FRESH ISSUES OF CAPITAL

Consent for issue of capital of Rs. 6.26 crores has been granted by the Controller of Capital Issues. The amount is divided among eight companies, namely, Asia Cables Corporation, Century Spinning and Manufacturing Company Prabhat Ltd., Indian Drugs and Pharmaceuticals, Mysore Paper Mills, Britannia Engineering, Kothari Sugar and Chemicals, and T.I. Miller Private Ltd. The details of the issues are as follows:

Asia Cables Corporation: This Company has a paid-up capital of Rs. 50 lakhs in equity shares of Rs. 100 each. It has been granted consent to issue further capital of Rs. 155 lakhs in equity shares of Rs. 100 each for cash at par. Of this, shares of the value of Rs. 55 lakhs would be offered to the American collaborators, Messrs. Phelps Dodge Copper Products International Corporation of U.S.A. and Enfield Cables Limited of U.K., against supply of capital equipment and the balance of Rs. 100 lakhs to existing shareholders on the basis of two new shares for each share held.

Century Spinning and Manufacturing Company: The Company has a paid-up capital of Rs. 202.91 lakhs in equity shares and Rs. 125 lakhs in preference shares. Consent is granted to this Company for the issue of bonus shares of the value of Rs. 50.98 lakhs in the ratio of one bonus share for every four shares held.

Prabhat Limited: Rs. 70 lakhs in equity shares of Rs. 100 each to be issued at par. Of these, shares of a value not exceeding Rs. 30 lakhs will be issued for consideration other than cash against assets to be taken over and against loans from directors, relatives and friends, dealers and agents as on 31st March 1961 and the balance for cash. The object of the issue is to take over the Prabhat (Stove and Lamp) Products Company (Private) Limited and to run the same.

Indian Drugs and Pharmaceuticals: To issue equity capital of Rs. 60 lakhs. This public sector Company will set up four plants for the manufacture of drugs, medicines, surgical instruments and drug farms for producing medicinal plants.

Mysore Paper Mills: The Company's present paid-up capital is Rs. 25 lakhs consisting of 250,000 equity shares of Rs. 10 each. The scheme of expansion is estimated to cost Rs. 330 lakhs. For meeting a part of this, consent is granted to the issue of further capital of Rs. 100 lakhs in equity shares of Rs. 10 each to be offered to existing shareholders at a premium of Rs. 2 per share, in the ratio of four shares for every one share held. The balance requirements will be raised as loans from financial agencies.

Britannia Engineering Company: Issue of capital of Rs. 50 lakhs in 500,000 equity shares of Rs. 10 each for cash at par. The fresh capital is required for the manufacture of wagons, road-rollers and printing machineries. The existing capital of the Company is Rs. 50 lakhs in equity shares.

Kothari Sugar and Chemicals: Consent was granted for the issue of debentures worth Rs. 35 lakhs to the Bank of India Limited, Bombay. The proceeds of the issue, together with the equity capital of Rs. 80 lakhs raised under the authority of consent order dated 22nd October 1960, will be utilised for setting up a sugar factory of 1,250 tons cane crushing capacity per day. The debentures will carry a rate of interest not exceeding 6½ per cent.

T. I. Miller Private Limited: Consent was granted to the issue of capital of Rs. 25 lakhs, of which Rs. 22.50 lakhs will be subscribed for cash by the Tube Investments of India Limited, Madras, and Rs. 2.50 lakhs will be offered to H. Miller & Co. Ltd., Birmingham, in respect of technical know-how. The proceeds of the issue will be utilised for the manufacture of automobile lamps and dynamo lamps

COMPANY MEETINGS AND DIVIDENDS

KILLCOTT TEA CO., LTD. Annual General Meeting, Calcutta, 8th June 1961. Dividend: 25 per cent or Rs. 2.50 per share, subject to deduction of tax. Transfer books will remain closed from 1st to 8th June 1961, both days inclusive.

POOBONG TEA CO., LTD. Annual General Meeting, Calcutta, 8th June 1961. Dividend: *Nil*. Transfer books remain closed from 1st to 8th June 1961, both days inclusive.

INDO-BURMA PETROLEUM CO., LTD. Annual General Meeting, Calcutta, 9th June 1961. Dividend: Rs. 2.50 per ordinary share (includes interim dividend of Re. 1.00 per share), subject to deduction of tax. Transfer books remain closed from 15th May to 9th June 1961, both days inclusive.

JUGGILAL KAMLAPAT COTTON SPG. AND WVG. MILLS LTD. Annual General Meeting, Kanpur, U.P., 9th June 1961. Dividend: 12½ per cent or Re. 1.25 per share, subject to deduction of tax. Transfer books remain closed from 20th May to 9th June 1961, both days inclusive.

SRI RANGA VILAS GINNING, SPINNING AND WEAVING MILLS LTD. Annual General Meeting, Peerlamedu, Coimbatore, 12th June 1961. Dividend: 6 per cent or Rs. 3.00 per share, subject to deduction of tax. Transfer books remain closed from 29th May to 12th June 1961, both days inclusive.

VIRUDHUNAGAR TEXTILE MILLS LTD. Annual General Meeting, Sulakarai, Virudhunagar, 12th June 1961. Dividend: 10 per cent or Rs. 5.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 29th May to 12th June 1961, both days inclusive.

BOWREAH COTTON MILLS CO., LTD. Annual General Meeting, Calcutta, 15th June 1961. Dividend: 10 per cent or Rs. 10.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 5th to 15th June 1961, both days inclusive.

ASHOK LEYLAND LTD. Annual General Meeting, Ennore, Madras, 15th June 1961. Dividend: 8 per cent or Re. 0.40 per share, subject to deduction of tax. Transfer books remain closed from 27th May to 14th June 1961, both days inclusive.

AMBIKA SILK MILLS CO., LTD. Annual General Meeting, Bombay, 15th June 1961. Dividend: Rs. 15.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 8th to 23rd June 1961, both days inclusive.

DUNBAR MILLS LTD. Annual General Meeting, Calcutta, 15th June 1961. Dividend: Rs. 2.00 per share, subject to deduction of tax. Transfer books will remain closed from 5th to 15th June 1961, both days inclusive.

HANSQUA TEA CO., LTD. Annual General Meeting, Calcutta, 16th June 1961. Dividend: 20 per cent or Rs. 2.00 per share, subject to deduction of tax. Transfer books will remain closed from 7th to 16th June 1961, both days inclusive.

PHASKOWA TEA CO., LTD. Annual General Meeting, Calcutta, 16th June 1961. Dividend: *Nil*. Transfer books will remain closed from 7th to 16th June 1961, both days inclusive.

CHAMPDANY JUTE CO., LTD. Annual General Meeting, Calcutta, 16th June 1961. Dividend: 5 per cent or Rs. 5.00 per share. Transfer books will remain closed from 5th to 16th June 1961, both days inclusive.

RAIPUR MANUFACTURING CO., LTD. Annual General Meeting, Ahmedabad, 16th June 1961. Dividend: Rs. 40.00 per ordinary share (includes interim dividend of Rs. 12.00 per share), subject to deduction of tax, for the year ended 31st December 1960.

ANDHRA CEMENT CO., LTD. Annual General Meeting, Madras, 19th June 1961. Dividend: 10 per cent or Re. 1.00 per share, subject to deduction of tax, payable on or after 19th June 1961. Transfer books will remain closed from 10th to 19th June 1961, both days inclusive.

ATUL PRODUCTS LTD. Annual General Meeting, Ahmedabad, 19th June 1961. Dividend: 12 per cent or Rs. 12.00 per share, subject to deduction of tax, payable from 20th July to 14th August 1961.

INDIAN WOOD PRODUCTS CO., LTD. Annual General Meeting, Calcutta, 20th June 1961. Dividend: 30 per cent or Rs. 3.00 per share, subject to deduction of tax (includes interim dividend of 10 per cent or Re. 1.00 per share), payable on or after 4th July 1961. Transfer books will remain closed from 10th to 20th June 1961, both days inclusive.

A. V. THOMAS AND CO., LTD. Annual General Meeting, Alleppey, Kerala State, 21st June 1961. Dividend: 20 per cent or Rs. 2.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 8th to 21st June 1961, both days inclusive.

ALEMBIC CHEMICAL WORKS CO., LTD. Annual General Meeting, Baroda, 22nd June 1961. Dividend: Rs. 9.80 per share (net). Transfer books will remain closed from 1st to 22nd June 1961, both days inclusive.

NEW GREAT EASTERN SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 21st June 1961. Dividend: *Nil*. Transfer books will remain closed from 10th to 25th June 1961, both days inclusive.

TRAVANCORE RUBBER AND TEA CO., LTD. Annual General Meeting, Alleppey, Kerala State, 28th June 1961. Dividend: 9 per cent or Re. 0.90 per share (includes interim dividend of 4 per cent or Re. 0.40 per share), subject to deduction of tax. Transfer books will remain closed from 14th to 29th June 1961, both days inclusive.

AHMEDABAD ADVANCE MILLS LTD. Annual General Meeting, Bombay, 19th July 1961. Dividend: Rs. 6.00 per ordinary share, subject to deduction of tax.

TATA MILLS LTD. Annual General Meeting, Bombay, 20th July 1961. Dividend: Rs. 5.00 per share, subject to deduction of tax

SYNOPSES OF COMPANY REPORTS

Vijayalakshmi Mills Ltd.

N.B.—Adjustments include the amount transferred from provision for taxes.

Extracts from the Directors' report: The Company has made a satisfactory result during this year. The production potential of the Company has been considerably increased during the year. The installed spindleage at the end of the year stood at 33.576 as against 26,536 at the close of the previous year. Six Combers, 2 Double winders and two Roto Coners installed during the year have added to the profit earning potential of the Company.

The Company has also launched on a programme of rehabilitation and modernisation by replacing during the current year 3,200 old spindles with the latest type ring frames. The Company's application for licence for installing 300 automatic looms for production of cloth for export market only stands a fair change of being considered favourably.

For the rehabilitation and modernisation programme the directors propose to raise the required funds by the issue of 6,915 equity shares to the existing shareholders in the proportion of one right share for every two shares held by them. Circulars in regard to this issue are being issued. The right shares will rank for dividend for the year 1961 equally with the existing shares i.e., they will be entitled to dividend on the nominal value of shares for the full year. The directors hope, the new issue will be fully taken up by the existing shareholders.

Accounts in brief as at 31st December 1960 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.

N.B.—Adjustments include the balance brought forward from the previous year; provision for expenses for in a previous year not required and excess depreciation in previous years written back.

* On the increased ordinary capital of Rs. 1,25,00,000. The dividend for 1959 was on a paid up ordinary capital of Rs. 63,00,000.

Extracts from the Directors' report: Keeping in view the trading conditions which prevailed during the year the directors consider the working results to be satisfactory. The directors are happy to report that they have been able to recommend payment of dividend on the increased capital within a short period after the issue of new shares which were allotted on 3rd June, 1960. An addition of 30 per cent has been made to the dividends proposed on the Preference Shares in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act. 1960.

As mentioned in the last year's report the Company floated new shares in April, 1960. The fact that the equity issue was heavily oversubscribed shows the confidence of the public in the management of this Company. The shares subscribed by the public out of the new issue and allotted by the directors amounted to Rs. 68.25.800 thus increasing the paid-up capital of the Company to Rs. 1,42,25,800. The Company's shares are quoted both on the Calcutta Stock Exchange and the Bombay Stock Exchange.

Cotton Textile Unit.—As reported last year the trading conditions in the Cotton Textile Industry showed some improvement towards the end of 1959. The cost of production, however, increased due to rise in the prices of cotton and other consumable stores and higher wage bill. Due to failure of cotton crop in 1959-60 season on account of adverse climatic conditions there was scarcity in the supply of Indian cotton. Consequently the prices soared high and pierced the ceilings. The Government had to reintroduce the quota-system for Indian cotton with a view to ensure equitable distribution. Foreign cotton was also imported to fill the gap in the supply of indigenous cotton. The implementation of the Wage Board's recommendations from 1st January, 1960 imposed an additional burden on the Company.

With a view to hold the price line the Cotton Textile Industry agreed, at the request of the Government, to reduce the prices of cloth and yarn from 1st August, 1960 by making only such additions to the prices prevailing in August, 1959 as were commensurate with the increase in the cost of production. All possible efforts are being made by the Industry to step up production in order to meet the shortage in supply. This Company too has started running 3rd shift partially.

During the year under report the Company installed Combing Machines which have already been put into operation. The Company has also put up a Sanforising Plant recently with a view to produce sanforised cloth. Thus the Company is making all possible endeavours to keep its plant and machinery up-to-date so as to keep pace with the modern developments in the technique and finish of cotton textile fabrics. Schemes for replacement of machinery and other equipments of spinning, preparatory and weaving sections and wet processing department are also in hand.

Rayon Unit.—The Rayon plant and other auxiliary units viz., the Sulphuric Acid and Carbon-bi-Sulphide Plants which started operation in August, 1959 worked satisfactorily during the year. The rayon filament yarn produced by the plant has been well received in the market and ranks among the best products of viscose rayon in the country.

The power failure in the Kanpur Electricity Supply Administration caused by the recession of the Ganges River in November, 1960 dislocated the working both of the Textile and Rayon units resulting in a considerable loss to the Company.

Expansion Programme.—The Company is going to put up a plant for the manufacture of Sodium Sulphate to be recovered as by-product from the Rayon plant. Orders have been already placed for the import of the requisite plant and machinery from West Germany and the same are expected to be shipped shortly.

The Company has been further granted licences for the following: Expansion of the existing rayon plant form 5 tons to 10 tons per day; Plant for producing rayon grade pulp from cotton linters with 10 tons per day capacity; and Fertiliser Plant for manufacture of superphosphate with a capacity of 40,000 tons per annum. The Company is working up all these schemes and will go ahead with them as early as possible.

Accounts in brief as at 31st December 1960 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.

Proposed dividend (taxable)	90 (6%)	75 (5%)
Carry forward	6	13

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: During the year under report, the Mills worked for 306 days in double shifts with an average of 31.573 spindles spinning cotton yarn from 2s to 40s. and 60s to 80s. The purchases of cotton, Indian as well as imported were restricted. The prices of yarn upto counts 40s (Indian) were under the control of Indian Cotton Mills Federation in concurrence with the Textile Commissioner. During the year the workers were paid increased wages consequent upon implementing the recommendations of the Textile Wage Board, and with the increase in living index the rate of dearness allowance was also increased. Considering the age of the machinery and the prevailing conditions of trading, the directors consider that the profit earned by the Company is satisfactory.

During the financial year under report, the Weaving Machinery was dismantled and sold. The proceeds of the sales were utilised for the renovation of the machineries.

The Industrial Finance Corporation has sanctioned a loan of Rs. 20 lakhs for the renovation scheme, out of which a sum of Rs. 10 lakhs have been received so far against the machineries ordered and received under this scheme till this date. Further, the management have arranged for purchase of machinery under deferred payment basis to a value of about Rs. 5,50,000. Out of this, machineries worth Rs. 3,50,000 have been received after the close of the financial year. The building for the housing of the blow room machinery is in progress and is expected to be finished by the end of May 1961, and the machineries received under the renovation scheme will be installed by that time. All the preparatory and spinning machinery under the above scheme are expected to be delivered by August 1961. The commitment of the Company for the purchase of capital goods after close of the financial year till date of this report is Rs. 1.57.000 (C.I.F. basis).

N.B.—Adjustments represent the actual debit balance carried to the balance sheet.

* Adjusted against the loss brought forward from the previous year.

† This includes provision for development rebate also.

‡ This loss is deducted from the reserve account.

Extracts from the Directors' report: The fall in profit in the year of account as compared to last year's results, is mainly due to the increase in cost of yarn but without corresponding higher cloth prices.

The directors recommend a dividend of 5 per cent tax-free on preference shares, 10 per cent on equity shares and 10 per cent on deferred shares, amounting in all to Rs. 1,38.262. The balance of profit is to be set off against prior years' losses.

N.B.—Adjustments include the balance brought forward from the previous year; profit on sale or adjustment of fixed assets and liabilities in respect of previous years written back.

* After adjusting the debit balance brought forward amounting to Rs. 35,408.

Extracts from the Directors' report: During the period under review a sum of Rs. 24,42,176 was paid as excise duty which is 16.95 per cent of the total sales of the Company's mills cloth for the year.

The working results for the year were affected by an unjustified strike, which lasted for a period of 51 days. Taking this into account, the profits made should be considered satisfactory.

A mercerising Range has been received and is under erection. A cloth *Singeing Machine* has also been installed. Further additions of machinery for betterment of quality, such as, *Barber Colman Winding Machine*, *Hot Air Stenter* and *Whitin Combers* are expected to arrive and soon go into operation. The modernisation of the *Ring Frames* has started giving satisfactory results and the Spinning Preparatory is also in the process of modernisation.

The directors have provided depreciation for the year under review in accordance with the Companies (Amendment) Act 1960 on book value which is in excess of Rs. 3.4 lakhs approximately than what is required under Income Tax Act. The arrears of depreciation could not be provided due to inadequacy of profits in earlier years.

Accounts in brief as at 31st December 1960 are as under:

COMPANY AFFAIRS

(*Concluded from page 1046*)

the tax-free dividend of 20 per cent paid for the years 1958 and 1957.

The financial position of the Company is sound. The paid-up capital is Rs. 1.50 crore, comprising Rs. 50 lakhs in 7 per cent 50,000 preference shares of Rs. 100 each and Rs. 1 crore in 10 lakh ordinary shares of Rs. 10 each. It is supplemented by reserve and surplus of Rs. 2.58 crores. The unsecured loan of Rs. 14.56 lakhs and current liabilities and provisions aggregating Rs. 165.17 lakhs are more than adequately covered by current assets amounting to Rs. 279.98 lakhs. In addition, the Company has investments of Rs. 256.74 lakhs in Government securities and the ordinary shares of Balmer Lawrie Company, I.C.I.C.I. and Burma Oil Company. The Company's gross block of Rs. 106.60 lakhs has been well written down to Rs. 51.23 lakhs, the depreciation provided so far being Rs. 55.37 lakhs.

The Rs. 10 fully paid shares are currently quoted at Rs. 28.94 *cum-div.* On an *ex-div.* basis and at the proposed rate of dividend, the net return works out to 7.82 per cent per annum.

The Permanent Magnets Limited has placed orders for the purchase of machinery and the deliveries are so arranged that the machinery will reach Bombay in January next. Tenders for the construction of the building for the factory have been called for and it is expected that the plant will go into production by the end of April next. Share certificates are ready which can be collected from the Company's Bombay Office.

Notice

THE INDIA SUGARS AND REFINERIES LIMITED

HOSPET (Bellary District)

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-seventh Annual General Meeting of the Company will be held at the Registered Office of the Company at Hospet (Bellary District) on Thursday, the 29th June 1961, at 4 p.m., to transact the following business:—

(i) To receive and adopt the Directors' Report and audited accounts for the year ended 30th September 1960;

(ii) To declare a dividend on Ordinary Shares;

(iii) To elect a Director in place of Shri M. R. *Morarka*, who retires by rotation and being eligible, offers himself for re-election;

(iv) To elect a Director in place of Shri Madanlal Somani, who retires by rotation and being eligible, offers himself for re-election;

(v) To appoint Auditors for the year 1960-61 and fix their remuneration.

You are requested to be present in person or by proxy.

The Share Transfer Books of the Company will be closed from 16th June 1961 to 29th June 1961, both days inclusive.

By Order of the Board,
per pro THE INDIA SUGAR AGENCIES PRIVATE LTD.,
C. D. CHOUDHARY,
Managing Agents.

HOSPET,
Dated 22nd May 1961.

Note.—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and such proxy need not be a member of the Company. Proxies in order to be effective must be received at the Registered Office of the Company not less than 48 hours before the Meeting.

The dividend when declared will be made payable on or after 6th July 1961 at the State Bank of India, Madras, and Dividend Warrants will be posted to the Shareholders, whose names stand in the Register of Members as on 29th June 1961 or in accordance with their mandates. Shareholders may kindly intimate to the Company any change in address immediately.

DUNLOP RUBBER CO. LTD.

RECORD TURNOVER

THE Sixty-second Annual General Meeting of the Dunlop Rubber Company Limited was held on May 29 in London. Sir G. Edward Beharrell, the Chairman, presided and, in the course of his speech, said:

"The year 1960 has been one of considerable growth and the volume of goods sold was greater by about 5 per cent when compared with the previous year. Turnover increased from £261 million to a further record figure of £275 million. Our sales in the last few months were, of course affected by the recession in the motor industry in several countries, but sales in other directions were well maintained.

"The benefit from the increased volume during 1960 went a considerable way towards offsetting the cost increases with which we were faced during the year. Of these, the price of rubber was the principal factor—and this is referred to and illustrated in the Directors' report—but increased labour rates were also important. In total, these two items increased our costs, when compared with those of the year before, by several million pounds. On the other hand, selling prices were not raised to a commensurate degree; but as a result of greater efficiencies and the additional turnover our profit was only slightly lower than in 1959. A noteworthy feature was the fact that the overall profit from our United Kingdom operations was 15 per cent higher, and the results achieved by some of our units were considerably better than in that year.

Dividend

"Taxation absorbed a higher proportion of our net profit for the reasons already stated in the Directors' report, and this, of course, affected our disposable profit. Nevertheless, the Directors consider that the results and prospects justify an increase in the final Dividend from 1*s.* 2*d.* to 1*s.* 3*d.* per 10*s.* stock unit, thus making the total dividend for the year 1*s.* 7*d.* or 15.5/6ths per cent. I hope stockholders will approve their recommendation. At the same time I would like to point out that, in each of the last four years, the ordinary dividend has been increased and that, allowing for the bonus issue in 1959, the total rate paid and recommended for 1960 is over 40 per cent higher than the rate paid for 1957, whilst the dividend is still twice covered. I would also like to advise stockholders that the Board has decided that the present disparity between the interim and final payments should be reduced. Therefore, in the absence of unforeseen circumstances, the interim dividend for 1961, to be announced in October, will be at a higher rate than in 1960, although this must not be taken to imply a higher distribution in total for the year.

"It would seem that the time of accord between the countries of the Common Market and the Free Trade Association may not be far off. At the very least, the ultimate probability of a grander economic design has ceased to be a flight of fancy. This is the time of the countdown, and for the country and the individual firm we are entering a period when the possible consequences of the alliance should be carefully and urgently considered. We have the chance now to temper our enthusiasm with facts.

"For one thing, too much should not be expected too quickly from the larger trading area. Even when tariffs have disappeared and fiscal policies have been suitably related, there is no reason to believe that problems of production and distribution will disperse in a spirit of economic unanimity. Too much, perhaps, is sometimes read into the example of the Iron and Steel Community. I would find it very difficult to visualise, for example, the fast emergence of a single sales policy within Europe for some of our major products even after other discords have been harmonised.

"In contrast with the early months of 1960, but, in accordance with our expectations, the current year started quietly, largely due to the recession in the motor industry which persisted until fairly recently.

"For the year as a whole, it is too early to say how we shall fare. Like all manufacturers as widely based as we are, we cannot isolate ourselves from the economic conditions of the world's many parts. We are not, however, dissatisfied with the prospects and forecasts of most of our divisions and companies and we have good reason to hope that our current year's results will show further progress."

The report was adopted.

MONEY SUPPLY IMPROVES

(*From Our Own Correspondent*)

BOMBAY, 31*st May*

Thanks to return of funds from upcountry centres and the consequent improvement in supply of loanable funds, the short-term money market ruled easy especially in the early part of the week. Call money rate among exchange and Indian banks stood at 4½ per cent. Demand for funds was well maintained. The volume of business was quite substantial, despite the reluctance of some lenders to lend at the ruling rate. The other rates did not show any change. For purposes of record, rates are given below:

	Per cent
Inter-bank call money:	
Exchange and other large Indian banks	4½
Other banks	4½
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3½
(v) 12 months	4

The results of the 91-days' Treasury Bills of the Government of India sold through weekly tenders show that the total amount offered and accepted was Rs. 2 crores, as against an invitation for an equivalent amount. The average rate of accepted tenders was unchanged at 2.7560 per cent per annum. 91-days' intermediate Treasury Bills sold from the 24th to 27th inst. amounted to Rs. 33 lakhs. Their sales are being continued from 31st May to 3rd June.

A decline of Rs. 22.26 crores in notes in circulation is revealed by the statement of the Reserve Bank of India for the week ended 26th May 1961 as compared with the previous week. As the notes held in the Banking Department have gone up by Rs. 12.88 crores, the notes issued have shrunk by only Rs. 9.38 crores. Foreign securities have remained unaltered at Rs. 113.01 crores, while balances held abroad have improved slightly by Rs. 25.22 lakhs, so that the total foreign assets has risen by that amount to Rs. 136.12 crores. Deposits of banks with the Reserve Bank of India have increased by Rs. 58.74 lakhs to Rs. 77.02 crores. On the assets side, other loans and advances have fallen by Rs. 5.11 crores to Rs. 116.81 crores. Of these, borrowings against usance bills are of the order of Rs. 12.65 crores, as compared with Rs. 16.27 crores a week ago.

The statement of the Scheduled banks for the week ended 19th May 1961 shows a decline of Rs. 8.60 crores in demand deposits and an expansion of Rs. 45.17 lakhs in time deposits. The deposits of the State Bank of India have contracted by as much as Rs. 13.40 crores which means that the deposits of other scheduled banks must have actually expanded. The borrowings from the Reserve Bank of India have come down by Rs. 12.65 crores and the sum borrowed against usance bills from the same source by Rs. 7.37 crores. The borrowings from the State Bank also display a similar trend, those of demand and time nature receding by Rs. 1.37 crore and Rs. 82 lakhs, respectively. On the asset side, advances and bills discounted (bank credit) have declined by Rs. 12.39 crores, bringing down this portfolio to Rs. 1,286.21 crores. A year ago, the advances and bills discounted were of the order of Rs. 1,127.34 crores. Over the week, the advances of the State Bank contracted by Rs. 3.39 crores. The investments of Scheduled banks as a whole have fallen by Rs. 9.34 crores, but as far as the State Bank have shrunk by as much as Rs. 10.33 crores, it is obvious that investments of other Scheduled banks have risen by Rs. 1 crore.

The notable development in the Government securities market during the week was the opening of the subscription list in respect of the re-issue of the Central Government 3½ per cent 1967 conversion loan. The total outstanding amount of the three maturing loans eligible for conversion (3½ per cent 1961, 2½ per cent 1961 and 3 per cent Hyderabad loan 1951-61) are placed at Rs. 139 crores. The response to the conversion loan is said to be quite good. There was good inquiry for short-dated loans but turnover was not very substantial, as sellers were few. In the Central loans sections, the prices of practically all securities remained firm at their existing rates. 3 per cent 1986 (conversion loan of 1946) shed 10 nP to Rs. 73, while 3 per cent 1970-75 first development loan improved by 10 nP to Rs. 90.80. In the State loans sections, 4 per cent 1969 loans were keenly bid. Andhra and Uttar Pradesh loans registered some gains; the former closed 5 nP higher at Rs. 98.40 and the latter 10 nP at Rs. 98.45. Other State loans were unchanged.

In the foreign exchange section, the rupee weakened slightly in relation to the U.S. dollar. The banks' selling rate for ready T.T. on New York declined by 25 nP to Rs. 479.50 per 100 dollars. The selling rate remained unaltered at Rs. 476. In the New York exchange market, the pound sterling lost further ground *vis-a-vis* the dollar. The latest available rates (30th May 1961) are 279.060-279.100 cents per £ for spot and 277.820-277.860 per £ for three months' forward. Over the week, the pound lost 0.17 cent in the spot and 0.22 cent in the three months' forward.

LINSEED STEADY

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 29*th May*

In sympathy with the advancing trend of other oilseeds markets locally and at the other main centres, linseed prices have continued to rise and sellers have been very reserved. Crushers have shown a keen interest and small quantities have been changing hands daily with buyers over. The market has been firm in sympathy with seeds.

Stocks in the hands of sellers, are small; local buyers are showing interest daily, but mills are reluctant to do business for forward except at higher prices, owing to continued scarcity of the seeds supply position.

There is very little activity in the oilcake market; at present we are still out of parity with foreign markets, only small local business being done daily. The latest quotation is as follows:

Ready/May delivery Rs. 26.75 nP per maund.

BULLION EASY

(*From Our Own Correspondent*)

BOMBAY, 31*st May*

An easy trend was in evidence in the bullion market during the week under review. The easiness was due to expectations of slack demand for both gold and silver in the coming weeks, in view of the monsoon. There were also fears of heavy arrivals. Early in the week, it was reported that a bank had sold 3,000 to 4,000 tolas of ready gold. Consequently, prices tended to look down. The decline in prices would have been more marked but for reports suggesting confiscation of several lakhs of rupees worth of gold by the Customs authorities at Bombay, Calcutta, New Delhi and Erode in Madras.

The daily average offtake of both gold and silver during the week was less than in the previous week, being 4,000 tolas and six bars, as against 5,500 tolas and eight bars, respectively. The daily average arrivals amounted to 5,670 tolas of gold and 28 bars of silver, the corresponding figures for the previous week were 6,750 tolas and 29 bars. The floating stocks are reported to be around 35,000 tolas of gold and 400 bars of silver.

Adjustment rates fixed today were Rs. 118.55 per 10 grams of gold and Rs. 198.50 per kg. of silver. The corresponding rates for last week were Rs. 119.50 and Rs. 199.90.

It is understood that the Bombay Bullion Association has requested the Forward Markets Commission to remove the existing special margin requirements on outstanding purchases. The plea is on two grounds. One, off-season has already set in and prices have actually declined to a great extent. Two, the floating stocks are sufficient to avert any possible bull squeeze. The margin on total purchases payable are Rs. 750 per kg. in gold, if the outstandings of a member exceed 30 kg., and Rs. 650 per kg. in silver, if the outstandings exceed 160 bars.

The *Jeth Adhik* (first) settlement in gold was subjected to selling and retreated from Rs. 120.30 to Rs. 118.45 before finishing at Rs. 118.80. The second settlement moved down from Rs. 118.25 to Rs. 117.80 yesterday. It, however, recovered to Rs. 118.05 today. The rate for transferring commitments from the first to the second settlement continued to be against bears. Since the rate was more than a rupee during the major part of the week, the bulls in the first settlement were required to pay a higher margin of Rs. 20 per ten grams. The margin, however, was lower at Rs. 8 yesterday and today because the carry-forward rate declined to 90 nP and further to 75 nP today.

Ready gold came in for selling and receded from Rs. 120 to Rs. 118.45 yesterday but improved to Rs. 118.80 today.

In silver, the *Jeth Adhik* (first) settlement, which had advanced from Rs. 200.30 to Rs. 201.35 on Wednesday the 24th inst., drifted downward to touch Rs. 198.75 on Monday this week. After recovering to Rs. 199.15, the settlement finished at Rs. 198.90. The second settlement fluctuated between Rs. 200.10 and Rs. 198.30 and closed at Rs. 198.50. The rate for transferring commitments from the first to the second settlement continued to be against bears, though the actual rate declined from Re. 1 on Wednesday the 24th inst. to 40 nP today. Since the rate was less than a rupee, no margin was in force.

Ready silver began the week at Rs. 199.45, as against the previous close of Rs. 199.90. Induced by selling pressure, it declined to Rs. 198.30 on the 29th inst. After recovering to Rs. 198.55 today, it finished at Rs. 198.50. The discount under the *Jeth Adhik* settlement was 40 nP, as against 50 nP on Wednesday last week.

The world price of gold in the London bullion market was a shade easy at $35.0618, as against $35.06¼ a week ago. Ready gold improved from 251*s.* 0¾*d.* to 251*s.* 3*d.*, owing to the slight firmness of the pound sterling *vis-a-vis* the dollar. Ready and forward silver, however, were unaltered, the former at 79⅛*d.* and the latter at 79¾*d.* Silver in New York also continued unchanged at 91.375 cents.

The following table shows the trend of the market during the week under review:

Gold	31-5-1961 (closing) Rs.	High Rs.	Low Rs.	23-5-1961 (closing) Rs.
Ready (.99 fine)	118.80	120.25	118.45	119.75
Forward:				
Jeth Adhik*	118.80	120.80	118.45	119.90
Jeth 2nd	118.05	118.50	117.70	119.25
Sovereign	94.25	94.50	94.25	94.50
Silver				
Ready (.996 fine)	198.50	200.60	198.30	199.90
Forward:				
Jeth Adhik*	198.90	201.35	198.75	200.25
Jeth 2nd	198.50	200.10	198.30	199.80
London—	30-5-1961			22-5-1961
Silver Ready	79¼*d.*	—	—	79¼*d.*
Silver Forward	79¾*d.*	—	—	79¾*d.*
Gold	251*s.* 3*d.*	251*s.* 3*d.*	251*s.* 0*d.*	251*s.* 0¾*d.*
New York—				
Silver	91.875 cents	—	—	91.375 cents

* 31*st* May settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES DULL

(*From Our Own Correspondent*)

BOMBAY, 31*st May*

Lack of fresh incentives and uncertainty regarding grant of further export quotas for short-staple cotton were chiefly responsible for the dull trend of the cotton futures market during the week under review. Further, operators preferred to await the reaction of the Centre to the Gujarat Government's renewed plea for urgent measures to meet the problem of heavy stock accumulations in the State. There was, besides, the reported withdrawal of interest in ready cotton by the Cotton Mills Federation. Business actually put through, as a consequence, was considerably restricted, with values moving narrowly.

The I.C.C. August contract, which had touched a high of Rs. 574 on Wednesday the 24th inst., moved down to Rs. 566 on Monday this week. At this level, some support emerged and the contract improved and touched Rs. 571 today. It, however, finished easy at Rs. 569.

Spot cotton was somewhat active. The popular varieties such as CO2 (choice quality), Vijay, Kalyan, Moglai and Kalagin-Wagad evoked good support from spinners. Export section generally ruled dull, in view of the delay in the announcement regarding further export quotas. Kalyan came in for some business, thanks to demand from shippers. Zoda and yellow pickings also attracted scattered inquiries. An important development of the week was the announcement of the extension by one month of the shipping period in respect of the global import quota announced on 23rd November 1960. As a result of this decision, the shipping period will expire only on 30th June next and not earlier. Sudan cotton and short-staple American cotton were well favoured. African varieties also evoked interest from some mills. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

CO2 1,275; Hubli Laxmi 950; Kalyan 840; American 1,235; Sudan XG3L 1,450.

Cotton traders have noted the statement of the Sudanese delegation at the recent meeting of the International Cotton Advisory Committee at Tokyo. The delegation pointed out that Sudan was trying to push up sales of its cotton to Communist countries on the basis of equality and mutual benefits without concluding barter deals. According to it, Sudan "does not intend to extend its cotton production in the long run. It desires to lessen the degree of dependence on one major crop, cotton, and to diversify its agriculture. It plans to cover its arable land with cotton for one-third of the total area and with food and fodder for two-thirds."

Prices moved in a narrow range in the Karachi cotton futures market during the week under review. N.T.R.G. July contract put on 5 nP to Rs. 70.35. May contract went off the board at Rs. 70.70, as against Rs. 71 last week-end. Spot cotton ruled weak, as offerings were quite large, while buying was restricted. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi, the figures in brackets giving last week's rates:

Sind *Deshi* 98 (97); Punjab *Deshi* 93 (94); 4 F Punjab Roller 85.70 (85.80); S.G. 90.70 (90.80); N.T. Roller 92.70 (92.80); S.G. 97.30 (97.20); 289 F Punjab Roller 93.70 (93.80); S.G. 100.20 (100.30).

Listless conditions prevailed in the Alexandria cotton futures market during the week. Traders were not inclined to enter into large fresh commitments either way, as they preferred to await clarifications regarding the latest decision of the Egyptian Government to buy 35 per cent of the shares of all cotton exporting firms. Some in Egypt feel that, in other countries, exporters by general agreement are often strong enough to impose the price which is most suitable to their interests. It is considered indispensable that the U.A.R. Government should do likewise. In some cases also, it is said, foreign Governments would buy very large quantities of cotton without any warning, causing an abnormal rise in prices out of proportion with world rates and placing Egypt in a difficult position to sell its crop in other markets. To quote one report: "By establishing control over cotton exports, the Government will be able to end triangular operations which harm the country. It will also be able to set a quota for each purchasing country according to its real needs, thus rendering re-exports impossible by those countries at lower prices than those fixed by the Alexandria market. The Government will now also have the means of obtaining large quantities of foreign currencies for the working of its economic development plan."

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: July 70.55; *Ashmouni*: June 62.33; August 61.32.

The Liverpool cotton futures market presented dull conditions in the absence of any fresh development. May position closed at 23.90*d.*, as against 24.00*d.* last week-end and July position at 24.00*d.* as against 24.05*d.* Sudan May was quiet at 31.75*d.*

Business in cotton futures at New York was virtually interrupted by holidays for the last three days. The operators noted that the International Cotton Advisory Committee, at the end of its Tokyo session last week, called on the U.S. to strive towards abolition of its dual price system for raw cotton to help solve a major world textile industry problem. In a resolution unanimously adopted by the delegates of 35 countries, the I.C.A.C. pointed out that the widening difference between the domestic and export price of U.S. cotton for the next season was moving away from the desirable objective of a one-price system and could have repercussions on the distribution of trade in cotton textiles. It said that many countries viewed with apprehension the forthcoming increase in the U.S. domestic price and hoped that the new American administration would achieve a solution to this problem without adversely affecting world textile industries.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	26-5-61	22-5-61	16-5-61
Spot	34.25	34.20	34.15
July	33.27	33.25	33.27
October	34.07	34.19	34.05

YARNS LISTLESS

(From Our Own Correspondent)

BOMBAY, 31*st May*

The yarn market moved rather indecisively during the week under review in the absence of any new encouraging development. Inquiries for art silk yarn from consuming centres were at a low ebb and operators thought that offtake would tend to decline in the coming weeks. The floating stocks of imported yarns were reported to be quite comfortable. Staple fibre yarns were somewhat firm, in view of the reluctance of several spinning units to sell 40 x 2 yarns at the prices fixed by the Indian Cotton Mills' Federation. Cotton yarns were dull.

Spot Cupressa Bemberg yarn (60 x 1) encountered selling and dropped Rs. 2.632. The forward delivery (June), however, was well favoured, the quotation moving up from Rs. 2.545 to Rs. 2.560. 40 x 1 J. P. June contract was quoted at Rs.2,908, as against Rs. 2,913. Among imported art silk yarns, 120 Japan and 150 Japan were done at Rs. 1.735 and Rs. 1.777, respectively, same as last week. Among indigenous yarns, 120 National Rayons Bt. cones first grade attracted excellent support and jumped up by 74 nP to Rs. 16.21. But 150 Bt. cones first grade receded by 7 nP to Rs. 15.33.

Business in 40 x 2 staple fibre yarn August contract commenced on Wednesday the 24th inst. Trading in this contract, it may be noted, is not subject to any floor and ceiling rates. Goods of specified 22 mills can be tendered in this contract. Transactions were put through today at Rs. 911. Spot Kohinoors rallied from Rs. 10.87 to Rs. 11.13.

In the cotton yarns section, twenty counts Gokaks fell by 25 nP to Rs. 22.50. New Greats were quiet at Rs. 21.25. Thirty counts Simplex changed hands at Rs. 27. Forty counts Maduras were dull at Rs. 33, while Minaxis improved by 50 nP to Rs. 34. Sixty counts Finlays were unaltered at Rs. 65.39, as also Gokaks at Rs. 50.75. Eighty counts Moderns eased by 10 nP to Rs. 70. Finlays were neglected at Rs. 81.75 and Mahendras at Rs. 68.68.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	31-5-1961	22-5-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
June	2,560.00	2,545.00
Spot	2,632.00	2,645.00
40 x 1 JF June	2,908.00	2,913.00
120 Japan (per 100 kg.)	1,735.00	1,735.00
150 Japan (per 100 kg.)	1,777.00	1,777.00
Staple fibre yarn (40 x 2)—		
August (per 90.72 kg.)	911.00	—
Kohinoor (per kg.)	11.13	10.87
Cotton yarn (per bundle of 10 lbs.)—		
10s Fodar	—	17.50
20s New Great	21.25	21.25
30s Simplex	27.00	—
40s Madura	33.00	33.00
60s Finlay	65.39	65.39
80s Mahendras	68.68	68.68

OILSEEDS FALL AFTER EARLY RISE

(From Our Own Correspondent)

BOMBAY, 31*st May*

May 1961 hedge contracts in respect of castorseed, linseed, cottonseed and groundnut went off the board today. The volume of tenders delivered against these contracts was more or less in line with trade expectations. The delivery orders issued during the month amounted to 2,750 metric tons in castorseed and 225 metric tons each in linseed and cottonseed. As for groundnuts, however, there were no deliveries at all, in view of the wide disparity between spot and permissible hedge contract prices.

The oilseeds market turned easy towards the close of the week, after making some headway in the initial sessions. Castorseeds met with support from shippers who had already entered into export commitments. There was also some support from parties which were inclined to expect a renewal of demand for castor oil from the U.S. and East European countries later in the year. Consequently, prices registered an improvement. The upward trend was, however, reversed subsequently, following larger arrivals from upcountry centres, easy conditions in the spot section and reports suggesting continued pressure of Brazilian supplies in world markets. Groundnuts, too, put on a cheerful appearance initially as arrivals from upcountry centres were limited, with business centering round local stocks. But values drifted downward towards the close, in view of the slowing down of purchases by *vanaspati* manufacturers and crushers at previous high levels. The setback in castorseeds also acted as a damper. Linseed ruled subdued, mainly due to the dull export conditions and limited local demand. In sympathy, cottonseeds declined. With its season coming to an end, sesame was featureless.

Castorseeds September 1961 contract fluctuated between Rs. 178.50 and Rs. 175.87, before finishing at Rs. 176. May contract improved from Rs. 179.25 to Rs. 180 on Thursday, but fell to Rs. 178.12 yesterday. It, however, rose again to Rs. 179 today. Ready Madras eased by 38 nP to Rs. 35.12. Oil Commercial declined by 20 nP to Rs. 14.80. Oil B.S.S. improved initially from Rs. 16 to Rs. 16.20, but fell back later to the last week's closing level.

In the spot groundnut section, Khandesh quality lost 50 nP to Rs. 53.50. Coromandals were lower by 25 nP at Rs. 53.75, although they had touched Rs. 55.50 earlier. Nizam bold was quiet at Rs. 53.50. Oil ex-mill was done at Rs. 22.10. Railway receipts rose initially from Rs. 21.85 to Rs. 22.25, but declined subsequently to Rs. 21.90.

Linseed September 1961 contract shed 10 nP to Rs. 37.56. May contract terminated today at Rs. 37.75, as against Rs. 37.94 last week-end. Bold ready fell by 38 nP to Rs. 37.12. Linseed oil rose from Rs. 15.80 to Rs. 15.90. It, however, closed at Rs. 15.80 today.

Among cottonseeds September 1961 contract eased by 50 nP to Rs. 93.75. May contract lost a like amount and went off the board at Rs. 96.50.

Sesame bold was quiet at Rs. 370. Sesame oil shed 25 nP to Rs. 26.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	31-5-1961	23-5-1961	17-5-1961
	Rs.	Rs.	Rs.
Groundnut			
Nizam bold	53.50	53.50	53.50
Coromandel ready	53.75	54.00	53.50
Khandesh quality	53.50	54.00	53.50
Oil ex-mill ready*	22.10	22.10	21.80
Railway receipts*	21.90	21.85	21.50
Castorseed			
May 1961	179.00	179.25	177.25
September 1961	179.00	177.50	176.25
Ready Madras	35.12	35.50	35.25
Ready Kanpur	33.25	33.62	33.62
Oil B.S.S.†	16.00	16.00	15.95
Oil commercial†	14.80	15.00	14.90
Linseed

Kardi seed	26.75	27.00	26.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

GOOD DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 23*rd May*

A total of approximately 468,000 kilograms was on offer in sale No. 21 held today. Quality showed a further seasonal decline. There was, however, a useful selection from the Nilgiris. There was strong general demand. Highgrowns received better support but were irregular and generally slightly easier. Good mediums sold at slightly lower rates with the exception of a few coloury lines which sold well. Mediums and low mediums, although well supported, generally sold at around last rates. Plain sorts were keenly competed for at firm prices. Black leaf teas received keen competition and were a strong feature. C.T.C. and leggcut sorts realised satisfactory prices. Whole leaf grades were well sought after but tended easier.

	1961	1960
	Rs.	Rs.
Low mediums	4.40-4.55	3.64-3.75
Mediums	4.55-4.65	3.75-3.97
Good mediums	4.70-5.15	4.08-4.30
Nilgiri B.O.P.	Rs. 4.55-5.80	

The average price realised in sale No. 21 was Rs. 4.58 per kilo as against Rs. 4.60 a week ago and Rs. 4.03 in the corresponding sale last year.

Dust Sale No. 21: 265,000 kilograms were offered in dust sale No. 21, held on 15th May 1961. There was good demand at easier rates. Highgrowns sold readily but were irregular and generally lower. Good mediums were taken up at a drop of 10 nP per kilo. The coloury Wynaad descriptions, although well competed for, declined by up to 25 nP. Mediums and low mediums were irregular and easier up to 15 nP with the powdery sorts a weak feature. Residuals received better support but at easier rates. C.T.C. and legg-cut teas came in for strong support at fully firm to dearer rates.

The average price realised in dust sale No. 21 was Rs. 4.29 per kilo as compared with Rs. 4.41 a week ago and Rs. 3.92 in the corresponding sale last year.

Export Quota: The price for special licence is quoted nominally at 1/6 nP per kilo. There are few buyers in the market. There are sellers of new season's quota at 4 nP per kilo but no buyers.

Colombo: Approximately 7 million pounds were offered this week. There was good general demand although highgrowns and good mediums were generally slightly lower following quality. Low mediums and plain teas were firm.

London: There was no sale this week due to Whitsun holidays.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Ltd. wire:

Sale No. 22: 472,000 kilograms. Strong general demand. Plain and low medium fully firm. Mediums and good mediums 5 to 10 nP easier. Nilgiris irregular, but generally easier.

TEAS IRREGULAR

(From Our Own Correspondent)

CALCUTTA, 30*th May*

Modest demand was in evidence during yesterday's export sales, and prices were about steady. Shipping of new season's teas showed some improvement and is expected to rise in the coming few weeks.

That demand has not so far been as good as earlier expected has been a disappointment to trade circles. However, such a phenomenon is attributed to buyers' expectations of a marked increase in world tea output and as a result they anticipate keener competition among producing countries to secure increased markets.

It remains to be seen if India would be able to step up exports commensurate with the present trend of increased production. Trade circles would once again plead with the authorities for revision of the export duty and the total abolition of the duty on plain teas, which have been priced out of the market. Whether or not India would be able to export more tea depends upon India's ability to secure some of her lost markets for plain teas.

Dusts on offer during last week's sales for internal consumption amounted to 22,927 packages. There was good general demand but prices were irregular. An irregular trend was recorded in orthodox teas as while the smaller types hardened, others eased. Legg-cut teas were steady and the bright lines recorded higher prices. There were a few withdrawals of medium C.T.Cs possessing clean leaf appearance, but earlier in the sales, prices of these were firm. The fibrous teas met with more support at lower rates. The quotations per 1 kg. inclusive of excise duty were: Good Assam C.T.C. dust—not quotable; medium Assam C.T.C. Rs. 5.80 to Rs. 6.30, legg-cut dust Rs. 4.35 to Rs. 5.20, medium Assam dust Rs. 4.25 to Rs. 4.80, and plain orthodox dust Rs. 4.05 to Rs. 4.40.

Leaf on offer amounting to 34 chests met with support at irregular rates.

There was good demand during yesterday's export sales and in accordance with quality prices improved. Offerings totalled 27,140 chests. Keen competition was offered to Assam C.T.C. teas, and despite the irregular tendency prices added with B.Ps being the strongest feature. Among Darjeelings, offerings of which amounted to nearly half of the total on offer, the teas possessing flavour were favoured while others eased following a decline in quality. Orthodox teas were in good demand but prices were irregular. Fannings recorded the largest decline, while a few useful liquoring well-made teas recorded an addition. Leggcut Dooars were also sold at firm rates, but the poorest lots among these eased. Quotations per 1 kg. inclusive of excise duty were: Plain fannings Rs. 4.55 to Rs. 4.60, clean plain pekoe Rs. 5.10, and plain B.P. Rs. 4.70 to Rs. 4.75.

JUTE STEADIER

(From Our Own Correspondent)

CALCUTTA, 30*th May*

Following strong rumours of imminent block closure of mills for about a fortnight, prices of jute goods were steadier during the week under review. An important development in the week was the fall in fibre prices by Re. 1.50 per maund for all available varieties offering. This latter development followed the re-fixation of maximum prices at Rs. 56 a maund basis Assam bottoms by the Indian Jute Mills' Association, as against Rs. 62 a maund which was the maximum price fixed nearly three months ago when the system of maximum prices was introduced in an attempt to arrest the upward spiral in the fibre market. It would be remembered that the Government of India, perturbed at the hardening prices of the fibre, desired to freeze all fibre stocks and introduce a system of control. However, at its intervention, the I.J.M.A. was given a chance to take some action for lowering fibre prices. Subsequently, the Association fixed maximum prices on a voluntary basis and directed its constituent mills not to buy fibre at above the maximum prices. That within a short period of three months fibre prices could be brought down by Rs. 6 a maund, at a time when the fibre shortage situation is daily growing in severity, has been hailed by trade circles. This performance does commendable credit to the I.J.M.A. and shows that unofficial control can achieve what official control may not achieve. An outstanding feature during the week was that, following the lowering of the maximum prices, fibre prices gave way by Rs. 1.50 below the now-lowered maximum levels. Offers increased remarkably, but mills lent only restricted support in order that the falling trend might not be disturbed.

In the last three months, prices of goods have also fallen. This fall works out to Rs. 500 a ton in the case of hessian and Rs. 400 a ton in the case of sacking. On the other hand, the fall of Rs. 6 a maund in fibre prices works out to only Rs. 162 a ton. In other words, despite the fall in fibre prices, simultaneous business by mills in goods and fibre continue to be unprofitable for mills, and it is apprehended that it would not be before the new season that prices of fibre and goods are likely to bear a reasonable economic relationship. At current levels, the average loss of mills per ton of goods sold is believed to be Rs. 250. With the increase in the offers of fibre there have been suggestions of availability of adequate fibre for mills to continue production. The Jute Balers' Association, Calcutta, has, in a statement, pointed out that there is enough fibre available and that the threatened closure of mills should be avoided. The Association believes that the use of hemp and old gunny cloth has resulted in an increase of about 100,000 bales of raw material to mills. Following good rains in the last two weeks, sowing operations in West Bengal have proceeded smoothly, and it is estimated that, in view of the high prices, the area sown would be higher at about 950,000 acres as against 750,000 acres in the last season. In view of the earlier sowing in this season, the area on which farmers would be enabled a second crop would also be larger than last year. This factor also accounts for the higher acreage being sown under jute in this season.

Meanwhile, it is becoming almost certain that mills would be permitted to close down for some time in the near future. It is understood that the Government of India has approved the idea of block closure of mills; however, whether the closure should be for a continuous period or spread over in the next two months between intervals has not yet been decided. There is indeed strong opposition to the closure

move. Labour and trade are agreed that the proposed closure should be avoided, although naturally for different reasons. However, mention should be made of the trade view that, if only Government would permit some imports of Siamese fibre, which has been tested in Calcutta and found to be almost equal to Indian jute in quality, mills can avoid closure.

The week under review in the market was short of two working days. Due to the widespread *hartal* on Wednesday last, transport was disrupted and the market could not function as usual. Friday last was a holiday. Business passing with overseas buyers continued to be slender in the week, and even the marked fall in prices earlier in the week did not result in increasing inquiries. This clearly showed that prices must decline more rapidly and more markedly before overseas buyers could be expected to show greater interest. Earlier in the week, there was good covering business done following interest on behalf of the Government of India. It was also believed that Chinese buyers were interested in heavy goods for near and ready delivery. As a result, the price of ready B. twills was steady at Rs. 166.00 and that of ready hessian 40" 10 oz. at Rs. 55.00. This was followed by selling pressure on Tuesday last; as a result B. twills lost to Rs. 164.50 and hessian 40" 10 oz. to Rs. 54.25. Some business on local bazar account was done at these levels, but since this was not substantial, these prices were maintained on Thursday. Over the week-end, however, prices improved as a result of the report that the Union Commerce and Industry Ministry agreed to the proposal for a block closure of mills, the timing and duration to be settled subsequently. Ready B. twills hardened to Rs. 166 and ready hessian 40" 10 oz. to Rs. 54.75.

Following selling pressure prices recorded handsome declines during yesterday with B. twills being lower at Rs. 161.25 and hessian 40" 10 oz. at Rs. 52.50. Mills were keen sellers, but inquiries from overseas were limited.

The reduction of Rs. 6 per maund in the maximum prices of the I.J.M.A. was the starting point for a declining trend in fibre prices in the week. Sellers were keen for business but mills continued to be reserved. Reports of good rains continued to be received from the districts and expectations of an earlier crop coupled with the imminent closure of mills for some time for want of jute lent sobriety to the fibre market, and this accounted for this week's decline in prices below the lowered maximum prices. Opening and closing quotations for the principal varieties are given below:

(In Rs. per maund against May-June delivery)

	Opening	*Closing*	*Decline*
Assam bottoms ...	56.00	54.50	1.50
Northern bottoms	55.00	53.50	1.50
Daissee bottoms ...	58.00	56.50	1.50

METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 30*th May*

Following higher advices from foreign markets, steadier conditions were in evidence in the metal market during the week under review. On the London Metal Exchange, tin reached a high of £870 a ton to close at £869. It was noted that only a few points were necessary to reach the level of £880 a ton since if the price reaches this level, in accordance with the International Tin Agreement, the Buffer Stock Manager in London is expected to sell so that demand would be fully satisfied and the price would not move farther than £880. However, it is not believed that the Manager has any mentionable stocks with him, and if this is so it is apprehended that the price may cross the level of £880. Nevertheless, considerable stocks are held in the United States on Government account and if the U.S. Government decided to release a portion of its stocks, the price situation would be kept under control. It should be noted that, according to reports from producing countries, there is the apprehension whether the six producing countries would be able to produce even as much as 120,000 tons during this year as against the earlier estimate of 145,000 tons. This means that the shortage situation has not as yet entered the worst phase! Locally, stocks are extremely limited, and strong demand maintained the quotation at the higher level. Copper scrap prices were also firm here but the scrap market was paid less attention in view of larger imports of the virgin metal in April, these amounting to 4,816 tons as against 1,807 tons in March. On the London Metal Exchange, electrolytic copper closed firm at £246½ a ton after being higher at £249¼. Electrolytic zinc was also maintained firm here, virgin lead being unchanged at Rs. 130 per 100 kgs.

FOODGRAIN ARRIVALS POOR

(From Our Own Correspondent)

HAPUR, 29*th May*

Fully steady conditions were witnessed in the foodgrains markets during the week under review, as, despite good *rabi* crop, arrivals were poor. Following the removal of restrictions on the zonal movement of wheat announced early last month and the more recent decision to lift the curbs on bank advances against wheat, the Government of India has now decided to give option to roller flour mills to buy their wheat requirements from indigenous stocks in the open market or from central stocks of imported wheat. This decision has followed the general decline in the prices of wheat.

Wheat at Hapur ruled quietly steady during the week to be quoted on Monday at Rs. 14.50 a maund for average quality and upto Rs. 16 for superior farm produce. Daily arrivals of wheat, which were slightly better at an average of 1,500 to 2,000 maunds, were being lifted mostly by consumers and there was as yet a small stock of wheat here at 12,000 maunds. Wheat arrivals are likely to mount soon, as cultivators have now almost finished winnowing and threshing operations. Offtake from fair-price shops which were selling imported wheat has considerably declined all over the State of U.P., thanks to the advent of new wheat crop in markets.

Rice also ruled steady during the week in line with wheat and gram. Demand, too, was reported to be better and week-end prevailing prices were:—rice *sela mainpuri* Rs. 20.50; *gainda kutcha* Rs. 20.50; *ramajwayan sela* Rs. 23.75; *raimunia sela* Rs. 25; *basmati sela* Rs. 28 to Rs. 30; superior Rs. 32 to Rs. 38 a maund.

Gram was steady on advices from the Punjab from where large quantities of gram were reaching, resulting in larger local stocks at 21,000 maunds. Punjab variety was quoted at Rs. 13.75 and local variety at Rs. 13.25. Barley ruled quiet at Rs. 11, inferior *bejhar* at Rs. 10.62 and *moongia* variety at Rs. 11.25 a maund.

SUGAR DECLINES

(From Our Own Correspondent)

HAPUR, 29*th May*

Sugar ruled quiet during the week, with E-29 Simbhauli quoted at Rs. 107 per bag and in retail at 97 nP per seer, as against the controlled price of Rs. 107.50 per bag and retail price of Re. 1.10 per seer. Some factories have closed their season and the U.P. Government has warned against such closure, if cane is still available in the area. Further exemption in purchase tax has been announced in order to encourage factories to continue crushing. Sugar production is now expected to touch a new high of more than 3.0 million tons. Export prospects are still bleak, despite the Union Government's efforts to arrange exports.

Khandsari ruled quietly steady during the week. Some demand was reported from the consuming areas of Rajasthan, Gujarat and Punjab, but prices were almost stationary at:—inferior Rs. 27 to Rs. 30; superior Rs. 31 to Rs. 34.25; crystal Rs. 33 to Rs. 36.25; *boora* Rs. 40.50 a maund.

Gur sought slightly higher levels during the week, as demand was reported from the consuming areas of South and Punjab, but want of loading facilities hampered despatches. Sunday's offtake was three wagon-loads to Gujarat and Punjab. Daily arrivals were poor, at an average of 75 maunds and local stock is put at 50,000 maunds. Wagons are only available by allotment and requisitioned wagons of last two months were not made available. Prevailing prices were:—dry best Rs. 16; *kotha* dry Rs. 15.50; dry-wet Rs. 14.75; wet Rs. 14; *shakker* Rs. 16.50 a maund.

TANNED HIDES QUIET

(From Our Own Correspondent)

MADRAS, 29*th May*

Trading in E. I. tanned hides and calves was small during the week, due to seasonal holidays. The market was quiet and there were very poor inquiries from overseas buyers and for inland trade. Stocks had not accumulated in the local market and sellers were not keen to take low prices.

The tanned skins section was also quiet. There was some call for goat skins at less money, but business did not result. Tanners found that the current outturn from their tanneries yielded very poor percentage of higher selections which implied the falling off in the quality of raw supplies. Tanned sheep skins in middle class tannages were a shade easy.

Notice

THE INDORE MALWA UNITED MILLS, LIMITED

Registered Office :
Seksaria Chambers, 139, Medows Street, Fort, BOMBAY 1.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fifty-Fourth Ordinary General Meeting of the Indore Malwa United Mills Ltd. will be held at the above address on Tuesday, the 27th day of June, 1961 at 4 p.m., to transact the following business :—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960.
2. To declare a dividend.
3. To appoint a Director in place of Shri Sitaram Shivnandrai Parasrampuria, who has attained the age of 68 years and who retires from office by rotation, but being otherwise eligible, offers himself for reappointment and to consider and if thought fit to pass the following resolution of which special notice under Section 281 of the Companies Act, 1956, has been received by the Company :—

   "RESOLVED that pursuant to the provisions of Section 281 and other relevant provisions, if any, of the Companies Act, 1956, Shri Sitaram Shivnandrai Parasrampuria, who has attained the age of 68 years and who retires from office by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit prescribed for Directors under Section 280 of the said Act shall not apply to him."

4. To appoint a Director in place of Shri Chandmal Lachhmandas Agrawal who retires from office by rotation, but being eligible, offers himself for re-appointment.
5. To appoint Auditors to hold office from the conclusion of this Meeting until conclusion of the next Annual General Meeting, and to fix their remuneration.

SPECIAL BUSINESS

6. To consider and if thought fit to pass, with or without modification, the following resolutions :—

(i) *As Ordinary Resolutions :—*

(*a*) "THAT the Company gives its approval to the extension of the Office of Messrs. Madhya Bharat Textile Agents, Indore, as the Sole Selling Agents of the Company for the sale of all piecegoods and yarn manufactured by the Company under the Agreement made between the Company and said Messrs. Madhya Bharat Textile Agents, Indore, dated the 25th June, 1955, upto the 30th June, 1961."

(*b*) "THAT the powers given to the Directors to borrow monies on behalf of the Company by Resolution No. 1, passed at the Extraordinary General Meeting of the Company held on the 14th May, 1956 be limited to the sum of Rs. 2 Crores."

(*c*) "THAT the Company, in supersession of Resolution No. 6 passed at the 50th Ordinary General Meeting of the Company held on the 10th June, 1957, do hereby give its consent to the Board of Directors contributing or subscribing to charitable and other funds not directly relating to the business of the Company or the welfare of its employees such amounts as they may think fit, from time to time notwithstanding that such amounts in the aggregate may exceed in any financial year Rs. 25,000 or 5% of the average net profit of the Company as determined in accordance with the provisions of Sections 349 and 350 of the Companies Act, 1956, during the three financial years immediately preceding whichever is greater, but subscriptions shall not in any financial year exceed the sum of Rs. 1,50,000 in the aggregate."

(ii) *As Special Resolution :—*

"THAT the Regulations contained in the document submitted to this meeting and for the purpose of identification subscribed by the Chairman thereof be approved and adopted with such modifications, if any, as may be agreed to at this meeting, as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association thereof."

By Order of the Board,

K. L. SEKSARIA,
Chairman.

BOMBAY, 10*th April*, 1961.

N.B.—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The Share Transfer Books of the Company will remain closed from Monday, the 12th June, 1961 to Tuesday, the 27th June, 1961, both days inclusive.

3. The dividend, when sanctioned will be made payable on and after the 3rd July, 1961 to those members whose names stand on the Register of the Company on the 12th June, 1961, at the Registered Office of the Company, Fort, Bombay, 1, and/or at the Mill Office, Indore (M.P.) upon presentation of Dividend Warrants which will be posted to each member to his last given address.

4. A member is requested to notify immediately any change of address to the Company.

5. The relative Explanatory Statement pursuant to Section 173 of the Companies Act, in respect of the special business under item 6 has been forwarded to the Members of the Company.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings at the end of January 1961, amount to 11.56 crores of rupees.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

PROTECTION OF BANK DEPOSITORS

(*Concluded from page 1029*)

patronage because the belief that the banks in the State system were guaranteed by the State and therefore the depositor could not lose.

"As a matter of unbiased history, therefore, the guarantee of deposits plan proved fallacious and unworkable, whether from the point of view of banking practice actuarial science as applied to the insurability of bank deposits, the effects on the human element within banking, the effects on the public attitude towards banks, the attitude of public bank supervisory officers in respect to their duties and administrative functions, or the fortifying of the banking structure to withstand adverse economic conditions.

"These historical experiences show that the guarantee plan is inherently fallacious and based on erroneous premises and assumptions. It has proved to be one of those plausible, but deceptive, human plans that in actual applications only serve to render worse the very evils they seek to cure."

The favourable record of the Federal Deposit Insurance Corporation has been due partly to the soundness of its operations to date and partly to the fact that it has been operating during a period of improving business conditions. The test of the Corporation and the effectiveness of Federal Deposit Insurance will come when another financial crisis develops. No one knows whether or not the huge reserves available to the Corporation will prove adequate.

While it is important that the depositors of the bank be safeguarded in every way possible, because it is true that he is the innocent party in case of a bank failure, nevertheless the method by which he is to be guarded must be a sound method which actually will accomplish the purpose for which it was created. Perhaps the development of sound banking practice, or the extension of State powers of supervision over banking, and the raising of the standard of banking by a higher type of legislation might provide adequate protection for depositors of failed institutions, because, generally speaking, it can be stated that banks fail because of poor management or dishonesty. Poor management can be overcome to some extent by raising the banking standards through the revision of the banking laws, placing them on a higher plane. Dishonesty can be overcome to some extent by strict supervision of the banking activities of a community through a well-established corps of examiners operating under the jurisdiction of a highly efficient central banking department.

The question of developing deposit insurance in India was mooted by the Rural Banking Enquiry Committee and the Committee of Finance for the Private Sector in 1954. It was, however, felt that, although the proposal was commendable in principle, the time was not yet ripe for the introduction of such a measure in our country. The Indian banks are at present considered to be passing through a period of transition and the risks and uncertainties to which they are still subject would not seem to make deposit insurance immediately workable at this stage. Furthermore, the larger banks, those run on sound lines and enjoy full public confidence, do not apparently look to this proposal with much favour. They feel that, in the event of a deposit insurance being launched in this country, the major brunt of it will have to be unnecessarily borne by them. The problem has, however, once again assumed importance by the failure of the Palai Central Bank.

The Government has begun giving serious thought to the introduction of deposit insurance in India. But the conditions prevailing in our country are so different that the adoption of deposit insurance seems to be beset with serious difficulties. There are two main problems which requires to be solved. In the first place, whether the small banks would be able to bear the cost of the deposit insurance? One practical solution seems to be that these banks should be merged with bigger banks before the deposit insurance takes practical shape. The Reserve Bank of India has acquired statutory powers to force amalgamations and mergers, and there is no doubt that it would exercise this power discretely to rescue tottering banks by effecting their mergers in the bigger banks. It is the small bank which is a menace to the economy of our country and the sooner it is exterminated the better it will be. Consolidations and mergers have been defended for many reasons, such as the attainment of safety and the inability in many areas for a bank to have branches. Bigger banks, which intend to expand, are experiencing great difficulty in securing accommodation for their new branches while the smaller banks, which have been in existence for some years, are in many cases possessed of vast buildings. If the mergers of these banks is brought about, one of the handicaps, which stands in the way of bigger banks to expand themselves, would be removed. Another reason given in support of the merger movement is that it is the only rapid answer to reduction in the number of banks in particular areas where too many banks give rise to serious qualitative credit problems.

One question which is sometimes asked is whether India needs so many banks with their branches scattered in far-flung areas. Why should not India adopt the dual system of banking in operation in the U.S.A.? In this country, there are 48 States and as many legislative authorities on banking. In addition, there are three national legislative authorities so that in all there are 51 legislative authorities to control the banking system of America. The U.S. is also a federation of States but the division of the country into various States is based on administrative convenience. In our country, on the other hand, the basis is linguistic consideration. It is suggested that the country should be divided into six or seven zones, if not for political reasons, for banking purposes, and each zone entrusted to one of the big banks now functioning in the country. These banks would enjoy the same status as the State banks in the U.S.A., while the Reserve Bank of India and the State Bank of India would form the national banking system of the country. This is, however, no satisfactory remedy for the ills of our country. The duality of the American system does not give it strength. On the other hand, it has been one of the causes of too many bank failures in the U.S.A. Each of the forty-eight States exercises its sovereignty in part by chartering banks. In comparison to the national bank laws most of the State laws are liberal. This gives State banks a competitive advantage and requires national banks, on occasion, at any rate to modify their concept of conservative banking.

The second problem is that, after having secured insurance of their deposit obligations, will not the bankers indulge in reckless lending thinking that, even if their advances turn bad, the depositors would not stand to lose because, in the event of liquidation of the bank, they would be paid by the guaranteeing Corporation? This difficulty can be overcome, if stricter supervision of the insured banks is undertaken not by the Reserve Bank of India but by an audit authority responsible to the Deposit Insurance Corporation, or by an authority appointed by the Ministry of Finance. If this suggestion is adopted, there will be three supervisory agencies over an insured bank, namely, (1) statutory auditors appointed under the Companies Act; (2) Reserve Bank inspectors who will conduct inspection under the Banking Companies Act and the Reserve Bank of India Act; and (3) Government supervisory authority.

(*Concluded*)

BANKING

(*Concluded from page 1028*)

market operations as monetary weapon, the paper observes:

"Unwillingness to use open market operations as a monetary weapon may be due to the fact that, in discussions of the long-term rate, the tendency is to take note of the (relatively limited) effects on savers and borrowers, though the main relevant impact, as suggested above, is on lenders. A much more important cause, however, is the natural desire to keep down the cost of servicing public debt. This may well be an important consideration against raising the interest rate; but the functional approach adopted here suggests that this cannot be the end, but only the beginning, of the argument. The reason is that an Exchequer which subsidises several sectors in the economy—part of 'direct controls'—can surely subsidise itself in the matter of the debt burden as well. Since fixing the interest-rate below the equilibrium level cannot reduce the real burden of development in the public sector, the issue need not turn on the nominal cost of servicing public debt. The question at stake is whether India is, or is not, prepared to recognise the true function of monetary policy while taking, simultaneously, adequate action outside the monetary field for carrying to fruition her plans."

Proceeding, the paper avers that Indian economy needs purpose-wise control over investment, in addition to overall control. In recent years, attempts have been made to put monetary curbs on "speculative" or unproductive activity, as, for instance, ban on bank financing of badla business and increased margin requirements in respect of loans against shares. Measures of this kind may be useful so far as they are effective, but the difficulty is, first, of isolating speculative activity from other activity and, secondly, of devising means which, while curbing the latter, will not hit the former. The policy of operating a structure of ceilings over bank advances against specific agricultural products like rice, wheat, oilseeds and cotton also becomes ineffective in checking the speculative spurt in their prices, because the market for credit is a single market and the borrower frustrated at a bank may evade the control by approaching unorganised channels of finance.

Notice

JUGGILAL KAMLAPAT COTTON SPG. & WVG. MILLS CO. LTD., KANPUR

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirty-eighth Annual General Meeting of Juggilal Kamlapat Cotton Spinning and Weaving Mills Company Limited will be held on Friday the 9th June, 1961 at 4-30 p.m. (S.T.) at the Registered Office of the Company at Kamla Tower, Kanpur, to transact the following business:—

1. As special business to consider and, if thought fit, to pass with or without modification the following resolution as an ordinary resolution:—

   "RESOLVED that the 6½% Income Tax Free Cumulative Redeemable Preference Shares of Rs. 100 each which were issued after 31st March, 1960 be treated on the same footing as the 6½% Income Tax Free Cumulative Preference Shares of Rs. 100 each issued prior to that date under the Preference Shares (Regulation of Dividends) Act, 1960 and the stipulated dividend in respect thereof be raised by 30% subject to deduction of tax under Section 18 (3D) of the Indian Income Tax Act."

2. To receive and adopt the Directors' Report and the audited Balance Sheet and the Profit and Loss Account of the Company for the year ended 31st December, 1960.

3. To declare dividends in respect of the accounting year ended 31st December, 1960.

4. To elect a Director in place of Shri Kailashpat Singhania who retires by rotation but is eligible for re-election.

5. To elect a Director in place of Shri Sohanlal who retires by rotation but is eligible for re-election.

6. To elect a Director in place of Shri Govind Hari who retires by rotation but is eligible for re-election.

7. To appoint Auditors to hold office until the next Annual General Meeting and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 20th May, 1961 to 9th June, 1961 both days inclusive.

By Order of the Board,

R. N. GUPTA,
Secretary.

KAMLA TOWER,
KANPUR, *5th May*, 1961.

Notes:—(1) Dividends, as recommended by the Directors, if approved at the Annual General Meeting will be paid to those shareholders whose names are on the Company's Registers on the 9th June, 1961 or to their mandatees.

(2) The Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 in respect of the special business under item No. 1 of the notice is given below.

(3) A member entitled to attend and vote is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a Member.

EXPLANATORY STATEMENT

(*For Item No.* 1)

One of the terms of issue of the 6½% Income Tax Free Cumulative Redeemable Preference Shares of Rs. 100 each which were issued under the Prospectus dated 14th April, 1960 was that they shall rank *pari passu* with the existing 6½% Income Tax Free Cumulative Preference Shares of Rs. 100 each in all respects except that they shall be entitled to dividend only from the respective date of allotment. The proposed resolution is in consonance with this condition. If the 6½% Income Tax Free Cumulative Preference Shares issued prior to 1st April, 1960 are to be governed by the Preference Shares (Regulation of Dividends) Act, 1960 those issued after that date should also be treated on the same footing. No Director of the Company holds any of these shares.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CII. No. 2618 **BOMBAY, 10th JUNE 1961** **PRICE Rs. 2**

THIRD PLAN IN FINAL FORM

THE deliberations of the National Development Council which met at New Delhi last week have naturally aroused country-wide interest. This cannot be attributed to the fact that it met to take yet another look at the draft third Five-year Plan before putting the stamp of its approval. After all, such approval might easily have been taken for granted, considering that the members of the Council have had several opportunities of examining the Plan. But what really lent weight to its deliberations was that quite a few finer points came up for review and led to some lively discussion. Moreover, by fortuitous coincidence, the National Development Council and the Aid-India Consortium met on the same day, though at different centres, and since the outcome of the latter has been particularly helpful, the former came to have an added appeal to the public. If the New Delhi meeting approved the final draft of the third Plan, the Washington conference was responsible for creating world-wide interest in the Plan and for generating the hope that its success could be taken as reasonably certain. The net result of the two meetings has been that the Plan gets to a flying start.

The major outcome of the Council's meeting is that it is now generally agreed that the third Plan will be so framed as to reach the financial target of Rs. 7,500 crores; the physical target is set at a higher figure of Rs. 8,000 crores (for the breakdown of the targets *vide Commerce* dated 3rd June 1961, page 1019). Apparently, this is the minimum to be achieved. Mr. Nehru admitted that the blueprint of the Plan was still vague. He said that it would become more and more definite with experience and added: "Deliberately we have kept it not too clear, because we do not wish to tie ourselves up about the future too much." This means that as the Plan progresses some changes will necessarily have to be made. As things are, there are a few notable differences between the Plan outline as it was in January last and as it has emerged now. Further, the gap between the financial and the physical target continues. Presumably the gap is intended to provide for some necessary adjustments at a later date and also for some incentives for productive enterprise. This at least is the view that has been expressed by the Union Deputy Minister for Finance, Mrs. Tarakeshwari Sinha. In any case, it is unnecessary to regard the gap as some obstacle to successful Plan effort. Only it has greatly distracted public attention from the value and significance of the Plan itself to a meaningless exercise in arithmetical reconciliation.

The Council obviously took its cue from the recent favourable estimates of savings in our economy. The Savings Committee appointed by the Government is believed to have submitted its report which, according to Mr. Nehru, takes an optimistic view of savings. It would appear that the State Ministers who are the members of the Savings Committee felt that it was possible to raise resources to the tune of Rs. 8,000 crores or even Rs. 8,300 crores. It is quite possible that the Council was also impressed by the study of savings undertaken by the National Council of Applied Economic Research. The study has led its sponsors to conclude that, in India, the marginal propensity to save appears to be as high as in many advanced countries and is in fact higher than suggested by previous studies; over the past decade it is estimated to have been of the order of 20 per cent which "augurs well for the future growth and health of Indian economy." It is difficult to hazard a guess about the future trends in resources. It is significant that the Union Finance Minister did not share the optimistic views on the outlook for resources held by other members of the Council. He expressed the view that at present even the outlay of Rs. 7,500 crores should be considered optimistic. By and large, the Finance Minister's view is a correct appraisal of the immediate outlook for resources. An encouraging factor is no doubt the buoyancy in Central and State Government revenues. But the question is whether the public enterprises would yield Rs. 450 crores and whether the scope for new fiscal effort is sufficiently large to permit the Government to raise additional tax revenue to the tune of Rs. 1,710 crores. Sacrifice is no doubt essential for the success of the Plan, but an excessive burden, given a democratic set-up, may conceivably lead to frustration and popular discontent interfering with the progress of the Plan.

Although it is not known whether the Council discussed the different aspects of the Plan in some detail, the official Press note specifically mentions that the consensus of opinion was that transport and communication projects should enjoy a much higher priority. It is a pity that the Council missed the opportunity for examining this vital segment of the economy in greater detail. Current shortages in transport capacity should have induced a greater sense of urgency. The fact is that, if these shortages persist, the Plan would easily flounder. It may be mentioned here that, whereas transport accounted for 5 per cent of the total outlay in the first Plan and 4 per cent in the second Plan, the proportion is only 2.5 per cent in the third Plan. It is known that, at the end of the third Plan, the through goods traffic will move up to 300 million tons, as against 182 million tons at the end of the second Plan, and that out of this total the railways would be able to carry only about 235 million tons, as against a little over 160 million tons at the end of the second Plan. There is no reason why road transport should not be encouraged to carry a much larger proportion of the through goods traffic than the share allotted to it in the third Plan, namely, 60 million tons. Given the necessary facilities, road transport can certainly lift more traffic. This will cut distribution costs and prevent any possible emergence of pockets of shortages. It is of the utmost importance that transport in all its forms should be suitably improved and augmented. And yet, there seems to be only an inadequate appreciation of the case for more and better transport.

The Council has not given any clear indication of its mind on what constitutes a right price policy in the third Plan. According to some Press reports, it endorsed the price policy as laid down in the final draft. It was stressed that minimum prices should be ensured to the agriculturists in respect of foodgrains, oilseeds, cotton and jute and the policy should aim at stability in essential commodities like foodgrains, cotton and oil. One would, however, have expected the Council to give a clearer lead on this issue. This was sadly lacking. The fact is that if the country, in the pursuit of its objective of economic development, overlooks the importance of stability, much of the Plan would go awry. Not only will the internal resources position be disturbed but the availability of external resources will be adversely affected.

It would appear that the receipts and payments position in the third Plan (Rs. in crores), with figures in brackets showing the corresponding estimates in the second Plan, is:

Receipts: Exports 3,700 (3,053); net invisibles nil (420); net capital transactions excluding private foreign investment —550 (—172); external assistance 2,600 (927); draft on foreign reserves nil (598); total 5,750 (4,826).

Payments: Import of plant and equipment 1,900 (—); intermediate products and components 200 (—); maintenance imports 3,650 (4,826); total 5,750 (4,826).

Surely, if production costs are not brought down and quality improved, it will be difficult to envisage an increase of Rs. 650 crores in exports. But it is vital that this increase should take place in the interest of earning sufficient foreign exchange to finance the country's rising import requirements.

Finally, it seems particularly odd that the Council should have met and dispersed without devoting any attention to the financial and physical requirements of the private sector. The oft-repeated platitude that the two sectors are parts of a single whole and that they are interdependent becomes meaningless if, at the highest levels, no attention is paid to the complex nature of the problems in the private sector. What are the prospects of its raising the resources it needs for its development? How will the vastly increased fiscal effort affect its savings capacity? On what basis will the Government allocate scarce foreign exchange resources between the two sectors? These are issues of vital significance to the future of the country's economy. Strangely enough, they do not seem to have figured in the Council's deliberations.

GROWTHMANSHIP

MR. Colin Clark, a world-renowned authority on problems of economic growth and one-time economic consultant to the Government of India, needs no introduction to economists, students, businessmen and planners in this country. This lively and stimulating economic thinker is now distinctly seen as an *iconoclast*, which word, in its figurative sense, means "one who assails cherished beliefs." The medium through which he has assailed some current economic theories is Hobart Paper 10 on "Growthmanship," with its significant sub-title, 'A study in the mythology of investment,' published recently by the Institute of Economic Affairs, London—an independent research and educational organisation. If brevity is the soul of wit, this paper of just 64 pages has it in a unique measure. Two main issues have been examined here by Mr. Clark—first, whether

growth should take precedence over stability in the value of money, and, secondly, how best to promote it. In this examination, the author has criticised the present excessive preoccupation with economic growth and come to the conclusion that the role of investment in growth is much more complex than many economists have supposed. It is this "excessive preoccupation with economic growth" that has led, according to Mr. Clark, to the advocacy of unduly simple proposals for obtaining it and to the careful choice of statistics—which Prof. J. K. Galbraith described in another context as a bogus use of figures—"to prove that countries with a political and economic system which you favour have made exceptionally good economic growth and that countries administered by your political opponents have made exceptionally poor economic growth." And he has also given impressive reasons for arguing that healthy and continuing growth is not possible with persistently rising prices.

Mr. Colin Clark has a fundamental objection to such "persistently rising prices" because they constitute a species of social injustice. As the principal sufferers from rising prices are pensioners, civil servants, teachers and others whose salaries are adjusted infrequently and all those who have put their small savings in the savings bank deposits or life insurance, the humanist in Mr. Clark would condemn anyone, who knowingly permits or condones a policy that leads to persistently rising prices as morally responsible for plundering the savings of the poor and other groups who cannot help themselves. As a discerning economic thinker, he also assails the belief that rising prices are an unavoidable consequence, or a prior condition, of satisfactory economic growth. Both these statements, according to him, are untrue, for there is already enough evidence from several countries to show that there is no necessary connection between economic growth and price changes. In fact, both Victorian Britain and modern Japan, for instance, provide two telling examples of rapid and sustained economic growth during periods of stable prices. He even goes a step further and says that persistently rising prices for a long period seem to impede economic growth.

If the question of prices has not been dealt with in its proper perspective so far, it is because the emphasis in growth economics has been concentrated on one of the factors concerned, namely, investment to the exclusion of most other relevant factors of which 'organisation' is a crucial one. While investment of capital is undoubtedly necessary for economic growth, it is certainly not the controlling or predominant factor. Mr. Colin Clark would have it that the principal factors in economic growth are not physical but human and that the latter ones develop steadily but slowly. 'Growthmanship,' which consists in saying that if more economic growth is wanted all that is to be done is to invest more, has thus come in for the severest condemnation at the hands of the author.

It is in this context that Mr. Clark has questioned the appropriateness of using the concept of 'capital-output ratio.' He, of course, concedes that the 'capital-output ratio' may be an accurate description of things as they are now, but it would be a big mistake, in his view, to think that, if we add three units to the national stock of capital, output will necessarily be raised by one unit per annum, or whatever the ratio is. A causal relationship of the kind provides the basis for the 'new theory of growth' which is to the effect that, "as, roughly, three units of investment should produce one extra unit of income, annual investment running at around 15 per cent of national income can thus, if wisely channelled, create a 5 per cent annual increase in national income." As a general economic law, its validity is questioned by Mr. Clark who has also criticised the economists for not considering so far even the possibility of a falling capital-output ratio. If, thus, the correlation between capital and output is open to question, so also is the related one between the rate of investment and the rate of economic growth. In regard to the latter, Mr. Colin Clark has shown that high investment and rapid economic growth do not necessarily go hand in hand. For instance, in such countries as Argentine, Australia, Ireland, New Zealand, Norway and Sweden—countries with a considerable measure of government regulation of economic affairs—gross domestic investment as per cent of gross national product (mean of 1950-56) has been 19.8, 29.3, 14.6, 23.8, 31.1 and 20.6, respectively. But, surprisingly, in these countries, the rate of growth of real gross product as per cent per year has been only 1.7, 2.6, 1.1, 1.5, 3.2 and 3.7, respectively, in about the same period. It would thus appear that statistics of investment and growth are not dependable instruments of economic policy.

In the light of his findings which have been referred to briefly so far, Mr. Colin Clark has made some significant recommendations—significant from the point of view of their applicability to conditions in this country. First and foremost among these recommendations is the one which is to the effect that policy should not give to arbitrary concepts of immediate growth priority over the avoidance of price increases and the encouragement of long-term economic welfare. Another recommendation is that Governments should avoid attempting to force accelerated growth. That a more courageous effort to deny trade unions the power to enforce closed shops and restrict the output of working people should be made and that a substantial reduction in the burden of taxation which at present blunts incentives to effort be effected are two other recommendations made by Mr. Clark. Particularly significant from the point of view of this country is the recommendation that more attention should be given to the development of domestic capital markets which would harness private saving for private investment. Above all, Mr. Clark has laid the greatest emphasis on such other factors in growth (besides capital investment) as improvement in education, a dependable currency, a banking and credit system, general understanding and observance of laws of property, contract, company organisation, etc., and heavy investment in transport and other forms of communications. These factors are precisely the ones which should appropriately claim greater attention at the hands of planners and businessmen in this country. Growth, in such circumstances, may well have the certainty of creating more real capital than is possible under conditions of creeping inflation which slows down real savings.

AID TO INDIA

INDIA has every reason to feel gratified at the outcome of the Aid-India Consortium's fourth meeting at Washington last week. For, as a result of its deliberations, this country is now assured of substantial firm commitments of aid amounting to $2,225 million or Rs. 1,059 crores for the first two years of the third Plan ($1,295 million for 1961-62 and $930 million for 1962-63). This sum covers more than two-fifths of the estimated aggregate foreign assistance requirements of $5,500 million and does not include the P.L. 480 assistance of $1,300 million. The country-wise commitments, which, of course, are subject to appropriate legislation or other necessary authorisations in the respective countries, may be noted in the boxed table in this article. The estimated disbursements of aid under these commitments and the funds likely to be available, including a large carry-over of aid committed by the Consortium members during the second Plan, will not only cover the prospective balance of payments deficit in 1961-62 but go a long way towards making up the foreign exchange gap in the following year. It may be that the aid requirements of the second year (1962-63) will also be fully met, now that there is a reasonable prospect of some other European countries (besides France which joined the Consortium only at its latest Washington meeting with a firm commitment of $15 million each for the first two years) coming into the body and offering some aid to India. If, thus, more countries happen to join the Consortium, they may be taken to have been persuaded by the way in which India's case is presented in the World Bank's *communique* on the Washington meeting of the Consortium:

"It (the Consortium) considered that, in relation to India's needs, the broad objectives of the third Five-year Plan (1961-66) were reasonable, that the Plan itself was well conceived and that India had demonstrated a capacity to make effective use of foreign aid. The Consortium recognised that, in order to carry out the Plan, the *very considerable resources* (italics ours) which India herself is able and prepared to devote to its financing, together with vigorous efforts to increase India's export earnings, will have to be supplemented by a substantial inflow of foreign capital, both private and foreign."

The Consortium has now settled the broad framework of aid and its quantum. It has yet to finalise the details governing the actual utilisation of aid, such as terms of repayment and rates of interest. There is, happily, some indication that these will be very favourable from the point of view of India. "Stress," to quote the World Bank *communique* on the Washington meeting of the Consortium, "was laid... on the need for aid to be extended in a form which would add as little as possible to India's foreign exchange repayment obligations, and the members of the Consortium undertook to give due consideration to this point in deciding the terms on which aid would be made available."

It is scarcely necessary to emphasise here that a fairly large part of the loans granted should also be "untied" in the sense that they are not to be linked to specific projects. Again, the repayment of loans must be spread over as long a period as possible and it should also be partly in rupees or in the form of goods and services which India can spare. Further, the rates of interest should be reasonably low, so that the country will not be saddled with an enhanced debt burden on account of heavy servicing charges. And there is the need for eliminating or at least reducing the procedural delays in the release of funds by the aid-giving countries. This aspect is to be specially emphasised because experience so far has shown that the wide gap between the date of aid authorisations and the date of actual release has greatly handicapped the planning and execution of quite a number of projects.

But development aid even on such favourable terms would not meet India's full requirements. Hence the need for supplementing Government and other institutional loans by a substantial inflow of foreign private capital. Although the importance of such capital has been widely recognised in India and the authorities have taken some steps to attract it, the pace of actual investments has been rather slow. In fact, there appears to have been a setback lately. The recent analysis of the trends in foreign investments in India as given in the May 1961 issue of the *Reserve Bank of India Bulletin* reveals that the total net inflow of foreign capital into the private sector in India during the five-year period 1956-60 was about Rs. 200 crores (allowing for appreciation in the value of investments in some industries), or an annual rate of just Rs. 40 crores.

If the inflow of foreign private capital is to be accelerated, it is of the utmost importance that the Government should take some more concrete steps other than those already taken to ensure to the foreign investor prospects of a fairly good return and certainty of fair and equitable treatment. It is in this context that the forthcoming meeting of over 80 executives of leading business corporations in the U.S., sponsored by the Business International Incorporated and due to begin a five-day session at New Delhi on 23rd October next, assumes special significance. The conference, we are told, will be attended by Cabinet Ministers and top officials of the Government of India. To the extent it promotes a better understanding between Indian and American businessmen of each other's views and problems, the conference will have probably paved the way for new U.S. investments, as well as for the expansion of existing enterprises.

Countrywise Commitments
(In million dollars)

	1961-62	1962-63	Total
Canada	28	28	56
France	15	15	30
Germany	225	139	364*
Japan	50	30	80
United Kingdom ..	182	68	250
United States ..	545	500	1,045
I.B.R.D. and I.D.A. ..	250	150	400
Total ..	1,295	930	2,225*

* Exclusive of $61 million offered by West Germany for the period covering 1963-64 to 1965-66.

Happily enough, the Kennedy Administration's latest tax programme is so designed as to give a great boost to such ventures by making American overseas investments in the economically advanced countries less attractive, on the one hand, and by continuing to accord what is called the "privilege of tax deferral" (postponement) to profits earned and reinvested, on the other. If this programme is approved by the U.S. Congress and if at our end, too, more positive steps are taken to attract foreign private capital, the chances are that there will be a larger inflow of such capital in the third Plan period. The fact that more foreign public capital will be flowing in, thanks to the sustained efforts of the Aid-India Consortium, may also encourage foreign private investors in the belief that this country will be a going concern with a large measure of political and economic stability.

MARKET GOSSIP

Indian Sugar For U.S.

SOON after we went to press last week, the U.S. Secretary of Agriculture announced the authorisation of a quota of 225,000 tons for Indian sugar during the current calendar year, alongside allotments of new quotas amounting to 90,000 tons to Australia and 5,000 tons to Paraguay, as well as an upward revision in allocations to other supplying countries. The grant of a quota to India is said to have been rendered possible as a result of the reallocation of the last of the sugar quota originally reserved for purchase from Cuba and the upward revision in the U.S. estimated consumption requirements of sugar for 1961 from nine million tons to ten million tons. For three reasons, the export of Indian sugar to the U.S. is important. In the first place, it will yield much precious foreign exchange which can be used for buying machinery, spare parts and raw materials from the U.S. Secondly, the U.S. pays for sugar a price 50 to 60 per cent more than the ruling world market price. And, finally, exports of 250,000 tons of sugar will reduce the pressure of heavy stock accumulations with many mills in India.

The details regarding the price at which sugar will be bought by the U.S., delivery schedules, etc., are all being discussed with the U.S. officials by Mr. S. K. Patil, Union Minister for Food and Agriculture, who is already in the U.S. Mr. Patil, it is incidentally stated, will also seek a supplementary quota for India. It is, however, doubtful whether the plea will be conceded. For, barring 200,000 tons, the entire estimated U.S. domestic sugar requirements of 10 million tons for 1961 (the earlier estimate was only 9 million tons) have already been allotted or authorised. The only chance of an increase in quota will be when other suppliers of sugar to the U.S. fail to fulfil their quotas. Even the quota now allotted—that is, 225,000 tons—itself entails considerable loss of rupee resources in the form of full remission of taxes and grant of subsidy which is expected to be of the order of Rs. 163 per ton. India must, of course, not grudge this in the least, in view of the generous economic development assistance it has received from the U.S.

Some sugar millowners in India feel that the quota of 225,000 tons allocated to the country by the U.S. is small. A few even declare that it would be better to decline the quota and try to export a larger quantity to other countries. It may be noted here that, when once India becomes a member of the International Sugar Agreement, its exports will have to be subjected to quota regulations as laid down under the Agreement. The scope for India selling sizable lots of sugar to countries other than the U.S., is practically absent except at a heavy loss, though it is true that the free market net import requirements for 1961 as lately estimated by the International Sugar Council are marked higher at 8.51 million metric tons, as against the February estimate of 6.92 million tons. For the gap that exists between Indian and world prices is very, very wide.

Paper Traders On Strike

Strikes are generally considered an effective weapon in the hands of trade unions to clinch an issue in the field of collective bargaining. But it is an irony of fate that the business community is constrained to resort to these techniques to make its voice heard. The paper trade in many parts of the country, including Bombay, Calcutta, Ahmedabad, Poona and Nagpur, observed a one-day strike on Thursday as a token of protest against the State Governments' indifference, if not reluctance, to agree to the replacing of sales tax by additional excise duty in the case of paper and paper products. This step, although unusual, reflects only the extent of frustration of the trade over their repeated attempts to get their grievances redressed.

It is said that the Central Government has already realised the importance of such a reform in respect of paper. But the State Governments have not been unanimous in their view. While several States have acceded to this legitimate demand Maharashtra and Gujarat Governments have refused to concur with the majority view. Of course, the Central Government can always point out that unless States agree among themselves, it is helpless in the matter. Apparently, the dissenting States feel that removal of sales tax will deprive them of an important fiscal weapon which can be wielded freely to strengthen their treasury. They may also argue that if they retain the right to levy the tax, they can vary the rates to suit their regions and thereby get more revenue themselves than what they are likely to get in any scheme of State-wise distribution of the revenue by the Central Government.

Fears of reduction in State revenues in the event of the removal of sales tax are certainly more imaginary than real. In fact, in respect of textiles, tobacco and sugar, sales tax was replaced by additional excise duty more than three years ago. The experience of these commodities has proved that the States Governments' fears are out of place. In fact, the additional excise duties levied in lieu of sales tax have become a steady source of revenue. The States' share of revenue from additional excise duty is expected to be about Rs. 40.09 crores in 1961-62, which compares with Rs. 38.35 crores in 1960-61 and Rs. 38.91 crores in 1959-60.

The present system of sales tax involves cumbersome administrative procedures, which the trade resents most. It is also true that, as pointed out by the Taxation Enquiry Commission, it has led to increase in the cost of production, to enhancement of the burden of the consumer, apart from multiplying the difficulties of dealers from whom the tax is collected. Sales tax, no doubt, cannot be abolished for all commodities, but there is certainly a strong case for it to be replaced by additional excise duty in respect of paper. Already, this commodity has come in for a certain amount of Central control, which is bound to facilitate the levy of excise duty. The various advantages of adopting the suggested method are:

(1) The scheme will put an end to the complications and difficulties arising out of the multiplicity of sales tax rates and policies of the various States.

(2) The revenue yield under the scheme will not suffer any setback. On the contrary, there is likelihood of a substantial increase in the revenue.

(3) As the tax will be collected at the sources, there will hardly by any loopholes under the scheme leading to evasion of tax.

(4) This scheme will yield easy and immediate revenue collection as compared with the cumbersome and delayed realisation under the sales tax structure.

(5) The scheme will involve a great reduction in cost of collection of the tax, which again is an important matter from the revenue point of view.

(6) The manufacturers, importers, etc. who would come within the ambit of the taxation measure will be spared the present complex and elaborate procedural formalities which are required to be complied with under the Sales Tax Law of the respective State. The procedure will be very much simplified under the scheme in question and form-filling and record-keeping will be reduced to the minimum.

The State Governments would do well to consider the whole question dispassionately and view it from a wider perspective, keeping in mind the need for rationalisation of the overall national tax structure, instead of confining their thinking to the immediate problem of their own revenues. It is to be hoped that the Finance Commission will devote some thought to this problem and suggest suitable measures to facilitate the replacement of sales tax by additional excise duty in respect of certain commodities like paper, matches and vegetable products, without affecting, in the process, the legitimate interests of the States.

More On Oil Negotiations

Eighteen months have passed since the Government of India declared that offers from overseas to search for oil would be welcome. The Government has received proposals from six companies from the U.S., the U.K., the Netherlands, France and Italy. So far negotiations have been successful only in the case of the Burma Oil Company. The deal with this Company has already been referred to in these columns of the issue of *Commerce* dated 3rd June 1961. At the moment, negotiations are still going on with the Italian State-owned E.N.I. for oil exploration in Cutch, which is one of the areas reserved for companies taking the Government of India into partnership. It is said that this Italian organisation is also interested in setting up petro-chemical and lubricants plants. Already one of its associated Companies is (with a German contractor) building a large crude pipeline from Assam to Bihar. Presumably, the E.N.I. may well bid for a products line from the State-owned Barauni refinery to Delhi—a project which the Government is now having under examination. Another company, namely, Continental Oil, has offered to search for oil in the Cauvery delta of Tanjore district in Madras State. Nothing further is known of this offer and of the state of negotiations pertaining to it. The Esso Standard (formerly Stanvac) had offered to search for oil in the Jaisalmer area, but the negotiations between this Company and the Government have broken down because the latter insisted on 50 per cent ownership in a new venture—a proportion which was not acceptable to the Company. It may be recalled in this connection that the former Stanvac had accepted 25 per cent Government capital participation in the Indo-Stanvac exploration project which was abandoned recently after the drilling of ten dry holes in West Bengal at a cost of about Rs. 8 crores. The other company which has been in the field is stated to be the Shell which has offered to search for oil in the Indo-Gangetic plain. No further details are available about the state of negotiations between the oil companies and the Government of India.

An account may be given here of the present state of oil exploration by the Government's Oil and Natural Gas Commission. In the State of Gujarat two fields have so far been found at Cambay and Ankleshwar. It is stated that delineation and assessment of the complicated, much-faulted structures have been difficult and that it is too early to form an estimate of reserves. The Cambay field may prove to have only more gas than oil. In Assam, the Commission's discovery of oil at the end of last year at Rudrasagar near Sibsagar is yet to be assessed. It would thus appear that the Oil and Natural Gas Commission which has been searching for oil in several parts of the country has not had any outstanding success to its credit. After all, it is a relatively small organisation which was virtually alone in a sedimentary area of 400,000 sq. miles. The point needs to be driven home that in the last five or six years much more could have been achieved if opportunity and incentives had been given to get 10 or 20 companies to look for oil and gas.

If this has not taken place, it is because of the Government's ambivalent attitude to private, particularly foreign, enterprise in the oil field. Already some severe brakes have been put on foreign oil refiners and marketers. But, at the same time, they have been invited to search for oil. Here the Government insists on State partnership, half or more than half the profits for itself and also undivided control by itself of any oil found. These are considered to be onerous terms by foreign oil companies. If the Burma Oil Company has accepted some of these terms, it may be because the additional concession of 1,800 sq. miles of fresh territory for exploration east of the present 500 sq. miles area of Oil India Ltd. in Assam seems to be a largely proved area. In other words, there will be relatively little risk in the venture of exploration in the additional concession granted to the Company. In other areas of the country, a similar fortunate circumstance may not obtain and oil exploration may turn out to be a veritable gamble in quite a few of them. It is still to be hoped that the Government will not unduly procrastinate in its negotiations with the other oil companies. As the country is short of capital and the Government alone cannot embark on an expensive and highly capital-consuming venture like oil exploration simultaneously in different parts of the country, it may be that the Oil Ministry will yet see reason and bring about a good measure of co-operation with foreign private capital in this particular field.

Block Closure Of Jute Mills

The reports suggesting the distinct possibility of a block closure of jute mills for sometime with a view to conserving available raw jute supplies have proved correct. The West Bengal Government has approved of the Indian Jute Mills Association's proposal for completely closing down mills for two weeks, once from the 26th inst., and again from the 24th of next month. The Union Government has agreed to the arrangement. No one will dispute the fact that a block closure of mills for a fortnight would result in a reduction in the earnings of workers who have already suffered losses on account of the cut in working hours. But it must be remembered that the supply position in respect of raw jute is very critical, not to speak of the continuing power shortage. Further economy in jute usage is, as the Government of West Bengal has made it clear, necessary to achieve an equilibrium between consumption and supply, and the block closure is the only way of stopping piecemeal closure which is likely to cause greater hardship to labour.

The accusation of labour leaders that the jute mills are only trying to boost prices of jute goods by artificially restricting output is not at all justified, for will not such a curtailment of production cut into the profit margin of mills? It is estimated that the block closure of mills for two weeks will result in a loss of 40,000 tons of jute goods. Surely, the industry would have avoided this loss if it could. But there is a wide disparity between the cost at which the industry is buying raw jute and its earnings from sales of finished goods. The jute mill workers would do well to recognise the helplessness of the industry and co-operate with it in solving the problem of raw jute shortage. In any case, the workers will receive lay-off compensation during the period of closure. And the I.J.M.A. also has held out the assurance that it would make every effort to minimise the hardship to labour and that it would be prepared to make such changes in the decision as may be warranted in the light of the jute supply position. It follows from the latter assurance that, if there is a reasonable reduction in fibre prices, coupled with a welcome increase in the quantity of fibre offered, the mills may revoke their decision for closure.

Jute circles, however, firmly believe that there is a real shortage of fibre supplies and that, though fibre offers increase, such an increase will not relieve the position completely. Further, in the interests of the industry, closure has become imperative, as, without an adjustment in production, fibre prices will not move down to levels as required for the economic working of the industry. It is also essential that, at the beginning of the new season, fibre prices must be reasonable. Not long ago, there were rumours of the intention of the I.J.M.A. to create a buffer stock. It is suggested that this idea should be revived and, since fibre prices are expected to be normal in the beginning of the season, the opportunity should not be missed by the I.J.M.A. Normalcy in fibre supplies is very essential in order to ensure that no overseas business in goods is diverted to Pakistan mills.

It is encouraging to hear in this context that the prospects for the coming season's jute crop are good. From the information available at the recent meeting of the Central Supervisory Body for Jute held at Calcutta, an increased acreage under jute in all the jute-growing States is confirmed. Anticipations are that the final acreage will show an increase of 20 to 25 per cent over the last year. The consensus of opinion at the meeting was that the coming crop of mesta and jute would be sufficient to meet the raw material needs of mills in the next year and also provide for the normal margin of fibre stocks. Certain State representatives even apprehended a glut in supplies and urged the need for a price support scheme. The Supervisory Body, however, did not think that there would be a glut in supplies, and it was pointed out that the scheme for building up a buffer stock in jute should be pursued further in the event of supplies becoming unmanageable.

Australian Floating Fair

The Australian Trade Mission ship m.v. *Straat Banka*, which has been transformed into a floating shopwindow of Australian primary and manufactured products for exhibition at Singapore, Malacca, Port Swettenham, Penang, Colombo, Bombay and Cochin, is scheduled to arrive in Bombay on the 25th of this month. The exhibits are expected to illustrate not only the high quality

EQUITIES RISE FURTHER

GOOD SUPPORT FOR TEXTILES

(From Our Own Correspondents)

BOMBAY, *8th June*

THE share market ruled buoyant during the week under review, with practically all counters continuing their upward march. Investment support for equities, particularly growth scrips, was well sustained, thanks to the encouraging outlook for industries. Wide satisfaction was expressed over the outcome of the Aid-India Consortium's meeting at Washington. The firm aid offers aggregating Rs. 1,059 crores ($2,225 million) for the first two years of the third Plan made by the Consortium members and reports indicating the possibility of other European countries also joining the Consortium and making available to India large-scale assistance would, it was felt, greatly facilitate imports of a wide range of machinery and equipment, as well as raw materials. There was also an increase in the inflow of funds into the share markets, in view of the easy money conditions. The suggestions for the mobilisation of funds of commercial banks for investment in public sector projects, for the appointment of another Taxation Inquiry Commission and for checking the so-called monopolistic tendencies in the private sector canvassed at the recent meeting of the National Development Council were no doubt taken note of, but they failed to have any effect on the market. Consequently, equities forged ahead. Although intermittent profit-taking pared the gains, today's closing rates were generally well above those prevailing a week ago.

In the steel section, Tata Steels touched a new high of Rs. 165 on Wednesday, but closed at Rs. 162.75. The net gain over the week was Re. 1.75, as against Rs. 3.50 last week. Indian Irons were well supported and advanced from Rs. 28.25 to Rs. 28.55, before finishing at Rs. 28.35. Mukand Irons jumped up from Rs. 28 on the opening day to Rs. 30.50 on Wednesday. The closing rate was, however, a little lower at Rs. 30.

Textiles attracted good attention on encouraging dividend news and continued large offtake of piecegoods. Centurys forged ahead from Rs. 675.50 to Rs. 715 on Monday. But liquidation by tired bulls took the rate down to Rs. 703 today. The net gain over the week was Rs. 27.50. Khataus were highly fancied by operators and moved up from Rs. 577.50 to Rs. 635 on Wednesday. At this stage, profit-taking set in and the scrip finished at Rs. 601.25 today. The net gain over the week was Rs. 23.75. Standards increased by Rs. 16 to Rs. 1,557. Simplex spurted by Rs. 11 to Rs. 202 before closing at Rs. 200. Swans, which were subdued last week, registered a rise of Rs. 15, today's closing rate being Rs. 590. Victorias hardened by Rs. 10 to Rs. 397.50. **Morarjees gained Rs. 8 to** Rs. 436 on bonus issue prospects. Thanks to satisfactory working results, Swadeshi Mills advanced by Rs. 7 to Rs 279.50. Mafatlals rose by Rs. 7.50 to Rs. 867.50. Laxmis. Bradburys and Shri Niwas put on Rs. 5 each to Rs. 526, Rs. 135.50 and Rs. 265, respectively. Podars gained Rs. 4.50 to Rs. 152. Bombay Dyeings began the week at Rs. 66 and reached the peak of Rs. 69.70 on Tuesday, but eased on selling pressure to Rs. 68.40, showing a net rise of Rs. 2.60 over the week.

Sugar shares received selective support. Maharashtras were bid Re. 1.50 higher at Rs. 185.50. Belapurs opened at Rs. 288 and, after easing to Rs. 286.50, recovered to Rs. 292 on Monday, but declined again to Rs. 288.50 today. Over the week the scrip gained 50 nP. Phaltans were steady at Rs. 138, as also Oudhs at Rs. 185 and Hindustans at Rs. 340. But Walchandnagars shed Re. 1.25 to Rs. 175 and Ravalgaons Rs. 2 to Rs. 69.

In the cement group, Associated Cements advanced on good support from Rs. 161 to Rs. 164. Digvijays also received inquiries and put on Rs. 2.50 to Rs. 158. Dalmia Cements gained 8 nP to Rs. 12. The working results of the Company for 1960 are encouraging and the Directors have proposed a taxable dividend of 12 per cent on ordinary shares. Jaipurs remained steady at Rs. 11.52 and Orissas at Rs. 14.56. But Ashokas lost 16 nP to Rs. 9.20. Bagalkots eased by 8 nP to Rs. 8.36.

Among shippings, Scindias opened at Rs. 14.88 and gained 56 nP to Rs. 15.44 on Wednesday. Today, however, they eased to Rs. 14.96. Over the week the rise was only 8 nP. Great Easterns gained 8 nP to Rs. 15.08. But Bharat Lines fell by Re. 1.04 to Rs. 5.24 in view of unsatisfactory working results. In the automobile section, Hindustan Motors advanced by 24 nP to Rs. 22.68. Auto Products gained an equal amount to Rs. 13. But Premier Automobiles declined by 75 nP to Rs. 171.75.

In the rayon group, National Rayons met with excellent support and scaled a fresh peak of Rs. 591 on Wednesday as against Rs. 555 last week-end. At this level there was heavy profit-taking and the scrip came down to Rs. 573.50 today. The net gain over the week was Rs. 18.50. The news of an industrial licence for South India Viscose for the manufacture of wood-pulp from blue gum and wattle lifted the shares from Rs. 166 to Rs. 172.50. Gwalior Rayons spurted by Rs. 2.80 to Rs. 55.30. Barodas, however, receded by Rs. 2 to Rs. 125. Raymonds by Re. 1 to Rs. 123 and Indian Rayons by 50 nP to Rs. 62.50.

Buying enquiries in chemicals and dyestuffs were selective in nature. Indian Dyestuffs spurted by Rs. 17.50 to Rs. 570. Amar Dyes were marked up by Rs. 5 to Rs. 415. Dhrangadhras (New), Synthetics and Adarsh Chemicals put on Rs. 2 each to Rs. 108, Rs. 173 and Rs. 103, respectively. Tata Chemo-pharmas gained Re. 1.04 to Rs. 20.40. Tata Chemicals (New) scrips were done at Rs. 19, as against Rs. 17.88 last week. Citrics, Alembics and Dharamsis were well maintained at Rs. 53.50, Rs. 267.50 and Rs. 300, respectively. But Colour Chems were pushed down by Rs. 2.50 to Rs. 372.50. Polychems lost a like amount to Rs. 235.

In the engineering section, Premier Constructions were well supported and spurted by Rs. 15.50 to Rs. 212. Teleos were keenly bid and jumped up from Rs. 365.50 to Rs. 377 on Monday. At this level, profit-taking ensued and the scrip fell to Rs. 396.50 on Wednesday. But fresh buying that emerged again lifted the price to Rs. 384.50. The closing was Rs. 377.50. Over the week, the gain was Rs. 12. Alcock Ashdowns advanced by Rs. 4 to Rs. 299. Larsen and Toubros more than recovered the ground they had lost last week and put on Rs. 2.75 to Rs. 46.25. Investas received good support and increased by Rs. 5.50 to Rs. 131. Structurals gained a rupee to Rs. 171. But New Standard Engineering shares moved down by Rs. 2 to Rs. 184, reflecting disappointment of operators over the cut in dividend (taxable) from 12 per cent for 1959 to 9 per cent for 1960. Greaves Cottons were quoted a rupee lower at Rs. 177; Jyotis lost Re. 1.50 to Rs. 184. Khandelwals eased by 50 nP to Rs. 81. Mahindras changed hands at Rs. 19.80 *ex-div.*, as against Rs. 20.40 *cum-div.*, last week. Kamanis were fully steady at Rs. 17.24.

In the miscellaneous section, Bombay Burmahs received considerable bull support and spurted by Rs. 26.50 to Rs. 666.50 on Tuesday. Thereafter, profit-taking reduced the gain and the scrip closed at Rs. 652 today. The net gain over the week was Rs. 9. Ceat Tyres rose by Rs. 2.50 to Rs. 230. Killicks. Wimcos and Bombay Oxygens registered a rise of one rupee each to Rs. 102. Rs. 259. and Rs. 58.50, respectively. Sirpurs put on 24 nP to Rs. 16.44. Tata Oils gained 20 nP to Rs. 79.20. Indian Pipes changed hands 50 nP higher at Rs. 179. Hindustan Levers were firm at Rs. 47.25.

Calcutta Stock Exchange

CALCUTTA, *7th June*

Although there was a measure of profit-taking and gains were reduced on the Calcutta Stock Exchange during the week under review, the announcement from Washington that Aid-India-Club countries have committed loans amounting to $22.86 million in the next two years led to cheerful conditions, and this coupled with the notable improvement in money supplies led to a good deal of replacement buying at lower levels. The hope for the resolution of the Big Power problems that was generated in the Vienna meeting of the Big Two was noted with satisfaction as continuance of foreign aid to India is dependent on the continued existence of peace in the world. Despite the steadier conditions during the week, long-term commitments were yet paltry, and that explained the unimpressive volume of business. That there was no selling pressure should be attributed to optimism in regard to the future of industries.

Coals continued to meet with selected attention on expectations of help for increasing output, while jutes went to the doldrums on news that mills were to close down for a fortnight for want of raw jute. However, the keen long-term buyer found the present rates attractive considering the prospects of the rapid fall in fibre prices and good chances for a bumper fibre crop. A mixed trend was in evidence in engineerings but Indian Irons maintained the gain on expectations of an imminent announcement of steel retention prices. Miscellaneous industrials attracted buying support at lower levels but activity was marked by profit-taking.

Among coals, Bengals recorded a high of Rs. 400 earlier in the week, when profit-taking developed and the rate dropped to Rs. 385 to regain to Rs. 391. Barrakurs were fully steady at Rs. 20.81. Khatras Jherriahs were better at Rs. 48.62 as against Rs. 47.50 previously. Raneegunges after being higher at Rs. 17.97 receded to Rs. 17.50, while Pench Valleys eased from Rs. 19.75 to Rs. 19.12 and Karanpura Collieries from Rs. 208 to Rs. 190. A handsome rise was recorded in Borreas at Rs. 25 as against the previous rate of Rs. 23.37. New Beerbhooms were a few nP lower at Rs. 24.25.

An impressive feature in cotton textiles was provided by the smart score in Bharat Commerce from Rs. 24.31 to Rs. 25.87. Kesorams were marked higher at Rs. 34.25. Bowreahs, after rising to Rs. 224, receded to Rs. 222 to spurt to Rs. 226. Bengal-Nagpurs were better at Rs. 4.31. Elgin Mills were unchanged but steady at Rs. 20.00.

With very few transactions, jutes trod a dull path. Kelvins were unchanged at Rs. 140. Anglo-Indias realised Rs. 179 as against Rs. 188 previously, while Birlas after being lower at Rs. 27.31 changed hands at Rs. 28.44. Megnas were quiet at Rs. 11.12. Fort Glosters changed hands at Rs. 303 as against Rs. 317 previously.

Among engineerings, Indian Irons opened at Rs. 28.03 and steadily rose to Rs. 28.50 to close at Rs. 28.28. Texmacos after recovering to Rs. 20.70 closed at Rs. 20.35. J.K. Steels were a steady feature and rose from Rs. 26.56 to Rs. 29.75 on interested buying. Braithwaites at Rs. 33.62 recorded a fractional gain, while Calcutta Steels, for which a dividend of Re. 1.50 a share subject to tax has been announced, were unchanged at Rs. 18. At Rs. 108 Indian Standard Wagons gained Rs. 4 following a good dividend. Dalmia Irons were better at Rs. 10.37.

Replacement buying contributed to selective rises among miscellaneous industrials. Balmer Lawries, on interested attention, spurted to Rs. 275 from Rs. 263. Dunlop Rubbers at Rs. 50.81 gathered nearly a point but eased to close at Rs. 50.12. Union Carbides recorded a sharp rise of three points at Rs. 57.25. Rallis after recovering to Rs. 138 receded to Rs. 136. British Paints were difficult to be obtained but earlier realised Rs. 24.75 against Rs. 24.62 previously; a final dividend of 10 per cent totalling 12½ per cent subject to tax against 10 per cent previously has been declared.

Indian Aluminiums were at one time higher at Rs. 33.19 but eased to close at Rs. 32.87. Indian Cables were fractionally higher at Rs. 36.75 as were Hindustan Motors at Rs. 22.19. Indian Coppers were held firm at Rs. 5.52. Clive Row Investments were better at Rs. 8.86. Despite the report of good progress in construction of factory buildings and sheds, General Tyres were depressed at Rs. 6.19.

Teas were dealt with around previous levels. Banarhats were unchanged at Rs. 330 while Hantaparas at Rs. 142 scored Rs. 6. Gungarams were better at Rs. 163 against Rs. 160 previously.

* * * *

Madras Stock Exchange

MADRAS, *7th June*

There was all-round improvement in values on the Stock Exchange during the week under review. The improvement followed good buying inquiries from investors who were encouraged by the offer of substantial foreign aid by the Aid-India Club and pronounced firmness of Bombay and Calcutta markets. Textiles were in the forefront, as both investors and professional operators extended renewed support on encouraging corporate news. Sugars were well favoured, thanks to the announcement of a quota (250,000 tons) for Indian sugar in the U.S. Teas elicited larger inquiries on encouraging news from auction centres. Coffees and rubbers moved up in sympathy. Banks and electricals were also quite active. Chemicals and engineerings were particularly strong in the miscellaneous section.

Among textiles, Vasantas were marked up by Rs. 12 to Rs. 250. Tirmurti's jumped up by Rs. 11 to Rs. 119 *cum-div.*, following the announcement of a higher dividend of 15 per cent, taxable, for 1960, as against 7½ per cent distributed in 1959. Janardanas spurted by Rs. 10.50 to Rs. 73. Cannanores rose by Rs. 7 to Rs. 172. South India Viscose advanced by a like amount to Rs. 171, though the Directors of the Company have not proposed any dividend for 1960. Lakshmis came in for good attention and improved by Rs. 5 to Rs. 170. Buckinghams scored a gain of Rs. 4.25 to Rs. 217.25. Coimbatore Cottons and Coimbatore Pioneers gathered Rs. 4 each to Rs. 170, and Rs. 348 *ex-div. cum-right*, respectively. Radhakrishnas picked up Rs. 2.50 to Rs. 34. Loyals put on Rs. 2.25 to Rs. 42.75 and Dhanalakshmis Rs. 2 to Rs. 215. Following reports of encouraging working results of the Company, Travancore Rayons rose by Re. 1.85 to touch a peak of Rs. 40.60.

In the sugar group, Indias gathered 60 nP to Rs. 13.50. Deccans declined from Rs. 14 to Rs. 13.90 initially, but staged a smart recovery subsequently and closed at Rs. 14.15. East India Rs. 43.50, recovered to Rs. 43.75, a net gain of 13 nP. Cauverys were firm at Rs. 131.50, as also Mysores at Rs. 59. But United Breweries encountered selling and dropped Re. 1.95 to Rs. 108.05. Travancores eased by 15 nP to Rs. 10.10.

Among teas, Haileyburias rose by 15 nP to Rs. 14.50, *cum-div.*, following the announcement of a dividend of 15 per cent, taxable, for 1960, which compares well with 12½ per cent distributed in 1959. Periakaramalais and Parksides improved by 15 nP each to Rs. 3.95 and Rs. 29, respectively. Blue Mountains rose by 10 nP to Rs. 3.32. 2 nP to Rs. 3.05. Twyfords ruled steady at Rs. 13 *cum-div.* The Company has maintained the dividend for 1960 at the previous year's level of 10 per cent, taxable. Devasholas were fully steady at Rs. 20.75, Kil Kotagiris at Rs. 4.92, Nonsuchs at Rs. 28.10 and Peermades at Rs. 23.30.

Coffees elicited some support, after remaining subdued for the last several weeks. Consolidated Coffees hardened by 15 nP to Rs. 21.15. Ouchterlony Valleys were higher by 9 nP at Rs. 3.71. Coffee Lands picked up 3 nP to Rs. 18.65 and Mysores 2 nP to Rs. 5.45. Anaparals were fully steady at Rs. 4 and Balanoors at Rs. 16.60.

Among rubbers, Rajagiris rose by 10 nP to Rs. 18.70. Cochin Malabars put on 5 nP to Rs. 7.98. Woodlands were maintained at Rs. 8. The Company has announced a dividend of 10 per cent, taxable, for the year ended March 1961, same as for the previous year. Malankaras were fully steady at Rs. 18.75. Travancores at Rs. 11 and T.R. & Ts at Rs. 9.85.

In the miscellaneous section, Mysore Chemicals gathered 50 nP to Rs. 24.50. Metturs rose by 25 nP to Rs. 14.50. Mysore Fertilisers gathered 10 nP to Rs. 11.25. F.A.C.Ts improved by 3 nP to Rs. 10.43. Travancores were steady at Rs. 16.25. India Cements increased by 23 nP to Rs. 6.35. Andhras and Orissas were firm, the former at Rs. 10.50 and the latter at Rs. 14.55. Among others, Aluminium Industries spurted by 63 nP to Rs. 24. Indian Steel Rollings gained 10 nP to Rs. 10.20. Ashok Leylands picked up 7 nP to Rs. 9.35. McDowells were steady at Rs. 34.75 *cum-div.* The Directors of the Company have maintained the dividend for 1960 at the previous year's level of 30 per cent, taxable. Hindustan Ideals were unchanged at Rs. 23.45. The Company has declared a dividend of 6 per cent, taxable, for 1960, same as that distributed in 1959.

NEWS IN BRIEF

THE Planning Commission has accepted a production target of 900 million lbs. and an export target of 610 million lbs. of tea for the third Five-year Plan.

It is reported that the State Trading Corporation will be importing during the current licensing period 20,000 tons of caustic soda from Development Loan Fund sources and rupee-payment countries.

An Indian decanter, fashioned of solid brass and hand-carved by skilled craftsmen in the New Delhi area, has attracted favourable attention at the U.S. World Trade Fair of 1961 in New York.

A one-year Indo-North Korean trade agreement has been reached between the Governments of the two countries. Under the agreement the trade will be in terms of non-convertible rupees and on a balanced basis. It is proposed to open trade offices in both the countries.

The sales of iron and steel to or purchase thereof by re-rolling mills in Maharashtra State have been subject to full rate of sales tax or purchase tax, as the case may be, at 2 per cent, instead of the hitherto concessional rate of one per cent with effect from 1st inst.

The Government of India has decided to release 200,000 tons of sugar this month. There will be no release for free sale from the factories in Uttar Pradesh, Bihar and Punjab except a small quantity which will be released to each factory for sale at the factory gate.

The Commonwealth Development Finance Company Ltd. is contributing £600,000 in sterling debenture stock of the £2.94 million compound ammonium phosphate fertiliser plant proposed to be set up at Ennore in Madras. The plant will have an annual capacity of 51,000 tons and is expected to go into full production in June 1962.

The final draft of the third Plan provides for the establishment of a refinery in Gujarat to handle the crude oil from Cambay and Ankleshwar. The work on the refinery is scheduled to commence as soon as the decision on its location is taken. It is expected to attain a two-million-ton capacity by the end of the third Plan.

Total export (including re-exports) from India during April amounted to Rs. 53.36 crores (as against Rs. 57.36 crores in the previous month and Rs. 46.63 crores in April 1960). Imports aggregated Rs. 85.90 crores as against Rs. 81.38 crores and Rs. 98.82 crores. The adverse balance of trade in April was to the tune of Rs. 32.06 crores (as against Rs. 24.02 crores and Rs. 52.19 crores).

Per capita taxation is the highest in West Bengal, namely, Rs. 16.4, according to the latest estimates prepared by the State Government. The figures for other States are: Andhra Pradesh Rs. 11.9; Assam Rs. 14.6; Bihar Rs. 7.3; Maharashtra Rs. 15.4; Kerala Rs. 13; Madhya Pradesh Rs. 9.2; Madras Rs. 11.6; Mysore Rs. 12.5; Orissa Rs. 6.1; the Punjab Rs. 15; Rajasthan Rs. 11.5; and Uttar Pradesh Rs. 8.

The Government of India has decided to extend the procedure under Rule 191-A of the Central Excise Rules 1944 for export of articles under claim for rebate of duty on the excisable goods used in their manufacture to plastic manufacturers. It has also decided to permit the manufacture in bond of plastic manufacture for the purpose of export under Rule 191-B of the said rules. Those manufacturers of plastic goods who wish to export them under these procedures are required to contact the Collector of Central Excise, in whose jurisdiction their factory is situated, for further detailed information.

A voluntary reduction of some 7 per cent in the price of explosives has been made by the Indian Explosives Limited, the joint venture of I.C.I. and the Government of India set up only 2½ years ago to manufacture commercial blasting explosives at Gomia in Bihar. The reduction has been possible because of the cut in costs by intensive application of method study and improved plant operation by which the factory's designed output of 5,000 tons a year has been very considerably exceeded. Major extensions to the plant at Gomia are now in hand with a view to meeting the country's full requirements of explosives.

The third conference on human relations in industry will be held at Coimbatore on 24th and 25th inst. under the auspices of the South India Textile Research Association. The conference will be inaugurated by Mr. V. V. Giri, Governor of Kerala. The objects of the conference are to strengthen the existing awareness among all those connected with industry of the importance of human relations; to encourage interest in the study of particular problems of human relations from the point of view of management, labour and the community and to suggest lines of action for the promotion of better human relations in industry.

The possibilities of utilising wastes from wool, leather, lac and mahua cake as good manure have recently been investigated at the Indian Agricultural Research Institute, New Delhi. After proper [illegible] or acid treatment, these wastes have been [illegible] of sufficiently good quality manure. They take away the available nitrogen with ease into the soil and improve soil structure by inducing aggregation of soil particles. Various methods of treating these organic wastes were tried. Wool wastes were moistened with hydrochloric acid or nitric acid and then dried and powdered. Leather wastes were either steamed under pressure or steamed and moistened with ammonia, dried and powdered. Both leather and mahua cake were treated with

With the object of safeguarding the interests of consumers at large and promoting the cause of producing quality goods in the country, an organisation called the Consumers' Association of India (C.A.I.) has been set up under the Societies Registration Act of 1860, with Mrs. Raksha Saran, as Chairman. Its headquarters will be at New Delhi. The Association aims at undertaking, aiding and promoting the study and evaluation of consumer products and services; co-ordinating the efforts of consumers and producers in devising ways and means for the improvement of goods and services; undertaking consumer research to determine the needs of consumers; and promoting and popularising the use of goods according to the national and recognised standards. It will gradually build up a fund of information on the quality of various consumer products based on various laboratory tests and consumers' own reaction. The information thus collected through various sources will be made available to the public through the medium of its publications.

The use of Indian graphite for the manufacture of graphite crucibles, dry cells and pencils is now possible as a result of a process for upgrading the indigenous ore developed at the National Physical Laboratory in New Delhi. Pilot-scale beneficiation trials conducted over the last few years in the Laboratory have yielded fine, low ash graphite suitable for a wide range of applications. The characteristics of the graphite required vary according to the use to which it is put. To examine the suitability of indigenous graphite for various uses, the Laboratory has determined the desirable specifications. Beneficiated Indian graphite has been found to meet these requirements. For instance, the suitability of graphite for the dry cell or brush industry cannot be judged merely on the basis of fineness and its ash content. The factors that matter are electrical resistivity and bulk density measurements which are essentials for determining the suitability of graphite. Similarly, for crucible manufacture, a knowledge of specific surface of graphite is important, and in pencil manufacture, it is the smearing property. Suitable methods have been devised for undertaking these tests.

* * * *

From Abroad

The U.S.S.R. Government will give technical aid for the development of the nickel processing industry in Cuba. An agreement to this effect was entered into on the 1st inst.

Karachi port will have been modernised after the complete reconstruction of its 23 berths. The whole programme is estimated to entail an outlay of £11.5 million. The foreign exchange component has already been met out of a World Bank loan.

The International Shipping Federation will meet at Hamburg in West Germany on the 14th and 15th inst. The main purpose is to make preparations for the next session of the Joint Maritime Commission of the I.L.O., which is to be held at Geneva in September next.

The Swiss Government has introduced special measures to protect the domestic textile market against cheap imports from Japan. Imports from Japan will be allowed only if prices quoted in Switzerland are not more than 10 per cent below the Swiss price for cotton goods, 12 per cent for woollen goods and 20 per cent for other articles.

The Australian Government has granted subsidies aggregating £A172,000 for four more companies engaged in the search for oil in Australia. With this amount, the total subsidies granted in the last four years come to £A3.5 million. The money has been allotted to nearly 80 projects. So far, oil has been discovered at Rough Range in north-western Australia and at Cabawin in south-eastern Queensland.

The British rubber and plastics industries are to have a new joint research organisation. This represents an extension of the scope of the former Research Association of British Rubber Manufacturers. The technology of the two industries has much in common, and the new organisation has the support of the British Plastics Federation. The Department of Scientific and Industrial Research has also welcomed the move and has agreed to grant to the new organisation up to £77,000, provided that the industries themselves raise £120,000 in each of the three years 1961-63.

The Government of Pakistan has decided to experiment from October next in the field of underwriting export trade risks not covered by insurance companies. The export credit scheme is to be tried for three years and will be extended if it works well. It will cover both commercial and political risks at the buyer's end. It is proposed to run it on no-loss-no-profit basis. It will be run as a special wing of the semi-official Pakistan Insurance Corporation. There will be a Board headed by the Commerce Secretary and consisting of the representatives of other Ministries, the State Bank of Pakistan and the Pakistan Insurance Corporation.

The design office of Prozamet (the enterprise designing and building metallurgical and electrotechnical plants) began work on nine complete industrial plants worth more than 50 million currency zlotys ordered by Ghana. The plants include a steel foundry, instrument and tool factories, as well as a shipyard capable of building ships up to 6,000 d.w.t. The shipyard, the first in Ghana, will be built at Tema, a seaside town in Ghana. More than one hundred Polish engineering works will work on the machines and equipment for these plants. At the same time, Prozamet began preparations for the delivery of 40 repair shops for agricultural machinery ordered by Mongolia.

The Institute of Geology and Mineralogy of the Soviet Academy of Sciences has discovered a new mineral which has been named "Gagarinite," in honour of the first cosmonaut. Gagarinite is a mineral more than half of which is composed of rare earth elements. These elements are being widely used in all the latest branches of industry and have great prospects. They are employed in electronics and in hard alloy metallurgy. Thus, the main elements of gagarinite will probably be used to a considerable degree in making parts of future space ships. Gagarinite has been found in a number of deposits in Russia and the Soviet geologists hope to find new commercial deposits of this valuable mineral.

The new Bill controlling the activities of savings and commercial banks in Norway has now been passed by the Storting (Parliament). Under the Act, the Government will appoint one-quarter of the Board of Representatives of commercial banks with deposits of over £5 million, and local councils are given the same authority for savings banks. The Act lays down regulations to ensure the principle that banking policies are to be based on social as well as economic and financial considerations. It prescribes that annual reports on the activities of commercial banks should be submitted to the Storting and the control committee of each commercial bank is required to see that the prevailing Government principles for economic and financial policy are followed by the bank.

PERSONAL

MR. B. M. Mulgaoker, Secretary, Premier Automobiles Ltd., left for the U.K. and the Continent on Tuesday the 6th inst. on official business.

Mr. Bernard Naylor Thorpe, Pan American World Airways Airport Manager at Calcutta, left for London where he will assist the Pan American's Airport Manager to replan for the greatly increased flow of traffic through this airport.

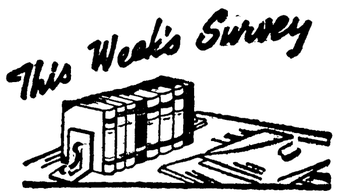
Mr. V. M. Paranjpe, Director, Division of International Finance, Reserve Bank of India, has been appointed Press Relations Officer of the Bank in place of Mr. S. D. Deshmukh who has been appointed Manager of the London Office of the Bank.

Mr. T. C. Kapur, Managing Director of the Export Risks Insurance Corporation Ltd., attended the conference of the Union of Credit Insurers held at Vienna from the 3rd to 8th inst. He is now visiting some European countries and the Middle East and is likely to return in the middle of next month.

NESTLER
HORIZONTAL 'PACKAGED' SMOKE TUBE BOILERS
For outputs from 1250 to 6000 lbs. of steam per hour at 150 lbs. p.s.i.
* High Efficiency * Quick Steaming
* Maximum Safety * Easy Transport
* Easy Installation
Distributors for Maharashtra, Gujarat, Rajasthan, Punjab, Jammu & Kashmir, Uttar Pradesh, Himachal Pradesh and Mysore:
M/S. GREAVES COTTON & CO. LTD.
1, Forbes Street, Bombay 1

NESTLER
VERTICAL STEAM BOILERS
for process Steam. Models up to 400 lb./hr. at 100 p.s.i. Exempt from Boiler Act

NESTLER BOILERS PRIVATE LIMITED Love Lane, Cross Lane, Byculla, Bombay 27



INDUSTRIAL RESEARCH

THE proposed third Plan allotment of Rs. 130 crores (as against Rs. 72 crores in the second Plan) for scientific and industrial research will be in addition to the committed expenditure of Rs. 75 crores for supporting current research activities. An aggregate outlay of about Rs. 200 crores in this field during the third Plan period is no doubt impressive, but it is modest in relation to the needs of a growing industrial economy. But expenditure, whether large or modest, cannot alone be expected to do the trick. Experience to date shows that, while research laboratories in various fields have been well staffed and equipped, they do not seem to have achieved much by way of evolving new products, processes and techniques for practical application; at least there is no authoritative account of achievements in the first and second Plan periods, whether in the field of pure research or in that of applied research. Even if it is supposed that some good work has been done in the laboratories, much of it is probably not capable of practical application or commercial exploitation.

The Council of Scientific and Industrial Research has, of course, repeatedly offered the explanation that the existing gap—very wide indeed—between the actual utilisation of a process and its laboratory success is due to certain inhibiting factors. These factors are stated to be lack of pilot plant facilities, inadequate liaison between industry and research workers, lack of knowledge about research results among those who frame licensing policies, absence of industrial consultants, and lack of design and fabrication facilities. It is presumably sought to be conveyed that the C.S.I.R. has no control over these factors. This cannot be true, for all these factors, barring the last two, would lend themselves to treatment at the Council's hands. If the Council has not provided in its research schemes for pilot plant facilities to test out the results of research on commercial scale, if it has not built up a liaison machinery between industry and the research institutions and if it has not regularly brought the new products and processes to the attention of licensing authorities in the Development Wing of the Commerce and Industry Ministry, the failure is its and not somebody else's.

This failure is, in part at least, due to greater emphasis from the very inception of the C.S.I.R. on setting up research laboratories in too many fields and on launching too many research schemes than on concentrating its resources in selected fields with an eye on practical application of laboratory results. No wonder, therefore, that very few new products and processes (probably less than 20 in all) for which the C.S.I.R. has been responsible have been taken up by industry for commercial application or exploitation. In the circumstances, it is rather a case of over-extending itself when the Council has evolved a whole range of schemes for the establishment of new research laboratories in the third Plan period. These institutes and laboratories are proposed to cover petroleum research, biology, fire research, fertiliser technology, forage and grassland research, plant virology, sheep and wool research, piggery research, livestock research for dealing with local and regional problems, switchgear testing and development, and so on. While research in these fields may be necessary, one wonders if in the existing laboratories and institutes (which are quite large in number) new divisions could not be started for these lines of research. For instance, no separate research institutes seem to be necessary for some branches of agricultural and livestock research or for fertiliser technology, for there are already national institutes of long standing which deal with agricultural, plant breeding and livestock problems. Again, there is no reason why there should be a medical research centre exclusively for developing and promoting the use of radio-isotopes in medical research, while there is an All-India Medical Research Institute.

Instances, thus, can be multiplied to show that there is avoidable duplication in research effort in different institutions. The aim must obviously be to make fuller utilisation of the research facilities already created rather than to create new facilities (except where absolutely necessary) or to duplicate them without regard to research co-ordination or expense. All the time, the scientific planners in the country seem to be taking advantage of the Prime Minister's laudable emphasis on science and scientific progress to sponsor a whole range of research laboratories, institutes and stations and an even wider range of research schemes in great hurry. Numbers alone cannot impress in the final analysis; it is the quality of research that matters. It is high time a commission of inquiry was set up to appraise the achievements of scientific and industrial research in the country so that further progress in this sector can proceed on sound and methodical lines.

JOINT SECTOR INDUSTRIES

In a fresh bid to promote the tempo of industrialisation in Maharashtra, the State Government has been considering the question of its possible participation in private industrial undertakings. A Study Group (Mr. R. G. Saraiya: Chairman) has now gone into the question and has made a study of the prospects for such joint sector undertakings in the State. The Government is now considering the report of the Study Group and its decisions on it are eagerly awaited. The group is understood to have expressed the view that there is good scope for joint sector industries in the State. Advocating, however, a very cautious approach to the issue, it has recommended the establishment of joint sector industries only in select, promising lines to begin with. If these experiments prove fruitful, it is needless to say, public confidence would be aroused making it possible for further expansion. The State Government has, no doubt, some experience in managing a few textile mills, the record of which has not altogether been discouraging. At any rate, the scope of the joint sector undertakings is far wider and the problems to be tackled are more complicated.

Of course, the proposed set-up is suitable only for certain selected industries. The Group has suggested several industries which offer distinct possibilities for joint ownership and management. These include alumina (in Colaba and Thana districts), stainless and ferro-alloys produced by electrical smelting processes, electrolytic manganese from low grade ores, and development of salt and chemicals on a large scale in the Ratnagiri area. The Group feels that joint enterprises would be set up in the case of mining of manganese and iron ore also in the areas reserved for the public sector. Another important industry suggested is the manufacture of fine and superfine cloth under export promotion schemes by the installation of modern composite spinning and weaving units with automatic looms and most advanced machinery. No less important is the suggestion relating to the manufacture of paper using sugarcane bagasse and also town gas meters—a large number of which will be in demand in Bombay once the Trombay Fertiliser Project goes into production and increases the availability of gas in the city.

The Group has not ventured to suggest any specific amount which the State Government should set apart for financing the overall projects. It feels that, to begin with, the State Government should be willing to invest about Rs. 8-10 crores in joint ventures. The joint ventures will certainly be in a position to raise capital from other sources, such as I.C.I.C.I. and also the counterpart funds of the U.S. aid under P.L. 480.

An important aspect of joint ventures is the extent of control to be maintained by the State Government. When the Government participates in the share capital of a company, a minimum of 26 per cent would appear to be imperative, under the provisions of the Company Law. The maximum limit will be 49 per cent. For any further increase will only render the Company into a Government undertaking, resulting in backdoor nationalisation. The appointment of the Chairman of the Board and auditors, according to the Group, should be subject to the prior approval and continuing consent of the Government. While such functions should rest with the Government, there is need for safeguarding the autonomy of the institution. The Group has made it clear that the joint ventures should have complete autonomy in regard to day-to-day working, purchases, sales, appointments, promotions, transfers and general managements. It remains to be seen whether the Government, the influential officials in particular, will resist the temptation of interfering with the day-to-day working of joint sector companies and establish conventions conducive to the unimpeded development of such enterprises. The report of the Study Group, although it is directly relevant to Maharashtra only, is bound to be helpful to other States which may propose to embark on similar schemes.

DEVELOPMENT OF VIDARBHA

In his presidential address at the first quarterly general meeting of the Nag-Vidarbha Chamber of Commerce, on 31st May, at Nagpur, Mr. D. C. Sutaria did well in highlighting the special needs of Nagpur and Vidarbha. Vidarbha is a relatively backward region in Maharashtra, for its irrigation facilities, roads, power, education and medical services are inadequate. In the first two Plans, meagre allotments had been made for these purposes. The Nag-Vidarbha Chamber of Commerce and Industry has, therefore, been pleading for the past many years for the industrialisation of the rural areas of Vidarbha and specifically for setting up some major manufacturing plant in the public sector in Nagpur or in its vicinity so as to create the necessary atmosphere of enterprise and confidence. But the Government of India has not responded favourably to the Chamber's plea. At least the State Government now seems to be earnest in its endeavours to encourage the establishment of some industries in Vidarbha. For instance, the Bhandara ammunition factory, the project for exploitation of coal in Kamptee and the setting up of the plates and vessels factory at Wardha do represent a good, though modest, beginning in the right direction. But if entrepreneurs are to come forward, as advised by Mr. Wankhede, Maharashtra Finance Minister, at Nagpur on the 3rd instant, to start new industries on their own initiative, they would need to be assisted by Government through the creation of basic facilities like power, roads, communications and technical institutions.

Mr. Sutaria's reference to the question of manganese mines in the Vidarbha region was quite timely. His suggestion that joint-sector principles could be applied in this field, viewed in the context of the recent creation of a joint-sector enterprise to develop the mineral resources of the Konkan region, also seemed to be practical. There should, therefore, be no difficulty in accepting Mr. Sutaria's plea for developing the mineral resources in Vidarbha on similar lines.

SHIPPING

Mr. G. L. Mehta's speech at the recent inaugural ceremony of the Eastern Shipping Corporation's new service from the West Coast of India to Japan succinctly presented the problems confronting Indian shipping. As Chairman of the National Shipping Board, Mr. Mehta was in a position to deal authoritatively with some of them. In dealing, for instance, with the problem of acquisition of new ships by Indian shipping companies, he had something critical to say about the Hindustan Shipyard of which he was himself the Chairman for some years. The cost of construction of ships at the Vizag yard was still substantially higher than what it should be. While shipbuilders in the United Kingdom were willing to sell a vessel of 10,000 to 12,000 d.w.t. at about Rs. 1.45 crore and some other foreign shipyards were in a position to offer a similar vessel at Rs. 1.35 crore, the cost of a ship at the Hindustan Shipyard was ranging between Rs. 1.8 crore and Rs. 2.0 crores. Mr. Mehta also referred to the unhappy alternative of purchasing ships on deferred payment terms which added 20 to 30 per cent to the cost, thus impairing the competitive capacity of Indian shipping.

Yet another shipping problem which has been causing serious concern for the past two years or more and which figured in Mr. Mehta's speech pertains to coastal shipping. The National Shipping Board has no doubt drawn the attention of various authorities concerned to the fact that an inadequate coastal fleet would not be able to assist the inland transportation system in periods of crisis. And it has also stressed the need for solving this problem from a broad national point of view by diverting some cargoes suitable for bulk transportation to coastal shipping. But the authorities concerned, it is distressing to note, have not paid any heed to this reasonable suggestion. In fact it would not be an exaggeration to say that the Government of India had not so far evolved any consistent long-term policy in regard to coastal shipping. Now that the crisis in coal movement has assumed serious proportions, merchant shipping is being called upon to transport another million tons per year. This means that as against only one million tons of coal cargo hitherto carried, coastal shipping would have to handle two million tons. Mr. Mehta, therefore, was on firm ground when he declared that "one could not expect coastal shipowners to keep vessels handy merely for the sake of a possible opportunity of lifting more cargo in emergencies." It is obvious that for a country like India with extensive coastline, policies would have to be framed in such a manner as to divert some cargoes to feed the ships regularly. This alone would make for economical operation.

While Mr. Mehta referred to the valuable assistance extended by the Government of India to the shipping industry in such ways as the training of merchant navy personnel, grant of substantial loans at concessional rates of interest and provision of Government cargoes to Indian ships, he also admitted that the third Plan provision of Rs. 55 crores for shipping would enable a net acquisition of only 2 lakh gross tons, as against the net addition of 5 lakh tons recommended by the National Shipping Board. His warning that the prospect was one of retardation rather than of acceleration in the pace of development of shipping was thus both timely and necessary. The Government of India, which is certainly aware of the role of Merchant Shipping as the saver and earner of foreign exchange, should give more tangible expression to this realisation by enabling the shipping companies (old, recently formed or currently proposed) to acquire ships on the most favourable terms and add the five lakh gross tons recommended by the National Shipping Board. Very few export industries, it should be remembered, can earn back the foreign exchange spent on their development as quickly as shipping can do. The recent statement of Mr. Raj Bahadur, Minister of State for Transport and Communications, that it was likely that the Planning Commission would provide additional funds when the present third Plan provision for shipping was fully utilised could certainly not be taken as a firm assurance.

MOVEMENT OF COAL

Various short-term measures have so far been improvised to remove the transport bottleneck in the movement of coal. But their impact on the coal supply situation has only been moderate. Industries located in regions far away from coal mines continue to face serious shortage of this essential fuel. Owing to inadequate transport facilities, coal accumulated at pitheads amounted to 4.8 million tons by February last as against 3.4 million tons in 1960. This is said to have resulted in the locking up of about Rs. 10 crores worth of working capital. One of the measures suggested to solve the problem is the provision of 200 additional wagons for transport of coal beyond Moghulsarai from next month onwards. While this is a step in the right direction, it will only be of marginal significance. For at present the number of wagons actually available is only 4,700, as against an estimated demand for about 6,100 wagons. A better solution would appear to lie in additional wagon-building. It is, therefore, gratifying to know that the railways have decided to manufacture a larger number of new wagons to improve the position in the third Plan. In this connection, Mr. Kripal Singh, Member, Transportation, Railway Board, also disclosed at a Press Conference last week after a meeting of the Chief Operating Superintendent of all the eight Railway Zones at Bangalore, that orders had been placed for 100,000 tons of steel for additional wagon production.

But increase in the number of wagons alone will not be sufficient. It would be necessary at the same time to give due attention to the demands of both small and large-scale manufacturers. Large-scale units favour bogie wagons, which have a capacity of about 55 tons, as against the capacity of only about 18 tons for ordinary wagons. Bigger wagons are not popular with small producers, since they do not have adequate equipments with mechanical unloading units. That is not all, for it could appear from Mr. Singh's observations that even at present, there is room for carrying some more coal in the existing ordinary wagons. Although each wagon is now loaded with 18 tons, its maximum capacity is 22 tons. It should be possible to haul at least one or two tons more of coal in each wagon. Actually the Railway Board has just issued instructions to all the railways to load one ton more in every wagon to increase transport capacity by 4 per cent. Such optimum utilisation of wagon space, accompanied by quicker wagon turn-round, is bound to ease the transport situation to some extent pending the availability of more new wagons. This is good in so far as it goes.

A new move afoot designed to solve the crisis in coal movement is the establishment of zonal coal dumps. Admittedly, this procedure entails larger expenses for unloading wagons, stocking coal in dumps, and loading it into wagons or trucks for despatch to various destinations. This will raise the landed cost of coal, with its effect on the cost structure of several industries, since coal is an important element in their expenditure budgets. This measure, too, is in the nature of a stop-gap arrangement. While additional wagon-building and fuller utilisation of wagon capacity may be expected to ease the railway transport situation, it is doubtful if the additional traffic offerings which are expected to be handled by the railways in the third Plan period can be fully cleared by them. Wherever possible and economic, alternative means of transport such as by road and by coastal shipping could, of course, be given greater encouragement than what has been proposed in the Draft Outline of the third Plan. But here, in so far as coal transport in particular is concerned, higher cost of haulage by road or by sea would have to be reckoned with. This raises the basic question whether the Government can bring about freight equalisation by some means or other. As this may be a difficult proposition, a lasting solution to the problem of coal movement would have to be sought only through the railways. Logically, therefore, the Railway Plan may have to be recast in its inner details so as to enlarge the capacity of railways to move almost all the coal required for their own use and for the use of industries in different regions.

Banking Increases National Wealth

P. N. B. Serves the Nation's Industry, Agriculture and Commerce.

BANKING SERVICE OF EVERY DESCRIPTION OFFERED.

THE PUNJAB NATIONAL BANK LTD.

Established 1895

Head Office : New Delhi.

INDUSTRIAL IBCON CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

IBCON PRIVATE LIMITED

HEAD OFFICE: ADELPHI, 119, QUEEN'S ROAD, BOMBAY 1.

ON THE ARENA

By The Archer

What Is Vulgar?

ANYTHING that is plebeian, common, customary is considered to be vulgar. In the course of man's perpetual attempt to elevate himself from the commonplace to the superior, vulgarity has acquired the connotation of being low, unrefined, coarse, debased and pretentious. According to Hazlitt (*Table Talk: On Vulgarity*) "a thing is not vulgar merely because it is common." There is also a quotation from *Punch Almanack* (1876) which says: "It's worse than wicked, my dear, it's vulgar." And so it is that when one talks of something being vulgar, one assumes the condemnatory attitude, and holds it up to ridicule as being beneath contempt, very much to be ashamed of. That seems to be what the Prime Minister said about the bright strings of twinkling bulbs and the brass bands proclaiming that a wedding is on; and he is reported to have said this in the context of the shortage of electric power in Delhi, and the large-scale illuminations which put a strain on the power supply system. I don't think this exposition of the subjective reaction of even so eminent a person as the P.M. is going to result in wedding festivities being celebrated with less pomp and ostentation than at present, but I will not be surprised if some enthusiastic social reformers are already planning to suggest a Vulgarity Prohibition Bill (*a la* Dowry Prohibition Act) making it illegal to have more than the customary lamps at weddings and just enough lighting to facilitate the ingress and egress of invitees, with, of course, the concomitant embargoes on the numbers of invitees, service of refreshments, provision of entertainments, music and loudspeakers, regulation of traffic, etcetera. Of one thing we may be sure, namely, that legal enforcement of "Vulgarity Prohibition" will be possible unlike in the case of dowry prohibition. Exhibitionism is the very basis of all vulgar display, and can be summarily brought to book by an alert enforcement force in any city in the country. For once, therefore, there will be an effectively enforceable law if and when a vulgarity prohibition Bill is passed.

What surprises me, however, is why large-scale illuminations alone have been singled out for being labelled as vulgar, when everything connected with upper class weddings in our large cities is "worse than wicked." Wedding receptions, manipulated through the issue of several thousands of invitation cards, serve the dual purpose of enhancing the prestige of the hosts in the social register, and ensuring the receipt, by "the happy couple," of a whole lot of wedding presents comprising cheques, cash, ornaments, clothes, suit cases, bags, and utility articles ranging from crockery, cutlery, table fans, lights and electrical gadgets to even bed pans and enema cans; they disrupt traffic and create noise and confusion over a wide area; the ostentatious display of wealth and plenty strikes a discordant note amidst the poverty and misery of many thousands of people in the locality; it generates class hatred. The social effects of ostentation are very disturbing in a country where extreme poverty exists side by side with considerable affluence. If ostentation goes unchecked it might lead to an upheaval in the years to come—God forbid!

As regards illuminations, some thought should also be given to toning down the celebrations of Republic Day every year, especially in a city like Bombay where electric power is available in plenty. If having illuminations is a legitimate way of celebrating festivities, what applies to Republic Day should also apply to a wedding day; if, on the other hand, they are vulgar at a wedding, they are equally vulgar at mass celebrations of Republic Day. What with competitions for achieving the last word in blazing splendour, and Government-owned buildings taking part in them, the amount of money, labour and organisation spent on illuminations during the last few years in Bombay, and the childish craze for a night of merry-go-round and noise and traffic jams, seem to have transgressed the bounds of justifiable enthusiasm even for celebrating such a day as the one on which we declared ourselves to be a Republic. Should we not cross over from adolescence to manhood and give up the enjoyment of infantile displays? Would it not be good to pump in some sobriety into our mass celebrations before we start preaching to individuals to give up vulgarity, ostentation and exhibitionism? Refinement is a way of life which begins, no doubt, with the individual and permeates into society, but when whole masses of people are encouraged to live riotously, it is difficult to eradicate the infection; it becomes endemic.

Unfair Criticism

Mr. C. Rajagopalachari has criticised that America had gone back on its policy of giving financial aid directly to Indian industrialists and was now "more attached to the Indian Government." In an interview with the I.N.S. he is reported to have stated that American aid to the Government of India would result in leaving it to the Indian Government to fix the priorities for disbursing the aid to various enterprises, and that the new policy would mean that America would lose the freedom to help private industry in India. In his view, the new policy would muffle the enthusiasm of Indian industrialists because they would have to beg the Government for getting the aid; the freedom and initiative of the private industrialist was involved in the issue, not the money. It would also mean delay because, before an industrialist in India could finalise any deal with his American counterpart, he would have to approach the Indian Government.

I fail to see any merit or substance in these arguments, as even the so-called direct American aid to industrialists would not be possible without negotiation through the Indian Government and its concurrence on all details. It is, of course, evident that Mr. Rajagopalachari's objections are in line with his pronounced antipathy to the Government's plans, planning technique and controls. Borrowing his favourite manner of illustrating by parables, I would cite two hypothetical cases. When a Hindu undivided joint family requires a loan for capital expenses no sensible moneylender would care to lend to a junior parcener according to the latter's personal need or order of priority, and no loan would ordinarily be available except with the full consent and approval of the Kartha of the family. Again, when a family consisting of a husband and wife is short of money for expenses, no sensible or self-respecting husband will consent to his wife accepting loans or gifts from neighbours, and transactions of that type will invariably result in degrading the husband to the status of a nincompoop.

If and when Mr. Rajagopalachari meets Ambassador Galbraith at some future date, I expect he will get a lively answer to his criticism; as far as I know, it was Mr. Galbraith who was responsible for the changed policy of the U.S. Government. In an off-the-record article which he wrote before his arrival in India, Professor Galbraith criticised U.S. agencies of the previous administration in Washington for stressing that U.S. aid should be channelled more through the private sector than through the public sector. In his view, the form of Indian economic development is an internal affair and should not be influenced, directly or indirectly, through aid programmes. Having, perhaps, influenced the U.S. Government's thinking in this regard, Ambassador Galbraith is sure to be disappointed when he hears the discordant note voiced by Mr. Rajagopalachari. The latter should also bear in mind that an influential section of American opinion is not very enthusiastic about aid to India, and that section is likely to make capital of his criticism.

It is undesirable that leaders of thought in a country which is in difficulties should voice divergent views on aid projects, just as it is undesirable for a person in distress to shout with two voices. I remember a war-time story to illustrate this. A soldier who had a cracked voice fell in a trench in the dark, and unable to get out, shouted for help in a deep voice. A passing sentry responded and called back "Where are you, give me the location." The man in distress answered, "Here I am, just behind the tree," but unfortunately his voice was different this time, a hoarse whisper. The passing sentry cocked his ear at the different voice and shouted, "To hell with you fellows, you seem to be two of you there, why don't you help each other?", and walked away.

Titanium Dioxide

In my column of 25th February last, I recounted the full (sad) story of titanium dioxide manufacture in Travancore, and pointed out how the factory, which is in an excellent position to earn valuable foreign exchange for the country, had not been expanded for the purpose although the technical merits of doing so had been unassailably established. I now see from a financial paper that British Titan Products have offered to help, but the offer is being somewhat critically examined, as it is subject to the condition that B.T.P. should be allowed to subscribe to the entire amount of new capital required for expansion. The present paid-up capital of Travancore Titanium Products Ltd. is Rs. 75 lakhs, and the proposed increase is Rs. 35 lakhs. If B.T.P. is allowed to subscribe the whole amount it would take the total of its interest to Rs. 51.55 lakhs as against the Kerala Government's holding of Rs. 38.25 lakhs, and thus B.T.P. will become the largest single shareholder. It is reported that both the Planning Commission and the Ministry of Commerce and Industry are in favour of accepting B.T.P's offer as it would obviate the necessity for the Indian factory seeking foreign exchange allocation. I hope that the State Government will agree to the proposal. It will be an act of self-immolation if the expansion scheme does not go through as a result of procedural or ideological difficulties. B.T.P. is the original foreign collaborator and knows the job of making the Indian factory pay and pay well. Its reputation is enough to make the pigment sell in foreign countries and a sizable amount of foreign exchange can be gathered if T.T.P. expands its production to, say, 15,000 tons per annum. The fact that the proportion of shareholding will be tilted in favour of B.T.P. should not stand in the way. As the proverb says, "It is good money even if it is acquired by sale of dogs, for the money will not bark."

Bank Funds For State Ventures

The National Development Council has suggested that measures should be taken to secure for the public sector a large share of the funds of commercial banks, which are, at present, largely invested in private sector enterprises. A spokesman of the N.D.C. is reported to have stated, however, that this suggestion did not, even remotely, involve any plea for nationalisation of banks. In the absence of a clearly spelt-out resolution or record of the proceedings it is difficult to comment on this, except to mention that, what is reported is, to say the least, very screwy. As matters stand, banks are unable to fulfil their commitments to their constituents, and large-scale refusal of advance limits seems to be the order of the day. The suggestion to evolve "measures to secure a large share of funds" to public sector units implies nothing short of compulsion, unless it be that the language is pathetically inappropriate. I am sure that banks are not very anxious to make advances to public sector enterprises especially at the rates which they would ask for, and subject to the wooden procedural methods that they are reputed to employ. If the National Development Council presses for greater assistance to public sector units than for private sector enterprises, and to the detriment or acute distress of the latter, and if it is unable to think of the national economy as a whole instead of as two separate sectors, one more favoured than the other, it should have its name changed to Public Sector Development Council, dropping out the often ing word "National."

ISSUES THROWN UP BY N.D.C. MEETING

HAVE PUBLIC SECTOR ENTERPRISES A HIGHER NATIONAL PRIORITY?

From Our Special Correspondent

NEW DELHI, 5th *June*

DELHI LETTER

THE National Development Council broke up rather abruptly on the second day of its session last week without going through the motions of approving in detail the final targets and outlays proposed in the various sectors. The Council readily agreed to the Prime Minister's suggestion that its endorsement of the chapter on the third Plan outline should be regarded as sufficient approval of the whole Plan: apparently this had nothing to do with the rigours of Delhi's climate at this time of the year nor with the acerbity of speech shown by State Ministers during the discussion of the resources position. It is, however, curious that some of the appeals for a passionate implementation of the Plan were not specifically directed towards agriculture and irrigation nor to the fostering of conditions for the success of a price policy on which a sub-committee was supposed to have been working for a long time. Perhaps there was disinclination to raise too many controversial issues at this stage which might hold up the finalisation of the Plan and its publication (expected some time next month); now that a face-saving formula has ended the dispute which arose at the last session between the States on the one side and the Planning Commission and the Union Finance Ministry on the other, it was on the whole a wise decision to have let matters rest there.

Unmistakable signs of impatience were in evidence at the meeting of the N.D.C. over the Centre's attitude to the States in financial matters. This is somewhat unusual because Central assistance to States for their plan outlays have been steadily enlarged during the second Plan period and, in addition, they have been getting increasing shares of certain taxes. There have been some setbacks in recent years, though they cannot be called major ones; for example, abolition of the tax on railway passenger fares and its substitution by a fixed subvention has denied to States the increasing revenue from the growing passenger traffic. The new scheme of company taxation has affected the total divisible pool of income-tax, though the Centre has been making up for it in other ways pending the recommendations of the Third Finance Commission; unless the Commission makes a generous award increasing the States' share of the income-tax to anything between 80 and 100 per cent, State Governments will have reason to feel aggrieved.

Differences Among States

There are, of course, larger differences among the various States themselves than between them and the Centre, which precludes any concerted move by all of them. For instance, repeated efforts by Dr. B. C. Roy, in the N.D.C. to secure a free hand for shaping his State's plan—with the Centre merely transferring resources on the scale required for it—have been countered by the Madras Finance Minister's objection that under such conditions national planning will cease to have meaning. Other differences will soon come to the fore in their arguments before the Finance Commission on the principles of distribution of the taxes shared with or collected by the Centre. Besides their several grievances, State Governments, naturally anxious in an election year to present big plans, have feared that the Union Finance Ministry's excessive caution may lead to dropping of projects having local appeal.

This explains the unusual challenge made to the Union Finance Minister to "dare and act" in raising resources for the larger physical plan of over Rs. 8,000 crores; unfortunately, most States had shown considerable pusillanimity earlier this year by leaving deficits in their revenue budgets uncovered and they did not show noticeable daring even during the second Plan period in spite of constant exhortations by the Planning Commission to tap certain sources of revenue. With that record, they could hardly accuse the Centre which has certainly made efforts to raise substantial additional taxation. Mr. Morarji Desai has been quick to seize this debating point but the episode, however, revealed some attitudes to the Centre which have not been much in evidence before.

A theory has been recently developed in Delhi on the basis of this and other developments connected with the language agitation in Assam, that the States have grown very powerful of late. Obviously much depends on the personal stature of individual State Chief Ministers or Union Ministers dealing with them and there is very little point in drawing parallels when their relative positions are not always the same. It is, however, significant that Mr. Nehru was anxious all the time to please the States and kept stressing the possibilities of raising larger resources on the ambitious scale indicated by the Savings Committee of the N.D.C.; the Union Finance Minister was thus isolated. The Centre alone cannot execute a very big plan and it has to carry the States along with it as much as possible in order to achieve full and wholehearted implementation, especially in matters like agriculture where energetic local efforts are needed. A stiff approach to them on the eve of the Plan was politically inadvisable and was naturally ruled out, even if it involved acquiescence in overoptimism or surrender to unrealistic demands.

Will the methods adopted in Gujarat and Maharashtra in raising small savings succeed, say, in West Bengal? Perhaps not, but even if six or seven other States can profit by them in the next five years, it would be no small gain. Most probably loans from the market of Rs. 800 crores will not materialise: the Finance Ministry has put the figure lower by Rs. 50 crores. Monetary stringency, felt at present levels of economic activity, is unlikely to ease in the coming years especially in view of the restricted deficit financing and possibly continued diversion of deposits to the non-banking sector. The Reserve Bank, it seems, would prefer a still lower borrowing target of Rs. 650 crores because of these reasons. Much of the optimism (of the Savings Committee and the Perspective Division of the Planning Commission) depended on the extravagant targets of new business which the L.I.C. had accepted for itself in a bid to prove its worth. Whether other things will remain the same to enable it to achieve these high targets is doubtful; if the savings drive is also stepped up successfully, the L.I.C. may soon discover its limits, assuming that its own efficiency does not act as a serious handicap.

Banks and Public Sector

The investments of the banking system in gilt-edged during the third Plan may not therefore be increased substantially (the Reserve Bank is reported to estimate it at Rs. 150 crores net) and apparently having this in mind, one Chief Minister is reported to have argued that the commercial banks should provide financial assistance to the public sector enterprises. There is no harm in saying so, and there is nothing to prevent the latter from approaching banks or securing assistance from them on the same terms as those applicable to other advances for industry. Instead of taking this unexceptionable line, the N.D.C. *communique* goes to the extent of declaring that "commercial banks should be *made* to contribute more for public sector enterprises which *were of a much higher national priority* than private sector enterprises." (Italics ours.) Surprisingly enough this has gone unchallenged: it appears that at one stage bankers themselves were anxious to accommodate public sector enterprises and had offered to do so at their last meeting in New Delhi. The object apparently was either to conciliate left-wing champions of nationalisation or to encourage the Government to channel more of its funds into the commercial banking system which can provide a base for its expansion of credit: it might have been a mixture of both, and due also to a desire to draw closer to the State Bank in status, now that the special deposits under P.L. 480 have also been transferred to the Reserve Bank.

Anyhow, the objects were never clearly stated in public and it is a mistake to imagine that the view expressed in the N.D.C. and quoted above was intended as a concession to the bankers' desire. An element of compulsion and a clear note of priority for the public sector as such over the private sector are indicated in it and unless it is established as a case of very bad drafting by the *rapporteurs*, it lays down a possibly dangerous rule. Could it mean that the baby car project in the public sector is automatically entitled to a higher priority than, say, cement, coal, cloth or even sugar in the private sector? If to the extent of the diversion to the public sector there is a corresponding decline in the levels of economic activity in the private sector, will the economy and the national interest gain?

Partisan Approach

These are points which were not raised or discussed by those preoccupied wholly with the public sector's outlay. As an earlier report in these columns pointed out, there is already a shortfall in the resources available for the private sector for its allotted outlay and it is extraordinary that the nation's highest body for taking planning decisions has no concern at all with about one-third of the total Plan outlay and the conditions required for making it a success. If we ignore this partisan approach to the question of the two sectors, the N.D.C. may be said to have done well on the whole; it has realised that transport and communications should have a much higher priority and that education should under no circumstances suffer through cuts in allocations. Despite all that was said in the Council the greatest uncertainty hangs over the additional taxation of States and the profits of public sector enterprises; the former, for obvious reasons, received scant mention and on the latter there is apparent unanimity on the need for issuing directives for the fulfilment of specific targets.

In spite of doubts, the third Plan has had a good start because a major uncertainty regarding foreign aid has been removed by the Washington announcement of large-scale external assistance for the first two years. Sustained American interest in aiding India has made this possible and the willing, if slightly delayed, response from other Western countries and Japan will strengthen President Kennedy's hands in steering the Aid Bill through Congress. New Delhi has shown a great deal of enthusiasm; the Prime Minister had taken the unusual step of writing personal letters to the heads of Governments concerned, proving the radical change in India's attitude to aid since planning began a decade ago. Not much is yet known about the quantum of aid that will be available for supporting the balance of payments when deficits are incurred for maintenance imports or for other development not tied to particular aid schemes. Terms will vary according to the circumstances of each lending country but on the whole they are expected to be reasonable if only West Germany will revise some of her notions about the cost of capital and period of lending.

AMERICAN LETTER

PRESIDENT KENNEDY'S LATEST MESSAGE TO CONGRESS

CONTROVERSY OVER NEW TAX PLANS

(From Our Special Correspondent)

NEW YORK, 2nd *June*

WHILE business volume in several sectors of the United States economy has been increasing of late, there have been many disturbing influences, both economic and political.

President Kennedy's address before a joint session of the Congress, in its final analysis, was considered by the business and financial community as being full of inflationary implications. That there would be a deficit in the Federal Budget for the fiscal year beginning 1st July, instead of a surplus projected by the Eisenhower Administration, was apparent before. But Mr. Kennedy's proposals seem to suggest that the magnitude of the deficit may be far greater than had been expected heretofore.

A trip to the moon by man and his return within this decade from the U.S., as suggested by the President, was considered largely propaganda. But the revamping of Federal expenditures and proposals for the expansion of the missile programme, left no doubt that it was no idle talk altogether. The request for more funds from Congress without increasing taxes was expected.

As an aside, Mr. Kennedy placed the cost of the moon project at between $7,000 and $9,000 million and Senator Keating rose to the occasion by proposing the issuance of "space bonds," or at least he wanted the authorities to look into the feasibility of such a flotation.

The hastily arranged joint session of Congress heard for about 45 minutes what seemed like a hastily prepared outline of the new Administration's plans and proposals. Obviously, the speech was designed in part to lay the groundwork for the discussions held by the President in Europe. Otherwise, there was reason to believe that the speech was intended to take the curse of the Cuban and Laos fiascos, to mention only two items.

There have been outbursts of protests over the Administration's new tax plans. The opposition comes not only from management but from labour union quarters as well. The proposals of a withholding tax on dividends and interest was opposed by the banking fraternity. The Treasury has expressed the desire of plugging loopholes, but in so doing its proposals have included such trivial things as the elimination of the first $50 per annum received by individuals in interest or dividends. It would hit probably more than one half of the population and most of them are small savers.

Amendment to Currency Law

Prominence was also given to the desirability of keeping a stable dollar. There is now a proposal in the legislative hopper to eliminate the statutory 25 per cent gold coverage to secure outstanding Federal Reserve notes and deposits. Some bankers call such a measure an encouragement to uncontrolled inflation. Fears are also expressed that removal of the 25 per cent gold control would be interpreted abroad as weakness rather than strength and that, in the event of a real international emergency, it would accelerate the gold drain rather than alleviate it.

On the other hand, the independent Committee for Economic Development, after lengthy research, supports the abolition of the 25 per cent gold requirement. The Committee also advocated that the U.S. should draw on the International Monetary Fund, against its deposits in this institution in order to dispel doubt that this country would ever use the Fund except under the most drastic circumstances. The third point made was to stem and withstand a speculative exodus of hot money from any particular major financial centre in the Western world.

The report suggests that the monetary authorities in the leading financial countries should agree on a very simple remedial procedure. That is, when any of them should receive an inflow of currencies of any other countries, such recipient nation would hold the additional foreign funds and not convert them into gold. Ten other minor recommendations were included in the Committee's 76-page report, *The International Position of the Dollar*.

While the controversy over the 25 per cent gold requirement rambles on, in most of these arguments the fact is overlooked that the proposed tax revisions will have a direct influence on overseas spending of American business and industry. They would remove many incentives and they would have a direct bearing on the U.S. balance of international payments.

Foreign Aid

Foreign aid is another area which, according to the President's proposals, is scheduled to be overhauled. The efforts of several agencies and other organisations, now working in this field, are planned to be co-ordinated, if not merged. Also, Mr. Kennedy wants to change the present system which requires him to ask Congress every year for new appropriations for the ensuing year. The White House proposals envisage that Congress will be asked to authorise 40 to 50-year loans so that U.S. help and aid for developing countries could be placed on a "rational" basis.

Congressmen and Senators, conscious of their prerogative of holding the Government's purse-strings are naturally reluctant to agree to measures which could be and are interpreted by some as an encroachment of the Executive branch of the Government on the rights and privileges of the Legislative Branch. It will be no easy task for Mr. Kennedy to get approval for such radical changes. In order to support Mr. Kennedy's stand, Washington has been urging West Germany, other European countries, Canada and Japan as well to make long-term loans.

United Nations News

Delegates of foreign countries to the United Nations say that India, for example, is posing a critical test of the Kennedy Administration's foreign aid programme. It is being pointed out that for the next ten years India will not be able to earn sufficient funds from exports to make sizable payments on loans, but that the ability to repay will increase every year, all other factors being equal.

India's loan requirements, according to information available here, approximate $2,500 million for the next two years. The tentative U.S. pledge calls for lending $1,000 million. The President will submit this and other foreign aid requests to Congress early this month, but what the reaction of the lawmakers will be, is uncertain.

In the meantime, the International Bank for Reconstruction and Development which is a subdivision of the U.N. has been holding meetings with industrial member-countries. At these discussions, it became apparent that the offer of financial help from nations other than the U.S. would be entirely inadequate to cover world needs and requirements and they would be particularly too small to meet India's needs.

The World Bank and the International Development Association are understood to be considering additional loans of $400 million, but the initial offers of other industrialised countries fell far short of the required $1,000 million.

Another point under discussion here has been the U.S. stand which proposes to make long-term loans at relatively low interest rates instead of at commercial rates which other countries have been charging. By contrast Soviet Russia has been extremely liberal in this respect.

Low rates, it is pointed out, would reduce the interest burden particularly during the first few years of any development programme when every penny counts.—*All Rights Reserved.*

The second meeting of the consortium of countries and institutions interested in development assistance to Pakistan was held at Washington on the 5th inst. under the auspices of the World Bank. The first meeting was held in October 1960. In addition to the representatives of the Bank and the International Development Association, the meeting was attended by the spokesmen of the Governments of Canada, West Germany, Japan, the U.K. and the U.S. The International Monetary Fund and the Governments of France, Norway, Sweden and Denmark were represented by observers. The meeting reviewed Pakistan's foreign exchange requirements for the period of the second Five-year Plan of economic development, which began on 1st July 1960, and considered the amount and nature of external assistance which might be made available to meet these requirements.

LABOUR IN BRITAIN

TRADE UNIONS IN STRONG BARGAINING POSITION

(*From Our Own Correspondent*)

LONDON, 2nd *June*

LONDON LETTER

"RECORD numbers at work, less unemployment, fewer serving in the Forces and the end of call-up"—these are the words with which the Ministry of Labour reports on the year 1960. Over the year, the number in civil employment rose by about 400,000 to reach a record seasonal peak at the year-end of nearly 24 million. One-third of the labour force at that time consisted of women and girls; half of them are working wives—about one out of every three married women in the country. And the first four months of this year have accentuated the trend towards still more full employment. In May, there were only 300,000 persons registered as unemployed in Great Britain. Percentage-wise that is only 1.3 per cent of the total labour force, the lowest May figure for five years. This total is not a static one, the turnover in unemployed being high and those on the Register now get jobs and those employed temporarily fall out. The number of unfilled vacancies, one of the best indices to inflation, rose by over 16,000 in April-May to a figure in excess of 350,000. There were thus more unfilled vacancies than there were persons registered as unemployed.

With output yet to rise with the balance of payments still very precarious, this state of affairs in the labour market presents the economic planners with a real problem. How is it possible to stimulate business activity without accentuating the labour shortage and creating a true inflation? For the next two months, on the usual seasonal pattern, employment will rise still higher and the gap between the persons seeking work and the posts available will widen. The stage seems to be set for a further bout of domestic inflation, and yet there is sufficient concern about prices and profit margins to make the danger seem not important.

Pressure of Employment

In what industries is the pressure of employment highest? Agriculture, coal-mining and shipbuilding are the three industries in which the labour force is decreasing. In engineering, electrical goods and vehicles (the latter after only a temporary setback), employment rose over the whole of last year overall by some 3 per cent. Prosperity in the textile industry was reflected in increased activity in textile machinery manufacture which was increased by 2 per cent: There was much activity in the cotton industry and, although the total labour force declined somewhat after the reorganisation of the industry, demands for labour increased. In the spinning and weaving sections of cotton and in linen and man-made fibres, there was a 4 per cent decrease, but the woollen and worsted industry made considerable demands for labour and the nominal drop in the labour force was due to sheer inability to record the numbers required. In transport, in catering and in the aircraft industry, the numbers employed were stepped upwards substantially.

The trade unions are in a very strong bargaining position. In 1960, eleven million workers (nearly half the labour force) had their weekly rates of pay increased, and one-third of the labour force had their normal weekly hours reduced by an average of nearly two per week. Practically all the negotiations which took place resulted in settlement of claims peacefully and without stoppage of work. The other side of the picture was the 2,800 strikes which took place during the year—a figure appreciably higher than the average over the previous ten years.

Only a rise in productivity creating the margins out of which higher wages can be paid can avoid a batch of industrial disputes in the autumn. That same higher productivity is necessary if domestic inflation is to be avoided and the balance of payments redressed. That then is the question mark hanging over industry in this country today—can productivity rise soon enough and sharply enough to avoid the clash between an adverse balance of payments and a serious labour shortage with its concomitant internal inflation?—*All Rights Reserved.*

CO-OPERATIVE MOVEMENT IN INDIA

MARKED RISE IN MEMBERSHIP, NUMBER OF SOCIETIES AND WORKING FUNDS

THE statistical statements relating to the Co-operative Movement in India for the year ended 30th June 1960, published by the Reserve Bank of India, show that there is noteworthy improvement in certain aspects of the co-operative movement. Thus, during 1959-60, the number of co-operative societies of all types rose from 283,971 to 313,499, the percentage increase being 10.4 as against 10.1 in the previous year. All the States shared this general increase. The owned funds of all societies went up from Rs. 220.16 crores to Rs. 267.32 crores and their working capital from Rs. 879.59 crores to Rs. 1,083.47 crores.

As in earlier years, agricultural credit societies constituted numerically the most important single class of co-operative institutions in the country. At the end of 1959-60 there were 203,172 such societies with a membership of 14.4 million. This shows that they have already exceeded the second Five-year Plan target of 200,000 for such societies. The membership target was fixed at 17 million. But the membership as at 30th June 1960, of 14.4 million, is still short of the target. Within the remaining period of the second Plan for which data are not yet available, it is unlikely that the membership target would have been realised. The performance in regard to the population served by co-operative institutions is, however, quite satisfactory. As against the target of 33 per cent, the actual percentage of population receiving the benefit of co-operative institutions was 38 as at 30th June 1960. About 56 per cent of the societies were based on limited liability.

As between the different States, Uttar Pradesh had the largest number of agricultural credit societies. But this cannot be taken as an index of intensive co-operative development in that State, because the extent of its territory and the size of its population seem to be primarily responsible for the figure of 57,136 societies. Madhya Pradesh and Maharashtra were next in order with 20,629 and 17,816 societies, respectively. Of the total number of agricultural credit societies in the country as a whole, as many as 21,305 remained dormant for one year, and 22,594 for two years and more. It may be recalled incidentally that the Vaikunth L. Mehta Committee on Co-operative Credit made recommendations last year to remedy this state of affairs by reviving or rejuvenating the dormant societies as far as possible. Another disquieting feature of the movement was that 3,072 societies were brought under liquidation during 1959-60 and 1,896 were wound up, bringing the figure of societies under liquidation to 16,502 as at 30th June 1960. Perhaps these societies were in such a bad plight that they could not be rejuvenated by temporary assistance.

Profitability

The net result of the operations of all types of co-operative societies, as indicated by the profitability of their operations, shows that during the year under review the position regarding the State co-operative banks, small-sized agricultural credit societies and primary land mortgage banks had improved both in regard to the number which worked on profit and the amount of profit earned. In the case of small-sized primary agricultural credit societies, the number of such societies earning profits was 130,129 in 1959-60, as against 111,033 in 1958-59 and the amount of profit also went up from Rs. 2.26 crores to Rs. 3.26 crores. The profits of central co-operative banks had increased from Rs. 1.93 crore to Rs. 2.48 crores, but the number of such banks which worked at profit had come down from 367 to 344.

The data relating to non-credit societies reveal that among such societies, weavers' and other industrial societies constituted the most important groups numbering 11,215 and 17,896, respectively. Next in order were sugarcane supply societies, which were concentrated mostly in Bihar and Uttar Pradesh.

State Co-operative Banks

The number of State co-operative banks remained unchanged at 22 during the year under review. Each major State and each centrally administered area, with the exception of the Andaman and Nicobar Islands, had one co-operative bank each. Only Maharashtra and Andhra Pradesh have the distinction of each having two such institutions. The society and individual membership of these banks declined from 23,802 and 8,235 as on 30th June 1959 to 22,790 and 8,217 as on 30th June 1960. The decline in the number of individual and societies is because state co-operative banks are tending to confine membership to central co-operative banks; individuals are being eliminated as far as possible and societies are disaffiliating themselves from the state co-operative banks and joining central banks. The paid-up capital and statutory reserves of the banks rose from Rs. 12.21 crores at the beginning of the year to Rs. 16.79 crores at the close of 1959-60. During the year under review the working capital of the state co-operative banks rose by 18.3 per cent to Rs. 174.74 crores. The interest paid by these banks on deposits ranged between ½ of one per cent and 5 per cent and the interest received by them on advances varied from 2¼ per cent to 8 per cent.

Central Co-operative Banks

In the case of the central co-operative banks and banking unions, the declining trend witnessed in their number in previous years continued during 1959-60 also. The number of such banks fell from 402 to 400, the smaller banks merging with adjacent larger banks. But the working capital of these banks showed a welcome rising trend, having gone up from Rs. 189.62 crores in 1958-59 to Rs. 247.40 crores. The owned funds of these banks increased by 31.6 per cent. Their deposits also improved substantially. As a result, they were in a position to lend more. Loans advanced by these banks during the year amounted to Rs. 297.14 crores, representing an increase of 41.4 per cent over the previous year. But one unhappy feature of their operations was the position of overdues. These amounted to Rs. 24.21 crores as at 30th June 1960 as against Rs. 14.93 crores a year ago. The position was particularly unfavourable in the case of Bihar, West Bengal and Assam, where the overdues constituted over 40 per cent of the outstandings.

Agricultural Credit Societies

The working capital of the agricultural credit societies went up by Rs. 52.76 crores to Rs. 223.70 crores, borrowings from state or central co-operative banks accounting for Rs. 141.92 crores of the total. Loans advanced by them during 1959-60 were higher at Rs. 169.09 crores as compared with Rs. 125.50 crores in the previous year. Of these, short-term loans were as high as Rs. 154.01 crores. The loan performance of these societies cannot be considered to be unsatisfactory when it is borne in mind that the draft outline of the third Plan expects the level of advances to reach the figure of Rs. 190 crores at the end of March 1961. The position in respect of their overdues was better than that of the central co-operative banks and banking unions, for such overdues constituted 21 per cent of the outstandings on 30th June 1960.

Another noteworthy feature of the operations of agricultural credit societies was that their average membership which has been rising since 1950 stood at 71 at the end of 1959-60. There has also been a sizable increase in the average working capital and the average loan per member. This is symbolic of their increased utility to the farmer, but very slender loanable funds distributed among too many borrowers cannot prove very useful to the user of borrowed funds.

The Rural Credit Survey Report, it may be recalled, had stressed the importance of large-sized societies. The Planning Commission fixed the target of 10,400 such societies in the second Five-year Plan period. The statistical statements show that this target is not likely to be achieved. There were only 8,023 large-sized societies as at 30th June 1960, as against 8,213 a year ago. The reduction in their number is noticed prominently in the case of Punjab, Maharashtra and Gujarat States. The decrease in Punjab was more pronounced where 280 large-sized societies were converted into service co-operatives during 1959-60. Thanks to the official shift in emphasis from large-sized societies to service co-operatives, the number of such large-sized societies has not appreciably increased in the country as a whole. The membership of such societies, however, increased from 2.77 million to 3.02 million in the year under review and their working capital also improved by Rs. 11.93 crores to Rs. 73.85 crores. Their lending activities also displayed marked progress, their loans increasing by Rs. 5.27 crores to Rs. 55.15 crores. Their overdues amounted to Rs. 10.69 crores as on 30th June 1960, forming 18.8 per cent of the outstandings, as compared with 14 per cent a year ago. The rate of interest charged by large-sized and small-sized agricultural credit societies on advances to members varied from 3¼ per cent to 9¾ per cent and from 4½ per cent to 12½ per cent, respectively. It is thus obvious that large-sized societies are in a position to lend on better terms to their members.

Non-Agricultural Credit Societies

The number of non-agricultural credit societies registered only a slight improvement from 11,084 to 11,371 and their membership increased by 0.21 million to 4.23 million in 1959-60. Their working capital, reserves and loans witnessed a substantial expansion.

The primary land mortgage banks also registered satisfactory progress. During the year under review the number of such banks rose by 45 to 408 (including land mortgage banking sections of 21 central co-operative banks) and their membership by 0.11 million to 0.55 million. During the same period the paid-up capital and reserves rose from Rs. 1,25.26 lakhs and Rs. 42.83 lakhs to Rs. 1,55.11 lakhs and Rs. 46.70 lakhs respectively. Their borrowings from central land mortgage banks rose from Rs. 14.58 crores to Rs. 18.09 crores and the loans due from members stood at Rs. 19.22 crores against Rs. 15.14 crores at the end of the previous year.

The data regarding primary agricultural marketing societies indicate an all-round improvement in their working results and resources. Their number increased from 2,380 to 2,501 and membership from 968,239 to 1,183,907. Their share capital and reserves rose from Rs. 5.94 crores to Rs. 7.54 crores and loans advanced to members from Rs. 12.20 crores to Rs. 15.87 crores. The sales of these societies as both owners and agents and purchasers registered a substantial expansion during 1959-60.

Co-operative Sugar Factories

The number of co-operative sugar factories increased from 50 on 30th June 1959 to 57 at the end of June 1960, of which 26 worked during the year. Their membership and working capital stood at 149,149 and Rs. 47.39 crores respectively at the end of the year compared to 130,815 members and working capital of Rs. 35.08 crores at the beginning of the year. The borrowings of these societies at the end of 1959-60 stood at Rs. 29.30 crores, of which those from Government, State Bank of India and Industrial

TURNOVER TAXES IN EUROPE

IMPORTS SUBJECTED TO SPECIAL LEVIES IN SOME COUNTRIES

[In a recent issue of Report on Western Europe *prepared by the Economic Research Department of the Chase Manhattan Bank, New York, there is to be found an interesting, though brief, account of turnover taxes in Europe. These taxes play such an important role in the taxation systems of Western Europe in particular that they would need to be studied by Indian exporters and export organisations which have been called upon to promote exports in markets that are not free from several discouragements. The Chase Manhattan Bank's study is, therefore, reproduced here.*—ED.]

TAXES on business transactions, sales, or turnover play a much more important role in the tax structures of Western Europe than they do in the United States. In some countries they bring in more revenue than direct taxes on income, capital, and wealth.

These "indirect" taxes deserve serious study by U.S. firms planning to enter the European market. They can be especially important to a new business since, unlike a net income-tax, they are an operating expense—levied on transactions whether they are profitable or not.

Unlike sales taxes in the U.S., which generally are levied only on the customer at retail level, turnover taxes in Europe are levied on the seller, and may be assessed throughout the process of production or distribution. In several countries, a tax is collected each time the product changes hands.

In Austria and all the Common Market countries except France the turnover tax is of the "cascade" type. "Cascade" turnover taxes are levied on a product's value at each transfer of ownership. Thus a radio component may be taxed five times before it reaches the customer. In industries involving several stages of manufacture, this gives a substantial cost advantage to an integrated firm that undertakes many of the processes in the cycle of production and distribution.

In order to reduce the cumulative effect of the "cascade" turnover tax, some countries tax wholesalers or retailers at reduced rates. Most countries exempt some products from the general turnover tax, and tax them only once in the the production cycle.

The French "value-added" turnover tax is not cumulative, although it is one of the highest turnover taxes in Europe. It is levied at a rate equivalent to 25 per cent of a product's pre-tax price each time it is sold, but all turnover taxes that other businesses have paid during previous stages of production may be deducted.

Tax at One Point

Many countries levy taxes on turnover or sales at only one point as a product moves from manufacturer to consumer. The Swiss general turnover tax is levied on the wholesaler. The purchase tax on consumer goods in the United Kingdom also is paid by the wholesaler. Other countries levy general retail sales taxes or tax sales of specific products.

All European countries exempt export sales from the turnover tax. Most of them also provide for refunds of at least part of the turnover taxes paid at earlier stages in the production of exports.

In addition to tariffs, several European countries levy special taxes on imports. Germany, Italy and Austria impose an "equalisation" tax on the c.i.f. duty-paid value of most imported goods. An equalisation tax is designed to reduce the possible cost advantage of foreign manufacturers who have not had to pay the turnover taxes borne by domestic producers in early stages of manufacture. In these countries the turnover tax is applied to the value of an imported product after payment of duty and equalisation tax.

Luxembourg, whose turnover tax is the lowest in the Common Market, also applies a special tax on imports. Although there are no special taxes on imports in Belgium and the Netherlands, some imported goods are taxed at a higher turnover tax rate than similar domestic goods.

Exceptions and Changes

The actual methods of assessment and definitions of taxable transactions vary from country to country. Also, the laws and regulations governing indirect taxes contain many exceptions—some products are exempt, others are subject to special rates. Moreover, the rates are subject to change. For these reasons, interpretation of how European indirect taxes will affect a particular business should be left to a well qualified attorney. The table below outlines in general form the taxes now applicable to most transactions.

Eventually the turnover tax and other indirect taxes may be harmonised in the Common Market. That is, their rates and structure may be changed to make the burden more nearly uniform in the six countries. This project is recognised as being a difficult one, however, so the special indirect taxes of each country probably will continue in force for some time.

Turnover Taxes in Western Europe

Country	General rate Per cent.	Tax on imports Per cent.	Remarks
"Cascade" taxes			
Austria ..	5.25	5.25	Tax on wholesale sales 1.5%. Sales subsidiaries owned by foreign parent are taxed at 5.25% on sales of goods imported from the parent company. Sales to private individuals are exempt.
Belgium ..	6*	None, but turnover tax ranges up to 13% on some imports.	
Germany ..	4	4-6	Tax on wholesale sales 1%. Sales subsidiaries owned by a foreign parent are taxed at 4% on sales of goods imported from the parent company.
Italy ..	0.4 to 8	0.4 to 8	10% is added to the invoice value of imports from a foreign parent to an Italian sales subsidiary. Most retail sales are exempt.
Luxembourg	2	2	Tax on wholesale sales 0.5%. Tax on large retailers 1.5%.
Netherlands	5	None, but turnover tax ranges up to 13% on some imports.	Retail sales are exempt. Wholesale sales are taxed at 0.75%.
Tax on value added			
France ..	25	None	Nominal rate is 20%, levied on value after payment of tax. Change in nominal rate to 22.8% has been proposed. Retail sales are exempt.

* Effective early 1961.

CRISIS

Facing NEWSPAPERS in India

IT is our duty to tell the public that due to the acute shortage of newsprint in the country at the present moment, several Newspapers face the possibility of having to close down.

The Ministry of Commerce does not appear to have taken adequate steps to ensure availability of newsprint against licences issued by them to Newspapers on the Rupee Account. The Ministry has issued authorizations to Newspapers for NEPA newsprint when the mill is unable to execute orders. There has also been inordinate delay on the Ministry's part in the issue of licences for the current licensing period. The situation facing the Newspapers is grave as there are today no stocks of newsprint in the country to meet an emergency such as this.

Issued by The Indian & Eastern Newspaper Society and published by this Newspaper in the national interest.

GUJARAT STATE FINANCIAL CORPORATION

The Gujarat State Financial Corporation was established on 1st May 1960 with an authorised capital of Rs. 2 crores, divided into 200,000 fully paid up shares of Rs. 100 each. Of this, 50,000 shares of the total value of Rs. 50 lakhs were issued in the first instance. The Government of Gujarat subscribed Rs. 18 lakhs and the Reserve Bank Rs. 10 lakhs, and the balance of Rs. 22 lakhs was offered to various financial institutions and individuals.

The working results of the Corporation for the period ended 31st March 1961 shows that the Corporation has succeeded in making a nominal profit of Rs. 42,180. Out of this profit, Rs. 4,300 have been transferred to the statutory reserve fund and a sum of Rs. 19,600 has been set aside for meeting the tax liability. The remaining amount is only Rs. 18,280 which is not sufficient for the purpose of giving a guaranteed dividend of 3½ per cent under Section 6 of the State Financial Corporations Act. And so the Directors have requested the Government of Gujarat to give Rs. 69,220 by way of subvention for the period ended 31st March 1961. The Corporation had dealt with up to the end of March 1961 twenty-eight applications, of which nine involving loans of Rs. 45.60 lakhs were transferred to it by the Bombay State Financial Corporation and the remaining 19 for Rs. 58.86 lakhs were received directly. The Corporation sanctioned 13 loans with total credit limits of Rs. 37.75 lakhs, rejected two applications, otherwise disposed of one more and kept 12 applications pending for future consideration. Eight loans were extended for entirely new projects, one for the new scheme of an existing unit, two for expansion programmes and others for replenishment of resources. As many as seven loans involving credit limits of Rs. 19.85 lakhs have been sanctioned to medium-scale concerns, the small-scale concerns with capital assets upto Rs. 5 lakhs have secured only three loans amounting to Rs. 2.90 lakhs. Large-scale units have obtained three loans aggregating Rs. 15 lakhs. The industry-wise classification of loans shows that five loans amounting to Rs. 35 lakhs have been made to the vegetable oil industry and one each to cotton textile (Rs. 2.62 lakhs), glue and gelatine (Rs. 2.50 lakhs), firebricks (Rs. 1 lakh), sanitarywares (Rs. 90,000), iron and steel castings (Rs. 2.43 lakhs), power-driven pumps (Rs. 6 lakhs) and semi-manufactures (Rs. 1 lakh).

INTERNATIONAL FIBRE SITUATION

COTTON STRENGTHENS ITS POSITION

IN refreshing contrast to 1959, when cotton's share of the total market contracted in all the main textile manufacturing centres, this foremost textile fibre of the world not only held its own but even strengthened its position in 1960. This conclusion emerges from a survey of the world textile fibre consumption made by the International Cotton Advisory Committee, Washington. In 1960, according to the Committee, cotton accounted for 64.8 per cent of the world fibre consumption, the same as in 1959. Rayon's percentage, however, suffered a further decline from 18.8 in 1959 to 18.6. While it is tempting to place heavy emphasis on lower and stabler cotton prices in explaining cotton's relative gains last year, the investments which have been made in cotton research and promotion in recent years, according to the Committee, would appear to have been the main factors responsible for the encouraging trend in cotton consumption.

The following table gives the consumption figures of the principal textile fibres during 1960:

(In million bales)

Area and year	Total	Cotton	Wool	Rayon and acetate	Other man-made fibres
United States—					
1957	12.75	8.39	0.71	2.46	1.19
1958	12.32	8.05	0.71	2.36	1.20
1959	14.09	9.01	0.91	2.92	1.55
1960*	13.44	8.73	0.86	2.21	1.59
Western Europe—					
1957	14.56	7.72	2.92	3.48	0.44
1958	13.42	7.14	2.66	3.13	0.49
1959	13.99	7.23	2.88	3.23	0.65
1960*	14.98	7.75	2.94	3.42	0.87
India—					
1957	4.84	4.54	0.05	0.25	..
1958	4.59	4.33	0.05	0.21	..
1959	4.76	4.44	0.05	0.25	0.02
1960*	4.79	4.45	0.05	0.26	0.03
Japan—					
1957	5.37	2.80	0.39	1.99	0.19
1958	4.23	2.31	0.34	1.41	0.17
1959	4.88	2.62	0.47	1.67	0.22
1960*	5.70	3.10	0.56	1.75	0.29
World, excluding E. Europe, U.S.S.R. and China—					
1957	46.12	29.50	4.89	9.68	2.05
1958	43.57	28.40	4.53	8.58	2.06
1959	46.33	30.01	5.11	8.73	2.48
1960*	48.00	31.10	5.20	8.90	2.80
E. Europe, U.S.S.R. and China—					
1957	17.04	13.90	1.30	1.72	0.12
1958	18.82	15.40	1.40	1.87	0.15
1959	20.47	16.80	1.50	2.00	0.17
1960*	21.05	17.10	1.55	2.20	0.20

* Preliminary.

In absolute terms, cotton consumption in 1960 rose to a new record of 31.1 million bales, an increase of 3.6 per cent as compared with the previous year. Rayon consumption also increased but at a much slower rate, about 2 per cent, and, in contrast to cotton, was still nearly 9 per cent less than the 1957 peak. By comparison with that year, rayon's percentage of the market has fallen from 21 per cent to 18.6 per cent while cotton's percentage during this period has increased slightly.

The natural fibres and rayon continue to feel the impact of severe competition from the synthetics. The share of the total market taken by the synthetic fibres, though still small, just about doubled in the last six years. Consumption of these fibres now amounts to the equivalent of some 3 million bales and is expanding continuously.

In the U.S.

So much for the global situation. Conditions within the textile industry vary in individual countries and, in particular, there is a dichotomy between the United States and elsewhere. During most of the calendar year 1960, the textile industry in the United States was in recession and mill consumption of cotton declined by 4.6 per cent. The impact on the rayon industry, however, was far more severe. Rayon consumption fell to its lowest level in eleven years and was off by 15.7 per cent as compared with 1959. Despite a decline in total textile consumption, cotton's relative position improved perceptibly last year. Consumption of synthetic fibres in the United States continued to increase but at a much slower rate. Production of textile glass fibres also set a new high last year and is now double what it was five years ago.

Elsewhere, the trend in consumption of all fibres was higher last year. In absolute terms, cotton consumption set a new record of 22.3 million bales—an increase of 1.3 million bales or 6.3 per cent from 1959. Rayon consumption rose by only about 600,000 bales but proportionately the gain was more marked—9.5 per cent. Nevertheless, cotton's relative position improved. For Western Europe as a whole cotton gained relative to rayon, but there were exceptions to the general trend in several countries, notably in the United Kingdom, Spain, the Netherlands, and Sweden. In these countries, the share of the total market going to rayon increased significantly, apparently to the detriment of cotton.

In India, cotton consumption remained virtually unchanged during 1960 but rayon rose to a new peak. In Japan, consumption of all fibres showed a marked increase but cotton claimed a larger share of the market while rayon's percentage was lower than for many years.

Synthetic Fibres

The most revealing observation on the textile situation outside the United States last year was the spectacular rise in consumption of synthetic fibres which increased by about 30 per cent by comparison with an increase in the United States of less than 3 per cent. At this rate, therefore, it would not be surprising if in a year or two's time aggregate consumption of these fibres in the rest of the world caught up with the United States. Production of synthetic fibres outside this country is still concentrated in two regions—Western Europe and Japan—though synthetic industries have been established in many other parts of the world in recent years.

Finally, mention may be made of the inter-fibre relationship in Eastern Europe, the U.S.S.R. and China. Here, although cotton still accounts for over 80 per cent of total fibre consumption, cotton's percentage has been declining. Statistics show an acceleration in the rate of growth in consumption of rayon and other man-made fibres and apparently it is planned to use these fibres to an increasing extent in the future. Production of rayon is considerably larger in Eastern Europe than in the Soviet Union but production of synthetic fibres is almost evenly divided.

"COTTON AND TEXTILE ANNUAL"

The third issue of this well-known annual *Cotton and Textile Annual* 1960-61 (Editor: Mr. R. V. Murthy. Published by Cotton and Textile Publications, Army and Navy Buildings, Mahatma Gandhi Road, Bombay-1. Pages: 224. Price Rs. 8) maintains the high standards set by its predecessors in respect of the variety and quality of the contents. A large number of experts, both Indian and foreign, have been brought together to discuss the various aspects of the cotton trade and industry. Mr. Manilal H. Patel, Vice-President, East India Cotton Association Ltd., reviews the existing position of arbitration and survey of cotton in India and offers some suggestions for improving them. Mr. R. Doraiswamy, Chairman of the Forward Markets Commission, examines the role of futures trading in cotton. Mr. Naval H. Tata underlines the need for rationalising the textile industry. Mr. D. S. Bakhle surveys the changing pattern of textile production in India. There are quite a few articles on the various aspects of U.S. cotton and industry.

In an editorial entitled "Cotton Needs Renewed Goodwill," written more in sorrow than in anger, the Editor expresses deep regret at the manner in which things are shaping for the cotton trade in the country. Pointing out that the trade was made to suffer innumerable slights during the past year which could not be forgotten so easily, he writes: "What amazes us most is the fit of melancholia that has so seized the whole rank and file of the trade that not a single person of importance seems to be there, with the requisite courage of conviction or strength of purpose, to take up cudgels on behalf of cotton with the authorities. It is this lack of faith in its own inherent strength and in the objectives which it seeks to achieve that is largely responsible for the predicament in which the trade finds itself today."

OFFTAKE OF TEXTILES ENCOURAGING

EFFORTS TO ENSURE MOST EFFICIENT UTILISATION OF MILL OPERATIVES

From Our Special Correspondent

MANCHESTER, 30*th May*

MANCHESTER LETTER

MANCHESTER merchants have often taken advantage of the Whitsuntide holidays to make an assessment of their position before the summer months when production at the mills is inevitably curtailed by annual holidays. Two years ago, the industry had only glimpsed a view of its future shape under the reorganisation proposals which had then merely been outlined. Few people could have imagined the intensive pressure for supplies which was to arise during a summer of almost unprecedented good weather and an autumn which brought the realisation that so much machinery was to be thrown on the scrap-heap. Twelve months later, the whole situation had altered. Instead of a meagre flow of goods through the pipelines, the remaining mills had more orders than they could possibly cope with, leading to decisions by many distributors to go abroad for additional supplies.

The subsequent decline in activity needs little elaboration so that, in 1961, the outlook has once more become obscure because of numerous developments which may affect conditions before the end of the year. To the hesitation about imports from the Far East has been added the increasing speculation about Britain's possible participation in the European Common Market, which becomes more imminent every day, if the political pandits are to be believed.

Supplies on the Move

Yet the prospects need not be wholly gloomy, if only for the fact that the reports of the movement of supplies at both wholesale and retail level are eminently encouraging. The Wholesale Textile Association has indicated an increase in total sales of 8.8 per cent during the first quarter of this year as compared with 1960. The expansion ranged from 3.3 per cent for women's hose and children's socks to as much as 19.2 per cent for women's knitted outerwear, blouses and skirts.

Although stocks held at the end of March were 6.6 per cent higher than 12 months previously, this cannot be regarded as an unduly large rise, in view of the maintenance of production in the mills, together with the overwhelming imports which are such a feature of current trading conditions. In some sections, notably household textiles and women's coats, costumes, furs and raincoats, the stocks held were, in fact, lower than in 1960 and the only departments in which a marked increase in supplies was apparent were haberdashery, ribbons, wool and gloves.

On the retail side the Board of Trade has described March as an exceptionally good month. The early Easter and the particularly fine weather undoubtedly contributed to the trend, but it is noteworthy that all the main sectors showed better trading as compared with the year previously and clothing and footwear shops provided a very large increase.

Sales in March were 17 per cent above the level in the same month in 1960, as against the increases of only three per cent and seven per cent, respectively, in the two earlier months of the year. The experience was shared equally by shops catering for men's and women's wear. Prices of footwear in March, as in February, were about 1½ per cent higher than a year earlier.

Fewer Workers Again

A further reduction of 1,240 in the labour force available for spinners and weavers at the end of March brought the manpower total to its smallest for many years back. The previous low point was reached a year previously when the completion of the redundancy programmes had been affected. Then the figure stood at 183,890, but, at the beginning of April this year, the number of employees on the books was exactly 1,000 fewer.

Although every effort is being made to introduce labour-saving devices and encourage the most efficient utilisation of the operatives at the disposal of the mills, the trend of recruitment since last autumn has been most unsatisfactory. By November, the available manpower had been gradually built up until 185,560 were employed in spinning, doubling and weaving, but, in the past four months, the previous gains have been more than dissipated. Nearly 2,000 fewer operatives are now employed in single spinning, but, in contrast, the weaving branch has lost only 500 workers.

That mechanisation and re-equipment are proceeding reasonably well is borne out by the production totals themselves, which indicate no substantial fall in output. The March returns covered Good Friday and, allowing for the holiday, the average rate of yarn spun and cloth woven showed some improvement over the previous two months, when absenteeism through sickness was at its height.

It is somewhat misleading to compare the March figures with those of the same month in 1960 when the mills were having "their last fling" before the final shut-downs caused by the redundancy projects. In March, the average output of single yarn was more than one million lbs. below the same month last year. Cloth woven, however, was only 500,000 yards a week down, illustrating the way in which the maintenance of the labour force can affect the flow of supplies.

April Trade Returns

Variation in the length of calendar months and seasonal influences often cause fluctuations in such matters as production and distribution of goods. The main feature of overseas trade in cotton goods in April, for instance, was a sharp decline in the amount of cloth imported as compared with the previous month and even the same month last year.

That the same thing occurred in February after a very big rise in arrivals in the first month of the year need not necessarily suggest that the equal expansion which followed in March will be repeated in May. At all events, the April return of 56,162,000 square yards was the smallest volume of imports since July 1960. It compares with 82,936,000 square yards in January and 81,653,000 square yards in March.

Grey cloth arrivals for the first four months of the year aggregated 218,643,000 square yards, a rise of 25 million yards on the same period in 1960. Leading suppliers were India (76,241,000 square yards). Hong Kong (27,126,000 square yards) and Japan (21,288,000 square yards), although several European countries must figure prominently in the "other foreign countries" total of 65,905,000 square yards which is more than twice as much as was imported so far last year.

No marked change was discernible in the quantity of cotton fabric shipped abroad last month, the figure of 26,171,000 square yards being almost up to the average so far in 1961. To the end of April, the total was 108,449,000 square yards, nearly 10 million yards below last year's comparable volume.

In ratio, cotton yarn exports have slipped back badly this year. In four months, only 6,177,000 lbs. have been sent abroad, as against almost 8,000,000 lbs. in 1960, while in man-made fibre yarns shipments are running at a higher level than last year at 17,922,000 lbs.

Sympathetic Attitude

The trade unions in the cotton industry, no less than the employers, are fully aware of the problems raised by the impact of arrivals of foreign goods. Company chairmen are not the only ones to voice their opinions and the annual report of the Weavers' Amalgamation, signed by Mr. Ernest Thornton, M.P., as President and Mr. Lewis Wright as Secretary, is equally outspoken in its attitude to this frequently debated topic. Although the claim that the British cotton textile industry is threatened with "probable extinction" is perhaps stressing the point too hard, the leaders of the workers in the manufacturing branch are right to urge the Government to re-examine its whole attitude on imports and draft anti-dumping legislation which would really be efficient.

In sharp contrast to the clash of ideas which often rises to the surface in other industries, the trade union is fully sympathetic to the employers on this point. Quite a few Lancashire millowners, the weavers' leaders say, have re-invested their money in their own firms when they might well have got out. They have re-equipped with modern machinery and reorganised their methods of production.

Not missing the chance to belabour the Government, however, the report says that it seems inconceivable that, after spending so much of the taxpayers' money to streamline the mills, the Government should use the Cotton Industry Act, 1959, as another alibi. Although admitting that the industry for generations past has existed on slumps and booms, major or minor, it emphasises the fact that trade is now in better shape than for a long time. "Long order books are not an unmitigated blessing and the more orders that can be accepted and the fewer rejected because of commitments ahead the better it will be," add the union spokesmen. "No one employed in cotton textiles is going to complain that our industry is becoming more profitable. If it is to re-equip and keep up-to-date and if workers are to enjoy an improving standard of living, there will need to be a profitable industry."

World Textile Conference

While cotton traders in most parts of the world are still awaiting the next moves of Mr. Kennedy and his advisers in relation to the calling of a conference to discuss the whole question of international trade in cotton fabrics, further propaganda is being put out to establish the case of the different industries before any negotiations begin. Much has been heard of Hong Kong's objections to renewing the voluntary arrangements with the U.K. and the U.S. textile trade has not been slow to raise its voice about the inroads being achieved by other countries in the American home market. Stressing the vital part played by the textile industry in the nation's economy, with particular reference to security, leaders of the U.S. cotton trade can point to the fact that they employ more than nine million people plus more than one million workers in the apparel trade. Textile manufacturing plants are located in 43 States and cotton producing farms number more than 950,000.

Figures of imports mirror the experience of Lancashire and are equally disturbing. Arrivals of cotton yarn last year exceeded 14 million lbs., whereas in 1958 they were less than one million lbs. Cotton cloth imports into the U.S. reached an all-time peak in 1959 and were then doubled again last year. Foreign purchases of man-made fibres increased by over 100 per cent between 1958 and 1960 and apparel imports were 70 per cent higher in the two years.

In the circumstances, the American President's move is a logical step from his own viewpoint. Most of the other countries which are suffering in this way would be more than ready to join in discussions to try and ease their difficulties. Mr. Kennedy's enthusiasm is certainly to be commended, but the record shows that gathering such conferences together presents very big problems and those who are at present gaining from the situation will be in no hurry to cut the ground from under their own feet.—*All Rights Reserved.*

MEETING OF WORLD COTTON COMMITTEE

COMPLEMENTARY ROLE OF MAN-MADE FIBRES STRESSED

[At the twentieth Plenary meeting of the International Cotton Advisory Committee, held in Tokyo, Japan, from 15th to 23rd May, Senator Dr. Ing. Kurt Dieterich, the President of the International Federation of Cotton and Allied Textile Industries, made a significant statement, outlining the viewpoint of the cotton spinning and manufacturing industries regarding current problems of raw cotton production and marketing. As the statement, here published in full, is presenting some new ideas on the competition of man-made fibres with cotton, it is bound to be read with interest in textile circles in this country.—ED.]

WE shoud like to express the point of view of the spinners and manufacturers of cotton and man-made fibres on policy matters that should be of particular interest to the member-Governments of the International Cotton Advisory Committee. As anticipated at last year's meeting, the relative prosperity of the cotton and allied textile industries has been maintained over the past twelve months. There is a strong feeling, however, that this relative prosperity should be given new and vigorous impulses if it is to be sustained. Such impulses might spring from the following three sources: (a) improved spinning and manufacturing techniques; (b) new end-use development; (c) promotion of textile consumption.

Great efforts are being made by our industries to improve current spinning, manufacturing and finishing techniques. Research in spinning and weaving has led to the development of new types of machinery which represent a radical departure from traditional methods. New finishing processes, such as the wash-and-wear finish, have been invented, and—although already widely applied—they are still far from being fully exploited from either a technical or a merchandising point of view. The development of new end-uses is also progressing. This is not only a matter of finding new applications for textiles but also of defending textiles against the products of the paper and plastics industries. It must be said, in this connection, that the advent of man-made fibres has encouraged the development of new end-uses, especially in the form of blends. As spinners and manufacturers of cotton we look upon the man-made fibres as a most welcome complementary raw material that has opened up new fields for the cotton textile industry and stimulated the consumption of textiles in general.

It is essential that cotton growers should keep pace with the industry in end-use development, in so far as they should produce those particular types of cotton for which there is a real demand, in the best possible quality and giving the highest spinning value.

Textile Consumption

The promotion of textile consumption must be carried on with all available resources. It is most encouraging to see that efforts in this field are now also being made on the domestic markets of some of the cotton producing countries themselves. This is no doubt a sign of a slowly rising standard of living. It is to be hoped that all cotton producing and exporting countries will also provide finance for the promotion of cotton textile consumption on the chief consumer markets of the world. Our Federation will follow up the initiative which it took in this direction on the occasion of last year's meeting in Mexico City. We have taken note, with great interest, of the report on prospective trends in consumption of textile fibres and feel that this is an important document which should be carefully considered. Whilst we are confident that an increase in consumption is possible, we feel that one should not be overoptimistic. We therefore, suggest that all countries concerned should comment on this report, particularly on the forecasts made therein, in the light of their own assessment of their growth potential. It should also be remembered that the increase in *per capita* consumption is usually matched by an increase in labour and machine productivity. It would therefore appear that, even if there were a substantial increase in the consumption of textiles, the equilibrium between anticipated demand and potential production would still be maintained on the basis of present capacity. With regard to extra-long staple cotton, care should be taken to avoid surplus production. This will mainly depend on a stable price policy for these varieties. Recently, the regular flow of these varieties into consumption has been disturbed by rather wide fluctuations in prices.

U.S. Cotton Policy

A few special remarks about United States cotton policy seem indicated. One satisfactory result of past U.S. cotton policy is the disappearance of the American cotton surplus. Today, the present level of U.S. stocks is so low as to justify the question whether a further reduction is advisable. The stocks held by the United States, as long as they are not excessively large and provided that their disposal is carried out in the same highly responsible manner as it has been in the past, may have a stabilising effect upon world prices, and function rather like a buffer stock. With regard to the new price policy of the United States Government, we doubt very much whether the recent change in direction will have the desired effects. We continue to believe that an early return to a one-price system will be in the best interests of all concerned. Whatever policy is eventually adopted, it should encourage a rationalisation of cotton growing and facilitate the most efficient production of the required varieties at attractive prices. We fully recognise that some degree of support for the United States cotton farmer is inevitable, but we believe that whatever measures are adopted for this purpose, they should involve the least amount of interference with the formation of prices on the world market.

Raw Material Prices

Raw material prices are another factor which may give an impulse to the prosperity of the textile industries. In this connection cotton producers should bear in mind that prices of man-made fibres have the great advantage of being relatively stable. Any sudden or unduly large increase in raw cotton prices must therefore inevitably provoke a shift from cotton to man-made fibres.

One final remark about cotton quality in general: the trend towards greater mechanisation in cotton harvesting will undoubtedly spread to most of the larger producing countries. We should like to stress that the introduction and increased use of mechanical pickers should be carried out with the utmost care, in order to achieve the high standard of results which is desirable from the spinners' point of view.

In conclusion, I should like to say that we continue to be hopeful for the cotton industry. If it proves possible to arrive at orderly conditions in the world's textile trade and avoid a disruption of markets, then we believe that our industry will be able to sustain the relative prosperity which prevailed during the past two years.

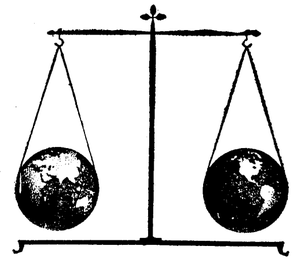
FURTHER COTTON QUOTAS TO MILLS

A Press note issued by the Textile Commissioner on 5th June says:—

"The Textile Commissioner has been receiving reports stating that due to the failure of the mills to effect purchases, stocks of unsold cotton are accumulating with farmers and co-operative societies and that the prices of some varieties have fallen to levels which do not provide sufficient incentive for the next season's sowing operations. The fast approach of the monsoon and the lack of godown facilities with the farmers and co-operative societies also create a serious problem. Mills are, therefore, advised to purchase their requirements without further delay.

"With a view to assisting the mills, the Textile Commissioner has decided to allow straightaway a further quota of Indian cotton equivalent to 20 per cent of their consumption of such cotton during the last season. Mills need not wait for a quota letter from the Textile Commissioner's office and may start making purchases to this extent. The quantities and qualities purchased may be reported to the Textile Commissioner at the end of each week. This concession is only available to those mills which have sent in their bank guarantees and have entered into firm contracts with the American shippers in respect of allocation of cotton stapling 1" and below made under P.L. 480 Purchase Authorisation No. 39-55.

"The Textile Commissioner wishes to emphasise that this concession is temporary and is likely to be withdrawn at any time without giving notice. Eligible mills, therefore, are requested to take advantage of it immediately and enter the market in a big way to effect purchases."



In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

TRADE PROMOTION

. . . is our business

Australia, New Zealand, and Fiji offer opportunities to exporters and importers and the International Division of the Bank of New South Wales can help those interested.

The Bank's complete banking service includes such specialized facilities as trade and industrial enquiries, economic and trade information, and a complete travel service. The Bank, through more than 1,000 branches and agencies, is closely and constantly in touch with industry, business, and agriculture in the areas it serves.

Enquiries may be made through your own bankers or direct to

BANK OF NEW SOUTH WALES
INTERNATIONAL DIVISION
John W. McEwen, Chief Manager

HEAD OFFICE: SYDNEY, AUSTRALIA

First and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with three branches in London.

Cadbury-Fry
in India

Finest quality walnuts in Cadbury's rich milk chocolate.

A delightful blend of selected raisins, nuts and Cadbury's milk chocolate.

An essential food for young and old. Tastes so delicious.

Delicious Roasted Hazels or Almonds in rich Milk Chocolate...each variety in attractive ½ lb. boxes.

Cadbury's PLAIN covering chocolate for a special flavour to your cakes and puddings ...MILK covering chocolate for creamy richness....in blocks of 1 lb. each and 20 lb. bulk tins.

LINKING SUGARCANE PRICE TO QUALITY

SYSTEM ADOPTED IN PHILIPPINES CAN BE FOLLOWED

By G. Ramchander

IN the context of the reference of the price linking formula to the Tariff Commission, it is worthwhile to consider whether the industry should not press for cane payment on quality basis rather than linking the cane price based on flat payment to the sugar price. The objections to the linking of cane price to sugar price are well known. It is discriminatory. This is the only industry which is required to share with the supplier of raw material the price of the final product. There is no parallel for this in any other country. In this, the higher the minimum price the higher the percentage to the grower. Even when the sugar price goes down, he has to be paid the minimum cane price. If the price of cane is to be linked to the price of sugar, naturally, when the sugar price goes down, cane price also should slide down.

As it is, in the flat system of payment, there is no incentive for growing quality sugarcane. Weight forms the important criterion for the grower. Therefore, when a higher payment is available depending upon the price of sugar, there is practically no reason for striving to attain higher yields of cane or sugar per acre. The industry is already blamed for high sugar prices. The grower will add, if nothing else, his prayers for higher sugar price so that he could have an increased share.

The following table shows the yield of cane and sugar per acre, together with recovery per cent cane in India and some other countries; it will be seen from this table that yields of both cane and sugar per acre are the lowest in our country.

Year	Yield of cane per acre (Tons)	Sugar recovery (Per cent.)	Yield of sugar per acre (Tons)
Philippines—			
1955	23.18	11.22	2.60
1956	23.41	11.02	2.58
1957	23.90	12.13	2.90
1958	21.98	12.69	2.79
Puerto Rico—			
1955	27.30	11.83	3.23
1956	29.20	11.16	3.26
1957	24.10	11.37	2.74
1958	..	..	2.85
Hawaii—			
1955	92.90	11.56	10.74
1956	92.70	11.09	10.28
1957	88.50	11.98	10.16
1958	89.80	10.13	9.09
Louisiana—			
1955	24.40	8.03	1.96
1956	23.60	9.03	2.13
1957	22.00	9.00	1.76
1958	..	..	2.02
India—			
1955-56	12.98	9.83	1.28
1956-57	13.24	9.73	1.29
1957-58	13.39	10.01	1.34
1958-59	14.66	9.84	1.44

An idea of the price of cane and the per cent cost of raw material to the total cost of sugar, including Government taxation, can be had from the table below:

Country	Price per ton of cane (Rs.)	Yield of sugar per ton of refined cane (Lbs.)	Price per ton of refined sugar inclusive of taxes (Rs.)	Amount realised per ton of refined sugar (Rs.)	Ratio of raw materials value to total refined sugar price (Per cent.)
Puerto Rico.	40.85	222.5 (224.7)	0.52	115.70	35.3
Hawaii ..	..	227.7 (230.0)	0.52	116.04	..
Louisiana ..	38.76	158.4 (160.0)	0.52	82.37	47.0
Philippines .	28.91	240.6 (243.0)	0.52	125.10	33.1
India ..	44.10	219.5 (—)	0.45	97.30	45.3

Figures in brackets relate to raw sugar.

The above table shows that the incidence of cane cost is the highest in India, barring Louisiana. What is thus required are steps to raise the agricultural productivity of the sugarcane industry. It has to be remembered that sugar has to be produced in the field for the factory to recover it. For this, incentives are absolutely necessary. But the incentive offered should be a rational one. In this context, it is evident that the higher the sugar content of sugarcane the higher the price offered should be the most logical.

In our country, the sharing of the produce between the tenant and the grower is an age-old agricultural practice. The Philippines has a similar system for sharing sugar between the grower and the miller. A modified system may suit our country while giving, at the same time, an incentive to grow quality cane. About 50 per cent of the sugar in cane may be fixed as the grower's share of sugar to be paid to him in terms of money. The average selling price of sugar for the calendar year January to December will be paid for this portion of his sugar after deducting the excise duty, selling commission at 75 nP per Rs. 100 of sugar sold, and sales tax, if any. An interim payment by way of a minimum price is paid within fourteen days of the supply of cane. The balance will be paid as final payment at the end of the year.

Sucrose in cane is determined by determining the sucrose in the first expressed juice and multiplying it by the Java ratio. The Java ratio is determined preferably daily or once in a week. The first expressed juice is collected from samples of cane crushed for a period of at least 15 minutes. When individual growers cannot bring enough cane for 15 minutes crush, they should supply under a group system or about 15 sticks per ton sampled at random could be analysed by a three-roller power-driven laboratory mill. Factors could be worked out every week connecting the laboratory-mill juice analysis with that of the first expressed juice of the factory.

The following cases are worked out to demonstrate the working of the system:

Assumptions

Fair price for sugar as worked out by the Tariff Commission (1960) for 1958-59 M. P. Region. Rs. 36 per maund or per ton (Rs.)	979.92
Excise duty per ton of sugar (Rs.) ..	291.20
Net selling price after deducting the excise duty (Rs.)..	688.72
Average all-India recovery percentage cane for the season 1958-59	9.84

The figures given below are for a supply of 100 tons of cane.

Case I.

Sugar in cane of grower 'A' as arrived at from the analysis of the first expressed juice and Java ratio (Per cent.) ..	12.5
i.e., sugar in 100 tons cane is (Tons) ..	12.5
The grower's share is 50 per cent. of 12.5 tons or (Tons)	6.25
Cost of 6.25 tons of sugar from 100 tons of cane at Rs. 688.72 per ton of sugar is 688.72×6.25 (Rs.)	4,304.5
Therefore, cost per ton of cane supplied is (Rs.)..	43.05

Case II.

Sugar in cane of grower 'B' as arrived at from the analysis of the first expressed juice and Java ratio (Per cent.) ..	13
i.e., sugar in 100 tons cane is (Tons) ..	13
The grower's share is 50 per cent. of 13 tons or (Tons)..	6.5
Cost of 6.5 tons of sugar from 100 tons of cane at Rs. 688.72 per ton of sugar is 688.72×6.5 or (Rs.)	4,476.68
Therefore, cost of one ton of cane supplied is (Rs.)	44.77

Case III.

Sugar in cane of grower 'C' as arrived from the analysis of the first expressed juice and Java ratio (Per cent.) ..	11
i.e., sugar in 100 tons of cane is (Tons) ..	11
The grower's share is 50 per cent. of 11 tons or (Tons)..	5.5
Cost of 5.5 tons of sugar from 100 tons of cane at Rs. 688.72 per ton of sugar is 688.72×5.5 or (Rs.)	3,787.96
Therefore, cost of one ton of cane is (Rs.)	37.88

When the cost of raw material is expressed as a percentage to the total cost of sugar, the following is the picture for the three cases:

	Value paid per ton of cane	*Value of cane as percentage to the total selling price of sugar*	*Value o cane as percentage to the selling price of sugar after deducting excise duty only*
	(1) Rs.	(2) Per cent.	(3) Per cent.
Case I ..	43.05	44.60	63.49
Case II ..	44.77	46.42	65.00
Case III ..	37.88	39.27	55.00

Cane cess and selling commission are not deducted for purposes of column (3) above as they are not uniform in all the States.

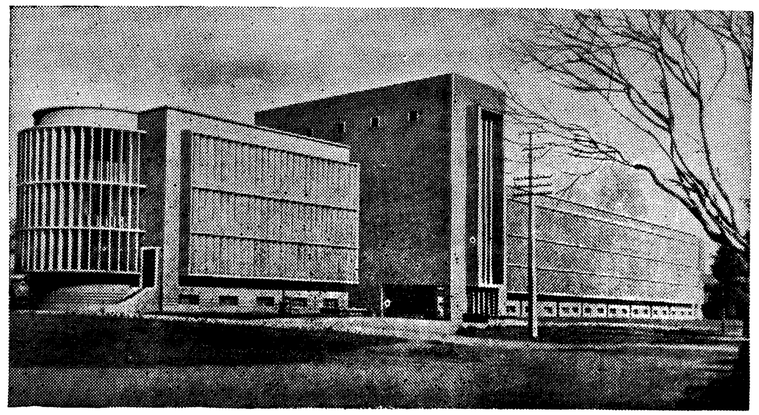
PARTNERS IN PROGRESS AROUND THE WORLD

SIX entire buildings...air conditioned by



SINGLE 480-ton **WORTHINGTON** Centrifugal System at

Dalmianagar— the thriving township of the booming industrial complex of ROHTAS INDUSTRIES. The handsome building above—the administrative hub of this gigantic industrial combine—the two-storeyed Chemical Laboratory, the 30-room Guest House and three Directors' Bungalows have been completely air conditioned by a SINGLE 480-ton WORTHINGTON Centrifugal System...a unique installation!

The plant room houses the Centrifugal and a 30,000 gallon chilled-water storage tank, with a 600-ton forced draught cooling tower alongside. Separate air handling units in each building provide individual temperature control and flexibility of operation. Specially designed to cope with the extreme temperature variations of Dalmianagar, the WORTHINGTON System provides year round 'engineered climate' (summer cooling—winter heating.)

Here is yet another instance in which the need for high performance and economy in operation led logically to a BLUE STAR engineered WORTHINGTON installation. You too, whether your requirements are large or small, will find that BLUE STAR can serve you best in "climate control."

PROBLEMS OF PLANTATION INDUSTRY

COFFEE MARKETING LEAVES MUCH TO BE DESIRED

WHAT is wrong with the South Indian plantation industry, particularly coffee and tea? One would get a clear answer to this poser if only one were to peruse the three interesting speeches delivered by the Chairmen of the Central Travancore Planters Association (Mr. G. Annesley-Cooke), Nelliampathy Planters Association (Mr. P. J. Stephen) and Kanan Devon Planters Association (Mr. W. C. Roy) at the recent annual meetings of the respective Associations. It will be evident from these speeches that the plantation industry is groaning under crippling taxation, lack of co-ordinated policy between the Centre and the States, and burdensome labour legislation. Mr. Annesley-Cooke was at some pains to state how the industry is left with a meagre share to be distributed as dividends and to raise its working capital which is of vital necessity to augment production. The relevant facts pertaining to Kerala State for the year 1960-61 are given below:

(In Rs. per acre)

Before profit:	
To State Government (land tax, plantation tax, sales tax, *panchayat* taxes, vehicles tax and factory licence fee)	124
To Central Government (export excise duties, wealth tax and estate duty, but excluding tea cess)..	101
	225
After profit:	
To State Government (agricultural income-tax).	202
To Central Government (Central income-tax) ..	155
	357
Total to State Government	326
Total to Central Government	256
	582

Labour benefits and bonus paid during the year amounted to Rs. 211 per acre, exclusive of usual wages, medical expenses, value of rent-free accommodations, and cost of educational and recreational facilities. The net balance that is available to the investor after meeting the taxes after profit of Rs. 357 referred to above and after setting apart a reasonable amount for development purposes and rehabilitation of existing assets and for capital liabilities under the Plantations Labour Act is only Rs. 58 per acre. To put it short, the net return to a producer whose production has gone up by 164 per cent during the period of a decade was only Rs. 58 per acre, while the Government received Rs. 582 and labour Rs. 211 per acre.

Agricultural Income-tax

Mr. Annesley-Cooke also highlighted the unjustified nature of the recent Agricultural Income-tax Ordinance that disallows expenditure on the upkeep of immature areas with retrospective effect. He declared that the Ordinance, which was contrary to the Central Income-tax Act and which nullified the decision of the highest judicial authority in the country, was yet another example of the policy of collecting revenue regardless of law or accepted principles; nor was this policy in keeping with the propaganda for more production, for the older bushes had to be replaced by new ones, if production was not to fall, and it was an irony of fate that the Governments must, on one side, stress the need for more production and, on the other, be unwilling to forgo the revenue on the expenditure needed. How disquieting was the tax policy of the Governments was impressively summed up by him thus:

"There was once a goose who laid plenty of golden eggs, but, I am afraid, due to near-starvation and the wrong type of diet, she has now practically dried up not only in the number of eggs she could lay but also in their consistency. Her neck has been twisted so much she does not know whether to now look backwards or forwards, and I feel only one or two more good yanks will be sufficient to put her out of her misery, if something is not done very soon to straighten it again."

When such is the position, how can the plantation industry be expected to find money for raising production and improving quality? This aspect has to be specially stressed in the context of the sizable production targets for tea and coffee fixed to be achieved under the third Plan. Even the increase in production will not, as Mr. W. C. Roy aptly warned, be of any avail, indeed, it will be disastrous, if it is accompanied by the slightest decline in the standard of teas which are already meeting steadily increasing competition in world markets. According to Mr. Roy, India's share of the London tea market has continued to decline. He warned that, if the trend persisted, it would not be long before the hitherto unavailable position of that market was jeopardised. He, therefore, felt that adequate arrangements for promoting the sale of Indian tea would appear to be an obvious need particularly in view of the strong and effective propaganda which is conducted on behalf of Ceylon tea and the steadily increasing popularity of the new African production. As for other world markets, he said: "More is being done and there are satisfactory sales promotion arrangements in North America, Australia and the Middle East, but, important as these markets are, the U.K. must continue to absorb the great bulk of our tea for many years to come and in particular the increased production which we must sell in the immediate future. India cannot afford further complacency in regard to this market."

Coffee Prices

The problems facing the coffee growers were briefly but lucidly dealt with by Mr. P. J. Stephen. The biggest worry of these growers, as readers are aware, is the continued low level of prices. In the recent export auctions, Arabica plantations A and Robusta varieties are being sold at Rs. 75 below last year's prices. The prices are too low to cover adequately the enhanced production costs. It needs to be stressed here that the coffee growers have no control over either the export prices or internal consumer prices. Viewed thus, it is regrettable that the Chairman of the Coffee Board, Mr. H. Sitarama Reddy, should have asked the growers to be prepared for a return much lower than in 1959-60 which might be around Rs. 2.23 per point. Addressing the fifty-second meeting of the Board held at Bangalore on Monday this week, Mr. Reddy said: "We are in a buyers' market and all-round efforts must be taken to produce quality coffee. Indian coffees have hitherto stood competition in the world market on quality alone. Reports reaching from countries abroad point out that the quality of Indian coffee has considerably gone down this year. This may, to an extent, be due to the very high production. To maintain our standards in the world market, greater attention should be bestowed on the improvement of quality. Planters and curers may bear this observation in mind and adopt all measures to achieve this end."

If the quality of coffee has deteriorated, it is not because of increased production but because of the fact that the currently ruling prices do not give adequate incentive to growers to put in more efforts for improving quality. The special sub-committee, the constitution of which has been recommended by the Coffee Board's Marketing Committee, will do well to give dispassionate consideration to the entire structure of coffee prices and make suitable recommendations. It must be remembered that the coffee industry has mainly to depend on the internal market and, at the same time, the Government is insisting on an all-out export drive. As Mr. Stephen rightly pointed out, what benefit will be derived by selling a good portion of our crop in foreign markets below our cost is beyond anybody's reason. He did admit that it was definitely in the country's interest to earn foreign exchange, but made it clear that it should not be done by ruining the industry. He said:

"The Coffee Board should bring in more realism in its marketing policy, especially export. Our Arabica coffee is well known for its quality. Why should we not get better prices in our export market like Kenya coffee, which has been all along fetching a better price abroad, in spite of a falling world market? These are the problems to be studied. The growers have all along been hoping that the Coffee Board will successfully tackle them. But things are drifting from bad to worse. To add to our calamities, the excise duty on coffee has been increased by one-third. Of course, the Central

T. D. KANSARA—*General Manager*

OGALE GLASS WORKS LIMITED

CHAIRMAN'S SPEECH AT ANNUAL MEETING

THE Fortieth Annual General Meeting of the Ogale Glass Works Ltd. was held at Ogalevadi on Wednesday, 31st May 1961. The meeting was presided over by Sardar Jagannath Maharaj Pandit, Chairman of the Company. The following are extracts from the speech of the Chairman:

"LADIES AND GENTLEMEN,

"Our expectations in achieving the working results for the year 1960 are being fulfilled to an extent which enables us to declare a taxable dividend of 10 per cent for the year, after setting aside required amounts towards reserves and carry forward. Even though this dividend is far below the dividends declared by the modern glass factories, this has helped the Company to regain the confidence of its shareholders to a considerable extent. I am further glad to announce that the Company's shares have now regained activity on the stock exchanges.

New Glass Unit

"In the Directors' report, a reference has been made to the new glass producing unit that is being established in the industrial area at Pimpri (District Poona) and I shall dilate a bit on the proposed scheme. We shall be mostly using furnace oil for our furnaces; the cost of furnace oil is comparatively less at Pimpri than at Ogalevadi, since Pimpri is nearer to Bombay port. Moreover, there would be a saving in transport cost, since the products that we propose to make at Pimpri will be sold in areas closer to Poona and Bombay than Ogalevadi. These are some of the reasons why we have located the new unit near Poona.

"We have already acquired about 21 acres of land on 99 years' lease on a very moderate annual rent and the construction of the factory buildings is progressing satisfactorily. We are hoping to go into production by the end of the current year or latest by early next year.

Training Technicians

"One of our technical executives in-charge of production, Mr. R. V. Ogale, was deputed to Germany and other countries in Europe to study the modern processes in melting of frits and vitreous enamelling, on the invitation and co-operation of Farbenfabriken Bayers A.G. Germany, and their assistance in giving this co-operation is greatly appreciated. Mr. R. V. Ogale has returned to his duties on completion of his mission. We have deputed another technical executive, Mr. N. R. Kulkarni, to Czechoslovakia under the scholarship awarded by the Czechoslovakian Government for a period of six months to study composition and quality control of glass and this process of training of our technicians in foreign countries, whenever an opportunity occurs, is in keeping with the Company's policy.

"I am thankful to workers, staff and the executives of the Company for the good work turned out by them during the year under the able guidance of the Managing Agents."

N.B.: *This does not purport to be a report of the proceedings of the general meeting.*

DESIGN...
for finest performance

Of all aspects of industrial endeavour the most intriguing is thermodynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story...a story of experience, analysis and design.

Varying Conditions

Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is *tailor-made* to give optimum performance under varying *local* conditions and requirements.

Fuel

Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel

Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities of waste material in the form of bagasse for fuel; again, in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digestors in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally

The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will *tailor-make* not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

WORLD ENERGY SUPPLIES

LOOKING TO YEAR 2000 A.D. AND BEYOND

IN an age in which irreplaceable fuels are being consumed rapidly, there is a responsibility to the future to know for how long such fuels are likely to be available economically, and to plan for alternative sources of power. Much light is thrown upon both the resources and the estimated consumption of fossil fuels (coal and lignite, oil and natural gas) by a recent study *Fossil Fuels in the Future** produced for the United States Atomic Energy Commission by Milton F. Searl. This report, which relates to the whole world and which covers the period up to 2,000 with some glimpses into the more distant future, thus goes far beyond the field covered by the study *Energy in the American Economy*, 1850-1975 which was discussed in the *Petroleum Press Service*, December 1960, page 439. The main purpose of the Searl report is to estimate when it will be necessary to provide nuclear power or other new sources of power on a large scale, and only the barest outline of its contents can be given here.

Forecasting the future level of demand is no easier than estimating the size of future supplies, both of which tasks the report has to attempt in order to discover when present fuel resources will become scarce and costly and when alternative sources of power will be needed. Commercial energy requirements depend on a number of factors of which the most important are economic development and population. At a compound annual rate of increase of 4.2 per cent annual world consumption is estimated to be 615 quadrillions (10^{15}) of British thermal units by the year 2000 compared with 109 in 1958. At the same time there are likely to be considerable changes in the location of demand; the share of the total taken by the United States together with the O.E.E.C. countries will fall from 58 per cent in 1958 to 40 per cent in 2000 reflecting the greatly increased share to be taken by other areas in which rapid economic development and growth of population will have taken place. Although fuel type is regarded as being of secondary importance in this report it is estimated that the share of oil fuels and natural gas will continue to increase. Oil will represent 41 per cent of the total by 2000 compared with 30.9 per cent in 1958, and natural gas 22.5 per cent compared with 12.6 per cent in 1958. For a study concerned with depletion, the most relevant figures are those showing cumulative consumption, and these are given in Table I below:

TABLE I

World Cumulative Consumption of Fossil Fuels
(In quintillions, i.e., 10^{18} of British Thermal Units)

	Coal and lignite (1)	*Crude oil natural gas liquids and shale oil* (2)	*Natural gas* (3)	*Total* (4)	*Col. (2) as % of col. (4)*
1959-1980 ..	1.51	1.60	0.64	3.75	42.7
1981-2000 ..	2.65	3.50	1.75	7.90	44.3
Total ..	4.16	5.10	2.39	11.65 (*)	43.8
Of which U.S.A...	1.23	1.70	0.88	3.81	44.6

(*) Of this 8.42 in the free world.

Fossil Fuel Reserves

The report classifies fossil fuel reserves both by type and by real cost based upon the 1958 level of availability. The reserves shown in Table II include estimates of reserves yet to be discovered which are based on the work and opinions of geological and mining experts; but they comprise only those reserves which it is estimated would actually be recovered at the cost limit shown. It is assumed that there will be unhindered access to resources.

(*) Discovered and yet to be discovered at end 1958.
(†) B.T.U. is a convenient but imperfect unit for this purpose since B.T.U. obtainable varies, depending upon efficiency of consuming equipment, etc.

However, the author shows that about three-fifths of the total shown in Table II lies in the free world embracing four-fifths of the oil and natural gas, two-thirds of reserves in the oil shale and tar sands and rather more than half the coal and lignite.

The most immediately comforting facts to be gleaned from a comparison of the two tables is that the fossil fuel reserves are nearly ten times the size of total estimated demand to the end of this century, and that there is sufficient of each fuel to satisfy demand up to 2000. The largest reserves are of coal and lignite, whereas oil and gas are most in demand. But a noteworthy feature of Table II is the expected large availability of fuel from shale and tar sands at costs 25 per cent or more than the 1958 level. Disregarding the type of fuel, total demand for commercial energy could be satisfied at real costs of less than 25 per cent above the 1958 level, but this would involve a deflection of demand away from increased reliance on liquid hydrocarbons and natural gas in favour of coal and lignite. On the other hand, taking into account the type of fuel probably required, a large proportion would be producible at real costs of up to 50 per cent more than in 1958, the more expensive fuels being liquid hydrocarbons, natural gas and fuel derived from oil shales and tar sands compared with the cheaper solid fuels. The report considers that these increased production costs should not prove very burdensome because a large part of the cost to the consumer is in processing, transporting and marketing, real costs of which are unlikely to rise significantly.

Projections Into Future

At the rate of consumption envisaged in the report there will still be 99.37 quintillions (10^{18}) of British thermal units of fossil fuels left in 2000 of which only 11.11 quintillions of coal and lignite will then be in the relatively low cost category of 1958 costs plus up to 25 per cent. Some projections further into the future show that at a compound rate of growth of 4 per cent from 2000, assuming that all the increase in demand is supplied by fossil fuels, all fossil fuels now believed to exist and be recoverable would be consumed by 2052; while if the consumption of fossil fuels remained constant at the level reached in 2000 they would last until 2171.

The present fuel position and that of the immediate future are, on the basis of these estimates, evidently secure but a fossil fuel shortage may well become a reality during the life span of the generation now being born. Fortunately there are many other sources of energy to be exploited, ranging from simple elemental forces to complex scientific devices. Nuclear power probably has the greatest potentialities because relatively small amounts of uranium, which is in good supply, are required. Relative costs are very important; it is now thought that in high fuel cost areas of the United States nuclear power stations will be fully competitive within three to five years. Fuel cells are likely to become important for transport purposes—their use in submarines is already planned. Then there are those inexhaustible but unreliable sources of energy, the sun and the wind, which were discussed in the *Petroleum Press Service*, February 1961, page 56, while hydro-electricity and geothermal energy depend on particular geographical factors. However, even if in the future the importance of fossil fuel as sources of energy declines, they are likely to remain in demand as valuable raw materials.—(*By Special Arrangement with the Petroleum Press Service*).

ELECTRIC LOAD CONTROL

Control of electric loads by adjustable cut-out and cut-in points over a wide current range is given by equipment introduced by Elcontrol Ltd., Hitchin, Herts, England. The device consists of an electronic relay unit housed in a steel case together with a separate current transformer. Operation or trip point of both forms of relay can be set anywhere between 20 per cent and 120 per cent of full load current and the current transformers are normally rated at 100 per cent overload. The differential is adjustable between 2 per cent and 100 per cent of the trip value. In both forms of relay unit available, the relay is energised when the monitored current is within the desired limits.

EUROPE'S ENGINEERING INDUSTRIES

O.E.E.C. REPORT FOR 1960

THE Organisation for European Economic Co-operation has just published a report on the progress of engineering industries in Europe in 1960—a year of vigorous expansion. Production by the engineering industries, which employ over 8.5 million people and account for a third of total industrial production, increased substantially in all member-countries. The rise over 1959 amounted in most of them to between 6 and 10 per cent, but totalled 15 per cent in Germany and as much as 20 per cent in the Netherlands and Italy. For member-countries as a whole, the growth in output in 1960 exceeded 11 per cent, i.e. roughly twice as much as noted in 1959. By comparison, the rise in output of other industries amounted to about 9 per cent for the entire year 1960.

Between 1950 and 1960, the report continues, the volume of engineering output increased by 105 per cent, as against 80 per cent for total industrial production. In both cases, developments in the U.S. were less favourable, industrial production having risen in these ten years by only 45 per cent and output by the engineering industries by 80 per cent.

In 1960, the value of European engineering imports from non-member-countries—three-quarters of which came from North America—is likely to have been more than $1,500 million; available information on production trends suggests that deliveries by European engineering industries valued over $48,000 million, almost 20 per cent of which were exports to non-member-countries (and about one-seventh represented intra-European trade). This means that, in 1960, the European market for engineering goods totalled over $40,000 million, and extra-European exports represented almost $10,000 million.

Roughly two-thirds of extra-European engineering exports went to the less industrialised non-member-countries. Consisting mainly of capital goods, they dropped in the first half of 1959, but resumed their expansion in the latter part of that year and increased considerably in 1960. Provisional figures suggest that they represented, in 1960, almost 15 per cent more in value than the year before. By contrast, European engineering exports to industrial non-member-countries expanded definitely slower in 1960 than in the two previous years.

Prospects for Current Year

The prospects for 1961 have also been dealt with in the O.E.E.C. Report. The overall order book situation at the end of 1960 suggests for 1961 a further substantial increase in the European production of engineering products and, more particularly, of capital goods. This rise in orders booked also means, however, that production capacity in 1960 was, on the whole, exploited to a very high degree and that consequently, in the months to come, expansion in capital goods industries will probably be slower than in 1960. Short-term prospects appear less certain for durable-consumer goods. The growth in internal demand will probably be slower after several years of vigorous expansion, and export demand will not necessarily continue to be as lively as in the last three or four years.

Export demand for capital goods is expected to remain lively in the near future from both the industrialised and the non-industrialised countries. As indicated in the first survey of the structure of engineering world trade contained in this report, the latter ordered more than half their capital goods imports in Western Europe and nearly one-third in North America, while their imports from Japan (5 per cent) and Eastern Europe (8 per cent) were still comparatively small.

Competition on the less-industrialised but expanding markets is very keen, but the competitive power of European manufacturers in face of the traditional competitors, the U.S. and Japan, is not likely to deteriorate. Competition from Eastern Europe tends, however, to become a sizable factor, although, in general, deliveries by Eastern Europe to less-industrialised countries outside the Soviet bloc are not likely to increase to a degree that might prevent further expansion of European exports to these areas. The very great demand for capital goods in the Sino-Soviet bloc countries should militate in the near future against an upsurge of exports by Eastern Europe on a broad front. Due to the spectacular and concentrated efforts on certain markets (e.g. India, certain countries in the Near East and Latin America) and for the export of certain goods (e.g. machine tools, complete industrial plant, tractors, rail and road transport equipment), this new factor will, however, have to be constantly watched, concludes the report.

"You can make your factory performance optimum"

NATIONAL PRODUCTIVITY COUNCIL

Through the courtesy of T.C.M. of U.S. Government, is now in a position to provide some very useful I.C.A. publications comprising

- Series of Manuals in fields of INDUSTRIAL MANAGEMENT
- INDUSTRIAL ENGINEERING & INDUSTRIAL RELATIONS
- PLANT REQUIREMENT REPORTS ● FACTORY PERFORMANCE REPORTS
- CAPITAL REQUIREMENT & OPERATING RATIO REPORTS
- COTTAGE INDUSTRIES REPORTS ● INDUSTRIAL DEVELOPMENT GUIDES, Etc., etc.

Free price list may be obtained from: Information Officer, National Productivity Council, 38, Golf Links, New Delhi.

NEW PRODUCTS AND PROCESSES

Self-contained Plastic Dip-coating Plant

A COMPLETELY self-contained plastic dip-coating plant was shown at the recent Industrial Finishes Exhibition in London. The makers claim it gives consistently high output at low running cost because of a development of the single overhead-oven principle recently introduced by them, which eliminates separate pre-heating and curing ovens. The company—well known in the United Kingdom and overseas for their plastic coating machinery, industrial finishes and materials—have now introduced movable powder and water quench tanks below the inverted oven. All this means a higher output, at lower cost in less space than the conventional plant. The overall measurements of the machine are 9 ft. 6 ins. x 4 ft. x 10 ft. (height) (290 cm. x 139 cm. x 304 cm.). Frames loaded with uncoated jigged articles are fed from both sides of the machine. Each frame is then lifted into the oven by hydraulic lifting gear for pre-heating and then lowered directly into the fluidising powder for coating before returning to the oven for fusing. At this stage the powder tank, mounted on a movable base, is pushed to one side and the water tank takes its place. The loaded frame is then lowered into the water tank for cooling and then conveyed back to its original starting point to be unloaded. A loaded frame from the other side then moves into position ready for the process to be repeated.

Portable Welding Equipment

A new type of compact welding equipment, intended for use in handicraft and small industry, has been added to the manufacturing programme of a Swedish Company, Nohab, makers of turbines, diesel engines and locomotives. The equipment includes portable arc welding transformers weighing 35 kg. (70 lbs.) and occupying a space of only 0.25 sq. m. (2.7 sq. ft.). Suitable for both light gauge welding and heavy plate welding, it is possible to weld with normal electrodes of 1-4 mm. diam. and with basic electrodes of 1.5-3.25 mm. The air-operated spot welding tongs, weighing only about 13 kg. can weld up to 2 mm. plates when using short arms and up to 1 mm. when using long arms. They are operated either suspended from a fixture or mounted on a stand but can, owing to their light weight, also be used as a hand tool. The manually actuated double spot machine is intended for spot welding when the workpiece is only available from one side. It is claimed to be particularly useful in the repair of car bodies and in light gauge welding.

New Counting Device for Stores

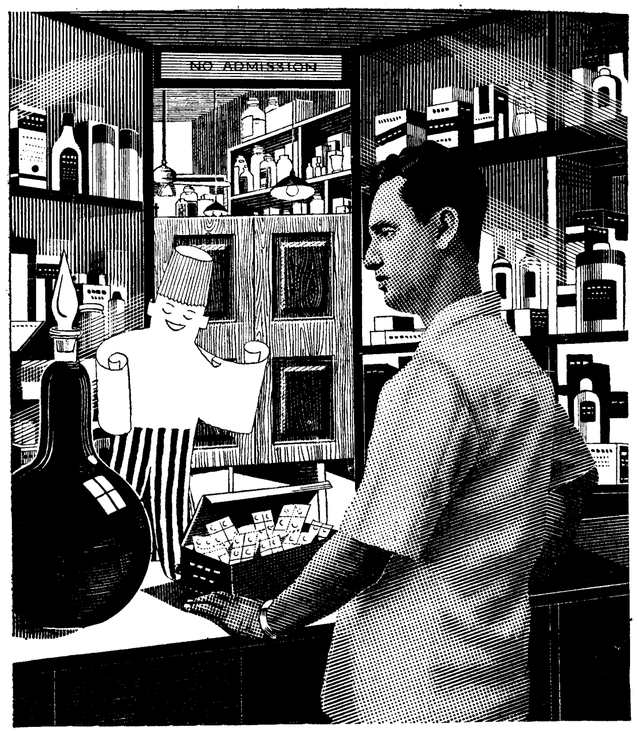
A new counting device which has been especially designed for use in store shops, so that an accurate account of stock can be kept speedily, has been developed in Britain. The device not only enables the stock to be accurately counted but it enables it to be marked rapidly in what is claimed to be a fraction of the normal time. It consists of a special tool made from steel with a chrome finish and comprises a specially designed four-digit counter unit which is attached to a felt-tipped pen. As soon as the felt tip is depressed by pressure exerted when it is placed against the stock item or bin, it not only makes a clearly visible ink mark but the counter records the number counted on a series of digit wheels. The counter weighs only seven ounces and can be produced if desired in five different colours. It is claimed that its use can reduce the marking and counting of stock to as little as one-eighth of the time normally required in some cases.

Novel Refrigerator

The first commercial thermo-electric refrigerators, which can also be used to heat as well as freeze, are being installed in a 500-room hotel in Chicago, U.S. The principles of their operation have been known for many years and many experimental devices are available in both the U.S., the U.K. and Russia. But a commercial thermo-electric refrigerator and heating device has not hitherto been put on the market for such a large-scale application as, for example, room temperature control. Using semi-conductor devices, heat or cold can be generated directly from electricity without any moving parts or any gas. As a result the system should require virtually no maintenance or repair. At least one hospital is shortly to be equipped with the new refrigerator, or temperature control unit. It is expected to be exceptionally cheap to operate.

Tube Profiling Machine

A new tube profiling machine, produced by Hancock & Co. Ltd., Progress Way, Croydon, England, is capable of producing its own templates from a drawing, and is suitable for the weld preparation of pipes from 3 in. (7.2 cm.) to 12 in. (30 cm.) in diameter. The standard machine deals with the preparation of branches, and an optional attachment is available for cutting the corresponding holes in the main pipe. All these cuts can be made for pipes to be set either at right angles to each other or at any desired angle of offtake. The machine works from templates which are made direct from drawings by a special attachment on the machine. These may be made from stock pipe, and drawings are made available by the firm to cover a complete range of standard pipe sizes and angles. A "library" of standard template drawings is supplied with the machine. The machine is provided with a multi-plying device; for example, the template for a 3 in. (7.5 cm.) pipe at 45 degrees into a 6 in. (15 cm.) pipe may also be used for a 6 in. (15 cm.) pipe into a 12 in. (30 cm.) pipe at the same angle. The drive is by fractional horse-power motor with infinitely variable speed, and the whole machine is made as a self-contained unit which may be easily transported.



MEDICINE MAN MR. AL FOIL F.G.S.P.P. ...

"... Fellow of the Grand Society for the Protection of Pills" said Mr. Foil, greatly impressing the awed Chemist who had never heard of the degree before. "That is just one of many honours conferred on me", continued Mr. Foil modestly, "by Pharmacists for having rendered valuable packaging service to the medicine manufacturing industry. Whatever the pharmaceutical product, be it pills or potions, aluminium foil wrapping safely seals in the prophylactic and curative properties for long periods and effectively protects them from contamination, moisture and dirt ... And that," finished Mr. Foil, "is just what the doctor ordered."

Long and extensive experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionery, Tea and many other Industries

VENESTA FOILS LIMITED KAMARHATI, 24 PARGANAS, WEST BENGAL

Selling Agents:

Tea Chest Linings: WILLIAMSON, MAGOR & CO. LTD., Calcutta.

(A SCHEDULED BANK)

Registered Office: **JAYAJEE CHOWK, LASHKAR, GWALIOR**

THIRD ANNUAL REPORT OF THE BOARD OF DIRECTORS

The Directors submit to the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December 1960 together with the Auditors' Report.

	Rs.	nP
During the year the working of the Bank has been satisfactory and after making the necessary and usual provisions the Bank has made a profit of Rs. 3,96,447.67. To this has been added the balance of Rs. 11,750.82 brought forward from the last year, making a total sum of	4,08,198	49
The following appropriations have been made :—		
Amount provided for Taxes	2,23,000	00
Amount provided for Gratuity	12,500	00
The Directors now propose :—		
To pay dividend for the year ended 31st December 1960 at the rate of Rs. 2.50 per share subject to deduction of tax at the prescribed rates which will absorb	1,25,000	00
To carry forward to the next account	47,698	49
Total .. Rs.	4,08,198	49

Under Article 149 of the Articles of Association of the Company Directors Shri Ram Babu Vaishya a Shri Lalchand B. Sethi retire by rotation but are eligible and offer themselves for re-election.

During the year a branch office of the Bank was opened at Ujjain (M.P.) which is functioning satisfactoril

The Directors convey their thanks to all the constituents of the Bank for their support to the Institutio and place on record their appreciation of the services rendered by the Manager and staff of the Bank.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

By Order of the Board,

V. R. SCINDIA,

Chairma

BOMBAY, 11*th March*, 1961.

Note to the Third Annual Report of the Board of Directors Regarding Dividend Payment

The Board of Directors, in the meeting held on 17th April, 1961, "RESOLVED to amend its earlier recommendation to the shareholders regarding dividend payment and recommended that a dividend of Rs. 3.00 nP. per share on the equity shares of the Company be declared in respect of the year ended 31st December 1960 in view of the advice received by the Directors that this being a company covered by the provisions of Section 23A of the Income Tax Act it must make a statutory distribution of 65 per cen of its net profits after tax." The Board further "RESOLVED that in order to enable the payment of th above dividend aggregating to Rs. 1,95,000 an amount of Rs. 22,301.51 nP. should be drawn from th General Contingency Fund of the Bank."

BALANCE SHEET AS AT 31st DECEMBER, 1960.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have audited the attached Balance Sheet of Krishnaram Baldeo Bank Private Ltd., as at 31st December 1960 and also the Profit and Loss Account of the Bank for the year ended on that date annexed thereto.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(*a*) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(*b*) The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(*c*) In our opinion proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books ;

(*d*) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(*e*) In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance Sheet read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December 1960 and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

JOINT CONSULTATION IN INDUSTRY—II

WHAT NEEDS TO BE DONE TO MAKE THE SCHEME A SUCCESS

By Prof. B. N. Mehrotra

SO far joint councils have been set up in 23 undertakings. All these units do not satisfy the criteria of selection laid down by the first seminar. There are at least half a dozen establishments which employ less than 500 workers. Strictly speaking, the scheme has better chances of success in a small concern. Nothing is known of the sub-committee's mind, but, in my opinion, the justification for prescribing the minimum number of workers is this: The scheme is being tried on an experimental basis and the experiences gained at small concerns could not provide adequate guidance for its further extension. It is unfortunate that all the three undertakings in Bombay, the biggest industrial centre of India, which have introduced the scheme, employ less than 500 workers. Similarly, in the public sector, the councils are functioning only in small establishments. The criterion that "there should be a well established trade union functioning" was very sound. Experience has shown that, where this condition was not satisfied, there has been trouble. This, to my mind, was the basic cause of the breakdown of consultation machinery at Hindustan Machine Tools Ltd. Of course, both management and the union have their own stories to tell and there are accusations and counter-accusations. But my own assessment of the situation is that the council was constituted with undue haste. The management showed overenthusiasm. In their anxiety to be the first in the public sector, the management artificially boosted up the union and went out of the way to facilitate its growth. But as the union had not firmly established itself, a rival union soon cropped up and claimed to be recognised as the representative union. If the management had waited till a genuine union sprang up, such a situation would probably have been avoided.

At the Sonabheel Tea Estate, in the beginning, the council received considerable assistance from the union, but, as rival trade union appeared on the scene and inter-union quarrels started, the support declined. At the Travancore Rubber Works, the council could not be constituted at all because of differences between two rival unions. The criterion that the undertaking should be a member of one of the leading employers' organisations has been generally satisfied. Rather their membership of the Association has played the major part in inducing these enterprises to make a trial. I inquired of a number of employers as to why they offered to try the experiment. Were they so enamoured of it? The usual reply was: "The Association had made a commitment at the tripartite conference to provide a particular number of units for the experiment and it approached us for co-operation. We being an important member of the Association could not say 'No.'"

Harmonious Relations

Harmonious relations between management and workers are a prerequisite for the success of worker participation. The council can function effectively only in an atmosphere of goodwill, mutual trust and faith. If these are lacking, nothing else can compensate. Deterioration in relations obstructs the smooth functioning of the council also. In a textile mill, the union-management relations got strained on the bonus question and this was reflected in the work of the council also. As the union leader angrily remarked: "What is the use of the council when the employers are not prepared to give a reasonable bonus to the workers, in spite of the fact that the mill has made huge profits. It is not possible to work on the joint council with an employer who is still harbouring nineteenth century concepts of labour-management relations."

With the exception of TISCO and Indian Aluminium Company, Belur, the joint councils, though varying in details, have generally followed the pattern laid down by the first seminar. The membership of the councils varies from six to twelve and the representation of labour and management is equal in all cases. The Model Agreement had provided that the workers' representatives should be nominated by the union concerned. It is desirable in the sense that it will help in mitigating the union's suspicion and the council may be assured of the union's permanent support. The union must, of course, see to it that its representatives are not the same persons who will participate in collective bargaining also with the same concern. In many cases, however, they have been elected by the workers. But the elections have either been held by the union or conducted by the management with the consent of the union. Ordinarily no qualifications have been laid down for the workers' representatives. A couple of agreements do provide a minimum of one year's service and some degree of education, but they are exceptions. The workers' representatives include one or two non-employees also. In some councils, union leaders are invited as observers. If it is the workers' turn to hold a particular office at the council, it is usually held by the non-employee member. It will not be out of place to mention that the Vice-Chairman of the H.M.T. Joint Council was a non-employee at the time the trouble started. The Belur Works do not permit non-employees on the joint committees. Some agreements give the union a right to recall its representatives on the council. This, I consider, as an unhealthy development. The council members will always be under the domination of the unions and will never be able to function freely. In consequence, the distinction between collective bargaining and joint consultation will get blurred. To begin with, the office of the Chairman was held by the management's representative, but, later on, many councils were presided over by the workers' representatives. In cases where the management representative continues to hold the office, it is by mutual consent. The managements have not shown any reluctance to have the workers' representative as Chairman. Departmental joint committees are not very common, but practically all the joint councils are assisted by sub-committees for various purposes such as welfare, canteen, safety, production, stores and waste.

Consultative Councils

At TISCO, there is a joint consultative council of management which is the apex of a comprehensive three-tier scheme of consultation. At the lowest level are 29 joint departmental councils; above them is the joint works council for the entire works and parallel to it is a joint town council for dealing with matters relating to the town, medical and health services. The council at the apex advises the management in regard to economic and financial matters. At the Belur Works, joint consultation is arranged by means of five joint committees each with defined subjects such as personnel relations, production, job evaluation, standards and canteen. It was not found necessary to draw too many formal agreements.

One of the recommendations of the first seminar was that, "where works committees are already working in units where joint councils are to be set up, the works committees shall continue." In actual practice, this has not happened. The works committees ceased functioning soon after the councils were set up. This was due to a misunderstanding of the role of works committees. The persons concerned could not make a clear distinction between the functions of the two bodies. A unit in the public sector is reported to have evaded the constitution of the council on the plea that "what is the need of the council? We already have a works committee functioning smoothly." A tripartite committee appointed by the Labour Conference in July 1959 considered this question and has drawn up guiding principles relating to the composition and functioning of committees. Illustrative list of items which a works committee should normally deal with and which it should not has also been laid down.

Mistaken Notions

The councils have performed consultative, advisory and administrative functions with varying degrees of success. The workers' representatives have generally expressed satisfaction over the information given to them and the matters on which they were consulted. Information of a confidential nature was ordinarily neither asked for nor given. Some managements 'regretted' that the workers did not always keep the confidence if such information was supplied to them. The Director-in-charge of a mill voluntarily imparted to the council some data regarding the cost structure. The workers' representatives asked for similar information next time also and the management had to seek the intervention of the union to persuade its nominees not to press for it. The right to receive information has led to serious complications in an engineering concern. The union representatives asked for some financial details which the management refused to give. The union in turn expressed its inability to participate in joint consultation. The union president explained his point of view thus: "Worker-participation seeks to give the worker the status of partner in industry. As a partner, I have a right to get whatever information I want. Nothing should be confidential from a partner. If I am treated as an inferior partner, I am not interested." This is an example of mistaken notions and exaggerated ideas about worker-participation.

In a jute mill, the workers' representative complained that the council was not consulted on the question of "sealing of looms." Such complaints have been few. The fact the workers had not much to complain about does not necessarily imply that the management was always straightforward, that it always supplied the information the council was entitled to or that it always consulted the council on matters on which it should have. It may be that the workers were not taking adequate interest and did not care whether a particular information was given to them or whether they were consulted on a particular matter or not. There has been some dissatisfaction over inadequate implementation of the council's decisions, but it was acknowledged by the workers' representatives that the reasons for delay or non-implementation were communicated to them.

Many councils have been entrusted with the administration of welfare and safety measures. Managements have, however, expressed disappointment over the meagre interest shown by the workers' representatives in this matter. There are examples where the management wanted to hand over these functions to them but they found one excuse or the other to escape it. They were not prepared to shoulder any responsibility. Their attitude was described by one management as "Do nothing and criticise others."

Suggestion Scheme

A suggestion scheme is described as an integral part of any participation plan. A large number of joint councils either have a suggestion scheme or propose to have it soon. At TISCO, an effective suggestion scheme is in operation since 1945. Till 1959-60, 473 suggestions had been accepted and Rs. 82,425 were given as rewards. In many other concerns, however, it has made no headway. The managements say that "there is no response" and attribute it to two factors: (1) the workers are not interested, (2) they have no ideas. I feel that the responsibility for the failure of the scheme largely rests on the management. We may not question their sincerity, but they are certainly making no efforts to popularise it. In a concern the suggestion box was not even opened for the first three months. No one thought of it. Only when I asked for the details of the suggestions received it was discovered that the box was not opened till then. In another enterprise, the majority of workers did not even know that there was any such scheme. They had seen the box, but did not know what it was therefor. In still another factory the management complained that the box contained workers' grievances on minor issues which clearly shows that the workers did not understand the basic idea of a suggestion scheme. Its purposes were not explained to them. Such examples can be multiplied and they clearly prove that the management will have to take more active interest if the suggestion scheme has not to remain on paper only.

One major difficulty experienced by the councils in their day-to-day functioning is that the workers' representatives are not familiar with the meeting procedures and have no knowledge of the working of the industry or its problems. Due to lack of education, their level of understanding and reasoning is also low. Both the management and the labour realise in full measure the urgent necessity of education and training for the council members. But the question is: Who should undertake that work? The best thing is for the unions to do it, but they plead their inability due to "lack of funds." The managements escape it by saying that "this is likely to be misunderstood. The unions will feel that we are indoctrinating the workers." The responsibility, therefore, rests on the Government. The Central Board of Education was asked to devote special attention to this problem and start short-term courses for the benefit of council members but nothing concrete has been done so far. It may be observed that the problem of education of management is equally important—particularly at the lower and middle levels. The Government is hoping to sponsor a scheme of training middle management.

Test Results Not Heartening

The success of the councils will be judged according to the contribution they make towards increasing productivity, improving labour-management relations and satisfying the workers' urge for self-expression. Applying these tests, we find that the results are not very heartening. In a few cases, the councils have helped in effective utilisation of material, avoidance of waste, the reduction of losses in the canteen or on transport, etc. There are no indications that there has been any perceptible improvement in productivity. There is no decline in accident rate or absenteeism either. Managements report "no change." Rather one management sarcastically remarked: "The question does not arise. The council has not bothered about production matters. The workers' representatives keep the council busy with their immediate problems." A study of the councils' proceedings confirms this impression. The councils have devoted much of their time and energy to discussing welfare measures and workers' other demands and listening to their grievances; problems relating to production or other general problems of the enterprise have figured in only infrequently. Some improvement in relations is reported but it is difficult to verify it. With the exception of one or two concerns, as, for example, Belur Works, other units had a brilliant record of industrial relations even before the introduction of the scheme. They had not experienced any major trouble. There has been no trouble since then either, but it cannot be positively stated that the council has much to do with it. Incidentally, it may be mentioned that Tatas had the worst industrial unrest in their history after the 1956 agreement which provided for joint consultation, was signed. The council's poorest performance is in relation to the third criterion. The scheme has singularly failed in developing in the workers a sense of belonging. The general body of workmen have remained untouched and unaffected. It is partly due to a weak "communication system." The workers do not know what is happening at the councils and their leaders do not take them into confidence. Moreover, even this is doubtful that the workers have the urge for self-expression. In an underdeveloped country the workers' first interest is economic well-being. All other considerations are secondary. The scheme has however satisfied the ego of union leaders. They are happy that they can talk to the top executives face to face on equal terms.

The reactions of labour and management vary from council to council. A cross-section of their views is given below:

Management views: "The scheme is premature and is serving no useful purpose. The uneducated workers have an inferiority complex and the educated ones think too much of themselves. Both these attitudes hinder the smooth running of the council. The union is asking for too much. The management is not prepared to hand over management functions to the union or share it with them. They can only be consulted. They want true participation which is not possible. Trade unions are apathetic and are providing no guidance to their nominees on the council. Workers put forward no proposals. In every matter the initiative has to be taken by the management. The workers are neither enthusiastic nor competent. They should not be consulted on major issues. They do not understand nor do they care to. They only know how to extract more. Consultation will ultimately lead to participation."

Labour views: "The council is a mere show. Management is not prepared to share responsibility with us. The council has eliminated from our minds the fear of management. The council put a check on management's favouritism and vindictiveness. The managements' motive in constituting the council is that it adds to their prestige. They are not sincere about it. The chairman (manage ment representative) adopts a very domineerin attitude. He wants to conduct the meetings in h own way. He does not allow union members eve to speak freely. *Mill ka prabandh malikno k kam, hai. Ham bina padhe likhe mazdoor ya sab kya janen.*"

In conclusion, it may be said that the pr gress of "worker-participation in management both in quantitative and qualitative terms disappointing. Much spade-work will have t be done to make the councils a success. Som important steps which must be taken before th scheme is extended further are:

Basic amenities of life should be assured to th workers. Then alone can they be expected to tak interest in it.

Trade union movement must be strengthene The trade union federations should discover com mon interests and objectives and evolve combine methods of attaining them.

A comprehensive and well planned programm of workers' education which should include trair ing courses for union leaders and council member Training of management in all aspects of huma relations is equally important.

The managements and the unions should accep the "code of discipline" as a matter of faith an implement it with all sincerity.

A satisfactory machinery acceptable to a parties for the settlement of disputes should b evolved. The possibilities of voluntary arbitratio should be fully explored.

The I.N.T.U.C. has rightly observed that "i is necessary there should be no false step take in this direction and we must allow sufficien time to prepare the ground and to create th necessary climate so that the experiment mad on even a limited scale will lead to success. The progress may be slow, but the pace must b firm and steady. The need for hastening slov is strong.

Note: The views of labour and manage ment quoted in this article are based on per sonal interviews.

INFLUENCE OF METTUR IRRIGATION PROJECT

FINDINGS OF PILOT SURVEY IN TANJORE DISTRICT

By Professor V. G. Ramakrishna Aiyer

THE Madras State has been a pioneer in the establishment of hydro-electric and major irrigation schemes, such as the Mettur Project. In recent years after independence, there have been devlopments in this field in the Madras State as part of the general scheme of development all over India. These development projects are presumed to raise the standard of living of the farmers through intensified farming and increased production. In the case of projects which have been completed in the past, e.g. Mettur Project, it would be worthwhile to find out what developments have taken place in agriculture and agro-industries in the zone commanded by these projects. An evaluation of the economic benefits of the Mettur Project might reveal certain trends and certain facts which could act as pointers to future schemes which are being planned in India and indicate modifications which may be necessary in planning.

The pilot survey was intended for studying the influence of the Mettur Projects in the directions mentioned above. Tanjore district has generally benefited most as far as agriculture is concerned due to this project. The Pattukottai taluk in the Tanjore district was considered ideal for the pilot survey since this is the only taluk of the district which was a dry area prior to the advent of the Mettur scheme and provides now a comparison over the conditions existing prior to the project.

Out of the area of 3,738 sq. miles of Tanjore district, Pattukottai taluk embraces at present 435 sq. miles, i.e. nearly a ninth of the total area. Out of the population of 2,982,670 (29.8 lakhs) in Tanjore district, Pattukottai has a population of 246,153. Roughly one-twelfth of the population of Tanjore district is in the present Pattukottai taluk. So we can say that in size and population, Pattukottai forms an important area and is sufficiently representative of the dry taluks of Tanjore.

Irrigation

Out of the population of 246,153 in Pattukottai taluk, 90 per cent is rural in character. More than 85 per cent of the population is depending on agriculture. The total number of villages in the taluk is 269 and out of these, 231 villages are now irrigated by the Cauvery Mettur Project, and the rest are mainly rain-fed supplemented by tanks and wells. Out of these 231 villages now irrigated of the Cauvery-Mettur canal, 15 villages were selected by random sampling for the pilot survey and three other villages were also chosen from the non-irrigated areas for purposes of comparison.

Prior to the introduction of the Cauvery-Mettur Project, the people of these villages found recourse to jungle streams, wells and tanks for agricultural purposes. Even now this is the case in the non-project areas where water is difficult to obtain even by digging wells, and even if water is obtained, it has not provided a regular and continuous source. In contrast to this, in the villages in the canal-fed areas a regular supply of water is now provided through the canals from the later half of June to the end of January. Further, in the canal-fed area the water-table has increased so that it is possible to dig wells at a depth of 10 to 20 ft. for irrigating the area during the summer months with such crops as gingelly and groundnut for supplementary income.

Crop Patterns

A noteworthy feature of the pilot survey is in respect of the changes in cropping patterns as a result of the irrigation facilities now provided by the Mettur canal. The area under paddy in Pattukottai taluk has jumped from 38.3 per cent of the total cultivated area as it stood prior to the project to 80.8 per cent. Nearly 89 per cent of the holdings have been brought under wet cultivation for paddy, whereas the comparable figure is only 22.9 per cent in the non-project area. All this tends to show that the advent of the Mettur canal has made Pattukottai almost an area of monoculture of paddy whereas prior to the project, owing to lack of water facilities, the farmers raised precarious varying crops to suit the changing and uncertain seasonal conditions. In paddy cultivation itself there has been a change. Whereas in the non-project area there is no acreage where two crops of paddy are taken, it is found that in the holdings surveyed in the project area, 35.3 per cent of the acreage is under double-crop system. One of the features worthy of mention with regard to patterns is the fact that the introduction of more assured water-supply has given an incentive almost wholly to expansion and intensification of paddy cultivation.

Regarding cultivation practices, the survey indicates that there is not much change or improvement. Though there is an Agricultural Research Station in Pattukottai with its model farms using iron ploughs, Burmese Setton, green manure trampler, etc., these expensive implements have no attraction for the small farmers with slender incomes. There was only one instance where the Japanese method of cultivation was practised.

Production Costs

In the canal-fed area, the average cost of production of paddy per acre was about Rs. 121 and the average value of the net yield per acre works out to Rs. 230 and average net profit to Rs. 113. The average yield of paddy in the canal-fed area is 30 *kalams* (a *kalam* of paddy is about 64 lbs. in weight) per acre whereas that in the non-project area is about 20 and the average cost of production of paddy is Rs. 96 per acre; the average value of the net yield per acre is Rs. 125 and the average profit Rs. 3.

In the case of groundnut the value of the net yield per acre in the project area is Rs. 128 and Rs. 80 in the non-project area; and the profit per acre works out at Rs. 71 in the canal-fed area, and Rs. 33 in the non-project area. The average yield of groundnut in the canal area is 26 *kalams* per acre and in the non-project area it is 17. These figures indicate clearly the substantially increased net returns to the farmer in the project area as a result of the continuous supply of water from the Mettur canal.

Land Sales

It is not easy to collect information in this regard and both direct and indirect methods of obtaining information had to be resorted to. Out of the 597 samples surveyed, 126 have been able to purchase additional lands during the last 10 years; and in only 11 samples had any indebtedness been recorded. The average holding in the project area is still not adequate as an economic unit, and though there has been a definite increase in the net returns it is not adequate to make considerable savings with which to purchase lands.

Agro-Industries

The pilot survey of the 15 villages included investigation into the rural industries existing and the possibilities of expansion. The chief industries are rice mills, oil pressing, mat-making and cloth-weaving and all of them are in small units. In the case of the villages adjoining the sea, fishing and the manufacture of salt are significant. There is need and scope for strengthening some of these small industries like mat-weaving on account of plenty of *korai* grass available in some of the villages, bee-keeping for which there is scope in some of the villages which are replete with flowering plants suitable for bee-keeping.

Population Trends

Almost cent per cent increase in the yield of staple food, i.e. paddy in the project area, has made it possible for Pattukottai taluk to sustain a much larger population than it did prior to the new irrigation facilities as is evidenced by the changes in population pattern between 1941 and 1951. While the Madras State during this period registered an increase of 14.4 per cent, Pattukottai taluk in comparison registered an increase of 33 per cent. In the villages surveyed, there have been instances of increase of population upto 372 per cent between 1931 and 1951. The average increase for the 15 villages surveyed was 58.6 per cent. This is a clear indication that the irrigation projects of this type go a long way to sustain a greater population than was originally possible.

The percentage of population under agricultural employment has also increased as a result of the project. According to the pilot survey, 93.8 per cent of the population in the villages surveyed in the canal-fed area have taken to agriculture as against 87.9 per cent in the non-project area. The irrigated area of Pattukottai taluk has also come to the succour of the agricultural people of the non-project area of this taluk and the dry areas of the neighbouring district of Ramnathapuram in the time of distress and famine and in periods of drought when these people migrate to the project area. The irrigated area of Pattukottai has also provided regular employment every year during the harvest time to the agricultural labourers of the dry areas of the taluk.

Important Findings

The important findings which emerged out of the survey may now be brought together. First, the cent per cent increase in the yield of paddy has enabled Pattukottai taluk to sustain a much larger population than it did prior to the project. Between 1931 and 1951, while the average increase in population in Madras State was about 27 per cent, in Pattukottai it was about 44 per cent. In the villages surveyed there have been instances of increase of population upto about 370 per cent between 1931 and 1951. Secondly, one of the indirect benefits to the agriculturists as the result of the Mettur canal has been the prevention of floods and saving of fertile lands in the delta from the damages usually caused by the floods. Thirdly, one of the indirect benefits which the project has conferred on the agricultural economy of the Tanjore district is that about 3.5 lakh acres were freshly brought under irrigation, i.e. an increase of about 44 per cent over the previous area under irrigation. The area under paddy rose by about 29 per cent and in Pattukottai taluk itself by about 211 per cent and about 89 per cent of the total area, as shown by the surveyed holdings, has been brought under wet land cultivation, whereas in the non-project area it is only about 23 per cent. Another finding is that the area under cultivation itself increased as a result of the project by about 27 per cent in Pattukottai taluk. The project has made it possible that a significant proportion of the wet land area in Pattukottai taluk can grow two crops of paddy a year instead of the one prior to the project. Among the holdings surveyed, about 35 per cent of the yet land area is under double crop compared to only a single crop in all the wet land area in the non-project zone in the same taluk.

The survey reveals further that the percentage of population under agricultural employment has also increased. About 94 per cent of the population in the canal-fed areas have taken to agriculture as against 88 per cent in the non-project area. Again, the crop pattern considerably changed as a result of the project whereas prior to the project, the farmers in the taluk under stress of lack of water facilities had to have recourse to growing of varied crops to suit the changing and uncertain seasonal conditions. Pattukottai is now an area of almost monoculture of paddy and the area under paddy has gone up from about 38 per cent of total cultivated area in 1931 to about 81 per cent in 1951.

Four other important findings are: First, in the holdings surveyed, it was estimated that only about 1 per cent of the total area under paddy grew improved strains and only 8 per cent of the total area under paddy received an effective dose of ammonium sulphate. It was evident that improved agricultural practices have not been adopted in the area surveyed to any significant extent, and what increase in yield has been obtained since the advent of the project has been mainly what water-supply by itself can achieve. Secondly, from the statistical analysis of data obtained, the average net profit from paddy cultivation has been more than three times the net profit obtained before the introduction of the project. This gives an indication of the comparative economic prosperity of the farmers in the project area and the scope for better creditworthiness of the farmers. Thirdly, adequate advantage has not been taken of electricity introduced in parts of the taluk. The use of electric power for starting small agro-industries requires in the initial stages some guidance and financial assistance and so long as these things are lacking, there is no point in finding fault with the simple village people in not developing subsidiary industries. This is a matter which will require the immediate attention of local authorities. And finally, lack of proper road communication in almost all the villages surveyed seems to be mainly responsible for the unsatisfactory progress in cultivation techniques in the villages.

MARKED EXPANSION IN GENERAL INSURANCE BUSINESS

NUMBER OF INSURERS, HOWEVER, DECLINES

THE *Indian Insurance Year Book*, 1960, just published, gives a comprehensive picture of general insurance in India at the end of 1959. Although the usefulness of the *Year Book* has been substantially lost through its delayed publication, considering the fact that there is no other source of reliable information about Indian insurance in the country, it is still a useful publication. We reiterate the plea voiced many a time in these columns that the Controller of Insurance should take steps to advance the publication of the *Year Book* so that the present wide gulf between the date of publication and the last accounting year covered by the *Year Book* will be reduced.

There were, at the end of 1959, according to the *Year Book*, 176 insurers registered under the Insurance Act, 1938 for transacting one or more classes of general insurance business in India. Of these, 89 were Indian insurers and 78 non-Indian insurers. While ten non-Indian insurers and one Indian insurer ceased to remain registered during the year 1960, one non-Indian insurer was registered during the year so that at the end of 1960, there were in all 166 insurers registered under the Indian Insurance Act for transacting one or more classes of general insurance. Of those, 88 were Indian and 78 non-Indian. Forty-eight of the Indian and 36 of the non-Indian insurers were registered for all three classes of general insurance business. Twelve Indian and 16 non-Indian insurers were registered for two of the three classes and the rest, namely, 28 Indian and 26 non-Indian, were registered for only one class. Of the Indian insurers, 39 having their registered office in Maharashtra State accounted for about 62 per cent of the total net premium income. About 71 per cent of the net premium income in India of the non-Indian insurers went to the 62 insurers constituted in the U.K. Tariff insurers continued to account for the bulk of the business in the country. The net premium income in India of the six Indian non-tariff insurers transacting miscellaneous insurance business was about 6.2 per cent of the premium income in India of all Indian (tariff and non-tariff) insurers.

Rate of Growth Higher

A comparison of the increase in industrial production and the growth of the general insurance business in India shows that the rate of growth of general insurance in 1959 was much higher than in the previous year. Thus the index number of general insurance business (Base 1951=100) rose by 10.5 points from 139.7 in 1958 to 151.9 in 1959, as compared with a rise of 4.6 in 1958 and 0.5 in 1957. The index of industrial production went up by 12.2 points during the year as compared with only 2.4 points in the year 1958 and 4.7 points in 1957. The following table gives a comparative study of the trend of industrial production and general insurance during the period 1954-59:

Growth of General Insurance 1954-'59

	1959	1958	1957	1956	1955	1954
Index of general insurance business in India ..	167.3	146.8	140.4	139.9	135.3	112.2
Index No. of industrial production	151.9	139.7	137.3	132.6	122.4	112.9
Gross premium written direct in India (Rs. in crores)	33.19	29.72	27.84	26.07	23.09	21.35
Net premium (Rs. in crores)	22.46	20.46	18.14	16.03	14.40	13.60

The gross premium written direct in India during 1959 in the classes of fire, marine and miscellaneous insurance business was Rs. 8.72 crores, Rs. 5.10 crores and Rs. 9.19 crores respectively, amounting in all to Rs. 23.01 crores for Indian insurers and Rs. 4.94 crores, Rs. 2.47 crores and Rs. 2.77 crores, respectively, amounting in all to Rs. 10.18 crores for non-Indian insurers. The gross premium written direct outside by Indian insurers was Rs. 1.99 crore, Rs. 1.74 crore and Rs. 3.31 crores in the classes of fire, marine and miscellaneous insurance respectively, amounting in all to Rs. 7.04 crores. The gross premium written direct in India and outside India by Indian insurers was higher than that during 1958 in all classes except for fire insurance business outside India. The non-Indian insurers wrote a larger gross premium in India during 1959, as compared with 1958. The share of Indian insurers in the total gross premium as well as net premium income rose further during 1959 in all classes of general insurance except for a slight fall in their share of the marine net premium income in India as compared with 1958.

Underwriting Experience

An analysis of the underwriting experience shows that Indian insurers spent in respect of fire insurance business during 1959 33 per cent of their total gross premium income in India as expenses, taxes and miscellaneous outgo, 14 per cent on commission and 26 per cent in claims, leaving a balance of 27 per cent. The corresponding figures for non-Indian insurers in respect of their Indian business were 36 per cent, 14 per cent and 22 per cent, leaving a balance of 28 per cent. In respect of marine insurance business Indian insurers spent in 1959 18 per cent of their gross premium income in India on expenses, taxes and miscellaneous outgo, 7 per cent on commission and 68 per cent in claims, leaving a balance of 7 per cent. The corresponding figures for non-Indian insurers in respect of their Indian business were 26 per cent, 9 per cent and 48 per cent, leaving a balance of 17 per cent.

In respect of miscellaneous insurance business, Indian insurers spent during 1959 24 per cent of their gross premium income in India on expenses, taxes and miscellaneous outgo, 13 per cent on commission and 54 per cent on claims, leaving a balance of 9 per cent. The corresponding figures for non-Indian insurers in respect of their Indian business were 31 per cent, 13 per cent and 41 per cent, leaving a balance of 15 per cent.

The total assets of Indian insurers as on 31st December 1959 amounted to Rs. 57.04 crores, as compared with Rs. 51.93 crores and Rs. 49.08 crores at the end of 1958 and 1957 respectively. Thirteen per cent of the total assets had been invested in securities of Government and public authorities, 3.1 per cent in foreign Government securities, 28.0 per cent in shares and debentures of Indian companies, 1.6 per cent in land and house property, 21.8 per cent in deposits, cash and stamps, 1.5 per cent in loans, 0.4 per cent as accrued and outstanding interest and 7.4 per cent in miscellaneous assets. The balance of 22.4 per cent was agents' balances, outstanding premiums, and amounts due from other insurers.

The assets in India of non-Indian insurers as on 31st December 1959 amounted to Rs. 11.41 crores of which 23.3 per cent were invested in securities of Government and public authorities, 20.9 per cent in shares and debentures of Indian companies, 2.7 per cent in land and house property, 32.4 per cent in deposits, cash and stamps, 0.7 per cent in loans, 0.3 per cent as accrued and outstanding interest and 9.9 per cent in miscellaneous assets. The balance of 9.8 per cent was agents' balances, outstanding premiums and amount due from other insurers.

All in all, the progress of general insurance during the year under review has been heartening. This result, partly attributable to the rise in industrial production, may be expected to have been bettered in the year 1960 when the index of industrial production had reached a record level. It is to be hoped that the next *Year Book* will unfold a still more heartening story in so far as growth of business in concerned.

The Government of India has formed an Advisory Committee for the purpose of Section 101A of the Insurance Act whose term of office will be for two years from the date of nomination. The members of the Committee are: Messrs. S. K. Vaiyapuri, Controller of Insurance (*Chairman*), T. M. Telang (Indian Trade and General Insurance Co., Ltd.), D. Hammond Gilles (Alliance Assurance Co., Ltd.), R. M. Desai (India Reinsurance Corporation Ltd.), B. R. Mody (Indian Guarantee and General Insurance Co., Ltd.). Mr. S. C. Das Gupta, Assistant Controller of Insurance, will be the Secretary of the Advisory Committee.

The Government of India has approved the India Reinsurance Corporation Ltd. and the Indian Guarantee and General Insurance Co., Ltd. as Indian reinsurers for the purposes of clause (ii) of sub-section (8) of Section 101A of the Insurance Act, as amended by the Insurance Amendment Act 1961.

QUESTION OF U.K.'S ENTRY INTO COMMON MARKET

THREE MAJOR HURDLES IN THE WAY

WITHIN less than a month from now—on 1st July 1961 to be precise—the European Free Trade Association will reduce tariffs among themselves by another 10 per cent. The first cut of 20 per cent had been made a year ago. According to the original provisions of the Stockholm Treaty, the 10 per cent cut was planned to take place only in January 1962. The acceleration of tariff cuts has been envisaged with the obvious purpose of keeping the E.F.T.A. in step with the pace of tariff reduction within the Common Market of the Six. The Six, it may be recalled, has already reduced internal tariffs among themselves by 30 per cent—10 per cent each in January 1959, July 1960 and January 1961. Although, thus, the two trading blocs have been taking decisive steps to consolidate their respective positions, no positive programme has so far been worked out to bridge the gulf between the two blocs—a gulf that threatens to endanger the unity of Europe.

In the meantime, British public opinion has become very vociferous in demanding a 'ink with the Six, prompted mainly by the rapid industrial progress made by them in the last two years. The British Government has, of course, become responsive to the public demand. In fact, an indication of the unmistakable desire of the U.K. to join the Six was given by Mr. Edward Heath, Lord Privy Seal, in his speech at a meeting of the Western European Union (in which the U.K. and the Six are constituent members) at Paris in February last. That the U.K. Government's European policy has not undergone any change since then has been vindicated by the observation of Mr. Harold Macmillan, the U.K. Prime Minister, at the meeting of the W.E.U. in London last week. Mr. Macmillan had practically nothing new to say on the Government's policy much to the disappointment of several observers who expected a clear enunciation of the Government's policy, if not a final decision, from him at this juncture. He did in fact stress the need for maintaining unity in Europe. But he made no secret of the fact that any such move by the U.K. would depend on how far the Six would reconcile themselves to the three problems facing Britain, namely, domestic agriculture, the E.F.T.A. link and the Commonwealth preferences. This would naturally necessitate the amendment of the Rome Treaty, if the U.K. is to be admitted as full member of the Common Market. Mr. Macmillan pointed out in particular that the Commonwealth—"association of peoples of many races buttressed by its trade pattern"—was an important element of strength and stability to the whole free world, making it difficult to be overlooked in any new move.

Commonwealth Meeting

Quite irrespective of the advantages or disadvantages of Commonwealth countries (other than the U.K.) arising out of closer co-operation in Western Europe, a time has come for the Commonwealth to reconcile itself to the new European policy of the U.K. It is now clear that the U.K. has once and for all rejected its original proposal for a free trade area. At the meeting of the senior economic officials from the Commonwealth countries at London last week, the U.K. delegation left the other members in no doubt about its intentions *vis-a-vis* the Common Market, although the U.K. refused to make any commitments on the subject. The question now facing the U.K. is not whether it should join the Six or not, but only the specific terms on which it should join them. So what the non-European Commonwealth countries have to think now is not whether the U.K. would go "in," but what price it will in the last resort be prepared to pay. The African Commonwealth members made it clear at the meeting that they would welcome any move towards Europe by the U.K. since this could only benefit their exports of tropical products by opening out an expanded market. The delegations of other Commonwealth countries pointed out, however, that they attached great importance to the existing trade links with U.K. On the whole, the general attitude of the Commonwealth delegations appeared to be a recognition of the inevitable rather than a positive welcome to U.K.'s possible membership of the Six. No clear solutions for the Commonwealth problem have so far been worked out. It is, however, interesting to await the reactions of the Common Market countries to the recent proposals made by President Kennedy to the Common Market for the abolition of protective tariffs on tropical products and for the creation of an aid fund for producing countries. An indication of the present British opinion on the Commonwealth system is well brought out by the London *Financial Times* in these words:

"For the Asian Commonwealth members the most important single issue is how a united Europe would treat their exports of low-cost manufactures. Here again the Americans have now put forward an idea which could prove the long-term answer. A scheme to share the "burden" of low cost imports among the industrial nations certainly should get full British support. It must be economically more beneficial to import cheap goods than to export dear money—provided the imports do not lead to really serious disruption of markets.

"It is on the commercial policy which Europe as a whole would pursue towards India, Hong Kong and Pakistan, that these countries will judge whether they are getting a fair return for any breach in the right of free entry they enjoy in Britain. For Australia, New Zealand and Canada the whole question is complicated by emotional forces which are bound to affect political and economic judgments.... Quite understandably, all three are anxious that their sales of temperate zone foodstuffs, and in the case of Canada of manufactures, to Britain should not suffer. They point out very rightly that it would hardly be advantageous for Europe to stimulate the production of foodstuffs through higher prices. The result of such a policy would be to curtail consumption while decreasing the market share of the most economic producers. For New Zealand the matter is especially grave because dairy produce accounts for such a large share of her export proceeds."

The fact that the problem is difficult, the paper concludes, should not make anyone assume that a European settlement must turn out disastrously for the Commonwealth. If and when the U.K. gets down to hard bargaining with the Six, it adds, the Commonwealth "will obviously have to be constantly and closely consulted."

Agriculture

The problem of British agriculture, it is being gradually realised in Britain, is not an unsurmountable problem. The Rome Treaty has laid down only a general scheme for a common agricultural policy. Details are yet to be worked out. This will enable the Six to make necessary adjustments to accommodate British views on the subject. It is true that the British farmer can be protected even after the British entry into the Common Market, except perhaps for some difficulties in respect of milk, pigs and a few horticultural products. But there is reason to believe that food prices in Britain will go up, if it joins the Six. Several research studies conducted in London, including those by Mr. Colin Clark and also by the Political and Economic Planning (P.E.P.), do confirm the fear of a rise in prices. But the general impression is that this price increase will only be of marginal significance. So long as the E.F.T.A. is concerned, the U.K. would appear to feel that its entry into the Common Market will only facilitate an early negotiated settlement of the two blocs.

Meanwhile, the Common Market countries themselves have been seeking to avoid any impression that its policies would lead to discrimination against third countries. The C.M.'s offer of a 20 per cent reciprocal reduction in customs duties for all industrial products is an instance in point. The offer is now being considered at the second lap of the G.A.T.T. Conference on tariff reduction commenced at Geneva on 29th May. The Common Market's offer has been welcomed by both the U.K. and the U.S. The British delegation has indicated that it is ready to begin talks immediately with the Common Market on its 20 per cent tariff reduction. Although the American delegation is not in a position to consider an overall reduction, it has expressed its readiness to begin talks, which will cover a very long list of products. The talks now in progress in Geneva covers all-round reductions in world tariffs and embrace 79 per cent of world trade or about $105,000 million.

G.A.T.T. OFFERS TECHNICAL ADVICE

The Contracting Parties to the General Agreement on Tariffs and Trade have decided to offer to newly independent States advice and guidance in formulating their commercial and customs policies. The decision was taken at the eighteenth session of the Contracting Parties held recently at Geneva. This undertaking to stand ready to offer technical assistance, covering all matters which fall within the competence and jurisdiction of the General Agreement, is being made on the understanding that the country which needs it will take the initiative in asking for assistance. The decision to offer technical assistance received the unanimous endorsement of the Contracting Parties. In particular, it was warmly welcomed by representatives of developing countries, who spoke on behalf of newly independent States. In the implementation of this decision there will be close collaboration with other inter-governmental agencies which are active in the field of technical assistance, as well as with other inter-governmental agencies having competence in such aspects of commercial policy as customs tariffs, so as to avoid any possible duplication of effort.

Another important decision taken at the session relates to the convening of a meeting of the Ministers for trade and economic affairs of all member-countries at Geneva at the end of November next. This meeting, which will last about a week, will be held during the period of the nineteenth session. All regions of the world are represented in the membership of G.A.T.T. and it follows that the Ministers will be called upon to consider problems of major importance relating to the continuing expansion of international trade, with a view to giving directives which will ensure a further step forward in bringing down trade barriers on a world-wide front. It may, therefore, be expected that Ministers from every continent, and representing countries in various stages of development will decide to attend this meeting. The broad subject matter for discussion at the Ministerial meeting arises in the main out of the work done during the past three years in the G.A.T.T. trade expansion programme. In the field of tariffs the Ministers will be in a position to take stock of the progress made in the "Dillon" round of tariff negotiations currently taking place at Geneva and to look forward towards further tariff disarmament on a world-wide basis, through the adoption of measures that may prove effective for this purpose.

Trade in agricultural and food products presents fundamental difficulties which are today generally recognised. Countries whose greatest efficiency lies in agricultural production are faced with severe restrictions in many markets and trade is so depressed that many efficient producers cannot even cover their costs. At the same time the world has an increasing need for cheap foodstuffs. Social and political considerations in many countries, whose economies are highly developed, have led to the adoption of price and income support policies and there is the problem of finding solutions to the difficulties in trade in agricultural products, which are acceptable both to importing and to exporting countries. The search for a solution to the question of agriculture is a matter of world-wide concern.

The need to expand the markets for primary products, semi-processed and light industrial goods is of vital interest for less-developed and developing countries. A number of them face particular difficulties in expanding their exports of products grown in tropical climates. Much work has already been done in identifying the obstacles which hinder the expansion of their export trade, and light has been thrown on the situation sometimes created by certain exports from developing countries in the markets of other countries.

It is expected that, in considering the general problems thus outlined and in formulating ways and means for resolving them, the Ministerial meeting will give further impetus to the work of the Contracting Parties as a whole. In view of the significance of the meeting stress has been laid on the need for a very thorough preparation of the ground in advance. This will be undertaken in September by the Council of Representatives and the results of their work, together with the preparatory work already undertaken by the Contracting Parties in connection with the trade expansion programme, will provide the factual material to which the Ministers will address themselves.

The session, it may be noted here, took a decision to admit the newly-independent country of Sierra Leone as a Contracting Party to the G.A.T.T. With this addition, there are now 39 Contracting Parties to the G.A.T.T.

HEAVY MACHINE TOOL PLANT

An agreement has been signed between the Heavy Engineering Corporation and Messrs. Technoexport of Prague for the preparation of the detailed project report for the heavy machine tool plant, to be set up at Hatia, Ranchi. The detailed project report is expected to be ready by the first week of December this year. The agreement provides, among other things, for the visit of Indian engineers to Czechoslovakia to take part in the preparation of the project report.

The heavy machine tool plant is the third project proposed to be set up near Ranchi under the Heavy Engineering Corporation. The other two are the heavy machine building plant and the foundry forge plant. The plant is being designed to produce annually 10,000 tons of different types of heavy machine tools. For the first time in India, the plant will turn out machine tools weighing as much as 150 tons each. A 60-acre site for the plant has already been selected. The capital outlay on the plant (excluding the cost of quarters for the staff) is expected to be nearly Rs. 15 crores. When in full production, the plant's annual output will be worth Rs. 8 crores. Trial production is expected to begin by 1965-66.

As a measure of export promotion, the Government of India has decided to allow drawback of customs and Central excise duty on jute goods manufactured out of raw jute imported from countries other than Pakistan, paper products (napkins, toilet paper and drinking straw), shrimp cartons for packing sea food, low tension electrical switchgears, motor starters, cosmetic preparations, perfumery compounds and perfumery and safety razor blades. Changes have been made in the items relating to umbrellas and umbrella ribs, hydraulic brake fluid, diamonds, mild steel, paper pins and clips and paper products (playing cards, carbon paper, etc.). Item relating to hessian and sacking has been deleted from the Customs and Central Excise Duties Export Drawback (General) Rules, 1960.

FOREIGN SECTOR IN INDIAN INSURANCE

HOW IT PLAYS A USEFUL ROLE

From A Special Correspondent

MR. T. T. Krishnamachari probably made the best defence of the role of the foreign sector in the Indian economy though he was probably referring only to foreign manufacturers who still continued to get licences in India for the production of chocolates, etc. His statement does generally apply to quite a few sectors of the economy. Mr. Krishnamachari had mentioned that the foreign companies are more efficient, their books of accounts are clear, they pay taxes regularly, they treat their staff better and it is easier to deal with them. The insurance market in India has a very complex pattern but in view of the overwhelming share in general insurance of the foreign insurance companies it will be useful to analyse the various sections and throw some light on the methods of working.

In a recent statement in Parliament on industrial policy, it was mentioned that foreign capital will not be welcome now in banking and insurance. This would mean that future banks and insurance companies floated in India must be wholly Indian-owned but it could presumably mean that the entrance into India of branches of various banks and insurance companies is not considered necessary or desirable. In actual practice, however, under the present Insurance Act there is nothing to prevent a foreign insurance company starting a branch in this country. The legal position is that as soon as an application is sent fully supported by the details required, the Controller of Insurance is bound to register any insurance company in India irrespective of its nationality. The Banking Law is probably more restricted but it is known that quite a few foreign banks have established branches in India during the last ten years. The present overall trend so far as foreign interests are concerned is not an increase but an actual decrease in the number of foreign units operating in India.

It is possible to exaggerate the actual decrease of foreign units operated in India. For instance, on the 31st December 1958 there were 91 Indian and 93 non-Indian insurance companies registered in India but as at 31st December 1959, the number of non-Indian companies declined to 78 from 93 and the number of Indian companies declined to 89 from 91, with the result that for the first time in many years there were more Indian general insurance companies in this country than non-Indian general insurance companies. This fall in the number of foreign insurance companies operating in this country is more apparent than real because all these companies previously were working in groups through joint branches with other insurance companies who continue to do business as before. The only change is that instead of four name-plates outside the branch office there are only three name-plates now. All the companies which are withdrawing from India were subsidiaries or managed companies and the principal companies who managed or owned them are still operating here, having taken over the business of the subsidiary companies.

Historical Factors

The large number of companies operating in a relatively limited field is the result of certain historical factors. In the good old days when principal agents, chief agents and special agents were allowed there was a restriction on the number of such agencies per each company. The only way therefore to increase one's business was to evade this regulation by bringing in additional subsidiaries which would entitle one to appoint additional principal agents. The net result was that all these companies never had their individual independent branches but operated through joint branches and the total business was allocated among these jointly operating companies in any proportion they liked. Now that chief agencies, principal agencies and special agencies have been abolished by law there is no point in dealing with a large number of companies and hence ten non-Indian companies ceased to remain registered during the year 1960. One more reason why these companies are being withdrawn is the amount of deposit required to be placed with the Reserve Bank before an insurance company can operate in India. These deposits are substantial sums and these could be withdrawn only by the companies ceasing to be registered. The total deposits of all Indian companies lying with the Reserve Bank of India are Rs. 279 lakhs as against the much larger amount of Rs. 305 lakhs kept by the non-Indian insurers. The non-Indian insurers' deposits are larger even though their total number is smaller because of certain red-tapism in the office of the Controller of Insurance. The deposits cannot be withdrawn without the approval of the Department of Insurance and the Department of Insurance goes into various details to make sure that there are no liabilities left in this country so far as the withdrawing companies are concerned. This department naturally takes very long time over this and companies which withdraw in any particular year are never able to collect their deposits in the same year. As most of the policies and liabilities of the withdrawing companies are guaranteed by the principal companies, it sounds ridiculous and unrealistic on the part of the Controller of Insurance to hang on to these deposits long after the real reason for them has disappeared. There is no reason why a foreign company which is withdrawing should leave with a bad taste of the usual red-tape of our Government departments.

Coming back to the method of operating for group offices, it is necessary to emphasise that the groups and mergers have become very prominent during the last three years and this tendency has been considerably accentuated even in India. Of course, this relates much more to the foreign companies than to the Indian companies. The present 88 Indian companies operating in India are operating through 77 groups which means that 11 Indian companies do not have independent offices but the 78 foreign companies operating in India are only 52 group offices which probably means that 26 insurance companies could go away from India and collect their deposits without any transfer of business away from foreign companies to Indian companies. The large number of mergers which were initially the results of take-over bids abroad have become necessary in India for reasons of economy. An optimum size unit can operate only with a premium income of about Rs. 5 lakhs per branch. Any insurance company which has to conform with the legal limits of expenses has to join hands with another insurance company, so as to form a more economic unit with a reasonable expense ratio.

A Revealing Picture

A comparison of the various portfolios of the Indian and foreign companies gives a most revealing picture. Foreign insurance companies got started in India not as branches but as agencies operating as departments of managing agencies, or business houses. This has a permanent effect on the composition of their portfolios in the sense that most of their accounts are tied accounts very often with some connections at the head office level. These tied accounts not only provide a certain base for minimum operations but they also provide the best quality of business that is available in this country. This is evident from the statistics of the last six years' business published in the *Insurance Year Book* which show that the claims ratios of the foreign companies for fire, marine and accident business have always been lower than the corresponding claims ratios of the Indian insurance companies. This also means that apart from these tied portfolios, whatever the outside business the foreign companies do, is properly rated and underwritten and there is a sound underwriting judgment behind most of their acceptances. This is an inevitable situation where the managers of the foreign companies tend to be people with proper training and managerial experience. The managers of Indian insurance companies, however, tend to be successful salesmen whose salaries vary according to the overriding commissions due to them on their personal portfolios. The main consideration in the minds of salesmen is the need to get along with their clients and not the proper assessment of any risk. It must be mentioned that the lower claims cost of foreign companies does not always mean a higher profit ratio because foreign companies tend to spend more than Indian companies on management expenses and commission costs. This higher payment of management expenses is more than justified by their results which are consistently showing a lower claims cost.

Most foreign companies have gone by sound underwriting considerations and have not blindly pursued an increase in the gross volume of business. This is seen from the fact that they have concentrated mainly on fire business and not so much on marine or miscellaneous business like Indian companies have. Fire business is known to be more profitable all over the world than any other business. Of the 88 Indian insurance companies operating in 1960 only 62 did fire business while of the 78 foreign insurance companies operating in India as many as 65 did fire business, with or without other branches of insurance. Apart from this numerical company-wise concentration of fire portfolio, a fire rate is easier to carry with any client in view of the fact that fire rates are tariffed and tariff rates are fully effective so far as this country is concerned. Again, of the total business done in India only 30 per cent of the total gross direct premium went to foreign companies but if only the fire portfolio is taken into account 36 per cent of the Indian fire business went to non-Indian concerns.

Specialised Insurance Needs

Banks and insurance companies have tended to concentrate at the bigger centres in large numbers leaving the smaller centres relatively inadequately served. Like Indian banks, some Indian insurance companies do operate in some of the smaller centres, but they are relatively smaller, their operating costs are high and the quality of their business is low. Even in spite of this, most of the Indian and foreign companies are concentrated in Bombay, Calcutta and Madras. Of the 95 Indian insurance companies operating in India, as many as 71 had their head offices in Bombay, Calcutta and Madras. Similarly, of the 97 foreign companies operating in 1959, as many as 77 had their head offices in Commonwealth countries. Of these 77, as many as 62 had their head offices in the U.K. This shows the extent of the domination of British companies in the non-Indian sector of the Insurance market. No wonder rates and the nature of insurance covers available in this country have always been dictated from London. Specialised insurances, particularly suited to the needs and requirements of this country, with a higher element of risk have not been supported by the foreign or even Indian companies. For example, the schemes for crop insurance, cattle insurance, export risks insurance, credit insurance and banking deposits insurance have to be initiated and floated by the Government and the private sector has kept completely out of these risky projects. While it is understandable in some degree, it is not clear why the subsidiaries of the Life Insurance Corporation which do general insurance business have stuck only to the traditional branches of insurance and have not taken any interest in these specialised insurance needs of this country.

Code of Conduct

The Code of Conduct for insurance companies in India as issued by the General Insurance Council is followed more in spirit by the foreign companies than by the Indian companies. This is evident from the fact that fictitious assets such as agents' balances, outstanding premiums and dues from other insurers form 22.4 per cent of the assets of Indian companies. The corresponding percentage for non-Indian companies is only 9.8 as at the beginning of 1960. While it is expected that these percentages would come down over a course of years it cannot be disputed that any written off balance amounts to a concealed form of rebating. It must be admitted that not all foreign companies follow the same standards, e.g., the French and American companies follow easier methods than the British companies do and the non-tariff Indian companies follow lower standards of business than the tariff companies do. While such individual and original differences cannot be always remedied the fact remains that the broad outline of the Indian and foreign sectors is very clear. It is useful to have a foreign sector of insurance companies in India because they set better standards of underwriting, efficiency and business practice and it also enables us to keep in direct touch with the biggest and oldest insurance market in London.

TURNOVER OF PHILIPS INDIA CROSSES FIVE-CRORE MARK

ALL-ROUND EXPANSION PLANNED

THE working results of Philips India Limited (Chairman and Managing Director: Mr. P. C. Vink, Calcutta) for the year ended 31st December 1960 are, indeed, excellent. Thanks to the improved position of supplies arising from the progressive realisation of the Company's manufacturing programme as well as to the vigorous efforts of the management to enhance the efficiency of its selling organisation, the total sales have jumped up from Rs. 490.95 lakhs in 1959 to Rs. 555.12 lakhs in 1960, representing a rise of more than 12 per cent. Although the rise in receipts from sales has been offset to a considerable extent by the increase of Rs. 25.64 lakhs to Rs. 283.57 lakhs in the consumption of goods and of Rs. 19.81 lakhs to Rs. 183.92 lakhs in other expenses, the gross earnings have advanced from Rs. 72.59 lakhs to Rs. 91.52 lakhs, the highest on record in the history of the Company. The profit margin, that is, the ratio of gross profit to sales, has improved from 14.8 per cent to 16.4 per cent.

As the Company has made considerable addition to fixed assets during 1960, provision for depreciation has been raised from Rs. 11.17 lakhs to Rs. 19.04 lakhs. And due to higher earnings, provision for taxation has also been increased from Rs. 28.06 lakhs to Rs. 33.50 lakhs. In view of these higher provisions, the net profit shows only a modest rise of Rs. 5.62 lakhs to Rs. 38.98 lakhs. Out of this profit, the Directors have transferred Rs. 2.90 lakhs to development rebate reserve, Rs. 2.02 lakhs for providing against doubtful debts, allocated Rs. 5 lakhs (Rs. 2 lakhs in the previous year) to staff gratuity fund, and Rs. 2.50 lakhs for contingencies. The Directors have not deemed it necessary to transfer any sum to general reserve. After making these provisions, the balance left is Rs. 27.04 lakhs which is sufficient just to maintain the dividend at the previous year's level of 12 per cent subject to tax which gives a tax-free dividend of 8.4 per cent. On this basis and taking the current market value of the Company's Rs. 10 fully paid-up ordinary share as Rs. 31, the net yield works out to 2.78 per cent.

An idea as to how the Company has progressed in the last four years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	5,55.12	4,90.95	4,48.14	4,78.59

* Subject to deduction of tax.

A notable event of the year under review was the acquisition of the assets of a lamp factory in Bombay which was previously owned by the Osler Electric Lamp Manufacturing Company Limited (in liquidation) at a cost of Rs. 51 lakhs. As the factory has been remaining idle since 1958, it requires repairs and renovation before it can be put into commission again. Philips India is making every endeavour to commence production as early as possible. The factory has a licence capacity of 5 million lamps per annum. Besides, it is expected to produce burner for gas discharge lamps, photoflash bulbs and glow-switches for fluorescent lamp starters.

During 1960, the Company's factory at Calcutta produced a four-band transistor set, which is designed essentially for use in semi-urban and rural areas. This product is calculated to offer the owner of a battery-operated radio set many additional advantages, including low operational cost. The manufacture of polyester ballasts in the same factory is yet another step forward in the field of fluorescent lighting. Polyester filling has been used for the first time in India in the production of ballasts, and is expected to reduce the size of the ballasts as well as their life and performance. The Company has also plans to manufacture a large range of specialised electronic instruments on a phased programme.

The Company is planning a further expansion of the manufacture of radio components at the factory at Loni in order to cater to the demands of other radio manufacturers and the growing needs for replacements in addition to fulfilling its own increasing requirements for the production of radio sets. This will call for acceleration of the process of integration and the manufacture on a larger-scale than hitherto not only of the existing range of locally produced components but also of new items such as carbon tracks, loudspeakers cones, electrolytic condensers including miniature types, as well as polyester condensers and air trimmers.

The Government has given assurance of its support and has issued necessary manufacturing licences in furtherance of this scheme. Every endeavour is being made towards its speedy implementation. Once the plan is fully realised, the factory at Loni will become one of the main sources of supplies of components for the country's electronic industry. The all-out efforts made to manufacture the full range of electronic components in India on an ever-increasing scale will undoubtedly help to quicken the pace of India's industrialisation.

As for the finance required to meet the outlay on the expansion programme, Mr. J. Zantman, Director, Finance and Administration, stated at a Press conference in Bombay the other day that the Company did not intend to enter the market in the near future. He stated that the Company was making sustained efforts to raise the ratio of indigenous components in radio sets from the present level of 30-45 per cent. The largest single item imported from abroad constitutes valves. The Company, we are told, is unable to produce the valves indigenously because the manufacture of valves is reserved for the public sector and industrial licences for manufacturing them in India were not being issued to the Company.

The Company's financial position, revealed by the balance-sheet as at 31st December 1960, is quite sound. Thanks to the continued expansion in manufacturing activities and capital expenses, its gross block has risen from Rs. 148.14 lakhs to Rs. 216.95 lakhs, which has been well written down to Rs. 150.25 lakhs, the depreciation provided so far being Rs. 66.70 lakhs. Capital expenditure in progress is of the order of Rs. 4.36 lakhs. The current assets (including investment of Rs. 2.47 lakhs) aggregate Rs. 420.72 lakhs, as against which borrowings and other current liabilities and provisions add up to Rs. 298.61 lakhs. The net assets thus amount to Rs. 276.72 lakhs comprising a paid-up capital of Rs. 220 lakhs and the reserves and surplus of Rs. 56.72 lakhs; of the reserves, the share premium alone is as much as Rs. 38.67 lakhs, the balance of Rs. 18.05 lakhs being the amount set aside from the year to year earning.

K.L.M.'S OPERATIONS

The 1960 annual report of the K.L.M. Royal Dutch Airlines, shows that modernisation of the fleet—commencing with the introduction of four turbine-engined aircraft in 1959—was continued in 1960 by putting 15 more of these aircraft into service. The latter included seven DC-8 pure jet airliners. Another five planes of the DC-8 type, this time equipped with turbofan engines, are to be added to the fleet during 1961. The thirteenth DC-8 ordered at the beginning of this year is scheduled for delivery in 1962. As a result of this, the capacity increased to 642 million ton-kilometres, which is 19 per cent more than in 1959, while the traffic volume likewise rose by 19 per cent as compared with 1959 and amounted to 366 million ton-kms. The revenue was 12 per cent higher, amounting to 612 million guilders, but the operating expenses, including depreciation increased, by 14 per cent. Consequently, the profit dropped to 10.3 million guilders, as against 15.4 million guilders for 1959. It is proposed to declare a dividend of 5 per cent for the year 1960.

In the opinion of the K.L.M. management, a structural improvement of the relationship between revenues and costs must now be the principal objective of civil aviation as a whole. The prospects in this connection are considered to be favourable, now that there is a certain respite in the field of technical progress so far as airliners are concerned and some stability has been achieved in regard to air fares. The new DC-8 has exceeded the high expectations in many respects; with no other type has a utilisation of 9 to 10 commercial flying hours per day been attained so soon after placing it in service.

As in 1959 so during 1960, the traffic growth was greatest in the classes with the lowest fares and in the air freight sector. The resultant broadening of the market offers good possibilities for a further expansion of traffic in the future. The K.L.M. network now links 114 cities in 80 countries. The Company has more than 200 sales offices. The number of employees rose from 17,332 to 18,609 in the course of 1960.

ANDHRA CEMENT FARES WELL

SLIGHT RISE IN PROFIT

NOTWITHSTANDING certain restrictive fa tors operating against the full utilisation rated capacity, the Andhra Cement Compar Ltd. (Chairman: Mr. V. Ramakrishna, Madra has been able to report a further improvement in its working during the year ended 31 December 1960. Owing to higher productic and despatches, sales have gone up Rs. 37.70 lakhs to Rs. 129.03 lakhs, representir a rise of over 40 per cent. The improvement sales is especially significant considering that has been achieved despite the persistent shor age of coal. The increase in the cost of ra materials and labour due to voluntary ar statutory concessions, however, has cut sharp into the available margins. The gross prof has accordingly risen by just Rs. 5.16 lakhs Rs. 23.06 lakhs.

As a result of the termination of the mana ing agency agreement, the provision for mana ing agents' commission has been reduced Rs. 75,000, as against Rs. 95,000 in the previo year. But the provision for depreciation h claimed a higher sum of Rs. 10.86 lakhs, as cor pared with Rs. 8.39 lakhs in 1959. After a lap of about three years, the Company's profi have, once again, become liable for taxatic and, accordingly, a provision of Rs. 2.30 lakl has been made to cover this liability. The n profit shows a slight increase of Rs. 9,000 Rs. 8.65 lakhs. The profit, together with t Rs. 23,000 brought forward from the previo year and Rs. 8,000 as provisions no longer r quired, comes to Rs. 8.96 lakhs. After transfe ring Rs. 1.48 lakh to reserves, the profit avai able for distribution amounts to Rs. 7.48 lakh Pursuant to the Preference Shares (Regulatic of Dividends) Act 1960, a provision of Rs. 19,0 has been made towards the preferred dividen for the year with a further provision Rs. 5,000 as a supplementary payment of prefe ence dividends for the year 1959. The divider on ordinary shares has been maintained at t previous year's rate of 10 per cent subject tax, the total dividend absorption being Rs. 7. lakhs. The balance of Rs. 14,000 has been r commended as a carry-forward to the next a counting period.

The salient features of the Company operations during 1960, as compared with tho for the three preceding years, are given in t following table.

(In lakhs of rupees)

	For the year ended 31st Decemb			
	1960	1959	1958	1957
Sales	1,29.03	91.33	90.85	76.6
Other income	3.00	2.63	2.68	2.2
Closing stock of cement	0.24	2.64	1.88	0.4

* Subject to deduction of tax.

The balance-sheet of the Company as 31st December 1960 discloses that the financi position is moderately strong. The subscrib share capital of the Company, comprisi Rs. 2.49 lakhs in 6 per cent preference shar and the balance in ordinaries, is Rs. 73.89 lakl with a further Rs. 9.12 lakhs in reserves. Cu rent liabilities, secured loans and unsecur loans together amount to Rs. 67.56 lakhs. T gross block (inclusive of net additions duri the year) is carried in the Company's books Rs. 163.73 lakhs which, after deducting Rs. 80. lakhs as the depreciation earned to date, giv a net block worth Rs. 83.68 lakhs. The oth working assets such as investments, curre assets, and loans and advances aggrega Rs. 66.89 lakhs.

The mechanisation schemes for handli raw materials at the mines are reported to nearing completion. The Directors expect t mechanised units to go into full operation ve shortly.

The present market quotation for the Co pany's Rs. 10 fully paid ordinary shares Rs. 10.50 *cum-div.* On *ex-div.* basis, the yie works out to 7.1 per cent per annum.

MARKED RISE IN PROFIT OF F.A.C.T.

EXPANSION SCHEME WELL UNDER WAY

THERE was a substantial improvement in the sales and profit of the Fertilisers and Chemicals Travancore Ltd. (Secretary: A. Ramakrishna Iyer) during the year ended December 1960, notwithstanding the reduction in the prices of ammonium sulphate and superphosphate, the two major items of production. Thanks to the high reputation enjoyed by the Company's products as regards their quality and price, the total sales proceeds increased by as much as Rs. 69.25 lakhs to Rs. 308.83 lakhs. A large part of the increase was neutralised by enhanced operating expenses. Even so, the gross profit was at the impressively high level of Rs. 80.37 lakhs, as against Rs. 68.34 lakhs for 1959. The production results achieved in 1960 have been the best so far since the inception of the factory, and have recorded sizable improvement over their 1959 level. The actual output—in tonnes—the figures in brackets relating to 1959, is:

Ammonium sulphate 39,813 (29,412); superphosphate 39,584 (35,253); sulphuric acid 52,827 (52,199); other chemicals 27,738 (18,497).

Owing to the termination of the managing agency agreement in August last, the provision for managing agent's commission has been reduced by Rs. 1.70 lakh to Rs. 2.42 lakhs, whereas that for depreciation has been stepped up by Rs. 2.99 lakhs to Rs. 25.10 lakhs, following large additions to fixed assets made during the year and charges in the rates of depreciation introduced by the Companies (Amendment) Act 1960. In view of the extra depreciation and development rebates allowed under the Income-tax Act, the Company has still to wipe off unabsorbed depreciation brought forward from the previous years and as such, has no liability for payment of income-tax for the year under review. No provision for income-tax has, therefore, been made. After these adjustments and the provision of Rs. 2 lakhs towards retirement gratuity as compared with Rs. 1.50 lakh provided in each of the three preceding year, the net profit shows an increase of Rs. 11.52 lakhs to Rs. 50.85 lakhs. Despite higher net profit, the Directors have not proposed any increase in dividend from the previous level of 6 per cent taxable, nor have they transferred any amount to general reserves excepting for the allocation of Rs. 23.55 lakhs to the development rebate reserves (as against Rs. 3.36 lakhs in 1959 and Rs. 11.26 lakhs in 1958). The total dividend absorption comes to Rs. 20.76 lakhs and the balance of Rs. 26.13 lakhs has been carried forward to the next year. The Directors must perhaps have felt that the Company has a heavy liability amounting to Rs. 46 lakhs on account of arrears of depreciation for prior years and that, unless this amount is fully written off, payment of ordinary dividends at higher rates would be unwise.

The following table indicates the working of the Company in the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales of products	3,08.83	2,39.58	2,47.11	1,74.00
Other income	11.07	15.24	14.06	14.81
Closing stock of finished products	13.96	11.90	9.27	17.31
Raw materials, operating supplies and stores consumed ..	1,17.70	92.12	92.59	81.92
Salaries, wages and bonus	55.07	44.74	38.63	31.53
Other expenses	67.52	52.25	56.12	47.24
Gross profit	80.37	68.34	65.31	33.12
Managing Agent's remuneration	2.42	4.12	3.55	0.51

The financial position of the Company as revealed by the balance-sheet as at 31st December 1960 was quite strong. The share capital of the Company, consisting entirely of Rs. 10 fully paid equity shares, has a book value of Rs. 346.06 lakhs and is supported by Rs. 64.30 lakhs in the reserves and surplus account. Secured and unsecured loans from banks and Industrial Finance Corporation aggregate Rs. 197.45 lakhs and current liabilities are placed at Rs. 136.47 lakhs.

On the asset side, the gross block is represented by Rs. 656.29 lakhs, deducting Rs. 305.36 lakhs as the depreciation written off to date, the net block comes to Rs. 350.93 lakhs. The net block figure does not represent the correct written down value of fixed assets, as the Company has yet to provide arrears of depreciation which, as already noted, amounts to Rs. 46 lakhs and that the expenditure of Rs. 141.40 lakhs incurred on development projects is not taken into account. Inclusive of the latter sum, the net block works to Rs. 492.33 lakhs. The balance of the assets, namely, Rs. 251.95 lakhs consists of investments, current assets, cash and loans and advances.

The distribution of fertilisers that is being done on behalf of the Government of Kerala has been satisfactory. The Government has now taken steps to entrust the entire distribution of Government fertilisers in Kerala to the Company's sales organisation.

During the year under review, the Company successfully completed the first stage of its expansion programme. The electrolytic hydrogen plant was ready for start in April last but, due to want of sufficient power, had to be kept idle till August 1960. Currently the plant is working at about 70 per cent of its installed capacity. The ammonia synthesis plant, forming part of the first stage, was commissioned for trial run towards the close of 1960. The phosphoric acid and ammonium phosphate plants were also put on trial run about the same time.

The review of the progress regarding the second and third stages of expansion, as made in the Directors' report, shows that the construction and erection works connected with the second stage expansion programme involving the installation of the oil gassification plant are making rapid progress. The delivery schedules of this plant have been kept so far and it is expected that all equipment forming part of this plant will be received by the third quarter of 1961. According to present indications, the Company hopes to start trial operations of the new plants by the first quarter of 1962. Details of the third stage expansion programme have been discussed with the concerned departments of the Government and have received their general approval. Certain proposals for financing the projects are now being considered. Meanwhile, enquiries for the various plants have already been issued. If work on this stage starts as contemplated, it is expected that it will be completed by early 1964. The production capacity then achieved will be 70,000 tons in terms of fixed nitrogen (equivalent to 350,000 tons of ammonium sulphate) and 35,000 tons of phosphoric acid (equivalent to 220,000 tons of superphosphates). This stage will involve an expenditure of Rs. 8 to 10 crores.

The Rs. 10 fully paid up ordinary shares of the Company are currently quoted at Rs. 10.40 *cum-div.* The net yield on *ex-div.* basis works out to 4.2 per cent per annum.

NEW STANDARD ENGINEERING CO.

The working of the New Standard Engineering Co. Ltd. (Secretary: Mr. M. G. Mehta) during the year ended 31st March 1961 has resulted in a gross profit of Rs. 18.05 lakhs as against Rs. 11.67 lakhs in the preceding year. After providing Rs. 5.92 lakhs for depreciation (Rs. 2.23 lakhs in 1958-59), Rs. 4.50 lakhs for development rebate (Rs. 1.35 lakhs) and Rs. 3.10 lakhs (Rs. 3.90 lakhs) for taxation, the net profit is Rs. 5.45 lakhs, to which is added Rs. 92,426 being the amount carried forward from last year. Out of this total, the Directors have recommended dividends at 9 per cent subject to deduction of tax on fully paid equity shares, on new equity shares and on 6.3 per cent (tax-free) cumulative redeemable preference shares. The dividend leaves a balance of Rs. 17,933 which has been carried forward. The rise in profit has followed the increase in sales from Rs. 92.83 lakhs to Rs. 119.09 lakhs which indicates the marked progress in the operations of the Company.

The fixed assets of the Company has increased by Rs. 46.09 lakhs which include the purchase of new machinery worth Rs. 23.92 lakhs.

Polychem Ltd., Bombay, has received a revised certificate from the Income-tax Officer stating that, under Section 15C(4) of the Income-tax Act, 1922, instead of 14.18 per cent of the dividends declared for the year ended 31st March 1960 only 84.16 per cent will be exempt from income-tax and super-tax in the hands of the shareholders. It is observed that the exemption under Section 15C(4) will be available to the Company's shareholders for the years ending 31st March 1961 and 1962 also.

The Ambika Silk Mills Company, Ltd. has earned a gross profit of Rs. 9.53 lakhs for the year ended 31st December 1960, as against Rs. 6.06 lakhs for 1959. Taxation and depreciation absorb Rs. 3.20 lakhs and Rs. 2.83 lakhs respectively. The Directors have declared a higher dividend of Rs. 15 per share, subject to deduction of tax, as against Rs. 12 paid in the previous year.

RECORD SALES OF ALEMBIC CHEMICALS

DIVIDEND, HOWEVER, CUT

THE sales of the Alembic Chemical Works Company Ltd. (Managing Agents: Messrs Rayuma Services) continued to rise year after year. The actual sales during the year ended 31st December 1960 were at the record level of Rs. 261.43 lakhs, a rise of Rs. 12.90 lakhs as compared with the previous year. The cost of raw materials and stores consumed is slightly higher at Rs. 136.08 lakhs, as against Rs. 135.27 lakhs in the previous year, but expenses have gone up by Rs. 11.35 lakhs to Rs. 89.17 lakhs due to heavier wage bill and enhanced excise duty. Nevertheless, the profitability or the ratio of gross profit to sales has improved further to 17.3 per cent from 16.8 per cent in 1959, 15.7 per cent in 1958 and 14.7 per cent in 1957.

The gross profit which also is a record, has risen by Rs. 4.96 lakhs to Rs. 46.75 lakhs. Thanks to the rise in profit, a larger sum of Rs. 12.55 lakhs has been allocated to depreciation, against Rs. 9.41 lakhs for 1959, while taxation absorbs less, Rs. 10.20 lakhs, as against Rs. 10.50 lakhs and remuneration of managing agent Rs. 3.12 lakhs, as against Rs. 3.24 lakhs. The net profit is thus higher by Rs. 2.27 lakhs at Rs. 20.91 lakhs. The dividend on ordinary shares, however, has been curtailed from 16 per cent to 14 per cent subject to deduction of tax because of the full amount payable on capital increased last year from Rs. 65 lakhs to Rs. 80 lakhs.

The following comparative table for the last four years shows the progress of the Company

(In lakhs of rupees)

	For the year ended 31st December

‡On increased capital raised by issue of 28,000 shares.

The Company which has been steadily widening the range of its products has an expansion programme for this year also. The programme envisages a further expansion of the penicillin, yeast and superphosphate plants. Orders for capital goods are likely to be placed after the necessary foreign exchange is made available. In view of the steady expansion in activities, the gross block has been more than doubled in four years, from Rs. 110.25 lakhs to Rs. 237.88 lakhs. The net block after providing Rs. 78.29 lakhs for depreciation now amounts to Rs. 159.59 lakhs, which is just equivalent to the aggregate paid-up capital plus reserves and surplus. The total investments of Rs. 24.44 lakhs is made up of Rs. 13.76 lakhs in quoted investments and Rs. 10.68 lakhs in unquoted investments.

The paid-up capital of the Company now stands at Rs. 100 lakhs comprising mostly 85,000 equity shares of Rs. 100 each. The balance of Rs. 15 lakhs is equally divided into 6½ per cent cumulative first preference shares, 5 per cent tax-free redeemable cumulative second preference shares and 6 per cent cumulative third preference shares, all of Rs. 100 each. The total of reserves and surplus is Rs. 59.71 lakhs inclusive of Rs. 8 lakhs for share premium account. The secured and unsecured loans of the Company have increased from Rs. 43.23 lakhs to Rs. 93.15 lakhs, on account of further expansion of fixed assets as well as increased stock in trade. The balance-sheet of the Company is very sound, inasmuch as current assets exclusive of investments at Rs. 148.56 lakhs exceed current liabilities by Rs. 68.83 lakhs.

The Central Budget for 1961-62 levied a Central excise duty at 10 per cent *ad valorem* on all proprietary medicines, not containing alcohol, with effect from 1st March 1961. The Directors, however, are hopeful that the additional burden will be fully covered from the sales proceeds.

The current quotation of the Company's Rs. 100 paid-up ordinary share is Rs. 267.50 *cum-div.* On a net dividend of Rs. 9.80 per share the net yield comes to 3.66 per cent.

ALCOCK ASHDOWN EARNS MORE

DIVIDEND MAINTAINED

THE receipts from the sales proceeds of Alcock, Ashdown & Co. Ltd. (Managing Agents: Messrs. Turner, Morrison & Co. Ltd.) during the year ended 31st December 1960 as compared with the previous year have registered an appreciable rise of Rs. 32.67 lakhs or 43.1 per cent to Rs. 108.40 lakhs. The gross profit, however, has improved by only 9.2 per cent from Rs. 13.86 lakhs to Rs. 15.14 lakhs, due to markedly higher expenses. The increase in other expenses from Rs. 68.60 lakhs to Rs. 99.18 lakhs is accounted for by stores. The profitability to sales has, therefore, gone down from 18.3 per cent to 13.9 per cent.

The net profit for the year is higher by Rs. 93,000 at Rs. 9.31 lakhs, after providing Rs. 1.12 lakh for depreciation as against Rs. 1.47 lakh, Rs. 3.65 lakhs for taxation (as against Rs. 3.25 lakhs) and Rs. 1.06 lakh for commission to Managing Agents (Rs. 76,000). The dividend is proposed to be maintained at 17 per cent subject to tax, but the net dividend will be higher at Rs. 13.04 as against Rs. 11.90 in the previous year. This higher distribution is on account of payment of a part of dividend equivalent to Rs. 3.80 per share proposed to be paid out of the reserve of exempted profits under Section 15C of the Income-tax Act.

The following comparative table reveals at a glance the progress of the Company since 1957:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

* Subject to deduction of tax.

The paid-up capital of the Company as at 31st December 1960 of Rs. 33.42 lakhs consisted of 33,422 ordinary shares of Rs. 100 each. Since then, however, 9,548 equity shares of Rs. 100 each have been issued at par in the proportion of two new shares for each seven shares held. Thus, the paid-up capital now stands at Rs. 42.97 lakhs. As against the paid-up capital of Rs. 33.42 lakhs as on 31st December 1960, reserves and surplus amount to Rs. 56.64 lakhs. The gross block of the Company is Rs. 84.06 lakhs, the depreciation so far provided being Rs. 61.02 lakhs. The total current assets at Rs. 118.48 lakhs, inclusive of Rs. 3.78 lakhs of investments, are above current liabilities amounting to Rs. 32.52 lakhs.

The Company has a satisfactory order book and its activities are expanding. At the Defence Works, Bombay, ship-repair work, the mainstay for several years has been declining gradually in volume and value, due to several causes, chief amongst which is the slump in trade. Consequently, attention is concentrated on the work in other shops. This policy has been fruitful as can be observed from the figure of sales and work done during the year under review. The order book for all the shops including the galvanising shop, which was restarted at the beginning of 1960, is fairly full and the prospects can be viewed with a measure of satisfaction. This has brought the question of rehabilitation and replacement of old and out-of-date machines for urgent attention. A certain number of machines have been scheduled for replacement or reconditioning and this programme has already been commenced. It is expected that this rehabilitation programme will have to be carried out in phases and a provision of Rs. 1.50 lakh has been made in the accounts and the machinery rehabilitation and replacement reserve now stands at Rs. 8.77 lakhs.

The activity at Ramasar Works, Bhavnagar, during the year continued to be restricted to the building of barges for the Government of Gujarat. Eleven barges were launched and delivered. The Company has enough orders for barges in hand to take it into 1962, with prospects of further orders to come shortly.

The Directors of the Company had under consideration a proposal for starting a fully equipped workshop for steel fabrication and general engineering at Bhavnagar. In view of the easy supply position of steel it was decided to proceed with this project. The work of erecting the shops is now in progress and the plant and machinery, which were purchased for Bhavnagar, have now been moved to the site. It is expected that the tower shop and the galvanising plant will commence work by October this year.

The current quotation of Rs. 100 paid-up shares is Rs. 299 *cum-div.* The net yield on an *ex-div.* basis works out to 4.55 per cent.

FRESH ISSUES OF CAPITAL

The Controller of Capital Issues has granted consent to four companies for issue of capital of various categories. The companies are: United Malleable Company Private Ltd., New Shorrock Spinning and Manufacturing Company Ltd., Machinery Manufacturers Corporation Ltd., and the Commercial Ahmedabad Mills Company Ltd. The details are:

United Malleable Company: This Company, which will be converted into a public company, has been given consent to the issue of capital of Rs. 1.25 crore consisting of 100,000 equity shares of Rs. 100 each and 25,000 cumulative redeemable preference shares of Rs. 100 each, carrying a dividend of 9 per cent. The capital is required for the Company's scheme for the manufacture of iron pipe fittings, in collaboration with the Union Malleable Company of Ohio, U.S.A., which will invest in the equity capital to the extent of Rs. 40 lakhs in the form of plant and machinery. The promoters will subscribe shares to the extent of Rs. 20 lakhs and will offer Rs. 65 lakhs to the public for subscription after conversion of the Company into a public limited company.

New Shorrock Spinning and Manufacturing Company: Issue of bonus shares of the value of Rs. 28,11,250 to existing equity shareholders in proportion of two bonus shares for every five shares held on capitalisation of the Company's share premium account to a like extent.

Machinery Manufacturers Corporation: Issue of further capital of Rs. 25,07,200 divided into equity shares of Rs. 10 each for consideration other than cash. Out of this, 190,720 equity shares will be allotted to the Company's existing equity shareholders on the sub-division of the existing shares of Rs. 100 each and 60,000 equity shares to the Managing Agents in discharge of the loan of a like amount.

Commercial Ahmedabad Mills Company Capitalisation of Rs. 5,77,500 from reserves and issue 2,310 bonus shares of Rs. 250 each in the ratio of one bonus share for every five shares held. The present paid-up capital of the Company is Rs. 28.87 lakhs.

A NEW INDO-BRITISH VENTURE

The Sawhney family actively associated with the sugar industry, has secured the participation of the famous Booker Group of Companies for the establishment in India of a new company, called the Triveni Engineering Works Ltd. The Company will set up a factory at Naini, near Allahabad, for the manufacture mainly of sugar machinery. The project is estimated to entail a capital outlay of about £250,000. Arrangements have also been made to manufacture industrial process turbines and other engineering products. The sugar machinery companies of the Bookers Group will act as technical consultants for the setting up of the engineering works and will provide planning and manufacturing advice for the production of sugar machinery. The first Chairman of the Board of Directors will be Mr. Balmokand Shah Sawhney. Members of the Board include Mr. Mehr Chand Mahajan, retired Chief Justice of the Supreme Court of India, Mr. C. W. Tyrrel, a member of the Booker Board of Directors and Chairman of Bookers Engineering Holdings, Mr. C. W. Murray, Chairman and Managing Director of George Fletchers, and Chairman of Duncan Stewarts, and T. Houghton, Finance Director of Bookers Engineering Holdings.

SATARA SWADESHI COMMERCIAL BANK LTD

On the recommendation of the Reserve Bank the Government of India has granted to the Satara Swadeshi Commercial Bank Ltd., Satara City a moratorium from 6th June to 5th September 1961 (both days inclusive) under the provisions of Section 45 of the Banking Companies Act, as recently amended. The question of amalgamating the Bank with the United Western Bank Ltd., Satara City is now under the active consideration of the Reserve Bank. The moratorium has been declared in the general interest of the depositors of the Bank and with a view to facilitating its reconstruction and amalgamation. During the period of moratorium, the Bank has been permitted to make certain payments as specified in the order. The moratorium, including payments to the depositors. This has been authorised in order to minimise the inconvenience to the constituents and the general public, while the scheme in relation to the Bank is under consideration.

THE MARVEL OF THE MULTI-PURPOSE POLICY

HE PAID Rs. 288 ONCE TO LEAVE FOR HIS FAMILY Rs. 1,01,880

When a breadwinner dies, so does the family income. But when a breadwinner with a Multi-Purpose Policy dies, a new income STARTS for his family. Here is a true-life example of this amazing Policy:

- A young chemist took a Multi-Purpose Policy for Rs. 20,000 with Double Accident Benefit.

Shortly afterwards his family lost him in an accident. From his Policy they receive:

- A lump sum of Rs. 20,000 (Double Accident Benefit)
- Plus Rs. 2,000 to meet the funeral, legal and other expenses
- Plus Rs. 400 a month for 2 years
- Plus Rs. 200 a month for over 21 years
- Plus bonuses due
- Plus Rs. 18,000 at the end of the Policy term.

The young man had paid just Rs. 288 in premiums. In return, his family receive a total of Rs. 1,01,880 wisely spaced out as an income for over 23 years! Had he lived he would of course have received Rs. 20,000 plus bonuses at the end of the Policy period.

Take a Multi-Purpose Policy without delay. It means unmatched security for your family.

There is no substitute for LIFE INSURANCE

† On a paid-up capital of Rs. 50 lakhs.

Extracts from the Directors' report: During the year under review, the supply position of raw material was generally better than before and the Company was able to produce 64,738 tons of finished bars and rods. The directors regret to report that the production of wire rods could not be started in the year under review as some part of the machinery which was expected to arrive in January 1961 had not so far arrived due to delay on the part of the manufacturers in keeping to their schedule. This, however, is expected to arrive by middle of this year and the directors expect that the production of wire rods will start by third quarter of this year.

Accounts in brief as at 31st March 1961 are as under:—

N.B.—Adjustments include the balance brought forward from the previous year.

* Includes additional dividend on preference shares for 1959 amounting to Rs. 2,280 as per Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report:

Crop—Tea	Estimate 1960 kg.	Crop secured 1960 kg.	1959 kg.
Pasupatarai	2,04,116	2,27,620	1,99,172
Carady Goody	3,08,443	3,76,637	3,25,949
Total ..	5,12,559	6,04,257	5,25,121

The total tea crop of 6,04,257 Kg. harvested during the year against an estimate of 5,12,559 Kg. is satisfactory, and records an increase of 79,136 Kg. over the previous year's production. The f.o.b. cost for the year was Rs. 2.77 per Kg. as against an estimate of Rs. 2.67 and the all-in-cost was Rs. 3.47 per Kg. against last year's figure of Rs. 3.48. The net average sale price realised was Rs. 4.53 per Kg. as against Rs. 4.58 for the last year.

Cardamom. The quantity of cardamom harvested during the year amounted to 13,035 Kg. as against 3,804 Kg. in the previous year. The cost of production for the year was Rs. 6.40 per Kg. as against Rs. 6.19 for the last year and the average sale price realised was Rs. 18.02 per Kg. as against Rs. 17.87 for 1959. The increase of cost was mainly due to the protective measures such as *Folidol* spraying which had to be undertaken against serious attack of white fly pest in some of the fields. Fortunately this was controlled in good time and, therefore, did not affect the crop.

Crop Estimate—1961	Tea (Kg.)	Cardamom (Kg.)
Pasupatarai	2,08,653	..
Carady Goody	3,26,586	11,340
Total ..	5,35,239	11,340

The Directors are happy to report that both the Estates have been regularly visited by Visiting Agents and are reported to be in excellent condition. The policy of fine plucking has been continued and the Company has also been continuing regular direct exports of its teas to U.K. and the U.S. with satisfactory results.

Accounts in brief as at 31st December 1960 are as under:

† Preference dividends for the years 1959 and 1960.

Extracts from the Directors' report: The Company under the export promotion scheme has to receive licences for the import of dyes and chemicals. For the exports of cloth and yarn, which have been made in the year 1960, the Company is entitled to such licences. A part of the licences against the same is received in the year 1961. The Company has realised till the date of this report the profit on this account of Rs. 83,980. Could this amount be taken in the accounts of 1960, the profit to this extent would have been higher.

This better working results of the Company was the outcome of increased attention of the directors to effecting improvements in the Mills, and the number of concerted steps taken towards that end on the lines reported last year. In fact, the earning would have been still better, but for certain adverse factors confronting the mill Industry as a whole, such as difficult cotton supply position, high costs owing to wage increases, and reduction in prices of yarn and cloth in response to Government's policy of holding the price line.

Replacement and Renovation: The directors are, however, glad to report on the progress of the replacement and renovation programme of the mills. Some of the departments specially carding and frames were rearranged on proper lines for improving the operational efficiency of the mills. In the Spinning Department, out of 40 new ring frames with a complement of 19,200 spindles for which orders had been placed, 26 frames of 12,208 spindles were received, installed and put into operation. Besides this, 23 humidifier fans, 4 dyeing jiggers and one dyeing oven for Dyeing were installed and are giving satisfactory service. Further orders with the foreign manufacturers for one combing set, one raising machine, one cheese beam dyeing plant, and one bleaching range (J. Box) have since been placed. In addition, 21 more ring frames of 9,240 spindles, 4 inter frames, one hot air stenter and drying range, one H.P. Kier and some other necessary machinery for process house have been ordered from the indigenous manufacturers. The Company's Bankers have guaranteed, whenever orders have been placed on deferred payments. During the year machinery worth Rs. 15.24 lakhs was installed. In addition machinery received and in transit amounted to Rs. 3.79 lakhs. Out of this total of Rs. 19.03 lakhs, Rs. 10.87 lakhs is payable in instalments on deferred payment terms.

Current Outlook: In the current year so far, cotton supplies have been better. Production in the mills has been good. Sales too, compare favourably with those of the corresponding period last year. The future outlook for the mills seems bright. With the completion of the Renovation Programme, the chances of augmenting the earnings appear to be encouraging.

Accounts in brief as at 31st December 1960 are as under:—

N.B.—Adjustments include the balance brought forward from the previous year.

* This includes an amount of Rs. 85,000 transferred from contingency reserve.

Extracts from the Directors' report: As mentioned in the report for the year ended March 1960, the availability in adequate quantities of raw jute during the period under review has been a cause of constant anxiety. For the larger part of the last financial year it has been impossible for this company to work profitably on the simultaneous purchase of raw material and sale of finished goods. Against this background the results of the working of the company can be viewed as not unfavourable. They are attributable in the main to the many economies effected in manufacturing costs over the past few years. Owing to increased competition from, in particular, Pakistan Mills it is more than ever necessary for the company to continue to reduce manufacturing costs and in order to achieve this the directors decided during the course of the year to concentrate the manufacturing operations of the company at Wellington Mill and to close down Champdany Mill.

The outlook for the 1961-62 jute crop is favourable and a large crop both in India and Pakistan can be expected. It is to be hoped that as a result of the fall in prices in raw jute and jute goods which can at present be forecast for later in the year the offtake of manufactured goods will revive and that in consequence some profit will be restored to simultaneous business. Failing this the outlook cannot be anything but obscure.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.

Carry forward	2,16	4,02

N.B.—Adjustments include the balance brought forward from the previous year; amount transferred from development reserve if any; profit on sale of fixed assets and liabilities in respect of previous years written back.

Extracts from the Directors' report: The trading conditions during the year under review remained favourable resulting in satisfactory turnover.

The supply position of cotton was affected by Government control on the quantum of purchase due to shortfall in cotton crop. Although the control on purchase is still in force, it is expected, that the industry will be able to obtain better supplies of Indian cotton during the year 1960-61 in view of the encouraging crop position.

During the year under report the Company paid a sum of Rs. 13,81,034 by way of excise duty. The directors are conscious of the continuous need to effectively meet the rising trends in the cost of production and to keep pace as far as practicable with the technological progress in the field of modernisation. Orders for new machinery have, therefore, been placed to the tune of Rs. 20 lakhs and these include one complete line of Blow Room, High Speed Drawing Frames, Ring Frames, Winding and Warping Machinery, Polymeriser and also improvements in the Drafting System both in spinning and its preparatory. A licence for the installation of 1,200 Spindles for the manufacture of waste yarn has also been obtained.

In order to provide additional working capital with the company, the directors have decided to issue a further capital of Rs. 9,50,000 divided into 95,000 ordinary shares of Rs. 10 each at par in proportion of one new ordinary share for every three ordinary shares held, subject to a special resolution to be passed in the extraordinary general meeting.

In accordance with the Companies (Amendment) Act 1960, depreciation has been provided for the year 1960 on the Book value of the fixed assets, which is approximately Rs. 3.7 lakhs in excess of what is required under the Income Tax Act.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	28,50,000	Gross block	1,57,23,142

Net profit	4,75	5,31
Adjustments	4	92
Appropriations:		
Total available balance	4,78	6,23
Transfer to reserves	*	1,75
Proposed dividend (taxable) Preference ..	98	1,37
,, ,, Ordinary ..	3,69 (9%)	3,07 (7½%)
Carry forward	11	4

N.B.—Adjustments include the balance brought forward from the previous year and the amount transferred from dividend equalisation reserve if any.

* Only Rs. 173 for development rebate reserve.

Extracts from the Directors' report: **Rubber**: The crop harvested during the year was **5,50,862 kgs.** as against an estimate of **4,67,201 kgs.** or an increase over estimate of **83,661 kgs.**, and **67,893 kgs.** more than the crop harvested during 1959. 1960 has established a record in rubber crop, due mainly to weather favourable to the growth of rubber coupled with high level tapping introduced during the latter part of the year. As in 1959 a portion of the rubber crop was sold with advantage on the Estates as liquid latex.

Expenditure and average sale prices are compared below.

Year	Crop	All-in cost nP. per kg.	Average sale price nP. per kg.
1957	4,25,115	288.50	333.19
1958	4,80,118	292.58	334.12
1959	4,82,969	293.44	333.16
1960	5,50,962	279.98	330.62

It is conservatively estimated that a crop of **5,30,703 kgs.** of rubber will be collected during **1961** at an estimated Estate Expenditure of **179.96 nP per kg.**

Tea: During the year under review the Metric System of weights was introduced for tea. The crop harvested was **5,68,260 kgs.** which is 21,899 kgs. less than the crop in 1959 and 21,410 kgs. below estimate. The shortfall in crop is partly due to unfavourable weather conditions and partly due to an unusual attack of Blister Blight in the latter part of the year.

Comparative figures of tea crops and revenue for the year under review and the three previous years are given below:—

Year	Crop	All-in cost nP. per kg.	Average sale price nP. per kg.
1957	4,54,636	410.23	349.34
1958	5,35,088	364.23	353.47
1959	5,90,159	378.51	405.55
1960	5,68,260	411.23	436.39

The slight increase in estate expenditure reflects the short-fall in crop, whilst the increase in the all-in-cost per kilogram reflects the increased burden of taxation borne by the Company.

In 1961 it is estimated that the Tea crop will be 6,05,545 kgs. to be secured at an estate expenditure of 297.30 nP per kg.

The improvement in tea prices mentioned in the report for the year ended 31st December 1959 was maintained during the year under review. The price of rubber remains unchanged, and it is a matter of regret that the Tariff Board which enquired into the rubber price structure did not see fit to enhance rubber prices, even though costs of production have undoubtedly risen. However, the news of the greatly improved rubber rehabilitation subsidy, referred to above, has been received with satisfaction, and, as already stated, this Company is preparing to accelerate its replanting to the utmost, commensurate with at least maintaining crop.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	57,00,000	Gross block	89,22,753
Reserves and surplus..	15,18,998	—Depreciation ..	20,79,944

Adjustments	1,16	1,05
Adjustments:		
Total available balance	9,29	6,16
Transfer to reserves	2,00	..
Proposed dividend	6,00 (30%)	5,00 (25%)
Carry forward	1,29	1,16

N.B.—Adjustments include the balance brought forward from the previous year.

Extracts from the Directors' report: As anticipated in the directors' last report, the results for the year are somewhat better than for the previous year, due mainly to the increased sales of the Company's products. The demand for both Cutch and Katha continues to be good and sales of the Company's total production present no problems at the present time. The Company has, however, now reduced production in order to conserve its reserve stock of timber which has decreased in recent years.

For the past 38 years it has been the custom to purchase trees from the U.P. Government on a lease basis. This gave the Company an assured intake of timber required to maintain full production. Since September 1960, however, no new lease has been granted to the Company and, instead, it is obliged to purchase its requirements in the auctions conducted by the Forest Department. It is not always possible by this system to obtain the full quantity of timber needed.

Accounts in brief as at 30th September 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	20,00,000	Gross block	22,69,933

		Current assets ..	49,89,087
		Investments	2,000
		Cash	20,15,510
	Rs. 67,80,342		Rs. 67,80,342

SUGAR

(*Concluded from page 1082*)

The system should be worked jointly by the factory and the growers. Each will have a chemist per shift in the quality payment laboratory which should be located very near the mills. The building and laboratory equipment will be provided by the factories. Cost on staff should be borne equally by the factory and the growers, but the factory will foot the bill initially. The grower's share will be deducted by the factory from the final payment from each grower in proportion to his supply of cane by weight. Or, in the alternative, the cost of working the scheme should be borne by the Government from the proceeds collected for cane cess. As far as possible, gadgets for automatic sampling of the first expressed juice should be installed by the factories. Where differences arise between the factory's and growers' chemist, the matter should be decided by the Director of the National Sugar Institute or his representative.

I have said that the average selling price of sugar should be computed for the calendar year January to December. This accounting year should be standardised for not only this particular aspect but for the industry as a whole as well as for other industries. Even the Government financial year should be a calendar year. Without some such standardisation, there is a lot of confusion. Since the calendar year is understood easily by the common man, that should be the yardstick for the accounting year too.

COMPANY MEETINGS AND DIVIDENDS

KYANG TEA SEED CO., LTD. Annual General Meeting. Calcutta, 15th June 1961. Dividend: *Nil*. Transfer books remain closed from 8th to 15th June 1961, both days inclusive.

Notices

TRITON INSURANCE COMPANY LIMITED

NOTICE TO MEMBERS

THE BOARD OF DIRECTORS OF THE Triton Insurance Company Limited hereby give notice that the ANNUAL GENERAL MEETING OF MEMBERS will be held at the Company's Registered Office, 4, Clive Row, Calcutta, on Thursday the 29th day of June 1961, at 3.30 p.m., to receive and consider the Audited Accounts for the year ended 31st December, 1960, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon, to declare a Dividend, to appoint Directors, to appoint Auditors and to fix their remuneration, and, as special business, to consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a Special Resolution:—

"That Article 112 of the Company's Articles of Association be deleted and the following Article substituted therefor.

112. Unless otherwise determined by the Company in General Meeting each Director shall be entitled to receive out of the funds of the Company remuneration by way of a fee of Rs. 250 for each meeting of the Board attended by him subject to a maximum in the aggregate of Rs. 1,200 each per annum. The Directors may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Directors may be held and who shall come to that place for the purpose of attending such meeting such sums as the Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending at the meeting in addition to his fees as above specified."

A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy in his stead and such proxy need not be a Member of the Company.

The Share Transfer Books of the Company will be closed from 15th June to 29th June, 1961, both days inclusive.

By Order of the Board.
D. FORDWOOD,
Secretary.

4, CLIVE ROW,
CALCUTTA, *27th May*, 1961.

Note:—Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been sent to all Members.

THE BORREA COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF DIRECTORS held on Wednesday the 31st May, 1961, the following dividends were recommended to be paid subject to deduction of tax.

Dividends for the year ended 31st December, 1960—

On 6½ per cent cumulative Preference Shares at 8.45 per cent per annum in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

On Ordinary Shares at the rate of 15 per cent.

Additional Dividend for the year ended 31st December 1959—

On 6½ per cent Cumulative Preference Shares at 1.95 per cent per annum in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Secretaries and Treasurers.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA.

THE ONDAL COAL COMPANY LIMITED

AT A MEETING OF THE BOARD OF Directors held on Monday the 29th May, 1961, the following dividends were recommended to be paid subject to deduction of tax.

Dividends for the year ended 31st December, 1960—

On 6½ per cent Cumulative Preference Shares at 8.45 per cent per annum in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

On Ordinary Shares at the rate of 6 per cent.

Additional Dividend for the year ended 31st December, 1959—

On 6½ per cent Cumulative Preference Shares at 1.95 per cent per annum in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

By Order of the Board,
P. PRASHAD,
Chairman.

Registered Office:
CHARTERED BANK BUILDINGS,
CALCUTTA, *29th May*, 1961.

DUNCAN BROTHERS AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE 62nd Annual General Meeting of shareholders of DUNCAN BROTHERS & CO., LTD. will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta, on Thursday, 29th June 1961, at 10-30 a.m., for the following purposes:—

1. To consider and adopt the audited Accounts for the year ended 31st December, 1960 and the reports of the Board of Directors and the Auditors.
2. To declare dividends on the preference and ordinary shares.
3. To elect a Director.
4. To appoint Auditors for the current year and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as an ordinary resolution:—

"Resolved that a 'Rights' issue of 10,000 equity shares of the Company be made, to be offered to equity shareholders of the Company in the ratio of one equity share for every nine equity shares held by them, the date of such issue to be fixed by the Board of Directors of the Company."

The register of members and share transfer books of the Company will be closed from 20th to 29th June 1961, both days inclusive.

By Order of the Board,
S. K. MITRA,
Secretary.

CALCUTTA, *31st May*, 1961.

Note: A member entitled to attend and vote at the meeting may appoint a proxy to attend and, on poll, vote on his behalf. The proxy need not also be a member of the Company.

EXPLANATORY STATEMENT

This resolution is necessary under Section 94 of the Companies Act, 1956. With the continued expansion of the Company's business as referred to in the Directors' Report forwarded to each shareholder of the Company, it is desirable and necessary to increase the equity share capital of the Company. It is considered that a 'Rights' issue of equity shares in terms of resolution No. 5 above will meet the present needs of the Company for further capital. The date of the 'Rights' issue has been left at the discretion of the Directors of the Company to be determined as may be necessary.

BENGAL POTTERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE FORTY-NINTH ANNUAL GENERAL MEETING OF THE BENGAL POTTERIES LIMITED, will be held at the registered office of the Company at 45, Tangra Road, Calcutta, on Thursday the 29th June 1961 at 3-30 p.m., to transact the following items of business:—

2 JUN 1961 PUBLIC LIBRARY

MONEY COMFORTABLE

(From Our Own Correspondent)

BOMBAY, *7th June*

Conditions in the Bombay short-term money market were fairly comfortable during the week. As the return flow of funds from mofussil centres gathered momentum, supply was adequate to meet the requirements of borrowers. Call money rate among exchange and Indian banks stood at 4½ per cent. Stray transactions were done at 4½ per cent after clearing hours. The other rates were unchanged. For ready reference we give them below:

	Per cent
Inter-bank call money:	
Exchange and other large Indian banks	4½
Other banks	4½
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3½
(v) 12 months	4

The results of the 91 days' Treasury bills of the Government of India sold through weekly tenders show that the total amount offered was Rs. 2.03 crores as against an invitation of Rs. 2 crores. The amount actually accepted was Rs. 2 crores at the average rate of 2.750 per cent per annum, same as last week. 91 days' intermediate Treasury bills sold from 31st May to 3rd June were of the order of Rs. 10 lakhs only. Their sales are being continued from 7th June up to 10th June.

The Reserve Bank of India's Statement for the week ended 2nd June 1961 as compared with the previous week discloses a decline of Rs. 72.06 lakhs in notes in circulation. As the notes held in the Banking Department have fallen by Rs. 8.30 lakhs, the notes issued have receded by Rs. 80.36 lakhs. Foreign securities have remained unchanged but, as the balances held abroad have shrunk by Rs. 7.35 crores, the total foreign assets have come down by that amount to Rs. 128.77 crores. Deposits of banks with the Reserve Bank of India have risen by Rs. 1.67 crore to Rs. 78.69 crores. On the asset side other loans and advances have increased by Rs. 7.03 crores to Rs. 123.84 crores. Such against usance bills have gone up by Rs. 41 lakhs to Rs. 13.06 crores.

A decline of Rs. 4.77 crores in demand and an expansion of Rs. 4.44 crores in time deposits are disclosed by the Statement of the Scheduled banks for the week ended 26th May 1961. Deposits of the State Bank of India have risen by Rs. 1.08 crore. Borrowings from the Reserve Bank of India have decreased by Rs. 5.92 crores to Rs. 24.20 crores and those against usance bills from the same institution by Rs. 3.62 crores. Borrowings of demand nature from the State Bank have fallen by Rs. 21.16 lakhs but those of time variety have increased by Rs. 20.60 lakhs. The assets side shows that advances and bills discounted have receded by Rs. 6.16 crores to Rs. 1,280.06 crores. They were of the order of Rs. 1,123.76 crores a year ago. Over the week, the advances of the State Bank have gone down by Rs. 3.44 crores. The investments of scheduled banks have improved by Rs. 6.51 crores. But, as the investments of the State Bank have improved by Rs. 7.07 crores, the investments of other scheduled banks have fallen by Rs. 56 lakhs.

In the Government securities market, the subscriptions in respect of the re-issue of the 3½ per cent conversion loan of 1967 by tendering 3½ per cent 1961, 2½ per cent 1961 and 3 per cent Hyderabad loan 1951-61 aggregated about Rs. 93.57 crores, out of the total outstanding amount of Rs. 138.89 crores. Thus the response is quite satisfactory. The Reserve Bank put up its buying rate for 2½ per cent 1961 issue by 20 nP to Rs. 99.70. The gilt-edged market was on the whole sluggish. The 4 per cent loans quoted at discount were in demand. But business was restricted due to absence of sellers. In the Central loans section the 2½ per cent 1962 loan hardened by 30 nP to Rs. 98.85 and 3 per cent 1970-75 first development loan put on 10 nP to Rs. 90.90. But 3 per cent 1986 (conversion loan of 1946) shed 15 nP to Rs. 72.85 and 3½ per cent 1969 declined by 5 nP to Rs. 98.65. All other issues were unchanged.

In the foreign exchange section, the rupee weakened further in relation to the U.S. dollar. The banks' selling and buying rates for ready T.T. on New York were Rs. 479.75 and Rs. 476.25 per 100 dollars respectively, as against Rs. 479.50 and Rs. 476 in the previous week. In the New York exchanges market, the pound sterling was under pressure. The latest available rates are 279.070-279.100 cents per £ for spot and 277.740-277.770 cents per £ for three months' forward. Over the week, spot sterling lost 0.01 cent, while the forward gained 0.07 cent.

GOAT SKINS STEADY

(From Our Own Correspondent)

MADRAS, *5th June*

Arrivals of tanned hides and calves were moderate and clearance was fair-sized, at steady prices. U.K. importers seemed interested in medium weight cow hides and all averages in inferior fifths though the demand for cow calf and buff calf was negligible. It has been reported that small quantities of kips were sold to East European countries. Market for goat skins was steady and for sheep weak.

In the German auctions for tanned skins held last week, prices realised were upto c.i.f. levels but stocks cleared were small, which is a disquieting feature. Shipments during last month were 2,542 bales tanned cow hides, 221 cow calf, 30 buff hides, 440 buff calf, 540 goat skins and 438 sheep to U.K.; 113 bales cow calf, 50 buff calf, 1,041 goat skins, 433 sheep to Continent; 116 buff hides, 283 buff calf, 95 goat to U.S.A. and 50 sheep to Japan.

BULLION BUOYANT

(From Our Own Correspondent)

BOMBAY, *7th June*

There was a notable recovery in bullion prices during the week under review. The recovery followed excellent support on fears that the floating stocks in the market might be depleted in the coming weeks. The fears were based on the ground that the offtake of both gold and silver would continue to be quite large, notwithstanding the monsoon. Some Calcutta interests were also active buyers in the local market. A bear operator of North India was reported to have built up long position. The scarcity of contracts accelerated the rise in prices. Even reports indicating large inflow of contraband metals failed to have any effect. Today's closing rates for gold and silver were higher than those at the end of last week.

The daily average offtake of gold during the week was higher at 5,000 tolas, as against 4,000 tolas in the previous week, while arrivals were somewhat lower at 5,600 tolas, as against 5,670 tolas. In silver, both offtake and arrivals were smaller, the average being 5 bars and 20 bars, as against 6 bars and 28 bars respectively. The floating stocks of gold are estimated at 30,000 tolas and those of silver are reported to be around 300 bars.

Adjustment rates fixed today were Rs. 119.30 per 10 grams of gold and Rs. 202.70 per kg. of silver. The corresponding rates for last week were Rs. 118.55 and Rs. 198.50.

The *Jeth Adhik* (second) settlement in gold which stood at Rs. 118.05 on Wednesday last week rallied to touch a high of Rs. 119.60 on Thursday the 1st inst. After receding to Rs. 118.35 on Monday, the settlement recovered to Rs. 119.50 today before finishing at Rs. 119.15. The first settlement went off the board at Rs. 118.65 on the 1st inst. The rate for transferring commitments from the first to the second settlement on this day was against bears to the extent of 90 nP.

Ready gold began the week at Rs. 119.20, as against the previous close of Rs. 118.80, and rallied to Rs. 119.90 on Friday. After declining in the subsequent sessions to Rs. 119.30, it moved up again to touch Rs. 119.90 today. Towards the close, however, it was a shade easy at Rs. 119.55. The net loss over the week was 75 nP. The premium commanded by ready gold over the second settlement was 65 nP, as against 75 nP last week-end.

In silver, the *Jeth Adhik* (second) settlement attracted very good attention of operators and forged ahead from Rs. 198.50 to as high as Rs. 203.75 today. At this level, profit-taking set in and the settlement finished lower at Rs. 203. The net rise over the week was Rs. 4.50. The first settlement ran out at Rs. 200.30 on Thursday the 1st inst., as against Rs. 198.90 on the preceding day. The rate for transferring commitments from the first to the second settlement was against bears, the actual rate widening from 40 nP to Rs. 1.15, so that the bulls in the first settlement were required to pay a margin of Rs. 300 per bar.

Ready silver which was quoted on a par with the second settlement last week commanded a premium of 30 nP on Thursday the 1st inst. The premium, however, disappeared in the subsequent sessions and it was quoted at a discount; the actual discount today was 30 nP. The closing rate was Rs. 202.70, as against Rs. 198.50 last week. The highest and the lowest levels touched were Rs. 203.25 (today) and Rs. 198.70 (1st inst.).

The world price of gold in the London bullion market was a shade better at $35.07, as against $35.06½. Ready gold improved slightly from 251s. 3d. to 251s. 3¾d. Ready and forward silver were unchanged at 79¾d. and 79¾d., respectively. Silver in New York was also unaltered at 91.375 cents.

The following table shows the trend of the market during the week under review:

	7-6-1961 (closing)	High	Low	31-5-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	119.35	119.90	119.10	118.80
Forward:

Silver Forward	79¾d.	—	—	79¾d.
Gold	251s. 3¾d.	—	—	251s. 3d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 27th June settlement. † 28th June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.33 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

LINSEED FIRM

(*Messrs. A. Bradley and Co.*)

CALCUTTA, *5th June*

Generally firm conditions have been maintained throughout the past week and prices have shot up to some extent. Arrivals of seeds have slackened and upcountry prices are higher; millers are showing great interest for ready and forward deliveries but sellers are reluctant to do business at current prices. Only small arrivals of ready goods are changing hands.

The oil market has firmed up, and stocks are low; buyers are showing keen interest for ready and forward deliveries in sympathy with other oil markets notably groundnut and mustard oil.

Ready/September delivery Rs. 27 per maund.

COTTON FUTURES RALLY

(From Our Own Correspondent)

BOMBAY, *7th June*

The cotton futures market depicted a distinctly firm trend during the week under review. The firmness was engendered by bull support which stemmed from the release of an additional quota of Indian cotton to mills equivalent to 20 per cent of their consumption in the last season. Rumours regarding the possible upward revision in the selling price for cotton to the extent of Rs. 30 per bale in the next season also imparted considerable strength to the market. There was, besides, speculative buying on hopes of a further export quota for short-staple cotton. Some believed that the quota would amount to as much as 100,000 bales. Consequently, cotton prices registered a sharp rally.

The I.C.C. August contract advanced from Rs. 569 last week-end to touch as high as Rs. 582.50 yesterday. Short-covering and speculative bull support lifted up the prices further to Rs. 585 today. At this level, some profit-taking set in and the contract finished at Rs. 583. The net rise over the week was Rs. 14.

The official announcement of the additional quota of Indian cotton to mills prompted active inquiries in the spot market in several varieties, particularly Kalyan, Khandesh, CO2, Vijay-Digvijay, Surti and L147. Laxmi and Zoda cotton continued to evoke attention of a few mills. The quotations—in rupees per candy of 784 lbs.—for a few important varieties of cotton are: Hubli Laxmi 975; Amravati (L147) 1,025; Moglai-Zoda 450 Samalaya Digvijay 965; Gadag Laxmi 965; Dhulia Zoda 551; Kalyan 850.

Among foreign varieties, mill's attention was focussed on American, Sudan and East African cotton. Transactions were put through today at Rs. 1,245 for American cotton, Rs. 1,290 (c.i.f. July-August shipment) for BP52 and Rs. 1,450 (c.i.f. July shipment) for Sudan XG3L. In the export section, routine business was reported in Zoda and yellow pickings. There was also stray buying in Bengal *deshi*, Moglai and Kalyan.

The Government, as already stated, has decided to issue to mills straightaway a further quota of Indian cotton equivalent to 20 per cent of their consumption of such cotton in the last season. The quota will, however, be given only to those mills which have given bank guarantees for the purchase of short-staple American cotton recently allowed under P.L. 480. It may be noted here that the quantity allowed under this programme is 300,000 bales, of which purchases covering 225,000 bales are reported to have already been made. The latest announcement of the additional quota may be expected to speed up the purchase of the remaining 75,000 bales. The quotas for Indian cotton issued to mills before this announcement aggregated 3,825,000 bales. With the latest announcement, the total quota issued would come to 4,705,000 bales. In this connection, the Textile Commissioner has warned the mills failing to send their bank guarantees in good time to the effect that such mills would run the risk of not being able to obtain popular varieties of Indian cotton in the market as these may get sold and become scarce at the end of the season with consequent effect on prices. He has made it clear that, in such an eventuality, he would not consider himself bound to requisition any cotton in the mills. The Press note issued by the Textile Commissioner on the 6th inst. says:

"It is observed that some mills which have been allocated American cotton stapling 1" and below under P.L. 480—Purchase Authorisation No. 39-55 have not sent in their bank guarantees in spite of reminders to them. These allocations are compulsory and no exemption therefrom will be considered. Mills which have taken these allocations are being given, in addition to their normal quotas of Indian cotton, extra quotas of Indian cotton to the extent of 20 per cent of their last season's consumption of such cotton as a special concession, which is withdrawable at any time without notice. Mills are, therefore, advised to send in their bank guarantees and to enter into firm contracts for import immediately, so that they may become eligible for the balance of their Indian cotton quotas as well as the extra quotas."

Cheerful conditions prevailed in the Karachi cotton market during the week under review thanks to enlarged professional interests. Operators welcomed the Government's decision to announce the provision for securing advance payment from consignees abroad for raw cotton exports, in a fresh bid to promote exports. Under a new circular issued by the State Bank of Pakistan, no such advance payment will henceforth be required and export can be made on GRP1/1 RP I forms stipulating receipt in Pakistan in an appropriate manner of the full export value of cotton exported within two months from the date of shipment or when export is made to India and within four months where the export is to any other country. July contract improved initially from Rs. 70 to Rs. 70.25 before closing at Rs. 70.10, with a net gain of 10 nP over the week.

The Alexandria cotton market displayed distinctly weak conditions during the week. Both *Karnak* and *Ashmouni* contracts came in for sustained selling with values moving down. *Ashmouni* June contract moved down from 61.66 T. (tallaris) to 66 T. per pound and August contract from 61.1 T. to 60.50 T. Karnak July contract was lower at 69.51 T., as compared with 70.35 T. last week-end.

In the Liverpool market, values moved narrowly in thin dealings. The professional interest were busy with renewed attempts to transfer commitments from near holdings to forward. The auction held by the Sudan Gazeria Board were of routine nature. The volume of business was only moderate. July position closed higher at 24d., against 23.90d. last week-end. October contract was quiet at 24d. and July contract (Sudan) at 31.75d.

After remaining subdued early in the week in sympathy with the yarn and piecegoods markets New York cotton market put on a better appearance towards the close, following some purchase

by commission houses. A fair volume of business was transferred from the near to distant contract.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	6-6-61	26-5-61	22-5-61
Spot	34.35	34.25	34.20
July	33.45	33.27	33.25
October	34.72	34.07	34.19

BEMBERG YARN CLIMBS UP

(From Our Own Correspondent)

BOMBAY, *7th June*

An important event of the week in so far as the yarn market is concerned is the announcement of the Government's decision to modify the licensing of art silk yarn export against rayon grade woodpulp under the existing export promotion scheme. According to the official Press note issued yesterday, 30 per cent of the entitlement for art silk yarn under this scheme has to be surrendered compulsorily by each manufacturer-exporter for the import of raw grade wood-pulp by the spinners of indigenous art silk yarn. The surrender of entitlement, it is stated, shall apply to art silk yarn only and not to import entitlement for dyes, chemicals, machinery and spare parts admissible under the scheme. In return for the surrender of entitlement, the manufacturer-exporter will be entitled to receive 75 lbs. of indigenous art silk yarn for every rupee worth of entitlement surrendered at the prices to be fixed by the Textile Commissioner from time to time.

It was reported that stocks of yarn were very much limited, while demand was increasing. There were complaints that the spinners were not making regular deliveries of acetate and rayon yarns. Consequently, rayon yarns scored handsome gains. Staple fibre yarns, however, were quiet. In a statement issued this week, the President of the Yarn Merchants Association and Exchange Ltd., Mr. Kantilal Nahalchand, said that the decision taken by the Association authorities to square up outstanding business did not in any way contravene the prices fixed by the Indian Cotton Federation for 40 x 2 staple fibre yarn. The President, however, stated that, though the Federation had fixed the ceilings for the various counts of staple fibre yarn, goods were not flowing into the market from the mills at these prices. The prevailing rate of ready delivery 40 x 2 staple fibre yarns ranged from Rs. 950 to Rs. 960, as against the ceiling of Rs. 971. Cotton yarns were dull. Transactions put through were limited. Traders noted that the hosiery yarn spinners had urged the Government to authorise them to sell their production in the open market at controlled rates. This plea is on the score that, as the Hosiery Industry Federation has failed to lift yarn for two successive quarters under the distribution scheme, large stocks of yarn are lying unsold with them. The present stocks are estimated at 800,000 lbs.

Cupressa Bemberg yarn (60 x 1) June delivery jumped up from Rs. 2,560 to Rs. 2,640. August contract was quoted today at Rs. 2,665. 40 x 1 J.P. June contract rallied from Rs. 2,908 to Rs. 3,050, the August position being quoted at Rs. 3,092. Spot Cupressa registered a rise of Rs. 13, today's rate being Rs. 2,645. Among imported yarns, 120 Japan was fully maintained at Rs. 1,735, 150 Japan at Rs. 1,777, and 120 Italy at Rs. 1,625. Among indigenous yarns, National Rayons 150 bright cones first grade forged ahead from Rs. 15.33 to Rs. 16.21. 120 bright cones first grade advanced from Rs. 16.21 to Rs. 17.51.

Staple fibre yarn 40 x 2 August contract was quoted today at Rs. 910, as against Rs. 911 last week-end. Spot Kohinoors were well supported, the quotation improving by 9 nP to Rs. 11.22.

In the cotton yarn section, ten counts Podars changed hands at Rs. 17.50, same as last week. Twenty counts Gokaks were unaltered at Rs. 22.50, as also New Greats at Rs. 21.25. Thirty counts Simplex were done at Rs. 27. Forty counts Maduras were done at Rs. 33 and Sixty counts Finlays at Rs. 65.39. Eighty counts Moderns lost 50 nP to Rs. 69.50. Finlays were dull at Rs. 81.75.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	7-6-1961	31-5-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
June	2,640.00	2,560.00
August	2,665.00	—
Spot	2,645.00	2,632.00
40 x 1 J.P. June	3,050.00	2,908.00
August	3,092.00	—
120 Japan (per 100 kg.)	1,735.00	1,735.00
150 Japan (per 100 kg.)	1,777.00	1,777.00
Staple fibre yarn (40 x 2)—		
August (per 90.72 kg.)	910.00	911.00
Kohinoor (per kg.)	11.22	11.13
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.50	—
20s New Great	21.25	21.25
30s Simplex	27.00	27.00
40s Madura	33.00	33.00
60s Finlay	65.39	65.39
80s Moderns	69.50	67.00

GROUNDNUTS FIRM

(From Our Own Correspondent)

BOMBAY, *7th June*

The oilseeds market put on a cheerful appearance during the week under review. Spot groundnuts touched new highs of the season. Arrivals from upcountry centres were scarce while the support extended by *vanaspati* interests and crushers was quite large. Consequently, values registered an improvement. The firmness of oil-cakes provided further impetus. There were, of course, reports indicating a substantial increase in groundnut production in Africa during the 1961 season but the reports had no effect. The French West African output alone is estimated at about one million tons, as compared with only about 800,000 tons in the last season. Linseed was in the limelight, on persistent bull support particularly from Calcutta interests following pronounced firmness of rapeseed oil in North India. The bulls were also encouraged by the revival of Australian enquiries for Indian linseed oil. Castorseeds were generally steady, thanks mainly to reports of some business in oil with the U.K. and also to smaller offerings. The upward trend in overseas prices of castor oil as a result of a possible shortfall in output in Brazil owing to insufficient rains gave rise to hopes of revival of U.S. interest in Indian castor oil. Spot cottonseeds ruled firm while the hedge contract was subdued. Sesame was fully steady.

In the groundnut section, Khandesh quality rose by Re. 1.50 to Rs. 55. Coromandal gathered Re. 1.25 to Rs. 55. Nizam Bold improved by a rupee to Rs. 54.50. Oil ex-mill spurted from Rs. 22.10 to Rs. 23. Railway receipts put on 80 nP to Rs. 22.70.

Castorseed ready Madras rose initially from Rs. 35.12 to Rs. 35.62, but moved down to Rs. 35.50 towards the close. Ready Kanpur hardened by 47 nP to Rs. 33.62. The hedge contract (September 1961 contract) fell from Rs. 179 to Rs. 176.10 earlier in the week mainly due to technical considerations. But it rose again to Rs. 178 before closing at Rs. 177.50. Oil commercial was firm at Rs. 15.05, as against Rs. 14.80. Oil B.S.S. rose by 15 nP to Rs. 16.15.

Linseed September 1961 contract moved up from Rs. 37.75 to Rs. 38.76. It, however, closed lower at Rs. 38.62 today. Bold ready improved by 88 nP to Rs. 38. Linseed oil put on 45 nP to Rs. 16.25.

Cottonseeds non-whites, whites and Berars hardened by 50 nP to Rs. 19.50. September 1961 contract, however, fell from Rs. 96.50 to Rs. 95.

In the sesame section, bold variety was maintained at Rs. 370 (per 250 kgs.) Sesame oil put on 25 nP to Rs. 26.75. Among other seeds, *Kardi* gathered 25 nP to Rs. 27. *Niger* was steady at Rs. 42.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	7-6-1961	31-5-1961	23-5-1961
Groundnut	Rs.	Rs.	Rs.
Nizam bold	54.50	53.50	53.50
Coromandel ready	55.00	53.75	54.00
Khandesh quality	55.00	53.50	54.00
Oil ex-mill ready*	23.00	22.10	22.10
Railway receipts*	22.70	21.90	21.85
Castorseed			
September 1961	177.50	176.00	177.50
Ready Madras	35.50	35.12	35.50
Ready Kanpur	33.62	33.25	33.62
Oil B.S.S.†	16.15	16.00	16.00
Oil commercial†	15.05	14.80	15.00
Linseed			
September 1961	38.62	37.56	37.69
Bold ready	38.00	37.12	37.50
Oil ready†	16.25	15.80	15.80

September 1961	95.00	93.75	94.25
Niger seed	42.00	42.00	42.50
Kardi seed	27.00	26.75	27.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FAIR DEMAND FOR TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *30th May*

Offerings in sale No. 22 held today amounted to 472,000 kilograms. Quality in general showed a further seasonal decline. However there were a few useful invoices from the Nilgiri district. There was strong general demand. Plain and low mediums were in keen demand and sold at around last rates. Mediums were well supported but were easier by 5 to 10 nP and so were the good mediums which sometimes declined up to 20 nP. There was good support for Nilgiris but these were irregular and tended little easier. Whole leaf grades sold well with buyers emphasising more on flowery pekoes grades. C.T.C. and legg-cut types were fully firm to dearer. Quotations were:

	1961	1960
	Rs.	Rs.
Low medium	4.40-4.55	3.55-3.65
Mediums	4.55-4.60	3.65-3.75
Good mediums	4.60-5.00	3.85-4.20
Nilgiris	Rs. 4.55-5.65	

The average price realised in sale No. 22 was Rs. 4.60 per kilo as against Rs. 4.58 a week ago and Rs. 3.90 in the corresponding sale last year.

Dust Sale No. 22: 300,000 kilograms were offered in dust sale No. 22 held on 1st June. There was fair demand at generally lower rates. Low mediums and mediums met with useful support at a decline of 5 to 15 nP. Good mediums also shared in the downward trend of the market and were easier by 10 to 15 nP and in some cases more. Highgrowns were in good demand and sold at around last rates. C.T.C., C.T.C. types and legg-cut types were well competed for and are quoted steady.

The average price realised in dust sale No. 22 was Rs. 4.28 per kilo as compared with Rs. 4.29 a week ago and Rs. 3.94 in the corresponding sale last year.

Export quota 1961-62: A small amount of business has been registered at 3 nP per kilo. At the time of writing there are sellers at 4 nP with no buyers.

Colombo: 7,641,000 pounds were offered this week. There was strong demand. Teas from Western districts were irregular and easier with quality. Mediums were easier by 5 cents. Low growns were in useful demand at slightly lower rates than last.

London:—North Indian and other growths. There was strong demand and prices were fully firm. Improved quality teas were dearer to buy.

Ceylon and South Indian: 27,054 packages were offered in Tuesday's sale. The market met with fair demand but prices were generally easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale No.* 23: 678,000 kilograms. Fair demand at lower rates. Plain and low medium 10 to 20 nP easier. Medium and good medium upto 20 nP lower. Nilgiris easier and generally lower.

TEA SLIGHTLY EASY

(From Our Own Correspondent)

CALCUTTA, *6th June*

Fair demand at firm rates was in evidence in the export sales held during last week while, at the internal sales held in the last week, prices declined.

Tea shipments were satisfactory during the week and every indication was in evidence that the way was being made for the peak as the season advanced. Note was taken of the strong demand at last week's sales held in London. African teas were reported to be a good feature there.

Trade circles were amused at the call of the Planning Commission for the tea industry's cooperation in realising the output target of 900 million lbs. and an export target of 610 million lbs. in the third Plan period. At a time when the industry is groaning under the weight of increasing costs of production and urging the Government to revise the tax structure and abolish the export duty, it is hardly appropriate on the part of the authorities to urge the industry to co-operate for raising output and exports without telling the industry how far its grievances have been considered. Excise duty together with the export duty has pushed up prices of tea, and high prices were the cause for the fall in exports of tea during last year, although Government's spokesmen would continue to take delight in believing that exports declined on account of lower production.

The trends in recent auctions in London have clearly indicated that other producing countries including Ceylon and Africa have been offering keen competition. These countries, unlike India, benefit from a lower cost of production as taxes there, if any, are more rational and take into consideration the capacity of the industry to pay the same without hurting it.

It was stated that the Government would provide loans for new planting and re-planting, and also foreign exchange for the import of fertilisers and machinery in order to achieve the raised targets.

Dusts on offer during last week's sales for internal consumption totalled 23,007 chests. Rates eased on limited demand. Orthodox teas declined by 30 nP. However, the few bright teas met with good demand. Legg-cut Dooars eased by 20 nP and medium C.T.C's by 60 nP. The quotations including excise duty were: good Assam C.T.C. dust Rs. 6.20 to Rs. 7.00 (nominal) medium Assam C.T.C. dust Rs. 5.40 to Rs. 5.90, legg-cut dust Rs. 4.20 to Rs. 5.00, medium Assam dust Rs. 4.09 to Rs. 4.60, and plain orthodox dust Rs. 3.85 to 4.20.

Leaf on offer amounting to 67 chests met with good demand.

JUTE DECLINES

(From Our Own Correspondent)

CALCUTTA, *6th June*

Following the approval accorded by the West Bengal Government to the block closure of mills for two weeks (one week each at the end of this month and July), fibre prices suffered a further marked decline of about Rs. 4 per maund during the week under review. The decline also affected the prices of goods. In other words, the decision for block closure of mills, meaning a loss of production of about 40,000 tons in the two months, did not result in a hardening trend. For, stocks are high in view of the perceptible drop in overseas business in recent months on account of the high prices. Overseas buyers did not rush to the market at the decline, and this gave momentum to the easy trend. The closure is expected to enable the mills to adjust fibre supplies. This will also bring the supply of goods to better relationship with demand. As a result of the closure, it is not expected that overseas buyers will rush to the market and accept offers to-mouth basis. The coming fibre crop is expected to ease supplies further, and overseas consumers hope that prices of goods would decline further.

From the market trends of recent weeks, it is clear that high prices of goods have done no good to the industry. Mills incur a loss of about Rs. 250 per ton of goods on simultaneous business. The forthcoming closure of mills is, therefore, welcomed as this would bring down fibre prices to reasonable levels. The fact that Pakistani mills have in recent weeks been underquoting Indian quotations and thus been able to divert business from Calcutta clearly brings to the forefront the need for pushing down prices of fibre as well as goods. Pakistani mills have been able to sell hessian constructions to overseas consumers at Rs. 3 per 100 yards below the Calcutta rate and sacking goods at about Rs. 10 per 100 bags below the Calcutta rate. The ability of the Pakistan industry to underquote Indian rates would only increase in the coming months, as the new Pakistani crop is expected to commence reaching

the mills across the border as from next month, whereas, in India, harvest is not expected to commence before August. It is, therefore, a welcome sign that fibre prices in India are now a few points below the recently reduced maximum prices of the Indian Jute Mills Association. There is every indication that fibre prices would continue to decline, as simultaneous business in goods as well as fibre being uneconomic, the mills are showing only paltry interest in fibre offers. Also the mills are in a position to continue operation with their existing stocks after taking into account the two weeks of block closure in the near future.

As stated above, overseas business in goods continued to be restricted during the week. As adequate interest was lacking, ready B. twills dropped from Rs. 161.25 to Rs. 158.50 on Tuesday and hessian 40" 10 oz. from Rs. 52.50 to Rs. 51.75. At lower levels, some business took place in the overseas market; however, this was insufficient to maintain the prices even at the low levels. Moreover, on Wednesday, the local market was affected by due-date activities, with the result that B. twills dropped to Rs. 156 and hessian 40" 10 oz. to Rs. 50.75. Advices from the New York burlap market were discouraging, as buyers there were putting off commitments in the hope that prices would decline further. However, the expectation of an announcement with regard to block closure of mills caused some recovery here, with B. twills nominally quoting higher at Rs. 157.50 and hessian 40" 10 oz. at Rs. 51.75 on Thursday. The decision for block closure was announced on Friday and, early in the day, prices tended to harden. However, selling pressure soon developed in a considerable degree and forced down B. twills to Rs. 155.50 and hessian 40" 10 oz. to Rs. 51.25. Over the week-end, prices dropped further, with B. twills being pushed down to Rs. 152 and hessian 40" 10 oz. to Rs. 48.85. The decision to re-open the hedge market, with the concurrence of the Forward Markets Commission as from 15th June, it was suggested in trade circles, should be reviewed and the reopening postponed until, say, July or August. For it was thought that the abnormal conditions prevailing in the market were hardly an appropriate time for reopening of the hedge. At lower levels during the week-end, there was some business done in goods, following which, yesterday, hessian 40" 10 oz. was quoted steady at Rs. 49.50 and B. twills at Rs. 152.50.

A welcome decline in fibre prices was recorded, as would be evident from the opening and closing quotations below. Factors contributing to the decline were poor interest shown by mills, the announcement of the decision of block closure by mills, and good reports of the growing crop coupled with the continuance of good weather:

(In Rs. per maund against June delivery)

METALS HARDEN

(From Our Own Correspondent)

CALCUTTA, *6th June*

The feature in the metal market during the week under review was that prices hardened further on strong demand against the background of tight supply conditions. Virgin lead also recorded a modest addition to price. It was apprehended that some of the best brands of foreign lead were on the verge of an acute shortage and in fact these commanded a modest premium against ready supplies. The premium at one time was even as high as Rs. 9 per 100 kgs., while the rise in price for the ordinary supplies was from Rs. 130.00 to Rs. 133.75 per 100 kgs. However, the quantity that changed hands was small, although the higher price was steadily maintained. It would be remembered that lead had come to be known as a traditionally quiet metal in the market in view of the price being unchanged at Rs. 130 for a considerably long time. Advices from the London Metal Exchange also contributed to the higher trend, since the price there improved from £ 64¾ per ton to £ 65-1/8. The possibility of an international price stabilisation scheme for the metal now being examined in New York under the auspices of the Lead and Zinc Study Group's Working Committee contributed to the bullish trend in London.

News of the week was that, in conformity with the higher price for copper in London at the time when the metal for current production was covered, sheet metal rollers raised the price of copper sheets by Rs. 17 to Rs. 487 per 100 kgs. and that of brass sheets by Rs. 10 to Rs. 372 per 100 kgs. Following acute shortage, copper scrap prices gained, with the berry quality rising from Rs. 479.50 per 100 kgs. to Rs. 482.25 and utensil scrap from Rs. 447.50 to Rs. 450 per 100 kgs. On the other hand, the London price eased from £ 244 per ton to £ 238¾, following the news of the settlement of the strike at Chilean ports. Also demand on London was only of a routine nature. In the local market, tin at Rs. 1,565.00 per 100 kgs. recorded a smart score of Rs. 136. However, there was consumer-resistance at the higher level. The price in Singapore hardened, and following this the London price was higher at £ 871 per ton before closing at £869. Electrolytic zinc at Rs. 332.75 per 100 kgs. recorded a ten-point rise. The supply position became tighter, but few consumers showed interest at the higher level. In London the price closed lower at £81¾ per ton after opening at £82.

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, *5th June*

Steady to firm conditions were witnessed in foodgrain during the past week as arrivals of new grains were still small and pressure of arrivals was not at all visible as entire arrivals were being lifted mostly by consumers and part by stockists. Wheat prices recorded fractional gains for average quality which was now quoted at Rs. 14.50 to Rs. 14.75 a maund, while farm quality prices were steady at Rs. 15.50 to Rs. 16.25 a maund. Daily arrivals at an average of 1,200 to 1,500 maunds were being lifted by consumers and local stock was poor at 16,000 maunds. Average wheat was quoted in the corresponding period last year at Rs. 15 and in 1959 at Rs. 20 a maund. The producer was retaining his produce as this was the only cause for such poor arrivals as wheat crop this year was a bumper one in this part of the country. Wheat prices were also steady, as following removal of ban on wheat purchases from open market, roller flour mills were also making purchases.

Rice prices ruled steady in line with wheat and other grain prices and better seasonal demand and week-end prices were:—*sela mainpuri* Rs. 20.50 to Rs. 21, *gainda kurcha* Rs. 20.50, *ramajwayan sela* Rs. 24, *raimunia sela* Rs. 25, *basmati sela* Rs. 28 to Rs. 30, superior Rs. 32 to Rs. 38 a maund. Gram prices registered further gains on firm Punjab advices. Daily arrivals were at an average of 1,000 maunds from the Punjab and local gram stock has swelled to 34,000 maunds. Barley prices also sought lower levels to be quoted at Rs. 11.12 and *bejhar* inferior Rs. 10.50 and *moongia* variety at Rs. 11.25 per maund. Daily arrivals were poor at an average of 100 to 150 mds. which were being lifted by consumers. *Methe* prices advanced further on good Rajasthan demand to be quoted at Rs. 25 to Rs. 26.50 a maund, while oats continued to be quoted at Rs. 13 to Rs. 14 a maund. *Jowar* and *guwar* were still in request and while prices of the former were quiet at Rs. 12 to Rs. 14.50 a maund, thanks to good stock at 10,000 maunds prices later improved to Rs. 14 to Rs. 16.50 a maund. Maize was listless at Rs. 13 with stock put at 4,000 maunds and *bajra* at Rs. 19 a maund. Gram was quoted at Rs. 13.50 and Rs. 14 for Punjab variety.

In pulses, peas was very much in request by stockists and with arrivals averaging 1,500 maunds and loading being restricted, local stock has mounted to 73,000 maunds. *Arhar* prices ruled quietly steady, arrivals being modest at an average of 500 to 600 maunds and local stock swelling to 37,000 maunds. Prices of other pulses were quietly steady during the week and week-end prices (in rupees per maund) were:—peas *dara* Rs. 11 to 11.12, farm white 12 to 13, peas *dal* 13, gram *dal* 16, *urd* 19.25 to 21, *urd dal* 24, *moong* 19.50 to 24, *moong dal* 24 to 27, *massoor* 13.25 to 14.50, *massoor dal* 16.25.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, *5th June*

Sugar prices ruled quietly steady during the week at Rs. 106.75 per bag of 2 mds. 30 seers for E-29 *Simbhauli* produce and in retail sugar was quoted at 97 nP per seer. Although export prospects were bright as it was reported that the U.S. has agreed to buy 225,000 short tons of Indian sugar and 29,000 tons are to be exported to Pakistan but as these exports were far below expectations due to huge surplus, market sentiment was not influenced by these export prospects. Production in almost all factories has stopped but few factories are still drawing cane.

Sugar prices were also quiet at Rs. 106.75 per bag for dry stuff and Rs. 99.50 to Rs. 101 for last year's damaged stocks in the Muzaffarnagar market where supply position continued easy despite better demand due to hot season.

Khandsari prices ruled quietly steady although trading during the week was small and loading too continued restricted. Week-end prevailing prices were: inferior Rs. 27 to Rs. 30, superior Rs. 31 to Rs. 34.50, crystal Rs. 33 to Rs. 36.50, crystal *Boora* Rs. 40.50 a maund.

Ready *gur* prices ruled quiet during the week on poor demand, following continued loading restrictions. Daily arrivals out of stocks retained by producers were small at an average of 50 to 75 maunds which were being lifted by consumers and *Boora* manufacturers. Week-end offtake was only one wagonload to the Punjab and local stock is now put at 46,000 maunds, the corresponding figure last year being 22,000 maunds. Total arrivals of *gur* here during the current season were put at 4.7 lakh maunds, as against total arrivals at 5.87 lakh maunds last season and 660,000 maunds in 1959. Latest prevailing prices were: dry Rs. 15.62, *kotha* dry-wet Rs. 15, wet Rs. 14, *shakker* Rs. 16.50 a maund. Corresponding prevailing prices of dry *gur* last year were Rs. 14.75 and Rs. 21.37 a maund in 1959.

Gur prices ruled quiet during the week at Muzaffarnagar where daily arrivals dropped to an average of 750 to 1,000 maunds and week-end prices were: *Chaku* dry Rs. 17, *kotha* mixed Rs. 16, inferior Rs. 13 to Rs. 15, *ladu* Rs. 16 to Rs. 16.25, *rusket* Rs. 8 to Rs. 10, *shakkar* Rs. 16 to Rs. 19, *masala* Rs. 21 to Rs. 23 per maund.

Gur futures moved both ways during the week but latest trend was bearish on heavy local and Punjab selling. *Gur* Ashad is today quoted at Rs. 14.39 and *fagun* at Rs. 13.68, as against week's opening at Rs. 14.52 and Rs. 13.48, and highest touched in mid-session at Rs. 14.93 and Rs. 13.96, respectively.

Notice

BRIDGE AND ROOF COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Annual General Meeting (being the seventy-seventh Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 29th June, 1961, at noon, to consider the Accounts of the Company for the year ended 31st December, 1960, to transact other ordinary business and the undernoted special business.

SPECIAL BUSINESS

NOTICE is also hereby given of the following Resolution which will be proposed as an Ordinary Resolution:—

"That pursuant to the provisions of Section 342 of the Companies Act, 1956, the resignation of Balmer Lawrie & Co. Ltd. of its office of Managing Agents of the Company with effect from 31st December, 1960, be and is hereby accepted."

Note :—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings at the end of February 1961, amount to 13.81 crores of rupees.

K—On September 1986 or later at the option of the Government after three months' notice.

PLANTING

(*Concluded from page* 1084)

Finance Minister was kind enough to bring the duty to the old level with regard to Robusta and we are grateful for the same. But this is an indication that the Board has not succeeded in keeping the Government well informed about the crisis the coffee industry is facing."

In the considered opinion of Mr. Stephen, the Coffee Board in its present set-up where growers' representatives are elected and growers are outnumbered by non-growers can achieve very little. This journal has itself drawn attention to this aspect on more than one occasion. Unless the growers have a substantial say in running the affairs of the Board, the efficiency of the Coffee Board cannot be improved. It is to be hoped that the Government will bear this in mind when it takes up the question of reconstituting the Board after 18th September next.

It is gratifying to be told by Mr. Reddy that the Coffee Board has already agreed to the system of open auctions subject to availability of cup taster and results of his testing. He said: "We may adopt his (Mr. Gerald Schluter, a leading coffee magnate in London) suggestion and start open auctions as early as possible and thus line ourselves in time with other countries." The system of open auctions will certainly be an improvement over the present system of closed tenders and attract enterprising traders from home and abroad, besides securing better prices for coffees of high quality. But this alone will not suffice. The other features of the Board's marketing policies will also have to be thoroughly overhauled. Only last week, we emphasised again (in our Survey columns) the need for earmarking a minimum export quota, radical changes in export procedures including open auctions, auctioning some lots of individual coffees under their estate names, introduction of testing, abolition of multi-channel system in internal market and replacement of sales tax by Central excise duty. All these measures must be implemented in right earnest at the earliest, if the coffee industry is to develop on sound and secure footing.

BANKING

(*Concluded from page* 1076)

Finance Corporation amounted to Rs. 1.16 crore, Rs. 2.20 crores and Rs. 12.19 crores respectively while the remaining amount came from central financing agencies and others.

There were 120 cotton ginning and pressing societies (excluding marketing societies engaged in processing) with a membership of 49,522 and their working capital amounted to Rs. 3.40 crores at the end of June 1960. There were 1,347 societies engaged in other processing activities such as paddy husking, groundnut decorticating, coffee curing, etc. and their membership stood at 63,736 at the end of 1959-60. Their working capital amounted to Rs. 1.94 lakhs as on 30th June 1960 as against Rs. 94 lakhs on 30th June 1959.

There were 5,631 farming societies of which 968 were better farming, 1,758 joint farming, 893 collective farming, and 2,012 tenant farming societies. The membership of these societies stood at 271,971 as on 30th June 1960 as against 223,350 at the beginning of the year. The working capital of the societies increased from Rs. 4.12 crores at the end of 1958-59 to Rs. 5.79 crores at the end of 1959-60. The number of irrigation societies increased from 1,603 at the end of 1958-59 to 1,641 at the end of 1959-60 and their membership stood at 54,136. The working capital of these societies amounted to Rs. 206 lakhs as against Rs. 194 lakhs at the beginning of the year.

There were 2,111 fisheries societies at the end of 1959-60 with a membership of 220,358 compared to 1,934 societies with a membership of 200,402 at the beginning of the year. Their working capital stood at Rs. 139.98 lakhs as on 30th June 1960 as against Rs. 112.94 lakhs as on 30th June 1959. There were 21 apex weavers' societies. 108 central weavers' societies and 11,086 primary weavers' societies with a total membership of 12.89 lakhs. The working capital of these societies aggregated Rs. 25.36 crores at the end of June 1960 as against Rs. 23.92 crores at the end of June 1959.

There were 16 spinning mills in nine States, viz., Andhra Pradesh, Bihar, Gujarat, Kerala, Madras, Maharashtra, Mysore, Orissa and Punjab. Their membership comprised 4,363 societies and 4,520 individuals and others. The working capital of the mills stood at Rs. 3.77 crores as on 30th June 1960 as against Rs. 2.93 crores as on 30th June 1959. There were 17,896 "other industrial societies" whose membership stood at one million and their working capital amounted to Rs. 13.31 crores as against Rs. 10.36 crores at the end of 1958-59. Their sales during the year amounted to Rs. 14.29 crores compared to Rs. 12.52 crores during 1958-59. There were 65 wholesale and 7,168 primary consumers' stores with a total membership of 1.4 million. The working capital of the wholesale stores and primary stores aggregated Rs. 9.44 crores. The purchases and sales effected by the stores during the year amounted to Rs. 46.29 crores and Rs. 47.98 crores respectively. There were six housing societies at the state level and 5,558 societies at the primary level and their membership was 1,812 and 320,188 respectively. The working capital of these societies aggregated Rs. 55.29 crores as on 30th June 1960 as against Rs. 45.34 crores as on 30th June 1959.

MARKET GOSSIP

(*Concluded from page* 1067)

of primary goods such as wool, meat, dairy products and canned fruits for which Australia has always been renowned but would also demonstrate the dynamic growth of that country's manufacturing industry since the Second World War, and its ability to make and supply goods to the world market. Also travelling on the *Straat Banka* will be a Trade Mission of 47 members headed by Mr. A. P. Whitington, President of the Australian Chamber of Commerce Export Council, representing Australian industry, commerce and banking. One of the important tasks of this Mission is to promote goodwill and demonstrate the extent to which Australia can help South-East Asian countries speed their economic development by supplying raw materials for local industries and providing necessary articles of equipment.

The exhibits include foods and beverages from all Australian States, garments of wool, terylene, silk and various types of furs, metals, electronic devices and air-conditioning equipment. Over 200 Australian firms are represented in these displays. The floating shopwindow, we are sure, will prove useful to our industrialists and businessmen in securing firsthand information about Australian primary and manufacturing products and also help in promoting trade and goodwill between India and Australia.

J. K. SYNTHETICS LTD.

The new public issue of J. K. Synthetics Ltd., formerly known as the J. K. Investment Trust Ltd., will open for subscription on Monday the 12th inst. and will close on the 17th inst., but not before the 14th inst. The issue amounts to Rs. 52,37,500 in 523,750 equity shares of Rs. 10 each at par payable in full on application. The new shares will rank in all respects *pari passu* with existing shares except that they will be entitled to dividend out of the earnings only of the year commencing from 1st July 1961. With this issue, the whole of which has been underwritten, the paid-up capital of the Company will increase to Rs. 125 lakhs.

The object of the issue is to meet a part of additional capital requirements of Rs. 178.60 lakhs for purposes of a new synthetic yarn undertaking. This expenditure has been or will be financed partly from a loan of Rs. 30.00 lakhs from the Rajasthan Government, Rs. 80.00 lakhs deferred payment facilities and Rs. 16.23 lakhs borrowing from banks and other sources. The synthetic filament yarn plant proposed to be established at Kotah in Rajasthan will have a capacity of 480,000 lbs. per annum. Orders for the plant and machinery required for the project (local and imported) have already been placed and shipments will start shortly. Some of the machines will come duly assembled and a team of foreign erectors and engineers will be arriving to take up the erection work simultaneously. The erection of indigenous machinery is already in progress and it is expected that the plant will be commissioned for trial operations sometime in October-November 1961.

Notice

BALMER LAWRIE AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE MEMbers of the above-named Company that the Annual General Meeting will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 29th June, 1961, at 12.15 p.m., to consider the Accounts of the Company for the year ended 31st December, 1960, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 14th June, 1961 to 29th June, 1961, both days inclusive.

By Order of the Board,
D. MANSON,
Secretary.

21, NETAJI SUBHAS ROAD,
CALCUTTA, *2nd June*, 1961.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

RURAL CREDIT FOLLOW-UP SURVEY

THE Reserve Bank of India has released this week the findings of its second Rural Credit Follow-up Survey. This Survey had as its period of reference the one year from May 1957 to April 1958, but the field investigation under it was actually conducted in the period May 1958-October 1959. It was confined to a dozen districts selected out of the original sample of 75 districts which figured in the All-India Rural Credit Survey, 1951-52. The districts selected for the follow-up inquiry are claimed to be fairly representative of the various types of agricultural economy prevailing in the different parts of the country. Two main objectives have been achieved in the latest Survey, the first being the collection of statistical data relating to changes in the "demand" side of credit, including outstanding debt and borrowings, and the second being the assessment of the performance of co-operatives on the "supply" side of credit. The general review report which has just been issued to the Press has dealt comprehensively, though not in great detail, with the various aspects of the rural credit scene. By far the greatest significance of the follow-up Survey is that it provides a broad comparison with the results of the 1951-52 Rural Credit Survey in the corresponding districts taken together.

What changes, if any, have taken place in the structure of rural credit in the identical districts over a period of six years are worthy of note. It is this comparative account that provides a picture of some advance in co-operative credit during the period. Quite impressive in this connection is the fact that the borrowings of an average family from co-operative credit agencies represented 12 per cent of all its borrowings in 1957-58, as compared with only 2 per cent in 1951-52. On the other hand, the proportion of borrowings from Government sources had come down from 5 per cent in 1951-52 to 2 per cent in 1957-58. Another striking trend revealed by the figures is that the proportion of borrowings from agriculturist moneylenders had increased from 18 per cent of all borrowings in the former year to 45 per cent in the latter. This, however, was accompanied by the opposite trend of professional moneylenders accounting for only 16 per cent of the borrowings of an average family in 1957-58, as compared with 56 per cent in 1951-52. Traders and commission agents, too, had come to account for a higher proportion (10 per cent) of borrowings in the year of the follow-up Survey, as compared with 5 per cent in the year of the original survey. Commercial banks did not contribute anything substantial to the average family's borrowings in either year; their relative contribution was only 1 per cent of all borrowings in both the years. It would appear from these comparative figures of borrowings according to sources of credit that moneylenders—agriculturist, professional and mercantile—continued to dominate the rural credit scene, although co-operative credit agencies had also made some advance.

Some other broad indicators emerging from the follow-up Survey as compared with the original Survey would also merit particular mention here. In the first place, the major indicator is the absolute outstanding debt per family in the respective years; in 1951-52, this was Rs. 434 whereas in 1957-58 it was Rs. 375. The outstanding debt over the period had decreased substantially; this decrease seems to have been due to the decrease in the total borrowings of average family from Rs. 263 in the former to Rs. 218 in the latter. A broad inference is possible from this trend is that, on of the increase in agricultural prices the period, the money returns of rural and their credit needs might have decreased to a corresponding extent. That borrowing families were also having increased money returns could be inferred from another indicator, namely, the average amount repaid during the year. It may be noted here that, in 1951-52, the amount repaid by an average family was Rs. 77, whereas in the year of the follow-up Survey it was Rs. 102. But, at the same time, increased money returns do not appear to have financed capital expenditure in agriculture to a greater extent; if anything, such expenditure was a little lower in 1957-58, being Rs. 175 per family, as compared with Rs. 188 in the year of the original survey. On the other hand, there was an increase in family expenditure from Rs. 390 in 1951-52 to Rs. 429 in the year of the follow-up Survey; this was probably due to an increase in the prices of commodities entering into rural consumption. These broad indicators show that the quantum of credit availability in the year for an average family had not increased at all. It may be that the agriculturist families might have borrowed substantially more for capital expenditure in agricultural improvement if more credit had been available. After all, the average debt per family expressed as a percentage to the value of owned land ranged only between 3 and 8 in six out of the twelve districts; this means that there was further scope for borrowing.

A disquieting trend revealed by the follow-up Survey is that, among the various purposes of borrowing, family expenditure was generally the most important. In 1957-58, borrowings for family expenditure were as high as 81 per cent of the total borrowings of an average family in Monghyr district, 80 in Deoria, 67 in Quilon, 65 in Burdwan, 61 in Bangalore, 54 in Sagar, 49 in Jaipur, 47 in Jullundur, 44 in Nizamabad, 35 in Chingleput, 25 in Sorath and 16 in Akola. On the other hand, capital expenditure and current expenditure in agriculture taken together ranged from 15 per cent in Deoria to 81 per cent in Akola. These figures show that, by and large, family expenditure accounted for a greater proportion of the total borrowings of an average family than capital and current expenditure for agricultural improvement. This should not be taken to mean that the rural families did not require more credit for purely agricultural purposes. Considering the fact that, on an average, each cultivator, according to the Indian Co-operative Union, requires Rs. 80 for short-term and Rs. 400 for medium-term loans for cultivation purposes, the average borrowings for such purposes in the 12 districts figuring in the rural credit follow-up Survey would appear to be far lower in comparison, as revealed by the indicator regarding capital expenditure (Rs. 175) in agriculture.

In the circumstances, the finding of the follow-up Survey that, in spite of numerous impediments encountered by co-operatives, the movement has made remarkable progress particularly since 1954-55, is not of any very great significance. For one thing, the pace of expansion and the level of co-operative activity was, according to the report itself, highly uneven in the various districts. For another, the absolute quantum of credit supplied by co-operatives was only Rs. 26 per family in the year of the follow-up Survey. For quite another, an integrated approach to the development of credit and marketing co-operatives was virtually absent because there were no adequate arrangements for inter-linking between credit and marketing. Obviously, such inter-linking was difficult to achieve. Even more difficult should have been the effort, wherever it had been made, to link technical aid with agricultural credit. The general review report does not, of course, reveal whether rural credit societies were at all trying to link technical aid with agricultural credit.

It is in this context that the Indian Co-operative Union's latest report, which is based on its experience of a rural development and credit project in 15 villages near Delhi, acquires a rare significance. The conclusions of the I.C.U. report are: first, its project has established the effectiveness and feasibility of combining technical advice and credit and, secondly, there is the necessity of making economic loans to farmers within a certain time limit. The I.C.U.'s finding that a small farmer—depending on a village moneylender for credit needs—is working on the most expensive capital would need to be seriously pondered. But as of today, according to the Reserve Bank's follow-up Survey, it is the moneylender who reigns supreme in financing agricultural credit. How long it will take for co-operative credit to finance almost all the requirements of agriculturists is anybody's guess, whatever be the current goals and targets in this field. With the slow but steady expansion of co-operative credit in the years to come, it may be that the lending resources of agriculturist moneylenders (who should be mostly landowners themselves and who are now far more important than professional moneylenders will be further augmented by their borrowings at cheaper rates of interest from the co-operative agencies. Such a trend will only detract from the intended significance of the co-operative credit targets and their possible achievement.

TAXATION IN ASIAN COUNTRIES

REFLECTING the increasing tempo of economic activity in underdeveloped countries, governmental incomes are rapidly moving up. The revenues of the governments now form a much higher proportion of the national incomes of these countries than in pre-war years. Further, since most governments are committed to a policy of direct intervention in the economic affairs of their countries, there is naturally a tendency to increase public saving for purposes of investment. The public sector is everywhere growing. To sustain the growth of the public sector and also to give an impetus to

development in the private sector, governments have found it necessary to impose new taxes and also to improve methods of collection. This has not necessarily turned out to be an unmixed blessing, for, in some countries at least, official enthusiasm for new fiscal measures has outrun their sense of discretion and experiments have been made at great cost to the taxpayer.

What is now necessary is not to reverse the upward trend in governmental revenue and expenditure in underdeveloped countries but to streamline fiscal administration to ensure that revenue is obtained without sacrificing the essential incentives for economic progress and to see that non-developmental expenditure is reduced to the barest minimum. On several aspects of this common problem in these countries, the *Economic Survey of Asia and the Far East* 1960, issued by the U.N. Economic Commission for Asia and the Far East (E.C.A.F.E.), throws much interesting light. The point made in the *Survey* is that the proportion of governmental revenue to gross national product has recorded a significant increase in most countries of the region. Between 1950 and 1958, this proportion increased from 17 per cent to 19 per cent in Burma, from 15 per cent to 23 per cent in Ceylon and from 9 per cent to 11 per cent in India. In Japan, however, it declined by 1 per cent to 22 per cent, whereas it remained unaltered at 11 per cent in Pakistan. The proportion is relatively smaller than in other industrially advanced countries. But it must be remembered that there are serious limitations to what underdeveloped countries can raise by way of additional revenue. Another notable feature of the fiscal trends in these countries is that the proportion of government expenditure to the gross national product has been generally higher than the similar proportion for governmental revenue. In 1958, government expenditure constituted 28 per cent of gross national product in Burma, 16 per cent in India, 26 per cent in Japan, and 15 per cent in Pakistan. Clearly, no precise conclusion can be drawn from the relative levels of governmental revenue and expenditure in different countries, for they generally reflect the different levels of economic prosperity and also the divergent attitudes towards what constitute governmental functions and responsibilities.

An analysis of the components of governmental revenue, however, reveals some striking similarities. Thus, with the exception of Japan and the free ports of Hongkong and Singapore, nearly all countries of the region depend to a substantial extent for their revenue on taxation of imports and exports. Thus, the taxes on foreign trade account for some 41 per cent of the total revenue in Burma, 53 per cent in Ceylon, 43 per cent in Indonesia, 20 per cent in Pakistan and 49 per cent in Thailand. In India, however, the tax on foreign trade accounts for only 10 per cent of the total revenue. Taxes on internal transactions including excise and sales taxes also constitute a very large proportion of the total revenue of the Governments in the E.C.A.F.E. region. The report points out that internal taxation has been increased in several countries to serve three main purposes —raising of revenue, curtailment of consumption (especially of luxuries) and saving on imports. It has also made the point that the revenue from excise taxes has increased not so much from the increased consumption or increased rates of duty on the traditional items as from getting a wide range of items in the tax net. Taxes on internal transactions constitute 21 per cent of the total revenue in Burma, 13 per cent in Ceylon, 43 per cent in India, 42 per cent in Japan, 24 per cent in Pakistan and 35 per cent in Thailand.

As is only to be expected, the governments of the developing countries have learned to attach increasing importance to personal income-tax and to tax on corporate profits. All countries except Japan have tax exemption limits, allowances, tax credits for dependents, progressive rates and differential treatment of individuals and companies. A distinguishing feature of the Japanese income-tax system is self-assessment. The taxpayer estimates his income and pays the estimated tax, and official adjustments are subsequently made on the basis of actual results. The tax on income and wealth accounts for 25 per cent of the governmental revenue in Burma, 23 per cent in Ceylon, 25 per cent in India, 47 per cent in Japan and 22 per cent in Pakistan. The tax exemption limit varies from country to country. It is, however, interesting to note that this limit is 11.5 times the per capita income in India. The relative multiple is 19 in Burma, 12.5 in Ceylon, 15.6 in the Philippines and 9.8 in Malaya. In industrially advanced countries, the multiple is much less because the per capita income itself is high. Thus, the multiple is 1.3 in the U.S., 1.9 in Canada and the U.K., 2.1 in France, 2.2 in Germany and 3.4 in Japan.

Incentives are provided in most countries in order to promote investment. There is a tax holiday for new and necessary industries in the Philippines and for approved industrial projects in Ceylon and Pakistan (as in India). There is also an allowance of higher and accelerated depreciation for fixed investment in approved channels. Again, in Burma, profits re-invested within one year are exempt from income-tax. This is obviously intended to stimulate self-financing of industrial expansion.

The report is, however, critical of land tax. It feels that, in Burma, India and Pakistan, the stagnant land tax absorbs administrative resources out of all proportion to its yield; income, excise and sales taxes, on the other hand, are only inadequately enforced. It feels that land tax is "inflexible and regressive from the point of view of fiscal development; if need be, it could be abolished altogether and the administrative resources released could be redirected to administer a simplified, more rational and flexible system of income, property and commodity taxes."

The Indian Taxation Enquiry Commission which examined the issue of land revenue reached the conclusion that it could not be abolished. It felt that, particularly in view of the financial needs of State Governments in the context of the implementation of their development schemes, a majority of which are for the benefit of the rural areas, it was difficult to envisage "any real substitute" for land revenue. It may be that, as agricultural income-tax becomes a more prominent feature of India's fiscal system, it will be possible to reduce the incidence of land revenue to a level at which it will cease to be of any practical significance. It may, however, be wondered whether such an improvement in the tax system is possible in India where substantial landholdings are being eliminated under ceilings legislation, or in other underdeveloped countries. The plain fact is that farmers understand land revenue which has been with them for generations, and they are likely to regard even a less onerous substitute for it as some new-fangled device.

The E.C.A.F.E. report makes a few eminently sensible suggestions for fiscal reform. It rightly insists that the tax structure should be simplified. For instance, it points out that, if an accessions tax on beneficiaries were introduced, it would obviate the need to have inheritance tax and gift tax. Again, if the scope of income-tax should be extended to cover lower income groups, tax forms and assessment methods should be simplified. Small traders or business men could be assessed on their gross income. Self-assessment could be made a general rule for non-wage incomes and tax tables for ready reckoning distributed as in Japan.

These suggestions are well worth examination not only in India but in other underdeveloped countries. There is need as well as scope for streamlining tax administration in these countries. If this was done and methods of taxation realistically revised, at least in respect of low-income assessees, it would not only reduce the burden on the overworked tax administrators but also increase the revenue through the exertions of officials who are relieved from the necessity to spend much time and energy over incomes which yield comparatively little revenue.

DOCK STRIKE AVERTED

WHAT would otherwise have paralysed the entire foreign trade of the country has happily been averted. The All-India Port and Dock Workers' Federation which had served notices of strike at the major ports from the 15th inst. has now withdrawn them. That wiser counsels have prevailed with the leaders of the usually militant dock workers is, indeed, commendable. Equally commendable is the role played by Mr. Raj Bahadur, Union Minister for Shipping, who conducted the negotiations with labour leaders. He was, of course, ably assisted by the Port Trust authorities, particularly by the Chairman of the Bombay Port Trust, Mr. A. L. Dias. The negotiations between the officials and the representatives of workers, we are told, were held in a cordial atmosphere, with goodwill on both sides. And the two sides have also mutually agreed to devise ways and means of avoiding strikes and lockouts at ports in the larger interests of the country. All this is certainly encouraging and it is to be hoped that labour-management disputes, if any, in other industries and trades will be amicably settled in like manner during the crucial third Plan period.

The whole nation has heaved a sigh of relief at the happy ending of talks between the port authorities and the dock workers. For, if the talks had failed and, as a result, the workers had launched a hasty and ill-advised step such as a strike, the entire cargo loading and unloading operations would have been thrown out of gear with the same disastrous consequences as were experienced during the nation-wide strike by port and dock workers three years ago. A strike for even one day would have done much harm to the country by putting up the landed cost of capital goods imported and by interrupting the supply and inflating the prices of other essential imports. It has only to be recalled here that the average daily traffic handled by the major ports is as much as 85,000-90,000 tons, imports accounting for 55,000-60,000 tons and exports for 30,000-35,000 tons.

There was absolutely no provocation for the threatened strike. The Committee constituted by the Government in August 1958 with Mr. F. Jeejeebhoy as Chairman was about to submit its report and the Government had stated that it would try to give immediate effect to its recommendations. Why, then, did the workers hold out the threat of strike? Perhaps, they thought that they might succeed in getting the report of the Jeejeebhoy Committee and/or that of the Second Pay Commission bypassed in basic matters, so that they could get greater benefits than those conferred by these bodies, as well as by the earlier Choudhury Commission. This was a wrong attitude and it is good that the workers have realised their mistake betimes.

By withdrawing the strike call, the workers have not lost anything. On the contrary, they have gained considerably. The implementation of the Jeejeebhoy Committee's award will doubtless benefit greatly the majority of dock and port workers: 60 per cent at Bombay and a slightly higher percentage at Calcutta and Madras. The pay of each worker will be fixed in the scale prescribed by the Committee at such a minimum stage in that scale as would give the incumbent an increase in pay which is not less than the last increment drawn by him. A proviso is, however, attached to the effect that no employee will get more than the maximum of the scale fixed by the Committee. If, in any case, the scale prevailing prior to the revision is higher than the one fixed by the Committee, the higher scale shall continue to apply. There will thus be no reduction in the existing scale of any post even for future incumbents. Where any scale has been prescribed by an award of a tribunal, the employees concerned will be entitled to continue in that scale, if they so desire, so long as the award remains in force.

It is thus evident that, under the Jeejeebhoy award, every worker, whatever be his emoluments, stands to gain at least one increment. Further, since the award is to be given retrospective effect from October 1957, each worker will get a lump sum of money as back pay. Maybe, some workers here and there will not get much benefit from the award. And maybe, the award has not redressed certain other grievances of workers. But it should be viewed not piecemeal but as a whole. Surely, one cannot expect from an award which is formulated on the principle of equal pay for equal work on all-India basis a necessarily equal incidence of immediate advantages in the different ports. Inasmuch as the majority of workers stand to benefit in terms of either higher pay or upgrading of their category or both, as well as from the promotion incentives offered, the port and dock workers would do well to accept the award in good faith. For their part, the authorities must take energetic action to give effect to the recommendations of the Jeejeebhoy Committee without undue delay. In any case, a strike is not the way to settle a dispute, and no happy solution can be found in an atmosphere of strike and conflict. Quite often have the port and dock workers held out threats of strike. It is high time that both the workers and the authorities made earnest efforts to ensure "peace" for a sufficiently reasonable period of time, so that the implementation of the series of development programmes under the third Plan could proceed smoothly according to schedule.

MARKET GOSSIP

Government Borrowing Programme

IT is widely anticipated that the Central Government will soon announce the second part of its borrowing programme for the current year. Only three weeks ago, the Government announced the conversion offer for three maturing loans, that is, 3½ per cent National Plan Bonds (first issue) 1961, 2½ per cent Loan 1961 and 3 per cent Hyderabad Loan 1951-61. The amount actually subscribed was Rs. 93.57 crores, as against the aggregate outstanding of Rs. 138.89 crores. The actual subscription represents no more than 40 per cent of the Rs. 235-crore target of borrowing envisaged in the Central budget for 1961-62. The balance thus comes to Rs. 141 crores. It is not known whether this entire sum will be raised by way of one single cash loan or two such loans. Indications are that two loans may be floated—a medium-dated loan of Rs. 65 crores carrying interest of 3.5 per cent and a long-dated loan of Rs. 75 crores carrying interest of a little over 4 per cent.

One of the loans is expected to come early next month, as the authorities would appear to feel that conditions in the money market will have improved significantly by then. It is true that money is today comparatively easier in the sense that borrowers are not finding it difficult to obtain their requirements. But the supply of funds has not improved so markedly as is usually the case at this time of the slack season, with the result that interest rates continue to rule pretty high. Inter-bank call money is currently quoted at 4¼ per cent. Although this rate is well below the level of 5-5½ per cent standing until recently, it is considerably higher than the rate of 3½ per cent that prevailed in the corresponding slack season last year.

So far as the banks are concerned, there has been lack of interest in the borrowing programme of the Government. This is not surprising because the surplus funds available with the banks for investment in Government loans are not as large as in the 1960 slack season, as the following statement pertaining to scheduled banks will show:

(In crores of rupees)

	2-6-1961	3-6-1960	5-6-1959
Net deposits	1,840.68	1,950.41	1,899.36
Total bank credit	1,281.33	1,134.07	1,005.88
Credit ratio %	69.61	58.15	59.10
Investments in Government Securities	550.45	755.64	634.75
Investment ratio %	29.90	38.74	37.35
Cash and balances with Reserve Bank	125.56	142.12	114.61
Cash ratio %	6.82	7.29	6.74
Borrowings from the Reserve Bank	29.27	47.10	9.52

It will be seen from these figures that, as compared with the position a year ago, the total deposits of the banks have shrunk by Rs. 110 crores, while bank credit (advances plus inland and foreign bills discounted) has risen by more than Rs. 147 crores, and the outstanding borrowings from the Reserve Bank are still large. It is doubtful whether the upward trend in the demand for bank credit will be reversed in the remaining four months of the slack season. At any rate, there is no likelihood of its reduction to any appreciable extent, thanks to the persistently rising (a) industrial capacity and production, (b) imports of raw materials and capital goods and (c) prices of commodities. In view of these factors, the response of banks to the cash loan or loans may not be very encouraging. What is more, the banks may utilise a large part of whatever additional funds they get by way of fresh deposits and repayment of seasonal advances for repaying to the Reserve Bank. The Government can, however, expect to get good support, as usual, from other institutional investors such as the L.I.C. and provident funds. It can also count on the Reserve Bank to absorb the portion of loans not taken up by the market.

Coal Movement By Sea

The Government of India has just announced the levy of an additional cess of 80 nP per ton on all coal despatched from collieries with effect from the 8th inst. for the purpose of meeting the additional expenditure which will be incurred for stepping up the movement of coal by sea. With this levy, the total cess on coal now comes to Re. 1.68 per ton. The additional levy now imposed is expected to yield an annual revenue of about Rs. 5 crores. It is not known whether this is related to the upper limit of Rs. 4 per ton by way of excise duty on coal which is authorised under the Coal Mines (Conservation and Safety) Amendment Bill which was passed by the Lok Sabha last month. Under this amended legislation, the Government has acquired powers to increase the excise duty from the previous Re. 1 per ton to a maximum of Rs. 4 per ton. The two main purposes of this measure are: first, to provide financial resources to the Coal Board to meet the cost of a central ropeway scheme in connection with stowing operations in the Jharia and Raniganj coalfields for the purpose of extracting their high quality coal with a measure of safety to life and property; and, secondly, to provide an element of subsidy in respect of coal movement by sea, in view of the higher cost of transport by coastal shipping as compared with the cost of haulage by the all-rail route.

It is calculated that the element of subsidy involved in respect of the proposed movement of an additional one million tons of coal a year by sea to the southern and western coastal States will be of the order of Rs. 4 crores. The subsidy, which is intended to make good the difference between the higher cost of transport by sea and the lower cost of transport by rail, it is feared, will have to be borne ultimately by industrial consumers. This, in its turn, may mean that the landed cost of coal supplies to Southern and Western India will be higher to some extent, although the Government says that it will not be so. Industrial units in these areas hope that transport of coal by sea would be a temporary measure and that the railways would be enabled to increase their transport capacity in the near future. It is in this context that Mr. Swaran Singh's announcement at Chandigarh the other day that the railways will increase the number of coal wagons from 1,900 to 2,100 per day northward beyond Moghalsarai for carrying coal from the Bihar and Bengal collieries which produce about 80 per cent of the country's total output of coal, and that the Government will lay stress on encouraging greater movement of coal from the coalfields in Madhya Pradesh, Andhra and Orissa to regions far away from the Bihar and Bengal coalfields, should be welcomed. But even this will only bring partial relief. Fuller relief can be had, if at all, when the wagon capacity of the railways is increased with expedition in the first one or two years of the third Plan. It would need to be added that, even in respect of coal that is to be moved by sea, the railways should be instructed to ensure prompt supply of wagons at the ports so that the steamers can discharge coal without any delay. Even in Southern and Western India, there will be need for greater availability of wagons on the railways for moving the coal discharged at the ports to different destinations in the coastal States concerned.

While the additional cess may add to general industrial costs indirectly through a rise in the price of coal in the country as a whole, it may be that its incidence on the price structure of industry will be relatively negligible. But in some industrial and commercial circles, the view is held that the ex-factory prices of certain commodities which are determined by the Government on the recommendation of the Tariff Commission might not be adequate for absorbing the increased costs resulting from the rise in the price of coal. This, obviously, is a matter for further examination.

Oils and Fats

Prices of oilseeds and oils have been steadily going up in the country, despite the generally larger output in the 1960-61 season and the none too satisfactory outlook on the export front. It is beyond doubt that the increase in domestic consumption of seeds and oils both for edible and industrial purposes constitute the major causal factor behind this rise in prices. The present prices of seeds and oils are higher by as much as about 15 per cent as compared with those a year ago. The wholesale price index (base: 1952-53=100) of oilseeds for the week ended 13th May 1961 stood at 157.4, as against 139.2 a year before and 153.5 in December 1960. The index for edible oils stood at 160.3, as against 138.4 and 154.0. While almost all seeds and oils have shared in the increase, there are wide differences in the degree of price movements. Groundnuts are in the forefront, with the prices having gone up by over 20 per cent over a year, as also groundnut oil, values of which are still higher, that is, by over 25 per cent. The following table shows the latest available prices for seeds and oils in Bombay market, as compared with those prevailing three months, six months and a year ago:

	Latest available	3 months ago	Beginning of 1961	A year ago
	Rs.	Rs.	Rs.	Rs.
Groundnut				
Nizam bold	55.00	54.12	45.00	44.10
Khandesh quality	55.00	55.00	46.75	45.80
Oil ex-mill	23.25	22.80	19.62	18.50
Castorseed				
Ready Madras	35.60	35.31	34.81	33.00
Ready Kanpur	33.75	33.37	33.62	31.80
Oil Commercial	15.10	15.00	14.97	14.10
Linseed				
Bold ready	39.00	38.75	38.75	38.00
Oil	17.05	17.00	16.80	14.80
Nigerseed (Madras)	41.50	39.75	38.00	38.00
Kardiseed	26.75	26.50	24.50	23.00

N.B.—Quotations for seeds are per 50 kgs and oils 10 kgs.

The upward trend in prices would have been arrested but for the lag in production of oilseeds. The total output of the five major oilseeds in 1960-61 is estimated (private sources) at only about 6.7 million tons, which compares unfavourably with the second Plan target (revised) of 7.6 million tons. According to private estimates, the total production of groundnuts (in shell) in 1960-61 was slightly higher at 4.4 million tons as compared with the previous year. The output of rape and mustard has risen from 1.04 million tons to 1.40 million tons. Production of linseed and sesame has been well maintained, whereas there is a decline in production in respect of castorseeds, that is, from 106,000 tons to 98,000 tons.

In the face of slow growth in domestic production, rapid increase in demand and, above all, restriction on their imports, it is not surprising that Indian prices should have been distinctly out of parity with world prices. By and large, the world supply position has been quite comfortable in respect of such commodities as groundnuts, linseed, and coconuts. It is reassuring to hear from Mr. J. C. A. Faure of Unilever that, despite short crops in China, there would be no shortage of fats and oils in 1961, thanks to improved supplies elsewhere. In his speech at the annual meeting of the International Seed Crushers' Federation held at Stockholm last week, Mr. Faure estimated the total world production of oils and fats (including animal fats, as well as edible, industrial and marine oils) at 32,595,000 tons in 1961, or a rise of over half a million tons over the previous year. As much as half of the increase is accounted for by African output. Some increase is also expected from Latin America, Russia, the U.S., India, Pakistan and the Philippines. The supplies available for export in 1961, according to Mr. Faure, would be 8,419,000 tons.

The U.S. Department of Agriculture, it may be noted in this connection, estimates the total world production of fats and oils at 32.5 million short tons, more or less close to the figure forecast by Mr. Faure. This compares with 31.5 million tons in 1960. The expansion was particularly marked in the case of edible oils, with groundnuts (fats and oil equivalent) touching 2.5 million tons (as against 2.3 million tons in 1960), soyabeans 3.9 million tons (3.8), cottonseed unchanged at 2.3 million tons and other edible vegetable oils 4.6 million tons (4.4). On the whole, the general world supply and demand position is bound to be in equilibrium, except for some regional variations. But in the case of oils in India, there is hardly any immediate prospect of a perceptible decline in values. Much will depend on the nature of monsoon conditions during the new sowing season that is in the offing, and also on whether the authorities will permit the import of a sizable quantity of relatively cheaper edible oils, such as soyabean oil, which will ease the tight supply position of fats and oils within the country.

Aid to Pakistan

As was briefly mentioned in our last issue (vide page 1075), the Consortium of Governments and institutions interested in development assistance to Pakistan met at Washington on the 5th inst. to discuss further aid for Pakistan during the second Five-year Plan which began on 11th July 1960. The meeting ended on the 7th inst. The Consortium members undertook to make additional funds aggregating $220 million available for commitment during the second year of the Plan commencing from 1st July next. Aid amounting to about $230 million has already been committed for the Plan by the members of the Consortium. These combined commitments of $550 million are expected to enable Pakistan to pay for essential imports required to maintain the economy in the coming year and to sustain the momentum of development. The country-wise commitments—in million dollars—for additional aid during 1961-62, subject as appropriate to legislative action or other necessary authorisation, the figures in brackets showing funds already committed, are: Canada 18.0 (19.8); France 10.0 (nil); West Germany 25.0 (37.5); Japan 20.0 (20.0); United Kingdom 19.6 (22.4); United States 150.0 (129.6); World Bank and I.D.A. 77.4 (nil); total 320.3 (229.3). In addition to these commitments, the U.S. has already undertaken to assist Pakistan's second Plan by making available surplus commodities; an agreement for a further amount of assistance in this category is currently being discussed between the Governments of the two countries. Pakistan is also receiving grants of wheat from Canada.

The first reaction of official and non-official circles in Pakistan to the firm aid offers announced by the Consortium has been one of great disappointment, in distinct contrast to the wide satisfaction expressed in India over the commitments promised for it. The Finance Minister of Pakistan himself has stated that he is disappointed that the Consortium has not yet met the country's need fully for the next two years. One wonders if there is any genuine cause for "disappointment" in the light of the Consortium's assurance to hold a further meeting later in the year to consider Pakistan's revised development programme and to decide on the extent and nature of assistance of the second and third years of the Plan taken together. The other criticism by Pakistan that the aid authorisations of $550 million for the first two years of the second Plan are much less than those ($2,225 million) made to India for 1961-62 and 1962-63 is wholly unfair for the simple reason that the population of India is nearly five times that of Pakistan and its foreign exchange gap is considerably more.

"Not Ordinarily Resident"

The question of defining residence for purposes of income taxation has always presented difficulties. When the 1939 income-tax legislation substituted the basis of accrual of income for the remittance basis, a special category of persons, namely, "resident but not ordinarily resident" was created on the recommendations of the Ayres Committee which had then suggested that justice would be done to all interests concerned if 'residence' was defined on the model of the British Codification Committee, with some modifications. Accordingly, Section 4B was introduced which defines persons "not ordinarily resident" as under:

"An individual is 'not ordinarily resident' in the taxable territory in any year if he has not been resident in the taxable territory in nine out of the ten years preceding that year or if he has not during the seven years preceding that year been in the taxable territory for a period or for periods amounting to more than two years." (Section 4B.)

The Indian Income-tax Amendment Bill now before the Select Committee, however, has sought to abolish the distinction between "resident and ordinarily resident," on the one hand, and "resident but not ordinarily resident" on the other. Under the present law, the first category of persons has to pay income-tax on their foreign income irrespective of whether it is brought into India or not, while

SHARE MARKET WEAK

VALUES MOVE DOWN

(From Our Own Correspondents)

BOMBAY, 15th *June*

AFTER an initial spell of firmness, the share market developed weakness in the later sessions of the week. Early in the week, operators' interest was concentrated on many popular scrips which tended to move up and stray bull liquidation was readily absorbed. Even the rumours of official measures to check effectively the speculative activity did not have any effect. The upward trend in prices was, however, halted late on Tuesday the 13th inst. when several counters suffered a sharp setback following apprehensions that margin requirements in the "volatile" shares might be tightened. Some bulls were nervous and began to liquidate as much of their holdings as possible. In particular, steel shares were marked down on fears that the earlier expectations regarding an increase in dividend might not materialise. Textiles also ruled weak. In the miscellaneous section, too, quite a number of popular scrips such as Telco, National Rayon, Bombay Burmah and Premier Construction were subjected to selling pressure. In sympathy, cement, chemical and other shares were subdued. The bearish trend persisted practically till the close today.

In the steel section, Tata Steels which opened at Rs. 162.75 evinced good speculative interest and spurted to Rs. 164.25 on Tuesday the 13th inst. At this level selling ensued and the scrip fell to Rs. 159.50. The net loss over the week is Rs. 3.25. Indian Irons were well supported on the first three days, the value advancing from Rs. 28.35 to the peak of Rs. 28.70 on Saturday. Subsequently, they declined to Rs. 28.15. Mukand Irons receded from Rs. 30 to Rs. 29.25.

Textiles generally ruled easy. Standards slumped by Rs. 75 to Rs. 1,482 on rumours that the shareholders of the Company might not get fixed allotment in the proposed chemical venture. Morarjees dropped Rs. 20 to Rs. 413. Khataus lost Rs. 11.25 to Rs. 590. New Citys decreased by Rs. 10 to Rs. 140. Finlays receded by Rs. 8 to Rs. 315. Mysores eased by Rs. 3.50 to Rs. 72 and Azamshahis by Rs. 3 to Rs. 70. Podars and Minervas shed Rs. 2 each to Rs. 150 and Rs. 80, respectively. Kohinoors lost a rupee to Rs. 315. India Uniteds were dull at Rs. 15.28. Centurys received good support and rallied from Rs. 703 to touch the peak of Rs. 727 on Thursday but receded on persistent profit-taking to Rs. 713 today. Simplex, however, evoked special inquiries and spurted by Rs. 6 to Rs. 206. Tata Mills rose by Rs. 3.30 to Rs. 65.50. Indores and Gokaks put on Rs. 3 each to Rs. 157 and Rs. 181, respectively. Bombay Dyeings began the week at Rs. 68.60 and improved to Rs. 71.90, but eased later to close at Rs. 70.50. Sassoons advanced by Re. 1.50 to Rs. 60.50. Shree Niwas gained a rupee to Rs. 266. Swadeshis and Vishnus put on 50 nP each to Rs. 280 and Rs. 130, respectively.

Sugar shares were neglected. Walchandnagars lost as much as Rs. 7 to Rs. 168. Phaltans receded by Rs. 3 to Rs. 135. Belapurs declined by Re. 1.50 to Rs. 135. Maharashtras, however, received bull support and advanced from Rs. 185.50 to Rs. 191.50.

In the cement group, A.C.C's rose by 50 nP to Rs. 164.50 on Monday. Thereafter, profit-taking ensued and the scrip drifted down to Rs. 162.75. The net loss over the week is Re. 1.25. Digvijays shed a rupee to Rs. 157. Orissa eased by 16 nP to Rs. 14.40, Bagalkots by 12 nP to Rs. 8.48 and Jaipur Udyogs by 32 nP to Rs. 11.12. But Dalmias recorded a rise of 12 nP to Rs. 12.12.

Among shipping, Scindias were subjected to selling and receded by 68 nP to Rs. 14.28. Bharat Lines lost 12 nP to Rs. 5.12. Great Easterns, however, were fully maintained at Rs. 15.08. In the automobile section, Premier Automobiles put on Re. 1.75 to Rs. 173.50. Hindustan Motors were well fancied and gained 56 nP to Rs. 23.24. Auto Products were firm at Rs. 13.

In the rayon group, National Rayons elicited good enquiries early in the week and spurted by Rs. 12.50 to Rs. 586. In the following two sessions, however, they were hammered down to Rs. 570. Gwaliors receded by Rs. 2 to Rs. 53.30. Barodas lost a rupee to Rs. 124. Indian Rayons dropped 50 nP to Rs. 62. South India Viscose, however, hardened by a rupee to Rs. 124.

A drop of Rs. 35 to Rs. 535 in Indian Dyestuffs was the feature of trading in the chemicals section this week. Amar Dyes were hammered down from Rs. 415 to Rs. 396.25. Dharamseys receded by Rs. 11.25 to Rs. 288.75. Poly Chems fell by Rs. 5 to Rs. 230. Citrics lost Rs. 3.50 to Rs. 50. Tata Chemicals shed 20 nP to Rs. 20.28. Adarsh Chemicals were dull at Rs. 103. But Ultra Marines hardened by Rs. 3.50 to Rs. 63. Colour Chems gained Rs. 2.50 to Rs. 375. The Company has decided to issue at par new shares in the ratio of one share for every share held. Dharangadhras put on 50 nP to Rs. 131.50. Synthetics gathered 50 nP to Rs. 173.50. The working results of the Company for the year ended 31st March 1961 disclose a net profit of Rs. 3.87 lakhs after providing Rs. 6.47 lakhs for taxation and Rs. 31,717 for depreciation.

In the engineering section, Premier Constructions declined by Rs. 6.50 to Rs. 205.50. Larsen and Toubros receded by Rs. 4 to Rs. 42.25, as the gross dividend at Re. 1.80 for the year ended 31st March 1961 failed to satisfy shareholders. Cooper Engineerings eased by Rs. 2.50 to Rs. 169. Alcock Ashdowns lost a rupee to Rs. 298. Texmacos shed 44 nP to Rs. 20.20. Structural Engineers were quiet at Rs. 171. But Greaves Cottons put on Re. 1.25 to Rs. 178.25. Jyot's gained Rs. 2.50 to Rs. 186.50. New Standard Engineerings gathered Rs. 2 to Rs. 186. Telcos opened at Rs. 379 and advanced to Rs. 383.50 on Saturday the 10th inst. but fell to Rs. 376.50 today.

In the miscellaneous section, Voltas climbed down by Rs. 18.50 to Rs. 296.50. Bombay Burmahs received good support in the earlier sessions and spurted from Rs. 652 to Rs. 663 on Tuesday the 13th inst. But liquidation by tired bulls brought the value down to Rs. 644. Ceat Tyres lost as much as Rs. 22.50 to Rs. 207.50. Wimcos shed Rs. 2 to Rs. 257. Sirpur Papers eased by 88 nP to Rs. 15.56. Tata Oils receded by Rs. 5.20 to Rs. 74 and Chemicals by 20 nP to Rs. 20.28. Bombay Oxygens dropped Rs. 3 to Rs. 55.50. Killicks decreased by Re. 1.50 to Rs. 100.50. Indian Hume Pipes were neglected at Rs. 179.

* * * *

Madras Stock Exchange

MADRAS, 14th *June*

Equities on the Stock Exchange ruled fully steady during the week under review, barring sugars and a few miscellaneous scrips, which encountered persistent selling. Textiles continued to attract attention of investors, with values of several shares moving up. Teas were quite strong on reports of encouraging offtake. There was an all-round improvement in the coffee group, despite the prolonged uncertainty regarding marketing. Rubbers were more or less maintained at last week's levels. Banks and electricals were well fancied. Investors, however, were reluctant to enter into new commitments in sugars, notwithstanding the grant of a quota for Indian sugar by the U.S. and prospects of sizable purchases by Pakistan and Iran. Miscellaneous industrials were generally easy in the absence of fresh incentives, except chemicals which met with fair demand and tended to rise.

Among textiles, Dhanalakshmis jumped up by Rs. 20 to Rs. 235 owing to scarcity of floating stocks and enlarged support. Premiers spurted by Rs. 9.50 to Rs. 269.50. Buckinghams advanced by Rs. 3.75 to Rs. 221. Lakshmis rose from Rs. 170 to Rs. 175 before finishing at Rs. 173. Janardanas scored a gain of Rs. 2, today's closing being Rs. 75.50. Anglo-Frenchs put on Rs. 2 to Rs. 135 on expectations of higher dividend. South Indias improved by a rupee to Rs. 172. Coimbatore Cottons gathered a like amount to Rs. 171.

Teas, as already stated, were strong. Haileyburias improved by 75 nP to Rs. 15.25. Peermades hardened by 13 nP to Rs. 23.43. Parksides and Waterfalls picked up 10 nP each to Rs. 29.10 and Rs. 3.15 respectively. Chembras were better by 5 nP at Rs. 3.88. Blue Mountains and Periakaramalais were fully steady, the former at Rs. 3.32 and the latter at Rs. 3.95. In the coffee group, Consolidated Coffees increased by 35 nP to Rs. 21.50. Ouchterlony Valleys rose by 14 nP to Rs. 3.85. Coffee Lands were higher by 10 nP at Rs. 18.75. But Anaparais eased by 10 nP to Rs. 3.90. As for rubbers, Mercaras hardened by 10 nP to Rs. 8. T.R. & Ts strengthened by 5 nP to Rs. 9.90. Midlands were maintained at Rs. 11.80, as also Travancores at Rs. 11. Cochin Malabars rose from Rs. 7.98 to Rs. 8.03 before closing at Rs. 7.85.

Sugars were easy. Cauverys suffered a loss of 50 nP to Rs. 131. East India Distilleries declined by 25 nP to Rs. 43.50. Deccans dropped 10 nP to Rs. 14.05 and United Breweries 5 nP to Rs. 108.

In the miscellaneous section, Tube Investments receded by Rs. 15 to Rs. 265. Western India Plywoods fell by Rs. 10 to Rs. 230. India Cements shed 5 nP to Rs. 6.30 and Dalmias 4 nP to Rs. 12.06. But Andhra Cements gathered 10 nP to Rs. 10.60. Among others, Aluminium Industries lost 10 nP to Rs. 23.90 and Ashok Leylands 5 nP to Rs. 9.30. Jeewanlals were quiet at Rs. 8.08, despite the announcement of an interim dividend of 5 per cent, taxable, for 1961. Chemicals were somewhat active. Metturs and Mysore Fertilisers hardened by 10 nP each to Rs. 14.60 and Rs. 11.35, respectively. F.A.C.Ts picked up 2 nP to Rs. 10.45.

Notice

LARSEN & TOUBRO LIMITED

I.C. House, Dougall Road, Ballard Estate, BOMBAY

NOTICE IS HEREBY GIVEN THAT THE Register of Members and the Share Transfer Books of the Company will be closed from Monday the 26th June, 1961 to Saturday the 22nd July, 1961, both days inclusive, for the purpose of payment of dividend.

The Dividend when declared for the year ended 31st March, 1961 will be made payable on or after the 5th August, 1961 to those Shareholders whose names stand on the Share Registers of the Company on 22nd July, 1961.

Shareholders are requested to notify to the Company any change in their present registered address as early as possible.

By Order of the Board of Directors,

FOR LARSEN & TOUBRO LIMITED,

L. & T. (MANAGEMENT) PRIVATE LIMITED,

N. M. DESAI,

Director,

Managing Agents.

Dated 15th June 1961.

(Concluded from previous page)

persons in the second category are not liable to pay Indian income-tax on their foreign income if the same is not received in India by them or on their behalf. As the abolition of the distinction is likely to cause hardship to certain sections, it is quite understandable that the Porbander Chamber of Commerce has submitted a comprehensive memorandum on this subject to the Select Committee dealing at length with the repercussions of the proposed alteration in the provisions concerned.

The memorandum points out that Indians living abroad, thanks to Section 4B, are able to visit India and to maintain their business, social and other relations with this country without inviting any heavy tax liability. Their visits prove advantageous to this country, inasmuch as these affluent persons contribute lavishly to charitable purposes, and also substantially to the tourist traffic which in its wake brings valuable foreign exchange. During their casual or occasional visits, they also explore business possibilities in India—possibilities which may be beneficial to this country from the point of view of its economic development. The effect of the proposed Bill, the memorandum adds, would be that these persons would not prefer to visit India if complicated questions of tax liability arise as a result of such visits.

It may, however, be recalled here that the question of having a special category of "resident but not ordinarily resident" was considered by the Income-tax Investigation Commission of 1949 (Chairman: Sir S. Varadachariar). The Commission had recommended that this category be abolished. In this connection, it observed as follows:

"Whatever might have then been the need or justification for special treatment of these groups (European officials and Indian traders having ancestral homes in India), it seems to us no longer necessary or right to continue to recognise them as special cases. Under the conditions existing today, the class of officers who mainly constituted the first group has ceased to exist. As regards the rest of the two groups, it is difficult to understand why their residence in India should have been minimised in importance by calling it technical residence. No one is going to be taxed on the ground merely of casual or occasional residence. The tests prescribed in Section 4A are in many cases sufficient to exclude hardship; and if any still remain, they may be dealt with by appropriate changes in Section 4A (*a*) (ii). It is not easy for the income-tax authorities to determine on the kind of evidence that will be available after the lapse of seven years how many days a person has been present in India during that period. Most of the replies to our questionnaire agree that this special category of 'not ordinary resident' may be omitted. We recommend accordingly."

It would be quite clear from the Commission's views that the present Bill which seeks to abolish the distinction has not done so out of oversight or caprice as is thought by some critics. However, the question has certainly two sides and the Select Committee would, therefore, do well to examine it thoroughly.

INDIAN RUBBER REGENERATING COMPANY

The Indian Rubber Regenerating Company Ltd., sponsored by the House of Kamanis (Chairman: Mr. Kandathil Mammen Philip), has announced the public issue amounting to Rs. 17.15 lakhs. The issue, which will open for subscription on the 26th inst., consists of 17,150 equity shares of Rs. 100 each. The balance of the total subscribed capital of Rs. 35 lakhs has already been taken up by promoters, directors, and their friends and associates. The subscribed capital of Rs. 35 lakhs is expected to meet the major portion of the total capital outlay of Rs. 52 lakhs. The remaining Rs. 17 lakhs, which represent the cost of plant and machinery imported, are proposed to be raised by way of a loan from the Industrial Credit and Investment Corporation.

The Company, it will be recalled, was incorporated in December last with the object of setting up a plant at Thana in Greater Bombay to undertake the manufacture of various grades and types of reclaim rubber. The entire requirement of reclaim rubber, which is used mainly by battery containers, as also by tyre manufacturers, etc., is now being exclusively met from imports. The proposed plant, when it goes into full production, is expected to result in the saving of foreign exchange to the tune of Rs. 50 lakhs annually. The consumption of reclaim rubber in 1960 aggregated 4,800 tons, as against 4,500 tons in 1959 and 4,051 tons in 1958, and is expected to go up further to 10,000 tons in the near future. The major raw material is scrap rubber which is also available in adequate quantities indigenously. Viewed thus, the prospects for the Company are, indeed, bright.

ACME PIG IRON AND CENTRIFUGAL PIPE WORKS

The public issue of the Acme Pig Iron and Centrifugal Pipe Works Ltd., Bombay, will open for subscription on Monday next. The issue amounts to Rs. 10 lakhs, divided into 20,000 equity shares of Rs. 100 each at par. This represents half the aggregate issued capital of Rs. 20 lakhs, the other half having already been subscribed by Directors and their friends.

The Company proposes to put up a plant with an annual capacity of 30,000 tons, for the manufacture of special and refined grades of low [illegible] phor and low sulphur pig iron which are [illegible] the production of high grade quality [illegible] automobile, machine tool industries, etc. [illegible] is to be located at Khopoli near Poona. [illegible] pany proposes to undertake later the [illegible] of 15,000 tons of steel castings and [illegible] composition annually. The Company [illegible] into an agreement with the Belgian [illegible] Compagnie General Des Condultes [illegible] the designers and manufacturers of [illegible] providing the required technical know[illegible] erection and commissioning of the [illegible] duction of pig iron.

NEWS IN BRIEF

THE Southern Zonal Council is expected to meet in the third week of July at Bangalore, according to Mr. Lal Bahadur Shastri, Union Home Minister.

The allocation for the third Plan for education has been fixed at Rs. 410.37 crores, of which the States outlay will be Rs. 338.37 crores and that of the Centre Rs. 72 crores.

The State Bank of Travancore has taken over the Kottayam Orient Bank and the Bank of New India, which have been under moratorium for the past six months, with effect from 17th inst.

A new oilfield has been discovered by the Oil and Natural Gas Commission at Kalol, a *taluka* town, 17 miles from Ahmedabad, Gujarat, according to Mr. K. D. Malaviya, Union Minister for Mines and Oil. The production from this field is expected to start within two or three years.

The Government of Bihar has set up a 13-man Wage Committee for the mica industry with Mr. S. N. Pande, Labour Commissioner, as Chairman. The Committee consists of five representatives—one each of the management and trade unions and three independent members.

India has decided to join the International Sugar Agreement. The instrument of accession will be deposited in the London headquarters of the International Sugar Council. India is the twenty-sixth exporting country to become a member. Eighteen importing countries are also its members.

It is reported that the Oil and Natural Gas Commission has offered to sell 1,500 tons of oil a day from its Ankleshwar oilfield to the Burmah-Shell (900 tons) and Stanvac (600 tons) refineries from September next. The price at which the refineries are to buy this crude oil is under discussion.

The Punjab-Himachal Pradesh Soil Conservation Board has approved schemes of soil conservation, costing more than Rs. 4.21 crores. The Board will spend Rs. 2.69 crores in Himachal Pradesh and Rs. 1.52 crore in Punjab for checking silt going down the Sutlej and the Beas. This will prolong the lives of Bhakra and Pong dams.

A team of geologists of the Mysore State Mining and Geology Department has discovered the existence of 110 million tons of workable iron ore reserves in the western parts of Mysore State. These reserves are valued at about Rs. 500 crores. The estimates of the ore reserves are provisional and a quantity of 16,000 tons of iron ore prospected by the team are now made over to the Board of Mineral Development for export.

An agreement between the Governments of India and Czechoslovakia relating to air services was signed at Prague on 19th September 1960, and thereafter it was approved by each country in compliance with Article XIV(1) of the Agreement. The agreement came into force with effect from 15th inst., as a result of the exchange of instruments of ratification/note of approval indicating the approval of the agreement by each country in accordance with its legal procedures.

The Railway Board has sanctioned a preliminary engineering and traffic survey for a broad-gauge railway line to provide connection from the Singrauli coalfields in Madhya Pradesh to a suitable point on the Anuppur-Katni section of the South-Eastern Railway covering a distance of about 170 miles. The survey which is estimated to cost over Rs. 8 lakhs will be carried out by the Northern Railway Administration. The new line will help in exploiting the hitherto undeveloped Singrauli coalfields.

The All-India Plastics Manufacturers' Association, Bombay, has sponsored an official delegation consisting of sixteen members to visit the U.K. and Continental countries. The delegation is expected to leave India sometime in the third week of June 1961 so as to synchronise its visit with the International Plastics Exhibition and Convention scheduled to be held in London from 21st June to 1st July 1961. The duration of tour of the delegation will be about three weeks. It will also visit important processing units in the U.K. and other European countries with the object of studying the latest methods of production techniques, quality control and the end-use of plastics for industrial and other applications.

The Government of Madras is taking steps to set up an Industrial Co-operative Central Bank, first of its kind in India, to finance small-scale industries and industrial co-operatives. The authorised share capital of the proposed Bank will be Rs. 30 lakhs divided into 30,000 shares. The Madras Government proposes to take up 51 per cent of the shares. The scheme has been forwarded to the Central Government for its concurrence and financial assistance. The Madras Government has suggested that any loss arising in respect of loans sanctioned by the Bank should be shared by the Bank, the State Government and the Central Government in the ratio of 10 : 22.50 and 67.50. The Handloom Weavers' Co-operative Societies will not come under the new scheme.

From Abroad

West German private and commercial banks will introduce a five-day week from 1st July next, according to the Salaried Employees' Trade Union.

The central gold and convertible currency reserves of the sterling area fell by £16 million during May and stood at £1,037 million on 31st May 1961.

An agreement has been entered into between the Governments of Yugoslavia and Pakistan under which the former has given a loan of $10 million for utilisation by the latter for development purposes.

World production of typewriters was about 4.2 million in 1960, as compared with 3.8 million in 1959. West Germany has maintained its position as the second largest producer and remained the largest exporter of typewriters.

Canadian pulp and paper production will have doubled by 1980 to keep up with world demand, according to the President of the Pulp and Paper Research Institute of Canada. Present Canadian production accounted for 12 million tons per year.

A trade pact between the U.S.S.R. and Italy for 1962-65 has been signed in Rome on 7th inst. This agreement provides for an 80-per cent expansion of trade between the two countries over the next four-year period as compared to 1958-61.

The total membership of the International Labour Organisation (I.L.O.) during 1960 was 97, as compared with 96 in 1959. Expenditure on technical assistance amounted to $2.89 million during 1960, as against $3.09 million in the previous year, while the money spent on social and economic assistance reached $237,856—more than double the sum allotted in 1959.

The establishment of a $355-million World Trade Centre in the port of New York has been recommended by the Port of New York Authority. A principal function of the Centre would be to bring together into efficient working relationships Government customs agencies, importers, exporters, foreign and American trade associations and the many other organisations involved in world trade.

Pakistan is to have a 58-million Institute of Nuclear Science and Engineering at Islamabad, according to Dr. I. Usmani, Chairman of the Pakistan Atomic Energy Commission. It is expected to be completed by the middle of 1963, and will be built by American Machine and Foundry Company's Atomic Division. The Institute will have a five-megawatt central research reactor.

The population of the U.K. and Northern Ireland has increased by 2.44 million during the past decade, according to the preliminary reports on the census taken on 23rd April 1961. The total population is now 52.68 million. These preliminary results show that the population of England alone has increased since 1951 by 2.27 million to 43.43 million.

Russia has placed a £7.50-million contract for the design and supply of all plants for two beet-sugar factories with the firm of Vickers and Bookers, London, through Techmashimport of Moscow. Accordingly, two silos will be built at a factory in the Caucasus, and two on the Black Sea coast. Construction work is likely to begin towards the end of the year. Each silo will have a capacity of 20,000 metric tons of sugar.

PERSONAL

MR. James Riddleberger has been appointed President of the Development Assistance Group (D.A.G.).

Mr. E. H. Van der Beugel has been appointed President of K.L.M.-Royal Dutch Airlines, with effect from the 1st inst.

Mr. C. Subramaniam, Finance Minister of Madras, left New Delhi in the second week of this month for Moscow on the first lap of his seven-week foreign tour.

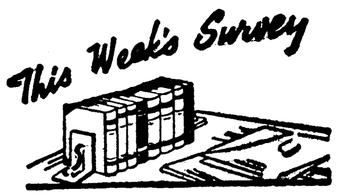
Mr. K. R. Damle, Secretary, Central Department of Agriculture, will represent India in the 35th session of the F.A.O. Council to be held in Rome from 19th to 30th inst.

Mr. N. G. Gokhale of the Tocklai Experimental Station of the Indian Tea Association at Cinamara, has taken over as Director of the station with effect from 1st inst. He succeeds Mr. H. Ferguson.

Mr. M. A. Raschid, Burmese Minister of Industries, Mines and Labour, has been unanimously elected Chairman of the 45th Session of the International Labour Conference, which opened at Geneva on 7th inst.

Mr. R. A. P. Misra, Managing Director, Indian Furnace Company (Private) Ltd., has been selected Secretary of the Indian Productivity Team on machine building industry which is scheduled to visit U.S.S.R. and Czechoslovakia during June-July 1961.

Mr. William Gunn, Chairman of the Australian Wool Bureau, has been elected Chairman of the International Wool Secretariat. Dr. J. G. van der Wath and Mr. J. Acland, Chairmen of the South African and New Zealand Wool Boards, respectively, have been elected Vice-Presidents.



EXPORT PROMOTION

PLANNERS and policy-makers, on the one hand, and industry and trade, on the other, are virtually at their wit's end in their efforts to promote exports. They have had to face the fact that the scope of their efforts are limited by several crucial factors, including increasing requirements of domestic consumption as well as the inelasticity of overseas markets for India's staple export commodities. The larger tempo of industrial development envisaged in the third Plan, already launched, will step up the demand for both maintenance and development imports. Besides, India has to repay about Rs. 500 crores of loan and bear interest charges of about Rs. 20 crores during the third Plan period. The foreign exchange resources being at a low ebb, these obligations will, strictly speaking, have to be met out of proceeds from current exports. Viewed against this background, there is certainly much force in the plea for an increase in the export target of the third Plan, made by Mr. S. L. Kirloskar, in his presidential address at the annual meeting of the Mahratta Chamber of Commerce and Industries held at Poona last Sunday. The provisional annual export target is laid down at Rs. 690 crores a year, as against Rs. 650 crores in the second Plan period. The Government itself, of course, is considering the question of raising this target by Rs. 50 crores to Rs. 740 crores. Even this will not make much difference to the balance of payments situation, considering the need for Rs. 500 crores for repayment of loans during the third Plan period and for maintenance imports at an estimated annual level of Rs. 714 crores.

The readjustment of the export target, of course, will only be of academic significance unless positive measures are implemented side by side to step up the exports of Indian products. The recent trends in exports certainly leave much to be desired. While imports have risen from Rs. 821 crores in 1956 to Rs. 1,000 crores in 1960, or an increase of Rs. 179 crores, exports were higher by just Rs. 21 crores at Rs. 635 crores. In general, India's major export products have tended to lag behind. Nor have the non-traditional goods made any significant headway, due obviously to the fact that, with rare exceptions, they have not been sufficiently competitive in world markets in terms of price, quality and salesmanship. There are, however, certain factors which lie within India's reach and can be utilised to its best advantage. Mr. Kirloskar regretted that under the present export promotion schemes, although disincentives were sought to be removed, no positive attempts to provide real incentives to the exporters were made. He called for a reorientation of the Government's policy with a view to granting adequate export incentives.

Mr. Satish Chandra, Union Deputy Minister of Commerce and Industry, in his reply at the meeting did not conceal his dislike for export incentives. It would not be a correct approach, he added, to claim incentives as a matter of right, as if the trade and industry had to be "compensated for undertaking an extraneous obligation on behalf of the Government." Mr. Satish Chandra's inference regarding the motive behind the industry's claim may be rather farfetched. But, at the same time, there is no denying the fact that palliatives such as export incentives will not enable India's industry and trade to develop on sound lines. As Mr. Satish Chandra himself pointed out, the more enduring way to increase exports is to devote far greater attention to improving productivity and efficiency of industrial apparatus and reducing cost of production. It is, however, open to doubt whether the Government's policy itself, particularly in respect of industries like textiles, is designed to attain the above-mentioned goals.

The increase in productivity and the bringing down of the cost structure are objectives to be attained "in the long run," that is, probably at a time, to quote Lord Keynes, "when we are all dead." In view of India's immediate vital necessity to secure more foreign exchange, there is a strong case for granting some help to selected sectors of industry and trade of a promising nature. An important suggestion made by Mr. Kirloskar is that the Government should introduce a system of remission of taxes on exporters' profits or turnover as was prevalent in West Germany, Japan and Ireland. He added that if a percentage of export proceeds was allowed to be deducted from taxable income, this indirectly would mean a subsidy to exports to a certain extent, without involving any international complications relating to subsidies. It may be recalled in this connection that the Export Promotion Committee (1957) too had advocated a measure of relief in direct taxation in the case of a variety of non-quota exports like textiles, as also engineering products and pharmaceuticals.

Mr. Kirloskar made many more suggestions to promote exports, most of them being no more than what we have been hearing all along *ad nauseum*. His suggestion to insist on exports of a certain percentage of production before granting licences for expansion of industries is not always practicable. It will probably encourage exports of sub-standard goods, as feared by Mr. Satish Chandra. This would only damage the reputation of Indian industry abroad. Instead of introducing an element of compulsion, exports must be undertaken by serious-minded people, who really mean business and are willing to give due attention to quality and after-sale services. Mr. Kirloskar's other suggestions, such as incentive import licences and foreign exchange retention, have already been implemented in the case of certain commodities with partial success. His plea for allowing the exporter to charge high prices in the domestic market to compensate for the loss in exports is apparently useful. But it is grossly unfair to ask the consuming class in this country, which is already hard-pressed in the face of inflation and several Government levies, to share the burden of exports. Still, some of Mr. Kirloskar's other suggestions, including promotion of overseas market research and consumer studies, as also reduction of premium rates charged by Export Risk Insurance Corporation, merit the serious consideration of the authorities concerned. The Government has already given some or other export incentives to a few industries. These are based mainly on considerations of expediency rather than on any strict principle. It will not be too much to ask the Mudaliar Committee, now investigating the question of export promotion measures, to devise a suitable formula for granting the already well-known measures of export incentives to various types of exports, depending on their specific handicaps.

HINDUSTAN MACHINE TOOLS

The news that the Hindustan Machine Tools Ltd., Bangalore, a Government of India enterprise, has just declared a maiden dividend of 10 per cent should not be taken to mean that this industrial concern in the public sector has not fared well during all these years of its operation. In fact, it has been doing fairly well since 1956-57 when it made a net profit which represented a return of just 1.02 per cent. In 1960-61, however, its net profit of about Rs. 74 lakhs represented a return of 13.9 per cent. If this enterprise has declared its first dividend only in the year 1960-61, it is because it has so far utilised its internal resources for the expansion project under which the capacity of the factory has been raised to 2,000 machines valued at Rs. 7 crores per annum. This expansion project has just been completed ten months ahead of schedule and in a record time of fourteen months and, that too, without any financial contribution from the Government or the shareholders. What is even more significant, it has been completed without any foreign technical collaboration. A foundry has also been recently completed and this will go into production during the current month. An industrial estate as an adjunct of the Hindustan Machine Tools Ltd. has just been established in respect of its first phase of 32 units. The Company has also undertaken the establishment of a watch industry with an initial capacity of 360,000 watches per annum in collaboration with the Citizen Watch Company of Japan. It would thus appear that the Hindustan Machine Tools Ltd. has expanded its operations in a number of lines in the last one year and reached a stage of development at which its confident proposal for the construction of two more machine tool factories, each of 1,000 machines per annum capacity, in other parts of the country during the third Plan, has found favour with the Government. That the Company, with its experience to date, will be able to construct the proposed two other factories economically and operate them efficiently, may be reasonably foreseen.

In the main line of production in the Hindustan Machine Tools Ltd. there has been a spectacular increase in the number and variety of machines produced during the year 1960-61. A total production of 1,002 machines in the year, representing an increase of 250 per cent over the second Plan target of 400 machines, was an outstanding feature of the Company's operations. Even more notable is the further diversification in production which has taken place with the addition of 16 types of cylindrical grinding machines in collaboration with an Italian firm. Recently, the Company has also entered into a technical collaboration agreement with a French firm for the production of special purpose machines in India. Thanks to these collaboration agreements, it may be expected that the Hindustan Machine Tools will be producing in the years to come a still wider range of machines than the 162 types which it is producing now and which include the heavy duty turret lathes that have recently come off the production lines of the factory. It is not surprising that the Company has now a bookful of pending orders for more than 500 machines which have been carried forward to the year 1961-62. That its Bangalore factory has been working at full capacity is clear enough. The credit for this happy state of affairs goes to Mr. M. K. Mathulla who has been the Managing Director of the Company.

JUTE TRADE

What is wrong with the jute trade in India? This was the question which Mr. A. I. Murison, Chairman of the East India Jute and Hessian Exchange Ltd. (E.I.J.H.E.), sought to answer when he addressed the annual general meeting of the Exchange held at Calcutta on Thursday the 8th inst. Mr. Murison not merely pinpointed some of the recent disquieting developments but also indicated how the jute market could be made to function smoothly, without violent fluctuations in prices. Admitting that a great many mistakes had been made by all, including the authorities, he said: "I think the time has come when we must make a clear and simple reappraisal of all our past stupidities and, by accepting the lessons learned from our past experiences, lay the foundations for a much better and happier future for the Association."

A pertinent, though well-worn, point stressed by Mr. Murison was that the simple factors of supply and demand dictated the prices of jute manufactures and raw jute. If only the authorities had recognised this point in time and arranged for adequate imports of raw jute, the jute industry would not have been in such a miserable plight as it is today. Instead of doing so, the authorities tried to interfere with the market mechanism. Any attempt to control prices without taking into account the demand-supply position has failed in the past and will continue to fail in the future. Mr. Murison did well to highlight this aspect. After explaining the working of forward market in jute, he urged that the powers of the Exchange and the authorities must be designed in such a way that immediate regulatory measures could be taken only against those undesirable elements who were clearly manipulating prices to their own advantage against the true trend of prices as determined by supply and demand. To quote him: "With the regulations as they now are, the actions of a few anti-social elements have led to regulatory measures being imposed on all members, guilty and innocent alike, much to the [illegible] advantage and at times loss to the innocent. This should not be allowed to happen again." Mr. Murison criticised the way in which the Forward Markets Commission had handled the jute market.

Whatever be the validity of the criticism of F.M.C., it cannot be disputed that the intervention of the F.M.C. has succeeded to some extent in checking undue speculation in the jute markets. The success would have been greater still if the Jute and Hessian Exchange had been functioning more efficiently. Mr. Murison was in the right where he said that the management of the Exchange should be placed in the hands of a smaller Board of Directors

the members of which were pledged to submerge their own parochial interests for the general good. The four other suggestions which he put forward are also quite pertinent. In the first place, the Exchange cannot control prices and any attempt to do so will always fail. The remedy here is to control the sources of supply and demand. Secondly, a parity must always be retained between the primary markets and the hedge markets; to fail here is to invite disaster. Thirdly, the Board and, of course, the Forward Markets Commission, must have power to take immediate and effective steps to control individual price manipulators, that is, those who engineer corners, bear raids and the like; people must be made to realise that the ordinary individual who backs his own judgment is a valuable speculating asset to any market and that the real rogue is not a speculator as such but a manipulator. And lastly, members, particularly those who have the privilege to be elected or appointed to the Board, must remember that the Exchange is a market as a whole, serving several interests. They must learn to suppress to a still greater degree their own personal and, perhaps, parochial interests for the general good.

MANAGERIAL REMUNERATION

A highlight of the Seminar on Company Law organised by the Bombay Chartered Accountants' Society in Bombay on the 10th and 11th inst., was the comprehensive discussion on the problem of managerial remuneration. Mr. C. C. Chokshi dealt at length with the question of the definition of "managerial remuneration." In this connection, the learned speaker referred to the decision of the Bombay High Court in the case of Ramaben Thanawalla *vs.* Jyoti Ltd. and concluded that, according to the judgment, managerial remuneration meant remuneration payable to certain categories of persons (managing agent, managing director, treasurers and secretaries, and manager) for performing only managerial functions. If any of them were performing other functions, say, those of technician or legal adviser, then the remuneration paid for such work would not be included in the term "managerial remuneration." The Government, too, has accepted this interpretation and made it quite clear in Section 198 that the overall upper limit laid down in that section is only with reference to the remuneration paid for managerial functions. This is done by adding the word 'managerial' between the words 'total' and 'remuneration' in Section 198.

The speaker then went on to point out how some of the other provisions of the Company Law intending to control the maximum remuneration payable to managing agents not only for managerial functions but for all the services rendered by them had created a lot of complications in the working of the Companies Act. For instance, the amendment of Section 348, according to Mr. Chokshi, has raised two issues for consideration by the Government as well as the legal and accountancy professions. The two questions are: (1) In view of the amended provisions of Section 348 and the aforesaid decision of the Bombay High Court, is it possible to pay a minimum remuneration to a managing agent under Section 198 without recourse to Section 352, particularly because the saving words have been deleted both from Sections 198 and 348? A doubt is also raised whether Section 352 can at all be invoked to pay a minimum remuneration to managing agents. (2) If the managing agency agreement lays down a provision for payment of remuneration to managing agents on a slab scale, then it is possible to pay the managing agents such remuneration plus director fees to partners or directors or managing agent of company so as to conform with the overall limit of 10 per cent laid down in Section 348 (1)?

Another subsidiary question is whether the director fees paid to managing agents' partners or directors should be deducted in computing the net profits under Section 349. Similar difficulties arise in case of remuneration payable to directors, especially because the full implications of Sections 309, 310 and 311 are not clear. The Bombay High Court decided that a technical director could draw remuneration for technical services without complying with the restrictions laid down in Section 309. But Mr. Chokshi doubts whether that decision would be good law after the amendment in 1960. Reading the provisions of Sections 197A, 198 and 309 together, Mr. Chokshi asks whether it is the intention of the Legislature to restrict the total remuneration of managerial personnel in whatever capacity they work to 11 per cent. However, in his view, it is difficult to understand why there is an undue discrimination against the managing agent and secretaries and treasurers whose remuneration in any capacity is restricted to 10 per cent or 7½ per cent as the case may be. His conclusion that "the apparently discriminatory restrictions on the managing agent and secretaries and treasurers may prove a boon in course of time" to the institution of managing agency itself is interesting indeed, although it is somewhat difficult to say whether it will in fact come true.

MANAGEMENT EDUCATION

It is rightly said that Management Education begins when other systems of education and that a man is best fitted to assimilate and appreciate management instruction only after he has been 'on the job.' This, indeed, has been the guiding principle for the activities of the Indian Institute of Social Welfare and Business Management, Calcutta, which held its annual general meeting recently. Founded by Dr. B. C. Roy, this Institute is claimed to have been the pioneer in the field of management education. It has been running a university post-graduate diploma course in business management and has been selected by the Central Government for the training of

(*Continued on page* 1122)

THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS AND APPLICATIONS ARE INVITED ON THE BASIS OF THE PROSPECTUS.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

An Industrial Licence has been obtained from the Central Government bearing No. L/1-A(1)/N-6/59 dated 25th September 1959 for the establishment of a new industrial undertaking of which a copy and other documents mentioned in the Prospectus can be inspected at any time during usual business hours at the Registered Office of the Company until the Subscription List has been closed.

A copy of the Prospectus having attached to it the documents required by Section 60 of the Companies Act, 1956, has been delivered for registration to the Registrar of Companies, Bombay.

ACME PIG IRON & CENTRIFUGAL PIPE WORKS LTD.

(INCORPORATED UNDER THE COMPANIES ACT I OF 1956)

	Rs.
Authorised Capital	50,00,000
Divided into :	
30,000 Equity Shares of Rs. 100 each	30,00,000
20,000 Shares of unspecified class of Rs. 100 each	20,00,000
	50,00,000

ISSUED AND SUBSCRIBED SHARE CAPITAL

	Rs.
Issued Share Capital:	
20,000 Equity Shares of Rs. 100 each	20,00,000
Subscribed Share Capital :	
7,500 Equity Shares of Rs. 100 each, subscribed and fully paid up by the Directors, their friends, associates and Signatories to the Memorandum	7,50,000
2,500 Equity Shares of Rs. 100 each, subscribed by Directors, their friends and associates on which Rs. 25 per share are paid up	2,50,000
	10,00,000

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION :	Rs.
10,000 Equity Shares of Rs. 100 each	10,00,000
	20,00,000

Terms of Payment of the above Shares :

(a) On Application .. Rs. 25 per share

(b) On Allotment .. Rs. 25 per share

(c) The balance of Rs. 50 per share in such calls as may be determined by the Board of Directors provided that no call shall exceed Rs. 25 per share and that there will be an interval of at least two months between any two calls. Failure to pay moneys on allotment or on any call will render the share and the previous payments made liable to forfeiture.

BOARD OF DIRECTORS :

SHRI RASIKLAL J. CHINAI
SIR JAMSETJEE JEJEEBHOY, Bart.
SHRI PRANLAL J. PATEL
SHRI SORABJI H. COMMISSARIAT
SHRI KANTILAL J. SHAH
SHRI VISHNU NIMBKAR
SHRI SULTAN A. NATHANI
SHRI SHANISCHANDRA C. SHETH
SHRI MANILAL P. KAPADIA

MANAGING AGENTS :

ACME STEEL PRIVATE LIMITED

(*Subject to the approval of the Government of India*)

Registered Office : 8, Hamam Street, Fort, Bombay.

Bankers : The Bank of Baroda Ltd., Bank of Baroda Bldg., Apollo Street, Fort, Bombay 1.

Auditors : 1. Messrs. Nanubhai & Co., Fort, Bombay.
2. Messrs. B. D. Jokhakar & Co., 8, Hamam Street, Fort, Bombay.

Solicitors : Messrs. Dikshit Manaklal & Co., Fort, Bombay.

Legal Adviser : Shri Indrajit Mehta, B.A., LL.B., Pathar's New Blocks, Bandra, Bombay.

BROKERS TO THE ISSUE :

Messrs. Dhirajlal Maganlal Purshotamdas, Share Bazar, Dalal Street, Fort, Bombay 1.
Messrs. Jashwantlal V. Bhagat, Hamam Street, Fort, Bombay.
Messrs. Lewis & Jones, Bank of Baroda Bldg., Apollo Street, Bombay.
Messrs. D. S. Maden & Sons, 5, Hamam Street, Fort, Bombay.
Messrs. R. R. Nahar & Co., 31, Dalal Street, Fort, Bombay.

Messrs. Kothari & Sons, Oriental Buildings, Armenian Street, Madras.
Messrs. Lalbhai Ambalal & Co., Manek Chowk, Ahmedabad.
Messrs. M. Nanjappaiah Jahgirdar, 181, Cavalry Road, Bangalore 1.

OBJECTS

The Company was incorporated on the 7th day of October 1960 as a Private Limited Company and was converted into a Public Limited Company by a special resolution passed in the General Meeting of the Company held on 22nd September 1960.

The project further covers in the second stage the manufacture of Steel Castings and Billets of special composition, subject to the necessary Industrial Licence being obtained from the Central Government.

PROSPECTS AND TECHNICAL ASPECTS

The scheme is proposed to be divided into two stages :—
(1) The Manufacture of refined grades of Pig Iron.
(2) The Manufacture of Steel Castings and Steel Billets by the Duplex process.

An agreement has been entered into with Messrs. Compagnie Generale Des Conduites D'Eau, Belgium, the designers and manufacturers of the Plant to provide the required Technical know-how for the erection and starting up of the Plant at Khopoli in the State of Maharashtra.

The Plant has already arrived and the erection work of the structure and the Plant is well in hand and the Plant is expected to be commissioned for production by the end of the current year.

The refined grades of Pig Iron which are intended to be manufactured are at present not produced in the country. All the integrated Iron and Steel Plants in the Public Sector as well as the Private Sector do not commercially produce Pig Iron of a low sulphur and low phosphor content and the industries which require this type of raw materials have to resort to costly methods of hot metal production or to imports, thereby involving a high capital outlay for their limited needs.

The Company's Products have export Potentialities.

In the second stage, it is proposed to manufacture 15,000 tons of Medium and Heavy Steel Castings and Steel Billets utilising the hot metal available from the present Plant.

Raw materials required are available in the country in sufficient quantities.

PROFITS

In normal circumstances the Company should be able to pay reasonable dividends on issue of Equity Shares.

CAPITAL OUTLAY

The estimated requirements of the company are as follows :—

	Rs.
(i) Land, Factory Building, Office, etc.	3,50,000
(ii) M.B.O. Hot Blast Cupola Plant including duty, transport, erection, etc.	8,00,000
(iii) Power House, Transformers, Weigh Bridge, etc.	1,50,000
(iv) Laboratory equipment	50,000
(v) Preliminary Expenses and other expenses (inclusive of brokerage and expenses of this issue)	75,000
(vi) Working Capital	5,75,000
	20,00,000

APPLICATION FOR SHARES AND ALLOTMENT

Application of Shares by members of the public must be for a minimum of Five Shares or multiple of five shares but allotments may be made for less than five shares.

Subscription List will open at the commencement of Banking Hours on 19-6-1961 and will close at the discretion of the Directors but not earlier than the closing of Banking Hours on 24-6-1961.

Application will be made to the Stock Exchanges, Bombay and/or Ahmedabad for listing of the equity shares of the Company on its cash list.

ON THE ARENA

Technical Training In Industrial Enterprises

DURING the last one week two ministers have struck the right note on the subject of providing facilities for technical training in industries, but what they said being words of conventional wisdom stressing the need for investment in personal development as a guarantee of economic power, it may be a long time before they are accepted as basis for positive action. I shall therefore attempt to make a few practical suggestions for the direction of investment and profits in the application of trained intelligence, at all levels, to our industrial enterprises, bearing in mind the accepted theory, reiterated by Professor J. K. Galbraith in his book, *The Liberal Hour*, that "most technological advance is now the result, not of the accident of inspiration or genius, but of highly purposeful effort. Once we had to wait for the accidental appearance of Edisons and Wrights. Now through education and organised effort in a laboratory or experimental shop we get something approaching the same results from much more common clay."

Mr. Lal Bahadur Shastri is reported to have suggested to the promoters of the new Madras Aluminium Company to have a special research laboratory and to take steps for training technical personnel. He gave out that the Government of India had been laying stress that every public sector unit should have its own training institute which should be opened before the factory came up as was done in the case of the Heavy Electricals Project in Bhopal. In his view, the private sector projects should adopt the same course.

Mr. C. Subramaniam, Finance Minister in Madras State, announced at a conference of industrialists in Madras that two committees would be set up this month to assess existing facilities in industrial establishments in the State for giving practical training to engineering graduates and licentiates. To quote Mr. Subramaniam, "our difficulties in the past have been more in the field of finding the necessary personnel rather than the material and financial resources for the implementation of the Plan projects. It is bound to be so during the third Plan period also because, in my view, we have not taken special precautions to prepare the necessary men during the first and second Plan periods. It should be possible for us to say that so far as technical personnel are concerned, they will be available in sufficient number and quality for the various purposes during the third and fourth Plan periods."

The merit in Mr. Subramaniam's move to appoint committees for assessing existing facilities is that it will provide the requisite basic material for the formulation of long-term schemes for purposeful effort. However, it falls short of our essential requirements in that the terms of reference embrace only "practical training for engineering graduates and licentiates"; it does not cover trainee workshop facilities for workers, raw, semi-skilled and skilled. In my view, it is as important to have trainee workshops in each factory, equipped and maintained on the same technological standard as the factory itself, as it is to have technical training establishments for engineering graduates and licentiates who will constitute the supervisory and semi-supervisory staff. If what Mr. Lal Bahadur Shastri referred to is such trainee shops, I am all for the compulsory requirement that such shops should be established even before the start of production in each factory. When granting licences it should be stipulated that such facilities should form an item of basic requirement, subject to prior and periodical inspection by the Technical Wing of the Ministry of Commerce and Industry for adequacy of equipment and maintenance.

Quoting again from Professor Galbraith's *The Liberal Hour*: "Corporations are now at great pains to explain that their prices must include provision for earnings sufficient to replace and expand their physical capital. This, they regularly assure the public, means that production will continue and be more efficient in the future. But as the National Bureau figures show, we have more to gain from the quality of the people. So a levy for this purpose, would be an even better gain." "Man has not retreated before the machine; rather the machine has become desperately dependent on the improvement of man. And our economy is still arranged to supply machines rather than to improve men." These observations have been made in relation to the U.S.A., but they are true of most capitalist countries and very true of current trends in India. In the first prospectus relating to any flotation, the entrepreneur who has secured foreign collaboration for a project boasts more of his perspicacity in finalising his deal with his foreign counterpart, than of the steps which he has taken or proposes to take for the establishment of training facilities in his enterprise. The recital of his achievements in later years relates largely to his success with his machines, and the acquisition of more automatic machinery, than what he has made of his workers. The break-down of his working expenses deal only with such tripe as rates and taxes, motor car running expenses, repairs and maintenance, Directors' fees, legal charges, advertising and publicity, donations, etc. and nothing about the investment or expenditure on technological improvement of the men for whom employment opportunities have been provided by him.

It would be fairly accurate to state that the question of technical improvement of workers has not been given the importance that it deserves. The Industrial Policy Statement of the Government of India dated 6th April 1948 (paragraph 9) emphasises only the need for continuing co-operation between industry and labour, and for that purpose, spells out the permissible content of fair profits and the need for sharing the residue with labour, but does not make it incumbent on industries to impart sufficient training to labourers with a view to improve their skill and application. It has become the fashion for industries in India to claim extra elements in profits for renovation, rehabilitation, obsolescence and even expansion, whereas it would be more in consonance with the philosophy of the socialist pattern of development if the consumer was asked to bear the expense of maintaining trainee establishments for improving the technical competence of workers. Whatever be the philosophy underlying our development plans, even enlightened self-interest should dictate that every unit in industry should have its own trainee shop for all apprentice workers where they will receive training not merely in the use of the several machines in the unit, but also all-round instruction in the technique of manufacture relating to the enterprise. This would eliminate the vicious habit indulged in by some managements of classifying certain categories of workers as unskilled or semi-skilled for long years, and provide for a better deal all round. Those units that conform to recognised standards in the maintenance of trainee shops may be given the incentive of wholesale writing off of the plant and machinery employed for the purpose, and, in any scheme of price fixation for the product of manufacture, all expenses incurred in training may be conceded as a *legitimate item*.

Industrial enterprises in India are victims of environment and circumstance. The persistent agitation for improved amenities for labour has resulted in the provision of medical, educational, recreational and housing facilities for workers, but not proportionally commendable trainee shops for raw, unskilled and semi-skilled workers. I have gone round several mills and factories where the managements have taken great pride in showing an assembly hall or theatre, or playground or modern canteen, but not a training establishment. On the other hand, in most enterprises in Europe, Germany in particular, almost the first thing that the visitor is taken to is the apprentice trainee shop, and it is almost staggering to see the versatility of the equipment there, and the care and attention given by first rate technical experts to the improvement of the young lads who receive their training in them. It is no doubt true that the average Indian worker seeks biological happiness more than his counterpart elsewhere, perhaps due to suffering under imposed austerity to which he had been tied for almost a century or more, but that is not to say that he will be unresponsive to the call for improving himself in technical competence. And therefore, in this regard, a great responsibility is cast on our neo-entrepreneurial class of the third and fourth Plans.

All India Radio

Akash Vani has an impressive record of quantitative development during the last twenty-five years. Beginning with three stations in 1936 it now has 28 of them working on 6(transmitters in 17 languages, 51 dialects and 8: tribal tongues for over 120,000 hours every year. Fifty-seven more transmitters are expected to come into being. As for the quality of its achievement in giving "expression to the various cultural and artistic forms of the country," I would content myself with saying that "This is All India Radio. Here is the news, read by Bla-bla-bla" is the least intolerable regular feature.

There are many little men with pompous notions of their own knowledgeability who are responsible for formulating the programmes broadcast by *Akash Vani*, and the programmes are popular neither with the cultured few nor with the uncultured many. Through hidebound insistence on conformity to a lot of annoying rules and regulations, A.I.R. officials have made it impossible for sensitive artistes among amateur musicians of both sexes to give of their best in broadcasts, while their pontific choice of puerile subjects for talks attracts only those talkers whose imagination has dried up through years of callisthenic kowtowing. And, of course, the scale of remuneration that has been standardised is so utterly unrealistic and beggarly that it is a waste of time spending so much effort for so little payment. Dr. Keskar, the Minister in charge of Broadcasting, is reported to have said that "in a developed country where all the needs of society had been met, it was possible to take a different decision about the role of the radio but in a country like India where everything had to be built up, it should not simply cater for entertainment." This mystic *obiter dictum* may make a lot of sense to those who are engaged in the difficult task of "building up everything in this country," but, by and large, what one sees is a lot of demolition and plenty of rubble to clear. A.I.R. may sniff its nose at providing mere entertainment, but most people who are fed up with its broadcasts feel much like the handsome young man who got married to a terribly ugly girl in a mad rush on admiration for her musical talent, and the very next morning of his honeymoon, threw up his hands at the sight of her uncouth form and wailed, "Oh! Sing, for God's sake, Sing!"

Are You Going To Uttar Pradesh?

If you are, then I hope your visit is *must*, and cannot be postponed; if on pleasur or for sightseeing, then, my advice is 'postpone until after the next elections. The U.P. Congress Committee has decided to issue coupon of rupee one, rupees five and rupees ten denc minations to boost the Congress election func While you are waiting for a tonga or tax someone looking highly respectable may ta you on the shoulder and ask you to cough u what you have for acquiring some of thes coupons; you will be gently deprived of whs you have in your pocket for the day's ex penses. You may have to walk long distance or go without a meal. You won't be able t say anything about it; the goodness of th cause will redeem the forthright manner i which you are being parted from your cas resources. And this might happen to yo every day, and many times too, at every stree corner, unless you are going to stick you coupons on your front and back, same as yo display your automobile taxation receipt. YO HAVE BEEN WARNED.

LONDON FINANCIAL MARKETS

CONFLICTING TRENDS IN RECENT WEEKS

By W. T. C. King

SOME rather conflicting trends have marked the London financial markets in the past month or so—partly it seems as a result of differences of view about the implications of current and prospective strains on sterling. The equity share markets, which had been strong before the Budget, mounted still further in the ensuing month in spite of the evidently sharply increasing pressures now being exerted upon profit margins, and in spite of the quite widespread market view that the general effects of the budgetary measures would be disinflationary. The industrial share index of the *Financial Times*, which towards the end of 1960 had dipped to under 295 (its lowest since the election boom in 1959), had by Budget day reached a new peak at over 353—but then climbed another 12 points to touch 365.7 in mid-May, making a gain of nearly 25 per cent in six months. After so rapid an advance, a pause for consolidation was due in any case, but the shake-out has proved to be rather sharper than some observers had expected. In the second half of May, the index has been driven down by over 14 points, to 351.5, or a little under its pre-budget level. The gain by comparison with the level 12 months previously has now been narrowed to 10 per cent.

In the gilt-edged market, the recent experience has been hardly less dramatic—but a good deal more disappointing. After the downward drift of the market during 1959 and most of 1960, there had been hopes last autumn that the long-awaited turn might be coming at last. But the rally stages then, at the prospect of a decline in short-money rates, soon petered out—notably after it was realised that, as in 1958, short rates could ease without exerting any perceptible downward pressure on medium and long rates. Early this year, gilt-edged prices sagged to their lowest since the 1957 crisis; and by mid-April, they were still only a little above the worst.

The Budget

Then came the Budget which at first sight seemed to offer, for three distinct reasons, a better augury for fixed interest securities. There was, first, the indication that the Government was adopting a new and more realistic approach to the recurrent problem of inflation—notably by equipping itself with more flexible and quicker acting weapons in the shape of the new style fiscal regulators which I discussed in some detail in my last letter. Secondly, there was the consideration that the availability of these between the Budget's tax weapons would reduce the Government's dependence on monetary weapons, thus reducing the risk that resistance to inflation would involve action that directly impinged on the gilt-edged market. Thirdly, as I also explained last month, the Budget estimates implied that the domestic cash requirements of the Central Government would be substantially less than it could expect to borrow more or less automatically from non-market sources. For all these reasons, many city observers looked for a healthier undertone in the gilt-edged market, in spite of the looming threat from the new legislation which should come into force in a few weeks' time—that increases the scope for trustee investment in equities.

These hopes, however, have so far proved wide of the mark. The improvement that followed the Budget was very brief, and by early May the market was sagging away again. The Government securities index of the *Financial Times*, which on Budget day had stood at 78.20, rose within a few days to 78.98, and has since dipped to only 77.55. This is not only a new low point for recent years, it is also only a fraction above the all-time low of 77.45, momentarily touched after the rise in the Bank rate to 7 per cent in 1957. At the crest of the market's recovery from that period of extraordinary strain, the index reached 87.74—in November 1959. Over the past 18 months, therefore, the general level of the market has dropped by over 11 per cent. And in the past month, the two leading "undated" stocks (stocks redeemable only at the option of the Government) have touched their lowest points ever. The 3½ per cent war loan has dipped to 55-3/8, at which it offered a flat yield of fully 6-5/16 per cent, and the 2½ per cent consols dipped to 41, with a flat yield approaching 6⅛ per cent. One other undated British Government stock, the 4 per cent consols, yields almost 6½ per cent.

These are very high yields by any standards. Until quite recent times, it would have seemed to most London observers almost unthinkable that British Government stocks could ever offer any such return. It should perhaps be pointed out, therefore, that a substantial part of the rise in interest rates to these very high points is the direct outcome of deliberate measures of monetary policy. The high rates have become an integral part of the country's defences against inflation. As the Radcliffe Committee observed, the notion that the market yields on a Government's bonds might be a measure of its "creditworthiness" was simply a "hangover" from the past.

Spasm of Weakness

However that may be, it remains true that the most recent spasm of weakness in the gilt-edged market seems to be much less a reflection of current monetary policy than of the strains that have lately become visible in the foreign exchange market. The only direct influence from the monetary side came from the clear effort of the authorities a few weeks ago to discourage hopes of any early reduction of the Bank rate from its present level of 5 per cent (reduced in two steps from 6 per cent towards the end of 1961). These hopes had stemmed mainly from the Budget arguments already noted, and so had intensified the competition for weekly offerings of Treasury bills, forcing the discount houses to raise their bids in an effort to prevent further depletion of their already low bill portfolios. The Treasury bill rate thus fell perceptibly at each of the three tenders from the end of April, reducing it from just under 4½ per cent to 4-5/16 per cent by 12th May. Throughout this period, however, the authorities were offering resistance by seizing opportunities to tighten credit supplies in the short loan market, thus forcing the discount houses repeatedly to borrow from the Bank of England in its capacity of lender as a last resort—i.e., forcing them to take seven-day loans at the Bank rate. These tactics led eventually to a reversal of the trend of bill rates. At mid-May the tender rate recovered to fully 4-13/32 per cent, and by the end of the month there was actually some market gossip about the possibility of an increase in the Bank rate.

Pressure on Sterling

This change in the market sentiment towards short-term rates has, of course, like the new strains on gilt-edged prices, been associated with the evidences of pressure on sterling. Shortly before the Budget, the sterling-dollar quotation had briefly recovered to its parity of 2.80 dollars for the first time since the major strains flung upon the market by the sudden revaluation of the D-mark in early March. But in the second half of April—partly, it seems, as a consequence of the series of international political uncertainties that became prominent at that stage—a new pressure carried the rate back to about 2.79-9/16 dollars, and during May it has eased further, touching only 2.79⅛ dollars on 30th May, its lowest since the crisis of 1957.

Unfortunately, it is now more than ever difficult for unofficial observers to gauge the true extent of any pressure. The movement of the rate is not in itself a sure guide to the state of the market, since much must depend on the particular tactics the authorities choose to adopt in their efforts to forestall or resist any speculative attack. Until recently, however, the underlying trend might be expected to become reasonably apparent from the course of the end-month figures of the reserves of gold and convertible currencies. But now even this source of light has become unreliable. Since the conclusion of the Basle agreement between the principal European central banks, it has become impossible for the outside observer to ascertain how far, for example, any given withdrawal of privately-owned overseas funds in London has been matched and offset by an increase in the sterling holdings of overseas

RAMTIRTH (HINDI MONTHLY)

Editor: **Yogiraj Shri Umeshchandraji**

Published every month by Shri Ramtirth Yogashram — Bombay

MORE THAN 160 PAGES PER ISSUE

THE MAIN IDEA BEHIND THIS MAGAZINE IS TO DEVELOP THE PHYSICAL, MENTAL AND MORAL ASPECT OF THE COMMON MAN

Annual Subscription Rs. 5/- only. Single Copy 65 nP. only.

UMESH YOGA DARSHAN

(First Part)

In Four Languages: English, Hindi, Gujarati and Marathi

(Author: **Shri Yogiraj Umeshchandraji**)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and *Neti Dhoti Functions*. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.

Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.

Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

LIKELY TERMS OF WESTERN AID

LOANS TO PRIVATE BORROWERS TOO MAY BE AVAILABLE

From Our Special Correspondent

DELHI LETTER

NEW DELHI, *13th June*

SOME further indications of the terms of Western aid for India's third Plan, which are now available, show that the Government of India will have to reckon with a wide variety of conditions in the bilateral negotiations and agreements for the utilisation of the aid assured at the Washington meeting of the Aid India Consortium. Though the object of the Consortium as a whole was to reduce interest rates on credits because some of the investments will be on infrastructure projects, there is a world of difference between the American terms on loans, which will be modelled on those of the International Development Association, and the West German. At present, the Bonn authorities do not wish to extend credits beyond 20 years; it is reported that the interest rate will be lowered from 5½ per cent to 3 per cent for a third of the payments in the first two years and the interest-free period of grace will be extended from five to seven years. Unlike American loans, however, German credits will not be tied to purchases in that country, but this will hardly make any difference since India has been in deficit in her trade with most of the West European countries and difficulty, if any, will arise only if aid from any country exceeds the net import surplus, after allowing for much larger imports than what is possible under the present restrictions. All the countries of the Consortium happen to be regular exporters of capital goods and machinery to India but since American prices have not been sufficiently competitive there has been a marked preference for using dollars for importing from other countries.

West German terms indicated above are more unfavourable than the two British credits granted for the third Plan (at the beginning of May) to the extent of £40 million—in both of which repayments can be spread over 25 years and the grace period in one is seven years and in the other (a credit for supporting the balance of payments), five years. Though the average rate of interest on these credits was not specifically indicated, it is unlikely that it would be more unfavourable than Germany's; these terms will apparently apply also to the balance of the British commitment of $250 million for the first two years of the third Plan. Considering Britain's current difficulties with her balance of payments (which have even revived talk of devaluation of the pound sterling), these must be regarded as far more generous terms than those West Germany has been willing and ready to give. The condition that purchases should be made in Britain is not an onerous one.

"Buy American" Policy

India has been getting used to making more purchases from the U.S.A. since the Development Loan Fund introduced the "Buy American" policy in October 1959 (relaxed only in certain special cases) and in the case of Eximbank credits. But the slow rate of utilisation, especially of the latter, may warrant doubts about the consequences of the new stipulation that 80 per cent of foreign aid should be used for purchases in the U.S.A; however, in the present position of the dollar and the American balance of payments, more liberal conditions cannot be expected from the Administration or Congress.

Estimates of the difference in prices of U.S. equipment and machinery vary (between 10 and 25 per cent) and in many cases the higher price may be offset or justified by the superior quality of the product; but the almost nominal interest rates charged and the longer period of repayments are decisive advantages to be counted against any possible increase in cost of projects due to this factor. The problem mainly is one of Indian project planners getting used to placing large-scale orders with relatively less familiar manufacturers.

Compensations for any slight disadvantage arising from this condition about purchases --- many. In his testimony before the Senate Foreign Relations Committee, Mr. Douglas Dillon has made it clear that development loans under President Kennedy's aid programme will generally follow the terms and conditions laid down for the International Development Association (and determined by the World Bank). If the latter's first development credit is regarded as a precedent for dealing with future applications, the prospects are indeed hopeful. I.D.A's credit to Honduras is for a term of 50 years; after a 10-year period of grace, repayments will start at the annual rate of 1 per cent of the principal for the first 10 years and at 3 per cent for the next 30 years. There will be no interest except for a service charge of ¾ of 1 per cent on the amounts withdrawn and outstanding; this is intended only to meet I.D.A's administrative costs. That an independent body like the World Bank has considered these easy terms necessary for development loans should be a convincing argument before Congress and Mr. Dillon has stated that almost similar terms will be necessary for U.S. loans. Developing countries which have been disappointed by the inadequate resources of less than $1,000 million placed at the disposal of I.D.A. may now have cause for optimism; if President Kennedy's aid programme goes through, a sum larger than this by a half will be available annually in the next five years.

A Possible Obstacle

A possible obstacle is the reluctance of Congress to grant authority to the President to borrow from the Treasury on the ground that it would weaken its scrutiny of appropriations. Since the object is to give firm commitments for aid some curtailment of the freedom of dealing with appropriations may have to be accepted. There are, on the other hand, two strong arguments for Congress accepting President Kennedy's proposals eventually. One is the renewed urgency for outbidding the Soviet Union in offering aid to developing countries in order to disprove Mr. Khrushchev's deep conviction that world events will work out in favour of his system; the next is the agreement which has been secured from other Western partners that their aid will match the American in its volume if not in respect of all other terms. Any substantial cuts may have the effect of reducing the total pool available to the recipient countries. Mr. Khrushchev's offers of credits at low interest rates of 2 per cent to 2½ per cent for 12-year periods have so far enjoyed a considerable propaganda advantage over the aid given by the West and the World Bank at very high rates of interest; it is obviously now difficult for the Soviet Premier to match the new pattern of American aid in its scale or in its commercial terms.

In one respect, however, there has been a decisive change of policy. Repayments have to be made in dollars and not in local currency as the Development Loan Fund had permitted before. At one stage, I.D.A. was also expected to introduce this additional facility to borrowing countries but it did not eventually do so, presumably because it would be accumulating a large volume of local currencies which may be unusable for re-lending. The reason may be slightly different for the change in American policy; U.S. authorities have already acquired a large stock of these currencies as a result of the sale of agricultural surpluses under P.L. 480 and have found the resulting situation a very delicate one—unusability of the currencies being only a minor embarrassment.

Mr. Douglas Dillon has stated that there is a danger of such large accruals of local currency becoming "a source of friction and misunderstanding" in relations with the countries concerned as the U.S. Government will be holding a large proportion of the outstanding money supply in a foreign country without deriving any advantage from them. There has been a good deal of controversy in India, for example, about the effects of the use of P.L. 480 funds; it has also been found necessary to transfer deposits of these funds from the State Bank to the Reserve Bank. Speculation was also started on the possibility of these funds being permitted by the U.S. authorities to be diverted for the development of Calcutta, if the Union Government was agreeable, thereby throwin the responsibility for refusal on the latte This change of policy should therefore be we come in this country as in others where th operations of foreign Governments in the loca currency will be viewed with disapproval an possibly also mistrust.

Dollar repayments over long periods an on the reduced scale which the new terms wi permit need not necessarily prove onerous c disadvantageous. They may even act as a spu to greater economic efficiency and promotion c exports for earning foreign exchange, once th developing country is well on the road to sel sustaining growth.

Loans to Private Borrowers?

Another special feature of U.S. aid, which there is only a bare hint now, is th possibility of loans to private borrowers al on appropriate terms. Whether this will b an improvement on the existing Cook Amendment provisions—which restrict loa for private enterprises connected with disposa of agricultural surpluses or for collaboration U.S. firms with Indian—is not known.

The steady enlargement of the concept aid from assistance to particular projects general economic development under an int grated plan, with emphasis on fostering soci conditions favouring the distribution of th benefits of growth, is an important achiev ment. It is now made clear that in certa cases, aid will also be available to promote th conditions necessary for economic plannin The World Bank will necessarily set the stan ards of judgment in these matters and pr vide the economic appraisal on the basis which assistance will be given. The two co *muniques* recently issued by the Consortium India and Pakistan bear out the importance the distinctions to be observed. While it w "encouraged by the economic progress ma by India" and felt that the third Plan was w conceived and that India had demonstrated capacity to make effective use of foreign a the Consortium noted the successful efforts Pakistan "to create conditions in the count favourable to economic development" and c cided to await the revised development p gramme to decide the extent and nature assistance on the basis of the detailed engine ing and cost studies. Planning on the rig lines obviously determined the difference approach.

SURVEY

(*Concluded from page 1119*)

labour welfare officers employed by the Uni Ministries and State Governments and also the Hindustan Steel Ltd. for organising junior executive development programme f their newly recruited young executives. T Institute, since its inception in 1954 under t ægis of the University of Calcutta, has prov ed in-service training to 1,395 labour welfa officers, 260 business executives and 111 soc workers in all.

It is noteworthy that the Institu which first started the system of service training in India, is still adhering to and it is equally noteworthy that the comm cial and industrial establishments in a around Calcutta, apart from sponsoring can dates for the Institute courses, are taking keener interest in its activities by enrolli themselves as collective members. Such coll tive members of the Institute numbered 43 the close of 1960-61. One of the privileges e joyed by these collective members is that t training facilities of the Institute are availal to candidates sponsored by them. The creasing realisation on the part of industr enterprises that management education is crucial importance in the conditions of in tutional management as distinct from own management, augurs well for the continu success of the Institute.

A sum of Rs. 17 crores have been alloca under the third Five-year Plan for Air-India Int national's projects. Construction of a new engine overhaul base at Bombay has already b taken up and will be completed during the th Plan period. At the beginning of the third Fi year Plan, the operating fleet of Air-India c sisted of four Boeing 707 Inter-continental Jets a nine Super-Constellations. Air-India has plans acquire two more Boeing 707 Inter-continen Jets, for delivery by April 1962. It will then h a fleet of six giant jets and expects to oper daily flights to London and New York, two flig a week each to Nairobi and Tokyo and one fligh week each to Moscow and Sydney. Air-In International completed 13 years of internatio operations on 8th June 1961. During 1959-60, operated 59.518 million capacity ton-miles 34.618 million revenue ton-miles, carried passengers, 1.981 million pounds of mail and million pounds of cargo.

U.K. AND OVERSEAS AID

GOLD LOSS PERSISTS

(*From Our Own Correspondent*)

LONDON LETTER

LONDON, *9th June*

THE Consortium of Western countries, plus the U.S., Canada and Japan, which for several months past have been considering aid to India, has unexpectedly publicised its latest decision, though, as far as the U.K. is concerned, there is a good deal of ignorance as to what it all means. For one thing, the Government have to ratify the decision of the Consortium and, in doing this, they will no doubt have to know from where the money is coming.

The grand total of aid for the first two years of India's third Five-year Plan is understood to be about £800 million and, of this, the U.K. is contributing about £90 million—over two-thirds in the current year and under one-third in the year following. The U.S. share of a little under a half the total will be tied to purchases inside the U.S., but the U.K. will have no such strings on its loan. The money, following well-established Treasury principles, will be spendable anywhere in the Commonwealth or in no matter what currency.

This difference in approach between the U.S.—which, in addition to its share of the main loan, will offer an even larger sum in the form of surplus commodities—and the U.K. is that the U.K.'s approach to these matters of lending is fundamentally that of a banker. It will lend what it has not got in the expectation that, in the sum total of its international transactions, it will receive the where-with-all. That is why no surprise has been expressed that the news of this proposed British commitment should come on the same day as the news of a still further fall in British gold reserves.

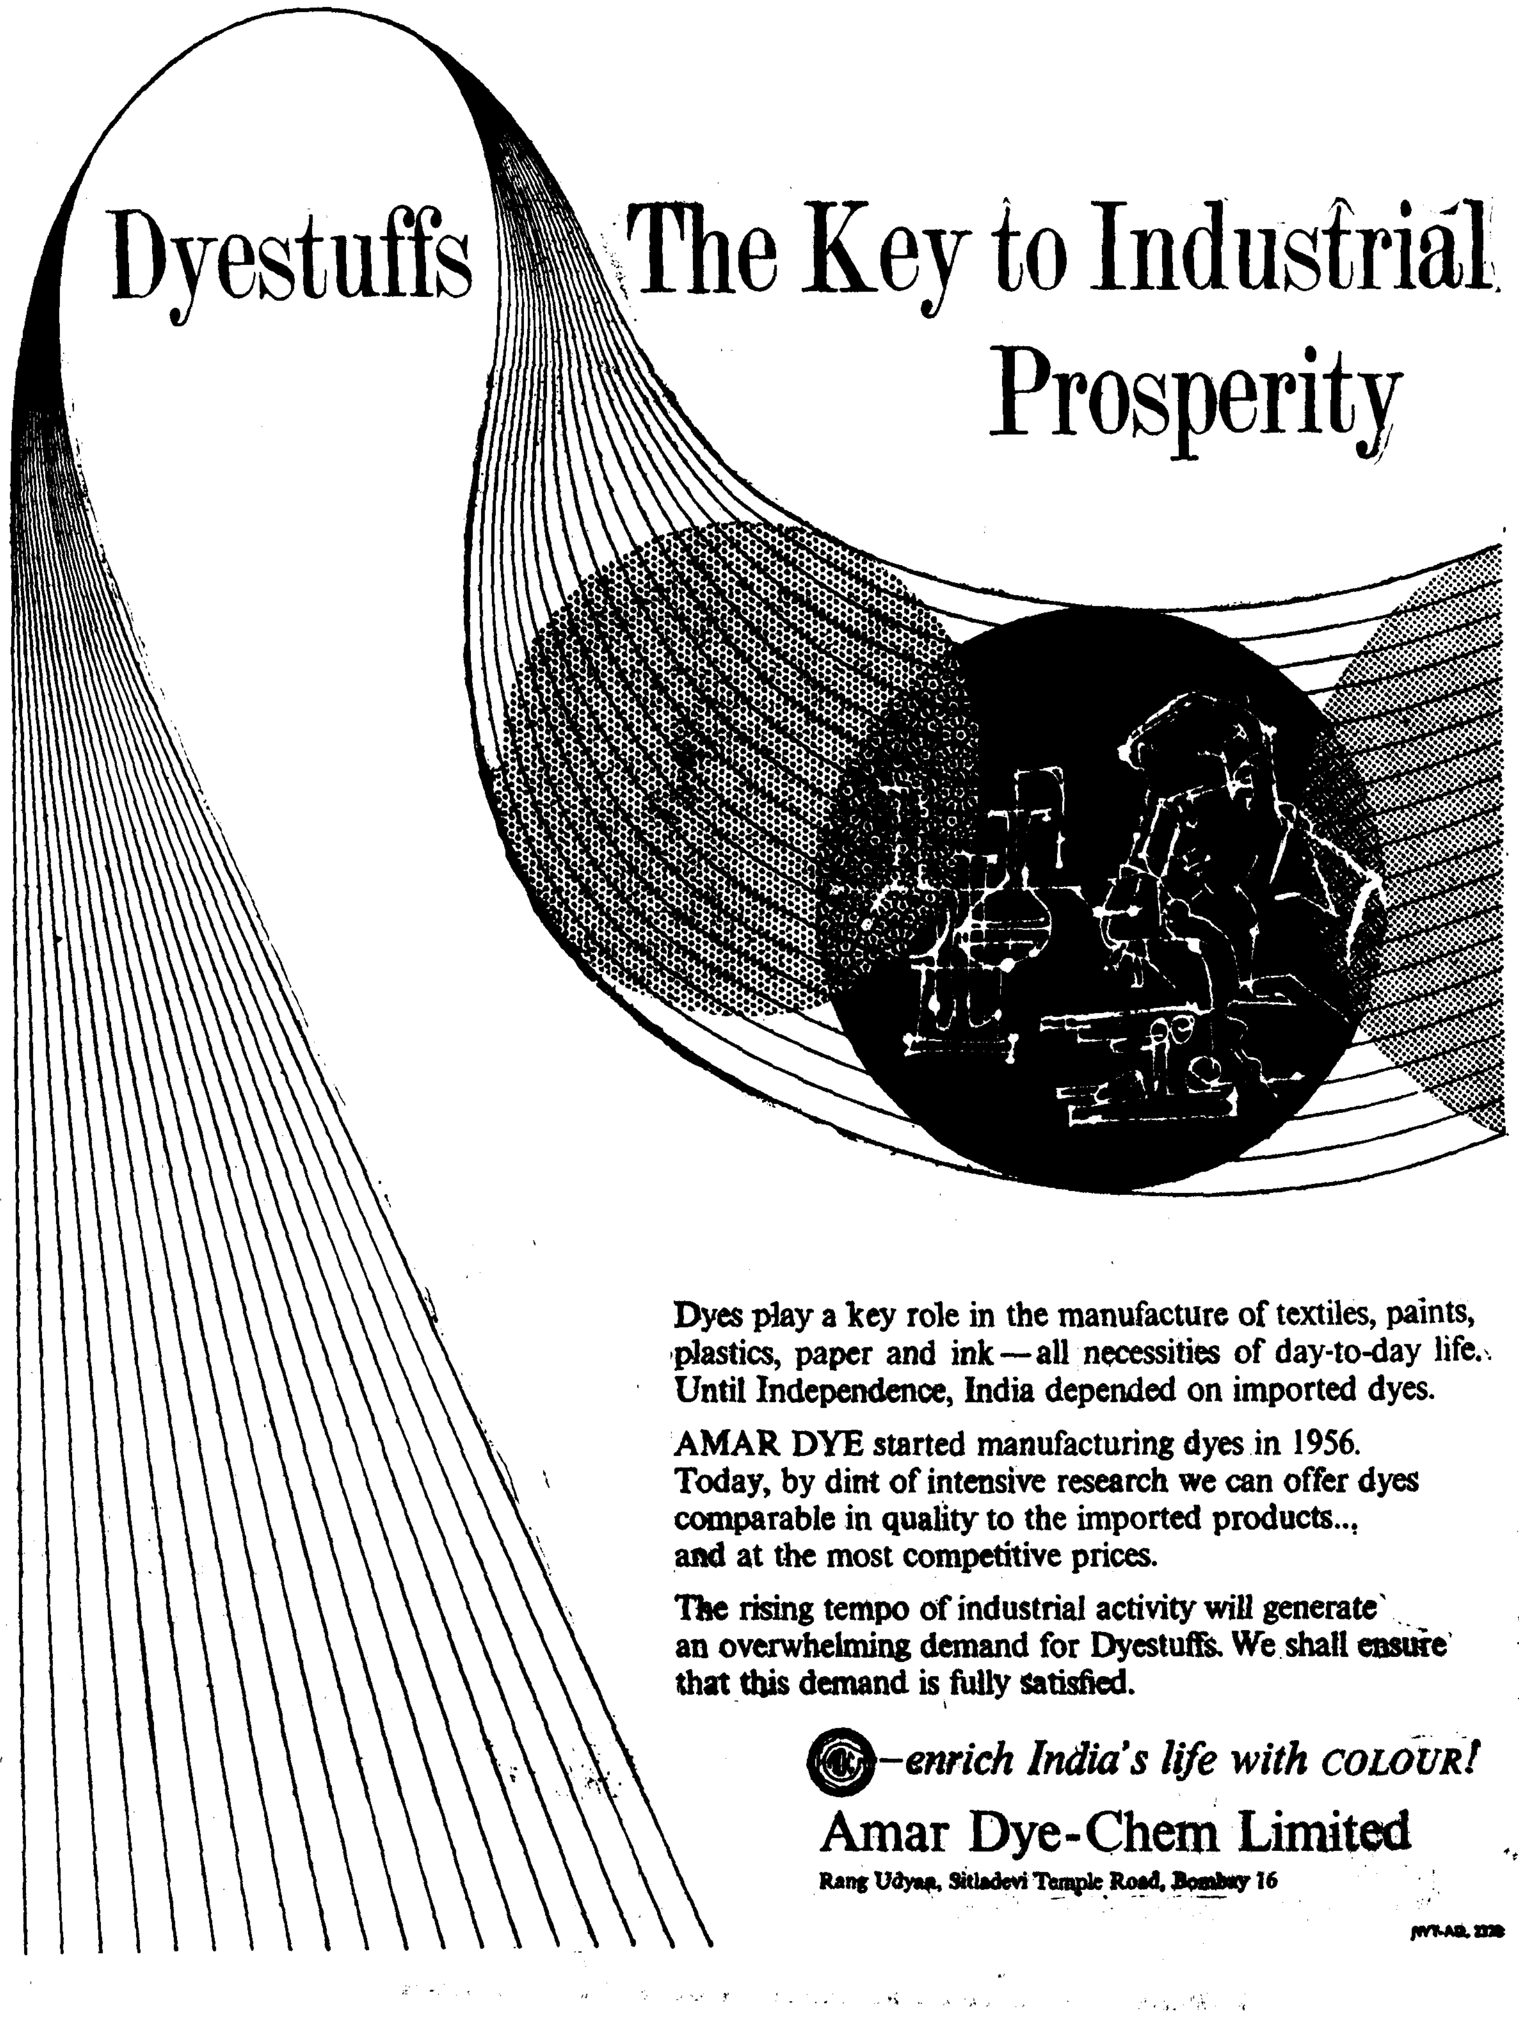
Although the heavy rate of fall in March (about £15 million per week) was more than halved in April, it has not been significantly slowed down. To that extent the published drop of only £16 million in May is deceptive. This is because the sterling area has benefited from Australia's drawings from the International Monetary Fund which have been partly used in a roundabout way to meet other U.K. commitments to European Central Banks. The true assessment of the position is probably that the U.K. is still losing gold at the rate of nearly £1 million per day. The loss in May is the first for this month for ten years, but is easily explained by the continued outward trickle of that hot money that came galloping in last year.

There is no reason to suppose that the outflow is due to an aggravation of the deficit on the current balance of payments. Indeed, the trend has been all the other way since the beginning of this year, and it is expected here that the forthcoming announcement by the Treasury of the balance of payments for the first quarter will be reassuring—if by reassurance is meant that the condition of the patient is a little better. It is not yet good enough to give any prospect that, in the current year, the balance of payments will show a surplus—which brings us back to the opening question of from where come the funds for overseas aid?—*All Rights Reserved.*

COMMONWEALTH DEVELOPMENT FINANCE COMPANY

The Commonwealth Development Finance Company has had its most active year since its inception eight years ago, according to its annual report just published in London. The report outlines the increased activity by the Company which has led to a greater volume of investment. As a result, commitments aggregating £3,68 million have been accepted involving participation in nine new schemes with a total capital cost of £20.00 million. Current commitments, including some from earlier years, are spread widely over the Commonwealth, with emphasis on Africa and Asia. Investments in India include those in East India Distilleries and Sugar Factories, the Industrial Credit and Investment Corporation of India, and Indian Oxygen Ltd.

The Company was formed in 1953 as a channel for investment of private funds in the Commonwealth, its purpose being to foster sound industrial development. Of its original authorized capital of £15.00 million, £8.250 million were subscribed for by industrial, financial, and commercial concerns in Britain and £6.75 million by the Bank of England.



INFLOW OF FOREIGN PRIVATE CAPITAL

RESERVE BANK'S REVIEW OF PRELIMINARY TRENDS IN 1960

THE net inflow of foreign investment in the private sector in India in 1960 can be expected to be somewhat higher than in 1959. This is the conclusion of an article on "Foreign Investments in India : 1959 and 1960 (Preliminary Trends)" prepared in the Division of International Finance of the Economic Department of the Reserve Bank of India and published in the May 1961 issue of the Bank's *Bulletin*. The above conclusion is based on an overall assessment of various factors affecting the inflow of foreign capital, such as approvals given for issues of shares to rupee companies and allotments by them, drawings on credits from official sources, the probable trends in capital repatriation, etc. During 1960, approvals for issue of shares of rupee companies to non-residents were maintained at the preceding year's high level of around Rs. 19 crores. But as the utilisation of approvals in 1959 was rather slow, the fresh inflow of capital into foreign controlled rupee companies is likely to be higher in 1960. Retained earnings may be as large as in 1959 since corporate profits are expected to be around the 1959 levels. Further, the gross petroleum capital outflow which was of unusual magnitude in 1958 might have fallen to more normal levels during 1960.

It is true that receipts of official capital during 1960 were at about the same level as in 1959, that is about Rs. 27 crores, but a decline in World Bank loan drawings have been counterbalanced by receipts of credits from the Eximbank and the D.L.F. The conclusion, therefore, seems warranted that the flow of foreign investment in the private sector would turn out to be larger in 1960 as compared with 1959. How much higher ? The article in the Reserve Bank of India *Bulletin* has given the following answer : "During the four years ended 1959, net inflow of foreign capital amounted to Rs. 153 crores allowing for appreciation in the value of investments in some industries. If, as is assumed, net foreign investment flows at a higher rate in 1960 than in 1959, the total net inflow of foreign capital into the private sector in the five-year period 1956-60, which would roughly correspond with the second Five-year Plan period, may be somewhere around Rs. 200 crores."

Official Measures

A number of official measures adopted recently might have improved further the climate for foreign investment in the country, though it is too early to judge their precise impact. These steps, besides streamlining the institutional machinery for processing applications for foreign collaboration in new ventures and for clarifying the Government's industrial policy, have been mainly directed towards making suitable adjustments in the tax structure. The Indian Investment Centre, set up in June 1960 with T.C.M. aid and charged with the promotion of foreign private investment inflow, would disseminate information on economic, financial and industrial policies of Government, survey foreign investment possibilities, advise Indian businessmen on attracting foreign capital as well as assist potential foreign investors interested in investment in India. As regards taxation, with a view to enabling Indian industry to secure technical collaboration on more favourable terms, the rate inclusive of income-tax and super-tax, on royalties received from Indian enterprises by foreign companies has been reduced from 63 per cent to 50 per cent. Further, the tax exemptions already given to foreign technicians have been enlarged. There has also been a modification in the tax payable by companies in respect of dividends received by them, as a result of which the rate of super-tax on dividends paid on inter-corporate investment, whether Indian or foreign, and whether on a majority or minority basis, has been fixed at a uniform level. Prior to this, there was a concessional rate of super-tax on dividends received by a parent company from its subsidiary, while inter-corporate investment on a minority basis was taxed at a higher rate. Also the tax on a minority share-holding by a foreign company was substantially higher than on an Indian company with a minority holding.

Besides noting the preliminary trends in 1960, the article has furnished a detailed review of the trends in foreign investments in the private sector during the year 1959 on the basis of the fuller data which have now become available. Net foreign investment in the private sector, that is, after allowing for repatriation of capital, aggregated Rs. 38 crores in 1959, which was Rs. 10 crores higher than in the preceding year. Inflow of both foreign private capital and long-term funds lent by official institutions to the private sector were higher in 1959 than in 1958. Apart from the World Bank, the private sector received loans from other official agencies such as the U.S. Export-Import Bank and the D.L.F. The loans from these two latter agencies exceeded those from the World Bank. Besides, there were drawings of Rs. 1 crore each from the British loan for the Nahorkotiya oilfields pipeline project and the Japanese yen credit, making up a total receipt of Rs. 27 crores, of official capital during 1959.

Industry-wise Utilisation

The industry-wise utilisation shows that while the World Bank loan was employed mainly in the iron and steel industry (Rs. 7.2 crores) and power projects (Rs. 1.5 crores), the loans from the U.S. Eximbank and D.L.F. as well as from Japan were spread over a large number of manufacturing industries, such as textiles, machinery and machine tools, electrical goods, transport equipment, chemicals and allied products, cement, and several miscellaneous products.

The table below shows the trend of inflow of foreign investment into the private sector (excluding the banking system) during the four years 1956, 1957, 1958 and 1959 :

(In crores of rupees)

	1956	1957	1958	1959
Inflow of private foreign capital (net)	24.9	17.9	2.4	10.8
Gross inflow	31.2	26.9	26.8	25.6
Of which :				
(i) Retained earnings	19.5	9.5	9.8	15.1
(ii) Cash inflow	3.1	5.9	4.8	3.3
(iii) Non-cash inflow	8.5	11.4	12.3	7.2
Outflow	—6.3	—9.1	—24.4	—14.8
I.B.R.D. capital	12.1	32.1	25.3	27.8
Gross inflow	43.3	59.0	52.1	53.9
Net inflow	37.0	50.0	27.7	38.1

It will be observed from the table that fresh capital receipts from abroad, as distinguished from retained earnings, for the establishment of new units as well as for expansion of existing undertakings, were lower in 1959 at Rs. 10.5 crores as against Rs. 17.1 crores in 1958. In this connection, approvals given for issue of shares to non-residents would appear to be a better guide to the foreign investor's response to the changing investment climate in the country, since there is usually a time-lag between the grant of approvals for issue of shares and the actual allotment of these shares. Approvals for allotment of shares to non-residents in 1959 were, in fact, significantly higher at over Rs. 19 crores as against Rs. 13 crores in the preceding year. The rate at which shares were actually allotted was, however, rather slow in 1959, with the result that the allotment of shares amounted to Rs. 6.3 crores in that year as against Rs. 7.5 crores in 1958. The decline in the rate of actual allotments is reflected in the reduced inflow of fresh capital.

Rise in Retained Profits

In fact, a notable feature of the foreign investment pattern in 1959 was the sharp rise in retained earnings. Unlike in the preceding two years, in 1959 there was a substantial rise in profits ploughed back in business which rose to Rs. 15.1 crores from Rs. 9.8 crores in 1958 and Rs. 9.5 crores in 1957. They were, however, lower as compared to the high of Rs. 19.5 crores reached in 1956. Total earnings of foreign controlled enterprises accruing to non-residents amounted to Rs. 38.4 crores in 1959 as against Rs. 35.2 crores in the preceding year. It is significant that during 1959 the increase in retained earnings exceeded the rise in aggregate earnings, since distribution out of earnings were reduced. The rise in earnings was accounted for mostly by the manufacturing group. For the second year in succession, the manufacturing group earned more and provided for a larger amount of reserves ; total proportionate earnings of these companies increased from Rs. 13 crores in 1958 to Rs. 16 crores in 1959 while the reinvested profits went up from Rs. 5 crores to Rs. 7 crores. The overall expansion in investment activity and improved business conditions have had, in general, a favourable effect on earnings, particularly of the manufacturing companies. As could be expected, because of the Government's restrictive import policy, these industries have of late enjoyed a sheltered market in India for their products. The plantations group which comprised mostly tea companies, presented an encouraging position, unlike in the preceding two years. These companies had to draw sizably upon their accumulated earnings in 1957 and 1958 with a continuous fall in their earnings. In 1959, however, they earned more and retained a still larger share of these earnings by reducing their distribution of dividends, etc. In the case of petroleum group, retained earnings were higher despite a reduction in total earnings. Of the aggregate earnings retained in 1959, manufacturing and petroleum groups together accounted for over 85 per cent.

The improvement in *net* foreign investment was almost entirely due to a substantial decline in the level of capital repatriation in 1959 to Rs. 14.8 crores from Rs. 24.4 crores in 1958. The bulk of the outflow in 1959 was in respect of the petroleum industry which fell sharply from Rs. 21.9 crores to Rs. 12.9 crores.

During 1959 the U.S.A. continued to be the principal investing country as was the case in the preceding two years. The net inflow of capital from that country aggregated as much as Rs. 22 crores in 1959, that is, about three-fifths of the total net inflow during that year. This was substantially higher than that from the U.K. The sharp rise in the flow of capital from the U.S. was accounted for mainly by the share of capital from official sources. The low figure of net investment of capital from the U.K. was attributed to the continued repatriation of sizable amounts of capital, which amounted to Rs. 15 crores in 1959. A large part of the capital repatriation to the U.K. in 1959 was accounted for by petroleum capital.

An idea of the country-wise analysis of foreign capital can be had from the following comparative table :

(In crores of rupees)

Country	1957		1958		1959	
	Gross	Net	Gross	Net	Gross	Net
U.K.	15.2	6.3	20.1	—2.0	14.6	—0.2
U.S.	10.5	10.5	4.5	2.6	7.6	7.6
Others	1.3	1.1	2.1	1.8	3.4	3.4
Total private capital	27.0	17.9	26.8	2.4	25.6	10.8

The U.K. continued to account for the predominant share of the total outstanding foreign investment in the country. Of the aggregate foreign investments of Rs. 610.7 crores, as at the end of 1959, nearly two-thirds, that is, Rs. 400.1 crores was from the U.K. Outstanding investment from the U.S. at Rs. 82 crores, although nearly double the level at the end of 1955, formed less than 15 per cent of the total. Outstanding investment from West Germany have not yet assumed a significant level.

The outstanding position of total business investment at the end of this last four years, as also at the close of June 1948, on industry-wise and country-wise basis is given in the following tables :

(In crores of rupees)

	June, 1948	1956	1957	1958	1959
Petroleum	22.3	116.4	134.1	118.4	120.7
Manufacturing	70.7	147.6	184.0	218.6	250.7
Trading	43.0	29.3	27.4	30.0	28.4
Utilities and transport	31.5	48.9	52.6	50.0	52.6
Mining	11.5	10.8	9.8	12.4	13.0
Financial	6.9	27.7	34.5	22.9	25.1
Plantations	52.2	87.9	86.6	96.0	95.1
Miscellaneous	17.7	24.6	24.4	24.3	25.1
Grand Total	255.8	493.0	543.0	572.6	610.7

(In crores of rupees)

	As at the end of				
	June, 1948	1956	1957	1958	1959
United Kingdom	206.02	392.5	398.8	398.8	400.1
United States	11.17	47.0	57.5	60.0	82.0
W. Germany	0.08	2.3	3.5	3.8	5.4
Japan	0.17	0.2	0.6	0.6	1.4
Switzerland	5.35	3.2	6.7	6.8	7.6
Pakistan	8.41	4.2	4.2	4.2	4.2
I.B.R.D.	..	14.8	46.9	72.2	82.0
Other countries	24.63	23.2	24.8	26.2	27.0
Total	255.83	493.0	543.0	572.6	610.7

The article further throws light on the movement in the assets and liabilities of the banking system. The net inflow of funds from abroad during 1960 was higher at Rs. 8 crores, as against Rs. 2 crores in 1959. The net inflow during 1960 was mainly through higher borrowings from abroad and slightly through drawing down of foreign assets. The higher draft of foreign resources in 1960 is explained to some extent by the more stringent monetary conditions that prevailed in 1960, relatively to the preceding year.

DEFICIT FINANCING AND ECONOMIC DEVELOPMENT

NEED FOR CONTROLLING INFLATIONARY POTENTIAL URGENT

By S. M. Veeraraghavachar

Department of Post-Graduate Studies and Research, University of Mysore

THE term "Deficit Finance" is generally used to denote the excess of expenditure over the normal revenues of a Government, whether on capital or revenue account. The normal revenues consist of what it receives by way of taxes, earnings of State enterprises, loans from the public, deposits and other miscellaneous sources. The Government may very often be forced to spend more than its revenue and the deficit in the budget can be covered either by drawing upon the accumulated cash balances or by borrowing from the banking system. Deficit financing, therefore, implies an addition to the gross national expenditure through budgetary deficits. If the Government borrows from the central bank to cover its budgetary deficits, the bank directly issues additional currency notes and deficit financing is clear and can readily be recognised. Deficit financing can also take place when commercial banks subscribe to the loans of the Government. When individual and non-banking institutions subscribe to Government loans, there is a transfer of resources from the private sector to the Government, so that there is no net addition to the gross expenditure of the Government. When the banks subscribe to Government loans, initially there may be a reduction in the cash reserves, but they can replenish it by borrowing from the central bank on the security of the Government bonds purchased by them. When this happens, there would be a net increase in the purchasing power. It is thus clear that, when the Government borrows from banks, it amounts to deficit financing just as in the case of its borrowing directly from the central bank.

One of the most important precepts of the classical school was that the budget should be balanced. This falls to the ground when we realise that the assumption of full employment is not correct and, in reality, we have an underemployment equilibrium and existence of unused resources in the economy. So long as a State can raise the level of its business activity by using the factors that are not employed, an outlay beyond its revenue would be justifiable and an unbalanced budget would be theoretically sound. The world-wide depression of the thirties and the Keynesian revolution brought about a change in the field of fiscal policy. No Government could look with indifference on the colossal waste of human and material resources involved in the depression. Thus Governments were compelled to resort to unbalanced budgets. But deficit finance was to be only of a temporary character till private enterprises could revive and come back to prosperity. It is seen that deficit spending was not accepted in normal times. Only in an emergency like war or depression deficit spending was to be thought of.

Inflationary Potential

In recent years deficit financing has come into prominence as a method of financing economic development in underdeveloped countries. The underdeveloped countries with low capital formation are unable to carry on rapid economic development. The vicious circle of poverty, low income, low savings and low capital formation can be broken only by rapid economic development. In the absence of large-scale foreign capital, the temptation for deficit spending would be very strong. Deficit spending for economic development has its advantages as well as inevitable dangers.

Deficit spending essentially increases the money supply, leading to increased aggregate national expenditure—directly by the Government and ultimately by the public. This increase in expenditure, unless it is accompanied by a corresponding increase in output, would bring about a rise in prices. Deficit spending is potentially inflationary in character. The crux of the problem would be to see that deficit spending does not become inflationary leading to soaring prices, which would ultimately defeat the very purpose for which it was undertaken. When deficit spending is made during war periods to finance expenditure of an unproductive character on a large scale, inflation is inevitable. But there is no need to argue that deficit financing should always result in inflation. As Dr. V. K. R. V. Rao rightly observes, "it is this illegitimate identification of deficit financing with inflation that is at the root of most of the current objections to the use of deficit finance for economic development." It is not deficit finance as such which would lead to inflation but the unproductive character of the outlay that would mainly explain the emergence of inflationary pressures. The central question is how far one can resort to deficit financing and the answer is that deficit spending should not be resorted to beyond the point at which it becomes inflationary. Some rise in prices is inevitable in a developing economy, but the rise in prices will become dangerous if it becomes spiral in character.

The limit for deficit financing depends on various factors. Broadly, these are (*a*) the state of the economy, (*b*) the purpose for which deficit financing is used, (*c*) the extent to which increase in investments results in an increasing flow of consumer goods, (*d*) the rigidity in the money rate of wages, and (*e*) the success with which additional incomes could be mopped up. If there is depression in the economy, even large-scale deficit spending may not result in inflation until stability is restored to the economy. On the other hand, if there is already inflation in the economy, further deficit spending would make the position worse. Deficit spending for unproductive or destructive purposes would be inflationary, whereas for productive purposes it may not be inflationary. Even with regard to productive investment, the time-lag between investment and the appearance of finished goods is of great importance. If the projects could add quickly to the flow of consumer goods, there would be little danger of inflation. But when investments are in heavy capital goods industries, it has greater inflationary potentialities. Finally, if the Government is able, by means of taxation or borrowing, to mop off the extra purchasing power generated and if the money rates of wages are rigid, the dangers of inflation would be less. It would, however, be very difficult to lay down any limit as safe, since it would depend on various factors. One has to proceed cautiously and must always watch possible danger signals pointing to inflation.

Under the Two Plans

The first Five-year Plan had an original outlay of Rs. 2,069 crores. Out of this, normal resources were estimated at Rs. 1,258 crores. External assistance was placed at Rs. 156 crores. Sterling releases were expected to give Rs. 290 crores. This would leave a gap of Rs. 365 crores which was to be met from further external assistance or by means of internal taxation, borrowing and deficit financing." Deficit financing was visualised to the extent of Rs. 290 crores. Taking the first four years of the Plan, the deficit spending amounted to Rs. 241 crores. For the last year of the Plan, the actual budgetary deficit was about Rs. 180 crores. For the five-year period, the total amount of deficit financing was to the tune of Rs. 420 crores. It should be noted here that the overall deficits during the last two years of the first Plan was more than Rs. 270 crores, thus causing a large dose of deficit spending in the last two years. The effect of this was not immediately felt and, in fact, we could see the effect only during the second Plan period. Definite spending during the first Plan did not generate any inflationary pressure. Prices at the end of the first Plan were lower by 13 per cent than when the Plan started. The all-India cost of living index in 1955 was at an average

level of 96, as compared with 100 in 1949. Money supply in the hands of the public at the close of the fiscal year 1955-56 was about Rs. 208 crores above the level in 1951, an increase of a little over 10 per cent as compared with the estimated increase of some 18 per cent in national income. It must be observed that, against this picture of stability, there were certain important factors helping such stability during the first Plan period. There were good harvests and most of the deficit spending was in the last two years of the Plan. These two factors, along with the increase in industrial production, contributed more or less to a stable price level during the first Plan period.

The second Five-year Plan was much more ambitious than the first. The total outlay was to be Rs. 4,800 crores in the public sector, Rs. 1,200 crores, or 25 per cent of the total, were to be financed through budgetary deficits. It must be emphasised here that one of the major objectives of the second Plan was rapid industrialisation with particular emphasis on the development of basic and heavy industries. This aspect is important because these industries do not bring about an increasing flow of consumer goods without a time-lag, so that inflationary pressure is bound to be generated in the time-interval before the appearance of the finished consumer goods. It was stated in the Report on the second Five-year Plan that "no amount of prudence in financial management can by itself eliminate completely the risk of inflation in an economy attempting to develop rapidly." But a risk has to be taken with sufficient safeguards. The most effective insurance against such risk would be the ability of the Government to control the prices of food and cloth which occupy a strategic position in the Indian economy. This was to be achieved by building up of buffer stocks of foodgrains by imports and also increasing food production within the country. A further defence against inflation was the prompt use of the instrument of taxation to mop off the extra purchasing power that deficit financing might generate. The Reserve Bank also could use its wide powers for quantitative as well as qualitative control of credit. Finally, even physical controls, including rationing and allocations, were suggested, though past experience of their working inevitably leading to black-marketing and corruption did not make them attractive.

'Consumption Goods

In discussing the inflationary potential of deficit financing, the important point is that the income generated through deficit financing tends to be almost wholly spent on consumption. If the supply of consumer goods does not expand immediately and adequately, there will be a rise in prices and cost of living. An inflationary spiral may be unleashed with the rise in prices, rise in cost of living, rise in wages and a serious imbalance in the balance of payments. The second Five-year Plan recognised the need for augmenting the supply of consumer goods, but the small-scale industry was assigned the impossible task of increasing the production of consumer goods and meeting the huge money demand generated by the total planned expenditure. While it is no doubt important to create more employment, it is wrong to give less weight to the production of consumption goods in the pattern of industrialisation envisaged under the Plan.

During the second Plan period, there had been a continuous uptrend in commodity prices. Over the year 1960, the general index of wholesale prices (1952-53=100) recorded a rise of 6 per cent. The industrial raw materials with 16.6 per cent and manufactures with 9 per cent showed the largest increases. The rise in the general price index is largely attributable to excessive monetary expansion. Money supply rose by Rs. 219 crores during 1960 and scheduled bank credit recorded the sharpest expansion in recent years, namely, Rs. 216 crores or 22.5 per cent, as compared with Rs. 99 crores or 11.3 per cent in 1959. The capital market was buoyant during the year. There was also a fall in the foreign exchange reserves. The continuous rise in prices, large expansion in money supply and decline in foreign exchange reserves clearly indicate the pressure of excessive demand. These are clear signs of inflationary pressure. No doubt the Reserve Bank has used both qualitative and quantitative control of credit in order to have a "controlled expansion" of money supply. The instrument of variable cash reserves, fixation of a basic quota for each bank's borrowing above which a penal rate is to be charged, directive to banks to raise their lending rate, and stipulation of a minimum margin with regard to shares and certain essential commodities—all these measures have been used to control the expansion of money supply. But we cannot say that they have succeeded in controlling the inflationary pressure. It is a well-known fact that monetary weapons alone cannot control the inflationary potential. Fiscal measures like additional taxation have also been resorted to control the inflationary potential. But it is clear that we have not succeeded. It is very often argued that, because there is an increase in production, deficit spending is not inflationary. But so long as expansion of money supply is in excess of the expansion in output, inflation is inevitable.

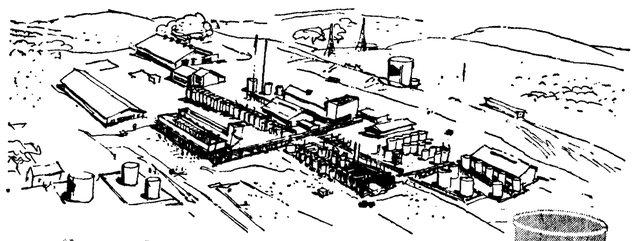
The rise in prices over the second Plan period has been more than 25 per cent. It is also clearly recognised that, in view of the present price trends, the scope for deficit financing is very limited in the third Five-year Plan. According to the Draft Outline on the Third Plan, it is assumed that money supply could increase by about 33 per cent in the third Plan period without causing excessive pressure on prices. It is estimated that the additional money creation permissible might be of the order of Rs. 950 crores. Allowing for the increase in the money supply by the banking system, the amount of budgetary deficits during the third Plan is taken as Rs. 550 crores.

Conclusion

In a total outlay of Rs. 12,000 crores with a physical target of Rs. 8,000 crores and a financial target of Rs. 7,500 crores in the public sector, deficit spending of Rs. 550 crores may not be much. But it is possible that, with a shortfall in other domestic resources, the temptation to increase deficit spending would always be present. It must be realised that, besides the monetary factor, there are other factors also contributing to rise in prices, such as increase in population, shortages of essential raw materials, uncertainty with regard to food production and unsocial practices of creating artificial scarcity. But when the second Plan is coming to a close with a rise in prices of more than 25 per cent, the primary need at present is to achieve economic growth during the third Plan along with price stability. In a developing economy, some rise in price is inevitable. A rise in price of about 2 per cent per annum may not be dangerous, but, beyond that, it would be really risky. Achieving progress along with price stability would very much depend upon our ability to hold the price-line with regard to foodgrains and industrial raw materials which occupy a strategic position in our economy. Increased production and building up of buffer stocks would help us to a great extent. It is also equally necessary to restrain consumption and encourage savings. Additional taxation must restrain consumption without affecting a minimum standard of consumption and also give all inducements to encourage savings. The existing capacities in industries should be fully utilised. In short, the primary aim of the third Plan should be progress with price stability.

A rise in prices leading to a rise in cost of production will have an unfavourable effect on our balance of payments position. When there is reduction in the cost and prices and lower rates of interest in other countries, we cannot compete in an international market on a competitive basis with our high cost and high prices. The plight of the sugar industry clearly illustrates the position. With a surplus of sugar, we are unable to find an export market, because prices are very much higher than international prices. Moreover, one cannot expect people to be enthusiastic about savings and lending to the Government, if the rupee goes on depreciating in value. One might criticise the Indian people for investing in precious metals and real property, but, when the rupee is depreciating, it would certainly be more profitable to invest in precious metals or real property, as they automatically appreciate in value, than invest in Government loans. Rising prices not only limit the ability to save but discourage such efforts, as people feel that they would get less goods and services in future for the money saved. It is very essential that, both from the internal and external aspects of our economy, the rupee should not be allowed to depreciate little by little. The monetary and fiscal policies should have the common aim of securing stability of prices and the value of the rupee. Deficit financing should be kept to the barest minimum and, hereafter, the aim of planning should be "economic development with price stability" and not at the expense of price stability.

UNION CARBIDE INDIA
now offers from its Trombay plant



These four synthetic organic chemicals now being produced at Union Carbide India's Trombay Plant serve as raw materials and intermediates in the processing and manufacture of a whole host of products for industry and the home—from dyes, textiles and drugs to automobiles, leather cloth, foodstuffs and photographic films,

For your requirements of these organic chemicals write to your nearest Union Carbide India Office.

Where on earth is Mogadiscio?

Frankly, till somebody in Mogadiscio ordered BINNY'S cloth, we too didn't know that it was the capital of Somalia in East Africa.

Today BINNY'S cloth is imported by 50 countries-superb fabrics made from cotton of the best quality and dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved.

Rigid Quality Control* ensures maximum durability and perfect finish.

Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

*Testing cloth for defects
Every yard of cloth from the looms is examined thoroughly for defects before it is passed for dyeing or bleaching and finishing.

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings . Khaki Drills . Bleached & Dyed Drills . Towels . Anticrease Suitings . Tussores Union Fabrics . Silk Sarees etc. etc.

JWT/BY/1/1387a

Buy your requirements of BINNY'S fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

AUGMENTING USES OF RAW WOOL

WORLD BODY TO INTENSIFY ITS ACTIVITIES

A DECISION to make renewed efforts to develop new processes and finishes in wool industry in all parts of the world was taken at the 10-day conference of the International Wool Secretariat held recently at Sydney. The need was also stressed for more regular exchange of information on technical advances between the Commonwealth Scientific and Industrial Research Organisation and the I.W.S., as well as for facilitating interchange of personnel between the two organisations. The conference, which was mainly concerned with promotional activities, further decided to continue and intensify work to discover the best method of allocating and using the available funds, suitable methods for measuring the effectiveness of promotional work, detailed surveys of consumer attitudes, and study of short and long term trends in demand for wool products.

Mr. McEwen, Australian Minister for Trade, who spoke at the conference, observed that "we have no doubt the best fibre but we must also realise that we cannot rest our case there; we have to go out now, and promote wool on a scale never before contemplated." The I.W.S. has already been engaged in the task of promoting the cause of wool, in order mainly to enable it to withstand competition from substitutable fibres. As pointed out by Mr. R. G. Lund, Regional Director for Europe, the I.W.S., in its programme for popularising wool, has applied two principles, namely, choice and concentration, keeping in view the fact that it cannot compete in every field with "rival fibre organisations which have greater resources." Its publicity measures have been concentrated in consumer advertising linked with merchandise and also in technical liaison and product development.

It is gratifying that, apart from the reaffirmation of faith in wool's competency as a fibre, the representatives of wool industry and trade have tried to chalk out positive measures to step up the tempo of publicity drive and explore new scientific processes. This has come not a day too soon. For the industrial demand for wool, it would appear, has not so far picked up in several major consuming countries, such as the U.K. and the U.S., since the 1958 recession. The latest trends in production, too, give no room for complacency.

Output Declines

The total world output of wool is expected to have suffered a small setback in the current season (1960-61). According to provisional figures released by the Australian Bureau of Agricultural Economics, world production of wool in 1960-61 would be of the order of 5,519 million lbs., greasy basis, a decline of 1.5 per cent as compared with the previous year. The decline in production is mainly the result of the lower level of clippings in Australia, which account for about 30 per cent of total world wool production. In South Africa and Argentina, too, there was a perceptible decline in output. The net decline in world output would have been much more pronounced but for the expected increase in output in some other countries, such as the U.S., New Zealand and Uruguay. The output in the Soviet bloc is also provisionally placed higher than in the previous year. Group-wise, the reduction in output is accounted for mainly by merino wools, thanks mainly to the setback in Australia. The production of crossbred and carpet wools show little change.

The following table shows at a glance the trend of world wool output during the last 25 years:

(Million lbs., greasy basis)

	1934-38 (average)	1958-59	1959-60	1960-61†
Australia	995	1,591	1,690	1,600
New Zealand	290	540	585	595
Rest of Commonwealth	230	254	265	N.A.
South Africa	581	314	319	297
Argentina	376	421	434	409
Uruguay	114	175	180	175
U.S.	470	289	316	320
Soviet bloc	435	1,010	1,098	1,106
Others	608	749	767	1,017*
World Total	3,788	5,347	5,599	5,519
(Clean equivalent)				
Merino	742	1,187	1,252	1,189
Crossbred	810	1,253	1,308	1,327
Others	472	697	627	617
Total	2,024	3,087	3,181	3,143

† Preliminary.
* Including Commonwealth countries other than Australia and Poland.
Source: Australian Bureau of Agricultural Economics.

The decline in Australian wool production (by about 5 per cent) was the result of dry conditions in all its important wool-producing areas in the beginning of the 1960-61 season. Although heavy rains fell in the south and west, Queensland was suffering from widespread drought until the end of December. Had it not been for the unfavourable climate, Australia would have maintained the tempo of the previous year's growth in output. In fact, during the current season, slaughterings are expected to continue at last year's high rate. The number of sheep in Australia, it may be recalled, set an all-time high at 155 million in March 1960, reflecting an increase of 2 per cent over a year. This increase reflected a record lamb marking which was more than sufficient to offset deaths and slaughterings. Almost all areas had participated in the increase in that season, except South Australia, where drought conditions reduced the number of sheep to 10 per cent below the previous year's level.

In Argentina

Another country which registered a decline in output was Argentina. Its production is expected to be lower by about 25 million lbs. at 409 million lbs. in 1960-61. This brings the country's output to the somewhat disappointing figure of 409 million lbs., or just the same attained as early as in 1957-58. The main reason behind this season's downward trend was the indirect impact of unfavourable weather conditions in the country, particularly in the Patagonian region, during the two previous years. The domestic wool industry suffered severely from floods during 1959 and from prolonged dry spells later in the season. Nevertheless, total production was running at a higher level, as is shown in the table in column one.

The unfavourable weather conditions have also affected adversely the South African wool industry. The Cape Province, in particular, has been worst hit by continuous drought in recent years. In the current season, there have been large-scale attempts to move sheep out of the most severely affected areas to regions where feed is more plentiful. This measure did not prove much of a success, and the domestic output fell below the 1957-58 level of 299 million lbs.

In Uruguay

The production in Uruguay was also damaged to some extent on account of bad weather conditions in recent years. Heavy flooding of grazing areas resulted in a 9 per cent fall in the number of sheep in the country between 1958 and 1959. These conditions improved slightly in 1960 and, therefore, production in the current season is expected to recover to the level of 1958-59, that is, 175 million lbs., or 10 per cent above that in the 1959-60 season.

In New Zealand, the upward trend in production witnessed in 1959-60 is expected to be maintained during the current season. According to the New Zealand Wool Commission, production in the current season is likely to go up to 595 million lbs., as against 565 million lbs. in 1959-60. The lambing rate in the last season was only slightly lower than in the previous season, and, in spite of a considerable increase in the number of sheep and lambs slaughtered, it is estimated that the number of sheep had risen to 48 million by June 1960, representing an increase of 30 per cent over 1954.

The production of wool in the U.S. is expected to rise by just 3 per cent to 320 million lbs. in 1960-61. The rate of growth, however, is smaller as compared with an increase of 8 per cent in 1959-60. The U.S. is, by the way, the only major producing country which showed a decline from the 1934-38 level of production. Its average annual output of wool in 1934-38 period, it may be recalled, was as much as 470 million lbs. It may be mentioned here that in 1959-60, for which final estimates are now available, three countries, Australia, New Zealand and South Africa, produced 46 per cent of the world's wool, from about 25 per cent of the world's sheep. They accounted for no less than 70 per cent of the wool entering world trade. If the other two important southern hemisphere producers, Argentina and Uruguay, are added, the five countries taken together accounted for over 90 per cent of the wool entering world trade. South America specialises in the production of crossbreds and carpet wools, and in 1959-60 contributed 23 per cent and 30 per cent, respectively, of these wools. The other large wool producers are the U.S. and the Soviet Union; in 1959-60, they produced 6 per cent and 19 per cent of world output, respectively.

Soviet Bloc

In respect of Soviet wool production, data are not readily available as in the case of other major producers in the non-communist countries. A rough idea about the Russian wool output is given in an article (by Mr. W. Black) in the latest issue of *The Times Review of Industry*. Analysing the trend of production in that country, Mr. Black observes as follows:

"The Russian wool industry has shown a very high rate of expansion in recent years. The number of sheep increased from 108 million in 1957 to 136 million at the beginning of 1960. Over the same period wool production increased by almost 30 per cent. During the last year, however, there have been reports that severe winter conditions have caused sheep losses, and, on the basis of these reports, the Commonwealth Economic Commission estimated that production was unlikely to increase by more than 1 per cent in 1960-61. Since that estimate, however, more information has been made available. The Central Statistical Board of the U.S.S.R. Council of Ministers, reporting in January on the fulfilment of the 1960 State Plan, puts the number of sheep at the end of 1960 at 132 million. This represents a 2.5 per cent decline on the peak figure reached at the beginning of 1960, and the first reduction recorded since the end of the last war. Mr. Khrushchev has recently made specific reference to the sheep-breeding industry, pointing out that last year's results lagged far behind the seven-year Plan targets. He still seemed to think, however, that the final targets could be achieved and urged a faster rate of expansion during the next five years."

As is mentioned above, it is likely that Russian output of wool will be smaller than that in the last season. The table on the previous page, no doubt, indicates an upward trend, but these figures are based on the Commonwealth Economic Committee's first estimate and is, therefore, possibly a little higher than the latest estimates.

Consumption

The data on the trend in consumption is not available for the period beyond 1960. It is, however, reasonable to assume that the recession that engulfed the wool industry in 1958 blew off by early 1959, but the recovery did not seem to have any lasting effect, with the demand from major consuming countries such as the U.S. and the U.K. slackening from the end of 1959 onwards. World consumption of virgin wool in 1959 was 3,157 million lbs. on a clean basis. This was 11 per cent higher than in 1958 and 7 per cent above the previous record level in 1957.

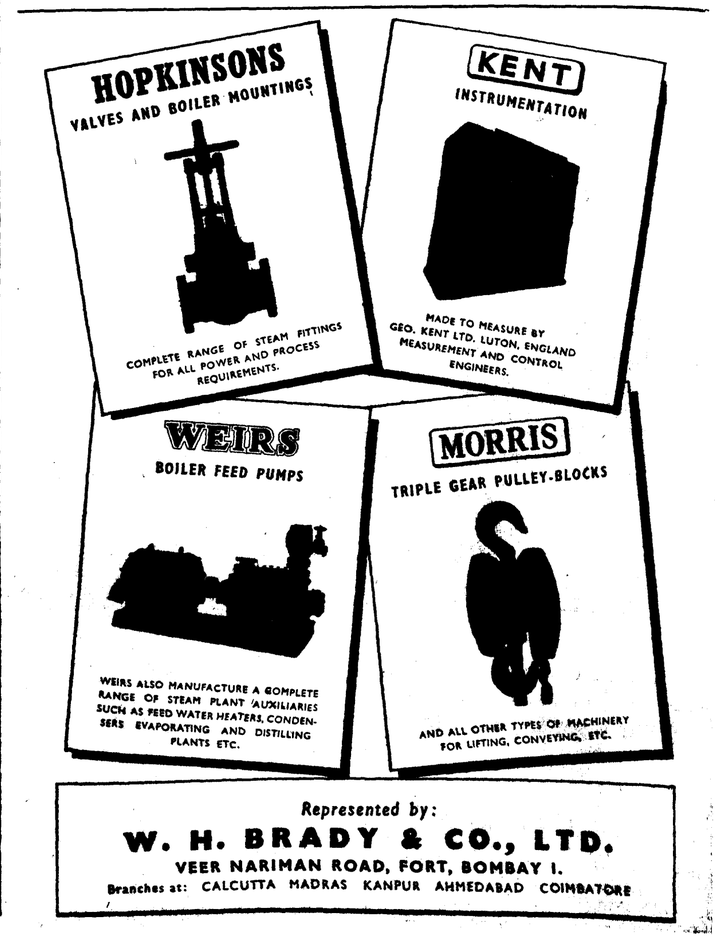
In 1960, the aggregate world consumption of virgin wool, it is estimated, was about 2 per cent above the 1959 level. The following table shows the provisional estimates of consumption of wool in the important countries during the last four years:

(Million lbs.—clean basis)

	1957	1958	1959	1960*
U.K.	481	444	509	481
U.S.	389	389	437	412
France	310	266	267	280
Japan	188	161	226	267
Italy	161	156	178	214
W. Germany	161	152	157	150
Soviet bloc	614	673	716	..
Others	670	689	667	..
Total	2,953	2,830	3,157	..

* Provisional.
Source: Commonwealth Economic Committee.

It was actually the relatively smaller consuming countries which absorbed an increasing volume of wool in 1960. The increase was particularly marked in the case of Japan and Italy. Japan consumed 18 per cent more wool in 1960 than in the previous year. This country has now become the world's fifth largest consumer of wool after the U.K., Russia, the U.S. and France. Italian consumption rose at a still higher rate, that is, by 20 per cent. In the case of France, too, there was some increase in wool consumption. In contrast, the U.K., by far the largest consumer of wool (excluding the Soviet bloc), and the U.S. consumed less last year than in 1959. In the U.K. consumption for 1960 is placed lower by 6 per cent and production of tops by 8 per cent, as compared with the previous year. The U.S. consumption is also estimated to have gone down by 6 per cent, the finer merino apparel wools registering the greatest fall. While there are no indications at present of any sizable improvement in the consumption pattern in these countries, there are equally ominous signs in countries like Japan, Italy and France, where the demand for wool was gradually slowing down at the end of 1960 and in the early part of 1961. In the light of this uncertainty in demand prospects, it may be that lower production during the current season is a blessing in disguise.



EXTRA-LONG STAPLE COTTON

An interesting report on extra-long staple cotton was submitted by a committee to the twentieth plenary meeting of the International Cotton Advisory Committee which met at Tokyo recently. The findings of the report reveal that, with a reduced carryover and smaller crop, supply in the two major producing countries, the United Arab Republic and the Sudan, has declined in the current season. The demand situation so far has not been as favourable as in 1959-60. The exports of extra-long staples from Egypt and the Sudan are sharply reduced but are higher in the case of Peru. The Committee thought that the main contributing factors in the reduction in demand were that mills had covered their requirements for some time ahead and had replenished their stocks during the last two years, that there has been a slackening in demand for fine yarns, and that apprehension concerning the future price trend might have led to some postponement of demand by importing countries. Demand for extra-long staples might also have been affected by cyclical factors.

Despite the reduction in demand, prices showed a rising trend during the early months of the season, but declined subsequently, though still commanding a premium over other cottons. Accordingly, the carryover on 1st August 1961 is expected to be higher than a year before. Based on the provisional estimates of acreage and assuming a return to more normal yields in the Sudan, the total production of extra-long staple may increase somewhat during the 1961-62 season. In view of such an increase, together with the larger carryover, a noticeable increase in supply is expected. The consumption outlook is enigmatic and the situation in the extra-long staples, therefore, warrants the closest attention of the I.C.A.C. during the coming season.

In the past, the problems in extra-long staple cotton have been related to the tendency for production to exceed offtake. The Committee, however, observed that the acreage restrictions continued in force in the U.A.R. and the United States, while any further expansion of acreage in the Sudan over the foreseeable future was likely to be limited. No expansion is contemplated in Peru. On the demand side, the Committee took note of the encouraging progress made in producing countries in the field of research and promotion and urged the continuance and acceleration of such programme to increase the consumption of extra-long staple cotton. The Committee endorsed a policy of collaboration and co-operation among all countries in achieving an expansion in consumption, though views were not unanimous at this time concerning any joint action under a formal agreement in the field of promotion as was advocated by the Sudan delegation.

In the opinion of the Committee, although production research should remain the prerogative of individual countries, a move should be made to initiate a joint research programme on utilisation of extra-long staples and the following course of action was recommended:

"The authorities in each of the four countries producing extra-long staples are requested to prepare a report on how such a programme might be implemented on a co-operative basis. These reports should be in the hands of the Secretariat by 1st November 1962 and would then be distributed immediately by the Secretariat to the respective Governments for comment and analysis. The reports and comments thereon should be re-forwarded to the Sub-Committee on extra-long staples in Washington for appropriate action."

The Committee noted with approval and satisfaction the impending visit by Mr. Santley to certain countries to evaluate the possibility of undertaking a comprehensive study of the extra-long staple cotton situation.

Twenty-four big textile mills are to be built by the end of the seven-year Plan period (1965) in Siberia, the Urals and the Far East. Over one billion metres of various fabrics, almost five times as much as planned for the current year, are to be manufactured in 1965 in these vast expanses of the Asian part of the U.S.S.R., which virtually has no textile industry today. This zone accounts for about four per cent, of all fabrics manufactured in the Russian Federation, while in 1965 it will manufacture more than 10 per cent of the total. The long-term programme provides for an annual output of upto 2,500 million metres by 1975.

TEXTILE TALKS WITH HONG KONG

GOVERNMENT URGED TO ENSURE CONTINUANCE OF CEILING PACT

From Our Special Correspondent

MANCHESTER, *6th June*

MANCHESTER LETTER

EVERYTHING points to a long delay in reaching any form of settlement with Hong Kong on the vexed question of a renewal of the pact curtailing shipments from the Colony for retention in Britain's home market. The whole problem is now additionally complicated by suggestions made by other countries, including the United States and Canada, that similar restrictions should be imposed, while the possible entry of the United Kingdom into closer association with the major European countries, provides the most baffling feature of all.

Internal squabbles between sectional interests in the Colony have persisted throughout the lifetime of the current arrangements and the gains made by the garment manufacturers at the expense of spinners and weavers have undoubtedly caused bitterness. A crisis now seems to have arisen, resulting in the refusal of the major parties to the pact to enter into discussions with their local Government advisers who have recently been in touch with the Colonial Office and Board of Trade administrators in London. For the moment, therefore, any idea of direct consultations between Hong Kong and the Cotton Board, representing Lancashire's viewpoint, seems unlikely, yet as the weeks go by the time for discussion is automatically reduced.

Basic alterations in the circumstances which have arisen since the original scheme was drawn up make the whole project far more complicated than it was in the past. Piecemeal arrangements separately fixed with different countries are themselves an unsatisfactory way of dealing with an admittedly complex problem. From this angle the viewpoint of Hong Kong can be understood. Political aspects, however, now play such an important part in reaching agreements of this nature that, however much the negotiators wish to carry on discussions purely at industry level, they can hardly expect to ignore the influence of Governmental attitudes.

Action Urged Over Hong Kong

A recommendation that the Government should "act with all speed" to leave no doubts in the minds of producers in Hong Kong that a continuance of the voluntary agreement limiting the supply of cotton goods to the United Kingdom must be negotiated "in the interests of everyone concerned" is contained in the quarterly Report of the Amalgamated Association of Operative Cotton Spinners and Twiners. "In certain sections order books have reached a position which is affecting efficient working; there are, we understand, evidences of price cutting and a feeling of disquiet by those contemplating appreciable re-equipment," the report adds.

Import figures for the first quarter of 1961, including the duty-free imports from Hong Kong, India and Pakistan, indicate an annual import rate running at 1,000 million square yards or about 70 per cent of domestic production. These figures, the report states, are "almost unbelievable" and two years ago would have been considered "impossible." "The Government must answer this question and it must do it boldly first with Hong Kong and next by duty protection against low grade productions and export subsidies."

Confidence in the future of the industry must be established, the report adds, if re-equipment is to be justified and if younger workers are to be recruited. "The situation which is developing can only be viewed in the light of our past experience. The degree of surplus capacity is mainly determined by the amount of foreign cheap imports and the shadow of the 1930's and the 1950's still envelops the minds of many of those employed in the trade."

New Wealth to Lancashire

Disused mills closed under the cotton reorganisation scheme are now bringing a new wealth to Lancashire, leaders of industry were told in Manchester. Empty cotton mills, snapped up by new employers, have been a major aid in bringing new industry to the Lancashire area, Mr. Tom Eccles, the Chairman, told the annual meeting of the Lancashire and Merseyside Industrial Development Association. "The past year has been an extremely good one for Lancashire and Merseyside," he told the conference. "Few areas have been so completely transformed in so short a time. It is not without justification that the area is now considered one of Britain's most prosperous." But, he said, there was still room for more industry in many parts of the area.

They hoped that the many jobs now available would coax back to Lancashire people who had switched their homes and jobs to the South and Midlands. Mr. Eccles said that one of the biggest headaches for industry chiefs was the Furness area of Lancashire. Its inaccessability, dependence on one industry and the migration of population, coupled with high unemployment, justified special consideration, but no form of Government policy was available. Bright spot was the number of workers available, particularly women. And, he said, the Association was centring its efforts on bringing new jobs to Furness.

As a footnote to the employment of empty cotton mills, Alderman T. E. Gallagher urged the Association to approach the Government for financial aid to remove those mills which could not be sold. "They are eyesores," he declared, "and should be pulled down."

A warning of a "terrific shake-up" for some industries if the United Kingdom joins the European Common Market was given by Mr. L. F. Cockcroft, the Chairman, at the annual meeting of the Ticking Group. Referring to Britain's possible entry into the Common Market, he said: "The odds seem to be that before long H.M. Government will announce its intention to take the plunge."

If we do go in, continued Mr. Cockcroft, we shall be "hard put to it" to find export outlets which will balance the increases to be expected in imports. On the other hand, imports from Asian countries had given "considerable concern" during recent months, said Mr. Cockcroft, and "the wider the Common Market is in its scope the more difficult dumping will become."

Mechanising Manpower

Scientists at the newly integrated research station working on behalf of the non-wool textile industries are, understandably enough, devoting a large part of their energies to the provision of machines and equipment capable of turning out suitable products with the smallest labour force possible. Although there were fears that the redundancy schemes in spinning and weaving would result in considerable unemployment, this nervousness was soon allayed when the subsequent buying spree took hold of the market. Latterly, the shortage of adequate workpeople has been a major factor in restraining output.

Although the immediate situation no longer causes quite so much alarm due to the reduction in demand, the necessity of making the most economical use of manpower is widely recognised. For this reason, revolutionary techniques are the subject of experiments which could transform the current methods of producing yarn and cloth.

Mr. R. H. Taylor, Chairman of Hayeshaw Ltd., the spinning group, has pointed out that more scientific discoveries leading to technological improvements in spinning machinery have taken place recently than for many years. Textile men from Lancashire have been to many other countries to discuss such developments, most of which are taking place in North America and Western Europe. The traditional centres of spinning and weaving realise that their main hope of survival against low cost competitors lies in being well ahead in technical processing.

Reducing Labour Costs

Britain and the other older-established textile nations face the necessity of reducing the ratio of labour cost to total cost to make shift-working pay. "In endeavouring to compete with countries that have a lower standard of living and at the same time overcome the shortage of labour, we must develop every means of mechanisation," is Mr. Taylor's comment. "We have to accept the fact that the textile industry is subject to trade cycles and some years are more profitable than others." Competition has become much keener, he adds, during the destocking movement which has been taking place during the current year. The challenge of competition from Western Europe must be met and it is hoped that the West in general will unite against cheap competition from the East.—*All Rights Reserved.*

PROSPECTS FOR INDIAN TEA INDUSTRY

INTERNAL OFFTAKE EXPANDING RAPIDLY

THE production target for tea fixed to be achieved by the last year of the third Plan (that is, 1965-66) is 408 million kg. (1 kg.=2.2 lbs.), which represents a rise of 88 million kg. as compared with the actual output of about 320 million kg. in 1960-61. Although the target is by no means ambitious, it is difficult to say categorically that the target will be successfully fulfilled, because much will depend on the attitude of Governments, Central and State, towards the industry. There is urgent need not merely for sizable tax relief but active encouragement and assistance to enable the industry to put in more effort to raise production and improve quality. This aspect has to be specially stressed because tea is the largest earner of foreign exchange for the country, not to speak of its employment potential and the valuable contribution it makes to the exchequers in the form of taxes and cesses.

While the long-term prospects for the industry are thus somewhat uncertain, it is, indeed, encouraging to be told that the outlook in so far as the 1961-62 season is concerned is quite favourable. This at any rate is the view expressed by Messrs. J. Thomas and Co. Private Ltd., of Calcutta, in their latest annual report. If the North Indian crop were to increase and if, as a consequence, prices were to recede, as is likely, this, it is pointed out, should have its compensations by way of reduced cost of production for producers and increased exports of Indian tea. Assessing the immediate outlook, the report observes: "The strong demand in the closing sales of season 1960 should provide an encouraging outlook for producers in the first few months of the new season, and there is every expectation that the market will open on a note stronger than for several years past. At present, the overall statistical position indicates that there is little, if any, surplus of tea in the world and, in all probability, there may be a slight shortage. In India itself, the consumption of tea is expanding more rapidly than in any other country and is possibly increasing at a rate of 7 to 9 million kg. per year and the immediate prospects would appear to be fair."

The Handicaps

In order to assess the future of the industry, Messrs. Thomas and Co. consider it necessary to examine the actual progress made in the past ten years. Their review of the progress reveals that the crops from Ceylon, Africa and other tea-producing countries have increased over the last decade from approximately 218 million kg. to 305 million kg., representing an increase of nearly 40 per cent while those from North and South India have only advanced by 20 per cent from approximately 265 million kg. in 1948-50 to 320 million kg. during 1958-60. The world shipments for the same period have also expanded by nearly 30 per cent, but the proportionate increase in the case of India amounts to less than 8 per cent indicating not only that India has fallen far behind its main competitors in production as well as exports but also that it has been unable to enlarge its exports in proportion to the increase in its own outturn. A great many factors are responsible for the present situation, but among the numerous handicaps from which the North Indian tea industry suffers are the seasonal nature of its manufacture, the large distances over which teas have to be transported to arrive at Calcutta, dearth of freight opportunities to various destinations and a shortage of fertilisers, all of which impose tremendous strains on the cost structure of the industry.

It is against this background that the imperative need for India raising its tea production as rapidly as possible has been emphasised. Otherwise, it is warned, with internal consumption forging ahead and prices tending to rise, not only will this country's tea be priced out of world markets but there will be less and less tea for export. If the third Plan production target is to be achieved, heavy expenditure will naturally have to be incurred, but the industry is currently facing the difficult problem of finding the required finance. Messrs. Thomas and Co. have done well impressively to highlight this point. They say:

"Despite the satisfactory market conditions which have been experienced since 1958, there is little surplus available to the producers to finance programmes of development both in the field and factory. While the need for revenue in the context of the present economic development programme which India is pursuing is fully understandable, it is mainly the taxation policy followed by the Central as well as the State Governments which has clearly served as disincentive to the Indian tea industry. In this connection, the new budget proposals are an additional burden on producers which will make it more difficult for them to achieve their target. If the long-term future is to be made secure, it is of the greatest importance that replanting of old areas and replacement of worn-out machinery are made economic and profitable, so that Indian production rises during the third Five-year Plan, both in quality as well as in quantity, to ensure India's competitive position in the export markets and to satisfy the requirements of the Indian consumers. Although, therefore, the satisfactory price levels in recent years may have fostered a sense of complacency in certain quarters, the future of the Indian tea industry in general and of exports in particular is clearly in the balance and the danger of a further decline in Indian shipments to overseas markets cannot be overemphasised. The vital necessity to earn foreign exchange as India launches its third Five-year Plan lends particular urgency to this problem."

In view of the vital role played by it in India's economy, the tea industry has a legitimate right to claim fair treatment at the hands of the authorities. How can the tea industry be expected to strive for a quantitative and qualitative improvement in production unless it is assured of a reasonable return? Such a return can be derived only if the burden of taxation on the industry is reduced and if steps are taken to ensure adequate supplies of fertilisers for tea gardens, improved transport and communications facilities and peaceful labour conditions.

Production

The latest annual report of Messrs. Thomas and Co. gives an interesting account of the developments in the tea industry and trade during the past season (1960-61). It will be seen from this review that weather, the most unpredictable element in a plantation industry, proved to be the major factor which influenced the industry's economy. The drought conditions which prevailed in the various tea-growing districts of North-East India during the first six months of 1960 were such that a shortfall in supplies during the rest of the season seemed inevitable, although it was hoped that the output would make up the necessary leeway before the season ended. This, however, did not happen and the season closed with a North Indian crop deficit of nearly 13 million kg. which was to have a considerable effect on the sales in Calcutta.

The weather during the year under review made the plantation of quality teas a harder task than is normally the case. Most of Assam, the Dooars, Terai and Cachar suffered during the early part of the year from a most severe drought which reduced the size of the crop harvested and, later in the year, many gardens, particularly those in the affected districts, in an effort to make up their loss of crop in the earlier months, produced teas of an indifferent quality. In Darjeeling, on the other hand, heavy rain and good growing conditions generally produced a much larger first flush but as is usual with free growth, very little quality was apparent. In view of the handicaps under which most of the tea was produced, the quality can be considered satisfactory.

Consumption

The internal operators bought the bulk of their requirements of leaf teas from export sales, since the quantities offered in the internal catalogues were as usual negligible and the quality very poor. It was the strong demand of buyers of tea for consumption in India that was mostly responsible for raising the level of plain teas to above world market prices for similar qualities, there being very few teas available below Rs. 4.40 nP per kg. throughout the season. The season 1960-61 was extremely satisfactory to producers from the point of view of dust prices as the up-to-date average has shown an increase of 49 nP to Rs. 5.19 nP per kg. from Rs. 4.70 nP per kg. for the same period in season 1959-60, whereas the average price for export teas showed an increase of only 29 nP per kg. As for the 1961-62 season, the report observes:

"The price levels on the dust market will partly depend on how much the U.A.R. buys in the Calcutta auctions; if the U.A.R. continues to make part of its purchases in Ceylon in the coming season, this would undoubtedly influence orthodox dust prices adversely on this market. The internal consumption which has been showing trends towards rapid expansion may, however, counteract this. Considering the unexpectedly large increase in population in India according to the latest census, it is unlikely that the *per capita* consumption has shown an increase during the last decade. However, this increase in population as well as the growing tea habit in this country should be sufficient reason to ensure a steady expansion in Indian consumption. The dust market may, therefore, be expected to continue on a healthy note especially for the strong liquoring types."

Exports

North India exports to the U.K. which had been at one time during the season lagging considerably behind, have since caught up to a great extent although closing behind last year's levels. The Calcutta export market once again received consistent support from the U.A.R. by its purchases of black fannings and grainy dusts. With the mutual trade agreement between the U.S.S.R. and India continuing, the former's offtake of North Indian teas was well maintained at about previous year's levels. The Irish Republic which has the highest *per capita* consumption after the U.K. was once again an active buyer. North Indian exports to Turkey have shown a shortfall of nearly 40 per cent during the season. Indian export figures to West European countries and to North America provide discouraging reading. In regard to the West European countries, West Germany has been the most prominent in the group but its offtake of Indian teas has shown a decline of approximately 300,000 kg.

Virtually the entire North Indian production was packed in indigenous chests and the standard of assembly was quite satisfactory. Cases of chesty and cheesy taints, however, continued to be numerous and many complaints were received, particularly from overseas buyers. The use of unseasoned shooks and battens in the construction of chests and storage under humid conditions in the godowns were some of the factors responsible for these taints and it is of the utmost importance that precautionary measures are taken by all concerned in this matter. During the year under review, transport of teas from the gardens to Calcutta was fully satisfactory, being rapid and uninterrupted except in July when the political disturbances in Assam caused some dislocation. The railway strike in May did not adversely affect the movement of teas as the season had only just begun and there was a negligible quantity available for carriage.

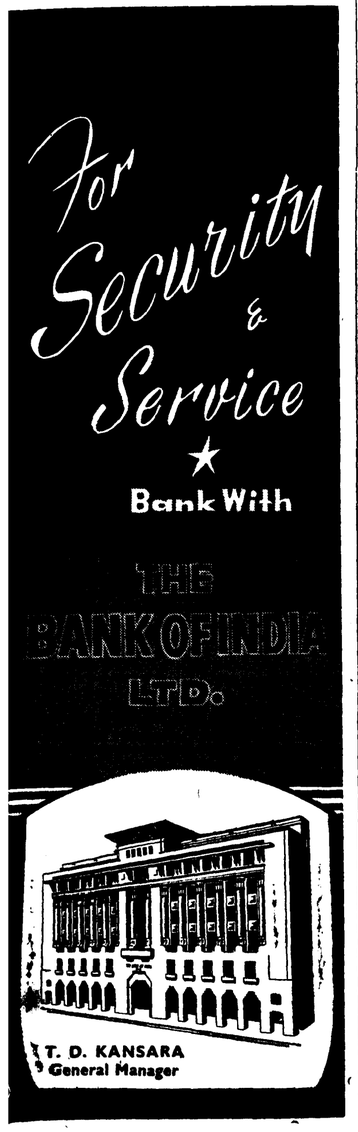
Prices

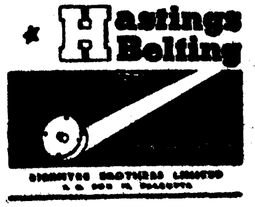
Prices ruling in the Calcutta market during the 1960 season were fully satisfactory and proved particularly beneficial to producers of lower quality teas. Although all districts registered higher averages this did not necessarily mean a better year financially for all gardens. To those estates which were severely affected by the drought this only helped to offset to a certain extent the loss they had suffered in crop. Given below is a table showing the percentage increase or decrease in production and prices in 1960-61 as compared with 1959-60:

	Percentage rise or fall in production	*Percentage rise in price*
Assam	— 6	7.0
Cachar	—21	7.0
Darjeeling	+11	0.3
Dooars	+ 1	7.0
Terai	— 3	6.0

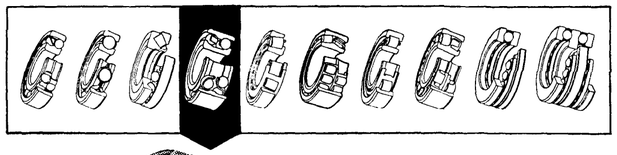
The overall Calcutta export prices in the first two months of the season compared unfavourably with 1959, mainly due to the lower level of prices realised by the Darjeeling offerings. The price averages during July, however, showed a significant improvement and this month's figure in fact touched the peak for 1960. Thereafter, although the monthly averages steadily declined as the season progressed, figures for August-November and February-March ruled at substantially higher levels than during 1959. The final consolidated Calcutta average showed an appreciation of 29 nP over 1959 and 60 nP per kg. over 1958.

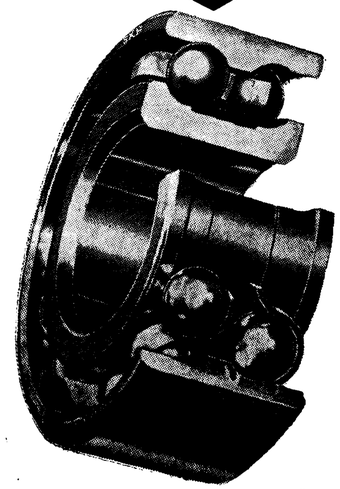
Price fluctuations for the different categories of teas in 1960 were on the whole narrower than in 1959. A notable feature of the market was that plain and lower medium teas enjoyed extremely satisfactory sales and, except on occasions during the early months of the season, virtually no teas in these categories were available below Rs. 4.40 per kg., a trend equalled only during the December and January sales of the previous season. This was one of the best seasons in recent years for whole leaf grades and the level of prices was nearly always maintained above Rs. 5 per kg.





SKF offer the widest selection of bearings





Illustrated here is the SKF DOUBLE-ROW ANGULAR CONTACT BALL BEARING in which the ball tracks are disposed so that the load paths through the balls intersect the shaft centre line outside the bearing. This type of bearing is useful where the displacement of a shaft subject to axial loads must be kept within very narrow limits.

INDUSTRIAL AIR SERVICES FOR INDIA

A PRACTICAL PLAN OUTLINED

By Wing Commander R. Vaughan-Fowler, R.A.F. (Retd.)

A COUNTRY of the size of India requires an elaborate pattern of domestic air services, if it is to enjoy the maximum benefits from industrialisation. The planning of the pattern requires more than a casual drawing of lines on the map to connect the cities and towns with the largest dots. The air service planner must take into account the growing transportation needs of an expanding industry. Also, the level of the economic life of the nation including the standard of living, as these two factors dictate the class of air service that is most suitable to the country's need.

The airline operators of the world through their public relations organisations, have so forcefully impressed upon the public mind the luxury and speed of air travel that the average individual has given up all hope of ever travelling by air because it is too costly. There are a few airlines who know from their own practical approach to air transport that, given the right treatment and management, air services can be offered at remarkably low air fares and cargo rates.

However, few operators are willing to admit this, in fact they will go out of their way to prove that air travel is a costly business, so air fare increases are justified. The anxiety to increase speed is pathetic, when on one bit of paper they prove it is cheaper if you fly faster, whilst on another bit of paper—the balance-sheet—they show the ever-mounting costs with rapidly vanishing margins of profit. In fact, some operators who in the past made profits are already in the red after one year of high speed operations.

The catch in the whole thing is that on paper it is easy to show what can be done, how much can be earned and how much it will all cost. The moment dislocation of the operation creeps in, as it invariably does in real life airline operation, profit margins are swallowed up in fabulous extra costs. To ensure profitable airline operation jet aircraft should be utilised for a minimum of ten hours per day or 3,560 hours per annum, also all services must operate according to the time-table. Minutes added to the flight time, when added together for the year's operations, add millions of rupees to the cost of aircraft operation.

Even assuming that high aircraft utilisation is achieved and also time-tables are adhered to, it is necessary to fill the aircraft at present-day air fares to 70 per cent of the payload factor if a reasonable profit is to be made. With seat capacity far in excess of public demand this high revenue load factor is unlikely to be achieved. Although these points mostly refer to international air transport it is desirable to explain them here so that the very real difficulties of achieving cheaper air travel through increasing speed are properly understood. Theoretically it should be cheaper to fly faster. In practice, this is not, so far, proving to be the case.

Domestic Air Services

With industrialisation growing apace, the need for really industrialised air transport has become a matter of urgency. In the past, the country has accepted such air services as its nationalised airline Corporation has seen fit to offer, and the cost of these services has not been questioned. Not seriously.

The time has come to ask ourselves—"Exactly what class of air service is going to serve the national need best?" Is it correct to model our domestic air services on the pattern adopted in Europe or some other countries? It is strongly contended that India is such a vast country, and having its own complex system of national life at a lower standard than that existing in most other countries, it is neither practical nor useful to superimpose some foreign air service pattern on this country. India's needs are entirely different from those obtaining in Europe and yet, the Indian Airlines Corporation, if its announcements are to be taken seriously, plans to follow the European pattern to the latter. Why?

The only plausible explanation is that the management of the I.A.C. has yet to make a real study of the country, its industry and its national life. Economy of operation is the first and foremost necessity so that air fares can be reduced instead of increased. This may call for revising our ideas of air travel, the luxury will have to go, there can be no frills. High density seating will be common on all services. In addition, each service should carry a quota of cargo, as income from this source has got to be built up till it contributes a substantial percentage of the direct operating costs, if not actually covering them.

The type of aircraft to be used must be carefully considered. The routes may be divided into two classes: (*a*) major routes over which traffic flow is considerable demanding the use of large-size aircraft, and (*b*) the secondary routes that can be served by a medium-sized twin-engine aircraft. Both types must be suitable for carrying mixed loads of passengers and cargo, with the bulkhead easily adjustable so that when necessary the passenger cabin can be enlarged or alternatively the cargo hold can be increased in cubic capacity. Flexibility in handling mixed loads is vitally important.

The main objective is to create more traffic by offering air travel at fares lower than those ruling in India today. The fares are already low by comparison with air fares in other countries, but they could be still lower if the I.A.C. selects the most suitable aircraft and goes out of its way to earn as much as possible from cargo.

Cargo Traffic

There appears to be a distinct disinclination to fight for a share of the domestic cargo traffic, which is now carried almost entirely by the railways and the road transport organisations. It is understood that the I.A.C. regards it as hopeless to even try to compete with the railways and the road transport. Why is it hopeless? How did this defeatist attitude come about? Has the I.A.C. ever discussed the possibilities of air cargo with the chambers of commerce or the various industrialists' associations? According to my information, bulk shipment of air cargo by I.A.C. ex-Bombay is not accepted, so all cargo by air has to be sent at express parcel rates! Of course, it is very nice charging this high rate but it is not helping the industrial development of the country nor serving the public need. It might not be out of place to point out that I.A.C. is supposed to be a public utility service.

Having adopted such a policy of virtually shutting out cargo, on what grounds does the I.A.C. adopt the attitude that it is hopeless to try to compete with the railways and the road transport? The whole approach seems illogical. What is certain, in spite of the high rates charged an incredible amount of goods are still sent by air. On this I base my claim that if the cargo rates were reduced to some reasonable figure there would be a flood of cargo for movement by air.

In other words, by lowering the air fares and fighting hard to attract cargo I.A.C. could double its income within a twelve-month period. I do not believe that is an optimistic estimate. But, to carry the loads it is necessary to have the right aircraft and at the moment these are not with the I.A.C., although they are available and are obtainable. The air services visualised would be: strict economy, find your own way to the airport, carry your own luggage and not more than 20 lbs. per passenger allowed. All luggage in excess would be charged extra—through a shop cash register system. Tickets would be sold at the airport, special reservations would only be made on payment of Rs. 5 booking fee, and no refund if seat not occupied. Cancellations acceptable up to 48 hours before departure time, with 25 per cent penalty deduction from refund. "First-come-first-served" would be the rule. Those unable to get on the first service would be sold the first unreserved seats on the next service. There would be no passenger lists or named tickets as there are today. Incidentally, all these have to be studied for audit purposes—just imagine the horde of accounts clerks doing unnecessary work.

This is India, I.A.C. is a monopoly airline, there is nothing to stop the Corporation operating services in the way suggested. This is the only way in which the I.A.C. can truly serve the country and the people of this country.

At present the I.A.C. services are nothing but a copy of European services, except that the fares are lower. According to the official I.A.C. announcements, the plan is to introduce jet air services over the main routes. There is no particular objection to this provided that the cheap industrialised air services are operated for the good of the country. The wealthy business executives who can afford first class travel can use the jet services, also all international travellers, and foreign tourists, but they should pay fares on the same level as those charged in Europe. They can well afford to pay these high charges, but India's small businessman is unable to, likewise the average-income household. Boiling it down, the present I.A.C. plan is to serve foreigners and people in the higher income brackets.

Simplification

The ideal situation in any country in respect of air transport is to select aircraft that can be used by both the civil and military operators. India selected for the Air Force a medium air transport known as the Avro 748 which is to be built under licence at Kanpur, under the jurisdiction of the I.A.F. Maintenance Command. The aircraft is suitable for both civil and military use. Numerous reports have appeared in the Press, also statements have been made in the Lok Sabha, that the Avro 748 is unlikely to receive its Certificate of Airworthiness, also that major modifications have got to be carried out. There is no truth in these attacks.

The all-up weight has gone up by 3,000 lbs. which is perfectly normal in the period of aircraft testing and development. The important fact is that the guaranteed performance is maintained and will in fact exceed the original promises. With this aircraft to be built in India it seems logical that it could be the most economical type of aircraft for the secondary air routes. One very important point that must not be overlooked is that the Avro 748 is powered by two Rolls-Royce 'Dart' engines, and these engines are to be manufactured at Hindustan Aircraft Limited, Bangalore.

For large-scale operations on the major routes, it would be possible to procure a four-engine type fitted with Rolls-Royce 'Darts.' This would mean that I.A.C. would be able to meet its operational requirements for industrialised cheap air services with two types of aircraft and one type of engine—tremendous technical economy which would contribute materially to reducing the air fares and the cargo rates.

The aircraft in mind is already in operation, sold by Britain to America and is also ordered in quantity by the Royal Air Force and the British European Airways, so it should be a very suitable type for heavy airlift in the Indian Air Force and the I.A.C. Again, the engines are 'Darts'. Is it possible to conceive a more economical aircraft teaming up, serving both civil and military? I think not.

Operationally such simplification of equipment is tremendously important, in fact it is the dream of aircraft operators to reduce the number of types to the fewest possible; naturally this also applies to engines. This cuts down holdings of spares, makes work easier, and another advantage is a substantial saving in capital outlay. Admittedly, for the I.A.C. to meet the luxury air service demand it would have to use another type of aircraft. For some time to come this could be the 'Viscount' with first class seating and luxury service on board, again using the Rolls-Royce 'Dart'. On the other hand, a pure jet may be preferred, in which case it can also have R-R powerplants as facilities for overhaul exist in India. Apart from equipment simplification and operational economy, the advantage reflects itself in air and ground crew training. Daily maintenance is quicker and easier, also it is comparatively simple to transfer technicians from one unit to another. Any airline operator seeking the most economical way to handle his business would be delighted if such simplification could be introduced.

Unification

All aviation in the country is part of the national Air Power. The logical way in which to control aviation is through a Minister for Air who unites the various efforts and projects and ensures that whenever possible and practical the Air Force and the Civil co-operate. At present there is no sign of any willing co-operation. In fact, in respect of some things, there is almost open conflict between the two sides of our aviation.

This is unhealthy and should be eliminated. In my opinion it is essential that it is eliminated and that, too, quickly. The country is faced with the grave possibility of trouble over the Northern Frontiers, so it is imperative that our air transport and its control are strengthened without delay. This proposal is directly intended to strengthen the I.A.C. Also, if fully implemented, it would be certain that I.A.C. would become a substantial profit-earner instead of being a drain on the national income.

If benefits such as these are not worth striving for, then there must be something seriously wrong with our aviation thinking. I believe that much could be done if chambers of commerce would take an interest in aviation. It would repay them to study the possibilities of air transport. If industrialists and business houses start to demand better air transport, then the Government is almost certain to take steps to improve our domestic air services. The situation really calls for general co-operation all round; the I.A.F., the I.A.C and, of course, Air-India International for the international traffic, the D.G.C.A. and the business side through chambers of commerce, finally the Government, let everybody sit in and talk it over. Then there might be a solid interest that would grow into a practical plan.

Air transport is an important national industry and should not be allowed to drift planless and rudderless into the future. Mistakes made now will be with us ten and twenty years hence. A well-planned policy at this time will guarantee prosperity for domestic air services all over India, which would serve the average citizen and businessman, instead of just a handful of visitors and rich travellers.

There are many good reasons why as a nation we should use air transport to the maximum extent, but this can never be brought about so long as the domestic Corporation refuses to apply its planning to the country's real requirement, and persists in spending its time and energy in trying to copy others, setting speed as its main objective. If this policy is carried through, fares must go up to the level of those in Europe, and that will close the door of air transport in the face of the very people who have every right to expect it to serve them and their growing industry.

JAPAN MACHINERY CENTRE

The third anniversary of the opening of the Japan Machinery Centre in Bombay was celebrated on 12th June 1961. An exhibition of Japanese small-scale machinery was inaugurated on that day.

At the exhibition are on display machines carefully selected with India's requirements for small-scale and ancillary industries in view. Among them are precision machine tools, industrial sewing machines, lathes, agricultural implements, hoists, crushers, welding machines, etc.

The Japan Machinery Centre is the Indian Wing of the Japan External Trade Organisation, popularly known as JETRO, the official trade promotion organisation working under the Ministry of International Trade and Industry, Government of Japan. It has representatives in 39 cities covering 34 countries, has trade centres in the major cities of the world and machinery centres in Bombay and Mexico. The Bombay Centre was opened on the 12th June 1958 with the object of giving industrialists in this country a close-up view of the latest type of Japanese machinery and a comprehensive picture of industrial developments in Japan today.

There are expert engineers on the staff of the Centre, generally available for consultations about operation, repairs, and after-sales service. They also provide advice on planning and running new factories. The Centre also helps facilitate business contracts where necessary.

During the last three years the Centre has been able to help many Indian industrialists obtain various types of machinery and equipment from Japan. One of the principal items has been textile machinery. A large number of R.T. winders, doublers, and pirn winders, made in Japan, are in operation today in various textile mills in India. In the field of machine tools, however, success does not seem to have been so great partly because of the existing import restrictions. Nevertheless, certain types of precision machines, automatic screwing machines and thread rolling machines are stated to have been introduced in a large number of Indian factories. The technical assistance service from the Centre has helped quite a few industrialists improve their production methods. Effective after-sales service on machines imported from Japan has also been provided.

Apart from these activities of the Centre, exhibitions in different parts of the country have played an important part. A successful exhibition was held in Bangalore in 1959. An exhibition of measuring instruments was held in February this year in Bombay and all the items, numbering over 100, displayed were presented to the Maharashtra State. India was thus the first country to receive such a gift from Japan. This exhibition was followed by the recent one in Ahmedabad. These exhibitions actually helped to take the services of the Centre from Bombay to different parts of the country.

The present exhibition in Bombay, apart from celebrating the third anniversary of the opening of the Japan Machinery Centre, also serves to introduce the industrialists of Maharashtra to the wide range of Japanese machinery available for small-scale and ancillary industries, the development of which is part of the State's industrial expansion programme.

19 JUN 1961 PUBLIC DEPARTMENT

NEW PRODUCTS AND PROCESSES

Washing Raw Wool

GRITTY, oily raw wool and other heavily stained fibrous materials, may be gently but efficiently cleansed, it is said, by means of equipment now available in Sweden. The system used is reported to be different from that of a conventional washing machine in that the liquid is continuously recirculating. The vessel itself is rectangular in shape and fitted with valves so that the flow of fluid can be regulated as required. The dirty fibre is dropped into the water or organic solvent which is continuously agitated by a jet placed below the surface. Splashing, it is claimed, is avoided and the material cannot be harmed in any way since it is not beaten or brushed.

Self-adhesive Fabrics

A technique for coating fabrics with a pressure-sensitive adhesive has been developed by Leonard Stace of Cheltenham, U.K. A pilot plant is now in operation. It is stated that the process is suitable for both man-made and natural fibres such as nylon, rayon, silk, wool and cotton. It is also said not to affect the natural flexibility of the materials or to cause "strike-through"—a problem which may arise when conventional glueing methods are used on fabrics. The adhesive-coated cloth has a paper backing which strips easily to leave the cloth ready for fixing by finger pressure. First uses for the material are likely to be for the lining of jewellery and cutlery boxes.

Reinforced Concrete Piles

Reinforced concrete piles, such as might be used, for example, in the foundations of buildings, but having an increased strength and greater uniformity of texture, may be produced, it is claimed, using a new, simple, economic technique developed by a Yorkshire engineer in the U.K. The usual method of forming such piles is to bore out a hole in the earth, line it with metal by the insertion of a tube, and then to place, within this tube, a long vertical, steel reinforcing cradle around which and within which the fluid concrete can nestle. After the hole has initially been filled with concrete the metal sleeve is withdrawn. More concrete is then forced into the hole around the steel cradle so that the concrete already in position can be wedged tightly against the sides of the hole and, in some places, actually keyed into the soft earth. The steel reinforcement must, of course, remain vertical and to ensure that this happens it is customary to place upon the outside of the cradle several triangular-shaped, reinforced, pre-cast concrete arms or spacers. Unfortunately these can be a nuisance: they take a lot of time to fit into position although they can easily become dislodged by the incoming concrete, there is no real assurance that the pre-cast material will adhere well to the new concrete, and, worst of all, perhaps, the latter trends to arch over the arms forming voids that can seriously weaken the pile. The proposed method of overcoming these difficulties, is, in essence, very simple. The triangular-shaped elements are removed completely and are replaced by thin flat blades or wedges positioned vertically one beneath the other and welded onto the inner side of the metal sheath. When the tube is withdrawn these come out with it and hence, it is claimed, a high degree of uniformity is obtained.

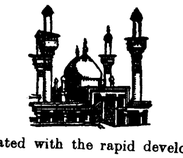
Plastic Pump

Associated Electrical Industries, U.K., is now producing a pump with working parts made entirely of P.T.F.E. plastics (polytetrafluorethylene). A coupler for joining tubing made of the same material so that only P.T.F.E. comes into contact with liquids flowing through is also being made. Chemical inertness and imperviousness to corrosive action are important properties of P.T.F.E. and the pump is expected to be particularly useful for pumping corrosive fluids or liquids which must be protected from impurities. The pump is of the diaphragm type and is self-priming. Delivery is stated to be two litres per minute with a one-foot working head and at the maximum head of 15-foot 1.25 litres per minute can be handled. The diaphragm and all other P.T.F.E. parts are housed in a cast aluminium body which is bolted to a geared electric motor. Both the pump and the coupler (the latter is a spring-loaded telescopic unit which expands to grip the tubing inserted at each of its ends) are being marketed by A.E.I. Radio and Electronic Components Division.

Reducing Blood Clots

A new enzyme has been discovered in the U.K. which is said by the scientists responsible for developing it to dissolve human blood clots. The enzyme itself exists in human blood and is called fibrinolysin. Tests carried out are said to have shown that 45 men and women suffering from critical heart ailments were treated and 39 survived. The remaining six were in a state of shock, or hopeless heart conditions before appearing for treatment. At present the compound is in very short supply and would only be usually given in an emergency. On the other hand research carried out with it indicates that it may be useful for other types of illness than heart conditions which involve blood clots as, for example, phlebitis, an inflammation of the vein, and so on.

A tale of Twenty-two Cities



From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

Incorporated in England by Royal Charter 1889 *with Limited Liability.*
HEAD OFFICE: 7 King William Street, London E.C. 4.
BOMBAY OFFICE: 314 Dr. Dadabhai Navroji Road, Fort, Bombay.

THE BANK OF IRAN AND THE MIDDLE EAST
Capital Rials 250,000,000
HEAD OFFICE: TEHERAN, IRAN (PERSIA). (P.O. BOX 1680)

INCOME-TAX AMENDMENT BILL—I

SOME CHANGES SUGGESTED

By A. C. Sampath Iyengar

THE Income-tax Amendment Bill 1961 is now under the consideration of a Select Committee of Parliament. Comments are made in this article on some sections of the Bill and suggestions offered, where necessary, for alterations or modifications in the hope that the Select Committee might consider them.

Sections 10(14), 37, 48 and 57(iii)

In the Income-tax Act as it at present stands, the following provisions occur:

In the context of non-inclusion in the total income, Section 4(3) (vi)—Section 10(14) of the new Bill—states: "any special allowance or benefits granted to meet expenses *wholly* and *necessarily* incurred ..." will not be included in the total income.

In the matter of deduction of expenditure incurred in business to ascertain profit, Section 10(2) (xv)—Section 37 of the new Bill—grants allowance for expenditure "laid out or expended *wholly* and *exclusively* for the purpose of such business...".

In relation to deduction of expenditure in calculating income from "other sources," Section 12(2)—Section 57(iii) of the new Bill—runs that "income ... shall be computed after making allowance for any expenditure ... incurred *solely* for the purposes of making or earning such income ...".

In the matter of calculating the amount of a capital gain, Section 12B(2)—Section 48 of the new Bill—directs the deduction of "expenditure incured *wholly* in connection with such sale, exchange ...".

So, from a perusal of the above quotations, it would be seen that the word "*necessarily*" occurs only in the context of Section 4(3) (vi) and nowhere else.

The notes on the clauses in the Bill naively suggest that "to secure uniformity of language" the expression "wholly, necessarily and exclusively" may be employed throughout. See page 241 of the printed Bill, notes on clause 57, item (iii). There is here something more than mere form. A matter of principle is really involved. This expression "wholly, necessarily and exclusively" comes from Schedule E, Rule 9, of the English Income-tax Act. The English Courts have commented upon the stringency of this expression under which it is almost impossible for the taxpayer to get any relief. Vaisey, J. in *Lomax* vs. *Newton*, 34 T.C. 508 at 561, said this:

"Before coming to the particular items, I would observe that the provisions of that rule are notoriously rigid, narrow and restricted in their operation. In order to satisfy the terms of the rule, it must be shown that the expenditure incurred was not only necessarily but wholly and exclusively incurred in the performance of the relevant official duties. And it is certainly not enough merely to assert that a particular payment satisfies the requirements of the rule, without specifying the detailed facts upon which the finding is based. An expenditure may be 'necessary' for the holder of an office without being necessary to him in the performance of the duties of that office; it may be necessary in the performance of those duties without being exclusively referable to those duties; it may perhaps be both necessarily and exclusively, but still not wholly so referable. The words are indeed stringent and exacting; compliance with each and every one of them is obligatory if the benefit of the rule is to be claimed successfully. *They are, to my mind, deceptive words in the sense that when examined they are found to come to nearly nothing at all.*"

Again, at the conclusion of this judgment, the learned Judge stated this:

"I must allow this appeal, except as to £6 (item No. 5), calling attention not for the first time *to the extreme and possibly unintentional narrowness of the rule.*"

Next, in *Sanderson* vs. *Durbidge*, 36 T.C. 239, Wynn-Parry, J., remarked:

"The Courts from time to time have commented on the strictness and the limited nature of that rule in the various forms in which it has appeared in various Taxing Acts for over a century. I do not think that I can do better as regards this than quote the observations of Vaisey, J. in the recent case of *Lomax* vs. *Newton*,"

and then the learned Judge extracted the observations of Vaisey, J., above quoted.

That the word "*necessarily*" has an independent force and an important significance in a combination of "wholly, necessarily and exclusively" is well brought out in the decision in a recent case of *Bentleys, Stokes and Lowless* vs. *Beeson*, 33 T.C. 491. The English Act, viz., Section 137(*a*) of the Income-tax Act, 1952, in relation to the allowance of business expenditure, allowed expenses "wholly and exclusively laid out or expended for the purposes of the trade, profession or vocation." The Special Commissioners nevertheless disallowed certain expenditure claimed, on the ground that the expenditure had not been proved to be *necessary* for the carrying on of a firm's business. Roxburgh, J., reversed the decision of the Special Commissioners on the ground that they had introduced a test which was not to be found in Section 137 (*a*), which used the words "wholly and exclusively" alone. The Court of Appeal confirmed the decision of Roxburgh, J., holding that the Special Commissioners had misdirected themselves by importing a foreign element of necessity. See at page 506 per Romer, L.J.

Legislative History

The legislative history in India in this context is informing. Clause (ix) of Section 10(2) of the Income-tax Act as it stood before the amendment of 1939, granted allowance of "any expenditure incurred solely for the purpose of earning such profits or gains." The Select Committee on the Income-tax Amendment Bill of 1938 recommended that this clause should be worded after the manner of the English Act granting allowances for expenses "wholly and exclusively" incurred. The Select Committee substituted Section 10 (2)(xii) which ran in the following terms:

> "any expenditure ... laid out or expended wholly and exclusively for the purposes of such business, profession or vocation."

and the said language has continued till today. The Bill as submitted to Parliament attempts to put the hands of the clock back.

If neither in the English scheme nor in the Indian scheme hitherto, "*necessity*" has figured as a test, it is because of the well-settled principle of law that "a sum of money expended not of necessity ... but voluntarily and on the grounds of commercial expediency ... may yet be extended wholly and exclusively for the purposes of the trade." See *Atherton's Case*, 10 T.C. 155, at page 191, per Viscount Cave, L.C., and also the remarks of the Supreme Court in *Eastern Investments Ltd.* vs. *C.I.T.*, 1951 20 I.T.R. 1, at page 4. The introduction of the word "necessarily" in relation to the allowance for business expenditure would conflict with the fundamental notions of expenditures properly debitable to revenue and would set at naught the whole series of case-law built up in India ever since the introduction of the Act of 1939.

It was for these reasons that the Law Commission in its Draft Bill recommended the dropping out of the word "necessarily" in the only place in which it occurs in the Indian Income-tax Act, namely, in Section 4(3) (vi) and the replacing thereof by the word "exclusively." There is no reason to depart from the recommendation of the Law Commission.

Finally, the following words of Danckwerts, J., in *Roskams* vs. *Bennett*, 32 T.C. 129, at page 132, in this context have a special appeal to the Select Committee sitting on the Draft Bill:

"Rule 9 of Schedule E, to which I have referred, is a very narrow and strict rule and it is one which undoubtedly causes a considerable amount of hardship when applied to particular cases. Judges dealing with particular cases have said so again and again. Their suggestions and their observations, however, have either fallen upon deaf ears or perhaps have not reached the ears which are relevant to an alteration of the law, that is to say, the ears of persons who through the legislature decide these matters for other people."

Section 13: Charity

This section is inconsistent with clause (b) of Section 11(1) (i). The latter clause recognises property held under trust in part for charity and permits non-inclusion of income to the extent to which the property is held in trust for charity. The proviso to clause (*b*) also runs in that sense. Clause (*a*) of Section 13, however, is in direct conflict with the above scheme. It runs that if *any part* of the income enures for the benefit of any relative of the author or founder of the trust, the entire income shall be includible in the total income. Here is an inconsistency which requires correction.

It is open to a person at law to devote some out of his several properties to charity and the rest as a gift to his relations. If two separate documents therefor be executed, the relief under Section 11 cannot be denied in respect of the charity document. The circumstance that the two dispositions are in one and the same document should not make a difference. Likewise, it is open to a person at law to devote a portion of the income from a certain property for charity and the remainder of the income from the same property as a gift to be enjoyed by his relations.

It is stated in the Notes on the Clauses to the Bill (see page 230 of the Income-tax Bill, 1961) that the "changes are made pursuant to certain recommendations of the Direct Taxes Administration Enquiry Committee, as contained in para 7.81(2) of its Report." If one turns to that Report, it would be found that what the said Committee was commenting upon was the case where under a guise to charity, "the *entire* income of the trust is spent *only* on the relations of the donor." See the Report of the said Committee, page 180, lines 12 to 14. That has nothing to do with a partial allocation of income for non-charitable purposes.

The Income-tax Act does not at all supersede the concept of a trust for charity. It has been consistently laid down by the Supreme Court, recently, that a trust for charity does not lose its character as such merely because there are minor benefits conferred upon the relations of the donor. See the decisions of the Supreme Court in *Menakaru Dasaratharama Reddy* vs. *Duddukuru Subba Rao*, 1957 A.I.R. S.C. 797; *Trustees of the Charity Fund* vs. *C.I.T., Bombay*, 1959 36 I.T.R. 513, 520; see also the decision of the Bombay High Court in *C.I.T., Bombay City* vs. *Trustees of Seth Meghji Mathuradas Charity Trust*, 1959 37 I.T.R. 419.

What all may be done under the Income-tax Act is merely to disqualify for exemption such portion of the charity income as is applied for non-charitable purposes. Hence, either clause (*a*) of Section 13 should be deleted, or, if desired to be retained for any reason, it should be amended so as to enable exemption for partial charity, by insertion of the words "that part of" at the commencement of clause (*a*) and by the substitution of the words "such part of" in line 3 in place of "any part of such." The section as revised would then read as follows:

"*That part of* the income of any trust or charitable or religious institution, if ... *such part of* income enures directly or indirectly for the benefit of any relative..."

Section 16(ii): Entertainment Allowance

Under sub-clause (*a*) of clause (ii) of Section 16, a Government servant is entitled to deduct towards entertainment allowance either a sum equal to one-fifth of his salary or Rs. 5,000, whichever is less. This allowance for expenditure is granted to the Government servant "in respect of any allowance... specifically granted to him by the Government." The phrase "in respect of *any* allowance" stands unqualified, and therefore, it would be permissible for the Government servant to claim the specified deduction, though the Government itself might have granted him towards such expenditure something less or far less. The Government might have granted, for instance, only Rs. 1,000 as allowance, but under sub-clause (*a*), even Rs. 5,000 could be claimed. The language in clause (ii) ("in respect of *any* allowance") is imprecise.

Again, sub-clause (*a*) applies only to a case where the Government servant "is in receipt of a salary from the Government..." Does this imply that there are Government servants who work honorarily without salary? If there are such, and presumably there are, their case would be governed by the residuary sub-clause (*b*). The result of applying that sub-clause to an honorary Government servant would be to tax him on his entire entertainment allowance, since one-fifth of his salary is *nil* under sub-clause (*b*) also.

In order to remedy the above defects, sub-clause (*a*) should be worded so as to refer to

(Continued on page 1138)

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue, by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

Licence from the Central Government has been obtained for the establishment of this New Industrial Undertaking of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the Prospectus having been attached thereto the documents mentioned below have been duly delivered for registration to the Registrar of Companies, Maharashtra, as required by Section 60 of the Companies Act, 1956.

Application will be made to the Bombay Stock Exchange for admission of the Company's shares to dealings on the Exchange and for an official quotation.

THE SUBSCRIPTION LIST WILL OPEN AT COMMENCEMENT OF BANKING HOURS ON 26th JUNE, 1961 AND WILL CLOSE AT THE DISCRETION OF THE DIRECTORS BUT NOT EARLIER THAN THE CLOSING OF THE BANKING HOURS ON 28th JUNE, 1961.

INDIAN RUBBER REGENERATING COMPANY LIMITED

(INCORPORATED ON 20TH DECEMBER, 1960, UNDER THE COMPANIES ACT, 1956)

AUTHORISED CAPITAL

1,00,000 Equity (Ordinary) Shares of Rs. 100 each ... Rs. 1,00,00,000

ISSUED CAPITAL

35,000 Equity (Ordinary) Shares of the aggregate value of .. Rs. 35,00,000

(i) **ALREADY SUBSCRIBED**

The Promoters, Directors, their Friends and Associates have subscribed 17,850 Equity (Ordinary) Shares of Rs. 100 each of the aggregate nominal value of .. .. .. Rs. 17,85,000

(ii) **NOW OFFERED FOR PUBLIC SUBSCRIPTION**

The balance of 17,150 Equity (Ordinary) Shares of the nominal value of Rs. 100 each is now offered at par for public subscription in terms of this prospectus .. .. Rs. 17,15,000

Payable as follows:—

1. Rs. 25 per share with application.
2. Rs. 25 per share on allotment.
3. Balance of Rs. 50 per share in two calls of Rs. 25 each, the first call to be made not earlier than 3 months after the date of allotment and the second call to be made not earlier than 3 months from the date of payment of the first call.

DIRECTORS

(1) MR. KANDATHIL MAMMEN PHILIP (*Chairman*), Industrialist, 11-A, Cuffe Parade, Colaba, Bombay-5.
(2) LT.-COM. H.H. IQBAL MOHAMMED KHAN, NAWAB OF PALANPUR, Businessman, 'Windmere', Cuffe Parade, Colaba, Bombay-5.
(3) MR. MAHOMED-AKBAR A. FAZALBHOY, Industrialist. Glamis Villa, Westfield Estate, Bhulabhai Desai Road, Bombay-26.
(4) MR. POONAMCHAND RAMJI KAMANI, Industrialist, Kamani House, Peddar Road, Bombay-26.
(5) MR. S. M. RAMAKRISHNA RAO, Industrialist, 399, Avenue Road, Bangalore.
(6) MR. RASIK RAMJI KAMANI, Industrialist, Ruia Park, Juhu, Bombay.
(7) MR. HASMUKH RAMJI KAMANI, Industrialist, Kamani House, Peddar Road, Bombay-26.
(8) MR. PRABHAKAR BALWANTRAI MEHTA, Business Executive, Morarji Mansion, Darabshaw Road, Bombay-26.
(9) MR. NAVNIT RAMJI KAMANI, Industrialist, Kamani House, Peddar Road, Bombay-26.
(10) MR. C. A. WILLNER, Consulting Engineer and Industrial Planner, 15, Richmond Road, Bangalore-1.

REGISTERED OFFICE

12. MESSRS. N. NANJAPPAIAH JAHGIRDAR, 181 Cavalry Road, Bangalore-1.

OBJECTS OF THE COMPANY

The Company was incorporated on 20th December, 1960 with the main object of undertaking manufacture of various grades and types of Reclaim Rubber and for the other objects particularly mentioned in the Memorandum of Association of the Company.

PROSPECTS OF RECLAIM RUBBER

The present consumption of raw rubber by the existing tyre factories alone is about 35,000 tons per annum, out of which about 15,000 tons of scrap rubber will normally be available. However, with the enormous increase in the production of Tyres, the consumption of raw rubber by Tyre factories is expected to go upto 60,000 tons per annum before the end of the Third Plan period. This will increase the availability of scrap rubber to about 25,000 tons per annum. As such the necessary scrap rubber required by the industry will be sufficiently available within the country.

At present almost the entire requirement of the country for reclaim rubber is being imported. The consumption figures of the reclaim rubber for the past three years are as under:

1958	4,051 tons
1959	4,500 "
1960	4,800 "

The main users of the reclaim rubber are Battery containers. Tyre manufacturers and all other rubber factories also use reclaim rubber to certain extent. Some rubber articles can wholly be made from reclaim rubber in more economical way and it is a good filler for many other articles. The Development Wing (Rubber) of the Government of India estimates that the consumption of reclaim rubber will rise to about 10,000 tons per annum in the near future. The policy of the Government of India is to encourage the indigenous industry particularly if it is going to save foreign exchange. The Company hopes to save foreign exchange of about Rs. 50 lacs every year as soon as its maximum production is reached. Moreover, there is no fear of any wasteful competition because there is still a wide gap between the country's requirement and the Company's proposed production.

It is, therefore, clear that the industry has bright future.

LAND FOR FACTORY

Keeping in view the availability of power, water, raw materials, skilled labour, transport facilities, etc. it is proposed to acquire by way of purchase a site approximating 6 acres round about Thana in Greater Bombay for erection of the Company's factory. Negotiations for the purchase of the said land are in progress and the Company does not at present anticipate any difficulty in acquiring the same.

PAYMENT TO PROMOTERS—PRELIMINARY EXPENSES

No payment is made or proposed to be made to the promoters of the Company, Messrs. Kamani Brothers Private Limited, except for reimbursement of actual preliminary expenses incurred by them and no profits or benefits have been given or are proposed to be given to any other person as promoter of the Company.

Preliminary expenses will amount to Rs. 1,00,000.

PROFITS

On the basis of the existing prices and after allowing costs, overheads, depreciation and other foreseeable contingencies, in so far as these items can be at present estimated, the Directors are of the opinion, that in the absence of any unforeseen circumstances the Company should be in a position to pay reasonable dividend on the issued equity shares.

COMMENCEMENT OF BUSINESS

The Company has obtained the Certificate of Commencement of Business dated the 9th March, 1961 from the Registrar of Companies, Maharashtra.

MINIMUM SUBSCRIPTION

The minimum amount which in the opinion of the Directors must be raised by the issue of shares in order to provide the sums required to be provided as per paragraph 5 of the Schedule II to the Companies Act, 1956 and upon which the Directors will proceed to allot shares in respect of the public issue, is Rs. 17,15,000.

RESOURCES AND DISBURSEMENTS

The total funds available with the Company will be as follows:

	Rs.
Share capital subscribed by the Directors, Promoters, their friends and associates..	17,85,000
Capital to be raised by this issue ..	17,15,000
Foreign Exchange: Loan to be obtained from the Industrial Credit and Investment Corporation of India Ltd. ..	17,00,000
	Rs. 52,00,000

(The Industrial Credit and Investment Corporation of India Ltd. have agreed in principle to grant this loan to the Company.)

This amount of Rs. 52,00,000 will be utilised approximately as under:

	Rs.
(i) Cost of land, site development, construction of roads, etc.	4,75,000
(ii) Construction of Factory Building ..	2,50,000
(iii) Cost of imported plant and machinery	17,00,000
(iv) Insurance, import duty, clearing charges, etc., on imported plants ..	3,30,000
(v) Cost of indigenous plant and equipments including erection charges, electrical installation	4,00,000
(vi) Cost of laboratory equipments, furniture, fixtures and vehicles, workshop equipments, etc.	1,50,000
(vii) Preliminary expenses, brokerage, advertising charges, etc.	1,00,000
(viii) Pre-operating expenses	3,50,000
(ix) Working Capital	12,45,000
(x) Contingencies	2,00,000
	Rs. 52,00,000

Additional finance, if any, required for working capital when the factory goes into production, will be obtained by way of loans from the Bank and other sources.

EXPENSES OF THE ISSUE

The preliminary expenses and expenses of the issue which are payable by the Company out of the capital now being issued are:

	Rs.
(*a*) Preliminary expenses and expenses of the issue.	74,275
(b) Brokerage and commission	25,725

No payment is to be made to promoters of the Company except for reimbursement of actual preliminary expenses which are payable to Kamani Brothers Private Ltd., the promoters of the Company.

BROKERAGE AND COMMISSION

Brokerage at the rate of 1 per cent will be paid by the Company on all allotments made in respect of applications bearing stamps of banks or certified brokers.

Commission at the rate of 0.5 per cent will be paid to the Managing Brokers, Messrs. Dhirajlal Maganlal Purshotamdas on 17,150 shares offered for public subscription.

APPLICATION AND ALLOTMENTS

Application must be for 5 shares or a multiple thereof.

All applications must be in the Form accompanying the Prospectus which can be obtained from the Company's Office and the Company's Bankers and Brokers. All application forms properly completed must be lodged together with the amount payable on application with the Company's following Bankers, namely:—

1. THE CHARTERED BANK, Mahatma Gandhi Road, Bombay-1
2. THE DEVKARAN NANJEE BANKING CO. LTD., Horniman Circle, Fort, Bombay-1
3. THE BANK OF BARODA LTD., Apollo Street, Bombay-1

or with any of the Branches of the said Bankers at Ahmedabad, Bangalore, Baroda, Bombay, Calcutta, Delhi, New Delhi, Madras, Rajkot and Surat.

All cheques and drafts drawn on Banks situated at places other than mentioned above should include a sum at the rate of 25 nP per cent (minimum 62 nP) of the amount remitted to cover all commission and Bank charges; otherwise the application is liable to be rejected.

The cheques or drafts should be made payable either to "The Chartered Bank A/c Indian Rubber Regenerating Co. Ltd.," "The Devkaran Nanjee Banking Co. Ltd. A/c Indian Rubber Regenerating Co. Ltd" or "The Bank of Baroda Ltd. A/c Indian Rubber Regenerating Co. Ltd." and should for the applicants' protection be crossed "A/c Payee only." A separate cheque or draft must accompany each application form.

The allotment will be indicated by the despatch of an allotment letter, but the Directors reserve the full uncontrolled right of accepting or rejecting any application in whole or part without assigning any reason. Where the application is rejected or not accepted in full, the whole or any balance of the application money received, as the case may be, will be refunded without any interest to the applicant (in which event, the Bank's commission, if any, will be payable by the applicant) within 2 months from the date of closing the subscription list.

ISSUE OF SHARE CERTIFICATES

Share certificates will be available for issue in exchange for letters of allotment within 4 months of allotment.

GUEST, KEEN, WILLIAMS LIMITED

MR. H. M. L. WILLIAMS CONFIDENT ABOUT COMPANY'S FUTURE

DEMAND FOR PRODUCTS CONTINUES TO GROW

A NOTE of optimism that, given sufficient power and adequate supplies of proper steel, Guest, Keen, Williams Limited has a good future and that it will be able to justify the confidence placed in the Company by shareholders was struck by Mr. H. M. L. Williams, Managing Director of the Company, in his statement to the shareholders read, in his absence on leave, by Mr. W. Morrice at the Thirty-first Annual General Meeting of the Company held at Calcutta on Tuesday, 6th June 1961. Mr. Williams stated that the demand for the Company's products continued to grow and that there was an increasing call from customers, particularly in the newer precision engineering industries for a greater varieties of specialised manufactures to good quality standards. The Directors, he said, were aware that the Company could only retain sales for such items by being more efficient, and this meant increasing output and reducing manufacturing costs. He pointed out that the efforts to increase efficiency and the various development projects were consolidating the position of the Company.

The following is the full text of Mr. Williams' statement:

"Mr. R. Catlow, the Chairman of the Board of Directors since 1953, has tendered his resignation of this appointment to take effect from the close of this meeting, but I am pleased to inform you that he will remain a member of the Board. Mr. Catlow has been at the helm of your Company all through a most intensive period of expansion; to all employees, and especially to me personally, his guidance and assistance have been a great encouragement. The Company has been most fortunate in having him to represent its problems to our associates in Britain, and this service I am happy to tell you he will continue to perform. Sir Raghavan Pillai, at present an additional Director, I am pleased to tell you, is willing to accept the chairmanship of the Board in place of Mr. R. Catlow; his appointment as a Director is a matter of a resolution later at today's meeting. Sir Raghavan Pillai has a vast fund of administrative experience and I consider the Company is most fortunate in securing his services.

"It is with regret that I report the retirement of Mr. E. J. Evans, a former Director, from the post of London Office Manager, who, by his loyal service and keen interest, has contributed much to your Company's development for many years.

Increased Competition

"The year 1960 as regards trading followed very much along the trend of its predecessor. Increased competition was encountered in a number of what have been your Company's traditional lines of manufacture; items which this Company has pioneered and developed to international standards of quality are increasingly being marketed by competitors at unremunerative prices and of a quality which leaves a great deal to be desired. In many of the production departments, the output suffered due to an insufficiency of proper quality raw materials. In particular, the supply position to your Company's Works of tested specification steel billets has been very difficult throughout the year, as also has the supply of steel crossing sleeper bar. The final stage of the rolling mill development project, to which I referred in my report last year, was completed only towards the end of 1960 when commissioning commenced; this project has not, therefore, been able to influence the past year's earnings.

"Turning now to the accounts themselves, the total sales for the 52 weeks ended 31st December 1960 amounted to Rs. 9,66,62,652 which showed an increase of Rs. 5,66,836 for the same period on the previous year. The total income is Rs. 9,95,36,373 and includes this year an amount of Rs. 15,60,000 received as dividend from Sankey Electrical Stampings Limited, which became a subsidiary of your Company during 1960 when Guest, Keen and Nettlefolds, Limited, the principal shareholders in your Company, subscribed for part of their rights entitlement by transferring their shareholding in Sankey Electrical Stampings Limited (formerly Sankey Electrical Stampings Private Limited). The surplus after taxation for the period under review is Rs. 61,66,715, as compared with Rs. 82,17,623 for the previous period, but, in comparing these figures, I must point out to you that, during 1960, the depreciation charge at Rs. 45,43,022 (1959—Rs. 30,62,135) was substantially higher as a result of the completion of capital projects. You will appreciate as with all major expansions and new developments a certain time has to elapse before revenue-earning momentum can be attained sufficient to absorb the initial heavy depreciation and the relatively high costs of the early operating stages. Mention must also be made of the statutory amount of Rs. 24,57,232 (1959—Rs. 33,01,000) which had to be provided in 1960 for development rebate reserve. These substantial transfers during the last two years all go towards strengthening the reserves of your Company.

"During the year, by reason of the rights share issue of 20,00,000 equity shares of Rs. 10 each at a premium of Rs. 18.50 per share, the issued capital has been raised from Rs. 2 crores to Rs. 4 crores and there has been a net increase of Rs. 3,68,11,728 to the share premium account which now stands at Rs. 4,27,05,728.

"For the 52 weeks ended 31st December 1960, an interim dividend of 80 nP per share has already been paid out on the former issued capital of Rs. 2 crores. Your Directors now recommend a final dividend for the same period of 80 nP per share on the currently issued capital of Rs. 4 crores, transferring from general reserve an amount of Rs. 6,03,673 which transfer they consider appropriate taking into consideration the very substantial statutory transfer to development rebate reserve I have already mentioned.

Capital Projects

"Capital projects completed during the year and reflected in the additions to fixed assets amounted to Rs. 1,55,24,647. During the years 1959 and 1960, no less than Rs. 3,86,47,026 worth of new buildings, plant and machinery was added, which will undoubtedly improve the future revenue-earning capacity of your Company. The cash intake from the rights share issue has enabled the Bank borrowings to be substantially reduced, at the same time to utilise liquid resources to best advantage a loan of Rs. 1 crore was given to Sankey Electrical Stampings Limited; since the end of the year, Rs. 30 lakhs of this loan has been repaid.

"Generally, the past year has for your Company developed very much on the lines I indicated in my report to you a year ago. The greatest difficulty has undoubtedly been an insufficiency of specification and quality steel billets which has prevented most of the Calcutta Works production sections from satisfying their customers' needs. The position started to improve in the early months of 1961, but it is most unfortunate, and indeed embarrassing, that, in spite of unflagging efforts of your employees, we are not yet in a position to satisfy our customers' needs with the efficient service to which we consider they are entitled. The difficulty arises due to steel-making capacity and quality even in the mild steel ranges from the country's steel works not yet being able to satisfy the demand of the more selective users who are manufacturing their products to specification. Last year, I said, except for a limited quantity of special steels, the Company's raw material problem would be substantially solved. I regret that I cannot yet report that this position has been reached, but it is now recovering from its setback and we are receiving more steel than we were a year ago.

Demand For Company's Products

"As regards the demand for your Company's products, this continues to grow and there is an increasing call from customers particularly in the newer precision engineering industries for a greater variety of specialised manufactures to good quality standards. This I consider is a most welcome development for industry in India and is a sure sign that the country's industry is expanding properly and is prepared to take the extra trouble associated with quality manufacture to internationally acceptable standards. I mentioned earlier increasing competition was being experienced in traditional lines of manufacture, this will no doubt continue to grow as others gain manufacturing knowledge. Your Directors are well aware that the Company can only retain sales for such items by being more efficient, and this means increasing output and reducing manufacturing costs. During the past year, careful study continued to be given by the management to increasing efficiencies and the benefit of this work (which is a continual process) together with the various development projects are, I am pleased to say, consolidating the Company's position.

Exports

"On the export front, both Calcutta Works and Bhandup Works have now made sizable contributions, but, although they have been able to supply overseas customers with fastenings and railway fittings fully up to standards of international quality, the prices have to be heavily subsidised and this will continue to be necessary until steel prices can be very substantially reduced. Your Company's experience of the actual working of the Government's subsidy drawback schemes has been excellent, claims being expeditiously and efficiently handled, which is, of course, essential to create confidence in the minds of potential exporters of engineering goods.

"The medical benefit schemes, which were introduced over a year ago so that all employees enjoy free medical aid, have been operating satisfactorily and the expansion of improved preventive treatment is now being studied both at Calcutta and Bhandup. An additional canteen building at Calcutta Works has been erected during the past twelve months and at Bhandup recreational facilities and further improvements to the sports ground have been made. Relations with labour have on the whole been satisfactory throughout 1960, and have generally followed constitutional methods of conduct and negotiation. However, there is still room for improvement whereby the trades unions and the Company management work in closer unison for the best interests of the Company, and its employees.

"The Company's consultants and associates, Guest, Keen and Nettlefolds, Limited, continue to render a great deal of technical assistance which is of immense benefit to our development and indeed without which the very rapid expansion of the past few years would not have been possible. Guest, Keen and Nettlefolds, Limited, besides injecting a large foreign exchange element for the rights issue, have in the past year brought to your Company the business of Sankey Electrical Stampings Limited, which diversifies and broadens the base of your investment with an interest in the country's growing electrical industry.

Bonus Issue

"In my report to you last year, I mentioned the subject of a bonus share issue, saying that, in view of the high rate of taxation on such issues and the need to conserve liquid resources, the Directors did not consider such an issue at that time to be in the best interests of the Company. Since then, there has been a reduction in taxation on bonus share issues which is to be welcomed, although an issue even from the share premium account which the shareholders themselves have subscribed still requires 12½ per cent to be paid as additional taxation. Your Directors, therefore, consider that, before incurring additional taxation liabilities which can otherwise be avoided, it is in the best interests of the Company that the recent expansion projects be allowed to reach a stage where they become greater revenue earners to service the currently issued capital of Rs. 4 crores which is now double the figure it was in the previous year's accounts. The commissioning of the various development projects has generally proceeded satisfactorily and, with the rod train of the Calcutta Works new rolling mills now in operation, we are now in a position subject to a sufficiency of steel billets to supply both the woodscrew works and the bolt works with the smaller sizes of their raw material which previously had to be imported. The wheel plant continues to increase its variety of trailer and car wheels. The bright bar plant at present under installation is expected to be in production well before the end of 1961.

"It would I think be only right for me to sound a word of warning concerning the present inadequacy of electric power supplies to

(*Continued on next page*)

NEW PUBLICATIONS

A Decade of Planned Economy: A Critical Examination of Indian Plans. By S. Kesava Iyengar, with an Introduction by Dr. C. P. Ramaswami Aiyar. Published by the Indian Academy of Economics, Mysore-2. Price: Rs. 15.

THIS is a critical study of Indian plans against the background of international developments. The author has examined the problem from various angles and carefully analysed the various factors that have influenced development in the country hitherto and are likely to shape the trends in the coming years. It is obvious that the author has taken great pains to emphasise the tremendous leeway that exists between the planned objectives and the actual achievements due to the impracticable approach and the unsuitable methods adopted.

The publication deals with all the important aspects of the economy, such as agriculture and community development, food supply, land reforms, co-operation and rural reconstruction, labour, industry and trade, finance and banking, social security and planning. A critical analysis of international plan problems has also been made and the plan progress in some of the leading countries, such as U.K., U.S.A. and U.S.S.R. examined.

The need for economic surveys, at least once in every five years, rather than *ad hoc* surveys, has been emphasised in order that the problems of a fast changing economy may be properly assessed. Useful suggestions for meeting the difficulties usually arising in these surveys have also been made.

An outstanding feature of this publication is the fact that not only have problems been analysed and studied critically but practical suggestions for improving the existing conditions have also been made. Keeping in view the fact that Prof. Iyengar has many years of experience in conducting economic surveys and in studying the various problems affecting our economy, his suggestions deserve careful consideration.

The author has rightly emphasised that the three major problems of planning in this country are to foster rapid economic growth without inflation, to choose carefully between expansion programmes in the domestic and foreign markets and to handle cautiously the problem of foreign aid.

In the light of the critical study made by the learned author, many of the existing beliefs regarding the Indian economy may have to be re-examined. The complacency that seems to be growing with regard to the progress achieved hitherto, when studied against the background of actual achievements during these ten years and the increasing requirements of the third Plan, requires careful attention. Mr. Kesava Iyengar's thoughtful analysis of economic events will be useful in any re-appraisal of the economic situation.

Industrial Entrepreneurship in Madras State. By Dr. James J. Berna, S.J., Asia Publishing House, Bombay, 1960. Pages: 238. Price: Rs. 18.

The complementary role of small-scale industries in the industrial progress of the country has been well recognised and the third Plan makes a substantial provision. In this context one is familiar with questions such as the possibility of co-existence of both large and small units in modern production, the appropriate field for the latter category to operate, how the developmental effort of these units could be furthered and in the process of growth what mistakes they have made and what lessons they hold forth. The research programme carried out by Dr. Berna bears on a number of these questions.

Dr. James Berna, S. J., was Assistant Professor in Georgetown University, Washington, D.C. and since 1959 holds the post of Economist at the Indian Social Institute, Poona. Dr. Berna for his studies had chosen a specialised topic, of entrepreneurship in Madras State. The study project was sponsored by the International Industrial Development Centre of the Stanford Research Institute as part of a programme of research and publication on small industry particularly as related to the problems of newly industrialising countries.

The scope of the study, though restricted, has enabled the author to proceed about it in a thorough fashion. He selected 52 firms for the study and investigated the background of the entrepreneurs, the ways in which they have made the transition to industry and the problems they have faced in establishing and building up their enterprises. The author has made good use of case studies to illustrate the points. The first two chapters provide a brief narration of basic concepts and the theoretical framework which have guided the author's approach and the economic environment of the case studies he made. The third chapter dealing with the entrepreneurs' background and the origins of firms studied reveals that the entrepreneurs have sprung from extremely varied economic and social backgrounds, such as persons with trading background (28.8 per cent), trained engineers (23 per cent), etc. These entrepreneurs had to face a variety of operational problems such as shortage of raw materials, establishing employer-employee relations and other labour problems such as shortage of skilled workers, training, etc. and more important, the problems connected with working capital. These institutions had to struggle throughout most of their existence and the new institutional schemes for finance, such as the pilot scheme of the State Bank of India have given much relief. In the sixth chapter he concludes that the entrepreneurs' mobility has perhaps been excessive, though these have come not on the basis of "fly-by-night" but out of sound decisions aimed at strengthening firms and improving their competitive position. In the last chapter a set of useful recommendations for future policy is included.

Madras City and Coimbatore present a cross-section where efforts are made to establish industries. Through the case studies the processes and problems that these small-scale and medium-scale industries have to face are brought out. The handicaps with these entrepreneurs continue to be shortages of material, inadequate technical knowledge and lack of technical counsel, inadequate capital and credit, inadequate distribution systems, lack of market analysis, etc. The recommendations of the study are broadly: (1) light engineering industries have great scope as small or medium-scale enterprises; (2) medium and long-term loans should be made available through the banking system with rediscount facilities with the State Finance Corporation; (3) re-examination of the definition of small-scale industries with a view to base the criterion on the size of capital rather than number of working men employed; (4) greater emphasis in technical assistance and training and (5) co-operative approach for technological improvement, on the part of Government and industrialists.

As Dr. Eugene Staley points out in the foreword, this is a good job of analysis and interpretation. This will be a useful addition to the library of both the research scholar and the administrator.

Agricultural Marketing in India and Abroad. By R. S. Srivastava. Vora & Co. Publishers Private Ltd., Bombay, 1960. Pages: 243. Price: Rs. 12.50.

The framers of the third Plan have well recognised that in the first two Plans agricultural production was not well cared for and that, if substantial improvements in the living standards are to materialise, this omission should be made good in the third Plan, stating further that the crux of the whole food and agricultural problem is the process of marketing. We are now familiar with the experiment in intensive agricultural production being tried out in selected districts and in this integrated scheme much faith has been pinned on marketing. In recent years several steps have been taken in this country with a view to improve marketing such as the linking of co-operative credit with marketing, facilities for storage—in villages, *mandis* and big distribution centres—efforts to popularise warehouse receipts along with the provision of banking facilities to rural areas, spaced introduction of uniform metric weights all over the country and steps to modify legislation intended to regulate marketing activity. It is, therefore, necessary that attention should be paid to the intensive study of methods and objects of reform in the marketing system.

The original thesis of the book *Agricultural Marketing in India and Abroad* by R. S. Srivastava was finalised in 1948 as a thesis for the University of Oxford. The author is now connected with the Programme Evaluation Organisation of the Planning Commission and, therefore, has had good opportunity to revise the earlier thesis with the developments of over a decade. In this publication the author has attempted to combine the presentation of the principles and economics of marketing with a comparison of policies and programmes. The author has tried to draw on foreign experiences but has not burdened the reader with large details where not necessary.

The eleven chapters can be conveniently grouped. The first three chapters introduce the subject dealing with aspects such as the socio-economic structure of India, the economics, important functions and problems of marketing and the ramifications of the structure of marketing. The next five chapters deal with the various aspects which determine as well as reflect the efficiency of marketing. A whole chapter is devoted to discuss the role of co-operation. He points out the several operational problems of marketing co-operatives and broadly divides the measures for development under two main heads—numerical expansion and qualitative improvements. He advocates the practice of binding the members to sell their produce through their co-operatives and feels there is not much derogatory in compulsory co-operation in this regard. A useful chapter on legislation and policy is added at the end.

Kothari's Investors' Encyclopædia 1960. Compiled by Messrs. Kothari and Sons, Oriental Buildings, Armenian Street, Madras 1. Pages: 2,361. Price: Rs. 30.

The *Investors' Encyclopædia*, brought out every year, has entered its 23rd edition. This edition, running to about 3,000 pages, is a virtual treasure house of information on the various aspects of Indian industries. Facts and figures bearing on almost all important industries, transport, banking and insurance are presented in the volume, along with graphs, charts and maps wherever found necessary. The *Encyclopædia* is divided into several sections, each containing a general review of the industry concerned, followed by an analysis of the working of the various joint-stock companies falling within the relevant section. Apart from the up-to-date write-up of companies, data on a number of companies recently floated have been added to the present edition. The other features of the edition include a summary of the draft third Plan, a list of companies for which licences have been granted since 1959 under the Industries (Development and Regulation) Act 1951, procedures involved in applying for industrial licences both at the Central and the State Government levels, etc.

INCOME-TAX AMENDMENT BILL—I

(*Concluded from page* 1136)

terms to a Government servant *simpliciter* and sub-clause (*b*) to an assessee *in terms* not being Government servant.

Next, sub-clause (b) in specifying the least of the three quantities for allowance, mentions as one of them "such entertainment allowance ... received ... in *any* previous year ending before 1st of April 1955." This is too vague. What is intended is "in *the* previous year *immediately* ending before 1st of April 1955."

In clause (ii), there is no language requiring proof of expenditure for claiming the allowance as there is in clause (i).

Finally, sub-clause (b) has not made any provision in respect of a servant not at all employed before the 1st day of April 1955 or not under the same master. Here is a *casus omissus*.

(*To be continued*)

(*Concluded from previous page*)

your Company. Plant at Calcutta Works has had for some months now to be operated on a load shedding and staggered hours basis and, whilst in some departments it has been possible to maintain production on different working hour schedules, the electric steel making furnaces had to accept a cut of approximately 35 per cent, and previously being on a 24-hour schedule, there is no chance of recouping this lost output; however, this is not a difficulty peculiar to this Company. Given sufficient power, and as I have mentioned earlier an adequacy of proper steel supplies, I feel certain that this Company has a good future and will be able to justify the confidence you as shareholders have placed in it.

"Finally, I would like to thank on your behalf the staff and all employees who have during the past year worked loyally and keenly in your interests, they have encountered most of the problems associated with industry today but with resolution and determination have done their best to overcome them."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

COLLECTIVE BARGAINING

PROGRESS MADE IN INDIA SLOW

By Dr. J. L. Rastogi

LABOUR participation in management and collective bargaining are two important aspects of labour-management co-operation. While the first seeks to promote common objectives in industry, the latter helps in resolving conflicting interests. Thus, each contributes in its own way towards industrial peace, and success and prosperity of the enterprise/industry. However, in India, while an increasing attention is being paid to labour participation, collective bargaining remains a neglected aspect.

Collective bargaining is a process and/or philosophy which is used for continuous adjustment of interests of labour and capital in a peaceful and equitable manner. The decisions of such joint negotiations are generally reduced in black and white or in what are known as collective agreements. Collective bargaining is, thus, a relationship between organisations—trade union, on the one side, and a concern or an employers' organisation, on the other. It is not merely conclusion of collective agreements around the table. It also implies interpretation, application and enforcement of these agreements. Thus, collective bargaining enables groups with conflicting interests and outlook to come closer and resolve their differences in an atmosphere of goodwill and mutual respect and to the best interest of the enterprise and/or industry. The utility and benefits of collective bargaining in establishing harmonious industrial relations have been beautifully summed up by the I.L.O. as:

"In the first place, collective bargaining permits the parties to work out their own affairs without dictation from above. This implies a recognition of the dignity of workers as an equal and responsible partner in a common enterprise. As a means for determination of wages and other working conditions, it is much more flexible and adaptable than statutory provisions, since the parties are closest to the actual situation in the economy and hence have the greatest understanding of economic possibilities and of their mutual needs. Collective bargaining is also a means of improving on statutory minimum standards. Furthermore, every collective agreement is an instrument of industrial peace, inasmuch as its very nature implies a substitution of reason and common accord for arbitrariness and anarchy in the regulation of the employment relationship. Finally, collective bargaining reduces the influence of external political considerations on the fixing of working conditions and on the regulation of labour-management relations."

Western Experience

With the growing recognition of advantages of collective bargaining in regulating industrial relations, it has become the basis of labour-management relations in Western countries. In Canada, there were over 1.6 million workers covered by such agreements in 1956, representing 38.7 per cent of all non-agricultural workers. In the United States, it was estimated that, in 1958, the number of agreements exceeded 150,000 covering 18.2 million workers. Collective agreements in both countries cover virtually all branches of industry, transport services and commerce. Similarly, in Great Britain, some 25 per cent of workpeople belonging to six great industries, coal, iron and steel, engineering and shipbuilding, building and civil engineering, cotton and railways, have evolved distinctive collective bargaining machinery of their own.

The nature and scope of collective bargaining vary from country to country according to the growth and strength of trade unions, enlightenment of the employers and method of its introduction. Collective bargaining is voluntary in some countries, like Canada, Great Britain and the United States, and has been a result of an evolutionary process over a long period of time. However, in some countries, it has been enforced through legislative compulsion as in Germany. Levels of collective bargaining in different countries have been adopted to suit their particular needs and circumstances. While in the United States and Canada plant-wide collective bargaining is more common, in West European countries it is generally conducted on industry/national level.

So far as subjects of collective bargaining are concerned, wages and working conditions have been the most important. These are used in their widest sense. Other matters of collective bargaining are hours of work, overtime, lay-offs and dismissals, discipline, holidays, leave, paid vacations, transfers, promotions, health and safety, etc. Additionally, relatively recent developments in collective bargaining have made for the introduction into Canadian and United States collective agreements of so-called fringe benefit provisions regarding pensions, profit-sharing, health, accident and life insurance, severance pay and supplemental unemployment benefits.

Employers in India have been late in recognising the contribution collective bargaining can make in improving relations. It is only since the Second World War that there has been a growing awareness of its benefits for establishing industrial peace. Efforts have succeeded in introducing some sort of tripartite negotiations at the national and State levels for which a number of tripartite bodies have been established. A few bipartite agreements have also been concluded between management and workers' representatives at national, industry and undertaking levels. Negotiating machinery at the Centre and the States is more concerned with matters of policy and subjects of national importance. However, it has to depend on the Government for implementation of its decisions. Recently, it has, of course, been decided to give immediate effect to unanimous decisions of these bodies.

Causes of Slow Growth

Bipartite agreements at the national level deal with matters like standardisation, rationalisation and bonus. Collective agreements at the industry and undertaking levels regulate respectively particular situations in industry and service and working conditions in each plant. Thus, collective bargaining in India is in its infancy and covers only a small fraction of the working class. Still we have to march a long distance to match Western standards in this direction.

The net result of apathy of management and labour to bargain collectively and peacefully resolve their differences has been that, in our country, service and working conditions, industrial relations and wages, etc., are largely regulated by legislation. Industrial disputes are very frequent and labour and management are suspicious about the intentions of each other.

Numerous causes can be attributed to slow growth of collective bargaining in India. They are listed below:

1. The most important cause has been the lack of proper appreciation of the philosophy, objectives and benefits of collective bargaining by management and workers and/or unions.

2. Attitude of employers in India has been hostile towards collective bargaining and trade unions. Workers' unions are still regarded as groups of conspirators and not as constructive and responsible organisations. Similarly, collective bargaining is considered against the interest of the employers and the industry which would curtail management's prerogatives and interfere in the functioning of the industry.

3. Absence of representative workers' unions or multiplicity of unions is yet another factor retarding the progress of collective bargaining in India. Trade unionism in our country is still not mature and a large proportion of the work-force is outside its scope. Very often, more than one union has been formed in one establishment making the question of union recognition difficult.

4. Outside union leadership and its political allegiance have also been responsible for the slow progress of collective bargaining. More weight is attached to personal and political objectives than larger interests of workers and industry. Instead of negotiating around the table, outside leaders want to dictate their own decisions. Collective bargaining is generally opposed as it would undermine their own authority and following.

5. State interference in regulation of industrial relations, and service and working conditions itself has been a great obstacle in the development of collective bargaining. Workers have failed to develop an independent and self-reliant attitude. They still look towards the Government for amelioration of their conditions and protection of their rights and dignity.

Important Prerequisites

Success of collective bargaining, depends to a large extent, on mutual confidence and sincere desire of the parties to settle their difference peacefully. Therefore, it should be voluntary and a result of self-realisation on the part of employers and workers of its utility. However, until sound traditions are developed and adequate experience accumulated, the Indian Labour Conference should lay down broad principles and procedure for guidance. To speed up the movement in the country, the Governments at the Centre and the States should have their own advisory services to aid and advise the parties to bargain and settle their differences around the table.

Collective bargaining calls for a change in the outlook of labour and management. Each should recognise the true contribution of the other in industrial venture. Both contribute towards the prosperity of the firm. While management takes initiative, organises work and issues directions, workers provide efforts and co-operation to make the venture a success. Management is also the trustee of workers' interest and welfare; similarly, trade unions are co-operative and responsible agencies of workers. Collective bargaining should be considered in its true perspective. It is neither against the interest of employers nor would it undermine the strength of trade unions. In fact, if conducted in an atmosphere of good faith, it would create a stake of workers in the enterprise and would enhance the prestige of union leaders.

For successful collective bargaining are needed strong workers' and employers' organisations. Efforts should be made to consolidate trade union movement and to grant it a structure above politics. At the plant level, principle of one union in each establishment irrespective of the aims, ideology and allegiance of leadership should be pursued. These would make the unions strong, independent and self-reliant. Similarly, employers should be encouraged to form their own associations to meet organised labour and settle their opposite interests to the best interests of the industry as a whole.

Proper education of workers, their immediate bosses, junior executives and top management in concept purposes and benefits of collective bargaining is also essential. It should form part of a factory induction course. Frequent refresher courses should also be organised to keep them informed of the latest developments. Besides, those who are to negotiate around the table should be specially trained in principles, techniques and procedures of bargaining. Last but not the least important is the proper communication system within the undertaking so that all concerned should know the progress of collective deliberations and how far the results are being implemented from time to time.

Set-up Recommended

Collective bargaining at national/industrial State level would set the broader pattern of industrial relations and bring about greater uniformity in service and working conditions. It would thus protect even those workers who are unable to do so at the unit level. Moreover, it would get as an incentive to employers, particularly small- and medium-sized, to form their own organisations to bargain collectively with organised workers. At the plant level, collective bargaining would be still beneficial, as it would enable the parties to settle themselves matters to suit specific needs and circumstances. Thus, mutual decisions would replace arbitrary actions and discretionary dictates in labour-management relations. However, collective bargaining, being a comparatively new experiment in India, should be introduced gradually and in stages. Initially it should be encouraged in concerns (a) employing more than a certain number of workers, (b) having peaceful industrial relations, and (c) with a strong and responsible trade unionism.

In order to avoid confusion, the jurisdiction of collective bargaining should be clearly defined. It should be distinguished from matters to be covered by labour participation schemes and which are the sole prerogatives of the management. The scope of collective bargaining should extend to all such matters, differences over which are likely to prejudicially affect the interests of the concern/industry. A collective agreement should thus lay down rights and obligations of the management and workers/unions, conditions of employment like recruitment, selection and training, transfers and promotions, lay-offs and retrenchment, etc., acts constituting misconduct and procedure and action to be taken for indiscipline including censure and warning notice, suspension and dismissal, standards of working conditions like health safety, sanitation, lighting, heating and ventilation and also matters like working hours, shift working, rest pauses, speed of work and introduction of modernisation and rationalisation. Besides, it should also lay down wage schedules, mode of payment, job evaluation and method of settlement of wage rates for a new job, a scientific grievance procedure and method of settlement of disputes, including conciliation and arbitration and a no strike/lockout clause.

Initially, however, collective bargaining should cover only rights and obligations of the parties, working conditions and grievance procedure and should extend to other matters gradually with the accumulation of adequate knowledge and experience in its working.

INDUSTRIAL ESTATES IN ANDHRA

THEIR EMPLOYMENT POTENTIAL YET TO BE ASSESSED

By Sripati Ranganadha

LIKE most of the States in India, Andhra Pradesh is predominantly an agricultural one. Indian agriculture is generally understood as that which breeds seasonal and disguised unemployment. The rural population is usually said to be home-loving, hence they are unwilling to leave their traditional calling and abode. The urban life is by no means presented with a plethora of jobs. Already there are many unemployed in the city. The present large-scale industrialisation that has made rapid strides in the past decade is mostly capital-intensive and tends towards automation and labour-saving devices; very little scope is, therefore, being extended to the unskilled population. As a result, it will take a pretty long time to generate "multiplier effect."

According to a summary report on the Thirteenth Census* of Indian Manufactures of the Central Statistical Organisation of the Government of India, the total number of persons employed between 1948-58 in the registered manufacturing industries was from 1,704,087 to 1,707,978. In fact, the percentage increase remained almost stagnant, that is .02 per cent. In view of the whole nation's statistics, the infinitesimal increase in the employed in Andhra Pradesh during that period could be easily imagined. Now what must be done? In the fitness of things the small-scale and medium-sized industries should offer much employment potential possibilities.

The present essay does not spell out how best the small and medium-sized industries could resist the current and onward march of unemployment, but it attempts to explain the all-out efforts of the Government to chalk out plans in setting up the industrial estates to meet the exigencies of the economy. It is not the present results that matter but the overall measure to plan and execute the formidable undertakings that really count.

The idea of industrial estates was mooted in 1955 by the recommendations of the Small-scale Industries Board to help the small-scale industrial entrepreneurs in terms of their basic necessities such as requisite capital, acquisition of factory location, adequate power and communication facilities. The Government has decided to lay out a network of industrial estates ranging in size from 15 to 60 acres all over India. The Government would initially choose the location of the industrial colony, develop the acquired estate with all the modern conveniences such as laying out roads, providing power, communication, water-supply, drainage and sanitary facilities. Factories and common service workshops would then be set up. Quarters would be provided nearby to industrial workers. These industrial units could be bought either straightaway, or in terms of hire-purchase or let out on rent depending upon the financial status of the entrepreneur. Provisions would be made for capital expenditure, equipment and working capital on easy terms. In order to encourage industrial co-operatives even loans could be extended at the rate of 2½ per cent.

The second Five-year Plan had envisaged 72 industrial estates and it had earmarked a sum of Rs. 10 crores for this venture. These undertakings by the Union and State Governments are praiseworthy and they are spoken of as the "highways to industrialisation" of our nation.

Andhra in the Vanguard

As a matter of fact, Andhra Pradesh is in the vanguard of this programme of industrial estates. It has already set up seven industrial colonies at Sanatnagar (Rs. 51.60 lakhs), Visakhapatnam (Rs. 29.71 lakhs), Vijayawada (Rs. 22.33 lakhs), Samalkot (Rs. 7 lakhs), Nandyal (Rs. 3.22 lakhs), Warrangal (Rs. 11.26 lakhs) and Cuddapah (Rs. 10 lakhs). The total cost of the above seven schemes has come to be Rs. 135.14 lakhs. The first five industrial estates were set up in 1957 and the one at Warrangal in 1959 and the last one at Cuddapah in 1960. Recently in 1961, another industrial unit has sprung up in Chandulal Baradari (Hyderabad). All the above undertakings are sponsored, of course, by the Government.

These estates have been provided with administrative buildings and common service centres which include tool room, electroplating and heat treatment. Normally, the small units cannot afford to have these amenities on their own. The bigger estates have been facilitated with bank and post office facilities within their premises. In addition to these services, raw material depots have been set up in every estate to provide the industrial units with a proper and regular supply of raw materials.

Now they are in a position to manufacture certain essential goods which include, among many, razor blades, steel furniture, cycles, car batteries, radios, microphones, tape recorders and so on. In certain items, production has been either slowed down or deferred owing to the shortage of both indigeneous and foreign steel and non-ferrous metals. In this connection, it must be pointed out, however, that the planners have given considerable thought over the development of aluminium, the only non-ferrous metal which can be indigenously produced at present in large quantities. The draft outline of the third Five-year Plan (1961-66) has set the target for this metal as 87,500 tons. Out of this, 52,500 tons have already been either pressed into production or under way. The remaining 35,000 tons are to be worked out during the Plan period. The present consumption of this metal which, in fact, is much less than our real requirement is around 44,000 tons. Because of the limited resources, the Government could not extend further industrial colonies to other centres. Instead, the Industries Department has evolved a modified similar scheme known as the Assisted Private Industrial Estate. According to this scheme, the prospective entrepreneur is expected to construct the factory, install machinery and equipment on his own with Government approved designs. The Government will look into other common conveniences such as the acquisition of fully developed factory sites for long-term lease, construction of roads, water-supply, electricity, drainage, sanitary facilities, common service and raw material depots. The prospective industrialists could make it convenient to borrow 70 per cent towards the cost of building and 75 per cent towards the cost of machinery from the Department of Industries and/or the Andhra Pradesh Finance Corporation. The salutary feature of the Corporation is that the enterprising industrialists could be permitted to repay the amount in 15 years in gradual instalments.

Technical Assistance

Technical assistance in terms of selection of machinery and raw material, layout and installation, preparation of blueprints, designs of tools, jigs and fixtures has been provided for the needy entrepreneurs by the Small Industries Service Institute which was set up by the Union Government for Andhra Pradesh in 1956. This Institute will also render service in the form of repairing and removing manufacturing defects, economising in fuel and raw material, and so on. Further, the Institute offers courses in business management which include factory laws, labour laws, contract laws, sources of raising finances, cost accounting and such other courses for the interested entrepreneurs. Classes are also conducted in blueprint reading for the workers who are employed in small-scale industries. The Institute has registered so far 284 small-scale units all over the State.

There is another wing for the Institute—the Economic Investigation Section—which looks after the supply and demand position of the industry in question and transmits this useful information to the prospective industrialists. This section is also engaged in conducting surveys in terms of market testing, market potentialities, total resources available, etc. Area surveys for six districts have already been completed so far.

Provisions have been extended to the economically backward districts, where spot advice is given by technical officers of different fields to persons who are interested in the industries. These technical officers stay for about two months in a particular district and try to help the new industrialists with details such as the form of machinery, equipment, raw material, the process of manufacture, total investment required and so on. This technical staff will also help the entrepreneurs to procure machines through the National Small Industries Corporation on hire-purchase scheme and through the Andhra Pradesh Finance Corporation and the State Bank of India. The former has already helped various sections of the industries of the State by supplying 280 machines worth about Rs. 2,118,306.

Extension Centres

Two extension centres are attached to this Institute and they are situated both at Vijayawada and Sanathnagar industrial estates. These extension centres make precision instruments such as auto parts, die, jigs and fixtures on behalf of the small-scale units on "no-loss-no-profit-basis" for a nominal sum. Further, these centres provide training to persons who are sponsored by small-scale industrialists for six months in machine shops, welding and electroplating.

Three mobile vans are attached to the Hyderabad Institute. They tour all over the State and demonstrate the use of modern machines and train the artisans who evince interest in them. By the end of 1960, it was reported that these vans covered 105 centres in four districts. There were 322 demonstrations which were witnessed by 3,81,880 persons and about 322 artisans had actually taken training from them.

Guntur has the significant honour of having a private Industrial Estate which was inaugurated on 29th April 1961. It is the first of its kind in the country. Eight such estates will follow suit in due course of time. The State Government has prepared to extend all the possible facilities including granting loans at a low rate of interest, provided the private sponsors do not misuse the privileges that the Government has given them. There are certain instances, according to the State Minister for Small-scale Industries, where they have misused the Government loans. Rumours have it that certain businessmen "who have had their business elsewhere, in their own or rented places, and had been carrying on on a large-scale, are said to have gone to the estates in large number." These industrial estates, in fact, are meant for small entrepreneurs who have been having production centres either at their own homes or rented buildings and who are unable to seek a market for their goods and services all by themselves. It is rather unfortunate that these privileges are exploited by big industrialists who could command large investments of their own. Experience tells us that most of our necessary industrial prerogatives are abused by a minority sometime or other but it does not, however, mean that these abused privileges are arguments against the privileges themselves.

In the Third Plan

It is indeed praiseworthy that the third Five-year Plan has proposed to set up at least an industrial estate in each district in addition to the 18 rural industrial estates. A sum of Rs. 83.57 lakhs has been allotted for this scheme. The State Government has made provision for Rs. 3.5 crores in the third Five-year Plan towards the development of small-scale industries. Further, the State Government is proposing to set up a unit for manufacturing the improved agricultural implements at an estimated investment of Rs. 56 lakhs. The proposed capacity of this unit would be approximately 3,600 tons per annum and its employment potential would be 576.

It is rather too early to assess the success of the present scheme in terms of employment potential and the volume of goods turnover. Despite certain limitations, the allout efforts of the Government shall never go in vain. The small and medium-sized industries which derive the necessary modern amenities and instruments of production cannot but grow. We can hope that the current and proposed schemes of industrial estates sponsored by the public and private undertakings will open new vistas for industrial expansion and employment opportunities in the years to come.

The Government of Bihar has decided to establish a development authority for helping industries in the private sector at a cost of Rs. 50 lakhs during the third Plan period. The need for such an authority has been felt in view of the great scope for development of ancillary industries in Barauni-Mokameh, Ramgarn-Barkhana, Bokaro and Adityapur areas of the State. The allotment of Rs. 50 lakhs is in addition to the working funds of the different departments of the State Government. The proposed development authority will help industrialist in acquiring and developing sites for new units, apart from providing them with water and power facilities, road and railway communications.

*The above census does not represent the real picture of the entire manufacturing industries of India. In 1948, for instance, 93 per cent of registered factories submitted their returns while in 1958, 78 per cent alone responded to the census. So 22 per cent of the registered factories did not submit returns to the Statistical Organisation. Despite the deflated figure, the overall percentage of the increase in the employed during that period does not constitute a spectacular difference.

TEXMACO SUFFERS DISTINCT SETBACK

PROFIT DECLINES—DIVIDEND HALVED

CONSTANT labour troubles, raw materials shortage and enhanced production cost have adversely affected the working results of the Textile Machinery Corporation Ltd. (Managing Agents: Messrs. Birla Brothers Private Limited) for the year ended 31st December 1960. The labour troubles were particularly acute in the earlier part of the year and again later in the year in connection with the demand for bonus. The labour resorted to go-slow tactics which led to a marked deterioration in efficiency. There was a virtual strike for about a month. The sales proceeds in 1960 dropped to Rs. 573.81 lakhs, the lowest figure since 1958, as against Rs. 614.06 lakhs in the previous year and Rs. 583.84 lakhs in 1958. As against the drop of 7 per cent in sales, the closing stocks show a rise of 42.9 per cent from Rs. 138.01 lakhs to Rs. 197.30 lakhs. The receipts from other income have increased from Rs. 8.69 lakhs to Rs. 20.37 lakhs mostly on account of the considerable increase in miscellaneous receipts and income from Rs. 3.64 lakhs to Rs. 14.40 lakhs, as well as in agency commission from Rs. 19,000 to Rs. 1.14 lakh.

It is, however, gratifying to note that, despite the aforesaid handicaps the production of the Company was more or less maintained at Rs. 633.10 lakhs, as against Rs. 636.08 lakhs in the previous year. The total cost of raw materials consumed has risen from Rs. 141.02 lakhs to Rs. 186.36 lakhs, practically the entire increase is offset by the decline in the cost of stores and spare parts from Rs. 233.78 lakhs to Rs. 209.75 lakhs and other expenses from Rs. 155 lakhs to Rs. 137.27 lakhs in spite of the increase in wage bill of Rs. 13.43 lakhs. Even so, there has been a sharp drop in gross profit from Rs. 92.95 lakhs to Rs. 60.80 lakhs, thus bringing down the ratio of profitability to sales from 15.1 per cent for 1959 to 10.5 per cent for 1960. As a result of lower profit, the provisions for depreciation, taxation and managing agents' commission have been reduced to Rs. 21.84 lakhs, Rs. 9.35 lakhs and Rs. 2.59 lakhs, respectively, as against Rs. 25.05 lakhs, Rs. 25.44 lakhs and Rs. 6.05 lakhs for the previous year. The net profit is, therefore, lower at Rs. 27.02 lakhs, as against Rs. 36.41 lakhs. In view of the setback to profit and the commitment on account of the full year's payment of dividend on preference shares issued in 1959, the dividend on ordinary shares has been halved from 20 per cent to 10 per cent subject to tax.

The following comparative table shows at a glance the progress made by the Company during the last four years.

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales and internal consumption	5,73.81	6,14.06	5,83.84	4,53.36

Carry forward	0.59	0.37	0.87	0.84

* Subject to deduction of tax.

The paid-up capital of the Company as at 31st December 1960 stands at Rs. 289.94 lakhs as against Rs. 241.60 lakhs a year before. The rise in capital is on account of the full amount being realised on 6.25 per cent preference shares issued in 1959. The paid-up capital consists of Rs. 150 lakhs in ordinary shares of Rs. 10 each, the balance of Rs. 149.94 lakhs being represented by 7.857 per cent, 5.50 per cent and 8.928 per cent preference shares of Rs. 100 each subject to deduction of tax. Reserves and surplus aggregate Rs. 56.16 lakhs. The gross block of Rs. 486.97 lakhs stands depreciated to Rs. 268.76 lakhs, after providing Rs. 218.21 lakhs for depreciation. The total of secured and unsecured loans has increased considerably from Rs. 156.79 lakhs to Rs. 303.33 lakhs, mostly in loans from banks which have gone up from Rs. 115.41 lakhs to Rs. 290.33 lakhs. The total of current assets at Rs. 823.20 lakhs are well above current liabilities at Rs. 451.73 lakhs, showing a margin of Rs. 371.47 lakhs.

The shortage of raw materials both imported and indigenous continued to cause a problem for the Company during the year. The steel required for wagons was in short supply and so the wagon production suffered a distinct setback. The supply of boiler plates which are imported from abroad, could not be maintained by foreign suppliers according to schedule. The considerable quantities of boiler plates were rejected here, even though they had been inspected and approved before shipment by Lloyds, the world-famous firm of surveyors. Thus the production of boilers also suffered. The other causes which affected production was the strike by Central Government employees in July. The Company lies on the Sealdah section of the railways which was the worst affected area. Railway transport in this section was completely paralysed and the attendance of workers was markedly affected. The alternative arrangement made by management for the transport of workers could serve the purpose only partially. The labour situation in the current year has improved, though even now there are occasional cases of go-slow. The raw material position has improved somewhat but it is not yet completely normal. The programme of manufacture this year was completely upset for more than two months due to the unprecedented shortage of power in Calcutta. The Directors however are hopeful that the Company will be able to show better results in the current year provided, of course, no further unforeseen difficulties crop up.

The trend of production in the various divisions of the Company as given in the Directors' report is indicated below:

"During the year under review, the production in the textile division was satisfactory. Orders in hand are also adequate. The work on the development of drawing frame has been completed and the frames will be in the market shortly. The development of the Simplex frames is proceeding well. The working of the carding engine division could not be satisfactory during the year under review due to restriction on imports of parts. Now the Company is producing most of the parts in its works, and it is hoped that the working of the division will improve in the current year. The production of capstan lathes for which licence has been granted by the Government of India is expected to start shortly. The necessary import licence has already been received. On account of the paucity of orders for just spinning frames, the jute machinery division had very little work during the year under review. The Company has, therefore, switched over the machines to other items of production. The working of steel foundry division was not satisfactory mainly owing to labour trouble. In the heavy engineering division, the Company has secured sufficient orders for wagons from the railways. The production of B.O.X. wagon was taken in hand during the year. The output of wagons, however, was not satisfactory, due to shortage of raw materials and labour trouble. The production in the sugar mill machinery and water tube boiler divisions made some progress. The Company has in hand orders for two complete sugar plants as well as for a sufficient number of boilers. The manufacture of gates for the Rihand Dam was taken in hand during the year and a number of gates have already been supplied."

The current market quotation for the Rs. 10 paid up share is Rs. 20.50 *cum-div.* On *ex-div.* basis and taking the net dividend of 70 nP per share, the net yield comes to 3.4 per cent.

FRESH CAPITAL ISSUES

The Controller of Capital Issues has granted consent for issue of capital of Rs. 20 crores to the Heavy Engineering Corporation, Rs. 40 lakhs to Uttar Pradesh Hotels and Restaurants Ltd., and Rs. 22 lakhs to Wellman India (Private) Ltd. The following are the details:

Heavy Engineering Corporation: Issue of further capital of Rs. 20 crores. The issue will be in equity shares of Rs. 1,000 each for cash at par to be subscribed by the Central Government. At present, the Corporation has a paid-up capital of Rs. 8.14 crores, all in equity shares.

Uttar Pradesh Hotels and Restaurants: Issue of Rs. 40 lakhs divided into Rs. 32.5 lakhs in equity and Rs. 7.5 lakhs in preference for cash at par, in addition to a capital of Rs. 7.5 lakhs in preference for cash at par, in addition to a capital of Rs. 7.5 lakhs in equity and Rs. 2.5 lakhs in preference already issued under the exemption order. This is a public limited company registered on 13th February 1961 to carry on the business of running hotels and restaurants.

Wellman India: Issue of Rs. 22 lakhs in ordinary shares of Rs. 10 each at par. Of this, shares to the extent of Rs. 10.78 lakhs (49 per cent) will be offered to Mr. Arthur G. Wellman of U.S.A. for consideration other than cash against supply of machinery, and the balance of shares of the value of Rs. 11.22 lakhs (51 per cent) to Indian nationals for cash. The proceeds of the issue will be utilised for the manufacture of synthetic fibre tops.

PODAR MILLS' SALES AT RECORD LEVEL

HANDSOME RISE IN PROFIT

THE working results of the Podar Mills Limited (Managing Agents: Messrs. Podar Sons Private Limited, Bombay), for the year ended 31st December 1960 are quite encouraging. The sales were at the record level of Rs. 191.13 lakhs, representing an increase of Rs. 34.03 lakhs or 21.6 per cent as compared with 1959. The gross profit has more than doubled from Rs. 11.42 lakhs to Rs. 24.95 lakhs, thus raising the ratio of profitability to sales from 7.2 per cent to 13 per cent. The profit would have been higher but for the increase in the prices of raw cotton and stores, as well as enhanced wage bill consequent on the implementation of the Central Wage Board's award, on the one side, and lower prices of finished goods, on the other. The cost of cotton consumed went up by Rs. 15.24 lakhs to Rs. 105.48 lakhs and wage payment by Rs. 1.05 lakh to Rs. 39.90 lakhs. The prices of cloth and yarn produced by the Company were reduced in accordance with the Price Regulation Scheme of the Indian Cotton Mills' Federation. These prices have been reduced further with effect from 1st January 1961.

Out of the gross profit of Rs. 24.95 lakhs, a sum of Rs. 6.68 lakhs has been provided for depreciation as against Rs. 5.75 lakhs in 1959, and Rs. 6.50 lakhs for taxation (*nil* in the previous year). The managing agents' commission has risen from Rs. 49,000 to Rs. 1.80 lakh. Despite all these provisions, the net profit for 1960 is higher at Rs. 9.97 lakhs, as against Rs. 5.18 lakhs for 1959. The improvement in profit has enabled the Directors to maintain the dividend on increased capital without drawing on the reserves at 12 per cent (including a bonus of 2 per cent) subject to deduction of tax. The Company's paid-up ordinary capital, it will be recalled, was raised from Rs. 40 lakhs to Rs. 45 lakhs during the year 1959.

The following comparative table shows at a glance the working of the Company in the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	1,91.13	1,57.10	1,44.58	1,37.07
Closing stocks	38.58	17.31	88.07	47.44

Carry forward	3.41	0.16	0.20	1.64

* Subject to deduction of tax.

The net block of the Company stands at Rs. 49.50 lakhs after providing Rs. 38.38 lakhs for depreciation. The additions to the gross block account during the year amounted to Rs. 7.22 lakhs, indicating satisfactory progress in the modernisation and rehabilitation of plant and machinery. The total investments of Rs. 39.39 lakhs are in subsidiaries which account for Rs. 37.93 lakhs. The quoted investments of the Company amount to Rs. 10.52 lakhs, the market value of which is higher at Rs. 11.11 lakhs. As against the total paid-up capital of Rs. 55 lakhs, consisting of Rs. 45 lakhs in ordinary shares of Rs. 100 each and Rs. 10 lakhs in preference shares of Rs. 100 each, the reserves and surplus amount to Rs. 47.47 lakhs. The financial position of the Company is good inasmuch as current assets, at Rs. 63.64 lakhs, cover current liabilities at Rs. 27.63 lakhs by more than two and a quarter times.

The Preference Shares (Regulation of Dividends) Act 1960, has led the Company to change 4 per cent tax-free preference shares to 5.75 per cent subject to tax. Thus, the net dividend will amount to Rs. 3.57 per share.

In order to increase production, the Company has started the partial working of the third shift with effect from 8th March 1961.

The Rs. 100 paid-up ordinary shares of the Company are currently quoted at Rs. 182. Taking the dividend as Rs. 3.40 per share, the net yield comes to 5.5 per cent.

EARNINGS OF STANDARD WAGON RECEDE FURTHER

DIVIDEND, HOWEVER, MAINTAINED

A FURTHER sharp drop in turnover owing to certain extraneous factors which restricted output has been disclosed by the accounts of the Indian Standard Wagon Company Ltd. (Managing Agents: Messrs. Martin Burn Ltd., Calcutta) for the year ended 31st March 1961. The actual drop was Rs. 74.78 lakhs, the total sales proceeds for 1960 being Rs. 475.72 lakhs as against Rs. 550.50 lakhs for 1959. Notwithstanding this setback and the increase of Rs. 17.60 lakhs to Rs. 125.41 lakhs in salaries, wages and bonus, the gross profit of the Company has gone down only slightly by about Rs. 85,000 to Rs. 63.63 lakhs. The results for 1960-61 may appear to be less favourable than those for the year preceding it. But considering that, during 1959-60, a sum of Rs. 10.92 lakhs had been credited to the profit and loss account being the difference between the provisional prices booked for orders completed in the previous years and the actual prices realised thereon, the results for the year 1960-61 must be said to be quite satisfactory.

Pursuant to the modifications introduced in the manner of computing the net profit on which managing agents and directors receive commission, the provision for the managing agents' commission has been reduced by Rs. 1.14 lakh to Rs. 4.09 lakhs. The provision for depreciation has been stepped up to Rs. 7.38 lakhs, as against Rs. 4.66 lakhs for 1959-60, and that for taxation to Rs. 24.50 lakhs, as against Rs. 22.88 lakhs. The apparent anomaly of the increase in tax provision despite lower taxable profits must be attributed to the fact that the profit-sharing bonus in the case of the Company is allowed only on a payment basis. Unfortunately, during the year under review, the labour union refused to accept the bonus offered and, though a provision of Rs. 5.75 lakhs was made in the accounts to this effect, the income-tax authorities did not allow it as an allowable item of expenditure while assessing the Company's overall tax liability.

After making the aforesaid essential provisions, the net profit shows a decline of Rs. 4.05 lakhs to Rs. 27.66 lakhs. Out of this profit, the Directors have set aside Rs. 23,252 to the statutory development rebate reserve and Rs. 30,990 to the general development reserve as against Rs. 2.41 lakhs and Rs. 2.68 lakhs, respectively, in the previous year. Besides these transfers from the profit and loss account, the general development reserve has been credited, in accordance with the provisions of the Finance Act 1958 with Rs. 1.24 lakh, being the sum utilised for the Company's business. The additions to general and plant replacement reserves have been maintained at their previous year's levels, namely, Rs. 1 lakh and Rs. 5 lakhs respectively.

It will be recalled that, during 1959-60, the Directors had experienced a certain amount of confusion as regards the correct interpretation of the provisions of the Finance Act, 1959, so far as they were applicable to preferred dividends and had, unlike most other companies, proposed the payment of preference dividends at the stipulated rate of 7 per cent without a gross up. The complications regarding the calculation of dividend on preference shares were settled by the Preference Shares (Regulation of Dividends) Act 1960 and accordingly there has become payable an amount of Rs. 41,297 as additional dividends on preference shares for that year. Preference dividends for the year under review have been declared in accordance with the Act and have claimed Rs. 1.79 lakh, as against Rs. 1.38 lakh. Ordinary dividends, however, have been maintained at 28.5 per cent subject to deduction of tax or equivalent to 19.95 per cent net. After the payment of the recommended dividends, there remains a balance of Rs. 53,466 which has been carried forward.

The decline in the Company's output in the past two years was due to the persistent shortage of steel, particularly "matching" steel. The Directors had anticipated that, by 1961, there would be a marked improvement in the situation, but, unfortunately, this did not turn out to be the case, and the provision remained unchanged. It is true that considerable quantities of steel were supplied at times and these were lying in the factories, but work could not commence for want of the matching steel. The continuation over several years of this vexatious situation had forced the Directors to doubt the efficacy of the system of Governmental control of steel.

The following table provides a comparative study of the salient feature of the Company's profit and loss accounts for the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	4,75.72	5,50.50	5,80.41	6,31.67

* Tax-free. † Subject to deduction of tax.

The balance-sheet of the Company as at 31st March 1961 discloses a highly satisfactory financial position. The subscribed capital has remained unchanged at Rs. 59.34 lakhs, with a supplement of Rs. 83.41 lakhs in various reserves. Current liabilities amount to Rs. 329.42 lakhs and are more than balanced by current assets, investments, and loans and advances together amounting to Rs. 423.02 lakhs. The fixed assets have a written-down value of Rs. 49.16 lakhs, as against the book value of Rs. 121.15 lakhs.

The current market quotation for the Company's Rs. 25 fully paid ordinary shares is Rs. 107.50 *cum-div.* On *ex-div.* basis, the net return on investment works out to 4.8 per cent.

The State-owned Hindustan Machine Tools has announced a maiden dividend of 10 per cent for the year ended 31st March 1961. The rate of dividend is claimed to be the highest ever proposed by any public sector unit in India so far. The net profit of the enterprise for the year is Rs. 74.02 lakhs, as against Rs. 37.07 lakhs for 1959-60.

(*Concluded from next column*)

Rs. 27.85 lakhs as the depreciation earned to date, yields a net block worth Rs. 97.64 lakhs. Current assets, inclusive of loans, advances and investments amount to Rs. 185.15 lakhs.

On a perusal of the profit and loss account, it will be seen that, during the year, the Company paid interest of Rs. 18.26 lakhs. The large interest payment by the Company was necessitated on account of inadequate capital of its own. Further, the Company had to keep huge stocks of various raw materials and stores to enable it to keep all its three furnaces in operation. Besides, the Company has to hold large stocks of ferro-manganese for a considerable period during the year. Therefore, the Directors have increased the share capital by issuing equal number of right shares to the existing equity shareholders and the same have been duly subscribed. As a result of increase in capital, the Company expects relief in payment of interest in the years to follow.

As for the future, the Directors expect that trading conditions will continue to be favourable. Under the Indo-U.S. barter deal to which a reference has been made earlier, the Company has already delivered approximately 18,100 tons of ferro-manganese. Besides, another barter deal involving export of ferro-manganese from India is also under negotiation, and, according to the Directors, the chances of the deal going through are fair. At the Company's pilot plant at Garividi, successful experiments have been carried out to manufacture electrolytic manganese and manganese sulphate. The Company is considering a proposal for the installation of plant and machinery to manufacture these products which offer excellent trading prospects.

The Rs. 100 fully paid ordinary shares of the Company are quoted at present at Rs. 181.25 *cum-div.* The net yield on *ex-div.* basis works out to 3.2 per cent.

FERRO ALLOYS DECLARES MAIDEN DIVIDEND

CAPITAL RAISED

A SIGNIFCANT expansion in sales and an appreciable rise in profit are the main features of operations of the Ferro Alloys Corporation Ltd. (Managing Agents: Messrs. Saraf Mor and Company Private Ltd., Tumsar) for the year ended 31st December 1960. The actual realisations from the sales of the Company's goods during 1960 aggregated as much as Rs. 326.40 lakhs, as against Rs. 42.43 lakhs in 1959. Following such a rise in sales, the gross profit of the Company amounts to Rs. 40.86 lakhs, that for the previous year being no more than Rs. 7.78 lakhs. Thanks to the Indo-U.S. barter deal under which the Company has to supply 50,000 tons of ferro-manganese to the U.S. and a better offtake by the steel plants belonging to Hindustan Steels Ltd., the Company has been able to overcome the difficulties on account of the huge accumulations of the finished product stocks experienced in the earlier years. The closing inventories have declined perceptibly to Rs. 119.47 lakhs from their all-time high of Rs. 158.72 lakhs a year ago.

Although the Company had incurred losses in the earlier years, it had provided for development rebate reserve. In view of the opinion held in some quarters that, under the Indian Income-tax Act, claim in respect of development rebate is tenable only in year the Company makes profits, to the extent such profits can absorb the rebate, the Company has been advised that it would be safe to transfer the development rebate reserve already created back to the profit and loss account and to create afresh the entire reserve up to 31st December 1960 out of the current year's profits. Accordingly, an amount of Rs. 14.20 lakhs has been transferred to the profit and loss account from the reserves, while a fresh allocation of Rs. 14.50 lakhs has been made from available profits towards the development rebate reserve earned upto the end of the year under review. The net transfer to reserve thus amounts to Rs. 30,000 only.

After making the aforesaid provisions and writing off preliminary expenses to the tune of Rs. 70,836, an aggregate sum of Rs. 9.99 lakhs has been provided for the payment of dividends to preference and equity shareholders. The entire accumulated liability, amounting to Rs. 6.81 lakhs, in respect of the dividends on preference shares upto the year 1960 has been provided for. The stipulated rate of dividends on preference shares has been increased from 6 per cent to 7.8 per cent subject to taxation in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act 1960. For the first time, a dividend on ordinary shares has been proposed at 8 per cent subject to deduction of tax. The surplus of Rs. 20.11 lakhs left over from the current year's profit has been adjusted against the accumulated losses of Rs. 25.65 lakhs upto the year ended 31st December 1959. The balance of Rs. 5.54 lakhs that remains to the debit of the profit and loss account has been carried forward to the next year's account.

The progress made by the Company since it went into production early in 1958 is presented in the following comparative table.

(In lakhs of rupees)

	For the year ended 31st December		
	1960	1959	1958
Sales	3,26.40	42.43	8.62

The Company's balance-sheet as at 31st December 1960 shows that its share capital of Rs. 59.87 lakhs is supported by Rs. 14.50 lakhs to the credit of the development rebate reserve. Loans both secured and unsecured amount to Rs. 178.93 lakhs, in addition to current liabilities aggregating Rs. 35.03 lakhs. The depreciable block as at the date of the balance-sheet is valued at Rs. 125.49 lakhs, which, on deducting

(*Continued in previous column*)

RESULTS OF DIGVIJAY CEMENT

HIGH PRODUCTION COST AFFECTS EARNINGS

THE year 1960 witnessed a marked improvement in the production and sales of the Shree Digvijay Cement Company Ltd. (Managing Agents: Shree Laxmi Agents Ltd.). The actual production of clinker amounted to 406,000 tons and that of cement 442,000 tons, as against 353,000 tons and 391,000 tons, respectively, in the previous year. The higher output was rendered possible by better supply of raw materials. The increase in production was accompanied by a corresponding rise in the sale proceeds from Rs. 277.23 lakhs to Rs. 326.23 lakhs, the highest level touched so far. The record level of sales, however, is not reflected in increased profitability because of the heavy incidence of manufacturing cost. The cost of raw materials, stores, power, etc., consumed increased from Rs. 174.43 lakhs to Rs. 217.88 lakhs, and other expenses, too, rose from Rs. 51.91 lakhs to Rs. 59.60 lakhs. The ratio of raw materials, stores, power, etc., consumed to the total sales proceeds during 1960 was as high as 66.7 per cent, the share of other expenses being 18.2 per cent. Consequently, the gross profit has come down to Rs. 43.93 lakhs, as against Rs. 48.09 lakhs, reducing the profitability to sales from 17.3 per cent. in 1959 to 13.4 per cent. in 1960.

The net profit of the Company for 1960 after providing Rs. 18.08 lakhs for depreciation, Rs. 10.25 lakhs for taxation and Rs. 1.64 lakh for managing agents' commission, amounts to Rs. 13.96 lakhs as against Rs. 16.22 lakhs for 1959. The net profit, together with the carry forward amount of Rs. 49,000, gives a total sum of Rs. 14.45 lakhs available for distribution. Since this sum is insufficient to pay the dividend on ordinary and preference shares at the previous year's rate of Rs. 6.50 and Rs. 9, respectively, the Directors have once again drawn from reserves Rs. 4.07 lakhs, bringing the total drawings for the past three years to Rs. 16.57 lakhs.

The following comparative table shows the working results of the Company for the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds (gross)	3,26.23	2,77.23	2,41.90	2,46.47

* Subject to deduction of tax.

The paid-up capital of the Company is Rs. 214.35 lakhs, consisting of Rs. 79.94 lakhs in preference shares and of Rs. 134.41 lakhs in ordinary shares. The total of reserves and surplus stand at Rs. 52.08 lakhs. The gross block of the Company at Rs. 424.37 lakhs stands depreciated to Rs. 238.68 lakhs, after providing Rs. 185.69 lakhs for depreciation. The fixed assets under or awaiting erection aggregate Rs. 23.84 lakhs. Of the total investments of the Company amounting to Rs. 88.52 lakhs, the investment in the subsidiary, that is, the West Coast Paper Mills Ltd., alone accounts for Rs. 85.05 lakhs. The market value of the investments is substantially higher at Rs. 142.96 lakhs. The total of current assets at Rs. 107.48 lakhs more than covers the current liabilities at Rs. 53.51 lakhs. The secured and unsecured loans are of the order of Rs. 138.72 lakhs, as against Rs. 155.40 lakhs in the previous year.

The clinker grinding plant in Bombay, which is nearing completion, is expected to go into production soon. As a result of the working of this plant, the Company's earnings may be expected to rise. In order to complete the expansion programme, the Directors have decided to erect another kiln and other accessories for increasing the installed capacity of the plant from 430,000 tons to 630,000 tons.

The current market quotation of Rs. 100 paid-up shares is Rs. 159 *cum-div.* On an *ex-div.* basis, the net yield works out to 4.1 per cent, on a net dividend of Rs. 6.30 per share.

VICTORIA MILLS FARES WELL

RESERVES QUITE LARGE

THE performance of the Victoria Mills Ltd. (Managing Agents: Messrs. Mangaldas Mehta and Co., Bombay) continues to be impressive. Thanks to satisfactory trading conditions, the sales of cloth, yarn and wastes have gone up from Rs. 219.31 lakhs in 1959 to Rs. 227.67 lakhs in 1960. The gross earnings (before payment of Rs. 6.25 lakhs as bonus to workers) have recorded a sharper rise of Rs. 12.66 lakhs to Rs. 29.90 lakhs. Consequently, the margin of profit, that is, the ratio of gross profit to sales, has risen from 7.8 per cent to 13.1 per cent.

Out of the substantially larger profit of Rs. 29.90 lakhs, taxation has absorbed as much as Rs. 6 lakhs, as against Rs. 3.65 lakhs in the previous year, depreciation Rs. 5.97 lakhs as against Rs. 5.53 lakhs in 1959 and remuneration to managing agents Rs. 1.42 lakh, as against Rs. 1.19 lakh. Despite these higher provisions the net profit has more than doubled, from Rs. 6.87 lakhs in 1959 to Rs. 16.51 lakhs in 1960. This is supplemented by a sum of Rs. 1.23 lakh, representing (1) premium under the export incentive scheme for the previous year, (2) excess provision for bonus no longer required, and (3) refunds of taxes and insurance premium as well as by the previous year's carry forward of Rs. 77,000. The total amount available for distribution is thus Rs. 18.51 lakhs, of which bonus to staff absorbs Rs. 6.25 lakhs and a sum of Rs. 1.12 lakh is provided for payment of bonus in excess of the provision for 1958. The Directors have also allocated Rs. 1.60 lakh to wages for short working in 1951 and 1952, Rs. 43,424 for adjustment of depreciation for 1959 and Rs. 37,000 for rebate on the sales of the previous year. The balance left is Rs. 8.74 lakhs. The Directors have stepped up the dividend on ordinary shares from 20 per cent to 25 per cent (taxable).

The following comparative table shows at a glance the progress of the Company in the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

The management of the Victoria Mills has always attached great importance to modernisation of plant and equipment. Blow room, cards, deliveries of drawing, can fed inters, doubling frames, winding and warping units have already been modernised in the past six years. During 1960, one Whitin's set of four combers, one pre-combing drawing frame, 15-M.M.C. flat revolving cards and one Benninger Maneklal automatic jigger were added. One complete rubber belt compressive shrinkage range sanforising machine which was ordered in 1959 is expected to be received and erected next month. The total outlay on various units of machinery during the current year is estimated at Rs. 20 lakhs.

The financial position of the Company as disclosed by its balance-sheet as on 31st December 1960 is quite sound. The paid-up capital of Rs. 25.60 lakhs is supplemented by reserves aggregating Rs. 66.80 lakhs. In view of the large reserves, there is great scope for capitalising reserves. The gross block of Rs. 116.62 lakhs stands depreciated to Rs. 45.40 lakhs, after providing Rs. 71.22 lakhs for depreciation. Secured and unsecured loans have increased from Rs. 29 lakhs to Rs. 51.49 lakhs. The total of current assets at Rs. 137.33 lakhs are well above the current liabilities at Rs. 90.32 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are quoted at Rs. 450 *cum-div.* On *ex-div.* basis and taking the dividend at the rate of 25 per cent (taxable), the net yield works out to 4.04 per cent.

KAMANI ENGINEERING FORGES AHEAD

MARKED RISE IN OUTPUT AND SALES

THANKS to large orders for fabricated structures and transmission line erection, the production and sales of the Kamani Engineering Corporation Ltd. (Managing Agents: Messrs. Kamani Brothers Private Ltd., Bombay) have both registered a marked expansion. The actual output of galvanised and painted steel structures during the year ended 30th September 1960 reached the impressive level of 13,485 metric tons, as against 10,190 tons in 1959, breaking all previous records. The rise in output was accompanied by a corresponding increase in sales proceeds (including earnings from erection work undertaken) from Rs. 167.61 lakhs in 1958-59 to Rs. 236.90 lakhs in 1959-60, representing a rise of more than 41 per cent. They are, however, still below the peak of Rs. 284.76 lakhs touched in 1957-58. During 1959-60, the Company secured new orders for fabricated structures of about 11,272 tons and transmission line erection for about 417 kilometres. A peculiar feature of the Company's financial results for the year under review is that the gross profit has not risen notwithstanding the expansion in sales, on the one hand, and the reduction in the cost of raw materials consumed (from Rs. 90.73 lakhs to Rs. 69.79 lakhs), on the other; it has gone up by just Rs. 1.40 lakh to Rs. 20.89 lakhs. This is largely the result of the sharp increase of Rs. 29.35 lakhs to Rs. 132.50 lakhs in other expenses, expenditure on purchases rising from Rs. 30.92 lakhs to Rs. 46.35 lakhs and salaries, wages and other payments to staff from Rs. 40.18 lakhs to Rs. 42.71 lakhs.

In view of the modest rise in gross profit, as also of larger provisions for taxation (Rs. 6.70 lakhs, as against Rs. 4.85 lakhs in the previous year) and depreciation (Rs. 4.89 lakhs, as against Rs. 4.40 lakhs), the net profit shows a decline from Rs. 8.59 lakhs for 1958-59 to Rs. 7.68 lakhs for 1959-60, while the remuneration to managing agents is lower at Rs. 1.62 lakh (Rs. 1.65 lakh in 1958-59). The decline in net profit is, however, made good to some extent by the excess provisions of previous years no longer required (Rs. 74,000). The total amount available for distribution is Rs. 8.44 lakhs out of which the Directors have utilised Rs. 2.88 lakhs for writing off the assets at the Lahore factory and Rs. 90,000 for meeting the expenses of previous years. They have also set aside Rs. 23,000 for development rebate reserve (Rs. 92,000 in 1958-59) and provided Rs. 80,000 for the dividend on preference shares. The dividend on ordinary shares has been raised slightly from 7.75 per cent (taxable) to 8 per cent (taxable) which gives a net dividend of 5.6 per cent. The dividend absorption amounts to Rs. 3.60 lakhs, leaving a sum of Rs. 3,000 which has been carried forward to the next year.

The synoptic view of the Company's progress since 1956-57 can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 30th September

One of the noteworthy features of the Company's working during the year 1959-60 was the establishment of a new department for participating in the railways' electrification work on the South-East Railway for 130 kilometres of railway track between Tatanagar and Kharagpur. The overhead equipment to be supplied, erected and commissioned was for 25 K.V. 50 cycles single-phase A.C. railway electrification. The Company carried on vigor-

Net profit	67	98
Adjustments	13	59
Appropriations:		
Total available balance	80	1,57
Transfer to wages (for previous years)	80	..
Proposed dividend (taxable)	Nil	1,50 (12%)
Carry forward	..	7

N.B.—Adjustments include the balance brought forward from the previous year.

Extracts from the Directors' report: The Company had a full order book over most of the year, the decline in profits as compared with the previous year being due to a combination of several factors, of which the paucity of ship repair work and the shortage in supply of ship building quality steel over which the Company has no control, are the principal factors. Nevertheless, the Company had to maintain the labour strength at normal levels permitting no effective reduction in the charge against profits. The Company is experiencing keen competition from foreign shipyards. due to the favourable cost of labour and of raw materials prevailing in their countries, and from Garden Reach Workshop, Calcutta, and Mazagon Dock. Bombay, the shipyards recently acquired by the Central Government. These Government shipyards, having the resources of the Government behind them. can quote prices unremunerative for private sector shipyards, but what is more disquietening, is that Government has given their newly acquired yards work for which the Company's tender was not only the lowest but also involved the minimum amount of foreign exchange. The directors are making representations to Government for redress.

Further Outlook: Work-in-progress on the 31st December 1960, was valued at Rs. 1,09,39,395 as compared with Rs. 81,10,175 at the end of the previous year; your Company has currently orders for five vessels for the Calcutta Port Trust and a similar number of dredgers for various Government and Local authorities. In addition, orders for two large dredgers and a survey launch are in the final stages of negotiation for which formal orders are expected to be placed with this Company.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	12,50,000	Gross block	61,38,062

N.B.—Adjustments include the balance brought forward from the previous year.

† This represents the dividend on 4½ per cent. tax-free cumulative preference shares for the years ended 31st December 1944 and 1945. The dividend for 1944 is at Rs. 3.70 per share gross and for 1945 at Rs. 4.39 per share gross. The net dividends will work out at Rs. 2.59 and Rs. 3.07 respectively.

* Balance carried forward after deducting the loss of Rs. 6,12,290 brought forward from the previous year.

Extracts from the Directors' report: Both net sales and production recorded increases during the year being Rs. 39.23 and Rs. 36.90 lakhs respectively, as compared with Rs. 33.10 and Rs. 36.58 lakhs respectively during the previous year.

Machine Tools: The year's deliveries of machine tools also improved: 291 machine tools valued at Rs. 33.11 lakhs were delivered as compared with 250 machine tools valued at Rs. 27.85 lakhs during the previous year. Satisfactory progress was maintained on the development of two types of *Radial Drilling* Machines. The first batch of a heavier type of *Pillar Drill* (*Model PD-50*) is at present under production. A new *Lathe* (*Model L-200*) with improved features, has been successfully marketed. The work on the development of a high speed *L-160 Lathe* has been completed and it will be put into production in the Company's factory at Chinchwad. The value of general engineering orders executed during the year was Rs. 5.59 lakhs as compared with Rs. 5.45 lakhs during the previous year.

As mentioned in the last year's report, the Company has embarked upon a programme of shifting and expansion. The award in respect of about 100 acres of land under acquisition at Chinchwad (near Poona) has been declared and the Company is in possession of the land. The construction of the factory buildings has progressed satisfactorily. The bulk of the new plant and machinery we require has been ordered and some machinery has already been received. The Company has obtained a licence under the Industries (Development and Regulation) Act, 1951 for substantial expansion and diversification of its activities. This will enable the Company to undertake the manufacture of a wider range of modern and more advanced types of machine tools. Subject to contingencies beyond the Company's control, the new factory at Chinchwad is expected to go into production by the beginning of 1962.

The Company made the first call of Rs. 25 per share on the 15,000 new ordinary shares payable by 29th March 1961. The second and final call of Rs. 25 per share on these shares has also been made and is payable by 15th June 1961.

The Company has made a provisional arrangement, subject to the approval of the Government of India, with a reputable foreign machine tool manufacturer, whereby the Company will purchase outright the designs, plans and manufacturing rights and know-how of a big lathe and a heavy shaper. The Company has placed further orders for the purchase of machinery and equipment aggregating to Rs. 4.75 lakhs approximately. Considerable progress has been made during the current year in the shifting and expansion programme of the factory. A sum of Rs. 9.14 lakhs approximately has been expended on land and buildings and Rs. 2.47 lakhs approximately for additions to machinery and plant.

The Company will require additional finance to meet the complete expenses of shifting, development and expansion as also for the manufacture of heavy shapers and lathes of foreign design. The directors are, therefore, applying for a loan from the National Industrial Development Corporation and may seek further equity capital by the end of 1961 or the beginning of next year.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	29,32,050	Gross block	28,16,789
Reserves and surplus	1,50,536	—Depreciation	11,01,766

„ „ „ Ordinary	87 (5%)	..
„ „ „ Pref. Ordinary	16,87 (10.71%)	9,00 (5.71%)
Carry forward	5	9,04

N.B.—Adjustments include the balance brought forward from the previous year; income relating to previous years written back and the amount transferred from general reserve if any.

* For wealth tax only.

† This includes an amount of Rs. 12 lakhs transferred from general reserve for the purpose of paying dividends.

Extracts from the Directors' report: The directors take pleasure in reporting that in keeping with their policy of modernising the capital equipment of the Company they have made additions to the fixed assets of the Company of total value of Rs. 56,39,699 out of which a sum of Rs. 53,78,689 represents additions to plant and machinery alone. This policy is being continued in the current year as well.

The Vanaspati Factory of the Company at Shegaon has, in accordance with the shareholders' decision in the meeting of the 13th January 1961 been sold and delivered to Messrs Bachhraj Factories (Private) Ltd., for a sum of Rs. 20,75,000.

The working of the various units of the Company has generally shown better results. The working of the Mills at Kanpur has, as usual, been upto the requisite standard of efficiency. The Company's mills at Pondicherry is also showing positive signs of improvement and is expected to show a profit in the current year. The Naini Mills continues to work efficiently. The Kanpur Mills of the Company has had lately to suffer a lock-out of more than three weeks duration consequent on the illegal strikes and go-slow activities of the workmen. The directors are, however, confident that if nothing untoward happens between now and the closing of the year 1961, the Company's working for the current year also will show satisfactory results. The construction of the Spinning Mills at Udaipur has nearly completed and the Mills are likely to go into production at an early date. But for the unexpected failure of the suppliers to supply the *Ring Frames* in accordance with the delivery schedule and the delay on the part of the Electricity Supply Company to supply power required for the Mill this unit would have been in operation much earlier.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	2,10,00,000	Gross block	6,95,70,628

Transfer to reserves	21	*
Proposed dividend (taxable)	36 (22½%)	16 (10%)
Carry forward	16	12

N.B.—Adjustments include only the balance brought forward from the previous year.

* Only Rs. 372.

Extracts from the Directors' report: A record crop of 994 quintals (2,739 maunds) was secured, which compares with a crop of 905 quintals (2,494 maunds) for 1959. The market for Darjeeling tea was satisfactory and the crop sold at an average price of Rs. 8.33 per kg. compared with an average price of Rs. 7.63 per kg. for the 1959 crop.

Labour costs showed a substantial increase over the previous year mainly due to the increase in the Minimum Wage which came into force in the latter half of 1959. Capital expenditure during the year amounting to Rs. 49,032 largely represents the cost of implementing statutory welfare requirements in regard to labour houses and the purchase of garden transport vehicles.

Estimates for the current season have been framed for a crop of 900 quintals.

Messrs. Andrew Yule & Co., Ltd. ceased to act as Managing Agents of the Company on 15th August 1960 and at an Extraordinary General Meeting of the Company held on 29th June 1960, they were appointed as Secretaries & Treasurers of the Company with effect from 15th August 1960.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	1,50,000	Gross block	5,81,607
Reserves and surplus	3,97,806	—Depreciation	2,42,540

Notices

SELECTED SATGRAM COLLIERIES LIMITED

NOTICE IS HEREBY GIVEN THAT THE Sixteenth Annual General Meeting of the Selected Satgram Collieries Limited will be held on Wednesday, the 28th June, 1961 at 3-30 p.m. at its registered office, F-2, Gillander House, 8, Netaji Subhas Road, Calcutta, to transact the following business:—

1. To receive and adopt the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1960 together with the reports of the Auditors and Directors.
2. To declare dividends.
3. To appoint a Director in place of Shri M. D. Shethia, who retires by rotation, but being eligible and offers himself for re-election.
4. To appoint a Director in place of Shri D. V. Parkhani, who retires by rotation, but being eligible and offers himself for re-election.
5. To appoint Auditors and fix their remuneration for the year ended 31st December, 1961.

To consider, and if thought fit, to pass the following resolutions with or without modifications, as ordinary resolutions:—

6. "RESOLVED that Shri Mahesh R. Chinai whose term of office expires under Section 260 of the Companies Act, 1956 be and he is hereby appointed a Director of the Company".
7. "RESOLVED that one bigha 18 kottahs 9½ chattaks land be demised to Dishergarh Coal Company Limited for construction of tenements for housing persons employed in Colliery, which is worked by the Company as Raising Contractor, for forty years at an annual rent of rupee one and on terms and conditions stipulated in the draft Lease Deed and subscribed by the Chairman of this meeting also for identification and the same be executed according to the provisions of Articles of Association of the Company".

The Share Transfer Books of the Company will remain closed from 13th June to 28th June, 1961, both days inclusive.

By Order of the Board,
For and on behalf of
SELECTED SATGRAM COLLIERIES LIMITED,
For S. D. SHETHIA & Co., PRIVATE LTD.,
B. S. SHETHIA,
Director,
Managing Agents.

CALCUTTA, *19th May*, 1961.

Notes:—(*a*) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

(*b*) Payment of any dividends declared will be made only to those members whose names are registered in the Books of the Company on the 12th June, 1961. No application for warrants will be necessary. Claims on behalf of holders of shares held on blank transfer will not be entertained.

(*c*) Necessary explanatory statement pursuant to Section 173 of the Companies Act, 1956 has been posted along with the notice of meeting to the shareholders.

THE CALCUTTA TRAMWAYS COMPANY, LIMITED

(Incorporated in England)

NOTICE IS HEREBY GIVEN THAT THE Preference Shares Transfer Books will be closed from the 17th to 30th June, 1961 (both days inclusive) for the preparation of Dividend Warrants in respect of the Interim Dividend of 2½ per cent, less Income-tax, payable on the 1st July, 1961, on account of the profits for the year ending 31st December, 1961.

By Order of the Board,
R. W. TURNBULL,
Agent.

P4, MISSION ROW EXTENSION,
CALCUTTA-1.
6th June, 1961.

STATE BANK OF INDIA

NOTICE

WITH REFERENCE TO THE NOTICE OF the 26th April 1961 issued in terms of Regulation 29(2) of the State Bank of India General Regulations regarding the holding of a Local Meeting of the shareholders of the State Bank of India on the Branch Register of Shareholders at the Bombay Local Head Office of the Bank for the sole purpose of electing a person to be a Member of the Local Board at Bombay in pursuance of Regulation 48 of the State Bank of India General Regulations, 1955, in place of Shri Jehangir P. Patel, a Member of the Local Board, whose term of office will expire on the 30th June 1961, NOTICE IS HEREBY GIVEN that I have accepted as valid the nomination proposing the name of Shri Jehangir P. Patel of 6 Veer Nariman Road, Fort, Bombay, as a candidate for election as a Member of the Local Board of the State Bank of India at Bombay. The said nomination being the only valid nomination received, Shri Jehangir P. Patel shall be deemed to be elected a Member of the Local Board of the Bank at the said Local Meeting of the shareholders proposed to be held on the 21st June 1961, which Meeting in terms of Regulation 40(1) of the said General Regulations now stands cancelled.

N. A. KRISHNAN,
Secretary & Treasurer,
State Bank of India,
Bombay.

8th June, 1961.

THE MEGNA MILLS COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of the Company will be held at its Registered Office on Friday the 7th day of July, 1961, at 3 o'clock in the afternoon, to consider and if thought fit to pass either with or without modification the following resolution which will be proposed as a special resolution, namely:

"That the Articles of Association of the Company be altered in manner following:—

The following new Article shall be added and numbered Article No. 122A.

"The Company shall not, so long as any money remains due and owing by the Company to the National Industrial Development Corporation Ltd. under or by virtue of the mortgage dated the 16th day of January, 1958, and/or any further charge or mortgage to be executed by the Company in favour of the said Corporation, lend monies without security to any person or persons without the consent in writing of the said Corporation first had and obtained. Such consent in writing may be of a general or special nature."

By Order of the Board,
A. D. A. ALEXANDER,
Secretary.

16, STRAND ROAD,
CALCUTTA,
Dated, 9th June, 1961.

NOTE:—1. A member who is entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

2. Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been sent to all shareholders alongwith the Notice convening the Meeting.

LONDON FINANCIAL MARKETS

(Concluded from page 1121)

central banks. It is generally understood that cushioning operations of this kind occurred to a large extent in March at the peak of the stresses caused by the revaluations and were continued on balance in April. In the absence of such aid, the losses from Britain's exchange reserves would certainly have been substantially greater than the £62,000,000 actually revealed for March and the £26,000,000 revealed for April, and the same sort of comment presumably holds for the loss of £16,000,000 announced for May (reducing the total "first line" reserve to £1,037 million).

The only reasonably reliable guide to the extent of any such operations will be that afforded by the detailed quarterly analysis available only after a substantial time-lag of the overseas sterling balance in London. These operations, as already noted, do not alter the absolute size of London's short-term liabilities: they merely cause a shift from private to official holdings. Such a shift is not disclosed by the normal first series of quarterly statistics (which show geographical distribution only), but only in the series now published in the Bank of England's new quarterly bulletin.

The latest figures of sterling balances yet available, those just released for end-March, thus throw little light on the matter—partly because they do not reveal the essential subdivision, and partly because they were made up soon after the Basle agreement. They do however show two interesting trends. Aggregate overseas holdings of sterling fell during the quarter by £164,000,000 to £4,272 million. But £131,000,000 of this decline represented the transfer of the funds temporarily held as "balance," pending their use in the purchase by Ford Detroit of the remaining outside holdings in Ford England. The true decline thus amounted to only £33,000,000. But this was the resultant of several sharply contrasting trends. The balances held by sterling-area countries continued to fall, but at a much slower rate than in the last quarter of 1960, when they dropped by £97,000,000. In the ensuing quarter, the decline was only £37,000,000. On the other hand, the trend of dollar-area balances was reversed; instead of an increase of £39,000,000 (excluding the Ford funds) there was a decline of £29,000,000. Similarly, the balances of other Western hemisphere countries dropped by £17,000,000. The fall in the balances of these two groups was neatly offset by the rise of £48,000,000 shown by the O.E.E.C. group—which suggests, but, of course, does not prove, that the strain was being met by operations under the Basle agreement.

Though one must regret the concealment of facts that these operations involve, it is fair to note that such concealment is the very essence of this particular effort to protect currencies against speculative assault or sudden irrational fear. It is true, of course, that if the strains on reserves that are neutralised by central bank co-operation are strains caused not by fundamental weakness of the currency in question, but simply by movements of mobile short-term funds, the concealment does not really cause any distortion of the facts. The true position is given not by the state of the reserves alone but by the balance between the reserves and short-term liabilities. What the central bank co-operation does is to prevent a withdrawal of private funds from reducing both the reserves and the liabilities (which it would otherwise affect equally) by confining the effect to a redistribution of the liabilities.

COMPANY AFFAIRS

(Concluded from page 1142)

ously the export drive which was launched in 1959. It obtained an export order for radio communication from the Irrigation Department of Thailand. Negotiation with regard to the offer for the supply of 1,100 tons of transmission line towers with the New Zealand Electricity Department were brought to a successful conclusion and the Company has secured the order. The Company also obtained a direct order of substantial value from the Neyveli Lignite Corporation. Another order amounting to Rs. 87 lakhs was obtained from the Barauni Thermal Power Station.

The paid-up capital of the Company amounts to Rs. 59.98 lakhs, consisting of Rs. 15 lakhs in 15,000 5½ per cent cumulative preference shares of Rs. 100 each and Rs. 44.96 lakhs in 449,625 ordinary shares of Rs. 10 each. As against this capital, the reserves aggregate no more than Rs. 3.71 lakhs. The current liabilities and provisions (including borrowings from banks) are of the order of Rs. 144.05 lakhs, which are more than adequately covered by current assets of Rs. 171.37 lakhs, including investments of Rs. 2.13 lakhs. This sum represents only the value of assets in India, as the Company's assets at the Lahore factory have been completely written off. The gross block of the Company has increased from Rs. 62.46 lakhs to Rs. 68.03 lakhs and it has been well written down to Rs. 36.37 lakhs, the depreciation provided so far being Rs. 31.66 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 17.24 *cum-div.* On *ex-div.* basis and at the proposed rate of dividend, the net return on shares comes to 3.35 per cent per annum.

MONEY EASY

(From Our Own Correspondent)

BOMBAY, 14*th June*

Thanks to comfortable money supply position, following the further return of funds from inland centres, the borrowers could easily obtain their requirements. The call money rate among Exchange and Indian banks came down from 4½ per cent to 4¼ per cent. It was felt that the rate might decline further in view of the excess of loanable funds over demand. The other rates continued to remain at their previous levels. For purposes of record, they are given below:

	Per cent
Inter-bank call money:	
Exchange and other large Indian banks	4¼
Other banks	4½
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91 days' Treasury bills of the Government of India sold through weekly tenders shows that, as against an invitation of Rs. 2 crores, an equivalent amount was offered and accepted. The average rate of accepted tenders was unchanged at 2.750 per cent per annum. The 91 days intermediate Treasury bills sold from the 7th to 10th inst. aggregated Rs. 1.97 crore, as against just Rs. 10 lakhs in the previous week. Their sales will be resumed from the 14th to 17th inst.

An expansion of Rs. 20.77 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 9th June 1961 as compared with the previous week. As the notes held in the Banking Department have declined by Rs. 17.16 crores, the total notes issued have risen by Rs. 3.61 crores. Foreign securities have receded by Rs. 5 crores to Rs. 108.01 crores but, since the balances held abroad have improved by Rs. 1.70 crore, the total foreign assets have shrunk by Rs. 3.3 crores to Rs. 125.48 crores. Deposits of banks with the Reserve Bank of India show an expansion of Rs. 4.64 crores to Rs. 83.33 crores. On the assets side, other loans and advances have contracted by Rs. 5.34 crores to Rs. 118.50 crores, while those against usance bills are higher by Rs. 97 lakhs at Rs. 14.03 crores.

The Statement of the Scheduled banks for the week ended 2nd June 1961 shows a fall of Rs. 1.16 crore in demand deposits and an expansion of Rs. 5.88 crores in time deposits. The deposits of the State Bank of India have gone up by Rs. 1.99 crore. The Scheduled banks borrowed Rs. 5.07 crores more from the Reserve Bank and those against usance bills rose by Rs. 41 lakhs. Borrowings (demand and time) from the State Bank registered a rise, the former by Rs. 55.44 lakhs and the latter by Rs. 94.40 lakhs. Advances and bills discounted which together comprise bank credit showed a modest rise of Rs. 1.27 crore to Rs. 1,281.33 crores, as against Rs. 1,134.07 crores a year ago. But as the advances of the State Bank have gone up by Rs. 4.27 crores, it is clear that the advances of other Scheduled banks have actually contracted by Rs. 3 crores.

The gilt-edged market continued to remain sluggish. The 3 per cent Conversion Loan is quoted at Rs. 72.45. The Reserve Bank is reported to have started selling 3½ per cent issue 1967 at Rs. 99. Induced by some enquiry, 3 per cent 1966-68 funding loan hardened by 20 nP to Rs. 96. 2½ per cent 1962 issue was maintained at Rs. 99. 3½ per cent 1968 and 4 per cent 1973 loans changed hands at Rs. 98.75 and Rs. 100.45, respectively. All other issues were unchanged.

In the foreign exchange section, the rupee improved slightly in relation to the U.S. dollar. The banks' selling and buying rates for ready T.T. on New York were Rs. 479.50 and Rs. 476.00 per 100 dollars, respectively, as against Rs. 479.75 and Rs. 476.25 in the previous week. In the New York exchange market, the pound sterling strengthened to some extent. The latest available rates are 279.200-279.230 cents per £ for spot and 277.620-277.650 cents per £ for three months' forward. As compared with last week, the pound gained 0.13 cent in the spot market and 0.12 cent in the forward.

TEA RECEDES

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 6*th June*

A total of 678,000 kilograms was offered in Sale No. 23 held today. Quality generally showed deterioration and this was particularly noticeable from the lower elevations which had a few invoices of rush teas on offer. There was fair demand at much easier rates. Highgrowns although well supported, were irregular and generally easier following quality. Good mediums and mediums received fair enquiry at a decline of upto 20 nP per kilo. Low mediums and plainest sorts were a weak feature registering declines of 10-20 nP per kilo and sometimes more. Whole leaf grades came to an irregular market with O.Ps. selling well. The few lines of C.T.C. and legg-cut sorts sold readily. Quotations were:

	1961	1960
	Rs.	Rs.
Low mediums	4.25-4.40	3.48-3.64
Mediums	4.40-4.55	3.53-3.76
Good mediums	4.55-4.85	3.86-4.08
Nilgiri B.O.P.	Rs. 4.50-5.65	

The average price realised in sale No. 23 was Rs. 4.43 per kilo as against Rs. 4.60 a week ago and Rs. 3.85 in the corresponding sale last year.

Dust Sale No. 23: Approximately 310,000 kilograms were offered in dust sale No. 23 held on Friday, 9th inst. There was fair demand at lower rates. The clean-leafed highgrowns received good support and sold at around last rates whilst the more stalky kinds generally eased. Support was forthcoming for the mediums but at a decline of 15-30 nP per kilo. The powdery sorts sold poorly. Residuals were readily absorbed but shared in the general decline. C.T.C. and leggcut types realised rates which were 10-15 nP below last.

The average price realised in dust sale No. 23 was Rs. 4.06 per kilo as compared with Rs. 4.28 a week ago and Rs. 3.99 in the corresponding sale last year.

Export Quota: There has been no activity for new season's quota and sellers are still nominally quoted at 4 nP per kilo.

Colombo: Just over 7 million pounds were offered in the export sale. The market opened to good general demand. Best highgrowns were firm whilst the lesser sorts were slightly easier. Mediums and Uvas sold at fully firm prices. Lowgrowns followed a slightly lower trend.

London—North Indian and other growths: In Monday's auction there was good general demand with plain liquoring types and the better mediums selling at steady rates. Others were irregular. Plain broken pekoe is quoted at 3*s.* 8½*d.*

Ceylon and South Indians: In Tuesday's sale the offerings amounted to 27,517 packages of which 7,367 packages were from South India. There was rather a selective demand.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No. 24*: 700,000 kilograms. Active demand. Plain and low medium 5 to 10 nP lower. Medium and good medium about 10 nP easier. Nilgiris irregular following quality."

BULLION FIRM AGAIN

(From Our Own Correspondent)

BOMBAY, 14*th June*

The firm trend of the bullion market noted last week gathered considerable momentum during the week under review, with values continuing to march upward. Silver made a strident advance, thanks to large-scale buying by some North Indian operators. The spot rate touched at one time yesterday as high as Rs. 203.95, the *Jeth Adhik* settlement being quoted still higher at Rs. 204.45. Since the rise in the quotation for the *Jeth* second settlement was more than Rs. 5 over the last clearing rate, the Board of the Bullion Exchange had to impose a special clearing yesterday under clause 104(2). In sympathy with silver and following enlarged offtake as well as seizure of large parcels of contraband metal in Bombay and other centres, gold also recorded an improvement. Even the reported sale of a large quantity of gold (estimated at about 20,000 tolas) by a leading bank on behalf of some parties had no effect.

The daily average offtake of gold and silver during the week was higher than in the previous week: 6,400 tolas and 7 bars, as against 5,500 tolas and 5 bars, respectively. Actual arrivals were also larger being 6,400 tolas (as against 5,600 tolas) and 26 bars (as against 20 bars). The floating stocks are estimated at 40,000 tolas of gold and 400 bars of silver.

Adjustment rates fixed today were Rs. 121.20 per 10 grams of gold and Rs. 203.95 per kg. of silver. The corresponding rates for last week were Rs. 119.30 and Rs. 202.70.

The *Jeth* second settlement in gold met with excellent support and climbed up from Rs. 119.15 to Rs. 120.75 today, or a net rise of Re. 1.60. Ready gold commanded a premium over the forward throughout the week, the premium actually increasing from 20 nP on Wednesday last week to 90 nP today. The closing rate was Rs. 121.65, representing a rise of Rs. 2.30 as compared with the rate prevailing a week ago.

In silver, *Jeth* second settlement began the week at Rs. 203.10, as against the previous close of Rs. 203.70, and rallied to touch Rs. 204.50 today. It, however, finished a shade easy at Rs. 204.45. Ready silver continued to be quoted at a discount under the forward though the actual discount today was lower at 50 nP, as against Re. 1. The rate which stood at Rs. 202.70 last week-end advanced steadily and touched Rs. 204 today before closing at Rs. 203.95. The net rise over the week was Re. 1.25.

The world price of gold in the London bullion market eased from $35.07 to $35.06½. Ready gold also declined by 1½*d.* to 251*s.* 2*d.* Ready and forward silver, however, continued unaltered at 79¾*d.* and 79¾*d.*, respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	14-6-1961 (closing)	High	Low	7-6-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	121.65	121.65	119.05	119.35
Forward:				
Jeth 2nd*	120.75	120.75	118.55	119.15
Sovereign	94.50	94.50	94.25	94.25
SILVER				
Ready (.996 fine)	203.95	204.00	202.10	202.70
Forward:				
Jeth 2nd†	204.45	204.50	201.70	203.70
London—	13-6-1961			6-6-1961
Silver Ready ..	79¾*d.*	—	—	79¾*d.*
Silver Forward ..	79¾*d.*	—	—	79¾*d.*
Gold	251*s.* 2*d.*	251*s.* 4½*d.*	251*s.* 2*d.*	251*s.* 3½*d.*
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 27th June settlement. † 28th June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES IRREGULAR

(From Our Own Correspondent)

BOMBAY, 14*th June*

The cotton futures market moved rather irregularly during the week, though the general tendency of prices was upward. For operators preferred to await the official announcement of measures regarding the accumulated cotton stocks in Gujarat. There was also the continued uncertainty regarding the release of a further export quota for short-staple cotton. In view of the conflicting rumours about these, cotton futures were subjected to alternate bouts of buying and selling. Consequently, prices moved erratically.

The I.C.C. August contract began the week firm at Rs. 586.50, as against the previous close of Rs. 583, thanks to the Gujarat Chief Minister's statement that the Centre was taking steps to solve the problem of cotton stock accumulations. But soon there was some liquidation by tired bulls which took the contract down to Rs. 582.50 the same day. At this level, support ensued again and the rate improved to Rs. 583.75 and further to Rs. 586.50 on the following day (Friday). The recovery gathered momentum in the two subsequent sessions, the contract touching as high as Rs. 587.75 at one time on Monday. After declining to Rs. 583.75 yesterday, the contract rallied to Rs. 589.75 today, on short-covering and renewed support induced by encouraging advices from the spot market. At this level, some profit-taking set in and the contract finished at Rs. 588.75.

The Government of India is reported to be considering several measures designed to help the co-operative societies in Gujarat to get over the difficulty arising from heavy accumulations of cotton stocks estimated at 175,000 bales. Among them, three stand out prominently. They are: (1) permission to traders to export freely the unsold stocks of Bengal *Deshi* lying in Bombay and elsewhere (estimated at about 80,000 bales), provided they buy equivalent stocks of Gujarat cotton lying with co-operative societies; (2) provision of facilities to those traditional consumers of Broach, Vijay and Surti cottons who increase their purchases from the societies to store the incoming American cotton which they have contracted under P.L. 480 with merchants on their own account subject to payment of a small carrying charge; and (3) fixation of prices at levels sufficiently below the present market rates so as to induce the mills and traders to make more purchases of Gujarat cotton. The Textile Commissioner held discussions on these matters with the cotton interests on Monday the 12th inst., as well as today. The final outcome of the discussions is anxiously awaited.

The spot market ruled active on hopes of favourable official action regarding Gujarat cotton. Mills evinced keen interest in varieties like Surti, Vijay, L. 147, CO2 and Digvijay. Some mills also bought Laxmi and Kalagin-Wagad. Among exportable styles, Bengal *Deshi* and Kalyan cottons evoked good support in anticipation of an early export quota announcement. In the import section, African and Sudan varieties attracted the attention of spinners. American short-staple cotton, however, was dull. Some of the transactions put through were: Busoga (UNUG) Rs. 1,315 and B.P. 52 Rs. 1,305 (both prompt shipment c.i.f.); American good middling 1" Rs. 1,238; and Jinja Rs. 1,210 (August shipment).

The quotations—in rupees per candy of 784 lbs.—for a few important varieties of cotton are: Hubli Laxmi 985; Amravati L. 147 1,045; Moglai Zoda 470; Samalaya Digvijay 980; Gadag Laxmi 985; Dhulia Zoda 560; Kalyan 860.

Price movements in the Karachi cotton market were confined to a narrow groove. There was some support for futures, whereas spot cotton ruled quiet, owing to lack of overseas enquiries and dull demand from local mills. The estimates of the U.S. Department of Agriculture indicating a decline in Pakistan's cotton output from 1,365,000 bales in 1959-60 to 1,325,000 bales in 1960-61 did not have any effect on the market. July contract rose by 10 nP to Rs. 70.20. Trading in the January new crop contract is due to commence on the 15th inst. The following are the latest available quotations—in rupees per maund of 92 lbs—for a few popular varieties of Pakistan cotton prevailing at Karachi, the figures in brackets being last week's rates:

Sind *Deshi* 91(93); Punjab *Deshi* 88(90); 4F Punjab Roller 85.55 (85.35); S.G. 90.05 (90.35); L.S.S.R. 88.05 (88.35); S.G. 92.55 (92.85); N.R. Roller 92.55 (92.85); S.G. 97.05 (97.35).

Easy conditions prevailed in the Liverpool cotton market. July position declined from 24*d.* to 23.90*d.* October and July (Sudan) position were quiet at 24*d.* and 31.75*d.* respectively.

The Alexandria cotton futures market was quite active notwithstanding the lull on export front, the non-communist countries still awaiting a possible decrease in prices. It is estimated by the U.S. Department of Agriculture that the production of Egyptian cotton would go up from 2.1 million bales in 1959-60 to about 2.2 million bales in the current season and that of Syrian cotton from 446,000 bales to 482,000 bales. Another source estimates the acreage under cotton cultivation in Syria during the 1961-62 season at 15 per cent more than in the previous season. The area under cultivation in Egypt is considered to be same as in the last season. The *Karnak* July contract rose from 69.51 T. (tallaris) to 69.60 T. per pound. The *Ashmouni* June contract closed higher at 60.08 T., as against 60 T. last week-end. August contract, however, declined from 60.50 T. to 60.27 T., after rising earlier to 60.75 T.

The steady trend noted in the New York cotton market towards the close of last week gathered further momentum during the week under review, thanks to fair volume of purchases

by commission houses and pronounced firmness in the spot section. Offerings were scarce. The U.S. Department of Agriculture has reported that purchases in the 14 spot cotton markets during the week ended 8th June amounted to 79,000 bales, as against 115,700 bales in the week preceding it and 49,500 bales in the corresponding week a year ago. The total exports for the season upto the first week of this month aggregated 6,389,851 bales, as compared with 6,028,156 bales in the same period a year ago. The Commodity Credit Corporation entry into 1960 Cotton Loan till the week ended 2nd June aggregated 540,273 bales (adjusted). The total repossession is placed at 427,186 bales, leaving a balance of stock of 113,087 bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	13-6-61	6-6-61	26-5-61
Spot	34.40	34.35	34.25
July	33.43	33.45	33.27
October	34.24	34.12	34.07

ART SILK YARN RALLIES

(From Our Own Correspondent)

BOMBAY, 14th *June*

There was a sharp rally in art silk yarn prices during the week under review. The rally followed a buying spree which stemmed from fears of a possible cut in import quota. The reports that the floating stocks were very low and that upcountry demand continued to be quite large also imparted strength. The rise in prices would, indeed, have been more appreciable but for the reported decision of the Government to issue to the State Trading Corporation licences worth Rs. 1 crore for import of art silk yarn against exports. The Committee set up by the Government to advise the Corporation about the imports and distribution of yarn, it is said, has decided to purchase nylon as well as viscose yarns at suitably reduced prices. If viscose yarns are not available, the Committee is likely to consider favourably the purchase of Cupressa Bemberg yarns. The S.T.C. is believed to have already concluded the barter deals with Germany, France and Hungary. The yarns covered under these deals are expected to arrive in the country shortly. Meanwhile, the export procedure is being streamlined and expectations are that the issue of licences as incentives against exports will be speeded up. Staple fibre yarns also ruled firm. Cotton yarns, however, continued to be dull in the absence of fresh support. Coarse and medium counts actually tended to move down. It was felt that prices would decline further, in view of the sluggish demand during the monsoon and increased arrivals from Coimbatore side following restoration of power cut to mills in that region.

Among imported art silk yarns, 120 Japan forged ahead from Rs. 1,735 to Rs. 1,847 and 150 Japan from Rs. 1,777 to Rs. 1,874. 120 Italy was quoted at as high as Rs. 1,847 today, as against Rs. 1,625 on Wednesday last week. 150 Italy were firm at Rs. 1,805. Among indigenous yarns, National Rayons 120 bright cones first grade jumped up by Re. 1.39 to Rs. 18.90. 150 bright cones first grade rallied from Rs. 16.21 to Rs. 17.03. Cupressa Bemberg yarn (60 x 1) August contract was well favoured, the quotation advancing by Rs. 25 to Rs. 2.690. June settlement put on Rs. 5 to Rs. 2,645. Spot Cupressa was done at Rs. 2,633, as against Rs. 2,645. 40 x 1 J.P. August delivery gathered Rs. 2 to Rs. 3,094, while June contract declined by Rs. 12 to Rs. 3,038.

In the staple fibre yarn section, 44 x 2 August contract evoked good buying enquiries and improved from Rs. 910 to Rs. 923. Spot Centurys picked up 4 nP to Rs. 11.26. Kohinoors were firm at Rs. 10.87.

Among cotton yarns, ten counts Podars were quiet at Rs. 17.50, as also twenty counts Gokaks at Rs. 22.50 and New Greats at Rs. 21.25. Thirty counts Simplex changed hands at Rs. 27, same as last week. Forty counts Maduras dropped 63 nP to Rs. 32.37. Sixty counts Finlays were unaltered at Rs. 65.39. Eighty counts Finlays were also unchanged at Rs. 81.75 and Moderns at Rs. 69.50.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	14-6-1961	7-6-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
June	2,645.00	2,640.00
August	2,690.00	2,665.00
Spot	2,633.00	2,645.00
40 x 1 JP June	3,038.00	3,050.00
August	3,094.00	3,092.00
120 Japan (per 100 kg.)	1,847.00	1,735.00
150 Japan (per 100 kg.)	1,874.00	1,777.00
Staple fibre yarn (40 x 2)—		
August (per 90.72 kg.)	923.00	910.00
Kohinoor (per kg.)	11.26	11.22
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.50	17.50
20s New Great	21.25	21.25
30s Simplex	27.00	27.00
40s Madura	32.37	33.00
60s Finlay	65.39	65.39
80s Moderns	69.50	69.50

LINSEED ADVANCES

(From Our Own Correspondent)

BOMBAY, 14th *June*

The oilseeds market ruled distinctly steady during the week under review under stimulus of fresh speculative demand. Further, in view of the paucity of selling by upcountry interests, local stocks were said to be poor. Naturally the crushers and other buyers were eager to enlarge their holdings as much as possible even at higher levels. Linseeds were particularly in the limelight on account of continuing firmness of rapeseed in North India and persistent manipulations by Calcutta interests. Rumours of Australian enquiries also imparted strength. Fresh offerings were scarce and the spot section ruled firm. Castorseeds which were quiet early in the week staged a smart rally towards the close, following news of substantial business in commercial oil having been put through with U.K. interests and on hopes of securing contracts for castor oil from some communist countries. There was a steady increase in the prices of groundnuts as well. This was due mainly to scarcity of supplies in the wake of keen demand for groundnut oil and oilcakes. The *vanaspati* manufacturers were eager buyers with the purpose of replenishing their stocks. Cottonseeds were well maintained in sympathy with other seeds. Sesame too ruled steady on good demand from South India.

Traders in oilseeds took note of the observation of Mr. J. C. A. Faure of Unilevers at the International Seed Crushers' Federation at Stockholm that there would be no shortage of fats and oils in 1961. He estimated the total world production of oils and fats at about 32.6 million tons in 1961, on an increase of ½ million tons over 1960.

In the linseed section, September 1961 contract improved by 13 nP to Rs. 39.75. Bold ready put on a rupee to Rs. 39. Linseed oil rose by 80 nP to Rs. 17.05.

Among castorseed, September contract spurted by Rs. 2.12 to Rs. 179.62. Ready Kanpur hardened by 13 nP to Rs. 33.75. Oil Commercial was higher by 5 nP at Rs. 15.10. Oil B.S.S. too improved by a like amount to Rs. 16.20.

Among groundnuts, Nizam bold rose by 50 nP to Rs. 55. Coromandels improved by 25 nP to Rs. 55.25. Oil railway receipts scored a gain of 40 nP to Rs. 23.10. Oil ex-mill was higher by 25 nP at Rs. 23.25.

Cottonseeds September 1961 contract was fully maintained at Rs. 95. Berars whites and non-whites were all quoted at Rs. 19.50.

In the sesame section, sesame oil picked up a rupee to Rs. 27.75. Sesame bold was well fancied at Rs. 370.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	14-6-1961	7-6-1961	31-5-1961
	Rs.	Rs.	Rs.
Groundnut			
Nizam bold	55.00	54.50	53.50
Coromandel ready	55.25	55.00	53.75
Khandesh quality	55.00	55.00	53.50
Oil ex-mill ready*	23.25	23.00	22.10
Railway receipts*	23.10	22.70	21.90
Castorseed			
September 1961	179.62	177.50	176.00
Ready Madras	35.50	35.50	35.12
Ready Kanpur	33.75	33.62	33.25
Oil B.S.S.†	16.20	16.15	16.00
Oil commercial†	15.10	15.05	14.80
Linseed			
September 1961	39.75	38.62	37.56
Bold ready	39.00	38.00	37.12
Oil ready†	17.05	16.25	15.80
Cottonseed

Niger seed	41.50	42.00	43.00
Kardi seed	26.75	27.00	26.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FAIR DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 13th *June*

Fair demand for tea was in evidence at the export sales held yesterday. Prices were about steady. At the internal sale held last week, general demand was good, but prices were irregular.

A further increase in tea shipments was reported during the week. However, fresh crop arrivals are yet small, and that accounts for the export auction taking place once a fortnight instead of every week. It may be remembered that the export auctions this year began much earlier than usual and, including the sales that took place yesterday, three export auctions have so far taken place. The recent language controversy in Cachar has also affected tea movements. It is, however, expected that, within the next two to three weeks, arrivals would be more substantial to justify an auction taking place every week.

There is no doubt among tea trade circles that production this year would show a substantial increase over 1960. In April, the North Indian production was higher at 19.1 million lbs., as against 16.6 million lbs. in April 1960. In May also, a substantial rise is believed to have taken place, as most gardens in the areas of Assam, Cachar, Dooars, Darjeeling and Terai reported favourable weather conditions and good output prospects.

It was noted with satisfaction that, in view of the fact that production rose substantially in the last two months, the proportion of superior teas to plains and commons would be more encouraging than last year. For it is in this period that quality teas are produced and production at this time last year was affected by prolonged drought.

While the immediate outlook for marketing was considered to be good by the trade, the long-term outlook was by no means considered certain. For, later in the year, the weight of the bigger crop would be felt. There are firm indications that this year more tea will be offered in world markets than last year. Pakistan has fixed an export target of 5 million lbs. for the year, and production in that country is expected to reach the higher figure of 57 million lbs. The Pakistan crop in April was as high as 4 million lbs., as against 1.6 million lbs. in April 1960.

Keener competition in world markets f Ceylon, Africa, Indonesia and China is alre being felt. According to Messrs. J. Thomas Co. Private Ltd., India's share in the market pansion in the last decade has been much than of other producing countries. It is sta that, in the last ten years, India's production gone up by only 20 per cent, as against nearly per cent in the production of Ceylon, Africa other tea growing countries. In this per world shipments increased by 30 per cent, w the increase in shipments from India was c about 8 per cent. These figures reveal the perative need for India to increase exports capturing more markets.

In the internal sales held last week, dusts offer amounting to 23,052 packages met w good general demand. Generally, an irregu trend prevailed. Among orthodox teas, the cl leaf varieties met with good support and pr gained, while the fibrous teas were bid at lo rates. Legg-cut teas evoked good inquiries, prices were lower. Among C.T.Cs, good sorts corded a liberal decline and fibrous teas w about steady. The clean leaf teas were changed. The quotations per 1 kg. inclusive excise duty were: Good Assam C.T.C. d Rs. 6.20 to Rs. 6.80 (nominal); medium Ass C.T.C. dust Rs. 5.40 to Rs. 5.90 (nominal); legg- dust Rs. 4.10 to Rs. 4.80 (nominal); medi Assam dust Rs. 4.05 to Rs. 4.50 (nominal); plain orthodox dust Rs. 3.80 to Rs. 4.20 (nomin

Leaf teas on offer amounted to only 55 che Prices were firm.

Overseas buyers paid more attention yesterday's export sales. Internal buyers w also active. As a result, there was good dema and prices improved. But demand for Darjeelin was lower, leading to a number of withdraw without a bid. Offerings aggregated 98,673 che The quality of Darjeelings was poor and uni pressive, and flavourings were extremely limit Flavourings were about steady, but others eas Keen attention was paid to C.T.C. teas, with t better descriptions being much in the forefro Medium C.T.Cs recorded an irregular trend, wh the poorer and lower priced teas hardened. The was good demand for orthodox teas. Fannin were fully steady on more interest, and medi and plainer teas were firm. Whole leaf grac eased. The quotations per 1 kg. inclusive of exc duty were: plain fannings Rs. 4.55 to Rs. 4. plain B.P. Rs. 4.70 to Rs. 4.75; and clean pl pekoe Rs. 5.05.

JUTES SLUMP

(From Our Own Correspondent)

CALCUTTA, 13th Ju

The most remarkable development in the ju markets during the week under review was t marked fall in prices of goods. The decline in flb prices, was also substantial, but this caused surprise, as it had been anticipated since the pr posal for block closure of mills was first moote And so, when the proposal was finalised after t Government accorded approval, the way for t decline in fibre prices was made all the cleare This was not so in the case of goods, as, in fac with the finalisation of the decision to close dow mills for a fortnight, at least initially prices goods were expected to move up. Prices move up for a day or two, but, since then, a gradu decline had set in. This was so because, at th rise, no worthwhile support was accorded t overseas buyers. As a result, the declining pha set in, but, even then, support from overse buyers had not been measurable. It was at th stage that details of finished goods in stock wit mills as at the end of May were announced. Fo the total at 92,100 tons shows an increase of 1,20 tons. Hessian rose by 6,600 tons, while heav goods and miscellaneous constructions fell b 6,600 tons and 1,000 tons to 44,400 and 13,20 tons, respectively. It was expected that, with ir creased stocks, no difficulty would be felt to mee the day-to-day demand having regard to the los of production of about 40,000 tons which would b entailed in the closure of mills for two weeks.

Lower advices from the New York burla market caused disappointment and were one o the factors which led to this week's declin From 12.60 cents per yard, the 40" 10 oz. heav hessian fell to 11.90 cents in New York. Th lighter construction, 40" 7½ oz. hessian, fell from 9.60 cents a yard to 9.05 cents. Buyers in New York were holding off entering into commitments as, taking the cue from Calcutta, they believe that prices would decline further in the course o the next two months. Inventories of bag manu facturers had become so low as to necessitat forceful than lower New York advices, whic pulled down prices here in Calcutta was tha Pakistan sellers were making all-out efforts to sel from that date, the export bonus scheme would be reduced to 10 per cent from 20 per cent fo marketing purposes. Thus, even if current Paki stan sales entailed losses, the bonus awards from higher sales would be more than fair compensa tion. Also, a further decline in prices of old crop was reported from the Narayanganj market. Ex port firsts fell from Rs. 370 to Rs. 350 a bale lightnings from Rs. 360 to Rs. 340, and hearth from Rs. 340 to Rs. 320. Cuttings were quiet a Rs. 300 per bale. However, overseas buyers o old crop were reserved. New crop arrivals were reported for the first time. But the quantity hitherto has been too low and, because arrivals consisted mostly of weedings and not long enough for baling, they were only acceptable for local consumption. Overseas buyers showed interest for new crop at £155 for July shipment, as against £160 previously. August shipments were quoted at £150. These levels should be compared

with the E.P.C. rates of £185 for the old crop and £167 for the new crop, revised early last week.

Weather conditions in the jute-growing districts of India continued to be extremely good. Moderate to heavy rains have occurred in many areas in the last week. Plants in many districts have already attained good heights, but some damage has been reported by isolated pest attacks. New crop is expected to begin arriving as from July, but the quantity would not become significant before August. As announced earlier, forward trading is expected to be resumed from 15th June; but there is opinion that it would be better to postpone forward trading by a few weeks more. Prices have now started to decline, but it remains to be seen if the decline would continue after forward trading commences. Experience had shown that prices tended to be subjected to violent fluctuations. It is to be hoped that, with very strict vigilance by the East India Jute and Hessian Exchange, prices would be kept within reasonable limits. Judging from the presidential address made at last week's meeting of the Exchange by Mr. A. I. Murison, there is every hope that the Board would take all measures in order that parity would be maintained between primary markets and the hedge markets.

On Tuesday last, the goods market opened under selling pressure from bear operators. Mills were anxious to sell moderately against near deliveries in both hessian and sacking constructions. As a result of this, a five-point decline occurred in the price of B. twills. Hessian also fell. At lower levels, fair business was reported and prices recovered. Ready B. twills closed at Rs. 151.50, as against the overnight quotation of Rs. 152.50, and ready hessian 40" 10 oz. at Rs. 49, as against Rs. 49.50. At this stage, bears became active once again and, following selling pressure on Wednesday, B. twills lost to as low as Rs. 144 and hessian 40" 10 oz. to Rs. 46.50. On Thursday, details of the stock figures of mills as at the end of May were announced, and an overall increase was reported. At lower levels, overseas buyers became active and, despite weaker New York advices, ready hessian 40" 10 oz. recovered to Rs. 47.50. In sympathy, B. twills steadied around Rs. 146. Fair covering business was the feature on Friday. B. twills recovered to Rs. 148 and hessian 40" 10 oz. to Rs. 48. Mills sold some quantities at the higher levels; any possible decline was nullified by short-covering over the week-end, although overseas buyers were inactive. B. twills were better at Rs. 148.50 and hessian 40" 10 oz. at Rs. 48.75. There was good demand yesterday and a good quantity was involved in covering business against ready and near delivery. This caused ready B. twills to recover to Rs. 150.00 and ready hessian 40" 10 oz. to Rs. 48.50.

In sympathy with the trend in goods market, fibre prices fell. Also, buyers were reserved. Moreover, the mills were not inclined to buy, since the stocks of fibre with them are expected to see them through up to the beginning of August, when the new crop is expected to begin to reach mills in adequate quantities. The closure of two weeks by mills is expected to result in a fibre saving of 200,000 maunds. Mills have fibre in their godowns sufficient for limited operations for about 2½ months. The opening and closing rates of the principal varieties of the old crop offering are as follows:

(In Rs. per maund against ready delivery)

	Opening	*Closing*	*Decline*
Assam bottoms ...	46.50	45.50	—1.00
Northern bottoms ...	45.50	44.50	—1.00
Daisee bottoms ...	48.50	47.50	—1.00

BASE METALS RISE FURTHER

(From Our Own Correspondent)

CALCUTTA, 13th *June*

Following higher advices from overseas markets, base metals recorded further additions to values during the week under review. With expansion of electricity and the setting up of a number of cable manufacturing industries in the country, consumption of copper has gone up in the last few years. The difficult foreign exchange position, however, has been restricting imports of copper, and it is understood that the Government of India wants the cable industries to cut down consumption of copper by half and proportionately increase the consumption of aluminium, the production of which within the country has impressively increased. Trade circles noted that, while laying the foundation-stone of the Indo-Italian aluminium venture a couple of days ago, Mr. Morarji Desai said that the Government would even have to impose a ban, as in France, to restrict consumption of copper. The Government's appeal to cable manufacturers to increase consumption of aluminium at the cost of copper, coupled with the Finance Minister's loud thinking at Mettur, trade circles thought, was a prelude to cutting down imports of copper in the forthcoming licensing period.

During the week, tin reached a high of Rs. 1,626.00 per 100 kgs., after opening at Rs. 1,525, while, in Bombay, a 150-point increase to Rs. 1,750 was recorded. The Bombay Metal Exchange took immediate steps to curb speculation by raising the margin to Rs. 2,500 per 50 kgs. In case the price was greater than Rs. 1,700 per 100 kgs. The exemption limit was reduced to 20 units from 50 units. In London, the price moved up from £867 to £879¼ per ton. Demand was good. Electrolytic zinc opened here at Rs. 330.75 and hardened to Rs. 338.50, following improved demand. However, the price on the London Metal Exchange declined from £81 to £79½, as stocks were increasing. Virgin lead, after touching a high of Rs. 145.75 per 100 kgs., dropped to Rs. 141.75.

GRAINS AND PULSES WEAK

(From Our Own Correspondent)

HAPUR, 12th *June*

Barring superior quality wheat, the prices of which further advanced on good consumers demand, prices of other grains and pulses ruled quiet during the week under review. Arrivals of new *rabi* grains were still modest and here in U.P., despite good *rabi* crop, pressure of arrivals has not all been felt in markets as cultivators were retaining their produce. Wheat average quality prices were stationary at Rs. 14.25 to Rs. 14.75 a maund, while farm quality was quoted fractionally higher at Rs. 15.75 to Rs. 17 a maund. Daily arrivals of wheat here were poor at about 1,000 to 1,200 maunds average which were mostly lifted by consumers and local stock is put at 20,000 maunds. Rice prices also sought higher levels as consumers demand was better and week-end prices were: *mainouri sela* Rs. 21.50, *gainda kutcha* Rs. 21, *ramajwayan sela* Rs. 24, *raimuni sela* Rs. 25.50, *basmati sela* Rs. 28 to Rs. 30, superior Rs. 33 to Rs. 39 a maund.

After ruling firm for major part of the week, gram prices ruled quiet in week-end, following slack demand at higher levels. Daily arrivals mostly from the Punjab were at an average of 1,000 maunds and local stock has swelled to 45,000 maunds. Barley prices were stationary around Rs. 11 to Rs. 11.25 a maund and *bejhar* too continued to be quoted at Rs. 11 a maund for inferior quality and Rs. 11.75 for moongia variety. *Juwar* and *guwar* were very much in request for sowing purposes and large-scale sowings of these crops and that of maize is being done these days here. *Methi* continued to attract good demand from Rajasthan and Bengal and week-end prices (in rupees per maund) were:—*juwar* 13 to 15.50, *guwar* 16.50 to 17.50, *methi* 26.25 to 27.50, oats 12, maize old 13, *bajra* 19 to 20; local stocks rice 8,000, *juwar* 10,000, maize 4,000 maunds.

In pulses after continued bullish conditions in peas prices during the major part of the week, prices drifted to lower levels in week-end as loading by rail is not at all available and with arrivals averaging 1,500 mds., local peas stock has mounted to 80,000 mds. *Arhar* too was quoted fractionally lower as grinders for *dal* were purchasers only at lower levels. Daily arrivals averaged 700 to 800 maunds and local stock is now put at 42,000 maunds. Corresponding stocks of peas last year was 85 *khattis* and that of *arhar* 22 *khattis* of about 800 mds. each. Prices of other pulses ruled quiet and week-end prices were (in rupees per maund): peas dara 10.87 to 11.25, farm 12 to 13, peas *dal* 12.75, gram *dal* 16.25, *arhar* 12.75 to 13.50, *arhar dal* 16.50, *urd* 19.25 to 21, *urd dal* 24, *moong* 20 to 25, *moong dal* 25 to 27, *massor* 13 to 15, *massor dal* 16.50.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 12th *June*

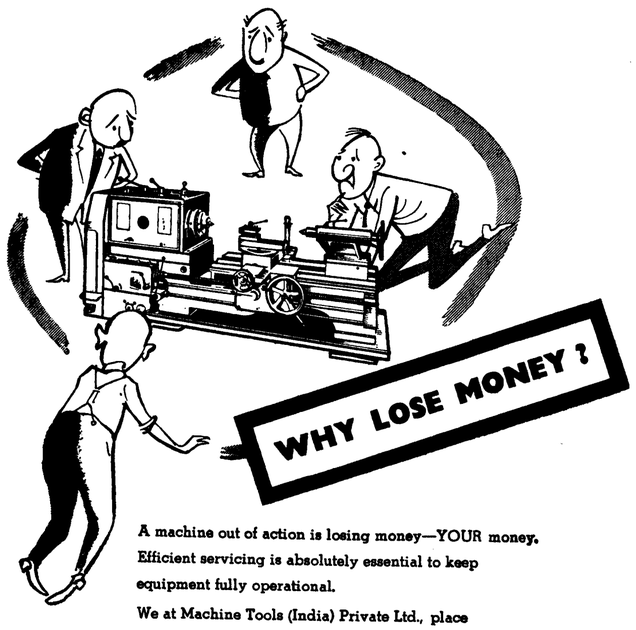
Sugar prices ruled quietly steady during the week at Rs. 106.75 per bag of 2 mds. and 30 seers of E-29 *Simbhauli* quality and in retail at 97 nP per seer in open market. Export announcements to the U.S. and Pakistan, however, failed to check the market as exports were far below expectations but efforts were being continued to get export quota enhanced. Further, monthly release of 200,000 tons has been made and despite good summer season, demand supply position is reported satisfactory. Production has nearly stopped in all factories; one or two factories, however, are still crushing, and total production in the country is reported a little over 3 million tons.

Sugar prices ruled steady in the Muzaffarnagar market due to good seasonal demand and while prices of damaged sugar of 1959-60 season advanced 50 nP to Re. 1.50 per bag at Rs. 100 to Rs. 103, dry sugar rose by 75 nP per bag to Rs. 107.25 per bag.

Khandsari prices were steady, following brisk demand from Rajasthan, North Gujarat, the Punjab and east U.P. and prices moved up by 50 nP to Re. 1.50 a maund. Stocks in the Muzaffarnagar market were reported to be 100,000 maunds and week-end prices were:—*khandsari* inferior Rs. 28 to Rs. 31, superior Rs. 32 to Rs. 35, crystal Rs. 33 to Rs. 37, *boora* Rs. 40 a maund.

Ready *gur* prices ruled quietly steady during the week and although railway loading was not available, following good demand from consuming areas, despatches were being done by road and local stock has run down to 36,000 maunds. There were reports that cane crop has been damaged due to *Salai* pest here and also in Bihar and rains too were now needed. Week-end prices of *gur* here were:—dry best Rs. 15.62, dry *kotha* Rs. 15.50, *kotha* dry-wet Rs. 15, *kotha* wet Rs. 14, *shakker* Rs. 16 to Rs. 16.25 a maund.

Gur futures registered a firm trend in week-end on Punjab and Delhi support. Local bulls were also main buyers. *Gur Ashad* is now quoted at Rs. 14.62 and *fagun* Rs. 13.86, as against week's opening at Rs. 14.38 and Rs. 13.69.



A machine out of action is losing money—YOUR money.
Efficient servicing is absolutely essential to keep equipment fully operational.
We at Machine Tools (India) Private Ltd., place particular emphasis on our 'AFTER-SALES-SERVICE'.
Our staff of factory trained engineers are constantly on the move throughout India, ensuring that *equipment sold by us will never let you down.*

MACHINE TOOLS INDIA PRIVATE LTD.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings at the end of February 196[illegible] amount to 13.81 crores of rupees.

Z—Ex eight instalments but [illegible] D—Domestic Loan not marketable. [illegible] the Government after three months' notice. K—On September 1956 or later at [illegible]

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

VOL. CII. No. 2620 **BOMBAY, 24th JUNE 1961** **PRICE Rs. 1**

PRESCRIPTION FOR BANKS

THERE is nothing new or novel about the suggestions of the Reserve Bank, in its annual statutory publication on the *Trend and Progress of Banking in India* during 1960, for expanding banking habit and banking services during the third Plan period. They have been advocated before, as long as a year ago by this journal, and by the Governor of the Bank himself on some occasion or other. But they are not less valuable for that reason. On the contrary, their reiteration in the Report serves to enhance their importance and underlines the urgency for implementing them. There is no exaggeration in the Reserve Bank's conclusion that "the volume of work to be handled by the banking system might well be nearly doubled in the third Plan period." Since there is no suggestion that new banks should be established, the existing banks should equip themselves "to meet the challenge of the third Plan," as the publication puts it. How are the banks to do it? First and foremost, says the Reserve Bank's report, the banks must intensify their efforts for gathering more deposits. This is stating the obvious. The question is how to get more deposits. The Reserve Bank's answers are: (1) open more branches, (2) create greater confidence among depositors, and (3) expand the service to customers by catering to the varying needs of business and individuals. Each one of these proposals has various aspects and it would have been more helpful if the authors of the report had discussed them at length and offered their conclusive comments.

There is undoubtedly considerable scope for expanding branch banking. Now that small banks are increasingly going out of favour, the big banks have to open more branches in areas which need the services of modern banking and where the provision of such services could become an economically viable proposition within a reasonable period of time. Alternatively, the small and medium-sized banks have to strive hard to become bigger units. There are even now 1,400 townships without any banking facility and this number may increase as economic development gathers pace. But these conditions alone are not sufficient to speed up the pace of branch banking. It has been suggested on more than one occasion that banks should be offered some fiscal incentives to open branches in places which are not immediately promising but have potentialities for the future. It is true that losses suffered by a new branch reduce the profit of the bank concerned and to that extent the bank pays less taxation. In other words, nearly half the cost of expanding banking, either area-wise or variety-wise, is borne by the Exchequer. But not all banks are making such large profits as to feel encouraged to branch out by this negative advantage. Some scheme of positive assistance is required, if progress is to be rapid and if branch banking is not to be the privilege of only the very big banks and/or the small banks that are prepared to take excessive risks as was the case with two of the scheduled banks that failed last year. It is high time the Reserve Bank made its stand clear on this demand.

Lack of trained and adequately qualified staff, especially for supervisory and more responsible tasks, is a big handicap that tends to slow down the progress of branch banking. The banks themselves are to be blamed for the persistence of this problem, because the vast majority of them have taken no effective steps to organise and provide training courses for their staffs. The Reserve Bank is, indeed, mild in its criticism when it says that "with the exception of a few, many big banks do not seem to be devoting the requisite attention to the training of their staff." It would be in their own interest if they accepted and implemented the Bank's advice that they should "accord high priority to the establishment of their own institutions for imparting training to members of different categories of staff so as to combine their plans for expansion with steps to improve their staff efficiency" and that "the possibility of having joint training arrangements for a group of banks might also be usefully explored." This advice implies that banks should recruit, for the administrative posts at least, promising young men, but, unfortunately, most of them offer such low salaries that they do not attract the best talent from the universities for being trained and posted as officers. It would be a good thing if the Reserve Bank were to appoint a small committee of competent men to examine the present situation and put forward some constructive proposals for improvement. The bank managements need not construe this attempt as one more interference by the bureaucracy. On the contrary, they should extend their full co-operation to the Reserve Bank for implementing this suggestion which is meant solely for their benefit. It would, of course, be a good thing if the Indian Banks Association itself could undertake this study, but it is such a conservative body that one wonders whether it is receptive to any new ideas, especially those that involve searching of hearts and self-examination.

Another feature of the present situation that discourages a bank from opening more branches is trade union activity among employees. Indiscipline and adoption of dubious means for getting overtime pay are said to be rampant. Consequently, the task of officers of banks is said to have become exasperating—a state of affairs not conducive to efficiency. This is essentially a human problem, but its solution could be made easier if the trade union leaders decide not to encourage lethargy and inefficiency among their followers.

Confidence among depositors in the soundness of banks is the first requisite for retaining deposits already obtained and attracting fresh deposits. By and large, Indian banks have been enjoying the confidence of the public. This is eloquently borne out by their immense progress in the past decade when their total deposits rose from about Rs. 870 crores to Rs. 1,950 crores. From time to time there have, of course, been some shocks and 1960 witnessed a few painful ones. Even these could have been avoided had the Reserve Bank been less lenient towards the erring banks in the middle of the fifties. Anyway, such weaknesses as were clearly discernible last year "are dimensionally of little significance," to quote from the report. Further, the Reserve Bank seems to have learned from its earlier mistakes and is taking steps to eradicate the weaknesses in the banking system. There is, however, a limit to what even a conscientious policeman can do, for no amount of control and inspection can be a substitute for honesty and sound judgment. With a view to inspiring still greater confidence among depositors, the Government has agreed to introduce insurance of deposits. But the beginning made in this direction is so modest that it is doubtful whether it will be of any significant help. Nevertheless, something is better than nothing and it is to be hoped that this facility will be quickly extended to cover a larger amount of deposit than a mere thousand rupees as now proposed.

As investments under the third Plan gather momentum, the present slow growth of deposits is sure to yield place to a vigorous expansion. It may be that the expansion will not be at the same pace as in 1958 and 1959, for deficit financing is unlikely to be of the magnitude witnessed in those years. But it is bound to be quite substantial, as the rate of economic development is scheduled to be heavier than in the second half of the second Plan period. Nevertheless, the banks will have to be more earnest than they have been in their attempts to attract deposits. Their theory that higher interest rates have no effect as incentive for drawing more funds into their custody has been disproved by recent events. The mere fact that today time deposits are far in excess of demand deposits, which is the reverse of the position ten years ago, is proof of the importance attached by depositors to the rates of interest they get. There is some recognition of this point in the Reserve Bank's report under reference. One, however, wishes the Bank were a little more explicit on it.

The current pattern of interest rates for time deposits is still on the low side. Expansion of branch banking will be of no avail if the branches cannot quote for deposits rates of interest that are reasonably attractive as compared with those offered by other users of funds. Since inter-bank agreement on interest rates has come to stay and competition for deposits by offering a higher price is regarded as unhealthy for banking business, the agreement must be modified on more rational lines, if it is to serve as an effective instrument for mobilisation of deposits. Further, the agreement must be enforced by the Reserve Bank rather than by the Indian Banks Association, as the latter has not been successful in getting the consent of all the banks to the agreement. Perhaps, the consequences of the failure of the Palai Bank would not have been so severe as they were had the ceilings on interest rates been fixed and enforced by the Reserve Bank. It is common knowledge now that even some high officers of Government and Ministers maintained large fixed deposits with the Palai Bank merely because it offered rates of interest which were substantially above the very low ceilings fixed under the inter-bank agreement negotiated by the Indian Banks Association.

The suggestion for a higher capital base for banks is also a part of the plan for strengthening depositors' confidence in banks. The proportion of owned resources to total deposit liability has steadily fallen from 7 per cent in 1950 to 4 per cent in 1960, chiefly because of the rapid increase in deposits in the past few years. The inability of banks to augment their reserves owing to low profit margins is another reason. Incidentally, the statement in this year's report that "the profits of commercial banks have increased substantially in the last decade" is likely to be

contested by banks, as it is contrary to their contention all along. The Reserve Bank will have to publish some concrete data to prove its point. Its own actions and statements in more recent years suggested that it shared the banks' point of view on the level of profits. It was only in last year's publication on the trend and progress of banking, for instance, that the Bank advocated a series of measures designed to improve the profit-margin of banks. Again, it did not oppose the banks' decision first to place a ceiling on interest rates on deposits and then to lower the ceiling. The object of the inter-bank agreement on deposit rates, as is well known, is to raise the profit-margin of banks. It was for the same purpose that the banks were allowed to enhance their rate of interest on advances. But all this does not mean that the Reserve Bank's remarks on the need for strengthening the reserves of banks are not pertinent. This need is imperative and all banks must set apart a portion of their profits to reserves every year, even if their existing reserves are well above the statutory requirement and even if it means a cut in the rate of dividend. Since not all banks have cared to follow this sound policy, the law must be changed in a suitable manner.

The case for increasing the paid-up capital of banks is also a strong one in the present circumstances. Only, the Reserve Bank must indicate the minimum ratio of capital funds to deposits which it thinks is ideal. As this is a ticklish problem, it is desirable not to make the maintenance of such ratio a statutory obligation. It must be left to each bank to attain that ideal as early as possible by its own voluntary effort. There is reason to believe that banks themselves will readily comply with this requirement if the authorities do not try to complicate the issue by wanting to prevent further concentration of shares in a few hands and by insisting that the new shares be offered at a premium. Bank shares have not appreciated unduly; in fact, they are not generally fancied by investors. Further, if a part of the net profit is to be compulsorily transferred to reserves, as mentioned above, it is only fair that shareholders should not be asked to take up additional capital at a premium.

While banks should undoubtedly widen the range of their services to their customers, the suggestion in the report that they "may consider the scope for a credit transfer scheme, even on a limited basis, on the lines of that introduced in the U.K. recently" is premature, for neither the country as a whole nor the banking system has advanced to such an extent as to permit the smooth working of this modern service. Even a simple credit instrument as a rupee travellers' cheque is not easily negotiable in this country. It would, therefore, be more useful, if the Reserve Bank could persuade the banks to collect upcountry and suburban cheques expeditiously and credit the accounts of their customers promptly. Notwithstanding the introduction of night airmail service, banks still take eight to ten days to collect a cheque even on such easily accessible cities as Calcutta, Delhi and Madras. There is plenty of room for improving the efficiency of essential services which banks are expected to render to their customers. They must attend to this task first before they take up new lines of activity.

MACHINE BUILDING IN THIRD PLAN

A DEVELOPMENT Council for Machine-building Industry—the sixteenth Council to be set up under the Industries Act—has been inaugurated this week at New Delhi. Considered to be the most important in the chain of Development Councils set up by Government, the latest Council, with its six sub-committees for six different groups of machinery manufacturing industries, will recommend targets of production for industrial machinery and co-ordinate production programmes in the third Plan. It will, in particular, review the capacity and production targets laid down for the machinery industries and also explore the possibilities of producing other important machinery items not specifically mentioned in the Plan. The Council may thus be expected to play a key role, for machine-building programmes, in the words of the Draft Outline, will have to occupy a key position in the third Plan to enable industrial growth to become self-sustaining as early as possible. This vital phase of development may reasonably be expected to be easily initiated in the third Plan period, as plentiful supplies of steel will become available in its first few years and the foundry/forge capacity, which is crucial for machinery projects, is due to be firmly established in the public sector.

In fact, it is the expected availability of castings and forgings that may be reckoned as the most hopeful factor. The public sector's programmes in this connection offer the prospect of 135,000 tons of grey iron castings, 73,000 tons of steel castings and 76,700 tons of steel forgings being available in the third Plan period. Here, the foundries attached to the three steel plants at Durgapur, Bhilai and Rourkela alone will account for more than 50 per cent of the output of grey iron castings and for a fifth of the output of steel castings, while the Foundry/Forge Project, Ranchi (III stage), will produce three-fifths of the steel castings and nearly all the steel forgings. But the larger part of this output of castings and forgings in the public sector may be absorbed by the machinery projects in the public sector itself. It is still not clear whether castings and forgings will be available in adequate quantities for the machinery projects in the private sector which is expected to start or step up the manufacture of a wide range of industrial machinery items. One of the first tasks to which the Development Council for Machine-building Industry will have to address itself pertains, therefore, to the establishment of further capacity for castings and forgings. The Council may have to assess these castings and forgings requirements at an early date and evolve the best arrangements for meeting them, that is, whether through captive foundry/forges or through independent units, or a combination of both. That some of the members of the Council have already laid emphasis on the need for establishing more foundries for producing high-quality castings is a hopeful sign.

There is yet another hopeful factor which Mr. Manubhai Shah, Minister for Industry, himself has indicated in his inaugural speech at the Council's meeting. Since the Government attaches the greatest importance to the rapid progress of machine-building industry, it is prepared, according to the Minister, to give the highest priority to the industry's requirements, including capital goods and essential raw materials. Mr. Manubhai Shah has also given the assurance that applications for licences and those relating to foreign technical collaboration would be speedily processed and disposed of and that there would be a more flexible licensing procedure providing for bulk tonnage of goods to allow scope for diversification and maximum utilisation of capacity. The Commerce and Industry Ministry may be depended upon to fulfil this assurance in the light of its licensing performance to-date. A fact which may be relevantly recalled here is that, in the recent past, there has been a steady increase in the number of applications for licences under the Industries (Development and Regulation) Act for setting up capacity for industrial machinery of all kinds as well as for providing the basic needs of machine-building industries. Already two Standing Committees—one for machinery manufacture for ferrous and non-ferrous metals and metallurgical industries and the other for machinery manufacture for chemicals, fertilisers and plastics industries—have submitted their final reports to the Ministry. And three other Standing Committees studying several aspects of the manufacture of machinery required for machine tools, transport and communications and consumer goods industries have also submitted their interim reports. The reports of these Standing Committees, which are to become so many sub-committees of the Development Council for Machine-building Industry, should greatly help the Commerce and Industry Ministry in licensing expeditiously an adequate number of fresh schemes for machinery manufacture and for the production of new machinery items in existing units or for the substantial expansion of such units. The prospects of liberal licensing are thus distinctly rosy for the machinery manufacturing industries.

But there will be one major handicap which may slow down the growth of these industries, unless, of course, it is removed in time by prior planning. This is the current inadequacy of designing facilities which represent a vital basic requirement in the field of machine-building. The Draft Outline itself admits that, in the beginning, the fabrication of plant and equipment will necessarily be based predominantly on 'bought out' designs. But it also lays down that the object should be to manufacture in the not distant future industrial machinery on the basis of indigenous designs. It is, therefore, to be hoped that energetic steps will be taken, on a high priority basis, in the earlier years of the third Plan, for a widespread diffusion of designing facilities in major individual establishments as well as for the establishment of designs organisations for groups of industries. A programme for training competent designers should also form an organic part of any plan for the creation of indigenous designing facilities.

Even if all these requirements are fulfilled there will still remain two important problems. One of them is how to provide adequate working finances for the machine-building industry through the banks and the other is whether import duties on foreign industrial machinery can be increased in order to encourage indigenous units. These issues, raised at the Development Council's inaugural meeting by the representatives of industry, should certainly compel consideration. The importance of the first issue can be easily understood from the phenomenal expansion of machinery manufacturing industries envisaged over the third Plan period. What is visualised is a fivefold expansion as compared with 1960—in which year the estimated production of major machinery manufacturing industries (machinery items for paper, tea, cement, sugar, mining, construction, jute, printing, chemical, oil, dairy and rice milling industries, solvent extraction plant, weighing machinery, machine tools, electric transformers, electric motors, diesel engines, power-driven pumps, boiler industry, heavy electrical equipment and heavy machinery) is valued at about Rs. 4 crores, as will be seen from the table in this article. If these industries are to achieve an aggregate production of the value of Rs. 22 crores by the last year of the third Plan, their requirements of working capital alone are bound to be enormous. The industry's expectations of assistance in this regard are certainly reasonable.

But not so reasonable is the expectation that import duties on foreign industrial machinery should be increased in order to encourage indigenous units. Already the Budget for 1961-62 has increased the duties on some machinery imports, and this has been rightly criticised on the ground that industrial costs will be increased as a consequence. So long as machinery items are in short supply, indigenous manufacturers can easily sell their wares. Again, since machinery and plant for most industries will be made to order, it may be expected as a matter of course that the authorities who have licensed the capacity for manufacturing such plant and machinery will certainly not license their imports, unless they are absolutely necessary. There is, therefore, no case for increasing the import duties on foreign industrial machinery items which will have to be imported until such time as their indigenous manufacture is established.

Production of Machinery

Name of industry	Estimated production in 1960 in terms of value (Rs. lakhs)*
Agricultural machinery	1,90
Boilers (industrial)	40
Cement machinery	55
Chemical and pharmaceutical machinery	1,20
Constructional machinery	1,00
Dairy machinery	20
Drilling machinery	10
Industrial machinery (unclassified)	30
Jute mill machinery	2,20
Mining machinery	20
Oil mill machinery	50
Printing machinery	5
Reduction gears	10
Rice, dal and flour mill machinery	45
Sugar mill machinery	3,25
Tea processing machinery	1,20
Weighing machinery	60
Solvent extraction plant	50
Machine tools (including small tools)	10,00
Electric transformers	7,00
Electric motors	6,00
Diesel engines	6,80
Power-driven pumps	2,40
Heavy electrical equipment	..
Heavy machinery	..
Total	46,40

* Based on actual production in the first nine months and estimated production in the last three months of 1960.

MARKET GOSSIP

New Fetters For Speculators?

THERE are signs of hesitancy on the part of investors to support equities at current level of prices. Here and there some cautious purchases are being made, but they are based on merits of individual scrips. It is mostly speculators who have been pushing up one popular scrip or another to spectacular levels. Even their grip is not firm, as the Government appears to be keen on placing new fetters. Obviously, it would like to do so with the consent of the governing boards of stock exchanges. All available reports go to show that these boards are disputing the Government's contention. The Bombay Stock Exchange, in particular, is said to differ from the Government rather keenly. That is unfortunate. The measures which it has adopted so far to prevent a runaway market are of a half-hearted nature, full of loopholes. It is high time its authorities realised the need for introducing a system of margin which will be simple, effective, operate automatically, and force every buying order to be accompanied by some cash down payment. One does not also understand the opposition to the Government's insistence on minimum brokerage being charged, a measure which should actually be welcomed by all the brokers. Apparently, the majority of them in Bombay feel that even a reasonable minimum level of brokerage will reduce the volume of orders from their clients who speculate on a large scale.

Knowledgeable circles aver that the authorities in New Delhi have formed the impression that equity values have reached unduly high levels. Even their anxiety to see that new capital issues do not suffer as a result of steps taken to curb the enthusiasm of bulls is unlikely to deter them now from enforcing measures to keep the boom within limits. Some of the operators who had boosted the leading scrips in recent weeks are said to be aware of the Government's intentions. They have, therefore, been steadily unloading their purchases in the past few days, though it is hard to say to what extent they have liquidated.

President Kennedy On Long-term Aid

Last week-end, President Kennedy delivered a keynote speech on foreign aid at the National Conference on International Economic and Social Development in Washington. Of course, the speech was largely a reiteration of the new principles enunciated by his administration for "a bold, new long-range programme, designed to play a sound and decisive role in improving the climate for freedom." But this reiteration by President Kennedy is certainly necessary, because it is by no means clear that, as of today, the U.S. Congress has been fully persuaded to accord its approval to aid projects on the basis of long-term planning and financing. The Kennedy administration has recently requested the authority necessary for such long-term financing—the capacity, as the President said, to make orderly, prudent long-range commitments, instead of appropriating and obligating new funds every year for a series of unrelated projects. It is his emphatic view that long-range needs of developing countries cannot be met evenly and economically by a series of one-year programmes. Probably, in the hope that the U.S. Congress might be more easily persuaded to grant the necessary authority for long-term financing, President Kennedy has laid renewed emphasis on the new principle that development loans should be repayable in dollars. This, of course, is only an inference which may or may not be valid.

One important consideration that seems to weigh with the Kennedy administration in its plans for long-term financing is that the Russians have already emphasised the importance of credits on a long-term basis. According to the U.S President, the aid given by the Communist bloc to less developed countries has been sharply rising in recent years. Some 8,000 technicians have also been sent by the Communist bloc countries to these areas. All this they are able to do without subjecting the recipient country to the perils of an annual legislative renewal. If President Kennedy has drawn pointed attention to this feature of Communist economic aid to less-developed countries, it seems to be for the purpose, again, of persuading the U.S. Congress to grant his administration the necessary authority for providing aid on a long-term basis. It certainly does not convey that American aid is being thought of as something that will be given in response to Communist initiative. The positive aspect of aid as something that is required for improving the climate for freedom rather than as an alternative to Communism, it is worthy of note, has again been emphasised by President Kennedy in no uncertain terms.

World Textile Conference

A conference of textile exporting and importing countries will be held in the second half of next month under the aegis of the G.A.T.T. at Geneva. The move, recommended by the G.A.T.T. Council of Representatives at their meeting at Geneva last week, followed the U.S. plea for a world conference of textile interests. The purpose of the meeting, it is said, is to give a platform for multilateral discussions designed to secure such arrangement of world trade in textiles which, while not seeking to restrict the exports of underdeveloped countries and Japan, will, at the same time, avoid the disruption of textile industries in the more industrialised nations.

While the present move reflects President Kennedy's anxiety to secure for the developing countries enlarged markets for their manufactures in developed countries, these multilateral talks cannot be expected to lead to any immediate positive solution to the world textile problem. It is now known that the proposed conference will be preceded by a meeting in Washington of the main cotton textile importing countries including the U.K., other West European countries and Canada. The precise object of this meeting is not known. It is, however, a safe guess that importing countries will try to forge a united front, so that they could speak with one voice at the G.A.T.T. meeting. Their argument will be based on disruption of their economies by imports from "cheap labour" countries. It is, however, to be hoped that, instead of harping on the problem of market disruption, which is more imaginary than real, the importing countries will appreciate the needs of developing countries for expanding their export trade in manufactured goods. As their economies become more and more industrial, they will find it necessary to export such goods. If they are not allowed to do so, how will they repay the loans which they are now getting from the developed countries?

The attitude of several textile importing countries has so far not been quite helpful to the developing countries. As the G.A.T.T. itself has realised, several of them have already taken discriminatory action against textile exporting countries on the ground of market disruption "either outside the framework of the G.A.T.T. or contrary to the G.A.T.T. provisions." These restrictions are undoubtedly impeding the tempo of economic development and industrial diversification envisaged in the less-developed countries. As pointed out in the latest annual report of the U.N. Economic Commission in the course of a cogent plea to developed countries for a re-orientation of their commercial policies, the major task of the developed countries "cannot be the defence of domestic production against 'mounting pressure' of imports.... for such pressure hardly exists in most industrial branches." What is needed is a courageous attempt on the part of developed countries to modify their commercial and industrial policies to enable the less-developed countries to exploit fully those industrial and export lines in which they enjoy comparative advantages. This will certainly be in the interests of highly developed countries, too, in that larger earnings of the developing countries will enable them to buy more capital goods without asking for grants and gifts. The world conference on textiles, it is to be hoped, will enable these problems to be seen in proper perspective.

I. D. A. Loans to Sudan and India

The International Development Association (I.D.A.), an affiliate of the World Bank, has just agreed to provide two new credits—one to the Republic of Sudan of $13 million for the construction of Roseires Dam on the Blue Nile and the other to our country of $60 million for highway development. These are the second and third credits, respectively, from that organisation which, as our readers are aware, was specially created by member-countries of the World Bank to grant loans on terms more flexible and strikingly different from those of the World Bank. The first country to receive the development loan (of $9 million) from the I.D.A. was Honduras.

The credit extended to Sudan is a joint loan of the aggregate value of $32.5 million, the balance of $19.5 million being made available by the World Bank. It is learnt that the West German Government is also likely to contribute $19 million towards the foreign exchange cost of the Dam. The construction of the Dam, with a reservoir having a net storage capacity of 2,700 million cubic metres, will immensely benefit Sudan's agriculture. The water stored by the Dam will more than double the supplies available for irrigation in that country during periods of seasonal shortage. It will enable 900,000 acres of land to be brought under irrigation, and also greatly increase crop yields. While the Dam is under construction, the Sudanese Government will intensify the programme of agricultural research to determine the new crops which could be grown with the help of the additional water made available through the Dam.

The development loan to our own country is for an amount of $60 million for financing 660 miles of national highways and 19 major bridges in the four States of Maharashtra, West Bengal, Bihar and Orissa. The loan is expected to provide approximately half the cost of the Rs. 60 crores road development programme, which includes a 13½-mile four-lane Eastern Expressway from Bombay to Thana, a four-lane carriageway from Calcutta across the river forking into two double-lane highways—one running to Saptgram and the other to Jamshedpur, a double-lane highway on Baharagora-Jamshedpur-Ranchi section in Bihar, and all the eight missing bridges on the Calcutta-Madras highway near Cuttack. Of the remaining 11 major bridges, five will be in Maharashtra, four in Bihar and two in West Bengal.

The terms and conditions of the loans to Sudan and India are exactly similar to those which governed the loan granted to Honduras. The loans are interest-free, and are repayable after a ten-year period of grace. Thereafter one per cent of the principal will be repayable annually for ten years and three per cent per annum over the next 30 years. The loans will bear a service charge of ¾ per cent on the outstanding amount. Repayment is, of course, to be made in foreign exchange and not in local currency, but this need not prove unduly burdensome particularly to India which will be required to pay only $600,000 annually from August 1971 upto August 1981 and $1.8 million per year for 30 years after the latter date. It is noteworthy that the loan to India will be for an 'infrastructure' project which, though not immediately remunerative, is a necessary underpinning for industrial development.

Export Promotion Council for Oilseeds

A plea to set up an export promotion council for vegetable oils, oilseeds and oilcakes was made by Mr. M. Nopany, President of the East India Oil Millers' Association, while speaking at the annual meeting of the Association, held at Calcutta last week. A permanent body like the proposed Council would be able to devise measures designed to expand the existing markets for these commodities and explore new ones abroad. Mr. Nopany's suggestion is apparently sound, but it would not be right to assume that the recent debacle on the export front in respect of some of the major oils, such as groundnut oil and linseed oil, has been due to the absence of a separate export promotion council. The crucial factor which has adversely affected India's exports of oils has been the persistent upward trend in their domestic prices, consequent upon the rapid growth of domestic demand and the halting expansion of output of oilseeds. To take an instance, the price of groundnut oil in Bombay has risen from barely Rs. 2,000 per ton in June 1960 to about Rs. 2,400 now. In contrast to this trend, the current price for groundnut oil (B.W.A.3/5 per cent) in the London market is lower at £120 per ton, as compared with £121 a year ago; in fact, it was still lower at £112 earlier during the current year. The major problem, therefore, is to bring down domestic prices. Although an export promotion council may be useful to some extent, the basic solution lies in stepping up oilseeds production.

Of course, Mr. Nopany was not unaware of the need for expanding production of oilseeds. He put the blame for the slow growth of oilseeds output squarely on State Governments which had so far not given adequate attention to the problem. He, therefore, appealed to these Governments and cultivators to devote particular attention to the raising of per-acre yields in oilseeds. It is, indeed, disquieting that the yields have been steadily declining in India, instead of improving. The acre-yield of groundnuts, for instance, fell from 740 lbs. in 1958-59 to 642 lbs. in 1959-60. This may be compared with as much as 1,500 lbs. in China, 1,435 lbs. in Argentina, 1,306 lbs. in Mexico, and over 1,000 lbs. in the U.S. Apart from increasing the production of major oilseeds, the supply position could be improved, Mr. Nopany added, by exploiting the potential resources of non-edible minor oilseeds of forest origin as well. This, again, is a suggestion presumably addressed to State Governments which control and administer forests.

In this connection, Mr. Nopany regretted that only six per cent of the total of two million tons of cottonseeds produced annually in the country was being crushed, the rest being used as cattlefeed. He commended the American practice of using only about 20 per cent for planting and as fertiliser as well as animal food, the major part being processed as edible oils, protein meal feeds and industrial cellulose. Proper utilisation of cottonseeds in this country will depend on how far the Government is prepared to encourage the cottonseed crushing industry, particularly by giving incentives to export cottonseed cake. The present Government policy in this regard leaves much to be desired. For instance, the link scheme (announced a few days ago) seeking to permit import of one ton of copra against every nine tons of expeller cake is quite an insufficient incentive. At the current world prices, export of every one ton of cake will entail a loss of about Rs. 125. But the link scheme will make up for only 50 per cent of this disadvantage.

Ashok Leyland's Progress

Dr. A. Ramaswami Mudaliar's speech at the twelfth annual general meeting of the shareholders of Ashok Leyland Limited (Ennore, Madras) is notable for the light it throws on the expansion plans of the Company. This enterprise, which supplies the renowned "Leyland" chassis and diesel engines, has now got its authorised capital raised to Rs. 10 crores in pursuance of a programme to produce 5,000 "Comet" chassis per annum and also to tool up for an annual production of 1,000 "600"-type engines for use in chassis heavier than the "Comet." The expansion programme will involve the raising of Leyland Motors' shareholding in Ashok Leyland Limited to 60 per cent of the total issued capital of about Rs. 5 crores. Such an increase in the British collaborator's shareholding will mean that the necessary foreign exchange for the purchase of plant and machinery for the expansion project is assured. Leyland Motors will also hold 75 per cent of the share capital of another project of Ashok Leyland Limited, namely, the foundry project. The latter project, under the name of Ennore Foundries Limited, is expected to meet all the castings requirements of Ashok Leyland by the end of this year. When, thus, castings are completely eliminated from the materials to be imported, Ashok Leyland will have registered further progress in the deletion of imported components and materials. Even other manufacturers can look forward to supplies of iron castings from the Ennore Foundries which will have surplus capacity from 1962 onwards.

A very heartening piece of news that Dr. Ramaswami Mudaliar has given pertains to the possibilities of exporting "Comet" chassis to neighbouring countries. Already the Company has made a modest beginning in this field with its sale of 24 chassis to the Ceylon Transport Board in 1960. The Company, it is gratifying to hear, will redouble its efforts to secure export business.

BOMBAY STOCKS IRREGULAR

TEXTILES, HOWEVER, FIRM

(From Our Own Correspondents)

BOMBAY, 22*nd June*

EQUITIES on the Bombay Stock Exchange displayed a mixed trend. In the early part of the week, the volume of business was restricted, as operators were chary of extending their commitments on account of rumours regarding the tightening up of the special deposit *havala* rates. The possibility of governmental restriction on speculative activity in certain scrips also weighed heavily on bulls. The new account on Monday the 19th inst. began, therefore, on a subdued note. Even the decision of the Board of Directors of the Bombay Stock Exchange to maintain the *status quo* regarding margin requirements failed to restore confidence. The textile section, however, registered gains on a wide front, due to good speculative support. Steels and sugars remained subdued. Chemicals and engineerings showed a two-way movement. In the miscellaneous section, some popular scrips attracted sustained inquiries. Cement shares ruled quiet.

In the steel section, Tata Steels which opened at Rs. 160.75 received good support and advanced to Rs. 164.25 on Monday the 19th inst. At this level some selling pressure was in evidence and the share fell to Rs. 162.25. The net gain over the week is Rs. 2.75. Indian Irons elicited some inquiry on the opening days and put on 20 nP at Rs. 28.45 on Monday. Thereafter, they were neglected and receded sharply to close at Rs. 27.80, showing a loss of 35 nP during the week. Mukund Irons were still well fancied and gained Rs. 2.50 to Rs. 31.75.

Textiles showed a mixed trend. On the whole, gains over a wide front outnumbered losses. Morarjees were a bright feature of the market and spurted by Rs. 45 to Rs. 458. Models gained Rs. 40 to close at Rs. 75. Finlays advanced by Rs. 11 to Rs. 326. Khataus put on Rs. 8.75 to Rs. 598.75. Shree Niwas hardened by Rs. 8 to Rs. 274. Laxmis rose by Rs. 6.25 to Rs. 531.25. Swans gathered Rs. 5 to Rs. 605. Gokaks went up by Rs. 3.50 to Rs. 184.50. Kohinoors opened at Rs. 315 and spurted to Rs. 324. On Wednesday, thereafter, due to bull liquidation the scrip fell to Rs. 318. Over the week, the gain was Rs. 3. Simplex too gained an equivalent amount to close at Rs. 209. Gold Mohurs advanced from Rs. 260 to Rs. 262.50. Other textile shares which made minor gains were Elphinstones, Tatas, Bradburys and New Great. Swadeshis remained firm at Rs. 280, the mill has shown encouraging results and the dividend is proposed to be raised from Rs. 14 to Rs. 17 per share, subject to tax. Dawns and J.K. Cottons also were quiet at Rs. 132 and Rs. 20.24, respectively. A few shares in the textile group registered losses. Prominent among them was Standards which slumped by Rs. 27 to Rs. 1,455, Mafatlals were hammered down by Rs. 10 to Rs. 920. Centurys lost ground due to rumours that bulls were losing grip over the scrip. On Friday the 16th inst., the final day of the last settlement, the scrip met with good support and spurted to Rs. 740 from the opening quotations of Rs. 720. On the following days, however, lack of speculative support brought down the rate to Rs. 707.50. Over the week, the loss was Rs. 5.50. Bombay Dyeings also lost Re. 1.20 to close at Rs. 69.30. Apollos and India Uniteds (Def.) suffered minor setback.

Sugar shares were depressed. Belapurs opened at Rs. 288.50 and climbed down steadily throughout the week to close at Rs. 274. The loss during the week amounted to Rs. 13. Maharashtras were also neglected and dropped by Rs. 6.50 to Rs. 185. Walchandnagars receded by Rs. 5 to Rs. 163 and Phaltans lost Rs. 2 to Rs. 133. The market was greatly disappointed when it heard that the President of the Indian Union had given his assent to the highly controversial Maharashtra and Ceiling Bill as adopted by the State Legislature.

In the cement group, speculative support was confined to Associated Cements which gained Re. 1.50 to Rs. 164.25. Orissas, Digvijays and Ramias remained quietly steady at Rs. 14.40, Rs. 157 and Rs. 12.12 respectively. But Ashoks and Jaipurs made minor losses of 12 nP each to close at Rs. 8.88 and Rs. 11.00 respectively.

In the shipping section, Scindias received some support and gained 20 nP on the opening day. Later, however, the lack of support for the scrip brought down the value to Rs. 14.32. Over the week, the gain was only 4 nP. Bharat Lines were quiet at Rs. 5.12. Great Easterns eased by 1 nP to Rs. 14.12.

In the automobile section, Premier Automobiles were subdued and lost one rupee to Rs. 172.50. Hindustan Motors also receded by 1 nP to Rs. 22.72. Auto Products, however, gained 1 nP to Rs. 13.20.

In the rayon group, National Rayons which opened at Rs. 570 *cum-div.* were well favoured and spurted to Rs. 572 on Monday the 19th inst. Later on that day, they were marked *ex-div.* and were quoted at Rs. 561.50. On reports that the Company's expansion plans were making good progress, the scrip went up to Rs. 575 only to slip back to Rs. 565. Baroda Rayons also hardened by Rs. 2 to Rs. 126. South India Viscoses gained one rupee to close firm at Rs. 175. Sassoon Mills also put on 88 nP to Rs. 15.24. But Gwaliors were marked down from Rs. 55.50 to Rs. 52 and Indian Rayons by a rupee to Rs. 61.

The chemical section showed a mixed trend. A gain of as much as Rs. 16 to Rs. 79 in Ultra Marines was the major highlight of the trading in this section. Polychems were also in fair demand and rose by Rs. 13.75 to Rs. 243.75. Citrics too, gained Rs. 2 to Rs. 52 and Alembics gathered Re. 1.25 to Rs. 266.25. But Colour Chems and Indian Dyestuffs lost Rs. 7.50 each to Rs. 367.50 and Rs. 527.50, respectively. Amar Dyes also receded by Rs. 6.25 to Rs. 390. Adarsh and Dhrangadhras lost a rupee each to Rs. 102 and Rs. 130.50. Synthetics lost 50 nP to Rs. 173.

In the engineering section, too, the trend was mixed. Premier Constructions were neglected and lost Rs. 6.50 to close at Rs. 199. Larsen and Toubros, despite the better working results, failed to elicit buying inquiry and eased by 75 nP to Rs. 41.50. Cooper Engineerings fell by Rs. 6 to Rs. 163. Khandelwals were brought down by Rs. 2 to Rs. 78 and Jost Engineerings by a rupee to Rs. 94. Jyotis, Mahendras, Chase Brights and Indian Steels also sustained losses ranging from 20 nP to 86 nP. But New Standard Engineerings met with inspired buying and gained Rs. 15 to Rs. 201. T. Manekalals spurted even more by Rs. 80 to Rs. 580. Telcos, which opened at Rs. 381.50, moved up to Rs. 390 on Monday, but eased later to close at Rs. 378. The gain over the week was just Re. 1.50. Fit Tights were well fancied and put on Rs. 2 to Rs. 60. Madras Aluminiums and Hindustan Aluminiums also reported minor gains.

In the miscellaneous section, Bombay Burmahs received good speculative support in the early part of the week and spurted to Rs. 653 after opening at Rs. 646, but met with bull liquidation, as the operators were disappointed with the (taxable) interim dividend of Rs. 12 per share as against Rs. 11 per share last year. The small increase in dividend fell short of their earlier expectations. The scrip declined to Rs. 622.50 showing a loss of Rs. 21.50 over the week. Voltas also lost Rs. 2 to Rs. 294.50. Sirpur Papers receded by 28 nP to Rs. 15.28. Killicks dropped 25 nP to Rs. 100.25. But Wimcos gained a rupee to Rs. 258. Bombay Oxygens put on Rs. 2 to Rs. 57.50. Ceat Tyres were keenly bid and spurted by Rs. 5 to Rs. 212.50.

* * * *

Madras Stock Exchange

MADRAS, 21*st June*

Under pressure of bearish advices from Bombay, the Madras Stock Exchange turned easy towards the close of the week, after remaining quite active during the major part of the week. The earlier firmness was induced by better inquiries from both investors and professional operators. Sugars ruled quiet, since operators preferred to await the final outcome of India's efforts to secure a sugar export quota from Iran and also quotas from the U.S. on a permanent basis. While India's decision to join the International Sugar Agreement was welcomed, a section of the trade felt that mills themselves would have to share a sizable part of the loss incurred in exports. Teas ruled easy, in the absence of any fresh incentives and on reports that the relatively newcomers in the field of world tea trade, such as Argentina, Peru and Brazil, would double their supplies in world markets during this year. Rubbers were dull, while coffees met with selective buying. Textiles shed much of their earlier gains during the latter part of the week, but some of the shares were ruling still higher, as compared with the last week-end. Banks and electricals were neglected. Among miscellaneous industrials, chemicals and cements encountered stale liquidation.

Among sugars, Cauverys came in for selling, with the quotation declining by 50 nP to Rs. 130.50. Deccans moved in a narrow range to close lower today by 5 nP at Rs. 14. East India Distilleries fell initially from Rs. 42.50 to Rs. 43.40, but recovered to the last week's closing level today. United Breweries were quiet at Rs. 108. Mysores, however, rose by 85 nP to Rs. 57.75. Indias put on 50 nP to Rs. 13.75 and Travancores 10 nP to Rs. 10.25.

Among teas, Kil Kotagiris drifted lower by 10 nP to Rs. 4.80. Periakaramalais fell initially from Rs. 3.95 to Rs. 3.83 before closing at Rs. 3.88. Neelamalais moved down by 5 nP to Rs. 4.25. Waterfalls were lower by 3 nP at Rs. 3.12. Blue Mountains shed 2 nP to Rs. 3.30. Haileyburias were dull at Rs. 15.25. Parksides at Rs. 29.10 and Devasholas at Rs. 30.75. But Chembras picked up 7 nP to Rs. 3.95 and Nonsuchs 5 nP to Rs. 28.15.

Mixed trends were in evidence in the coffee group. Ouchterlony Valleys lost 7 nP to Rs. 3.78. Sangameshwars, dropped 3 nP to Rs. 2.08. Coffee Lands were neglected at Rs. 18.75, as also Cowcoodys at Rs. 5 and Balanoors at Rs. 16.60. Mysore Coffees changed hands at Rs. 5.45. Consolidated Coffees, however, elicited good support and moved up by 75 nP to Rs. 22.25. Rajendras scored a gain of 12 nP to Rs. 12.12. Anaparais gathered 10 nP to Rs. 4.

In the rubber section, Thirumbadis declined by 5 nP to Re. 1.60. T.R. and Ts reacted by a like amount to Rs. 9.85. Pullangodes too dropped 5 nP to Re. 1.85, notwithstanding the announcement of a higher dividend of 6 per cent, taxable, for the year ended March 1961, as compared with 5 per cent for the previous year. Cochin Malabars closed 2 nP lower at Rs. 7.83, after fluctuating between Rs. 7.80 and Rs. 7.90 over the week. Malankaras were fancied at Rs. 18.70. But Travancore Rubbers hardened by 39 nP to Rs. 10.09 *ex-div.* Midlands gathered 5 nP to Rs. 11.85.

Among textiles, Lakshmis met with profit-taking at higher levels and were hammered down by Rs. 3 to Rs. 170. Cannanores eased by a rupee to Rs. 166. Premiers moved down by 50 nP to Rs. 289. Loyals too lost a like amount to Rs. 43.50. Janardanas shed 10 nP to Rs. 75.25. Bangalore Woollens were quiet at Rs. 202, as also Metturs at Rs. 400, Vasantas at Rs. 250 and Venkateshas at Rs. 197. Anglo-Frenchs were maintained at Rs. 135, following the announcement of a dividend of 15 per cent, taxable, for 1960, which compares favourably with that of 11 per cent distributed in 1959. Buckinghams were marked up by Rs. 3 to Rs. 224. Coimbatore Cottons rose by Re. 1.50 to Rs. 172.50. South Indias gathered a similar amount to Rs. 173.50. Maduras improved by a rupee to Rs. 39.50. Travancore Rayons rose Rs. 40.20 to Rs. 40.75, before finishing at Rs. 40.60.

In the miscellaneous section, Mettur Chemicals lost 14 nP to Rs. 14.46. F.A.C.Ts were lower by 10 nP at Rs. 10.35. Among other chemicals, Travancores were subdued at Rs. 15.87, Mysores at Rs. 24 and Mysore Fertilisers at Rs. 11.35. Among cements, Travancores shed 10 nP to Rs. 8.20, Dalmias and Orissas were dull at Rs. 12.06 and Rs. 14.44, respectively. Indias, however, picked up 20 nP to Rs. 6.50. The rise followed the announcement by the Directors of the Company for a final dividend of 6 per cent, taxable, making a total of 12 per cent for the year ended March 1961, which compares with 11 per cent, taxable, paid in the previous year. Among others, Aluminium Industries shed 30 nP to Rs. 23.60. Ashok Leylands dropped 2 nP to Rs. 9.28. Tube Investments were unaltered at Rs. 265. But Western India Plywoods rose by Re. 1.50 to Rs. 231.50.

NEWS IN BRIEF

THE Dowry Prohibition Act, which received the President's assent, will come into effect from 1st July next.

The Australian Government has donated 9,845 tons of wheat to India and Pakistan under the Colombo Plan.

The Kerala Government has passed a Bill seeking to empower the State Government to take over any industrial undertaking on its closure and run it as a measure of unemployment relief.

The Union Government has passed an order of moratorium in respect of the Cuttack Bank Ltd., Cuttack, and the Tezpur Industrial Bank Ltd., Tezpur, for the period 8th June to 7th September 1961.

The issue of bonus to U.P. sugar workers during the season of 1960-61 has been referred to a committee by the Sugar Tripartite Conference which met at Naini Tal on the 13th inst.

An increase of 10 per cent in the existing fare for Viscounts and 5 per cent for Dakotas will be introduced by the Indian Airlines Corporation with effect from October next, when the new winter schedule will come into force.

The National Textile Workers' Union (affiliated to the I.N.T.U.C.) has served notices on 70 textile mills in Coimbatore district for non-payment of 2 nP increase per point in dearness allowance from 1st June 1961 as per the Madras agreement arrived at on 30th June 1960.

The State-owned Hindustan Machine Tools has evolved a rationalised wage structure for its employees. Its main feature is the merging of a substantial portion of the dearness allowance in the basic salary and the enhancement of the minimum wage to Rs. 80.

The revenue realised from items on which duties are levied and collected by the Central Government during April 1961 amounted to Rs. 57.66 crores, as compared with Rs. 50.30 crores in the corresponding month last year. The increase was mostly accounted for by customs and Union excise duties.

The National Metallurgical Laboratory, Jamshedpur, has undertaken investigations for the manufacture of cryolite which is one of the essential minerals required by the steel, ceramic and aluminium industries. Cryolite is not found in India and is imported at present from Denmark and Greenland. The annual imports total about 7,500 tons.

An agreement to introduce the incentive schemes for Calcutta port workers with retrospective effect from 15th June has been reached between the Port Trust authorities and the employees' union. This will result in increased earnings for workers to the tune of Rs. 30 lakhs a year. It will be recalled that the incentive schemes are already in operation in Bombay and Madras ports.

An agreement for the manufacture of high quality tape recorders at the State-owned Bharat Electronics, in collaboration with the Nippon Electronic Company of Japan, has been signed on 20th inst. Under the pact, the Japanese firm will provide technical know-how and other facilities. Three kinds of tape recorders, namely, console, portable and playback will be produced.

India will take part in the *Jashan* Exhibition to be held in the Afghan capital, Kabul, from 23rd August 1961. The Indian trade pavilion at the exhibition will display a wide range of goods which India can supply to the Afghan market, including machinery, engineering and electrical stores, cotton and woollen textiles, silk and rayon goods, handloom textiles, coir manufactures and sports, leather and rubber goods.

The last date for submission of applications for import of garage tools under the U.S. Development Loan Fund Credit has been extended to 10th July 1961. Applications can be sent by established importers of garage tools, State transport authorities and other fleet owners and automobile manufacturers. Licences issued under this loan will be available for import of garage tools of U.S. origin and from U.S. only.

The fourth public sector steel plant to be set up at Bokaro is expected to cost about Rs. 200 crores, of which the foreign exchange component will be Rs. 100 crores. It will have an initial capacity of one million tons. An Indian firm of consulting engineers, Dastur & Co., has been asked to prepare a detailed project report. The foreign exchange requirements will be made available under the Aid-India Consortium programme.

From Abroad

The Government of Cuba has nationalised without compensation 97 bus companies, with effect from 17th inst.

The National Economic Council of Pakistan has raised the second Plan outlay from Rs. 1,900 crores to Rs. 2,300 crores.

Burma is planning to double its present population of 20 million in the next 16 years and has made laws to achieve this end, according to Mr. Tmakin Tin, National Planning Minister.

The U.S., West Germany and the Inter-American Development Bank are to lend Bolivia a sum of $11.35 million for the State-owned mining company COMIBOL.

U.K. exports aggregated £312.5 million (including re-exports) and imports £394.6 million in May 1961. The trade gap was higher at £82.1 million as against the figure of £23.9 million.

The U.S. Development Loan Fund has granted a $5-million loan to the Central Savings and Loan Bank of Chile to help the institution to support a nation-wide system of new private savings and loan associations.

The Pakistan Industrial Development Corporation is exploring the feasibility of starting a new venture for the production of insecticides in East Pakistan with Japanese collaboration. The capital outlay is expected to be Rs. 60 lakhs and the plant will have an annual capacity of 3,600 tons of insecticides.

The Congress of International Architects is to take place in London early next month. The architects will discuss about new materials and techniques and their impact on architecture, in general, and the way steel and concrete, aluminium and glass, asbestos and plastics can transform buildings today, in particular. As a result of the meeting, more prefabricated homes are expected to be introduced.

Nigeria proposes entering into bilateral agreements with several countries to establish scheduled international air services. At present, Nigerian Airways operate only between Nigeria and Ghana. Agreements are expected to be concluded with members of the International Civil Aviation Organisation, and subscribers to the Convention organisation in the U.S.

A trade pact has been concluded between the U.S.S.R. and the Republic of Togo, for the first time, at Lome on 12th inst. Under the agreement, the Soviet Union will export different machines and equipment, building materials, cotton fabrics and other textiles as well as other household and cultural goods. Togo will deliver coffee, cocoa beans, cotton, oil-bearing seeds and other traditional exports.

An International Silk Congress opened at London on the 12th inst. Over 200 delegates from 18 countries, including India, attended the Congress. Chief topics discussed were, *inter alia*, the problems of adapting cocoon and raw silk production to the growing world demand for silk, silk prices, revision of raw-silk classification, new packaging for silk, finishing techniques for silk and misuse of the term "silk".

Civil employment in the U.K. increased by 54,000 to a total of 23.76 million during April, according to estimates published by the Ministry of Labour. Two-thirds of the increase was accounted for by the rise in the number of women in employment. A significant aspect of the latest increase is that employment in the manufacturing industries has increased by 22,000—over half of this increase occurring in the metal, engineering and vehicles group of industries.

PERSONAL

MR. K. D. Malaviya, Union Minister for Oil, Mines and Fuel, left on the 18th inst., on a tour to Italy, France and the U.K.

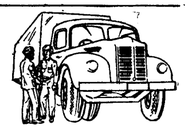
Mr. Subimal Dutt, the new Ambassador to the U.S.S.R., presented, on the 20th inst., his credentials to the President of the Soviet Union.

Mr. M. C. Setalvad, Attorney-General, returned to Bombay on the 18th inst., from Geneva after a six-week tour of Russia and other East European countries.

Major-General Tara Singh Bal, Ambassador of India to Argentina, has been appointed concurrently as Minister of India to Uruguay, with residence in Buenos Aires.

Mr. Pratapsingh S. Vallabhadas, nominee of the Indian National Steamship Owners' Association, and Mr. H. M. Trivedi, General Secretary, Indian National Dock Workers' Federation, have been elected members of the reconstituted National Harbour Board.

My choice of a truck? DODGE of course



Bhaiya, I have been a truck operator long enough to know that there can be no two opinions about the superiority of *Dodge trucks.* For instance take Axles. A Dodge vehicle is fitted with Timken axles now known as Rockwell-Standard which have a world-wide reputation. These axles have great load carrying capacity and are absolutely dependable-which means a great deal to us truck operators.

There are several other superior features besides. Taken together they lead to only one conclusion, namely, that the *Dodge is a great truck.* It is great in hauling power, great in endurance, great in earning capacity. You'll make *Dodge your truck,* too, I am sure.

CEILINGS AND SUGAR FACTORY FARMS

THE Maharashtra Agricultural Lands (Ceiling on Holdings) Act, 1961, under which ceilings are to be imposed on land holdings including the cane farms owned and operated by sugar factories, has just received the Union President's assent. This news from Delhi has thus belied the hope entertained in Deccan sugar factory circles that the President might withhold his assent to this legislation on the ground that it did not provide for exemption to the cane farms of sugar factories from the operation of ceilings in terms of the second Plan's land reform policy. It would appear that neither the Government of India nor the President has been persuaded by arguments recently put forward by the Land Reform Panel's Ceiling Sub-Committee itself, let alone the sugar industry in Maharashtra or elsewhere. This is, indeed, unfortunate, all the more so because the issue is thereby taken to a still higher level of controversy.

The President's action is most surprising, not to say painful. It is tantamount to discrimination against joint-stock sugar companies in Maharashtra *vis-a-vis* their confreres in other States of the Indian Union where sugarcane plantations owned and cultivated by such companies are exempted from the ceiling on land. Such discrimination, as readers are aware, is not permissible under the Indian Constitution. The Andhra land ceiling legislation, for instance, specifically exempts sugarcane plantations. There is also a similar provision in the Mysore Land Ceiling Bill already adopted by the State Legislature and awaiting the President's assent.

It may also be recalled here that the President sent back to the Kerala State Legislature the Land Ceilings Bill sponsored by the then Communist Ministry on the ground that it had not provided for exemption to plantations. A similar reasoning could well have been applied to the Maharashtra Land Ceilings Bill. It passes our comprehension as to how the President chose to follow a different course in the case of Maharashtra. Does it not mean that a measure considered unjust when promoted by Communists becomes just when it is put forward by the Congress Party?

CLOSURE OF COLLIERIES

Several industrial establishments in the country have already curtailed their production programmes because of inadequate supplies of coal. This is not all, for the coal situation is now forging a new link in its vicious circle, with the accumulation of large stocks at the pitheads. This has forced a number of collieries to close down, throwing out of employment a large number of workers. The paradox of relative scarcity of coal in the midst of its apparent abundance must be wholly attributed to the transport bottleneck. The blame for this must rest on the Railway Board which has failed to allot the required minimum number of wagons.

Already, about two dozen collieries in the Jharia and Raniganj areas have stopped working and several others are expected to follow suit. Coal stocks at pitheads are expanding at the rate of half-a-million tons a month, resulting in the virtual freezing of a large amount of capital. A delegation of the coal industry is meeting this week the representatives of the Government of India at New Delhi to apprise them of the present critical situation of the industry and to suggest suitable remedial measures. According to the estimate of the Indian Mining Association and the Indian Mining Federation, the stocks at the pitheads now are of the order of 6 million tons which have blocked nearly Rs. 10 crores of the industry's working capital.

Industries in general and the coal industry in particular look forward to some concrete result from the delegation's representations to the Government of India. Otherwise, at the present rate of wagon movement, the pithead stocks of about 6 million tons cannot be cleared in the foreseeable future. In the month of May, for instance, the average daily availability of wagons was lower at 4,625, which compared unfavourably with 4,804 in April, and the minimum allotment fixed by the Government at 5,030. The number of wagons actually required is at least 6,000 per day. The frequent changes in the system of wagon allotment has only aggravated the situation. The new system, introduced in November last, was once again modified in the beginning of this month. These periodical revisions in allotment procedures, which were introduced without taking the industry into full confidence, have created more difficulties in wagon movement instead of easing the position. It is, however, gratifying to hear from Mr. Kripal Singh, Member, Railway Board, that the authorities were already considering this issue in order to modify the present system consistent with the industry's demand. This move is quite welcome. The effective solution to coal movement cannot, however, be found unless the Government presses into service a larger number of wagons to meet the emergency created by the accumulation of stocks. Otherwise, there will be a downtrend in coal output, causing an overall physical shortage which will do nobody any good. Such a setback will be all the more unfortunate at the very commencement of the third Plan.

FINANCE FOR SMALL INDUSTRIES

The Reserve Bank's latest report on the *Trend and Progress of Banking* has referred to the 'insignificant' financial assistance provided by commercial banks to small-scale industrial units. As on 28th October 1960, the scheduled banks' advances to small-scale units (with assets below Rs. 5 lakhs) amounted to Rs. 35.02 crores or barely 6 per cent of their total advances to industries. The non-scheduled banks provided no more than Rs. 1.73 crores. Of the total credit extended by scheduled banks to small-scale industries, the largest share went to light engineering goods industry, which accounted for Rs. 7.32 crores or about a fifth of the total. Other important recipients were textiles, cotton, woollen, silk and rayon, and vegetable oil crushing and refining industries. According to the latest progress report, issued this week, of the State Bank of India, its scheme of credit facilities to small-scale industries in the country has been responsible for loans aggregating Rs. 8.8 crores to 2,633 units upto the end of March this year. Under the State Bank's scheme, small-scale industrial units enjoying limits up to Rs. 50,000 constituted 84 per cent of the total number of units so assisted.

The Government of India has, of course, been striving to enlarge the supply of institutional credit to small-scale industrial units by granting a degree of protection to the lending institutions against possible losses on such advances. It may be recalled that, for this purpose, the Government, in consultation with the Reserve Bank, formulated a guarantee scheme for bank advances to small-scale industries and brought it into operation last year. Under this scheme, which is meant to encourage commercial banks to lend more freely to small-scale units, losses, if any, arising out of advances granted to small-scale industries, are shared in a predetermined ratio by the Reserve Bank and the lending institution. The administration of the scheme, which came into force on 1st July 1960, has been entrusted to the Reserve Bank and the Bank acts as an agent of the Government of India and, for this purpose, is designated as "Guarantee Organisation." The losses are shared subject to the condition that the maximum amount recoverable against the guarantee in respect of any one advance will not exceed Rs. 1 lakh.

The scheme has been initially introduced in 22 approved districts which were selected on the basis of the relative importance of outstanding advances to small-scale industries and the potentiality for further expansion of such loans in these areas. The geographical coverage of the scheme obviously needs to be extended. But the fact that so far the State Bank of India and its subsidiaries, 49 other scheduled banks, all the State co-operative banks, the State Financial Corporations and the Madras Industrial Investment Corporation Ltd. have been specified as eligible institutions for the grant of facilities under the scheme would show that quite a large sector of the banking structure has been brought within the purview of the guarantee scheme. Even non-specified institutions will be in a position to avail themselves of the facilities, provided a specified credit institution participates in such advances for not less than 25 per cent of the amounts thereof. The extent of assistance provided under the scheme is not substantial, for the Reserve Bank has issued upto March 1961, guarantee certificates in respect of applications covering Rs. 172 lakhs only. Obviously, financing under the scheme, which is less than a year old, has yet to gain momentum.

A DECADE OF COLOMBO PLAN

The last one decade has been of momentous significance in the economic history of the Asian continent. For it was in this period that Asia began its valiant bid to fight the morass of poverty and pestilence in a concerted and organised manner and on a scale never before seen in the recorded history of this region. Today, all countries of the region have long-term development programmes of one kind or another. Ten years ago, the idea seemed novel, unorthodox and beyond the comprehension of the general public in several countries. These countries have now launched development programmes for the exploitation of their rich potential resources which have been lying dormant for centuries. They are virtually on the threshold of an industrial revolution. The Colombo Plan, the decennary of which will be celebrated on 1st July 1961, in all the 21 member-countries, including India, stands out as no mean contributory factor in expediting this economic transformation. The balance-sheet of the Colombo Plan for the last ten years may not show results as spectacular or as impressive as those of the Marshall Plan in the post-war decade in Western Europe. It must, however, be admitted that, but for the economic stimuli which the Colombo Plan sought to provide in this region, at least some of the countries would have probably continued to be left out from the main stream of industrialisation.

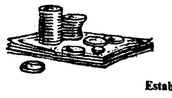
It was at the Commonwealth Prime Ministers' Conference held at Colombo in January 1950 that the suggestion for the creation of Colombo Plan was made for the first time. Subsequently, the Foreign Ministers gathered at Sydney called on the Asian countries to prepare six-year development programmes, beginning from July 1951, to provide a framework within which capital and technical assistance could be facilitated. This heralded the eventual evolution of the Colombo Plan for co-operative economic development in South and South-East Asia. Although the primary responsibility for development under the Colombo Plan has rested with the local peoples themselves, the assistance has come largely from member-countries situated outside South and South-East Asia—the U.K., the U.S., Australia, Canada, Japan and New Zealand. Since the inception of the Plan, it is estimated that all the countries in the region have spent about £9,500 million for development. Of this, the capital assistance given by the donor countries aggregated £2,250 million, or about 25 per cent of the total investment.

Banking Increases National Wealth

P. N. B. Serves the Nation's Industry, Agriculture and Commerce.

BANKING SERVICE OF EVERY DESCRIPTION OFFERED.

THE PUNJAB NATIONAL BANK LTD.



Established 1895

Head Office : New Delhi.

No less significant has been the technical assistance, without which development programmes would not have easily got under way. Since 1950, over 25,000 Asians have been trained and the services of nearly 12,000 experts have been provided to countries of the region, jointly by the members of the Colombo Plan and the agencies of the United Nations. The total expenditure borne by countries providing training or supplying experts under the Colombo Plan amounted to £46.4 million upto the end of June 1960. Apart from the developed countries, the members of the region also provided training facilities to foreigners. India, for instance, trained 1,279 persons from neighbouring countries. Of the eleven countries which provided training facilities to the Colombo Plan partners in 1959-60, India ranks fifth, after the U.S., the U.K., Australia and Canada. Of course, the contribution of the Colombo Plan defies precise calculation, since its intangible benefits to this region in terms of stimulating the economic growth have had a catalytic significance. Surely the statistics do not tell the whole story.

RAYON INDUSTRY

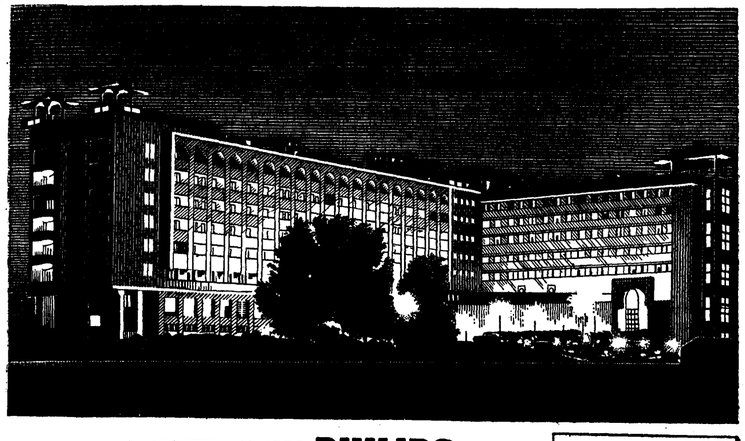
The progress of the rayon industry since its establishment in India about a decade ago has been remarkably impressive, notwithstanding the competition from substitutable fibres and also the increasing burden of Government levies. Although in the initial stages the industry was the preserve of a few pioneers such as the Travancore Rayons, National Rayons and Gwalior Rayons, a number of new units have come into this field of late. Consequently, the output of rayon yarn spun, which stood at about 15 million lbs. in 1955 and only 5 million lbs. in 1951, rose to nearly 46 million lbs. in 1960. Practically the whole of the increase is accounted for by viscose yarn, which touched a peak of 41 million lbs. in 1960, as compared with 13 million lbs. in 1955 and 5 million lbs. in 1951. The increase in the output of acetate yarn so far has, however, been relatively moderate. Thanks to the increase in rayon yarn production, the output of rayon fabrics in the country also rose from 176 million yards in 1951 to 243 million yards in 1955 and further to 414 million yards in 1960. Several schemes for the development and expansion of the rayon industry are under way. It is expected that the rayon and staple fibre industries will have an installed capacity of 140 million lbs. by 1962-63. The installed capacity is proposed to be stepped up to 215 million lbs. by the end of the third Plan. Also, considerable attention is to be devoted to the phasing of investments in the industry, preference being given to the expansion of wood-pulp manufacture over additional expansion in the output of synthetic filament.

The emphasis on the development of domestic sources of pulp has been laid not a day too soon. The industry has now reached a stage at which further dependence on import of this essential raw material will only hamper its progress, particularly in view of the present restrictive import policy. It is, therefore, gratifying to learn that the National Rayon Corporation is finalising the arrangements for putting up a rayon grade pulp plant, with a daily capacity of 100 tons at Nanjangud, Mysore. Mr. Kasturbhai Lalbhai, Chairman of the N.R.C., disclosed at the annual meeting of the Company in Bombay last week that efforts were being made to explore possibilities of raising a dollar loan to cover the foreign exchange needs of the plant on deferred payment terms and to obtain technical know-how from the U.S. Mr. R. J. Chinai, a Director of the Company, had already gone to the U.S. for expediting the matter. The proposed plant will utilise bamboo and other soft-woods in the adjoining forests in Nanjangud. In the meantime, Travancore Rayons, too, is going ahead with another scheme to manufacture rayon grade pulp out of cotton linters and blowroom cotton waste. Its plant, which will produce about 10 tons of linter pulp per day, is scheduled to go into production during the latter part of 1962. Gwalior Rayons are also in the field with a larger scheme for producing pulp from bamboo (150 tons a day) in Kerala State. When all these schemes are executed, the rayon industry is bound to become self-reliant, thereby stepping up its output uninterruptedly, improving the quality and also reducing the cost of production.

FERROUS SCRAP PROBLEMS

In a communication just addressed to the Union Ministry of Steel, Mines and Fuel (Department of Iron and Steel), the Indian Merchants' Chamber has welcomed the recent appointment of a committee to consider the various problems connected with iron and steel scrap in the country. The constitution of this Committee, in the opinion of the Chamber, is a step in the right direction. The need has been keenly felt for some time past for a thorough inquiry into the various aspects of the scrap trade and industry and the Chamber itself has all along pleaded for the appointment of a committee with representatives thereon of both trade and industry. But the composition of the Scrap Committee shows that it consists only of officials and there are in it no representatives of trade and industry. The Chamber's plea that some representatives of the scrap trade and industry should be included in the Committee seems to be reasonable in view of certain complications in the barter scrap export policy and of current proposals to encourage greater utilisation of scrap within the country itself. There is, for instance, the issue whether newcomers to the scrap export trade should receive encouragement or not. As things stand, only a meagre quantity of 10,000 tons has been set apart for absolute newcomers under the 1961-62 scrap barters. There is also the issue whether in the case of established exporters the distribution of allotments under the barter export scheme should not be based in the first instance on the actual export performance of the past year. In view of these complex issues, the Government would do well to appoint representatives of the scrap trade and industry on the Scrap Committee. It would not be difficult to do so, for the resolution constituting the Committee has itself provided for the appointment of additional members on the Committee.

The Ashoka Hotel AT NEW DELHI



LIGHTING BY PHILIPS

Occupying an area of 20 acres, the Ashoka Hotel—the largest project of its kind in India—stands out as another shining example of Philips specialised lighting.

The lighting is so essentially a part of the whole conception that it presents an architectural masterpiece which belies the fact that it is achieved by artificial means.

Philips exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy through maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need —whether it is industrial, commercial or any other specialised application— consult Philips Lighting Service Bureau.*

PHILIPS INDIA LIMITED

ON THE ARENA

By The Archer

A Versatile Minister

NOT to get deflated by failure in persuasion requires lots of guts, and the indefatigable Mr. S. K. Patil has plenty of them. He is reported to have gone to the U.S.A. to sell five lakh tons of sugar but could not get an agreement in Washington. He does not seem to be downhearted nor reticent in his public utterances. He has had talks with Messrs. Dean Rusk, Luther Hodges and Orville Freeman, and "been encouraged by them for the future." He praised the U.S. for the help given to India for the third Plan, and believes that the officials there who heard him speak of the Indian agricultural situation were particularly interested. (Why not? I am sure all of them were seasoned public officials steeped in the polite traditions of conventional conversation.) He gave assurances of a Congress victory in India in the 1962 elections and was certain that not a single seat in Parliament would be given up by Congress to the Communists. (That is the kind of pep talk that cheers people in the U.S.) He thought that Mr. Dean Rusk was keener than himself that Mr. Nehru should meet Mr. Kennedy. On his own initiative and without any instructions from the Indian Government, he had told Mr. Rusk that, if these two great men met, it would be good for everybody. (A hypothetical statement of this type need not have the approval of the Indian Government; it is almost too benedictory to provoke comment.)

Who said that Mr. Patil went to the U.S. to talk only about sugar? It looks as though he was sugary about everything of mutual interest to India and the U.S.

* * * *

Selection Committees For Admission To Professional Colleges

June and July each year are the months when thousands of brilliant teen-agers are disillusioned and driven to frustration by being denied the facility of pursuing their education for fruitful careers for which they are eligible by aptitude, performance and inclination. The beginnings of a sour and anti-social outlook on life are generated in them when they find that, in spite of academic excellence, they are subjected to a fresh evaluation by a selection committee on the basis of, as appears to their young minds, thoroughly irrelevant considerations which are included under the grandiose name of "personality test." The result has been that the young aspirants and their parents spend days and weeks in discovering diverse ways of exerting backdoor pressure on the selectors, and whether they succeed or not, the human effort in terms of calorific content is colossal. All this is due to the fact that (*a*) while aspirants number thousands, the available seats are only a few hundreds, and (*b*) it was found necessary to reserve seats on grounds of backwardness, both communal and regional. It would have saved enormous time, effort, frayed nerves and recriminations if a percentage of the available seats had been reserved for distribution to backward groups, and the rest had been given away on the basis of marks. But, in the attempt to have wider scope for patronage and preferment, the shibboleth of emphasis of extra-curricular activity such as excellence in sports, N.C.C. activity, etc. has gained importance and the selection committees have been allowed to give free play to their subjective prejudices, allergies and antipathies. Brilliant academic performance can be completely neutralised by poor marking in personality tests.

From the figures disclosed by the Madras Minister of Education last year, 62 per cent of candidates admitted to the Engineering Colleges in the State had not secured marks of distinction (75 per cent and more) in the relevant subjects, while 124 candidates who had obtained distinction had been rejected. It has to be so, for, if many mediocre boys have to be provided for, many brilliant ones have to be pushed out. The selection committee might assert that academic brilliance is not all that is needed, but the answer to this is that the marks obtained in examinations are in recognised test conducted on an organised scale, where subjective impressions are not brought into play, and indicate the quality of the candidate's application, hard work, understanding and analysis. On the other hand, in an interview of ten minutes, a brilliant youngster may appear repellent to a member of the selection committee, because he has a close crop or a thick lip or is short and stumpy or has not played hockey or football or cricket; the latter failings may be due to extreme poverty. Yet, he might make an excellent engineer or a first class medical man. He might, and, indeed, in most cases bright youngsters do, develop a distinctively agreeable personality after going through the professional course by the very humility of approach which is imposed on him by the deficiencies in his make-up. There are far fewer cases of a mistake being made on the basis of subjective assessments in "personality tests," and it is wicked and sinful to deny opportunities to bright and hopeful teen-agers by not recognising their academic merit.

The Andhra Government is reported to have given an admirable lead to other States by abolishing the system of selection committees for admission to the various professional colleges. The Government of India has scaled down the exaggerated importance attached by the U.P.S.C. to interviews of candidates to the administrative services and reduced the total of marks allotted for the personality test, as well as abolished the special minimum. The Madras Government appears to be continuing its preference to selection by committees, and will, perhaps, wake up to a realisation of its baneful effects after maximum harm has been done. It seems to have far greater faith in its selection committee members than in its teachers, lecturers, professors and examiners. Indeed, it even kept out the Deans of Medical Colleges from the selection committees formed last year for dealing with admissions to those colleges.

Disturbance To Tranquillity—The Transistor Menace

The Transistor Radio is a lovable little piece and easily portable; it does not pin the listener to a particular spot in his residence and can be switched on in a corner of the garden, in the open terrace, on the dining table or even in the kitchen. But its very versatility has made it a menace to tranquillity, an evil in the hands of inconsiderate users. A few days ago, I had to suffer patiently, for over an hour at the passenger lounge of an airport, the broadcast of raucous film songs played through a transistor radio by the young lady who owned it. She was apparently escaping from boredom in this manner, completely impervious to her surroundings, as though she was in Robinson Crusoe's island. No airport official took notice of this insufferable nuisance, probably due to preoccupation with other matters, or the lady was a person of some importance in the locality. However, it served as an unction to my tormented sensitivity when the lady was told by the air hostess just before emplaning that it was against aircraft rules to keep the transistor alive inside the plane, and the set went inside its case. While on a visit to Ootacamund last month I found a number of these sets being switched on during evenings at the gardens adjoining Raj Bhavan much to the disturbance of the peacefulness of the locality. I was also eye-witness to a very regrettable incident involving an old gentleman who was enjoying a quiet walk on a lonely road late one evening. A vulgar-looking youngster with a transistor radio whose tone control had been set at its highest, suddenly switched it on behind the old man and the loud shouts that came through being part of a radio play, the victim was nearly thrown off his feet in panic, and had to be held by a passer-by to prevent his collapsing.

A transistor radio set is covered by the same kind of wireless receiving licence as is applicable to an electric mains set. I see from the one in my possession that "the premises" where it is permissible to install it is precisely named. Further, the first condition on the reverse of the licence is that "the licence permits the use of the wireless receiving apparatus for private and domestic purposes only and not at any public place." It is obvious, therefore, that persons carrying their transistor sets to places of public resort and switching them on anywhere they please are guilty of breach of the terms of the licence and are liable to be prosecuted. I believe that during the last cricket test matches quite a few among young enthusiasts opened ou their transistor sets inside the pavilions an listened to the commentator as an aid to thei own following of the game in progress. All thi should be stopped, for there is no doubt that th very portability and versatility which is th great virtue of the transistor radio will result i its becoming a veritable menace to peacefu existence in places of public resort, relaxatio and recreation. As a first step, I suggest tha the Postal administration should issue a *com munique* drawing the attention of all owner of radio sets to the precise terms of the licence covering them, and warn them that th transgression of the conditions will result i prosecutions being launched. Thereafter, ther should be a ruthless drive against offenders an the maximum fines imposed. For noise in th modern world is a slow killer, and sudden nois is a quick and sure killer. The transistor radi can be a deadly instrument of destruction, if i is not kept under control.

* * * *

What Is Wrong With Underwriting?

Brief reports in some papers indicate tha Government does not view with favour th practice of institutions like the L.I.C. under writing blocks of shares in new issues. It i surmised that the objection stems from the be lief that these shares are held in the portfolio of the institutions at a discount, after deducting the underwriting commission from the purchas price. So what? How is it wrong for an insti tution to show the value of securities at the actual price paid, even granting that the price has been slightly depressed by taking into account the small amount of underwriting com mission earned?

The main business of the L.I.C. is to in sure lives, and it takes calculated risks of many types in carrying out this business. Is it not competent to take one such calculated risk (comparatively minor in degree) in regard to the investment of its funds after proper scientific assessment of the probabilities and possible trends, by underwriting the shares of a new flotation? Indeed, there can be no alarming imponderables in taking up this responsibility of underwriting, especially in a planned economy such as ours, where considerable examination has already been made by various Government departments for assurance of economic viability and avoidance of dissipation of scarce resources. If, as the Controller of Insurance is reported to have stated underwriting by the L.I.C. is not permissible under the Insurance Act (with which opinion the solicitors of the Corporation have not agreed) the remedy is to change the Act and not to estop the L.I.C. What seems to be going on is the usual L.D.C. technique of finding a difficulty for every possible or desirable solution.

If the L.I.C. takes pains and care, as it avers it does, to examine every new project, and is prepared to hold most of what it underwrites (if it is left holding the baby)—which might happen only in cases of extreme miscalculation—underwriting would appear to be a wise way of going about the business; the commission which it earns is almost money for jam. From the point of view of entrepreneurs who require some assurance of success in flotations, and of investors who attach some importance to the existence of reliable underwriters, also as an indication that the flotation will not be a flop, the L.I.C. and other financial institutions should continue the good work of providing underwriting cover. Let us hope that some theoretical objection will not be brought up against the practice; and, if it is necessary to satisfy accounting proprieties (or income-tax law) by showing the underwriting commission separately as an income, instead of as a deduction from purchase price, the question may be dealt with as a separate issue and a satisfactory solution found.

The International Monetary Fund has entered into a stand-by arrangement that authorises the Government of Ecuador to draw up to $10 million in currencies held by the Fund during the next twelve months. The Ecuadoran Government which has experienced a decline in its foreign reserves during recent months, has adopted a comprehensive programme to improve its international payments position. Governmental activities are to be financed by non-inflationary means, and the volume of bank credit is to be confined to a level compatible with internal and external stability. The role of the free market in Ecuador's exchange system has been reduced with the substitution of official rates of exchange for all trade transactions which formerly took place in that market. The Government plans an early elimination of the bilateral payments arrangements.

REGIONAL DISPARITIES IN ECONOMIC DEVELOPMENT

MEASURES FOR REDUCING THEM

From Our Special Correspondent

NEW DELHI, *20th June*

DELHI LETTER

REDUCTION in regional disparities and special attention to the backward areas of the country are two aspects of the problem of balanced development of different parts of the country which has been emphasised in successive Five-year Plans. The Draft Outline enumerated the principal measures adopted for giving effect to the main objective; presumably these have been kept in view in the final version of the Plan, though it is not easy to determine whether the various considerations would easily fit into the framework of general priorities. Generally, there has been a tendency to identify regional balance with an equitable dispersal of the big industrial projects, preferably of steel manufacture: and criticisms of the Centre and the Planning Commission have been based on the apparent concentration of some of the heavy industrial projects in certain areas. The Centre in reply has scored the debating point that a State itself is not necessarily a region and that State Governments should be in a position to prepare plans in such a way as to provide for the improvement in living standards of the backward and less developed areas and peoples through community development, irrigation, power, small industries and social services.

Tests

Not much progress has been made in evolving satisfactory tests of balanced growth or even in discovering the proper indicators of disparities which can be remedied. These disparities are an aspect of the wider problem of inequality which is being studied by the Mahalanobis Committee and perhaps it will be able to find acceptable standards of comparison between States and regions in respect of their rates of growth. There is always a danger that differences in social patterns, which accelerate or retard economic growth, will be ignored in an attempt to make out that the relative backwardness of an area is attributable solely to inadequate investment; even if this were true, it would not follow that investment could or should be diverted from an area where it matures quickly to another where the effects would be slow.

"Balanced economic development," stated the Draft Outline, "implies that the pattern of investment is so devised that the potential of each region for development is fully utilised and that disparities in levels of living, particularly in respect of services like education, water-supply and roads are progressively reduced. In an underdeveloped economy, advance towards this objective may be somewhat slow in the early stages of development, because of the urgent need to secure the maximum increase possible in national income in relation to the resources available. However, as resources increase and development programmes are enlarged and diversified, stimuli to growth will begin to operate over a wider area and levels of living will improve in all regions. In this phase of rapid growth of the economy, the question of balanced development has to be viewed from the angle of the relative rate of advance realised in different parts of the country. It must be realised, however, that such a policy can yield results only over a fairly long period."

This represents current thinking on the subject. Preliminary studies on the basis of States' outlay on plans have indicated wide disparities in investment *per capita* and per square mile; Central assistance as a percentage of State outlay seemed to favour certain States (besides Jammu and Kashmir) like Madhya Pradesh, Punjab, Orissa and Assam. (See Table below.) This is not, however, the whole story, since the Centre's own outlay is also spent in one State or another and cannot be excluded in any consideration of the total investment affecting regional balance in growth; nor can investment in the private sector and its geographical distribution be ignored, as is generally done in a purely political approach to the problem by pressure groups seeking to influence the Centre.

Effect on Costs

A new factor in the situation so far as new industries are concerned is the possible effect of a wide dispersal in their location on the cost structure and hence on future exports of manufactures. Two factors which have favoured a wide dispersal are (1) the disapproval of industrial empires and concentration of wealth and means of production in big business houses as part of Socialist policy; and (ii) the desire to avoid excessive urbanisation and overcrowding which give rise to social tensions. On the other hand, the need to economise capital on new investment, especially on the foreign exchange portion of it, has increasingly compelled a preference for expansion of existing units before new units are set up and for fuller utilisation of existing industrial capacity before expansions are sanctioned. Thus there will be a very limited field for manœuvre in the third Plan in the matter of industrial location; industries using large quantities of coal may continue to be located in the coal belt, because of the transport shortage, owing to the limited allocation for railways in the third Plan.

There is better realisation now that electric power should be developed in areas lacking coal before industry can be attracted on a large-scale. Even hydel sources are not always readily available, as in Madras. An additional allocation of Rs. 25 crores for new railway lines in the South is a belated recognition of existing deficiencies in the transport system in that region; judged by the delays in electrification schemes in the past, it may be doubted whether anything will be heard again about these new lines until the approach of the general election of 1967.

Role of States

State Governments usually throw the entire blame for regional disparities on the Centre and do not realise the extent to which their own sins of omission and commission have contributed to lower rates of growth. It is possible to overcome the deficiencies of railway transport by permitting unfettered development of road transport for which the initiative rests entirely with States. Even in the case of power, the Government of the Punjab has realised and Madras seems to be waking up to the fact that factory owners may be encouraged and assisted to have their own schemes for power generation to supplement those of the public sector. Finally, the spectacular growth of small industries in the Punjab and Madras has opened the eyes of other State Governments to the employment possibilities if technical training institutes and industrial estates can be set up instead of grandiose projects which take long to build and several years to commence production.

For these reasons, the outlook for a balanced development may be considered encouraging in spite of the emphasis on expansion of existing units, large-scale and multishift production and location on the basis of minimum demands on transport. It is now accepted as the Central Government's policy that where the advantages of two sites are nearly equal, the choice for locating an industry will be in favour of the more backward area. Mr. Gulzarilal Nanda, Minister for Planning, claimed some time ago that the allocations to States of their total outlay under the third Plan (and of Central assistance) had in fact taken into account various criteria of disparities in income, agricultural production and industry, employment, availability of facilities like roads, schools and hospitals. The States had been weighted and ranked according to these aspects of development and special factors like the percentage of scheduled castes and tribes had also been taken into consideration.

Although there have been suggestions for earmarking special funds for backward areas—on the example of the provision for the Southern regions of Italy—a practical difficulty arises as to who should administer them, the Centre or the States. Even if the latter are entrusted with the responsibility, they have been reluctant to accept the condition that, once earmarked, the funds should not be diverted for other purposes.

Private Sector Projects

Diversion is also being prevented in the private sector of licensed project from one State to another. A committee set up by the Union Ministry of Industry and Commerce has recommended against change of location after a licence is granted. It is now reported that the reallocation of spindle capacity which has remained unutilised, will be within the State to which it was originally sanctioned, unless the State Government permits the contrary. This may not always be conducive to speedy development but the rule recognises the validity of State boundaries (more than either national or regional considerations) when licences are issued on the basis of correcting regional disparities or of industrialising a backward region. Where a change of location is permitted in such cases, the Committee recommends that the State Government or any other party whose application is refused may revive an application.

These are the safeguards provided in the interests of maintaining the industrial balance in the Plan, but, as events have proved, the more crucial factors in developing backward areas may be power, transport and small industry, besides agricultural development.

A point considered in this context of regional balance is the possibility of transfers of population to sparsely populated areas. Mr. Nanda, however, recently said that "the worst enemy of movement was the politician"; if the problems of language that arise as a result of such movement are dealt with in Assamese fashion, tensions may increase. Even now the big public sector industrial projects are attracting a composite population and local politicians have been busy setting mischief afoot. But that is not a ground for stopping the process of bringing together various linguistic groups and paving the way for unity.

There is a conflict between the short- and the long-term considerations in tackling this problem of balanced development and, as in other matters, immediate advantages are likely to prove decisive.

State Plan Allocations and Central Assistance

* *Note :—Per capita* figures are based on earlier figures of population. (For Gujarat and Maharashtra, second Plan figures relate to composite State.)

Japan's overseas investments as at the end of 1960 amounted to $790 million, according to the Finance Ministry's announcement. Of this $202 million was by way of investment in International financing organs, $248 million represented direct investments and $340 million deferred payment credits.

AMERICAN LETTER

HEAVY DEFICIT FINANCING EXPECTED

TEN PER CENT OF POPULATION LIVES IN DEPRESSED AREAS

From Our Special Correspondent

NEW YORK, *17th June*

THE economic news is better. Business activity has been moving up on a broader front than expected. But there is gloominess in informed quarters about two major factors.

While President Kennedy's talks with President Charles de Gaulle of France, Chairman Khrushchev of the Soviet Union and Prime Minister Macmillan of Great Britain has had no noticeable effect on business developments, there is a feeling that the West is on the defensive. That is one source of misgiving.

The second is President Kennedy's spending programme. His blueprints call for expenditures of $18,000 million more than under the previous Administration and Budget officials now predict a Federal deficit of $5,600 million. In other words, the Eisenhower Budget submitted to Congress in January envisaging a Budget surplus has been offset completely and overturned.

Inflation Ahead?

This, of course, means deficit financing. Even though there are now official promises that this will be done without increasing the money supply to a dangerous extent, anyone in his or her right mind must conclude that inflation—unpredictable in magnitude at this time—is unavoidable.

Also, the President's tax revision proposals have come under severe criticism. Opposition stems from thoughts that, under the guise of plugging loopholes, some of Mr. Kennedy's suggestions will not create incentives for expansion; on the contrary, they would tend to stifle them. This is held to be true particularly by the request that income from U.S. subsidiaries abroad, whether or not remitted and distributed, be taxed.

The deterioration in international balance of payments position has been stemmed somewhat. It was achieved by close co-operation among the major central banks. West Germany reduced its interest rates and Holland reopened its capital markets to limited foreign issues.

Since the revaluation of some European currencies, sterling has been under heavy pressure and Britain is seeking more flexible fiscal policies. Foreign investment in U.S. corporate securities has been increasing. It reflects renewed confidence in the dollar following the President's statement that there would be no increase in the price of gold. The U.S. monetary position was also helped by prepayments of foreign central banks on post-war debts to the United States.

Gold Stocks Steady

Thus, U.S. gold stocks have remained relatively unchanged in the last four months. They now stand at about $17,400 million, off nearly $2,000 million from a year ago.

Professional forecasters of the Treasury and the Federal Reserve Board say now that the total national output of goods and services would reach an annual rate of more than $530,000 million in the first quarter. Individual estimates ranged from $525,000 to $540,000 million. This estimate compares with a first quarter annual rate of just under $500.000 million and the corresponding rate for the current quarter is expected to be $510,000 million.

Hopes for substantially higher outlays for business modernisation and expansion did not materialise. Capital spending for the year, as a whole, is now estimated at $34,600 million, off $110 million from earlier expectations three months ago. This would be about 3 per cent lower than the 1960 figure of nearly $35,700 million. Personal income is now about $410,300 million, as against an annual rate of $401.900 million 12 months previously.

The increases in the gross national product, in incomes and so on, were buttressed by a boost in Government spending. In accordance with the President's proposals in his special message to Congress, Washington expenditures are expected to rise soon to even higher levels than foreseen previously. The chain reaction should include stimulation of consumer buying, owing to rising personal incomes.

Heretofore, and with a few local exceptions, there are no indications of a strong upsurge in consumer demand. This is borne out by both the Federal Reserve survey of consumer buying intentions and by a National Industrial Conference Board poll.

Building and construction activity was higher in the first five months than in 1960. In analysing these figures, it turns out, however, that public building rose 12 per cent, while private outlays declined 3 per cent. It was the Governments on the various levels which provided the stimulus, not private enterprise.

Seven Per Cent Jobless

By the same token, the only area of non-farm employment which has shown steady gains in the last six months was the State and Local Government sector. Unemployment continues to be of concern. Despite improvement, the jobless figure has stayed consistently at about 7 per cent of the labour force with no change in sight.

The Committee for Economic Development, in an independent study, says that 17 million Americans, or nearly 10 per cent of the population, now live in areas of chronic unemployment. Retraining and relocation measures are now under consideration at Washington which would be designed to aid workers laid off when industries left their communities, or when workers were replaced by automation, spurred by excessive demands by organised labour. It means greater Government spending and a further step toward socialisation.

United Nations News

Word from Washington that International Bank for Reconstruction and Development, through a consortium of Governments and institutions, have agreed to undertake commitments of aid to India was well received at the U.N. The World Bank, which is an affiliate of the U.N., reported the consortium was encouraged by the economic progress made by India and aid of more than $2,000 million was subscribed for the third Five-year Plan.

The four largest contributors were the U.S., the World Bank and the International Development Association, West Germany and the U.K. in that order. In addition, the U.S. has agreed to make available surplus commodities worth about $1,300 million. Canada will also send grants of wheat.

Another meeting of the consortium is scheduled for the autumn of this year. Members will then consider India's financial requirements for the last three years of the current plan.

There is a good deal of discussion, too, at the U.N. over President Kennedy's brain-child, the U.S. Peace Corps. It is headed by his brother-in-law, Mr. Robert Sargent Shriver, Jr. Many regard it as wholly superfluous, adding just another overseas agency to those already existing. That feeling is held by many within and without the U.N. Since mostly young people have applied for two-year-hitches abroad, the Corps has been hurt by the assumption it is a sort of children's brigade. There was a U.N. debate scheduled on the Peace Corps but it has not yet come to pass.

So far, nearly 10.000 questionnaires have been received from hopeful applicants. More than 60 volunteers will be picked for work in Colombia and 30 for assignments in Tanganyika. They will arrive some time in September. Contracts with other countries are being negotiated.—*All Rights Reserved.*

(*Concluded from next column*)

"is not whether to agree to some arrangements immediately, but whether to enter a negotiation."

All this, on the part of the Prime Minister, is very clear. Why then the sharp divisions within the parties which must in the end crystallise out into a Conservative Government wanting unity with Europe and a Labour Government opposed to it? The immediate arguments as they are now emerging will be considered in Your Correspondent's letter next week.—*All Rights Reserved.*

U.K. AND COMMON MARKET

TIME TO DECIDE

(*From Our Own Correspondent*)

LONDON, *16th June*

LONDON LETTER

BECAUSE both parties in the House of Commons have for some time felt that the Government had made up its mind on the matter of joining the European Community, the Prime Minister's statement earlier this week on the procedures he intended has been generally ignored in favour of a partisan battle on the desirability or not of joining.

The confusion is understandable, in the first place, because of the Government's earlier resistance towards the Common Market culminating in its setting up of the rival European Free Trade Association. Only last week the Minister of State, Board of Trade, spoke to the International E.F.T.A. Action Committee outlining the work of the Association in its first year, and indicating the Government's attitude towards its relations with the E.F.T.A. countries. There was an inevitable picture of the Government bolstering up the E.F.T.A., on the one hand, and edging its way into the Common Market, on the other.

The E.F.T.A. does mean something in the eyes of the Government. In the first year, tariffs between the member-countries had been reduced by one-fifth, and on 1st July there will be a further 10 per cent reduction, making a total reduction of 30 per cent to date. The Association is not intended to develop closer political ties between the countries, but a Consultative Committee of it has been set up "to provide contacts with personalities representative of opinion in the main sectors of economic life, including labour, in the member-States." . . . the "Committee will constitute a valuable forum for periodical exchanges of views between the spokesmen of the governmental Council and the spokesmen of business and trade union circles assembled from all the seven E.F.T.A. countries."

The Minister then declared that the Government regarded the question of economic division or unity one of the most serious issues facing Western Europe. But he went on to say that the bilateral exploratory talks which have been held recently with individual countries of the Common Market are intended to seek a basis for negotiation to remove the danger of a divided Europe. The solution sought would not have to jeopardise the interests of any country or group of countries—surely a difficult enough objective! The Minister was understating the problem when he said: "Such a solution is bound to be complicated." For what it is worth, the Minister's summary of the Government's objective was stated as "a multilateral European system which will strengthen both the economic and political unity of Western Europe." What this is or what this means is anyone's guess.

Mr. Macmillan's Statement

But, when the Prime Minister made his statement this week, his words were transformed in the ears of the hearers into a declaration of intent to join the Common Market. All he was trying to do was to set down a plan of approach to the problem. But tempers are now so high on both sides of the House—and both sides are divided—that his statement has been done less than justice. Indeed, the unfortunate Premier had to say three times in the course of the discussion what he was trying to do. His own words are these: "All I am trying to do is to get the right machinery to consider the position with our partners in the Commonwealth, in Europe and in E.F.T.A., and then, having regard to the interests of British agriculture and industry, to decide whether or not it was in Britain's interests to see whether we could find a basis on which to have this unity with Europe."

Three senior Ministers are, in the near future, visiting Commonwealth capitals to consult. Economic and Finance Ministers will necessarily attend the meeting of the International Bank for Reconstruction and Development and this will provide a forum for a further exchange of views between the Commonwealth countries.

Finally, at the end of this month, there will be a meeting with the E.F.T.A. Ministers. The Premier sees all these discussions as a preliminary to any further discussions with the Six. "What we are really discussing," he said,

(*Continued in previous column*)

TREND AND PROGRESS OF BANKING

RESERVE BANK STRESSES THE NEED TO STRENGTHEN CAPITAL STRUCTURE

DURING the next quinquennium, the banking system will be called upon to meet the challenge posed by the third Plan, the investment target of which is about 50 per cent higher than that of the second Plan. The volume of work to be handled by the banking system, according to all available indications, might well be doubled in the third Plan period. In view of the impending increase in responsibilities, the Reserve Bank of India has, in its latest report on *Trend and Progress of Banking in India during* 1960, rightly stressed the need for expanding and strengthening the banking structure without in any way impairing its quality. First and foremost, banks will have to intensify their efforts to gather more deposits which would involve the acceleration of the expansion of branches. But, as the developments in the latter part of 1960 indicated some loss of confidence among depositors, the report emphasises that it is important to take all possible steps to ensure the fullest confidence of depositors in the soundness of the banking system.

Concrete Suggestions

For purposes of imparting strength to the banking structure, the Reserve Bank has made a number of concrete suggestions. The report points out that, during the last decade, the capital funds (paid-up capital and reserves) of commercial banks have not increased though there has been an expansion in their profits. The ratio of scheduled banks' own funds to deposits has steadily declined from 9 per cent in 1950 to 4 per cent in 1960. The Reserve Bank is, therefore, of the view that banks should take steps to build up their capital funds and inner reserves from their current net profits, besides raising funds whenever possible through fresh issues of capital. Other concrete steps recommended by the report for securing a sound growth of the banking system are: (1) prevention of a further decline in the liquidity ratio and in appropriate cases strengthening their liquidity and (2) extension of banking facilities to over 1,400 townships which are today without such facilities. The Reserve Bank is confident that, as economic development proceeds there will be immense scope for branch banking.

Besides these steps, the Reserve Bank has called upon the banks to extend their functions to cater to the varying needs of the business community. It has welcomed the new trend among banks, namely, underwriting of new issues, especially preference shares and debentures, but has cautioned them to adhere to certain safeguards and limits in the discharge of this function. It has also approved of the banks being "instrumental in the conclusion of deferred payments agreements" between industrial houses in India and foreign firms. It is of the view that banks can render a variety of profitable services to the community which they are not doing at present. Giving some specific instances, it says:

"The small man in the country does not enjoy adequate facilities for remittance and payments at reasonable cost. Banks may, therefore, consider the scope for a credit transfer scheme, even on a limited basis, on the lines of that introduced in the United Kingdom recently. Such a scheme, apart from ensuring facilities of remittance at low cost to the public, would also open up avenues of contacts between the banks on the one hand and the members of the public who have no bank accounts on the other."

Training of Personnel

The Reserve Bank envisages that in order to cope with the large increase in banking business in the third Plan period, a variety of problems will have to be tackled by banks, especially in the spheres of management, personnel, accommodation, mechanisation, etc. The inevitable growth in the scale of operations, its report states, renders necessary the adoption of modern techniques of management such as further specialisation of functions, their effective co-ordination, and some decentralisation of power among the bigger branch units. Regarding the training of personnel, the report admits that the assistance provided by the Reserve Bank through its Bankers' Training College is inadequate. Consequently, it has emphasised the need for the banks themselves to undertake the responsibilities in this behalf and observes:

"With the exception of a few, many big banks do not seem to be devoting the requisite attention to the training of their staff. Banks would have to accord high priority to the establishment of their own institutions for imparting training to members of different categories of staff so as to combine their plans for expansion with steps to improve their staff efficiency. The possibility of having joint training arrangements for a group of banks might also usefully be explored."

Trends in 1960

Reviewing the trends in 1960 which broadly corresponds to the last year of the second Plan, the report states that the year was eventful for Indian banking. It was characterised by a record expansion of bank credit, reflecting the rapid expansion of industrial and agricultural output. The past year, as readers are aware, witnessed a notable acceleration in the pace of industrial growth. Agricultural production, too, recorded a substantial improvement in the latter half of the year. Thanks to the larger overall investment in the economy, the pressure of aggregate demand for goods and services was more intense, causing a further rise in the wholesale price index, mainly in the non-food groups. The stock markets were in a buoyant mood. But the balance of payments position showed deterioration, involving a loss of exchange reserves, as against an accretion in 1959. Consequently, monetary policy was saddled with heavier responsibilities than usual.

The aforesaid trends in the economy were clearly reflected in the sphere of banking. While there was some setback to the rate of growth of bank deposits, there was an exceptionally large rise in bank credit. In fact, the most important single factor contributing to the rise in money supply during the year was credit expansion to the private sector which accounted for Rs. 246 crores, or more than one-third of the increase during the second Plan period as a whole. The rise in bank credit to Government was much less important, accounting as it did for Rs. 43 crores. "This was in marked contrast to the position in the previous years when Government demands on the banking sector exceeded those of the private sector. In 1959, the expansion of bank credit to Government was Rs. 247 crores, as compared with the rise of Rs. 129 crores in bank credit to the private sector. Monetary expansion was to some extent restrained by the fall of Rs. 68 crores in foreign exchange reserve to Rs. 319 crores at the end of 1960. In 1959, the rise in foreign exchange reserves had been a contributory factor to the increase in money supply. In 1960 there was also a slight rise in the rate of turnover of bank money. The annual overall rate of turnover of bank money increased from 17.4 in 1959 to 17.8 in 1960."

The table in column I bottom gives an idea of the changes in the assets and liabilities of all Scheduled banks during the last five years. It will be evident from it that the rate of growth of deposits in 1960 was significantly smaller whereas credit expansion was substantially heavier than in 1959. Consequently, the banks had to reduce their investments to a considerable extent. Reliance on the Reserve Bank was also comparatively greater than in the previous year.

Slow Growth of Deposits

The tempo of the growth of deposits was clearly slow during 1960. The aggregate deposits of commercial banks recorded a rise of only Rs. 39 crores (2.2 per cent) as Rs. 1,855 crores as compared with a rise of Rs. 253 crores (16.2 per cent) and Rs. 216 crores (16 per cent) in 1959 and 1958, respectively. The Reserve Bank authorities are aware that comparison with the earlier years would not be valid because of the change in procedure for banking the P.L. 480 funds. A factor responsible for the slow growth of deposits, according to the report, was the small order of deficit financing in 1960 than in the previous year. Another was the widening of the balance of payments gap and the net sale of sterling during 1960 as compared with net purchases in 1959. A third factor was the setback to public confidence following the closure of two scheduled banks which led to a short-lived run on some banks. It is quite likely that a part of such withdrawals found their way to postal savings deposit accounts, which showed a marked rise during the period. A fourth factor responsible for the slow growth of deposits was the high rates of interest outside the banking sector which had induced some persons with surplus balances to resort to direct financing, on a contractual basis of some transactions in city markets. Finally, a few industrial companies offered high rates of interest to attract deposits directly from the public. The Reserve Bank analysis shows that the number of new deposit accounts, however, increased by 400,000 or about 7 per cent to 5,800,000. The largest absolute increase in deposits by type of ownership was recorded in personal deposits. Business deposits of time and demand nature declined and so also Government and quasi-Government deposits.

On the subject of the growth of banking habit, the Reserve Bank asserts that a good deal yet remains to be done from the point of view of raising resources for the banking system and the inculcation of the banking habit among larger section of the people. The report observes:

"In the last year of the second Five-year Plan credit demands on the banking system outstripped the rate of deposit growth. With the possibility of a sharper rise in the credit requirements of industry and trade and other sectors during the third Plan period, the paramount need for a large and more intensive national effort at deposit mobilisation cannot be overemphasised."

Reliance on Reserve Bank

The strain on the resources of the banks was reflected in the larger borrowings of scheduled

A VERSATILE SYNTHETIC FIBRE

GROWING INDUSTRIAL USES OF NYLON

NYLON, which is made basically from coal, air and water and which has no counterpart in nature, has established its reputation as one of the most remarkable and versatile synthetic fibres produced by man. World production of nylon yarn last year, according to one estimate, was as much as 800 million lbs., equivalent to nearly half of India's output of cotton yarn. The greater part of the output of nylon yarn was consumed by the world's clothing industries for articles ranging from women's stockings to lingerie, shirts, socks, knitwear and household textiles. The rest of the output was used for a variety of industrial purposes such as ropes, tyre cord, coated fabrics, nets, and conveyor belting. These industrial uses of nylon have been rendered possible by the special characteristics that this synthetic fibre possesses. The peculiar properties of nylon are strength and elasticity (which give it very great powers of energy absorption), high flex strength, outstanding abrasion resistance, good wet strength, complete immunity to rotting, good resistance to chemical attack, and so on.

It is these properties which have enabled the manufacturers to use nylon for producing articles which reduce operating costs, improve efficiency and increase production. For instance, tensile strength and energy absorption have been utilised to produce drop forge belting which lasts upwards of three times as long as other types altogether the cost is no greater. Apart from the direct saving, efficiency is improved because drop forges are put out of commission less frequently for belt changes.

Great strength is also a vital asset for conveyor belting. Belting containing nylon is now used extensively in British coal mines. Apart from lasting longer, it is so strong that it is sometimes possible to reduce the number of transfer points so that capital expenditure on new installations is less.

Besides being useful for making things stronger and more durable, nylon's great strength can also be used in other ways. For example, it can reduce weight, bulk and thickness without sacrificing strength. Nylon rope weighs only half as much as manila rope of equivalent strength. This is useful in many ways and makes handling much easier.

Nylon gill nets provide a striking example of the sometimes surprising advantages to be gained by reducing thickness. Because the twine is so fine it offers little resistance and is almost invisible in water with the result that a nylon net catches two to three times as many fish as a natural fibre net. This is the main reason why nylon is now used for these nets almost everywhere in the world.

Nylon fabrics with waterproof coatings of plastic or synthetic rubber are another example of the things that can be achieved by saving weight and bulk. Fabrics of this type are used for a huge variety of purposes from protective clothing to inflatable draft and protective sheets. Some of them are completely new uses for textiles.

Various Types of Products

In Britain, the use of nylon for various types of industrial products is so widespread that there is scarcely any industry which does not make use of nylon in one form or another. Edible oil refineries use it for filter cloths; food manufacturing industries use it for a variety of articles from protective clothing to dough provers; papermakers use it for the huge felts which carry the "web" through the machines; the textile industry itself uses for articles such as rim and scroll bands. It goes into fire hose, parachutes, safety harness, ventilation ducting, lifting nets, tyres salvage sheets, inflatable dinghies, cure wrapping tape, diaphragms, vee-belts, press covers, laundry bags, aircraft fuel tanks and a host of other things. By lasting longer, improving efficiency and reducing maintenance costs it saves industry many thousands of pounds.

It is stated that there are more than a hundred industrial uses for nylon such as the ones narrated above. Many of these uses are to be exhibited by British Nylon Spinners Ltd., at the Indian Industries Fair which is to be held at Delhi in November next. It is expected that this display will illustrate graphically not only the tremendous scope of nylon but also its special attractions under increasingly competitive world conditions. British Nylon Spinners Ltd., incidentally, is stated to be the world's largest nylon yarn producing firm outside the U.S. It produces only nylon yarn and does not manufacture any of the products using nylon.

Besides the industrial uses for nylon there are also many uses for it in ships and shipping. For instance, today nylon ropes are used extensively not only for ocean towing but also for mooring purposes. Very large quantities of nylon are also used for whaling foregoers, the lines attached to the harpoons fired from the fast, sturdy little whale-catchers. It is stated that nylon lines are so strong that they enable whales to be brought in more rapidly.

The properties which make nylon such a suitable material for ropes make it equally attractive for many other purposes at sea. Among them will be various types of fishing nets. Nylon has already revolutionised the gill net section of the industry because nylon nets catch more fish—the twine is so fine that the fish cannot see it until it is too late—and now it is starting to revolutionise the purse seine section.

Fishing Nets

Very large numbers of British nylon purse seines—they weigh about a ton each—are already being used off Norway. They are proving outstandingly successful because they are so strong that they enable much greater weights of fish to be held safely. Furthermore, the nets are rotproof, so they do not require frequent preservative treatment.

Meanwhile, work is going ahead steadily with the development of various other types of nylon fishing net. Encouraging results are now being achieved with continuous filament nylon herring drift nets despite earlier predictions that it would be unsuitable because it would decapitate the fish. Development work is also going on with nylon trawl nets. Nylon is already used extensively for cod ends because of its long life.

Vessels themselves are now being made from nylon. The most remarkable of these is the "Dracone," a flexible oil-carrying barge which gets its name from the Greek word for "serpent." First conceived at the time of the Suez crisis, it is now being used commercially on a small scale and a new company was formed recently to exploit it throughout the world. Built from immensely tough coated nylon fabric, proofed on the inside with special oil-resistant synthetic rubber, a Dracone is exceeding strongly. During trials one was towed over a single beach and across fishing stakes without damage. Hundred-footers now in use hold about 35 tons; bigger ones, holding nearly 10 times as much, are beginning to go into service.

A craft of a very different nature is an inflatable catamaran made from a strong but lightweight coated nylon fabric. It collapses into a bundle small enough to stow on the roof of an ordinary saloon car and can be made ready for sailing in only 15 minutes. Two sizes are produced. A small one, 9 ft. 6 ins. long, carries three people; a bigger one, 16 ft. long, carries six.

Warships used nylon in several ways. On modern ships there is a mass of complicated equipment that requires protection and on an average frigate, for example, somewhere around 1,800 to 2,000 square yards of fabric is used for protective purposes. Proofed nylon is used extensively for weather screens and protective covers for articles such as boats, liferafts, funnels, hatches, guns, reels and winches. All the bunting aboard a modern warship is now made largely from nylon.

Aboard yachts, nylon is used extensively for spinnakers. As nylon is so strong it is possible to use a very lightweight fabric so that the huge sails catch the merest breath of breeze. They have the further advantage of being completely rotproof.

One of the most unexpected uses for nylon at sea is for sheathing the hulls of wooden boats. The process, which consists basically of bonding nylon fabric to the barewood of the boat, makes the vessel completely watertight and adds years to its life. It is particularly valuable in tropical waters since it protects the boat's hull from attack by shipworm which annually causes damage amounting to thousands of pounds.

A PASSENGER FROM CALCUTTA WRITES:

. . . Just a line to thank you and KLM for looking after us so well prior to our departure from Dum Dum, and during the flight to London. The service on the plane was excellent and the hostess charming . . .

COMMON MARKET AND TEXTILES

INDUSTRY WELL EQUIPPED TO MEET CHALLENGE

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 13*th June*

SO many vague and often unsubstantiated statements are at present being made about the effect of Britain's possible participation in the Common Market project that anything direct and to the point is to be welcomed—and, if this refers to the likely trend of textiles in such an eventuality, so much the better. On this basis, the statement presented to the North-West Regional Board for Industry by Mr. Donald B. Moore, General Secretary of the Textile Institute, was a contribution of some magnitude to this controversy.

Working on the premise that the Common Market is undoubtedly coming, Mr. Moore declared that Britain's textile industry was as well-equipped technologically as any trade in the country to meet the challenge. Clearly an integrated market in Europe would be a two-way traffic, but, in both high-quality goods and all the ranges of mass-produced clothing, Britain ought to be able to meet the challenge, he maintained. "We are strong on know-how, we are strong on quality, we are strong on clothing production and style, we are strong on retail distribution, we are strong on industrial textiles," he said, and added: "Let us not, therefore, be in the slightest bit hesitant in attacking the new markets that are going to open to us."

As the standard of living continued to rise throughout Europe, so the quantity of clothing sold would also rise and that could only bring good to the textile industry. There should be no hesitation in admitting to our colleges European students who could be sent back to their own countries imbued with Britain's outlook, willing and able to use our materials and to work on our machinery.

Out Into the World

Mr. Moore mentioned that he had been surprised how many leaders of the industry had been unable to attend a recent Textile Institute conference because they were abroad. Absentees from a recent meeting of the Association of Heads of Textile Departments of Technical Colleges were in Spain, Switzerland, Italy and Egypt. "All this seems to me to point to a very complete breaking down of the parochialism with which from time to time we have been accused," he commented. Taking the broader aspects of the proposals, the prospect of a home market of 260 million people, which the European Continent would provide, offered far more scope than the present home market of some 52 million people. A united Europe ought to be an enticing prospect, both from the viewpoint of increased productivity and increased trade, Mr. Moore added.

Perhaps the most revolutionary aspect of this project is only gradually impinging on the conscience of those concerned. It establishes far wider boundaries than any modern inhabitant of this country has visualised. Mr. Moore continued: "We shall have to become accustomed to the idea that the boundaries of the land in which we live will now be set somewhere on a line just a little west of Berlin, somewhere upon the borders of Finland and Russia, somewhere on the Adriatic, where Italy faces the Communist state of Albania, or out on the peninsulas of Greece. We must not be afraid to put our money there, if that appears to be the best place to build our factory or to get our raw materials. All we need call upon is the same spirit of adventure that gave us, at one time, the wealth of India, Australia and Africa."

The Chairman's Voice

Company chairmen usually have at least one opportunity during the year of expressing their views in public about trade conditions and prospects. The welter of words lately appearing in print in annual reports on behalf of textile interests provides a good cross-section of opinions and as such is worthy of repetition. The following extracts from such documents perhaps indicate the varying aspects of the outlook and individual reactions to what the future may hold:

"Our great difficulty is in the shortage of weavers. In these days of small families not nearly so many girls are coming into weaving mills. Many occupations are more attractive to girls than weaving, even though the wages are not so high as are paid to weavers. It is important that we use all the labour-saving machinery we can. The cost of automatic looms is anywhere between £500 and £1,000 and to replace 100 looms with automatic may cost in the region of £75,000. We can get a much better return by investing in other industries." (*Mr. Joseph Hollas, Chairman, Hollas Textile Holdings.*)

Plant for Russia

Factories at Oldham, Leeds, Accrington and Keighley will make the spinning machinery, valued at £1,750,000 involved in the £3-million contract for textile plant won in Russia by the Stone-Platt group, it was announced in Manchester. The order—which brings the group's business with Russia over the last seven or eight years to £16 million—is for two complete worsted spinning plants totalling 42,000 spindles, with dyeing and finishing machinery.

A spokesman for the group disclosed that the finishing plant would be made by Mather and Platt, of Manchester. The Stone-Platt group, who had one of the biggest textile stands at the Moscow Trade Fair, have been doing business with Russia for more than 100 years.

President of New Cotton Organisation

Col. J. B. Whitehead, Managing Director of the Lancashire Cotton Corporation, has been elected President of the newly-formed British Spinners' and Doublers' Association, which is to take over, from 1st July, all the functions, with the exception of accident insurance, now performed by the Federation of Master Cotton Spinners' Association Ltd., the Yarn Spinners' Association, the Yarn Doublers' Association and the Rayon Staple Spinners' and Doublers' Association. Mr. Fred Dunkerly and Mr. R. W. Greenhalgh have been elected Vice-Presidents of the Association. Mr. C. Henniker-Heaton has been appointed Director and Mr. W. R. Hanks, Secretary of the new organisation. Trustees will be Viscount Rochdale, Mr. O. L. Jacks, Mr. Philip Lees and Mr. Alan J. Stott. The headquarters and registered office of the Association will be on the fifth floor of the Manchester Royal Exchange.

Sustained Productivity

Despite the gradual reduction in the labour force, which continues to dwindle, the output of the mills in Lancashire and surrounding counties is being well maintained. The April figures, which are reasonable comparable with the previous month because both included part of the Easter holiday, showed no fundamental change from the rate recorded since the beginning of the year. Single yarn output, in particular, has been very constant, the weekly average being 14,210,000 lbs. in January; 14,470,000 lbs. in February; 14,280,000 lbs. in March and 14,330,000 lbs. in April.

The latest returns show an increase of some 30,000 lbs. weekly on the April 1960 level, but Easter intervened in that month last year. A similar trend is apparent in the weaving branch, although the April 1961 average of 37,760,000 yards was the highest output so far this year. This compared with 36,450,000 yards in the same month in 1960. Manpower in spinning and weaving by the end of April had fallen to 182,200, a drop of 2,600 since the end of last year. The comparable figure twelve months previously was 184,910.—*All Rights Reserved.*

The seventh Commonwealth Defence Conference on Clothing and General Stores will be held in London from 23rd June to 12th July 1961. India will be represented at the conference. The object of the conference is to consider and review the progress, in the Commonwealth countries, of the research development, design and inspection of clothing and general stores for all three Services. The conference also provides opportunities for both formal and informal collaboration between the staff engaged on the development and design of clothing and equipment.

ASHOK LEYLAND LIMITED

PROFITABLE USE OF INCREASED CAPITAL

CHAIRMAN, DR. A. RAMASWAMI MUDALIAR, REVIEWS PROGRESS OF EXPANSION PROGRAMME

ADDRESSING the shareholders of Ashok Leyland Limited, at its Twelfth Annual General Meeting held at Madras on 15th June 1961, Dr. A. Ramaswami Mudaliar, Chairman, expressed the confident view that in retrospect 1960 would have proved to be a memorable year for the Company. He gave details of the steps which were taken during the year to ensure that the Company's output would keep pace with the demand for its products. Commenting on the prospects of the Company in the current year, Dr. Ramaswami Mudaliar anticipated that 1961 was likely to be a year of transition from a lower level of production to a higher one.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the twelfth annual general meeting of your Company.

"The Directors' report, audited balance-sheet and profit and loss account for the year ended 31st December 1960 have been circulated to you, and with your permission, I shall take them as read.

"As the balance-sheet and profit and loss account have disclosed to you, 1960 may be considered to have been a reasonably satisfactory year. The ouput of Comet chassis for the year was 43 per cent in excess of that for 1959 and it has, therefore, been possible for your Directors to recommend the same dividend as previously. That is, the increased capital has been as profitably employed as has been the case for some years.

Expansion Programme

"It is probable that in retrospect 1960 will have proved to be a memorable year. Not only has the factory maintained progress with the manufacturing programme while increasing production and sales by an appreciable percentage, but also the foundations have been laid for the expansion of output to which I referred in speeches at the last annual general meeting and at subsequent extraordinary general meetings. It will be appropriate for me to give a brief history of the steps which have been taken during the year to ensure that our output will keep pace with the sales demand. In February, Messrs. S. Markland and D. G. Stokes, Directors of Leyland Motors Ltd., visited the factory and had discussions with your Directors regarding the proposed expansion programme; and arising from these discussions, decisions were taken in the same month to ask your approval to an increase in the authorised capital to Rs. 10 crores. In February also, following representations made at an earlier date to it, the Government of India approved Leyland Motors' share of the Company's capital being increased to 60 per cent. In April, you approved at an extraordinary general meeting the proposal to increase the Company's authorised capital to Rs. 10 crores as a preliminary step towards the ultimate financing of the proposed expansion programme. In this month, your Directors also decided to apply to the Government of India for their approval of a programme to increase the production of Comet chassis to 5,000 per annum and in addition to tool up for an annual production of 1,000 '600' type engines which are used in chassis heavier than the Comet. It was also proposed to add 20 per cent extra productive capacity to provide for the maintenance of vehicles in service. In July, an application was made to the Controller of Capital Issues for consent to the issue of Rs. 172.25 lakhs capital for the provision of buildings and plant and equipment to cover the first phase of the expansion scheme. Following a resolution taken at a Board meeting held in October and the receipt of a Consent Order regarding the proposed new capital issue early in November, you approved at an extraordinary general meeting held at the end of November the issue of Rs. 172.25 lakhs capital of which Rs. 139.10 lakhs was offered to Leyland Motors to bring their shareholding to 60 per cent of the total issued capital of Rs. 497.25 lakhs. Messrs. Leyland Motors took up this offer and this decision will provide the necessary foreign exchange for the purchase of plant and equipment.

"Coincident with the successive steps taken to provide the necessary capital for your Company's expansion, planning commenced in regard to the design and layout of buildings and of machine tools and other equipment to be accommodated in them. A contract was let in April for the steel work for the main building extension which will add 125,000 sq. ft. floor area for additional machine shops, assembly shops, etc. This addition with other building works, including the extension to the canteen, a new training centre and improvements to office accommodation will bring the total covered area to 12.65 acres. A contract for the builder's work for all these new buildings was let in August. The precaution of placing early orders for steel work and other building construction resulted in erection of the new buildings commencing before the year-end. I am pleased to be able to report to you today that such good progress has been made that it will be possible for the installation of plant and machinery in the new shops to commence in the second half of 1961. This fits in with the promised deliveries for machine tools and other equipment which will be shipped progressively from July 1961 onwards.

"At your last annual general meeting, I reported to you that the establishment of a foundry in collaboration with Messrs. Leyland Motors Ltd., in which this Company would have 25 per cent of the capital and Leyland Motors 75 per cent, had been approved by Government and at that time I anticipated full-scale production of castings might commence in the first half of 1961. Certain unavoidable delays occurred and actual delivery dates of major items of equipment have been later than was originally promised. I am pleased to be able to inform you, however, that by the end of this year, Ennore Foundries Ltd. will be in a position to meet all your Company's requirements of iron castings; and progressively from that time onwards, surplus capacity will become available which will be utilised for the production of castings for other manufacturers. Mr. West, Vice-Chairman of Leyland Motors and Chairman of West Yorkshire Foundries Ltd., accompanied by Mr. F. Grimshaw, Leyland Motors Ltd.'s General Works Engineer, visited your factory in November, the principal object of their visit being to acquaint themselves at firsthand with the progress being made with the erection of the foundry. I am sure you will agree with me that we are fortunate to be able to depend on the advice of Mr. West who is acknowledged to be one of the leading authorities on foundry practice.

Excise Duty

"In my speech at the last annual general meeting, I referred to a levy of excise duties which occurred on the 1st March 1960; and I expressed the hope that the incidence of such duties on the development of road transport would be carefully studied and that such a study might lead to the abolition or at least the lowering of these duties. It can only, therefore, be considered most unfortunate that far from lowering excise duties, they have since been increased. The 1961 Finance Bill provided for additional import duties and excise duties which will still further increase the price of materials used in the manufacture of motor vehicles; and will probably necessitate a corresponding increase in the retail price of the Comet chassis. The Finance Minister met a deputation from the Association of Indian Automobile Manufacturers when the latter represented to the Minister the seriousness from the point of view of the industry's welfare of the latest levies. The Minister could not give hope of any reduction in duties.

"During 1960, the Company commenced the marketing of industrial engines. To enter the market for industrial engines entails producing Comet engines additional to those required for use in the Comet chassis. With tooling available, it was not practicable to achieve a very high output and the total sales of industrial engines amounted to 162. Our incursion into this market, however, has demonstrated that there is a good demand for industrial engines with the performance characteristics of the Comet; and that there will be a similar demand for the heavier engines which are about to come into production. It is possible, therefore, to anticipate that as soon as it is practicable to increase the output of engines additional to those required for the Company's own chassis, there will be considerable revenue from the sale of industrial engines.

"For some time now, your Directors have had in mind the importance of export and attempts have been made to secure an entry into overseas markets. These efforts have been to some degree successful and your Company's export business commenced with the sale of 24 Comet chassis to the Ceylon Transport Board during the 1960 year. Efforts to secure export business will be continued because it is not only advantageous from the country's point of view but also from the Company's, as the Government of India provides additional foreign exchange to manufacturers who secure overseas business which can be utilised for the import of materials which are not available from indigenous sources.

Outlook for Future

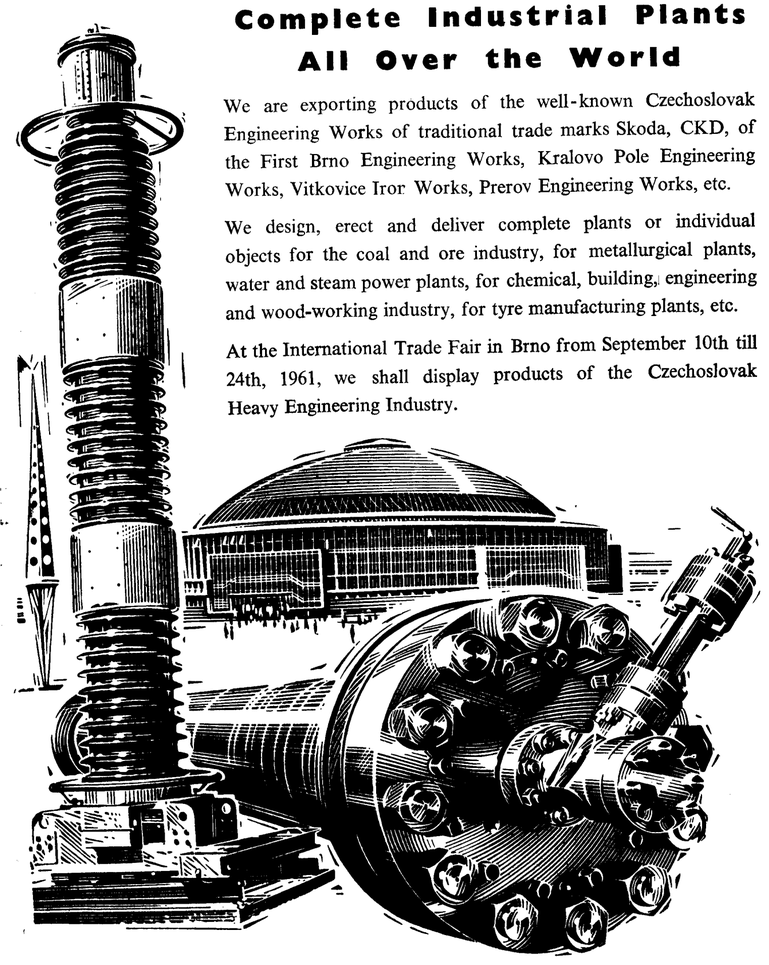
"It is my custom at your annual general meetings to attempt to give some idea of what the future holds as well as to review the results of the previous year. I do not think that apart from one particular issue to which I will refer a little later, 1961 will be a very different to previous years. It will undoubtedly be a difficult year because there will be a high level of expenditure on new buildings and new plant which will not immediately give rise to a corresponding increase in output. Nevertheless, it is hoped that production will again show a substantial increase on the previous year. In addition, I can anticipate with confidence that further progress will be made in the deletion of imported components and materials and, as I have already stated earlier in this speech, castings will be eliminated from materials to be imported. Towards the end of the year, new machine tools and equipment will be received in increasing volume and buildings being ready for its immediate installation, it will come into use without delay. Production, therefore, will be on a rising curve as the 1961 year approaches its end, but the new plant and machinery will not have any really appreciable impact on the output of chassis until 1962. 1961, therefore, is likely to be a period of transition from low level production, with the exclusive use of standard machine tools to higher volume production with an increasing use of special purpose machine tools; and the installation of the latter will commence during the current year.

"I have referred to one difference which will distinguish 1961 from other years. This is the change in the financial year-end from 31st December to 30th September. This decision was made by your Directors in order that the Company might fall in line with our associates, Messrs. Leyland Motors Ltd., whose financial year is from 1st October to 30th September. The current year, therefore, will be of nine months duration from 1st January to 30th September when a balance-sheet and profit and loss account will be prepared for the year ended 30th September 1961. Thereafter, the financial years will run from 1st October to 30th September inclusive.

"I have already referred to visits from Directors of Leyland Motors and I must once again place on record the invaluable advice both with regard to the work of the factory and its expansion which we receive from them. I am sure you will desire me to convey to them and above all to Sir Henry Spurrier our thanks for all the help and guidance received.

"I must also take this opportunity to recognise the enthusiastic help and co-operation that has been extended to your Directors by the officers, staff and workpeople both on the factory side and on the administrative office side I should like to convey our thanks to all of them."

Note: *This does not purport to be a record of the proceedings of the annual general meeting*



Complete Industrial Plants All Over the World

We are exporting products of the well-known Czechoslovak Engineering Works of traditional trade marks Skoda, CKD, of the First Brno Engineering Works, Kralovo Pole Engineering Works, Vitkovice Iror Works, Prerov Engineering Works, etc.

We design, erect and deliver complete plants or individual objects for the coal and ore industry, for metallurgical plants, water and steam power plants, for chemical, building, engineering and wood-working industry, for tyre manufacturing plants, etc.

At the International Trade Fair in Brno from September 10th till 24th, 1961, we shall display products of the Czechoslovak Heavy Engineering Industry.

SUGAR INDUSTRY IN MAHARASHTRA

MR. EDWARDS URGES EXEMPTION OF CANE FARMS FROM LAND CEILING

THE one aspect of sugar industry which this journal has been repeatedly stressing for quite sometime now is that the prices paid by sugar consumers are unconscionably high. The continued high prices must be attributed to a great extent to the heavy incidence of taxes. The various taxes levied by Central and State Governments together account for as much as 35 per cent of the total price of sugar. Even with a substantial reduction in taxes—this is, of course, very doubtful—the prices of sugar cannot be lowered to any significant extent, for the cost of making sugar itself is pretty high, thanks to the high cost of cane and high wages. When such is the position and when the world prices of sugar are considerably lower than in India, how can the country be expected to succeed in its attempts to build up an export market for sugar? Mr. F. Edwards, the retiring President of the Deccan Sugar Factories Association, therefore, did well to warn, in the course of his speech at the twenty-second annual meeting of the Association held at Bombay on Friday last week, that, unless and until steps were taken to bring down the present high cost of sugar production in India by increasing the cane yields per acre and by producing better quality cane with higher sucrose content, the losses on exports would continue to be "gigantic."

In this connection, Mr. Edwards touched on the excellent performance of joint-stock sugar mills in the Deccan region. He was not exaggerating in the least when he declared that, of all the sugar factories in India, the joint-stock units in Maharashtra State alone had succeeded in producing quality sugar at a much lower price than factories which did not grow their own cane. For the following comparative figures relating to cane yields per acre, sugar recovery and tonnage of sugar produced per acre themselves fully substantiate the claim of Mr. Edwards.

	Yield of cane per acre (Tons)	Average percentage recovery of sugar from cane (Per cent.)	Average output of sugar per acre of land (Tons)
Average yield of cane farms held by sugar factories in Maharashtra	54.70	11.46	6.27
Average for the whole of Maharashtra	25.48*	11.46*	2.92
Average for Madras	24.35*	9.01*	2.19
Average for U.P.	11.20*	9.60*	1.08
Average for All India	14.66*	9.84*	1.44

Note:—The table relates to the season 1958-59.
* Figures taken from *Sugar Manual* for 1959 published by the Sugar Technologists' Association of India.

It will be seen from the foregoing statement that the average yield of cane per acre of farms held by sugar factories in Maharashtra is more than twice the average cane yield in the State and nearly four times the average for the whole of India and bears favourable comparison with the results obtained in several other leading sugar producing countries. These impressive results have been achieved only because, as Mr. Edwards rightly pointed out, the joint-stock mills in Maharashtra have under their control large compact cane-growing farms which they have managed very efficiently on the most modern scientific lines. Instead of appreciating this aspect, it is highly deplorable that the State Government should have obstinately included the cane farms attached to sugar mills under the purview of its ideological land ceiling legislation. Mr. Edwards was at pains to highlight, once again, the disquieting consequences of the Maharashtra Government's move to take away from the joint-stock mills their efficiently managed and scientifically cultivated cane farms. The interesting observations he made bear reproduction:

"The facts conclusively prove that, if the cost of growing cane and manufacturing sugar is to be reduced to a minimum, with a view to cutting the losses involved in the export of Indian sugar or reducing the price to the consumer to induce him to use more sugar, the cane farms operated by sugar factories must be exempted from the purview of the land ceiling legislation. But if these cane farms are taken away from sugar factories and handed over to some other agency such as co-operative farming societies, as provided in the Act, it would do irretrievable harm not only to the sugar industry in the State but to the economy of the country as a whole. At present, because the sugar factories have extensive cane farms under their full control, they are able to regulate the planting of the correct varieties of cane so carefully as to time them for cutting when fully ripe, according to their daily requirements throughout the crushing season without loss of sucrose content of the cane. They are able to adjust the planting, cultivating, cutting, and crushing processes to achieve the maximum sugar production at minimum cost.

"The handing over of these cane farms which are being managed very efficiently on the most modern scientific lines to joint farming societies, consisting of a multitude of small cultivators and landless labour, must have a detrimental effect on the productivity of the cane farms, the quality of cane produced, the timely and regular supplies of ripe cane in adequate quantities to the factories, and will inevitably lead to a lower production and higher cost of sugar. It is, therefore, in the national interest that the full control of the farms must be left in the hands of the factories. In fact, this is an absolute necessity, if production and efficiency are to be maintained."

There is no exaggeration whatever in these observations. But it is unfortunate that the hope expressed by Mr. Edwards that the Union President might withhold his assent unless the Act was modified to exempt the cane farms of sugar factories from its purview has been belied within four days of his speech.

The Deccan Sugar Factories Association President also alluded to the report of the Central Wage Board for the sugar industry. The Board, it will be recalled, has fixed wage scales for sugar mill workers after dividing the country into four regions, Central, North, Maharashtra and South. While recommending uniform basic wage scales for the Central, Northern and Southern regions, the Board has prescribed higher basic wage scales for the sugar factories in Maharashtra region. Different rates of dearness allowance have been recommended for the four regions, the rates prescribed for Maharashtra factories being the highest. The main consideration for recommending the highest wages for the Maharashtra region, as stated in the report, is the capacity to pay of the sugar industry in the State. The recommendations of the Board have been accepted by the Government of India and the industry has been asked to implement them.

Mr. Edwards laid particular emphasis on the fact that the situation in so far as the sugar factories in Maharashtra are concerned has radically changed since the Wage Board report was published, as a result of the land ceiling legislation which deprives the mills of their extensive cane farms. In fact, he said, the paying capacity of the sugar factories without their cane farms would be little or no better than that of the mills in the Northern and Central regions. Few would disagree with him when he averred that there was thus no justification for burdening the sugar factories in the State with higher rates of wages than those prescribed for other regions. Despite all this, it is commendable that the Committee of the Association has decided to ask the member-factories to implement the Wage Board's recommendations in deference to the appeal made by the Union Food Minister.

A brief reference to the sugar distribution scheme of the Maharashtra Government was made by Mr. Edwards. Although he admitted that the scheme had worked satisfactorily during the year, he pointed out that, in one or two instances, while releasing the full quota allotted to co-operative factories, the State Government released only a part of the quota to the joint-stock factories keeping the balance in reserve which was released later. The heavy accumulated stocks are already putting a great strain on the financial resources of the joint-stock factories and the State Government's discriminatory treatment in the matter of releases aggravated the situation. Fortunately, however, when the matter was brought to the notice of the State Government, the stocks which were directed to be kept in reserve were released. Surely, there should, as Mr. Edwards urged, be no repetition of such discrimination in future between joint-stock factories and co-operative units when releasing the monthly quotas of sugar.

DEVELOPMENT OF ATOMIC ENERGY IN JAPAN

MANY-SIDED RESEARCH UNDER WAY

WITH the receipt of a small amount of enriched uranium and a reactor through the U.S. Government's "Atoms for Peace" programme in 1954, Japan began the development of atomic energy for peaceful purposes. In order to ensure that atomic energy would always be used for peaceful purposes, a Basic Atomic Energy Law was also instituted. Under this law, atomic reactors in Japan cannot, for any reason, be used for military research. According to *Asahi Evening News*, Japan's true intentions are to follow the policy of atomic development for peaceful uses only.

Great emphasis has been laid in the last few years on the development of atomic energy in various directions. The plans in this connection have particularly emphasised research on different types of reactors. The reason for Japan rushing through her plans in the field of atomic energy is stated to be a certain awareness in that country of the poor condition of conventional energy sources and the relatively high cost of fuel. The expectation of the Japanese Government is that the rapid development of nuclear power will solve the problem of energy sources. That the development of nuclear power on a substantial scale is one of the goals of the Japanese Government could be seen from the details of the long-range programme in this field. The present plans call for nuclear power generation to the tune of 7 million kw. to 9 million kw. in 1980. In the first stage, covering about 10 years from 1960 to 1970, it is planned to generate a million kw. of nuclear power.

It looks as though Japan's goals in respect of atomic energy are not confined to the generation of nuclear power as a supplemental source of energy. In fact, on a wide front, research into practical applications of atomic energy is at present under way in Japan. A number of commercial firms are also in the picture, developing new types of power reactors. This trend is attributed to the realisation that the manufacture of reactors and the processing of fuel elements are inseparable from each other. At least five major industrial groups are, therefore, engaged in the construction of power reactors in Japan. Under the long-range plan, besides the projects for atomic power generation in two stages, there are schemes for building atomic-powered ships. It is estimated that in about 10 years such ships will be developed to the level where they can successfully compete with conventional ships. The first atomic-powered ship, it is expected, will be placed in service by 1967. The experience gained from this undertaking is to be used as the basis for the construction of five to ten atomic-powered commercial vessels by 1970.

Currently Japan has also come to apply radioisotopes in a wide variety of ways in chemistry, engineering, medicine, agriculture and other fields. It is said that the most notable progress has been made in the field of industrial uses of radioisotopes. When domestic production of these isotopes by Japanese reactors—there are at present two reactors in operation, seven under construction and two more under contemplation—gets into full swing, it may be expected that the scope of utilisation of isotopes in industries will become even wider. Practical uses of these isotopes now include non-destructive testing and analyses in manufacturing processes. It is said that isotopes which are employed in thickness and liquid level gauges have revolutionised certain aspects of industry.

First, the penetrating capacity of radioisotope's radioactive rays is being utilised for the checking of the internal non-destructivity of various industrial materials, notably metals. Here the commonest method is to employ some suitable radioisotopes for radiography, that is, radiological detection of the internal conditions of different materials in a way similar to the fluorescent X-ray check on human bodies. It is stated that radioisotope-type radiographical checking costs only one-tenth of the highest powered X-ray examination without the least difference in efficiency. Moreover, radioisotopes have solved the longstanding problem of X-rays being unable to penetrate objects which are too complex in structure or too thick.

The second most important type of utilisation of radioisotopes is in respect of removing static electric charging of various equipment or materials in factories, laboratories and hospitals. This impediment to industrial operations is now being removed through the utilisation of the ionising actions of the radioisotope's radioactive beams. Also, an atomic electric battery, one of the most attractive nuclear innovations for laymen, has been developed on the basis of the principle of conversion of the energy of radioactive rays into electrical energy through the use of some radioisotopes. But it is stated that this innovation is still inadequate for general use because electricity generated by this device is small in wattage.

Thirdly, the chemical actions of radioisotope's radioactive rays have also come to be utilised in a number of ways. So far such utilisation as been confined to the synthetising of plastics. Plastic goods made through this radiation process are credited with numerous marked advantages. For instance, they do not soften in heat, are resistant to chemicals and do not lose elasticity even when exposed to high temperature. In the chemical field, radioisotopes are also used for explaining the structure of chemical reactions and chemical processes.

In view of the wide scope for practical industrial applications of atomic energy, private enterprises in Japan have come to place greater emphasis on further atomic research. As of 1959, the amount invested by them in atomic energy research is 5,000 million yen as compared with only 800 million yen in 1956. This amount is equivalent to about one-sixth of the total amount of funds invested each year by private enterprises for various researches.

It may be relevant to mention in conclusion that during the past six years, Japan has spent as much as 39,000 million yen for the development of atomic energy. Of this amount, the Japanese Government has supplied 24,000 million yen while the various private companies have contributed a total of 15,000 million yen. It would appear from these figures of expenditure on the development of atomic energy and on research in that field that private enterprises in Japan have been very enterprising and resourceful. Obviously private industries in that country do not want to be left behind in the latest processes of technology. Although the development of atomic energy in its early stage is not a profitable undertaking, Japan's industrial enterprises have taken particular interest in this field because their aim is to raise their technical level and to be in the forefront of technical innovation. Such technical innovation is becoming increasingly possible in Japan in view of the wide scope for practical applications of atomic energy in industry.

HALDEN BOILING HEAVY WATER REACTOR

The O.E.E.C. European Nuclear Energy Agency has just published the Second Report to its Steering Committee of the Halden (Norway) Boiling Heavy Water Reactor Project. The reactor, which first went critical in June 1959 and achieved boiling for the first time in October 1960, is at present the only one of its type to have reached this stage. The Report now published covers not only the technical progress achieved during the period under review (1st November 1959 to 31st December 1960) but also gives a full detailed description of the reactor installation and the general administration of the Project, which is one of the European joint undertakings in the field of nuclear energy organised by the O.E.E.C. European Nuclear Energy Agency.

The principal objectives of the Halden Project are to obtain experience in the operation of a boiling heavy water reactor, to gain an understanding of the physics and dynamics which govern its performance, and to develop means of accurate measurement within the reactor core.

The ultimate design specification of the Halden boiling heavy water reactor is 20 MW of heat produced in the primary circuit at a reactor outlet temperature of 250°C., corresponding approximately to 40 kg/cm² pressure. This specification is being approached in two stages, using different reactor cores for each stage.

The fuel charge for the first core consists of 7 tons of natural uranium, in the form of one-inch diameter cylindrical rods canned in aluminium. In addition, enriched uranium oxide "spikes," clad in stainless steel, are used to increase the reactivity. The fuel charge is assembled in the reactor core in the form of a hexagonal lattice.

The fuel charge for the second core, which is to be installed at the end of 1961, will consist of 1.5 per cent enriched uranium oxide in zircaloy cladding.

The core is contained in a mild steel pressure vessel lined with stainless steel. The tank has a curved bottom and a thick flat top lid, made of mild steel. There is access to each individual fuel rod through openings in the top lid.

Sixteen tons of heavy water act as both moderator and coolant. Shrouds around the fuel rods confine the boiling to the annulus between the shrouds and the fuel rod, and improve the general flow pattern in the core. Steam/water mixture passes upwards inside the shroud by natural convection and leaves the shroud at the top. The heavy water steam is taken from the reactor through the lid into a header ring. A steam line connects the header ring to the main heat exchanger and another line returns condensate to the reactor tank by gravity.

The total cost of the plant, including heavy water and the first uranium fuel load, was $3.5 million. The second fuel charge will cost approximately $500,000.

SURVEY OF FOUNDRY MOULDING SANDS

The Council of Scientific and Industrial Research has just published a monograph containing the preliminary results of an extensive survey of foundry moulding sands carried out by the National Metallurgical Laboratory of India. In this publication technical data on the properties of moulding sands, bonding clays and other bonding materials have been made available to the foundry industry in India for the first time.

The monograph gives the chemical, physical and moulding characteristics of more than forty samples of foundry sands taken from all over the country. Recommendations for the utilisation of these sands in moulding for different metals and alloys have also been made, for a significant contemporary development in foundry technology is the realisation of the importance of proper selection and use of foundry sands and moulding materials.

At present, about 80,000 tons of steel castings are made in approximately 1,500 established foundries. More and more heavy quality castings of 100 tons and above are being moulded in the country.

The Canadian House of Commons has announced a series of revisions in the regulations covering the far northern oil and natural gas exploration and development. The revisions provide for lower royalties on production, larger production leases and a reduction in the work requirement to hold leases. The announcement is a sequel to the preparations which are being completed by the oil companies for an active drilling programme in Arctic Islands and Northern territories.

NEW PRODUCTS AND PROCESSES

Pectin From Tamarind Fruit Pulp

THE Central Food Technological Research Institute, Mysore, has developed a process for recovering pectin and tartarates from tamarind fruit pulp. The tamarind pulp is extracted with hot water and the extract obtained by centrifuging the boiled slurry. The extract is concentrated in an evaporator. Pectin is precipitated by adding alcohol to the extract from which tartarates have been previously removed. Major raw material required for the process, namely, tama ind fruit pulp and other raw materials, such as alcohol, potassium carbonate, hydrochloric acid and sulphuric acid are available in India. Plant and machinery required for the process consists of centrifuges, double effect evaporator, filter press, drier, ball mill, vibrating screen, distillation column boiler, wooden vats and storage tanks. Total capital outlay for a plant producing 310 lbs. of Rochelle salt and 50 lbs. of pectin per day is estimated at about Rs. 5 lakhs. Tartaric acid and its salts like potassium sodium tartarate are extensively in use in various food, pharmaceutical and chemical industries. Pectin is used for the manufacture of fruit products like jams, jellies, preserves and marmalades. Indigenous manufacture of tartaric acid, its salts and pectin is expected to effect considerable saving in foreign exchange.

Malted Milk Powder

An improved process for the production of nutritive and palatable malted milk powder and allied products has been developed at the Central Food Technological Research Institute in Mysore. The new process makes use of solid powder such as malt extract and milk powder as base material instead of fresh milk and malt liquor. Production is thus facilitated since the amount of water to be evaporated for preparing the product is reduced. The base materials required in the new process are *ragi*, *jowar*, barley, wheat and milk which are readily available in the country. The total capital outlay for a 300-ton annual capacity plant is estimated at about Rs. 6.85 lakhs. In recent years, a considerable market has been developed for malt products in India. But the demand has been largely met from imports.

Renewable Carbon Paper

A new type of carbon paper that, it is claimed, regenerates itself immediately after it has been used, has now been developed for commercial applications in the U.K. The operation of the carbon paper depends on the fact that it has a porous surface and when the typewriter key is raised after striking a letter, ink from other areas of the sheet flows through the pores and refills the space where the key struck. Its action thus differs from standard types of carbon paper which act by transferring carbon from themselves to the second sheet of paper. Calculations are said to have shown that enough ink can be stored in the sheet for it to automatically regenerate itself for several hundred operations, and in many cases for even longer periods. This is because the actual impact of the keys of the typewriter strike only a relative limited area of surface yet the whole surface of the carbon paper can be filled with ink. At the same time the new paper is said to be competitive in price with current carbon papers while it is expected to be far cheaper to use.

Flaw Testing

A flaw-detection equipment which is designed to detect surface cracks or flaws in ferrous materials has been developed in the U.K. The new system is said to have considerably greater efficiency than previous systems. Its operation depends on the fact that in such materials a magnetic field will be distorted in the neighbourhood of the fault or crack. Although it was originally designed for testing—on a production basis—gas turbine aero engine discs of up to 42 inches diameter with, or without, blading it can also be used to test shafts of up to six inches in diameter and 84 inches long used in other types of plant. It can therefore be used widely in the mechanical engineering industry where ferrous metals are used. The system uses a combination of alternating current and direct current methods of magnetisation and a special "multiple adjustable hole system" which, it is claimed, enables all types of surface cracks to be revealed whatever their direction.

Automatic Coal Handling System

A model piece of automation—a working, fully automatic system for the surface handling of coal—has been designed and built by apprentices of the English Electric Company. The unit recently toured the coal mining areas of South Wales ending at the mining department of the University College of South Wales in Cardiff. The mobile display is in a special demonstration van, fitted out by the mining division of the company, and is making a six months tour of the mining areas in Britain. At each centre experts in the application of electronic equipment to mining problems are demonstrating how mine cars can be removed from a cage, emptied and returned completely automatically. The new system will not displace men, but has the essential point that electronic equipment is more reliable than conventional electro-mechanical gear and needs less maintenance. The operator can also take manual control to interrupt the sequence of operations such as sending mine cars down containing materials.

COLOUR

Nature's Beauty Aid!

MAN has taken his lesson from Nature... has employed many and varied processes from the brewing of dyes from herbs and leaves to the most modern scientific methods—to make his own life as colourful and gay as the variegated hues of Nature. Judging from the frescoes of Ajanta, 'colour-chemistry' in India has been an advanced science since ancient times.

Today, AMAR DYE are leaders in the indigenous manufacture of dyes—having established a name for the excellent quality of their Amarthols & Fast Bases. Intensive research and a rapid expansion programme will soon make India totally self-supporting in the requirements of coal tar dyes.

—enrich India's life with COLOUR!

Amar Dye-Chem Limited

NATIONAL RAYON CORPORATION LIMITED

MR. KASTURBHAI LALBHAI'S SPEECH AT ANNUAL MEETING

EARLY STEPS TO ENSURE ADEQUATE POWER SUPPLY FOR INDUSTRIES URGED

THE difficulty experienced by industries in getting additional power supply in Maharashtra State was explained by Mr. Kasturbhai Lalbhai, Chaiman of the National Rayon Corporation Ltd., in the course of his speech at the Fourteenth Annual General Meeting held at Bombay on Thursday, 15th June 1961. Mr. Kasturbhai Lalbhai warned that, with the growth of industries in the Bombay region, the power shortage might perhaps become more acute till the Koyna project went into regular operation at its rated capacity. He was sure that the Maharashtra Government was conscious of this problem and that necessary steps would be taken to see that industrial growth was not delayed for want of power. Incidentally, he suggested the staggering of working hours in industries, so that adequate supply of power would be available to industries in the Bombay area immediately. A notable announcement made by the Chairman was that the Company's rayon grade pulp project had made some progress with the selection of a site in Mysore State for the location of the pulp plant.

The following is the full text of Mr. Kasturbhai Lalbhai's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you this afternoon and placing before you for adoption the fourteenth annual report of the Directors and the statements of accounts for the year ended 31st December 1960. These were circulated to all the shareholders and so must have been in your hands for quite some time now, and, I believe, I have your permission to take them as read.

"The statements of accounts have been drawn up in conformity with the provisions of the Companies (Amendment) Act, 1960. The figures for the preceding year, which are also published alongside, have been suitably recast to bring them in line with the new provisions.

Preference Dividend

"Before I proceed to deal with a few items in the accounts which, in my opinion, require some elucidation, I wish to say that your Board of Directors have decided to recommend this year and hereafter payment of dividend on preference shares at Rs. 5.55 per share, free of Company's tax, with a view to placing them in the same position as they were before the enactment of the Preference Shares (Regulation of Dividends) Act, 1960, and amendment to Section 18(3D) of the Indian Income-tax Act. With this objective in mind, we considered the following two alternatives:

"(i) To increase the dividend to Rs. 6.25 per share instead of Rs. 5.55 as required under the Preference Shares (Regulation of Dividends) Act, which would, after deduction of Company's tax at 20 per cent, leave Rs. 5.00 per share; and

"(ii) to fix up dividend at 5 per cent free of tax.

"The second alternative could not be considered as the Preference Shares (Regulation of Dividends) Act requires that the dividend should be increased in the case of our Company by 11 per cent. If the first alternative is adopted, the return on preference shares will vary with the Company's tax rate, whenever such a variation is decided upon by the Government, and, in the event of the Company's profits not being taxable in any year, for any reason, the Company will, nevertheless, have to pay a dividend at 6.25 per cent. Your Directors have, therefore, decided to recommend the fixing of the dividend at Rs. 5.55 per share without the deduction of Company's tax, but subject to the statutory deduction at source of tax under the Income-tax Act.

Sales

"Coming to the statements of accounts, the reasons for lesser sales turnover in rayon yarn and waste have already been given in the Directors' report. The total sales of chemicals and other miscellaneous materials have increased from Rs. 37.00 lakhs to Rs. 46.11 lakhs. This is due to the increased production of caustic soda and chlorine at the Company's ancillary plants which made available a larger quantity of these two chemicals for sale. Apart from this, the consignment of caustic soda, which was imported earlier and remained unused for some time, was sold off on a 'no-loss, no-profit' basis with the necessary sanction of the Government.

"The amount of excise duty paid during the report year was Rs. 68.59 lakhs, about Rs. 4.70 lakhs more than that paid in the preceding year. This duty was paid at the lower rate for the first two months of the year 1959 and at the enhanced rate in the subsequent ten months, whereas duty was paid at the enhanced rate for all the twelve months of 1960 on the entire production.

"The Managing Agents' commission has been computed on the sliding rate of commission approved last year by the Central Government and stood substantially lower at Rs. 9.80 lakhs, as against Rs. 18.96 lakhs paid in the preceding year. The amount of depreciation deducted under Section 349(4)(*k*) of the Companies (Amendment) Act, 1960, was arrived at by applying the rates prescribed in the Income-tax Rules to the written-down value of the assets as shown in the books of the Company at the close of 1959.

Raw Materials

"The inventory for raw materials is comparatively lower and stood at Rs. 30.59 lakhs, as against Rs. 60.25 lakhs at the end of the preceding year; this may be attributed in the main to the stricter import control policy of the Government arising from the difficult foreign exchange position. Nevertheless, special provision has been made for the necessary raw materials sufficient for the trial runs as well as for uninterrupted operations of the additional spinning frames which will be pressed into commission shortly and of the tire cord plant which is expected to go into production later in the year.

Excise Duty

"In the Finance Act of 1961, excise duty on rayon yarn has once again been raised, from 90 nP to 150 nP per kilogramme for 120 and 150 denier, and from 130 nP to 225 nP per kilogramme for 100 denier. Excise duty has been imposed on caustic soda to the extent of Rs. 40 per metric ton, while the duty on sulphur has been raised from 5 per cent to 10 per cent *ad valorem*. Having decided to levy these duties, the Government seem also to be anxious to hold the price line and, with this end in view, the Textile Commissioner held a series of conferences with the rayon spinning and weaving units to see how much and by whom the increased levy has to be absorbed. Representations were made at these conferences that the rayon spinning industry was unable to bear the additional burden because the cost of production had already gone up consequent upon the revision and upgrading of scales of pay to the workers, imposition of excise duty on caustic soda and raising of the import duty on sulphur. The Textile Commissioner, after going fully into the matter, however, decided that 60 per cent of the increased excise duty on rayon yarn has to be absorbed by the rayon spinning units and 40 per cent has to be passed on to the rayon weaving units.

"The Textile Commissioner has also fixed the prices for rayon yarn to be charged to the consumers and the price differentials between the different grades in each of the deniers at 15 nP per kilogramme at each stage, so that the difference in price between the first grade and the reject is not less than 60 nP per kilogramme. The distribution of the indigenous yarn continues to be done as hitherto through a Distribution Committee appointed by the Textile Commissioner. About 83 per cent of our production is being reserved to the powerloom sector to whom allocation cards are being issued every quarter and the balance is to be made available to the handloom sector, ancillary industries, doublers and twisters to whom it is also proposed to issue allocation cards in the near future. About 88 per cent of our production is being directly sold to the consumers and 12 per cent through established dealers based on their previous purchases from us.

Power Supply

"With the present rate of growth of industries in Maharashtra State, the demand for power is increasing rather rapidly. It now appears that it has become somewhat more difficult to get additional power both for the existing industries as well as for the new industries which are coming up in Maharashtra State, and in particular, in the Bombay area. With the growth of industries in this region, perhaps the power shortage may become more acute till the Koyna project goes into regular operation at its rated capacity. I am sure, Maharashtra Government is conscious of this problem and necessary steps will be taken by them to see that the industrial growth in this region is not delayed for want of electric power. In the past, to meet power shortage, Maharashtra Government very wisely implemented a decision to staggering the holidays and working hours of the industry. Among other measures for making power available to the expanding industry in Bombay region, perhaps staggering of working hours may be considered. If this is done, then large quantity of power will be available to the industry in this area immediately.

Rayon Grade Pulp

"I am pleased to inform you that some progress has been made with regard to the Company's Rayon Grade Pulp Project. A suitable site at Nanjangud (Mysore State) has been selected for the location of the pulp plant. The Mysore Government have under their consideration a proposal to reserve Coorg, Kollegal and Mysore forest areas for the exclusive exploitation by us of the bamboo and other softwood resources in those areas suitable for the manufacture of pulp. The Mysore Government are of the opinion that there is adequate supply of water in the neighbourhood which they will consider making available at concessional rates for the first five years, and that the electric power required for the operation of our plant could also be made available. One of your Directors, Shri R. J. Chinai, is now in the United States exploring possibilities of raising a dollar loan to cover the foreign exchange needs on deferred payment terms acceptable to the Government and for obtaining technical know-how, and engineering and other related services. I am also pleased to inform you that we have obtained an industrial licence for the expansion of our tire cord plant, and necessary steps will be taken for its early implementation.

Labour

"The relations with the labour continues to be satisfactory. In the month of March 1961, bonus equivalent to ¼th of the total earnings during the year 1960 was declared and paid, but the Labour Union has made a demand for payment of bonus equivalent to 5/12th of the total earnings. This matter is now pending before the Assistant Commissioner for Labour.

"I must say a word in conclusion about the workers and the staff who by their efficient work have contributed in a large measure to the smooth running of the plant and the satisfactory working of the organisation.

"With these observations, I commend the report and the statements of accounts for adoption, and propose the following resolution:

Resolution

'The fourteenth annual report and the statements of accounts for the year ended the 31st December 1960, be and they are hereby adopted.'

"Thank you, gentlemen."

N.B.—*This does not purport to be the report of the proceedings of the annual general meeting.*

PHASING A DEVELOPMENT PLAN

IS IT A PRACTICABLE PROPOSITION?

By Dr. T. N. Dhar

A DISTINCTION is sometimes made between growth and development. The former is supposed to be a natural or normal process requiring no special efforts on the part of the community. Development, on the other hand, involves *structural* changes without which the "inertia of the social system" cannot be overcome and a decisive break with the past achieved. The economic advance of the United States in the nineteenth century is, thus, referred to as economic growth whereas that of the U.S.S.R. and of countries in Asia and Africa in the twentieth century—based as it is on conscious endeavour—is more aptly described as belonging to the latter category.

Translated into economic terms, the above distinction seems to imply that while, in the one case, demand and supply have managed to remain in fair consonance with each other, in the second case there is but little likelihood of any such conformity. In other words, the inherent strength of the early American economy was sufficient to ensure a supply of goods and services as and when they were needed, or to create a demand for them when supply was forthcoming. In an underdeveloped country, on the contrary, either supply is so inflexible as to fall short of demand, or demand is deficient for even such goods as can be easily supplied. This is the familiar "vicious circle" of low income—low saving—low investment (leading to low income) which has been made the *raison d'etre* of planning during the last few years.

To break this vicious circle it has been suggested that pressure should be exerted at a number of points simultaneously so that the operation of Say's Law (i.e. supply creating its own demand) may become possible, and in this way increase in supply may be matched by a corresponding increase in demand. For example, the workers of a factory producing shoes cannot 'consume' their output of shoes, those of a textile factory their output of cloth and so on. But simultaneous production of a number of goods will enable sufficient demand to be created for the products of each industry as the workers jointly increase the range of their purchases.

Obvious Difficulties

The logic is impeccable; but once we try to put these principles into practice, we run up against obvious difficulties. The resources required to be marshalled for an all-out attack on the problem of poverty puts a strain upon the economy which may turn out to be a source of weakness rather than of strength. The early years of the second Plan provide a case in point. From wisdom born of bitter experience, comment, during the preparation of the third Plan, has increasingly turned on the possibility of "phasing" in order that the likelihood of strain may be reduced to the minimum. There is talk of balanced growth, of avoidance of bottlenecks, of investment commensurate with available resources, of annual plans, and other such concepts—all aimed at avoiding a crisis similar to that of 1957. All this is good theory, but theory must also recognise the difficulties which are likely to arise in the course of implementation of the Plan. It is one thing to look at difficulties of a practical nature in a detached way and another to try to make allowances for them *in advance*. Of course, some of the problems may not suggest themselves until after they have arisen. Even so, if the foreign exchange crisis, for example, had been dimly foreseen, aid would have been canvassed in sufficient time to avoid serious trouble. That is to say, if the limitations of planning (or rather of execution) are made to stand out in sufficient relief, theoretical concepts must be appropriately revised. This may also be true of "phasing." Currently, the idea which tends to be conveyed by this term is that, through proper planning, some sort of smoothness can be imparted to the course of development. This belief, it must be pointed out, is subject to a number of qualifications.

In the first place, there is an element of paradox in the use of the phrase "balanced growth." When structural changes are taking place, it is too much to expect that supply and demand can be kept in close conformity to each other. The *discontinuity* inherent in structural change precludes the estimation of demand with any degree of accuracy, while the indivisibility of certain factors of production necessarily results in over- or under-fulfilment of targets set on the basis of anticipated demand. In short, the process of development proceeds, as hinted in the opening paragraph, by demand sometimes sharply exceeding and, at others, conspicuously falling short of supply. Far from there being balanced growth, there will be a continuous series of sudden spurts of output—in different sectors at different times—before the take-off stage is reached.

The second concept to be examined is the matching of resources with investment. Ultimately, all resources and output have to be measured in physical terms, but discussion of monetary resources is essential in the first instance in the case of an economy which is not of the communist type. Now, financial resources may be either external or domestic. To the extent that national income increases every year —and the proportion of savings may also rise at the same time—it follows that domestic savings will be steadily increasing over time. As a corollary of this, investible funds from this source should be progressively higher as the Plan proceeds. For example, it has been estimated that the yield from taxation may rise by about Rs. 100 crores per year even without any increase in the level of taxation.

Export Earnings

Similarly, it may be expected that our export earnings will rise—though the rise may not be substantial. But granted that the position will steadily improve, it does not follow that the pattern of expenditure can be adjusted so as to keep within the limits of the available resources. Since the import of plant and machinery will be necessary for a number of schemes with fairly long periods of gestation, the probabilities are that the greatest strain on the foreign exchange reserves will be felt during the second (or third) year of a Five-year Plan. The point is whether this should be accepted as inevitable or attempts made to smoothen out the hump in foreign exchange expenditure. Evidently, if some foreign credits have already been arranged, the problem is simplified (or rather postponed). But while such aid can be forthcoming for a few large projects, the vast majority of schemes will have to take their chance on, more or less, an *ad hoc* basis.

There is, of course, the possibility (as advocated by Prof. Reddaway) of keeping in readiness a number of project reports—to be produced at the right time (like rabbits from a magician's hat?). But to be really effective these projects should have varying gestation periods, differing foreign exchange implications, be suited to regional requirements, etc., in order to cover all eventualities. By the time one finishes the list of permutations and combinations, the task becomes truly stupendous. Nor is it necessarily more convenient to think of "expansions" as being more amenable than new enterprises. When questions of diversification arise, or demand for particular products only of an undertaking increase, the advantages of such "flexibility" disappear. As an illustration, it may be cited that two out of the three new steel plants cannot be expanded to their full potential during the third Plan because the demand for their products is not likely to be sufficiently great. This has necessitated the inclusion of the new scheme at Bokaro.

Admitting, for the sake of argument, that investment in a particular activity can be properly spread out over the Plan period, it does not follow that the same can be said for all activities as a whole, or even for groups of activities. We have had the unfortunate spectacle of seeing irrigation facilities wasted by non-construction of field channels. Again, most dams also have power generation plants installed at the same time and industries which will use this power should be established simultaneously with the power plants. Transport and communications may also have to be substantially increased. In short, there is no possibility of phasing the investment on dams, field channels, power houses, industrial establishments and transport facilities if waste through non-utilisation of the new resources is to be avoided. Hence, one comes to the conclusion that *effective planning involves a number of "package deals"* which may permit of phasing as between each other but not in relation to the constituents of each such package.

However, even this may turn out to be a little optimistic if attention is paid towards the avoidance of possible bottlenecks. Steel and cement, power and fuel, and transport facilities are such basic necessities of present-day development that any shortfall in their supply is likely to be fatal. Commonsense, therefore, suggests that it might be better to err on the side of excess rather than risk failure by trying to merely keep up with the anticipated demand. Even though this may involve some "waste" of scarce resources in the rather doctrinaire sense that there may be some non-utilisation of capacity, the creation of excess capacity in these sectors is, fortunately, not necessarily an economic loss if it paves the way for greater progress. E.g., new railway lines which currently appear uneconomic may open up fresh areas for exploitation, while an excess of steel may encourage machine-building at a faster rate than originally envisaged. One can legitimately claim that such outcomes, though unplanned, are as much part of the developmental process as the fulfilment of targets fixed on a more (?) rational basis. Indeed, the notion of development, as opposed to growth, outlined above, *favours* such lack of balance as being the essence of structural change.

From the above analysis, it will be clear that the so-called availability of resources cannot be used as a criterion for phasing a plan. For if we have a five-year plan which is so drawn up that the physical targets to be achieved at the end of the plan period are mutually consistent, one cannot rely on "phasing" to ensure that there will be smooth progress towards the goal. Either the plan must comprise targets which are not consistent with one another or we must give up the attempt to match efforts with resources. Within limits, of course, negotiated foreign loans and deficit financing aim at reducing the strain on current resources but these are, after all, a draft on the future and will create difficulties later on. Thus, all that can be said at the moment is that while some of the "bottleneck items" must be targetted in physical terms *irrespective of financial considerations*, the rest of the economy will have to be left subject to monetary ceilings of investment only. Within this framework it will, however, be necessary to operate a system of priorities; but how does one proceed to do so? For example, considering the question of foreign exchange only, how does one solve the following problem?

The demand for petroleum products is likely to be 14 million tons by 1966 whereas the refining capacity, according to present indications, is likely to be only 8.75 million tons. Setting up the additional capacity would require foreign exchange to the tune of Rs. 60 crores within a year or two, but if this expenditure is not undertaken, the drain on foreign exchange by 1966 would be Rs. 75 crores *per year*. If, on the other hand, refining capacity is expanded, a net benefit of Rs. 25 crores a year may be expected after paying for the crude oil which must be imported. (The saving in foreign exchange would obviously be larger.)

A Difficult Choice

Here is a choice—a very difficult choice—between the present and the future. The balance of advantage necessarily lies in the creation of the additional capacity—provided that this is an isolated case. Unfortunately, most of the industries striving to manufacture commodities at present imported will also be able to make similar claims and, in these conditions, any system of priorities is likely to be subject to pulls from different directions. (The fact that each department claims "top priority" for its own activities will amply bear this out!)

But, once again, let us assume that it is possible to separately phase the output of each industry. This, however, it is apparent, will be a formidable task. Prof. Reddaway has been graceful enough to admit that "it is not easy for an academic outsider who does not know what *has* been done, nor yet what *can* be done, to say much about... (the possibility that)... the mere publication by the Government of its estimates of phased output requirements and the extent to which they might be met from existing capacity may help to stimulate the necessary applications for licences."* But a consideration of the various steps involved in the process will show up the difficulties of the task.

The first requirement is a fairly accurate estimate of demand at the end of each year of the plan, for if the working hypotheses are not correct the licensing policy will itself be governed by the exigencies of the situation. Secondly, there must be a sufficient number of entrepreneurs *willing, and able*, to come forward and in a position to deliver the goods. Mere licensing is no guarantee of ultimate fruition of schemes for even experienced businessmen may not be able, for a variety of reasons, to make headway; yet this will not deter them from applying for licences. (E.g., the Jha Committee mentions that the existing automobile manufacturers were prepared to bid for the "small car" even though they had not fulfilled their obligations in respect of earlier commitments.)

In the third place, it becomes essential that all applications relating to a particular project or industry should be processed at the same time. Otherwise a sound scheme may be rejected at some stage and a dubious one accepted shortly after if circumstances have changed in the meantime. This requirement will, however, itself present a challenge to the licensing authority which will have to choose between schemes with varying implications.

Fourthly, the potential investor must be satisfied about the timely availability of "bottleneck" items without which his efforts may be of little avail. How can one expect a factory to be established when the requisite power is not (even potentially) in existence? What is the assurance that an import licence for plant and machinery will be forthcoming at the right time?

And even if these problems can be successfully tackled, there are others which may interfere with the phasing which has been decided upon. Capacity required to be installed has to be distributed among a number of units some of which at least will have to be newly established. It is commonly believed that expansion of an existing unit is cheaper than establishing a new one, but this is not universally true. In particular, the foreign exchange requirement may be the same for an expansion as for a new undertaking. Moreover, it is possible that the foreign exchange requirement per unit of capacity may be low initially (i.e. for small units) but may rise for medium capacities and decline thereafter. In such circumstances, an attempt to conserve foreign exchange may result either in falling short of or overshooting the mark. If, however, one has to choose schemes in the light of their gestation periods, it is not possible to take into account the availability or otherwise of financial resources, be they domestic savings or foreign currency.

Conclusion

The picture which now unfolds itself is that the problem of "phasing" involves the balancing of four types of resources—domestic savings, foreign exchange, physical outputs, and time (i.e. time-lags in execution). Hence, it must be reiterated that if the targets to be achieved at the end of a plan period are broadly consistent with one another, there is little hope of smooth progress towards the goal. Certain adjustments may, nevertheless, be possible—if the political atmosphere admits of this. The expenditure on imported plant and machinery will necessitate matching investment from domestic sources, which means that both foreign exchange and domestic savings will be in short supply in the earlier years of the plan. Later, the drain on domestic resources on this account will fall while the quantum of resources will increase. If schemes covering housing, general education, health, etc. are largely taken up during the latter half of the plan period the strain on internal finances should be reduced. The foreign exchange earnings of these later years will be used mainly for imports of essential raw materials and, in this way, a balance in their use will be introduced.

Apart from broad generalisations of this type, the complexities of the problem of phasing would seem to indicate that a pragmatic approach would best meet the needs of the situation. After all, other countries (e.g. Poland and Yugoslavia) have found that it does not pay to plan in too much detail. So far as we are concerned, perhaps at the end of the third Plan, when machine-building has reached a fairly high level, and the question of imports of plant and machinery is no longer acute, talk of phasing may be given a more practical shape. But if, by that time, the take-off stage has been reached the need of phasing will, in all probability, have disappeared!

Reducing
MATERIALS & INVENTORY COSTS
Adds Directly to Profits

Do You Know that	Do You Know that	Do You Know that
60nP Represents the Average Purchase Price of Materials for all Industries per Rupee of Production Cost in India?	2% Saving in Materials Cost EQUALS 17% Extra Sales?	All Progressive Industrialists Can Reduce Purchasing & Inventory Costs by at least 5%?

We have highly qualified specialists under the guidance of Mr. A. R. Palit who has had twenty years' purchasing experience in India and the U.S.A.

Our Consulting Service offers you

- Complete advice regarding setting up an efficient materials and purchase management department including store-keeping and stores inventory-control; or the modernising of your existing operations.
- Analysis of your particular purchasing and inventory-control problems for specific recommendations for greater efficiency including ways and means for cost-reduction.
- Detailed advice on store-keeping and stores inventory-control.
- Introducing application of modern methods in your organisation under our supervision.
- Tailor-made instructional courses.

INCOME-TAX AMENDMENT BILL—II

CHANGES REQUIRED IN SOME SECTIONS

By A. C. Sampath Iyengar

Section 23 (1)—First Proviso and the Explanation thereto and the Proviso to the Explanation

THE Law Commission, with a view to a logical treatment throughout the various topics, set to itself the task of first defining the "gross income" under the different heads of "income" in the opening sections relating to each head, and then, listing in separate sections the deductions to be allowed or to be not allowed in computing the net chargeable income under each head (see page 9, para 30 of the Law Commission's Report). In keeping with the said basic scheme, when it came to the third head of income—"Income from house property"—the Law Commission first set out in two independent sections (namely, Sections 22 and 23 of its draft) the method of calculating the annual value; in Section 24, the deductions which could be made out of the annual value; and in Section 25, the deductions that could not be made out of the annual value.

In the matter of deduction for municipal taxes paid, the Law Commission remarked that whatever quantum was intended to be permitted as a deduction, the same could be directly expressed—irrespective of whether it was the tenant's liability or the owner's liability. In the words of the Law Commission:

"The existing provision is defective in form, because it brings about in a roundabout way a result which can be stated directly. The gist of the clause (9(2), 3rd proviso) is that in the case of a tenanted property, one half of the municipal taxes should be deducted. This need not be expressed in the form of a "deeming" provision (as Section 9(2), 3rd proviso, clause (*a*) appears to do) regarding the tenant's liability, followed by a provision (clause (*b*) of the proviso) for deduction if the tenant's liability is borne by the owner.

"The draft seeks to remove this defect. The provision has also been made simpler by removing the reference to the law authorising the levy of tax, etc., as unnecessary. It may be added here that as a general rule, such laws make the tax payable wholly by the owner and not by the tenant."

The Law Commission had earlier stated that in relation to treatment of "house property": "the main drafting changes are the omission of provisos and re-arranging the section on a more logical basis" (see page 343 top).

The present Draft Bill has departed from the Law Commission's treatment in every one of the above respects. It has interwoven the deductibility of the municipal tax into the sections relating to ascertainment of the gross annual value; it has reintroduced the allowance for municipal tax in terms of the tenant's liability on a "deeming" basis; and it has in its Section 23(1), first inserted a proviso then, an explanation thereto and then, another proviso to the said explanation.

To adhere to logical treatment, the subject of deduction for municipal taxes should be removed from clause 23 of the Bill to clause 24; secondly, the deduction, in the interest of simplicity, should be expressed straight at one-half of the tax levied by any local authority in respect of the property, reproducing clause (i) of Section 24(1) of the Law Commission's draft. This would be the general rule of deduction.

The explanation inserted by the Bill grants as a deduction the full amount of the taxes paid in respect of properties whose construction is completed before 1st April 1950. The proviso to the said explanation grants another kind of deduction in respect of residential units whose erection is begun and completed after 1st April 1961. The deductions in respect of these two different matters can form either separate clauses under sub-section (1) of Section 24, or can form separate sub-sections to Section 24.

The Law Commission further, as a guide to the determination of the annual value, incorporated in its draft (in its Section 23(2)) the relevant factors which should weigh in arriving at the annual value. The Bill of 1961 has completely omitted the same. No reasons are mentioned. The said sub-section (2) no more than reduces into legislation the result of the case-law on the subject, a helpful guide.

Section 23(2), Proviso (Old Section 9(2), Proviso)

Even house property in the occupation of the owner for the purposes of his own residence, falls to be taxed on its "annual value." But the policy of the Income-tax Act has always been to fix a ceiling for its annual value.

This ceiling (gross) was expressed at ten per cent of the "total income" of the assessee, which entailed ascertainment of an unknown quantity by reference to a figure which comprised the unknown quantity itself. For, the "total income" of the owner would include the "annual value" of the owner-occupied residence too. Further, in computing the total income from the property occupied by the owner, deduction has to be made in respect of repairs, insurance premia, land revenue, interest, etc. Since this formula would involve a large mathematical calculation, the Law Commission, in order to simplify the calculation, fixed the ceiling by reference to a known quantity, viz., the total income of the owner from all other properties and from all other sources. Eleven per cent thereof was fixed as the ceiling. This eleven per cent was roughly the percentage calculated on the basis of ten per cent of the "total income." See pages 343 and 344 of the Law Commission's 12th Report.

The Bill as presented to Parliament, however, reverts to the old formula of expressing the ceiling by reference to the "total income" as before. The purpose of the Bill is statedly to simplify, but, on the other hand, the simplification suggested by the Law Commission is thrown overboard by the Bill.

In passing, it may be mentioned that the Departmental practice in view of the complicated formula has been to fix the ceiling by reference to the self-same known quantity mentioned by the Law Commission. The difference between the Departmental practice and the Law Commission is this: whereas the Departmental practice adopts 1/11th of the known quantity, or, in other words, 9.09 per cent of the known quantity, the Law Commission adopts 11 per cent. The formula at 10 per cent of the "total income" works out to 10.9 per cent of the other income, not 9.09 per cent. See page 344 of the Law Commission's 12th Report. So, the Departmental practice is not in keeping with the correct percentage as calculated by reference to the "total income" formula.

The Departmental practice is correct only if in the computation of the total income, the deduction for repairs alone is taken into account and not the other deductions that are permissible under Section 24(1). Where the Department itself, in order to avoid the complicated mathematical formula, is in practice fixing the ceiling with reference to the known quantity, one feels that there is all the more reason for adopting the recommendation made by the Law Commission.

Section 27, Clauses (iv) and (vi)

Clause (iv) uses the word "imposed" in referring to tax imposed by a local authority. Clause (vi) refers to taxes "*levied*" by a local authority. The same expression, either "imposed" or "levied," should be used in both places.

Section 30

Clause (i) of Section 30(*a*) permits the allowance for repairs, while clause (ii) thereof permits the allowance of current repairs. The difference between a "repair" *simpliciter* and a "current repair" has been the subject-matter of divergent and conflicting views in courts of law. See the decisions in (1) *Ramkishan Sunderlal* vs. *C.I.T., U.P.*, 1951 19 I.T.R. 324, in which current repair was understood as petty repair as contrasted with heavy repair; (2) *C.I.T. & E.P.T., Madras* vs. *Sri Rama Sugar Mills Ltd.*, 1952 21 I.T.R. 191, *C.I.T., Delhi* vs. *S. B. Ranjit Singh*, 1955 28 I.T.R. 14, *R. B. Bansilal Abirchand Spg. & Wvg. Mills* vs. *C.I.T., M.P.*, 1957 31 I.T.R. 427, in all of which current repairs were understood as contrasted with repairs resulting in new capital assets; (3) *C.I.T., B. & O.* vs. *Darbhanga Sugar Co., Ltd.*, 1956 29 I.T.R. 21, in which current repair was understood as contrasted with past repair or arrear repair; and (4) *New Shorrock Spg. & Mfg. Co., Ltd.* vs. *C.I.T., Bombay North*, 1956 30 I.T.R. 338, in which current repair was understood as contrasted with accumulated repair over a period of time.

There is also the other view that current repairs are ordinary repairs arising in the ordinary course of the running of plant and machinery, and not extraordinary repairs arising from accidents or breakages or other extraordinary events.

Recently, the Calcutta High Court in *Humayun Properties Ltd.* vs. *C.I.T., West Bengal* (Income-tax Reference Application No. 8 of 1956) observed that this was a fit subject matter for the Legislature to clear up. Either the word "current" should be removed from the statute book, or a statutory definition should be inserted so as to avoid litigation.

Section 45

This section enacts that the income arising from the transfer of a capital asset "shall be deemed to be the income of the previous year in which the transfer took place." This language has been interpreted authoritatively to mean that the relevant previous year is the year in which title passed from the transferor to the transferee. See the decision of the Supreme Court in *C.I.T.* vs. *Bhurangya Coal Co.*, 1958 33 I.T.R. 802, and also the decision of the Calcutta High Court in *C.I.T., West Bengal* vs. *A. J. Elde and another*, 1954 25 I.T.R. 150. In the case of transfer of immovable property worth over Rs. 100, title passes only upon execution of a conveyance and upon registration thereof under the Indian Registration Act. In cases involving big consideration of several lakhs parties in order to save stamp fees and registration charges avoid the execution of a conveyance in writing. The vendor is paid the full consideration money and he is satisfied. The vendee is put in possession of the immovable properties and he is satisfied. No title passes in such a case and so no Capital Gains tax would be attracted. To remedy this situation, specific legislation is necessary. It has been well decided that part-performance of contract in relation to a sale of immovable properties does not transfer the title from the vendor to the vendee.

Sections 47 and 49

Sub-clause (b) of clause (iii) of Section 47 refers to "any distribution of assets on the dissolution of a firm, body of individuals or other association of persons," whereas clause (ii) of Section 47(1) refers only to "any distribution of capital assets on the dissolution of a firm." The reason for the omission of "body of individuals or other association of persons" in clause (ii) of Section 47(1) is not clear. As the clauses stand at present, the implication would be that any distribution of assets on the dissolution of a body of individuals or other association of persons would be chargeable to Capital Gains tax to support which there is no logical reason.

Section 53

The relief by way of exemption from Capital Gains tax provided by this section is illusory. The exemption applies only where the market value of all the house property assets owned by the assessee (before sale of any portion thereof) is Rs. 50,000 or less and the sale price of the house property sold does not exceed Rs. 25,000. This means that the clause comes into play where the assessee has at least two house properties, one of which is below the value of Rs. 25,000. Having regard to the present economic conditions, very few house properties would correspond to the specifications mentioned in this section. In order to give meaning and substance to these provisions, the limit of the market value should have to be increased or the relief itself should be scratched.

Section 54

This relates to grant of relief from Capital Gains tax where an assessee sells his residential house property in order to purchase a new residence. According to the section, the purchase of the new house may be made first in earlier accounting year and the existing house may be sold in the next accounting year; or, alternatively, the existing house may be sold first and the new house may be purchased in the subsequent accounting year. In the former event there is a possible difficulty, on the section as it stands, for obtaining the relief. If the assessment to Capital Gains tax is completed during the corresponding assessment year, before the purchase is made of the new property in the next accounting year, there is no provision for reopening Capital Gains assessment already completed. Hence, a power to so reopen should be provided in the section.

Section 60: Transfers of Income

This section is meaningless and requires to be deleted. When there is no transfer of an asset, the income from the asset can accrue only

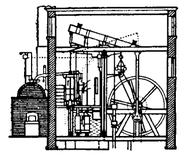
Steam...

Industry's greatest power

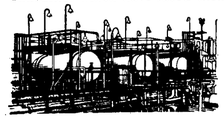


SINCE 1782, when the first Rotative Steam Engine enabled the use of steam power to motivate machinery, steam has played an ever increasing part in industry throughout the world.

Not only is steam today's most important source of power for the civilised world, but it must remain so for many years to come. Even atomic power is yet in its infancy and can only be applied as an alternative source of heat. Steam is indeed the real power of industry.

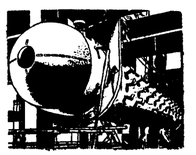
While this is but an outline of the extensive and continually growing part that steam plays in power generation and industry throughout the world, it indicates quite clearly the unparalleled importance of steam power in the industrial growth of India... and, therefore, the urgent need to manufacture vital steam-raising plant in this country to meet the demands of expanding industry.

This is one of the needs which has led to the formation of a new and powerful industrial group, ACC-Vickers-Babcock Limited (AVB). The vast technical knowledge and extensive practical experience available to it will enable the new company to make an important contribution to Indian industry—and help Indian engineers overcome some of the difficulties which have faced them for so long.



The new AVB plant is nearing completion on a 700-acre site at Durgapur. The workshops, designed on modern lines, will have built into the structure electric overhead travelling cranes with 70 tons lifting capacity. All workshops have been designed to allow for progressive expansion so that it will be possible to lift 200 tons without making structural alterations. Up-to-date machine tools are being installed. When completed, they will include a 3000 ton hydraulic press capable of bending steel plates up to 5" thick for use in the manufacture of high pressure boiler drums, and pressure vessels required for the fertiliser, chemicals and oil refining industries. The new plant will make it possible to manufacture steam-raising equipment in the high pressure range—for the first time in India.

ACC-VICKERS-BABCOCK LTD. offers the industrialist his best chance to ensure a fully *integrated* installation comprising the boiler plant itself and a wide range of equipment from the fuel handling and preparation plant to the ash plant and dust disposal installation.



Besides, the industrialist has the confidence that he will get after-sales service of the highest quality from AVB!

PROBLEMS OF PRODUCTIVITY

CERTAIN MISCONCEPTIONS EXAMINED

By Dr. K. C. Bhandari, Gwalior

FEW slogans in recent times have assumed greater importance than has the slogan "Produce or perish." There are two recognised ways of increasing production: one is by employing greater resources towards intensifying production and the other is by the introduction of productivity, that is, by producing more from the available resources by bringing about some technological and other improvements. In view of the country's limited capacity to increase the resources to a very great extent, more emphasis has necessarily to be laid on the latter.

There are a number of misconceptions about productivity. Most of them are general, while a few of them are specific only to Indian environment. A clear understanding about the same is a prerequisite to any further advancement in the sphere of providing further stimulus to the movement of productivity in India.

The first and foremost misconception about productivity is that it is considered synonymous with rationalisation. It is also remarked in the same context that it is merely "old wine in new bottles"! There is some truth in this conception in so far as the objectives to be attained by both (productivity and rationalisation) are concerned, namely, increase in overall production. Except for this, the conception of treating rationalisation as identical with productivity is totally misleading. Rationalisation literally means putting reason into industry, while productivity implies an economisation of means in relation to given ends. While there is an emphasis on the reduction of waste in rationalisation, there is a greater emphasis on improvement of management under productivity. The movement of productivity is a multi-pronged attack on waste, job-drudgery, unwholesome labour relations, inhuman conditions of work and all that is wrong in industry and impedes production. It seeks to establish easier and better way of doing things.

Another misconception, widely prevalent in this country, is that increase in productivity will increase only the profits of capitalists. It is obvious that such a misconception can be harboured in a capitalistic economic society. However, if there is a proper understanding about mutual rights, duties and responsibilities among the various constituents of industry, such a result is not likely. The idea of increasing productivity is to give the benefits of the same to each of the participants in industry. Even the consumers who are not directly concerned with the production aspect of industry are going to be benefited by the increase in productivity. But, it is essential that there must be some watch-dog (may be the Government machinery) to see that the returns are equitably shared among workers, employers and consumers.

Effects on Employment

Again, it is a common belief that the productivity drive will bring about reduction in employment potentialities resulting in immediate retrenchment of a vast labour force and thereby worsen the employment situation in the country. The employment situation in the country is indeed awful, and any measure which further deteriorates it cannot be accepted without reservations. We have now to consider as to whether the fear of unemployment is a genuine one. Productivity drive will certainly reduce cost of production. The reduced cost of production will in turn, result in the fall of prices. Reduction in prices will mean rise in overall demand and the extension of the markets for the commodity beyond local, regional and national frontiers. This will induce the producers to work at their maximum capacity, and to establish more units for similar production which is sure to result in creating more and fresh demand for labour. Moreover, when the increased productivity results in higher wages to the labourers, it will also act as an impetus to greater demand for goods and services. This, too, will increase employment. It is just possible that there may be some partial and temporary dislocation in the employment position and consequently, there may be some hapazard retrenchment and unemployment. The fear can be greatly minimised if the industry as well as the State are alive to the situation and take early steps to correct the position.

Apart from this, we are experiencing a great shortage of consumers', producers' and capital goods. It can hardly be imagined that those who will be discharged on account of introduction of productivity measures will not be absorbed immediately in a developing economy like that of ours in the context of our economic planning. To dispel any natural apprehension on the part of labour, there should, however, be a sort of commitment on the part of the State that those discharged owing to the productivity drive will be employed alternately and thus will not be allowed to swell the number of already unemployed. A regular periodic labour census can be a useful guide in counteracting any tendency towards unemployment.

Another mistaken notion that has occupied the minds of some of us is that productivity will entail greater strain on human nerves by requiring the labourers to work harder. Though, there is nothing wrong in working harder and though our labourers as well as all others in the country must work harder to realise our 'dreams,' it may be stated that productivity never implies harder work on the part of the labourers. On the contrary, it strives to reduce fatigue, monotony and strain. By a scientific and systematic planning of work, it attempts to reduce strain on human nerves rather than increase it.

It is also sometimes remarked that productivity is specifically concerned with industry. Nothing is far from the truth. Though the beginning of productivity drive has been made in the sphere of industry only, it has to be introduced ultimately in all spheres of national economy. The movement has still to be launched in the spheres of trade, transport, agriculture and office management, etc. Productivity is, as a matter of fact, "everybody's business."

Only about 60 per cent of the world's school age children are actually in school, according to the United Nations Educational, Scientific and Cultural Organisation (U.N.E.S.C.O.). Although there has been an increase in school enrolment since the end of World War II, the progress falls far short of the goal prescribed in the U.N. Universal Declaration of Human Rights. The U.N.E.S.C.O. report shows that in mid-1957, out of a total world population of 2¾ billion, 341.45 million or 12.4 per cent, were enrolled in schools at all levels. In 1957-58, the latest period for which figures are available, out of 551.0 million children throughout the world in the school-age range 5-14, about 341.50 million were in classrooms.

'ENGLISH ELECTRIC'

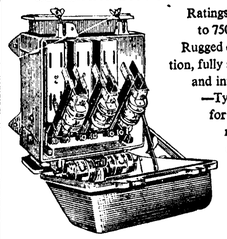
HIGH RUPTURING CAPACITY HEAVY DUTY

FUSEGEAR

H. R. C. CARTRIDGE FUSE-LINKS

Hermetically sealed construction— Non-deteriorating— ASTA certified for 35 MVA rupturing capacity— Visible indication of operation— Ratings up to 300 amps.

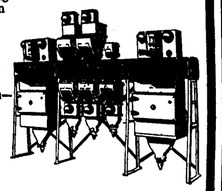
COMBINATION FUSE-SWITCHES



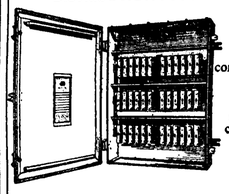
Ratings from 30 to 750 amps— Rugged construction, fully shrouded and interlocked —Type tested for 35 MVA rupturing capacity.

COMBINATION FUSE-SWITCHBOARDS

Incorporating Combination Fuse-Switches upto 750 amps— Robust and compact construction— Readily modified and extended— Type tested for 35 MVA rupturing capacity.



DISTRIBUTION FUSE-BOARDS



Robust, dust and moisture proof construction —Type tested for 35 MVA rupturing capacity— Ratings from 15 to 100 amps.

Flexibility of power distribution— Can be installed without disturbing existing layout or production— Avoids chasing of floors for ducting— Approved by Fire Insurance Authorities.

INVESTORS' GUIDE

The 1961 Edition of the Calcutta Stock Exchange Official Year Book is just now out. It is India's most up-to-date and comprehensive work of reference on investments. Contains detailed information relating to the securities of all companies quoted on the Calcutta and Bombay Stock Exchanges. Also contains information on economic matters, tax rules and rates, names and addresses of Liquidators of Companies wound up since 1944, preference dividends in arrears. Special features of this Edition : (1) Information relating to all Bombay Companies and (2) List of Companies which accept vernacular signatures on transfer deed.

Copies available from the Stock Exchange, 7, Lyons Range, Calcutta, at a price of Rs. 12.50 nP per copy. Postage Rs. 2 extra.

FREE with each copy "Trading in Cleared Securities."

BRITAIN MOVES CLOSER TO COMMON MARKET

CONSULTATIONS WITH COMMONWEALTH IMMINENT

THE U.K. is gradually moving towards the orbit of the Common Market of the Six, not so much out of its clear conviction that the Common Market alone is the be-all and end-all of European unity, as by a certain concatenation of adverse circumstances. Britain has fared badly on the economic front of late, with a serious threat of inflation taking shape and its exports lagging behind. On the contrary, the Common Market has solid achievements both in the industrial and commercial fields to substantiate its competency. The U.K., it is now reported, has entered into a confidential agreement with the three constituent members of the Common Market, namely, France, West Germany and Italy, to ward off a domestic financial crisis. Under the agreement, the three Common Market countries are reported to have pledged support against any "run on the pound." While there was a selling of sterling lately, the agreement came into force, with the three countries buying sterling through the Central Bank of the Common Market. The U.K., of course, has accepted the obligation to buy francs, marks and liras in case of any threat to their stability; but this condition is easy to honour, since there is hardly any possibility of such a threat to their currencies; in view of the prosperous conditions within the community of the Six.

It is open to doubt whether the three Common Market countries will extend their continued support to sterling unless the U.K. arrives at a categorical decision to come into the Common Market. It is said that the U.K. has given assurances to the other signatories of the agreement that a firm decision will be taken by early August next. The U.K. has naturally to make up its mind, and that too without any delay, notwithstanding its anxiety to safeguard its agricultural, the E.F.T.A., and Commonwealth interests. In the meantime, arrangements are being completed in the U.K. for embarking on detailed consultations with the Commonwealth.

In order to have talks with the Government of India on the question of the possible British entry into the European Common Market, the U.K. Government will send a "fact-finding" mission to New Delhi, led by a senior Cabinet Minister, shortly. These talks are part of the Commonwealth-wide talks proposed by Mr. Harold Macmillan, the British Prime Minister, in his speech at the House of Commons last week. Allaying fears abroad that the U.K. had already decided to join the Common Market, the Prime Minister observed that no decision "to start negotiations" with the Six would be taken before the conclusion of full Commonwealth consultation. The decision to be taken, he stressed, was "not whether we join the Common Market, but whether we enter into negotiations." He reiterated the well-known British view that the commencement of negotiations should be preceded by "Commonwealth consultations, talks already arranged with the E.F.T.A. and the securing of protection for U.K. agriculture."

British Anxiety

There does not seem to be any real possibility of the convening of a Special Commonwealth Prime Ministers' Conference immediately for considering the issue. In fact, Mr. John Diefenbaker, Prime Minister of Canada, called for a meeting of the Commonwealth Ministers. Mr. Macmillan, however, doubted whether a special conference would be fruitful at this stage. There is much to be said in favour of his stand. The interests and circumstances of the various Commonwealth countries differ much from one another and from those of the countries of Europe. So it will be useful to have bilateral talks at the Ministerial level which makes possible detailed commodity-wise examination of the commercial policies. This should admittedly be followed by considerations of broad policies at a Prime Ministers' Conference. Mr. Macmillan was not against a Prime Ministers' Conference as such. Probably he wanted details to be worked out prior to any such conference.

The British anxiety to join the Common Market has to be understood in the light of the need for effecting such a merger before the Common Market itself reaches a point of no return. The U.K. realises that it is already too late. Further delay will only cause confusion and uncertainty in the sphere of commerce and industry, with no compensating advantages. It is fairly well known that the Common Market is taking various steps to speed up integration among themselves. Apart from tariff cuts, which have been referred to in these columns previously, the Six are beginning to close in on some of the really tough problems of their ambitious programme of integration. Efforts are under way to draft an agricultural policy for the Six, which had been left out in the Rome Treaty, apart from finding out agreed solutions to anti-trust policy and methods of taxation. It is true that all these measures have failed to secure the unanimous consent of all the members. In the course of an interesting article, entitled *Report on Western Europe*, appearing in the bimonthly publication of the Research Department of the Chase Manhatten Bank, New York, it is pointed out that the C.M. Commission's draft proposals for a common anti-trust policy—strictly European standards—ran into stiff opposition in the Common Market's Economic and Social Committee, where many representatives of the business community voted against those proposals, which require that most inter-company agreements be registered in advance with the Commission. Anti-trust is the first field in which the Commission has run into the opposition of the business community. The European view of cartels is not nearly so restrictive as the American. A cartel may be "good" or "bad," depending on its economic effect. The Rome Treaty condones cartel agreements as long as they promote economic progress and as long as consumers receive a fair share of the benefits. In practice, this may well mean that cartels will be outlawed in the Common Market only if they result in artificially high prices. The C.M. Commission will work out an anti-trust policy in accordance with its mandate in the treaty, but the chances are that the Commission will move cautiously in pressing its proposals and in their subsequent enforcement, as pointed out in the abovementioned article.

Agricultural Policy

Another important problem relates to the evolution of an agricultural policy for the Common Market. To live up to their Rome Treaty obligations, the Six must agree to a common agricultural policy; and there are still wide differences of opinion as to what that policy should be. The basic issue here is the extent to which agricultural trade among the Six should be freed of restrictions—and how soon. The Commission, with substantial Dutch and French support, favours a policy that would remove most barriers to the free flow of farm products inside the Common Market. Farmers retain much political power in each member-country, and national governments are under pressure to maintain systems of farm protection that have existed for nearly a century. There is more to the problem than votes, however. The Germans, for example, have made a good start at reforming the structure of agriculture by consolidating land holdings and making rural development loans. Rapid industrial growth has helped to reduce the number of farms in the past seven years. West German agriculture is gradually becoming more efficient and better able to compete with other European agriculture in a free market. Opening the door now to farm goods from France and Holland, some Germans feel, would expose German agriculture to too much competition too soon. While recognising that national potection is on the way out, they feel that delay will enable the German farmer to compete successfully when it has been eliminated.

Nor have the Six come anywhere near to an agreement on the question of a common energy policy. This is obstructed by disagreement between the French who are anxious to maintain a prefential position for Saharan oil, and the Dutch, who want refined products from the Netherlands to get the same advantage.

Since the Six have been earnestly striving to make a success of the Common Market, these differences of opinion on details represent only a passing phase. That the move towards integration is gaining steady momentum within the Six is vindicated by the trend of their trade in 1960. Flow of trade among the Six rose by 25 per cent in 1960 over 1959. This gain followed a 19 per cent rise in 1959. Finished manufactures accounted for much of the increase. Imports from outside the Common Market also rose by 22 per cent in 1960, with manufactured goods again accounting for a large part of the increase. Trade gains of the E.F.T.A. were large but by no means so impressive as those of the E.E.C. Trade among the Seven was higher by just 15 per cent. It must, however, be remembered that until July 1960, there was no tariff cuts at all within the Seven.

Bridging the Gulf

The problem of what is now styled as bridging the gulf between the two trade blocs continues to be as elusive as it ever was. The Chase Manhattan Bank's article rightly says that the most important obstacle to a commercial agreement between the Six and the Seven is their "difference of approach" towards the question of European unity. Although both groups are seeking a kind of unity in Europe, they are going about it differently. The Six have laid down a fairly detailed master plan in advance, including the guideline for solving such delicate problems of integration as anti-trust regulation, tax policy and Government subsidies, under the guidance of community institutions. The E.F.T.A. has started with a much less detailed plan, with a minimum of institutions, and counts on the member-governments to work out the details co-operatively as they are ready. One way of putting it is that the Common Market has started with a written constitution, requiring the member-countries to co-operate, "while E.F.T.A. has started with a general statement of intention, and prefers to let its constitution grow naturally—as did the British constitution—to fit the needs of member-countries as they evolve."

It is precisely because of their difference in approach that some people continue to favour a customs union for all the members of Western European community. Dr. Wilhelm Beutler, Executive Director of the Federation of West German Industries, has recently observed that the establishment of an all-European customs union still seems to offer the best short-term solution. Setting up of such a customs union, which would comprise the members of the Common Market as well as the members of the European Free Trade Area, offers the important advantage that a workable system of European economic co-operation can be established within the shortest possible time, while it would in no way exclude Britain's future membership in the Common Market which remained the optimal long-term aim, according to him. Britain's membership in the Common Market requires some amending of the Treaty of Rome and it may take quite some time to go through the necessary diplomatic, legislative and administrative procedures. What is needed at present, however, is quick action.

Mr. Beutler feels that the proposed customs union which would not involve any of the political obligations the Common Market members have taken upon themselves, would meet this requirement, and, at the same time, represent a suitable "transitory stage" on the way towards full European economic integration. It is doubtful whether the proposal for the customs union finds favour with the Common Market Commission. The dominant opinion in the Common Market is that a plan to extend tariff preferences to the Seven would be acceptable only if the Seven are willing to join the difficult projects of integration as well, including the political obligations, which are inevitable concomitants of the Rome Treaty.

The Raw Materials Sub-Committee appointed by the Government of India under the chairmanship of Mr. G. L. Bansal, met the officials of the Directorate of Industries, Maharashtra, the State Trading Corporation, the Small Industries Service Institute, the Iron and Steel Controller and the Chief Controller of Imports and Exports in Bombay last week. The Raw Materials Sub-Committee also discussed with the State Government officials the memorandum submitted by the Directorate of Industries on the problem of supply of raw material to the small-scale industries in the State. The number of small-scale units in the State is about 6,375, in addition to 3,000 units which are not registered under the Factories Act. Among the suggestions made by the officials of the State Department of Industries for relieving the shortage of raw materials as well as for the long-term measures including the use of substitutes were:—planning of indents of the small-scale industries for controlled materials on high priority basis, opening of raw material depots at suitable centres, prompt assistance to private industrial units in a position to import raw materials that involve foreign exchange, and speedy disposal of licences or any assistance to those manufacturing units which have definite prospects of exporting their products and earning sufficient foreign exchange.

YEAR OF MARKED PROGRESS FOR TRAYONS

STEADY IMPROVEMENT IN FINANCIAL POSITION

WITH an increase of 11.3 per cent in its sales in the year ended 31st December 1960, as compared with the previous year, the Travancore Rayons Limited (Managing Agents: Emcete and Sons Travancore Private Ltd.) has registered further significant progress. The receipts from sales of rayon yarn, cellulose, film and other products increased steadily to Rs. 376.88 lakhs as against Rs. 338.51 lakhs in 1959 and Rs. 328.29 lakhs in 1958. The selling prices were maintained at uniform levels despite an all-round increase in the cost of manufacture. The consumption of raw materials and stores was more or less maintained at Rs. 119.78 lakhs as against Rs. 115.97 lakhs in the previous year. The other expenses increased from Rs. 92.52 lakhs to Rs. 100.57 lakhs mostly on account of an increase in wages to the tune of Rs. 4.92 lakhs. Due to the increase in expenses, gross profit has improved by only 4.2 per cent from Rs. 118.82 lakhs to Rs. 123.92 lakhs, thus bringing down the ratio of profitability to sales from 35.1 per cent to 32.8 per cent. The net profit for the year, however, shows a striking improvement from Rs. 29.57 lakhs to Rs. 52.81 lakhs. This is due to lower provisions for depreciation, taxation and managing agents' commission, at Rs. 36.47 lakhs, Rs. 27.30 lakhs and Rs. 7.34 lakhs, respectively, as against Rs. 40.36 lakhs, Rs. 39.04 lakhs and Rs. 8.56 lakhs, respectively, in the previous year. The Directors have decided to maintain the dividend of 20 per cent, subject to deduction of tax, on ordinary shares in view of the ambitious expansion programmes in hand.

The steady improvement in the working results of the Company is clearly evident from the following comparative table since 1957:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	3,76.88	3,38.51	3,28.29	2,55.50

* Wealth tax only. † Subject to deduction of tax.

The paid-up capital of Rs. 50.00 lakhs in preference shares of Rs. 10 each and Rs. 100 lakhs in equity shares of Rs. 10 each remains constant at Rs. 150 lakhs. The reserves and surplus, however, have improved from Rs. 73.21 lakhs to Rs. 99.22 lakhs. The gradual expansion in the block account has taken the figure for gross block to Rs. 541.72 lakhs, which is more than three and a half times the paid-up capital. After providing for a total depreciation of Rs. 306.58 lakhs, the net block stands at Rs. 235.14 lakhs, which is nearly equal to the paid-up capital plus reserves. The expansion in the fixed assets is financed from the Company's own resources as is evident from the secured and unsecured loans standing at a low figure of Rs. 18.38 lakhs, as against Rs. 26.99 lakhs in the previous year. The current assets at Rs. 163.57 lakhs show an excess of Rs. 31.21 lakhs over the current liabilities of Rs. 132.36 lakhs.

The manufacturing operations of the Company during the year were very satisfactory. The production of plain and moisture-proof cellulose film was according to anticipation, and the level of production showed an upward trend. With the commissioning of the third cellulose film plant, the Company's capacity for cellulose film has been raised to 10 tons per day. The production in rayon plant fell short of full capacity due to unexpected problems encountered in production and also to difficulties and delays in obtaining the necessary spare parts in view of the stringent foreign exchange position. The sulphuric acid plant which started production a little over a year ago has enabled the Company to become self-sufficient in its requirements and leave a surplus for sale outside.

The Company which has been a pioneer in the rayon industry in India continues to expand its activities and capacity. The production of cellulose film is likely to reach 12 tons per day before the end of this year, when the modifications in No. 1 cellulose film plant are carried out shortly.

The cotton linter plant is likely to go into production in the latter half of 1962, with the production of 10 tons per day. Provision has also been made to double its output. The working of this plant will lessen the Company's dependence on imports and enable production of superior quality pulp, yarn and film.

The Company has been permitted to install six more Butterworth rayon spinning machines at an estimated cost of Rs. 35 lakhs, which will enable it to maintain the installed capacity at about 8.6 tons per day in terms of 120 deniers. Orders for the machineries will be finalised as soon as the financial arrangements for the necessary foreign exchange are completed.

In an accompanying letter to the Directors' report, the Chairman reveals that the Company has been granted licence for the manufacture of rayon grade pulp from cotton linters and blowroom cotton waste. With the launching of this scheme, the Company will also become a pioneer in the manufacture of rayon grade pulp in the country. The factory is expected to go into production in the latter half of next year. The Company has also received sanction from the Government for expansion of its rayon yarn section by about 2,000 tons per year. The latest budget of the Central Government raised the excise duty on rayon steeply by 66-2/3 per cent and also imposed a high excise duty of 20 per cent *ad valorem* on cellulose film. The actual repercussions of this on the finances of the Company, though not likely to be favourable, are yet to be assessed fully.

With all its expansion schemes on hand, Trayons, it may be confidently hoped, will have a proud position on the industrial map of India. This hope justifies the current quotation of Rs. 10 paid-up shares at Rs. 40.20. At this rate, on a net dividend of Re. 1.40 per share, the net yield works out to 3.4 per cent.

FRESH CAPITAL ISSUES

The Controller of Capital Issues has granted consent for issue of capital of Rs. 120 lakhs to the Southern Cable Corporation, Rs. 60 lakhs to Titaghur Paper Mills Company Ltd., Rs. 30 lakhs to Western Bengal Coalfields Ltd., Rs. 20 lakhs to Richhold Chemicals (India) Private Ltd. and Rs. 15 lakhs to Utrilon (India) Private Ltd. The details are given below:

Southern Cable Corporation

This is a new Company, and consent has been given to the issue of capital of Rs. 120 lakhs, consisting of one million equity shares of Rs. 10 each and 9 per cent 20,000 cumulative redeemable preference shares of Rs. 100 each. The capital is required for the Company's scheme of manufacture of P.V.C. wires and cables in collaboration with Messrs. Hackethal-Draht-und Kabel-Werke, Germany, who have agreed to invest Rs. 20 lakhs in the equity capital. The International Finance Corporation, Washington, will also invest an equivalent sum, besides, granting a loan of Rs. 45 lakhs.

Titaghur Paper Mills

Issue of Rs. 60 lakhs in 5½ per cent debentures bonds of Rs. 1,000 each repayable at par on 31st December 1970 with the option to redeem wholly or in part after 31st December 1966 at a premium of 1 per cent. The existing subscribed and paid-up capital of the Company is Rs. 142.92 lakhs. Capital is required for expansion of capacity to 1,000 tons of paper per month at the Company's third mill at Choudwar (Orissa).

Western Bengal Coalfields

Issue of 30,000 debentures of Rs. 100 each for cash at par, bearing interest at a rate not exceeding 7 per cent per annum and redeemable after 10 years from the date of issue. The proceeds are required for developing existing collieries and for sinking a new pit. The Company's existing capital is Rs. 49.98 lakhs.

Reichholds Chemicals

Issue of capital of Rs. 20 lakhs in equity shares of Rs. 100 each for manufacture of synthetic resins. Out of this issue, shares not exceeding Rs. 9 lakhs in value will be offered to the American collaborators, Reichholds Chemicals Co., New York, and the balance will be subscribed by Simpson & Co. Ltd., Madras.

Utrilon India

Issue of Rs. 15 lakhs divided into equity shares of Rs. 100 each in connection with their scheme for the manufacture of P.V.C. footwear and allied articles in technical collaboration with Industrial Synthetics Ltd., U.K. Out of Rs. 15 lakhs, Rs. 9 lakhs will be subscribed in India and the remaining Rs. 6 lakhs may be offered to Indian nationals resident abroad.

IMPROVED TURNOVER OF BRITISH PAINTS

DIVIDEND STEPPED UP

THANKS to a rise of over Rs. 5 lakhs in the sale of paints, and of over Rs. 14 lakhs in that of synthetic resin products, the gross turnover of British Paints (India) Ltd. has increased by Rs. 20.83 lakhs to Rs. 187.74 lakhs in the year ended 31st December 1960, as compared with Rs. 166.91 lakhs in the previous year. This achievement is all the more gratifying, considering the fact that there was during the year a general fall in demand, resulting in more severe competition. The Company's products, nevertheless, continued to attract an increased demand which unfortunately could not be fully met owing to inadequacy of working capital.

A large portion of this increase in turnover has, however, been neutralised by the rise in the costs of raw materials and packages with the result that the gross profit shows a nominal rise of about Rs. 82,000 to Rs. 16.67 lakhs. Consequent on higher provisions for depreciation (Rs. 3.09 lakhs as compared with Rs. 2.56 lakhs in 1959) and for taxation (Rs. 6.82 lakhs as against Rs. 6.57 lakhs during 1959), this difference has been further narrowed down. The net profit which stand at Rs. 6.76 lakhs, thus shows an improvement of only Rs. 4,191. The transfer to reserves has been slightly reduced from Rs. 4.10 lakhs in 1959 to Rs. 3.63 lakhs in the year under review, while an amount of Rs. 42,667 has been credited back as provision in excess of anticipated liabilities. The balance to the credit of the profit and loss account, therefore, amounts to Rs. 3.76 lakhs inclusive of the carry-forward from the previous accounting period. With a larger amount available for distribution, the rate of ordinary dividend has been increased to 12½ per cent, subject to taxation, from the 10 per cent subject to taxation, declared a year ago.

The progress made by the Company during the past three years for which full operating particulars are available, is contained in the table below:

(In lakhs of rupees)

	For the year ended 31st December		
	1960	1959	1958

* Subject to deduction of tax.

The financial position of the Company, as disclosed by its balance-sheet as at 31st December 1960, is strong. The issued and subscribed share capital consisting entirely of Rs. 10 fully-paid ordinary shares is Rs. 28.36 lakhs and is backed by Rs. 30.60 lakhs in the reserves. Current liabilities and provisions amount to Rs. 59.55 lakhs in addition to bank loans totalling Rs. 19.49 lakhs. The fixed assets, comprising a paint factory and the newly constructed synthetic resin factory, are carried in the books at a cost of Rs. 42.15 lakhs. After deducting from this amount Rs. 21.90 lakhs as the depreciation earned to-date, the net block works out to Rs. 20.25 lakhs. Current assets are placed at Rs. 117.76 lakhs in all.

Towards the close of 1960 the Company issued a prospectus offering 2.16 lakhs ordinary shares of Rs. 10 each at a premium of Rs. 5 per share. The issue was well received and brought to the Company an additional Rs. 35.38 lakhs after meeting the expenses of the issue. This amount is to be principally utilised to finance a substantial expansion in business.

The Company has made further satisfactory progress in its negotiations with a foreign company for a collaboration arrangement in regard to the manufacture in India of a special type of protective coating, which is currently not manufactured in the country, but which is imported in large quantities. If these negotiations are fruitfully concluded, it is proposed to form a new company in conjunction with the foreign collaborators. The Company's share in this new venture will be to the extent of 51 per cent of the total issued capital.

The current market quotation for the Company's Rs. 10 fully-paid ordinary share is Rs. 24.81 *cum-div.* The net yield on an *ex-div.* basis works out to 3.7 per cent.

RECORD SALES OF INDIA SUGARS

SHAREHOLDERS GET MORE

THE sales of India Sugars and Refineries Ltd. (Managing Agents: The India Sugar Agencies Private Ltd.) touched the record level of Rs. 204.53 lakhs during the year ended 30th September 1960. The record sales were achieved, though the quantity of sugar actually produced was lower at 16,006 tons, as against 17,647 tons in the previous season. The decline might perhaps have been more marked but for the improvement in average sugar recovery from 9.53 per cent in 1958-59 to 10.42 per cent. in 1959-60. The total of cane crushed was substantially lower at 153,133 tons, as compared with 185,172 tons in the previous year. Owing to higher sugar recovery and larger realisations from sugar sales, the Company gave a bonus of Rs. 8.055 per ton of sugarcane to the cane suppliers under the SISMA Formula. The production in the distillery increased substantially from 57,036 gallons to 86,740 gallons. The sale of spirit was also better.

Despite the record level of sales, the profit of the Company is slightly lower at Rs. 22.50 lakhs, as against Rs. 23.15 lakhs for 1959-60, reducing the ratio of profitability to sales from 11.8 per cent to 11 per cent. This is because expenses have increased, albeit slightly, from Rs. 175.98 lakhs to Rs. 176.81 lakhs. Out of the expenses, nearly 50 per cent—Rs. 88.95 lakhs to be precise—is accounted for by sugarcane, nearly 30 per cent or Rs. 51.87 lakhs by excise duty and gallonage fees, and nearly 9 per cent or Rs. 15.62 lakhs by wages. Larger provisions have been made for depreciation and taxation: Rs. 5.70 lakhs and Rs. 2.92 lakhs as against Rs. 4.65 lakhs and Rs. 50,000, respectively, in the previous year. The dividend to ordinary shareholders has been raised from 12½ per cent to 14 per cent subject to deduction of tax, after transferring to reserves Rs. 5.42 lakhs, as against Rs. 70,000 in 1958-59. The amount of dividend distributed on preference shares is lower at Rs. 73,000, as against Rs. 82,000, in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

The following comparative table shows at a glance the progress of the Company in the last four years:

(In lakhs of rupees)

	For the year ended 30th September			
	1960	1959	1958	1957
Sale proceeds	2,04.53	1,96.18	1,33.33	83.23

Sugar produced (Tons)				

* Less tax. † Subject to deduction of tax.

The paid-up capital of the Company as at 30th September 1960 stands at Rs. 74.98 lakhs, consisting of Rs. 11 lakhs in preference shares of Rs. 100 each and Rs. 63.98 lakhs in equity shares of Rs. 10 each. The reserves and surplus aggregate Rs. 18.32 lakhs. The secured loans of the Company have been reduced from Rs. 27.37 lakhs to Rs. 10.09 lakhs. The gross block of the Company at Rs. 84.67 lakhs stands depreciated at Rs. 51.11 lakhs, after providing Rs. 33.56 lakhs for depreciation. The total investments of the Company amounting to Rs. 35.12 lakhs are higher by Rs. 3.25 lakhs as compared with the position a year before. The total of current assets is Rs. 79.27 lakhs, as against which current liabilities are of the order of Rs. 62.11 lakhs.

With regard to the subsidiary companies, the working of the Salar Jung Sugar Mills has shown a noticeable improvement. In spite of the reduction in the quantity of cane crushed as compared with the previous year, the sugar produced remains almost the same. The total quantity of sugar produced during the year ended 30th June 1960 was 7,004 tons, as against 7,012 tons in the previous year. The Company has made a net profit of Rs. 1,61,877 after providing for some of the liabilities pertaining to the previous year amounting to approximately Rs. 2,80,399, as against a profit of Rs. 1,11,996 in the previous year, and paid an additional cane price of Rs. 3.5 per ton to the cane suppliers in the season 1959-60. Subsequent to the publication of the accounts of this subsidiary, the Company has subscribed for 319,836 shares out of the fresh issue of 320,000 ordinary equity shares. Out of the above, 205.276 shares have been allotted and the balance of 114,560 shares is expected to be allotted soon. Consequently the loan outstanding against this Company will be completely adjusted and the Company will hold 435,304 equity shares in all in this subsidiary company out of 500,000 shares which works out to approximately 87 per cent. There has been an improvement in the working of another subsidiary—Manjula Confectionary Private Ltd. The loss shown in the profit and loss account on manufactured products is lower than that of the previous year. The Company has reorganised the sales organisation and has appointed more salesmen and distributors all over the Andhra, Kerala and Mysore areas. By virtue of Section 43(A)(2) of the Companies Act I of 1956 as amended by the Companies (Amendment) Act 1960, the Manjula Confectionery Private Ltd. has become a public limited company with effect from 28th March 1961.

The appeal filed in the Supreme Court with reference to the demand for cess on sugarcane has been decided in favour of the Company and so the Company expects to get a substantial refund from the Government.

As regards the current season, the total crushing of cane and total production of sugar are likely to be more than last year. The crushing operations are expected to continue till the middle of June 1961, the total estimated quantity of cane crushed being more than 200.000 tons.

The wage bill is likely to increase in the current year, in view of the award of the Central Wage Board for Sugar Industry which has recommended a basic minimum wage throughout the country. The actual increase in the wage bill of this Company will, of course, be known only after the award has been fully implemented.

The Directors' report for the year does not throw any light on the application made by the Company to the Central Government for expanding the productive capacity of the factory still further, a reference to which was made in the Chairman's speech last year.

The current quotation for the Rs. 10 paid-up ordinary shares of the Company is Rs. 13.25 *cum-div.* which gives a net yield of 7.4 per cent or a net dividend of 98 nP per share.

PAPER PRODUCTS LTD.

The financial results of Paper Products Limited, one of the leading manufacturers of flexible packing material, for the year ended 31st July 1960, are, indeed, encouraging. Thus, thanks to a handsome increase in sales of 25 per cent over the previous year's levels, the net profit (after providing Rs. 2.01 lakhs for depreciation, Rs. 67,655 for development rebate and Rs. 5.40 lakhs for taxation) amounted to Rs. 11.71 lakhs, as against Rs. 10.72 lakhs in 1958-59. The Company had declared a (taxable) dividend of 26 per cent, representing a net dividend of 18.2 per cent. The Company's reserve fund as on 31st July 1960 stands at Rs. 10 lakhs.

(Concluded from next column)

position is extremely sound. As against the paid-up capital of Rs. 33.64 lakhs comprising Rs. 29.64 lakhs in ordinary shares of Rs. 10 paid up and Rs. 4 lakhs in preference shares of Rs. 100 each, the reserves and surplus stand at Rs. 117.33 lakhs. The secured and unsecured loans of the Company, though they are still very large being Rs. 139.56 lakhs, are lower by Rs. 11.72 lakhs as compared with the previous year. The total current liabilities and provisions amount to Rs. 108.38 lakhs which are more than adequately covered by current assets aggregating Rs. 250.89 lakhs, inclusive of investments worth Rs. 16.07 lakhs. The net block of the Company stands at Rs. 145.52 lakhs, after providing Rs. 348.61 lakhs for depreciation.

The Rs. 10 paid-up ordinary shares of the Company are currently quoted at Rs. 32.75 *cum-div.* On an *ex-div.* basis and taking the net dividend of Re. 1.05 per share, the net yield works out to about 3.3 per cent.

EQUITABLE COAL EARNS MORE

DIVIDEND CUT RESTORED

THE increase in production and the grant of larger assistance for sandstowing operations have resulted in higher earnings for the Equitable Coal Company Ltd. (Managing Agents: Macneill and Barry Ltd.) for the year ended 31st December 1960. The actual coal output was higher at 1,892,344 metric tons, as compared with 1,837,340 tons in the previous year and 1,790,817 tons in 1958. But despatches in 1960 were less at 1,837,838 tons, as against 1,864,051 tons in 1959. Consequently, the closing stocks at the end of 1960 are higher at 93,576 tons as against 39,071 tons a year before. The improvement in production was possible because the rainfall, which was relatively light and dispersed, did not have any adverse effect on colliery working as was the case in 1959. The Company also benefited from the increased quantum of assistance for sandstowing operations, following the upward revision in the ceiling limit for assistance from Rs. 2 to Rs. 2.50 per ton with effect from 1st February 1960.

The receipts from sales of coal increased for the second year in succession to Rs. 392.56 lakhs as against Rs. 383.02 lakhs in the previous year, and Rs. 365.61 lakhs in 1958. The gross profit for the year under review has gone up by 92.6 per cent, from Rs. 17.04 lakhs to Rs. 32.83 lakhs. The increase in profit is in distinct contrast to the setback suffered in 1959 which had forced the Directors to cut the dividend by 50 per cent. The ratio of profitability to sales has jumped up from 4.4 per cent to 8.3 per cent. The rise in profits during the year under review has enabled the Directors to restore the cut in dividend. Even after providing larger amounts for depreciation, (Rs. 16.81 lakhs as against Rs. 12.42 lakhs for 1959), taxation (Rs. 85,000 as against nil), and managing agents' commission (Rs. 1.39 lakhs, as against Rs. 77,000), the net profit stands as high as Rs. 13.78 lakhs, that for 1959 being just Rs. 3.85 lakhs. Besides restoring the cut in dividend to 15 per cent subject to deduction of tax, the Directors have transferred Rs. 6.80 lakhs (as against Rs. 4.64 lakhs in the previous year) to the debenture redemption sinking fund, development rebate reserve and development reserve.

The salient features of the Company's working results for the past four years are given in the following statement:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	3,92.56	3,83.02	3,65.61	4,00.60
Other income	2.88	4.03	2.56	3.22

* Subject to deduction of tax. † In metric tonnes.

The wagon supply position over the South Eastern Railway was far from satisfactory upto September 1960. The consequent heavy accumulation of stocks had an adverse effect on production generally and, at several collieries, raisings had to be restricted quite drastically for varying periods of time. The improved wagon supply position between September and the end of the year was most welcome. The Government imposed a cess of 25 nP per ton on coal consumers with effect from 1st February 1960, following the recommendations contained in the reports of the Coal Price Revision Committee. This cess, it is felt, will provide funds to subsidise collieries working under adverse conditions. The working of the Company in the current year, however, has suffered due to deterioration in transport position and the consequent additional accumulations of coal stocks at pitheads.

The balance-sheet of the Company as at 31st December 1960 reveals that the financia

(Continued in previous column)

SYNOPSES OF COMPANY REPORTS

Synthetics and Chemicals Ltd.

(*Chairman*: Mr. Tulsidas Kilachand, Bombay.)

First Annual General Meeting—3rd July.

Working Results:

	For the period from 21st January 1960 to 31st March 1961 (In thousand rupees)
	1960
Gross income	14,43
Expenses	3,77
Transfer to taxation	6,47
,, ,, depreciation	32
Net profit	3,87
Appropriations	Nil
Carried forward	3,87

Extracts from the Directors' report: The Company has acquired land of about 1,381 acres at Bareilly. For the purpose of the Company's plants the railway siding has been completed and is open for traffic. Orders for the principal plant and machinery have been placed. Some of the machineries valued about Rs. 1 crore have been received at site, and other machinery is being shipped. The construction of the housing colony is progressing satisfactorily. The overall progress of the project is satisfactory. The directors are glad to place on record the wholehearted co-operation that has been extended by the Government of India, the U.P. Government and by Firestone Tire & Rubber Company.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	3,66,91,250	Gross block	1,41,20,622

* After writing off Rs. 69,747 being loss on sale of investments.

† Includes additional dividend at Re. 1.20 per share, on preference shares for the year 1959 (Rs. 54,000).

Extracts from the Directors' report: The directors are pleased to record an increase of Rs. 9,05,208 in the net profit as compared with the preceding year, reflecting in particular improved trading conditions in the Tea and Jute industries. The year has however been marked also by further expansion of the Company's other interests.

Tea (India): The majority of the companies in this Company's Agency have again enjoyed a successful year, as the higher average prices have in most cases offset some reductions of crop occasioned by the severe early season drought which affected certain areas, particularly in Assam and Cachar, and the total income from this source was appreciably higher than in 1959. During recent months however there has been a decline in the price of common teas and if the lower level is maintained the income for 1961 is likely to be affected. The total crop harvested by estates in the Agency in India was 20,766 metric tonnes as compared with 20,433 metric tonnes in 1959.

Tea (Pakistan): The year 1960 was unfortunately marked by a drought of almost unprecedented severity, and although Chittagong prices were well maintained the loss of crop inevitably resulted in a reduced return from these interests. On the other hand with far more favourable conditions at the start of the current season a good start has been made on manufacturing the 1961 crop and an improvement may reasonably be expected. The total crop harvested by Agency estates in Pakistan was 4,017 metric tonnes compared with 5,470 metric tonnes in 1959.

Jute Mills. The year ended 31st March 1960, was a particularly successful one for the Anglo-India Jute Mills Co., Ltd., managed by this Company, and income from this source showed a considerable advance over the preceding year. The process of modernisation carried out during the past few year's is continuing and the Company's mills remain in the forefront of the industry's progress.

Carbon Black. Mention was made in last year's report of the Company's collaboration with Phillips Petroleum Company in the promotion of Phillips Carbon Black Ltd. which has been incorporated with the object of setting up the first carbon black plant to be established in India. The public issue of shares by the new company, over twenty times subscribed, was handled during the course of the year by Duncan Brothers & Co. Ltd. Considerable progress has meantime been made on the design and construction of the new plant at Durgapur, planned for a capacity of 30 million pounds per annum, and it is expected that production will commence towards the middle of 1962.

Woolcombing: The directors' last report referred to the promotion of Isaac Holdens (India) Ltd. in order to set up the first commission woolcombing plant in India, and they are glad to report that part of this plant was brought into operation in January this year. The next phase of the installation is expected to be ready this autumn, while application has been made for import licences in respect of the remaining machinery required to bring the plant up to its full licensed capacity of 10 million pounds per annum.

Schrader-Scovill Duncan Ltd. Since the close of the year the Company has been associated with the Scovil Manufacturing Co. of Waterbury, U.S.A. in the promotion of Schrader-Scovill Duncan Ltd. which was incorporated in India on 29th March 1961. The first object of this new undertaking is to establish a plant in Bombay for the manufacture of tyre tube valves for motor cars, and the necessary Government licence has been obtained for this purpose. Application is being made for Government consent to the appointment of Duncan Brothers & Co., Ltd., as Secretaries and Treasurers.

New Ventures. The directors continue to explore suitable methods of further extending the Company's activities and interests, and negotiations are proceeding with Government and with various overseas collaborators.

Share Capital. With the continued expansion of the Company's business the directors consider it desirable to increase the equity capital and it is proposed to make a 'Rights' issue of 10,000 ordinary shares later this year, to be offered to equity shareholders in the ratio of one share for every nine shares held by them.

Accounts in brief as at 31st December 1960 are as under:—

N.B.—Adjustments include the balance brought forward from the previous year and unclaimed dividends if any.

* Calculated at 6.5 per cent. in accordance with Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: Raisings for the year were 92,250 tonnes compared with 92,059 tonnes in the previous year, whilst despatches totalled 91,255 tonnes as against 92,364 tonnes.

With the commencement of raisings from the Sonachora Seam, to which the existing shafts were sunk, it was decided to obtain a combined grading for the raisings of this seam together with the very much larger output of the Lower Kajora Seam, in order that these coals may be handled together. The Coal Board have now sanctioned Grade I classification for the entire output of Lachipur Colliery.

Accounts in brief as at 31st December 1960 are as under:—

	(15%)	(10%)
Carried forward	31	20

N.B.—Adjustments include only the balance brought forward from the previous year.

* Calculated in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: *Raisings and Despatches*.—2,01,253 tonnes of coal were raised and 2,00,239 tonnes despatched during the year compared with 1,68,490 tonnes raised and 1,66,715 tonnes despatched during 1959. The increase in raisings, is accounted for by the illegal strike that this colliery suffered during the previous accounting period in March 1959.

During this year, it was hoped to drive new surface inclines to 18 seam in Aralgoria but this was not possible due to the extreme difficulties experienced over land acquisition.

Transport.—Wagon supplies were again irregular and in addition the number of covered wagon supplies prevented full use being made of the mechanical screening arrangements at this colliery. Stocks increased by 1,014 tonnes during this period.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	11,50,000	Gross block	48,42,643

Carried forward	(Nil)	(84⅔%)
	47	14

N.B.—Adjustments include the balance brought forward from the previous year and excess provision of income-tax written back.

Extracts from the Directors' report: *Programme of Expansion Scheme*: The expansion programme undertaken by the Company was completed during the latter part of the year under review. The production out of these machines also started coming out during that year. The full effect of the entire expansion scheme will, it is hoped, be reflected in the working of the year 1961. Production of all items recorded an increase during the year under review.

Working Results: The annual turnover of the Company increased to Rs. 2,43,00,612 against the previous year's figure of Rs. 2,00,03,247. This represents an increase of 21 per cent. Inspite of larger turnover, the profit during the year has gone down, particularly due to the increase in the cost of some of the major raw materials like raw rubber and textiles.

It is expected that during the year 1961, the working of the Company will yield satisfactory results, provided other conditions remain satisfactory, particularly because larger production out of the new expansion scheme will be forthcoming.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.

Carried forward	5	3

N.B.—Adjustments include the balance brought forward from the previous year and other credit items relating to previous years written back.

Extracts from the Directors' report: The mill was running on three shifts and the average spindles worked during the year was 21,351. There was an addition of 6,272 spindles during the year and the installed capacity of the mill was 21,360 ring spindles and 1,664 doubling spindles at the end of the year. The spinning department was completely humidified during the year. The humidification plant for the preparatory department and one set of four high speed combers will be installed during the current year.

The working of the mill during the year continued to be satisfactory but the working expenses were on the increase due to the Central Wage Board Award involving in the payment of enhanced wages and dearness allowance.

Further the Company's mills being a traditional spinner of fine counts was forced to pay huge amounts as premium to the extent of Rs. 5,08,000 for the consumption of imported cotton during the year. Besides the prices of imported cotton increased gradually and there was no corresponding increase in the selling rates of higher counts of yarn. In spite of all these the year's working resulted in a net profit of Rs. 4.77 lakhs.

Accounts in brief as at 31st December 1960 were as under:—

Extracts from the Directors' report: *Season 1960*: The directors have pleasure in informing the shareholders that Shree Ganga Tea Estate of the Company for the first time started giving yield and the Green Leaves collected therefrom during the year amounted to 68,951 kgs. which were sold to the Joonktollee Tea Estate.

The company has recently secured a further permission of 48.94 acres to extend plantation on virgin soil in addition to the permission previously received for 122.35 acres. Since the publication of last report, a further area was put under plantation and the total acreage so far planted now stands at 125 acres approximately. Seed nursery as well as shade nursery were also put up. Necessary steps are being taken to cultivate the remaining 46 acres.

Carried forward	5,75	5,15

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Operations*.—Adverse conditions affecting the Company's tea interests contributed to a reduction in the trading profit for the year. This reduction was offset largely by the profit on the sale of investments which has enabled the Board to recommend a dividend distribution at the same level as last year.

Subsidiary Companies—The Bengal Flour Mills Co. Ltd.—Despite a reduction in the profits of this company, its results for the year were satisfactory.

Bridge & Roof Co. (India) Ltd.—This company had a successful year, an increase in its profits being recorded. The Company resigned its office of Managing Agents of Bridge & Roof Co. (India) Ltd. with effect from 31st December 1960 and has been appointed its Secretaries with effect from 1st January 1961.

British India Electric Construction Co. Ltd.—The results of this company showed a marked improvement over those of the previous year.

The Indian Galvanizing Co. (1926) Ltd.—This company is being wound up by a members' voluntary liquidation with effect from 30th December 1960. In consequence, the Company ceased to be its Managing Agents on that date.

Balmer Lawrie & Co. (Pakistan) Ltd.—The liquidation proceedings of this company continue. Its accounts have been prepared up to 1st April 1960, the date on which the liquidation commenced.

Associated Company—Assam Pulp Mills Ltd.—There has been some further delay in the establishment of a pulp-manufacturing mill for this company. Negotiations for the finalisation of the project are continuing. The Company continues to bear the major part of the preliminary expenses in connection with Assam Pulp Mills Ltd. During the year the Company has taken up a further 11,250 of its ordinary shares.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	80,01,400	Gross block	79,91,396

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Season 1959-60 Production*: The crushing during the year started on 9th November 1959 and finished on 30th May 1960, with a total crush of 48,74,283 (40,21,387 for 1959) maunds of cane at recovery being 9.45 (10.26) per cent which is considered satisfactory.

Cane price was increased from Re. 1.44 per maund to Rs. 1.62 per maund at the factory gate and from Re. 1.31 to Re. 1.50 at outstations. Cane cess and Cane Co-operative Societies' Commission remained at 19 nP and 5 nP per maund respectively.

Estates: There was a profit of Rs. 1,61,263.81 in the Estate profit and loss account for the year 1959-60 after providing for the large landholding tax. There was no capital expenditure during the year.

Season 1960-61 Prospects: The season's crush is expected to be in the region of 47,00,000 maunds of cane with an average recovery of 9.55 per cent which is considered fair.

Accounts in brief as at 30th September 1960 are as under:—

THE MANDYA NATIONAL PAPER MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Extraordinary General Meeting of The andya National Paper Mills Limited, will be ld at the Registered Office of the Company at Palace Road, Bangalore-1, on Friday the h July 1961, at 3 p.m. to consider, and if ought fit, to pass the following resolutions th or without modifications:

I. *As Special Resolution*: RESOLVED that the Resolution passed by the Members at the Second Annual General Meeting of the Company held on the 4th November 1960, authorising the Board to issue 5 lakhs New Equity Shares of Rs. 10 each and 10,000—6½ per cent Redeemable Cumulative Preference Shares of Rs. 100 each, be and is hereby withdrawn and the following Resolution is substituted therefor:—

"RESOLVED that the Company hereby authorise the Board to issue 8 lakh New Equity Shares of Rs. 10 each and offer them for subscription on the following terms and conditions:—

(i) The New Equity Shares shall be offered for subscription at par to the existing holders of equity shares of the Company whose names appear in the Company's Register of Members on the 28th July 1961, in the proportion of 8 New Equity Shares for every 14 Equity Shares held by each such member on the said date, the shares to be allotted to be suitably adjusted to the nearest multiple of five.

(ii) The Board of Directors may offer shares to the existing Members in excess of above mentioned proportion after taking into consideration renunciations which may be advised to the Company before the date of offer.

(iii) The holders of Equity Shares may also apply for a larger number of Equity Shares than they are offered by the Board but their applications for additional shares will be considered by the Board after the shares have been allotted in the proportions as determined by the Board.

(iv) The Board of Directors may also entertain applications from the public and the holders of Preference Shares, but the allotment to the public and the holders of Preference Shares will be considered by the Board after the existing holders of Equity Shares have been allotted the shares applied for.

(v) The New Equity Shares shall rank *pari passu* with the existing Equity Shares of the Company in all respects.

(vi) The offer aforesaid shall be made by the Board by a Notice specifying the number of shares offered and limiting the time not being less than one month from the date of the offer within which the offer if not accepted will be deemed to have been declined.

(vii) The offer aforesaid shall include a right exercisable by the Members concerned to renounce the shares offered to him or any of them in favour of any other person.

(viii) After the expiry of the time specified in the Notice aforesaid or on receipt of earlier intimation from the person to whom such notice is given that he declines to accept the shares offered, the Board of Directors may dispose of them in such manner as they think fit.

(ix) The issue, offer and allotment of the New Equity Shares shall be made in such manner and on such terms consistent with this resolution as the Board may in its absolute discretion determine and without prejudice to the generality of its powers given in this resolution, the Board is hereby explicitly authorised to decide and settle all questions relating to the issue and allotment to non-resident members of the Company.

(x) A sum of Rs. 5 per share shall be payable along with the application and the balance of Rs. 5 per share shall be payable in such calls as may be determined by the Board of Directors.

(xi) The Certificates in respect of New Equity Shares shall be completed and ready for delivery within 6 months after the date of last allotment thereof.

(xii) The Underwriting arrangement for the new issue may be made by the Directors as they think fit, but the underwriting commission shall not exceed 2½ per cent of the nominal value of the shares which the Board may decide to have underwritten.

(xiii) Aforesaid issue shall be made by the Directors subject to the sanction of the Controller of Capital Issues and on such terms and conditions as the Controller of Capital Issues may prescribe."

II. *As Ordinary Resolution*: "RESOLVED that the Board of Directors be and are hereby authorised to borrow moneys up to a limit of Rs. 4 crores (inclusive of borrowings already made) notwithstanding that the monies to be borrowed together with the monies already borrowed by the Company (apart from temporary loans obtained from the Company's Bankers in the ordinary course of business) may exceed the aggregate of paid-up capital of the Company and its free reserves, that is to say reserves not set apart for any specific purpose."

III. *As a Special Resolution*: "RESOLVED that the Contract between the Company and the Neturia Coal Company Private Limited, an associate (As defined by Section 2(3)(c) of the Companies Act 1956) of Bedi and Company Management Limited, the Company's Managing Agents, a draft whereof has for the purpose of identification been subscribed by the Chairman of this Meeting, for the sale of coal by the Neturia Coal Company Private Limited, to the Company up to 80,000 tons annually at the Government Controlled Rate plus incidental charges not exceeding Re. 1 per ton for a period of 10 years, commencing from 1st July 1961, be and is hereby approved."

The share transfer Registers of the Company will be closed from the 12th July to the 28th July, 1961, both days inclusive.

By Order of the Board,

1. To adopt the Directors' Report and the audited Profit and Loss Account of the Company for the year ended 31st December, 1960, and the audited Balance Sheet as at 31st December, 1960.
2. To declare dividends on Preference and Ordinary shares.
3. To appoint a Director in place of H.H. Maharaja Fatesinghrao Gaekwad who retires by rotation and is eligible for reappointment.
4. To appoint a Director in place of Sir Fazal Rahimtoola, Kt., C.I.E., who retires by rotation and is eligible for reappointment and to consider and, if thought fit, to pass the following resolution in respect of which a special notice, as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

   "RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions, if any, of the Companies Act, 1956, Sir Fazal Rahimtoola, Kt., C.I.E., who has attained the age of 65 years and retires by rotation be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him."
5. To consider and, if thought fit, to pass the following resolution:—

   "RESOLVED that pursuant to the provisions of Section 294 and other applicable provisions (if any) of the Companies Act, 1956, the Company hereby approves and consents to the appointment of Messrs. Nathuram Ramnarayan Private Limited and Messrs. Patel Ghanshyamdas & Co. Private Limited as the Company's sole Selling Agents for the Company's products for a period of five years commencing from the 1st day of January 1962 for the whole of India except the States of Mysore, Andhra Pradesh, Madras and Kerala, at the remuneration and on the terms, provisions and conditions contained in the Agreement made between the Company and the said sole Selling Agents, a copy whereof is placed before this meeting and for the purpose of identification subscribed by the Chairman thereof."
6. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

   "RESOLVED that the Articles of Association of the Company be altered in the following manner:—

   (i) For Article 27(*a*) substitute the following Article:—

   "27(*a*). The certificates of title to shares shall be issued under the Seal of the Company which shall be affixed in the presence of and signed by (i) two Directors or persons acting on behalf of the Directors under a duly registered Power of Attorney and (ii) the Secretary or some other person appointed by the Board for the purpose; Provided that at least one of the aforesaid two Directors shall be a person other than the Director appointed by the Managing Agents under Article 132 or a Director to whom Article 137 applies. A Director may sign a share certificate by affixing his signature thereon by means of any machine, equipment or other mechanical means, such as engraving in metal or lithography.

   Provided always that, notwithstanding anything contained in this Article, the certificates of title to shares may be executed and issued in accordance with such other the provisions of the Act or the Rules made thereunder, as may be in force for the time being and from time to time."

   (ii) In Article 131 delete the words "and he shall also be ex-Officio Chairman of Directors."

   (iii) After Article 168 insert the following new Article as Article 169:—

   "169. The Directors may elect one of their number to be the Chairman of the Board of Directors and determine the period for which he is to hold office and unless otherwise determined the Chairman shall be elected annually."

   Existing Article 169 shall be renumbered "169(A)."

   (iv) In Article 170 delete the words "Ex-officio."

   (v) In Article 184 for the existing proviso the following proviso shall be substituted:—

   "Provided nevertheless that certificates of debentures may be signed by one Director only or by an Attorney of the Company duly authorised in this behalf and countersigned by the Managing Agents and certificates of shares shall be signed as provided in Article 27(*a*)."

   (vi) In Article 186 for clause (1) the following clause shall be substituted:—

   "(1) Subject to the provisions of the Act, Tata Industries Private Ltd., their successors in business and assigns shall be the Managing Agents of the Company from the 16th day of August 1960 for the period and upon the terms, provisions and conditions set out in the Managing Agency Agreement dated the 1st day of November 1960 and which were approved by the Company by a Special Resolution at the Annual General Meeting of the Company held on the 15th day of May 1959 and by the Central Government with certain modifications agreed to by the Board. The said Agreement may (subject to the provisions of the Act) be further modified from time to time in such manner as may be mutually agreed upon between the Company and the Managing Agents."

   (vii) In Article 187 for clause (1) the following clause shall be substituted:—

   "(1) The Managing Agents, subject to the provisions of the Act and these Articles, shall be entitled to the management of the whole of the affairs of the Company and they shall exercise their powers as such Managing Agents including the powers conferred on them by the Managing Agency Agreement dated the 1st day of November 1960, subject to the superintendence, control and direction of the Board of Directors of the Company and subject also to the restrictions contained in Schedule VII of the Act and Article 189"."
7. To appoint Auditors and to fix their remuneration.

Notes:—(*a*) The relative Explanatory Statements, pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under item Nos. 4 to 6 set out above, are being posted to all members.

Dated at Bombay this 20th day of June 1961.

By Order of the Board of Directors,
WALLACE & COMPANY,
Secretaries & Treasurers.

TRAVANCORE OGALE GLASS MFG. CO., LTD.

MR. CHATTANATHA KARAYALAR'S SPEECH

THE Annual General Meeting of the Travancore Ogale Glass Manufacturing Company Ltd. was held at Alwaye on 9th June 1961. The following are extracts from the speech of Mr. S. Chattanatha Karayalar, M.P., Chairman of the Company, which was read in his absence by Mr. K. V. Mathew, Director:

"At the last meeting, I said that new equipment had been installed and with the co-operation of the workers and their leaders, we might be able to achieve better results in the years to come. I feel that our expectation in this direction is being realised. You will have observed from the profit and loss account that the production has increased. The profits also are higher.

"The two-year agreement with labour ended on 31st December 1960 and we have now entered into a fresh three-year agreement under which we have been assured of efficient and increased production and in turn the workers were granted wage increments for the next three years. I trust that the agreement will be implemented in the spirit in which it has been entered into.

"In my speech last year, I referred to the atmosphere of suspense and uncertainty prevailing during the period when the issue of the annual bonus was being discussed. The union leadership also felt the same way and I am glad to announce that by the new agreement a fixed share in the yearly profit of the Company has been assured to labour. I trust this will go a long way towards enthusing them to put in their best efforts to improve production and earn more and more.

Workers Thanked

"I wish to take this opportunity to thank the workers in general and their enlightened leaders in particular, for the lead they have given to the industrial labour in Kerala in settling matters amicably by direct negotiations.

"I would like now to refer to the recent excise duties levied on glass and glassware from March 1961. The excise duties are as high as 10 per cent. on chimneyware and 15 per cent on bottles, tumblers and other ware. The levy is unreasonably high when it is remembered that the glass industry is hardly making a profit of 5 to 8 per cent on its turnover. The industry has made suitable representation to the Central Government for introducing specific duties instead of *ad valorem* duties."

ELECTRONIC BALANCING MACHINE

An engineering firm at Zuidlaren in Holland has recently developed an electronic balancing machine for the dynamic balancing of car wheels. Removal of the wheels is avoided as they can be balanced both statically and dynamically on the vehicle. The machine is of sturdy construction and mobile, so that it can easily be wheeled to the car under test. All that is required is to jack up the car and arrange the pick-up of the machine under the swivel pin or brake drum. A white strip is stuck at any desired point on the wheel to be tested which is then set spinning by an electric motor with a driving roller. As soon as the wheel has reached the required speed the driving roller is disconnected. A wheel position at which the point of imbalance can be determined after the wheel has been stopped can be found by means of a stroboscope lamp which receives its current impulses from the pick-up and by the white strip. The degree of imbalance can be read on a meter fitted to the stroboscope lamp. The balancing machine can be used for passenger cars as well as motor trucks by reversing a simple switch. If any failure should occur in the electrical installations despite the sturdy construction, the user can easily remedy the defect by replacing any faulty section.

ATUL PRODUCTS LIMITED

IMPROVEMENT IN SUPPLY OF COAL URGED BY CHAIRMAN, MR. KASTURBHAI LALBHAI

ADDRESSING the shareholders of the Atul Products Ltd., at their Thirteenth Annual General Meeting held at Ahmedabad on Monday, 19th June 1961, Mr. Kasturbhai Lalbhai, Chairman of the Company, urged the Government of Gujarat to work out a satisfactory solution to the problem of coal shortage in the State. In an obvious reference to the rumours that Cambay oil could be used in place of coal as a fuel, Mr. Kasturbhai called upon the State Government to furnish authoritative information to the industry regarding the economics and other particulars of oil consumption in good time to render the switch-over easy.

The following is the full text of Mr. Kasturbhai's speech:

"GENTLEMEN,

"The Directors' report, the statement of accounts and other papers relating to the working of the Company during the year 1960 have been circulated to you and they have been in your hands for some time. If you will, therefore, kindly agree, we will take them as read for the purpose of this meeting.

"It will be seen from the accounts that the Company has made a profit of Rs. 1,17,86,783 and that this figure includes Rs. 14,28,800 as dividends received from the Atic Industries Limited and the Ameer Trading Corporation Limited out of their profits for the year 1959. Provision for Rs. 19,94,092 has been made for depreciation and Rs. 11,16,656 for Managing Agents' remuneration; also other suitable appropriations have been made as shown in the report. This leaves a sum of Rs. 26,94,306 to be utilised for paying dividend, at the rate of 12 per cent per annum, subject to deduction of tax, on the equity shares of the Company. I hope you will be satisfied with the working of the Company and the results for the year.

Shortage of Coal

"It has been mentioned in the report that the Company lost 15 days' production due to the shortage of coal. We had a similar loss in the previous year, and I am afraid of having a similar experience in the year 1961 also. The question of the shortage of coal all over the country has been so much in the forefront recently, that I do not know whether I need say anything more about it, except perhaps to say that we should be prepared for it even in the future. Particularly so, because we, in Gujarat, are at such a distance from the coalfields and also because the total requirements of Gujarat are sure to increase at a rate faster than elsewhere in the near future. It is perhaps no exaggeration to say that the whole immediate industrial future of Gujarat is closely dependent on the supplies of coal and the allied supply of power and I will request the State of Gujarat to do everything in its power to solve these two problems satisfactorily, as early as possible.

"In this connection, it is heartening to learn that we might be able to use Gujarat oil as fuel instead of coal. However, if this be really so, the State of Gujarat should come out with some authoritative statement to that effect, so that those who intend to use oil may perhaps themselves prepare for the same, because the switch-over from one to the other is not easy. It is not known, for instance, as to when and in what form and where oil, as fuel, will be available. There are rumours that the crude oil at Cambay is so thick that it is only fit to be burnt in special furnaces; that large supplies of gas are also available which can be used as fuel, but that neither of these products will be transportable over long distances. Then, there is the question of the comparative cost of coal and oil. It is well known that, as things are today, it will not be economical to use oil as against coal. I feel that the State of Gujarat should take care that advantage is not taken of the present coal situation and Gujarat is saddled with a fuel which is costlier. I request the State of Gujarat to settle all these issues as soon as possible and give authoritative information to the public.

Imported Raw Materials

"The report also mentions that, this year, we have lost some production due to the shortage of raw materials. The exact position is that we have lost production equivalent to about Rs. 17 lakhs during the year. The Company's position in the matter of raw material stocks and supplies has been one of hand to mouth for quite some time. In the present case, the Company could realise by November 1960 that, unless it had the October 1960-March 1961 period import licences in hand soon after the normal date of issue, it would be so short of materials that it would have to close the plants one after another in the period following February 1961. Although this was brought to the notice of the appropriate authorities, the Company did not get the import licences in hand till the middle of February 1961 with the consequence mentioned above.

"Such an unfortunate delay will perhaps not occur in the future; but I should invite your attention to the fact that, owing to the shortage of foreign exchange in general, an inadequate supply of raw materials will have to be considered as a constant phenomenon. In common with cuts introduced elsewhere, the value of the import licences granted to the Company has been cut down by about 20 per cent. The Company is trying to make good this shortfall by purchasing raw materials from certain countries which accept payment in rupees. But the range of materials is not sufficiently wide and selection in the matter of quality and price is not always easy. Ultimately, therefore, the Company will have to carry on as best it can for the time being and, in the meanwhile, make arrangements for local manufacture of these materials.

Manufacture of Intermediates

"As you are aware, your Board has been conscious of this problem for quite some time. I had last year referred to the various schemes which the Company had in mind or in hand for the manufacture of various intermediates. I am sorry that for various reasons the progress in realising these aims has been rather slow. The sulphuric acid plant has been working since July 1960 and a plant for a few individual intermediates is also nearly ready. But, while a large part of the equipment for the BON acid plant is on the site, the building is still under construction. This plant will now, therefore, get into production only by the first quarter of 1962. The position in respect of the caustic soda plant is also similar, and it may get into production by June 1962. Again, mainly on account of the difficulties in securing adequate foreign exchange, the combined scheme for intermediates and fast colour bases has been delayed longer than anticipated. Now, however, all the problems connected with these schemes have been satisfactorily settled. All the same, these schemes will not be completed before the end of 1963. I am, therefore, afraid that till all these schemes get into proper working order, we will continue to face the shortage of raw materials and we will not be in a position to get the best out of our dyes plants.

"A company, known as Cibatul Limited, has been registered on the 7th December 1960 with an authorised capital of Rs. 5 crores, out of which capital has been issued for Rs. 1 crore. Atul, as a company, is holding 65 per cent shares in this company and the remaining 35 per cent is held by Ciba Limited, Basle, and Ciba of India Limited. As mentioned in the report, the Company will make some urea formaldehyde plastic products and also intermediates for the sulfadrugs. The factory of this Company will be located on Atul's site. The designing and engineering of the plants of this Company is nearly ready but the question of foreign exchange is not yet settled to satisfaction. Therefore, it will be difficult to put the plants of the Company into operation till about the end of June 1963.

"As I stated earlier, we would not be able to complete all the schemes we have in hand till the beginning of 1964. By that time the Company would have invested Rs. 7 crores more for the various plants. I am afraid the result of this investment will not be reflected in a corresponding scale of increase in the final sales of the Company. However, by the time we have made these investments, we will ourselves be manufacturing most of the raw materials we require and will thus be self-dependent. The Company will also be so broadbased that we would be well equipped to get into the manufacture of products other than dyes, if we so desire."

Note: This does not purport to be a record of the proceedings of the annual general meeting.

Notice

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Twenty-eighth Annual General Meeting of the Company will be held at the Registered Office, 59C, Chowringhee Road, Calcutta, on Wednesday, the 19th day of July 1961, at 12-30 p.m., for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March 1961 and the Reports of the Directors and Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.
4. To apoint and fix the remuneration of the Auditors.
5. To transact any other ordinary business of the Company.

SPECIAL BUSINESS

The approval of the appointment by the Board of Sole Selling Agents in Burma.

EXPLANATORY STATEMENT AND NOTE

The approval of the Company is necessary to the Board's appointment of a Sole Selling Agent.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby given that the Ordinary Share Register of the Company will be closed from 1st to 19th July 1961, both days inclusive.

By Order of the Board,
F. P. GILBERT,
Secretary.

59C, CHOWRINGHEE ROAD,
CALCUTTA, 20*th June* 1961.

MARKET REPORTS

SHEEP SKINS WEAK

(*From Our Own Correspondent*)

MADRAS, 19*th June*

Arrivals of tanned cow hides were of moderate volume and clearance was halting. There was steady call for buffalo hides but no demand for buff calf or cow calf. Though prices ruled nominally unchanged in all sections, the undertone was weak. Market for tanned goat skins was quiet and for sheep weak.

In view of the ensuing August holidays in Europe, Madras tanners do not expect revival of serious export trading during the next few weeks. The next tanned skins London public sales commence on the 26th June when 80,000 goat and 120,000 sheep skins will be offered for sale.

LINSEED FIRM

(*Messrs. A Bradley & Co.*)

CALCUTTA, 19*th June*

A very firm tendency prevails and a further rise has been recorded in all sections. The main reasons have been shortage of supplies and firmness in mustard and groundnut markets; movement of new crop seeds have been very slow in the centres and local offerings are very meagre, whilst ready supplies are negligible. The oil market has advanced also in sympathy with seeds, but business is negligible as millers are reluctant to do any forward business at current rates. Local ready stocks are very small. The oilcake market is keeping steady, there is good local demand but the turnover has been small as stocks are running low in the mills.

The latest quotation is as follows: Ready, June delivery Rs. 29.50 per maund.

The U.S. Government has given its approval for a loan of Rs. 4 crores ($8.1 million) to Air-India International Corporation towards meeting a part of the cost of two Boeing 707 inter-continental jet aircraft. The credit has been channelled through the U.S. Export-Import Bank. Air-India at present has four jet aircraft. The addition of two more planes will go a long way towards meeting Air-India's goal of operating an all-jet air fleet. As the operation of piston-engined aircraft is becoming increasingly non-competitive, the Corporation is planning to retire its Super-Constellation planes and replace them with jet airliners. Three of the jet aircraft in service were bought with credits extended by the World Bank and certain commercial banks in the U.S. The fourth plane, which entered service in April last, was financed in part by a loan of $4.1 million extended by the U.S. Export-Import Bank.

MONEY SLIGHTLY EASY

(From Our Own Correspondent)

BOMBAY, 21*st June*

Conditions in the short-term money market turned distinctly comfortable during the week. Thanks to the return of funds from mofussil centres, combined with the inflow of funds from Calcutta, where call money rates are lower than in Bombay, supply improved further. Consequently, the inter-bank call rate among Exchange and Indian banks came down to 4½ per cent from 4¾ per cent last week. The other rates were unchanged. For reference, the rates are given below:

	Per cent
Inter-bank call money:	
Exchange and other large Indian banks	4½
Other banks	4¾
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3½
(v) 12 months	4

The results of the 91-days' Treasury Bills of the Government of India sold through weekly tenders showed that the easy money conditions were beginning to have some impact on the demand for Treasury Bills. Against an invitation of Rs. 2 crores, an equivalent amount was offered and accepted, which was the same as last week. But the average rate of accepted tender declined from 2.750 to 2.650 per cent per annum. The 91-day intermediate Treasury Bills sold from 14th to 17th inst., amounted to only Rs. 30 lakhs. Their sales are being continued.

The Reserve Bank of India's statement for the week ended 16th June 1961 discloses a contraction of Rs. 14.32 crores in notes in circulation, as compared with the previous week. As the notes held in the Banking Department have gone up by Rs. 15.56 crores, the total notes issued show a rise of Rs. 1.24 crore only. Foreign securities are unchanged at Rs. 108.01 crores, but, as the balance held abroad have declined by Rs. 1.69 crore, the total foreign assets are lower by that amount at Rs. 123.79 crores. Deposits of banks with the Reserve Bank of India have further improved by Rs. 2.92 crores to Rs. 86.25 crores.

A decline of Rs. 3.82 crores in demand deposits and an expansion of Rs. 8.14 crores in time deposits are disclosed by the statement of the Scheduled Banks for the week ended 9th June 1961. The deposits of the State Bank of India have declined by Rs. 72 lakhs. Borrowings from the Reserve Bank of India have fallen by Rs. 7.92 crores, but those against usance bills from the same institution registered a rise of Rs. 97 lakhs. Borrowings from the State Bank of demand nature also declined by Rs. 1.27 crore, while borrowings of time variety remained unchanged. Advances and bills discounted (bank credit) show a contraction of Rs. 36 lakhs to Rs. 1,280.97 crores. A year ago, this portfolio stood at Rs. 1,134.01 crores. The advances of the State Bank recorded a rise of Rs. 3.04 crores. This means that credit given by other scheduled banks must have declined by Rs. 3.40 crores. Investments of the scheduled banks as a whole fell by Rs. 13.33 crores, but as the State Bank's investment are marked down by Rs. 13.81 crores, the investment of other scheduled banks must have actually improved by Rs. 48 lakhs.

The gilt-edged market was dull. Inquiries were confined only to the short-dated securities in the Central loans section. Medium and long-dated loans were neglected. 3 per cent 1986 (Conversion loan of 1946) was particularly weak; its quotation declined further by 45 nP to Rs. 72 in the absence of support. 2½ per cent 1962 put on 5 nP to Rs. 98.90 and 3 per cent 1970-75 first development loan advanced by 10 nP to Rs. 91. The prices of all other Central loans were unchanged. In the State loans section, demand on account of sinking funds caused a spurt in prices of a large number of short and medium-dated issues. For example, 3 per cent 1962 Maharashtra loan gained 50 nP to Rs. 99, 4 per cent 1969 and 1971 Maharashtra loans were marked up by 10 nP and 25 nP to Rs. 99.60 and Rs. 99.25, respectively. 4 per cent 1969 loans of Gujarat, Madras, Andhra, U.P., Madhya Pradesh and Mysore showed rises of 5 nP, 15 nP, 10 nP, 15 nP, 40 nP and 15 nP respectively.

In the foreign exchange section, the rupee showed some weakness in relation to the U.S. dollar in sympathy with sterling. The banks' selling and buying rates for ready T.T. on New York were Rs. 480.00 and Rs. 476.50 per 100 dollars, respectively, as against Rs. 479.50 and Rs. 476.00 in the previous week. In the New York exchange market, the pound sterling was under pressure on account of the rumours of possible devaluation. Its exchange value climbed down from 279.200 cents as on 14th inst. to 278.700 cents as on 19th inst., in the spot market. Later, however, the statement of Dr. Per Jacobsson to the Basle Economic Society that the rumours of further currency changes were baseless imparted some strength to the pound sterling and the latest available rates show some improvement over the lowest levels reached on the 19th inst. The rates as on the 21st inst. are 278.870-278.900 cents per £ for spot and 277.010-277.040 per £ for three months' forward. As compared with last week, however, the pound lost 0.33 cent in the spot and 0.61 cent in the forward.

BULLION LISTLESS

(From Our Own Correspondent)

BOMBAY, 21*st June*

There have been no outstanding developments in the bullion market this week. An irregular trend prevailed during most of the week. A slightly easier trend was noticeable in the initial sessions due to profit-taking induced by reports of heavier arrivals. Later, the lost ground was recovered on the promising beginning made by the monsoon, prospect of early commencement of trading in the new three-monthly futures contract and professional buying by Calcutta and Rajasthan operators. Of the two metals, silver showed better signs of holding its ground than gold. Over the week, however, neither of them showed any significant variation, as will be seen from our customary comparative table given at the end of the report. Silver arrived at the rate of 37 bars per day on an average, while the offtake was no more than 8 bars. In the case of gold, the average arrivals were 7,000 tolas and offtake 3,500 tolas per day.

In the London bullion market, the price of gold tended to be higher, because of the weakness of the pound sterling, but there was no change in the price of silver. In New York, too, silver remained unchanged.

The following table shows the trend of the market during the week under review:

	21-6-1961 (closing)	High	Low	14-6-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	121.75	122.50	120.80	121.65
Forward:				
Jeth 2nd*	120.70	121.25	120.10	120.75
Sovereign	94.50	—	—	94.50
SILVER				
Ready[(.996 fine)	203.00	204.05	202.75	203.95
Forward:				
Jeth[2nd†	203.50	204.55	203.25	204.45
London—	20-6-1961			13-6-1961
Silver Ready	79½d.	—	—	79½d.
Silver Forward	79½d.	—	—	79½d.
Gold	251s. 5½d.	251s. 5½d.	251s. 0½d.	251s. 2d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 27th June settlement. † 28th June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 19*th June*

Sugar prices ruled quietly steady during the week at Rs. 106.75 per bag and retail at 97 nP per seer and although supply position continued easy, following monthly releases earlier this month of 2 lakh tons, good export prospects to U.S.A. and Pakistan and other countries checked further fall in sugar prices. Demand, too, was quoted better due to summer season. Production has finished and, in order to lessen pressure of stocks in factories, the Government is increasing the quantity of sales for delivery at factory gates at controlled prices.

Sugar recorded modest gains in Muzaffarnagar market during the week following brisk demand owing to summer season. It was reported that sugar factories had still not been able to lessen the burden of stocks they had been carrying. Some of the mills could not dispose of their balance stocks of 1959-60 season even at a handsome amount of rebate.

Khandsari attracted good demand from Punjab and east U.P. and inquiries were also received from Rajasthan, North Gujarat and M.P. and prices improved fractionally during the week. Sharp gains, however, were registered in prices of old *khandsari*. Stocks of *khandsari* in week-end at Muzaffarnagar were poor at about 25,000 maunds, the corresponding figure last year being 80,000 maunds. Week-end prices were: *inferior* Rs. 30 to Rs. 32, *superior* Rs. 33 to Rs. 35.50, *crystal* Rs. 34 to Rs. 37, *boora* Rs. 40, *khandsari old* Rs. 27 to Rs. 32 per maund.

Ready *gur* prices ruled quiet in week-end following bullish trend in mid-session as loading was made free for some days when week's offtake aggregated eight wagonloads and further despatches were hampered for want of empties. Loading was now again stopped and small offtake is being arranged by road. Daily arrivals are now poor and local stock is put at 33,000 maunds with latest prevailing prices being: *gur dry* Rs. 15.50, *kotha selected* Rs. 15.75, *kotha dry-wet* Rs. 15, *wet* Rs. 14.12, *shakker* Rs. 16.25 a maund.

Gur prices registered sharp gains of 50 nP to Re. 1 per maund during the week in Muzaffarnagar market on brisk demand from Punjab, Gujarat and M.P. Stockists were reluctant to dispose of stocks anticipating better prices later. *Gur* stocks there were put at 1.3 lakh maunds as against 2 lakh maunds on corresponding date last year and prevailing prices were: *Chaku kotha dry* Rs. 18.25 to Rs. 19.25, *medium* Rs. 18, *wet* Rs. 15, *rusket Chaku* Rs. 12.50, *shakker* Rs. 17 to Rs. 19, *masala* Rs. 21 to Rs. 24 per maund.

After early gains *gur* futures ran down sharply during the week on active bear pressure. Fluctuations were as follows: (opened 12th June, highest, lowest, on 19th June) *Gur ashad* Rs. 14.62, Rs. 14.73, Rs. 14.52, Rs. 14.57; *gur fagun* Rs. 13.86, Rs. 14.13, Rs. 13.82, Rs. 13.83.

COTTON EASY

(From Our Own Correspondent)

BOMBAY, 21*st Ju*

A distinctly easy trend has come to prevail the cotton market. Early in the week, the tre was fully steady, with I.C.C. Jarilla August sta ing in the neighbourhood of Rs. 587. This v due to reports of delay in the arrival of monso and the possibility of a satisfactory arrangem being made by the Textile Commissioner with Indian Cotton Mills Federation for disposal stocks of cotton held by co-operatives in Guja This has actually materialised as we shall p sently show. Nevertheless, there has been a of Rs. 10 in the futures contract since Saturd last. The chief reason for this drop is report good rainfall in almost all the cotton-grow tracts in Maharashtra, Gujarat, Madhya Prad and Andhra. As usual, speculators have star spreading the view that the crop in the 1961 season will be a bumper one, much better t the large crop harvested in 1960-61. After dec ing to a low of Rs. 575 on Tuesday the 20th i from a high of Rs. 588 touched on Thursday 15th inst., Jarilla August finished today at Rs. the rise over the lowest level being attribut to profit-taking.

The Textile Commissioner's discussions v the representatives of trade and industry on difficulties of Gujarat cotton co-operatives h been fruitful, as will be seen from the follow quotation from the official Press note:

"As a result of these discussions, it has b agreed by the trade and the mills to speed their purchases of cotton, provided stocks w offered by the co-operative societies at ma prices in keeping with the quality of the co and that unrealistic prices were not demanded cottons of mixed or deteriorated quality. The operative societies also expressed their willingn to dispose of their stocks at market prices stated that, while a part of the cotton might mixed or have deteriorated in quality, such st were not large.

"It was felt that, while buyers and sel might continue to transact business in the nor manner at a mutually agreed price, occas might arise where it might not be easy to ne ate an agreed price. In order to assist the chase and sale of stocks on such occasions, it been agreed that samples should be refe jointly by the buyer and the seller to a small t nical committee consisting of three persons, representative of the mills or the trade, one re sentative of the co-operative societies of the concerned, and one of the Textile Commissio The Committee, after examining the sample, s determine the fair price for the lots in ques which shall be binding on both parties.

"The Textile Commissioner hopes that mills will now come forward and effect purch against their quotas as quickly as possible. mills have already been granted an additi concessional quota of Indian cotton to the tent of 20 per cent of their last year's consu tion. In addition, any mill which wishes to n purchases beyond its quotas may do so and mate such purchases to the Commissioner. guarantees in regard to American cotton now been received from most of the mills, there is no factor whatsoever which need back mill demand. The trade also should come forward to discharge fully its traditi function of holding stocks in anticipation of n purchases.

"The Textile Commissioner also hopes co-operative societies would adopt a realistic tude and dispose of their stocks as early as sible at prices appropriate to the quality of stocks offered by them for sale, and would res utilise the machinery of the technical comm whenever there was any disagreement in re to prices."

The mills have already started implemen their assurances to the Textile Commissio During the last two days at the Sewri spot ket, Gujarat varieties received greater atten than others. Good business was put through Vijay and Digvijay held by the co-operatives. staples from other areas were relatively negle with the result that they lost quite a few ru Laxmi, for instance, was down by 10 to 15 po Amaravati and Kalyan lost no less than Rs.

The quotations—in rupees per candy of lbs.—for a few principal varieties of cotton ar

Hubli Laxmi 970 (985); Amravati L 147 (1,045); Moglai Zoda 490 (470); Digvijay 975 (Gadag Laxmi 965 (985); Dhulia Zoda 500 (Kalyan 840 (860).

N.B.—The figures in brackets relate to rates a week before.

An important development of the week the enhancement of the floor prices for cotton the 1961-62 season. The floor for Jarilla 25 has been stepped up from Rs. 495 to Rs. 600 candy, that is, from Rs. 139 to Rs. 168.57 quintal (100 kilogrammes). The floor prices other varieties, says the Government, will be creased correspondingly. There will, however no change in the ceiling prices of any of varieties of cotton.

The official announcement to the afore effect has had no particular effect on the ma Operators, however, were disappointed that ceilings were not raised.

The Karachi cotton market suffered a ma setback during the week under review. futures and spots came in for persistent selling account of the lack of encouraging export quiries and the low level of demand from do tic mills. Operators took note of the Governm proposal to use colonisation plans to step up duction of raw cotton and to enforce shortly trols on ginning to avoid malpractices. Tra

in January (1962) contract commenced on the 15th inst. Opening at Rs. 81, the contract quietly declined to Rs. 77.65. July contract lost Rs. 4.05 to Rs. 66.05 over the week. Among spots, L.S.S.R. lost Rs. 4 to Rs. 85.90. 4F Punjab Roller eased by Re. 1.65 to Rs. 83.90 and S.G. by Rs. 2.15. The following are the latest available quotations—in rupees per maund of 92 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi, the figures in brackets being last week's rates:

Sind *Deshi* 91 (91); Punjab *Deshi* 88 (88); 4F Punjab Roller 83.90 (85.55); S.G. 87.90 (90.05); L.S.S.R. 85.90 (88.05); S.G. 90.40 (92.55).

The Alexandria cotton market displayed distinctly weak conditions during the week under review, thanks to dull conditions on the export front and the low level of domestic offtake. It may be noted here that, in accordance with the recent decision of the Government to control cotton export trade for participating in the share capital of cotton exporting firms, the Misr organisation—a Government body—is reported to have already acquired 35 per cent of the share capital of such leading companies as Messrs. Farghally Coton Co., Loutfi Mansour, Huri and Co., H. Kupper, Bibawi Cotton and Choremi Benachi Cotton. The other companies are also reported to be negotiating with the Misr organisation. It is also learned that small firms, such as the Giza cotton, the Egyptian Continental, and Messrs. Mohammed Ismail may amalgamate to form a new company. The object of this step is to avoid unduly large fluctuations in the prices of cotton and prevent hiding foreign exchange earnings. The Ashmouni August contract gave way from 60.27 T. (tallaris) to 57.15 T. per pound. June contract was lower by 2.92 T. at 57 T. Karnak July contract declined from 69.65 T. to 69.35 T.

Easy conditions continued to prevail in the Liverpool cotton market in the absence of any fresh incentives. The commission houses were sellers particularly in near positions. July position drifted lower from 23.90*d.* to 23.70*d.* per pound. July position (Sudan) was quiet at 31.75*d.* October position, however, elicited some support, the quotation having gone up from 24*d.* to 24.15*d.*

In distinct contrast to the trend in the previous week, cotton futures in the New York market ruled easy during the week under review, following reports of favourable weather conditions in major cotton tracts. There was some pause in the mills' purchases too. The spot section, however, was well maintained. Exports for the season upto the end of May were slightly higher at about 6.4 million bales, as compared with 6.0 million bales last season.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	20-6-61	13-6-61	26-5-61
Spot	34.50	34.40	34.35
July	33.25	33.43	33.45
October	34.08	34.24	34.12

OILSEEDS ADVANCE FURTHER

(From Our Own Correspondent)

BOMBAY, 21*st June*

The oilseeds market continued to rule firm during the week under review, thanks mainly to sustained speculative buying. The local demand from crushers too was quite large. Linseed was in the forefront, with its quotations moving up to touch peak levels. The firmness in linseed was engendered by the sizable support from Calcutta interests, following the pronounced strength in North Indian rapeseed markets. Arrivals also were smaller. Castorseeds rose to the season's peak level, mainly as a result of the revival of export enquiries of castor oil from the U.K. and some of the East European countries. The upward trend in castor oil prices in London, following the tapering off of Brazilian supplies, opened out hopes of further U.K. enquiries for Indian oil. Arrivals of castorseed from upcountry centres were substantially lower than the corresponding period last year. For values ruling in upcountry centres were still higher than that prevailing in the local market. Groundnuts were well maintained in view of the tight statistical position and steady offtake by local crushers and *vanaspati* manufacturers. The total volume of business in groundnuts was, however, not very large, particularly towards the close, since buyers were awaiting some decline in values owing to favourable monsoon conditions in producing areas. The decision of the Government of India to allow export of H.P.S. groundnut-in-shell to East European countries, in addition to the U.K. and Netherlands, against the quota of 2,000 tons already released, did not have any perceptible effect on the market. The sesame section was steady in sympathy with other major seeds and oils.

Cottonseeds, too, ruled distinctly firm, following the announcement of an export incentive scheme for its cakes. The scheme seeks to grant import quota of one ton of copra against every nine tons of decorticated cottonseed expeller cake. Crushers and exporters welcomed the scheme. Nevertheless, the incentive fell short of their expectations. It is said that the profit derived from the import of copra will compensate for only half of the loss suffered in exporting the cake.

Among linseeds, September 1961 contract rose initially from Rs. 39.75 to Rs. 40.62, before closing at Rs. 40.31, with a net gain of 56 nP. Bold ready improved from Rs. 39 to Rs. 40.12; it had earlier touched Rs. 40.75. Linseed oil improved from Rs. 17.06 to Rs. 17.30 by Monday. Subsequently, it lost some ground and closed today at Rs. 17.10.

Among castorseeds, September contract made headway from Rs. 179.62 to Rs. 180.87 by mid-week. Subsequently, it fluctuated both ways to finish at Rs. 180. Madras small closed today higher at Rs. 35.62, as against Rs. 35.50 last week-end. Oil commercial hardened from Rs. 15.10 to Rs. 15.20, before winding up the week at Rs. 15.10. Oil B.S.S. was steady at Rs. 16.20.

In the groundnut section, Khandesh quality moved up by 50 nP to Rs. 55.50. Coromandels picked up 25 nP to Rs. 55.50. Nizam Bold was fully maintained in the beginning but closed rather subdued at Rs. 54.75, with net loss of 25 nP. Towards the close, oils, too, lost their earlier gains. Oil ex-mill rose from Rs. 23.25 to Rs. 23.60 by Saturday. But it fell to Rs. 23.05 later on. Railway receipts closed lower at Rs. 22.80, as against Rs. 23.10.

Among cottonseeds, September 1961 contract rallied from Rs. 95 to Rs. 96.50 by Saturday. But it gave way subsequently to close at Rs. 95.50. Berars, whites and non-whites, put on 10 nP each to Rs. 19.60.

In the sesame section, bold ready was held firm at Rs. 370, so also oil at Rs. 27.75. Among other seeds, Kardi put on Re. 1.25 to Rs. 28 and Niger 75 nP to Rs. 42.25.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	21-6-1961	14-6-1961	7-6-1961
Groundnut	Rs.	Rs.	Rs.
Nizam bold	54.75	55.00	54.50
Coromandel ready	55.50	55.25	55.00
Khandesh quality	55.50	55.00	55.00
Oil ex-mill ready*	23.05	23.25	23.00
Railway receipts*	22.80	23.10	22.70
Castorseed			
September 1961	180.00	179.62	177.50
Ready Madras	35.62	35.50	35.50
Ready Kanpur	33.87	33.75	33.62
Oil B.S.S.†	16.20	16.20	16.15
Oil commercial†	15.10	15.10	15.05
Linseed			
September 1961	40.31	39.75	38.62
Bold ready	40.12	39.00	38.00
Oil ready†	17.10	17.05	16.25
Cottonseed			
September 1961	95.50	95.00	95.00
Niger seed	42.25	41.50	42.00
Kardi seed	28.00	26.75	27.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BEMBERG YARN RALLIES

(From Our Own Correspondent)

BOMBAY, 21*st June*

A feature of trading in the yarn market was the pronounced firmness in the art silk yarn section, thanks mainly to the scarcity of floating supplies and fears of reduction in import quota. Besides, upcountry enquiries were quite encouraging. J/P and Cupressa Bemberg yarns were in the forefront, following the marked increase in the premia on the import licences. During May, imports of rayon yarn into Bombay aggregated 1,083,000 kgs., which compares with only 2,700,000 kgs. in April and 9,240,000 kgs. in March. Japan was the leading supplier accounting for 25 per cent of these imports. The staple fibre yarns also ruled distinctly steady. Operators took note of reports that the Government of India is considering the question of imposing control on the distribution of staple fibre yarn with a view of eliminating the existing alleged malpractices. Cotton yarns, however, were listless.

Among imported art silk yarns, 120 Japan was quoted higher by Rs. 27 at Rs. 1,874. 150 Japan was fully maintained at Rs. 1,874. 120 Italy, however, was marked down by Rs. 84 to Rs. 1,763. Among indigenous yarns, National Rayons 120 bright cones first grade gathered 22 nP to Rs. 19.12, while 150 bright cones first grade dropped 49 nP to Rs. 16.54. Cupressa Bemberg yarn (60 x 1) August contract staged a smart rally to touch Rs. 2,710, a net rise of Rs. 20 over the week. June settlement forged ahead by Rs. 10 to Rs. 2,655. Spot Cupressa was marked up by Rs. 26 to Rs. 2,659. (40 x 1) J. P. August delivery advanced by Rs. 89 to touch a peak of Rs. 3,183. June contract spurted by Rs. 85 to Rs. 3,123. This rally led to the imposition of special clearing rates for J.P. Bemberg yarns today.

In the staple fibre yarn section (40 x 2) August contract rose by Rs. 17 to Rs. 940. Spot Kohinoors put on 16 nP to Rs. 11.42. Spot Citys stood higher by 2 nP at Rs. 10.89.

Among cotton yarns, ten counts Podars eased by 13 nP to Rs. 17.37. Twenty counts Gokaks were quiet at Rs. 22.50, as also New Greats at Rs. 21.25. Thirty counts Simplex changed hands at Rs. 27. Forty counts Maduras rose by 50 nP to Rs. 32.87. Sixty counts Finlays, however, drifted lower by 39 nP to Rs. 65.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	21-6-1961	14-6-1961
Art silk yarn—	Rs.	Rs.
60/1 Cupressa Bemberg (100 kg.)—		
June	2,655.00	2,645.00
August	2,710.00	2,690.00
Spot	2,659.00	2,633.00
40 x 1 J/P June	3,123.00	3,038.00
August	3,183.00	3,094.00
120 Japan (per 100 kg.)	1,874.00	1,847.00
150 Japan (per 100 kg.)	1,874.00	1,874.00
Staple fibre yarn (40 x 2)—		
August (per 90.72 kg.) ..	940.00	923.00
Kohinoor (per kg.)	11.42	11.26
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.37	17.50
20s New Great	21.25	21.25
30s Simplex	27.00	27.00
40s Madura	32.87	32.37
60s Finlay	65.00	65.39
80s Moderns	69.50	69.50

GOOD DEMAND FOR TEA

[*Messrs. Forbes, Ewart and Figgis Private Ltd.*]

COCHIN, 13*th June*

700,000 kilograms were offered in Sale No. 24 held today. Quality particularly of low mediums and mediums showed a further decline. The market met with an active demand. Low mediums and mediums met with good support at a decline of 5 to 10 nP per kilo, but towards the end of the sale these eased further and were easier by 15 nP and sometimes more. Good mediums were well supported but were easier by 10 to 15 nP. There was useful inquiry for highgrowns but these were irregular with quality. Whole leaf grades were better supported than last week and are quoted steady. A small selection of C.T.C. types and legg cut sold well and were often dearer. The quotations were:

	1961	1960
	Rs.	Rs.
Low mediums	4.15-4.30	3.30-3.50
Mediums	4.30-4.45	3.50-3.75
Good mediums	4.45-4.70	3.75-4.05
Nilgiri B.O.Ps.	Rs. 4.50-5.15	

The average price realised in sale No. 24 was Rs. 4.37 per kilo as against Rs. 4.43 a week ago and Rs. 3.81 in the corresponding sale last year.

Dust Sale No. 24: 290,000 kilograms were offered in dust sale No. 24 held on 15th inst. There was good general demand but prices were irregular for all descriptions. Low mediums and mediums were well supported and sold around last rates. Good mediums were firm whilst Calicut descriptions were generally lower. Highgrowns met with good support and were firm. There was good inquiry for C.T.C. types and legg cut types which tended a little easier.

The average price realised in dust sale No. 24 was Rs. 4.01 per kilo as compared with Rs. 4.06 in the previous week and Rs. 3.90 in the corresponding sale last year.

Export Quota: Market remained rather quiet and at present there are large sellers at ½ nP per kilo.

Colombo: Just over seven and a half million pounds were offered in the export sale. There was strong demand. Good mediums were firm to dearer. Teas from Uva sold at dearer rates following quality. Lowgrowns were well supported and were steady.

London: North Indian and other growths: 24,916 packages were offered on Monday. There was a good general demand and prices were fully firm for most descriptions.

Ceylon and South Indians: 29,014 packages were offered of which 9,286 packages were from South India. The market met with fair general demand. Low mediums declined by 1d.

As we go to Press, Messrs. Forbes, Ewart and Figgis Private Ltd., wire:—

"*Sale No.* 25: 6,37,000 kilograms. Strong general demand. Low mediums and mediums fully firm. Good mediums about steady. Nilgiris irregular following quality."

TEAS STEADY

(From Our Own Correspondent)

CALCUTTA, 20*th June*

Owing to poor arrivals of tea, no sales took place during this week, and the next export and internal sales are scheduled for the 26th and 28th inst., respectively. However, increased shipments of tea took place during the week. These, in loaders for the United Kingdom, increased notably. The climax is not expected until a few weeks hence. Last week's sales for internal consumption took place as scheduled and, with exporters being active, good demand for new season's teas was a feature.

It is evident that foreign buyers have increased their offtake. In the first two auctions, interest was not developed but in the third export auctions held in the last week more interest was in evidence, with Russia and Turkey dominating among foreign buyers.

As expected, the output in North East India in May showed a marked increase. At 30.69 million lbs. the increase was 9.74 million lbs., as compared with May 1960. With last month's figure, output in the 1961-62 season has now aggregated 49.77 million lbs., representing a total increase of 12.25 million lbs. Comparison of output with last year does not disclose a useful analysis since in the last year production was much lower than an average year in view of drought. Production in 1959-60 represented an average and, as compared with that, the output in the last two months has been much lower. Such an analysis has led to the belief that production in the current year is not expected to lead to a glut in supplies. The improved demand in the export auctions springs from such a belief.

Trade circles here hoped that the U.S. would consume more tea this year than last year, but that how much of this increase would account for Indian teas remains to be seen. Both India and Ceylon have been paying good attention to propaganda in the U.S. However, in other countries such as West Germany, Switzerland, East Germany, Czechoslovakia, etc. Indian propaganda is often conspicuous by its absence and visitors from India to some of these countries have reported the complete lack of "tea-sense" among several people who take to other beverages, including coffee, very liberally. The Tea Board would have to be more active in propaganda in foreign countries if the Planning Commission's increased production and export targets are to be realised. If activities of Government departments are not co-

ordinated, there is every danger that other producing countries would score over India in foreign markets.

Pakistan has announced that the present rate of excise duty of Re. 0.62 a lb. and export duty of Re. 0.37 a lb. would continue.

Dusts on offer during last week's internal sales amounted to 25,079 packages. New season's teas included in the total offerings amounted to 12,277 packages. These met with good demand but some quantity of the non-wither legg-cut teas, the price of which was much lower than brokers' valuations, had to be withdrawn. On the other hand, keen competition was offered to Darjeelings, prices of which rose impressively. Orthodox teas were firm at lower rates. Medium C.T.Cs. eased up to 30 nP. Old season's teas were in good demand, but C.T.Cs. eased and orthodox teas recorded an irregular trend. No quotations were given since representative teas were limited.

Leaf offerings amounting to 126 chests were irregular.

BASE METALS SUBDUED

(From Our Own Correspondent)

CALCUTTA, 20*th June*

Prices of base metals eased during the week under review, as support at higher levels became restricted. Further, prices in overseas markets declined. The news of the week has been the announcement of the Government of India's decision to revive, with immediate effect, the quota licences at 12½ per cent to established importers in respect of copper wrought in the form of rods, sections, pipes, tubes and sheets covered under Section 41(ii)/I of the Import Schedule as well as copper alloys in similar shapes covered under Section 46(c)/I. These quota licences were a feature of the import policy in the April-September 1960 period, but remained suspended in the following six months. Licences will be valid for 12 months in respect of copper wrought, and nine months in respect of wrought brass, bronze and other alloys.

The virtual ban imposed on imports of these semis in the past nine months has led to acute scarcity, and cottage industries have been hit hard in particular. Two new units have been set up to produce non-ferrous semis in Bombay, but it will take time before these units can reach capacity. In the meanwhile, the capacity of the pioneer unit in Calcutta has been increased considerably, and this unit has still plans for further expansion. As and when indigenous production increases further, it is to be hoped that the quota to established importers in respect of semis would be reduced progressively, if not withdrawn at a time.

If indigenous production of non-ferrous semis, such as copper and brass tubes, sections and rods, and brass and copper sheets, and zinc and lead pipes and sheets cannot be increased to capacity, the blame should be squarely placed on Government's shoulders. Paucity of raw materials such as copper, zinc, tin and lead, is stated to be the case why the pioneer manufacturer through extrusion process in Calcutta has had to slow down the pace towards the realisation of increased capacity. According to the annual report of this firm for the last accounting year, production had to be curtailed for lack of adequate raw materials, mainly copper and zinc. In this connection, market circles have praised Dr. B. C. Roy for his forthright appraisal to the Government of India of the position facing West Bengal. About 100 small-scale industries in and around the industrial belt of Calcutta have reached a point of crisis in view of acute shortage of copper, zinc, and tin and brass sheets. West Bengal's requirements have been estimated at 3,100 tons, whereas the import quota is only 450 tons. This being the true state of affairs, it is a pity that sometimes the existing shortage of semis is attributed to inadequate indigenous capacity. The extrusion plant in the private sector situated in Calcutta has enough, if not more, capacity to meet India's increased requirements, and production can be speeded up if only the Government of India can consider granting increased quotas of copper and zinc commensurate with the capacity of the plant. From all points of view, the country stands to benefit by increasing indigenous production of semis. The Government has recently imposed excise duty on copper and brass pipes and tubes, and copper and brass flats and squares and sheets. Government stands to lose this duty if imports are made at the cost of indigenous production.

In the local market, tin eased from Rs. 1,604.25 per 100 kgs. to Rs. 1,521.50. Demand was just fair and that explained the declining trend. On the London Metal Exchange, tin was maintained firm at £879¼ a ton. In New York, the ready metal was unchanged, but in forward positions a contango was developing. In London, electrolytic copper eased from £237⅛ a ton to £233¼. Copper scrap prices in Calcutta were about steady. Electrolytic zinc here at Rs. 336.50 per 100 kgs. declined to close at Rs. 330.75, and virgin lead at Rs. 139.75 was a couple of points lower.

JUTES RECORD RECOVERY

(From Our Own Correspondent)

CALCUTTA, 20*th June*

Following greater support, steadier conditions were in evidence in the jute markets during the week under review, and prices of both goods and fibre recorded a handsome recovery. Prices of goods improved on covering demand at lower levels, although overseas buyers continued to be inactive. The better statistical position in regard to sacking goods has been due to the transfer of looms from sacking to hessian. Output of sacking in May declined by 2,200 tons to 38,200 tons, but that of hessian and miscellaneous constructions rose by 1,000 and 300 tons respectively to 28,500 and 11,600 tons, leading to an overall fall in the total output by 900 tons to 78,300 tons. Stocks at the end of April were 90,900 tons and thus the total availability of goods in May was 169,200 tons. May-end stocks being 92,100 tons, demand in the month was of the order of 77,100 tons, i.e. 1,200 tons more than output. This general improvement in the statistical position revived covering demand during the week. The improvement in the statistical position of sacking alone has been more satisfactory than hessian. Sacking stocks at the end of April were 48,800 tons and production was lower at 38,200 tons. The total availability, therefore, was 87,000 tons. Stocks at the end of May being only 44,400 tons, sales in the month should have aggregated 42,600 tons, i.e. 4,400 tons more than production. This lent greater rhyme and reason for the recovery in sacking prices.

Further, market circles had reason to believe that as from July onwards foreign buying of sacking goods would be accelerated. Feeler-inquiries were already in evidence from importers in Indonesia and West Africa. Cuba was believed to be awaiting proper timing to enter the market, and this timing would not be farther than July, when that country was expected to lift approximately 90,000 bales in the next three months. Australian buying was expected to total about 100,000 bales a month in the July-September period. With a good agricultural crop within the country and increased industrial activity, domestic buying is also expected to improve in the coming months. In addition, there would be the usual tenders from the Government of India. All these would indicate that in the new season mills would have to increase the proportion of production of sacking in relation to hessian. As regards the U.S.A., judging from current indications, that country would as well delay purchasing. In view of higher prices, the U.S. has not only reduced consumption, and apart from small purchases here and there, that country is consuming more from stocks. Current stocks there including those on the high seas would be sufficient to meet about three to four months' requirements. As such, the U.S. can well wait for prices to decline. Interest from Argentina is yet paltry, and no indications are yet available that that country would be soon lifting hessian in greater quantities.

As announced earlier, forward trading against November delivery jute goods was resumed on 15th June. The improvement in prices of goods in the ready market was also due to the commencement of forward trading. It is felt that, since several restrictions have been removed, strict vigilance is essential to put down excessive speculation. Special margins on purchases of raw jute and certain standard constructions of jute goods on transferable specific delivery contracts have been removed by the Forward Markets Commission in an attempt to bring about normal trading conditions in the jute markets. The restrictions imposed during last year on the number of transfer of *pucca* delivery orders issued against transferable specific delivery contracts in certain standard constructions of jute goods have also been withdrawn. It would be remembered that these restrictions were imposed one after another in order to check the rising trend in prices. Despite these restrictions and the imposition of heavy special margins, prices of raw jute and jute goods moved up, and the rising trend received considerable impetus from the shortage of fibre, the seriousness of which grew as the season advanced. Although several restrictions have now been removed as a precautionary measure and aimed to minimise speculation, the East India Jute and Hessian Exchange has taken certain steps to limit the volume of business to the capacity of individual members. The procedure of registration of transferable specific delivery contracts and the submission of trading returns in these returns by members of the Exchange would be continued.

With the approach of the new season, the question of what ought to be a fair price to fibre has become important. With the chances of a bumper crop, it is felt that if cultivators should be able to succeed in marketing the entire crop they would gain in cost of production being spread over a larger harvest. As such, if growers receive about Rs. 25 a maund, basis Assam bottoms, that would be a fair price, according to market circles. This would mean that the price in Calcutta would have to be around Rs. 30 a maund. However, opinion is not unanimous as to the fair price for the grower. It is reported that the Bihar Government strongly feels that the grower should not get anything less than Rs. 35 a maund. Officials connected with jute development in West Bengal have felt that cultivators in this State should get about Rs. 30 a maund. Since opinion in this regard is not unanimous and the Government, with country-wide elections in the offing, may err, if at all it errs, for the benefit of cultivators only, jute mills will soon represent to the Government of India their own position and state what price they can pay if their production is to be economic and they should be able to offer competition in foreign markets. That the jute mills are always eager to pay fair and reasonable prices to the grower is evident in the desire of mills recently expressed by the Indian Jute Mills' Association favouring a price support scheme. The Association has pointed out that a scheme of this type would prevent prices from being forced down to uneconomic levels. When the full weight of the forthcoming bumper crop begins to be felt on the market, prices are likely to react. It would be remembered that in 1958-59 fibre prices following a very good crop declined to very low levels and the result was that in the following year farmers reduced the acreage on jute. It is felt that, encouraged by higher crop, the Government of India should not plunge itself into an export programme as in the past. Industry circles said that had only the Government thought realistically and prevented resumption of export early last year, the present shortage could have been averted. Instead of exports, the State Trading Corporation should be asked to buy early in the next few months and thus create a buffer stock.

Pakistani mills would appear to have stopped under-quoting Indian rates. This was one more reason why prices in Calcutta steadied. On Tuesday last, prices of goods eased as mills offered liberally and subsequently business was done for near deliveries. Ready B. twills declined from Rs. 150.00 to Rs. 147.00 and ready hessian 40″ 10 oz. from Rs. 48.50 to Rs. 47.25. Advices from the New York burlap market were discouraging. The 40″ 10 oz. hessian in New York eased from 12.05 cents a yard to 11.80 cents and the 7½ oz. hessian from 9.15 cents to 9.00 cents. This caused disappointment among stockists here and this was reflected in B. twills moving down to Rs. 146.50 and hessian 40″ 10 oz. to Rs. 46.50 on Wednesday. On Thursday, trading in futures market for November delivery jute goods reopened. This caused prices for ready and near delivery goods to move up. At one time, ready B. twills were as high as Rs. 151.50 but soon receded to Rs. 149.50. Hessian 40″ 10 oz. after being higher at Rs. 48 closed at Rs. 47.25. On Friday, good covering business was done, ready and near delivery goods receiving greater attention. B. twills spurted to Rs. 154 and hessian 40″ 10 oz. to Rs. 48.50. Over the week-end, more covering business was done as a result of which B. twills, though unchanged, were steady at Rs. 154 and hessian 40″ 10 oz. was better at Rs. 49.25. Following a decline in interest during yesterday, B. twills eased to Rs. 152 and hessian 40″ 10 oz. to Rs. 48.00.

In sympathy with goods, fibre prices also improved. Mills bought a little more than last week. Generally, sellers were anxious for business. Better advices in regard to the new crop from the Narayanganj market also contributed to the hardening trend in Calcutta and mofussil markets. Heavy rains in Pakistan districts have slowed down early arrivals and this, in turn, brought the remainder of the old crop to the forefront. However, the old crop interested only those who were having guaranteed shipment commitments. This explained the further fall in prices of the old crop. Export firsts at Rs. 335 per bale recorded a fall of Rs. 35. Export lightnings eased from Rs. 360 to Rs. 320 and hearts from Rs. 340 to Rs. 300. Local opening and closing quotations for the old crop are given below:

(In Rs. per maund against ready delivery)

	Opening	*Closing*	*Gain*
Daissee bottoms ...	47.50	50.00	2.50
Assam bottoms ...	45.50	48.00	2.50
Northern bottoms ...	44.50	47.00	2.50

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, 19*th June*

Quietly easy conditions were witnessed in foodgrain prices during the past week due to slack demand in the face of increasing stock positions. Arrivals, however, were small as cultivators were retaining their produce here although pressure of wheat arrivals was reported in other producing areas of Punjab and Madhya Pradesh. Wheat prices at Hapur eased fractionally during the week to be quoted on Monday at Rs. 14 to Rs. 14.50 a maund for average quality and Rs. 15.25 to Rs. 16.25 for better farm produce. Daily arrivals here were now poor at an average of 750 to 1,000 maunds and local stock is now put at 20,000 maunds. Although wheat prices were much lower in the States of Punjab and M.P., loading bottleneck has hampered despatches from those areas. Rice prices, however, ruled quietly steady on good consumers' demand and with local stock put at 8,000 maunds, rice prices here now were: *mainpuri sela* Rs. 22.50, *ramajwayan sela* Rs. 24.50, *raimunia sela* Rs. 25.50, *basmati sela* Rs. 28 to Rs. 30, superior Rs. 33 to Rs. 39, *gaindakutcha* Rs. 21.50 per maund.

Gram prices sought lower levels on easy Punjab advices and with daily arrivals at an average of 1,000 maunds from Punjab, local grain stock mounted to 45,000 maunds. Demand, too, is now reported slack. Barley prices ruled quiet at Rs. 11 to Rs. 11.25 a maund and *bejhar* at Rs. 11 to Rs. 11.75 and arrivals of these coarse grains were small at an average of 100 maunds daily each. *Jowar* prices improved fractionally to Rs. 13 to Rs. 13.50 and *guwar*, too, was quoted higher at Rs. 16.50 to Rs. 17.50 a maund thanks to good demand for seed purposes. Large-scale sowings of these fodder crop and maize are being done these days. *Methi* continued to attract good buying support from Rajasthan and Bengal and prices improved to Rs. 26 to Rs. 27 a maund. Prices of other coarse grains were quiet at: oats Rs. 12 old, maize Rs. 14 *bajra* Rs. 19 to Rs. 20; local stocks: *juwar* 10,000, gram 45,000, maize 4,000, rice 8,000 maunds.

In pulses, peas prices ruled quietly steady as loading facilities were easy in mid-session and week's offtake aggregated seven wagonloads to consuming areas of Madras and Bombay side. Daily arrivals averaged 1,000 maunds and local peas stock is put at 85,000 maunds. Prices of *arhar* and *urd* sought higher levels following better demand. *Arhar* arrivals declined to about 400 maunds daily and stock is put at 43,000 maunds. Prices in other sections were quiet during the week and week-end prices were: *Peas* dara Rs. 10.50 to Rs. 10.75, *farm white* Rs. 11.50 to Rs. 12.50, *peas dal* Rs. 12.50, *gram dal* Rs. 16 *arhar* Rs. 12.75 to Rs. 13.50, *arhar dal* Rs. 16.25, *urd* Rs. 20 to Rs. 22, *urd dal* Rs. 25, *moong* Rs. 20 to Rs. 25, *moong dal* Rs. 24 to Rs. 27, *masoor* Rs. 13 to Rs. 15, *masoor dal* Rs. 16.50 a maund.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 16th June, 1961

BANKING DEPARTMENT

LIABILITIES	Rs.
Capital paid-up	5,00,00,000

INCOME-TAX AMENDMENT BILL—II

(*Concluded from page 1186*)

to the owner and would *eo instanti* be chargeable in the hands of the owner of the asset. The way in which the owner subsequently chooses to apply his income by transferring it to others is wholly immaterial to the Revenue. See the decisions in *Procat Kumar Mitter* vs. *C.I.T., West Bengal*, 1961 41 I.T.R. 624, S.C. and *K. A. Ramachar* vs. *C.I.T., Madras*, 1961 42 I.T.R. 25, S.C.

(*To be continued*)

BANKING

(*Concluded from page 1172*)

duled banks from the Reserve Bank. Over the year 1960, outstanding borrowings increased by Rs. 50 crores, as compared with Rs. 1 crore only in 1959. The absence of the normal slack-season contraction in bank credit led to smaller repayments by the banks. During the period May-October, the conventional slack season, the average outstanding borrowings from the Reserve Bank remained much higher at Rs. 38 crores than Rs. 10 crores in the corresponding period of 1959. This was largely the result of the persistence of a strong demand for credit from industry, which considerably offset the normal seasonal reduction in credit. The additional reserve requirements imposed by the Reserve Bank also induced banks to have a larger recourse to borrowings. The average rate of interest on borrowings by banks worked out to 5 per cent. As in the previous year, borrowings against securities predominated over those against bills.

Investments

Another notable feature of the banking situation in 1960 was the substantial sales of Government securities by scheduled banks in contrast to a continuous acquisition in the previous three years. This was caused by the slow growth of deposits, the heavy demand for bank credit and the imposition of additional reserve requirements. Investment in Government securities declined by Rs. 157 crores or by 20 per cent to Rs. 630 crores in 1960, as against a rise of Rs. 150 crores or 24 per cent in 1959. Consequently, the investment-deposit ratio came down from 48.4 per cent to 38.4 per cent. Treasury bill holdings also declined by Rs. 23 crores to Rs. 48 crores in 1960 in contrast to a rise of Rs. 50 crores in 1959. The changes in the investment pattern are, however, considerably exaggerated by the change in the banking of P.L. 480 funds.

Bank Credit

An analysis of advances of scheduled banks according to purpose shows that industrial credit rose by Rs. 144 crores in the year ended 31st October 1960 as compared with Rs. 20 crores and Rs. 41 crores in 1959 and 1958, respectively. The sharp spurt in industrial advances was occasioned by the coming into production of new industrial units (particularly in engineering, sugar and chemicals) set up in the earlier phase of the second Plan, as well as by the significant growth in the scale of production, following the larger availability of iron and steel. The expansion also represented partly the impact of the rise in prices of raw materials and partly the build-up of stocks in certain industries. The restrictive measures applied to credit against certain commodities in the previous year and the blanket control on clean advances during the year might have also diverted bank credit to industry to a greater extent. Credit extended to commerce rose from Rs. 374 crores to Rs. 395 crores, though as a proportion of total scheduled bank credit it declined from 40 per cent to 36 per cent. Of the total increase in bank advances to commerce about 75 per cent was absorbed by the wholesale trade. Some decline was registered in bank advances to the financial sector which stood at Rs. 70 crores for the year ended October 1960 as against Rs. 77 crores in the corresponding period of 1959 and their proportion to the total came down to 6.3 per cent from 8.3 per cent.

The importance of bank credit in meeting the requirements of industries is evidenced by the large volume of credit made available by the banks to industries. During the five-year period 1956-60, the increase in scheduled bank credit was of the order of Rs. 455 crores. Of this industrial credit amounted to Rs. 342 crores or 75 per cent. The corresponding figures for the quinquennium 1951-55 were Rs. 169 crores and Rs. 69 crores, or 41 per cent.

Security-wise Advances

The security-wise breakdown of advances discloses that advances to mills against cotton textiles rose by Rs. 14 crores in 1960, in contrast to a decline of Rs. 17 crores in 1959. Advances to sugar mills increased by Rs. 24 crores, as against Rs. 1 crore in the previous year. Advances against iron and steel and engineering products expanded by Rs. 50 crores (Rs. 17 crores in 1959). The two items against which there was an excessive rise in bank advances were shares and debentures of joint-stock companies and jute goods. The reasons for the larger advances are explained as follows:

"The marked increase in the expansion of credit was to an important extent explained by the substantial rise in the rate of growth of industrial output and the increase in investment activity in the economy. The further rise in the general index of wholesale prices was also a factor though it is hard to separate the two aspects of bank credit expansion, namely, a result of a rise in commodity prices and a cause thereof. Also, in some commodities, such as raw jute and jute goods, the rise in prices seemed to be rather disproportionate to the fall in output. Again, in the case of sugar, larger output was not matched by releases of stocks for consumption. Thus, the larger expansion was accounted for by general as well as special factors affecting particular commodities. As generally happens in a situation of continuous rise in prices, excess speculative building-up of inventories would no doubt have taken place during the year."

Credit Policy

In the first quarter of 1960, bank credit went up by Rs. 160 crores and appeared to the Reserve Bank to be larger than was warranted by the genuine requirements of trade and industry. The situation demanded, the report states, some corrective action. But main reliance could not be placed on selective credit controls. The Bank therefore decided to make use of quantitative instrument, such as varying the cash reserves of scheduled banks maintained with the Reserve Bank. But, as no significant impact was felt on the level of bank credit, the Bank announced a new set of credit measures in September 1960, which introduced a system of penal rates—a three-tier rate structure according to the extent of borrowing. The report states that following these measures the general trend appeared to be towards some easing of the pressure of monetary demand. Scheduled bank credit declined by Rs. 29 crores, between 30th September and 25th November 1960, in contrast to a rise of Rs. 3 crores in the corresponding period of the previous year.

SHREE VALLABH GLASS WORKS LTD.

Shree Vallabh Glass Works Ltd., sponsored by the House of Taktawalas (Chairman: Mr. Ratilal Nathalal, Ahmedabad), has announced the public issue of its capital. The offer amounts to Rs. 37.255 lakhs in 37.255 equity shares of Rs. 100 each and the list opens on 5th July. Of the balance of subscribed capital of Rs. 72 lakhs, Rs. 27.745 lakhs will be taken up by the promoters, directors and their friends and Rs. 7 lakhs by the Industrial Credit and Investment Corporation Ltd.

The subscribed capital of Rs. 72 lakhs is expected to meet a major portion of the total capital outlay of Rs. 1.15 crore required for the Company's project of manufacturing sheet and wired glass. The Industrial Credit and Investment Corporation has also agreed to grant a loan of Rs. 37.19 lakhs to meet the cost of imported machinery and capital equipment.

The Company has taken over the Andheri "Tufex" glass plant which is already in production for the last three years and has been making good profits. The Company's new plant will be set up near Anand in Gujarat State. The Andheri plant has already secured two licences of the value of Rs. 1.95 lakh and Rs. 1.96 lakh for importing the machinery required for manufacturing laminated safety glass and bent toughened glass. The Company has also finalised arrangements with Messrs. Industrieofen and Maschinen, the world-famous manufacturers of West Germany, for the supply of machinery and equipment as well as the technical know-how for the new project. The services of Dr. Eckert, who has designed several glass plants all over the world, have been secured for setting up the new factory which is expected to go into production by the end of 1962.

The Board of Directors includes several notable industrialists of Gujarat, including Mr. Arvind Narottam Lalbhai, a Director of Kasturbhai group of mills.

The Tariff Commission, it may be noted here, has estimated the total demand of sheet glass in the country at about 110 million sq. ft. in 1960. Present production is placed at nearly 85 million sq. ft. With the growth of construction industry, both demand and production of sheet glass have increased. At present, plants similar to that of the Company are situated near Calcutta. The Company's plant will be the first in Western India which is one of the most important consuming markets of the Company's products. The Company's Andheri plant alone will consume a substantial part of the sheet glass production of the Anand plant.

During the second Plan, demand for glass has increased at a rate much faster than that envisaged either by the Tariff Commission or the Planning Commission. Demand will rise further during the third Plan period. The market for the Company's [illegible] manufactured. Being [illegible] country, the [illegible] has the [illegible]

MAFATLAL GROUP MILLS REPORT BETTER RESULTS

STANDARD TO ISSUE BONUS SHARES

THE cotton mill industry, as readers are by now aware, had a fairly satisfactory year in 1960, even though in the second half of the year the cloth market was in a disorganised state of affairs, following the Government's persistent effort to bring down cloth and yarn prices. Larger sales and higher profit have been the experience of *most* mills, especially in the Bombay region. It would have been surprising, therefore, if the Mafatlal group of mills, which not only make high quality fabrics but has also a high-powered marketing section, were to report results contrary to the general trend. Actually, all the three mills of the group, namely, the Standard Mills Company Ltd., the Mafatlal Fine Spinning and Manufacturing Company Ltd., and the Sassoon Spinning and Weaving Company Ltd., have fared much better than most of the purely cotton mills during the year ended 31st December 1960. Thus, the sales of Standard increased by Rs. 76.03 lakhs to Rs. 697.06 lakhs, of the Mafatlal Fine by Rs. 27.79 lakhs to Rs. 272.10 lakhs and of the Sassoon Spinning by Rs. 44.17 lakhs to Rs. 576.15 lakhs. Their gross profits also have gone up as will be seen from the account of each company given below.

Standard Mills

The ordinary shares of the Standard Mills have been receiving considerable speculative support in the past one year or more on rumours that the Company was contemplating a rights issue to finance some new profitable undertaking for which it had received a licence. Speaking at the annual meeting of the Company's members last year, the Chairman referred to this rumour and conceded that the management was, in fact, considering such a project. He, however, pleaded his inability to give further details as the plans were still in a nebulous stage. Despite the uncertainty about a rights issue, the shares continued to command a high price which was given a further boost a few weeks ago on reports of a bonus issue. Those who had purchased the shares in this anticipation will now feel highly gratified to know that the Directors have decided to recommend the issue of bonus equity shares, in the proportion of two new shares for every five existing shares, by capitalising an amount of Rs. 43.90 lakhs out of Rs. 96.82 lakhs standing to the credit of the share premium account.

It will be recalled that a similar issue was recommended two years ago when one new share was issued for every five old held and that an amount of Rs. 29.95 lakhs was transferred from the share premium account to the share capital account. Thus the present bonus issue will be the second to be declared within the span of two years, a fact that speaks highly of the farsighted financial policy followed by the management.

It will however be realised that the above issue will not involve any change in the amount of capital funds invested in the business. But there will be an addition of 4.39 lakhs of ordinary shares to the number that is already outstanding and these will be eligible for a proportionate dividend next year.

Gross profit of the Company has shown a remarkable uptrend during the past four years as will be evident from the table below.

(Value in lakhs of rupees)

	1960	1959	1958	1957

Carry forward	1.38	0.91	0.02	1.56

* Subject to deduction of tax.

† On increased capital of Rs. 109.75 lakhs raised by the capitalisation of Rs. 21.95 lakhs.

It will be seen that the gross profit has increased from Rs. 89.15 lakhs in 1957 to Rs. 143.19 lakhs in 1960 or more than 60 per cent. The increase during the year under review alone is quite marked, being well over Rs. 40 lakhs or 40 per cent. Despite heavier provisions for depreciation and taxation as compared with the previous year, net profit for 1960 has reached the all-time high of Rs. 60.92 lakhs. Allocations to reserves have been stepped up from Rs. 10.53 lakhs to Rs. 27.36 lakhs. Thus, against the proposed transfer of Rs. 43.90 lakhs from reserves to the share capital account, the reserves have been strengthened by Rs. 27.36 lakhs. It is important to note that the bonus issue recommended is in addition to a cash dividend of Rs. 30 per share subject to deduction of tax, which incidentally is the highest declared so far.

The Rs. 100 paid-up ordinary shares of the Company are now being quoted at Rs. 588 *ex-div.* and *ex-rights* and fetch a yield of about 3.5 per cent net.

Sassoon Spinning

The profits of the Sassoon Spinning and Weaving Company Ltd. for the year ended 31st December 1960 have shown sizable improvement, despite the fact that the revenue from other sources had declined sharply by Rs. 11.14 lakhs as evidenced by the comparative table given below.

(Value in lakhs of rupees)

	1960	1959	1958	1957
Sales	5,76.15	5,31.98	4,96.69	5,43.63
Other income	38.35	49.49	27.92	4.18
Stocks of finished goods	49.85	36.20	43.26	34.16
Raw materials and stores consumed	3,42.99	3,26.24	3,24.89	3,40.19
Salaries, wages and bonus	1,77.31	1,61.11	1,42.74	1,38.70
Other expenses	57.77	52.98	46.84	34.29

* Subject to deduction of tax.

† On increased capital of Rs. 75.80 lakhs.

This somewhat paradoxical situation can be attributed to higher production during 1960 as disclosed by improved sales and increased closing stocks of process and finished goods. That the Company's products experienced good demand from overseas markets is evidenced by the fact that its premiums under export incentive scheme have increased by Rs. 1.66 lakh to Rs. 13.44 lakhs. Higher production and better sales have thus contributed to increased gross profits.

Net profit, too, has recorded an impressive rise of Rs. 6.34 lakhs to Rs. 17.74 lakhs even after heavier provisions for depreciation and taxation. It will be observed that the tax provision for the year is more than double that for the previous year. With the statutory development rebate reserve claiming Rs. 7.68 lakhs, the Directors have supplemented the profits available by a withdrawal of Rs. 3 lakhs from the general reserves to declare a dividend of Rs. 1.70 per share subject to deduction of tax which has absorbed Rs. 12.82 lakhs. The dividend at 17 per cent is decidedly low as compared with 25 per cent recommended last year, but it must be noted that it is on an increased share capital of Rs. 75.30 lakhs as compared with Rs. 37.70 lakhs in 1959.

The Company's ordinary shares of Rs. 10 each are currently quoted at Rs. 51.80 to give a net yield of about 2.3 per cent.

Mafatlal Fine

In spite of a fairly high rise of Rs. 27.79 lakhs in sale proceeds, gross profit of the Mafatlal Fine Spinning and Manufacturing Company Ltd. has increased only moderately by Rs. 6.70 lakhs to Rs. 69.47 lakhs for the year ended 31st December 1960.

In trying to find an answer to this situation one comes across the two items that loom the largest in the cost of production, namely, raw materials and stores consumed and salaries, wages and bonus. Although the former shows an increase of Rs. 12.35 lakhs over the corresponding figures for 1959, it is observed that there has been no material change in the percentage to sales of the cost of raw materials and stores consumed for the two years. One has, therefore, to come to the conclusion that the decline in gross profit has been brought about chiefly by the increase of Rs. 8.92 lakhs in salaries, wages and bonus as is disclosed by the following table:

(Value in lakhs of rupees)

	1960	1959	1958	1957
Sales	2,72.70	2,44.91	2,23.60	2,10.25
Other income	7.35	10.11	8.81	8.28
Stocks of finished goods	21.93	20.25	25.05	21.20
Raw materials and stores consumed	1,18.04	1,05.69	1,14.74	1,18.51
Salaries, wages and bonus	67.63	58.71	58.62	50.97
Other expenses	26.38	23.04	21.29	19.79
Gross profit	69.47	62.77	46.61	30.12
Mg. Agents' commission	6.01	5.32	3.74	2.12
Provision for—				
Depreciation	11.77	8.58	8.37	10.88

* Subject to deduction of tax at appropriate levels.

After providing Rs. 11.77 lakhs for depreciati and Rs. 20.05 lakhs for tax contingencies, the n profit has increased marginally by Rs. 2.42 lakl to Rs. 31.64 lakhs. In view of the larger transf of Rs. 7.55 lakhs to development rebate reserv as against Rs. 3.42 lakhs in 1959, transfer to gen ral reserve has been cut down from Rs. 4 lakl to Rs. 2 lakhs. Transfer to dividend equalisatic reserve has, however, been maintained at Rs. lakhs.

The slight increase in net profit has made possible to declare ordinary dividends at a some what higher rate of Rs. 30 per share subject t deduction of tax which compares favourably wit Rs. 29 (Rs. 25 + a bonus of Rs. 4) subject to ta declared in 1959.

Considerable progress has been made durin the year in the reorganisation and renovation prc gramme of the mills. A sum of Rs. 2.10 lakhs wa spent on extension of buildings and of Rs. 30.1 lakhs on additions to machinery and equipmen Most of the machines have been installed and ar reported to be working satisfactorily. In additio machinery worth Rs. 7.31 lakhs is in transit.

The Company's financial position is sounc Against the paid-up share capital of Rs. 87 lakh reserves amounts to Rs. 156.68 lakhs or nearl twice as much. One wonders in this situation wh the Company did not follow suit with the Standar Mills and declared a bonus issue.

An interesting feature of the balance-sheet i that assets other than fixed assets have beer maintained in a highly liquid form. The total o investments, debtors, cash and loans and advance is Rs. 136.33 lakhs which is about twice the cur rent liabilities including bank loans.

The Rs. 100 paid-up shares of the Company are being done around Rs. 865. At this price, the net yield works out to 2.4 per cent.

ESCORTS LIMITED

The Directors of Escorts Limited, New Delhi have recommended a gross dividend of 16 per cent for the year 1960. The shareholders, under Section 15C, will enjoy the benefit of tax-free dividend upto the extent of about 25 per cent of the dividend. The total profits of the Company for the year are Rs. 24,28,456. After providing Rs. 7,80,000 for income-tax (Rs. 6,30,000 in 1959), and Rs. 3,32,761 for depreciation (Rs. 1,24,300 in 1959), there remains a net profit of Rs. 13,15,980, out of which the Directors have set apart Rs. 3,04,652 for development rebate reserve and Rs. 2,70,000 for general reserve (Rs. 1,90,000 in 1959).

The Company has made satisfactory progress in setting up the factory for X-Ray equipment under Westinghouse Licence and expects to be in production before the end of the year. Pistons manufacture has progressed according to plan. It is putting up a factory for the manufacture of motor cycles and scooters, for which an industrial licence has been issued, and 23 acres of land has been acquired in Faridabad (near Delhi). The Company has negotiated the purchase of plant and machinery under long deferred terms of payment to the extent of Rs. One Crore. All payments for these projects are payable in rupees and no foreign exchange is involved. The Company has further decided to increase the production capacity of pis- tons from 300,000 to 500,000 per year. Similarly, the subsidiary companies, Goetze (India) Private Ltd. and Sharpedge Private Ltd., have planned to expand their production.

The Company has also been given industrial and import licences for manufacture of railway shock absorbers and heating elements. To meet the capital requirements for all the new projects, the Directors have decided, subject to the permission of the Controller of Capital Issues, to issue new rights shares on the basis of one for one equity shares at a premium of Rs. 3 per share. They have also decided to issue 9 per cent preference shares to the extent of Rs. 8 lakhs, most of which is expected to be allotted to foreign collaborators against technical 'know-how' and supply of plant and machinery.

The equity shares of the Company are currently quoted at Rs. 23.

ALCAN MALAYAN COMPANY

The first aluminium rolling mill in the Federation of Malaya will be built by Alcan Malayan Aluminium Company Ltd. This new Malayan industrial development which has been granted a pioneer certificate is being established by Aluminium Ltd. of Canada which will finance the enterprise and furnish technology. Construction is expected to start immediately on a 15-acre plant site at Petaling Jaya, near Kuala Lumpur. The new plant will cost approximately M$4 million. The rolling mills will have a capacity of 2,000 tons per year of flat aluminium sheet, circles and building sheet, using aluminium ingot as raw material imported from Canada. The production from the mill will provide aluminium end product manufactures in the Federation and Singapore with these rolled products for further fabrication and uses. Aluminium household utensils are made from circles and there is an established Malayan market for aluminium sheet for rubber estate equipment building products and transportation applications. The new Alcan plant will have a modern four-stand two high rolling mill train with furnaces for melting and annealing as well as semi-fabricating equipment. Corrugated aluminium building sheet will be one of the materials produced.
