THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS AND APPLICATIONS ARE INVITED ON THE BASIS OF THE PROSPECTUS COPIES WHEREOF ARE AVAILABLE FROM THE COMPANY'S REGISTERED OFFICE AND THE MANAGING BROKERS, BROKERS, MENTIONED HEREIN.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them. The Central Government have granted licences (copies of which are open to public inspection at the Registered Office of the Company) for the industrial undertakings as set out in the Prospectus. It must be distinctly understood that in granting these licences the Government of India do not take any responsibility for the financial soundness of the undertakings or for the correctness of any of the statements made or opinions expressed in regard to it. A copy of this Prospectus having attached to it the documents required by Section 60 of the Companies Act, 1956, specified herein, has been delivered for registration to the Registrar of Companies, Bombay.

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 18th APRIL 1961 AND WILL CLOSE AT THE DISCRETION OF THE DIRECTORS BUT NOT EARLIER THAN THE CLOSING OF BANKING HOURS ON 20th APRIL 1961.

LYNX MACHINERY LIMITED

(INCORPORATED ON 10TH NOVEMBER, 1960 UNDER THE COMPANIES ACT, 1956)

AUTHORISED SHARE CAPITAL .. .. Rs. 2,50,00,000

Divided into

1.	20,00,000	Equity shares of Rs. 10 each	Rs. 2,00,00,000
2.	50,000	9 per cent (free of Company's tax but subject to deduction of taxes at source at the prescribed rates) Cumulative Redeemable Preference Shares of Rs. 100 each..	Rs. 50,00,000
			Rs. 2,50,00,000

ISSUED SHARE CAPITAL:

6,00,000 Equity shares of Rs. 10 each .. .. Rs. 60,00,000

SUBSCRIBED SHARE CAPITAL:

1,41,504 Equity shares of Rs. 10 each fully paid up.. Rs. 14,15,040

CAPITAL AGREED TO BE TAKEN UP:

1,59,496 Equity shares of Rs. 10 each (on which Rs. 5 per share is payable on application and the balance of Rs. 5 is payable on 1st December, 1961 reserved for allotment and agreed to be taken up by Directors, Promoters and their friends and associates) .. Rs. 15,94,960

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION:

2,99,000 Equity shares of Rs. 10 each .. .. Rs. 29,90,000

APPLICATION FOR SHARES BY MEMBERS OF THE PUBLIC MUST BE FOR A MINIMUM OF 50 SHARES OR MULTIPLES THEREOF.

TERMS OF PAYMENT OF THE ABOVE SHARES—ON APPLICATION Rs. 5 PER SHARE, THE BALANCE OF Rs. 5 PER SHARE IS PAYABLE ON 1st DECEMBER 1961.

OBJECTS OF THE COMPANY

The Company was incorporated on 10th November 1960 generally with the aims, objects and purposes set forth in its Memorandum of Association and in particular to manufacture engines, cranes, furnace equipments, road and building machinery such as concrete mixers, concrete vibrators, roller pan mixers and asphalt mixers, flexible shaft machines, engineering tools, etc.

BUSINESS AND PROSPECTS

The Company has taken over the business of the partnership firm LYNX MACHINERY COMPANY as from 10th November 1960. The firm was established on 1st June 1957 and since then has been engaged in manufacture of concrete vibrators, concrete mixers, roller pan mixers and other equipment used in the building and construction trade. The firm has been regularly earning profits. The Company has secured the necessary industrial licences under the Industries (Development and Regulations) Act, for the following products:

1. Engines.
2. Concrete Vibrators.
3. Overhead Travelling Cranes and Electric Hoist Cranes.
4. Concrete Mixers.
5. Roller Pan Mixers.
6. Asphalt Mixers.
7. Tar Boilers.

There is today an increasing demand for building, road making and construction equipment, oil engines, cranes of various kinds, grinders and tools which are still being largely imported. The rapid industrialisation in India under the Second and Third Five-Year Plans envisages a large expansion of manufacturing capacities in all these items. Indigenous production of these items will not only help save foreign exchange to an appreciable extent but may also earn foreign exchange, by way of exports to our neighbouring countries.

LISTER ENGINES: The Company has been granted a licence to manufacture 6,000 Lister B & D type Engines per annum in technical collaboration with the world-renowned manufacturers of oil engines, Messrs. R. A. LISTER & CO. LTD., ENGLAND. These Engines are still being imported in India and have numerous applications in the Industrial and Agricultural field. The marketing will be undertaken by Messrs. VOLTAS LIMITED, BOMBAY and Messrs. BALMER LAWRIE & CO. LTD., CALCUTTA.

ALLAM VIBRATORS: India has been regularly importing in considerable quantities concrete vibrators of the world-famous manufacturers Messrs. E. P. ALLAM & CO. LTD., ENGLAND. The Company has been granted licence to manufacture 1,200 Vibrators per annum. The Company will manufacture a wide range of Allam Vibrators which will help to a great extent the construction programme envisaged in the Third Five-Year Plan.

CRANES:—(a) DEMAG ELECTRIC HOIST CRANES: Messrs. DEMAG-ZUG G.m.b.H. OF WEST GERMANY, the world-renowned manufacturers of Cranes, have agreed in principle to grant a licence agreement to the Company for the manufacture of Electric Hoist Cranes in Eastern India. In view of the rapid industrial development outlined in the Third Five-Year Plan, the demand for these Cranes, already large, will further increase.

(b) SCHIESS-DEFRIES CRANES: Besides Electric Hoist Cranes the Company will also manufacture various other types of Cranes including Overhead Travelling Cranes, Goliath Cranes in technical collaboration with Messrs. SCHIESS-DEFRIES, WEST GERMANY, belonging to the well-known industrial group of Messrs. SCHIESS. The cranes will be sold under the Trade Mark of SCHIESS-DEFRIES/LYNX, and the licensed capacity will be fixed after one year of the Company going into production.

LYNX CONCRETE MIXERS: The Company is regularly manufacturing various sizes of Concrete Mixers and already a large number of these machines are in use throughout the country. The Concrete Mixers manufactured by the Company enjoy a high reputation and are marketed by the well-known firm, Messrs. HEATLY & GRESHAM LIMITED. The annual licensed production capacity is 600 numbers.

LYNX ROLLER PAN MIXERS: The Company has been manufacturing two types of Roller Pan mixers and the licensed annual production capacity is 228 numbers. These are also being sold by Messrs. HEATLY & GRESHAM LTD.

LYNX ASPHALT MIXERS AND TAR BOILERS: The licensed capacity of Asphalt Mixers and Tar Boilers is 144 numbers each per annum. The Company will shortly undertake the manufacture of these machines because of the extensive road-making programme envisaged in the Third Five-Year Plan.

OFU-LYNX RE-HEATING FURNACE PARTS: An Agreement has been reached between the Company and OFU-LYNX PRIVATE LTD. for manufacture of OFU-LYNX furnace parts. Since Messrs. OFU-LYNX are currently negotiating for large number of orders for furnaces it is expected that the Company's production in furnace parts will be considerable. "OFU" Furnace being very well known the scope for this business in India is considerable.

BAXTUL FLEXIBLE SHAFT MACHINES: Subject to the approval of the Government whereupon it will become effective, a technical collaboration agreement has been signed with a well-known British firm, THE FLEXIBLE DRIVE & TOOL CO. LTD. ENGLAND, whereby Flexible Shaft Machines like grinders, ship scaling machines, tube scaling machines and other engineering tools will be manufactured and sold under the Trade Name BAXTUL/LYNX. The Company's application for Industrial Licence and collaboration agreement are under the consideration of the Government. This scheme when approved by the Government will be a very profitable addition to the Company's manufacturing programme.

SKODA DIESEL ENGINES: The Company is negotiating for the manufacture of certain types of well-known SKODA Stationary and Marine Diesel Engines in collaboration with the renowned European concern of SKODA, CZECHOSLOVAKIA. The Company in due course will apply for the necessary Government's sanction for the implementation of this scheme. In view of the large popularity enjoyed by SKODA engines the benefits of this technical collaboration when the scheme is implemented will be considerable. Under this collaboration the Company proposes to manufacture higher horse-power Marine and Stationary Engines.

In all these collaborations the Company will have the benefit of their full technical assistance and in most cases the Company will send Indian Engineers for training abroad.

LAND, PREMISES AND PLANT AND MACHINERY: The existing factory premises of the Company are situated in the industrial area of Calcutta and comprises more than 13 Bighas approximately with structures covering an area of approximately 40,000 sq. feet. Adequate power and water-supply is available. The Commissioners for the Port of Calcutta have indicated their willingness to give a long-term lease in respect of the plot of land of about 40 Bighas located in Kidderpore, on their standard terms and conditions. The Company proposes to erect a new factory for the manufacture of new products, that is to say, Engines, Cranes, etc. on this plot of land. The Company has obtained necessary approval of the Ministry of Commerce and Industry for import of Plant and Machinery for a value of Rs. 30 lakhs for the various schemes sanctioned by the Government. As mentioned above, the Company is already manufacturing in its existing factory Concrete Mixers, Concrete Vibrators and other road building machinery.

PAYMENT TO PROMOTERS—PRELIMINARY EXPENSES

1. Shri K. K. JAJODIA, Shri R. K. JAJODIA and Shri M. K. JAJODIA are partners of the Firm whose fixed assets have been acquired by the Company and who will receive the purchase price of Rs. 14,00,000 for the same and a sum of Rs. 7,66,374.49 in respect of the current assets and liabilities which have been taken over by the Company at prices based on the Auditors' report as from 10th November, 1960.

2. The Promoters will be reimbursed of all the expenses incurred by them on behalf of the Company which are estimated at Rs. 50,000.

MANAGING DIRECTOR

The Board of Directors have, subject to the approval of the Central Government, being obtained, entered into an Agreement dated the 23rd March, 1961 with Shri K. K. JAJODIA for the appointment of the said Shri K. K. JAJODIA as Managing Director of the Company.

The Agreement between the Company and Shri K. K. JAJODIA provides *inter alia* that Shri K. K. JAJODIA be paid by way of remuneration an annual commission of 5 per cent on the net profits of the Company as computed in the manner laid down in Section 198(1) of the Act with the usual perquisites and that in the event of the Company having no profits, or its profits being inadequate, in any financial year, he is to be paid a minimum remuneration of Rs. 30,000 per annum with the usual perquisites provided nevertheless the said Shri K. K. JAJODIA shall be entitled to draw a sum of Rs. 2,500 per month towards his remuneration as Managing Director.

ESTIMATED PROFITABILITY

Since the Company has a running business, with the implementation of the expansion programme both in the present and new lines of manufacture, the Company is confident that within a short period the profits will be sufficient to provide an attractive return to the shareholders.

COMMENCEMENT OF BUSINESS

The Company has already obtained a Certificate dated 21st March 1961 for commencement of business from the Registrar of Companies, Bombay.

MINIMUM SUBSCRIPTION AND CAPITAL OUTLAY

The minimum amount which in the opinion of the Directors must be raised by this Issue and upon which the Directors can proceed to allot shares to the public as offered by this Issue has been determined at 1,49,000 Equity Shares (of the nominal value of Rs. 14,90,000) being only a part of this Issue out of which Rs. 12.90 lakhs will be utilised towards part payment of the purchase price of the land, buildings, plant and machinery, motor vehicles, etc. and Rs. 2 lakhs will be for preliminary expenses, brokerage and expenses of this Issue.

Any amount by which the allotment to the public out of the present issue falls short of the amount to be raised from the public will be, as required, met by borrowings from Banks or from other sources in the usual course of business. Likewise, it is intended that the balance of Rs. 24,00,000 required to meet the total capital outlay as detailed below together with any increase there may be in the actual cost over the estimated cost of the plant and facilities will be raised by loans from the Company's Bankers or from other like sources against the fixed and other assets of the Company in the ordinary course of business. For this purpose the Company has already approached the PUNJAB NATIONAL BANK LTD. of Calcutta which has indicated willingness in principle to make available a substantial loan subject to the usual formalities being satisfied.

CAPITAL OUTLAY

The financial requirements of the Company will be made up as under:—

		Rs.
1.	Purchase price of land, plant machinery and equipment including cost of erection of machinery, construction of factory building, power house, etc.	72,00,000
2.	Preliminary expenses including brokerage and expenses of this issue	2,00,000
3.	Working Capital	10,00,000
		Rs. 84,00,000

SOURCES OF FINANCE

The above amount will be provided as under:—

		Rs.
(a)	Subscribed Capital	14,15,040
(b)	Present Issue	45,84,960
(c)	Borrowings from Banks and other sources as and when required in the usual course of business	24,00,000
		Rs. 84,00,000

EXPENSES OF THE ISSUE

The Expenses of the Issue other than brokerage are estimated at Rs. 75,250 and will be payable by the Company.

BROKERAGE

Brokerage will be paid to Registered Brokers on the recognised Stock Exchange in India and Banks at 0.18 nP. per share on allotment made in respect of applications bearing their stamps. Messrs. LEWIS & JONES, BOMBAY, are the Managing Brokers to the Issue and will be in addition entitled to a commission of 0.07 nP. per Share subscribed by the Public.

The total amount of brokerage payable by the Company will be Rs. 74,750.

The following is a condensation of the Auditors' report by the Auditors, Messrs. SINGHI & CO., relating to the figures of sales and profits as published in the Prospectus.]

	Sales Less Commission and Discount	Profit Before Provision for Taxation
	Rs. nP.	Rs. nP.
Year ended 31st May 1958	2,79,165.93	10,044.82
Year ended 31st May 1959	6,59,787.95	54,175.82
Year ended 31st May 1960	18,54,009.38	1,61,380.44
Period from 1st June 1960 to 9th November, 1960 ..	6,23,473.11	2,42,212.88

ALLOTMENT AND SHARE CERTIFICATE

Where an application is rejected, or not accepted in full, the whole or any balance of the application money received will be refunded to the applicant within two months from the date of closing of the subscription list in which case bank commission, if any, will be payable by the applicant.

Share Certificate will be issued in exchange for letters of Allotment within 4 months from the date of allotment.

WEST COAST PAPER MILLS LIMITED

MR. P. D. BANGUR'S SPEECH AT ANNUAL MEETING

REVISION OF PAPER PRICE POLICY URGED

IN the absence of the Chairman, Mr. G. L. Bangur, Mr. P. D. Bangur, one of the Directors, presided over the Fifth Annual General Meeting of the West Coast Paper Mills Ltd., held on 28th March 1961. In his speech delivered at the meeting, Mr. P. D. Bangur discussed the problems of the paper industry in general and the difficulties faced by the Company in particular. He pointed out that the present price of paper was uneconomic and hardly sufficient to enable producers to make adequate provision for depreciation and give a reasonable return to the shareholders. As a result of the levies imposed on chemicals and other materials required for paper production in the recent Central Budget, the cost of production of paper, according to Mr. Bangur, would go up and reduce further the low profit margin of the industry. He, therefore, called for a revision in the price of paper.

The following is the full text of Mr. P. D. Bangur's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the fifth annual general meeting of the shareholders of the West Coast Paper Mills Ltd.

"The Directors' report, the balance-sheet and the audited accounts for the year ended 30th June 1960 have been in your hands for sometime and with your permission I take the same as read.

"The progress and working of your mills at Dandeli can be considered quite satisfactory, as revealed in the balance-sheet, particularly when this has been the first year of its normal working. As shown in the balance-sheet, after setting aside a sum of Rs. 88,26,362 for depreciation and development rebate reserve, the net balance left with your Company was Rs. 28,74,465 including Rs. 4,70,474 transferred from the development rebate reserve account of the last year. Your Directors have already paid all the arrears of preference dividend and further proposed a dividend of 6 per cent (subject to deduction of tax) on the ordinary shares for the year ended 30th June 1960.

Expansion Schemes

"Encouraged by the good working results your Directors have been giving very careful consideration to the expansion programme of this new unit.

"The Government of India have recently granted to your Company a licence for the manufacture of 27,000 tons of rayon grade pulp and paper and also a licence for setting up a caustic soda plant with a rated annual capacity of 9,000 tons of caustic soda and 7,200 tons of chlorine.

"The Government of India have been very keen to utilise the limited supplies of bamboos for the manufacture of rayon grade pulp so that the drain on foreign exchange for the import of such pulp may be reduced. It is understood that the Government of India have issued a few licences for the manufacture of rayon grade pulp from bamboos. Since the manufacture of dissolvable pulp from bamboos will mean the introduction of absolutely a new process, your Directors have thought it advisable to get the feasibility of this project fully examined and investigated by a competent firm of consultants. They have accordingly appointed Messrs. Sandwell International Ltd., who are consultants of international repute for paper and pulp industry, to investigate the feasibility of this project. Their two senior executives, who have already been to the works at Dandeli and also in Bombay, have carried out a detailed and close examination of the relevant issues pertaining to the rayon grade pulp project as well as the expansion of paper and the installation of caustic soda/chlorine plant. Their detailed survey report on the technical and economic aspects of this huge integrated scheme of expansion is expected to be ready sometime about the end of April. The Directors will then only be in a position to review the whole scheme in the light of their comprehensive survey and come to a suitable decision.

"It may be interesting to mention here that the preliminary remarks conveyed to us by their two senior executives clearly indicate that they have been very much impressed with the layout and fine performance of the factory and they are satisfied that there is no indication of unusual wear and tear or deterioration of equipment and that the maintenance has been found quite satisfactory. They have also paid a tribute to the high calibre of the technical personnel of your Company and placed on record their appreciation of the work that is being done by the departmental heads in solving the various day-to-day problems.

Loans from Abroad

"The necessary total foreign exchange requirements of the entire integrated scheme of expansion has been roughly estimated to be in the neighbourhood of rupees six crores and the Government of India have indicated their willingness to allow us to negotiate a direct loan for a major portion of the resources with the D.L.F. and Export-Import Bank of U.S.A., while they may also allot a small portion of this amount of foreign exchange for import from the sterling area. The way has thus been cleared for the securing of foreign exchange resources and further negotiations will be carried out with the international agencies after the survey report of the consultants is in our hands and properly examined by your Board.

"I would also like to refer to the increased requirements of bamboo due to the expansion programme, especially in view of the fact that the proportion required for the manufacture of rayon grade pulp will be higher than those for paper pulp. Necessary representations have been made to the State Government of Mysore and I hope they will take a favourable decision in due course.

Quality of Paper

"It is a matter of great satisfaction that the qualities of different varieties of paper manufactured by your Company have achieved very great popularity in a very short period and have secured a special position in the principal consuming centres. Constant vigilance and sustained efforts are being made to maintain the high standard already achieved so that the Company may continue to enjoy the high reputation which it has already built in the initial period. I hope you will share with me the pride of special position which your products enjoy in the markets.

"The mill at Dandeli, as you know, is situated in an out-of-the-way place where we have to face very serious bottlenecks of transport ever since the beginning. The long-drawn-out negotiations with the railway Board to take over the Alnavar/Dandeli section have still not been finalised. It is, however, expected that the Railway Board would take over this line in the near future. Your Company, together with other industrial units, which have sprung up in this fast developing area, have represented their difficulties both in regard to the inadequate nature of transport facilities and the inflated freight structure, which has been levied on this route.

"I hope the Railway Board would take definite steps to take over and strengthen this railway line without any further delay.

"Furthermore, inadequate educational and medical facilities along with the difficult condition of the roads in that region continue to pose a problem for the industries and efforts are being made to seek assistance of the State Government and we hope the Mysore Government will pay special attention to the rapid development of this region and create such elementary facilities for the benefit of the people living in that region. We are deeply indebted to the Mysore Housing Board for taking active interest in bringing up the new township at Dandeli and constructing 400 tenements which have recently been completed. We are, however, requesting them to construct additional housing in this township to provide accommodation for all the labour working in that region. Your Company is also undertaking subsidised housing scheme to put up additional houses for various categories of staff and labour.

Shortage of Raw Materials

"The paper industry has been facing the problem of adequate supply of raw material to keep it working to its capacity. Bamboo is one of the main raw materials for this industry in India, but a substantial portion of which have flowered in this region. In order to overcome this problem, your Company is undertaking plantation programme vigorously with the active co-operation of the Forest Department of the Mysore State. To cope with any possible shortage in the supply of bamboo, your Company is planning to diversify the production programme by making use of other possible raw materials and even bagasse, if necessary. Required equipments are being planned in our expansion programme to facilitate the use of such different raw materials.

"The cost of production in the industry will be further adversely affected on account of the increase in the price of chemicals and other levies as announced in the current year's Central Budget. I would like to point out that the increase in the levy of excise duty on certain varieties of paper is excessive. The incidence of excise duty on cheap varieties of packing and wrapping paper works out to about 32 to 35 per cent of the prices of paper. In order to improve the general pattern of packing in the country, wrapping paper has been extensively used as raw materials by the various other industries and there is no justification for such heavy excise duty on the low-graded varieties of paper. Other adverse factors are, increase in the import duty on plant and machinery from 10 per cent to 15 per cent and the reduction of development rebate from 25 per cent to 20 per cent which will increase the capital outlay and thereby slow down the tempo of industrial development in general.

Price Policy

"I would like to emphasise the urgent need for the Government to review the present price regulation policy which is followed on the recommendation of the Tariff Commission. I would also like to clarify that the working results of your Company, though excellent under the circumstances, should not lead to any inference as if the paper industry is doing quite well. As you have seen from the accounts, we have not been able to make adequate provision for depreciation, leave alone to set aside anything for the reserves. Moreover, the dividend, which has been proposed is hardly comparable even to the yield on Government securities and, therefore, the difficulties that even the new units, who have got the most modern and up-to-date plant and machinery, are experiencing in not being able to provide adequate depreciation and reasonable return to the shareholders should be properly appreciated.

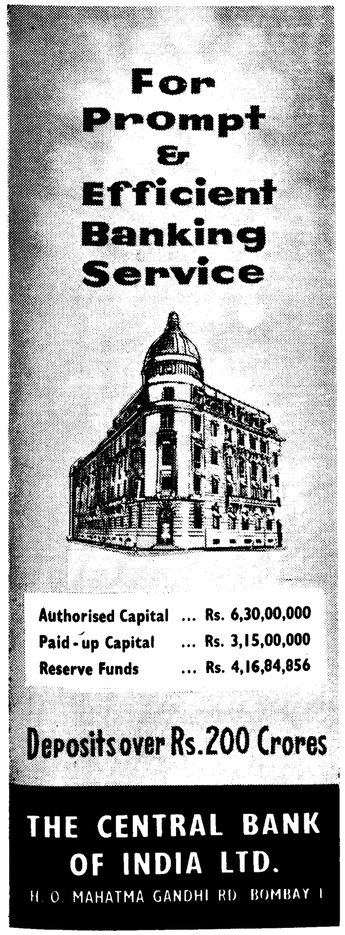
"The prices of manufactured goods of those industries are regulated which are of basic importance to the national economy and it does not seem logical how the development of these industries could be promoted by the enforcement of such uneconomic prices on these industries which do not allow them to have necessary reserves for their expansion. This matter of ensuring adequate and reasonable return to the basic industries, whose prices are controlled and regulated in the national interest, should be revised in a manner conducive to the proper growth and development of these industries.

New Issues Market

"At the end, I would like to point out the significant growth of the issue market in the stock exchanges which has created a healthy tendency to attract investment of a very wide circle of small investors in the industrial enterprises. This trend of mass investment in industrial enterprises should be fostered and encouraged to make our corporate sector really broad-based. Indeed, the recent development in highly industrialised countries clearly indicate the fast growing interest in industrial enterprises and certain figures indicate an impressive increase in the number of shareholders during the last few years. I hope, therefore, the Government of India and the Reserve Bank will not do anything to arrest the dynamic growth of investment in industrial enterprises.

"Before I conclude I would like to give first-hand information about the serious fire which

(Continued on page 707)



THE STATE BANK OF INDIA

OFFER

NEW INCREASED

INTEREST RATES

Open a savings account and/or lodge in fixed deposit with THE STATE BANK OF INDIA and take advantage of these new increased interest rates:

DIRECTORS' FIFTY-FIFTH ANNUAL REPORT

The Directors have pleasure to submit to the Shareholders the Fifty-fifth Annual Report for the year 1960. After making the necessary provisions a sum of Rs. 17,22,548.78 is available for distribution. The Directors recommend the following appropriations :—

	Rs.	nP
To Provision for Income-tax	7,65,000	00
To Preference Dividend	62,440	00
To Dividend on Equity Shares at 15 per cent.	5,40,000	00
To Bonus to Staff	3,10,000	00
	16,77,440	00
Leaving balance to be carried forward	45,108	78
	Rs. 17,22,548	78

Though the general trend during the year of accounts has been for Bank deposits to remain at last year's level and the advance/deposit ratio to rise, your Directors are glad to report that in the case of your Bank there has been a satisfactory increase in deposits and the liquidity position has been more than maintained.

In order to improve the capital/deposit ratio of the Bank, it is the intention of your Directors to approach you later in the current year with a proposal to increase the Capital and also to seek your approval to set apart a portion of such new issue for subscription by members of the staff as was done on a previous occasion.

Your Directors are also glad to report the appointment by them as an additional Director of His Highness Sahdevji Naraharedevji, Maharana of Dharampur. The experience and guidance of His Highness will be of great advantage to your Bank.

The eight new branches opened during the year, viz., Chamarajpet and Chickpet—Bangalore in Mysore State, Mount Road—Madras and Avanashi Road—Coimbatore in Madras State, Abdul Rehman Street—Bombay, Dombivli, Poona and Sitabuldi—Nagpur in Maharashtra are making satisfactory progress. Two more officers of the Bank underwent refresher courses in Germany this year—one at the Deutsche Bank, Hamburg, and another at the Dresdner Bank, A.G., Hamburg. We are thankful to both these Foreign Bank friends for offering these training facilities.

The construction of the Bank's Administrative Offices in Bangalore has been commenced and the work is making speedy progress.

The Directors thank all shareholders, customers and staff for their co-operation during the year.

ADMINISTRATIVE OFFICE,
BANGALORE-2,
Dated 17th January, 1961.

By Order of the Board,
A. DAMODAR PAI,
Chairman.

BALANCE SHEET AS AT 31st DECEMBER, 1960.

1959 Rs.	nP.	CAPITAL AND LIABILITIES	Rs.	nP.	Rs.	nP.
		1. Capital—				
		AUTHORISED CAPITAL—				
86,00,000	00	1,72,000 Equity Shares of Rs. 50 each	86,00,000	00		
14,00,000	00	28,000—5 per cent. Cumulative Preference Shares of Rs. 50 each	14,00,000	00

(Continued on next page)

NEW PRODUCTS AND PROCESSES

Mechanical Blacksmith

A MACHINE which can shape metal into any decorative design or scroll, more accurately and in a fraction of the time it would take a blacksmith, has recently been patented by a British manufacturer, Isecut Power Machines Ltd. of Surrey. Powered by a small electric motor it can shape into a variety of designs such as circles, squares, triangles and ellipses by passing it through the appropriate "mandrels." These "mandrels" can be interchanged by an unskilled operator in less than 60 seconds. The machine has automatic stopping, magazine loading and will automatically rectify irregularities of up to 3/16 in. in original cut lengths—so there is no scrap. As all the work is done by cold manipulation, the metal needs none of the "redressing" which is necessary if a metal has been heated and hammered into shape. In tests recently, the machine was matched against the skill of several first-class blacksmiths. It was calculated that a blacksmith, working at top pressure, could produce an average of 40 double-ended S-scrolls in one hour. These scrolls are widely used in wrought iron work and the machine comfortably produced 300 in an hour. And so it was in shaping sheet metal for car silencers, iron rods for pre-stressed concrete supports and many other shapes. In all cases the machine was upwards of eight times faster than the blacksmiths. As far as can be gauged there is no limit to the machine's versatility. In standard form it can accomplish almost any task in multi-purpose steel bending and forming. And where exceptions do occur, specially shaped "mandrels" can be tailor-made at extra cost.

Pelletiser

A compact precision machine, which will enable firms to make pellets for shot blasting from high-tensile steel wire, has been produced by a U.K. firm, Dohm Ltd., London. The manufacturers, already producing a wide range of sizes of cut, high-tensile, steel wire pellets for shot blasting, estimate that to a firm which has to import pellets the new pelletiser would cover its cost after producing the initial 50 tons. The unit, powered by a 1½ h.p. electric motor, produces pellets ranging in size from 0.020 in. to 0.064 in. (0.5 to 1.6 mm.), accurately without tearsons, specifically for use in shot blast cabinets. It can be used to replenish hoppers as required and can be modified to suit any requirements in this field. With compactness as a design feature, the firm are producing two models, one requiring a floor area of 7 ft. x 2 ft. 6 ins. and the other an area of 3 ft. 6 ins. x 1 ft. Each machine is supplied complete with up to five gears to individual users' requirements and it is a simple operation to change the gears to produce different size pellets. Additional gears are supplied at extra cost where a user needs more than five sizes. Pellets are produced in lengths equal to the wire diameter. This is achieved automatically by the predetermined speed of the hardened steel rollers. As an example of their capacity the machines are designed to cut fine wire at speeds sufficiently high to give an average production of 28 lb. (12.7 kg.) of pellets an hour. Sizes of more than 0.040 ins. (1.02 mm.) up to 0.064 ins. (1.63 mm.) can be produced, but the wear on cutting blades is considerably higher.

Versatile Power Transmission Belting

A power transmission belting, combining the flexibility and simplicity of the flat belt with the high speed ratios, shorter centre distances and freedom from slip of the V-belt drives, has been produced by Turner Bros. Asbestos Co. Ltd., Spotland, Rochdale, England. The new belting, claimed to be the biggest advance in the transmission world since the V-belt was introduced more than 30 years ago, has been named the "Poly-V Drive." The concept of the drive is extremely simple. It is in effect a flat belt with a series of parallel V-shaped grooves moulded on its inner side. These ribs form the driving surface of the belt which completely fill the mating grooves on the pulleys. The load-carrying member extends across the full face of the drive unlike the multiple V-belt drive where part of the total drive width available is wasted by the space between belts. The grooved inner face of the belt also has about twice the area in contact with the pulleys compared with multiple belt drives of the same width. These two principal features of the drive mean that it can transmit the same load in less space or a greater load in the same space as the multiple belt drive. In fact, it has been found that the "Poly-V" drive will increase drive capacity by about 50 per cent.

Rubber-base Contact Adhesive

A rubber-base contact adhesive has been successfully developed at National Chemical Laboratory, Poona. Liquid rubber prepared from solid natural rubber is treated with a mixture of phosphorus oxychloride and trichloride under suitable conditions to give a resin which is dissolved in aromatic hydrocarbons or chlorinated solvents to give an adhesive of required consistency. The bond obtained is resistant to dilute acids and alkalies at ordinary temperatures but softens at about 90°C. In the case of metal bonds, shear strengths upto 1,200 lbs./sq. in. have been obtained with this adhesive. The range of its usefulness can be increased by using it in combination with suitable rubbers, like neoprene. The product has been tested by industry and reported equal to or better than some imported adhesives. Apart from its applications as general adhesive, the material can be used as an anchor coat in the manufacture of cellophane adhesive tapes.

Shoes by the Thousand

There are normally about 300 operations in making a shoe by factory methods, but plastic footwear is being made now by machinery in one operation. After the shoe has been made, it has to be trimmed and the buckle attached by hand, but the main process is automatic. These economically priced plastic shoes are selling well in many countries. Polyvinyl chloride (commonly called P.V.C.), coloured in the shades required, is poured in at one end of a machine and shoes comes out at the other. One of the firms making these shoes, Eatoughs Ltd., High Street, Burton-on-Trent, Staffordshire, England, uses nine operators per eight-hour shift, working on seven machines. To these, of course, must be added those engaged on trimming and packing, and the whole team can turn out 70,000 pairs a week. There is little, if any, waste, since faulty shoes can be put into the machine again.

Artificial Lightning Aids Chemistry

Man-made lightning is being used by Sun Oil Company researchers to simplify the study of chemical changes under conditions of high temperature and pressure. They reproduce in a glass tube the conditions present in a stroke of lightning by discharging at least 10,000 volts between electrodes at speeds of miles per second. They can control the type of atmosphere—air, gas, or a gas mixture—in the tube as well as the strength and number of the shocks. The artificial lightning stroke is so short and sudden that it doesn't break the glass, the researchers report, and the rapid heating and cooling of the gas enables chemists to isolate new materials that are formed at high temperatures but which would fall apart again if allowed to cool slowly.

Measuring Heat

A novel instrument designed to measure the effectiveness of radiant heating, either during the air conditioning of offices or in industrial drying processes, has been developed in Australia. The device consists of a radiation "receiver" in the form of two very thin polythene hemispheres which are kept inflated by an inert gas supply and a thermopile—250 thermocouples surrounded by blackened plates. The latter, contained within the "receiver," is thus protected from moisture and from convective heat loss. Radiant heat is absorbed by the thermopile and an electric current, proportional to the intensity of the heat, is generated. This is recorded directly without further amplification, it is stated.

Cow's Milk to Order

The cow, a highly complex milk factory, may some day be specialised to meet specific consumer needs, according to Mr. R. D. McCarthy of the Pennsylvania State University's Department of Dairy Science. He says that by varying the cow's diet scientists may be able to encourage the growth in its stomach of certain bacteria to help produce milk specifically designed for nutrition of adults or of children or to make better cheese or ice cream. In a speech at a recent American Chemical Society meeting he said, "... The future appears bright for 'calling the shot' in producing the type of milk we desire for various reasons."

CANARA BANK LIMITED—*(Contd.)*

Schedule of Particulars required by the Banking Companies Act, 1949 (Act X of 1949) attached to and forming part of the Balance Sheet as at 31st December, 1960.

1959 Rs.	nP.	PARTICULARS OF ADVANCES	Rs.	nP.	1959 Rs.	nP.		Rs.	nP.

AUDITOR'S REPORT

I beg to report that I have audited the annexed Balance Sheet of the Canara Bank Limited as on 31st December, 1960, and also the annexed Profit and Loss Account of the Bank for the year ended that date, with the Books and Accounts and certified returns from Branches and report that :—

I have visited twenty-five branches of the Bank and have examined the Books of Account and cash and securities as at the time of my visit of the Branches so visited, twelve Branches have been audited in December 1960 and the other thirteen Branches on 31st December 1960 and after. Adequate and satisfactory arrangements for scrutiny and check at regular intervals of the accounts of the Branch Offices by responsible officers of the Bank are in force and their Inspection reports have been made available to me at the time of audit of the Bank.

By its order No. 1 (7) CL. VI/61, dated 6th February 1961, the Government of India, in pursuance of Sub-Section (4) of Section 228 of the Companies Act with clause (*d*) of Sub-Rule (1) of Rule (4) of the Companies (Branch Audit Exemption) Rules, 1961, has exempted the unmentioned Branches (which, however, include some of the Branches audited by me) from the provisions of sub-sections (1) and (3) of Section 228 of the said Act in respect of the year ended 31st December 1960. (1) Fort Bombay, (2) Mandvi Bombay, (3) Girgaum Bombay, (4) Kalbadevi Bombay, (5) Bandra Bombay, (6) Dadar Bombay, (7) Sion Bombay, (8) Mazagaon Bombay, (9) Worli Bombay, (10) Matunga Bombay, (11) Chembur Bombay, (12) Byculla Bombay, (13) Abdul Rehman Street Bombay, (14) A/cs. Section, Bombay, (15) F. D. Bombay, (16) Kalyan, (17) Ulhasnagar Kalyan, (18) Mohone Kalyan, (19) Dombivli, (20) Ahmedabad, (21) Hawai Nagpur, (22) Sitabuldi Nagpur, (23) Sholapur, (24) Bhavanagar, (25) Hyderabad, (26) Secunderabad, (27) Nizamabad, (28) Warangal, (29) Vijayawada, (30) Adoni, (31) Chickpet Bangalore, (32) Chickmagalur, (33) Shimoga, (34) Davangere, (35) Mandya, (36) Belgaum, (37) Dharwar Market, (38) Dharwar Malmaddi, (39) Hubli, (40) Karwar, (41) Sirsi, (42) Gangulli, (43) Coondapoor, (44) Udipi, (45) Mulki, (46) Karkala, (47) Bantwal, (48) Puttur, (49) City Mangalore, (50) Bunder, Mangalore, (51) Hampanakatta, Mangalore, (52) Mercara, (53) Gulbarga, (54) Tumkur, (55) Bellary, (56) Gadag, (57) Bijapur, (58) Raichur, (59) Foreign Dept., Madras, (60) GN St. Madras, (61) Mount Road, Madras, (62) Salem, (63) Erode, (64) Opp. St. Coimbatore, (65) Avanashi Road, Coimbatore, (66) Tuticorin, (67) Payyanur, (68) Cannanore, (69) Kozhikode, (70) Cochin, (71) Kasargod, (72) Tellicherry, (73) Calcutta.

(*a*) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of audit. (*b*) Such information and explanations have been found to be satisfactory. (*c*) Transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank. (*d*) The Returns received from the branches have been found adequate for the purposes of my audit. (*e*) The Bank's Balance Sheet and Profit and Loss Account dealt with by this Report are in agreement with the Books of Accounts and Returns. (*f*) In my opinion and to the best of my information and according to the explanations given to me the said Accounts give the information required by the Companies Act, 1956, and the Banking Companies Act, 1949, in the manner so required and the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1960 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st December 1960. (*g*) In my opinion proper Books of Account as required by law have been kept by the Bank so far as appears from my examination of these Books.

A. UMANATH RAO, B.A., F.C.A.,
Chartered Accountant,
Auditor.

SUPERSONIC AIR TRANSPORT

ITS RISKS AND DANGERS NOT YET FULLY RECOGNISED

By Wing Commander R. Vaughan-Fowler, R.A.F. (Retd.)

AIR transport having entered the jet air age with the introduction of subsonic air services, the public is now being subjected to propaganda heralding the supersonic air travel age. In view of the fact that subsonic air transports are only now being "bedded down" in the air traffic control systems of the world, and that this process is admittedly going to take ten years, it seems premature to start serious construction of supersonic airliners so as to introduce supersonic air travel within the period of the next ten years. The present air traffic control systems are not unified, neither are they equipped with technical aids for aerial navigation capable of handling air transports travelling at 600 m.p.h., which, to further complicate the problems, have to mix with slower types of aircraft. Existing airliners already cruise at altitudes above the normal weather reporting facilities, which means that essential information regarding force and direction of winds is not available for navigation purposes.

It is not suggested that air transport should not progress through research and planning towards the day when supersonic air travel is introduced. On the contrary, it is believed that in the years to come supersonic air travel will have its proper place in the world transport systems. But, to introduce it before it is fully understood and before its problems have been solved is, in my opinion, an extremely dangerous step which public opinion should oppose.

Before proceeding to explain some of the difficulties and dangers in the path of supersonic air travel it is necessary to look at air transport as it is today. Subsonic vehicles have brought any two points, however far apart on the world's surface, within 48 hours of each other, whilst journeys which used to take two or three days by air are completed in under 20 hours. Only a minute fraction of the world's population is able to use air transport because the cost is too high for the average individual. For those who can afford this form of travel, journeys even so extensive as from London to Tokyo can be completed in jet airliners flying at subsonic speeds without undue fatigue and within a phenomenally short time. There is no economical urgency to introduce faster aircraft. There is no public demand for faster air travel as the public has yet to digest subsonic air travel speeds which are surprising even to the old hand air travellers. Financially the airline operators are burdened with heavy debts to pay for the subsonic airliners they are now using as well as those already on order which they will receive from the manufacturers between now and the end of 1962.

Background Reasons

These operators have yet to step up their sales organisations so as to sell the enormous capacity of seats and cargo space which their fleets are capable of carrying. Unless this air transport capacity is occupied, and it will require loads many times as great as any so far achieved, these operators are going to find themselves with enormous operating debts they are unable to meet. Governments will have to come to the aid of air transport with subsidies and capital assistance. It must be realised that at the present moment we have only before us the record of the first 18 months or so of jet air travel. Those operators with this modern equipment have managed to reap a rich harvest, but as the new equipment is delivered and more operators enter the field with their modern equipment, the available traffic loads are going to be spread with the result that individually the operators will find it extremely difficult to fill their services even to fifty per cent of the load capacity. A few may be fortunate, good salesmanship backed with eye-catching advertising may attract good loads but to arrive at the true profit and loss account of air transport it is necessary to look at the whole picture.

The reason why supersonic air transports are being introduced in such a rush is that they have a military value, and nationally the first country to launch supersonic air transport will have achieved a scientific victory over other nations, which will naturally add prestige to its national record. There are clear indications that the airline operators themselves are not by any means anxious to push ahead with introducing supersonic air transports. To quote Sir William Hildred, Director General of the International Air Transport Association, "If we are pushed into Mach 3 speeds too soon, we will be headed for chaos, if not disaster."

Unfortunately the airline operators are not in any position to express their views strongly or oppose the wishes of Governments because, almost without exception they are at the mercy of Governments. Those fortunate enough to be financially independent still have to conform to Government wishes, they must also obtain Government approvals to operate the routes. In addition the charges they impose upon the travelling public and the shippers of air cargo have to receive the approval of Governments. In the majority the operators are under the control of Government so they have little opportunity to oppose the wishes and the policies put forward by the politicians. These are the background reasons why supersonic air transport is being forced upon the world long before the necessary preparations for its safe and smooth operation have been properly investigated.

Dangers

Very few have given supersonic air travel any deep consideration. The majority, even those in air transport, have accepted supersonic air travel as just another step in the natural progress of the air transport business. The dangers ahead are quite serious and the lack of knowledge regarding them is so great, it can be said, that hardly anything is known about the problems of supersonic air travel. A few scientists are aware of the very real dangers that exist, but their views are unwelcome amongst those who advocate rushing ahead to launch supersonic airliners into the air transport system by the year 1968, or 1970 at the latest.

There are two major dangers which by themselves are more than sufficient to cause responsible individuals to pause and think again. These major dangers are cosmic radiation and the sonic-boom. I will discuss cosmic radiation first. It is admitted by scientists that the biological effects of cosmic radiation at the supersonic cruise altitudes are unknown. The same applies to the sonic-boom. It is claimed that the burden of proof in respect of these dangers, and of course their elimination, rests with those who advocate supersonic air travel.

Professor Martin Wrete of the University of Uppsala, Sweden, has expressed some powerful warnings regarding the dangers of cosmic radiation. Mankind is continuously exposed to this form of danger generally referred to as ionizing. Its dangerous qualities compare with those of X-rays which can have disastrous results on human organisms. According to Professor Wrete the total ionizing influence of cosmic radiation on all animal organisms is at its maximum at an altitude of 75,000 ft. which happens to be the cruising altitude of the supersonic air transports. This is a very solemn thought which in some respects is positively frightening as even shielding does not protect the human being. Cosmic radiation can pass through a shield such as lead and when it emerges is actually intensified, having what is known as a "cascade effect" which is more harmful.

Cosmic Radiation

There are sufficient reasons for believing that cosmic radiation is the cause of cancer. To quote the Professor:

"Civil aircraft personnel, who must obviously spend long periods at relatively high flying altitudes, are subject to an increased exposure to cosmic radiation, which is approximately 40 times stronger at a height of 30,000 ft. than at ground level. In an aircraft, however, the altitude is not the only unfavourable factor as a certain cascade effect developed by the aircraft fuselage is also present. Aircraft personnel must therefore be subject to a somewhat greater risk of injury to the sex-cells, resulting in congenital development irregularities of descendants, than people on average."

He goes on to point out that passengers constantly travelling will be subject to grave risks of bodily injury and adds, "but female passengers in the first months of pregnancy will probably run an acute danger of fetus injuries, resulting in abortion or deformities."

The damaging effect on the individual's sexual life may be carried into future generations; therefore, responsible individuals could hardly contemplate family life if they accept the dangers of cosmic radiation produced by constantly travelling at exceptionally high altitudes. The profession of aircrew is particularly involved and it is for their organisations and associations to ensure that these dangers are not going to be accepted without a complete scientific investigation, which must also produce infallible methods of eliminating the risks involved. Here it is again necessary to quote Professor Wrete:

"The possibility of shielding crews of jet military aircraft, which are already operating at extremely high altitudes, has been seriously discussed, but consideration of this had to be abandoned. Materials that contain considerable amounts of hydrogen atoms, e.g., water and certain liquid fuels, should, it is true, lend themselves as shields, but such thicknesses are required that the practical realisation appears to be impossible. It has been necessary to be satisfied with a recommendation that over-long flight durations at these heights should be avoided."

If shielding is impractical for one or two persons in a military aircraft it will obviously be many times more impractical for protecting a hundred or more passengers in an airliner which has got to carry a sufficiently large load to pay its way.

It is necessary to realise that cosmic radiation is something that exists in the universe and that human life, animal life and plant life only exists on this earth because the Almighty has surrounded the world with a protective envelope of atmosphere which is at least 100,000 ft. thick. Safety is guaranteed by this air protection even though scientists still believe that the 0.3-0.5 per cent of the maximum value of cosmic radiation, experienced at sea level, is possibly the cause of some of our illnesses and physical breakdowns, in particular those experienced by victims of cancer. If these scientists are correct and there is little reason to doubt that they are, the question arises, is it intended that those on this earth to remain alive shall remain on it, and not venture out into upper altitudes or attempt to reach other planets?

The Sonic Boom

The sonic-boom or bang is the other major danger that has to be eliminated if supersonic air transport is to become a common and economic feature in our daily life. A detailed study of this problem is not practical in the space of an article. However, enough can be said to show that unless the sonic-boom is very strictly controlled, or reduced to an acceptable level, it is going to be the cause of great inconvenience to many millions of people, as well as reducing their working efficiency by disrupting their normal life and damaging their nervous systems. Furthermore, it will have a physical effect on some individuals even to the extent of causing premature death.

The first question that requires a direct answer is, "In a democratic age is it right to introduce a class of vehicle that will serve comparatively few but which will cause bodily harm to millions as well as property damage for many?" What is the answer, Yes or No? So far sonic-booms have only been produced by small military aircraft. They have caused alarm, as well as sufficient damage to property in the United Kingdom to create public protest that has resulted in the British Government introducing regulations forbidding military aircraft to fly at supersonic speeds over land!

With air services constantly coming and going there would be a more or less continuous roll of booms along every air-route centreline, and for thirty miles on either side. These strips of country are known as the sonic-boom carpet, but when aircraft are turning they will cast their sonic-boom over a much wider area, so restricting them to air routes does not really help to confine the trouble. Wherever a sonic-boom occurs window glass and tiles are liable to be broken, resulting in thousands of legal actions to recover financial loss for damage to property. The value of house property in a sonic-boom carpet area is bound to fall considerably.

Institutions such as hospitals which already request motorists to refrain from using their horns so as to relieve patients from nervous strain due to noise, would have no protection against the sonic-boom, which bursts upon one as a severe bang, without warning. The very unexpectedness of the bang increases its harmful effect on the nervous system of human beings and animals. Imagine the disturbance and distress caused by glass being shattered in

Nil	6. Income from Non-Banking Assets, and Profit from Sale of or Dealing with such Assets	2,675·00
Nil	7. Other Receipts	10,000·00
52,778		
28,17,768	Total Rupees	31,25,472·65

We have audited the foregoing Balance Sheet of the Indian Branch of The British Bank of the Middle East, as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Indian Branch of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to Sub-Sections (1) and (2) of Section 211 and Sub-Section (5) of Section 211 and Section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) In our opinion, proper books of account as required by law have been kept by the Indian Branch of the Bank so far as appears from our examination of those books;

P. E. H. ALEXANDER,
Manager.

(c) the Balance Sheet and Profit and Loss Account of the Indian Branch of the Bank dealt with by this report are in agreement with the books of account; and

(d) In our opinion, and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branch of the Bank as at 31st December, 1960 and the Profit and Loss Account gives a true and fair view of the Profit of the Indian Branch for the year ended upon that date.

Chartered Accountants.

BOMBAY, 24th March, 1961.

THE MYSORE SUGAR COMPANY, LIMITED

SPEECH OF CHAIRMAN, MR. V. V. NAIDU, AT ANNUAL GENERAL MEETING

HIGHER MINIMUM PRICE FOR CANE ENTAILS ADDITIONAL BURDEN

THE Twenty-seventh Annual General Meeting of the Mysore Sugar Company, Ltd., was held at the Registered Office of the Company at Bangalore on Thursday, 30th March 1961, under the chairmanship of Mr. M. Mallaraj Urs, in the absence of Mr. V. Venugopal Naidu, Chairman and Managing Director, who is on foreign tour. Moving the adoption of the report and the accounts, the Chairman made the following speech at the meeting:

"GENTLEMEN,

"I have great pleasure in welcoming you to this the twenty-seventh annual general meeting of the shareholders of the Mysore Sugar Company, Limited, and in placing before you for adoption the report of the directors and the audited statements of accounts for the year ended 30th June 1960. Copies of these have been in your hands for some time and, with your permission, I shall take them as read.

"Mr. B. M. Krishnan, who was the Chairman and Managing Director of your Company for the last three years, laid down his office on 5th February 1961 on completion of his term and I have taken over from him. The Board of Directors have placed on record their appreciation of Mr. Krishnan's services to the Company. I am happy to report on this occasion that Mr. H. K. Veeranna Gowdh, one of your Directors, has been appointed as a Minister in the Mysore Government and I am sure you will all join me in wishing him a happy and successful term of office as a Minister. I earnestly hope that his rich experience and guidance will be available to the Company whenever they are needed.

Sugar Stocks Heavy

"The year 1959-60 was a notable one for the sugar industry and witnessed a significant rise in sugar production. As against 19.18 lakh tons of sugar produced in the country during the year 1958-59, the production during 1959-60 touched a record level of 24.24 lakh tons, representing an increase of 5 lakh tons in the course of one year. The demand for sugar has not, however kept pace with the rising trend in production. The result is that there is heavy accumulation of sugar stocks with the factories and it is apprehended that the industry will be burdened with a carryover of more than ten lakh tons at the end of this season, unless indigenous demand goes up appreciably or exports take place in sizable quantities. It may be mentioned, in this connection, that export of sugar under the existing conditions is proving to be a costly affair involving loss both to the industry and the State exchequer, though exports have their advantage in earning foreign exchange for the country.

"The target of sugar production for the third Plan is, therefore, tentatively fixed at 30 lakh tons, though there are indications of this figure being revised to 35 lakh tons. Towards this end, new factories are being licensed and set up and several existing units are also being permitted to extend. Our application for rehabilitation and expansion is also now before the Central Government who will, I trust, consider our request very favourably.

Price Linking Formula

"A matter that has been agitating the sugar industry for some years past has been the price linking formula designed to ensure payment of a deferred price for sugarcane by passing on to the growers a share of the sugar price. Although such a payment has become a statutory liability from the 1958-59 season, it has not been an easy matter to notify the formula in its complete form, for various reasons. The Government of India have now referred the formula to the Tariff Commission for examination with a view to modifying the existing formula or suggesting an alternative and simpler formula and at the same time to go into the claim of the industry for including a rehabilitation allowance in the sugar price, before it can be shared. After deep consideration, the industry has submitted to the Tariff Commission an alternative proposal. It is hoped that the Tariff Commission will soon evolve a fair and simple formula acceptable to all.

"Another event of great significance to the sugar industry has been the publication in recent months of the report of the Central Wage Board for the sugar industry which was constituted in 1957 to go into the question of evolving a wage structure for the workers in the industry. The Board has examined the problem of wage fixation in great detail and has made a number of recommendations which have the effect of increasing the emoluments of the several categories of employees with retrospective effect from 1st November 1960. These recommendations have a vital bearing on the finances of the industry and their effect would be an immediate increase in the cost of production of sugar, as the Board itself has admitted. The recommendations have since been accepted by the Government of India, who have requested the employers, workers and the State Governments to take immediate steps to implement them. The Indian Sugar Mills Association has subsequently taken up this question with the Government.

"As you would have seen from the report of the Directors in your hands, our factory at Mandya had a normal season during 1959-60. The factory commenced crushing operations on the 2nd July 1959 and continued up to 7th February 1960, crushing 3,11,524 tons of cane and producing 31,550 tons of sugar. The corresponding figures for the previous season were 3,48,814 tons and 35,771 tons, respectively. The production of sugar would have been higher but for the fact that we did not receive the entire quantity of cane contracted for due to competitive price of *jaggery*. In spite of lower output, the quantity of sugar actually sold was higher than in the previous year and the receipts from sugar sales rose to a record figure of Rs. 430 lakhs. Control over distribution of sugar continues to be exercised by the State Government and with the improvement in the supply position, the public are now assured of plentiful supply of sugar at fair price.

Sugarcane Price

"At a time when our crushing season had well-advanced, the Government of India increased the statutory minimum price of sugarcane by Rs. 5 per ton with effect from the 25th October 1959. This step, intended to give incentive to the cane growers and to maximise production, has, however, affected us adversely. Having paid the usual cane price for cane purchased till 25th October 1959, it was rather inexpedient for us to increase the price for subsequent purchase and thus pay two different prices for one and the same crop. It was the intention of your Directors to pay a uniform average price for all purchases during the entire season. The suppliers insisted upon payment at the enhanced price from the commencement of the season and your Company had to pay this extra price to cane purchased prior to 25th October 1959. Though the selling price of sugar was increased, this increase in respect of stocks held on 25th October 1959 did not accrue to us due to the levy by the Government of India of a special excise duty. Thus, in the result, we had to pay higher price for cane from July 1959, while we lost the benefit of higher sugar price on stocks held, as special excise duty was levied on these stocks. Our representations for refund of excise duty in the peculiar circumstances of our case have not so far been fruitful. Your Directors are, however, hopeful that appropriate relief would be forthcoming and that we would not stand to suffer on this account.

Working Results

"Reflecting the higher tonnage of sugar sold and the higher price realised for sugar and despite the adverse factors referred to above, I am glad to say that the working of the Company during the year under report has yielded a gross profit of Rs. 42.31 lakhs, representing a sizable increase over the profit of Rs. 31.90 lakhs earned during the preceding year. This year too, the exact liability on account of deferred price for sugarcane has not been clearly indicated. Pending determination of the actual amount as a result of the examination of the price linking formula by the Tariff Commission, your Directors have set apart a sum of Rs. 14,22,450, which would allow payment at an interim rate of Rs. 4.50 per ton of cane. Here I may say that the provisional additional price of Rs. 5 per ton for the year 1958-59 did not satisfy the cane growers and consequent on their resorting to a sudden strike and withholding cane supply to the factory, it became necessary to make payment at an increased rate of Rs. 6 per ton. The burden of this additional price, as also that on account of additional bonus paid to employees in respect of the year 1957-58, has fallen on the accounts for the year under review.

"After meeting the above charges relating to previous years and providing Rs. 6,92,253 for depreciation and Rs. 13,50,000 for taxation, and after transferring Rs. 5 lakhs to the reserve for rehabilitation of plant and machinery, we are left with a net profit of Rs. 8,23,840 as against Rs. 6,54,699 in the previous year. Adding the balance brought forward from last year's account, the amount available for distribution comes to Rs. 8,69,012. As in the last year, your Directors recommend payment of dividend at 30 per cent, subject to deduction of tax, so as to ensure for shareholders the same rate of net return that they have been accustomed to receive in the past.

"The proposal for capitalisation of a part of our reserves by the issue of bonus shares is also pending from some time and the recent reduction in the rate of tax on bonus shares should make this easier of implementation. It should, therefore, be possible for your Directors to persuade the Government of Mysore who are the major shareholders of this Government Company to agree to this proposal. Allied to the question of capitalisation of reserves is also the question of writing off the value of certain items of obsolete and unserviceable stores and spares which may tend to inflate the real value of our assets. A solution to this problem is now engaging the earnest consideration of your Directors.

Expansion Scheme

"The scheme for expansion of the capacity of our factory to 3,000 tons of cane per day, of which you were informed last year, has not yet taken a definite shape, as we have not yet received the requisite licence from the Central Government. In consultation with experts, we have finalised the requirements of additional machinery to be installed for serving the threefold objective of rehabilitation, modernisation and expansion. The whole scheme is estimated to cost about Rs. 115 lakhs and orders for machinery are expected to be placed with one of the approved sugar machinery manufacturers in India as soon as the licence is received. The programme is intended to be implemented in a phased manner over a period of three years. By far the greater portion of the expenditure would be on account of rehabilitation of old and overworked machinery, some of which have been in continuous service for over 20 years and are in immediate need of replacement in the interests of continued smooth operation of the factory. Apart from stepping up sugar output to as much as 50,000 tons per annum, the expansion programme would promote efficiency and economy in operation and thus bring about a reduction in the cost of production which is of paramount importance if we are to face the future with confidence.

"We have succeeded in securing a licence from the Government of India for the manufacture of cellulose acetate at Mandya based on our alcohol. Considerable preliminary work in regard to this scheme had been covered by my predecessor, Mr. B. M. Krishnan, including delicate negotiations with representatives of certain leading foreign firms and also financial institutions in the matter of securing suitable technical know-how and collaboration and foreign exchange resources. These had reached a crucial stage when I assumed office last month. I have now taken up the threads of the negotiations and active steps are now being taken for concluding satisfactory arrangements. While, at this stage, it may not be possible to disclose the nature of the arrangements or the details of the scheme, I may broadly say that the project envisages production of cellulose acetate flakes suitable for manufacture of raw-film leaving a portion of the flakes to be processed into moulding powders. The capital cost of the project would be of the order of Rs. 3.5 crores and, as at present, a separate company is proposed to be sponsored for this enterprise.

"Our relationship with our employees continued to be satisfactory and cordial during the year under report, and your Directors have no doubt that the employees will continue to extend their wholehearted co-operation at all times.

"It only remains for me in conclusion to express my sincere thanks to my colleagues on the Board for their valuable guidance and co-operation. The Government of Mysore, and particularly the Chief Minister, have been very sympathetic towards the Company and we are grateful to them. The employees from the General Manager downwards have served the Company in a loyal and efficient manner, under trying conditions, and they deserve to be complimented. Our thanks are also due to the cane growers who form an essential link in our industry."

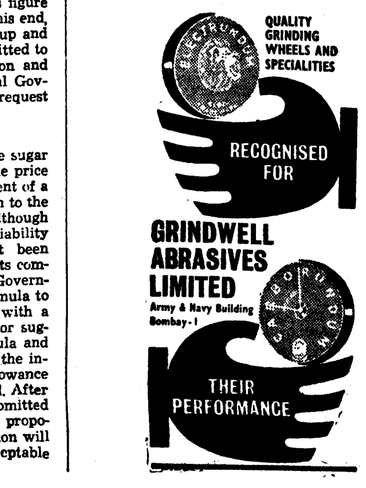
The report and the accounts for the year 1959-60 were adopted and a dividend of 30 per cent subject to deduction of tax was approved. Sriyuts T. Shamanna and Dharmaprakasha L. S. Venkaji Rao were elected as Directors in place of the two retiring Directors.

With a vote of thanks to the Chair, the meeting terminated.

T. HANUMIAH,
Secretary.

BANGALORE, *Dated 31st March* 1961.

Note:—*This does not purport to be a report of the proceedings of the general meeting.*



WEST COAST PAPER MILLS LTD.

(*Concluded from page* 700)

had suddenly taken place at the factory from noon of Sunday the 19th instant till early morning of Monday the 20th.

"The entire stock of 47,000 tons of bamboo, which was duly insured, was destroyed before the fire could be controlled.

"I am, however, glad to inform you that no damage was caused to the buildings, plant and machinery and that the factory has since then resumed its normal working.

"I, however, regret to mention that both the telephone and telegraph facilities were not available at that time and the management were put to a very awkward situation as they had to send offices to far-away places like Haliyal and Alnavar to communicate with the authorities concerned about the emergency for securing the necessary assistance from Belgaum and other places.

"I hope you will all join with me in placing on record our appreciation of the conscientious and hard work of the staff and labour which has resulted in achieving this success."

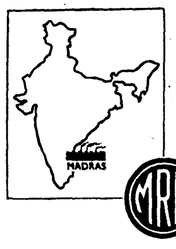
UNDER SECRETARY TO GOVERNMENT
17 APR 1961
PUBLIC DEPARTMENT

A NEW GIANT
TYRE FACTORY



MRF

A gigantic new venture in Indo-American collaboration sets the stage for a major development in India's tyre and tube industry.

The Madras Rubber Factory—India's largest manufacturer of tread rubber compound—and the Mansfield Tyre and Rubber Company, Ohio—one of the oldest, and sixth largest manufacturer of tyres, in terms of units produced, in the United States—have joined hands to manufacture Mansfield truck and car tyres and tubes at Madras.

When in full production, the new factory will be producing over 3,00,000 tyres and tubes per annum. A part of this production will be exported overseas.

MADRAS RUBBER FACTORY LTD.

Dhun Buildings, 175/1 Mount Road, Madras 2.

Branches: Ahmedabad, Bangalore, Bombay, Calcutta, Calicut, Coimbatore, Delhi, Jullundur, Kanpur, Kottayam, Mangalore, Nagpur, Trichur and Vijayawada.

NIZAM SUGAR FACTORY LTD.

CHAIRMAN, MR. R. S. KRISHNASWAMY, ON EXPORT OF SUGAR

SHORTAGE OF CHEMICAL FERTILISERS PERSISTS

ADDRESSING the Twenty-third Annual General Meeting of the shareholders of the Nizam Sugar Factory Limited, held at Hyderabad on 30th March, 1961, the Chairman of the Company, Mr. R. S. Krishnaswamy, suggested that, in view of the huge sugar stocks at the beginning of the current season and the prospect of a good crop, exports of sugar should be stepped up so as to bring down stocks and stabilise prices. He suggested that the export agency section of the Indian Sugar Mills' Association should purchase and stock all the exportable surplus. The following is the full text of Mr. Krishnaswamy's speech:

"I have great pleasure in welcoming you to the twenty-third annual general meeting of the shareholders of the Nizam Sugar Factory Limited. The report of the Directors and the audited accounts for the year 1959-60, together with the comments of the Comptroller and Auditor-General of India thereon under Section 619 (4) of the Companies Act, 1956, have been in your hands for some time and, with your permission, I shall consider them as read.

"Your Company has made a gross profit of Rs. 1,11,65,834 for the year under review. Deducting Rs. 8,07,786 towards depreciation (including development rebate of Rs. 51,118), Rs. 10,52,086 for managing agency commission and Rs. 30,25,000 for taxation, the net profit is Rs. 63,10,962 which is the highest achieved so far, and is two and a half times more than the net profit of Rs. 24,67,062 in the previous year.

Production Up

"The factory commenced crushing operations on the 4th of October 1959, and the season came to a close on the 3rd of May 1960. The duration of the season was 213 days which is longer by 41 days than that in the previous year. This is partly due to the stoppage of the first factory for a period of about one month when the first mill engine was damaged owing to an accident, and partly due to the increased crushing of 48,558 tons. The total quantity of cane crushed was 491,777 tons, as against 443,219 tons of the previous year. The output of sugar increased from 44,336 tons to 51,199 tons, that is, about 16 per cent. The percentage of recovery also went up from 10 to 10.41.

"The factory farms produced and supplied 224,407 tons of cane during the year as against 187,513 tons in the previous year in spite of the disease-affected seed cane, untimely supply of fertilisers, change in irrigation system and unfavourable seasonal conditions. This quantity is equal to what the factory farms produced in 1955-56 when the yield was said to be 43 tons per acre.

Mechanical Breakdown

"I wish to make a reference to the unfortunate accident that occurred on 6th January 1960 to the mill engine No. 1 of the first factory at a time when the crushing season was at its peak. The crank pin gave way causing grave and serious damage to the cylinder head and the connecting rod. As a result of this, the first factory stopped crushing for a period of about one month. However, it resumed operation at a reduced crushing rate during the following period of about one month by running three mills in place of five mills with necessary adjustments and repairs; this was a bold decision taken by your management which has appreciably reduced the loss caused by the mechanical breakdown. In spite of this unfortunate accident, the working results of the year under review are good.

"Government of India earmarked a quota of 50,000 tons of sugar in the month of September 1959 and a further quota of 50,000 tons in January 1960 for export from the 1959-60 production and your factory was allotted a quantity of 2,164.74 tons of sugar. This quantity was not lifted by the Indian Sugar Mills' Association out of 1959-60 production and your factory has been permitted to export this quantity from 1960-61 production. Further, with a huge carryover of sugar stocks at the commencement of this season and also coupled with the estimated production of about 28 lakh tons of sugar, it is felt that the export of sugar should be stepped up with a view to bring down stocks at the end of the year to manageable proportions. This would mean an export of 5 lakh tons of sugar and the Government of India and the Indian sugar industry are making every effort in this direction and it is hoped that if considerable quantity of sugar goes out of this country it will enable us to earn the much needed foreign exchange. At the moment, the sugar factories are saddled with huge stocks which are not moving fast enough into the markets. It would relieve the factories to a great extent if the export agency section of the Indian Sugar Mills' Association purchases and stocks all the exportable surplus. This will also stabilise the price of sugar.

Preference Dividend

"The procedure relating to the payment of dividend on preference shares has again undergone a slight change in accordance with the provisions of the Finance Act, 1960 and the Preference Shares (Regulation of Dividends) Act, 1960. The Section 18(3E) of the Finance Act 1959, which permitted grossing up to the full extent, has been dropped in the Finance Act, 1960 and the dividend on preference shares became payable as per Section 18(3D) of the Indian Income-tax Act which does not allow for grossing up. But the Preference Shares (Regulation of Dividends) Act, 1960 now allows for grossing up to the extent of 30 per cent. Your Company has some agricultural income which is exempt from income-tax and therefore the grossing up will be in the same proportion as the non-agricultural profit bears to the total profits of the Company. Your Directors, therefore, have recommended that the dividends payable on preference shares should be in terms of the Preference Shares (Regulation of Dividends) Act, 1960.

"Dividends on preference shares were paid to the shareholders by the 31st of December 1960 as per Section 18(3D) of the Indian Income-tax Act and the balance now payable in terms of the Preference Shares (Regulation of Dividends) Act, 1960 will be paid after the accounts have been adopted by the shareholders.

"In case of ordinary shares, the dividend has been increased from Rs. 5.40 nP per share to Rs. 5.75 nP which works out to 23 per cent.

Sugar Sales

"The sugar sales during the year totalled 500,516 bags, as against the previous year's sale of 544,692 bags. The minimum price of cane was increased from Rs. 1.44 nP to Rs. 1.62 nP per maund delivered at the factory gate with effect from 25th October 1959. As the factory started crushing from 4th October 1959, cane received from 4th October 1959 to 24th October 1959 (both days inclusive) was paid at Rs. 1.44 nP only. The cane-growers represented that they should be paid the minimum price of Rs. 1.62 nP per maund for supplies of cane during that period. Your Directors have decided to pay at the enhanced rate of Rs. 1.62 nP per maund from the 4th of October 1959 to the 24th of October 1959 for the cane supplied to the factory. This year your Directors have made a provision of Rs. 45,94,502 for 'extra price' for cane at about Rs. 9 per ton.

Expansion Scheme

"I am glad to inform you that our expansion scheme has made good progress. Most of the machinery ordered has arrived at site as per schedule by the first week of January 1961 and erection is also in progress. It is expected that the entire machinery will be erected during the off season and the full capacity of the expanded plant will be available for production in the coming season.

"The working results of the confectionery plant are encouraging. Competition in this line is very keen and steady progress is being made in the sales. During the year 1959-60 the sales have reached the figure of Rs. 3,90,458 while in 1958-59 it was Rs. 29,073. Profit can be expected only when the sales exceed Rs. 12 lakhs per annum and for the year 1960-61 efforts are being made to increase the sales with a view to reach this target.

Agricultural Operation

"The working results of the factory cane plantation have also been good. Agricultural operation account shows a profit of Rs. 32,94,389 as against a profit of Rs. 5,32,958 in the previous year. This is the highest profit so far made by the factory farms.

"The supply position of chemical fertilisers continued to be most difficult and it is hoped that the representations which have been made by the Company to the Government of Andhra Pradesh for adequate allotment will bear fruit. I may add here that timely supply of chemical fertilisers and organic manure, such as oilcake, plays a very important part in raising cane crop.

"The position regarding the availability of new tractors has not improved. The Company had therefore to incur sizable expenditure in re-conditioning the existing tractors with a view to carry on the ploughing operations of our extensive farms satisfactorily and in time. Every effort is being made to obtain a fleet of new tractors as early as possible.

Housing for Workers

"The relations between the management and labour have been satisfactory. Construction of 260 two-room tenements for housing the workers under the Government of India industrial housing scheme is in progress. Apart from this, 160 houses are being constructed purely from Company's own funds and will be made available to workers shortly.

"The CO_2 plant which was acquired from the Hyderabad Construction Company, Ltd., has been erected and it will go into production soon.

"An agreement between the Nizam Sugar Factory Limited and the Government Power Alcohol Factory for the management of the affairs of the Government Power Alcohol Factory by the Nizam Sugar Factory on an agency basis is being finalised. By this arrangement, the Nizam Sugar Factory will manage the affairs of the Government Power Alcohol Factory on behalf of the Government of Andhra Pradesh.

"The details of establishing a paper factory of 100 tons per day capacity for manufacturing printing paper from bagasse have been submitted to the Government of Andhra Pradesh for consideration. The project is being examined by the Government.

"Before I conclude, I would like to express my thanks to my colleagues on the Board of Directors for their abiding interest in the affairs of the Company and to the Officers, staff and workers of all ranks for their continued co-operation, loyalty and efficiency."

UNITED BANK OF INDIA LIMITED

CHAIRMAN, DR. N. N. LAW, ON DEPOSIT INTEREST RATES

"PROFIT MARGINS OF BANKS VERY NARROW"

THE view that the recent upward revision of interest rates by banks is an extremely undesirable step was expressed by Dr. N. N. Law, Chairman of the United Bank of India, Ltd., in his speech at the Annual General Meeting of the Bank held at Calcutta on Monday, 10th April 1961. In the opinion of Dr. Law, the growth of bank deposits did not depend so much on the rate of interest as on the confidence the banking system was able to inspire in the public, the banking facilities available and the quality of service rendered. He doubted the validity of the view that a rise in interest rates would stimulate savings which, he said, constituted the basis of bank deposits. On the contrary, he felt that, in the present context, higher interest rate would only add to the operating expenses of the banks. The following are extracts from Dr. Law's speech:

"GENTLEMEN,

"It is my happy privilege to welcome you to this meeting. Last year, your Bank has completed the first ten years of its united existence. It is heartening to note that, during this period, our basic progress has been satisfactory. We have been able to cross the aggregate peak deposits of the pre-merger period. We have closed 55 overlapping branches and opened 24 new branches, a number of which are in previously unbanked areas.

"Coming now to our operations during the last year, the balance-sheet has been in your hands for some time and you would not have failed to notice that despite the tendency of deceleration which marked the growth of bank deposits last year, we have been able to achieve an increase of Rs. 4.06 crores in our deposits, a rise of 8.5 per cent over 1959. Our advances portfolio has also registered an increase of 14.7 per cent over that of 1959.

Monetary Policy

"The past year has been a significant one for Indian banking. On the one hand, it witnessed efforts on the part of the monetary authority in playing its role actively in an attempt to control the effects of various adjustments that were taking place in the economy. On the other, there were certain developments in the country inhibiting banking progress. In the monetary field, by and large, the Reserve Bank showed its alertness and did all that was within its powers to keep the situation under control.

"In a situation where there is a narrow profit margin and a low capital structure of banks, (to which I shall be referring again later in this statement), the directive of the Reserve Bank in prescribing minimum lending rates and limiting the rate of interest on short-term deposits was most appropriate and timely. I have not yet been able to reconcile myself to the appropriateness of the removal thereafter of the ceiling on short-term deposit interest rates, particularly at a time when introduction of a deposit insurance scheme will call for a rigid control in this regard.

Deposit Insurance

"In order to strengthen public confidence in banking, which was adversely affected during the past year, the Reserve Bank by sponsoring a scheme of deposit insurance is removing an important lacuna in the Indian money market mechanism. We now learn with a sense of satisfaction that the Government has, at last, made up its mind to give effect to the scheme. The Governor of the Reserve Bank is to be congratulated for having taken this right step for better development and growth of Indian banking. It is hoped that an appropriate scheme, suiting the needs of the situation, will be given effect to without further loss of time.

"You would no doubt recall that, as early as 1954, your Managing Director gave shape to his earlier suggestion, first made in 1948, that a scheme for deposit insurance be evolved and that over the past few years I have been advocating the establishment of an agency for deposit insurance as well as for rehabilitation of sub-standard units. The importance of deposit insurance lies not only in covering depositors' loss in case of bank failure, but more in its ability, as a tranquilliser, to bring about a general climate of confidence. However, this is not the end in itself. It is only a means to achieve the objectives of a healthy expansion and development of the banking system for sustaining the growth of the economy. Any scheme for deposit insurance, therefore, to be successful, will have to be designed with a view to taking care of the liabilities side of the banking balance-sheet, the Reserve Bank taking care of the assets side.

"The most important thing, in the present context, is to provide a better margin of safety for the depositors. This can only be done by having an adequate capital structure for the deposit insurance agency itself as well as generating operating conditions conducive to gradual growth of the capital structure of the individual banks, and also by ensuring that an amount of liquidity is maintained in the commercial banking system.

Capital Structure

"Increased capital funds can be achieved in two ways, by augmentation of reserves from profits and by issue of fresh capital. I may point out, as the indices of variable dividend securities clearly show, that bank shares are not thought to have growth prospects. In such circumstances, it becomes ruinously expensive—and uneconomic too—for banks to secure capital on the only terms on which such issues can be successful. In other words, the strength secured from an addition to capital is dissipated by the higher quantum of distribution required thereon. It would follow that whether for augmentation of reserves or for issue of fresh capital on equitable terms, the profit margins of bank operations must be enhanced.

"Again, the liquidity position which the banks are required to maintain has an important influence on the profit levels which can be reached. Thus, capital funds, liquidity and profitability of a banking institution are mutually the cause and effect of one another.

Liquidity

"Under compulsion of circumstances liquidity is drifting downward. It is true that the liquidity position of banks in any country, at any point of time, would be a reflection of the state of activity of its national economy, extent of banking habits and coverage and pressure of legitimate demand for credit; the liquidity of banks, in the conventional sense, will reflect the degree of development and integration of the overall economic fabric of the country. In a developing economy like ours with a limited banking habit, banking liquidity will naturally tend to be lower and the pattern comparatively rigid. More so, when massive planned efforts are being made to increase the tempo of economic activities. It is also true that in these days of advanced central banking, immediate liquidity problem no longer has the significance it had in the past. Yet the basic need for liquidity in banking business cannot be ignored or its importance minimised.

"Admittedly, economic expansion calls for greater credit requirements for industry and trade. But that should not eventually lead to bank finance replacing, even partly, the functions of owner capital. In so far as high taxation and low saving rate force this distortion, the phenomenon calls for immediate attention; this is important for the basic need for institutional growth. It seems that the low capital structure in the industry is being sought to be supplemented, to a noticeable extent, with bank funds. In so far as this tendency is responsible for the present expansion of bank advances, pushing up the advances-deposit ratio further, it could be said to be unrealistic and even disturbing; unless of course this is considered to be only a transitory phase.

Profitability

"Another reason, may be the most important one, for the liquidity being placed low is the need for increased profits. The profit margins of the banks are already very narrow. With a number of major banks the profit, after deduction of taxes and bonus to the staff, for 1960, as ratio to deposits, ranges between 0.17 per cent and 0.30 per cent. To match the mounting operating costs, therefore, banks tend to seek better earnings through larger advances. Any increase in the quantum of profit has, thus, been the result of 'double shift' in advances. This can neither be regarded as normal nor be looked upon with complacence. That even such profit has evidently failed to allow for ploughing back and make up for the decline in the investment values, is all the more a matter for concern. There is an urgent need for a study of the structure of operating costs and operating earnings with a view to achieving a better differential.

"It is surprising to note that, while the advances-deposit ratio has been continuing to take an upward turn, the banks have thought it fit further to raise the rates of interest on short and other term deposits. We have been expressing our views against raising of interest rates and we still believe that the recent upward revision has been an extremely undesirable step.

Interest Rates

"Over the years, it has been our confirmed conviction that, by and large, the growth of deposits does not depend so much on the rate of interest as on the confidence which the banking system inspires, availability of banking facilities and the quality of services rendered to the community. While most of the people still live at or below the subsistence level, it would seem incorrect to assume that a feasible rise in interest rates will stimulate savings as the base for bank deposits by curtailment of consumption, particularly when the value of the rupee is declining. The step, on the other hand, will further add to the increasing expenses of the banks. If the increased expenditure were, instead, spent on opening branches in unbanked areas and improving the quality and diversifying the range of services, the banking habit would have been further stimulated resulting in mobilisation of fresh deposits; that would have been a useful investment in the future.

"The influence of rising deposit rates on the relationship between short-term and long-term rates of interest needs more consideration than it has received so far. Any increase in the short-term rates of interest in the organised sector of the money market will, sooner or later, lead to an increase in the long-term rates of interest. The short-term rates in this sense are the rates offered on bank deposits and the long-term rates are those offered on public bonds.

"The higher rates of interest paid on bank deposits may tend to push the bond rate upward in regard to the future borrowings of the Government. This will cumulatively add to the burden of servicing charges, which will, for obvious reasons, have to be met by progressive increase in taxation. Any disturbance on this account is likely to reflect itself by further complicating the difficult funding problem. In order, therefore, to prevent the servicing cost of the public debt from rising sharply, the interest rates prevailing elsewhere in the economy, particularly on bank deposits, will need to be kept under close control. The policy of varying the minimum lending rates of the banks, already initiated by the Reserve Bank, can effectively take care of the adjustments in the economy.

Peg the Rates

"In this connection, I would also point to the danger of uncertainty about the future course of interest rates. It is our considered view that, in the interest of present investment and also in order to bring about a healthy growth of future investment, proper steps should be taken to remove any fears of capital depreciation. To quote Keynes, 'the monetary policy, which strikes public opinion as being experimental in character or easily liable to change, may fail in its objective.'

"I therefore suggest that the desirability of following the U.S. method of imposing a reasonable limit on interest rates on medium-term and long-term public debt should be seriously considered. It may not be necessary, however, to adopt the American method of legislative provision; a stipulation as to the maximum rate of interest to be offered incorporated in the national Plans, may, perhaps, serve the purpose equally effectively.

Tax Concession Necessary

"Returning to the question of profitability, I think that by increasing the rates of interest on deposits, the banks have again postponed the opportunity of raising their low profitability. It

THE SYSTEM OF HIGHWAY TAXATION

A SCIENTIFIC STUDY WANTED

By R. Ramadas

IT was in 1950 that the Dalal Committee made a strong plea for a scientific study of the principles of taxation of motor vehicles. But it was a cry in the wilderness. Such a study is long overdue for the following reasons:

(a) There is a general feeling that motor vehicle taxation in India is excessively high. Official spokesmen have not denounced this view. However, in the absence of an empirical decision on what should be the appropriate share of motor transport out of the total expenditure on roads, the element of "contribution" to general revenues from out of the proceeds of motor taxation remains "guesswork" at the best. The Dalal Committee made an estimate of Rs. 11 crores for the year 1949 and, more recently, the National Council of Applied Economic Research, New Delhi, assessed the "gross" and "net" contribution for the year 1957-58 on certain assumptions. The Salter Commission of 1931 in the U.K. suggested a certain approach so as to enable defining the responsibility of motor transport towards public costs on roads. In the United States, the "predominant use" concept is adopted in such calculations. In the interests of Indian economic growth it is necessary that a formula has to be found whereby the users of roads are made to feel that taxation of road transport is not arbitrary but in line with current trends in other parts of the world.

(b) Co-ordination of transport services requires that the "track cost" should be properly reflected in the costs of operators. Competition cannot be said to be under equal conditions, if the contribution that one set of carriers make by way of fuel tax, licence fees, etc., contains a "tax element," whereas the obligations of the rival carrier are more leniently viewed.

(c) Internal competition may favour particular firms with a "favourable" fleet composition, if fuel and vehicle taxes ignore the actual use made of the roads but base themselves on arbitrary methods like "unladen weight" of the vehicle. Let us discuss the three aspects separately.

Two Basic Facts

By far the most controversial issue in highway financing relates to the "responsibility" of motor vehicle users towards financing the public costs on roads. There are two basic facts to be kept in mind here. First, roads are required not only for use as a track for the operation of motor vehicles but for "community use" as well. By the phrase "community use" is indicated the use of roads for "property access," the use of roads "for the local movement of persons and property in the performance of production, marketing, buying supplies, going to school, and carrying on numerous social and other activities." Road improvements benefit not only users and property owners but also the general public by facilitating Government functions.

The second fact of particular significance to "old" countries like the U.K. or India is what is termed as the "legacy of the past," that present road users enjoy a very substantial heritage in respect of both of the road system existing before the motor era and of the heavy capital expenditure of transformation during the era. In England, the Salter Commission of 1931 suggested an interesting compromise formula whereby the "legacy of the past" should be written off against the community use of the road for other purposes than motor transport *and that motor transport should bear the whole future cost of the roads.* In the U.S., allocation formulæ are usually based on a classification of highways. The three commonly recognised categories are primary or trunk highways, local roads, and city streets. Most authorities are of the view that vehicle operators should bear nearly all the costs of primary (trunk) highways and that large proportion of the costs of local roads should be defrayed from general tax revenues. The Board of Investigation and Research assigned to users 85 per cent of the annual costs of the primary highway system, 30 per cent of the costs of secondary local roads, and 40 per cent of the costs of city streets. In the case of India, the Technical Sub-Committee on Road-Rail Relations recommended in 1943 that only two-thirds of the road expenditures should be charged on motor vehicles.

The Dalal Committee quotes some figures to show "diversion" of motor tax proceeds for non-highway purposes. The total tax collected on registered motor vehicles and the commodities required for their maintenance and working amounted in the year 1949 to about Rs. 23 crores in Part A States, whereas the total expenditure on road maintenance in the same year amounted to Rs. 12 crores. Even debiting motor transport with interest charges on the money invested in the roads after 1914, when the motor vehicle began to appear on the Indian roads, Rs. 9 crores represented the "diversion" for non-highway purposes in 1949. The Committee has not thought it necessary to include costs of construction of National and State highways among the "cost offsets." Instead of debiting interest charges on capital expenditure on roads since 1914, if capital expenditure and road construction were taken into account, the result would have shown whether motor transport contributed in full or the greater percentage of the public costs on roads.

Highway Costs

More recently the National Council of Applied Economic Research, New Delhi, made a "pioneer study" of the financial contribution of road transport to the public exchequer for the year 1957-58. Charging all the cost offsets (including capital expenditure on roads by the Centre and State Governments, cost of traffic Central and administration expenses on road transport) against the gross contribution of Rs. 133.6 crores, it concludes that the overall net contribution of road transport to the exchequer in the year 1957-58 is Rs. 43.3 crores. Whether the "tax" element should be allowed to continue at that level, whether vehicle operators may not legitimately claim that it would have been cheaper if they owned their own track like railways and the "discrimination" inherent in this state of affairs are matters for practical men. This much, however, may be inferred: in India, the principle appears to be tacitly accepted that the funds for road construction and road maintenance should come from the motor vehicle users. The theoretical merits of such a proposition are open to question. But statements about the "heavy burden" of taxation on motor transport mean little unless some agreed formula is accepted so as to determine the share of total road costs which motor transport should bear.

"The problem of an equitable system of highway user charges is not solved when the appropriate share of highway costs which motor vehicles should pay has been determined." The proportionate share of highway costs so determined has to be distributed among the different types of vehicles. It is a fundamental principle here that the taxes should reflect the use made of the road by the different types of vehicles. If certain vehicles require higher construction or maintenance standards, the tax levied on them should reflect this. If certain types of use such as heavy duty trucks or truck-trailers imply greater deterioration of the road, the tax differential must be appropriately higher. The main categories are operators of passenger cars, buses and trucks. Trucks are further divided into sub-groups according to size (e.g., 1-2½ tons, 2½-4 tons, 4-10 tons etc.). Vehicle tax is generally levied in India on the basis of unladen or laden weight, whereas the gross ton-mile system of allocation is favoured in the U.K., and the U.S.A. Using the gross ton-mile system of allocation, the Board of Investigation and Research found that, in 1940, motor vehicle operators as a whole covered all costs with payments. Certain groups did not meet their costs, indicating that some users were subsidising others. The most highly subsidised class was the large tractor-trailer combination, for which the ratio of user payments to assigned costs was only 61 per cent. A study made by Sir Osbert Mance about the relative incidence of fuel tax and licence fees on motor vehicles operating on roads in the U.K. (adopting the gross ton-mile formula) revealed that, "on a ton-mile basis with present taxation, the heavy diesel engine is heavily oversubsidised by the smaller petrol vehicles." Similar statistical probes into the equity of the motor vehicle taxation structure in India may yield valuable results.

A PASSENGER FROM CALCUTTA WRITES:

... Just a line to thank you and KLM for looking after us so well prior to our departure from Dum Dum, and during the flight to London. The service on the plane was excellent and the hostess charming ...

This extract is from an unsolicited letter: a photocopy can be obtained from KLM, Calcutta.

For that extra personalised service, there's nothing like flying "the Golden Circle"

to **EUROPE** on **KLM DC-8 JET**

DEPARTURE: Calcutta Saturday 17.45 hrs. DEPARTURE: Delhi Thursday 22.20 hrs.

Excellent Prop-Jet connections from Amsterdam to the U.K.

ARRIVAL: London Sunday 09.55 hrs. ARRIVAL: London Friday 13.10 hrs.

For further information, contact your Travel Agent.

Sincerely yours

Managing Director.

T. R. BHAGAVAT,
General Manager.

IMPORTS EXCEEDED RS. 1,000 CRORES IN 1960

INTAKE OF RAW MATERIALS HIGHER

INDIA'S total imports exceeded the Rs. 1,000-crore mark during the year 1960. To be precise, they stood at Rs. 1,011 crores, just short of Rs. 15 crores, as compared with the record level of Rs. 1,026 crores touched in 1957, according to the statistics relating to the import trade for the whole of 1960, released by the Department of Commercial Intelligence and Statistics, Calcutta. With the figure for imports in 1959 revised to Rs. 940 crores, imports last year show a rise of about 8 per cent (or Rs. 71 crores), whereas exports registered an increase of no more than 2 per cent. Consequently, the adverse balance of trade widened from Rs. 319 crores in 1959 to Rs. 376 crores. It is, of course, much less than the level of Rs. 386 crores touched in 1957. A detailed reference to the major trends in export trade was made in these columns two weeks ago (*vide* page 602 of *Commerce* dated 1st April 1961). It is now proposed to follow up this study by an analysis of import trade in 1960.

Import Policy

The increase of Rs. 71 crores in the value of imports during 1960, as compared with 1959, was accounted for mainly by industrial raw materials, machinery and other manufactured goods, as is evident from the accompanying Table I. It was the notable rise in the imports of raw materials and machinery that contributed largely to the expansion of about 14 per cent in the industrial production in 1960, which compares well with about 9 per cent in the previous year. In contrast, imports of food materials, particularly wheat, were markedly lower, evidently because of the perceptible improvement in the foodgrains supply position within the country. The general import policy, it may be noted here, was substantially the same as in the previous year. There were, however, marginal adjustments in the import policy which was designed to attain two objectives, namely, (1) to conserve foreign exchange resources for essential imports, and (2) to enable indigenous industry to maintain production at maximum levels so as to sustain the tempo generated by the economic development of the recent past.

The following table shows the percentage share of the major groups of commodities comprising India's imports:

	1960	1959
Food, drink, tobacco	16	19
Crude raw materials, including fuels	22	14
Chemicals	8	9
Manufactures and machinery	51	50

The above table shows that the raw materials group (crude materials and fuels) made considerable headway in 1960. Among crude materials, imports of raw cotton rose by over 100 per cent to Rs. 75 crores. This was necessitated by the pronounced shortage of supplies, following the distinct setback to the crop and good domestic demand. Similarly, the intake of raw jute was higher, thanks to scarcity of domestic supply. Rubber manufactures, particularly synthetic rubbers, also showed a sizable increase in imports, reflecting the growing industrial demand for this commodity. Imports of iron and steel scrap, pulp and waste paper and silk, however, declined slightly.

In the manufactures group, iron and steel as well as non-ferrous metals accounted for the major part of the increase in imports, iron and steel alone rising by Rs. 26 crores to Rs. 111 crores. Imports of copper moved up by Rs. 7 crores to Rs. 23 crores, zinc by about Rs. 4 crores to Rs. 9 crores and aluminium by over a crore of rupees to Rs. 7 crores. Besides, India bought more of paper, paper-board, glass and glassware.

Capital Goods

The total purchases abroad of capital goods by India, too, went up last year. The increase was particularly noticeable in the case of machinery for mining, industrial and metal-working. The value of tractors (other than steam) imported rose from Rs. 2.6 crores to Rs. 5.2 crores, reflecting larger demand for this item from Indian farmers. But there was a sharp fall in imports of railway vehicles as a result of enlarged domestic production. Likewise, the imports of aircrafts and electric and power-generating machinery were lower.

In the chemicals group, there was a strident increase in imports of organic chemicals, dyestuffs, pigments and paints, etc., while those of inorganic chemicals suffered a distinct setback, the value being Rs. 16 crores, as against Rs. 24 crores. Another important item the import of which was curtailed was manufactured fertilisers. Such a curtailment is regrettable, in view of the rapidly expanding demand for fertilisers from the agricultural sector and the inability of the domestic industry to cope with it. The imports of chemicals together fell by Rs. 2 crores to Rs. 86 crores.

Food

There was, as already stated, a marked fall in imports of food materials, especially wheat and spelt (unmilled) which declined by Rs. 31 crores to Rs. 104 crores, and milk and cream by Rs. 4 crores to Rs. 3.55 crores. The imports of rice, on the other hand, increased from Rs. 11 crores to Rs. 19 crores. A slight improvement was also noted in the case of fish, cocoa, cereals and maize.

A country-wise analysis of import trade reveals that the U.S. and the U.K. continued to be the major suppliers of merchandise to India, accounting as they did for about 44 per cent of the total imports in 1960, as against 43 per cent in the previous year. In absolute terms, imports from the U.S. rose by Rs. 22 crores to Rs. 240 crores and those from the U.K. by Rs. 18 crores to Rs. 202 crores.

Among other countries, Japanese supplies moved up by Rs. 12 crores to Rs. 54 crores. There was also a notable increase in imports from Australia, Burma, Pakistan, Malaya, Singapore, the U.A.R., Kenya and Rhodesia, whereas imports from some of the leading Common Market countries suffered a sharp decline. Imports from West Germany, for instance, fell by Rs. 7 crores to Rs. 113 crores, from France by Rs. 4 crores to Rs. 18 crores and from Italy by Rs. 3 crores to Rs. 24 crores. India's imports from Canada declined by as much as Rs. 13 crores to Rs. 15 crores. Purchases from Iran, Saudi Arabia, Ceylon and Sudan, too, suffered a slight decline.

FRENCH QUOTAS FOR INDIAN GOODS

The French Government has announced special quotas for the import of about 20 types of goods from India, the total value of which is expected to exceed Rs. 2 crores. The quotas will be valid for export to France during 1961. Some of the items to be imported by France under this arrangement with their approximate value in the new French currency are: handicrafts including ivory goods and jewellery (700,000 francs), hand-made woollen carpets (600,000 francs), sports goods and frog-legs (500,000 francs each), coir mats, Kashmir rugs, textile articles and items such as shawls and *saris* (200,000 francs each). Other articles to be imported from India are fruits and fruit juices, 1,500 sewing machines and hand-made and mill-made cotton fabrics. Imports of coffee and castor oil with also be effected in terms of the global quota.

TABLE I

Imports—Commodity-wise

(Value in rupees lakhs)

	1960	1959
Food	**156,24**	**181,54**
Of which:

RESULTS OF CENTURY MILLS EXCELLENT

A MOST MODERN PLANT PROPOSED TO BE INSTALLED

THE year ended 31st December 1960 was by far the best year in the history of the Century Spinning and Manufacturing Company Ltd. (Managing Agents: Birla Gwalior Private Ltd.). The total proceeds from sales of cloth, yarn and waste have increased by Rs. 134.53 lakhs to Rs. 1,345.86 lakhs, in continuation of the trend noted in the last five years. The Company maintains two block accounts, one for textile plant and the other for rayon plant, both of which show a persistent increase in earnings since September 1956 when rayon production commenced. The closing stocks of finished goods have increased by Rs. 61.11 lakhs, while those of materials in process have fallen by Rs. 10.26 lakhs. As a result of the rise in the stocks of finished goods, the closing stocks-in-trade stand higher at Rs. 360 lakhs, as against the previous year's figure of Rs. 324.99 lakhs.

On the expenditure side, the cost of raw materials, stores and spares consumed have gone up from Rs. 529.50 lakhs to Rs. 613.26 lakhs, excise duty, rebate, etc., from Rs. 40.22 lakhs to Rs. 56.89 lakhs and other expenses from Rs. 417.51 lakhs to Rs. 463.69 lakhs. The total wage bill of the Company amounts to as much as Rs. 341.29 lakhs, representing nearly one-fourth of the sale proceeds. The gross profit has increased to Rs. 285.54 lakhs from Rs. 176.37 lakhs in the previous year, Rs. 132.58 lakhs in 1958 and Rs. 67.78 lakhs in 1957. Thus, in the four years, the gross profit has improved by more than four times. The extent of the increase in profit is more appreciable than rise in sales.

Whereas the gross profit has gone up by Rs. 109.17 lakhs, the net profit shows a rise of Rs. 87.49 lakhs to Rs. 141.32 lakhs. The handsome rise in profit has enabled the Directors to strengthen the reserves to the extent of Rs. 56.50 lakhs, the provision made in the previous year being a bare Rs. 10.45 lakhs. The dividend declared is 30 per cent subject to taxation, as against 31.5 per cent in the previous year, but the dividend for 1960 is on increased capital. The Directors feel that the Company is eligible for exemption of tax under Section 15C of the Income-tax Act and has applied for the same. The shareholders will get the benefit of this exemption, as well as the proportionate exemptions of tax in respect of dividends. The provision for depreciation has been stepped up by Rs. 26.62 lakhs to Rs. 91.33 lakhs, while that for taxation is reduced by Rs. 5.50 lakhs to Rs. 43 lakhs.

The following comparative table shows at a glance the progress made by the Company in the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales gross	1,345.86	1,211.33	1,060.99	989.65
Other Income	22.65	17.99	9.07	10.89
Stocks of finished goods and in process	228.49	171.64	287.06	202.78

† Subject to deduction of tax.

The gross block of the Company has crossed the Rs. 10-crore mark to stand at Rs. 1,053.72 lakhs, which is over three times the paid-up capital, both ordinary and preference. The increase in block account during the year is Rs. 110.96 lakhs, mostly in the rayon division being Rs. 107.67 lakhs. In five years' time, the gross block has increased by Rs. 429.05 lakhs, while paid-up capital has risen by only Rs. 219.48 lakhs. It is satisfactory to note that the gross block has been financed from the Company's own resources. Reflecting this position, the secured and unsecured loans have come down during the same period from Rs. 151.89 lakhs to Rs. 11.81 lakhs.

The net block of the mills division has been heavily written down to Rs. 85.71 lakhs, after providing Rs. 232.07 lakhs for depreciation, while the net block in the rayon division stands as high as Rs. 505.27 lakhs even after providing Rs. 230.67 lakhs for depreciation. The total investments of Rs. 11.32 lakhs comprise Rs. 4.37 lakhs in unquoted investments and Rs. 6.95 lakhs in quoted investments. The paid-up capital of Rs. 328.91 lakhs, consisting of Rs. 203.91 lakhs in ordinary shares and Rs. 125 lakhs in preference shares, has increased during the year by the issue of 81,968 right ordinary shares of Rs. 100 each. These right shares were offered at a premium of Rs. 20 per share in the ratio of two shares for every three shares. The share premium account has moved up from Rs. 4.43 lakhs to Rs. 20.62 lakhs. The Company has no secured loans against hypothecation of stocks which have been written down to *nil*, as against Rs. 90.50 lakhs in the previous year. This may be due to the issue of right shares last year. Unsecured loans have also come down from Rs. 76.75 lakhs to only Rs. 11.81 lakhs. As against the drop of Rs. 155.44 lakhs in secured and unsecured loans, the receipts from right issue (including the premium) amount to Rs. 98.36 lakhs. That the financial position of the Company is sound is borne out by the wide gap of Rs. 150.50 lakhs between current assets (exclusive of investments) at Rs. 434.96 lakhs and current liabilities at Rs. 284.46 lakhs.

Both textile and rayon plants had a normal working during the year and offtake of cloth and yarn was satisfactory. Orders for plant and machinery for expansion of the rayon plant to 18½ tons production per day have been placed with manufacturers in Japan and shipments of machinery have actually started arriving. The full capacity of the rayon plant is expected to be reached by the end of the current year. The outlay on the scheme is estimated at Rs. 3 crores.

Under the Export Promotion Scheme, the Government of India has granted permission to the Company to install 336 automatic looms, in addition to 192 automatic looms in replacement of old plain looms. With all these 528 automatic looms, the Company intends to put up a most modern mill at a suitable place outside Bombay. The plans to set up a new super two-tyre yarn and cord plant employing the latest technique and equipment is expected to be in operation during the second half of 1962. The total cost of the scheme is put at Rs. 4 crores. For this project, the Company has signed a technical collaboration and know-how agreement jointly with the world-famous firms of Algemene Kunstsijde Unie N. V. of Holland (manufacturers of the well-known ENKA brand products) and Vereinigte Glanzstoff-Fabriken AG. of Germany.

The preference shareholders of the Company must have felt gratified at the decision of the Directors to change the 6 per cent tax-free shares to 8.57 per cent subject to deduction of tax. Thus, the preference shareholders will get the same amount of dividend under the new rules also.

The ordinary Rs. 100 paid-up shares of the Company has moved up from Rs. 452 early this year to Rs. 594 *cum-div.* at present, or a rise of nearly 31 per cent in a little over three months' time. At the current market quotation of Rs. 588, the net yield works out to 3.57 per cent on a net dividend of Rs. 21 per share.

(*Concluded from next column*)

The recent reduction in the bonus tax from 30 to 12½ per cent has made it possible for the Company to issue bonus shares, in view of large reserves. It is proposed to issue, subject to the sanction of the Controller of Capital Issues, one bonus share for four ordinary shares. As the proposed issue will increase the ordinary capital to Rs. 87.46 lakhs, which is higher than the authorised ordinary capital, the Directors propose to increase the authorised capital to Rs. 250 lakhs, consisting of Rs. 175 lakhs in ordinary shares of Rs. 10 each and Rs. 75 lakhs in preference shares of Rs. 100 each.

With the announcement of bonus shares issue and the maintenance of dividend on increased capital, the market quotation for ordinary shares has shot up from Rs. 19.62 to Rs. 22.87 in a month's time. The net yield at Rs. 22.87 is 4.3 per cent, taking the net dividend as 98 nP per share.

JAY SHREE TEA AND INDUSTRIES

RECORD PROFIT—BONUS ISSUE

IN view of its diversified industrial activities, besides tea gardens, the name of the Jay Shree Gardens Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd.) was changed during 1960 to Jay Shree Tea and Industries Ltd. The working results of the Company for the year ended 31st December 1960 reveal a substantial increase in gross profit to Rs. 58.41 lakhs, which compares favourably with Rs. 39.90 lakhs for 1959, Rs. 33.88 lakhs for 1958 and Rs. 29.21 lakhs for 1957. Thus, in four years, the gross profit has doubled, as against the increase of 65 per cent in sale proceeds. This means that the profitability of the Company has increased from 16 per cent to 19 per cent. The sale proceeds aggregate Rs. 296.60 lakhs, as against Rs. 238.77 lakhs in the previous year. The increase in profit is due to better results in other departments. The quality of the tea produced by the Company show a perceptible improvement during the year and better prices were realised.

The following comparative table indicates at a glance the progress of the Company in the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	296.60	238.77	187.30	178.95

	(14%)†	(14%)†	(10%)	(10%)
Carry forward	0.88	0.46	0.91	0.93

† Subject to deduction of tax.

Out of the increase of Rs. 18.51 lakhs in gross profit, taxation has taken Rs. 7.25 lakhs more, the sum actually earmarked being Rs. 21 lakhs. Managing Agents' commission is higher by Rs. 76,000 at Rs. 4.10 lakhs and provision for depreciation by Rs. 58,000 at Rs. 8.77 lakhs. The net profit has increased by Rs. 9.92 lakhs, from Rs. 14.62 lakhs to Rs. 24.54 lakhs. The rise in profit has enabled the Directors to transfer Rs. 9 lakhs to reserves as well as to maintain the dividend of 14 per cent on increased capital.

The paid-up capital of the Company is Rs. 73.42 lakhs, of which ordinary shares of Rs. 10 each account for Rs. 69.97 lakhs and preference shares of Rs. 100 each for Rs. 3.45 lakhs. The ordinary capital was increased during the year from Rs. 58.57 lakhs to Rs. 69.97 lakhs by the issue of one right share for every five shares at par. The reserves of the Company at Rs. 78.25 lakhs are now above the paid-up capital on account of the transfer of Rs. 16.25 lakhs to reserves from profits. The net block of the Company stands at Rs. 128 lakhs, after providing Rs. 76.25 lakhs for depreciation. The investments of Rs. 3.18 lakhs are mostly in unquoted investments, as only about 10 per cent (or Rs. 0.33 lakh) is in quoted investments. The total current assets (exclusive of investments) at Rs. 116.04 lakhs are well above the current liabilities at Rs. 75.01 lakhs by Rs. 41.03 lakhs.

The new extension and replanting programme of the tea gardens has been implemented according to schedule. In the Woodcrafts Assam Plywood Factory, new and better varieties such as decorative plywood, flush doors and block-boards have been successfully introduced. The land purchased by the Company for the installation of superphosphate and sulphuric acid plants at Tribeni has been requisitioned by the Government of West Bengal. This unexpected development has completely upset and delayed the project. Another plot of land at Khardak near Calcutta has been acquired and the construction work has started. This factory will start production during the second half of the current year, as the major portion of the plant has already been received. An industrial licence to install a hard-board plant in Madhya Pradesh has been received, in addition to the letter of indent in hand for another plant in West Bengal. A licence has also been received for the installation of a chipboard plant in Assam with an installed capacity of 1,700 metric tons per annum.

(*Continued in previous column*)

INDIAN ALUMINIUM FORGES AHEAD

SALES AND DIVIDEND HIGHEST ON RECORD

THANKS to the marked all-round improvement in the production operations of the Indian Aluminium Company Ltd. (Secretary: Mr. T. D. Sinha, Calcutta) and brisk demand for its products, the working results of the Company for the year ended 31st December 1960 are quite encouraging. Sale proceeds have registered a rise of more than 13 per cent from Rs. 9.70 crores in 1959 to Rs. 11.25 crores, highest on record. The Company's own products and the agency and distributor products handled by the Company have both contributed to this marked rise. The former increased by Rs. 97 lakhs to Rs. 801 lakhs and the latter by Rs. 58 lakhs to Rs. 324 lakhs. A large part of the improvement in sale proceeds has been offset by the rise in expenses from Rs. 7.27 crores in 1959 to Rs. 8.49 crores in 1960. Even so, the gross earnings show a notable expansion of Rs. 29 lakhs from Rs. 2.52 crores to Rs. 2.81 crores. In view, however of heavier tax commitments, the net profit of the Company has dropped by Rs. 20.85 lakhs to Rs. 126.67 lakhs. The provision for taxation is as high as Rs. 99 lakhs, as against Rs. 52.28 lakhs in 1959. Provision for depreciation is also higher at Rs. 55.26 lakhs, as against Rs. 52.23 lakhs. The net profit of Rs. 126.67 lakhs, together with Rs. 33.42 lakhs, the carry forward from the previous year and Rs. 16.10 lakhs representing the several miscellaneous excess provision of previous years written back, gives a total of Rs. 176.19 lakhs available for distribution.

The Directors of the Company have recommended a higher dividend of 15 per cent (subject to tax)—highest paid so far—on ordinary shares as against 12 per cent (subject to tax) distributed in the previous year. It is a shade higher than even the tax-free dividend of 10 per cent paid in 1956.

The following comparative table shows at a glance the progress of the Company since 1957:

(Rupees in lakhs)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	11,24.77	9,69.68	7,42.97	5,44.39
Other income	5.38	9.07	3.53	4.06
Manufacturing and other expenses	8,49.22	7,26.72	6,04.79	4,52.06
Gross profit	2,80.93	2,52.03	1,41.72	96.39
Provision for—				
Depreciation	55.26	52.43	27.95	26.29
Taxation	99.00	52.28	61.43	38.97
Net profit	1,26.67	1,47.52	52.33	31.13
Excess provision written back	16.10	..	..	..
Capital issue expenses	..	11.33	..	4.81
Adjustment relating to previous years	7.62	..	..	..
Provision for gratuity	4.16	5.19	4.66	4.75
To Development Rebate reserve	2.63	61.50	11.10	..
To general reserves	50.00	..	..	..
Dividend—				
5 per cent Preference	1.78	3.00	1.37	1.37
Ordinary	60.10	48.12	27.78	23.13
	(15%)*	(12%)*	(7%)	(6%)
Carry forward	49.91	33.42	15.55	8.13

*Subject to deduction of tax.

It will be seen from the above table that, as against the development rebate of Rs. 61.50 lakhs provided for in the previous year, the provision made in the accounts for 1960 is only Rs. 2.63 lakhs, but the Directors have considered it prudent to plough back substantial part of the net profit to reserves for future expansion and contingencies. The amount transferred to general reserves is as much as Rs. 50 lakhs, as against *nil* in 1959. Provision for gratuity is lower by Rs. 2.03 lakhs at Rs. 4.16 lakhs.

The production of the various products in the Company's factories during the last four years is indicated below:

(In tons)

	1960	1959	1958	1957
Aluminium ingot	15,901	14,892	5,664	5,448
Rolled products	10,952	10,414	8,884	7,288
Extruded products	1,370	1,240	1,084	746
Aluminium powder and paste	432	429	333	463

The improvement in production achieved in 1960 is attributed to the generally satisfactory relations with employees. During the year under review, a new three-year agreement was signed with the Alupurum union. Bonus agreements were also entered into with Lohardaga and Hirakud unions. In regard to transport, however, the Company faced considerable difficulties particularly in respect of coal supplies. The uncertainty of wagon availability compelled the Company not only to use the more costly mode of road transport but also to maintain the larger inventories which involved the locking up of extra capital.

In the Central Government budget for 1960-61, it will be recalled, duty of 10 per cent was levied on aluminium and in the 1961-62 budget similar excise duties have been imposed on copper and zinc products as well as on pipes and tubes made out of the three non-ferrous metals. These levies, it is feared, will have an adverse effect on the demand for the Company's products in the long run.

The Directors, however, welcome the Government's decision to retain the protective duty at 35 per cent *ad valorem* on aluminium and aluminium manufactures. The Tariff Commission had actually proposed to continue the protection with a reduced duty of 25 per cent *ad valorem*, but the Government decided to retain the duty at the existing rate. It is felt that the recommendations with regard to the freight classification of aluminium and power rates as made by the Tariff Commission would be of considerable assistance to the aluminium industry.

The following extract from the directors' report will give a fair idea of the progress in the expansion projects undertaken by the Company.

"Satisfactory progress was made on the Company's expansion projects at its Alupuram, Belur, Hirakud and Muri Works. Orders for most of the equipment required have been placed. Detailed engineering of all the projects is progressing satisfactorily. Construction work has started at all the sites. Barring any untoward happening, it is expected that the second extrusion press at Alupuram and the additional potline at Hirakud will be ready to go into operation before the end of the year. Expanded facilities at Belur and Muri are likely to be ready by the middle of next year."

Following the conversion of a portion of the loan stock into ordinary shares effected in 1959, the paid-up capital of the Company amounts to Rs. 438.59 lakhs, comprising Rs. 398.59 lakhs of ordinary capital (3,985,948 shares of Rs. 10 each) and Rs. 40 lakhs of preference shares (40,000 five per cent taxable cumulative shares of Rs. 100 each). This is supplemented by reserves and surplus aggregating Rs. 299.65 lakhs. As a result of the issue of 6¼ per cent debenture-stock in 1959 the outstanding secured loans are now of the order of Rs. 415.27 lakhs, as against Rs. 566.78 lakhs in 1959. Over the year, the loans from banks have been considerably reduced from Rs. 262 lakhs to Rs. 86.94 lakhs. The other current liabilities and provisions amounting to Rs. 303.26 lakhs, are more than adequately covered by current assets at Rs. 546.20 lakhs (stocks: Rs. 329.54 lakhs, sundry debtors Rs. 169.06 lakhs; loans and advances: Rs. 10.62 lakhs; cash Rs. 36.85 lakhs). During the year under review, the Company incurred a capital expenditure of Rs. 294.06 lakhs, bringing the gross block to Rs. 12,64.53 lakhs (inclusive of progress payment and advances to suppliers for capital constructions together amounting to Rs. 140.86 lakhs). This is written down to Rs. 910.57 lakhs.

The Rs. 10 fully paid up ordinary shares of the Company are currently quoted at Rs. 34.87 *cum-div.* as against Rs. 26.87 a year ago. On *ex-div.* basis they offer a net yield of 3.1 per cent per annum.

T.W.A.'S EARNINGS IN 1960

Trans World Airlines Inc. earned a consolidated net profit of $6,473,000 in 1960, as against $9,402,000 in 1959. Gross revenues reached an all-time high of $378,350,000, a rise of 8.6 per cent over 1959. The T.W.A. superjets serving the U.S. and 10 European cities accounted for 55.6 per cent of the record passenger revenues of $329,229,000. Total operating expenses were $362,304,000, an increase of 9.4 per cent over 1959. However, major operating economies produced a 7.5 per cent decrease in expense per available ton-mile. Profit from operations was $16,046,000, as compared with $17,263,000 in 1959. The major reason for the 1960 profit was the all-time record results of the international division. The introduction of transatlantic jet service with nine larger Boeing superjets produced record international revenues of $100,958,000, an increase of 35.2 per cent over 1959, and operating income for the division of $17,096,000

(*Concluded from next column*)

assets of the Company. The debit balance of the debenture-stock redemption account (current) with National and Grindlays Bank Ltd. stands at Rs. 28.47 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are currently quoted at Rs. 50.37. The net (tax-free) yield on the shares is approximately 3 per cent.

DUNLOP RUBBER'S SALES AT PEAK LEVEL

DIVIDEND MAINTAINED

THE aggregate sale proceeds of the Dunlop Rubber Company (India) Ltd. (Managing Director: Mr. J. Luckham) touched an all-time peak of Rs. 30,46.56 lakhs during the year ended December 1960, representing a rise of as much as Rs. 459.07 lakhs as compared with 1959. Despite such a rise, the gross profit of the Company has improved by just Rs. 20.84 lakhs to Rs. 264.64 lakhs. This is due to the high cost of imported rubber, higher prices of other raw materials, appreciable rise in excise duty payment (from Rs. 355.29 lakhs in 1959 to Rs. 527.60 lakhs in 1960), and larger amount paid by way of interest. The increase in expenses on account of raw material purchase alone was to the extent of 19 per cent, though the increase was due partly to increased production. The percentage of profits to sales dropped during the year from 4.56 to 4.08.

As against the rise of Rs. 20.84 lakhs in gross profit, the net profit has registered an increase of only Rs. 8.5 lakhs, because of larger provisions for depreciation (Rs. 58.71 lakhs, as against Rs. 50.99 lakhs in 1959) and taxation Rs. 81.37 lakhs (Rs. 74.76 lakhs). The Directors have maintained the dividend at the previous year's level of 21½ per cent. A sum of Rs. 17 lakhs has been allocated to development rebate reserve (same as in previous year) and provision has been made for regular dividend on guaranteed preference shares and second cumulative preference shares. The total dividend distribution absorbs Rs. 68.97 lakhs. The surplus carried forward amounts to Rs. 25.13 lakhs, as against Rs. 24.03 lakhs.

The comparative results of the Company's working in the last four years are given below:

(In lakhs of rupees)

	For the year ending 31st December			
	1960	1959	1958	1957
Sale proceeds	3,046.56	2,587.49	2,227.76	1,997.00

Carry forward	25.13	24.03	22.46	22.23

*Dividends for 1959 and 1960 subject to taxation.

The financial position of the Company is quite sound. The reserves and surplus aggregate over Rs. 6.04 crores, as against the paid-up capital of Rs. 3.70 crores. A sum of Rs. 70 lakhs stands to the credit of the share premium account alone and the general reserves exceed Rs. 4.32 crores. In 1959, the authorised capital of the Company was raised from Rs. 5.0 crores to Rs. 7.5 crores. Reviewing the working results of the Company in these columns last year, we had pointed to the low capital of the Company and the imbalance between the paid-up capital (Rs. 3.70 crores) and the net block account (Rs. 6.39 crores). The heavy taxation of 30 per cent on capitalisation of reserves had restricted the scope for a bonus issue then. It is heartening that the taxation on bonus issues had recently been reduced to 12½ per cent. The increase in the capital of the Company last year has not yet been utilised. In the light of the growing financial needs of the Company for meeting the cost of its expansion programmes, the issue of bonus shares calls for consideration.

The gross block at the end of 1960 amounted to about Rs. 10.40 crores, on which depreciation of Rs. 4.01 crores has so far been provided for in the books. Additions to the block during the year amounted to over Rs. 77 lakhs, plant and machinery alone accounting for about Rs. 60 lakhs.

The current liabilities of the Company, including secured loans from banks, aggregate more than Rs. 5.16 crores, showing a rise of about Rs. 1.44 crore over the previous year. The increase in borrowings from banks to meet the working capital needs to supplement the expanding production programme accounted for about Rs. 57 lakhs. Current liabilities are doubly covered by current assets exceeding Rs. 10.28 crores. The debentures issued by the Company amount to over Rs. 2.04 crores and these are secured on a floating charge over the

(*Continued in previous column*)

JAY SHREE TEXTILES FARE WELL

DIVERSIFIED ACTIVITIES

THE working results of the Jay Shree Textiles Ltd., Rishra (Managing Agents: Messrs. Birla Brothers (Private) Ltd.) for the year 1960 show an all-round improvement. The Company's sale proceeds (net) have touched the record level of Rs. 121.09 lakhs, representing a rise of over 25 per cent, from Rs. 95.69 lakhs in 1959. The marked improvement has followed diversified activities and introduction of many new products in the last two years. Among the popular products of the Company may be mentioned "Flaxocot" canvas, heavy industrial fabrics, Jacquard twines and linen threads for spindle tape stitching. The increase in the realisations from the Company's sales and the consequent larger profits have benefited the shareholders in the form of higher return. The dividend (taxable) of 10 per cent on equity shares recommended for 1960 compares favourably with the 8 per cent distributed in the previous year. The tax-free dividend comes to 7.0 per cent, as against 5.6 per cent for 1959; the dividend paid in 1956 was no more than 3.75 per cent. On the basis of the tax-free dividend of 7 per cent and taking the current market value of the Company's Rs. 10 paid-up shares at Rs. 18, the net yield works out to about 4 per cent per annum.

The gross profit for the year ended 1960 at Rs. 25.21 lakhs is higher by over Rs. 5 lakhs as compared with the previous year. The net profit after providing for depreciation Rs. 3.99 lakhs (Rs. 13.34 lakhs) and taxation Rs. 8.71 lakhs (Rs. 75,000) amounts to Rs. 11.14 lakhs, as against only Rs. 3.96 lakhs in 1959. It may be added here that the Company had gradually written off in the last few years the arrears of depreciation from the huge balance of over Rs. 340 lakhs at the end of 1956 (including initial depreciation, development rebate, etc.) to Rs. 8 lakhs (excluding the initial depreciation, development rebate, etc.). Incidentally, the provision of Rs. 8.71 lakhs for taxation is the highest for the last several years. A sum of Rs. 5 lakhs has been transferred towards dividend equalisation reserve for the first time and Rs. 1.19 lakh for development rebate reserve, as against Rs. 88,000 in 1959. A sum of Rs. 21,280 has been carried forward, as against Rs. 34,072 in 1959.

The comparative performance of the Company in the last four years is detailed in the following table:

(In lakhs of rupees)

	For the year ending 31st December			
	1960	1959	1958	1957
Net sale proceeds	121.09	95.68	81.75	83.66
Closing stocks of finished goods and process stock	29.24	28.29	22.49	16.48

*Includes Rs. 1,306 being wealth tax short provisions for 1958.
†Since 1960 refers to Secretaries and Treasurers remuneration.
‡Dividends for 1959 and 1960 subject to taxation. Others tax-free.

The activities of the Company have expanded in the last few years. Many new lines of production have been undertaken and the new products introduced by the Company appear to be popular and are fetching good prices. The Company, it is stated, is the only one of its kind in the East to produce in the same factory yarn and fabrics made from flax, staple fibre, cotton and wool. The manufacture of reinforced rubberlined hose commenced during the year under review. This project is in collaboration with Messrs. George Angus and Co., Ltd., England. The Company has still not been able to proceed with its scheme for manufacturing high-tension electric insulators, in view of the difficulties in obtaining import licences for the scheme, though the necessary permission was granted by the Central Government last year. The scheme has now been deferred, as the Directors have decided to implement immediately the scheme envisaging the setting up of a cotton spinning plant with 15,200 spindles. The licences for this purpose under the Industries (Development and Regulation) Act has been obtained. The plant, estimated to cost about Rs. 70 lakhs, is expected to go into production in the middle of 1962. Actual work in this regard has already started. Orders have been placed for the supply of most of the plants. In addition, there are plans for the manufacture of synthetic rubber oil seals and malleable castings, steel forgings and steel structurals.

The manifold development programmes of the Company have entailed a large expenditure, necessitating increased borrowings. In 1959, the Company paid off old debentures worth Rs. 13.71 lakhs by issuing fresh 7 per cent mortgage debentures for a sum of Rs. 25 lakhs, with a view to financing its expansion programmes. These are secured against part of the fixed assets and floating charge on other assets. During the year under review, the Company liquidated the bank loan of Rs. 3.05 lakhs. The expansion schemes of the Company would entail large additional financial requirements, a portion of which is expected to be secured through the fresh issue of equity capital to the extent of Rs. 24.59 lakhs. The matter is stated to be under active consideration and the new 'rights' issue is likely to be at par in the proportion of one new share for every existing two shares.

The gross block of the Company at the end of December 1960 exceeded Rs. 96 lakhs, including assets of over Rs. 8 lakhs added during the year. The depreciation provided so far amounts to Rs. 46.96 lakhs. The arrears of depreciation aggregate about Rs. 8 lakhs in accordance with the Indian Income-tax Act on the basis of calculations of the Company. The balance at the credit of renovation and renewals reserve amounts to Rs. 6 lakhs.

The current assets of over Rs. 72 lakhs as at 31st December 1960 doubly covers the current liabilities of the Company amounting to Rs. 33 lakhs. Provision for taxation is Rs. 9.49 lakhs, as against Rs. 78,000. Reserves and surplus are of the order of more than Rs. 14 lakhs, as against the paid-up capital of Rs. 49.18 lakhs, all in equity shares. The amount paid-up on the forfeited shares is Rs. 91,000.

PRAGA TOOLS CORPORATION LTD.

How an indisciplined labour force dominated by two antagonistic unions can adversely affect industrial production is clearly illustrated by the working results of the Praga Tools Corporation Ltd. (General Manager: Mr. B. Venkataraman, Hyderabad) for the nine months ended 31st March 1960. Since the accounting period has been changed to conform to the financial year (April-March), the accounts for 1959-60 cover only nine months. When the Company earned a net profit of Rs. 5.77 lakhs during the year ended 30th June 1959, following the record level of sales amounting to Rs. 73.34 lakhs in that year, it was expected that the Company would show better results in the subsequent year. But, due to the outbreak of serious rioting inside the factory involving the clash of two groups of workers in November 1959 and the unsettled labour conditions in subsequent months, the production in the nine months ended March 1959 was only Rs. 40.51 lakhs or a monthly average of Rs. 4.50 lakhs as against the previous year's average of Rs. 5.21 lakhs. The lower rate of output has adversely affected the sales, which amounted to no more than Rs. 47.89 lakhs in the nine months under review. The figure for the whole of 1958-59 was Rs. 73.34 lakhs. Even at the close of March 1960, labour conditions continued to remain unsettled and a riot actually took place on 3rd May 1960 when a mob attacked certain officers and assaulted them. The situation since then, however, is said to have improved.

The gross profit of the Company for the nine months amounts to Rs. 8.14 lakhs, as against Rs. 11.23 lakhs for the previous year. After providing Rs. 3.89 lakhs for depreciation (Rs. 4.81 lakhs in the previous year), the net profit comes to Rs. 4.25 lakhs, as against Rs. 5.77 lakhs for 1958-59.

No provision has been made for income-tax, as against Rs. 65,000 in 1958-59, because the Company has been advised that there would be no liability for payment of income-tax, in view of the carry forward of past losses and unabsorbed depreciation.

After setting aside Rs. 80,000 to development rebate reserve, the Directors have added to the net profit an amount of Rs. 5.35 lakhs on account of the provision of Rs. 5.29 lakhs made in earlier years for interest on Andhra Pradesh Government loans and excess provision made in previous years for remuneration to Managing Agents, which are now written back. With these allocations and adjustments, the available profit aggregates Rs. 8.80 lakhs. A large part of the profit has been used to wipe out the entire debit balance of Rs. 5.08 lakhs (being the loss as per the balance-sheet as at 30th June 1959). The balance of Rs. 3.72 lakhs has been carried forward.

The Directors are making vigorous efforts to implement the expansion and development programme, which envisages the setting up of an entirely new factory with facilities for developing ancillary industries to feed the main factory with component parts. For this purpose, the Company is trying to acquire an extensive piece of land near Maulali railway station outside Hyderabad City. The Company has signed collaboration agreements with three British firms: Messrs. Kearney and Trecker for drill chucks, Messrs. A. A. Jones and Shipman Ltd. for tool and cutter grinders and Messrs. F. Pratt & Co. Ltd. for lathe chucks. In addition to these, the Company has been permitted to utilise the Polish credit to the extent of Rs. 1 crore for the purchase of plant and machinery required to step up its production.

It would appear that the financial position of the Company requires to be strengthened considerably. As against the paid-up capital of Rs. 136.90 lakhs, the reserves and surplus amount to a bare Rs. 6.21 lakhs. The current liabilities and provisions at Rs. 12.41 lakhs are more than adequately covered by current assets of Rs. 120.15 lakhs (stocks Rs. 55.42 lakhs, sundry debtors Rs. 7.98 lakhs, loans and advances Rs. 3.12 lakhs and cash Rs. 31.65 lakhs). The gross block of the Company stands at Rs. 79.38 lakhs which is written down to Rs. 31.99 lakhs, the depreciation provided so far being Rs. 47.39 lakhs.

Notice

BURN AND COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Board of Directors has declared additional dividends on 6 per cent and 7 per cent Preference Shares in the Company in respect of the accounting years 1959-60 and 1960-61 as required under the Preference Shares (Regulation of Dividends) Act 1960, and sanctioned payment of dividend on the same for the four months ending on 30th April 1961.

The dividends will be paid on or after 10th May 1961 to those shareholders whose names appear on the Company's respective Registers of Preference Shareholders on 1st May 1961 or to their mandatees.

The Preference Share Registers and Transfer Books of the Company will be closed for this purpose from 24th April, 1961 to 1st May 1961, both days inclusive.

FOR BURN AND COMPANY LIMITED,
MARTIN BURN LIMITED,
S. GUPTA,
Managing Director,
Managing Agents.

12, MISSION ROW,
CALCUTTA 1,
12th April, 1961.

TOSHNIWAL BROTHERS LTD.

Toshniwal Brothers Private Ltd., a leading firm of Bombay, importing several types of scientific instruments and laboratory test equipments, proposes to set up in collaboration with Messrs. Hartmann and Braun of Frankfurt, Germany, a Rs. 65-lakh plant in Ajmer (Rajasthan) for manufacturing about Rs. 60 lakhs worth of industrial process control and test equipment annually. Industrial licence has already been obtained from the Government of India and the necessary land has been acquired. The factory is expected to be completed within the next six months and a part of the production marketed by the end of 1961. The foreign collaborators will supply technical know-how and will train the requisite personnel both in India and Germany. The foreign exchange required for the proposed plant will be about Rs. 22 lakhs. The Company is allowed to export its products to neighbouring countries such as Burma, Ceylon, Pakistan and Nepal. The equipment to be produced is mainly used by paper, chemical, plastics and iron and steel industries. The Company is likely to enter the market to raise capital to finance the new project.

ROYAL DUTCH-SHELL GROUP'S TRADING RESULTS: 1960

The gross production of crude by the Royal Dutch-Shell Group of companies, including the quantities received under special supply contracts, averaged 2,569,000 barrels daily in 1960, 4 per cent higher than in 1959. Sales of crude oil and oil products, which amounted to 2,667,000 barrels daily, showed an improvement of 7 per cent, while refinery runs were also about 7 per cent higher at 2,549,000 barrels.

The Group's net income amounted to £177,500,000, as against £175,500,000 in 1959, registering an increase of 1.4 per cent. The income was held down by generally lower prices which reflected sharpened competition. Sales and operating income was £2,674 million in 1960, an increase of £95 million over 1959. Operational expenses, purchase of oil, etc., aggregated £1,463 million or £60 million more than the previous year. Sales tax rose by £46 million to £716 million. Depreciation, depletion and amortisation increased from £180 million in 1959 to 187 million in 1960. Taxation on income fell from £148 million to £134 million. Capital and exploration expenditure in 1960 was of the order of £419 million, as compared with £422 million in 1959.

SYNOPSES OF COMPANY REPORTS

Rayalaseema Mills Ltd.

Chairman: M. Narayanappa, Esq., Rayanagar, Adoni.)
Fifteenth Annual General Meeting—28th April.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	90,92	70,54
Closing Stock	2,22	1,53
Gross profit	13,60	6,94
Transfer to Managing Agents' remuneration	77†	52
Transfer to Depreciation	2,48	2,69
Transfer to Taxation	4,48	1,54
Net profit	5,87	2,19
Adjustments	1	6
Appropriations:		
Total available balance	5,88	2,25
Transfer to Donations	1	..
Transfer to Reserves	2,45	1
Transfer to Proposed dividend (Taxable)	3,35 (15% p.a.)	2,23 (10% p.a.)
Carry forward	7	1

Note.—Adjustments include only the previous years balance brought forward.
† For the period from 1st January 1960 to 15th August 1960.

Extracts from the Directors' report: The supply position of Indian Cotton continued to be difficult this year also. However, the year's requirements were covered within reasonable rates. The yarn rates were quite favouable upto 15th August 1960, when the Indian Cotton Mills Federation, Bombay, in consultation with the Government of India reduced the prices.

The Rayalaseema Development Company, ceased to be the managing agents from 15th August 1960. The accounts of the Company has been finalised and profit and loss account for the period ended 15th August 1960 and balance-sheet as at 15th August 1960 were duly audited by the auditors of the Company. The amount charged in the profit and loss account as managing agent's commission is calculated on the actual profits made by the Company upto 15th August 1960. In accordance with the resolutions passed at the extra-ordinary general meeting of the Company held on 25th March 1960, an application was made to Central Government for the approval of the appointment of Rayalaseema Industrial Agencies as the managing agents of the Company from 16th August 1960. The Central Government has so far not accorded sanction for the appointment of managing agents of the Company and the Board of Directors took charge of the administration of the Company from 16th August 1960. Pending the approval of the appointment of the managing agents by the Central Government, the Board of Directors considered it best in the interests of the Company, that management of the affairs of the Company should be entrusted to a managing committee of directors consisting of Sri M. Narayanappa, Chairman, Board of Directors and accordingly an application was made to the Central Government for their approval. The Central Government has approved the appointment of the committee of directors for a year from 31st January 1961. The Committee has begun to manage the affairs of the Company from 18th February 1961.

In view of the space available in the mills for further expansion, and as it would also reduce the cost of production to some extent, the directors felt that further expansion by installing 28,800 spindles were desirable, making the unit one of 50,000 spindles. Accordingly an application has been made to the Central Government for the installation of 28,800 spindles. Another application has also been made for starting a separate unit of 16,000 spindles for spinning yarn of higher counts other than 20s and 26s.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	22,33,300	Gross block —Depreciation ...	56,78,717
Reserves and surplus ...	13,62,109		31,03,738

Carry forward	2	1

Note.—Adjustments include the balance brought forward from the previous year and the amount transferred from dividend equalisation fund.
† After deducting taxes amounting to Rs. 8,205.

Extracts from the Directors' report: The result of the year's working after meeting the incidence of Wage Board recommendations in the year is satisfactory. The cotton supply position appears to be improving. There has been voluntary reductions in yarn prices both during the year and also from the 1st January 1961.

The Company has completed 25 years of its existence and in commemoration of this occasion the directors have recommended the declaration of a bonus dividend of 1 per cent to the shareholders. The staff and the workers will be paid a special bonus of 2½ per cent on the basic salary and wages earned by them during the year 1960.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.

Killick Industries Ltd.

(*Managing Director:* Mr. A. N. Haksar, Bombay.)

Annual General Meeting—28th April. Dividends payable on or after 9th May.

Working Results:

	For the year ended 30th November (In thousand rupees)	
	1960	1959
Gross income	68,18	64,13
Gross profit	17,75	18,88
Transfer to Depreciation	60	1,14
Transfer to Taxation	8,50	8,90
Transfer to Development reserve	1	3
Net profit	8,64	8,81
Adjustments	1,46	1,69
Appropriations:		
Total available balance	10,10	10,50
Transfer to new share capital issue expenses	*	6
Proposed dividend	10,00	10,38
Carry forward	10	6

N.B.—Adjustments include the balance brought forward from the previous year and the amount transferred from equalisation of dividends reserve.
* Capital issue expenses for the year was only Rs. 410.

Extracts from the Directors' report: *Share Capital*: As at 30th November 1960, calls amounting to Rs. 750 remained unpaid in respect of the issue of 25,000 new shares.

Investments: During the year under review, the Company was allotted 140 shares in A.C.C.-Vickers-Babcock Limited in respect of which a sum of Rs. 14,000 has been paid. The Company also purchased all the 1,691 shares of A. R. Haseler (Private) Limited, a Company dealing mainly in aircraft spares, for a sum of Rs. 84,550.

Industrial Development: Negotiations with regard to the formation of a new Company for manufacture of *Dexion Slotted Angle* have reached an advanced stage.

John Baker and Sons (Engineers Steel Files): Necessary steps have been taken to modernise the equipment at the File Factory with a view to increasing production and improving the quality of files manufactured.

Managed Companies: *The Kohinoor Mills Co., Ltd.* (31-12-1959): There was an improvement in the cloth and yarn markets this year. The stocks carried by the Company at the end of the year were reasonably low. Continued progress was made in the Company's renovation and rationalisation programmes.

The Ahmedabad Electricity Co., Ltd. (31-3-1960): To meet the growing power needs in Gujarat, the Company was authorised to expand its capacity by the addition of a second 30 MW set. *The C3 Project*, as this is called, has since been finalised and orders placed with overseas manufacturers.

The foreign exchange component of the *C2 Project* is to be financed by a loan aggregating $3.9 million from the U.S. Development Loan Fund. This has made it possible for the Company to finance the *C3 Project* to the extent of Rs. 1,00,00,000 from the money available out of the new debenture issue.

Bombay Suburban Electric Supply Ltd. (31-3-1960): Extensive development has been taking place in the Company's area of supply and expansion is proceeding apace to meet the increasing load.

The Surat Electricity Co., Ltd. (31-3-1960): Power shortage in Gujarat has led to the Company being called upon to maintain and operate its Diesel Station to meet emergencies. The trading relations with the State Electricity Board, from which source the Company derives bulk power for distribution, have continued to be cordial.

The Shivrajpur Syndicate Ltd. (30-11-1960): There was no appreciable improvement during the year in the general condition of the manganese trade. Fortunately, however, this was recognised by Government and a measure of relief has been given to the industry by way of reduction in the rates of royalty as also the introduction of a system of rebate of railway freight in the case of medium grade ore meant for export. The Company's sales during the year well exceeded the figure of the previous year mainly as a result of barter deals.

The Hingir-Rampur Coal Co., Ltd. (30-6-1960): The improvement in production as well as sales continued during the year. The claim against Government for compensation on account of the closure of No. 10 Pit owing to flooding by waters from the Hirakud Dam has not yet come up for final hearing.

The Central Provinces Railways Co., Ltd. (30-9-1960): Operations during the year were more or less normal, although there was a further decline in goods traffic as a result of increased competition from road transport.

Joint Membership: *Cement Agencies Private Ltd.*: By virtue of Section 43A of the Companies Act this Company has become a public Company with effect from 28th March 1961. Management of the Associated Cement Companies Limited continued as usual.

Subsidiary Companies: *Killick, Nixon and Co., Private Ltd.* (31-7-1960): The Company's working for this year has resulted in a profit, to which the export of piece-goods has contributed in no small measure. A factory for the local manufacture of certain engineering products of which the Company acts as Agents, has been set up at Chandivali and is expected to be in production shortly. Negotiations are also in progress for the manufacture of other items.

Stamco Industries (Private) Ltd. (30-6-1960): Efforts to rehabilitate the Company have continued and it is expected that fruitful collaboration with Caribonum Limited, London, will in due course enable the Company to show improved results.

A. R. Haseler (Private) Limited (31-3-1960 *and* 30-9-1960): This Company became a subsidiary of Killick Industries Limited with effect from 30th September 1960.

Snowcem India Private Limited (31-1-1960): Production and sales were satisfactory.

With effect from 28th March 1961 the above subsidiary Companies have become public Companies by virtue of Section 43A of the Companies Act.

Accounts in brief as at 30th November 1960 were as under:—

Liabilities	Rs.	Assets	Rs.

Transfer to Taxation	8,50	9,75*
Transfer to Development rebate reserve	33	79
Net Profit	7,74	9,88
Adjustments	1,37	89
Appropriations:		
Total available balance	9,11	10,97
Transfer to:		
Reserves	1,03	2,00
Proposed dividend	6,90 (25% p.a.)	6,90 (25% p.a.)
Carry forward	1,18	1,37

Note.—Adjustments include the balance brought forward from the previous year.
* After providing Rs. 55,000 for taxation for the previous year.

Extracts from the Directors' report: The decline in profits is mainly accounted for by uneconomic working of the camera factory due to smaller production as explained later. The Company had also to incur higher expenditure on account of wages and salaries as a result of implementation of the recommendations of the Textile Wage Board. The results were further affected by increases in the prices of raw materials and stores.

Camera Factory: During the year under report the camera factory suffered interruptions of production more than once on account of delayed issues of import licences and delayed supplies of raw materials by indigenous manufacturers. For the last 3 or 4 months, in the absence of these difficulties, there has been a marked improvement in production. As against a monthly average of 646 cameras in the year under report the factory has now been producing about 2,000 cameras a month. The Company has submitted a scheme to the Government for the manufacture of Agfa Isolette models.

Photographic Paper Factory: The Company has received an Industrial Licence for the manufacture of photographic printing paper in collaboration with Messrs. Agfa A.G. Leverkusen, West Germany. The Company has also received a licence for import of plant and machinery required for the above factory. Construction work for the factory to be established at Mulund, Bombay has started and it has come up to the plinth level. Fabrication of steel work and erection of the same is in progress. Orders for plant and machinery are being placed. If no unforeseen bottlenecks intervene, it is expected the factory's erection will be completed by March 1962.

The shareholders at the general meeting held on 21st December 1959, have authorised the issue of 8,750 new ordinary shares of Rs. 100 each at a premium of Rs. 100 each to Messrs. Agfa A.G., Leverkusen, in terms of collaboration agreement executed with the said firm. The permission of the Reserve Bank of India has been received for the issue of these shares. Allotment will be made as soon as the necessary formalities are completed.

The Company estimates that it will have to incur a capital expenditure of about Rs. 89 lakhs in the coming months, out of which orders for about Rs. 69 lakhs have been placed against which advances amounting to Rs. 4,70,000 have been paid.

A further order for Rs. 55,000 has been placed since the close of the year.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ... Reserves and surplus ...	27,60,000 43,02,269	Gross block —Depreciation	87,81,909 47,39,264

Carry forward	7	3

N.B.—Adjustments include the balance brought forward the previous year, refund of income-tax if any and transfer from reserves if any.

Extracts from the Directors' report: Since 1956 depreciation has been calculated on the statutory basis i.e., on written down values. It has been realised, however, that this basis does not result in assets being fully depreciated by the end of their useful life. It has therefore been considered prudent to calculate depreciation on a percentage of original costs as was done prior to 1956 and that basis has been re-introduced.

T. C. Sales Tax: Tea sales in Cochin Auctions during the years 1952-53 to 1956-57 have been assessed to sales tax under the Travancore-Cochin Sales Tax Rules by the Kerala Sales Tax authorities. The total amount demanded is Rs. 81,477. The assessments have been contested in the Court and are now before the Appellate Tribunal for their decision. The liability has therefore been brought into the year's accounts.

Tea: A total crop of 13,30,106 lbs. was harvested during the year. A comparative statement of the crop, cost of production and prices for the past 3 years is given below:

Year	Crop Lbs.	Estate cost of Production per lb.	Average price realised per lb.
		Rs. nP.	Rs. nP.
1957-58	12,19,238	1 44	2 27
1958-59	11,08,447	1 70	2 24
1959-60	13,30,106	1 41	2 16

The unsold stock in London has been valued at Rs. 2.50 per lb. For the season 1959-60 the Company was allotted 8,52,797 lbs. export quota representing a release of 67 per cent of the estates best crop.

Coffee: A crop of 682.737 tonnes was harvested and delivered to the Coffee Board. A comparative statement of crop, cost of production and points awarded for the past three years is given below:—

Year	Crop Tonnes	Estate cost of production per tonne	Points Awarded
		Rs. nP.	
1957-58	532.308	4,258 00	8,22,972
1958-59	726.250	3,412 00	11,49,145
1959-60	682.737	3,593 00	10,63,380

Final payment has been received in respect of 1958-59 season coffee and the total payments received amount to Rs. 2.45 per point, which is equivalent to Rs. 3,878 per tonne. A bonus payment at 0.0175 nP per point has been received on 1955-56 season coffee. The 1959-60 Coffee has been valued at Rs. 2.15 per point which is equivalent to Rs. 3,947 per tonne. Rs. 2.00 per point has been received to date.

Tea: The 1960-61 crop is estimated at 635,000 kgs. [14,00,000 lbs.] to be harvested at an estate cost of Rs. 3.21 per kg. and an all in cost of Rs. 3.44 per kg.

Coffee: 1960-61 crop is estimated at 790 tonnes to be harvested at an estate cost of Rs. 3,379 per tonne and an all in cost of Rs. 3,563 per tonne.

Accounts in brief as at 31st October 1960 are as under:—

" " " Ordinary	3,00 (10% p.a.)	5,40 (15% p.a.)
Carry forward	34	62

N.B.—Adjustments include the balance brought forward from the previous year, E. P. T. Post war refund; excess provisions written back; profit on sale of assets and transfer from contingency reserve.
† This includes an amount of Rs. 18,900 being supplementary dividend at 2.1 per cent. on preference shares for the year ended 31st October 1959.

Extracts from the Directors' report: Trading conditions were difficult during the year. Prices of raw jute fluctuated widely and by the end of the period had more than doubled. Unfortunately, prices of manufactured goods generally failed to keep in parity with the price of the raw material and profitable simultaneous business was rarely possible. However, the working of the mill during the period was efficient, and full benefit from the rationalisation carried out in 1958 was obtained. The results for the year, therefore, are not unsatisfactory.

Installation of the modern Drawing and Spinning machinery referred to in the directors' last report was not completed as early as had been hoped owing to delay in delivery occasioned by a strike at the manufacturers' works. New machinery to the value of Rs. 25,42,230 was however installed during the accounting period, and the remainder to the value of Rs. 4,85,000 was delivered by the end of December, 1960. This machinery has worked very satisfactorily and further orders have been placed for similar machinery to extend the modernisation of the mill's heavy weft yarn section at a cost of approximately Rs. 4,12,000.

In these circumstances the prospects for the current year are obscure: the results will certainly be adversely affected by the increase in overhead costs which will arise through the lower level of production. In addition, the direct costs will be increased as a result of the extra payments to workers in implementation of the recommendation in respect of interim relief made by the Wage Board for the Jute Industry set up in August, 1960.

Accounts in brief as at 31st October 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ... Reserves and surplus ...	45,00,000 28,06,428	Gross block —Depreciation	1,36,96,070 70,34,735

Carry forward	2	2

Note.—Adjustments include the previous years balance brought down; excess provisions written back and transfer from reserves if any.
* Rs. 11s after adjusting Rs. 2,60,000 for taxation short provided

Extracts from the Directors' report: Recent Budget proposal of additional levy of the excise duty on various items of stores and others generally and the raw materials viz. staple fibre and cotton yarn particularly would affect the working of the Company in the current year. Commitment made in respect of forward contracts for sale of yarns would also affect the working of the current year.

Accounts in brief as at 31st December 1960 are as under:—

MONEY STILL TIGHT

(From Our Own Correspondent)

BOMBAY, *12th April*

Conditions in the Bombay short-term money market continue to be stringent. Demand for funds is heavy as usual, while the supply is still not large despite the return of funds. Interest rates, as a consequence, continue to rule at their recent high levels. For purposes of record, we give them below:

	Per cent.
Inter-bank call money—	
Exchange and larger Indian banks ...	5½
Other banks	5½
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91-day Treasury Bills of the Government of India sold through weekly tenders disclose that as against an invitation of Rs. 2 crores, the total amount offered was Rs. 2.65 crores. Actual acceptance was Rs. 2 crores. The average rate of accepted tenders remained unchanged at Rs. 2.750 per cent per annum. The aggregate amount of 91-days' intermediate Treasury Bills sold was Rs. 1.60 crore. Their sales will be continued again from today.

The statement of the Reserve Bank of India for the week ended 7th April 1961 shows a further rise of Rs. 55.17 crores in notes in circulation, taking the total to Rs. 2,039.91 crores. As the notes held in the Banking Department have increased by Rs. 2.04 crores, the total notes issued have gone up by Rs. 57.21 crores. On the assets side, foreign securities are unchanged at Rs. 123.01 crores. Since, however, the balances held abroad have gone down by Rs. 1.93 crore, the total foreign assets are lower by a corresponding amount at Rs. 134.32 crores. The deposits of the banks with the Reserve Bank have fallen further by Rs. 25.16 lakhs to Rs. 70.60 crores. Other loans and advances have declined by Rs. 38.71 crores. Of this decline, borrowings against usance bills alone account for a fall of Rs. 11.75 crores to Rs. 33.64 crores.

An expansion of Rs. 7.88 crores in demand deposits and of Rs. 9.97 crores in time deposits, is shown in the statement of the Scheduled banks for the week ended 31st March 1961. Of the total increase, the State Bank of India accounts for as much as Rs. 12.30 crores. Borrowings of scheduled banks from the Reserve Bank of India have gone up again, this time by Rs. 11.91 crores, on top of a rise of Rs. 4.33 crores in the previous week. Of this increase, borrowings against usance bills account for Rs. 8.24 crores. Borrowings from the State Bank of India also have registered an expansion of Rs. 94.05 lakhs of demand nature and of Rs. 1.06 crore of time nature. Advances and bills (bank credit) have increased sharply by as much as Rs. 15.84 crores, bringing the total rise over the fortnight to Rs. 25.72 crores. The total bank credit comes to Rs. 1,333.76 crores, as against Rs. 1,132.84 crores a year ago. Of the rise of Rs. 15.84 crores in scheduled bank credit, the State Bank's share is a bare Rs. 1.08 crore. The investments of scheduled banks as a whole have gone up by Rs. 73.42 lakhs. But, as the investments of the State Bank of India have risen by Rs. 1.77 crore, it is obvious that the investments of other scheduled banks have actually fallen by Rs. 1.74 crore.

In the gilt-edged section, the short-dated loans were reported to be in demand during the week under review. In the Central loans section, the 3 per cent. 1966-68 funding loan, 3 per cent. 1970-75 first Development Loan and 3½ per cent. 1967 third National Plan Bonds gained 10 nP each. 3 per cent. 1963-65 closed 5 nP higher at Rs. 93.65. 3½ per cent. 1966 Bonds moved up by 15 nP. State loans remained unchanged at last week's levels.

In the foreign exchange section, the rupee remained steady. The banks' selling for ready T.T. on New York was unchanged at Rs. 478.25 per 100 dollars, whereas the buying rate eased slightly from Rs. 475.00 to Rs. 474.75 per 100 dollars. In the New York exchange market, the pound sterling touched a slightly higher level. The latest available rates are: 279.920-279.950 cents per £ for spot and 278.840-278.870 cents per £ for three months' forward. Thus, over the week the sterling has gained 0.05 cent in the spot and 0.50 cent in the forward.

HIDES FIRM

(From Our Own Correspondent)

MADRAS, *10th April*

Arrivals of E.I. tanned hides and calves were moderate and met with fair clearance at firm prices. Importers were slowly following Madras levels and price increases were registered for important quantities, especially light weights. Cow calf met with selective support. Buff hides and buff calf ruled firm, following U.S. interest.

Tanned skins were firmer. Demand for skins suitable for suede leather and garment trade was brisk and prices improved steadily.

Total shipments during the month of March were: 3,714 bales tanned cow hides, 244 cow calf, 51 buffalo hides, 744 buff calf, 596 goat skins, 536 sheep skins to the U.K.; 9 cow hides, 274 cow calf, 323 buff calf, 1,316 goat and 535 sheep to the Continent; 103 buffs, 261 buff calf and 125 goat to the U.S.A.; 3 goat and 232 sheep to Japan.

BULLION BUOYANT

(From Our Own Correspondent)

BOMBAY, *12th April*

The bullion market which had experienced a shake-out in values last week ruled buoyant during the week under review. Both gold and silver met with good support induced by encouraging trend of offtake and hopes of a further improvement in the coming weeks. It was feared by some that, in view of such enlarged demand and of the negligible contraband arrivals of late, a shortage of supplies might be felt in the not too distant future. The actual floating stocks at present were estimated at no more than 40,000 tolas of gold and 500 bars of silver. Consequently, prices registered a sharp rally.

The daily average offtake of gold during the week was higher at 6,750 tolas as against 4,750 tolas, while arrivals were lower, being 6,000 tolas as against 8,750 tolas. In the case of silver, both offtake and arrivals were larger than those in the previous week; the daily averages were 15 bars and 18 bars, respectively, as against 8 bars and 15 bars.

Adjustment rates fixed today were Rs. 121.30 for gold and Rs. 204.20 for silver. The corresponding rates last week were Rs. 119.25 and Rs. 201.95, respectively.

Reflecting apprehensions regarding a possible shortage of supplies developing in the market, the premium commanded by ready silver over forward (*Jeth* settlement) increased markedly from Re. 1.55 last week-end to Rs. 3.50 today. The actual closing spot rate was Rs. 204.20, as against Rs. 109.50 a week ago. The *Jeth* settlement began the week firm at Rs. 198.60, as against the previous close of Rs. 197.95 and advanced to touch a high of Rs. 200.75 today before finishing at Rs. 200.70.

Ready gold, which was quoted at a discount of 55 nP under forward (*Jeth* settlement) last week and early this week, commanded a premium of 25 nP on Monday this week. The premium widened further to 65 nP yesterday, but declined slightly to 55 nP today. Over the week, ready gold spurted by Rs. 3.05 to Rs. 121.55. The highest level touched today was Rs. 121.75. The *Jeth* settlement was quoted at Rs. 121 today, as against Rs. 119.05 last week, the highest and the lowest levels touched being Rs. 121.20 (today) and Rs. 119.10 (6th April), respectively.

The latest available world price of gold in the London market is $35.08¼. Ready gold eased from 250s. 8¼d. to 250s. 7d. Ready and forward silver were unaltered, the former at 79⅝d. and the latted at 80d. Silver in New York was also unchanged at 91.375 cents.

The following table shows the trend of the market during the week under review:

	12-4-1961 (closing)	High	Low	5-4-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	121.55	121.75	118.40	118.50
Forward:

* 31st May settlement. † 1st June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

TEA DUST RECEDES

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *6th April*

Dust Sale No. 14: A total quantity of 220,000 kilograms was offered in Dust Sale No. 14 held today. There was good demand but prices were irregularly easier for all descriptions. Residuals, low mediums and mediums declined by 20 to 30 nP and sometimes more. Good mediums also shared in the downward trend of the market and were easier by 10 to 20 nP. Highgrowns met with better support, but these were also a little easier with quality. The best C.T.Cs. were in keen demand and inclined dearer whilst other descriptions under this category were generally lower. The few clean black leaf teas on offer met with strong competition at dearer rates.

The average price realised in dust sale No. 14 was Rs. 4.61 per kilo, as compared with Rs. 4.73 last week and Rs. 4.74 in the corresponding sale last year.

Export quota: Special licence is nominally quoted at ¼ nP per kilo.

Colombo: There was no sale this week.

London: There was no sale this week.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No.* 14:—675,000 kilograms. Good demand. Plain and low medium brokens 10 nP to 20 nP easier. Similar fannings upto 10 nP lower. Medium and good mediums irregular and easier with quality."

COTTON FUTURES DECLINE

(From Our Own Correspondent)

BOMBAY, *12th April*

In contrast to the easy trend noted last week, the cotton futures market put on a cheerful appearance during most part of the week under review. Although the delay in the announcement of export quota for Bengal *Deshi* (the announcement was made only yesterday) and the dull activity in spot market were bearish factors, the meagre volume of tenders (a mere 600 bales till the 10th inst.) and hopes of a quota for not only Bengal *Deshi* but also for Kalagin and Wagad imparted much strength to the maturing April contract. The contract steadily advanced from Rs. 571 in the beginning of the week to Rs. 578 on Monday and further to Rs. 585 on Tuesday, following news of adverse survey results of Laxmi cotton tendered earlier. Traders noted that those who tendered cotton had to pay as much as Rs. 100 per candy as the difference between spot and contract rates plus penalty. It was feared that tenders on subsequent notice days would be lower still. The firmness of the April contract strengthened the August contract which also recorded a rise. The upward trend in prices persisted till the close yesterday. Today, there was a distinct setback, notwithstanding the export quota of 60,000 bales of Bengal *Deshi* announced yesterday. The quota, though it was welcomed, fell short of expectations. The trade was counting on a quota of 100,000 bales of Bengal *Deshi*. The hopes that the scheme for import of short-staple U.S. cotton under the recent P.L.480 agreement would be finished in a day or two acted as a damper.

The following table indicates the trend of prices of the contract during the week:

(In rupees per three quintals)

I.C.C. Jarilla	12-4-61	*High*	*Low*	5-4-61
April 1961 ...	579.50	585	570	571.50
August 1961 ...	576.25	582.50	576.25	579.50

Mill demand for ready cotton was slack, because most spinners had made purchases, subject to the availability of Indian cotton quota for them. Mill buyers were inclined to pick and choose and bargain. Moderate interest was, however, noted in CO2, Laxmi, Vijay, Kalyan and a few other popular varieties. Surti choice quality and L.147 were bought as substitutes for Laxmi Jaydhar and lower Vijay and Digvijay were absorbed in the place of Khandesh and Berar.

The export quota, already steady, fell flat, because the purchases made already by shippers on a subject-to-licence basis exceed 75,000 bales. The quota will be distributed on a first-come first-served basis, subject to a maximum of 2,500 bales per shipper.

Interest in foreign cotton was subdued. Early in the week, some Bombay mills booked a total quantity of 1,400 bales of Sudan XG4S cotton at Rs. 1,725 per candy. In later sessions, Sudan cotton on sample evoked inquiries. It changed hands at Rs. 1,560. East African and Egyptian cotton received stray inquiries. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

L.147 1.020; Vijay 900; Digvijay 945; Kalyan 840. B.P. (U.N.U.G.) 1,325; B.P.52 1,335.

Cotton futures in Karachi suffered a setback during the week. Speculative buying and investment support, which had imparted strength to the market last week, dried up and values gave way to hedge selling. The absence of any keen interest in Pakistan cotton by foreign buyers and the pressure of new crop in the wake of slack domestic mill demand quickened the downward trend of the market. Both the May and July Contracts were marked down, the former from Rs. 72.20 to Rs. 71.35 and the latter from Rs. 79.50 to Rs. 71.15. Spot prices too tended to ease.

Quiet conditions prevailed in the Alexandria cotton futures market during the week. In spite of the fact that the third estimate put the crop lower at 1,492,300 bales, as against 1,551,600 bales of the second estimate, futures prices tended to recede. Lack of interest on the part of foreign buyers in Egyptian cotton and keen competition from Sudan discouraged fresh buying. Both the Karnak and Ashmouni contracts eased on persistent selling. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 69.97; July 70.57.

Ashmouni: April 60.20; June 60.02; August 60.20.

Cotton futures in Liverpool ruled barely steady during the week. Values moved narrowly. Turnover was limited. In the absence of any fresh incentives, trading interest was at a low ebb. Advices from New York contained nothing to cheer up sentiment. Moderate hedge selling was absorbed in Commission House buying and local trade covering. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: May 24.70; July 24.95; October 24.10.

American Cotton Mixed Growths Contract: May 25.10; July 24.95; October 24.55.

Sudan: May, July, and September 31.75.

Listless conditions prevailed in the New York Cotton Exchange during the week. Values remained practically unchanged in thin trading characterised mainly by inter-month switching operations. Moderate volume of fresh buying that emerged at times was confined to new crop positions.

Weather reports indicate satisfactory progress of new crop. About 90 per cent of the planting in Lower Rio Grand Valley and South Texas and Coastal Bed areas has been completed. In South

Central area, however, only 60 per cent of planting has been completed.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	11-4-61	4-4-61	27-3-61
Spot	33.50	33.50	33.50
May	33.16	33.15	33.18
July	33.65	33.68	33.72

NEW CROP OILSEEDS CONTRACTS

(From Our Own Correspondent)

BOMBAY, 12*th April*

The outstanding development of the week in the oilseeds market was the commencement of trading in new crop groundnut, castorseed, linseed and cottonseed contracts on Saturday the 8th inst. The new contracts are subject to the same margin regulations as are applicable to the maturing contracts. There was hardly any business in the groundnuts contract since the spot prices commanded a premium of more than Rs. 50 crores over the ceiling of Rs. 220.

The undertone of the market remained easy during the week under review, with the exception of linseed which staged a smart rally in the beginning of the week on better North Indian advices. The reported abolition of import fees on groundnut oil, linseed and linseed oil in the U.S. did not have any effect on the market. For the prices of Indian groundnut and linseed oils continued to be out of parity with world prices, even after taking into account the aforesaid measure. As for linseed, no export from India is permitted. Groundnuts ruled easy owing to the sustained pressure of new crop offerings from the South. The comfortable supply position in respect of rape and mustard, too, acted as a damper. Crushers and *vanaspati* manufacturers were hesitant to enter into new commitments in the hope of a further decline in prices. Castorseeds encountered selling, thanks to larger arrivals and lack of follow-up support. Except for some purchases by Communist countries, castor oil export section remained dull, particularly in the absence of any U.S. enquiries. Cottonseed were listless, in view of the none-too-encouraging advices from the raw cotton market. Sesame suffered a perceptible setback in view of heavy arrivals and slack inquiries. Linseed put on a cheerful appearance early in the week, but lost some ground towards the close on stale liquidation.

Among groundnuts, May contract was dull at Rs. 220. There was no business in the August contract. Nizam bold dropped Re. 1.50 to Rs. 53. Coromandels lost a like amount to Rs. 53.25. Oil Railway Receipts were lower by 85 nP at Rs. 22 and oil ex-mill by 50 nP at Rs. 22.50.

In the castorseed section, May 1961 contract gave way from Rs. 177.62 to Rs. 175.87. The September contract, which was quoted on the opening day at Rs. 182.37, turned weak subsequently to close at Rs. 180.62 today. Ready Madras declined by 62 nP to Rs. 34.75. Oil B.S.S. shed 20 nP to Rs. 33.37. Commercial was dull at Rs. 15.70.

Among cottonseeds, May contract suffered a fall of Re. 1.50 to Rs. 93.50. September contract moved down from Rs. 96 to Rs. 94.50. Spot whites lost 40 nP to Rs. 19.30. Both non-whites and Berars shed 20 nP each to Rs. 19.30.

Sesame bold ready fell by Rs. 10 to Rs. 360. Sesame oil declined by 45 nP to Rs. 27.80.

In contrast, linseed May contract moved up from Rs. 36.84 to Rs. 37.47, before closing at Rs. 36.91. September contract was quoted lower at Rs. 37.37 today, as against Rs. 37.69 on Saturday. Bold ready was, however, higher by 12 nP at Rs. 37.57. Oil too put on 5 nP to Rs. 16.25.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	12-4-1961	5-4-1961	28-3-1961
Groundnut	Rs.	Rs.	Rs.
May 1961	220.00	220.00	—
August 1961	—	—	—
Nizam bold	53.00	54.50	53.25
Coromandel ready	53.25	54.75	53.50
Khandesh quality	53.25	54.75	53.50
Oil ex-mill ready*	22.50	23.00	22.60
Railway receipts*	22.00	22.85	22.40
Castorseed			
May 1961	175.87	177.62	179.50
September 1961	180.62	—	—
Ready Madras	34.75	35.37	35.62
Ready Kanpur	33.37	33.75	33.87
Oil B.S.S.†	16.50	16.70	16.65
Oil commercial†	15.70	15.70	15.90
Linseed			
May, 1961†	36.91	36.84	36.62
September 1961	37.37	—	—

September 1961	94.50	—	—
Niger seed	41.50	42.00	41.00
Kardi seed	27.75	28.25	27.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for Niger is contracts are per 250 kilograms, except Linseeds for which rates are per 56 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BEMBERG YARN FIRM

(From Our Own Correspondent)

BOMBAY, 12*th April*

Traders in yarn are anxiously awaiting the final decision of the Government in regard to the clearing of the additional excise duty on indigenous rayon fabrics. The Textile Commissioner held discussions this week with the representatives of both spinning and weaving sectors and he is reported to have communicated his views to the Government.

Meanwhile, the indigenous Art Silk Yarn Distribution Committee (appointed by the Government) has announced its decision fully to meet with the unbooked quantities of indigenous yarn quotas from the stocks available with spinners. The total stocks are estimated around 1.5 million lbs. The last date for booking quotas for the January-March 1961 quarter is 30th April 1961. In response to the earlier Press note issued by the Committee inviting art silk weaving units to forward their cards if there are any unbooked quantities of indigenous yarn for the April-June 1960, July-September 1960 and October-December 1960 quarters, the Committee received 1,019 cards from various centres in India, the unbooked quantities of yarn being about 1,012,000 lbs.

The allocation of indigenous art silk yarn to art silk powerloom weaving units for the current quarter April-June will be made on the basis of the number of loom-shifts worked by the units during the quarter October-December 1960, according to a Press release of the Maharashtra Government. The allocation will be made only to such units as are holding valid installation permit and/or registration Certificate of the Textile Commissioner, Bombay, to work powerlooms on art silk/staple fibre yarn. The art silk powerloom weaving units may apply and submit their cards for the issue of a fresh allocation card so as to reach the office of the Textile Commissioner, Bombay by 16th April 1961. The art silk weaving units can apply through their respective associations.

This week has witnessed a fall in the prices of imported art silk yarns with the exception of 60/1 Cupressa Bemberg yarns which have tended to rise. The fall in prices has followed selling on fears of reduced offtake from weaving centres, consequent on the reported refusal of spinners to bear any portion of the incidence of additional taxation. Cupressa Bemberg yarns, however, are ruling firm. The firmness is engendered by apprehensions regarding a possible scarcity of supplies. Staple fibre yarns are well supported, thanks to encouraging reports from consuming centres. Cotton yarns are dull. Business put through is limited with values moving narrowly.

Spot Cupressa Bemberg yarn (60/1) met with excellent support and jumped up from Rs. 2,755 to Rs. 2,840. April and June deliveries both advanced by Rs. 15 to Rs. 2,615. Imported art silk yarns, as already stated, drifted downward. 120 Japan receded by Rs. 20 to Rs. 1,536. 120 Japan fell by Rs. 26 to Rs. 1,737. 120 Italy dropped a like amount to Rs. 1,517. 150 Italy was quoted lower at Rs. 1,737, as against Rs. 1,763. Among indigenous yarns, National Rayons 150 bright cones first grade eased by 7 nP to Rs. 14.65, while 120 bright cones first grade evoked some enquiries and gathered 5 nP to Rs. 13.02.

Staple fibre yarn (40 x 2) June settlement was well favoured, the quotation advancing by Rs. 21 to Rs. 911. April settlement picked up Rs. 7 to Rs. 927. Spot Kohinoors were fully firm at Rs. 10.58, as also Centurys at Rs. 10.52.

In the cotton yarn section, ten counts Moderns were maintained at last week's level of Rs. 18.75. Podars were also unchanged at Rs. 21.75. Thirty counts New Greats spurted by 68 nP to Rs. 28. Simplex rose by 25 nP to Rs. 26.75. Forty counts Minaxis were quiet at Rs. 33.25, but Maduras hardened by 25 nP to Rs. 32. Sixty counts Gokaks and Finlays were dull, the former at Rs. 50.75 and the latter at Rs. 66.40. Eighty counts were dull, Moderns being quoted at Rs. 71.50. Finlays at Rs. 82.25 and Mahendras at Rs. 68.68.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with the previous week.

	12-4-1961	5-4-1961
Art silk yarn—	Rs.	Rs
60/1 Cupressa Bemberg (100 kg.) April	2,615.00	2,600.00
60/1 Cupressa Bemberg spot	2,840.00	2,755.00
120 Japan (per 100 kg.)	1,536.00	1,536.00
150 Japan (per 100 kg.)	1,737.00	1,763.00
120 Italy (per 100 kg.)	1,517.00	1,543.00
150 Italy	1,737.00	1,763.00
Staple fibre yarn—		
40 x 2 April (per 90.72 kg.)	927.00	920.00
40 x 2 June	911.00	892.00
40 x 2 Century (per kg.)	10.52	10.52
40 x 2 Kohinoor (per kg.)	10.58	10.58
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	18.75	18.75
30s New Great	21.75	21.75
30s Simplex	26.00	27.12
40s Madura	32.00	31.75
60s Finlay	66.40	66.40
80s Mahendras	68.68	68.68

FOODGRAINS EASY

(From Our Own Correspondent)

HAPUR, 10*th April*

Easy conditions prevailed in foodgrains during the week ended 10th April, thanks to better supply position following increased arrivals of both old and new crop wheat in the market. The Government of India has withdrawn zonal restrictions on the movement of wheat and its products. The main reasons which induced the Government to take this decision were the bright prospects of *rabi* crops, larger stocks in the central reserve, a heavy import programme and relatively low ruling prices of wheat in the country.

Wheat prices at Hapur registered a modest fall in the later part of the week to be quoted on Monday at Rs. 17 to Rs. 18.25 a maund for old crop, while new wheat was quoted at Rs. 16.25 to Rs. 17.25 per maund according to quality. Daily arrivals of wheat have improved to about 200 mds., half of which is new produce. Harvesting of wheat is nearing completion and, as winnowing operations are in full swing, wheat arrivals would soon increase. A further fall in prices is anticipated. Inferior quality rice prices improved slightly during the week on better consumer demand while other sections were listless. Rice is still reaching here from east U.P. and local stock is put at 5,000 mds. Latest prevailing prices were: Mainpuri sela Rs. 20.50, gainda *kucha* Rs. 20.50, ramajwayan sela Rs. 23.50, raimunia sela Rs. 25, basmati sela Rs. 28 to Rs. 30, superior Rs. 32 to Rs. 38 a maund.

The all-India final estimate of rice for 1960-61 puts the current year's area and production of the crop at 83.34 million acres and 33.7 million tons, respectively. This is an all-time record. As compared with the partially revised estimate of 82.8 million acres and 30.96 million tons for 1959-60, the estimates for 1960-61 show an increase of 506,000 acres or 0.6 per cent in area, and 2,737,000 tons or 8.8 per cent in production. The yield per acre for the current year for the country as a whole works out at 906 lbs.—an increase of 8.2 per cent over the revised yield rate of 1959-60.

Gram prices registered a sharp fall of about Re. 1 per maund during the week to Rs. 13.87 a maund for Punjab variety. New gram is reaching the local market in small quantity. But bumper crop expectations from Punjab was the main depressing factor. Barley sought lower levels at Rs. 11 and bejhar new too was quoted lower at Rs. 10.25 for inferior quality and Rs. 11 for moongia variety. Maize was listless at Rs. 11 to Rs. 13, while *jowar* and *guwar* prices were steady due to better demand. Current prices are: *jowar* white Rs. 12.50 to Rs. 13 and *guwar* Rs. 13.25 to Rs. 13.50 a maund.

In pulses, new peas arrivals averaged 1,500 to 2,000 maunds daily. Prices were steady on good outside enquiry and buying by stockists. Loading was, however, restricted to consuming areas of South and small despatches were made by *khatties*. Some demand in the form of *dal* was also reported. Arhar was listless with old stocks of 7 *khatties* lying flat and new crop expected soon. Prices of other pulses were quietly steady on good demand and poor local stocks. Ruling prices on Monday (in rupees per maund) were: peas *dara dal* 15.75, *urd* 19 to 21.25, *urd dal* 24, *moong* 23, *dal* 25, *Massor* 12 to 15, *dal* 15.

SUGAR PRICES DEPRESSED

(From Our Own Correspondent)

HAPUR, 10*th April*

Sugar prices were depressed during the week, thanks to the release of further quantities for sale. The Government of India is, however, very anxious to arrange exports and the Union Food Minister is himself visiting the U.S. with that end in view. Factories all over west U.P. are crushing sugarcane at full speed and a higher output, as compared with the corresponding figures last year, is reported. The recovery is also said to be better. Prevailing prices here are: Rs. 107.50 per bag of one quintal and retail Rs. 1.02 per seer.

Sugar prices also sought lower levels in the Muzaffarnagar market during the week. Prices of damaged sugar of last season's crop declined further by Rs. 2 per bag to Rs. 100 to Rs. 103 per bag, while dry quality was quoted at Rs. 107.09 per bag. Production was still being carried on vigorously. In Kanpur market, poor offtake and mounting stocks were responsible for an easy trend in sugar prices during the week. Stocks swelled to 20,000 bags of crystal sugar and 5,000 bags of *khandsari*. Prices were Rs. 110 to Rs. 111 per bag in the open market and for damaged old sugar Rs. 106 to Rs. 108 per bag.

Khandsari prices were steady as production has almost come to a close and there has been demand from Jammu, Kashmir, East U.P. and Rajasthan. The output on the whole has been much lower than last year. *Khandsari* stocks in Muzaffarnagar market were placed at 65,000 mds., the corresponding figure last year being 1,65,000 mds. week end rates are: crystal *khandsari* Rs. 31 to Rs. 36, inferior Rs. 25 to Rs. 29, superior Rs. 31 to Rs. 33.50 a maund.

Ready *gur* prices recorded fractional gains during the week as daily arrivals dropped to an average of 100 mds.; but loading was restricted, being available only by allotment. Local stock is put at 73,000 mds. *Gur* prices have also improved in the producing areas of the South. Sowing for cane is still going on and the State Government is anxious about increase in cane acreage. Prevailing prices here are: pansera Rs. 14.12 to Rs. 14.62, kotha Rs. 14, shakker Rs. 16 a maund.

Gur prices ruled steady in the Muzaffarnagar market during the week as daily arrivals dropped heavily to about 2,000 mds. due to harvesting of *rabi* crops. The total arrivals of *gur* there during the season were put at 12.08 lakh maunds, the corresponding figure last year being 14.44 lakh maunds and present stocks were put at 2.50 lakh maunds. Prevailing prices at weekend are: Chaku Rs. 13 to Rs. 16, pansera Rs. 14 to Rs. 14.50, ladoo Rs. 14.50, rusket Rs. 7 to Rs. 10, shakker dara Rs. 14.75 to Rs. 16.50, masala Rs. 17.50 to Rs. 18.62 a maund.

Future *gur* prices were bullish on continued bull support. *Gur* Baisakh and Ashad delivery prices are now quoted near the best levels at Rs. 13.66 and Rs. 14.44 respectively, as against week's opening rates of Rs. 13.22 and Rs. 14.07, respectively. Trading in *gur* Fagun next would commence as soon as permission from the F.M.C. is received.

SUGAR

(Concluded from page 686)

yields. This will also help in reducing the cost of maintenance of factories, as, in these areas, generally the number of crushing days is more than in other parts. The acreage may be controlled either by fixing the water rates unfavourable for sugarcane cultivation or by regulating the water supply from canals so as to suit only other crops. If acreage is regulated in this way as extension to take place only in high-yielding areas, it would make it easy to bring down sugarcane prices. Though it is generally thought that the improved methods of production have been adopted in larger measures for commercial crops, there is yet plenty of scope for further increase in yield rates through such measures. The fifth Evaluation Report shows that there was nearly one-fifth (18.9 per cent) of the acreage under sugarcane which was not planted with improved seeds; while nearly one-third (33.5 per cent) of the area was not treated with any type of fertilisers.

Before thinking of any policy on crop planning with respect to this cash crop, it is pertinent to inquire about the factors which helped to attain such growth within the last few years. One of the most important factors is the comparatively remunerative returns received by the farmers. An equally important factor is the phenomenal rise in the extent of irrigated area during the second Plan and later years of the first Plan period. When water comes to a dry tract, there is naturally a change in the crop pattern in any one of the three directions, namely, (1) from coarse to fine food grains; (2) from foodgrains to cash crops; (3) higher intensity of cropping. There is certainly a lack of knowledge at all levels, especially with Government officials at district and tehsil levels and farmers, about the various alternative crop schemes to suit the individual needs and capacities of the farmers which are at least as profitable as that of growing sugarcane. The first thing that strikes most of them is to put as much area as possible under sugarcane when water reaches the village. The factors like comparatively smaller risk involved in growing the crop and lower labour requirements as compared to raising of crops like potatoes and cotton should have also influenced the farmers to go in for sugarcane. Again, the assurance of receiving a fixed price for the crop helps the farmer in choosing it in preference to other crops for which the prices are fixed under free forces of demand and supply and, therefore, susceptible to wide fluctuations.

The third Plan envisages provision of irrigation facilities for an additional area of 14 million acres. When taken with 3.5 million acres of irrigation potential created but remaining unutilised during the second Plan period, new irrigation will be available for 17.5 million acres. If experience is any guide and if there will be no regulation on sugarcane acreage, a good proportion of this areas will be put under sugarcane resulting in further abnormal and unplanned rise in production of *gur* and sugar. It is not the aim of this paper to put a complete ban on further expansion of the *gur* and sugar production but only to plead for a regulated growth of these industries.

Some Probable Alternative Crops

If any regulation is to be imposed on sugarcane acreage, the farmers should be advised by Governmental and extension agencies about the different crops which can be grown profitably over the areas awaiting new irrigation during the coming years. Encouragement by way of timely and adequate supply of improved seeds and fertilisers to grow such crops should also be extended to the farmers. Though the selection of alternative crops will differ from area to area and largely be determined by the needs and capacities of individual farmers, an attempt is made in the following paragraphs to suggest a few major crops which may be raised profitably.

Rice is one of the most suitable crops for raising over a large area to be brought under irrigation. This crop, though grown most extensively than any other crop, is still short of consumption requirement both within the country and outside. Even its imports on large scale, as in the case of wheat, are not possible. Cotton, the most extensively grown commercial crop within the country as well as in the rest of the world, is another crop which is commended for growing on a large scale. We have been spending huge foreign exchange (over Rs. 40 crores in 1959-60) for many years on the import of cotton, largely of long-staple varieties, which are capable of being raised in irrigated tracts. In spite of its importance as a commercial crop and the huge foreign exchange involved in the import of long-staple varieties and sizable earnings realised by exporting *deshi* varieties, the performance during the second Plan was far from encouraging. The production of cotton in 1954-55 was 5.3 million bales which is also the figure estimated for 1960-61. In fact, the production in 1959-60 was only 3.8 million tons and the hardships that arose on account of this are too well known to recapitulate here. Another crop which should receive more attention is oilseeds which is grown at present all over the country. The earnings from animal and vegetable oils, sources of valuable foreign exchange, have recently been falling down mainly due to lower production. This fall in production has resulted in the index of prices of edible oils which is the cheapest and only source of fat for the common man, shooting up by nearly 30 points within one year ending with February 1961. Oilseeds production is expected to reach only 6.4 million tons in 1960-61, and this represents a shortfall of 1.1 million tons from the second Plan targets. In the absence of a sustained drive, it will be difficult to reach the target of 9.2—9.5 million tons set for the third Plan. Oilseed cakes, cottonseeds and oils (including that of cottonseed) also have a very good market within and outside the country.

It is not necessary to work out here the comparative economics of sugarcane and other crops. But it may be pointed out that, if the sugarcane growers are also to receive the price for their crop with the same margin of profit obtained by the wheat growers in the two districts of Muzaffarnagar and Meerut, the other crops grown in these districts are found to yield higher returns than sugarcane. Even if prices of sugarcane are to be fixed with a slightly higher margin of profit, any combination of two of the other crops grown in the districts (paddy, wheat, maize, cotton and gram), are still found to be paying at least as much as sugarcane.

U.N. MISSION ON FERTILISER INDUSTRY

The U.N. Technical Assistance Board mission, which recently visited India and made a survey of the prospects for developing fertiliser industry, has recommended the establishment of four new fertiliser factories, each with a capacity of 85,000 tons of nitrogen, during the third Plan period. The places of location suggested are Gorakhpur, Ankaleswar, Ennore or Tuticorin, and Mangalore. The mission has pointed out that on technical and other considerations the fertiliser projects at Visakhapatnam (private sector) and Kothagudem in Andhra Pradesh should be operated jointly, preferably by the same party. The Namrup plant in Assam, based on natural gas, should be built immediately as it was a project where the manufacturing cost should be quite low. The mission has, however, not approved of the proposals for establishing units in the private sector in Rajasthan, Madhya Pradesh and the Koyna area in Maharashtra in the immediate future. It feels that these could be taken up in the fourth Plan. The economics involved, the relatively lesser demand for fertilisers in these areas and the availability to them of nearer sources of fertilisers from projects already planned, did not indicate urgency for taking up these proposals immediately, according to the mission.

Cement Price Fixing Arrangement in U.K.

The price of cement to consumers in the U.K. are fixed by the Cement Makers' Federation, and their present practice of maintaining a "fixed price for each point of delivery" has been upheld recently by a ruling of the Restrictive Practices Court as being not contrary to public interest. According to Sir Halford Reddish, Chairman and Managing Director of Rugby Portland Cement, the Cement Makers' Federation are not alone in their satisfaction with the outcome of the case before the Restrictive Practices Court. Over four thousand buyers of cement are reported to have sent their replies to a questionnaire before the hearing, 97 per cent of whom were strongly in favour of a continuance of the present system. Sir Halford has pointed out that, as it is impossible to erect a cement plant just anywhere, and locational suitability is of importance to a plant to be an economic producer, large consumer demands cannot be met at many places from the nearest works, and a scheme such as that operated by the Federation is essential. The essence of the cement makers' argument was that they accepted a lower rate of return on their invested capital, as the absence of price competition lessened their risks. (The present rate of net profit on new cement works was less than ten per cent, less than in manufacturing units generally.) According to Justice Diplock of the Restrictive Practices Court, cement prices may rise substantially, say, by 25 shillings to 40 shillings per ton, if the price scheme adopted by the Federation was dropped.

It is stated that the manner in which cement prices are fixed by reference to the distance of delivery from the nearest works involved an element of 'transport subsidy' for more remote customers, and, correspondingly, a premium to the nearest ones. The Judge, however, found that the premium was not so high as to outweigh the benefit to cement users in general of enjoying low, fixed prices. Further, he was of opinion (and his decision in favour of the scheme was largely influenced by the fact) that the industry was on the whole efficient, had expanded its capacity to meet demand, and had fixed prices with moderation and a sense of responsibility with the regular advice of an independent chairman and an independent accountant.

If the cement industry in India had made up its mind to have a Federation as in the U.K. for internal regulation of prices and operation of a supply pool, it might have averted the entry of the State Trading Corporation into the field. As matters stand, it looks as though the S.T.C. has dug its toes in and will stay put. But an attempt could still be made to persuade Government to hand over the internal distribution to the industry after finalising all the requisite arrangements for self-regulation and the creation of a Federation as in the U.K. Perhaps, as a next step, the effective performance of the Federation might result in lifting the control over price which now exists.

MARKET GOSSIP

(Concluded from page 675)

likely to render its task particularly difficult is to evolve solutions which will not merely be in the national interest but also prove practicable.

On the import front, the room for manœuvre is strictly limited. Given the scarcity of foreign exchange and the deficit in balance of trade—last year, imports at Rs. 1,011 crores exceeded exports at Rs. 635 crores by Rs. 376 crores, the corresponding figures for 1959 being Rs. 940 crores, Rs. 621 crores and Rs. 319 crores—it is not possible to expect the Committee to liberalise the current restrictions on import trade. Broadly speaking, import control will continue to be rigid. It should, however, be possible to suggest measures designed to streamline the procedure for the grant of import licences. In particular, the Committee will do well to examine the need for further decentralisation of the machinery of import control. A demand to this effect has been voiced by several trade organisations whose members find it necessary to undertake periodical visits to the capital. There is no reason why subordinate branches of import trade control at important port towns should not undertake at least a part of the work that is being done at New Delhi. There is also insufficient co-ordination between import control authorities, on the one hand, and the authorities in charge of industrial licensing, capital issues and other aspects of industrial activity, on the other. Some means should be found not only to bring about greater co-ordination among these authorities but also to expedite mutual consultations.

There is also the vexed problem of the divergent claims of actual users and established importers. The Government has probably carried its preference for actual users a little too far. The Committee should examine the case for reversal of this policy which has occasionally been supported by the actual users themselves. After all, established importers render some real service in that, by shouldering the burden of maintenance of stocks, they enable the actual users to concentrate on manufacturing activity. If actual users are expected to maintain large stocks of imported materials for their use, it will mean much diversion of working capital which could be put to greater use. Further, actual users cannot always be expected to know in advance what articles they will need. These circumstances point to appropriate changes governing issue of import licences. What is now necessary is to see that the services of the established importers are utilised in a manner which will impose no hardship whatever on manufacturers but actually make their task easier.

A problem that is common to both importers and exporters is the growing activity of the State Trading Corporation. It is not clear whether the Committee is expected to examine the question of defining the role of the S.T.C. or assess critically its performance. If the terms of reference are liberally interpreted, there is no reason why the S.T.C. should not come under the Committee's review. There is now a widespread feeling among several sections of commercial opinion that the S.T.C. does not render a service which cannot be better rendered or at least as ably rendered by private traders. In any case, a definition of the S.T.C.'s role is conducive to better planning of trade activities by the private sector. All this is not to contend that the S.T.C. has no place in the country's economy. Only, it should truly live up to the official promises frequently made to the effect that this body is intended to supplement not supplant private effort in foreign trade.

On the export front, there is now considerable awareness of the importance of stepping up our effort to sell more goods abroad. Official action has so far been confined to the establishment of export promotion councils (of which there are 12 at present) and the grant of special incentives to exporters in the shape of tying up part of foreign exchange earnings with import entitlements. There is need to keep import entitlements under scrutiny in order to prevent their improper use and transfer and also to see that they do not result in unnecessary imports. Perhaps it is better to give a straight relief in income-tax than to induce exporters to export goods at a loss which can be covered by gain through imports. Incidentally, the Committee might examine whether the fiscal treatment of export income is fair and just. Further, it is a pity that export promotion bodies work on their own without the benefit of effective co-ordination. The Ramaswami Mudaliar Committee will be well advised to examine whether an apex body which will co-ordinate the export efforts of individual councils will not be useful.

A point that must be remembered is that export promotion, by its very nature, does not yield immediate results. The way to export prosperity is long and hard. The problem India faces today is similar to the one Europe faced some ten years ago when it sought a market for its goods in the U.S. During the period 1949-54, the results of Europe's efforts were disappointing and there was much frustration among European exporters. But then, this period of waiting and preparation did yield rich dividends for, in recent years, there has been a steady increase in Europe's exports to the American market. If India commences its export promotion efforts in right earnest today, it may well hope to see its efforts crowned with success in four or five years' time.

A thorough-going examination of the impact of trade blocs such as Common Market and European Free Trade Association on India's trade prospects is now overdue. Last year, India imported goods worth Rs. 171 crores from the Common Market, whereas its exports aggregated only Rs. 43 crores; the deficit was thus as large as Rs. 128 crores. India has not fared better in its relations with its neighbouring countries either. Thus, its exports to the E.C.A.F.E. region (other than Japan and including China) were valued at Rs. 68 crores, whereas its imports were as high as Rs. 101 crores; the deficit in trade was thus Rs. 33 crores. The Committee should not only assess the repercussions of the formation of trade blocs on India's trade but also suggest what measures India could adopt in order to promote its exports to these areas.

A problem that deserves attention is whether it is right that India should concentrate much of its export attention on developing new lines of export trade. New lines of export trade such as engineering goods have great potential value, whereas even a small improvement in exports of traditional items such as tea and jute goods could mean sizable increase in foreign exchange earnings. Discussing this question, the *Economic Survey*, published by the Union Government along with budget papers, observes: "There are in the short run rather rigid limits to the expansion that can be achieved in respect of traditional exports like tea, jute goods and cotton textiles, but it has to be borne in mind that a small percentage increase in these exports can yield a larger total of foreign exchange." In our search for markets for new products, we cannot possibly ignore the claims of our traditional items. For one thing India is much better known abroad as an exporter of tea and jute goods than as an exporter of machines or electrical appliances. This means it should be relatively easy to step up exports of traditional items. Here the problem is one of creating the necessary surpluses. India failed to increase its raw cotton production and the result is that last year its import bill on this account went up by Rs. 40 crores; a similar failure in respect of raw jute meant an increase in the bill for raw jute by Rs. 6 crores. Clearly, so far as India is concerned, export promotion involves concentration of efforts on agriculture and on raising per-acre yields. When this is accomplished, it should be possible to reduce prices and thereby stimulate the offtake of our traditional items by foreign countries.

Finally, there is the problem of financing export trade. In this sphere, the two welcome measures which have been adopted are the export risks insurance scheme and the liberalisation of the bill market scheme. According to the report of the Export Risks Insurance Corporation, 96 policyholders succeeded in obtaining finance facilities in respect of 2,607 shipments of the value of Rs. 2.37 crores; these figures do not include instances of exporters to whom banks afforded financial facilities without either the assignment of policies or transfer of the rights in respect of individual shipments. As the insurance scheme becomes more popular, it may be possible to enlarge the scope for export finance. Again, the Reserve Bank has extended the bill market scheme to export bills. Thus, bills arising out of the applicant bank's advances against export bills granted at any of its offices will be eligible for being offered as security for the borrowings under the scheme provided such borrowings are availed of by the bank concerned at places where the Banking Department of the Reserve Bank is located. The 90-day limit has also been waived for export bills; there will be no specific restriction now on the usance of the export bills provided the usance promissory notes lodged with the Reserve Bank mature within 90 days. It is for the Committee to examine whether the financing facilities available for exporters are adequate and whether there is a case for setting up a specialised export credit institution.

Notice

THE SENDRA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, at 11.00 a.m. on Monday, the 15th May, 1961, for the following purposes:

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1960, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in the place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 8th May, 1961 to 15th May, 1961, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD.,
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA, *30th March*, 1961.

Notes: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 30th May 1961, to those Shareholders so entitled whose names appear in the Company's books on the 15th May, 1961, or to their mandatees. No application for Dividend Warrants will be necessary.

SUPERSONIC AIR TRANSPORT

(Concluded from page 704)

windows of hospitals, offices and homes. Shattered plate-glass in shop-windows would almost certainly cause bodily injury to passers-by.

The larger the aircraft the louder and more destructive is the boom that is produced. Half a pound per square foot might be acceptable, but supersonic airliners with capacity for a hundred passengers or more are estimated to produce a sonic-boom that will have an impact of from 1.5 to 2 pounds per square foot at speeds of Mach 2 or 3. This would be quite intolerable. The only known scientific method of reducing the boom produced by an aircraft is to slim the vehicle, which is totally impractical, in fact ridiculous as far as an airliner is concerned, as it would have to be built with a cabin a mile long to accommodate the passengers lying flat on the floor head to foot in a single line.

There is one possible partial solution. Restrict all supersonic air transports to subsonic speeds at all times over populated country and below an altitude of 40,000 ft. Aerodynamically this is going to impose a terrific handicap on the designer and his team as they will have to produce an airframe with good flying qualities at low speeds as well as at supersonic. In addition the penalty imposed on operators by restricting the first and last parts of each flight to subsonic speed, as well as perhaps a goodly portion of the route should it pass over land, is going to destroy the whole advantage of supersonic travel, as well as knock the bottom out of it economically.

There are many other formidable difficulties in the way of introducing supersonic air transport. Already one subsonic airliner at present in the design stage may have to be cancelled as the powerplants producing 24,000 to 25,000 thrust each will create so much noise at take-off no airport in the world could accept such an aircraft. But this is a subsonic design, and the supersonics in addition to their jet engines will also employ rockets to enable them to gain supersonic speed quickly. The noise from these rockets plus the jet engines will never be accepted as a frequent occurrence within miles of any populated area.

Finally, scientists and technicians have yet to design and produce the essential air navigational equipment that can make the operation of supersonic aircraft reasonably safe. In the face of these problems the first steps should be towards finding solutions to the dangers of cosmic radiation, the sonic-boom and air traffic control. When it is known how to eliminate these dangers without a shadow of doubt, then it will be time enough to consider the actual manufacture of supersonic air transports, but not before.

In the present international situation with Governments hankering after supersonic military transport as well as national prestige, it would seem that only public opinion can save aviation from a most serious blunder which will have far-reaching harmful effects on the vast majority of the world's people. The press and public opinion must force the issue.

UNITED BANK OF INDIA LIMITED

(Concluded from page 709)

is high time that banks took a more realistic view of the situation, kept interest rates under control and tried other methods of improving their resources and profitability. While undoubtedly banks will have to make their own efforts in this regard, it is also our view that the banking system should receive apposite assistance from the concerned authorities. Tax concessions on that part of profits, which is utilised to build up reserves and thus to strengthen the capital structure, should, for example, be seriously considered by the Government.

"Indian banking needs a major reorganisation and the urgency of a close study of the whole matter cannot be overemphasised. In this connection I am glad to mention that your Managing Director, Sri B. K. Dutt, has given a timely lead. He was invited by Calcutta University to deliver a series of lectures as Prof. Benoy Kumar Sarkar Memorial Lecturer for 1960. He selected 'Monetary Discipline and Indian Banking' as the subject of his lectures. In these lectures, which are now available in book form, he has analysed in detail the prevailing situation in the Indian banking system and has put forward a number of ideas for its progressive development.

Note.—*This does not purport to be a record of the proceedings of the annual general meeting.*

L.I.C. INVESTMENT POLICY

IT would be a grave mistake to allow the adverse reactions of the share markets to the recommendations of the Estimates Committee in regard to the investment policy of the Life Insurance Corporation to cloud and confuse one's mind. In recent months, there has been a lot of overtrading in shares, making the technical position of the markets highly vulnerable to even the slightest bearish news. There is no real reason to feel that the interests of investors will suffer, if the L.I.C. ceases to buy the equities of existing companies. Indeed, the intrinsic merits of the Committee's recommendations are of a high order. They suggest that the Committee has paid serious thought to the problem of ensuring that the savings collected by the L.I.C. are more effectively utilised for realising the objective of planned economic progress than has been the case so far. There is no bias against the private sector in the Committee's recommendations, a factual summary of which is published elsewhere in this issue. On the contrary, they would, if implemented, help the private sector to play a vigorous role in the drive for rapid industrialisation of the country. The Committee has made it clear that it does not wish to see a reduction in the proportion of investments made by the L.I.C. in the private sector. Its proposal, therefore, does not involve any violation of the assurances given by Mr. C. D. Deshmukh, the then Finance Minister, at the time when life insurance was nationalised. Surely, Mr. Deshmukh never said that any part of L.I.C.'s funds would be used for supporting stock exchanges, much less for stimulating and sustaining a boom on them.

We were, of course, surprised to read in the papers that the Chairman of L.I.C. was in favour of his Corporation being relieved of the task of investing its funds, as suggested by the Committee. But our surprise was a pleasant one, for we never thought he would like to give up a substantial part of his mighty power. Rarely does one come across persons who wish to surrender power, even in part. Apparently, the present L.I.C. Chairman is not mad after power. He wants to serve the Corporation more effectively by concentrating on the primary function of selling insurance and servicing policyholders. This is a commendable attitude. The argument that, if the L.I.C. is relieved of the responsibility of successfully investing its funds, its efficiency would suffer, its enthusiasm for securing more new business would wane and it would not be able to declare larger bonuses, is not convincing. One does not see how these things would automatically follow. Even at present, the L.I.C. has not much choice left in regard to its investments, since the great bulk of its funds has to be put into gilt-edged and approved securities. It has discretion only in regard to about 13 to 15 per cent of the funds. But, for investing this relatively small proportion of its funds, it has to bother itself quite a lot, with the Chairman and Managing Directors themselves taking particular care to see that none of the purchases they make invites public criticisms of a nature that would affect the reputation of the Corporation. As the Estimates Committee itself rightly says, the L.I.C.'s investments in stocks and shares "lead to allegations and aspersions which, though they may not be justified in most cases, yet may do little to increase the prestige of the Corporation." This remark is actually an understatement, because the Corporation's prestige has suffered heavily due to not infrequent allegations of corruption, favouritism and inefficiency in the investment of its funds in stocks and shares. It is said that the Finance Ministry is opposed to the Estimates Committee's suggestions and the stand taken by the L.I.C. Chairman. This is understandable, because it is a thankless task for anyone to undertake this responsibility. Has it not already ruined the reputation of a former Finance Minister and quite a number of senior civilians and administrators?

Someone has, of course, to do the job of investing the funds of the L.I.C. The question who should do it is not so important as to how they should be invested. It is the latter that gives rise to the former. The Estimates Committee has given sound reasons for suggesting that the present policy and method should be changed. Its suggestions fully endorse the critical observations and practical proposals made by Mr. P. V. Krishnamurthy, an expert on insurance who has seen service in both the public and private sectors, in a comprehensive article to this journal some two and a half years ago, *vide* pages 831-33 of *Commerce* dated 22nd November 1958. In the absence of the full text of the Committee's report, it is not clear whether the Committee has submitted a concrete scheme for administering the Life Fund, but Mr. Krishnamuthy did spell out his scheme. It is quite possible to divert a part of the L.I.C. funds for establishment of new industrial projects in the private sector without in any way injuring the interests of either the policyholder or the taxpayer. The policyholder is already protected by virtue of the Corporation being owned by the Government of India. The Corporation's obligations in regard to bonus to policyholders can be met by Government guaranteeing a specified return on that part of the funds which is invested in the private sector. When the investments start earning, the Government will get, both by way of dividends and capital gains, much more than it has paid to the Corporation by way of guaranteed return. If the surplus is heavy, a part of it can be passed on to the L.I.C. which can be utilised either to enhance the bonus or to reduce the premium rates. Even otherwise, there is room for raising the bonus. Higher efficiency and low mortality rate can easily bring about a sizable improvement in the surplus available for distribution to policyholders. The cry that policyholders will suffer under the proposed amendment is thus meaningless.

If the Government has complete control over the investment of life fund, on the lines suggested by the Estimates Committee, it can use the proportion now meant for the private sector—there is no reason why this proportion should not be raised, if need be—for encouraging new entrepreneurs, for helping backward States to attract industries, for achieving regional balance in economic development and for establishing difficult industries which will become good dividend payers in course of time but which are not in a position to attract private investors now. If the projects for investment are chosen on sound economic considerations, the return will be quite handsome after the initial years and the net gain will be considerably in excess of what can be earned by buying the scrips of old companies at inflated values. To say that this argument is wrong is to contend that those who invest in shares of new industrial enterprises are doing a foolish thing.

It is no part of the L.I.C.'s function to ensure stability on stock exchanges. If stability is to be ensured through open market operations, the Government could do it by having a separate body for this purpose. Why should the L.I.C. be chosen for this purpose? It is those who say that the present policy and practice of L.I.C. should be continued that are unmindful of policyholders' interests, for there is no guarantee against risks inherent in them. Surprisingly enough, they seem to be oblivious of this point. There is no reason to feel that the withdrawal of the L.I.C. from the stock exchanges will lead to a crash. In the first place, the L.I.C.'s investments in equities have been relatively small, less than Rs. 6 crores per annum. Secondly, such investments have been spread over a very large number of scrips of which a good many are back-benchers. And, thirdly, there is a dearth of good scrips, a position that will continue for several years to come. In case there were to be a sudden influx of these scrips, it would provide an opportunity for individual investors to pick them up at fairly reasonable prices and thereby help broaden the ranks of individual stock-owners, a development which the private sector should welcome. Not long ago, it used to be contended, rightly in our view, that the L.I.C. was helping the unhealthy boom on stock exchanges by not booking its capital profit. Another widespread criticism was that the L.I.C. might be utilised as a machinery for back-door nationalisation. The scope for this danger will be eliminated, if the Estimates Committee's recommendations are accepted. Those who argue that the boom on stock exchanges should be kept up with the help of L.I.C. funds in order to enable new companies to get capital are suggesting that the L.I.C. should be a party to beguiling investors into doubtful ventures or to enabling company promoters to earn windfall profits by collecting a sizable premium on new shares. A sound industrial project should be able to attract sufficient capital in the normal course. Undoubtedly, it is necessary to ensure a climate of confidence for facilitating flow of capital into industries, but this does not mean that a stock exchange boom should be engendered and kept up for that purpose.

A BOOK FULL OF HALF-TRUTHS

WORLD interest in Indian economic development has been growing rapidly. This is due not merely to the fact that India is a vast Asian country, trying to quicken the pace of development broadly through democratic planning but also because the dependence of India on foreign assistance is now substantially large. It is only natural that foreigners should review our policies and achievements critically and India should welcome this for

more than one reason. Such appraisals are especially welcome on the eve of the finalisation of India's third Five-year Plan. One would normally look forward with special interest to a book by Prof. Bauer, who is a specialist in the field of underdeveloped economies, being, among other things, the joint author of a Cambridge University handbook on the subject and Professor of Economics (with special reference to economic development in underdeveloped countries) in the University of London. We are, however, sadly disappointed by his latest book entitled *Indian Economic Policy and Development.** It does not appear to be the product of objective thinking. On the contrary, it is full of prejudices and is a long catalogue of acts of omission and commission on the part of the Government of India. Essentially, what the Professor is opposed to is India's socialism. One can judge the substance of the criticism when it is mentioned that a very distinguished British economic weekly characterised the book as full of half truths; it will be borne in mind here that understatement is the characteristic of the British. Perhaps, it will not be an exaggeration to say that Prof. Bauer has written in the best traditions of a Tory diehard. It remains to be seen whether this book will do any harm to India, but, fortunately for us, the author is in a minority which is fast shrinking in size.

Now, what is the catalogue of commissions and omissions on the part of the Government of India? The fundamental mistake is, according to Prof. Bauer, the Government has embarked on socialist planning. The regulation of the economy is severe. The investment is excessive. Its composition is wrong, especially the emphasis on heavy industry. Agriculture is neglected. So are education and transport, especially roads. The deficit financing is too large. The private sector is being "throttled." Foreign aid is being given predominantly for non-economic considerations. There is conspiracy, as it were, on the part of the Government of India or foreign economists and journalists, especially American, to withhold information and overlook failings, in order to obtain large foreign aid for India. Continuance of large-scale foreign aid will, by adding to Government's resources, only perpetuate the wrong things that are a feature of development planning, which, according to Prof. Bauer, is not essential for the development process.

Prof. Bauer feels that the suggestion that foreign aid "be abandoned is at first sight attractive when applied to aid to India, where it serves to underpin policies resolutely pursued which cannot be interpreted reasonably as according either with the aim of raising the standard of living of the masses, or with the aim of promoting a society resistant to totalitarian influences." However, the Professor himself feels that this may not be done. So he has urged that the aid must be much smaller than what India has obtained for the second Plan or what it would like to get for the third Plan. The figure which Prof. Bauer recommends is no more than £75-100 million (Rs. 100-135 crores) per annum for a period of 3-5 years, as compared with the average of about Rs. 600 crores per annum that has been projected for the third Plan.

Nobody in India, least of all the Planning Commission, has maintained that all has been well with the Plans so far. For instance, it is now well recognised that not sufficient attention was given to agricultural development in the second Plan, this being presumably due to the substantial improvement that was recorded in output in the first Plan, that more attention should have been paid to the development of general and technical education and managerial talent, and that a larger role should have been allotted to the private sector than has actually been the case so far. There has been frank admission of the under-estimation of the requirement of foreign exchange for the second Plan which is now being estimated much more realistically for the third Plan. Likewise, there has been growing concern at the extent of deficit financing and, for this reason, the quantum of deficit has been rapidly going down from 1958-59 onwards; the deficit for the current year (1960-61) is very small, of the order of Rs. 35-40 crores only. In fact, the ceiling to deficit financing for the third Plan is placed at Rs. 550 crores and a deficit of this magnitude cannot be regarded as inflationary. Prof. Bauer has ignored all these latest trends and facts. He has taken the figure of deficit financing of the first 2-3 years of the second Plan and tried to paint a harrowing picture of the evils of deficit financing. Incidentally, Prof. Bauer and his like require to be told that a good part of the balance of payments deficit in the first two years of the second Plan did not reflect the import propensity of deficit financing. It was a deliberately planned deficit in balance of payments, for the much larger investment of the Plan. In fact, to a large extent, deficit financing and balance of payments deficit were one and the same thing, the Government's requirement of foreign exchange being obtained through borrowing from the Reserve Bank of India.

The criticisms regarding the restrictions on private sector's activities are also largely theoretical and out of date. Despite several inconsistencies in the Government's policies, the fact remains that the private sector has recorded a tremendous expansion in recent years. The best testimony to this is the veritable boom in the stock market in the past two years. Some of the spheres earlier reserved for the public sector have been thrown open to the private sector. Steel, coal and fertilisers are, to mention a few instances, witnessing expansion in the private sector. The Government has also taken steps to increase the flow of financial resources to the private sector, through the setting up of special institutions. In the matter of allocation of foreign exchange, too, the private sector has not been discriminated against. In the result, the actual performance of the private sector has turned out to be about 40 per cent higher than the estimate of Rs. 2,400 crores given in the second Plan projection, whereas the public sector outlay has had to be cut. It is surprising that Prof. Bauer has not taken note of these developments. The fact that private foreign capital is coming to India in much larger amounts than before, albeit in collaboration with the private sector in India, bears testimony to the increasing confidence of foreign investors.

It is true that there are many formalities, procedures and regulations to which the private sector has to submit itself and that, undoubtedly, there is scope for rationalisation. It is also true that not all the sections of the Government and the ruling party appreciate the role of the private sector. But, in a young democracy with 400 million have-nots, this is inevitable to some extent. Perhaps, many of the State Governments could abandon with advantage their adventures into certain types of economic activity, which the private sector could handle more competently. One may also concede that, while corporate taxation, in general, is not oppressively heavy, the taxation of the high income brackets is severe and what is more the multiplicity of taxes is annoying.

It is, however, a moot point whether the private sector would have been in a position to undertake many of the industrial projects which the Government has undertaken. Its ability to mobilise internal resources is relatively much smaller, in the present circumstances, than that of Government. It is extremely doubtful if the private sector could obtain a fraction of foreign aid that Government is able to mobilise. Neither would it be practicable for Government to obtain large domestic and foreign resources and place most of them at the disposal of the private sector. There is scanty recognition in Prof. Bauer's book of the undeniable fact that the dynamism of the private sector owes its inspiration, to a large extent, to the ambitious planning of Government. The majority of the private sector, however, is fully aware, and quite appreciative, of this.

Nor can there be much disagreement over the emphasis on heavy industry, especially steel. Nearly every one has recognised that India is favourably placed for the production of steel. This is not to say that one should necessarily justify the setting up of three units in the public sector rather than two or that one should support the establishment of a fourth unit in the third Plan in the public sector. There could, of course, be some pruning here and there, but, by and large, the emphasis on heavy industry and power is justified, when the country has resources.

Despite the rate of growth of national income in the second Plan falling behind expectations, the increase, in real terms, of the order of 40 per cent in the decade of planning, compares very favourably with the growth in the long period of British rule; incidentally, Prof. Bauer is of the view that it is not "meaningful" to ascribe Indian poverty to the effects of British rule, a view with which few will agree, either in India or abroad, not excluding the British Isles. It is the advent of planning under Government auspices after independence that has injected dynamism into a stagnant economy. The inhibitory customs, beliefs and the influence of caste are waning, though some may consider that the pace needs to be greater. There is everywhere a desire to improve the standard of living. People are reading, talking and thinking on the problem of economic development. Ministers, members of legislatures and the general public are becoming increasingly educated in the economics of growth. These are some of the aspects of Indian economic planning which deserve to be appreciated, rather than figures of food or steel output, rate of growth of national income or balance of payments deficit, important though they are. Indeed, hundreds of distinguished foreigners who have visited India have paid a compliment to India's effort and success in these directions. They have come to India, partly on their initiative and partly on the initiative of the Government and, while, of course, they have many criticisms on detailed aspects of the Plan, hardly anyone has condemned the Plan *in toto*, as the learned Professor has done. In fact, he goes further and questions the *bona fides* of the favourable comments of others. He suspects a conspiracy on the part of all, especially the American economists, to get more aid for India. He has not even one good word for the Government of India. This is a sad feature of Prof. Bauer's book. Any critic is welcome to be brutally frank in his appraisal, but the criticism should be marked by objectivity and sympathetic understanding of the historical, political and environmental factors operating on the economy. It is, however, a matter for gratification that such one-sided criticisms are, as stated at the outset, so few. It is for each country to decide the pattern of its economic organisation, but the point is that, so far, there is not enough evidence to show that Governmental activity has been injurious to economic growth. In any case, there is no reason to assume that economic policies would not be modified to meet the changing situation, since the declared objective of the Government is to achieve economic growth through democratic means. As already mentioned, the Government has given much evidence of flexibility. Again, one should also note that the democratic process is really one of trial and error and various conflicting points of view have to be reconciled, leading to compromises of all sorts.

While Prof. Bauer has indulged in wholesale condemnation of the Indian Government's economic policy, we do not propose to do the same and condemn his book unreservedly. He has quite a few valid points of criticism, most of which have, in fact, been recognised by the planning authorities themselves. Development of agriculture, education, general as well as technical, and development of transport facilities are being given greater priority in the third Plan, though in respect of education and transport, especially road transport, Government ought to go much further. There is likewise a need to put foreign aid to the most productive use. India's record in the matter of utilisation of foreign aid is considered to be quite good by foreigners, but let us apply to ourselves even more rigid standards than what the foreigners do, so that there may be no difficulty to service the debt and repay it on maturity. Export promotion needs to be tackled much more vigorously. Likewise, the Government should do a much better job of mobilisation of domestic resources than what it has accomplished so far. The fact that Prof. Bauer recommends foreign aid of £75-100 million per annum is itself some indication that even he has some confidence in India's ability to put foreign aid to good use. But any attempt to influence the evolution of Indian political and economic policies and institutions is essentially the job of the Indian electorate. Subject to this basic postulate, it is the duty of all of us to study all criticisms and viewpoints, particularly of those who have a genuine desire to help us, and it should be our endeavour to profit by them in stepping up the rate of growth of the economy.

Indian Economic Policy and Development. By P. T. Bauer. Publishers: Messrs. George Allen and Unwin Ltd., London. Pages: 152. Price: 16 shillings.

MARKET GOSSIP

Much Ado About Nothing?

THERE is little prospect of the Government of India accepting the suggestion of the Estimates Committee to divest the L.I.C. of the function of investing its funds. The Union Finance Ministry is opposed to the idea and, although Mr. Morarji Desai refrained from commenting on it in his reply to the debate on his Ministry, his past observations on the investment policy of the L.I.C. and his conservative outlook on these problems warrant the inference that he would favour the continuance of the *status quo*. It is a safe bet that the L.I.C. Chairman and his officers will have to carry the responsibility at least for quite some time to come, if not for ever. With the life of the present Parliament and the present Cabinet limited to only one more year, the operators in share markets can safely proceed on the assumption that there would be no change in the investment policy of the L.I.C. on the lines suggested by the Estimates Committee for another 12 to 18 months. It would be quite unrealistic to speculate now on what the next Parliament and the next Government would do.

The substantial shake-out experienced by the share markets this week merely because of certain proposals on paper is proof of the fact that the speculators had overtraded on the long side and the slightest adverse news was enough to make them uneasy. But the most important factors that have weakened their hands are the high level of interest rates and the absence of investment support for equities at the top levels. From 1st April, most banks have raised their rate of interest on advances against shares to 7½ per cent per annum and, even at this rate, they are reluctant to allow the parties to draw up to their full limit. The *budli* charges in the market are, therefore, much higher, as much as 12 to 15 per cent per annum. With the scope for further capital appreciation in the near future restricted and with net yields on the popular scrips being in the neighbourhood of 4 per cent, bulls have very little attraction to hold on to their purchases.

Some are, however, banking on the hope that interest rates will tend to decline after a few weeks, when the traditional period of busy season comes to an end. Another hope is that, since no new capital issues by the private sector will be permitted in the slack season and since a good part of the capital, now being locked up in such promising issues as Goodyear Tyre and Madras Rubber, will be returned in the next two months, the markets may begin to look up again a month hence. A third hope is that, in order to make Central and State Governments' borrowings successful, the Reserve Bank will soon initiate appropriate measures to ease the money market. A fourth hope is that, after Parliament adjourns by the end of this month or early next month, the chances of getting shocks from New Delhi will be next to nothing. The Bill to amend the Income-tax Act is due to be introduced in Parliament in the next few days and this may provide an occasion for some members to run down the private sector again. One cannot also be too sure that the Bill itself will be completely innocuous so far as the stock exchanges are concerned. But the firmness with which Mr. Morarji Desai replied to allegations of widespread tax evasions in the country suggests that he will not support woolly and unpractical ideas. For all these reasons, some in the markets feel that the present setback to equity values is only a passing phase and that the upward trend in equities will very soon assert itself. But there is also a growing opinion that, if and when this happens, many an investor would be tempted to book his profit as a precaution against pre-election shocks.

It remains to be seen whether this prognostication, which is apparently based on previous experience, will materialise. It is true that the 1954-56 boom came to an end in July-August 1956 and was followed by a depression which lasted for nearly two years. But the party-in-power is in a more chastened mood today than it was some two or three years ago. There is, of course, still the ginger group (of the Congress Party) into which Mr. K. D. Malaviya is trying to infuse fresh strength. He seems to have been successful in getting a broad measure of support from Members of Parliament for his oil and mineral policies, even though they have yielded very little solid results and muddied the climate for obtaining foreign aid. There are many in Government circles who feel that, while Mr. Malaviya has been successful "in bringing the three foreign oil companies to their senses," he is going too far in stubbornly refusing to allow them to expand their activities. They readily concede that the gains achieved by him through hard bargaining with oil companies have been more than neutralised by his dog-in-the-manger policy in regard to exploration, drilling and refining, a policy which has come in for sharp criticism, behind the scenes, of course, from the members of "Aid-India Club," including the World Bank. It is felt by knowledgeable circles that, if Mr. Malaviya pursues this policy without substantially modifying it in the very near future, the Indian spokesman will find it pretty difficult to convince the "Aid-India Club" of the need for foreign assistance of the order envisaged in the third Plan.

The Union Cabinet must be fully aware of this possibility. It is reported that, during his flying visit to New Delhi this week, Mr. B. K. Nehru, India's Commissioner-General for Economic Affairs in Washington, gave a full report to the Government of the reactions of Western Governments to Mr. Malaviya's oil policy, about which he is believed to have written to it even earlier. All this does not seem to have made any impression on him. The lack of realism in his policy will be further evident from the fact that, at a time when India's foreign exchange resources are less than Rs. 130 crores, he is in favour of the foreign oil marketing companies and refineries throwing open a part of their capital to Indian investors. In other words, he will have no objection to their repatriating a part of the funds they have invested in this country. The significance of tolerance shown to Mr. Malaviya's attitude is that doctrinaire leftist forces in the Cabinet are still a power to reckon with in this country.

Tackling the Sugar Problem

It would appear that, for India, it is more difficult to tackle the problem of surplus of a particular commodity than the problem of scarcity. This is so at least in so far as sugar is concerned. The sugar mills are carrying heavy stocks and the stocks are expected to be heavier still towards the close of the current season; one estimate places the total undisposable surplus that will lie with mills as on 31st October next at as much as 1.35 million tons. The spokesmen for the industry have clearly warned that, if the position does not improve, the industry will not be able to purchase the cane supplied by farmers, to pay the cane cess, purchase tax and co-operative societies' commission, and to implement the Wage Board's award. The crisis could have been avoided if only the authorities had followed a realistic sugar policy without importing political considerations into it. The result is that they are now greatly confused as to what should be done to solve the crisis of plenty in sugar. Such is the impression one gets from the observations made by Mr. S. K. Patil, Union Minister for Food and Agriculture, in the course of his reply to the debate on the demands for grants for his Ministry in the Lok Sabha on Tuesday this week.

One had thought that Mr. Patil would clearly spell out the Government's policy on sugar. But this hope has been belied. Mr. Patil has not indicated any firm line of action to tackle the problem of surplus, nor has he made policy pronouncements on the issue pertaining to controls on distribution, movement and prices, excepting to say that the Government would bear all the export losses in the first year of the export programme. At one stage, he rejected outright the plea for the immediate removal of all controls on sugar, on the ground that, if this step were taken, "there would be such a collapse of price that the whole industry would go to the dogs." But at another stage, he said that, as soon as the export programme got under way, control on distribution would be lifted in a manner which would enable more sugar to come into the market. To quote him: "When the sugar gets out, if I liberalise circulation and remove the control on distribution, you will find the possibility of somewhere about 200,000 tons (more) of sugar being taken by the people."

The statement of Mr. Patil that "the loss on sugar export will be borne by the Government itself mainly in the first year at any rate," is vague. What, one would ask, would happen to the losses on exports in the subsequent years? It is, of course, a different question whether there will, in fact, be any sizable exportable surplus of sugar in the coming years, in view of the continuously rising pressure of demand for this article of daily necessity in the context of the expanding population, the increasing living standards of the masses and the growing preference of consumers for white sugar *vis-a-vis* brown sugars (*gur* and *khandsari*). There is also the vagary of Dame Nature which influences greatly the size of sugarcane crop and, consequently, rate of sugar output. The problem will not be so stupendous as is made out, if the Government quickly implements a stockpiling programme, followed by measures to reduce the area under sugarcane for the next season and relaxation of controls on distribution and consumption.

The need for earning foreign exchange is no doubt urgent. But no less urgent is the need for ensuring sufficient supplies to the expanding domestic market at a reasonable price. As in the case of coffee so in that of sugar, the larger the home market, the greater the industry's capacity to export a larger volume at a loss. On an average, the loss on 100,000 tons of sugar exported abroad comes to about Rs. 4 crores, besides the loss in rupee resources to the extent of Rs. 3.43 crores as a result of the full remission of excise duty and cane cess. The total loss thus comes to Rs. 7.43 crores or over Rs. 24 for every ton of sugar produced. The loss will rise further, if exports are increased without expanding the size of the domestic market. It is true that the loss may be subsidised either directly by the Government or at the cost of the industry or the consumer. But there is a limit upto which such subsidy can be extended.

A stable export market for Indian sugar can be built up not on the basis of subsidy or other artificial props, but only through efforts at making sugar a competitive commodity in world markets. It is true that the free market in world trade in sugar is an artificial one and that sugar producers all over the world are subsidised in some form or other. But the cost of production of Indian sugar must be substantially brought down even for finding an overseas buyer who is prepared to extend to this country the special price which he is paying to another country for political or other reasons. It is here that the sugar policy of the Government calls for a complete reorientation. The primary objective of the policy should be reduction in production cost. Sugarcane, the principal raw material, accounts for the major portion of the cost, thanks to the system of paying for cane on the basis of weight alone irrespective of quality considerations. Although Mr. Patil is fully aware of the defects in the system, he is reluctant to change it. In the Lok Sabha this week, he revealed that he was working on a long-term plan by which sugarcane prices could be reduced without affecting the income of the farmer. He is reported to have said: "If the yield can be raised by 40, 80 or 100 per cent by provision of better fertilisers and irrigation facilities, it is reasonable for me to ask something in return." While it would be interesting to know the details of Mr. Patil's plan, it must be emphasised even at the risk of repetition that there is no alternative to the method of paying for cane other than the one that relates the price to the sugar contained in cane and not to the wood in it. It is only the adoption of this method that will ensure a higher return to the cane grower and a reduction in the land devoted to sugarcane. If Mr. Patil takes a bold lead in giving effect to such a policy, he will surely have rendered a distinct service to the agriculturists, the sugar industry and the consumers.

So far as the immediate problem is concerned, an attempt may be made to solve it on the following lines:

(1) Government should build up a bufferstock of 300,000 tons to 400,000 tons of sugar.

(2) Remove controls on prices and distribution.

(3) Reduce the excise duty and cane cess by one-fourth. The loss could be more than made good through increase in consumption. After all, the Government did not bargain for a production of 2.7 million to 3 million tons this season.

(4) Let the consumer have the benefit of cheap sugar and eat more sugar. If he cannot do so now, when the supply is more than the demand, when will he?

(5) The banks should be enabled to increase the accommodation to sugar factories and merchants by the Reserve Bank freely rediscounting such advances at the basic Bank rate of 4 per cent on the distinct understanding that they will charge their clients not more than 6 per cent.

(6) It is hard to believe that sugar mills are not making adequate profit. They have all had a larger supply of cane and a bigger turnover. Accordingly, if the effective ex-factory prices go down a little, outcome will not be that serious. Surely, if there are uneconomic or inefficient units in sugar industry, now is the time to eliminate them. How long should India put up with inefficiency even in such a simple processing industry as sugar?

(7) The Government should boldly announce a modest reduction in the price of sugarcane even for the 1961-62 season. One real test of leadership lies in leading the masses (here cane growers) and not in being led by them. If it is the forthcoming elections that are worrying the Ministers, they seem to be suffering from imaginary fright. Are not consumers of sugar larger in number than growers of sugarcane? Can they not make capital out of a reduction in the price of sugar? They can serve the cane growers' interests better by enabling them to receive prompt payment for the cane sold to the factories and by persuading them to sell their unharvested crop to the factories at a lower price. If the price of cotton, wheat and rice can be allowed to go down, why should price of sugarcane alone stay put at a fancy level?

Paper Industry

The production target for paper and paperboard tentatively fixed to be achieved by the end of the third Plan (1965-66) is 700,000 tons, which may be revised upward, since licences have already been granted or approved to increase the installed capacity to 1,145,000 tons (from 410,000 tons) in 1960-61, as against the original target of 900,000 tons. The tentative production target of 700,000 tons itself represents quite a substantial rise—350,000 tons or 100 per cent—over the actual estimated output of 350,000 tons in 1960-61. Will so much of additional production materialise? It will be rash to say that it will on the basis of the remarkable production performance of the industry during the second Plan period which witnessed a rise of 90 per cent in output, from 187,000 tons in 1955-56 to 350,000 tons in 1960-61. For the conditions now obtaining in the paper industry are greatly different from those prevailing during the major part of the second Plan period. The industry today is caught between the impact of enhanced cost of manufacture, on the one side, and fixation of uneconomic prices, on the other. How disquieting is the situation was pointedly described by Mr. P. J. Egan, Chairman of the Indian Paper Makers Association, in his speech at the recent annual meeting of the Association at Calcutta. Here is what Mr. Egan said:

"The prices of all raw materials, including rags and paper cuttings, have increased considerably. The price of coal has gone up and, due to wagon shortage, mills are now incurring additional expenditure on road transport for coal. In addition, coal bills have shown an all-round increase, due to the downgrading of coal for the paper industry. The basic prices of china-clay, rosin and almost all chemicals used by the industry have increased and, as most of these items are generally supplied in gunny bags, packing charges for these items have recently soared, due to the inordinate increase in the price of gunnies which, of course, has had its effect on mills' own packing costs. Moreover, labour costs have increased as a result of Tribunal awards."

Mr. Egan would, perhaps, not have taken pains to highlight the above handicaps had it not been for the fact that the paper industry is compelled to sell its products at prices based on the

EQUITIES DRIFT DOWNWARD

UNDERTONE EASY

(From Our Own Correspondents)

BOMBAY, *20th April*

THE share market had a short trading week of only four working days, since it was closed on Friday the 14th inst. (*Ambedkar Jayanti*) and Monday the 17th (*Shivaji Jayanti*). During this brief period, equities drifted downward. The power cut in several industrial regions gave rise to fears of a possible setback to production with adverse effect on the profits of companies. The continued monetary stringency restrained the enthusiasm of investors. Further, the forthcoming attractive new public issues of leading companies checked the flow of funds for investment in existing scrips. On top of all these came the Estimates Committee's recommendation to the Government to take over investments of life insurance funds from the L.I.C. It was feared that, if the recommendation were accepted, the L.I.C., the largest institutional investor in the country, would withdraw completely from the share market. Heavy speculative liquidation, therefore, ensued and scrips in both cash and forward lists suffered a sharp setback on Tuesday. But, on second thoughts, it was realised that the recommendation would not be accepted by the Government at all; operators noted the report that the Estimates Committee had itself referred to the strong objection raised by the Finance Ministry officials. This consideration and the announcements of further tax concessions by Mr. Morarji Desai in the Lok Sabha yesterday led to a recovery in values yesterday and today. The recovery, however, was not marked enough to make up for the earlier losses, so that the closing rates today were lower than those at the end of last week.

Steel shares staged a retreat. Tata Steels came in for heavy selling, in spite of the news of L.I.C. buying, and declined from Rs. 150 to Rs. 145. At this level there was short covering as well as some replacement buying and the scrip rose to Rs. 146.25. The net loss over the week is Rs. 3.75. Indian Irons dropped 25 nP to Rs. 26.55. Mukand Irons, however, were well favoured, thanks to the announcement of expansion plans by the Company, and were marked up from Rs. 26 to Rs. 27.15.

Barring a few select scrips, textiles lacked support. Finlays were marked down by Rs. 15 to Rs. 326. Khataus slumped by Rs. 11.25 to Rs. 335. Podars eased by Rs. 9 to Rs. 147. Swans fell by Rs. 10 to Rs. 555. Morarjees eased by Rs. 8 to Rs. 332. Gokaks and Indores receded by Rs. 4 each to Rs. 180 and Rs. 144, respectively. Svadeshis were quoted Rs. 3.75 lower at Rs. 257.75. Kohinoors were done Rs. 3.50 lower at Rs. 289.50, as against Rs. 293 last week. Standards lost Rs. 3 to Rs. 1,482. Simplex shed Rs. 2 to Rs. 187. Centurys, however, elicited special support and firmed up from Rs. 569.50 to Rs. 583.50 before finishing at Rs. 581. Indore Malwas strengthened by Rs. 4 to Rs. 144. Bombay Dyeings, after minor fluctuations, closed unchanged at the last week's level of Rs. 65.30.

Cements were subdued. A.C.Cs came in for selling induced by the failure of the expected bonus issue to materialise and declined progressively from Rs. 158 to a low of Rs. 155.50; towards the close, they shaded better at Rs. 156.25. The net loss over the week is Re. 1.75. Digvijays receded by Re. 1.50 to Rs. 152. Orissas were dull at Rs. 14.32.

Sugar shares did not show any decisive trend, as operators preferred to analyse the implications of Mr. Patil's statement in the Lok Sabha on sugar prices, controls and stocks. Belapurs eased from Rs. 286 to Rs. 280, though towards the close they attracted some support and recovered a part of the earlier losses. The finish was still Re. 1 lower than the last week-end quotation of Rs. 286. Maharashtra Sugars receded by Re. 1 to Rs. 201.50. But Walchandnagars were well favoured and put on Rs. 3 to Rs. 197. Bhopals were a shade better at Rs. 26.10. Phaltans were quiet at Rs. 143.

Further ground was lost by shipping shares. Great Easterns declined by 24 nP to Rs. 15.05. Scindias eased by 32 nP to Rs. 14.32. Among automobiles, Premiers fell by Rs. 2.75 to Rs. 167.50. Hindustan Motors eased from Rs. 19.68 to Rs. 19.76.

Uncertainty about the incidence of excise duty continued to depress rayon shares. National Rayons were hammered down from Rs. 520 to Rs. 500.50 on Tuesday. Scattered buying attracted by the low level lifted the scrip to Rs. 506 at close today after having touched Rs. 507.50. Baroda Rayons eased by Rs. 3 to Rs. 139.50. The Company has decided to issue right shares to its existing shareholders in the ratio of one new share for every two held at a premium of Rs. 5, that is, at Rs. 105 per share. South India Viscoses changed hands Rs. 3 lower at Rs. 157. Gwalior Rayons receded by 25 nP to Rs. 44.75.

Dyes and chemicals continued to be depressed. Polychems slumped by Rs. 15 to Rs. 225. Colourchems and Indian Dyestuffs were marked down by a like amount to Rs. 325 and Rs. 487.50, respectively. Adarsh Chemicals fell by Rs. 9 to Rs. 75. Alembics softened by Re. 1.50 to Rs. 265.50. Amar Dyes, Citrics and Dhrangadhras were neglected at Rs. 390, Rs. 57 and Rs. 132, respectively.

Engineering shares fared no better than others. Telcos encountered selling and retreated from Rs. 338.25 to Rs. 322 on Tuesday but recovered to Rs. 331.50 today. Cooper Engineerings declined further by Rs. 13 to Rs. 195. New Standards (new) were down by Rs. 5 at Rs. 178. Despite favourable working results, Alcock Ashdowns decreased by Rs. 2 to Rs. 324. Kamanis shed a rupee to Rs. 17. Mahindras lost 76 nP to Rs. 20.24. Texmacos receded by 16 nP to Rs. 21.84. Premier Constructions dropped 50 nP to Rs. 192.50.

In the miscellaneous section, too, selling was widespread. Bombay Burmahs declined from Rs. 613 to Rs. 604. The Company's tea crop during the 9-month period ended 28th February, 1961, amounted to 49.56 million lbs., as compared with 45.89 million lbs. in the same period last year. Wimcos slumped by Rs. 20 to Rs. 276. Tata Oils moved down by Rs. 5.20 to Rs. 76.50. Jayant Papers lost Rs. 4.50 at Rs. 58.50. Premier Tyres eased by Rs. 3.50 to Rs. 105. West Coast Papers softened by a rupee to Rs. 206. Voltas lost a like amount to Rs. 275. Hindustan Levers declined by 98 nP to Rs. 47.50 *ex-div.*

Madras Stock Exchange

MADRAS, *19th April*

The Stock Exchange continued to be subdued during the week under review, with professional operators reluctant to enter into new commitments either way. The Estimates Committee's suggestions that the Government should take over the investment of Life Insurance Corporation's funds acted as a great damper. There was also much concern over proposed cut of 50 per cent in the power supply from next month which, it was feared, would adversely affect the production operations of industries. Textiles were subjected to selling pressure. Tea company shares ruled easy, on reports that there was demand for tea only at low prices. Coffees drifted downward, thanks to large accumulations of stocks and continued decline in prices. In sympathy, rubbers were weak. Sugars suffered a setback to vaues. Banks and electricals were featureless. In the miscellaneous section, chemicals and cements encountered selling.

GOODYEAR INDIA

The eagerly awaited public issue of Goodyear India Limited has now been announced; it will open for subscription on Tuesday next week (25th April). The issue, the details of which are published on pages 748-751, consists of 400,000 equity shares of Rs. 10 each at a premium of Rs. 7 per share. Applications for shares must be for a minimum of 50 shares or multiples of 50 shares. The whole issue is to be thrown open to the public, unlike in the case of other companies where substantial portions are earmarked for being subscribed by promoters and directors, as well as their friends and managing agents. Recently, the Company allotted 1,600,000 equity shares of Rs. 10 each to the parent Company, namely, Goodyear Tire and Rubber Company of Akron, Ohio, U.S., on consideration of machinery and equipment to be supplied by it and partly in consideration of cash payment.

The public response to the above issue is bound to be overwhelming, despite the premium of Rs. 7 per share, what with excellent growth prospects and chances of handsome return on investment. There is, as it is, a good demand for the Company's tyres and other rubber products and this is likely to increase further, as its manufacturing facilities are completed and as the general market expands, in keeping with the improvement in standards of living and communications. The Company has embarked on a major programme of erecting and equipping an entirely new factory. The proceeds of the issue will be used to purchase machinery and equipment abroad and also provide additional working capital. No information is, however, made available as to the installed capacity of the new factory and the actual annual rate of output. The Company has already secured from the U.S. Export-Import Bank credit facilities amounting to Rs. 2.25 crores. It is anticipated that the Company will be in a position to meet out of its internal resources its obligations under the loan agreement in relation to repayment of interest and instalments of the principal. The credit is repayable in 18 equal half-yearly instalments commencing from 15th February 1961 and bears interest at 6 per cent per annum.

ASSOCIATED INDUSTRIES (ASSAM)

The Associated Industries (Assam) Ltd., a company promoted by the Calcutta business house of Jatias for the purpose of setting up a cotton spinning mill and a chemical plant in Chandrapur area near Gauhati in Assam, has announced the issue of capital amounting to Rs. 50 lakhs to finance the projects. The details of the issue appear elsewhere (pages 738-739). It will be seen therefrom that the issue consists of 15,000 9.3 per cent (taxable) redeemable cumulative preference shares of Rs. 100 each (Rs. 15 lakhs) and 350,000 equity shares of Rs. 10 each (Rs. 35 lakhs). The entire preference shares will be taken up by the Government of Assam for cash at par. Of the equity issue, 250,900 shares (Rs. 25.09 lakhs) will be open for public subscription, including the 50,000 shares reserved for the people of Assam; the subscription list will open on Friday the 28th inst. The balance of Rs. 9.91 lakhs will be taken up by (1) the Government of Assam (40,000 equity shares), (2) Rallis India Ltd., Calcutta (30,000 shares), and (3) the Directors, their relatives, friends as well as associated companies (29,100 shares, in addition to the 100,000 shares already allotted to them).

The total capital outlay on the projects is put at Rs. 105 lakhs. The Industrial Finance Corporation of India has sanctioned a rupee loan of Rs. 26.17 lakhs and a dollar loan of $505,000 for the purchase of plant and machinery. The Company has entered into an agreement with the well-known American firm of Singmaster Breyer Inc., New York, for the supply of a complete plant to produce sulphur dioxide (liquid), sulphuric acid, superphosphate and mixed fertilisers. As for the cotton mill, the New Standard Engineering Company of Bombay has undertaken to supply and erect the blow-room machinery and Textools of Coimbatore will supply the other equipment such as card engines, can fed inters and ring spinning frames.

MADRAS RUBBER FACTORY

It will be recalled that a brief reference to the proposal of the Madras Rubber Factory Ltd. to offer for public subscription capital amounting to Rs. 50 lakhs was made on page 170 of *Commerce* dated 28th January 1961. The details of the offer have been announced now—*vide* pages 752 and 753 of this issue. The list of public subscription will open on Monday the 24th inst. and close on the 29th or earlier but not before the 26th inst.

The capital of Rs. 50 lakhs (500,000 equity shares of Rs. 10 each) to be offered for subscription will enable the Company to meet 25 per cent of the total estimated additional outlay of Rs. 2.0 crores on the production programme which envisages manufacture of 300,000 automobile tyres, 300,000 tubes and 10 million lbs. of camelback and tread rubber annually. A sum of Rs. 25 lakhs has been reserved for subscription by the Mansfield Tyre and Rubber Company of the U.S., the foreign collaborating firm, against payment for machinery, etc., to be purchased in the U.S. and/or in cash and an equal sum will be taken up by promoters, directors and their friends. The balance of Rs. 1 crore is proposed to be raised by loans from banks and other financial institutions.

The public issue of Madras Rubber is expected to meet with full success. The factory is already earning handsome profits and the prospect of a dividend on the increased capital from the very first year of the commencement of production of tyres, tubes, and camelback and tread rubber is promising. The Company has sufficient spare land for further expansion. The products of the Company are assured of a ready market. Mansfields has given the factory liberal and generous collaboration terms. The Directors and Managing Agents of Madras Rubber have sufficient experience in all aspects of rubber industry and business management, and are connected with a large number of rubber plantation companies and rubber factories.

POLYCHEM

Polychem Limited, Bombay, has received the consent of the Controller of Capital Issues for the issue of 32,000 equity right shares of Rs. 50 each at a premium of Rs. 75 per share. The existing shareholders will receive the right shares in the ratio of two shares for evey five held by them. As a result of this issue, the ordinary capital of the Company will increase from Rs. 40 lakhs to Rs. 80 lakhs.

The object of the present issue is to finance its new styrene manomer project which is estimated to cost approximately Rs. 3 crores. Styrene manomer is an important plastic raw material used in the manufacture of polystyrene. Although the Company has an installed capacity to produce about 12½ million lbs. of polystyrene, only 60 per cent of the capacity is now being utilised due to inadequate imports of styrene manomer. The Company is, therefore, anxious to produce styrene manomer at an early date in order to expand the production of polystyrene. The plant is expected to go into production by the third quarter of 1962. It has already secured an industrial licence and has finalised arrangements for a dollar loan of Rs. 1 crore from the Industrial Finance Corporation. The technical collaborators for the project are Messrs. Dow Chemie A.G. of Switzerland.

The issue of 196,000 equity shares of Rs. 10 each offered by the Binani Metal Works Limited, Calcutta, has been largely oversubscribed. The Directors propose to take every possible step to expedite the allotments and arrange refunds after consultation with the Stock Exchange authorities.

NEWS IN BRIEF

THE U.P. Government has decided to refer for arbitration the question of rationalisation in the State's textile mills to the former Chief Minister, Dr. Sampurnanand.

A new company by the name of Indian Drugs and Pharmaceuticals Ltd. has been registered by the Government of India to implement the four drug projects to be set up with the assistance of Soviet Russia.

The Government of Madras proposes to effect a 50 per cent cut in the electricity supply in the State with effect from the beginning of next month, unless the storage position of reservoirs in the hydro-electric system improves in the meantime.

The Government of India has decided to extend the benefits of compulsory contributory provident fund under the Employees' Provident Funds Act to the starch industry with effect from 31st May 1961. The Act now covers 48 industries.

The Union Ministry of Commerce and Industry is considering a proposal of the Kerala Government for establishing a plant to manufacture heavy transformers and switchgear in the State. It is learned that Hitachi of Japan has agreed to collaborate with a private party in the proposed project.

India's exports were higher by about Rs. 5 crores at Rs. 53.59 crores in February 1961, as compared with the corresponding month last year. Imports, too, rose from Rs. 69.68 crores in February 1960 to Rs. 74.32 crores. The adverse balance of trade declined from Rs. 21.04 crores to Rs. 20.73 crores.

An agreement in principle has been reached between the Government of India and the two foreign oil refineries operating in Bombay for refining crude oil from Ankaleshwar. Disclosing this in the Lok Sabha, Mr. K. D. Malaviya, Union Minister for Mines and Oil, stated that details of the proposed arrangement were being discussed now.

The Standard-Vacuum Oil Company's refinery in Trombay earned a foreign exchange of over Rs. 19 crores during the last six years through exports of motor spirit and fuel oil. The total net saving in foreign exchange, after paying for crude imports in 1960 alone was Rs. 5.65 crores. The refinery's total net export earnings since its establishment in 1954 aggregate Rs. 7.92 crores.

The Indian Telephone Industries, Bangalore, will start the manufacture of a new telephone receiver before the end of the third Plan period. The instrument has been designed entirely by Indian engineers at the factory. All the components of the receiver will be indigenous. Only a very small percentage of the raw materials will be imported. But even this is expected to be produced in the country later. As against a production target of 320,000 instruments in the second Plan period, 441,000 instruments have already been manufactured in the factory. In the third Plan period, the production of this unit will be doubled.

The Government of India has decided to grant licences for import of eighteen items from Pakistan during the current financial year, as provided for in Protocol No. I to the Trade Agreement between the Governments of India and Pakistan, concluded in March 1960. The items are: fresh fruits, dhanicha seeds, chuna khari pearls, eggs and poultry, guar meal, books and periodicals, gramophone records, films exposed, fish dry and salted, green spices, betelnuts, drugs and medicines, black cumin seeds, mother of pearl shells, betel leaves, fluorspar, nylon guts and monofilament and live turtle. Protocol No. I to the Trade Agreement provides for import of these items from Pakistan against payment in non-convertible Indian rupees.

The Import Trade Control Organisation received 189,509 applications for import licences during the half-year ended 31st March 1961. The disposal of applications kept pace with the intake and the number of pending applications at the close of the licensing period was 1,161 only. In addition to applications for import licences, the Organisation also dealt with a very large volume of correspondence on questions of policy, interpretation of rules and regulations, appeals, etc., received from the trade and the various Chambers of Commerce and Trade Associations. The number of such letters, during the period, was over 700,000. A close watch was kept in order to prevent malpractices: 42 firms were black-listed during this period for contravention of the Import and Export Trade Control Regulations.

A five-point programme entailing a total estimated cost of Rs. 77 crores will be implemented for completing the Damodar Valley Project. In addition to Rs. 148 crores spent so far. The programme is designed to complete the power projects already taken up, together with the residual irrigation and navigational works, to carry on soil conservation, afforestation and pisciculture on a larger scale, as well as to construct a low dam to ensure water for industrial use and two more thermal units of 125 mw. each. The four existing dams as against the seven originally planned, have been found to be inadequate for flood control in West Bengal.

A formal agreement providing for the grant of a $5-million U.S. D.L.F. loan to the Industrial Credit and Investment Corporation of India Ltd. was signed last week. The approval of the loan was announced in September last. The loan which will be made available for specific projects in the private sector, may be used to finance foreign exchange costs of capital equipment and services. The loan, though denominated in dollars, will be available to the extent of its equivalent in other currencies also. The use of $100,000 or more of this loan will be limited in financing equipment, materials and services having their origin in the U.S., but, smaller amounts from this loan may be utilised for procurement elsewhere. The prior approval of the D.L.F. would be necessary for disbursement of an amount more than $250,000. All payments shall be computed and stated in U.S. dollars, but repayments will be made in Indian rupees.

From Abroad

The total number of television sets in West Germany has now passed the five-million mark.

The Pakistan Government proposes to introduce co-operative farming on a compulsory basis.

Exports from Japan rose by 15.1 per cent to $4,145.2 million during the financial year ended April 1961, as compared with the previous year.

The International Monetary Fund has granted a Rs. 5-crore loan in foreign exchange to Ceylon. The loan is intended to ease Ceylon's balance of payments difficulties.

The U.S. Agriculture Department has predicted that the U.S. wheat output in 1961 will be 1,262 million bushels, a decline of 100 million bushels, as compared with 1960.

The Soviet Union has 21,708 people with 100 years of age or older. Of these, 4,436 live in urban areas and 17,272 in the countryside; 5,432 are men and 16,276 women.

Soviet Russia will supply 500,000 tons of Cuban sugar to China before the end of August next on an interest-free loan basis, under a trade protocol signed between the two countries. The loan will be repaid between 1964 and 1967.

Despite the revaluation of West German currency, its gold and foreign exchange reserves increased by as much as DM 1,908.3 million to DM 32,370.6 million during the month ended 7th April—the first full month since the revaluation.

The U.S. Government proposes to grant exploration assistance to seven new minerals, including gold, silver and iron ore in order to promote their production. It will also meet 75 per cent of authorised exploration costs for another group of 18 minerals, such as asbestos, beryllium, chromite and mica.

The Austrian Chamber of Commerce, in consultation with the League of Austrian Industrialists, has agreed to a price freeze in respect of manufactured goods until the end of the year, subject to two conditions, namely, prices for raw materials would not increase and no demands for wage increases be raised during the period.

World maize output in 1960-61 season is expected to touch a record of 8.1 billion bushels, an increase of 3 per cent over the previous season, according to the U.S. Agriculture Department. The Argentine crop is expected to go up by 25 million bushels to 200 millilon bushels. Bumper crops are also expected in South Africa (150 million bushels) and Brazil (315 million bushels).

The Cycle Division of British Tube Investments has announced a three-year plan to rationalise production, which includes the closing down of its four factories, in order to surmount the intense competition from the Continent and some Asian countries. The number of cycles manufactured in the U.K., last year, it may be noted, was less than 2.3 million, as against 3.5 million in 1955.

The British firm of Messrs. Hunting Surveys has been awarded a contract to photograph the whole island of Jamaica from the air under the British Colonial Development and Welfare Scheme. These photos of aerial survey, it is said, will be useful for road planning, forestry control, boundary demarcation and investigation of potentialities for hydro-electric schemes, besides their usefulness for revision of maps.

The British Leyland Motors has won a £1-million Yugoslav contract for the supply of Leyland single-deck buses and spares. Further, the Company has entered into an agreement with a Yugoslav company, Industrija Motora Rakovica, under which the latter will have the right to manufacture in Yugoslavia Leyland large 0.680 diesel engine, which develops 150 h.p. and in its horizontal form is used to power Worldmaster bus.

A semi-official Brazilian shipping concern, Lloyd Brasileiro, has made enquiries in Japan in connection with its proposal to buy 36 freighters. The Brazilian Company is expected to pay a part of the cost in the form of coffee exports to Japan. It has also asked for deferred payment terms over a period of more than five years. A similar deal is reported to have been proposed by Brazil to Yugoslavia also.

The British Overseas Airways Corporation (B.O.A.C.) has placed a £325,000-contract with

PERSONAL

PROF. John Kenneth Galbraith, the U.S. Ambassador to India, presented his credentials to the President on Tuesday the 18th inst.

Mr. Jean Paul Garnier, Ambassador of France in India, presented his credentials to the President, Dr. Rajendra Prasad, on Monday this week.

Mr. John Dykstra, Vice-President in charge of manufacturing, Ford Motor Company, Detroit, U.S.A., has been appointed President of the Company in place of Mr. Robert McNamara, who has become the U.S. Secretary of Defence.

Mr. V. N. Rajan, Director-General, Employees' State Insurance Corporation of India, has been elected Vice-Chairman of the third World Congress on the Prevention of Occupational Risks. The next session of the Congress will be held in Paris next month.

Mr. C. A. J. Plummer, of Britain's National Industrial Fuel Efficiency Service (N.I.F.E.S.), has arrived in Delhi at the invitation of the Government of India to carry out a six-month programme of investigation into fuel consumption at selected factories.

Mr. Murarji J. Vaidya has been re-elected President of the Indian Council of Foreign Trade for the current year. The Vice-Presidents are Mr. P. B. Advani (Bombay), Mr. B. N. Bannerjee (Calcutta), Mr. V. V. Mariwala (Bombay) and Mr. D. C. Kothari (Calcutta).

Mr. Cyril E. Harrison, Managing Director of the English Sewing Cotton Company, Manchester, has been elected President of the Federation of British Industries for the next two years *vice* Sir William McFadzean. Mr. Harrison was hitherto the Vice-President of the Federation.

Mr. Franz Fraefel, Swissair's District Manager for Calcutta, North India and Burma, has been appointed the Company's General Manager for India, Ceylon and Burma, with headquarters at Bombay. Mr. Willy Salzborn, until recently Swissair's District Manager for Bombay, South India and Ceylon, has been transferred to Lisbon, where he will take charge of the general management of the Company's operations in Portugal.

Standard Telephones and Cables for a new electric computor system that will provide its ticket offices throughout the U.K. and Europe with up-to-date information about the availability of seats on all B.O.A.C. flights. Specially designed for the airlines, the computer is expected to be in operation by next year, and extended to other parts of the world at a later stage.

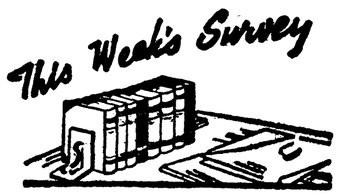
The British firm of Messrs. Simon-Carves, a member of the Simon Engineering group, has signed contracts with Czechoslovakia, East Germany, Poland and Rumania for the design and erection of four polythene plants for these countries. The technical know-how for these units, which will be built up during the next three years, will be supplied by Imperial Chemical Industries. This is the first time that I.C.I. has sold its polythene manufacturing rights to any East European country.

Personal income in the U.S. touched an annual rate of $409,500 million last month, or an increase of $3,500 million over the previous month. Even after excluding the national service life insurance dividends paid to war veterans, the rate of which was raised recently, there was still an increase of $1,500 million in personal income mostly by way of wage and salary disbursements. Total wages and salaries advanced in March by $1,000 million to an annual rate of $272,000 million. This was the first rise in pay rolls since July 1960.

Messrs. McKie and Baxter Ltd., a marine engineering firm in Paisley, Scotland, has secured an order valued at £155,000 from India. The Company will supply propelling machinery and ancillary equipment for two twin-screw steam tugs being constructed by the Mazagon Dock Ltd., Bombay, for the Visakhapatnam Port Authority. The order comprises two marine boilers, twin-screw triple expansion engines, deck machinery, such as windlasses, auxillary machinery, propellers, and shafting and fire-fighting equipment for the tugs.

A long-term trade agreement has been signed between Russia and Yugoslavia for the 1961-65 period. Under the agreement, the Soviet Union will deliver to Yugoslavia machines and equipment, including plant for coal-mining, iron and steel, cement and some other Yugoslav industries, as well as coal, coke, manganese ore, pig iron, ferrous rolled stock, oil products, asbestos, chemicals, consumer goods and a number of other commodities. Against this, it will buy from Yugoslavia 16 tankers, nine sea-going dry-cargo vessels, 3,500 railway tank-cars, ferrous rolled metals, steel tubing, non-ferrous rolled metals, chemicals, leather, woollen knitwear and other commodities.

A new company, called the Nuclear Developments, has been established in Britain jointly by three large industrial concerns, namely, Imperial Chemical Industries (Metal Division), Rolls-Royce and the Rio Tinto Company. It will be the first private enterprise of this type to produce fuel elements and prepare the fuel for civil nuclear engineering purposes in the U.K. The Rio Tinto extracts and processes uranium on a large scale, while Rolls-Royce has been engaged in the nuclear field for the last eight years and has specific interest in fuel elements for marine nuclear propulsion. The I.C.I. Metals Division has been a producer of certain nuclear metals and reactor components for over 20 years.



I.N.T.U.C. CONFERENCE

THE speech delivered by Mr. Michael John, President of the Indian National Trade Union Congress (I.N.T.U.C.), at the twelfth annual session held at Yamunanagar, Punjab, merits careful study by both the employers and the Government. For, as the chief of the largest trade union organisation in the country, the remarks of Mr. John can be taken to reflect the views of the most influential section of organised workers in the country. In his 7,000-word address, Mr. John said many things that are eminently sensible and practical. But, at times, his practical sense seems to yield place to woolgathering, which make him sound less than the responsible trade union leader that he is, and more like an agitator. His observations on last year's general strike by Central Government employees showed that he belonged to the former category of trade unionists. He termed the strike "ill-conceived, unwarranted and anti-national." Although the I.N.T.U.C. did not approve of the strike, it had insisted, according to him, that the Government, as an employer as well as the representatives of both the employer and the employee, had a special responsibility to discharge which it could not shirk. The eventual acceptance by the Government of the recommendations of the Pay Commission and the principle of arbitration has opened, to quote his words, " a new chapter in the history of our trade union movement."

What Mr. John said about arbitration in the private sector and workers' participation in management is, however, not informed by the same objectivity and level-headedness. He wanted the Government to give legal sanction to the method of voluntary arbitration, making it compulsory for both parties—labour and employers—to submit their disputes to arbitration. But, if this suggestion were to be implemented, arbitration would cease to be voluntary. The I.N.T.U.C. has for quite some time been toying with the idea of arbitration. Perhaps, it is disillusioned with the experience of adjudication, the introduction of which it enthusiastically supported, little realising that such will eventually undermine its own strength by weakening collective bargaining. Satisfied perhaps from experience that adjudication by itself cannot usher in the millennium, it is now plumbing for arbitration. Since the employers has not been as ready to switch over to arbitration as the I.N.T.U.C. would have liked, it has now turned to its political patron, the Congress Government, to make arbitration legally binding on both parties. Arbitration, as a method of settling disputes, has much to commend itself if both parties agree to it. But the moment mutual consent is replaced by compulsion, it ceases to have any of the advantages claimed for it.

The I.N.T.U.C. leader underlined the urgency of associating labour in every aspect of the management of undertakings. He seemed to suggest that workers should have as effective a voice in the running of an enterprise as the shareholders on whose behalf the management acts. This contention is based on a mistaken equation of workers and shareholders as joint owners of an enterprise. This is a position which even the most democratic countries of the West have not accepted. If workers are recognised as joint owners, then it logically follows that they have a right not only for a voice in every aspect of management but also for a share in the profits not as bonus, as is the case now, but as dividend pure and simple. A worker now gets a wage, as also a share in the profit by way of bonus, whereas a shareholder gets only a dividend as a return on the savings invested in a company. When no profit is made, the shareholder gets nothing and invariably suffers a depreciation of his capital, while the worker gets his wage and, in many cases, even a bonus. Mr. John's conception of participation is very similar to the demand of a person who wants to eat the cake and have it too. This contradiction apart, his idea will not bring any significant direct or even indirect benefit to workers. It will only help the trade union leaders to get full-fledged directorships on the boards of companies and all the power that goes with such posts. Obviously, this kind of participation is not what is envisaged in the scheme of workers' participation in management which the Union Labour Ministry seeks to implement. In view of the latest demand on behalf of workers, it is necessary to define clearly the exact scope of the scheme, so as to avoid any misunderstanding about it or nursing of high expectations.

Workers' anxiety about the continuously rising trend of prices of essential commodities in the country is understandable and, indeed, justified. It is only natural, therefore, that the I.N.T.U.C. leader should draw attention to the urgent need for arresting the trend of prices. His suggestion that a price control machinery should be set up for the purpose is, however, not very practical. What precisely is that machinery supposed to do? Could it order the price levels to go down? Upward trend of prices is a symptom of the inflationary malady afflicting the economy. Unless the causes that make for inflation are removed, prices cannot be kept at a predetermined level. The real remedy lies only in increasing production, avoiding inflationary wage demand and reducing deficit financing. The first two at least cannot be achieved without the wholehearted support of workers and their trade unions.

FOUNDRY INDUSTRY

"The backbone of industrial structure." This was how Dr. B. R. Nijhawan, Director, National Metallurgical Laboratory, described the importance of foundry industry, in his speech at the annual convention of the Institute of Indian Foundrymen held in the City on Sunday this week. There are now well over 2,000 working foundries with an aggregate installed capacity to produce 1.4 million tons of ferrous castings (or cast products); the number excludes the small pit furnaces that abound in the country, the number and total productive capacity of which have not yet been statistically assessed. The importance of the foundry industry will be all the more greater in the context of the projected developments during the third and subsequent Plan periods. The need for a broad-based development of the industry cannot, therefore, be too strongly emphasised. Dr. Nijhawan did well to urge the indigenous producers to consider the development of ancillary industries for the supply of processed raw materials and also essential foundry-moulding equipment, so that the foundry industry would stand on its own within a short period.

Considering the vital role played by the foundry industry in the industrial complex of the country, it is somewhat unfortunate to learn that a fairly large part of the industry's capacity continues to lie idle for want of sufficient supplies of special grades pig iron, coke and coal. Thus, as against the total capacity of 1.4 million tons (in the organised sector), the actual output of ferrous castings in 1960 was only 860,000 tons the extent of idle capacity being as much as 40 per cent. The problems confronting the industry were impressively highlighted by Mr. J. V. Patel, Chairman of the Institute's Western Regional Centre, in the course of his welcome speech. Mr. Patel stated that the foundries were in a state of suspended animation, because of non-availability of coke and coal for the last few months. He pleaded for allotment of more wagons for moving these essential raw materials and suggested that, until such time as the transport bottleneck was eased, coal dumps be created to solve any temporary shortage that might arise. He also pleaded for freight equalisation in the case of coal and coke, so that the handicap of higher prices paid by the foundries in the Western and Southern regions could be overcome.

The pleas put forward by Mr. Patel on behalf of the industry are quite reasonable. Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, who inaugurated the convention, himself realised the difficulty caused by coke and coal shortage owing to transport bottleneck. But he could not hold out any assurance in this regard, excepting to say, as usual, that "every effort is being made to get the essential things moving." The Minister rejected the suggestion for freight equalisation and dismissed the demand for the creation of dumps at important consuming centres on the ground that it was only a palliative and not a solution.

The engineering industries are now on the threshold of an era of what Mr. Jehangir Ghandy, Director-in-Charge, Tata Iron and Steel Company, Ltd., has aptly characterised in his message to the convention as "unprecedented growth" and the foundry industry should naturally take its due share in such growth. But much will depend on the availability of pig iron of requisite quality, as well as coal and coke. It is gratifying that the Government has already decided to license establishment of eight pig iron production plants each with a production capacity of 100,000 tons per annum in the various parts of the country. While the setting up of these plants will ensure adequate supplies of pig iron, it well behoves the foundry industry to introduce quality control methods and raise the level of productivity. Simultaneously there is also the need for imparting training in foundry technology. The proposed move of the Central Government to establish a Foundry Forge and Training Centre at Ranchi is, indeed, a step in the right direction. But one centre alone will not fully serve the purpose. And so similar centres will have to be started in some other regions as well. The sugestion for opening one such centre in Bombay as made by Mr. Patel deserves sympathetic consideration. Some of the major foundry manufacturers themselves should take the initiative in this direction by providing training courses in their works.

ETHICS OF ADVERTISING

Advertising is one of the most misunderstood of modern business practices. Discussions of its utility or futility are sometimes raised to a moral plane and the very ethics of advertising questioned. Mr. P. L. Tandon, Vice-Chairman of Hindustan Lever Limited, has, therefore, done well, in his speech at the Company's annual general meeting held this week, to send a strong beam of clarity and vision through the gloomy confusion of contemporary thinking on advertising.

Advertising, he rightly pointed out, performs a vital economic function at a surprisingly small cost. By creating and stimulating consumer demand, it promotes expansion in the volume of sales which alone can bring down cost. Advertising, according to Mr. Tandon, is not even a charge on the consumer, because the large volume of sales it promotes ultimately makes the product cheaper to him. His own company's advertising which, as every one knows, is one of the largest and most imaginative advertising campaigns in the country, cost only Rs. 2.80 for every Rs. 100 worth of sales. Advertising ensures a regular demand which enables factories to operate with minimum fluctuations. The rapid movement of goods brought about by advertising enables the working capital to be reduced. Speedy and large turnover helps the trade to operate on a smaller profit margin.

Critics of advertising question the very need for it. If the consumer really wants a product, they argue, he will go in for it, advertising or no advertising. This argument is wrong for two reasons. First, the consumer may not oftentimes be aware of the existence of a product and, secondly, the demand for it may be dormant. By telling the consumer that there is a product that will meet his requirement and making him want it advertising plays a vital role in satisfying consumer demand.

Mr. Tandon conceded that the effect of advertising cannot be measured as precisely as the effect of, say, investment in new production lines. As large sums of money are being spent on advertising, it is necessary to devise some means of evaluating its results. He disclosed that through its operation statistics and market research departments, Hindustan Lever is experimenting with new techniques in measurability of advertising, and pre-testing virtually every advertising campaign. Sales performances are also analysed with a view to finding out the impact of advertising on the turnover.

WAREHOUSING

The Estimates Committee, in its report on the National Co-operative Development and Warehousing Board, has raised a fundamental issue regarding the role of the Board. The Government of India has been thinking of divesting the Board of its existing functions relating to warehousing. Its proposal is perhaps prompted by the apparently divergent nature of the working of the co-operative organisations and warehousing corporations. While co-operative development is fostered through co-operative societies and financial assistance for that purpose is given by the Board through State Governments, warehouses are administered by warehousing corporations which are commercial organisations and not co-operative bodies. It is argued, therefore, that the running of warehousing corporations was not closely connected with the overall policy or allocation of funds for co-operative development. The co-ordination between warehousing corporations and the Board can still be ensured, it is explained, even after their bifurcation by giving representation to each body on the other.

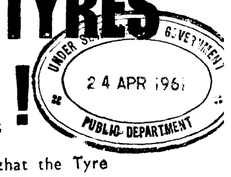
The Estimates Committee has expressed doubts, in this connection, whether the separation of the functions of warehousing from the Board will achieve that degree of "integrated approach and planning" which is necessary for the successful implementation of the objectives for which it was constituted. It is also not clear to the Committee whether the proposed mutual representation alone will ensure the same measure of co-ordination as at present. It may be recalled here that the Board was established in 1956 in pursuance of the recommendations made by the Committee of Direction, Rural Credit Survey, set up by the Reserve Bank of India. The Board assumed the pivotal position in the integrated scheme propounded by the Committee. The Committee's suggestions on the development of warehousing were designed not only to provide storage facilities, but also to make these institutions the virtual link between co-operative credit and marketing. There is, therefore, a strong case for an apex "planning and financing body" at the Centre. In any case, if the proposal is decided upon, the Estimates Committee feels, there is no sufficient justification for the continued existence of a separate Board itself, merely for disbursing funds to co-operative societies. This function, according to the Estimates Committee, can be fulfilled at the official level by the Ministry of Community Development and Co-operation.

The views of the Estimates Committee on this subject appear to be logical. One is at a loss to know why the existing "integrated set up" should be disturbed. The basis of the provocation for the suggestion appears to be more imaginary than real. Indeed, the difference in the nature of the co-operatives and warehousing corporations only makes the need for co-ordination more pressing.

The proposed change in the administrative machinery has come at a time when distinctly more concerted efforts are called for in order to fulfil the ambitious targets laid down in the third Plan. In fact, the performance in respect of warehousing during the second Plan leaves much to be desired. The Central Warehousing Corporation was expected to set up large-sized warehouses at about 100 important centres by 1960-61. It would appear that the number of godowns already set up was no more than 40. The various State Warehousing Corporations were expected to put up 250 warehouses, but they have, it is said, set up only 200 units so far. In the third Plan, the Central Corporation is expected to construct 35 more warehouses and 20 specialised storages, including cold storages for perishable commodities such as fruits and vegetables, besides completing the target set in the second Plan. Apart from the "slow and halting" progress made in the construction of godowns, the Estimates Committee has found that, in some cases, the constructed godowns could not be put to much use. This unprofitable experience could have been avoided, the Estimates Committee feels, had a proper assessment been made of the potential storage demand before undertaking the construction of godowns in the areas selected. Another important defect brought to light by the Estimates Committee is that the interest rates charged on the loans to co-operative societies by some State Governments are very much higher than what they are expected to pay the Board on the funds taken from it. The higher rates are charged on the score of reimbursing the administrative charges. But, as the Board is already giving subsidies for additional State Government staff for co-operation, the Estimates Committee sees no reason why the State Governments should levy a higher interest rate from co-operative societies. The country is in urgent need of larger warehousing facilities not only to serve as mere storages, but also to draw an increasing quantum of marketable surplus from the rural sector. The State Governments will do well, therefore, to shake off their indifference and lethargy and prove equal to the occasion.

Another significant point stressed by the Estimates Committee is that the scope and functions of the Central and State Warehousing Corporations should be clearly defined. The Committee states that the setting up of warehouses in the same or contiguous areas by two different Corporations cannot evidently result in efficiency or economy. It has, therefore, called for closer liaison between the Central and State Warehousing Corporations.

It's Always Possible to MAKE YOUR TRUCK TYRES LAST LONGER !



All Users of truck and bus tyres are now aware that the Tyre Industry in India does not yet have sufficient manufacturing capacity to meet the demands of all parties.

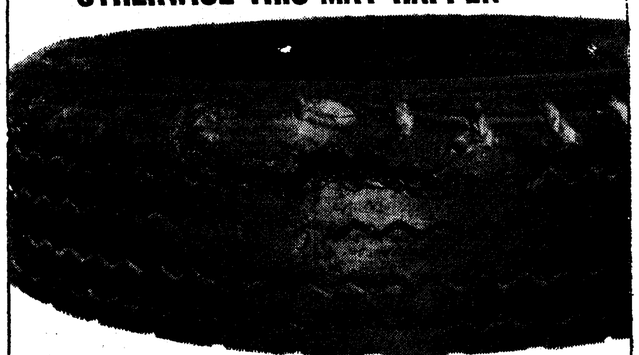
It is not a matter of distribution. More than 100 Tyre Dealer Associations and Syndicates covering a network of approximately 5000 Tyre Dealers have set up controls so that such supplies as become available are allotted at the recognized retail price to those Tyre Users whose need is both imperative and proven.

It will be some time before the new tyre factories, now in the course of construction, commence to produce tyres. The expansion programmes of the present manufacturers cannot be implemented overnight.

In the meantime, what—?

WE BELIEVE that this prolonged tyre scarcity condition can be attacked if everyone who has anything to do with trucks and buses does his utmost to see that the USEFUL LIFE of each and every tyre is extended as far as possible by CAREFUL REGULAR INSPECTION AND MAINTENANCE. Here is one way to achieve long life and maximum service.

MINOR CUTS MUST BE REPAIRED— OTHERWISE THIS MAY HAPPEN



This tyre is now a complete loss. Water has entered through cuts in the tread which were neglected and allowed to develop as the tyre continued in service. Had this tyre been removed and repaired it would not have "died young" like this.

ON THE ARENA

By The Archer

Bitter Sugar

PARADOXICAL as it may seem, the problem of surplus sugar has developed into a bitter one. And everybody concerned is restless and *unable to move as in a treacle pond.*

Pat was a rearer of pigs and had to march *them out into the open country every day for* exercising and grazing. They moved slowly and following them was a tiresome job for Pat. Looking at his forlorn face one day, a friend of his suggested that he should grind a liberal quantity of raw mustard and smear a thimbleful on the tail of each pig, which will make them hurry home. A few days later the friend saw Pat panting home, but all alone; the pigs were not to be seen. Questioned as to what had happened, Pat stammered, "Aye, aye, I took thy advice and the trick worked. Them pigs have been running so fast, the devils they are, and I can't keep pace with them, so I have smeared mustard on my backside, and by Jove, it smarts."

Something like this seems to have happened to Government and the sugar industry. The industry was unable to supply the country's requirement of the commodity in 1958-59 and had to be granted special incentives to increase production during 1959-60. The Food Minister, Mr. S. K. Patil, felt happy that he had found a solution which was then acceptable both to producers of sugar and growers of cane, but is obviously uncomfortable now with a plethora of stocks and no movement. The production which was 19.19 lakh tons in 1959, rose to 24.21 lakh tons in 1960 and is estimated to be about 27.50 lakh tons in 1960-61. The result is that there is a large surplus of about a million tons which cannot be consumed inside the country and cannot be exported because the price of Indian sugar is almost double the world market price. Storage and credit facilities throughout the country are not sufficient to handle the present problem, and the country's banking system, already strained, is in no mood to add to its commitments. Advances to sugar factories at the end of last January are stated to have aggregated to Rs. 52 crores, as against Rs. 30 crores at the corresponding period in 1960, and the demand for more money remains unabated. The industry in Bihar faces a crisis, with large stocks of sugar unsold, and large quantities of cane in the fields which the factories are finding it difficult to crush because of financial difficulties. The position appears to be no better in U.P.

The Union Ministry of Food and Agriculture is stated to favour higher bank advances against accumulated sugar stocks held by mills with reductions in margins required by banks, but the latter are in no mood to agree. Mr. Patil is reported to have mentioned that Government was considering the possibility of enabling the mills to dispose of some of their stocks by paying a part of their dues to cane-growers in kind, namely, sugar. (Traditional dealers of sugar do not come forward to lift stocks when more releases are offered.) The relief to the industry can be only marginal, but, obviously, the next move may have to be for starting an EAT MORE SUGAR campaign! Mr. Patil is, of course, against any suggestion of decontrol, for the simple reason that prices will come crashing down, and there will be chaos in the industry and somewhat of a crisis in the banking system.

The lessons to be learnt from a situation of this type to a major industry in the country are many and varied. Sugar factories have been allowed to be established in regions where sugar-cane cultivation was not advantageous from the point of view of quality (sugar content), yield per acre or length of season. Pressure of public opinion and social considerations make it difficult to remove these factories to more economic locations. Large sums of money have been collected by the several States concerned by way of cane cess, but no intensive work has been done towards improving yield or quality. Cane prices have been pegged at a level supposed to be remunerative to growers, and, in areas where sugar prices were more favourable to producers than elsewhere, the "excess" profits were allowed to be shared with cane growers under a linking formula. The result is that growers all over the country now want more for for cane and accuse the industry of unfair practices. On the other hand, the industry clamours for a higher price for sugar on the plea that the Wage Board award has to be implemented and rehabilitation has to take place (and has not been provided for specifically in the price), denying stoutly that it has diverted all the gains acquired in the past for purposes of expansion as against timely rehabilitation. No one seems to be bothered about the fact that, whatever may be the historical reasons for this most unhealthy state of affairs, the naked truth remains that the price of Indian sugar is much too high for the export market, and that an industry which has an output in excess of internal requirements cannot expect to survive the impact of normal economic forces, unless its cost of production is brought down. And this may be a lesson to other industries also in the country which are fast expanding unmindful of trends in the outside world. The day of reckoning will be when export is inevitable for staying in production, and it will be very foolish, indeed, to postpone getting to grips with the problem of costs until then.

Expertise in Adulteration

Inaugurating the Agmark Consumers' Association, the Minister for Agriculture in Madras stated that cardamom, exported to France, was adulterated with rats' excreta, and, consequently, our name in foreign markets was mud (or filth?). He was horrified to see that ghee could be adulterated with snake fat, milk with dirty water and so on. Although it might torment his already distressed soul, let me give him the information that there is a thriving business in discovering new materials useful for purposes of adulteration, with intelligent and expert brains behind it, who are continuously engaged in exploiting the unlimited bounties of nature in the shape of articles useful for camouflage. Varieties of sand, clay, pebbles and stones have been collected, sifted, sieved and sorted to be docketed, compartmentalised and labelled for adulteration with grains and pulses of like appearance. Whole bags of them are held for sale by established dealers who operate mostly above ground and do not seem to find it particularly difficult to carry on their nefarious trade. But rat excreta (ugh!) calls for an assiduous organisation with a scientific O and M behind it, also, perhaps, a well developed rat nursery and large collections of rodents capable of prolific yields, reared, housed, fed and nourished, honoured and blessed by their keepers for their bounteous munificence! Who said that the avenues for profitable employment are limited?

The Madras Government Milk Project

The Madras papers have been full of bitter complaints against the State Government Milk Project about which there has been a measure of facile boosting (or boasting?) by the Minister concerned; incidentally, it was the same Minister who was horrified about adulteration of foodstuffs and milk. The project was conceived to develop (eventually) into something like the Aarey Milk supply in Bombay, and the complaints are not so much against the slow pace of development and coverage, as against the utter disregard of the basic principles governing the supply of wholesome milk. It is reported that, while all the milk collected at the factory is being pasteurised, not all of it is bottled, although there is a sterilising plant and an automatic bottling plant (using aluminium foil covers for sealing) at the factory. The reason (*would you believe it?*) is delay in the supply of standardised half litre bottles and crates to suit! The project is fifteen months old and the Milk Commissioner has not yet been able to solve the problem of bottle supply. And so, a part of the milk supplied to kiosks is despatched in cans, which have the slimy unsterilised look about them, and are filled (at the kiosks) into bottles by *chokras* employed for house delivery, who also cap them with foil covers by hand pressure. These bottles are not sterilised and anything could happen to the milk in the process of transfer from cans to bottles, from adulteration with wash-water to poisoning. The State Government Minister, who appeared to be distressed by the anti-social activities of milkmen who added water to milk, has allowed the officers in charge of his milk project to start a system which lends itself to the worst form of abuse in an organised form! The tragedy could be that consumers who were using the milk without boiling, presuming it to be sterilised, may be subjecting themselves to considerable danger. It is no wonder that they have started shouting "Physician, cure thyself"!

It is mentioned that there are only eleven kiosks in the city, serving the needs of 3,500 families with a production of 14,500 pounds of milk, served (allegedly) by a couple of poorly maintained motor vans which are said to have frequent breakdowns. In addition to not maintaining the requisite quantum of supply to the several kiosks for serving the normal needs of coupon holders (coupons have to be purchased in advance for cash), there is no knowing when the milk van arrives at a kiosk, the time being anywhere from 4 a.m. and 8 a.m. in the mornings and 2 p.m. and 7 p.m. in the evenings, so that most consumers have to pay extra for house delivery and put up with the cheeky impertinences of the cycle boys. For utter lack of planning, the Madras Milk Project seems to take the cake. One newspaper report says that the project is suffering from teething troubles, but, even in humans, such troubles do not last fifteen months, and the report, therefore, seems to be a strained effort at glossing over lousiness. As for the technique employed in processing, bottling and supplying milk, the persons concerned seem to know as much about the business as a cow knows about astronomy.

Entrance Fees to Visit Monuments

The reported proposal to collect an entrance fee from people visiting the Taj Mahal, which, I hope, is true, raises the interesting question how tidy sums of money could be collected from the holidaying or sightseeing public for the upkeep and maintenance of many national monuments, places of public resort, architectural relics and such like. It is a weakness with most of us that we expect the right of free entry anywhere and everywhere, and jib at paying even a small fee for keeping places clean. When the wealthy aristocrats of England were pinched by income-tax and could not maintain their castles and palaces in condition, they resorted to collecting fees for looking them over, and the curious public gladly paid what was asked for as being fair and proper.

I should certainly vote for a "Pay and peep in" scheme for most places of public interest, and particularly for our air terminals. The Santa Cruz airport, Palam airport, Dum Dum airport and even Madras airport are crowded during the busy hours of morning and evening, and I have myself been finding it difficult most of the time, at these airports to elbow my way through the large crowds of sightseers to reach the booking counter, and thereafter to find a seat. If I was lucky to find an unoccupied seat and got on to it, I invariably sat hugging my bag to my body, for fear that the fellow by my side may walk away with it if I laid it on the floor. I confess I am suspicious by nature, but that is nothing to be ashamed about, especially in a situation when one may not have time to run after a bag-snatcher. I have strained my ears to catch the words following "Your attention please" after every announcement, without any success, and when the final call arrived, "Please have I had to poke and push and dig through a phalanx of sightseers, three or four deep, barring my way from the lounge to the tarmac. My suggestion for levy of a regulatory, and even deterrent, fee is mainly to make a *bona fide* paying passenger less uncomfortable or harassed. A platform ticket has to be purchased for entry into a railway platform. So, why should not a similar fee, larger in amount, of course, be collected for entry into airports!

Notice

THE BENGAL FLOUR MILLS COMPANY, LIMITED

THE BOARD OF DIRECTORS OF THE COMPANY has decided to recommend to the forthcoming Annual General Meeting, the payment of a Final Dividend of 25 per cent for the year ended 31st December, 1960.

AMERICAN LETTER

UNITED STATES AT THE THRESHOLD OF ANOTHER BOOM?

NEW YORK FEDERAL BANK ON INDIA'S PLANS

From Our Special Correspondent

NEW YORK, 16th April

THERE are, essentially, two major schools of thoughts. One holds that another boom is about to begin in the United States. It points to the fabulous rise in stock prices and questions only how big the boom is going to be and how long it will last.

The opposing faction points to nothing but unemployment, chiefly for political reasons in my opinion, and the Government itself has listed 101 "major distressed" areas in the U.S. and 184 minor ones. The criterion for "distressed" is that at least 6 per cent of the labour force is out of work. Heretofore, 3 per cent jobless was considered "full employment," so that 6 per cent can hardly be considered a national calamity.

There has been a rise in personal income. Inventories are now so low that they have to be replenished with rising industrial orders. This means that plant and equipment spending will increase. Retail trade has improved and Easter business has been far better than expected. All these are solid plus signs.

India's Economic Progress

As indicated in previous despatches, the importance of India as the leading nation in the so-called Far East and one of the leading countries in the world has been receiving growing recognition here. Nothing could speak louder of cognizance of these matters here than a six-page study in the current *Monthly Review* of the Federal Reserve Bank of New York on "India's Economic Development and Balance of Payment." Not all readers in India may agree with the opinions expressed by the New York central bank, but the following excerpts may be interesting enough to show mature American opinion, rightly, or wrongly:

"Since India's independence, the country was faced with the mutually perpetuating problem of a low level of savings and of investments. During the first Five-year Plan, agricultural and industrial output exceeded the targets, but investments lagged. Again, paraphrasing, the balance of payments' deficit was relatively small. Inevitably, miscalculations were made during the first two Five-year Plans, despite (or, perhaps because of) the advice given by the U.S., British, German bankers and a representative of the International Bank for Reconstruction and Development.

"As the third Five-year Plan opens this month, there are misgivings about one major problem—inflation. Prompt and decisive fiscal and monetary action will be required. The new development plan is certain to result in a severe balance of payment deficit which will have to be overcome by increased foreign assistance."

The Bank estimates that, during the first two Five-year Plans, substantial progress has been made, with real income expanding by about 40 per cent in the last decade and industrial output rising more than 50 per cent in the last five years.

It is projected that, by the end of the fifth Plan in 1976, national income will have tripled and *per capita* income will have doubled to about $110 (U.S.) annually since 1951, when the first Plan started. India's current *per capita* income is given at about $70 (U.S.) a year.

The success of India's development programme would be considered a milestone in the battle against poverty, particularly against the background of a population of 430 million—equal to that of Africa and Latin America combined—and gaining at the rate of 9 million a year.

India's third Plan calls for expenditure investments of 50 per cent more than under the second Plan. This would require about $1,300 million (U.S.) a year which would have to be raised either by sufficient resources at home and foreign aid together. The success to reach this figure remains to be seen, otherwise the development programme will have to be adjusted. The second Plan has lagged. Investment in Government-owned facilities, according to the Bank, was 15 to 20 per cent below schedule; the growth of national income has lagged even more, partly because farm income and productivity have grown only slightly.

All these and other reasons are cited by the Federal Bank of New York for the necessity on the part of the New Delhi Government to take firm fiscal and monetary measures to stem India's unfavourable balance of trade and, among other things, the very real threat of inflation.

Representatives of India are privately critical of U.S. businessmen. They say that Americans want a greater share in ownership than, for example, the Germans or the British. Representatives from the U.S. more or less ignore the innumerable small businesses in India out of fear and uncertainty and prefer "big deals" with such firms as Tatas and Birlas.

U.N. statistics show that about $160 million of American money was invested in India in December last at which time negotiations were in progress for additional investment deals totalling about $65 million.

U.S. Companies Abroad

Owing to unrealistically high taxes, the continually rising wage pattern and rising costs, otherwise, a severe profit squeeze has developed for U.S. companies. One intimation of this is contained in the last *Letter* of the First National City Bank of New York which, in effect, renounced its own compilations of the previous months, stating that 1960 corporate profits had been 2 per cent ahead of 1959. A re-check and receipt of additional statements showed no progress at all, not even 2 per cent.

As a result of these and other factors, industry has been enlarging their operations abroad. The Common Market had a good deal with this development, too.

Outside of India, the chief beneficiary countries included Italy where foreign investment is now twice as large as two years ago. Lots of American manufacturing money has also gone to West Germany. Belgium, France and Formosa are also on the list. Spain is another one.

Taxes are lower in most of these countries, labour is more willing and efficient than in the U.S.

There are also duty and tariff advantages, depending on the country of origin and destination. Oils, chemicals and electronics lead the list of these companies. This development, outside of interest rate factors and other elements, played its part in the outflow of gold and dollar balances from the U.S.—*All Rights Reserved.*

(Concluded from next column)

of the reasons for West Germany's phenomenal post-war recovery, for her active balance of payments and for her rising reserves? Even U.S. economic progress has been outpaced by Germany, while, financially, the shift in power has provided a current phenomenon. The British Chancellor is looking enviously at German economic experience and seeking to draw such lessons from it as may be politically applicable in the U.K.—*All Rights Reserved.*

LONDON LETTER

SEARCH FOR SALVATION

(From Our Own Correspondent)

LONDON, 14th April

WHEN a country has incurred a current payments deficit of £344 million, to which it has added by way of net long-term investment £100 million, it is pertinent to inquire what it proposes to do about it. When the amount of the overall true deficit of £445 million is equal to one-eighth of current exports and the proposal is that exports should be increased, it is pardonable to inquire as to the likelihood of such an increase being achieved.

There is little enlightenment on these matters in the Government's *Economic Survey* for 1961, on which your correspondent commented in his previous week's letter. The size of the deficit is explained by exceptional increases in investment and stocks and work in progress. Last year, national income and expenditure rose some 6 per cent, but this figure covered a rise in expenditure by consumers and public authorities of 4 per cent and then rises in two items which need not rise at all; first capital expenditure which was some £350 million higher in 1960 than in 1959 and, secondly, an increase in the value of stocks and work in progress by some £440 million over the 1959 figure. The latter development is exceptional: in both 1958 and 1959 stocks, etc. increased by less than £150 million; even in the two preceding years, the increase averaged under £300 million, but, in 1960, the estimated increase is no less than £600 million. The Treasury rightly considers that a jump of some £630 million in the importation of goods and services in 1960 over 1959 can be laid at the door of the demand created by excessive stockpiling and investment.

But, of course, it does not follow that if there had been no stockpiling, there would have been no payments deficit. Nevertheless, the Treasury is hoping that, in 1961, stocks will not be increased at anything like the 1960 rate—they may of course even be run down—and so painlessly help the external payments account to balance.

The Government does not expect reduced investment to come to the help of the external account: on the contrary, it is proposed to retain the tax concessions on new investment (called investment allowances) which were introduced for—and succeeded in—stimulating industrial investment. Whether the right kind of investment has been stimulated is another matter. But, in any event, the Government recognises the need to expand exports. It claims that it has already given substantial aid to this end; it has "mounted an intensive campaign to publicise the need for continued expansion of exports and the range of Government services available to help exporters. They (the Government) have extended export credit guarantee facilities; and they have supported the action of industry in setting up the Export Council for Europe and in reconstituting the Dollar Exports Council to form the Western Hemisphere Export Council." For the rest, the *Economic Survey* sums up the Government viewpoint thus: "...what ultimately happens, depends upon the action and attitudes of industry as a whole."

This attitude to the problem is naturally one of political philosophy and, when the Budget is debated, the Opposition will insist that the economy will always be in trouble, until the Government is prepared to intervene actively in the field of capital investment to ensure that industries manufacturing for export are preferred.

The Government insists that its responsibility is "to help and stimulate" and thought is being given in the preparation of the Budget proposals to such tax changes as will stimulate production. A comparison of the treatment of incomes recently made here, shows a radical difference of approach between the U.K. and Sweden, on the one hand, and between West Germany and the U.S.A., on the other. The U.K. applies the lowest amount of tax to the smaller incomes and its taxation thereafter becomes steadily progressive following closely the rates applied in Sweden.

In Western Germany, however, the tax trend alters sharply beyond the middle incomes, becomes regressive in fact, so that, between certain income ranges, the State takes proportionately less than it does on lower incomes. Is this technique of favouring the higher incomes one

(Continued in previous column)

ROUBLE *VERSUS* DOLLAR

WILL RUSSIA BE ABLE TO HELP DEVELOPING COUNTRIES ON A LARGE SCALE?

[The readjustment of the external value of the rouble, the Russian currency, sometime ago was claimed by Soviet leaders to signify the growing strength of the rouble vis-a-vis the U.S. dollar and other currencies. That this claim is not justified has been well brought out in an interesting article entitled "Rouble versus Dollar" appearing in the January-February 1961 issue of the Swiss Bank Corporation's Business News Survey. *In this article, the author recalls the defects in the methods of compilation of statistics in the Soviet Union as highlighted by Prof. S. G. Strumilin of Russia towards the end of 1959 which, he says, have awakened the leaders of Russia to the imperative necessity of facing economic and monetary realities. The author has cited facts and figures to support his contention that there could be no question of the Soviet Union being able to help the less developed countries with equipment on the same scale as is now being given by the West. In view of the great importance of the subject to India, we are reproducing the article on this page, with due acknowledgment to the Swiss Bank Corporation.—*ED.]

ADDRESSING the Supreme Soviet on 5th May 1960, Mr. Khrushchev announced that a new rouble equivalent in gold to ten times that of the old rouble, would be created at the beginning of 1961. That was done. Old rouble notes to any amount were exchanged for new rouble notes of one-tenth of the nominal value. Simultaneously, prices, wages and all monetary obligations were scaled down in the same proportion. Up to that point, the operation resembled that by which in 1959 France created a "heavy" franc, nominally only one hundredth the value of the old franc it replaced. Neither in France nor in the Soviet Union did these changes encounter any snags. Besides that, however, the relation of the rouble to the dollar in respect of its gold content was changed, the rouble being devaluated by 55.6 per cent.

No convincing explanation of the motives for these monetary changes were made by Moscow at the time. But ostensibly the step had been decided long before announced by Mr. Khrushchev. Evidently only the weightiest of reasons could have prompted the Soviet leaders to have taken such a step. This is the fourth time since World War II (1947, 1950, 1957, 1961) that the Soviets have had to readjust their monetary system. In 1957, indeed, the Soviets suspended redemption payments on Government bonds for twenty years, although only inland payments were involved. In Western countries, authorities qualified to judge are still by no means unanimous about the real reasons of the Soviet Union for making the change.

On 17th November 1960, *Soviet News* reported the publication by *Pravda* of an article contributed by the U.S.S.R. Finance Minister Mr. Vasily Garbusov, the highest monetary authority in the Soviet Union, declaring:

"The new rate of exchange of the rouble as compared with the U.S. dollar conforms to the real correlation of the purchasing power of the two currencies . . . In the U.S.S.R., there is no inflation and cannot be . . . In the U.S.S.R., both wholesale and retail prices are fixed by the State, so that the purchasing power of the rouble in the Soviet Union is controlled on a planned basis . . . The raising of the gold content and exchange rate of the rouble is of major importance for the solution of the economic problems connected with the foreign trade relations of the U.S.S.R. The new exchange rate of the rouble provides the possibility for a comparison of world prices with the wholesale prices in the U.S.S.R., as the mean world-market prices will in the main be levelled through this exchange rate with the mean wholesale prices in the U.S.S.R.

"This will make it possible to estimate more correctly the relative profitability of exports and imports of specific commodities and the profitability of the U.S.S.R.'s foreign trade as a whole and of its trade with individual countries . . . The lowering of the exchange rate of the currencies of capitalistic countries in relation to the rouble will entail a corresponding reduction of foreign trade prices expressed in roubles and, consequently, a corresponding recalculation of all sums expressed in roubles on the basis of foreign trade prices."

Key to the Mystery

To facilitate the understanding of the motives of the Soviet leaders for this new readjustment of the external value of the rouble, the words of Garbusov may be taken at their face value, the controversial issues they raise being for the moment neglected. The reasons given by Garbusov lead to revelations of momentous significance for world trade. All the background facts cited here can be easily verified.

Towards the end of 1959, the eminent Soviet academician, Prof. S. G. Strumilin, the doyen of contemporary Soviet economists, published in Moscow an epoch-making book entitled: *Essays on the Socialist Economy of the U.S.S.R.* demonstrating beyond doubt that, owing to errors of compilation, Soviet official statistics have always vastly exaggerated the rate of growth of industrial production in the Soviet Union. Figures are computed in such a way that the increments in value achieved at each successive stage of manufacture are counted over and over again.

When, for example, says Strumilin, an automobile is made, the value of the finished car only should be counted in assessing total industrial production. Whereas actually, besides the value of the car itself, the value of all the component parts of the car and the materials used at each stage of manufacture—iron ore, steel, rubber, leather, glass—are counted separately and added to that of the finished car. The distortion has increased greatly during the last few decades as the Soviet economy has turned to the manufacture of more complicated products involving more stages in production.

Soviet industrial production between 1928 and 1956, says Strumilin, increased not 23-fold, as the Soviet official statistics indicate, but less than 15-fold. Whereas in 1928, according to the official statistics, the aggregate value of the output of Soviet industry was 21.5 mds. roubles, the real figure—so Strumilin demonstrates—was only 10.1 mds. roubles. (mds.=milliard, that is thousand million). The official index puts the total Soviet industrial production in 1956 at 492.4 mds. roubles, whereas the real figure should be only 147.7 mds. roubles.

Pure Coincidence

In his book, Strumilin says that, owing to multiple counting, statements on the growth of industrial production in 1956 were 3.3 times as high as reality. By a pure coincidence, two American authorities on the Soviet economy, Prof. Norman M. Kaplan and Prof. Richard M. Moorsteen, working quite independently of Strumilin, came to the conclusion, in 1958, that the Soviet official statistics set production 3.7 times as great as reality. The difference between the two estimates is explained by the fact that Strumilin based his figure on industrial production as a whole, while the two American economists let the production of Soviet military equipment out of account.

If Strumilin is right, all the confident predictions made by Moscow that the industrial production in the Soviet Union would overtake that in the U.S.A. within very few years are illusory. This is now quite apparent even to the Soviet authorities. Nevertheless, the publication of Strumilin's books was permitted and is still on sale. Obviously because the Soviet authorities wanted the facts known. To base economic planning on false statistics would be as disastrous as to try to build a skyscraper on quicksand.

This resolve to put figures on industrial production onto a realistic basis explains why Garbusov declared emphatically in *Pravda* that the purpose of the revaluation of the rouble was to enable Soviet foreign trade to be put onto a realistic foundation and to be able to determine whether exports and imports in specific cases are profitable. Drastically expressed, Garbusov admitted the necessity for adopting capitalistic principles in developing Soviet foreign trade. This is a decision of major worldwide significance, indicating that structural changes in foreign trade relations among the countries of the Eastern block are contemplated.

"COMECON"

In 1949, COMECON—Council for Mutual Economic Help—was created to accomplish for the European States of the Eastern block what the Marshall Plan began to do for Western Europe in 1948. That is to say, to eliminate all impediments to trade among the members of the group, for example, by facilitating the exchange of commodities and the settlement of accounts in intra-Comecon trade. A common policy was to be adopted to permit the application of the principle of the division of labour, so that industrial production could be organised to permit the pooling of energy resources, the building of pipelines to distribute mineral oil, the drafting of common investment programmes and the use of methods of automation to multiply industrial output and cheapen production costs, impossible without an assured home market large enough to take up the augmented output. Economic integration was to give an immense impetus to the fruitfulness of industrial research. All the countries belonging to Comecon were to retain their full sovereignty but were to enjoy equal rights all round and freedom of action in developing their foreign trade with countries outside the group, above all, trade with countries of the Western world. That programme looked indeed formidable.

From the outset, the Soviet Union, Poland, Czechoslovakia, Hungary, Rumania, Bulgaria and Albania were members of Comecon. Red China did not join but sends a non-voting observer to attend major deliberations. Yugoslavia applied for membership in 1949 but was not admitted. In autumn 1950, East Germany joined.

If the plans made by Comecon could have been fully implemented, the expansion of industrial production in Eastern Europe would have been far more dynamic. Actually, despite all impediments, development has been really substantial, largely because, as regards their natural resources of energy and raw materials, the countries of Eastern Europe are economically supplementary. But to exploit all the potentialities fully, the adoption of a multilateral system of trade and payments, on lines followed by the O.E.E.C. countries of Western Europe, was essential.

This was clearly recognised from the outset. Until now, however, the Soviet Union, whose influence in Comecon outweighs that of all the other members combined, has insisted that all trade and payments not only among the members of the Comecon group but also in commerce with the West, should be kept on a bilateral basis. The reasons for that are political. As long as trade is kept bilateral, the Soviet Union is able to decide the pattern of trade of all the members of the group, deciding what shall be exported, whither and at what prices. In foreign trade, the advantages have been hitherto always reserved for the Soviet Union. Development has in consequence been hitherto cramped, while passive resistance to integration increased.

Prices

As regards prices, one typical example of innumerable cases of the arbitrary treatment of the other states by Moscow is that of the export of Polish coal. By a manipulation of the rouble rate of exchange, Poland was at one time being obliged to export at $1.25 a ton when the world market price was $12 to $15. Where political considerations predominate, export prices fixed by Moscow are often different for different Comecon countries. This treatment must be suffered because the Soviet Union is in practice the only source of many industrial materials indispensable to the countries of the Eastern block.

At the Comecon rally in Warsaw in May 1959, the principle of the equality of rights of all the member states was reaffirmed and the creation of a multilateral system of payments on the E.P.U. model resolved. Until now, these decisions have remained a dead letter. Moscow still insists on keeping all foreign trade bilateral. The Soviet Union resists any change that would weaken its political grip on the whole Eastern block. A multilateral payments system depends on the availability of some common "unit of account" based on economic realities. The E.P.U. used the dollar as a basis of accounting for multilateral settlements in Europe. No such unit has until now been available to the Eastern block. The value of the rouble in terms of other currencies has always been problematical. In trade among Comecon countries, accounts are kept in roubles but settlements are always bilateral by exchange of commodities. The most recent trade agreement between Western Germany and the Soviet Union fixes aggregate deliveries by Germany at a value of DM 1.89 mds.—56 per cent of which are to be in machinery, industrial equipment and ships—and by the Soviet Union DM 1.84 mds. during 1961-63. The U.S.S.R. is to deliver chiefly grain, timber, fodder, diesel oil. Accounts are kept in deutsche marks.

Since virtually all European currencies were made convertible at the end of 1958, the foreign trade of European countries increasing still further in consequence, the disadvantages of bilateral trade became more apparent than ever in Moscow. Trade among the countries of the Eastern block is done on what is really a barter basis. No Comecon country can sell more to any other Comecon country than the latter can pay for in goods. Any credit balance arising in favour of one Comecon country cannot be used to settle a debt to a third Comecon country. Only political considerations deter Moscow from putting trade among the countries of the Eastern block on a multilateral basis to expand trade as happened among the O.E.E.C. countries.

Since 1959, the preparations being made by the Common Market of Six to reorganise the economy in accord with the principles of the division of labour have demonstrated to the Soviet leaders the inestimable advantages of economic integration. If this could be achieved by the Comecon countries, their common market would consist of more than 300 million consumers of which the Soviet Union would account for about 220 millions. By comparison, the number of consumers in the U.S.A. now is about 185 millions and in the Common Market of Six about 170 millions. As the ultimate aim is economic integration, the resolve of the Soviet Union to revalue the rouble so as to bring Soviet price levels into alignment with those on the world market is not difficult to understand.

By the Communist system, all wholesale and retail prices, all wages and salaries—as Garbusov stated—are fixed by the State. Losses suffered when prices charged are too low compared with costs are supposed to be made good by the profit when prices are too high. Until now, not the least attention has been paid to actual costs of production in fixing prices in foreign trade. In that sector, all prices are "political." In trade with the West, "world prices" are charged and settlements made mostly in dollars or sterling. To accelerate the expansion of production, the Soviet Union has an insatiable demand for machinery, industrial equipment, chemicals, wool, rubber. To obtain dollars and sterling to pay for these, the Soviet Union, whenever necessary, has sold oil, aluminium, tin and other staple commodities at dumping prices, doubtless often far below actual cost. There is, however, a limit to the volume of exports that can be sold at a loss.

Garbusov mentioned that one object of revaluating the rouble was "to establish a rate of exchange that would make possible a comparison of world prices with wholesale prices in the U.S.S.R." In other words, the Soviet economy has reached the stage when foreign trade must be placed on a realistic price basis.

Convertibility

Theoretically, the Soviet Union could make the rouble convertible externally at once without difficulty, because the State has complete control over the balance of payments and over internal and external prices. That kind of convertibility would, however, achieve nothing to facilitate the import of products from the West, urgently needed by the East. The volume of imports from the West might indeed be augmented by making larger payments in Soviet-mined gold, a course that the Soviet Union would take only with the greatest reluctance.

Whether the gold reserves of the Soviet Union are great enough to make the rouble even conditionally convertible is not known. No official figures have been published by the U.S.S.R. since 1937. All the estimates made by the most eminent experts of Western countries in recent years are summarised by Oscar L. Altman in the *Staff Papers* of the International Monetary Fund in April 1960.

In its monthly bulletin of January 1961, the First National City Bank of New York states that, excluding the U.S.S.R., the world gold output reached a new record in 1960 for the seventh consecutive year, the value at $35 per oz. amounting to $1,180 million—an increase of between 4 and 5 per cent on the 1959 figure. Of this total, the output of newly-mined gold in the Union of South Africa totalled some $750 million by value. "Western observers compute that the production of Russian gold in 1960 was between $350 and $600 million by value at the present gold price of $35 per oz." "Gold import statistics show, however, that the Soviet Union must have exported approximately $250 million worth of gold annually in the period 1957 to 1959."

These figures are doubtless close enough approximations to indicate the order of magnitude of the gold reserves available in the Soviet Union for making the rouble convertible against gold. How great the stocks of Soviet gold are now is not known definitely but estimates quoted in *Staff Papers* set the maximum figure at about $8 mds.—against about $17½ mds. held by the U.S.A.—According to Altman, the stocks of the Soviet Union at the end of 1959 might have been as low as $4-6½ mds. If the output of gold newly-mined in South Africa were to be greatly diminished, for example, by racial upheavals, the monetary arrangements of the West might be seriously disturbed. The output of newly-mined gold in the Soviet Union might then even exceed that in the free world.

But there are far too many unknowns in the situation to justify any dogmatic verdict. If the order of magnitude of the various estimates is anywhere near the truth, the Soviet Union would hesitate to make the rouble convertible into gold at present, especially as the cost of mining gold in the Soviet Union is believed to be far higher than in South Africa. About 75 per cent of the Soviet gold production is concentrated in the sub-arctic Far East. Mining and transport costs are very high and the working year short. On 22nd June 1959, *The Times* (London) reported an estimate showing that the cost of mining gold in the Soviet Union must be at least $166 per oz. at the official rate of exchange at that time. By devaluating the rouble by 55.6 per cent against the dollar, the difference of this cost and the official price of gold—$35 per oz.—is diminished. If the official dollar price of gold were raised, the margin would be narrower still. After devaluation of the rouble by 55.6 per cent, the figure of $166 would be reduced to $73.7, a very close approach to what was commonly expected to become the new dollar price of gold, had the Eisenhower regime raised the price of gold.

At this juncture in world economic evolution towards a single system whose end—according to the oft-avowed aims of Moscow—must be the universality either of collectivism or of free enterprise, the Soviet Union has been placed by events under the necessity of demonstrating the power of its economic system to lift the standard of living in the less-developed countries overseas to that prevailing elsewhere.

Aid to Underdeveloped Countries

Up till now, the economic integration of the Comecon group could not be achieved because of the unwillingness of Moscow to allow removals of the impediments to trade within the group and permit the inauguration of a system of multilateral settlement of accounts. Trade of the underdeveloped countries could not be subjected to the same restrictions as those binding the Comecon countries. Help for underdeveloped countries must be given in the form of gifts in kind or by facilitating the expansion of their foreign trade. Has Moscow resources enough to give unrequited aid? Up till now, the Soviet Union has had to part very reluctantly with gold in large amounts to square its own balance of trade with Western countries. Speaking on 29th September 1960, Prime Minister Macmillan stated that Western aid for the less-developed countries up till then had aggregated $14 mds. whereas Soviet aid, given or promised, amounted to only $3 mds. According to the October bulletin of the First National City Bank of New York, the economic help of the chief industrialised countries of the West in 1954-59 aggregated $18 mds., the amount in 1959 alone exceeding $4 mds. The Soviet Union and its satellites have constant difficulty in paying for imports of machinery and industrial equipment from the West to expand their own production. There could be no question of the Soviet Union helping the less-developed countries with equipment on the same scale as that now given by the West.

Faced by the challenge imposed by circumstances, the Soviet Union is forced to come to grips with realities and exploit every conceivable way of expanding industrial production in the Eastern block, even if that means allowing the Comecon countries to integrate their economies. The passive resistance practised hitherto by these countries would cease only if equality of rights, so long promised, were actually granted. Moscow might now be disposed to pay this price for Eastern solidarity. Integration of the Comecon block of countries with an aggregate population of more than 300 millions could in time become a real threat to the West if in the East all industrial production were co-ordinated, the division of labour practised, the advantages of automation exploited and the rate of economic expansion accelerated.

CANARA BANKING CORPORATION

STEADY PROGRESS REPORTED

THE year 1960 witnessed a further expansion in the activities of the Canara Banking Corporation Limited (Chairman: Mr. B. Vaikunta Baliga, Udipi, S. India). Thus, the audited accounts for the year show that the income by way of interest and discount earned has risen from Rs. 41.07 lakhs in 1959 to Rs. 48.63 lakhs. The income from commission and exchange also increased by Rs. 1.64 lakhs to Rs. 11.09 lakhs. But, as interest paid and other expenses too have increased sizably, the former by Rs. 5.29 lakhs to Rs. 30.89 lakhs and the latter by Rs. 3.19 lakhs to Rs. 21.81 lakhs, the profit for 1960 is higher by only Rs. 68,000 at Rs. 6.75 lakhs. But since the provision for taxation has been raised by Rs. 70,000 to Rs. 2.80 lakhs, the sum available for distribution is a shade less. The Directors have transferred a slightly smaller amount to statutory reserves, namely, Rs. 1.35 lakh, as against Rs. 1.80 lakh set aside in 1959. But they have decided to maintain the ordinary dividend at the previous year's level of 15 per cent (taxable) per annum.

The progress of the Bank since 1957 is depicted in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Interest and discount earned	48.63	41.07	34.91	28.38
Commission and exchange	11.09	9.45	8.36	6.66
Interest paid	30.89	25.60	22.53	17.46
Expenses	21.81	18.62	16.47	13.58
Depreciation	0.50	0.34	0.37	0.37
Profit	6.75	6.07	4.02	3.75
Provision for taxation	2.80	2.10	1.75	1.60
To reserves	1.35	1.80	0.93	0.80
Dividends—				
(Preference and ordinary)	2.63	2.09	1.33	1.33
Rate of ordinary dividend	(15%)*	(15%)*	(D-8%+ B-2%)	(D-8%+ B-2%)
Carry forward	0.11	0.14	0.07	0.06

	As on 31st December			
	1960	1959	1958	1957
Capital	25.00	24.98	20.00	20.00
Reserves	10.85	18.00	14.40	13.55
Deposits	472.72	444.65	419.35	385.76
Borrowings from other banks	9.25	35.85	29.14	35.47
Advances	488.72	490.65	395.39	343.45
Investments	353.27	340.03	305.65	229.55
Cash	106.77	112.08	109.44	94.03
Balance-sheet total	1084.17	1074.88	918.94	749.53
Ratio to deposits of—	%	%	%	%
Advances	56.0	58.1	54.9	58.6
Investments†	39.4	37.1	40.6	39.2
Cash	12.2	13.2	15.2	16.1

* Subject to deduction of tax.
† Ratio arrived after taking into account only unpledged portion of securities.

It will be observed that the upward trend in profit has been fully maintained, though the pace of growth has been a little slower as compared with the swift advance made in 1959.

Coming to the balance-sheet, one finds that, contrary to the general contractionist trend of deposits in the past year, the deposits of the Canara Banking Corporation have actually risen by Rs. 28.07 lakhs. The rise is more pronounced in the case of fixed and savings bank deposits—the former having gone up by Rs. 31.40 lakhs and the latter by Rs. 18.09 lakhs. The current deposits, however, have declined by Rs. 21.41 lakhs. As the aggregate deposits recorded a sizable expansion, the Bank has reduced its borrowings from other banks, as witness the decline in this item from Rs. 35.85 lakhs in 1959 to Rs. 9.25 lakhs in the year under review. On the assets side, the advances show a fractional fall, from Rs. 490.65 lakhs to Rs. 488.72 lakhs, and their ratio to deposits has also come down from 58.1 per cent to 56.0 per cent. The Bank's bill business expanded substantially, the outstanding bills for collection having increased from Rs. 54.15 lakhs to Rs. 65 63 lakhs. The investments of the Bank have gone up from Rs. 349.93 lakhs to Rs. 353.27 lakhs and so also their ratio to deposits from 37.1 per cent to 39.4 per cent. The liquidity ratio (investment plus cash) stands at a high level of 51.6 per cent. The reduction in advances and strengthening of liquid assets suggest that, in view of the strain on the banking system, the management preferred to play for safety.

During the past four years, the Bank's paid-up capital and reserves have increased substantially; the former stands at Rs. 25 lakhs as against Rs. 20 lakhs as on 31st December 1957 and the latter at Rs. 19.35 lakhs as against

(Continued on page 779)

COTTON MILLS' PERFORMANCE LAST YEAR

OUTPUT OF CLOTH AND YARN RISES, WHILE OFFTAKE RECEDES

THE ideologically-biassed textile policy of the Government has adversely affected not merely the more efficient, large-scale mill sector but the community in general. The production of mill cloth has gone down in the second Plan period, from 5,307 million yards in 1956 to 5,048 million yards in 1960, while the population of the country over the same period has risen from 391 million to 438 million. It is true that the output in the decentralised sector (handlooms and powerlooms combined) has increased quite notably, from an estimated total of 1,787 million yards in 1956 to 2,258 million yards in 1959 and 2,195 million yards in 1960, both figures being estimates. Even so, the *per capita* production of cloth (in both mills and decentralised sector) has shrunk greatly; in 1960, it was no more than 16.6 yards, as against 18.1 yards in 1956. Is this planning? Cloth, it is scarcely necessary to point out, is an essential item of consumption and as such exerts its influence greatly on the general level of prices. If, therefore, the inflationary impact of the substantial expenditure contemplated in the third Plan is to be held in check, it will be of the utmost urgency to take all possible measures designed to accelerate the production of mill cloth. Otherwise, the country will be faced with a virtual cloth famine at the end of the Plan.

That the mill industry has endeavoured to maintain as high a level of production as possible, despite the unhelpful official policy, is, indeed, creditable. The quantity of cloth actually produced in 1960 was 5,048.35 million yards, representing a rise of nearly 123.00 million yards as compared with the output of 4,925.43 million yards in 1959. The rise would have been more appreciable if the industry had been assured of regular and adequate raw cotton supplies at reasonable prices. The 1959-60 cotton season, it will be recalled, witnessed a sharp setback to the crop and the authorities did not make arrangements in time for getting imports from abroad. The production of yarn in 1960 was of the order of 1,737.12 million lbs. which, though it is higher than the previous year's figure of 1,722.81 million lbs., is below what was produced in 1957, namely, 1,780.10 million lbs.

Mill Activity

The following table indicates the mill activity in 1960 as compared with 1959 and 1958.

	1960	1959	1958
Cloth (million yards)			
Production	5,048.35	4,925.43	4,926.97
Delivered for :			
Civil consumption	4,080.21	4,497.79	4,301.49
Export	749.29	890.02	635.89
Other purposes	23.84	26.24	20.71
Unsold stock*	340.27	204.66	479.70
Yarn (million lbs.)			
Production	1,737.12	1,722.81	1,665.33
Consumed in mills	1,152.96	1,159.18	1,148.81
Export	22.80	33.57	34.01
Other deliveries	584.24	609.53	577.88
Unsold stock*	32.22	9.21	25.44
Cotton consumption (thousand bales of 400 lbs.)	5,097	5,095	4,964
Of which : Indian	4,112	4,639	4,440
Foreign	985	456	524
Spindles worked (daily average number)			
1st shift	11,771,011	11,227,877	10,904,927
2nd shift	11,861,818	10,982,740	10,411,744
3rd shift	5,066,854	4,940,430	4,961,855
Looms worked (daily average number)			
1st shift	178,975	175,968	177,014
2nd shift	173,010	168,254	164,295
3rd shift	42,774	37,416	33,413
Workers at work (daily average in all departments)	772,844	769,647	N.A.

* At the end of December. N.A.—Not available.

The improvement in cloth and yarn production during 1960 followed the more intensive utilisation of the mills' machinery and plant. On an average, 11.77 million spindles were employed in the first-shift working of mills, as against 11.29 million in 1959. Similarly, the average number of spindles in second and third shifts was higher, being 11.56 million and 6.07 million, as against 10.93 million and 4.94 million, respectively. Similarly, the daily average number of looms run was higher in all the three shifts: 178,975, 173,010 and 42,774, as compared with 175,968, 168,254 and 37,416, respectively, in 1959. The continued intensive utilisation of the mills' existing plant and machinery will only hasten their end, especially because a large part of them was installed many, many years ago and has outlived its utility. The mill industry must, therefore, be allowed to expand its capacity (both spinning and weaving) steadily, rehabilitate the worn-out equipment through replacement of modern machinery, particularly installation of automatic looms, with all the balancing equipment, and rationalise the methods of manufacture.

Consequent on the higher number of spindles and looms run in all the three shifts during 1960, the daily average number of workers at work in the different departments was higher at 772,344, as against 762,637 in 1959. This number is, however, less than the total number of workers on list (including *budlis*) which was 894,572.

More Higher Medium Cloth

The rise of 123 million yards in cloth production during 1960 as compared with 1959 was accounted for mainly by higher medium categories, the output of which amounted to 2,074.70 million yards, as against 1,758.42 million yards. The production of superfine counts was also higher at 301.53 million yards, as against 291.03 million yards. Coarse cloth, however, suffered a distinct setback, from 892.05 million yards in 1959 to 704.56 million yards in 1960. Likewise, the production of lower medium and fine counts declined, the former from 1,741.99 million yards to 1,738.53 million yards and the latter from 241.95 million yards to 229.03 million yards. These changes mainly reflect the fall in the supply of Indian cotton and the increased use of American cotton.

Sort-wise, longcloth and sheetings occupy the first place, as their share in the total output of wearable cloth is nearly one-third. Prints and chintz rank second, followed by *saris*, *dhotis*, poplins and crepes, mulls and voiles, shirtings, sucies, and drills, etc. The monthly averages of wearable cloth varieties packed in 1960 are given below, the figures in brackets relating to 1959:

(In thousand yards)

Dhotis 36,796 (38,635); *saris* 44,476 (39,387); dupattas, khes, chola, uparana 825 (648); mulls, voiles and dorias 21,830 (27,462); poplins, crepes, twills and hair cords 43,174 (35,546); longcloth 75,261 (68,460); sheeting 37,527 (40,393); leopard cloth and markin 13,069 (13,411); shirtings 20,051 (19,935); sucies 21,973 (19,460); madapalam, cambrics and lawns 3,074 (2,171); prints and chintz 46,726 (49,015); coating, tussores, corduroy and bedford corduroy 9,831 (11,593); drills, jeans, satin drill and gaberdine 17,728 (18,649); leno cloth 679 (514), mazri cloth *dosuti/dedsuti* 5,456 (6,196); other items 7,174 (7,940).

Of the 5,048.35 million yards of mill cloth produced in 1960 the share of bleached cloth alone was more than two-thirds, 3,365.56 million yards, to be precise. The quantity is higher than the 3,283.62 million yards produced in 1959. The output of piece-dyed fabrics was also higher at 789.53 million yards, as against 767.38 million yards. There was, however, a fall in the production of printed varieties, from 652.28 million yards in 1959 to 621.74 million yards in 1960.

The rise in cloth output noted last year was, however, not accompanied by a corresponding rise in deliveries of cloth for various purposes which actually suffered a setback. The quantity delivered for civil consumption was lower by 437.48 million yards at 4,060.31 million yards, for exports by 140.73 million yards at 749.29 million yards and for other purposes by 2.40 million yards at 23.84 million yards. Consequently, the unsold stocks lying with mills at the end of December 1960 were well above those a year before—340.27 million yards, as against 204.66 million yards. The reasons for the lower offtake are well known. So far as the domestic market is concerned, the main reason was the uncertainty caused by the Government's pricing policy. The frequent insistence by the Government for a reduction in prices deterred the dealers from buying freely. The result was inadequate supply of cloth in the retail markets.

TIGHTER SQUEEZE IN TEXTILES AHEAD?

STOCKS WITH TRADERS RISING

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 11*th April*

SPECULATION about the Budget proposals always provides a happy hunting ground for the economic forecasters and for political pandits. Publication of the official survey issued by the Government offers an opportunity to guess at what the Chancellor has in store.

Although there are still incorrigible optimists, the main weight of opinion this year seems to favour little change in the basic situation for a large body of taxpayers, although the belief that concessions may be granted on surtax is gaining ground. Some observers, indeed, suggest a further toughening in the Government's attitude towards retail expenditure and few suggest that any relaxation in purchasing power can be anticipated, owing to the recent drain on national reserves. From the viewpoint of the Lancashire cotton industry, nothing could be better than some extra cash in the pockets of prospective customers, as bigger retail sales of textiles could tip the scales at a time when there appears to be some need for additional pressure to be supplied at that point.

Little Follow-on Business

The trading cycle which has often been featured in learned discussions about the rises and falls in demand for cotton and allied products has, since the beginning of 1961, appeared to have reached its zenith for the time being. The big buying movement in late 1959 scarcely diminished in volume throughout last year, but, when the autumn failed to bring more than a steady offtake, with an absence of follow-on business of note, it became imperative that new orders should soon be secured.

The dullness of trading in the first quarter of this year has only been relieved by very fleeting spurts of activity and, while the mills themselves are generally busy working off current orders, the dearth of workable demand has gradually sapped the confidence of producers. There is still time for a revival to take place and it only needs some small developments to provide the "snowball" effect which invariably follows increasing pressure for supplies. Such a trend might well be set in motion by the freeing of additional purchasing power in the hands of the public.

Textiles benefited to some extent, along with other consumer products, from the tightening of controls of hire-purchase arrangements and more durable goods last year. The pipelines have to a large extent been restocked from their extremely low levels of twelve to eighteen months ago. Occasional reports are received of individual distributors complaining about ample stocks and an accumulation of goods held, but such experience is as yet unusual.

Irregularity in conditions affecting certain branches of the market, however, is already apparent. The past few months have seen some sections struggling against adversity, notably those firms chiefly engaged in doubling and the waste trade. Producers of goods in the very fine and very coarse qualities have suffered the most, but, among average constructions of cloth and counts of yarn, the situation as a whole is still reasonably encouraging.

Not to be ignored, and with its shadow growing longer every week, is the impact of imports. The authorities are clearly aware of the growing impatience in the industry about the renewal of the Hong Kong pact, but everyone admits the difficulty facing Lancashire's negotiators. At the same time, uncertainty is always the worst feature of any trading period, leading to prolonged hesitation among customers. It follows that, whatever the outcome, an early attempt should be made to settle this vital matter, so that the industry may be spared a phase of stagnation while talks appear to drag on unendingly.

Cotton Research

Research work carried out by the Empire Cotton Growing Corporation in two countries which have now become independent—Sudan and Nigeria—will not be affected by their change of political status, Lord Derby, the President, told the annual meeting of the Corporation in Manchester. Representatives of both countries had expressed their thanks to the Corporation for past help and had already stated that they would need assistance for many years to come. The Sudan had, in fact, asked if the number of Corporation's staff working in that country could be increased. Staff had been working there since 1925.

Production in the areas covered by the Corporation had been raised from 500,000 bales annually during the war to a new record level of 1,500,000 bales. It had been necessary to increase staff accordingly, but this expansion had not been in proportion to the trebling of the cotton crop. Mr. James Littlewood, Chairman of the Council of the Corporation, said that some outside growths of cotton such as Nigerian commanded a premium over United States varieties because they were still hand picked and did not suffer the disadvantage of mechanical picking and cleaning.

Lord Derby disclosed that the crop in Nigeria now being handled was likely to be the largest ever produced in this territory. He estimated that it would exceed the previous record of 241,000 bales in the 1957-58 season by about 40,000 bales. The Eastern extension of the Nigerian railway system, he said, was making good progress and by 1962 should have reached Gombe allowing all the production in that area to be railed direct to the coast for shipment instead of having first to be transported 190 miles by road.

Still More Figures

Additional tables giving more information about world affairs in the production of cotton and allied goods are now available in the quarterly statistical review issued by the Cotton Board, making this document, which is widely distributed to the trade at large, an even more valuable guide to be kept close at hand. Although inevitably most details are furnished about the supply and consumption of yarn and cloth produced in Lancashire mills, the outline of output, shipments and imports in numerous countries provides an up-to-date picture of the global textile scene.

The latest summary of conditions in the United Kingdom industry serves to confirm figures and trends already apparent. The reduction in the working week and absenteeism earlier in the year are responsible for the curtailment of output, which in the case of single yarns in February was 7 per cent below the November level. Cloth production in January was 5 per cent lower than in October 1960 which represented the best month since the scrapping programmes were completed.

Retail sales of clothing, however, according to the report, increased by 7 per cent last year as compared with 1959, and this represents a major source of strength for the cotton industry. "The main weakness in the situation is the increase in stocks of cotton goods, brought about by the flood of imports," adds the survey.

Over the Peak?

On an international basis, the review contends that cotton yarn production passed its peak some time in the course of last year. Over 1960 as a whole, world output was 4 per cent higher than in 1959, but, in the third quarter, it was only 2 per cent above the corresponding period twelve months previously and, by the fourth quarter, it had slipped back to 2 per cent below the 1959 level. Shipments of cotton cloth last year again expanded for the second year in succession, with the general level of exports about 11 per cent higher than in 1959. The United Kingdom, the United States, India and Switzerland were the chief exceptions to the improvement, while big gains were recorded by Japan, France and Spain.

As a result of figures published in the survey, it is now possible to break down the large imports of foreign goods into different types. The average quarterly arrivals of cotton yarn, for example, which amounted to 9,650,000 lbs. last year, included nearly 5 million lbs. of doubled yarn and a further 3,720,000 lbs. of single grey yarn below 42s counts.

In the case of grey cloth imports, which averaged nearly 150 million yards per quarter last year, the major quantity entering British ports was fabric below 42 inches in width, which accounted for over 80 million yards quarterly. A further 40 million yards of cloth between 42 inches and 60 inches arrived, while drills, jeans and gaberdines represented 11,750,000 yards of the quarterly total. Other woven fabrics arriving from overseas sources included more than 4 million yards of bleached cloth quarterly, 8,870,000 yards of printed goods, 6,674,000 yards of piece-dyed material and 6,310,000 yards of yarn-dyed fabrics.

Bigger Machine Activity

During a year so momentous as that encountered in Lancashire when such wholesale scrapping of plant took place, the rate of machine activity in the mills is of special importance. The disposal of redundant plant in the spinning section had reduced the number of spindles in place from 26,240,000 in 1958 to 13,140,000 in the final quarter last year. The mills were working at 95 per cent of capacity at the end of 1960, as against only 65 per cent two years previously. It is significant that the weekly average output of all types of yarn in the fourth quarter last year was 12,760,000 lbs., as against 12,660,000 lbs. over the whole of 1958.

In weaving, similar comparisons show the number of looms in place in the final quarter last year at 150,500, as against 255,400 in 1958, but the number of fully automatic machines remained almost unaltered at 41,700, as against 41,500 two years previously. Machine activity late last year reached a weekly level of 92½ per cent, whereas 1958 again represented a low-point of only 70 per cent. Cloth production appeared to have suffered more from the results of the redundancy scheme, the weekly average output last year being fully 2 million yards a week below the 1958 average and, even in the final quarter, it was over one million yards down on the level two years before.—*All Rights Reserved.*

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company at Gauhati and at its Regional Office at Calcutta. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

Licences have been obtained from the Central Government for the establishment of this new industrial undertaking at Chandrapur near Gauhati in the State of Assam and for effecting a substantial expansion in the existing industrial undertaking, of which copies together with copies of all orders amending the same are open to public inspection at the Registered Office of the Company at Gauhati, and at the Regional Office at Calcutta. It must be distinctly understood that in granting these Licences the Government of India do not take any responsibility for the financial soundness of these undertakings or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of the Prospectus, having attached thereto the documents required by Section 60 of the Companies Act, 1956, has been delivered to the Registrar of Companies, Assam, Tripura and Manipur, Shillong, for registration.

Application will be made to the Calcutta Stock Exchange, for permission to deal in the Equity Shares of the Company and for official quotation.

The Subscription List will open at the commencement of Banking hours on Friday, the 28th April, 1961 and will close at the close of Banking hours on Saturday, the 6th May, 1961, or earlier at the discretion of the Board of Directors of the Company, but not before the close of Banking hours on Monday, the 1st May, 1961.

ASSOCIATED INDUSTRIES (ASSAM) LTD.

(INCORPORATED ON 7TH NOVEMBER, 1959, UNDER THE COMPANIES ACT, 1956)

AUTHORISED SHARE CAPITAL

		Rs.
(1)	7,00,000 Equity Shares of Rs. 10 each	70,00,000
(2)	30,000 Redeemable Cumulative Preference Shares of Rs. 100 each	30,00,000
		Rs. 1,00,00,000

ISSUED SHARE CAPITAL

	Rs.
1,00,000 Equity Shares of Rs. 10 each, fully paid up in cash	10,00,000

The abovementioned 1,00,000 Equity Shares have been allotted for cash at par to the Promoters and Directors of the Company and their relatives, friends and associated companies.

PRESENT ISSUE

Preference Shares:

	Rs.
15,000 9.3% (Taxable) Redeemable Cumulative Preference Shares of Rs. 100 each	15,00,000

The Government of Assam have agreed to subscribe the entire issue of 15,000 Preference Shares which will be allotted to them for cash at par.

Equity Shares:

3,50,000 Equity Shares of Rs. 10 each	35,00,000
Rs.	50,00,000

OUT OF THE PRESENT ISSUE OF 3,50,000 EQUITY SHARES

	Rs.
(1) The Directors and their relatives, friends and associated companies have agreed to subscribe for cash at par and will be allotted 29,100 Equity Shares of Rs. 10 each	2,91,000
(2) Rallis India Limited, Calcutta, have agreed to subscribe for cash at par and will be allotted 30,000 Equity Shares of Rs. 10 each	3,00,000
(3) The Government of Assam have agreed to subscribe for cash at par and will be allotted 40,000 Equity Shares of Rs. 10 each	4,00,000

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION

2,50,900 Equity Shares of Rs. 10 each	25,09,000
Rs.	35,00,000

Out of 2,50,900 Equity Shares offered to the public for subscription a preferential allotment of 50,000 Equity Shares will be made to the people of Assam and the Government of Assam have underwritten the said 50,000 Equity Shares on the above condition.

UNDERWRITING

The entire aforesaid issue offered to the public has been underwritten as follows :

	Underwriters	*Equity Shares*
1.	Government of Assam, Shillong	50,000
2.	The Bank of Baroda Ltd., Bombay	60,000
3.	The Concord of India Insurance Co., Ltd., Calcutta	20,900
4.	New Zealand Insurance Co., Ltd., Calcutta	50,000
5.	Royal Exchange Assurance, Calcutta	20,000
6.	Place Siddons & Gough (Private) Ltd., Calcutta	50,000
		2,50,900

In the opinion of the Directors the resources of the underwriters are sufficient to discharge their underwriting obligations.

DIRECTORS

1. MR. G. D. JATIA (*Chairman*), 55/1, Bhupendra Basu Avenue, Calcutta-4, Industrialist, Managing Director of Reform Flour Mills Private Ltd.

The consents required under the Act have been obtained and filed with the Registrar of Companies, Assam, Tripura and Manipur, Shillong, along with the Prospectus as required by Section 60 of the Companies Act, 1956, and have not been withdrawn.

APPLICATIONS AND SUBSCRIPTIONS

Applications for the Equity Shares by members of the public must be for a minimum of 50 shares or multiple of 50 shares.

Terms of Payment on Above Equity Shares

On application	..	Rs. 2.50 per share.
On allotment	..	Rs. 2.50 per share.
Balance	..	Rs. 5.00 per share on call or calls to be made not earlier than 3 months after allotment.
		Rs. 10.00 per share.

Failure to pay the allotment money or any call when made will render the shares liable to forfeiture.

DIRECTORS

Article 89 provides that the number of Directors shall not be less than three nor more than twelve.

An Agreement has been entered into with the Government of Assam under which they have the right to appoint an Ex-Officio Director, who will not be liable to retirement by rotation and shall hold office till such time Government holds shares in the Company whether Preference or Equity.

So long as any loan from the Industrial Finance Corporation to the Company is outstanding, the Industrial Finance Corporation will have the right to appoint two Directors on the Board of Directors of the Company as Ex-Officio Directors, not liable to retirement by rotation.

Unless otherwise determined by the Company in General Meeting, each Director shall be entitled to receive out of the funds of the Company for his services in attending Meetings of the Board a fee of Rs. 100 per meeting of the Board attended by him. All other remuneration, if any, payable by the Company to each Director, whether in respect of his services as a Managing Director or a Director in the whole or part-time employment of the Company shall be determined in accordance with and subject to the provisions of these Articles and of the Act.

HISTORY OF BUSINESS

INCORPORATION AND COMMENCEMENT OF BUSINESS

The Company was incorporated on 7th November 1959, under the Companies Act, 1956 and obtained the Certificate of commencement of business from the Registrar of Companies, Assam, Tripura and Manipur on 11th November, 1959.

OBJECTS OF THE ISSUE

The Company has now taken on hand business in two units, viz. (1) Textile Unit and (2) Chemical Unit.

Textile Unit

It is intended to establish a cotton spinning mill of 25,000 spindles in two stages. The work on the first stage for the establishment of a mill with 12,320 spindles has already been taken up and is well under way.

Chemical Unit

It is intended to set up a production unit for the manufacture of:—

(a) Super Phosphate	...	3,000 tons per month
(b) Mixed Fertilisers	...	6,000 " " "
(c) Sulphuric Acid	...	1,500 " " "
(d) Sulphur Dioxide	...	300 " " "

START OF THE MILLS

The Mills will go into full production both in the textile and the chemical units by the end of 1961 or beginning of 1962.

RAW MATERIALS

Cotton : Cotton is the main raw material for *the Textile Unit of the Company.* A large part of the supply needed for the Company will be available in the country but some cotton may have to be imported. The quantity of cotton to be imported from abroad is relatively small and no great difficulty is anticipated for obtaining licences in respect thereof.

Sulphur and Rock Phosphate : Sulphur and Rock Phosphate are the main raw materials for the Chemical Unit. Since the use of Fertilisers is indispensable for the increase of production of food grains the Company anticipates no great difficulty in obtaining the requisite quantity of sulphur and rock phosphate from abroad under the actual users' licence.

The factory site has an easy access by river, rail and road.

TECHNICAL ARRANGEMENT FOR THE CHEMICAL UNIT

An Agreement has been entered into between the Company and Singmaster Breyer Inc. of New York, U.S.A., which has a resident Technical Representative at New Delhi for supply to the Company of complete plant for production of sulphur dioxide (liquid), sulphuric acid, super phosphate and mixed fertilisers. The plant will be partly fabricated in India and partly imported from abroad. Singmaster Breyer Inc. will be responsible for complete procurement, fabrication and erection of the plant at site and bringing the plant into satisfactory commission and training of the Company's personnel. The sulphuric acid plant will be of Monsanto design. Singmaster Breyer Inc. are well known and have experience in India for erection of the plant of the type required by the Company.

PLANT AND MACHINERY FOR THE TEXTILE UNIT

Contract for supply and erection of the Blow-room machinery has been placed with New Standard Engineering Co. Ltd., of Bombay who are now manufacturing Blow-room machinery in India in collaboration with Truetzschler of Western Germany.

Orders for supply and erection of Card Engines Can Fed Inters, Ring spinning frames and other plant and machinery with the latest drafting arrangements have been placed with Textool Co. Ltd., Coimbatore.

IMPORT LICENCE

Application has been made to the Government of India for Licence for the import of the plant and machinery required for the Chemical Unit. Foreign Exchange will be met from the Dollar loan sanctioned by the Industrial Finance Corporation. Import licences for import of a small part of the plant and machinery required by the Company for the textile unit are expected to be received shortly.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The minimum subscription in respect of the present issue on which the Directors will proceed to allot is Rs. 25,09,000 which is the total amount of the present issue offered to the public for subscription.

The Capital outlay is estimated as follows:—

Land and Land Development and Roads	... ...	Rs.	3.250 lacs
Buildings	... ...	"	14.600 "
Preliminary Expenses	...	"	0.100 "
Expenses of Issue	...	"	1.050 "
Pre-operational Expenses	...	"	1.635 "
Plant and Machinery	...	"	84.666 "
		Rs.	105.300 lacs

The above capital outlay will be met as follows:—

(1)	Equity Shares already issued	Rs.	10.00 lacs
(2)	Equity Shares offered to the public	"	25.09 "
(3)	Equity Shares to be allotted to other parties	"	9.91 "
(4)	Preference Shares included in the present issue	"	15.00 "
(5)	Loan from Industrial Finance Corporation of India hereinafter mentioned in rupee In foreign exchange equivalent to approximately Rs. 26,17,000 / 25,05,000	Rs.	50,22,000 " 50.22 "
(6)	Deferred Performance Payment for supply and fabrication of plant for the chemical Unit	"	2.00 "
		Rs.	112.22 lacs

It is estimated that the Company wil require a working capital of Rs. 40 lacs which together with any increase in the actual cost over the estimated cost of the plant and facilities will be met partly from the surplus of the resources over capital expenditure mentioned above and partly by loans from the Company's Bankers and if necessary from other sources.

FINANCIAL ARRANGEMENT WITH INDUSTRIAL FINANCE CORPORATION OF INDIA

Loan : The Industrial Finance Corporation of India have sanctioned a loan of Rs. 26,17,000 and a Dollar loan of $5,05,000 to the Company to be utilised towards the purchase of plant and machinery for the integrated project of textile and chemical units.

The loan is to be secured by a first mortgage of the existing and future fixed assets of the Company and will carry interest at the rate of 7% per annum on the Rupee loan and not exceeding 8% on the Dollar loan with a rebate of ½% on the Rupee loan if instalments of principal and interest are paid on due dates.

During the subsistence of the mortgage the Industrial Finance Corporation may at any time appoint not more than two persons to be Directors of the Company.

The Company will however, be free to borrow from its Bankers any moneys which it may from time to time require against hypothecation of stocks, raw materials and finished goods.

During the currency of the loan the dividend on Equity Shares in any year shall not without the prior approval of the Corporation exceed 8%.

The said loan shall also be subject to other terms and conditions and subject to agreement being reached thereon, a formal agreement will be entered into between the Company and the Corporation.

Mr. G. D. Jatia, Mr. D. N. Jatia and Mr. S. S. Lahiri, Directors of the Company, have agreed to guarantee the loan in their personal capacity.

PROSPECTS AND MARKETABILITY

The Third Five-year Plan lays great stress on industrialisation and increase in agricultural productivity in the country and in particular in the less developed States. The economy of the State of Assam has been mainly dependent on agriculture and tea plantation. The establishment of a Cotton Spinning Mill and an integrated chemical plant for the manufacture of Sulphur Dioxide (Liquid), Sulphuric Acid, Superphosphate and Mixed Fertilisers will certainly assist in the implementation of the recommendations of the Five-year Plan.

There are no Cotton Mills in the State of Assam although there is a great demand for yarn from the Handloom industry spread throughout the State. At present the bulk of the yarn required by he State for consumption is supplied from other States and even the full complement of the Company's production will still be far below the demand.

The decision of the Government of India to install Refineries in Gauhati and Barauni gave the impetus to the Company to start the present chemical unit. Arrangements have been reached between the Company and the Indian Refineries Ltd., who are installing both the Refineries for the supply of our production of Sulphur Dioxide (Liquid) to them. To make full use of the Acid Plant required for the process of the Sulphur Dioxide and also the spent acid a Super Phosphate and Mixed Fertilisers Plant was co-ordinated with the above chemical plant, thereby making it a complete integrated unit.

The major portion of Sulphuric Acid produced by the Company will be consumed by the Super Phosphate plant and a small portion will be available for sale in the market. The Company has also received a licence for the manufacture of Alum and when this is taken up it will consume major portion of the surplus Sulphuric Acid. Sulphuric Acid being a basic chemical it may be expected that with the development of other chemical industries in the State there will be no difficulty in selling the surplus acid.

To increase the production of food grains there is a drive for greater yield per acre by systematic and scientific use of different types of Fertilisers. With the location of an Ammonium Sulphate and Urea plant at Namarkatia, it is expected that there will be a greater demand for Super Phosphate to make a balanced application of the fertilisers to the soil.

The Mixed Fertiliser Plant will supply ready-to-use fertilisers to the farmers. As already mentioned, Assam being a predominantly agricultural and tea plantation State, Fertilisers will naturally assume a great significance in the agricultural economy. It is, therefore, expected that there will be great demand for the Fertilisers and the Company's product will find a good market.

Subject to the approval of the Company in general meeting it has been arranged that Rallis India Limited who have wide experience in the field of Fertilisers will be appointed sole distributors of the Company and the Company will benefit from their experience.

PRELIMINARY AND OTHER EXPENSES

The preliminary expenses including Underwriting commission, Brokerage and expenses of this issue are estimated at Rs. 1,15,000.

BROKERAGE

Brokerage will be paid to Underwriters, brokers and Banks at 10 nP per Equity Share of Rs. 10 each offered to the public on allotment made in respect of applications bearing their stamps.

UNDERWRITING COMMISSION

An underwriting commission of 2½% will be paid to the underwriters.

COMMISSION

No sums have been paid within the two years preceding the date of this Prospectus or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions, for any shares in or Debentures of the Company or as discount in respect of shares issued.

PAYMENT TO PROMOTERS, ETC.

No amount or benefit has been paid or given or is intended to be paid or given to any Promoter or officer for promoting the Company except Rs. 19,142.50 paid by way of reimbursement to Jatia Industries Private Ltd., for expenses incurred by them towards preliminary expenses and for purchase of land.

MANAGING AGENTS

Article 128 provides for the appointment of Managing Agents but no Managing Agents have been appointed or proposed to be appointed at present.

MANAGING DIRECTOR AND WHOLE-TIME DIRECTOR

Article 128 provides that subject to the provisions of the Companies Act, 1956, the Board of Directors may appoint a Managing Director or Managing Directors, Manager or Managers of the Company. There are no Manager or Managers of the Company and it is not proposed to appoint any Manager or Managers at present.

The Company proposes to appoint Mr. D. N. Jatia of 55/1, Bhupendra Basu Avenue, Calcutta, as the Managing Director and Mr. S. S. Lahiri of 1/1/2B, Hazra Road, Calcutta, as the whole-time Technical Director. The terms and conditions of appointment and the remuneration will be determined by the Company in general meeting subject to the approval of the Central Government.

PLANT SITE AND POWER

The Company has with the approval of the Government of Assam purchased an extensive land, comprising nearly 1,200 acres in Chandrapur Area near Gauhati, for the factory site and staff accommodation. This site offers all essential facilities and there is good scope for further expansion. A railway line passes across the site and a railway station is in close proximity. The site being situated on the banks of a perennial river, there is no dearth of water supply and in addition there is the advantage of river transport and disposal of effluents from the Chemical plants. A road from Gauhati to the site is under construction. The Assam State Electricity Board has assured the required supply of power.

APPLICATION FOR SHARES AND ALLOTMENT

Applications for Equity Shares must be for a minimum of 50 shares or multiples of 50 shares. All applications for Equity shares must be made on the form accompanying the Prospectus, which can be had from the Company's Bankers, Underwriters and Brokers to the issue. All application forms duly completed must be lodged together with the amount payable on application, with any of the following banks, namely:—

1. State Bank of India, Calcutta.
2. The Bank of Baroda Ltd., Calcutta.
3. The Central Bank of India Ltd., Calcutta.
4. The United Bank of India Ltd., Calcutta.

or with any of their branch offices at the following places, namely:—

Ahmedabad, Bangalore, Baroda, Bombay, Delhi, Dhubri, Gauhati, Kanpur, Karimganj, Madras, Shillong, Tinsukia.

The Share Certificates will be issued in exchange of Letters of Allotment within four months of allotment.

INVESTMENT OF LIFE INSURANCE FUNDS

ESTIMATES COMMITTEE'S RECOMMENDATIONS

THOSE who had thought that the restoration of Section 27A of the Indian Insurance Act in respect of the investment of the L.I.C., after the storm that raged over the Mundhra affair, had sealed the controversy regarding investment of life insurance funds, have been proved wrong. The report of the Estimates Committee (Chairman: Mr. H. C. Dasappa) on L.I.C., presented to Parliament on Monday, has again reopened the subject. The Committee, in its report, calls for a fundamental change in the policy followed in respect of investment of life insurance funds. It has suggested that the L.I.C. should cease to make investments on its own and that the Government of India should take over all the investible funds of the Corporation as an "unfunded debt" and utilise them for "development investment" under the Five-year Plans. In the Committee's opinion, such a change in procedure will not only help to realise better the objectives of nationalisation of life insurance but also free the Corporation from the "controversial and distracting work of investment."

The Committee has observed that, in making such a suggestion, it has not lost sight of the fact that a certain portion of the life funds is at present being provided for the development of new industries or for the expansion of existing ones in the private sector. But, in its view, such investments could be made through other financing agencies in the public sector taking into account the size of investment made by the L.I.C. for this purpose in the past and the allocations in the Plan.

Policy Objectives Not Realised

The reason advanced by the Committee for divesting the L.I.C. of the responsibility of choosing appropriate outlets for its funds is that investments so far made by it have failed to achieve any of the original policy objectives of social advancement, diversification of investment and avoidance of speculation. As regards the first, namely social advancement, the Committee is of the opinion that the L.I.C. is not competent to make investment for social advancement charged as it is with the function of making businesslike investment in the interest of policyholders. To the extent that the L.I.C. purchases Government securities, the objective of social advancement is, in fact, pursued not by the L.I.C. but by the Government. If the L.I.C. were to further this objective through other investments, the Committee maintains, it could hardly do so without making selective purchases of stocks and shares and it is doubtful, according to it, if such selective purchases could be consistent with the aim of security and steady return. Even so, it would be difficult, it is pointed out, to avoid the criticism that such operations might be discriminatory and result in speculation.

As regards diversification of investment, the Committee concedes that the limited contribution which the L.I.C. can make towards it is possible through investments in stocks and shares. But here, again, it has to look to a secure and steady return which would mean that, in the interests of its policyholders, it has to invest generally in established and sound concerns. This consideration, argues the Lok Sabha body, restricts the scope of the L.I.C. to encourage establishment of new industries so as to correct the existing regional imbalances. It points out that, during the two years 1958 and 1959, even after the policy of diversification of investment was laid down by the Government, the pattern of investment has not materially changed.

Diversification

Thus, out of Rs. 12 crores invested in the shares and debentures of companies during the two years, Rs. 5.52 crores (over 45 per cent) has gone to Bombay, and Rs. 2.69 crores (about 22 per cent) has gone to West Bengal. All other States together get only Rs. 4 crores. Similarly, out of an investment of Rs. 4.42 crores in approved securities during the same period, Rs. 2.95 crores had been invested in Bombay alone. Again, out of Rs. 7.04 crores invested in shares and debentures in 1959, Rs. 4.81 crores, that is, 68.5 per cent, was in shares already in the market and only Rs. 17.15 lakhs, that is, 2.4 per cent, was invested in shares and debentures of newly-floated companies. Commenting on this pattern, the Committee says that purchase of shares already in the market could hardly be held to serve the purpose of aiding the development of new industries or the expansion of existing ones. On the other hand, it would mostly go to the benefit of persons who are already possessed of such shares, and, very likely, for speculation.

The Committee in fact seems to question the very need for L.I.C. pursuing a policy of financing new ventures, as will be evident from the following quotation: "The fact that other public undertakings like the Industrial Finance Corporation, the Industrial Credit and Investment Corporation and State Industrial Finance Corporations, which could finance new industries on a developmental basis had come into operation, would make the role originally contemplated for L.I.C. in this respect somewhat superfluous."

L.I.C. and Speculation

The L.I.C. has also not been able to discourage speculation. On this point, the Committee quotes the Chairman of the L.I.C. himself as saying that, at times, the operations of his Corporation in the share market, though not speculative in themselves, may be the cause of speculation. It points out as an instance the purchase by the L.I.C. of the shares of a mining concern where the availability of ore was not substantial. As a result of the purchase, the market value of the share rose immediately and subsequently firmed up, but it was found that the dividend fell. Substantial purchases by the L.I.C., in the Committee's opinion, cannot be kept a secret and they are bound to have a bullish effect on the market.

The Committee disagrees with the view that the funds of the L.I.C. should be made available to stabilise the stock exchange from time to time. It seems to be against the L.I.C. operating on the stock exchange at all, as witness the following observation of the Committee: "Investment in stocks and shares leads to allegations and aspersions, which, though they may not be justified in most cases, yet may do little to increase the prestige of the Corporation."

For all these reasons, the Committee is of the opinion that it would be in the interests of the country and the Plan programme as a whole, if the Government itself were to take over the entire investible funds of the L.I.C. as an unfunded debt on which interest could be predetermined periodically in consultation with the Corporation to give an adequate return to meet all its liabilities. The Committee estimates that such an agreement would provide the third Plan with resources amounting to Rs. 450 crores.

The suggestion for the take-over of investible funds of the Corporation is only one, though by far the most important and fundamental, of the recommendations of the Committee. Incidentally, the Chairman of the L.I.C. is also inclined to support this suggestion. The Committee has also made a number of other suggestions for improving the business of the Corporation, streamlining procedures and decentralising the administrative set-up of the Corporation. Some of the main recommendations and comments in this regard are outlined below:

The Estimates Committee favours the creation of semi-autonomous zonal units under a federal structure of the Corporation, so as to encourage initiative and to promote greater efficiency. Delegation of functions in the matter of writing of business, payment of claims, grant of loans and servicing of policyholders, it maintains, would introduce an element of healthy competition between different semi-autonomous zonal units.

Dissatisfaction has been expressed by the Committee over the L.I.C.'s performance in respect of new business. There has been a shortfall of Rs. 28 crores in respect of new business completed in 1960 from the target of Rs. 525 crores. The increases planned for are Rs. 130 crores for 1961, Rs. 156 crores for 1962 and Rs. 180 crores for 1963. This, on an average for the three years, works out to Rs. 158 crores per year. The actual increase during the previous three years 1957-60 has been about Rs. 70 crores a year. This, the Committee points out, is less than half the anticipated average increase in the next three years. It, therefore, feels that, unless the Corporation doubles its present performance in securing the new business, the target of business fixed for 1963 cannot be reached. It is suggested that the reasons for the shortfall in new business in 1960 should be analysed and suitable measures taken to prevent its repetition. The Committee has also asked the Government to keep a continuous watch over the actual performance of the Corporation so that the latter may not fall behind targets.

The existence of widespread complaints regarding the servicing of policyholders has been noticed by the Committee which has urged that effective steps should be taken to improve the position in this regard. It has also found that the present procedure for grant of loans to policyholders is far from simple. There is delay in the grant of loans which defeats the very purpose for which loans are sought by policyholders. It has been suggested that immediate attention should be paid to these matters and action taken to simplify the procedure for disposal of loan applications by empowering the branch offices of the L.I.C. to grant loans upto a specified maximum which should be disposed of within a time limit to be fixed for the purpose. A reduction in the rate of interest charged on loans has also been suggested as desirable. Another suggestion is that the surrender value of policies issued by the Corporation should be stepped up to bring it on a par with the leading insurance companies abroad, as the loan obtainable on a policy depended on its surrender value.

The delay in the settlement of claims has also been criticised by the Committee which found that, on 1st January 1960, as many as 73,082 claims, for a total sum of Rs. 14.04 crores, were outstanding, out of which 33,810 were outstanding for more than 12 months. The Committee points out that such long delay is very undesirable and results in unnecessary hardships to the claimants. When the Government has guaranteed payment to policyholders such delays also tend to expose the Government to criticism.

As regards premium rates, the Committee is of the view that, in the nationalised set-up, the premium rates, should not be any higher than is warranted by strict actuarial considerations. One of the tests of the successful working of the Corporation is the long-term reduction it can effect in expenses and, consequently, in the rates of premia. It has suggested the setting up of a Committee, consisting of the Controller of Insurance, representatives of the Corporation and independent actuaries, to review the rates of premia offered at present by the Corporation.

TEXTILES

(*Concluded from page 738*)

The drop in exports is attributable to a fall in the competitive capacity of Indian mills, thanks chiefly to cost inflation which was not fully off-set by the special export incentive scheme.

An analysis of the pattern of yarn production shows that, during the year under review, there was a further shift from coarse to finer counts. The following table illustrates the position:

(In thousand pounds)

Counts	1960	1959	1958
1s to 20s	743,367	841,308	851,628
21s to 40s	859,684	770,592	740,280
Above 40s	134,072	111,904	93,468
Total ..	1,737,123	1,723,804	1,685,376

Out of the total 1,737.12 million lbs. of yarn that came off the spindles of mills last year, the composite units consumed 1,136.73 million lbs. for wearable cloth (5,048.35 million yards), a little over 13.77 million lbs. for manufacturing sewing thread yarn and 2.46 million lbs. for making hosiery goods. The remaining quantity was delivered for other purposes: 541.86 million lbs. for civil consumption (557.57 million lbs. in 1959), 22.80 million lbs. for export (33.27 million lbs.), and 19.33 million lbs. to other mills (18.49 million lbs.). The major part of delivery for "civil consumption" represents the supply made available to the decentralised sector (handlooms and powerlooms). The decline in supply was due to reduced demand for yarn from this sector which experienced a downward trend in offtake of cloth due to high prices. Reflective of this position is the fall in the output of cloth in the decentralised sector from 2,258 million yards in 1959 to 2,195 million yards in 1960. This is the first year since 1952 to register a reversal of the upward trend in production in the decentralised sector which in 1952 was just 1,313 million yards.

COTTON TEXTILE INDUSTRY ANNUAL

A comprehensive and up-to-date survey of the Indian cotton textile industry is presented in the latest edition of the *Indian Cotton Textile Industry Annual* (Editor: Prof. M. P. Gandhi, Nanabhay Mansion, Sir P.M. Road, Bombay-1. Pages: 88; Price: Rs. 6). This edition covers the year 1959-60. True to the high standards set by its predecessors, the *Annual* deals with every aspect of the industry, including Plan targets, prices, exports, finance and labour. The Appendix on raw cotton gives a bird's eye view of the supply situation. There is, besides, a wealth of statistical material carefully collected and arranged which facilitates easy and ready reference.

ESTIMATES COMMITTEE ON COFFEE BOARD

ONLY MINOR ASPECTS HIGHLIGHTED—MAJOR ISSUES IGNORED

IT is a pity that, in its report on the Coffee Board, the Estimates Committee has failed to examine in detail the working of the Board, point out the deficiencies in its working and recommend measures for their removal. All that the Committee has done is to highlight certain minor aspects of the Board's functions. It has, of course, urged that a periodical assessment of the activities of the Board, with particular reference to its prescribed objectives and functions, should be undertaken by an agency independent of the Board and its report submitted to Parliament. It has also urged every effort to foster the industry, so that the objectives of the Board are fully realised. it says:

"Recent years have witnessed a phenomenal progress in the coffee industry. It is one of the main cash crops in the hilly tracts of the Western Ghats. The Coffee Board has evidently been a stabilising factor. The Committee, however, feel that the trends need careful watching, especially with a falling international market. If, for any reason, coffee does not become paying, there is no alternative crop that can be raised on the same hill slopes. It is not only important to the economy of the areas otherwise backward, but also it has been a consistent foreign exchange earner."

But one is unable to understand why the Estimates Committee itself did not care to study the system of marketing coffee adopted by the Board. If it had, it would surely have found out the defects in the system. Anyway, something is better than nothing. The fact that the Committee has found it necessary to suggest an examination of the Board's affairs by an independent body clearly implies that all is not well with it and that it is not effectively serving the purpose for which it was formed. This inference is by no means unwarranted, as readers will recall the observations of this journal on the subject in the past 12 to 18 months.

Growers Receive Less

The price policy of the Coffee Board is supposed to have been based partly on the objective of ensuring a fair return to the grower, but this objective has not been fulfilled at all. As the Committee itself has shown, the actual payment made to coffee growers have been steadily declining and, in 1959-60, it even fell below the average of payments made to growers during the seven years ended 1954-55. The table below gives the cost of production, fair return arrived at and the actual payment made per point of coffee during the last four years:

(In rupees per point)

	1959-60*	1958-59*	1957-58†	1956-57†
Based on production cost‡ ..	2.04	2.23	2.33	2.22
Fair return§	2.35	2.35	2.39	2.39
Actual payment made to growers by the Board ..	2.20	2.45	2.51	2.51

* Per 50 kg. basis. † Per cwt. basis.

‡ Including 10 per cent return and interest on working capital.

§ Based on the average of payments made to growers during the seven years ended 1954-55.

The Committee alludes here to the fear expressed by the Coffee Board that any further increase in price may result in consumers' resistance in the home market. It also recalls the reference in the report of the Expert Committee (submitted in June 1959) to the apprehensions expressed by many well-informed observers that the world prices might be below the domestic prices and, in the circumstances, it might not be possible to maintain a minimum release price calculated in accordance with the practice adopted by the Board hitherto. The Committee now feels that the pricing policy should be examined to see in what way it requires modification to give a fair return to the grower and to encourage exports while avoiding too high an internal price.

No one will suggest that the prices of coffee payable by consumers should be enhanced to any marked extent, because the prevailing prices themselves are already high. But one is unable to explain the wide gap that exists between the "consumer price" and the "coffee grower's price." Whatever be the factors responsible for the gap, it must be stressed that the prices actually received by coffee producers are low and do not adequately cover the marked increase in the cost of production, let alone provide for a reasonable return on capital employed. Further, there is a considerable time lag—sometimes as many as 18 months to 24 months—between the date when coffee producers deliver their produce to the Board and the date when they receive payment. The Coffee Board's policy suffers from a number of defects such as weird and outdated multi-channel sales, auction by closed bids, export sales by calling tenders, restricting the trade only to registered dealers, undercutting by private retail trade under the guise of propaganda and many other ritualistic practices. Drawing attention to all these defects, we had emphasised, on a previous occasion, that, by re-orienting coffee policy, by making the grower really responsible for marketing decisions concerning his coffee, by reorganising procedures and methods, by enlarging the production base and by expanding the home and overseas markets, the producers of Indian coffee could face the future with confidence. It is unfortunate that the Estimates Committee has failed to focus attention on these most important problems of the coffee industry.

Export Promotion

The Committee has laid special emphasis on export promotion. It says:

"The Committee are of the view that the export of coffee has to be specially encouraged to increase earnings of foreign exchange. Indian coffee is now faced with keen competition in the world market and special measures are called for not only to increase our export but even probably to retain them at the present level. The Committee feel that it may be desirabe for this purpose to export Indian coffee at comparatively lower prices, even though that may require pegging of domestic consumption.

"Obviously, much has not been done for foreign propaganda and the emphasis has been on the internal market. It is understood that the Board is planning to improve the existing arrangements in this respect. In view of the imperative necessity of increasing exports of coffee, the Committee hope that prompt and adequate measures will be taken in this direction. In case it is considered that the resources available at the disposal of the Coffee Board are not adequate, the feasibility of pooling the resources of a number of Commodity Boards Committees for this purpose may be examined."

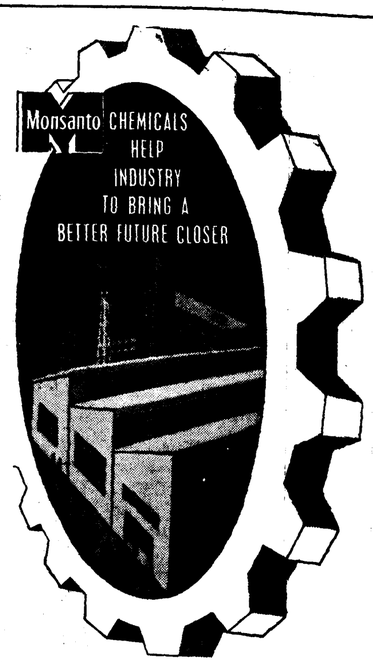
The anxiety expressed by the Committee over exports is understandable, considering the tight foreign exchange position and the keen competition in the world coffee market. But it would be wrong to advocate higher exports through the pegging of domestic consumption. For it is only maximisation of production and expansion of the home market that will improve the industry's capacity to export a larger volume at a loss.

Developmental Activities

Be that as it may, the Estimates Committee has done well to pinpoint the disquieting features of the Coffee Board's developmental activities. The data furnished in the report reveal that, out of the Central Government loan of Rs. 261.42 lakhs granted to the Board in 1956, to be drawn in instalments over a period of five years for being utilised towards the grant of financial and other aids to small growers, the amount actually drawn up to the end of March 1961 is only Rs. 10.24 lakhs, or just 4 per cent of the funds earmarked. This, as the Committee avers, is not an encouraging performance. The poor performance is attributed mainly to legal difficulties relating to mortgage transactions. Only in May 1960, the Board modified some of the other terms and conditions governing the grant of loans. Could the Board not have taken the remedial measures much earlier? The Committee points out that adequate thought was not given to the different aspects of the scheme before it was put into operation.

Another major scheme under the development plan which, according to the Estimates Committee, has not proved successful relates to the supply of fertilisers and pesticides to small coffee growers. The scheme was abandoned by the Board after the very first year of its inception (1956-57). The Committee has, therefore, urged that the Development Department of the Board should be wound up and its work redistributed suitably, for it feels that the Department has hardly justified its existence. Here are the facts which support the Committee's contention: During the four years from 1956-57

(*Continued on page 766*)



Monsanto works constantly both to develop new, better chemicals—and to improve those chemicals already used in every major industry.

PHARMACEUTICALS
acetylsalicylic acid, phenacetin, benzoic acid, phenol, phenolphthalein, germicides are but a few of the many Monsanto products in this field.

RUBBER
Monsanto's accelerators help speed vulcanisation, add quality. Anti-oxidants improve resistance, prevent early cracking, give increased flexibility.

TEXTILES
Monsanto Syton is widely used in spinning cottons and woollens, increases yarn strength, allows for reduction in twist.

PRESERVATIVES
Monsanto's pentachlorophenol chemicals help to preserve a wide range of products. Monsanto sodium benzoate helps prevent corrosion.

PAINT
Monsanto's chemicals are used extensively in the manufacture of high-quality paints, varnishes and lacquers.

SYTON is a Registered Trade Mark

MONSANTO CHEMICALS OF INDIA PRIVATE LTD.
Wakefield House, Sprott Road, Ballard Estate, Bombay 1.
Also at: Calcutta, Delhi and Madras.

Monsanto

chemicals for every industry

Monsanto Chemicals Limited, London. Monsanto Chemical Company, St. Louis, U.S.A. Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

NOTE:—No provision has been made for the charge for future payments of Gratuity. The Gratuity paid during the year amounting to Rs. 26,147.60 is included in Salaries and Allowances and Provident and Pension Funds.

REPORT OF THE AUDITORS

We have audited the foregoing Balance Sheet of the Indian Branches of Comptoir National D'Escompte de Paris, as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Indian Branches of the Bank for the year ended on that date in which are incorporated the returns of the Calcutta Branch of the Bank audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with provisions to sub-section (1) and (2) of Section 211 and sub-section (5) of Section 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act, 1949.

We report that:—

(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit;

(b) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Calcutta Branch;

(c) the Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns;

(d) the report on the accounts of the Calcutta Branch audited by other Auditor has been forwarded to us and the same has been considered in preparing our report;

(e) in our opinion, and to the best of our information and according to the explanations given to us the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis and read with the notes appearing thereon, the said Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

STATE AND OIL EXPLORATION

ECONOMIC CRITERIA OFTEN SUBORDINATED TO POLITICAL CONSIDERATIONS

[The financial and other difficulties that usually beset State entities engaged in oil exploration, and the advantages to be secured from the co-operation of the international oil industry, form the subject of a study recently prepared for the World Bank by the well-known U.S. oil consultant, Mr. Walter F. Levy. In the long run, oil exploration cannot, of course, be divorced from oil operations as a whole; and economic criteria are often subordinated to political considerations. But, though necessarily restricted in scope, Mr. Levy's report highlights the important conclusion that the diversion of scarce local investment resources into oil exploration, which foreign capital is willing to undertake, generally entails the neglect of essential tasks, such as the provision of social services and public utilities, which private enterprise cannot normally provide.]

IN the modern world of industrialisation and rapid technological change, capital investment is a key to economic progress. But in countries where living standards are low and the need for greater production correspondingly acute, the resources available for investment are invariably scarce. Hence, if, in the non-communist world, the pace of economic advance is to be fast enough to satisfy the rising aspirations of the people, assistance from outside the country is indispensable. Such assistance is available today in different forms from a variety of sources, public and private. It is, however, unfortunately true that the flow of capital and technical assistance to underdeveloped countries is sometimes more limited than it need be, because of obsfacles erected by the Governments of those countries themselves.

Some of the barriers are, in the last analysis, psychological; they often consist of beliefs or attitudes of mind which express themselves in open or covert hostility to private enterprise or to the investment of foreign capital. There is, for instance, the belief that some of the ills of our time are the inevitable concomitant of—to use a somewhat old-fashioned phrase—production for gain rather than production for use. The attitudes in question may be quite irrational; they may be based on popular misconceptions of capitalistic production which bear little, if any, relationship to twentieth century realities. But whether ill-founded or not, their effect is the same: they lead Governments to limit the scope for private investment, local or foreign, to reserve certain spheres of activity to the State, or to impose upon foreign concerns conditions which discourage further investment by those already working in the country, or make the participation of new entrants virtually impossible. And so we have the paradoxical spectacle of certain countries where the need for rapid economic development is most pressing hampering their progress by fetters of their own making. They consign to State entities development work which could be more effectively performed by private enterprise and in the process, leave undone urgent tasks which can be undertaken only by the State.

An International Industry

The oil industry provides a number of illustrations. This is an international industry *par excellence*, where capital will flow freely, in the absence of artificial barriers, into the discovery and development of any nation's latent resources. There are, however, a number of Governments which, for various reasons, are unwilling to avail themselves of the assistance which the international oil industry could provide. They regard the discovery and development of their oil resources as tasks which they must keep strictly for themselves. But since their financial resources are generally insufficient, they must still seek overseas economic aid for this purpose, in addition to the external help they already receive for other purposes.

The World Bank, under its charter, does not provide help in respect of projects for which private capital is readily available on reasonable terms. It has not, therefore, hitherto made any substantial loans for oil development by State entities—though obviously any loans it makes to the Governments concerned for other projects will release funds for local oil development. The Bank's reasoning is that its own scarce resources should be reserved for employment in fields for which, for one reason or another, private capital is not adequately available.

It has, however, recently felt the need for an impartial study of the economic and financial aspects of State *versus* private enterprise in the field of oil exploration, especially in view of various developments in recent years. And it invited the well-known U.S. oil consultant, Mr. Walter Levy, to undertake such a study; this has been made available to member-Governments. Without venturing upon any criticism of the principle of State enterprise, and looking only at the results which may be achieved, Mr. Levy's report, based largely on a detailed study of specific cases, spotlights the handicaps under which a State oil concern may labour. It also discusses the new forms of co-operation between State and private capital which have been evolved in recent years.

Hazardous Undertaking

Oil exploration, as Mr. Levy emphasises, is a hazardous undertaking in which the results are generally unpredictable. The chances of finding oil tend to be broadly related to the scale of the effort made, with the corollary that large capital outlays are often a condition of success. Recent experience outside the U.S.A. and the Soviet bloc suggests a rough measure of the cost of finding new oil today: according to Mr. Levy's estimates, this is, on average, almost $2,000 for every barrel per day of production. In other words, an outlay of something like $100 million would be needed, on average, to develop resources to provide a production of 50,000 barrels a day, or 2½ million tons a year. There is, in addition, the investment for transportation, refining, etc., which could add up to another $150 million. Nor will the need for large-scale expenditure cease when the oil has been found and the necessary facilities provided: though profits should then be available, there must be continuing long-term investment to find new oil to replace current production.

As an illustration: in Guatemala, where more than 30 companies are engaged in the search for oil, covering two-thirds of the national territory, the total expenditure aggregated $20 million in 1957-58—the first two years of operations, before extensive drilling had begun. This expenditure was equivalent to more than a tenth of the Government's income from all sources. In Colombia, where substantial results are now being achieved, some $950 million have been spent by the oil industry, over a quarter of which remains to be recovered.

Shortage of Capital

Because oil prospecting and development work is so costly, State entities with sole responsibility for national oil development tend to suffer from chronic shortage of capital. As an example, Mr. Levy cites the case of Petrobras in Brazil. To keep such enterprises going, the Government is often forced to provide subventions and privileges of one kind or another—tax reliefs, special loans, preferential exchange rates, etc. Where these subsidies are partly concealed, as they often are, the true cost of the oil exploration in terms of national resources is disguised. The tendency to capital shortage will obviously be aggravated, if—as in Mexico until recently—the Government holds down the local price of petroleum products, thus giving a hidden subsidy to the consumer. Where the State entity is an integrated undertaking, capital shortage may distort its investment programme, priority being given to refining, which gives promise of a quick return, and the exploration sector starved of funds.

Where total capital resources are scarce, as they are in all economically underdeveloped areas, expenditure on oil exploration can only be at the expense of other claimants. In a developing country, there is urgent need for services and utilities—schools, hospitals, houses, roads, power stations, etc.—which private enterprise cannot as a rule be expected to provide. If the State diverts its scarce capital resources from these channels into fields in which private enterprise is willing and able to help, essential tasks will be postponed or left undone and the country's ecohomic and social development greatly retarded. This is the choice that Governments have to make; but they seldom care to put it into such simple terms.

Nor is lack of capital the only handicap from which a State oil entity is likely to suffer. It will naturally seek to appoint nationals to senior posts and will often be under political pressure to do so; but as the local supply of suitable scientific and technical personnel is usually very limited, it has difficulty in recruiting the number and variety of skilled staff required for the oil search. Neither is a Government oil entity as well placed to benefit from the cross-fertilisation of ideas as are international companies, with their wide experience and extensive research activity. Though it may employ foreign consultants and foreign technicians, this is no real substitute for the advantages that flow from close links with organisations working in various countries and always abreast of new developments.

Centralised Judgment

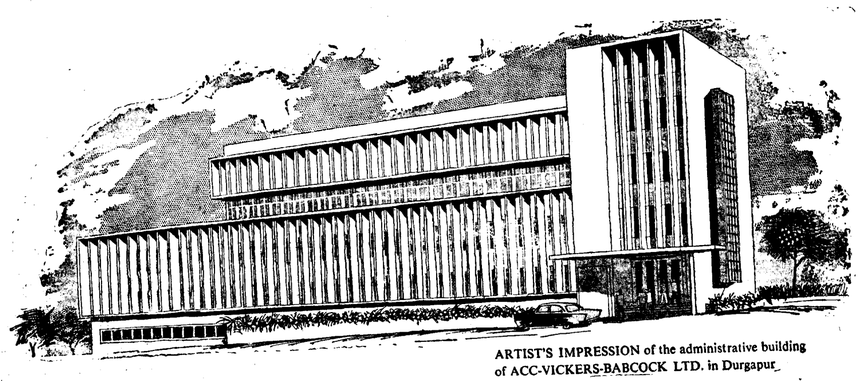
Another handicap in the field of exploration is that the choices and decisions made by a State entity tend to reflect one centralised judgment—which contrasts strongly with the diversity of judgments involved when many oil companies are engaged competitively in the search for oil. Mr. Levy cites the recent example of Turkey, where a score of foreign concerns participate in the search. One major company (Esso), having drilled 11 dry holes and spent $20 million fruitlessly, decided to abandon its search. Another major (Mobil) has, however, just recently brought in a wildcat with an initial production of 1,200 barrels a day; this is the country's most prolific discovery so far. In a vast country where little or no oil has yet been found, multiplicity of effort ensures a more comprehensive assessment of a country's oil prospects than a single State enterprise could provide in the same time.

The decisions of a State enterprise also tend to be subject to many kinds of political pressure. In particular, it may have difficulty in justifying continued expenditure on unsuccessful drilling—though a crop of dry holes is generally the price that must be paid for a full-scale search programme. With limited funds at its disposal, there are temptations for a nationalised undertaking to concentrate on development drilling in relatively proven areas, rather than to risk its resources on wildcats. Such a course must, however, be inimical in the long run to the discovery and development of a country's latent resources.

With harsh experience gained, it is now realised in some countries that the scope of the exploration effort will be severely limited if it forgoes the benefits which foreign oil companies can bring. This was true of Turkey until 1954, of Bolivia until 1955, and of Argentina until 1958. Hence, also, the decision of the Indian Government in 1959 to invite foreign companies to join in the search for oil, notwithstanding an earlier decision to the contrary. And the same truth was in the mind of the Chilean President when he told Congress last year that the rejection of foreign assistance in the development of the country's resources was a serious mistake. This being so, some countries have adopted solutions involving foreign participation which, they are convinced, do not compromise their national objectives.

The arrangements adopted differ from country to country. In Argentina, for example, the help of foreign companies takes the form of contractual arrangements with the Government oil entity. Bolivia and Turkey are instances where selected acreage has been reserved for Government operation, with private companies exploring over other areas. In the French Sahara, where the initial effort was largely State-financed, private capital has since been brought in to achieve the most comprehensive development of the country's oil potential, in partnership with State entities. In Iran, there is Government-industry co-operation of a different kind. Whatever the particular arrangements evolved, the consequence of bringing in foreign capital, with the accompanying technical skills, is that the scope of the exploration programme goes far beyond that which the country concerned would have been able to accomplish by its own resources alone.

Effective co-operation between a Government and foreign capital must, of course, be based on agreements that are conducive to the interests of both. From the Government standpoint, the foremost consideration will be diligence on the part of the operating company in exploration and subsequent development work. For the company there must be at least the expectation of favourable returns, if the venture is successful; foreknowledge of its rights and obligations at all stages of operation; security for its capital investment; and, where public and private enterprise are both engaged, some guarantee against discriminatory treatment. These are essential preconditions for attracting the desired investment



ARTIST'S IMPRESSION of the administrative building of ACC-VICKERS-BABCOCK LTD. in Durgapur.

New Power in Industry

NERVE-CENTRE of ACC-VICKERS-BABCOCK LTD. in Durgapur

MARK THIS administrative building of ACC-VICKERS-BABCOCK LTD. which is fast nearing completion in Durgapur. Very soon busy design engineers, led by experienced men from AVB's overseas collaborators, will occupy the largest portion of it...giving initial shape to the power that AVB will add to Indian industry from its plant nearby.

This building will be the *nerve-centre* of AVB. Here the finest engineering minds will study, design and draw up plans that will 'tailor-make' mining and cement-making machinery, and vital steam-raising plant for the many thermal power stations to be installed in the country during the Third Five Year Plan.

To ensure that steam-raising and industrial boiler plants give optimum performance, it is imperative that they be 'tailor-made' to suit varying local conditions and requirements. Here at this *nerve-centre*, all the advanced technical knowledge of AVB will be utilised *to the fullest extent*, to ensure that each project is designed for the finest possible performance.

DIRECTORS' FIFTY-FIFTH ANNUAL REPORT

The Directors have the pleasure to submit to the shareholders, the Bank's Balance Sheet as on and the Profit and Loss Account of the Bank for the year ended 31st December, 1960.

After making provision for payment to the staff of the Bank of a bonus equal to 1/12 of the pay earned by them during the year 1960, net profits for the year 1960 are Rs. 6,74,836.94 and with a sum of Rs. 14,360.81 brought forward from previous year's account, the sum available for distribution is Rs. 6,89,197.75. After placing a sum of Rs. 1,35,000.00 to the Statutory Reserve Fund, the balance left over is Rs. 5,54,197.75 and the Directors recommend the following appropriations in this behalf.

		Rs. nP
1.	To provision for Taxes	2,80,000 00
2.	To pay a dividend at Rs. 3.25 and Rs. 2.93 per share on 7,000—5 per cent. and 18,000—4½ per cent. First Preference Shares respectively and at 15 per cent. per annum on 25,000 Ordinary Shares (all dividends payable are subject to deduction of Indian Income-tax in terms of Section 18 of the Indian Income-tax Act, 1922) ..	2,62,948 12
3.	To carry forward to next year's account	11,249 63
	Total .. Rs.	5,54,197 75

The Directors regret to report the sad and sudden demise of the Bank's Chairman, Dr. U. Padmanabha Mallya, L. M. & S., on 15th September, 1960. He joined the Directorate of the Bank in 1931 and was Chairman from 1959 to the date of his death. His boundless enthusiasm and wonderful adaptability have been a perennial source of inspiration and guidance to the Board and Officers of the Bank. Three decades of his active association with the Bank have been very helpful in building up the Bank. In his place Shri B. Vaikunta Baliga, B.A., B.L., M.L.A., who has also to his credit long and active association with the Bank has been unanimously elected as Chairman of the Board of Directors of the Bank.

Since the last report, the Bank enlarged its scope for services to its clientele by opening 9 new branches at Malleswaram (Bangalore City), Shivaji-Park (Bombay), Kalbadevi (Bombay), Karwar, Kushalnagar, Nandyal, Tadpatri, Chirala and Erode, thus bringing the total number of branches to 62 on the date of this report. All the new branches are progressing satisfactorily.

The Directors are happy to report that the Bank has stepped into 'B' Class from 'C' Class as defined in the Sastri Award and the provisions of the Award touching such upgrading have been complied with, with effect from 1st January, 1961.

During the period under report, the general progress of the Bank has been kept up, despite the general adverse trends in the money market and the credit curbs which were in operation.

The Directors thank the shareholders and customers of the Bank for their unstinted patronage and seek their continued support in an increasing measure in the years to come. They also wish to place on record the devoted and loyal services of the General Manager, other officers and staff.

(By authority of the Board),

B. VAIKUNTA BALIGA,
Chairman.

OFFICE OF THE CORPORATION, UDIPI,

NEW PRODUCTS AND PROCESSES

Quick Detection of Pregnancy

A WOMAN'S pregnancy can be determined in only 90 minutes with a new epoch-making method developed by two Swedish gynecologists, Professor Carl Axel Gemzell and Dr. Leif Wide of the Academic Hospital, Uppsala. The method has been tested since the latter half of 1960 both at the Academic Hospital and the Karolinska Hospital in Stockholm. About 1,500 pregnancy determinations have been made and not a single test has so far proved misleading. One important factor is that the new method can at once determine the quantity of pregnancy hormones in the woman's urine—a procedure which previously took weeks. If the quantity of hormones is too large or too small in relation to the time since conception it may be a sign of unhealth, a tumour or a possible miscarriage. The procedure is simple and inexpensive. A urine sample from the woman is added to a preparation consisting of antibodies to her own hormones. The antibodies come from a rabbit and have been formed through an immunological process. After 90 minutes a glance at the test-tube gives the answer; if the woman is pregnant a circle forms at the bottom of the tube. Whereas in previous methods for determining pregnancy one rabbit was needed for each test preparation it is reported that one animal is sufficient for thousands of tests with the new method. The new preparation is soon to be produced by the pharmaceutical industry and will be available for all practising gynecologists.

Stain-resistant Clothes

Clothes that can suffer a severe stain, and yet be wiped clean! This is the latest announcement to come from a U.K. manufacturer. A chemical preparation is impregnated into the finished cloth and the result will be suits, dresses and coats that are stain-resistant to a certain number of fluids including tea, coffee, beer, fruit juices, ink, ice cream and jam. First, the chemicals and their mixture remains a secret. But in the U.K. manufacturers of most fabrics—satin, cotton, rayon as well as wool mixtures—can now have their cloths impregnated. This will be done under a house-to-house agreement, and then, when a push-button machine unit to carry out the process has been fully developed and tested—it will take about a year—the firm will cope with the sale of machines and the process. This chemical process will hardly add any cost to a garment as far as the manufacturer is concerned. While it is effective against "waterborne" stains, it is not fully resistant against oil stains, but the finish makes it easy to remove them with an ordinary household solvent.

New Rubber

A new rubber which is said to have an exceptionally low friction surface similar to that of PTFE has been developed in the U.K. At the same time the material differs from PTFE compounds and PTFE and rubber compounds in that it is said by the scientists responsible for developing it to retain elasticity. One great advantage of the material is that it should make it possible to produce seals for industrial equipment of a type where elasticity is important, that will operate for exceptionally long periods of time without the need for the use of any lubrication. A special grafting process is used to produce the low friction surface. The technique is said to be so efficient that different coefficients of friction can be made virtually to order. The new rubber is expected to find widespread applications in chemical plant and mechanical engineering as well as in atomic energy and guided weapons.

Electronic Weighing System

A firm at Eindhoven, Holland, has designed an electronic weighing system which can be readily incorporated into conveyor belts and weighs the load transported. Weighing is not affected by vibrations and jolts of the constantly moving material. The weight of the material transfers to the guide rolls of the conveyor belt, continuously changing loads resulting in forces on the attachment systems of the rolls. These forces are transmitted to two pickups and measured by an electronic installation, as a result of which time-weight integration is obtained. If required, the equipment can be connected direct to an electromagnetic counter and an automatic recording or accounting machine. The equipment, it is claimed is damp- and dust-proof and requires little maintenance. The accuracy of measurement is better than 0.5 per cent.

Low Temperature Welding

A completely new range of low heat metal joining alloys, called Obvis, will be on display at the Engineering, Marine, Welding and Nuclear Energy Exhibition to be held at Olympia, London, from 20th April to 4th May 1961. The new alloys, developed by Weldcraft Ltd. of Britain, the use of which will have the advantage of a low heat requirement in use but provide the strength achieved in fusion welding. The bond is achieved by the building up of a surface alloy between the parent metal and the deposited metal. There is no fusion of the base metal and, therefore, less heat is transferred to the metal surrounding the area of the joint. Consequently, very much lower temperatures are required. The tensile strength of the resulting joint is equal to and often greater than that of parent metal.

Nylon for Ship's Propellers

In conjunction with a German firm and after extensive research work a Dutch factory has found potentialities for the use of nylon for the construction of ships' propellers. These experiments have resulted in the manufacture of a special type of nylon (polyamide) which fully meets the requirements for this purpose as regards shaping, shock absorption and corrosion resistance. In practice this means that these nylon propellers have a higher resistance to impact load and a higher shock absorption than metal propellers, so that crankshaft, propeller shaft and all interior parts of the propeller shaft housing are less heavily loaded. Laboratory experiments have been confirmed in practice. This type of polyamide can also be used for the manufacture of screw caps and mixing equipment.

Analysing Chemical Samples

A new system which uses a typewriter to produce direct recordings automatically of the contents of chemical elements present in a sample being examined by spectrometers has been developed in U.K. The system is designed so that the information relating to the proportions per cent concentration of the chemical elements present in the sample being tested is typed out automatically after the exposure of the specimen for examination purposes is completed. If required, carbon copies can readily be made, or alternatively the system can be adapted so that it will automatically use pre-printed or pre-typed forms. One advantage of the system is the fact that it enables written records to be recorded in virtually any quantity more or less automatically, and with far greater accuracy, it is claimed, than might otherwise be the case.

Titanium Metal Strip

A new process for producing titanium metal strip by means of cold rolling from raw powder form has been developed in Britain. The operation of the process depends on the use of raw powder strip one millimetre in thickness which is then treated by a series of sintering and rolling operations. Tests carried out with the material are said to have shown that it has a tensile strength of 67.5 kilograms per square millimetre. At the same time it has an elongation of 23.7 per cent. The thickness of the final metal strip produced is of the order of 0.45 millimetre. The process is said to be cheap to operate and to enable the titanium metal to be produced in forms which have not hitherto been possible to achieve at a relatively cheap cost.

Welding Torch

A new welding torch for use in powder welding, which uses oxy-acetylene gases to provide the heat and argon to convey the powder on the section being welded, has been developed in the U.K. Both the flow of the gases and the powder can be controlled, it is claimed, independently. The operation of the system is such that it will, it is claimed, enable standard pistol-type welding units to be readily adapted. It is expected to be especially useful for welding many different types of engineering components, which have previously been prepared for treatment. It is expected to find widespread applications in the chemical engineering industry as well as in other specialised fields such as atomic energy.

Tape-controlled Electric Switch

Now being produced in the U.S. is an electric switch which can be operated by merely touching any part of a long tape. This enables an operator to start or stop a large machine wherever he may be working on it and eliminates the need to walk to controls at a fixed point. The tape carries two bare copper wires along its 36-foot length. When the operator touches it, his finger completes a low-voltage electric circuit which operates a relay. This in turn controls the electricity supply to the main drive motor.

AUDITOR'S REPORT

I have audited the foregoing Balance Sheet of The Canara Banking Corporation Limited as at 31st December, 1960, and also the Profit and Loss Account of the Bank for the year ended on that date with the books of accounts of the Head Office and Branches and report that:

(a) I have audited the accounts of all branches of the Bank;
(b) I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of my audit;
(c) Such information and explanations have been found to be satisfactory;
(d) The returns received from the branches have been found adequate for the purpose of my audit;
(e) The transactions of the Bank as have come to my notice have been, in my opinion, within the powers of the Bank;
(f) In my opinion, and to the best of my information and according to the explanations given to me, the said accounts give the information required by the Companies Act, 1956, in the manner so required;
(g) In my opinion,
(i) the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1960;
(ii) the Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and
(iii) proper books of accounts as required by law have been kept by the Bank so far as it appears from my examination of those books; and
(h) The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of accounts and Returns.

PROSPECTUS

The consent of the Government of India has been obtained to this issue, a complete copy of which is available for public inspection at the Registered Of of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundn of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for this industrial undertaking, of which a copy is open to public inspection at the Registered Of of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundn of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Application has been made to the Calcutta Stock Exchange for permission to deal in and for an official quotation of the Equity Shares of the Compar

A copy of this Prospectus having attached to it the documents required by Section 60 of the Companies Act, 1956, and specified hereunder has be delivered to the Registrar of Companies, West Bengal, for registration.

The Subscription List will open at the commencement of banking hours on April 25, 1961 and, provided subscriptions are obtained up to the total amou of this offer, will close at the close of banking hours on April 27, 1961. If subscriptions up to the total amount of this offer are not obtained by that date, t Subscription List will remain open at the discretion of the Directors.

HISTORY AND DEVELOPMENT OF BUSINESS

The Company was incorporated in India on October 10, 1922, as a private limited company under the name, The Goodyear Tyre & Rubber Co. (India) Limited and in 1947, the Company's name was changed to The Goodyear Tyre & Rubber Co. of India Limited. By virtue of the operation of Section 24 of the Companies Act, 1956, the word "Private" became part of the Company's name which from April 1, 1956 was The Goodyear Tyre & Rubber Co. of India Private Limited.

The Company was converted into a Public Company on March 24, 1961 and the name was changed to Goodyear India Limited.

The Company was formed, *inter alia*, with the object of dealing in tyres and other products and also to take over the business then carried on in Ceylon in the name of The Goodyear Tyre & Rubber Export Company.

In 1936 the Company entered into a Manufacturing Agreement with a resident manufacturer under which Goodyear types, tubes and allied products were produced in India to Goodyear specifications and using certain equipment supplied by Goodyear.

In 1951 the Company entered into a Manufacturing and Technical Agreement with a second resident manufacturer under which Goodyear industrial rubber products were produced in India to Goodyear specifications.

The Company also imports tyres, belting and other products from associate overseas manufacturers.

The Company is a subsidiary of The Goodyear Tire & Rubber Company of Akron, Ohio, U.S.A.

LAND PREMISES AND PLANT

The Company is finalising the purchase of approximately seventy acres of land in the District of Gurgaon, Punjab, to erect a tyre plant. The site is ideally situated approximately 21 miles south of New Delhi on the main Delhi-Agra road. The plant is presently near completion on this site.

MANAGEMENT AND STAFF

The non-resident Directors are Executives of The Goodyear Tire & Rubber Company, Akron, Ohio, U.S.A., and have long been connected with the Company.

The Managing Director and the two other full-time working Directors in India have many years of service with the Company and its overseas associate Companies. Mr. R. E. O. Carey, the present Managing Director of the Company, has been associated with the Company for more than 25 years and is fully conversant with business conditions in India.

Subject to the control and direction of the Company's Board of Directors, the Managing Director and the full-time working Directors are responsible for the day-to-day administration of the Company. The Company has trained competent personnel adequate for its requirements. The senior Indian staff have been given specialised training in the U.S.A. and England at various times in the past.

The Company has its Registered Office in Calcutta with Branches at Bombay, Calcutta, Delhi, Lucknow and Madras and Depots at Ahmedabad, Bangalore, Ernakulam, Gauhati, Hyderabad and Jabalpur.

MAIN OBJECTS

The main objects of the Company, as set out in its Memorandum of Association, are as follows:—

To carry on all or any of the business of merchants, shippers, traders, commission agents, importers and exporters, and to manufacture, buy, sell and deal in property and goods of all kinds, and to carry on all or any other business or business operations or operation usually carried on or performed by companies or persons carrying on the business aforesaid or any of them, or which may seem capable of being conveniently carried on in connection with any of

SECRETARIAT FOR COMMITTEE 24 APR 1961

the Company's business or operations, or to be conducive to its interests, or to enhance the value of or facilitate the realisation of or render profitable any of the Company's business, property or rights.

To carry on any other business whether manufacturing, trading, financial, mining, agricultural or pastoral, commercial or otherwise, which may be capable of being conveniently carried on in connection with the above or may be calculated to enhance directly or indirectly, the value of or render more profitable any property or business of the Company, or assist or conduce to the economical or profitable carrying on of such business.

OBJECTS OF THE ISSUE

The Company has embarked on a major programme of erecting and equipping an entirely new factory in India so as to keep pace with the general industrial development of the country and meet the increasing demand for tyres and other rubber products.

The proceeds of this issue will be used firstly to purchase machinery and equipment abroad, and secondly to provide additional working capital. The Government of India has been advised of the Company's plans and have issued such licences for which applications have been made.

FINANCIAL INFORMATION

Auditors' Report

THE DIRECTORS,
THE GOODYEAR TYRE & RUBBER CO. OF INDIA PRIVATE LTD.
209, LOWER CIRCULAR ROAD,
CALCUTTA.

ALLAHABAD BANK BUILDINGS,
APOLLO STREET,
BOMBAY-1.

Dear Sirs,

We have examined the books and accounts of The Goodyear Tyre & Rubber Co. of India Private Ltd. as kept in Calcutta which have been audited by Messrs. Price Waterhouse & Co. for the five years ended 31st December, 1960 and report that the profits of the Company are as set out below. These profits have been arrived at after charging all expenses of working and management including provision for normal depreciation on the basis allowable for taxation and after making such regroupings and adjustments, subject to the notes given below, as are, in our opinion, appropriate.

THE GOODYEAR TYRE & RUBBER CO. OF INDIA PRIVATE LTD.

PROFITS AND PROSPECTS

There is good demand for the Company's products which is likely to increase as its manufacturing facilities are brought to bear and as the general market expands in keeping with improved standards of living and communications. It is anticipated that the future business will produce a reasonable return on the capital employed.

On December 30, 1960, an Agreement was entered into between the Company and Export-Import Bank of Washington, D.C., U.S.A. (hereinafter referred to as the "Eximbank") whereby the Eximbank agreed to establish in favour of the Company credit facilities not exceeding in the aggregate Rs. 2.25 crores with a view to making advances to the Company from time to time within the aforesaid limit to assist the Company in meeting rupee expenditure for the acquisition or construction in India of land and buildings and purchase in this country of machinery of Indian origin and to provide working capital in connection with the establishment and operation of a plant for manufacture of rubber products in India.

The loan actually drawn upon by the Company in terms of the Agreement is required to be repaid in eighteen equal half-yearly instalments commencing from February 15, 1963, and interest at the rate of six per cent per annum on the amount of the loan outstanding from time to time is expressed to be payable by the Company on February 15, and August 15, in each year.

The Agreement imposes certain conditions relating to dividends which could call for an acceleration of the repayment of the principal to be applied against the next instalment(s) of the Eximbank loan if the aggregate of dividends declared or paid from January 12, 1960, to the date of such declaration or payment exceeds 60% of the net earnings of the Company during the same period.

It is also one of the terms of the Loan Agreement that no dividend shall be declared by the Company if payment of interest on the loan outstanding at any time or any instalment thereof remains in arrears.

It is anticipated that the Company will be in a position to meet out of its internal resources its obligations under the Loan Agreement in relation to the payment of interest and instalments of the principal.

STATUTORY AND GENERAL INFORMATION

A. F. FERGUSON & CO.

Bombay, 20th March, 1961.

delivered to the Registrar of Companies, West Bengal, for registration.

(i) Agreement dated July 1, 1960, with R. E. O. Carey, Managing Director, whose monthly remuneration is Rs. 7,619.

(ii) Agreement dated January 25, 1960, with Achyut Purushotam Kanvinde and Shaukat Rai as Architects in connection with erection of buildings for the new factory project at Ballabgarh. The Architects' fees are calculated as a percent of construction costs, subject to a maximum.

(iii) Agreement dated March 16, 1960, with Priestley Dugal & Co. (India) Private Limited for fabrication and erection of structual steel of factory building at Ballabgarh. The amount the Company will pay to the contractors for said works of fabricating and erection of the steel work shall be at the rate of Rs. 1,175 per long ton, subject to conditions and terms of the contract.

(iv) Agreement dated April 26, 1960, with Uttam Singh Dugal & Company Private Limited, as contractors for certain civil engineering work including the furnishing and delivering of all material and preforming all the construction work as described in the specification in reference to the building to be constructed. Tendered amount for the work is at a stipulated fee subject to certain adjustments specified in the agreement.

(v) Agreement dated February 8, 1961, with Gannon Dunkerley & Company Limited for the erection of process piping and machinery in connection with the Factory at Ballabgarh. Payment for this work is based on a schedule of rates for personnel under supervisory, administrative and labour categories, as well as other fees for equipment hire.

(vi) Agreement dated December 30, 1960, with the Export-Import Bank of Washington, D.C., U.S.A., for credit facilities to the extent of Rs. 2,25,00,000.

(vii) Agreement dated December 30, 1960, with The Goodyear Tire & Rubber Company, Akron, Ohio, U.S.A., regarding allotment of 16,00,000 Equity Shares of Rs. 10 each at par partly in consideration of machinery and equipment to be supplied by The Goodyear Tire & Rubber Company, Akron, Ohio, U.S.A. to the Company and partly in consideration of cash.

(viii) Agreement dated December 3, 1960, with the Central Railway for the construction of a siding for serving the Company's factory premises at Ballabgarh.

(ix) Agreement (by exchange of letters dated January 20, 1960 and March 20, 1961), with Andrew Yule & Co., Ltd., appointing them to be Registrars and share transfer agents of the Company for a period of five years with effect from April 1, 1961, at a stipulated fee.

(x) Approved draft Agreement in respect of 70.97 acres of land at Ballabgarh from the Governor of the State of Punjab in favour of the Company. This agreement relates to the land acquired by the Government of Punjab under the Land Acquisition Act, 1894, at the instance of the Company, the Company having agreed to pay the compensation which may be approved by Government in respect of the land so acquired.

(xi) Purchase Order dated October 27, 1960, with W. H. Brady & Co., Ltd., to furnish fire protection system at a stipulated fee.

(xii) Agreement dated March 8, 1961, with Bhagwan Singh & Company Private Limited for the installation of electrical equipment at a stipulated fee.

In addition the Company will enter into an Agreement with The Goodyear Tire & Rubber Company, Akron, Ohio, U.S.A., for technical collaboration at a stipulated fee calculated on net sales.

Redeemable Preference Shares

The Company has not issued and does not at present intend to issue any Redeemable Preference Shares.

OTHER PREVIOUS ISSUES

On December 30, 1960, an Agreement was entered into between The Goodyear Tire & Rubber Company of Akron, Ohio, U.S.A., of the one part and the Company of the other part whereby it was agreed that a total of 16,00,000 Equity Shares of Rs. 10 each in the capital of the Company would be allotted to The Goodyear Tire & Rubber Company at par and credited as fully paid up and that the consideration for such allotment should be (*a*) the transfer to the Company by The Goodyear Tire & Rubber Company of such items of machinery and equipment comprised in the Agreement as should have been or the documents of title to which should have been delivered to the Company on or before January 31, 1961, and (*b*) the payment by The Goodyear Tire & Rubber Company in cash of such sum as taken with the value of the aforesaid items of machinery and equipment should be equal to Rs. 1,60,00,000 such sum to be deposited by The Goodyear Tire & Rubber Company on January 31, 1961, in U.S. dollars in an account to be opened in the name of the Company with a Bank in the U.S.A. approved by the Company.

In pursuance of the aforesaid Agreement documents of title in respect of the machinery and equipment comprised in the aforesaid Agreement to the value of Rs. 1,20,26,264 were delivered to the Company's agents in the U.S.A. before January 31, 1961, and on that date The Goodyear Tire & Rubber Company deposited with the Agency of The Chartered Bank in New York, 8,33,942.52 U.S. dollars (Rs. 39,73,736 calculated at the rate of Rs. 4.7650 to one U.S. dollar) to the credit of an account opened in the name of the Company. The Company allotted 16,00,000 Equity Shares of Rs. 10 each in the capital of the Company to The Goodyear Tire & Rubber Company at par in terms of the aforesaid Agreement, the final allotment having been completed on February 3, 1961.

Subject as aforesaid no shares or debentures have been issued or agreed to be issued within the period of two years preceding the date hereof either for cash or for consideration other than cash. No amount has been paid to the Company by way of premium on any shares within the two years preceding the date hereof.

Commissions

No sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company or as discount in respect of shares issued.

Payment to Promoter

No amount or benefit has been paid or given within the two years preceding the date hereof or is intended to be paid or given to any promoter or to any officer of the Company apart from normal remuneration and reimbursement paid to such officers.

Option to Subscribe

The Company has not entered into any contract or arrangement and does not at present propose to enter into any contract or arrangement whereby any option or preferential right of any kind had been or is proposed to be given to any person to subscribe for any shares in or debentures of the Company.

Directors

The Articles of Association of the Company provide that:

The number of Directors unless otherwise determined by Special Resolution shall be not less than three nor more than nine.

The Board may appoint an Alternate Director to act for a Director during his absence of not less than three months from the State in which Board meetings are usually held. An Alternate Director so appointed shall *ipso facto* vacate office when the absent Director returns to the State.

The qualification of a Director, other than an Alternate Director, is the holding of One Equity Share in the capital of the Company.

Directors shall be entitled to such remuneration as Directors as may from time to time be determined by the Company in general meeting. All other remuneration, if any, payable by the Company to each Director, whether in respect of his services as a Managing Director or a Director in the whole or part-time employment of the Company shall be determined in accordance with and subject to the provisions of these Articles and of the Companies Act, 1956. The Directors shall be entitled to be paid their reasonable travelling and hotel and other expenses incurred in India in consequence of their attending at Board and Committee meetings or otherwise incurred in the execution of their duties as Directors.

If any Director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from Calcutta for any of the purposes of the Company or in giving special attention to the business of the Company or as a member of a Committee of the Board then, subject to Sections 198, 309 and 310 of the Companies Act, 1956, the Board may remunerate the Director so doing and such remuneration may be either in addition to or in substitution for any other remuneration to which

The control of the Company is vested in the Board who, subject to the provisions of the Companies Act, 1956, may exercise any power or do any act or thing which under the Memorandum and Articles of Association of the Company are not required to be exercised or done by the Company in General Meeting.

Subject to the provisions of the Companies Act, 1956, the Board may appoint one or more Directors to be Managing Director or Managing Directors of the Company, either for a fixed term or without limitation as to term of office. The Board may confer on a Managing Director such of the powers vested in the Board as it may think fit, for such time, for such purpose, upon such conditions and with such restrictions as it thinks fit. A Managing Director shall receive such remuneration as may be sanctioned by the Company in general meeting and approved by the Central Government.

Interest of Directors

Mr. R. E. O. Carey is the Managing Director of the Company and receives remuneration for his services as such.

Mr. R. E. Hostetler and Mr. R. T. Budd are whole-time Directors and receive remuneration accordingly.

Messrs. E. J. Thomas, R. DeYoung, H. L. Hyde and F. T. Magennis are Shareholders and Executive Directors of The Goodyear Tire & Rubber Company, Akron, Ohio, U.S.A., the principal Shareholder of this Company and may be deemed to be interested to that extent.

Capitalization of Reserves and Profits. Nil.

Indemnity

The Articles of Association of the Company provide that every Director, Manager, Secretary or officer of the Company or any person (whether an officer of the Company or not) employed by the Company and any person appointed Auditor shall be indemnified out of the funds of the Company against all liability incurred by them in such capacity in defending any proceedings, whether civil or criminal, in which judgment is given in his favour or in which he is acquitted, or in connection with any application under Section 633 of the Companies Act, 1956, in which relief is granted to him by the Court.

Management

The management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

Borrowing Powers

The Company's Articles of Association provide that the Board may from time to time, subject to Sections 292 and 370 of the Companies Act, 1956, raise or borrow, from the Directors or elsewhere, and secure the payment of, any sum or sums of money for the purposes of the Company; but the Board shall not without the sanction of the Company in general meeting borrow any sum which, with monies already borrowed by the Company (apart from temporary loans from the Company's bankers in the ordinary course of business) will exceed the aggregate for the time being of the paid-up capital of the Company and its free reserves.

Voting Rights

The Company's Articles of Association provide that every member shall have one vote either personally or by proxy for every Equity Share held by him. No member shall be entitled to exercise any voting rights either personally or by proxy at any meeting of the Company in respect of any shares on which any calls or other sums payable by him have not been paid or in regard to which the Company has exercised any right of lien. The voting rights are otherwise in conformity with the provisions of Section 87 of the Companies Act, 1956. The present share capital of the Company is not divided into different classes of shares.

Restrictions on the Right to Transfer

The Company's Articles of Association provide that subject to Section 111 of the Companies Act, 1956, the Board may without assigning any reason refuse to register any transfer of a share.

CONSENTS

Messrs. A. F. Ferguson & Co., the Auditors of the Company, have given and have not withdrawn their written consent to act as the Auditors of the Company with a copy of their report included herein in the form and context in which it is included. A copy of such consent together with a statement of adjustments made by that firm in arriving at the profits shown in the report and giving the reasons therefor has been attached to the copy of this Prospectus which has been delivered to the Registrar of Companies, West Bengal, for registration.

The following consents have also been obtained and copies thereof have been attached to the copy of this Prospectus which has been delivered to the Registrar of Companies, West Bengal, for registration:

Messrs. Orr, Dignam & Co. have given and have not withdrawn their written consent to act as the Solicitors of the Company and to the issue of this Prospectus with their name included therein as the Solicitors of the Company.

The Chartered Bank have given and have not withdrawn their written consent to act as the Bankers of the Company and to the issue of this Prospectus with their name included therein as the Bankers of the Company.

Messrs. Andrew Yule & Co., Ltd. have given and have not withdrawn their written consent to act as the Registrars of the Company and to the issue of this Prospectus with their name included therein as the Registrars of the Company.

Messrs. Place Siddons & Gough (Private) Ltd., Calcutta, have given and have not withdrawn their written consent to act as the Brokers to this issue and to the issue of this Prospectus with their name included therein as the Brokers to this issue.

Messrs. Lewis & Jones, Bombay, have given and have not withdrawn their written consent to act as Brokers to this issue and to the issue of this Prospectus with their name included therein as the Brokers to this issue.

Messrs. Batlivala and Karani, Bombay, have given and have not withdrawn their written consent to act as Brokers to this issue and to the issue of this Prospectus with their name included therein as the Brokers to this issue.

Messrs. Harbans Singh Mehta & Co., New Delhi, have given and have not withdrawn their written consent to act as Brokers to this issue and to the issue of this Prospectus with their name included therein as the Brokers to this issue.

Messrs. Paterson & Co., Madras, have given and have not withdrawn their written consent to act as Brokers to this issue and to the issue of this Prospectus with their name included therein as the Brokers to this issue.

Documents

A print of the Company's Memorandum and Articles of Association, copies of the material contracts referred to above, the order of the Central Government giving consent to this issue (being No. R 429-CCI/58 dated November 18, 1960), the licence of the Central Government for this industrial undertaking (being No. L/30(1)/N-9/59 dated September 21, 1959), the Report of the Auditors with copies of all Balance Sheets and Profit and Loss Accounts on which such Report is based, may be inspected at the Registered Office of the Company between 10-00 a.m. and 12-00 noon and between 2-30 p.m. and 4-30 p.m. on any working day (except Saturday) for a period of 14 days from the date of publication of this Prospectus or until the closing of the subscription list, whichever is earlier.

Application and Allotments

Applications for shares, which must be for 50 shares or multiples of 50 shares, must be made on the accompanying official form and will be refused if not so made. The application form together with a remittance for the full amount payable on application must be sent to a branch of The Chartered Bank in India; or to the Allahabad Bank Limited, Ahmedabad branch only.

The Chartered Bank maintain branches at the following places in India :

At Calcutta	(*a*) 4, Netaji Subhas Road, Calcutta-1.

OBJECTS

The Company was formed generally for the purpose set forth in the Memorandum of Association, a copy of which is attached to the prospectus and in particular to enable the Company to expand its business in the line of manufacture of automobile tyres and tubes in collaboration with the Mansfield Tire & Rubber Co., Mansfield, Ohio, U.S. America.

PROSPECTS OF BUSINESS

The annual production programme at present envisaged by the Company is as follows:—

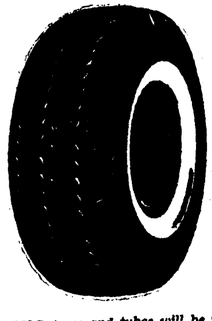
	Tyres
I. (A) Heavy Truck and Bus Tyres ..	2,04,000
(B) Car, Delivery Van and Motor Cycle Tyres	96,000
	3,00,000
	Tubes
II. (A) Heavy Truck and Bus Tubes ..	2,04,000
(B) Car, Delivery Van and Motor Cycle Tubes	96,000
	3,00,000
II. (A) Camelback and Tread Rubber	Lbs. 1,00,00,000

The total installed capacity of all automobile tyre factories in India, including those in existence and those licensed and coming into production in the next two or three years amount to only 2.5 million tyres. At 80 per cent effective capacity, the actual production from these units may be only about two million tyres.

There are at present, over 5,00,000 motor vehicles in India and in the next five years, this figure is expected to reach a million mark with the enormous increase in the demand for automobiles, consequent on the increase in the Road Transport Industry. Taking into account the number of old vehicles that may go out of the road and of the probable short-fall in the production in the Third Five-Year Plan, it can confidently be estimated that there will be at least 7,50,000 vehicles, by the end of the Third Five-Year Plan. Estimating the annual requirements of these vehicles at 1.5 tyres per car, delivery van, jeeps, etc., and 5.5 tyres per truck and 0.5 tyre per motor cycle, the minimum yearly requirements at the end of the Third Five-Year Plan may be of the order of 4 million tyres and tubes. Laying the cornerstone of Goodyear Tyre Factory in Delhi the Union Minister of Industries, Sri Manubhai Shah, said on 12th November 1960 that demand of tyres in India will increase manifold and will reach 4.5 million by the end of the Third Five-Year Plan and therefore many more tyre factories will have to be erected. So there will be a substantial gap between supply and need and the Madras Rubber Factory is attempting to manufacture only 0.3 million tyres and tubes out of a total shortfall of nearly 2 millions. Though the production and installed capacity of tyres at the Madras Rubber Factory will be one of the largest among the new factories that had been licensed, it is clear that there will be no difficulty of marketing this production as the gap between supply and demand is still very great.

U.S. COLLABORATION

The Company had been fortunate to secure the collaboration from one of the leading international tyre manufacturing companies of America, viz., "The Mansfield Tire & Rubber Company," on very favourable terms. They are subscribing for one-fourth of the present issue of the Equity Capital of the Indian Company. They will give the complete know-how and also station their experienced staff in India and meet their salaries for the erection and working of the tyre factory so that the quality of the tyre production in India will be equal to the international standards. They will also train all the necessary technical personnel from India and will meet all the expenditure of our staff in America when sent for training. In addition, the Mansfield Tire and Rubber Company have given permission to the Madras Rubber Factory to export to all world makets except the United States of America and Canada, tyres having "MANSFIELD" trade mark and name. This is a very valuable and unique concession extended to this Factory.



MANSFIELD tyres and tubes will be manufactured by the Madras Rubber Factory

The Mansfield Tire and Rubber Company was established in 1912 and today, it is one of the oldest and leading tyre manufacturers of America. Their main factory at Mansfield has a capacity of produce 14,000 Tyres per day which is more than double the total production of tyres in India today.

Mr. James H. Hoffman, a leading business magnate and President of the Mansfield Tire & Rubber Company, has agreed to become a Director of the Indian Company.

BRIEF HISTORY

The firm Madras Rubber Factory (M.R.F.) was founded in the year 1946 and today, has become one of India's leading Rubber Factories and is the largest manufacturer of tyre rubber (tread rubber and camelback) in India. It had in 1959-60 a production worth about Rs. 1,00,00,000 and the production exceeded Rs. 1½ crores in 1960-61. The Factory has received licence for substantial expansion from the Government and in 1961-62 it is anticipated that the production will exceed Rs. 2,00,00,000. Likewise the profits were over Rs. 6 lakhs in 1959-60 and has been Rs. 10 lakhs in 1960-61 and is expected to be over Rs. 15 lakhs in 1961-62.

The Madras Rubber Factory, located in the heart of the Industrial area of the city, has over 11 acres of vacant land attached to the factory. It has already a team of chemists, engineers and technologists experienced in rubber manufacture. They have also a well equipped laboratory and the quality of "MRF" Tread Rubber has established a fine reputation, not only in India but also in fourteen neighbouring countries where "MRF" Tread Rubber is being exported. The Factory is even now unable to meet the full demand and hence, production is being stepped up every month. The Company has also a net work of branches and Sales Depots spread throughout India, and in particular in all the important centres like Bombay, Calcutta, Delhi, Bangalore, Coimbatore, etc., etc.

SPECIAL ADVANTAGES

The first and foremost advantage is that the Madras Factory is already an established rubber factory with large production facilities. It is already earning substantial profits enough to declare a dividend even for the increased capital, from the very first year of working of the Company even before the commencement of production of tyres. The Company has sufficient spare land for putting up the tyre factory for further expansion.

The technical collaborators, viz., the Mansfield Tire & Rubber Company have agreed to take one-fourth of the present issue of Equity Capital of the Company and have offered very valuable concessions especially in the matter of technical fees to be given to them.

The earnings from the tyre factory are expected to be more than 100 per cent of the Equity Capital of the Company.

The Directors and the Managing Agents have long experience in all aspects of the Rubber Industry and business management and are connected with a large number of rubber plantation companies and rubber factories.

ESTIMATE OF PROFITS

Even before tyre production starts, a turnover of over Rs. 2 crores and a net profit of over Rs. 15 lakhs can be expected from the existing business of the Company from the first year of the Company's working. When the tyre factory goes into full production a turnover of Rs. 10 crores is expected giving a net return of over 1½ crores of rupees. Thus the Company can earn a reasonable profit even in the first year of its working and very substantial profits after attaining full production of tyres.

CAPITAL ALLOCATION

The estimated additional capital requirements of the Company are as follows:—

	Rs.
Additional buildings	15,00,000
Machinery and installation	1,50,00,000
Preliminary expenses	50,000
Expenses for this issue	3,50,000
Working Capital	31,00,000
	2,00,00,000

It is proposed to meet the above capital expenditure in the following way:—

Rupees One crore by issue of further Equity Capital. The balance of Rupees One crore as well as any increase if any in the actual cost of plant, machinery and facilities will be raised, to the extent required, by loans from Bankers and other financial institutions and if necessary from other sources.

No Promotion Expenses—No payments are to be made to the promoters or Managing Agents for expenses incurred or for their services in the promotion of the Company. The entire expense thereof has been met by the promoters.

ACQUISITION OF BUSINESS OF MADRAS RUBBER FACTORY AS A GOING CONCERN

The Company has been promoted by partners of Madras Rubber Factory. The partners had equal shares in the partnership. Their names appear in the prospectus as signatories of the Memorandum of Association of the Company.

The entire business of the firm of Madras Rubber Factory has been acquired as a going concern by Madras Rubber Factory Private Ltd., for a consideration of Rs. 24,96,500.

APPLICATION FOR SHARES

Application for 50 Equity shares or multiples thereof will only be considered and must be submitted on the printed form attached to the prospectus or a printed copy thereof and delivered with the amount payable on application before the date of the closing of the subscription list to:—

(i) The Registered Office of the Company at Madras or its Bombay, or Bangalore Offices.

(ii) The Head Offices or any of the branches of the Bankers of the Company mentioned herein or

(iii) The office of any of the Company's brokers mentioned in the prospectus.

Remittances should include Bank charges at 15 nP percent subject to a minimum of 65 nP in cases they are by cheques or drafts on places, not covered by the Bank offices mentioned herein.

Cheques or drafts should be crossed—A/c Madras Rubber Factory Ltd.

Copies of the Application forms and Prospectus may be obtained from the Registered Office of the Company, its brokers and underwriters or Bankers mentioned in the Prospectus. Separate remittance should accompany each application.

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

CHAIRMAN'S REVIEW

THE Eleventh Annual General Meeting of Sen-Raleigh Industries of India Ltd. was held at Calcutta on Monday, 17th April 1961. The following are extracts from the statement of Mr. Abhijit Sen, Chairman of the Company:

"Your Directors have felt that, from this year, the Chairman's statement should be circulated in advance so that all members, irrespective of whether they can attend the annual general meeting or not, may share the information contained in the statement.

"The profit for the year, after providing Rs. 20,00,730 for depreciation, amounts to Rs. 24,49,361. Your Directors recommend that the dividend on the ordinary shares be maintained at 8 per cent as in the previous year and that the dividend on the preference shares be stepped up to 6.5 per cent in order to comply with the provisions of the Preference Shares (Regulation and Dividends) Act 1960.

"Past experience has shown that the capacities installed and worked to at the end of each Plan period are only stepping stones to further expansions in the succeeding Plans, and so the Company's policy of retaining a major portion of the profits in the business should be taken as a necessary adjunct to an expanding economy.

Production Higher

"Increasingly greater use of indigenous raw materials, wherever available, did allow bicycle production to record a slight increase over the previous year, but this increase was hardly of the order where it could make itself felt in the face of rising demand for our products. Marked increases in production were also recorded in some friction parts where a freer release of raw materials made operation at near-capacity levels possible.

"Demand in general for your Company's products continued to outstrip the increase in production, but this satisfactory position may not long continue in one or two of the components we make, in which saturation point may be reached in the foreseeable future as licensing of industrial capacity for these items has been more liberal than wise. In the competition that is bound to develop, it is felt that our early entry into these lines will stand us in good stead, as our range of products have established a reputation for quality and service.

"The biggest single factor limiting production still continues to be the lack of suitable steel in sufficient quantity. Can we hope that the steel processing plants would be able to rush into production and alleviate the indigenous steel shortage from 1962 onwards, so that the industry could face the future with greater confidence. The import licensing policy for steel continued to be on an annual basis, but the benefits of this policy were rather lost on the industry, as licences were switched in two successive periods to two different currency areas, namely the rupee payment area (consisting of the Eastern European countries) and the United States of America (against D.L.F. loans).

Foreign Exchange

"Foreign exchange problems still dog our footsteps and will continue to do so on an ever-increasing scale both for raw material and for plant requirements in the future. Government policy now appears to favour only such new schemes or major expansions where foreign investment matches the requirement of plant import and as this may very well become the pattern for the day in the third Five-year Plan, your Company may have to consider this feature as a determining factor in undertaking some of its future expansions.

"For the present, industrial licences have been received for substantial expansions in chain manufacture and for manufacture of a new item—dynamo lamps. In the case of the chain expansion, import licences have also been received and plant is now being ordered.

"Your Company naturally expects to play its due part in raising the country's bicycle production to 2.5 million in the third Five-year Plan. Schemes for expansion are now under consideration and construction of buildings to accommodate expansions have already begun.

Power Shortage

"Plans for our future expansions are rather clouded by present shortages of power and water at Asansol. Notwithstanding the fact that our factory is situated in the heart of the Ruhr of West Bengal and in the midst of various multi-purpose projects, power is already on ration and no serious consideration seems to have been given to the question of supplying water to a rapidly growing industrial area, not to speak of supply to rural areas about which the Union Government is so concerned today. An Asansol-Raniganj water-supply scheme has been in the offing from 1945 onwards, but two successive Plans have passed it by and residents of Asansol town still have to buy water by the bucket in summer, and industries fear to expand for lack of water.

"Considering the important part Asansol plays in the industrial and economic life of the State—if not the nation—it does appear to be the most neglected town in India as far as the planners of the country are concerned. Unless Asansol receives some attention from the planners in the third Five-year Plan, not only will it rapidly deteriorate into the second nightmare city of **the State but industries** will hesitate to venture into further investment in this area.

"Last year, I mentioned the need for your Company to consider diversification of interests within the light engineering range. After careful thought, your Directors have now applied for and obtained industrial sanction for manufacture of electric house service meters. They are satisfied that there will be a continuing demand for such meters in this country for some

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd. as at 31st December, 1960 and also the annexed Profit and Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors. The reports on the accounts of the branches audited by other Auditors have been dealt with in preparing our report in the manner considered necessary by us.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisions of sub-section (1) and (5) of section 211 and sub-section (5) of section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in accordance with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

(a) We have obtained all the information and explanations, which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;

(b) The transactions of the bank which have come to our notice, have been within the powers of the Bank;

(c) In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank;

(d) The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;

(e) In our opinion and to the best of our information and according to the explanations given the said accounts give the information required by the Companies Act, 1956, in the manner required for banking companies and on such basis the said Balance Sheet gives a true and view of the state of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the Profit for the year ended upon that date.

HINDUSTAN LEVER LIMITED

MR. P. L. TANDON, VICE-CHAIRMAN, OUTLINES COMPANY'S MARKETING TECHNIQUES AND POLICIES

"ADVERTISING PERFORMS A VITAL ECONOMIC FUNCTION"

IN his speech at the Annual General Meeting of the Hindustan Lever Ltd., held at Bombay on Tuesday, 18th April, 1961, Mr. P. L. Tandon, Vice-Chairman, gave a fairly detailed account of the marketing techniques and policies of the Company. He laid special emphasis on the importance of marketing research for an essentially trading concern. The general impression that India was a price market, Mr. Tandon declared, was wrong, as witness the growing sections of the population demanding quality products. Referring to advertising, he observed that it performed a vital economic function in a free society in so far it enabled cost to be brought down through mass production made possible by stimulating demand. The Hindustan Lever's advertising, according to him, cost Rs. 2.80 per every Rs. 100 worth of sales.

The following is the full text of Mr. Tandon's speech:

"It gives me great pleasure to welcome you to this annual general meeting of the Company.

"I shall take as read the report and accounts for the year 1960 which have been with you for some time. I shall talk to you today about our own marketing, how we do it and what is our thinking behind it.

"We are essentially a marketing company. What we produce we have to persuade the consumers to buy. There is no captive market for us. Successful marketing is our life-blood, and we can say with some satisfaction that our marketing is lively and effective. Marketing to us is a total operation, more than mere selling. It has a wide band of activity, from product development to consumer satisfaction.

The Product

"We only go to market when we have a product that is right for the market and is right in itself. This begins with a process of careful discusions among our men and women in marketing, marketing research, technical research and development. The marketing people know their consumer; marketing research makes sure that this is so; the technical research and development people have to develop the product; the advertising people assist in moulding its personality, they give it name, packaging and appeal. There will be many trials and tests with the product; probes into the market to ascertain the size and shape of the demand; till, finally, the product is ready for market testing. Let me begin with marketing research, which is the first link in our marketing chain.

Marketing Research

"Marketing research tries to find out what the consumers, the men and women who constitute the market, think and want. It keeps us in touch with the consumers' minds and to study their changing likes and dislikes and habits.

"Marketing research operates in a variety of fields. There is conventional research, known as quantitative research, where, with the aid of questionnaires, we find out what products of interest to us people use; how much they buy and how often; who in the family use them; what the qualities are that they look for and what is their opinion of the brands they buy. This type of research gives us excellent surface bearings, but sometimes, what people say is not always why they do it. Quite unconsciously there can be a difference between people's spoken and unspoken attitudes. This is an area where the newly developed techniques of motivation research can help to bring us closer to people's thinking.

"Motivation research, instead of relying upon direct questioning, goes deeper into what motivates people's actions and beliefs, especially in areas where there is a good deal of emotional content. That is particularly so with products where the social connotation is equally as important as personal satisfaction. When it comes to finding out women's views on beauty and adornment, direct questions are unlikely to bring out the real answers. But get them together in a group and the discussion will be revealing to the trained ear of our psychologist, who will pick up nuances that are otherwise likely to be missed.

"Our marketing research also operates in a variety of other fields. It conducts rural surveys to find out about habits of people in the countryside and the changes that are taking place. It operates consumer panels in towns where housewives are visited regularly for budgetary enquiries. It also conducts surveys of more general, sociological interest to study the growth that is characteristic of our society today.

"All this may sound an imposition on the housewife, but it is not. She, in fact, enjoys greatly to being called upon by our market research girls and discussing domestic matters with them. These young ladies are well educated, mostly graduates, from good homes, and they are carefully trained by their senior managers, also women. They are therefore very acceptable to the housewives; in fact, their problem often is how to get away from an interview.

"We firmly believe in marketing research and we use it extensively. Altogther, we interviewed over one lakh people in 1960. We consider it cheaper than making mistakes. We go a stage further and test-market the new product when it is ready for marketing but before we feel it can be launched on a national scale. Both marketing research and market-testing help us by bringing forth ideas for improving the products.

Test-marketing

"In test-marketing we select one or more towns or an area and try out the product under live conditions. Test markets are selected for their representativeness, either of the country or the problem. An area or town may be doing well in the sale of a type of product but not so well for our own brand. When we bring out an improved product this might be just the area to find out how far we can increase our share of the market. If we succeed here we are sure to do well elsewhere. Test-marketing can also help us to try out an advertising approach or a sales promotion scheme on a pilot scale at a small cost.

"Yet another form of test-marketing is sampling, where our girls will leave samples of the product and return after a while to ask what the family thought of it in use; how does it compare with other brands they use; and would they buy it when it is available. The opinions we receive can be very helpful, particularly when they lead to a modification of the product.

"During test-marketing our marketing research can also help. It may come in with enquiries before and after the launch of the product to study its impact.

"At the end of all this, I should like to emphasise, we are using our judgment, and the whole problem is to create men of adequate judgment. These are tools and aids which, well employed, assist their judgment and decisions. Hunches are good if they are more often right than wrong; and backed by information they are more likely to be right.

Price

"While the product is being thus tested, our accountants will be busy discussing with marketing people the likely price and profit margins. Accounting is so much part of our marketing thinking, but our accounting approach here is a little different from the conventional one. We do not go in for a detailed and elaborate allocation of overhead costs in an arbitrary manner, but rely instead upon each product group taking its share of overheads in block.

"There are two points about price which I should mention here. The first is price and quality. The widespread impression that India is a price market is no longer wholly true, because there are growing sections of population which demand quality. This is becoming more important as the country's economy and living standards improve. Therefore, to cut quality or packaging in a consumer product and to think only of cheapness would prove a false economy, at least in sections of the market that demand something better. Secondly, advertising and sales promotion are necessary parts of the product price to achieve good demand which, in turn, will lead to high volume of production and a consequent reduction in price. This point, I feel, deserves further attention and I will return to it.

"After the product has been successfully developed and tested, both in our research and development laboratories and in the homes of potential consumers, we are now ready to launch it. The first stage is distribution, backed by a selling effort.

Distribution

"Our distribution goes deep into the country. Having adequately covered the urban areas, our promotion efforts are constantly directed at taking our products into more and more small towns and villages. In 1954, our distribution covered 1,400 markets with a total population of 38 million. Today, we cover over 6,500 markets with a population of over 91 million, and beyond that is the still wider distribution that is done by the enterprising traders in small villages that we do not reach ourselves. It would be fair to say that there would be very few villages in India where Sunlight Soap does not reach. Interestingly enough, our sales increases in the smaller markets, especially in the rural areas, have been most gratifying. In the last five years the average annual growth of some of our popular products in the rural areas has been more than four times that of the all-India expansion. This is but natural in a growing economy in which there is vastly more room for improvement in the villages than in the towns. Wide distribution, too, helps to keep prices low by increasing sales volume by creating competition among retailers.

"And now a few words about our distribution system in general, and how we reach the villages.

"The central point of our distribution system is our chain of wholesalers throughout the country. From our five factories, goods are despatched to 60 stock depots which are the primary distribution points scattered over the country. From here they go to our wholesalers. In each one of the 6,500 markets we shall cover in 1961, we have one or more wholesalers for each group of our products.

"Our wholesalers are local people who will always know local conditions better than we can. Being neighbours, their contacts with the retailers are close. As our representatives in the towns and as men of substance, their importance as our associates is good for their business and for us. They buy the goods from us outright for cash, warehouse them, distribute them with almost clock-work regularity, and extend credit to the retailers. All this saves us working capital. Belonging to the community, they form an effective and intimate link between us and the thousands of retailers who stock our products, and they do the whole operation smoothly and profitably for themselves and economically for us. They are loyal to us and rarely leave; we, in turn, treat them with respect and keep their interests always before us. Most of our vanaspati and soap wholesalers who began with us over 20 years ago are still with us. And our bad debts in the past have not amounted to even a thousandth of one per cent of turnover.

Selling

"At the back of our wholesalers is our own large sales force, which today comprises 511 salesmen and supervisors. They have a set of specific and clear-cut functions. The first is, of course, selling. They visit every market at periodic intervals ranging from four to eight weeks, depending upon the type of product and size of the market. Upon their visit, they discuss local conditions and problems with the wholesalers and then go out in the market to sell alongside them. This stimulates the wholesale trade to push our products and also gives us direct contact with the retailers. At the same time, they arrange display of point-of-sale advertising material and of our products to attract the consumer's attention when he or she enters the shop. The salesmen have, besides, other functions like inspecting the quality of our goods, their packaging and contents, and withdrawing anything which, in their opinion, is not in a prime condition. Fortunately, our speedy turnover and distribution methods make sure that our goods are fresh in the market.

"I have spoken already about our penetration into the countryside, and our spearhead here is a fleet of 45 motor vans spread over the country. These vans do a pioneering job, mainly covering small towns and nearby villages, working their way progressively deeper into the rural areas. They call at all worthwhile retail outlets; appoint wholesalers in new places where there is a sufficient volume of business to justify it; interest new retailers in stocking our products; and display advertising material and our goods. As soon as a market responds to this pioneering treatment and develops regular sales, it is put on the permanent journey plan of a regular salesman.

"At the back of the rural work is another fleet of 12 cinema and seven demonstration vans which combine the functions of propaganda and consumer sale. They give cinema shows in the villages at which large audiences happily see our advertising films coupled with an entertainment film. In addition, we show a suitable Government of India information film for broad educational purposes.

Advertising

"Wide though our distribution is, by itself it cannot sell. It has to be taken to its next logical stage which is persuading the consumer to buy it. Distribution merely makes the product available; the consumer has to want it before the real sale takes place. Between distribution and consumption, therefore, there is the vital area of demand, created by consumer persuasion through advertising.

"There is some confused thinking about advertising. It seems to be regarded by some in India as unnecessary and by others as a case of the chicken and the egg; which comes first? Some go even further and argue that advertising is an economic waste and a luxury. We differ from this view.

"We believe that by creating and expanding consumer demand, advertising promotes volume which alone can effectively bring down costs. We do not believe in cutting quality to save cost, but to look for saving through increasing sales. Advertising in a free society therefore performs a vital economic function and at a surprisingly small cost. Our own advertising costs us only two rupees and eighty naye paise for every hundred rupees of sale.

"Advertising in fact is not even a cost to the consumer, for, by the high volume of sales it brings, it actually means a saving to him. It also ensures a regular demand which, in turn, enables our factories to operate with minimum fluctuations. There are other savings too. For instance, the reduction in working capital that accrues from the rapidity with which advertising helps to move the products from our factories, the wholesalers' godowns and the retailers' shelves. This speedy turnover of stocks helps the trade to operate on smaller margins than they would be willing to accept on slow-moving goods.

"All told, advertising helps us in many ways. It introduces our products to millions of homes; it gives an assurance of quality to the consumers; and it helps reduce costs and the working capital employed.

Two Methods

"With the household products of wide appeal that we sell, our advertising has to be spread, over a large area. As it has to reach millions of homes in towns and the countryside, we have to use as many available media as possible, and it takes two forms—direct and indirect. In direct advertising, we go straight to the consumer and make a personal approach by sampling and demonstration, while, in indirect advertising, we use media like the press and cinema to carry our message.

"Our advertising thus aims to reach the consumer, usually the housewife, in three ways: by meeting her and explaining to her about our product and how to use it; by reminding her through the daily newspaper and whatever she goes to the pictures; and by the last-minute appeal when she enters the shop and sees our showcards attracting her attention to the goods displayed on the shelves.

"It is important that our advertising, while trying to attract, should, at all times, be sincere and correct. We go to considerable trouble to make sure that the claims we make for our products are justified. For this purpose, all written advertising is submitted to both our legal and technical departments who scrutinise each copy to make certain that all claims are tenable. Advertising creativeness has to be given freedom but only up to the point of truth, and no further.

"It is not possible to evaluate advertising expenditure as we can our capital expenditure. The effect of advertising cannot be measured as closely as the effect of spending money on new production facilities. Nonetheless, it is very important, when we are spending large sums on advertising, to develop some means of evaluation, and these we are trying to create through our operations statistics department, who are experimenting with the new techniques in measurability of advertising; through our market research who pre-test virtually every new campaign; and through sales analyses.

Staff

"And now I come to the most important area in our marketing operations—that of the men and women who run it. I have made a particular reference to women because they are playing a growing part in our organisation. There are 41 women working today in marketing and marketing research, mostly in the latter, and they are trained in a variety of disciplines; one has done a doctorate in psychology, another in social sciences, and a third in nutrition chemistry; there are two who have graduated in domestic science; and of the remaining 36, 27 are graduates in arts and sciences.

"We keenly appreciate that, although for its vitality and success, our marketing will require the use of latest methods and techniques, in the ultimate analysis, we depend upon the calibre of the men and women we employ, upon their proper selection and training. Total efficiency of the operation must be a sum of the jobs well done.

"For selection we look far and wide, and process the applications through a carefully designed multi-tiered procedure which aims at ruling out anything other than ability. It looks for those qualities of mind and manner which make for a good marketing type, possessing initiative and yet objectively analytical, resourceful, and with a mind that will grasp a situation quickly and meet it with energy and courage.

"For promotion, we attach great importance to developing our own employees at all levels so that as many of them as possible can rise. Among our marketing managers today, 40 per cent joined the Company as salesmen and clerks; 20 per cent joined us as trainees, and 40 per cent were recruited directly from outside. While we are satisfied that our selection and promotion procedures work well, we have to be absolutely sure that we do not allow standards at any level to fall. If that happens, efficiency and morale will deteriorate and that will be injurious not only to the organisation, but to the individual whose well-being and future is so intimately bound with it.

Training

"Training in the Company is a continual process. Training during probation must first make sure that the person employed is in fact cut out for the job and is capable of making a career with us; and then teach him the job. After confirmation, we are strong believers in developing the individual through devolution of responsibility and training. It takes various forms. We organise courses at our Training Centre in Bombay to which employees from all levels are brought for one-week to three-week courses. These are designed with two purposes in mind: a broader understanding of the Company's objectives and policies; and the inculcation of skills and techniques. Salesmen and supervisors have quarterly conferences with their area sales managers; branch conferences are held twice a year and bring together all levels in branch marketing; annual conferences are held at all-India management level; and special conventions are organised every year at all-India or branch levels for all staff whenever we launch an important new product.

"We encourage our managers to attend and participate in outside marketing and management conferences and seminars, and we also send men regularly to the Administrative Staff College at Hyderabad. In addition, we make use of the considerable training opportunities provided by Unilever. A few have been to the U.S. and Australia, and many to Britain and Europe. Our own training facilities have developed so far that Unilever are using them for sending men from their associate companies from Africa to the Philippines.

"This, then, is a brief account of our marketing; the thinking and philosophy behind it; the tools and aids that are made available to the men and women who run it, and of the men and women themselves. It is an operation that has run well, but we are constantly watchful of complacency creeping in. We are always studying change and trying to adapt ourselves to the new."

HAVE PLEASURE IN ANNOUNCING ENHANCEMENT IN THEIR RATES OF INTEREST ON DEPOSITS

Certain items of enhancement are:

Savings Bank Accounts	From 2½ to 3% p.a. (From 1-4-61)
Deposits fixed for 12 months and over but less than 24 months.	From 3½ to 4% p.a. (From 15-3-61)
Deposits fixed for 60 months and over.	From 4½ to 5% p.a. (From 15-3-61)

For further particulars please apply to the nearest branch of the Bank.

G. S. SUNDARAM,
Secretary.

SEN-RALEIGH INDUSTRIES OF INDIA LTD.

(*Concluded from page 755*)

years to come, and this is a line where the experience gained by your Company can be profitably utilised.

"With the growing shortage of foreign exchange, there is a likelihood of imports of materials being linked with export performance. Your Company has been exploring the possibilities of obtaining a wider export market for some time. Although the export performance in bicycles has not been very good for the industry as a whole in 1960, our saddles have gone out to many new markets and we now await the reaction from the importing countries. Efforts to develop bicycle exports are continuing and it is hoped that 1961 will show better results in this direction than the past year.

"I cannot conclude without a passing reference to the provisions of the present Finance Bill, inasmuch as these concern foreign collaboration. To us, it appears that an invidious distinction has been drawn between foreign associates who have helped in developing the industries of the country in the uncertain stages of the first and second Five-year Plans and those associates who intend to come in after April 1961 when the country's economy has become relatively more stable. All the benefits in the way of lower taxes on inter-corporate investment and on royalty remittances have been made applicable to arrangements entered into after April 1961, whilst older arrangements remain liable to tax at the higher rates.

"Before I close, I would like to thank my colleagues, the staff and the workers of the Company, and our foreign associates for the work they have put in to conclude one more successful year of operation."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

INDIAN PAPER MAKERS ASSOCIATION

CHAIRMAN, MR. P. J. EGAN'S ADDRESS AT ANNUAL MEETING

PLEA FOR REVISION OF PAPER PRICES

A PLEA for revising the prices of paper was made by Mr. P. J. Egan, Chairman of the Indian Paper Makers Association, while addressing the Annual General Meeting of the Association held at Calcutta on Tuesday, 11th April 1961. The present prices, Mr. Egan stated, were based largely on the production costs of bigger, old-established factories which were the more efficient low-cost units. He urged for a suitable revision of prices so as to make it more representative of the industry as a whole, by taking into account the production costs of the new small-scale units. In this connection, he alluded to the sizable increase in the cost of production that had occurred since the last Tariff Commission's inquiry, as well as to the need for providing adequate rehabilitation allowance. He also referred to the fact that four-fifths of the paper industry's expansion envisaged in the third Plan was to be ensured through the setting up of new mills and said that the capital outlay per ton of capacity in new units was much greater than what would be involved when the existing units were allowed to expand, resulting in higher cost of servicing capital and depreciation.

The following are extracts from the speech of Mr. Egan:

"The second Five-year Plan envisaged a target capacity by the end of 1960-61 of 450,000 tons of paper and board a year and an annual production of 350,000 tons; against this the actual installed capacity achieved to date amounts to 410,000 tons, while production for 1960 was 345,000 tons, or only 5,000 tons short of the production target. Within the space of five years, the industry has increased its output by nearly 90 per cent.

"An important feature of this achievement on the part of the industry was the predominant part played by existing units, which between them accounted for approximately four-fifths of the increased production in the second Plan. Another feature is the extent to which expansion of existing mills' production was financed out of their own resources. The increase in production was in no small measure due to the industry's restraint in the declaration of dividends and to its policy of ploughing back its resources.

Third Plan Targets

"The third Plan sets the industry targets of 900,000 tons and 700,000 tons for capacity and production, respectively, and whereas in the second Plan four-fifths of the increased production resulted from the expansion of existing units, for the third Plan, new units are required to provide four-fifths of the expansion envisaged. A point which this at once raises is that capital outlay per ton of capacity is much greater for the setting up of entirely new units than for the expansion of existing units and, consequently, the cost of servicing capital and depreciation per ton of production is higher in the case of new units.

"Another feature of the third Plan is the development of capacity through the medium of small-scale paper units, which are expected to produce 30 per cent of the total increase in installed capacity. Given a combination of cheap labour, cheap local raw materials, and proximity to markets these small units may be an economic proposition, but their manufacturing costs will always be considerably higher than the costs of the larger units. In view of the vital part which new and small-scale units are being called upon to play in the third Plan, and, as present prices are largely based on the costs of the bigger, older established, and, therefore, the more efficient low-cost units, of the industry, an immediate revision of prices to make them more representative of the industry as a whole is surely necessary.

Rail Transport Facilities

"Although paper production during 1960 amounted to 345,000 tons, representing a rise of 30,000 tons over 1959, the industry was faced with an increasing number of problems as the year progressed. In July 1960, the paper industry was downgraded from selected grades to grade 1 for its requirements of coal, resulting in increased consumption and grave difficulties for some mills in maintaining the required pressure of steam. Moreover, the supply position of railway wagons has deteriorated to such an extent that some mills have had to resort to road movement of coal.

"Shortage of rail transport is even more serious in relation to supplies of raw materials. Despite strong representations which resulted in the railways deciding to make regular allocations of block rakes for bamboo movement, the railways have been unable to do so with the result that, while thousands of tons of bamboos are accumulating at the railheads, stocks at the mills are reducing at an alarming rate. China-clay and lime supplies, as also despatches of finished paper, have been seriously affected by wagon shortage.

"If even at the present level of production, the industry is being handicapped by lack of rail transport, I cannot see how it will be able to fulfil its obligations under the third Plan, unless a vast improvement is made in wagon availability.

Power

"Another problem which is causing some mills concern is the serious shortage of electrical power in West Bengal. If the shortage persists, it will undoubtedly impede the much needed expansion of the paper industry apart from slowing down the present rate of production.

"Last year, this Association, in its memorandum, requested Government to grant an increase in the price structure which came into effect on 1st January 1960. At a conference held in May 1960, the Union Minister for Commerce and Industries accepted that a case had been made out in the industry's favour on certain points which deserved looking into, but considered that there should be a reasonable lapse of time before prices were reviewed. A review of the price structure is now long overdue.

"Since the Tariff Commission's investigations, mills' production costs have steadily increased and Government itself is directly responsible for part of mills' increased costs. I refer in particular to the 5 per cent railway freight surcharge, which came into effect from 1st April 1960, to increases in railway freight as a result of alterations in the minimum weight conditions for transport of bamboos and other raw materials from November 1960, and to the new excise duty on caustic soda and soda ash levied from 1st March this year.

Rise in Production Cost

"The prices of raw materials and chemicals have increased considerably and packing costs have soared due to the inordinate increase in the price of gunnies. The price of coal has gone up and, due to wagon shortage, mills are now incurring additional expenditure on road transport. In addition, coal bills have shown an all-round increase due to the downgrading of coal for the paper industry. Moreover, labour costs have increased as a result of Tribunal awards.

"The 5 per cent contingency allowance provided by the Tariff Commission in the price structure recommended by them has long since been absorbed. On the consideration of costs alone, therefore, an increase in paper prices is now well overdue.

"At the recent rate contract meeting, the industry asked for a price increase to offset the increase in production costs. Although Government is still of the opinion that it is premature to revise paper prices, they have agreed to reconsider the matter as soon as they receive from the industry details of increases in mills' costs.

Return on Capital

"I trust that, when Government are re-examining paper prices, they will not confine themselves to the question of cost increases alone, but will also take into consideration the necessity for an adequate return to the industry on employed capital. The return of 12 per cent provided by the Tariff Commission which is intended to cover a wide variety of payments, including labour bonus and managerial remuneration both of which are items of cost, taxation, transfer to reserves, interest on working capital, debenture and loan interest, as well as dividends is wholly insufficient. Moreover the necessity for a suitable rehabilitation allowance to enable mills to make up the disparity between their depreciation provisions and replacement costs is just as much in the paper industry as in any other industry.

Scarcity of Raw Materials

"Scarcity of raw materials is another problem which is facing the industry today. I hope that State Governments now are awakening to the realisation that the policy of granting annual contracts, although possibly a source of immediately increased revenue, has been the cause of the gradual wasting away of forest resources. To ensure scientific exploitation and development of the forests, it is essential that leases of at least 20 years are given to paper mills to enable them to undertake widespread plantation of bamboos, grass and other fast growing cellulosic raw materials. As such development work involves a considerable outlay spread over a period of years, it would only be warranted if the lessee has the assurance of a long security of tenure. The necessity for widespread planting of bamboos has become all the more now that it is proposed to make use of bamboo for the manufacture of rayon grade pulp for which schemes aggregating 280,000 tons have already been approved by Government. To ensure that the requirements of existing paper mills are not jeopardised, it is very essential that raw materials resources are carefully surveyed.

"Bagasse is becoming extremely important as a raw material for the manufacture of paper and, in order that it can be made available for the expansion of the paper industry, it is essential that sugar mills are given early assurance of a regular supply of an alternative fuel.

"The urgent necessity for building up a substantial export market for paper has been engaging the close attention of the industry.

"Considerable progress has been made in India's paper machinery manufacturing industry and already the fabrication of the first units of 3-5 tons capacity is in course of completion."

ANNOUNCEMENT

THE ANDHRA BANK LTD.

(*Head Office:* MASULIPATAM)

have pleasure to announce that the

INTEREST RATE on Savings Bank Accounts in all their offices is raised from 1st APRIL, 1961 from 2½ per cent to

3%

Interest Rates on Fixed Deposits are also revised.

CANARA BANK LIMITED

SPEECH OF CHAIRMAN, MR. A. D. PAI

CONCERTED EFFORTS WANTED TO STRENGTHEN BANKING STRUCTURE

A CALL for concerted efforts to strengthen the banking structure in the country was made by Mr. A. D. Pai, Chairman of the Canara Bank Limited, in his speech at the Fifty-fifth Ordinary General Meeting of the Bank held at Mangalore on Wednesday, 22nd March 1961. Mr. Pai stated that the necessity of assisting weaker units to strengthen themselves either by merger with bigger banks or by formation of stronger units by amalgamating two or more small units had now been recognised. In order to minimise losses by way of bad debts, he commended for acceptance the starting of a Credit Information Bureau. He also wanted a Code of Conduct to ensure uniform practices in the matter of granting large advances.

The following is the text of Mr. A. D. Pai's speech:

"Your Bank's 55th annual report, balance-sheet and profit and loss account for the year ended 31st December 1960 are already with you since some time now. I, therefore, ask your permission to take them as read.

"As you will no doubt have noted, 1960 was a year of stress for the banking industry. The year was marked by acute monetary stringency and increased demand for funds. There was unprecedented increase in investment in capital machinery and in shares of new industrial ventures. Unlike in previous years, when deficit financing led to growth of bank deposits, the Government during the major part of 1960 was able to withdraw the money in circulation by cancellation of *ad hoc* Treasury Bills. The transfer of P.L. 480 funds from the State Bank to the Reserve Bank of India also contributed to the depletion of deposit money from the banking sector.

"In consequence, the general trend in 1960 was for a much slower growth in the deposits of scheduled banks as a whole. Despite this trend, and the lower deposit rates your Bank has been offering under the inter-bank agreement, the Bank recorded an increase in deposits from Rs. 28.93 crores to Rs. 30.82 crores. The increase works at 6.39 per cent, as against 3.77 per cent of scheduled banks as a whole. The bank's savings and current deposits showed accelerated growth compared to previous years.

Encouraging Small Savings

"In the second half of 1960, your Bank, in order to encourage small savings, started two fresh schemes of deposit—cumulative deposit and interest-free loan savings deposits, both being new types of recurring deposits in which depositors are not penalised for delayed instalments. There has been encouraging response to these schemes.

"As against Rs. 15.88 crores in the previous year, your Bank's advances are at Rs. 16.53 crores on 31st December 1960. There was unabated demand for funds during the year and, with a view to checking rising prices, the Reserve Bank brought in various credit curbs intended to restrict further expansion of credit in the country. Your Bank has been able to maintain a satisfactory ratio of advances to deposits *vis-a-vis* the scheduled banks as a whole. Also, the pattern of advances is becoming more diversified, and larger credit has been extended to industries in keeping with the country's stress on industrialisation. The percentage of secured to total advances at 82.26 per cent, is higher than in previous years. And your Bank has been able to maintain a high liquidity ratio as in previous years. The continued demand for funds during the year accounted for a reduction in the Bank's investment in Government securities. In order to restrict expansion of credit, the Reserve Bank, during the year, fixed an upper limit to banks for borrowings against Government securities beyond which the borrowings would be charged a penal rate of interest. The penal interest being higher than the yield on these securities, unloading of a part of the holdings in Government securities was found preferable, while, at the same time, a larger amount has been held as call money lent to other banks, making for a more liquid position.

Deposit Rates Lower

"Under the inter-bank agreement, the deposit rates offered by your Bank on term and notice deposits were lower than in the previous year. Rates on advances were put up by ½ per cent in the second half of 1960 as per the directive of the Reserve Bank of India. Your Bank has accordingly been able to report higher profits than in the previous year. This year, we have transferred a sum of Rs. 3.5 lakhs to inner reserves, while our reserve fund and share premium account stand at Rs. 50 lakhs and Rs. 6.3 lakhs, respectively, as against the paid-up capital of Rs. 50 lakhs.

"A question which has been engaging the attention of your Directors in this connection is the need for increasing the capital and reserves ratio to deposits. The ratio for your Bank at present stands at 3.44 per cent nearly as for other scheduled banks in the country whose ratios are generally within 4 per cent. If the capital and reserves base is broadened, banks will be in a stronger position to face any difficulties in the future. Your Directors, therefore, intend approaching you later in the current year with a proposal for a fresh issue of equity capital.

"The failure of two scheduled banks in 1960 focussed attention on the need to strengthen the banking structure in the country. The necessity of assisting weaker units to strengthen themselves either by merger with bigger banks or by formation of stronger units by amalgamating two or more small units has now been recognised. Your Bank has been approached by a few banks in this connection and the proposals are being examined with sympathy, understanding and goodwill. Your Bank has also started a small administrative unit at Trivandrum to examine proposals received from banks in that State (Kerala State) and to assist in preparatory work for opening branches at centres where there is comparative dearth of banking facilities.

"With a view to assisting the smaller banks of South India, your Bank has started a scheme for training senior officers of such banks at no financial cost to them.

Concerted Efforts

"The situation also calls for concerted efforts by all banks. To minimise losses by way of bad debts, starting of a Credit Information Bureau by pooling the information gathered by banks deserves attention. Banks would also do well to draw up a 'Code of Conduct' to ensure uniform practices in the matter of granting larger advances. For instance, it is a healthy convention to call for audited statement of assets and liabilities and particulars of limits enjoyed elsewhere before large limits are sanctioned. The provision of training to employees of your Bank received careful attention during the year. Our staff Training School held five basic courses for 127 trainees, bringing the total trained to 488 since the inception of the School in 1955. Your Bank has also arranged to have a second batch of two members sponsored by the Bank's Employees' Union to be trained as worker-teachers at the workers education centres at Bangalore and Hyderabad, respectively. Two senior managers of your Bank went for advanced refresher courses offered by the Deutsche Bank, A.G. and the Dresdner Bank, A.G., Hamburg. We thank both these foreign bank friends for affording us these training facilities.

New Branches

"In 1960, your Bank opened eight new branches, Chamrajpet and Chickpet, Bangalore; Mount Road, Madras; Avanashi Road, Coimbatore, Abdul Rehman Street and Dombivli, Bombay; Poona and Sitabuldi, Nagpur. All these branches are progressing well. Our branch and foreign department at Calcutta, started in October 1959, has recorded satisfactory progress and the foreign business handled by your Bank showed further increase over the previous year.

"In February of the current year, your Bank opened two more branches, at Khar, Bombay and at Bagalkot in Mysore State. Your Bank has also obtained licences for opening branches at Visvesvarapuram, Bangalore and at Kottayam, Changanacherry and Trichur in Kerala State and arrangements are being made to open these branches soon. Our branch at Cochin was shifted to our own building during the year, and the construction work of our Administrative Office in Bangalore is in full swing.

"We are prepared to shoulder the increasing responsibilities which all institutions must be prepared to take up in our nation's pilgrimage to a position of economic independence and self-sufficiency.

"I thank our shareholders, constituents and staff for the co-operation they extended during the year."

INDIAN OVERSEAS BANK LIMITED

SPEECH OF CHAIRMAN, MR. M. CT. MUTHIAH

MORE MONEY MUST BE FOUND BY OR FOR THE BANKING SYSTEM

SATISFACTION at the increasing awareness on the part of the monetary authorities about the urgency of finding more money by or for the banking system was expressed by Mr. M. Ct. Muthiah, Chairman of the Indian Overseas Bank Limited, in his speech at the Twenty-fourth Annual General Meeting of the shareholders, held at Madras on Monday, 17th April 1961. Unless such money was found, Mr. Muthiah felt, it might not be possible for the country fully to implement the third Plan involving an appreciable outlay in both public and private sectors. He appreciated the Reserve Bank's decision to release special deposits impounded during 1960, to extend the Bill Market Scheme for re-discounting bills on behalf of banks, and to restore public confidence in the banking system. He alluded, in particular, to the scheme of compulsory insurance of bank deposits, as well as to the efforts being made to bring about merger of weaker units with the stronger ones.

The following are extracts from the speech of Mr. Muthiah:

"GENTLEMEN,

"It gives me great pleasure to extend to you all a warm welcome to the twenty-fourth annual general meeting of the Bank. The Directors' report and the statement of accounts for the year 1960 have been in your hands for some time and with your permission, I shall take them as read.

Bank's Progress

"You will see from the comparative figures furnished the great progress made by the Bank during the last decade and a half, more particularly during the last six years. Deposits which stood at Rs. 11,29 lakhs in 1954 rose to Rs. 29,29 lakhs in 1960 and our total resources from Rs. 18,48 lakhs to Rs. 49,43 lakhs. Advances had gone up from Rs. 5,52 lakhs to Rs. 19,90 lakhs and investments in securities from Rs. 4,09 lakhs to Rs. 11,54 lakhs. Gross earnings had risen from Rs. 69 lakhs to Rs. 2,27 lakhs and net profit from Rs. 13 lakhs to Rs. 45 lakhs during the same period. This is an achievement of which we can all be proud, and it brings to a successful conclusion a chapter in the Bank's history which records unprecedented growth and development.

"The net profit of Rs. 45 lakhs in 1960, as against Rs. 34 lakhs the previous year, is an all-time record. However, your Directors have considered it prudent to recommend only a dividend of 14 per cent, subject to tax, the same as last year.

"Our capital funds and reserves have risen from Rs. 75 lakhs in 1954 to Rs. 1,44 lakhs in 1960.

"During 1960, four new branches were opened at Amritsar, Ludhiana, Triplicane (Madras) and Karol Bagh (New Delhi). We have since opened a branch in Willingdon Island, Cochin and arrangements are on hand to open one at Erode. Our overseas branches are making an excellent contribution to the progress and prosperity of the Bank.

Economic Trends

"The year 1960 has definitely taken the country to the highest level of production ever attained, though not without considerable strain on the economy in general and the banking system in particular. A decade of bold planning to meet the ever-growing needs of the country has set at naught any criticism on the concept of planning itself, as the industrial and agricultural productions have increased by about 66 per cent and 33 per cent, respectively; but the national concern is, however, rightly focussed at the moment on the rising price level with its forebodings of further difficulties. It is, indeed, a welcome move that the Government, the monetary authorities and the accredited representatives of the banking system have decided to meet more often in the future to take such concerted actions as may be feasible to afford any possible correctives.

"Owing to decline in agricultural production in 1959-60 to 72 million tons, as against more than 75 million tons in the previous year, there was a reduction in the domestic availability of foodgrains and raw materials, which shortage was, of course, made good by requisite imports. From all accounts, despite floods in certain parts of the country in 1960, the estimated yield is put around 75 million tons, the tentative target fixed under the second Plan. The fact that the output of cotton in 1960-61 will also be substantially larger than in the previous year, leaves a hopeful trend for the first year of the third Plan. A notable event of the year was, however, the massive deal concluded by the Union Minister of Food with the Government of the United States of America under P.L. 480 Agreement, for the import of 16 million tons of wheat and 1 million tons of rice in the next four years against rupee payment to bolster India's defences on the food front.

Industrial Production

"Performance in the industrial sector was much more spectacular. Production in the first ten months of 1960 registered an increase of about 11.3 per cent over the corresponding period of the previous year and it is reported that this rate of increase had been the highest ever achieved. Without any unforeseen setback, the overall industrial production for the whole year may show a rise of about 15 per cent as compared with that of 1959.

"The pace of industrial expansion at the end of the second Plan period was as fast as it could be in the face of difficulties in procurement of raw materials. The commissioning of several units in the public sector steel plants at Bhilai, Durgapur and Rourkela and the expansion of Tatas and Indian Iron plants brought down slightly the prices of steel, but the shortage of coal and more so, railway wagons for transport of coal stalled the lighting of new blast furnaces at all the public sector plants and reduced productions from the level planned by the Tatas. A major factory in the new field which went into production during the year was the Heavy Electricals Ltd., at Bhopal, run by the Government with the help of the Associated Electricals as technical consultants. Other spectacular new deals with foreign collaborators were also made in 1960. To mention only a few, three fertiliser plants are to come up in Madras State, one in the public sector with German and Italian assistance and the other two in the private sector, one being built by Simon Carves and the other by the Germans; the Nangal Fertiliser Plant in Punjab with French aid will be ready soon. It is also reported that the United States has lent all the money needed for a factory in Trombay, Bombay, to use refinery waste gases. The Government have also come forward, in deference to the demands of the public, to launch in public sector two consumer goods projects, namely, one watch factory in Bangalore and a camera factory in Calcutta with Japanese collaboration.

"Thanks to a general increase in the agricultural and industrial production, the national income (at 1948-49 prices) is expected to be in the neighbourhood of Rs. 12,500 crores for 1960-61, as against Rs. 11,750 crores in 1959-60, thus registering a rise of about 6 per cent. The real national income which stood at Rs. 10,480 crores in 1955-56 rose to about Rs. 12,500 crores for 1960-61, thus recording an increase of about 19 per cent. All this was possible because of a total investment of about Rs. 6,750 crores, both in the public and private sectors during the second Plan period. The ratio of investment to national income which stood at 8 per cent at the end of the first Plan had risen to 11 per cent towards the close of the second Plan, thus exceeding the target fixed at 10.7 per cent.

Banking and Money

"But the most disquieting feature of the economy during the second Plan period was, of course, the money supply which was increasing roughly at twice the rate at which real income was increasing. While the real national income rose by about 19 per cent, money supply rose by about 35 per cent. Especially in the last year of the second Plan, it was the private sector that was generating the marked increase in money supply. The prime inflationary factor in economy was not currency in circulation, but bank advances made, of course, in response to increasing requirements of trade and industry.

"During the year 1960, scheduled banks' aggregate deposits increased by Rs. 65 crores to Rs. 1,892 crores, as against an increase of about Rs. 254 crores in the previous year, while the bank credit rose by about Rs. 217 crores to Rs. 1,181 crores, as against a modest rise of about Rs. 19 crores only in 1959, thus pushing up the ratio of deposits to total advances from 53 per cent to 63 per cent at the end of 1960. The banking system, hard pressed for resources, liquidated its holdings in Government securities to the tune of about Rs. 154 crores to create additional money supply. This factor along with an unprecedented boom on the Stock Exchange in which the prices of industrial securities rocketed far beyond what was justified by dividend returns, apparently induced the Reserve Bank to enforce vigorously the dear money policy, by undertaking a series of monetary restraints and discipline. Besides tightening the existing credit control measures, the controlling bank wielded for the first time in the Indian monetary history what is known as the weapon of variable reserve ratios, whereby upto 50 per cent of increase in deposits subsequent to March 1960 was impounded with them over and above the normal statutory requirements. On the eve of the 'slack season,' which term has, of course, lost its significance with the growing demands for bank credit against industrial output right round the year, the Reserve Bank had also informally requested banks to help reducing the bank credit by about Rs. 100 crores. In the absence of any significant reduction, the Reserve Bank was perforce obliged to restrict scheduled banks' recourse to them for advances by levying progressively higher penal rates beyond certain fixed quotas. The lending rates of banks were also required to be raised with a fixed minimum of 5 per cent. Whatever may be the merits of these restrictive measures, I am glad to note that there is now an increasing awareness on the part of the monetary authorities that, unless more money could be found by or for the banking system, it may not be possible for the country fully to implement the impending third Plan, involving as it does an appreciable outlay both in the public and in the private sectors. The Reserve Bank of India have since released special deposits impounded during 1960, and have also started extending Bill Market Scheme for re-discounting of bills on behalf of banks. They are also moving briskly to restore the public confidence in the banking system, which, though sound basically, had received a jolt from the recent failure of the Palai Central Bank with its repercussions on a few other banks in Kerala, now under moratorium. They are also busy concerting a scheme of compulsory insurance of bank deposits up to certain limit with a view to protecting the interests of smaller depositors and are also endeavouring to bring about merger of weaker units with the stronger ones, for which requisite statutory powers have been obtained.

"Indian banks had also realised that the rates of interest for deposits were out of tune with present conditions and had accordingly raised the interest rates on term deposits as well as savings deposits.

A Decade of Planning

"The first and second Five-year Plans had successfully laid the foundations necessary to raise the standard of living of the people and to open out to them opportunities for a richer and more varied life. The country had witnessed rapid industrialisation with particular emphasis on the development of basic industries and the creation of a progressive and equitable economic and social order. The decade has made us plan-conscious and, although we may not have solved all our basic problems, we have every reason to be proud of our achievements. The economic progress made was impressive because the resources required for the two Plans were found and foreign collaboration on an extensive scale helped the establishment of several industries.

"The second Five-year Plan that has just ended, thanks to the intrepid efforts of both the Government and the people, has been broadly successful with the private sector even exceeding the target fixed for it by about Rs. 800 crores. Encouraged by this success and with an abundant measure of goodwill on the part of India's friends abroad, the third Plan is expected to be launched with a total investment of Rs. 6,300 crores in the public sector and about Rs. 4,100 crores in the private sector, with of development. This proposed investment, which is roughly 50 per cent over that of the second Plan, is again not an overambitious one in terms of India's growing population and its needs. With her external resources dwindled to Rs. 319 crores, which may not even cover maintenance imports, the third Plan will need a larger flow of foreign assistance in major part 'untied' and participation for industrial development. There is, of course, a growing recognition by India's friends abroad of her exchange needs for development. Our Finance Minister's trip to Europe and the United States, though primarily for formal conferences of Commonwealth Finance Ministers, the World Bank and the International Monetary Fund, served also as a reconnaissance mission to explore prospect of foreign assistance for the third Plan, which is tentatively put at Rs. 2,200 crores.

"The Finance Minister has also not been slow in implementing ways and means to supply rupee investment for the third Plan. He has, indeed, displayed rare courage in his recent budget in getting additional revenues to the tune of about Rs. 63.17 crores by way of taxes spread over a large number of commodities even in the first year of the third Plan period, for which an overall taxation programme of Rs. 300 crores is scheduled. If the experience gained in the second Plan is to be any guide, it is fervently hoped that a major share of the tax revenues would be utilised for the financing of commitments under the Plan towards a self-generating economy. Our country's great efforts to attain eventually economic independence have attracted the attention of the stream of foreign dignitaries who had visited our country recently. The most handsome tribute to the country's honest endeavours has, of course, been paid by Her Majesty Queen Elizabeth II in her broadcast message to the nation on the eve of her departure from India, an extract of which is appended below:

> "'It is plain to see that, however much personal outlooks or backgrounds may differ, there is a deep underlying unity of purpose and effort. I can assure you that, for someone like myself, who has the experience of travelling widely and seeing many people, the efforts being made and the achievements are truly impressive.'

Diversified Services

"Your Bank has availed of every possible opportunity to add to the service requirements of the public, both in avenues for attracting the savings of the community and in financing the movement of produce, particularly in external trade. The handsome profit made in 1960 is a tribute to the prudent use made of available resources and although it is difficult to forecast future trends, I have no doubt that your Bank will continue its progressive role in all the countries in which it operates. We recently introduced a system of recurring deposits which affords a convenient method of accumulating savings with a handsome return. We have also introduced rupee travellers cheques for the convenience of travellers in India and abroad. These, together with the personal loan scheme and gift cheques introduced earlier, provide a more diversified form of bank service.

Staff Training

"As I have been mentioning in the last few addresses, we have launched on a long-term development of service potential by organised staff training. Our Staff Training School and the Officers' Refresher Course have continued to make excellent contribution for the dissemination of knowledge to our staff. Earlier this month, we deputed the Principal of our Refresher Course for a three months' Credit Seminar organised by the Chase Manhattan Bank, New York. This Bank had invited one officer each from three banks in India out of the total of twelve officers for Asia and the Middle East and our Principal was one of them. We will also be sending shortly, two officers to the Midland Bank for training and I avail of this opportunity to record my appreciation of the co-operation extended by the Chase Manhattan Bank and the Midland Bank. I would also like to thank the Reserve Bank of India for continuing to train our officers.

"In conclusion, I should like to take this opportunity to express, on behalf of the Directors and on my own, our high appreciation of the excellent work done by the entire staff during the year."

Note: This does not purport to be a record of the proceedings of the annual general meeting.

U.K.'S NEW BID TO BOOST SALE OF CAPITAL GOODS ABROAD

E.C.G.D. LIBERALISES ITS TERMS

THE measures recently taken by the Governments of a number of advanced countries of the West to expand the scope of export credit guarantee schemes are an index of the growing importance of these arrangements in international trade. As long as international trade was financed principally by bank acceptances or documentary credits for short-term transactions and by securities floated on well organised capital markets for medium-term or long-term transactions, export finance and export credit insurance raised no problems or special difficulties. Governments did not feel the need to intervene or control the technical arrangements through which export trade was financed and developed. But political and economic uncertainties, which marked the international scene since the twenties, foreign exchange crises, etc., transformed the conditions under which international trade was carried on.

The changed conditions were such that uncertainties beset even short-term transactions. In addition to traditional default or insolvency risk faced by the exporter, there was the threat of non-payment as a result of political risks or non-transferability of outstanding claims. These risks were often difficult to assess and banks and private insurance companies were reluctant to cover them. Discouraged by several unsuccessful ventures in the early twenties, the private financial institutions found it difficult to apply their traditional techniques, such as the assessment of individual creditworthiness by banks and the use of actuarial principles by insurance companies, to a new type of operation. As a result, many Governments found it necessary to engage in export credit insurance in co-operation with existing institutions. At first, the coverage was confined mainly to non-commercial risks, but, subsequently, the scope was considerably widened. The Export Credit Guarantee Department (E.C.G.D.) was set up in Britain under the control of the Board of Trade as early as in 1920. In Germany, the Hermes Versicherung A.G. was allowed in 1925 to operate for the Government of Germany; in France, the *Campagnie francaise du commerce exterieus* was established in 1928.

Composition of Trade

A more recent development, which has resulted in widespread modifications in the export credit guarantee schemes of several countries, is the change that has occurred in the composition of world trade. The steep rise in the proportion of capital goods in world trade has had a two-fold result. First, export financing has become increasingly more complex. Larger credit terms are sought by importers of capital goods who are often enterprises or institutions in countries with a shortage of foreign exchange. Secondly, the willingness of economically developed countries to participate in the industrialisation of developing countries has necessitated reorganisation of export credit insurance schemes, as the traditional supply of medium-term finance has dwindled since the thirties to a quite inadequate level.

Consequently, numerous, and sometimes radical, changes have had to be introduced in the operation of traditional schemes in the late forties and in the fifties. The reasons underlying the changes are manifold. In some countries—Switzerland, for example, export credit insurance schemes were broadened as a means of supporting certain industries (particularly engineering) in which exports are of high importance. In the U.K. and W. Germany, the expansion of the scheme was officially sponsored by the extension of special direct guarantees, partly from the desire to promote the industrialisation of the less developed countries and partly from the wish to boost exports. Another motive underlying recent changes is the anxiety of Governments not to fall behind competitors who offer more attractive conditions to stimulate exports of capital goods.

The last mentioned development is precisely the reason for the latest modification of the export credit guarantee scheme of the British Export Credit Guarantee Department. British exporters of capital goods have, for quite some time, been complaining that the terms of guarantee offered to British exporters by the E.C.G.D. are less favourable than those given by credit insurers in other countries, particularly in W. Germany. Consequently, it has been argued, Britain was losing sizable export contracts for capital goods. Announcing the changes in the House of Commons on the 12th inst., Mr. Reginald Maudling, President of the British Board of Trade, stated that they, together with the improvement already made such as part-period cover, 'matching,' the general expansion of special facilities originally designed for the dollar area and special rates for ships, represented a major expansion of the services available from the E.C.G.D. and could stand comparison with those offered by similar institutions in the world.

Three Categories

The latest modifications fall under three headings. First, *premium rates*. A new assessment made in the light of experience of the likely level of recoveries after major defaults showed that a substantial reduction in premium rates was justified. Consequently, a scale of premiums for medium-term business which will reduce the total premiums charged by about 25 per cent has been proposed. The main benefit of this reduction will be concentrated in those markets where the highest rates are charged at present. There will also be reductions in respect of comprehensive business in the more expensive markets.

Secondly, *long-term export finance*. A new system has been introduced whereby the E.C.G.D. will guarantee loans for longer periods made by financial institutions in Britain to credit-worthy overseas buyers. The extent to which the E.C.G.D. grant this facility will be limited by the country's balance of payments position. The E.C.G.D. will, therefore, be selective in accepting individual projects and will satisfy itself that they will bring substantial benefits in return. In highly exceptional cases, where business could not otherwise be financed and where, in the opinion of the Government, there are compelling reasons for regarding a project as one of outstanding economic importance to the U.K., supplementary finance will be provided. The *raison d'etre* of this measure, according to the President of the Board of Trade, is the recognition that, in the case of very large capital projects and of ocean-going ships, where the return on investment may take many years to mature, a buyer may need and expect credit for periods exceeding five years from the date of delivery and which he can obtain in some foreign countries.

Thirdly, in order to help *small- and medium-sized* firms, with little or no experience of exporting, it has been decided to introduce a new form of E.C.G.D. cover for firms with a current export turnover of less than £10,000 a year. This will be available across the counter at all branches of E.C.G.D. and will cover small exporters in respect of transactions with individual approved buyers at a flat rate of premium. The cover will be available for a limited time. This simple and easily accessible facility is designed to encourage new firms to enter the export markets and subsequently become customers of E.C.G.D. on normal basis.

Hundred Per Cent Guarantee

Explaining the aforesaid modifications at a Press conference held subsequently, Mr. Maudling observed that, under the new system of export finance guarantee, the E.C.G.D. would give 100 per cent guarantee for loans made by a British bank or financial institution to an overseas buyer of equipments for large-scale capital schemes. Much of the business in these large schemes lay, according to him, in the developing countries which had real need, both in terms of internal finance and of their foreign exchange position, for giving an early start for the industrial projects prepared by them and to pay over the long-term. The sources of international capital were insufficient to meet more than a part of this demand and the Government of the U.K., he said, believed that the new export finance guarantee was the right way of tackling the problem. The true nature of this demand from the overseas countries, added Mr. Maudling, was for the provision of an "investment" by the supplying country. Rather than continue to force what was essentially "a self-liquidating investment" into a pattern of supplier credit (normally granted by British exporters of capital equipment with E.C.G.D. assistance to overseas importers on a five-years-from-shipment basis), the U.K. Government

(Continued on page 766)

BRITISH INDIA CORPORATION EARNS MORE

ORDINARY DIVIDEND RESUMED AFTER FOUR YEARS

THE confidence in the growing strength of the British India Corporation Ltd. (Chairman: Mr. H. S. Chaturvedi, Kanpur) voiced by the Chairman at its last annual general meeting has been borne out by the results of the Company for the year ended 31st December 1960. Sales during the year, which include figures pertaining to inter-branch transfers and excise duty for the first time, have risen by 8.2 per cent from Rs. 726.35 lakhs to Rs. 785.89 lakhs. Although this improvement is only modest, the gross profit has risen by 40.4 per cent from Rs. 70.45 lakhs to Rs. 98.93 lakhs. Consequently, the ratio of gross profit to gross sales reflects a rise from 9.6 per cent to 12.5 per cent. The closing stocks, too, are higher but only under raw materials from Rs. 105.16 lakhs to Rs. 122.04 lakhs. Works-in-progress and stocks of finished goods are actually lower at Rs. 206.46 lakhs, as against Rs. 234.04 lakhs, reflecting increased activity and better offtake. The other income has been falling regularly on account of falling income from investments. The net income from investments has dropped to Rs. 1.28 lakhs from Rs. 2.59 lakhs in the previous year, Rs. 2.56 lakhs in 1958 and Rs. 8.61 lakhs in 1957.

The latest profit and loss account shows one major change in presentation of sales figures. As stated earlier, this year's sales include figures for inter-branch transfers and excise duty, while for the earlier years sales figures were exclusive of this item. The comparison of the previous year's figures in the latest balance-sheet with that of 1959 reveals this major change, though no mention of it is made in the report. On the expenditure side also the figures differ for excise duty. The consumption of raw materials, stores and spares has increased to Rs. 352.27 lakhs from Rs. 299.03 lakhs in the previous year. On account of the substantial increase in gross profit, the provisions for depreciation and taxation have been increased to Rs. 7.40 lakhs and Rs. 20 lakhs, as against Rs. 6.88 lakhs and Rs. 11 lakhs respectively in the previous year. Still the net profit at Rs. 71.53 lakhs compares favourably with Rs. 52.57 lakhs for the previous year and a loss of Rs. 5.60 lakhs for 1958.

The Company realised a net surplus of Rs. 10.20 lakhs which has been transferred to capital reserve. Receipts arising from the sale of fixed assets comprises the profit accruing on the sale of (*a*) the Couperganj factory and the Juhi factory buildings with its compound, both of the former Cawnpore Cotton Mills branch and (*b*) certain other fixed assets. The sizable nature of profit for the year, which, by the way, is a record for the last ten years, has prompted the Directors to resume payment of dividend on ordinary shares, albeit at a modest rate of 4 per cent taxable, after a lapse of four years.

The following comparative table reveals the progress of the Company since 1957:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	7,85.89*	7,26.35*	7,19.98	7,64.48

* Including inter-branch transfers and excise duty.

† Subject to deduction of tax.

The B.I.C. group consists of woollen, cotton and leather industries. The well-known Lalimli and Dhariwal products are from these mills. Cooper Allen & Co. which produces leather goods, army boots and equipment, is one of the largest enterprises of its kind in the world. The North West Tannery is a well equipped and up-to-date tannery manufacturing the famous Flex shoes and other leather goods.

The results of two woollen branches for 1960 are satisfactory, although production during the year was lower than in the previous year, on account of import restrictions on wool. With a further reduction in the value of wool import licences by some 19 per cent for the licensing period October 1960 to September 1961, there will be a further drop in production and consequently in the earnings. In order, however, to improve the working efficiency of the two woollen mills and to produce finer grades of materials which are in demand, the Directors have under consideration a scheme for the rehabilitation and modernisation of the two branches. It is intended to implement the present scheme in stages from the Corporation's own resources.

The reorganisation of the Cooper Allen branch was continued during the year. It is encouraging to note that an all-round improvement in working efficiency and substantial economies in overheads have been effected, which has given its fruit in a small profit made for the first time since 1953. Although the turnover increased by 15 per cent, good quality of hide continues to be in short supply and this operates as a restrictive factor on the further development of the domestic as well as export business.

The paid-up capital of the Corporation of Rs. 406 lakhs consists of Rs. 81 lakhs in 8 per cent cumulative preference shares of Rs. 100 each and Rs. 325 lakhs in ordinary shares of Rs. 5 each. Reserves and surplus have increased from Rs. 164.33 lakhs to Rs. 198.78 lakhs. It is a matter for satisfaction that secured loans have sharply dropped to Rs. 22.69 lakhs from Rs. 134.01 lakhs in the previous year, meaning thereby repayment of most of the debts. The net block of the Corporation, which is rather small as compared with its paid-up capital, stands at Rs. 72.28 lakhs after providing Rs. 233.94 lakhs for depreciation, which is more than three-fourths of the gross block. The investments aggregating Rs. 124.32 lakhs are mostly in subsidiaries. The current assets, exclusive of investments, at Rs. 614.92 lakhs are well above the current liabilities of Rs. 184.05 lakhs, showing a margin of Rs. 430.87 lakhs.

The dividend on 8 per cent preference shares is being paid at 10.4 per cent taxable.

The current market quotation of the Rs. 5 paid-up ordinary shares of the Company is Rs. 8.12 *cum-div.* giving a net yield of 1.7 per cent or a net dividend of 14 nP per share. The yield, though very small, reflects the confidence of investors in this one-time favourite that the adverse consequences of Mr. Haridas Mundhra's frauds have been successfully overcome and that, in the coming years, the Company would be able to repeat the dividend record of the past when it was under British management.

(*Concluded from next column*)

block. The additions to assets during the year amounted to Rs. 57 lakhs on top of Rs. 42 lakhs added last year. Further, the capital works in progress as at the end of the year were Rs. 37.72 lakhs. These figures show that the Company is pursuing an active programme for keeping its mills modern and highly efficient. The current liabilities of the Company, including secured loans from banks to meet the growing working capital requirements, have increased by Rs. 48 lakhs to Rs. 227 lakhs. Bank borrowings, it may be noted, have nearly doubled during the year under review. In addition, there is a debenture liability of Rs. 64.66 lakhs. The current assets (including investments at Rs. 9.83 lakhs) amount to Rs. 457 lakhs, thus providing ample cover for liabilities.

The net yield on the Company's ordinary shares at their current market price of Rs. 206.50 *cum-div.* is 4.8 per cent. For those investors whose rate of income taxation is less than 30 per cent, the yield will be proportionately higher.

The Directors of Pan American World Airways, Inc., have declared a dividend of 20 per cent per share payable on 12th May 1961 to stockholders on record at the close of business on 14th April 1961. This is the 66th dividend paid by Pan American. A payment of 20 cents a share was made on 10th February 1961. Dividend payments have been made each year since 1941.

BUCKINGHAM AND CARNATIC FARES WELL

PROFIT UP BUT DIVIDEND SAME

IN keeping with the general trend of higher profits experienced by cotton mills during 1960, the results of the Buckingham and Carnatic Company Ltd., the premier cotton mills in South India belonging to the Binny Group, for the past year show a distinct improvement. The cost of production was undoubtedly on the high side, for no fault of the management of course. But sales realisations were large enough to bring about a substantial rise in gross profit for the second year in succession. In 1957 and 1958, the gross profit was in the neighbourhood of Rs. 100 lakhs. It staged a rise of a little over 16 per cent to Rs. 116.47 lakhs in 1959. The past year witnessed a further growth, the actual figure being Rs. 150.51 lakhs, an increase of nearly 30 per cent. The net profit, too, has gone up, from Rs. 36.63 lakhs for 1958 and Rs. 43.65 lakhs for 1959 to Rs. 58.28 lakhs. The rise over the 1959 figure is well above one-third. But the equity shareholders have had no direct benefit from the improved results. For the eighth year in succession, they are having the same rate of dividend, namely, 10 per cent per annum, free of tax. The only consolation they can have is that they have not been asked to be content with the same rate of dividend, subject to tax, following the abolition of grossing of dividends for tax purposes. They can, of course, have the satisfaction that the improvement in profit has been utilised to strengthen the financial position of the Company. Besides setting aside a larger amount for depreciation and maintaining the transfer to debenture sinking fund, the general reserve has been provided with Rs. 17.85 lakhs, as against a mere Rs. 1.81 lakhs last year.

Readers can get a full picture of the Company's performance during 1960 from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales of cloth, yarn and waste	11,28.28	10,57.88	9,88.58	9,97.65

Preference shares	2.08	1.60	1.60	1.60
Ordinary shares	17.85 (10%)	17.85 (10%)	17.85 (10%)	17.85 (10%)
Tax liability on ordinary dividend borne by the Company	7.65	8.33	..	..
Carry forward	2.17	2.31	1.83	1.92

Note:—Preference share dividend for 1960 at 9.75 per cent, taxable. Other years 7.50 per cent, tax-free.

It will be seen that the provision for taxation has shot up by Rs. 13.50 lakhs, an increase of more than 50 per cent over the amount set aside for the previous year. This is a measure of the benefit the Government has received as a result of the rise in the Company's profit.

The sale proceeds of the Company for the year reached the record figure of Rs. 11.28 crores, as against Rs. 10.57 crores in 1959. The increasing trend on the sales front has been noticeable since the last five years, in the course of which the sale proceeds have gone up by a fourth. The export performance of the Company is quite encouraging; in 1960, exports accounted for Rs. 1.95 crore, or 17 per cent of the total sales. In addition to import entitlements for raw materials, machinery, dyestuffs, etc., under the export incentive schemes, the Company earned a cash incentive of Rs. 15.07 lakhs during the year under review.

The Company would have fared even better had the labour not indulged in some unjustified stoppages. The Wage Board award and the higher cost of living had led to an increase in the wage bill. The D.A. for December 1960, for instance, was Rs. 75.24 per worker, as compared with Rs. 65.44 for the corresponding month of 1959.

The gross block at the end of 1960 amounted to Rs. 8.63 crores, on which the depreciation provided so far exceeded Rs. 5.14 crores, that is, approximately, 60 per cent of the value of the

(*Continued in previous column*)

MARKED IMPROVEMENT IN KOHINOOR MILLS' RESULTS

PROFIT AND DIVIDEND RISE

NOTWITHSTANDING the difficult cotton supply situation and the frequent changes in Government's textile price policy, the progress made by the Kohinoor Mills Company Ltd. (Managing Agents: Killick Industries Ltd., Bombay), during the year ended 31st December 1960 is reflected in the statement of accounts for that year, is quite satisfactory. Thus, the gross sale proceeds have recorded a substantial improvement from Rs. 665.19 lakhs in 1959 to Rs. 684.93 lakhs. As the closing stocks of finished goods and materials in process have also increased by Rs. 18.56 lakhs to Rs. 99.84 lakhs, it is obvious that the expansion in sales is primarily due to the rise in the output of cloth and yarn. There has been a sharp increase in raw materials and stores consumed, from Rs. 340.94 lakhs in 1959 to Rs. 385.54 lakhs. Over the year, the other expenses have also increased substantially by Rs. 33.98 lakhs to Rs. 290.65 lakhs. Of this rise, salaries and wages alone account for Rs. 27.39 lakhs. Even so, the gross profit has recorded an impressive rise from Rs. 17.11 lakhs in 1959 to Rs. 32.18 lakhs in the year under review, representing an increase of more than 88 per cent. This is the highest witnessed since 1956 for which year the Company's gross profit was Rs. 59.98 lakhs. The Company could have shown even better results but for the Government's announcement in the second half of the year that a reduction in cloth prices was desired. This caused uncertainty in the market and the movement of cloth became extremely sluggish. Even after an agreement was concluded between the Government and the Indian Cotton Mills Federation regarding the stamping of prices with effect from 10th September 1960, the Government wanted a further reduction and the uncertainty in the market continued throughout the year and caused the stocks of finished goods to accumulate with the mills. It also led to a narrowing down of the profit-margin. Another factor that tended to bring about the same result was acute shortage of cotton and the consequent rise in the prices of raw materials.

The remuneration for the Managing Agents absorbs Rs. 2.18 lakhs, as against Rs. 1.10 lakhs for 1959; the provision for depreciation has been stepped up from Rs. 7.38 lakhs to Rs. 10.92 lakhs and that for taxation is higher by Rs. 0.75 lakh at Rs. 4.25 lakhs. After these necessary provisions, the net profit aggregates Rs. 14.83 lakhs which is almost treble the net profit for 1959. It must, however, be borne in mind, in this connection, that 1959 was a year of low profits for the Company. In fact, owing to dissensions in the managing agency house, the Company had to suffer more than the comparable cotton mills in this country during the years 1957 to 1959 when the textile industry as a whole was in the doldrums owing to serious defects in the Government's textile policy. Happily, the unfortunate chapter in the Killick Industries Ltd. is over and the organisational defects in the working of the Kohinoor Mills have been set right by the present management. In fact, the results for 1960 reflect, to some extent, the outcome of this reorganisation.

As for appropriations, the Directors have transferred Rs. 5.50 lakhs from the machinery reserve and taken into account Rs. 1.66 lakhs being the refund of additional income-tax for the year 1952. They have then set aside Rs. 7.06 lakhs as development rebate reserve. The proposed dividend at the rate of 15 per cent. (5 per cent interim plus 10 per cent final) subject to tax, requires Rs. 15.00 lakhs, that is, a little more than the net profit. After deducting tax at 30 per cent, the net dividend to shareholders amounts to 10.5 per cent, as against the gross dividend of 9.5 per cent or net dividend of 6.55 per cent for 1959. The dividend for the year under review is, however, much lower than that of 18 per cent, free of tax, steadily maintained by the Company since 1953.

How the Mill has progressed in the last four years will be clear from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds (gross)	6,84.93	6,65.19	6,34.27	6,35.96
Closing stocks of finished goods and materials in process	99.84	81.28	1,34.23	1,36.87
Raw materials and stores consumed	3,85.54	3,40.94	3,72.09	4,00.94
Other expenses	2,90.65	2,56.67	2,52.04	2,58.68

Carry forward	0.21	0.25	0.68	0.83

* Subject to deduction of tax.

† This includes Rs. 1.66 lakhs being the refund of additional income-tax for 1952.

The Company's financial position, as reflected in its balance-sheet as at 31st December 1960, is quite sound. Thus, the paid-up capital of Rs. 100 lakhs, all in ordinary shares of Rs. 100 each, is supplemented by reserves and surplus of Rs. 102.38 lakhs. Of the latter figure, the machinery reserve alone accounts for Rs. 61.50 lakhs. The current assets aggregating Rs. 266.80 lakhs (investment in the shares of National Machinery Manufacturers Ltd. Rs. 7.20 lakhs; stores and spares Rs. 38.21 lakhs; stock-in-trade Rs. 189.94 lakhs; sundry debtors Rs. 5.21 lakhs; cash Rs. 0.73 lakh and loans and advances Rs. 25.52 lakhs) more than adequately cover the current liabilities and provisions (including borrowings from banks) at Rs. 192.78 lakhs. During the year under review, there were additions to the block account of the value of Rs. 39.64 lakhs, taking the gross value of the block account to Rs. 418.29 lakhs. As the depreciation so far provided is Rs. 303.39 lakhs, the net block stands at Rs. 114.90 lakhs as on 31st December 1960. The block account and the paid-up capital are thus well balanced.

During the year under review, the Company continued its policy of modernising its equipment. Thus, new machinery valued at Rs. 51.13 lakhs were received, of which that valued at Rs. 37.69 lakhs were actually erected. In addition, an expenditure of 1.46 lakhs was incurred on the mill buildings.

The Rs. 100 fully paid-up shares of the Company are quoted on the Bombay Stock Exchange at Rs. 293 *cum-div.* On an *ex-div.* basis, the net yield on them comes to 3.6 per cent per annum. The relatively low yield reflects the expectations of investors that the dividend will be bettered in the coming years.

PREMIER FERTILISERS LTD.

Among the new industries licensed by the Government of India, the Premier Fertilisers (Managing Agents: Emcete and Sons Private Limited, Madras), which has been licensed to manufacture 16,500 tons of sulphuric acid and 40,000 tons of superphosphate per annum, has made rapid strides towards the implementation of the project. The formal inauguration of civil works at Cuddalore O.T. was done by the Chairman, Mr. M. Ct. Muthiah, on 5th February 1961. Contracts for the works have been finalised and actual construction is being taken up and is expected to be completed in six months. The entire foreign supplies of plant and machinery are expected to arrive by August 1961. Similarly, indigenous items, for which contracts were finalised in December last, will start arriving soon. According to present indications, the factory is expected to go into production by the end of this year.

"TATA A.G."

The House of Tatas has formed, with the approval of the Central Government and the Reserve Bank of India, a small subsidiary company in Switzerland called "Tata A.G." The Company has been established in Zug near Zurich and is expected shortly to undertake exports from India of various products and commodities, some of which may be further processed in Europe before being marketed.

The Board of the Company consists of Mr. J. R. D. Tata (Chairman), Mr. N. H. Tata, Mr. J. D. Choksi, Mr. J. R. Jenk (Managing Director), and five Swiss nationals, including Mr. R. H. Scheupp who retired in 1959 as the Managing Director of Voltas Ltd., Bombay.

RECORD SALES OF JESSOP AND COMPANY

DIVIDEND MAINTAINED ON INCREASED CAPITAL

THE improvement in the supply of steel and better management led to record sales by Jessop and Company Ltd. (Chairman: Sir B. P. Singh Roy, Calcutta) in the year ended 31st October 1960. It will be recalled that the Company was one of the worst victims of the Mundhra manipulations. The proceeds from sale have successively risen to Rs. 908.24 lakhs and, as compared with those in the previous year, show a sharp increase of Rs. 249.14 lakhs or 37.7 per cent. The increase in activity is also reflected in the rise in closing stocks of raw materials and works cost as well as work-in-progress from Rs. 541.49 lakhs to Rs. 607.39 lakhs. The expenses have also increased almost in the same proportion. Nevertheless, the gross profit has advanced by Rs. 20.53 lakhs or 31.4 per cent to Rs. 85.75 lakhs. The excellent increases in sales and profits are not shared by the ratio of profit to sales which has dropped from 9.8 per cent to 9.4 per cent. This feature is attributed by the Directors in their report to "the fact that the Company took up two new lines of manufacture (one of which replaced an old-established line), where the profit yield cannot but be low in the initial stages."

The increase in output has enabled the Company to maintain its unique position in the engineering industry which has an important role to play in the industrialisation of the country. The Directors have not frittered away the higher profit by increased payment to shareholders but have strengthened the financial resources by retaining a good part of the profit. The Directors have, however, maintained the dividend on the enhanced ordinary share capital (which is now double that of the previous year) at 8.58 per cent, subject to tax. They have also provided larger amounts for depreciation and taxation at Rs. 19.28 lakhs and Rs. 29.17 lakhs, as against Rs. 13.05 lakhs and Rs. 22.68 lakhs respectively, a year ago. The transfers to reserves have been enhanced from Rs. 20.62 lakhs to Rs. 24.28 lakhs.

The following comparative table for the last four years reveals the Company's progress:

(In lakhs of rupees)

	For the year ended 31st October			
	1960	1959	1958	1957
Sale proceeds	9,08.24	6,59.10	6,50.73	5,94.19

* Basis of valuation changed.

†Subject to deduction of tax.

In view of the manipulations made by Mr. Haridas Mundhra in the investment of the Company's funds during the middle 'fifties, its investment portfolio is of more than ordinary interest. Of the total investments amounting to Rs. 75.23 lakhs, no less than Rs. 74.86 lakhs are in shares of other companies. Of these, Rs. 65.36 lakhs are in Richardson and Cruddas and Rs. 7.35 lakhs in Assam Cements, which were made in 1956 at the instance of Mr. Haridas Mundhra. These are bad debts now. The share scrips purporting to be the holding of the Company are still in police custody. The provisional share register prepared by the special officer of Richardson and Cruddas shows the holding of the Company at only 455 preference shares and 17,300 ordinary shares, as against the total of 17,900 preference shares and 181,000 ordinary shares in the books of the Company. The position in Assam Cements is also similar. The Company has filed civil suits in the Calcutta High Court but the same have not come for hearing yet. It will be recalled that a sum of Rs. 60.24 lakhs given as an advance to a firm of shareholders at the instance of Mr. Haridas Mundhra has also not been recovered. This has been written off in the balance-sheet by adjustments against reserves built up in the past.

The gross block of the Company which has increased from Rs. 292.71 lakhs to Rs. 342.62 lakhs during the year, stands depreciated at

STORM AND CALM IN WORLD'S EXCHANGE MARKETS

By W. T. C. King

EDITOR, "THE BANKER," LONDON

THE revaluation of the Deutschemark, which was disclosed a few hours after the despatch of my last letter, (*vide Commerce* 18th March, 1961), produced the biggest upheaval in the international exchange markets since the sweeping currency realignments that accompanied the devaluation of sterling in 1949. Some very large movements of funds were set in motion, amid great speculative activity and frenzied dealings. But the extraordinary confusion that obtained for some days was brought under control a good deal more quickly and effectively than many people thought possible at the time—thanks very largely to a series of reassurances from finance ministries, backed up by forthright tactics by central bankers, and notably by the Bank of England, in the exchange markets.

The possibility of an increase in the exchange value of the D-mark had long been envisaged in international financial circles, because of the great strain put upon the international exchanges—and especially upon sterling and the dollar—by West Germany's persistently strong surplus on current account. The very fact, moreover, that an upvaluation had seemed to many observers to be the only means by which this pressure was likely to be significantly eased in the long run, had exacerbated the problem—because the D-mark became a magnet for funds in search of a speculative profit.

The German authorities, having more bitter memories of past inflations than any other major power, remained determined to resist the rising tendency of domestic prices that might otherwise have provided a fundamental corrective; if the domestic value of the D-mark was not to be reduced in this way, then sooner or later its external value would have to be raised. So ran the argument. And it was reinforced when the efforts of the German monetary authorities to discourage the inflow of funds by reducing interest rates began to be seen as a danger to domestic stability.

Move Surprised World

But, in spite of these well-recognised grounds for the gold value of the D-mark, the move took the world entirely by surprise. The resultant confusion in the exchange markets was, unquestionably, mainly attributable to the circumstances of the change, and especially to the absence of technical co-operation with other monetary authorities before any public announcement was made. Paradoxically, the need for careful and concerted stage-management had really been made all the greater by the fact that the degree of revaluation was so very modest.

It was natural, after all the talk of the past few years, for international bankers and speculators to jump to the conclusion that the D-mark move might be merely part of a wider movement; and when they found that the appreciation amounted to no more than 5 per cent—much less than most estimates of the degree of undervaluation—many of them began to argue that the gap was intended to be bridged by reductions in the exchange values of those currencies on which the strength of the D-mark most impinged, in other words, sterling and the dollar.

And the expectations of further moves were heightened when it became known that the Dutch Government, after a week-end of urgent negotiations, had decided to raise the exchange value of the guilder correspondingly—lest the increased appetites and buying power of German consumers and importers impose an inflationary strain upon the productive resources of the closely related Dutch economy. That decision led international bankers to look urgently around to identify other currencies that might be destined to appreciate for similar reasons.

After a brief phase in which many currencies were being named as likely candidates, attention focussed principally on the Swiss franc and, to a much lesser extent, on the Italian lira. At the outset, therefore, the major movements of funds set in motion by the shock had seemed to be out of dollars and sterling and into Swiss francs.

It had been promptly reported that the efforts of the Swiss National Bank to hold the dollar above its lower support point in Zurich had involved it, as well as the commercial banks in Switzerland, in very large purchases of dollars. But it soon became clear that at least as massive a tide of money was moving towards the D-mark itself; whatever funds left Frankfurt for profit-taking reasons, this movement must have been tiny by contrast with the opposite movement representing repatriation of German balances overseas and new inflow. (Incidentally, it may be noted that the profits won by international speculators who had been keeping funds in Frankfurt were very small—since the amount of revaluation did not greatly exceed the loss of interest at yearly rates compared with keeping money in London.)

In the first 10 days after the D-mark shock, the reserves of the Bundesbank, after excluding the book loss of some DM. 1,500 million as a result of the reduction in the gold price, rose by DM. 1,306 million, or roughly $327,000,000—a huge rate of intake. The inflow slackened to $41,000,000 in the following week. Over the same period, the reserves of the Swiss National Bank rose by the equivalent of $285,000,000.

Returns Awaited

At the moment of writing, we still await the end-of-March return of Britain's reserves of gold and convertible currencies, which will be the first statement to reflect the strains resulting from the D-mark move. But there can be no doubt that a substantial part of this large accretion to the international reserves of the Bundesbank and the Swiss National Bank resulted directly or indirectly from the run on sterling in the early days of the month; most of the remainder reflected the parallel pressure against the dollar.

It does not follow, however, that the reserves of Britain and the United States must have experienced an equivalent decline. Over the same period, indeed, the weekly statements from the United States actually showed a small rise in the gold holding, coupled, however, with an increase in the dollar claims held by oversea monetary authorities—indicating that the European central banks were continuing to carry their acquisitions of dollars, or at least were not converting them into gold on any larger scale than Britain was selling gold in New York, as it might be presumed to have done in order to replenish its diminished working balances in dollars.

In any case, the major strain on sterling was confined within the first week after the shock. The quick restoration of confidence was very largely attributable to the bold and firm tactics adopted by the Bank of England, acting as agent for Britain's exchange equalisation account, in its market operations. Instead of permitting the sterling-dollar rate to drop right back to the lower support point in face of the torrent of offerings of sterling, the British authorities quickly made it clear that they were prepared to supply dollars to all comers at $2.79¼—less than half a cent below the point to which the rate had fallen by the eve of the German move.

And when the atmosphere was being calmed down by the succession of denials from European capitals of any intention to follow the German lead, and by the new affirmation from Britain's Chancellor of the Exchequer that there would be no devaluation of sterling, the Bank of England seized the opportunity to launch its own counterattack upon the speculators, and drove the sterling-dollar rate almost back to parity.

A few days later, the return to more normal working conditions in the exchange markets was greatly aided by an unprecedented action from the European central bankers after their assembly in Basle, Switzerland, for the regular meeting of the Bank for International Settlements: they issued a *communique* saying they were satisfied that the rumours of new currency realignments were without foundation, and stating that the central banks concerned were co-operating closely in the exchange markets.

The nature of this co-operation has, naturally, not been officially disclosed, but it is generally understood in market circles that the principal central banks are determined to prevent the recurrence of the sort of dislocation of the markets that took place in early March; to this end, they are likely to be prepared to smooth out some of the effects of short-term movements of funds by absorbing and carrying larger balances of the currencies temporarily under pressure.

Thanks to these various measures, the exchange markets have been much quieter in the second half of the month. Sterling is believed to have been self-supporting, at a little below par, for much of the period since the squeeze on the bears, with the authorities actually gaining foreign exchange on some days—though new support was reported to have been needed after the news of South Africa's decision to leave the Commonwealth when it becomes a republic in a couple of months' time. The spasm of pressure then was thought to have reflected a mistaken belief that sterling might suffer from some change in the method of disposal of newly mined South African gold; but, in fact, Britain has not enjoyed any pre-emptive rights in this disposal—a large part of the gold output that comes to London is sold here, because London provides a highly efficient marketing channel, and such part of the gold as finds its way into the central reserves of the sterling area does so because South Africa needs sterling. Though a member of the sterling area—and notably enjoying the rights of free access to the London capital market, without any exchange-control impediment to the outflow of private funds from London—South Africa has not been a participant, in the full sense, in the so-called sterling area "dollar pool."

One consequence, for sterling, of the strains of early March is that a significant part of the expected outflow of short-term funds that had been expected in any case this year—in natural reversal of the extraordinary inflow that took place in 1960—has been compressed into a very short period. The drift of mobile funds is likely to continue to be adverse to sterling, however, in spite of the improvement in confidence. Fortunately, the exchange market, like the London stock market, seems to have taken in its stride the announcement of the scale of Britain's deficit for 1960.

The adoption of a new basis of estimation, combined with a number of improvements in analytical technique, has had the effect of writing down the current surpluses achieved in the two previous years and writing up last year's current deficit; it is estimated at £344,000,000, as compared with the surplus of £51,000,000 in 1959 and £291,000,000 in 1958. Britain's net export of long-term capital is put at £201,000,000, bringing the overall deficit up to £545,000,000. Of this, £168,000,000 was financed by a favourable balance of so-called "monetary movements"—the excess of identified short-term borrowings over gold acquisitions. The remainder, a very large "balancing item," comprises unidentified borrowings and (favourable) errors and omissions.

(*Concluded from previous page*)

Rs. 240.04 lakhs, after providing Rs. 102.58 lakhs for depreciation. The paid-up capital of the Company at Rs. 223.97 lakhs consists of Rs. 20 lakhs in preference shares of Rs. 100 each and Rs. 203.97 lakhs in ordinary shares of Rs. 10 each. During the year, ordinary capital of the Company was raised by the issue of 10.20 lakhs new shares of Rs. 10 each, which were offered in the ratio of one to one at a premium of Rs. 2 per share. As a result, the share premium account stands at Rs. 20.40 lakhs. Reserves and surplus have risen by Rs. 42.61 lakhs to Rs. 147.66 lakhs, which includes the share premium account also. Even after making allowance for the bad investments, the financial position of the Company must be said to be sound. The current assets at Rs. 705.45 lakhs exceed current liabilities at Rs. 457.05 lakhs by a margin of Rs. 248.40 lakhs, of which doubtful investments account for only Rs. 72.61 lakhs.

As for the further expansion of activities, the Directors' report states as follows:

"The demand for the Company's products continues to be very great and the Board has certain schemes in hand to increase output of established lines, particularly cranes and road rollers.

"To this end, it is proposed to establish a new road plant works which will undertake the manufacture of road rollers and, in the future, other road-making plant. The manufacture of road rollers represents a steady repetitive business and transfer of this work to a new works will free capacity both in the structural and mechanical works for cranes and kindred products.

"It is also proposed to build a new foundry. The present foundry is now producing to the limit of its capacity and cannot meet our demands.

"The Board has also under consideration certain other schemes connected with the manufacture of new products but is not possible to enlarge on these at the present moment."

The current market quotation of Rs. 10 paid-up ordinary shares at Rs. 22.85 gives a net yield of 2.59 per cent. or a net dividend of Re. 0.60 per share.

N.B.—Adjustments include the balance brought forward from the previous year and the amount transferred from general reserve.

† This figure is arrived at after making provisions for depreciation and taxation in respect of pravions years amounting to Rs. 5,40,000 and Rs. 68,652 respectively.

Extracts from the Directors' report: The Alexander & Finlay Thread Co., in which this Company has a 50 per cent share, earned a profit of Rs. 21,049 (after allowing for depreciation of Rs. 50,000). While the volume of gross sales increased substantially over the previous year, the benefit of this was offset by an increase in manufacturing costs and the cost of raw materials. Some new articles were introduced and have proved popular. Orders have been placed for the necessary additional machinery to diversify the production.

An order has been placed for 23 twist ring frames for delivery early in 1963. These frames will replace some of the older frames in accordance with the Mill's programme of rehabilitation. Machinery has been well maintained during the year.

Brushware Ltd.

(*Secretaries and Treasurers :* The British India Corporation Ltd., Kanpur, U.P.)

Annual General Meeting—29th April.

Working Results :

	For the year ended 30th November (In thousand rupees)	
	1960	1959
Sales	3,30	2,90
Closing stock	78	52
Gross profit	24	24
Transfer to ex-Managing Agents' remuneration	1	2
Transfer to Secretaries and Treasurers' remuneration	1	..
Transfer to depreciation	..	2
" " taxation	9	9
Net profit	13	11
Adjustments	7	6
Appropriations :		
Total available balance	20	17
Transfer to rehabilitation reserve	10	5
Proposed dividend	5	5
	(5% p.a.)	(5% p.a.)
Carry forward	5	7

N.B.—Adjustments include only the previous year's balance.

Extracts from the Directors' report: As referred to in the directors' last report, the Company's factory has since been registered as a 'Small-Scale Industry'. The Company's property has, as usual, been maintained in good repair.

In pursuance of Section 330 of the Companies Act, 1956, Messrs. Begg, Sutherland and Company Private Ltd. ceased to be managing agents of the Company with effect from 15th August 1960, and The British India Corporation Ltd. have instead been appointed as the secretaries and treasurers.

Accounts in brief as at 30th November 1960 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	1,00,000	Gross block ...	2,42,977
Reserves and surplus ...	3,41,853	—Depreciation	2,42,974
Other liabilities	38,189	Net block ...	3
		Current assets	2,46,624
		Investments	1,29,309
		Cash	1,04,106
Rs.	4,80,042	Rs.	4,80,042

PLANTING

(*Concluded from page 742*)

to 1959-60, the Department spent Rs. 4.90 lakhs on its administration, whereas the total amount of loans disbursed by it was Rs. 6 lakhs and the amount sanctioned by the Coffee Board but not disbursed was Rs. 15 lakhs. The cost of disbursing each rupee of loan thus works out to about 83 nP. Even if the amount sanctioned but not disbursed is taken into account, the cost would be 24 nP for each rupee sanctioned.

Other Recommendations

The other important recommendations made by the Estimates Committee are:

In the absence of the permanent Chairman of the Board, or pending his appointment, it is the Vice-Chairman (and not the Chief Marketing Officer, an employee of the Board, as at present) who should be called upon to perform the duties of the Chairman and, in his absence, any other member of the Board and in no case an employee of the Board who is not a member thereof. If need be, suitable provision to this effect may be made in the rules.

The performance of the Board in regard to the utilisation of funds provided for labour welfare measures needs to be improved considerably.

Suitable action must be taken to see that the research stations do not suffer from want of necessary equipment. It will be desirable to have a follow-up of the results of application of the fruits of research conducted by the Board.

A periodical assessment of the Board's working with reference to its prescribed objectives and functions must be undertaken by an agency independent of the Board and its report presented to Parliament.

The Estimates Committee has also made a brief reference to the Working Group's recommended production target of 80,000 tons to be achieved by the end of the third Plan (1965-66). It does not say whether the target is reasonable or not. It only hopes that "adequate statistical data would be collected and current trends of production carefully analysed before revised targets under the third Plan are fixed." The Committee has, however, done well to underline the urgency of raising per-acre output of coffee which is at present just 50 per cent of the world's average. Surely, it would be interesting, as the Committee observes, if the Board could give in its reports figures of increased production from (*a*) existing acreage, (*b*) reclamation of abandoned tracts of established coffee, and (*c*) new clearings and plantations.

ENGINEERING

(*Concluded from page 744*)

If Government decisions were always rationally based on economic considerations, those concerned would readily discern where, in this matter, their country's best interests lay. In practice, however, non-economic considerations, of which Mr. Levy could take little account in his study, loom only too large in the formulation of Government policy. Thus the nationalisation of the oil industry in Mexico, the exclusion of local or foreign private capital from exploration in Brazil, and the bolstering of State oil activities in India, are the outcome, not of judgments as to the comparative economic advantages, but of decisions taken in the pursuit of political objectives. It is fortunate, on general grounds, that men are prepared to make great personal sacrifices for the sake of their political ideas, misguided though these may sometimes prove to be. But it is unfortunate that the application of political ideas to the shaping of policy in such a crucial sector as oil exploration and development may involve the State in sacrifices, the cost of which in material terms is not to be ignored.

In setting out comprehensively the handicaps that may beset State enterprise in oil exploration, with the diversion of resources which this entails, and in directing attention to the possibilities of co-operation between State and private capital, Mr. Levy has performed a valuable service. But it must be borne in mind that the tasks of exploration and development with which his report is concerned cannot, in practice, be dissociated from oil operations as a whole. The risk capital which international companies are now able to pour into the search for oil in so many parts of the world is necessarily derived from the profits earned by selling the oil and its products, locally or elsewhere. It follows that their extensive search effort can be sustained only by the integration of the various phases of oil operations in many countries. More perhaps than any other, the oil industry underlines the truth that the free nations belong to one world. By implication, the Levy report is a further demonstration that, today, international co-operation is the shortest route to material progress.—*By Special Arrangement with the* Petroleum Press Service.

COMMERCE AND INDUSTRY

(*Concluded from page 761*)

would restore this demand to its true nature by means of export finance guarantees.

Under the new method, the British exporter will make and sell his products for which he will get part-payment with the contract and the other part on completion (this part being at his own risk, should there be any dispute as to performance). The latter will be paid by the importer abroad out of a loan made to him for that purpose by a bank or institution in the U.K. The loan will be guaranteed one hundred per cent by the E.C.G.D. against the borrowers' failure to pay.

The essence of the new system, according to Mr. Maudling, would be a pure lender-borrower relationship between the overseas borrower and the U.K. supplier of finance with E.C.G.D. standing as guarantor of repayment by the borrower. This new facility, the President of the Board of Trade pointed out, would, however, be granted with much greater selectivity than normal E.C.G.D. insurance, in that the Department would see that what ought still to be treated as supplier credit, and governed by the principles of supplier credit insurance accepted by all members of the Berne Union, did not secure the "soft option" of these new finance guarantees.

It is noteworthy, in this connection, that the U.S. Export-Import Bank announced last month a broadening of its system of guaranteeing credits advanced to U.S. exporters by private commercial banks with a view to placing U.S. exporters on a basis of full equality with their competitors. This was done in order to meet the criticism of U.S. exporters that the export credit guarantee scheme offered to West German and British businessmen by their respective Governments in respect of export of light industrial equipment were more liberal than those available to them.

Other capital exporting countries, however, complained that, because of its special techniques, the U.S. Ex-Im Bank was able to offer for exporters what in fact amounted to a long-term guarantee. Now that the Ex-Im Bank has modified its scheme to cover financing of exports of smaller goods and Britain has decided to guarantee loans for longer periods than hitherto, the gap between the facilities available to exporters in both countries, as also the difference between the facilities available in these countries and that obtaining in W. Germany, must have been appreciably reduced.

Capital importing countries such as India and other developing countries stand to gain from these developments as they can secure their requirements of heavy capital equipment on longer-term credit. But those among them, who are also exporters of goods, though not of the heavy type, may have to face keener competition from these countries. It is significant to note, in this connection, that the Kapur Committee has recommended that long-term credit should be easily made available to those engaged in new lines of export, especially engineering goods. The Committee is reported to have pointed out in its report submitted, last month, that in the absence of such facilities Indian exporters would be at a disadvantage in the competitive markets abroad.

BRITISH EXPORTS TO EUROPE

A substantial expansion of British exports to Europe can be achieved, if opportunities are seized promptly and full regard paid to the individual requirements of each country. This, in brief, is the verdict of members of the Export Council for Europe on their return from "pathfinder" missions to Austria, Denmark, France, Italy, Norway, Portugal, Spain, Sweden and Switzerland. The Council is now studying reports submitted by each team, and next month will publish a consolidated report which will contain the recommendations for action.

In order to complete these surveys, further missions will now visit the remaining countries to be covered by the Council. A team of seven, led by Sir William McFadzean, Chairman of the Council, will visit West Germany, and three-man teams will visit Holland, Belgium and Luxembourg, Greece and Yugoslavia. Besides, two-man teams will go to Ireland, Turkey and Finland. The teams will work with commercial representatives of the British Government, British trading interests, importers of British goods, and all other appropriate bodies. Discussions will be on the basis of market needs, competition from other countries, questions of price, quality and design, and study of successful British export efforts as well as investigation of complaints where these are well founded. The advisability of inviting buying missions to visit the U.K. will be explored.

The Export Council for Europe, it may be recalled, was formed in November last for the purpose of expanding exports of British goods and services to the member countries of O.E.E.C. It is not, however, concerned with the formulation of trade policy or with answering service inquiries from individual firms.

Notices

THE MAFATLAL FINE SPINNING AND MANUFACTURING COMPANY, LTD.

Registered Office:
"Mafatlal House", Back Bay Reclamation
BOMBAY-1

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Thirtieth Annual General Meeting of the Shareholders of THE MAFATLAL FINE SPINNING AND MANUFACTURING COMPANY LIMITED, will be held at the Registered Office of the Company at Mafatlal House, Back Bay Reclamation, Bombay, on Monday, the 15th day of May 1961, at 4-00 p.m. (S.T.), to transact the business as specified in the Notice dated 31st March 1961 already posted to the shareholders of the Company individually.

By Order of the Board of Directors,
NAVINCHANDRA PURSHOTAMDAS & Co. LTD.,
YOGINDRA N. MAFATLAL,
Director,
Managing Agents.

FOREIGN ASSETS BELOW RS. 130 CRORES

(From Our Own Correspondent)

BOMBAY, *19th April*

Conditions in the short-term money market have not undergone any marked change. It is reported that some borrowers have started returning money to the banks, but, as the demand for funds from trade and industries is still very heavy, stringency is yet the only appropriate description of the state of the market. Interest rates in any case are still ruling at their high levels and there is no early prospect of their going down at all. The prevailing rates are:

	Per cent
Inter-bank call money—	
Exchange and larger Indian banks ...	5¼
Other banks	5¼
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3¼
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91-days' Government of India Treasury Bills sold through weekly tenders show that, as against an invitation for Rs. 2 crores, the amount offered was Rs. 2.52 crores. Of these, tenders for Rs. 2 crores were accepted; the average rate remained unchanged at 2.750 per cent per annum. 91-days' intermediate Treasury Bills sold from 12th to 15th inst. aggregated Rs. 10 lakhs only.

A decline of Rs. 1.38 crore in notes in circulation is disclosed by the statement of the Reserve Bank of India for the week ended 14th April 1961. Their total now stands at Rs. 2,038.53 crores. Notes held in the Banking Department have increased by Rs. 89.88 lakhs, hence the total notes issued have fallen by Rs. 47.87 lakhs. Foreign securities have gone down by Rs. 5 crores and as the balances held abroad have also shrunk by Rs. 1.33 crore, the total foreign assets are lower by Rs. 6.33 crores at Rs. 127.90 crores. The deposits of banks with the Reserve Bank of India have expanded by Rs. 3.11 crores to stand at Rs. 73.70 crores. On the assets side, the other loans and advances have receded by Rs. 4.18 crores to Rs. 142.61 crores, which include borrowings against usance bills of the order of Rs. 33.30 crores.

The Scheduled banks' statement for the week ended 7th April 1961 shows that their demand and time deposits have registered a marked expansion of Rs. 12.28 crores and Rs. 12.97 crores, respectively. The deposits of the State Bank of India, on the contrary, have suffered a setback of Rs. 5.69 crores, so that the deposits of other Scheduled banks have staged a surprisingly large rise of Rs. 30.94 crores. Borrowings of Scheduled banks from the Reserve Bank of India have declined by Rs. 34.09 crores; of this decline, that against usance bills is of the order of Rs. 11.75 crores. Their borrowings from the State Bank of India of demand variety have also gone down by Rs. 1.60 crore, but those of time variety have risen fractionally by Rs. 45.00 lakhs. On the assets side, advances and bills (bank credit) have receded by Rs. 8.99 crores, bringing their total down to Rs. 1,328.81 crores; a year ago, they stood at Rs. 1,130.09 crores. The advances and bills of the State Bank of India, on the contrary, have slightly risen by Rs. 1.30 crore. The investments of Scheduled banks, as a whole, have receded by Rs. 7.64 crores, and, since the investments of the State Bank alone have shrunk by Rs. 8.00 crores, the other Scheduled banks must have actually improved their investment portfolio by Rs. 36 lakhs.

In the gilt-edged section, there was good enquiry for short-dated and medium-dated central loans and the 4 per cent issues of several State Governments. The demand was from investors who are statutorily compelled to invest their funds in Government obligations. But, owing to scarcity of sellers, turnover was limited. The prices of some of the Central issues registered some improvement. Thus, 2½ per cent 1961, 3 per cent 1963-65 and 1970-75 first development loan, 3½ per cent 1965 and 1966 Plan bonds gained 10 nP each. 3 per cent 1964, 3½ per cent 1964 closed 5 nP higher at Rs. 98.65 and Rs. 99.95 respectively. In the State loans section, the prices of all the issues were well maintained at last week's level, the only exceptions being 4 per cent 1969 Madras and 4 per cent 1969 U.P. which closed at slightly lower levels.

In the foreign exchange section, the rupee remained steady. The banks' selling and buying rates for ready T.T. on New York remained unchanged at Rs. 478.25 and Rs. 474.75 per 100 dollars. In the New York exchange market, the pound sterling showed some weakening. The latest available rates are: 279.900-279.940 cents per £ for spot and 278.790-278.830 cents per £ for three months' forward. This shows that, over the week, sterling has gone down fractionally by 0.02 cent in spot and 0.05 cent in forward.

KIPS FIRMER

(From Our Own Correspondent)

MADRAS, *17th April*

Hides and skins ruled firmer, following well-spread inquiries from importers overseas. E.I. tanners were quoting prices higher than last week, which limited export trading. There was good call for lower grades in kips and goat skins, but sellers' ideas were stiff.

Dressers on the Continent were keen on top class goat skins, but tanner's quotations were high. Prime sheep skins also touched peak prices for small quantities.

Raw markets ruled firm all round. E.I. tanners state that stocks are not available in quantities.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, *19th April*

There was a sharp drop in bullion prices during the week under review. The decline followed nervous liquidation by some bulls who had made sizable purchases last week on fears of a shortage of supplies developing in the next few weeks. Heavy arrivals in upcountry centres and prospects of starting six-monthly settlements (in the place of monthly settlement) were the chief factors that led to large-scale selling. Some speculative offerings also emanated from Calcutta and Delhi. Prices would have suffered a steeper fall but for signs of enlarged offtake. The daily average offtake during the week was 7,500 tolas of gold and 25 bars of silver, as against 6,750 tolas and 15 bars, respectively, in the previous week. Average arrivals of gold were lower at 4,500 tolas, as against 6,000 tolas, while those of silver were higher at 23 bars, as against 18 bars. The floating stocks of the two metals are reported to be around 45,000 tolas and 600 bars, respectively.

The question of switching over from monthly to six-monthly settlements in bullion was discussed by the Board of the Bullion Association on Wednesday last week. No definite decision was, however, arrived at, in view of divergence of opinion among members. A few members were said to have opposed the move on the ground that business in bullion would dwindle and that genuine hedge contracts would become difficult, in view of the long duration of the settlements. The whole issue was left to be considered further by the Bylaw Committee of the Association.

The Government of India hopes to reach a decision "soon" in regard to the taking over of the Kolar gold mines from the Mysore Government and run it as a Central undertaking. Disclosing this in the Lok Sabha on Thursday the 13th inst., the Union Finance Minister, Mr. Morarji Desai, said that the proposal now under consideration would facilitate an improvement in the working of mines, with a better and more systematic utilisation of payable ores. He recalled that provision had been made in the Central budget for expenditure necessary on the acquisition of the mines. The Government, he added, was still examining the question whether the mines should be run as a departmental concern or through a corporation, but made it clear that the State Government would be associated with the running of the mines after the Centre took over. Incidentally, the Minister gave the following particulars:

"The Kolar gold mines were acquired by the Mysore Government towards the end of November 1956 from John Taylor and Sons and have been run as a nationalised departmental undertaking since then. The gold mined in this area and in the Hutti goldfields in Raichur district, after being refined and cast into bars, used to be sold in the open market till the middle of 1958, but a decision was taken in July 1958 that the entire production of gold in the country should be acquired by the Central Government to be held as non-monetary stocks at the disposal of that Government. Under the regulations relating to transactions in gold by which India is governed as a member of the International Monetary Fund, the price which has been paid for this gold is the international parity price of Rs. 62.50 per tola, but, in order to avoid any dislocation in the finances of the Mysore Government, which has been producing this gold at a substantially higher price, assistance is being given to that Government as a purely temporary arrangement."

The feature of trading in the bullion market this week was the further increase in premiums commanded by ready metals over the forward (*Jeth* settlement), from 55 nP to Re. 1.30 in gold and from Rs. 3.50 to Rs. 4.00 in silver. The *Jeth* settlement in gold began the week at Rs. 121.20, as against the previous close of Rs. 121.00, and moved down to touch Rs. 118.50 today before recovering to Rs. 119.15, a net loss of Rs. 2.05. Ready gold declined from Rs. 121.55 to Rs. 120.70 on the 15th inst., and, after recovering to Rs. 121.35 yesterday, eased again to Rs. 120.45 today. In silver, *Jeth* settlement receded from Rs. 200.70 to Rs. 197.20 today. Towards the close, it was better at Rs. 198.05. The net loss over the week was Rs. 2.65. Ready silver fluctuated between Rs. 203.75 and Rs. 201.20 before finishing at Rs. 202.05, as against Rs. 121.55 last week-end.

The latest available world price of gold in the London market is $35.07½, as against $35.08½ last week. Ready gold improved slightly from 250*s*. 7*d*. to 250*s*. 8*d*. but rose to 250*s*. 7½*d*. yesterday. Ready and forward silver, however, were unchanged, the former at 79⅝*d*. and the latter at 80*d*., as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	19-4-1961 (closing)	High	Low	12-4-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	120.46	121.85	119.80	121.55
Forward:

London—	18-4-1961			11-4-1961
Silver Ready	79⅝d.	—	—	79⅝d.
Silver Forward	80d.	—	—	80d.
Gold	250s. 7½d.	250s. 8d.	250s. 7½d.	250s. 7d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 31st May settlement. † 1st June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES DEPRESSED

(From Our Own Correspondent)

BOMBAY, *19th April*

The easy trend witnessed in the cotton futures market towards the close of last week gathered further momentum during the week under review. The market was closed on Friday the 14th and Monday the 17th as they were bank holidays. Cotton futures showed pronounced weakness in dealings throughout this short trading week, in spite of the fact that tenders against the April contract continued to be small. Thus, tenders issued on the 13th inst. amounted to only 50 bales, bringing the total till that date to no more than 650 bales. The easiness of the market is mainly attributed to the Government's announcement that the issue of the balance of quota for Indian cotton will be linked to the import of 300,000 bales of U.S. cotton stapling 1" and below but not less than 13/16", as per the recent Indo-U.S. agreement. Thus, the fear that mills will have to buy short-staple U.S. cotton, which is costlier than comparable indigenous growths by about Rs. 150 per candy, has been confirmed. Since they have, in any case, to buy U.S. cotton, unless they are prepared to forfeit their quota for Indian cotton, they are reluctant to go in for Indian cotton in a big way. Even those mills that are interested in Indian cotton find themselves without quota. Consequently, buying interest was very much lacking in both the spot and futures sections. On the other hand, both the April and August contracts came in for persistent selling, with the result that their quotations suffered a sharp setback. The following table indicates the extent of the fall in prices and the range of fluctuations:

(In rupees per three quintals)

I.C.C. Jarilla	19-4-61	*High*	*Low*	12-4-61
April 1961 ...	560.00	579.75	560.00	579.50
August 1961 ...	566.75	576.50	561.50	576.25

In the absence of quota, business in ready cotton was restricted. Although popular varieties like Kalyan, Surti, L.147, CO2 and Vijay evoked enquiries, actual business done was small. The prospect of large arrival of short-staple U.S. cotton exerted a downward pressure on prices. The main features of the latest import programme in respect of U.S. cotton are as under:

(i) A quantity of 300,000 bales of American cotton of staple length 1" and below but not less than 13/16" will be allowed for import.

(ii) The contracting period is 31st June 1961 and the shipment period 31st July 1961.

(iii) Allocation to mills will be made on the basis of the spindle point production of yarn of counts 11 to 40 during the calendar year 1959.

(iv) In order to ensure import of this cotton mills are required to execute a bank guarantee at the rate of Rs. 50 per bale within 20 days from the date of the quota letter issued to them.

(v) The balance of 25 per cent of Indian cotton quota will be issued to the mills only on production of such bank guarantee.

Apart from the linking of the grant of Indian cotton quota to import of U.S. cotton, traders are also disappointed that the contracting and shipment periods have also not been extended. This means that Indian buyers will not qualify for the enhanced subsidy rate of 8½ cents which comes into effect on 1st August 1961.

Export demand for Bengal *Deshi*, which was keen since the announcement of the quota last week, dried up towards the close of the week on receipt of the news that the ceiling was reached on Saturday, that is, in less than five days. Shippers are awaiting the outcome of the shipping bills presented which are said to be for a quality far in excess of the quota. Against a ceiling of 57,000 bales, excluding the share of co-operatives, the quantity applied for is said to be about 87,000 bales.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Wagad 720; Vijay 940; Kalyan 850; Digvijay 960; Hubli Laxmi 1,000.

In spite of the removal of restrictions on exports of cotton, announced by the Pakistan State Bank, cotton futures in the Karachi market failed to improve during the week. The slackness of overseas demand and the large quantity of cotton still available for export were responsible for the lack of buying interest. The quotations for both N.T.R.G. May and July contracts were unchanged at Rs. 71.35 and Rs. 71.15, respectively.

With a view to stimulating exports, restrictions on shipments, in force since 1949, under which exports were subject to full payment being received in advance from consignees abroad or under confirmed or irrevocable letter of credit have been removed. According to a circular issued by the State Bank, henceforth no such advance payment would be required and exports could be made on undertakings for stipulating receipts of full export value of cotton exported within two months from the date of shipment in the case of exports to India and four months if exported to other countries.

A divergent trend was witnessed in the Alexandria cotton futures market during the week under review. While the long-staple Karnak contracts tended to look down, the medium-staple Ashmouni contracts edged higher. The former was influenced by keen competition from Sudan, while stray enquiries from some overseas buyers were responsible for the strength of the latter. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 69.79; July 70.20.

Ashmouni: April 61.35; June 60.70; August 60.20.

Cotton futures in Liverpool suffered a setback during the week. Both the American and

American type contracts came in for selling which met with only limited buying. Advices from New York continued to be easy. The following are the latest available quotations—in pence per lb.—from Liverpool:

American Cotton One Inch Staple Contract: May 24.25; July 24.60; October 24.10.

American Cotton Mixed Growth Contract: May 24.65; July 24.95; October 24.55.

Sudan: May, July, September 31.75.

Cotton futures on the New York Cotton Exchange drifted lower during the week on commission house selling prompted by the steady increase in certified stocks. Crop news encouraged further selling. Trading in the 1962 October contract, the first contract of the 1962 season, started on the 12th inst. This contract will henceforward be the barometer of the trade's reaction to any change effected in the new support programme.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	18-4-61	11-4-61	4-4-61
Spot	33.65	33.50	33.50
May	32.75	33.16	33.15
July	33.30	33.65	33.68

HIGHGROWN TEAS DEARER

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *13th April*

Offerings in sale No. 14 held on Tuesday, 11th April 1961, aggregated 677,000 kilograms. Quality from all districts was generally inferior to last. There was good general demand at lower rates. Best highgrowns received better support than in recent weeks and were occasionally dearer. Below best, however, came to an irregularly lower market. Good mediums and mediums met useful support at 5 to 10 nP lower but where quality was maintained prices were generally firm and sometimes dearer. Medium and low medium brokens were well supported but at a drop of 10 to 15 nP. Similar fannings were up to 10 nP lower. Black leaf teas, whilst being well supported, followed an easier trend with fannings dearer than their brokens. A small quantity of C.T.C. and legg-cut tea sold at around last rates. Whole leaf grades were generally easier with the exception of flowery pekoes which sold well.

	1961	1960
	Rs.	Rs.
Low medium	4.50-4.65	4.08-4.19
Medium	4.65-4.80	4.19-4.52
Good medium	4.85-5.30	4.85-5.51
Nilgiri B.O.P. ...	5.00-6.90	

The average price realised in sale No. 14 was Rs. 4.83, as against Rs. 4.93 in last week's sale and Rs. 5.20 in the corresponding sale last year.

Dust Sale No. 15: In this week's dust sale No. 15 held on 13th inst., a total of approximately 207,000 kilograms were on offer. There was good demand, but at irregularly easier rates. High-growns received only fair support and were quoted 10 to 15 nP per kilo easier. Coloury mediums were well sought after, but at rates which were up to 10 nP below last and sometimes more. Support for the low mediums was very irregular and these generally sold at lower rates, although a few selected lines advanced slightly. C.T.C. and jegg-cut teas were slightly easier, whilst C.T.C. types realised fully firm to dearer rates. Residuals were a weak future of the sale.

The average price realised in sale No. 15 dated 13th inst. was Rs. 4.57 as against Rs. 4.61 in last week's sale and Rs. 4.74 in the corresponding sale last year.

Export Quota: Special licence business is being transacted at ½ nP per kilo at which rate there are still heavy sellers.

Colombo: The market opened to a strong demand with Dimbulas advancing by 30 to 50 cents per lb.; similar fannings were not so strong. Mediums were 5 to 10 cents dearer whilst low-growns sold at firm rates.

London—North Indian and other growths: In Monday's sale there was good general demand with coloury sorts again selling well. The thinner types and most African descriptions sold at slightly easier rates.

Ceylon and South Indians: 22,063 packages were offered of which 6,786 were from South India. There was good demand and prices were ½d. to 1d. dearer for most descriptions.

As we go to press, Messrs. Forbes, Ewart and Figgis Private Limited wire:

"*Sale No. 16*: 750,000 kilograms. Good general demand at lower rates. Plain and low medium 5 to 15 nP lower. Medium, good medium and Nilgiris 20 to 30 nP easier."

ART SILK YARN "BANK"

(From Our Own Correspondent)

BOMBAY, *19th April*

A notable development this week in so far as the yarn market is concerned is the move to evolve a fresh scheme of advance licensing for the purpose of making art silk yarn available for the Export Promotion Scheme. Discussions on the issue were held at a meeting of the representatives of spinners, weavers and traders, the Additional Secretary to the Union Ministry of Commerce and Industry, and the officers of the Textile Commissioner in Bombay on Saturday the 15th inst. At this meeting, it was agreed that a fresh scheme should be introduced. The salient features of the scheme are given below:

The quantity of yarn to be imported in advance will be of the value of Rs. 1 crore with free foreign exchange and Rs. 25 lakhs from rupee payment countries. This will in effect create a "yarn bank" from which weavers will draw yarn for preparing fabrics for export. The yarn will be handled by a corporate body, and a full representative Advisory Committee, including spinners, weavers, exporters and the trade, would advise on the operation of the scheme.

The limit of advance per loom for any approved manufacturer will be Rs. 1,500, the advance being recoverable at the time of import entitlement.

The other parts of the present scheme will continue and entitlement under it will be made quarterly.

It was also agreed at the meeting that the present limit of Rs. 6,000 per loom under the Export Promotion Scheme for the year as a whole would be raised to Rs. 7,500 and that 30 per cent of the import entitlement would be utilised for import of rayon grade pulp for the spinners who have already agreed to make a certain quantity of yarn available to the entitlement holder at concessional prices. This will supplement the imports of rayon grade pulp mills' import allocations.

The aforesaid decision has not, however, affected the yarn market to any significant extent. This is not surprising considering that the traders prefer to analyse carefully the implications of the new scheme. There is a wide disappointment among traders over the continuance of the restricted art silk yarn import policy pursued by the Government. Addressing the annual meeting of the Bombay Yarn Merchants Association and Exchange Ltd. held yesterday, Mr. Kantilal Nahalchand, President of the Association, declared that, as a result of the restricted import policy, activity in the yarn market remained restricted. Mr. Kantilal regretted that the Government had not conceded the request of the Association for permission to distribute indigenous art silk yarn even at a meagre margin. He warned that, "if this sort of policy is continued by the Government, it will result in the complete annihilation of the normal trade channel." He reiterated that the Government was pursuing the policy of keeping only the manufacturers and the consumers which, he said, would have severe repercussions on the trade. He also deplored the Government's policy in enlarging the activities of the State Trading Corporation.

A distinctly irregular trend was in evidence in the yarn market in the past week. Cupressa Bemberg yarn suffered a distinct setback to prices, although the anticipated issue of actual users' licence had not materialised. Even reports that offtake in consuming centres was gradually rising were not of much avail. Staple fibre yarns also tended to move down. Cotton yarns lacked support. It was stated that the handlooms and powerlooms were not inclined to augment their stocks of yarn, notwithstanding the removal of uncertainty about excise duty on yarn.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	19-4-1961	12-4-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)	2,560.00	2,615.00
April	2,600.00	2,615.00
June	2,672.00	2,840.00
60/1 Cupressa Bemberg spot	1,556.00	1,586.00
120 Japan (per 100 kg.)	1,750.00	1,787.00
150 Japan (per 100 kg.)	1,501.00	1,517.00
120 Italy (per 100 kg.)	1,737.00	1,737.00
150 Italy		
Staple fibre yarn—		
40×2 April (per 90.72 kg.)	920.00	927.00
40×2 June	905.00	911.00
40×2 Century (per kg.)	10.45	10.52
40×2 Kohinoor (per kg.)	10.45	10.58
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	19.00	18.75
20s New Great	21.75	21.75
30s Simplex	26.75	26.75
40s Madura	31.50	32.00
60s Finlay	65.40	66.40
80s Mahendras	68.80	68.68

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, *19th April*

Easy conditions prevailed in the oilseeds market during the week under review, barring groundnuts which elicited moderate support from local buyers. Castorseeds were subjected to nervous liquidation, thanks to heavy arrivals from Nizam, expected new crop offerings from North India in the immediate future, and fears of heavy tenders against the maturing contract. Shippers of castor oil turned cautious buyers in anticipation of a further fall in prices, with the prospects for improvement in the supply position. There was no enquiries from the U.S., but Russia, Czechoslovakia and the U.K. extended some support. The reported attempt of the State Trading Corporation to sell castor oil to Pakistan did not have any effect on the market. Linseed ruled listless, due to growing pressure of new crop supply and lack of encouraging advices from North Indian markets. The purchases made by crushers were on a small scale. Cottonseed was depressed in sympathy with raw cotton. Sesame was dull in the absence of any fresh development. Groundnuts tended to move down early in the week, following pressure of supplies from the South and stringency in money. Subsequently, however, they staged a recovery which was induced by support at low levels, while Saurashtra interests were reported to be reluctant to part with stocks. There was also some support from the *vanaspati* industry. Firmness of world soyabean oil and oilcakes, too, imparted strength.

Castorseeds September 1961 contract eased by 62 nP to Rs. 180. May 1961 contract, after, improving from Rs. 175.87 to Rs. 176.12, declined to Rs. 176. Ready Madras lost 25 nP to Rs. 84.50. Oil commercial shed 25 nP to Rs. 15.45. Oil B.S.S. dropped 20 nP to Rs. 16.30.

Among linseeds, September 1961 contract suffered a loss of 46 nP today, the closing rate being Rs. 36.91. May 1961 contract receded from Rs. 36.91 to Rs. 35.56. Bold ready was marked down by Re. 1.32 to Rs. 36.25. Linseed oil was lower by 75 nP to Rs. 15.50.

In the cottonseed section, September 1961 contract declined by 25 nP to Rs. 94.25. Non-whites, whites and Berars shed 5 nP each to Rs. 19.25. May 1961 contract, however, was higher by 25 nP at Rs. 93.75.

Groundnut Nizam bold improved from Rs. 53 to Rs. 54 before closing at Rs. 53.75, a net increase of 75 nP over the week. Khandesh quality gathered 75 nP to Rs. 54. Railway receipts picked up 10 nP to Rs. 22.10, but oil ex-mill dropped 20 nP to Rs. 22.30. May 1961 contract was dull at Rs. 220. There was no transaction in respect of August 1961 contract.

Sesame bold was dull at Rs. 360. Sesame oil, however, picked up 20 nP to Rs. 28.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	19-4-1961	12-4-1961	5-4-1961
Groundnut	Rs.	Rs.	Rs.
May 1961	220.00	220.00	220.00
August 1961	—	—	—
Nizam bold	53.75	53.00	54.50
Coromandel ready	54.00	53.25	54.75
Khandesh quality	54.00	53.25	54.75

Cottonseed			
May 1961	93.75	93.50	95.00
September 1961	94.25	94.50	—
Niger seed	41.50	41.50	42.00
Kardi seed	27.25	27.75	28.25

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

FOODGRAINS RECEDE

(From Our Own Correspondent)

HAPUR, *17th April*

Foodgrains continued to rule bearish during the week under review. Arrivals of new *rabi* grains in markets were large. Although the area under rice crop in the country increased only by 0.6 per cent to 83.36 million acres in 1960-61, as compared with 1959-60, the output touched a new heigh of 33.7 million tons. Wheat crop the arrivals of which have just begun in the markets was also said to be a bumper one.

Wheat at Hapur recorded a fall of over Re. 1 per maund to be quoted on Monday at Rs. 15 a maund for new average quality and at Rs. 16.12 for better farm produce. New arrivals were reported to be meagre and they were lifted higher at Rs. 17.25 a maund. The daily average of new wheat arrivals during the week was 400 maunds, but, following rains in the week-end, arrivals dropped as the winnowing operations were being held up. Trade expected a further fall in prices, as arrivals would mount soon.

The U.P. Government has decided not to purchase wheat under price support policy unless prices go down below Rs. 11.50 a maund.

Rice ruled mostly quiet, though slight gains were recorded in the prices of coarse quality, due to better seasonal demand. The supply position, however, was easy, with local stock put at 5,000 maunds and more rice still reaching here from east U.P. Latest prices were: *sela mainpuri* Rs. 20.50; *gainda kutcha* Rs. 20.50; *ramajwayan sela* Rs. 23 to Rs. 24; *sela raimunia* Rs. 25; *sela basmati* Rs. 28 to Rs. 30; superior Rs. 32 to Rs. 38 a maund.

SUGAR IMPROVES

(From Our Own Correspondent)

HAPUR, *17th April*

Sugar improved by about Re. 1 per bag during the week to Rs. 108.50 per bag and, in retail, it was quoted at Re. 1.02 per *seer*. Supply position, however, continued to be easy, as the damaged sugar of last season reaching the market and was quoted at Rs. 100 to Rs. 103 per bag. The U.P. Government has ordered half the quantity given to an allottee to be sold by him in the open market and, if the other half also remains undisposed, that quantity also may be sold in the open market. Stocks with factories were heavy and it has become a problem for mills to store their produce. On 31st March, the factories had stocks of 19.37 lakh tons, as against 14.18 lakh tons a year ago. Factories were still crushing cane at good speed and the season here is likely to be dragged on for more than a month.

Quiet conditions were witnessed in the Muzaffarnagar sugar market, thanks to easy supply position. Buyers were not many even at lower rates of Rs. 107.69 for dry stuff and Rs. 100 to Rs. 102 per bag for damaged sugar. Crushing was being continued in almost all factories in the district.

Sugar ruled quiet at Rs. 111 per bag in Kanpur market.

Note:—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1958. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. J—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of December 1960 amount to 11.33 crores of rupees.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. F—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

$—The reserves of Straw Products Ltd. include a non-distributable amount of Rs. 63,40,654 brought about by revaluation of land, buildings, plant and machinery in the year ended 31st December, 1956.

H.—Clive Row Investment—Dividend for 1959 includes additional dividends of 9 nP for the year ended 31st March 1955 and 37 nP for the year ended 31st March 1956.

M.—Managed by the Board of Directors. *N.B.*—Dividends paid since 31st March 1959 are shown as taxable. (k) Investments. 'C'—On increased Capital.

§§ Investment at cost. * Includes bonus.

MARKET GOSSIP

(*Concluded from page* 727)

cost structure evolved by the Tariff Commission. Since the prices were enforced in January 1960, the cost of production has risen appreciably and the 5 per cent contingency allowance provided by the Commission has long been absorbed. On the consideration of costs alone, therefore, an upward revision in paper prices, according to Mr. Egan, is now well overdue. The price rise must be adequate enough not merely to cover the cost increase but also to provide for a reasonable return on the capital employed. Given such an increase, the paper industry will, there is no doubt, endeavour to achieve the production target set for it. It is interesting to hear from Mr. Egan that a large part of the expansion and modernisation programmes of existing mills during the second Plan period was financed out of their own resources.

The I.P.M.A. Chairman was at some pains to explain the merits and demerits of the Government's policy of licensing additional capacity. He did admit that the small units enjoyed the advantages of cheap labour, cheap local raw materials and proximity of markets. But he hastened to add that, despite these advantages, the cost of production of small factories would always be higher than that of bigger units, in view of the economics of large-scale manufacture. This is simple commonsense. The one distinct advantage a large, modern paper factory enjoys is the wide scope for the recovery and reuse of chemicals and other products that are utilised to make paper; the scope is said to be considerably restricted, nay, absent, in the case of a small factory. Apropos the preference shown by the authorities to the establishment of new factories *vis-a-vis* the expansion of existing units, Mr. Egan stated that capital outlay per ton of capacity was much greater for the setting up of entirely new units than for the expansion of existing factories, with the result that the cost of servicing capital and depreciation per ton of production was higher in the case of new units. Few would disagree with this assessment.

Britain's "Incentive" Budget

The British Budget for the financial year 1961-62 presented by Mr. Selwyn Lloyd, the Chancellor of the Exchequer, on the 17th inst., has been hailed as an "incentive" budget. Aside from the new tax proposals, which have been mainly designed to restrain consumption, stimulate investment and encourage productive effort, Mr. Selwyn Lloyd's budget also marks a new departure, in that it presents a major advance in the general budgetary policy in Britain. It seeks to arm the Chancellor, for the first time, with two new economic regulators, namely, a discretionary variation of the purchase tax and excise duty and a pay-roll tax which would be invoked "at any time" in between budgets with a view to curbing or stimulating purchasing power and demand.

The Chancellor prefaced his speech with a statement of the objects of his budget. The purpose of the present budget, he observed, was "to restrain the growth of consumption, continue to encourage investment and leave room for increased exports and provide additional incentives to effort and initiative." New taxes proposed and tax concessions announced by him are aimed at subserving these objectives.

The main tax changes proposed by the Chancellor are a rise in the duty on heavy oil from 1d. per gallon to 3d. per gallon, an increase in licence duty on motor vehicles from £12 10s. to £15 a year in the case of private cars and other types of vehicles (excepting buses, coaches and invalid carriages) and the levy of a 10 per cent duty on charges made by TV programme contractors for the insertion of advertisement. These taxes are expected to yield a revenue of £70 million this year.

With a view to encouraging initiative and effort, the level at which earned income attracts surtax has been raised from £2,000 to £4,000. Since the earned income allowance applicable to income-tax will be deductible in computing income for surtax, this proposal means that surtax will not be payable on earned income until £5,000. This concession, which will affect 150,000 taxpayers, will cost the Exchequer £58 million in 1962-63 and £83 million in a full year. This loss will be nearly covered by an increase in profit tax from 12½ to 15 per cent which will yield £45 million in 1962-63 and £70 million in a full year. These adjustments will be applicable to taxes payable on and after 1st January 1963.

The two new economic regulators empower the Chancellor (1) to raise or reduce at any time purchase tax and all the main customs and excise revenue duties (with the exception of TV licence duty and vehicle excise duty) by a maximum change in either direction of upto 10 per cent of existing charges, which means that consumer purchasing power can be curbed or stimulated by upto £200 million either way, and (2) to impose, at any time, a surcharge on employers upto a maximum of 4s. a week per employee, at which rate it will entail a withdrawal of £200 million from the economy.

The switch of burdens from the individual to the company, as reflected in the relief in surtax on earned income and the raising of the profits tax is, as noted above, designed to encourage individual initiative and is regarded as the first step towards separating personal from company taxes. This is also perhaps meant to meet the criticism in Britain that taxation on middle income brackets is high in the U.K., as compared with, say, W. Germany. For instance, it has been pointed out that a single person earning DM 1,000 a month pays DM 171 as income-tax in W. Germany, whereas a person in the same income group would have to pay DM 192 in Britain. Again, a married man with one child, for which tax allowances may be claimed, and who earns DM 2,000, pays DM 349 in the Federal Republic, whereas, according to British taxation, he would have to pay DM 406. It has been pointed out that it is perhaps this more lenient tax policy in W. Germany that has enabled that country to raise its gross national product by 55 per cent between 1955 and 1959, as compared with 23 per cent in Britain, and to create 4.9 million jobs during the decade 1950-60, as compared with 1.5 million in Britain.

BANKING

(*Concluded from page* 735)

Rs. 13.55 lakhs. The expansion in reserves has been due partly to the judicious policy followed by the Bank of transferring a sizable part of the profit to reserves from year to year and partly to the accretion in the share premium account.

The Rs. 50 fully paid ordinary shares are quoted at Rs. 74.75 *ex-div.*, giving a net return of 7.6 per cent per annum.

BRITISH BANK OF THE MIDDLE EAST

The statement of accounts of the British Bank of the Middle East pertaining to its operations in India during the year ended 31st December 1960 clearly shows that the Bank has made steady progress. Although it has only one office in this country, at Bombay, its income from interest and discount amounted to Rs. 23.83 lakhs, as against Rs. 20.99 lakhs in 1959. The income from commission and exchange also went up, from Rs. 6.61 lakhs to Rs. 7.30 lakhs. In spite of the higher turnover of the Bank, it is gratifying to note that expenses other than interest paid at Rs. 12.20 lakhs are actually a shade lower than in the previous year, when they aggregated Rs. 12.29 lakhs. Over the year, interest paid by the Bank to depositors has registered a substantial increase from Rs. 7.09 lakhs to Rs. 12.08 lakhs. As a result, the profit before taxation is substantially lower at Rs. 6.76 lakhs, as against Rs. 8.68 lakhs in the previous year. Nevertheless, the provision for taxation has been stepped up from Rs. 3.96 lakhs to Rs. 4.48 lakhs, so that the net transfer to the London office is much lower at Rs. 1.52 lakhs, as compared with the sum of Rs. 7.04 lakhs transferred in the preceding year.

A synoptic view of the Bank's progress since 1957 can be had from the following comparative table:

(In lakhs of rupees)

	1960	1959	1958	1957
For the year ended 31st December				
Interest and discount earned	23.83	20.99	14.24	24.16
Commission and exchange	7.30	6.61	8.87	11.67
Interest paid	12.08	7.09	2.29	4.99
Expenses	12.20	12.29	20.46	19.66
Depreciation	0.21	0.12	0.08	0.20
Profit	6.76	8.68	1.27	11.17
Provision for taxation	4.48	3.96	..	5.82
Net transfer to London office	1.52	7.04	4.24	0.24
Carried forward	0.76	..	2.31	5.28
As on 31st December				
Deposits	1,43.01	1,94.69	1,21.94	1,67.06
Borrowings from other banks	0.90	0.48	..	71.00
Advances	4,35.93	3,95.32	2,92.05	3,45.70
Investments	38.10	33.10	35.55	43.28
Cash	21.82	26.32	21.70	34.19
Balance-sheet total	7,48.96	6,70.69	6,71.73	7,63.95

The foreign exchange bank, too, has been no exception to the general trend of banking in the country. Thus, over the year, its deposits have fallen from Rs. 194.69 lakhs in 1959 to Rs. 143.01 lakhs in the year under review. The most pronounced decline was registered by fixed deposits from Rs. 101.92 lakhs to Rs. 46.72 lakhs. Other categories of deposits, savings and current, actually showed expansion—the former by Rs. 1.26 lakhs to Rs. 2.66 lakhs and the latter by Rs. 2.26 lakhs to Rs. 93.63 lakhs. On the assets side, advances have recorded a notable expansion of Rs. 40.61 lakhs to Rs. 435.93 lakhs. The Bank's bill business also made good progress as is evident from the rise in bills for collection from Rs. 87.09 lakhs to Rs. 89.44 lakhs. Acceptances, endorsements and other obligations, too, showed a substantial improvement from Rs. 127.16 lakhs to Rs. 161.77 lakhs.

STATE BANK OF TRAVANCORE—A CORRECTION

In the balance-sheet of the State Bank of Travancore appearing on page 638 of *Commerce* dated 8th April 1961, the item No. V under "Particulars of Advances" has been shown in the left side column, whereas it should have come in the right side column; the item pertains to debts due by Directors or Officers of the Banking Company or any of them either severally or jointly with any other persons. The totals in the left side column cover only the first four items, that is, (i) debts considered good in respect of which the Banking Company is fully secured; (ii) debts considered good for which the Banking Company holds no other security than the debtors' personal security; (iii) debts considered good, secured by the personal liabilities of one or more parties in addition to the personal securities of the debtors; and (iv) debts considered doubtful or bad, not provided for.

The error is regretted.

All preference shares are taxable unless otherwise stated.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

†† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

FACE THE TEXTILE FACTS

A DISTINGUISHING feature of the cotton textile industry is that it has nothing new to tell. Its basic problems are self-same and so also the solutions to them. The credit, nay kudos, for this state of affairs goes to the Government, for dynamism has been conspicuous by its absence in its textile policy. Only three weeks ago, Prime Minister Nehru exhorted the millowners in Ahmedabad, on the occasion of the centenary celebrations of the cotton mill industry in that centre, not to lag behind technological advances in the rest of the world. His colleagues in the Union Cabinet, in the Planning Commission and in the Indian National Trade Union Congress need this advice more than the millowners. It is they who are largely responsible for obstructing the pace of modernisation of textile industry, for stopping its growth, for the high cost of clothing in this country and for the dwindling share of India in the world trade in cotton textiles. Instead of urging the millowners to introduce more and more automatic looms and improved types of carding, spinning and processing machinery, they discouraged them by placing all impediments possible in the name of handloom weavers and mill workers. "Hasten slowly," was the Government's directive to millowners, with the result that the number of uneconomic units has increased and the problem of rehabilitation and renovation has assumed great dimensions. The pity of it all is that, though the policy-makers are fully conscious of their mistakes, they never seem to be able to muster enough courage to admit them and, what is more important, to initiate bold measures that will help the industry to stage a leap forward. Even the few changes they make in their policy under pressure of circumstances are always belated and, therefore, less useful than they would have been had they been done in good time. To give an instance. The restrictions on modernisation of plant and machinery have been eased to some extent, but this action is not of much avail now, as there is no foreign exchange to buy new machinery abroad and the domestic manufacturers of textile machinery are unable to cope with the demand, for a variety of reasons, including shortage of steel and know-how, sudden rise in orders and labour trouble.

A critic may say that the aforesaid criticism is one-sided. There are undoubtedly many who feel that millowners, too, are equally responsible for the defects in their industry. But this is true only upto a point, because their sins of omission and commission are chiefly the by-product of the Government's restrictive policy. The creation of a sellers' market, a direct outcome of official policy, is not conducive to improving efficiency or spending large sums on modernisation of plant and machinery. Again, why should a millowner bother about finding export market for his production when he can easily sell it in the domestic market? But for the export incentive scheme, under which imports of machinery, stores and cotton are linked to exports of cloth and yarn, the setback in India's cloth exports would have been more marked. This incentive scheme, however, cannot be continued for ever, as it only amounts to postponing the day of final reckoning. The persistent refusal of the Government to allow expansion and the imposition of stringent conditions for introducing high productivity machines have compelled enterprising millowners to divert their talent and the monetary resources they could command to other more promising ventures, such as chemicals, rayons, nylon, paper, pulp, films, cameras and engineering. A prominent millowner once said, apparently in a sense of exasperation, that, with threats from Government, abuses from the public and labour, and curses from the spokesmen of handloom weavers, he would not like to waste any more of his time, energy and capital on cotton textile industry and would like to go in for newer industries which the Government is anxious to see established. This is already happening. Wadias of the famous Bombay Dyeing are taking to chemicals, Kasturbhai Lalbhais to dyes and colours, Sarabhais to pharmaceuticals, Ghias to cameras and films, Birlas (Century) to rayons and pulp and Binnys to engineering. Such examples can be easily multiplied. The well-known business houses mentioned here are now more interested in these new industries than in clothing India's growing millions. They are doing so not because they feel that the cotton mill industry has no scope for expansion but because they have learnt from experience that the Government is not interested in allowing such expansion.

If this policy is pursued, there is sure to be a cloth famine in the country and/or a further fall in exports before the end of the third Plan period. This cloth famine will manifest itself in the form of low *per capita* consumption, by which we mean lower than the barest minimum a person should have. This point was again clearly brought out by Mr. Krishnaraj M. D. Thackersey, the retiring Chairman of the Indian Cotton Mills' Federation, in his speech at its third annual general meeting on Wednesday the 26th inst. We advisedly say "again", because, in the past twelve months, he had reiterated it in a number of Press conferences. The main theme of his speech was: "Some aspects of the problem of the consumer securing cotton textiles at fair price." He recounted the reasons for, and the various stages in which, the voluntary control on prices of cloth was introduced. He candidly admitted that he was not sure whether the consumer was getting the full benefit of this control. He also warned that the industry should not be blamed or made a scapegoat, if scarcity of cloth reappears, leading to a hue and cry from all over the country. Those who may be inclined to think that he was crying wolf or to dismiss his warning as coming from an incorrigible grumbler will do well to ponder some of the simple statements he made. Here is the relevant extract from his speech:

"The availability of cotton textiles which was 15¾ yards pre-war has, after 21 years and two Plans, remained static at the same level, the actual figure for 1960 being 15½ yards—taking the population of that year at 430 million. In this context, one might consider the minimum clothing supply that should be aimed at, consistent with a reasonable standard of living. If only one pair of shirts and one pair of *dhotis* can, with continuous use, be made to last eight months, a man will require 14 yards in eight months, that is, 21 yards in a year. If a pair of *saris* and a pair of blouses can similarly be made to last eight months, a woman will also need 21 yards per year. There can be many regional variations in the clothing requirement, depending upon climatic conditions, the custom and usage, the type of clothing used by various strata of society, etc. But providing for other items like underwear, bedsheets, chaddars, headwear, towels, etc., the minimum requirement for a reasonably modest standard of living may, by and large, be put down at 21 yards *per capita*. It is easy to imagine the gravity of a situation in which, against a requirement of 21 yards, the availability, and perhaps also the purchasing capacity, is limited to only 15½ yards. It is small wonder, therefore, that the problem of supplies and prices of cotton textiles does not remain within the confines of economics, but attracts attention and interest on a very wide scale. The situation has been made more complicated by the existence of such widely varying means of production, ranging from the most modern mills at one end of the scale to *Ambar Charka* and *khadi* at the other—where the humanitarian aspect transcends all canons of normal economic principles."

Mr. Krishnaraj then went on to show why it would not be possible for mills to prevent cloth being sold to consumers at excessive prices. "Out of some 6,600 million yards made available to the civilian market in 1960," to quote him, "about 2,250 million yards were supplied by the decentralised sectors. From the balance of 4,350 million yards supplied by mills, some 1,000 million yards of grey cloth should have been subjected to various finishes like bleaching, dyeing and printing, by agencies

outside the mills. This means 3,350 million yards out of 6,600 million yards, or a little over half of the total internal supply, reached the consumer in the form in which it left the mills. Thus, any regulation of the price of mill cloth would, under the present pattern of production, extend to only half the supply in the internal market. Cloth has to reach 438 million consumers spread all over the country, more in villages and in hamlets than in big cities; and inevitably lakhs of persons will have to be employed in the distributive trade. The utter impossibility of exercising control over the operations of so enormous a distributive agency is self-evident and, whenever the demand outstrips the supply, there is little hope of the consumer getting at a proper price even that half of the internal supply which reaches him in the form in which it leaves the mills. By and large, the consumer will, therefore, have to pay for his clothing requirement the price dictated by the law of supply and demand and control at the mill stage, or may be even at the wholesale stage, offers no solution to the problem of ensuring a proper price for the consumer. The one and only solution is to bring about parity between the supply and demand." Critics of mill industry and of financial journals such as ours which have been voicing the need for a more realistic, forward-looking textile policy would be doing a good service to the public if they could show in what respects the aforesaid case for rethinking is defective. They should make a dispassionate appraisal of the problem with a genuine interest in finding an effective, lasting solution to it and not indulge in naming a scapegoat and condemning it, which, as Mr. Krishnaraj aptly remarked, is easy escapism.

The conclusions on what should be done, if consumers are to be assured of adequate supply of cloth at reasonable prices, are obvious. In the first place, the target for cotton textiles in the third Plan should be raised to a level that will provide for a *per capita* availability of at least 21 yards by 1961-66, if not earlier, after leaving a margin of 1,000 million yards for export. Secondly, since the decentralised sector has not been able to raise its production to the level envisaged despite all the spoon-feeding by the authorities, and since it is shortage of mill-made cloth that quickly brings about a rise in prices, the target for mill sector should be raised to a much higher level than the one mentioned in the draft third Plan. It is almost certain now that the Planning Commission will finally agree to an increase in the mill sector's target by some 200 million yards, but this will not suffice. The increase should be at least 500 million yards, if not more. Thirdly, no restrictions whatever should be placed on modernisation and integration of the industry. On the contrary, the mills should be given all possible assistance and encouragement to go ahead in this direction. And, fourthly, controls on prices and production should be abolished as soon as raw cotton situation becomes normal. There is enough evidence of the failure of the cotton textile policy pursued in the past ten years. He who learns from experience is wise.

THE FOOD SITUATION

THE debate in the Lok Sabha last week on the demands for grants for the Ministry of Food and Agriculture was not marked by the usual acrimony. In fact, there was an atmosphere of confidence in the House, probably because the members had recognised in a way the fact that the country had turned the corner on the food front. Mr. S. K. Patil, therefore, should have felt happy over the restrained tone of criticism and the appreciative references to his Ministry. But neither he nor some of the members who participated in the debate would go so far as to say that the country was wholly out of the wood in the matter of food. There was certainly no question of any undue complacency setting in at the higher levels, particularly at a time of continuing marginal food shortage necessitating imports at an annual rate of about four million tons. At the same time, there was happily no tendency to be unduly alarmist at a time of reasonably good foodgrains production which would be anything between 76 million and 80 million tons in the current year. It was a happy augury for the third Plan that a mood of restrained optimism had set in on the food front.

More than ever, there is need for this mood, however gloomy the demographic picture may be, for pessimism and alarmism, which spread faster than hope and optimism, have too often worsened the food situation in terms of prices or supplies. Such a mood may not breed complacency, for the expected population of 490 million by 1966 will constitute a challenge and an opportunity to the country which has been set the task of achieving self-sufficiency in foodgrains. Currently, the stage is also well set for taking up this challenge, what with the gradual removal of some inhibiting factors and the steady operation of some stabilising or incentive factors. The inhibiting factors which are gradually ceasing to operate are price controls, procurement, State trading and zonal restrictions. As for price controls, maximum price for wheat is not in force now in any State. But maximum prices for rice and/or paddy are in force at present only in Assam, Madhya Pradesh, Uttar Pradesh and Punjab; even here, they have not been strictly enforced, for mere statutory orders have had no effect on the factors of demand and supply. The position in respect of internal procurement is that only rice is procured in the Punjab and Madhya Pradesh on behalf of the Government of India. Such procurement, too, is only marginal, for it has accounted for just 530,000 tons in 1960 (upto 3rd September), as compared with 890,000 tons in the whole of 1959. There is no procurement of wheat, because of its limited production, and the Government itself is putting into the market imported wheat to the tune of three to four million tons every year. As for State trading in the sense of procuring and marketing internally produced foodgrains, it has been practically given up. Even the returns submitted by licensed wholesalers and millers are not being checked, for most State Governments have taken the view that, since foodgrains are not procured or requisitioned, they need not bother about the returns. As for zonal restrictions on movement, they are being gradually removed. The wheat zones are now a thing of the past, and the entire country is treated as a single zone, because of the large stocks held by Government. Even in respect of rice, the zones are being gradually reduced in number by widening them with the co-operation of the State Governments. It would appear from this review that the factors which have interfered with the market forces and in some way inhibited production are not much in evidence now. The present trend thus is that the normal factors of demand and supply are coming into their own.

This trend is also accompanied by the operation of some stabilising or incentive factors. The most important stabilising factor in so far as market supplies and prices are concerned is the steady build-up of a buffer stock of foodgrains amounting to 1.9 million tons at the end of 1960, as compared with 800,000 tons at the end of 1959. Already, even this limited build-up of reserve stocks has led to a psychology of dehoarding on the part of traders and producers and helped in curbing speculative tendencies. The current P.L. 480 Agreement, which will enable the Government to build up a reserve stock of 5 million tons of foodgrains by 1964, has also had a salutary effect on the market sentiment. The consequent decline in market prices in the latter part of 1960 has, however, not been so steep as to cause any undue anxiety to producers. The index number of wholesale prices of cereals shows that the price decline has been very moderate. Again, in view of the high annual increase in population, no widespread tendency for any appreciable decline in foodgrain prices is likely to manifest itself. Still, it may be that the Government will accept the recent recommendation of the Estimates Committee of Parliament and expedite decision on the question of setting up the proposed Agricultural Commodities Advisory Committee and the Farmers' Advisory Panel. If these bodies are set up and if floor prices are announced, wherever necessary, sufficiently before the sowing season, a more positive incentive factor calculated to increase food production will also come into operation. That the Government will sooner or later bring this factor into play may be reasonably foreseen, for any steep decline in prices will hit the producers and retard production itself to some extent. It may be expected that Mr. Patil's steadfast aim will be to maintain prices at levels which are fair to the producer and the consumer alike and which reduce to the minimum the spread between the price received by the former and the price paid by the latter. It is, indeed, a remarkable development that these twin objectives have now a greater chance of being achieved without State trading than through it.

The food situation, in so far as prices and supplies (at the current levels of production and imports) are concerned, is thus distinctly rosy. It will continue to be so, if the expected increases in annual foodgrains production *fully* materialise during the third Plan period. But this cannot be postulated with any certainty, for the uncertain factors in the situation will be rainfall, utilisation of irrigation facilities, availability of fertilisers, and so on. The population increase, at the same time, will call for greater production of such commercial crops as cotton, jute and oilseeds, and that may well mean some diversion of cropland from cereal production. It is, therefore, of the utmost importance that subsidiary foods like bananas, sweet potatoes, tapioca and groundnuts be developed during the third Plan period. But it is doubtful if the provision of Rs. 8 crores in the Plan for this purpose will be sufficient. The technical division set up in the Food Department, which is called upon to implement the subsidiary food programme, will certainly require more funds, if it is to do full justice to this work. The more important items on which development will have to be undertaken in the near future are: (i) increase in agricultural production of subsidiary foods; (ii) conservation of perishable foods through dehydration; (iii) development of edible groundnut flour; (iv) development of multi-purpose food like macaroni and enriched wheat flour; (v) development of parboiled rice by improved methods; and (vi) development of food from lower plants such as yeast, algæ and mushrooms. These lines of development would need to be assigned some priority, for greater availability of such subsidiary foods which urban folks will more readily consume will mean smaller cereal consumption by them. By any showing, the need for producing and popularising subsidiary foods is compelling in the circumstances of a relatively slow growth of cereal production and a relatively fast growth of population. With the best will in the world, family planning alone cannot be expected to ease the population pressure on food situation by the end of the third Plan, for its effect, in terms of a falling birth rate, will be felt only in the period of the fourth and fifth Plans. In the ultimate analysis, the food situation can be eased only by lower *per capita* consumption of cereals for which more cropland is required and greater *per capita* consumption of non-cereal foods which require relatively less cropland. It is now more and more a question of taking more out of a dwindling *per capita* landholding.

COAL PRODUCTION AND PRICES

THERE were two important points in Sardar Swaran Singh's reply to the Lok Sabha debate on demands for grants relating to his Ministry. One of these was that, in assigning a target of 17 million tons of additional coal production to the private sector in the third Plan, the Government expected it to be realised from specified collieries. Each one of the collieries participating in the expansion programme, he said, would have a "charter" for expansion. And he added that each such colliery would have to give a detailed programme of coal production to the Coal Controller and that its achievement and progress would be watched by him so that there was no failure. But the Minister did not seem to have given the assurance that the requirements of the collieries concerned for plant and machinery and other facilities would be adequately met. It may be that the required facilities will be given only after protracted negotiations between the industry and the Ministry. But it would have been better if the collieries concerned had been left in no doubt regarding the prompt availability of import licences for mining equipment and the supply of adequate power of which there is a critical shortage, particularly in West Bengal.

The other point made by the Minister was, however, happily free from ambiguity. This was concerned with the plea for introducing uniform prices for coal throughout the country in the near future. In dismissing this plea, Sardar Swaran Singh said pointedly that such prices would upset the economy of industries which had come up historically in areas nearer coalfields, as they would have to pay anything between Rs. 12 and Rs. 15 per ton more for their coal. The Government would not, therefore, accept a fantastic proposal of the kind. Industries in areas which are far away from the coalfields would have to be satisfied with the element of price subsidy resulting from the telescopic freight rates. In any case, it is not the price of coal that is so very important at the present time. What is much more important is its easy availability, for the costliest ton of coal will be that which cannot be had in time. Industries in distant areas like Kanpur, Delhi, Ahmedabad, Bombay and Madras need more coal supplies irrespective of their prices. It is doubtful whether industries in such areas have inspired a demand for uniform coal prices.

MARKET GOSSIP

L.I.C. Investment Policy

SOON after we went to press last week, the Union Finance Minister made a crisp statement in the Lok Sabha on the Estimates Committee's recommendations on investment of L.I.C. funds which fully confirmed our anticipation. He did not, of course, straightaway reject the Committee's recommendations, but said enough to suggest that the *status quo* would continue for a considerable time to come. He observed that the Committee's suggestion was of "such a vital character" that he was "unwilling to hazard any personal opinion." He, however, assured the House that the proposal would receive the most serious consideration of the Government. He reminded the House that it had given its approval to the present policy. While everything could be changed by the House whenever it thought to do so, he added, the change had to be done properly. Full consideration would, therefore, have to be given to the recommendations of the Committee, but no heat should be generated.

The aforesaid statement leaves the issue open. How long it will remain so and what decision the Government will take are questions for which answers will depend on the temper of the House. Meanwhile, there are reports that the L.I.C. Chairman did not make the statement he is purported to have made to the Estimates Committee, namely, he personally saw no objection to the Government taking over the whole of L.I.C.'s funds and investing them on the lines suggested by the Committee. This is also only a report. It would be better if Mr. P. A. Gopalkrishnan, I.C.S., Chairman, were to issue a statement to the Press clarifying the position.

Apropos our editorial comments last week on the investment policy of L.I.C., Mr. M. A. Master, who needs no introduction to our readers and who is a staunch supporter of private enterprise, writes to us as follows:

"Will you accept my warmest congratulations on your very clearly and forcibly presenting the implications of the recommendations made by the Estimates Committee in regard to the investment policy of the L.I.C.? I have always held the view that, instead of utilising the funds of the L.I.C. in buying the scrips of existing companies, it would be of considerable help to the realisation of the planned economy, if the available funds were utilised for helping the establishment of new industrial projects, irrespective of the fact whether they were in the private or the public sector. After all, the L.I.C. belongs to the Government and they could certainly guarantee a stated return to the policyholders on their funds as indicated in your editorial. The adoption of this policy will at any rate save the fear of nationalisation by the back door. Everyone knows how large funds are invested in existing companies even when the returns are very poor. This actually gives rise to the suspicion that, in due course, the Government desires to obtain control over the existing companies, if they cannot nationalise them. At a time when domestic resources are very short, there is greater reason why these funds should be utilised in the establishment of new industries."

The majority of public opinion is, however, sharply critical of the recommendations of the Estimates Committee. The Committee of the Federation of Indian Chambers of Commerce and Industry has hastened to express its disapproval of the Committee's proposal and to plead for the continuance of the present policy.

Oblivious of the foregoing developments, the L.I.C. has continued to invest in shares and stocks of existing companies. During the last few days, for instance, it is said to have bought a sizable block of T.I.S.Co. shares. This has lent considerable strength to this market leader. Indian Irons, too, have been ruling firm in expectation of a bonus issue and on reports that the Company has asked the Government to sanction an increase of Rs. 100 per ton in its retention price.

New Loan Prospects

Intelligent anticipations of the forthcoming borrowing programme of the Central Government have already commenced, though conditions in the money market have by no means become favourable enough to assume that the Government will make an early entry. It is true that there are more lenders in the inter-bank money market than borrowers; today, even at 4½ per cent, lenders were over, as against 5½ per cent which borrowers were willing to offer last week. This, however, does not mean that the supply of funds with banks has improved to any substantial extent, having regard to the present level of bank credit. On the contrary, banks are worried as to how they will be able to meet the ever-increasing needs of industrial borrowers. Every new project that has been floated in the past two years is banking on bank borrowing for a substantial proportion of their fixed capital and working capital requirements. If the present trend of deposits were to continue for another year, the Indian banks might have to do what the Japanese banks were doing until recently, that is, borrow from the central banking institution and re-lend the funds to trade and industry, resulting in the credit ratio going up to 90 to 100 per cent of deposits.

In the face of these prospects, it would, of course, make no material difference whether the Central Government enters the market in a month's time or waits till the monsoon is in full swing. But psychology is an important factor. It would not be to the advantage of the Government's prestige, if it attempted to borrow from the market at a time when practically the whole issue would have to be taken up by the Reserve Bank of India, the L.I.C. and the provident funds. If the Government waits till the seasonal pressure slackens appreciably and a good part of the funds lent by banks returns to them, it may be able to get at least some modest support from banks. There is no necessity to rush, simply because 3½ per cent 1961 loan, with an outstanding of Rs. 75.29 crores, is falling due for repayment on 1st June. This problem can be taken care of by offering to its holders facilities for conversion into a short-dated loan in the last week of May. After all, the bulk of this issue must already be in the hands of the Reserve Bank.

Power Shortage

Power shortage, which is currently being experienced in many parts of the country, has posed a serious threat to industrial production. For nearly a month now, Calcutta has been in the grip of an acute power shortage owing to a serious failure of two generating sets, with a total capacity of 80,000 kilowatts, belonging to the Calcutta Electric Supply Corporation. This failure is attributed to overload and delay in overhauling the plant. Besides, Calcutta has lost some 20,000 kilowatts which was being received from the thermal plant in Durgapur. The position has been made worse by the complete breakdown of both the generating units of D.V.C.'s Durgapur thermal power station. In fact, this has affected the entire industrial belt of Bihar and West Bengal. Big industrial consumers, such as the steel works at Jamshedpur and Burnpur and the Dalmianagar industries, have been directed to restrict their power consumption. The D.V.C. has asked the Calcutta Electric Supply Corporation to cut its load by 10 per cent. The Corporation, in its turn, has advised industries in Calcutta to close down completely for one day every week to conserve power. Engineering and jute are the two industries most affected by the power cut. The Eastern Railway has also been warned that its electric traction might be affected.

Power shortage is, however, not confined to the Eastern region alone. Western and Southern regions also face the same problem. Acting on the recommendation of the Gujerat Electricity Board, the Gujerat State Government has decided to cut power supply by 10 per cent. The Government has informed the industries in the State that there is no alternative to a cut and has asked them to reduce their power consumption accordingly. The industries have, however, been allowed to devise suitable spreadover of power consumption. Meanwhile, representatives of the textile industry in Ahmedabad are reported to be considering ways and means of economising power consumption. Whatever solution is adopted, it is clear that a large number of costly industrial plants will have to remain idle for some time. It is not known as to when the industries in Gujerat can expect relief from power shortage. The cut in power supply in Gujerat has been enforced, with a view to helping the new industries that are being established there. The Sabarmati Power Station, it may be noted, has reached the level of its maximum generating capacity. The execution of the Ahmedabad Electricity Company's plan to expand its capacity has been delayed because of the tactics adopted by a few of its minority but influential shareholders to get control of the Company.

Madras State, too, has been experiencing scarcity of electric power, due to insufficient supply of water in the hydro-electric reservoirs. Industrialists in the State have already expressed concern at the power shortage. A 50 per cent cut in power supply is looming large and may become a reality if monsoon fails to set in in time in the catchment areas. The scope for supplementing power supply through diesel generating sets is also said to be limited, as many industrial establishments, which had hitherto their own diesel generators, have sold them off. This State has had no power cut in the past two years and the industrialists had been expected to believe that, with the commissioning of Kundah power station, there would be no shortage in power supply in the summer. It is now apparent that even Kundah offers no protection against seasonal fluctuations in hydel power generation. The industries that will be most affected by power cuts are cotton mills, plantations, cement and a large number of small engineering establishments.

Nowhere, however, is the power shortage as acute as in Calcutta. And there is no hope of the normal supply being restored for at least two months. Mr. Mohammed Ibrahim, Union Irrigation and Power Minister, informed the Lok Sabha this week that the *status quo* in respect of power supply would be restored probably by the middle of June.

While the power situation in Calcutta and neighbouring region would improve only after the generating units of C.E.S.C., Durgapur and D.V.C. have been recommissioned, the reasons for the breakdown of these units one after another deserve to be investigated so as to prevent a recurrence of the present critical situation in future. Meanwhile, in order to relieve the shortage, such industrial units as are in a position to produce power by diesel generators should be allowed to do so. Supplies for domestic consumption and those required for display lighting, cinema shows, etc., should be reduced to the minimum.

There is good reason to believe that the present power failure in Bengal and Bihar will not have taken place if the West Bengal Government and the D.V.C. had not interfered with Calcutta Electric's plans for expansion. Both the authorities had underestimated the growth of demand for power and overestimated their capacity to establish their own power generators and run them efficiently. The result has been that all the plants in operation in the public and private sectors alike have had to be kept in continuous operation without the break necessary for periodical overhaul. If the present power failure in many parts of the country has any lesson to offer, it is that, in a rapidly developing economy, power supply should always be well ahead of demand.

Aid for India

Whatever be the defects in some of the policies and programmes pursued by the powers-that-be in India, there is wide recognition abroad on the point that the country has, by utilising wisely the aid received from other nations, demonstrated, to borrow the phrase of a London contemporary of ours, the validity of its claim for funds for the future. And it is good fortune that India has quite a number of foreign friends within the country and outside who have consistently been advocating large-scale financial assistance for it. Symbolic of the interest and enthusiasm shown by these friends in India's economic development is the consortium of countries and institutions interested in development assistance to India, popularly known as the "Aid India Club," which met under the auspices of the World Bank at Washington this week. The meeting was presided over by Mr. Eugene R. Black, President of the World Bank, and attended by the Government representatives of the U.S., U.K., Canada, West Germany and Japan. The I.M.F. and the Governments of Austria, Denmark, France, Norway and Sweden were represented by observers.

Since the meeting was held *in camera*, no information is yet available about its deliberations. The meeting lasted for only two days, instead of three days as was expected earlier. It has been adjourned to 31st May 1961, as the participants wanted time to consult their Governments further.

It is gathered from reports received from Washington that the meeting reviewed India's foreign exchange requirements for the third Plan and sought to assess the amount, as well as the nature, of further external assistance which might be made available to meet these requirements. It may be noted here that the third Plan is expected to cost Rs. 3,200 crores more than what the country can actually raise from its own resources. The bulk of this amount—Rs. 2,600 crores—represents the value of capital goods, components and other maintenance imports, the balance of Rs. 600 crores

(Continued on page 824)

POPULATION EXPLOSION

"For every four persons on earth in 1950, there are today five. For every five today, in 40 years there will probably be ten. In the past half-minute alone, about 90 babies will have been born into the world; only 60 persons will have died, leaving a net increase of 30, or one every second. This rate of growth last year added the equivalent of the population of Italy to the world's millions, and the rate seems to be accelerating. In 1961, it will probably push the population of the world past the three-billion mark, and it will double that figure before the end of the century.

"Three hundred years ago, there were probably no more than 500 million people alive in the world, and the total was increasing only slowly. This stability was maintained by an uneasy balance between high birth rates and death rates. Many babies were born, but many also died. Living conditions were such that many of the remaining children failed to survive beyond the age of thirty. . . .

"Of course, we welcome this trend (decline in death rate), whatever the problems it may set for us. We all want to reduce the suffering and waste involved in premature death or disabling disease, and we can expect death rates to go on falling in the developing countries. . . . But, if only 20 people—or even fewer—in every thousand are henceforth to die each year, then a birth rate of 40 per thousand, which formerly just kept the population steady, will bring an explosive growth in numbers. And there is little reason to suppose that birth rates will soon decline to match the fall in death rates. It is much simpler to attack disease than it is to alter the reproductive pattern of a society. Medicine has yet to make available a cheap and easy method of regulating births. And not every one wants fewer children. . . .

"What view are we to take of all this? . . .

"I must be blunt. Population growth threatens to nullify all our efforts to raise living standards in many of the poorer countries. We are coming to a situation in which the optimist will be the man who thinks that present living standards can be maintained. The pessimist will not look even for that. Unless population growth can be restrained, we may have to abandon for this generation our hopes of economic progress in the crowded lands of Asia and the Middle East. This is not a field in which international agencies can do much. But there is scope for Governments to act: it is time that they gave earnest attention to this threat to their aspirations.

"Population growth does not alter the rules for successful economic development. On the contrary, it reinforces their strength by increasing the penalties for breaking them. In relation to the need, capital is short, and must be stretched as far as it can possibly go. In the developing countries, therefore, the first question to be asked of any economic policy must be: 'Is this the road to maximum economic growth?,' and if the answer is 'No' we must look very closely at any doctrines which are put forward to excuse this sacrifice of economic advancement."

—Mr. Eugene R. Black,
President, World Bank.

N.B.—*An extract from Mr. Black's address to the Economic and Social Council of the United Nations on 24th April 1961.*

SHARE MARKET STEADY

STEELS WELL FAVOURED

(From Our Own Correspondents)

BOMBAY, *27th April*

IN contrast to the easiness witnessed in the past fortnight the share market put on a cheerful appearance during the week under review. The Finance Minister's statement in the Lok Sabha that there would be no change whatever in the policy governing investment of life insurance funds for the time being and that no decision had been taken on the Estimates Committee's recommendations in this regard, which were still under consideration, discounted the fear that the L.I.C. might withdraw from the stock exchanges. The market regained its poise, the operators being inclined to extend their commitments. A slight easiness of conditions in money market enabled investors to lend support. Steels and textiles, in particular, were well-supported. Bonus announcement by some leading cotton mills strengthened the hope that others too might follow suit. Scrips in both cash and forward lists recorded sizable gains.

Steel shares, unlike in the past two weeks, elicited sustained buying enquiries. Tata Steels received good support, especially from the L.I.C., and improved from Rs. 146.25 in the beginning of the week to Rs. 148.75 on Monday. After moving narrowly thereafter, they closed at Rs. 148.25 today, showing a net rise of Rs. 2 over the week. Indian Irons moved up from Rs. 26.55 last week-end to Rs. 27.25 today, the highest level of the week, before closing at Rs. 27.20. The net gain over the week was 65 nP. Mukand Irons extended the gain made last week and rose from Rs. 27.15 to Rs. 29. The close was, however, a shade lower at Rs. 28.35.

Textiles, as already stated, ruled firm, the shares of most of the leading mills recording improvement. Centurys were in the limelight, thanks to keen bidding prompted by expectation of bonus issue which did prove correct. It was announced on Tuesday that the existing shareholders would be allotted bonus shares in the ratio of one share for every four ordinary shares held. Opening at Rs. 560, the scrip climbed up to Rs. 625 on Tuesday before finishing at Rs. 611 today. The net rise over the week was Rs. 30. Swan spurted by as much as Rs. 45 to Rs. 600, on the news that the Company had decided, subject to approval of the Controller of Capital Issues, to issue bonus shares (Rs. 24 lakhs) in the ratio of two shares for every three ordinary shares held. Morarjees advanced by Rs. 20 to Rs. 355. Finlays were marked up by Rs. 21.50 to Rs. 347.50. Shree Niwas were quoted Rs. 14 higher at Rs. 268. Svadeshis were marked up by Rs. 11.75 to Rs. 269.50. Standards hardened by Rs. 4 to Rs. 1,486. Influenced by reports of better working results, Elphinstones improved by Rs. 7 to Rs. 88 and Gokaks by Rs. 3 to Rs. 183. New Greats rose by Rs. 2.50 to Rs. 210.50. Vishnus spurted by Rs. 2 to Rs. 131.50. Gold Mohurs by Rs. 10 to Rs. 277.50. Kohinoors and Podars put on a rupee each to Rs. 290.50 and Rs. 148 respectively. Tata Mills were firm at Rs. 51, as also Simplex at Rs. 187 and Bombay Dyeings at Rs. 65.30.

Sugar shares depicted a divergent trend. Belapurs were well fancied and firmed up from Rs. 285 to Rs. 290 *yesterday*. Although they dipped to Rs. 289 today, the net gain over the week was Rs. 4. Walchandnagars strengthened by Rs. 6 to Rs. 203. But Phaltans were easy at Rs. 140.50, as against Rs. 143 last week-end. Maharashtra Sugars lacked buyers and shed a rupee to Rs. 200.50.

Cements were well supported. A.C.Cs rose from Rs. 156.25 to Rs. 159. The closing, however, was a shade lower at Rs. 157.50, as against Rs. 156.25 a week ago. Digvijays put on 50 nP to Rs. 152.50. Orissas hardened by 28 nP to Rs. 14.60.

Selected rayon shares attracted the attention of operators. National Rayons rallied from Rs. 506 to Rs. 524.50. At this level, profit-taking set in and the scrip receded to Rs. 517.50. The net change over the week was Rs. 11.50. South India Viscose hardened by Rs. 2.50 to Rs. 159.50. Gwalior Rayons were done 75 nP higher at Rs. 45.50. Baroda Rayons were quoted at Rs. 131 *ex-right*. But Indian Rayons were a shade easy at Rs. 64.50.

In the shipping group, Scindias receded by 8 nP to Rs. 14.24. Great Easterns were neglected at Rs. 15.08. Automobile shares fared well, thanks to reports that the much-publicised small car project might not materialise. Premier Automobiles advanced by Rs. 2.25 to Rs. 169.75. Hindustan Motors gathered 16 nP to Rs. 19.92.

Barring a few scrips, which were subdued, dyes and chemicals generally moved up. Colour-Chems spurted by Rs. 26.25 on rumours of a possible new capital issue. Poly-Chems were quoted Rs. 2.50 higher at Rs. 227.50. Indian Dyestuffs put on a like amount to Rs. 490. Adarsh advanced by Rs. 3.50 to Rs. 78.50 Dharamsis gathered Rs. 3 to Rs. 265. Kemp & Cos., on the other hand, eased by Rs. 7 to Rs. 315. Synthetics were done Rs. 5.50 lower at Rs. 152. Amar Dyes receded by Rs. 3.75 to Rs. 386.25. Dhrangadhras lost a rupee to Rs. 131.

Engineering shares were a shade easy. Alcock Ashdowns receded by Rs. 2 to Rs. 325. Texmacos shed Re. 1.32 to Rs. 26.52. Mahindras dropped 24 nP to Rs. 20. Kamanis were neglected at Rs. 17, Telcos, which had slumped from Rs. 351.50 to Rs. 342 early in the week, drifted downward thereafter and touched Rs. 339.50 today. The net loss over the week was Rs. 9. Larsen and Toubros, however, attracted stray buying and improved by Re. 1.25 to Rs. 43. Premier Constructions picked up Rs. 3 to Rs. 95.50.

In the miscellaneous section, some of the highly speculative scrips such as Bombay Burmahs eased, while quite a few others ruled fully steady. Bombay Burmahs succumbed to selling early in the week and declined from Rs. 605 to Rs. 600 and, after advancing to Rs. 611, receded again to Rs. 599.50 before finishing at Rs. 598.50. The net loss over the week was Rs. 5.50. Wimcos lost Rs. 3 to Rs. 273. West Coast Papers shed Rs. 4 to Rs. 202. Premier Tyres receded by Rs. 3 to Rs. 102. Hindustan Levers were a shade lower at Rs. 46.75. Voltas, however, were done 50 nP higher at Rs. 75.50. Tata Oils gained a like amount to Rs. 77. Anil Hardboards were unchanged at Rs. 287.50.

* * * *

Madras Stock Exchange

MADRAS, *26th April*

Following large-scale offerings which met with poor buying support, equities on the Madras Stock Exchange drifted downward during the week under review, with the exception of a few textile and sugar shares which tended to harden. The decline in prices was particularly pronounced in the plantation section. Operators were much concerned over the continuously rising trend of production costs, on the one side, and declining tendency in prices realised, on the other. Coffee shares were neglected despite the Union Finance Minister's announcement of the reduction of excise duty on robusta and Liberia varieties of coffee to the original level of Rs. 41.35 per quintal.

Among teas, Lucky Valleys receded by 62 nP to Rs. 13.25. Haileyburias dropped 35 nP to Rs. 14.75. Kil Kotagiris fell by 25 nP to Rs. 4.95. Neelamalais declined by 16 nP to Rs. 4.45 and Blue Mountains by 15 nP to Rs. 3.15. Several other shares also suffered a setback to values.

In the coffee group, Rajendras closed 40 nP lower at Rs. 12.50. Coffee Lands receded by Re. 1 to Rs. 19.50. Consolidated Coffees declined by 30 nP to Rs. 23. Savamalais shed 10 nP to Rs. 3.45. Sheveroys lost 15 nP to Re. 1.73.

Rubbers were dull. Business put through was considerably restricted and values were more or less unchanged at last week's levels. Travancore Rubbers, for instance, were unaltered at Rs. 10.70. Similarly, Malankaras were subdued at Rs. 18.00, Midlands at Rs. 11.80 and Kallas at Rs. 5.

In the sugar section, Cauverys hardened by a rupee to Rs. 130. India Sugars improved by 15 nP to Rs. 12.90. K.C.Ps were steady at Rs. 23.46, as also Mysores at Rs. 59 and Andhras at Rs. 28.25. Travancores, however, slipped by 17 nP to Rs. 10.45 and East India Distilleries by 12 nP to Rs. 43.50.

The textile section displayed a mixed trend. Vijayakumars were hammered down from Rs. 130 to Rs. 111. Anglo-French fell by Rs. 2.25 to Rs. 138. Lakshmis declined by Rs. 3. Rajalaxmis receded by Rs. 2 to Rs. 79.50. Coimbatore Spinnings were dull at Rs. 56. Coimbatore Pioneers at Rs. 350 and Vasantas at Rs. 252. But Metturs spurted by Rs. 5 to Rs. 385, Buckinghams by Rs. 2 to Rs. 216 and South India Viscoses by Rs. 2 to Rs. 162. Bangalore Woollens and Balasubramanias gained 50 nP each to Rs. 205.50 and Rs. 115.50, respectively. Travancore Rayons gained 10 nP to Rs. 37.60.

Among miscellaneous industrials, Madras Cements receded by Rs. 5 to Rs. 91. W.I. Plywoods declined by Rs. 2 to Rs. 246. Madras Aluminiums lost a like amount to Rs. 23. Aluminium Industries eased by 55 nP to Rs. 22.80. Mysore Chemical and Manufacturings shed 50 nP to Rs. 25. Rallis were on offer at Rs. 156, as against Rs. 140 a week ago. Tube Investments softened by a rupee to Rs. 284. Among cements, Andhras and Orissas were dull at Rs. 10.55 and Rs. 14.31, respectively, while Indias gained 5 nP to Rs. 6.05. Hindustan Levers were quoted at Rs. 49.80 *ex-div.*, same as last week. Standard Motors were unchanged at Rs. 16.75, Mysore Cements at Rs. 8.10 and Sen-Raleighs at Rs. 25. Seshasayee Papers, on the other hand, jumped up by Rs. 2.57 to Rs. 7.12. Mysore Papers gained 25 nP to Rs. 24.75. Kirloskar Electricals put on 12 nP to Rs. 13.12.

INDIAN INVESTMENT CENTRE

The Indian Investment Centre, which was inaugurated by the Union Finance Minister, Mr. Morarji R. Desai, on 16th February 1961, is now functioning at its head office at the National Insurance Building, Parliament Street, New Delhi. Being a non-profit, semi-official organisation, the Investment Centre, in encouraging and accepting inquiries from Indian and foreign entrepreneurs, maintains complete objectivity, treats information furnished to it as confidential, offers individual attention to each specific project, and operates exclusively as a service organisation.

The Centre has collected and continues to collect information on matters pertaining to Government policies, laws and regulations and terms and conditions relating to foreign investment in India as well as on procedures for licensing of industries, import of capital goods, control of capital issue, terms of collaboration between Indian industrialists and foreign collaborators, and on taxation, company law, labour legislation, etc. It also maintains up-to-date data on industrial capacity, current production, trade, markets, labour, communications, available industrial sites, power supply and other utilities. It will thus act as a reservoir of information for prospective Indian and foreign industrialists.

The Investment Centre will advise and assist Indian and foreign industrialists at all stages of the formulation and development of the proposals for joint ventures in this country. It is the aim of the Centre to encourage participation of private foreign capital in all projects for which the Government of India attaches a high priority. Entrepreneurs who wish to expand substantially their existing productive capacity or those who want to establish a new undertaking may approach the Centre for assistance in building up their proposals up to a project stage. Further, the officers and experts of the Investment Centre will examine all aspects, including the technical and economic aspects of the project, with a view to seeking foreign technical collaboration and/or financial participation. The Centre has prepared a check-list of information required for proposals for foreign technical or financial collaboration; this will be supplied on request. Indian entrepreneurs are requested to formulate their proposals on the basis of this check-list in as comprehensive a manner as possible so that the Centre would be able to assist them in seeking foreign collaboration/participation.

The Centre has now a complement of officers and technical experts to handle inquiries. Several inquiries have been received from both Indian and foreign entrepreneurs and are being processed. The inquiries from foreign firms relate to the investment climate in general and specific requests for collaboration. The inquiries from Indian firms refer to specific projects for which the parties seek foreign participation/collaboration. The Centre is making arrangements in principal capital-exporting countries whereby inquiries emanating from Indian entrepreneurs and those received from foreign investors will have prompt attention.

CANARA BANK LTD.—A CORRECTION

In our review of the Canara Bank's working results for 1960, appearing on page 682 of *Commerce* dated 15th April 1961, it was mentioned that transfers to reserves (including Rs. 50,000 for development rebate reserve) amounts to Rs. 3.50 lakhs. This was not correct. The figure of Rs. 3.50 lakhs represents only the sum transferred to innat reserves and does not include any amount for development rebate reserve.

A LARGE INDIAN PUBLIC COMpany intends to appoint an assistant to the Managing Director. The appointment carries prospects of eventual promotion to the Board in an executive capacity for a man possessing the requisite qualifications, which include preferably membership of one of the Institutes of Chartered Accountants, experience in modern methods of financial control and management accounting, knowledge of industrial legislation and ability to deal with personnel problems at different levels. There is no fixed scale of remuneration for this appointment but a good salary with commensurate allowances, depending on age and experience, will be paid to the successful applicant.

Reply, stating age and giving full particulars of experience, along with the names of two Referees, to Box No. 974, C/o "Commerce", Brady House, Veer Nariman Road, Fort, Bombay.

Notice

THE STANDARD COAL COMPANY LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Annual General Meeting of the members a Dividend on the Ordinary Shares at 15 per cent per annum for the year ended 31st December, 1960 subject to deduction of tax.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LTD
Secretaries

CHARTERED BANK BUILDINGS,
CALCUTTA, 21st April, 1961

NEWS IN BRIEF

THE export incentive scheme for cotton textiles in its present form has been extended up to 31st December 1961.

The Union Government is considering a proposal to give subsidies to cultivators as an incentive for trying newly evolved techniques of cultivation.

An agreement "in principle" on the refining of crude oil from Ankleshwar by the refineries of the Standard-Vacuum Oil Company and Burmah-Shell has been reached with both the companies.

The Indian Telephone Industries has announced a revised wage structure merging dearness allowance with basic pay, inclusion of all daily rated workers in the monthly scales of pay and payment of an ex-gratia payment of Rs. 105 to each worker.

The negotiations with the manufacturers of Volkswagen of West Germany for the production of small cars in the public sector have not proved fruitful. Meanwhile, the Japanese Company which manufactures 'Bluebird' has informed the Pande Committee that it will submit fresh terms for collaboration.

The Government of India proposes to issue licences to two more parties for the manufacture of paper machinery, one at Madras and the other at Poona, in addition to licences already granted for the establishment of two paper machinery producing units at Calcutta and Ahmedabad, according to Mr. Manubhai Shah, Minister of Industry.

The Central Board of Revenue has asked all importers of food colour to get a warranty from their overseas suppliers. It is stipulated that the colours purchased by them should conform to the standards prescribed under the Prevention of Food Adulteration Rules. The particulars of the methods of basis applied to observations during the tests and their results are also required to be furnished.

The Oil and Natural Gas Commission has decided to undertake seismic survey to assess the possibilities of off-shore drilling for oil, first of its kind in India, in the Gulf of Cambay. The Commission has already started negotiations with the Chief Naval Hydrographer to secure necessary assistance for the survey and the exploration work. It has also decided to undertake structural drilling in Ghogha in Gujarat.

The twenty-eighth annual general meeting of the Indian Sugar Mills Association, Calcutta, will be held at New Delhi on Thursday, 4th May 1961. Mr. D. D. Puri, President of the Association, will preside over the meeting, which will be inaugurated by Mr. S. K. Patil, Minister for Food and Agriculture. Apart from reviewing the various important developments in the sugar industry in the past year, certain important resolutions having a vital bearing on the sugar industry are expected to be taken up for discussion.

The last year of the second Plan, that is, 1960-61, witnessed an all-time record loading of more than ten million wagons for transport of goods on the railways. The total number of wagons loaded at the originating and transhipment points was higher by nearly 400,000 as compared with the previous year (1959-60). Coal alone accounted for one-third of the entire volume of freight traffic during 1960-61, the number of wagons actually loaded being 2,668,440, as against 2,433,707 in 1959-60, representing an increase of 9.7 per cent.

A survey of conditions in the hosiery industry in Coimbatore District conducted by the Economic Investigation Branch of the Small Industries Services Institute, Madras, has revealed over-expansion. The Government of Madras has been urged to consider the question of licensing yarn dealers and users. The scope for developing new industries such as pipe fittings, industrial rubber goods, link clips, metal shields for textile bobbins, cotton-seed oil and surgical cotton as well as for expanding the existing industries like grease cups, expanded metal and machine tools in this region is said to be quite good.

The Reserve Bank of India has reaffirmed its policy with regard to the question of linking indigenous bankers with the organised banking system. Three prerequisites for such linking have been laid down. One, the indigenous bankers should segregate their banking activities from their non-banking activities. Two, they should have their banking accounts audited. And three, they must subject themselves to supervision and control by the Reserve Bank. The Bombay Shroffs' Association has been asked to submit concrete proposals in this respect to provide the basis for discussion.

Fifteen contracts have been concluded with the Soviet Union for the supply of spares for the Bhilai steel plant, according to Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel. The approximate value of the contracts is Rs. 654.02 lakhs. The price of spare parts worth Rs. 2.1 crores included in the original contract has been fixed on the basis of national average price per ton which was agreed to be paid for the main plant and equipment. In the case of non-proprietary articles such as ball and roller bearings competitive quotations were invited and the Soviet offer was found to be the cheapest, while in other cases the prices were settled by mutual negotiations.

A bill to set up a statutory corporation to administer the deposit insurance scheme will be introduced in the next session of Parliament. The Corporation will have a board of directors consisting of representatives of the Reserve Bank, the State Bank of India, scheduled banks and officials of the Union Finance Ministry. The question as to who should be the chairman of the corporation—a senior civilian or an officer from a bank or the Governor of the Reserve Bank itself as ex-officio chairman—has not yet been decided. The premium for the insurance will be paid by the banks. The Finance Ministry suggested that deposits up to Rs. 1,000 should be covered by the scheme. But the banks wanted this to be raised to Rs. 1,500. The Bank's proposal will cover 80 per cent of the deposits. Official thinking now is to extend the scheme to cover all the deposits. A final decision on this is expected to be taken shortly.

The Government of India is considering a proposal so to amend the Industrial Disputes Act as to vest in the appropriate Government the power to declare any industry to be a public utility on grounds of public emergency or public interest. At present, under the Industrial Disputes Act, besides the industries specifically declared to be public utilities, some others have been mentioned in the First Schedule and in respect of the latter the appropriate Government by notification could declare them to be public utilities. The move has presumably arisen following the request of the Indian Iron and Steel Company to the Government to declare iron ore mines of the Company to be public utilities. On a consideration of the issue, it was found that, while the Centre could declare the iron and steel industry to be a public utility, it had no power to do so in respect of the iron ore mines though they were vital for a steel plant.

An official report on the expansion of the Rourkela steel project contains proposals envisaging an increase in the present capacity of one million tons to 1.8 million tons a year at the end of the third Plan at a tentatively estimated cost of between Rs. 60 crores and Rs. 80 crores. At the end of the third Plan, the report says, the group of rolling mills at Rourkela steel works will comprise one of the biggest and most modern steel rolling mills. Major expansion schemes being proposed include the following: In addition to the present three batteries of coke oven, there will be two more batteries. A fourth blast furnace will be installed with 1,500 to 1,800-ton capacity per day. There will be two more L.D. converters of 50-ton capacity each in addition to the present three L.D. converters of 40-ton capacity each. The cold rolling mill which is yet to be completed by the end of this year will be expected to raise its capacity to 670,000 tons from its present 170,000 tons a year, by the installation of five-stand tandem cold rolling mills.

The additional *ad hoc* duty on all kerosene including inferior kerosene has been increased by Rs. 8.17 per kilo-litre at 15c with effect from the 15th inst. The increase in the levy will also be borne by the oil companies and will not result in any increase in wholesale or retail prices of kerosene oil to the consumers. Announcing the increase in the course of a Press note issued on the 18th inst., the Union Finance Ministry said: "In terms of the *ad hoc* agreement for the pricing of major petroleum products, between the oil companies and the Government in force since April 1959, reduction in prices offered by the companies were mopped up by levy of additional duties under the Mineral Oils (Additional Duties of Excise Customs) Act 1958, which are borne by the companies themselves so that the prices to the consumers are not affected thereby. The oil companies were also required to maintain an account of variations in the import cost elements. Due to fall in world prices, this account has a credit of about Rs. 2 crores in favour of Government for the period 1st April 1959 to 31st December 1960.

From Abroad

West Germany had a record foreign trade surplus of DM 1,900 million during the first quarter of 1961. Exports aggregated DM 12,200 million and imports DM 10,300 million, as compared with DM 11,400 million and DM 10,000 million, respectively, in the corresponding quarter of 1960.

A new British Petroleum ocean terminal at Angle Bay in South Wales, estimated to have cost £6,500,000, was declared open by the British Minister of Power, Mr. Richard Wood, recently. The terminal is one of the few installations in the world capable of accommodating the 100,000-ton (deadweight) tankers of the future. It comprises a coastal strip of 140 acres and an adjacent area of 220 acres.

Fixed investment in industry and mining in Sweden will rise by about twice as much this year as was estimated six months ago, according to a survey of Swedish industrial investment plans. The survey, based on questionnaire sent out by the Board of Trade in March, indicates an exceptionally sharp increase of 24 per cent in the prospective investment expenditure in 1961 as compared with 1960.

The Soviet export organisation, Technoexport, is to supply Iraq with complete oil drilling equipment at a cost of £500,000. Technoexport has already made, under the 1959 Iraq-Soviet agreement for technical co-operation, a seismographic survey in the area of Khanaquin near the border of Iran about 100 miles north-east of Baghdad. The area surveyed is not covered by territorial concessions to the oil companies currently operating in Iraq.

A committee of the U.S. House of Representatives has voted the $800 million special fund for Latin America. Of this amount, $100 million will be given to Chile for assisting the recovery from last year's earthquakes. The entire balance of $500 million will represent the sum allocated to the "Alliance for Progress" plan which aims at tying the U.S. loans to self-help reforms in the recipient countries in the hope of making American aid the instrument for directly raising the living standards in Latin American States.

PERSONAL

MR. C. R. Pattabhiraman, M.P., has been nominated Chairman of the Public Accounts Committee in place of Mr. Upendranath Burman.

Mr. Ramnath Goenka has been re-elected Chairman of the Punjab National Bank for the current year.

Mr. Lalitchandra C. D. Nanjee has been elected President of the Bombay Shroffs Association for the year 1961-62.

Mr. K. C. Nair, First Secretary in the Embassy of India, Brussels, has been appointed Commissioner for the Government of India in the West Indies and British Guiana.

Mr. Arvind Narotham Lalbhai and Mr. Rasiklal Nagari have been elected President and Vice-President, respectively, of the Ahmedabad Millowners' Association for the year 1961-62.

Mr. Madanmohan R. Ruia will lead a ten-man delegation to the eighteenth Congress of the International Chamber of Commerce to be held at Copenhagen from 22nd to 27th May next.

Mr. Naval H. Tata has been re-elected President of the Employers' Federation of India for 1961. The Vice-Presidents elected are Mr. Neville N. Wadia, Mr. H. Mackay Tallack, Mr. E. F. G. Hunter and Mr. J. K. Srivastava.

Mr. A. R. Foster, Managing Director of the Imperial Chemical Industries (India) Private Ltd., has been appointed Chairman and Managing Director of the Company following the death of Mr. J. M. Lall.

Mr. Lala Bharat Ram, Chairman of the Delhi Cloth and General Mills, has been elected Chairman of the Indian Cotton Mills' Federation for the year 1961-62. Mr. Ramnath A. Podar and Mr. G. K. Devarajulu have been elected Vice-Chairmen.

Mr. Nityanand Kanungo, Union Minister for Commerce and leader of a seven-man economic mission to Italy, left for Rome last week. The other members of the mission are Mr. R. V. Raman (Joint Secretary in the Ministry of Commerce and Industry), Mr. M. A. Chidambaram, Mr. N. B. Amin, Mr. Sitaram Pandit, Mr. G. R. Domodaran and Mr. N. R. Reddy.

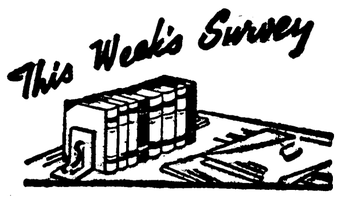
Sir Oliver Franks has decided to resign the Chairmanship of Lloyds Bank at the end of 1961 and return to academic life early next year. He will be succeeded by Mr. Herald Peake, Vice-Chairman of the Bank and Chairman of the Steel Company of Wales. Sir Oliver will, however, continue to be a member of the Board. Viscount Amory, a former Chancellor of the Exchequer and a Director of Lloyds Bank, has been appointed a Vice-Chairman of the Bank. The other Vice-Chairman is Mr. A. H. Ensor.

An initial investment of $1 million (Hong Kong) on the setting up of an instant coffee plant in Hong Kong has been made by a group of overseas Chinese, American, British, Swedish and Filippino businessmen. The group started a similar plant ten years ago in the Philippines. It hopes to process coffee beans from South America, Indonesia, Africa and the Philippines for South-East Asian and European markets. The plant will have a capacity to produce $9 million (Hong Kong) worth of roasted coffee annually. The plant is expected to go into production in September next.

The U.S. Export-Import Bank has made its first loan to a Government oil monopoly in a foreign country to the Argentine State Monopoly YPF. The credit covers a part of the shipment cost of refinery equipment worth $1.5 million to be supplied by the Armco Steel Company of the U.S. The grant of the credit puts an end to the longstanding unwritten U.S. Government policy of withholding financial assistance from foreign Government oil industries. Incidentally, it is also the first tangible result of the Kennedy Administration's campaign to increase Government assistance to U.S. exporters.

Poland and Ghana have signed the last two of the three agreements under which Poland will assist Ghana in the implementation of a wide range of industrial projects. The projects include construction of twenty factories to produce steel from scrap metal, forged and pressed tools and agricultural implements, mechanical joineries, fortified wines and liquors, cars and lorry springs and various other products. The mining of large deposits of iron-ore and the building of a shipyard on the Volta River are also included. Poland has agreed to meet a part of the £12 million cost of those projects in the form of supplies of necessary equipment.

The number of cars, lorries and buses on the world's roads rose by just over 7 million last year to 126.3 million, according to a world motor census in the May issue of *The American Automobiles* published by McGraw-Hill. The increase was 11.6 per cent in cars, 6.7 per cent in lorries and 7.5 per cent in buses. The census also estimates that there were 20.6 million motor cycles and 11.3 million tractors. It states that of the 16.3 million units produced in 1960, 43.2 per cent represented an expansion and 56.8 per cent went for replacement of worn out vehicles. In particular, much of the U.S. production went to replace 1955 models which had sold in record numbers.



PROGRESS AT NEYVELI

THE Integrated Lignite Project, otherwise known as the Neyveli Project, has been delayed in its execution by about two years, with the result that its total cost has gone up by nearly Rs. 9 crores. If this rise in cost owing to delays had not been there, the entire cost of the Project would have been just under Rs. 85 crores. Even then, this total, representing the revised cost, would be Rs. 16 crores more than the original estimate of Rs. 69 crores. At least Rs. 6 crores (out of the said Rs. 16 crores) is accounted for by two newer schemes, namely, the clay-washing scheme and the scheme for quarters for staff (other than for operating and maintenance staff included in the cost of scheme) and buildings for common and services units. The balance of Rs. 10 crores of the additional cost is accounted for by increases, due to other causes, in the costs of the mining project, the thermal power station, the fertiliser scheme and the briquetting and carbonisation scheme. Of the revised total cost of about Rs. 94 crores, these four latter schemes account together for Rs. 85 crores.

The mining project for producing 3.5 million tons of lignite per year is now expected to be completed by the middle of 1961 and to go into full production by March 1964. The thermal power station of 250 M.W. generating capacity, according to the revised schedule, will have its first unit commissioned by October 1961 and be in full production by the middle of 1963. The fertiliser scheme for producing 152,000 tons of urea will reach the stage of initial production in October 1962 and the stage of full production in the early part of 1963. And the briquetting and carbonisation scheme, for producing 380,000 tons of carbonised briquettes to replace charcoal and also firewood, will be completed by the end of 1962 and go into full production in the first half of 1964.

It would appear from this revised schedule that the Project as a whole (which has been under construction since 1955) is now in an advanced stage of execution. The Estimates Committee of the Second Lok Sabha has, therefore, given the finding that the Project is now progressing at such a tempo as would seem to assure that the present revised schedules will be kept up.

The Committee has, at the same time, done well to point out that, even after the completion of the Project, there will remain one important line of activity calling for enterprise and experimentation. This is the utilisation of the likely by-products (charfines, tar, middle oil, polyvalent phenols, etc.) from the briquetting and carbonisation plant. There is currently no scheme as part of the Neyveli Project for commercial utilisation of these by-products, in view of the consideration that any such scheme would add an additional Rs. 25 crores to the cost of the Project. As the Neyveli Lignite Corporation (with its authorised capital of Rs. 80 crores) is in no position to take up this scheme, it may be worthwhile for private enterprise to set up industrial units (ceramic, plastic, chemical, etc.) for the utilisation of the said by-products. The Estimates Committee's observations in this connection would bear reproduction:

"The Committee find that not much advance planning has so far been done in the matter. They feel that, unless some vigorous efforts are made, the by-products of the Project are likely to go waste at least for some time. It is not necessary for the Corporation, if its resources do not permit economic exploitation of the by-products, to take this work on themselves. Necessary planning and research may, however, be carried out by the Corporation and all encouragement given by publicity and other avenues to enable the exploitation of the by-products to be taken up by enterprising parties. They further suggest that avenues of setting up medium and small-scale ancillary industries should also be fully explored in consultation with the State Government, Planning Commission and the Ministry of Commerce and Industry. In this connection, the desirability of appointing a Technical Expert Committee to undertake a survey and also to recommend the industrial development of the entire areas with regard to by-products and other resources available may be considered by Government without delay."

The Committee's report is no less valuable for one major recommendation which has a general applicability to all public undertakings. This pertains to the economics of each individual project which is not predominantly developmental. It is the emphatic view of the Committee that such economics should be worked out "in advance in sufficient detail" and not merely in general terms. Its further observations are quoted below:

"Apart from other considerations, the requirements to be met should be that the estimated earnings of the concern are not only sufficient to provide for a fair return on the capital invested after providing for adequate reserves and depreciation, but also accumulation of sufficient funds over a specified period for financing further expansion of related new projects, so that the drain on the Public Exchequer for starting new undertakings is largely avoided. Alternatively, the undertaking should be in a position, after a specified period, to redeem from its accumulated funds its capital which can be utilised by Government for other purposes.... The Committee has recommended that, henceforth, while setting up a public undertaking, its economics should be suitably worked out, taking into account the above requirements and placed before Parliament when funds are sought for this purpose."

This is a sound piece of advice. It is obvious that if this procedure had been followed before launching the various public industrial undertakings in the last decade, there would have been less occasion for complaint and disappointment on the score of their working results. "Less haste, less waste" should be the motto, at least from now onwards. The Estimates Committee's advice, if heeded, will go some way in discouraging hasty decisions to sponsor industrial undertakings in the public sector without regard to their profit-making capacity or to the capacity of the State to run them profitably.

U.S. TAX REFORM

The 7,000-word message sent to the U.S. Congress by President Kennedy on the 21st inst., seeks to translate into concrete tax proposals the broad tax reform outlined by him in his earlier message on budget and fiscal policies. The first major overhaul of the U.S. tax system in seven years, the tax proposal now made has, as its immediate objective, stimulation of long-term economic growth by encouraging investment, removal of some of the inequities in the present tax system, closure of loopholes in tax laws and a reduction in the pressure on the U.S. balance of payments position by making it less attractive for U.S. investors to keep incomes abroad.

The President's proposals include an incentive plan costing the U.S. Treasury $1,700 million a year. According to it, companies will be allowed to deduct from their taxes a proportion of their investment spending linked to depreciation allowances according to a complicated formula, under which the maximum credit a company might receive would be 15 per cent of all investment spending over and above the deduction for depreciation.

The loss of revenue resulting from this scheme will be made good by the imposition of a withholding tax on incomes by way of dividend and interest at the rate of 20 per cent, the repeal of special exemptions granted on dividend income since 1954, enforcement of stricter rules for expense account deductions and abolition of tax privileges granted to individuals and companies resident in W. Europe and Japan. It may be noted here that, hitherto, business firms have been permitted to defer taxes on foreign incomes until such incomes were repatriated to the U.S. The President's proposal would require that, after a two-year transitional period, the taxes be paid annually along with domestic income. This proposal, however, would not apply to incomes originating from investments in underdeveloped countries. This step may well encourage the flow of foreign private investment to underdeveloped countries in preference to the developed countries of Western Europe, Canada, Japan, South Africa and New Zealand. These proposals are only a prelude to a comprehensive tax reform which is now under preparation by the Treasury for presentation to Congress next year.

TOURISM

The seven-day seminar on tourism, organised by the Economic Commission for Asia and the Far East (E.C.A.F.E.) in co-operation with the International Union of Official Travel Organisations and the United Nations Bureau of Technical Assistance Operations, currently being held at New Delhi since Monday, 24th April, is unique, in that it is for the first time that the problems of tourist development in the E.C.A.F.E. region are being discussed at an international level. Apart from highlighting the attractions of the countries of this region for foreign tourists, the seminar, by providing a forum for the exchange of views and experience, would be useful for promoting a greater realisation of the vast potentialities and possibilities of tourism. The present conclave is in pursuance of the E.C.A.F.E's recommendation, at its sixteenth session held last year, that a seminar on travel and tourism be held in 1961 to discuss and suggest ways and means of improving tourist facilities, so that the best use is made of the possibilities offered by tourism. It had also adopted a resolution on the promotion of tourism which urged Governments of the region to declare 1961 as "Visit the Orient" year and to take special steps to attract the largest number of tourists during the year.

The subjects on the seminar's agenda include methods of compilation and interpretation of tourist statistics, the most appropriate methods of tourist publicity, the facilities necessary to encourage tourism by removal of travel barriers, improvement in air, rail, road and inland waterway transport, the additions and improvements necessary in hotels, motels and supplementary accommodation and training facilities needed in the various aspects of tourist industry.

Governments of the E.C.A.F.E. countries are no doubt alive to the many advantages which accrue from an increase in the number of foreign visitors. In some countries, earnings of foreign exchange from tourism rank high, as compared with those from visible exports, but, generally speaking, in the countries of the E.C.A.F.E. region, full advantage is not being taken of the phenomenal increase in air travel, despite their many historical, scenic and cultural attractions. The basic reason for this lies in the fact that tourist industry in most of these countries is not sufficiently organised.

The Prime Minister, Mr. Nehru, who inaugurated the seminar, stressed primarily the value of tourism in promoting international understanding and goodwill. But what invests tourism with special importance to the countries of the region is that it is capable of earning foreign exchange desperately needed by these countries. That in spite of many attractions the countries of the region have not been able to attract a fair share of the world tourist traffic is evident from some of the figures quoted by Mr. M. S. Ahmed, Chief of the Transport and Communication Division of the E.C.A.F.E. He pointed out that it was estimated that, in 1958, foreign travel contributed the equivalent of at least £5,000 million to world foreign exchange proceeds, representing about five per cent of the total international trade that year. In Australia foreign currency receipts from tourism in 1958 accounted for 3.4 per cent of the gross national product and exceeded receipts from its main exports, namely iron and steel and timber. Although world tourist traffic as a whole had increased phenomenally since the war, the countries of the E.C.A.F.E. region had not derived proportionate benefit. Thus, the amount spent by Americans, one of the most travel-minded people in the world, increased fourfold from $400 million in 1939 to $1,600 million in 1959, but the share of E.C.A.F.E. countries in the increase was negligible.

The main reason for this, according to Mr. Ahmed, was the existence of certain handicaps in these countries such as travel barriers, including visa and currency restrictions, lack of trained personnel, luxury hotels and restaurants and publicity. These made the countries of E.C.A.F.E. region less attractive to foreign tourists than they would otherwise have been. In Mr. Ahmed's view, the budgetary allocations made by Asian Governments for tourist promotion was also inadequate.

The inadequacy of budget allocation for tourist development is nowhere so conspicuous as in India, a country which has tremendous potential for tourist development. It has an infinite variety of attractions for the tourist such as no other country can offer. The very fact that, in spite of this advantage, the inflow of tourists to this country, though it has improved considerably of late, is relatively small as compared with countries like France or Italy is clear proof that enough is not being done in this direction. In saying this, it is not our intention to throw cold water on those who are now in charge of tourist promotion under the leadership of Mr. S. N. Chibb, Director-General of Tourism.

It must be conceded that they have succeeded in raising India's foreign exchange earnings from tourism to a respectable figure of Rs. 22 crores in 1959 as against a mere Rs. 4.5 crores in 1950; tourism now ranks as the sixth largest foreign exchange earner. This growth shows how much more could be earned if only more effort and money were expended on development of tourism. Tourism was virtually neglected in the first Plan, with no financial provision made for it. The second Plan set aside Rs. 3.46 crores for the development of tourism in the country, except Jammu and Kashmir for which separate provision was made. Out of this amount, the share of the Centre was Rs. 2 crores and that of the States Rs. 1.46 crores. The Centre's share was subsequently reduced to Rs. 1.10 crores, so that the total Plan provision was no more than Rs. 2.56 crores. The sum of Rs. 5 crores earmarked for tourism in the third Plan, though about double the second Plan allocation, is still inadequate. The Tourist Development Council itself had drawn attention to this and had recommended, at its meeting held at Shillong in September 1960, that the allocation should be substantially raised to meet at least the minimum requirements of tourism. The Council put forward a number of suggestions for improving the facilities available for tourists. These included licensing of medium-sized cars as luxury taxis, provision of self-driven taxis for foreign tourists, relaxation of mileage restrictions on railway travel, issue of liquor permits valid for all States in India by Indian missions abroad. With a view to encouraging construction of more hotels, the Council had recommended provision of land at reasonable market rates for the hotel industry. The last of its recommendations received some cognisance at the hands of the Finance Minister who has provided in his latest budget certain tax concessions for building hotels, but their utility is restricted, as they will be available only for hotels constructed by joint-stock companies with the prior approval of the Government.

Apart from the provision of more and better hotels, transport facilities, etc., there are many apparently trivial and simple matters wherein there is considerable room for improvement. Attention to these has been drawn time and again by this journal. If the present seminar and the "Visit India" year planned to be celebrated this year result in the Government devoting more attention to tourism, they will not have been in vain.

INCOME-TAX AMENDMENT BILL

The reform of the basic structure of the Income-tax law in India, as well as some of its specific provisions, has been long overdue. As a result of frequent and uncoordinated changes in the Income-tax Act from year to year, the present law has become extremely cumbersome and harassing, besides providing ample scope for tax evasion. It was against this background that the Tyagi Committee and the Law Commission proposed a number of far-reaching suggestions for overhauling the entire Income-tax law. Their recommendations constitute the basis for the comprehensive Income-tax Amendment Bill, running into as many as 298 clauses, which was introduced in the Lok Sabha on Monday the 24th inst. This move is calculated to improve the efficiency of the tax collecting machinery, eliminate harassment of assessees, to stop the various methods of evading the tax payment and to achieve greater equity between different taxpayers. The Bill appropriately covers a wide range of subjects from the definition and clarification of some of the basic concepts like "income," "residence," "assessee," "assessment year," "dividend income" to such complicated issues like depreciation provision, development rebate allowance, double taxation, treatment of capital gains, the problem of tax liability of charitable trusts, etc. As the fundamental objective of the proposed legislation is to minimise the evil of tax evasion and the consequent injustice to honest taxpayers, the new measure rightly proposes changes in regard to the procedure for assessment, collection and recovery of tax, penalties imposable, exemptions and computation of taxable income.

Following the recommendations of the Tyagi Committee, several provisions have been deliberately introduced to expedite the recovery of taxes; these provisions are on the whole well-conceived. Under the proposed legislation, [illegible] will be required to file returns on their own by 30th June of every assessment year and delay in payment would mean payment of interest at 6 per cent on the tax payable by the assessee. But, at the same time, the Bill imposes an obligation on the authorities to pay interest at 4 per cent, if they delay beyond six months any refund due to an assessee. For the purpose of securing prompt payment of income-tax, the new legislation also seeks to give more powers to the income-tax officers. Under a special clause, the income-tax officer is empowered to send a certificate of arrears both to the tax recovery officer in whose jurisdiction the assessee may carry on business and to the tax recovery officer in whose jurisdiction the assessee may reside or may have any property. Once such a certificate is received, the recovery officer can recover the payment as if it were arrears of land revenue. The Bill further lays down stringent rules with regard to escaped income, in the case of which the income-tax officer is empowered to issue notices within a period of eight years from the end of the relevant assessment year. The special provisions pertaining to tax avoidance authorise the income-tax officers to deal more effectively than hitherto with transactions in securities and other dealings, where, in order to avoid tax, the interest and profits are transferred to persons other than the owners or to non-residents.

Some of the provisions in the proposed legislation dealing with tax evasion are somewhat softer than recommended by the Tyagi Committee. Thus, under the amending Bill a person who has helped an assessee in making a false statement or declaration of income shall be subjected to a penalty of not less than Rs. 500 and not more than Rs. 5,000. The Tyagi Committee actually wanted the abettor to be disqualified from tax practice in future. The Committee also wanted the names of persons found to have evaded taxes and on whom a penalty of not less than Rs. 5,000 was imposed to be published in the Government *Gazette* as well as in newspapers. It is not correct to say, as some do, that such deterrents are useless, for the knowledge that a tax-dodger's name will appear in the daily Press may act as a strong disincentive to submit false returns. A similar provision, it may be noted, exists in the tax statutes of some advanced countries also, such as Australia and the U.S., and has had the desired effect of discouraging tax evasion. The Government has accepted this suggestion in part, in that the Bill provides for the publication of the names of assessees found guilty of evasion in the official *Gazette*, but not in the newspapers also as suggested by the Committee. There is, however, no ban on the latter taking the information from the *Gazette* and giving publicity to it.

The Bill also rightly seeks to tighten up the provisions regarding the treatment of charitable trusts for purposes of taxation. In future, in case a charitable trust carries on some business which is not the primary object of the trust, the income from it would not be entitled to exemption from tax. Similarly, if under the terms of the trusts or the rules of the institution, any part of its income is utilised by any relative of the founder of the trust, its income will not be excluded from tax.

Another welcome feature of the Bill is the roping in of co-operative societies within the tax net. It is provided that the profits and gains of a co-operative doing business other than the specified types of activities and also any co-operative the income of which is in excess of Rs. 15,000 will attract taxation. This means that co-operative societies running transport services, or engaged in large commercial and industrial activity such as textile and sugar, will be subjected to taxation in the same way as joint-stock companies. This is only as it should be, because, nowadays, the co-operatives are being entrusted with functions which they were not supposed to do under the traditional ideas of co-operation. The fact that the relevant provisions in the Bill are clearly more stringent than even those recommended by the Tyagi Committee reflects the realistic attitude of its framers.

The investors as a body are also likely to feel the pinch as a result of some of the clauses in the proposed legislation, such as the clause pertaining to capital gains accruing to shareholders of companies in liquidation. Thus, a provision has now been incorporated in the Bill that the shareholders who have received any portion of the capital assets of the Company in liquidation shall be chargeable to income-tax under the head "capital gain." Investors will also be hit by the wider definition of "dividend" which purports to include bonus preference shares issued by a company out of its accumulated profits.

While allowing professional tax to be included in the allowances admissible for computing taxable income, the Bill seeks to tighten certain loopholes in computing income. Thus, perquisites in lieu of salary have been defined to include not only compensation for termination of employment but also compensation received in modification of the terms of employment. The Bill is also harsh on salary-earners, inasmuch as the treatment of gratuity as income will be in a more adverse fashion than hitherto. It would appear from the Bill that the entire amount of gratuity would be added to the total income of the assessee in the year in which he receives it, instead of spreading it over the last three years of service as is the case now.

There are, of course, a few concessions proposed to be granted in certain cases. In regard to depreciation allowance, for instance, the period during which the asset should not be sold or transferred is reduced from ten years to eight years. Another is that the concession of the non-withdrawal of development rebate if the asset is sold to the Government has been extended to assets transferred to a local authority, a corporation established under the law and to a Government company. Similarly, provision has been made for dealing with cases of hardship where a bad debt is written off in one year but the income-tax officer refuses to allow it for that year.

FINANCE BILL PASSED

The Finance Bill 1961 was passed by the Lok Sabha on Saturday the 22nd inst., after the House completed the third reading, with a reply by Mr. Morarji Desai, Union Finance Minister. The Bill as now passed incorporates certain changes in taxation announced by the Minister subsequent to its introduction on 28th February. It will be recalled that, replying to the debate on the budget on 17th March, Mr. Desai gave some tax concessions aggregating about Rs. 4.50 crores annually; the concessions included reduction in the effective incidence of increased excise on kerosene, compounded levy on small units of powerlooms, on cotton yarns of counts one to ten, and wool used in the manufacture of carpets. Further tax reliefs amounting to Rs. 1.64 crore were announced by him at the end of the second reading on Wednesday the 19th inst.; the reliefs are in respect of inferior coffee, powerloom units, newsprint, cosmetic and toilet preparations, glassware, chinaware, and porcelain-ware, and copper and copper alloys. Some minor adjustments in direct taxation were also announced.

All these tax concessions and adjustments are estimated to yield a total relief in taxes to the tune of Rs. 6.14 crores. As a result of this relief, the total proceeds (Rs. 63.17 crores, including the States' share of Rs. 2.30 crores) from additional tax proposals originally made in the 1961-62 budget are now placed lower at Rs. 57.03 crores. But Mr. Morarji Desai hopes that a part of the loss would be offset by higher yields from some of the new excises.

In the sphere of direct taxation, the Finance Minister has done well to reduce the tax on the dividends received by a foreign company from a non-subsidiary Indian company formed during the period 1st April 1959 to 31st March 1961 from 53 per cent to 40 per cent, which is the same as that in respect of a similar company formed after 1st April 1961. The concession has been given retrospective effect covering the period 1959-61. The Finance Minister has also withdrawn the proposal for specifying certain limits for entertainment expenditure allowance in respect of non-company assessees. The taxable limit for entertainment allowance will, however, continue. These changes are not of much revenue significance, but they place partnerships and one-man firms on the same footing as companies. The abolition of this discrimination is fully justified. Mr. Desai would certainly have earned the gratitude of investors if he had conceded their justifiable plea for completely abolishing the tax on bonus shares, restoring the cut in development rebate (from 25 to 20 per cent) and granting retrospective effect to the benefit of tax reduction (from 63 to 50 per cent) on royalty payments made to foreign companies now restricted only to royalties involved in agreements made after 31st March 1961.

The concessions in indirect taxes lately announced by the Finance Minister cover a fairly wide field. The excise duty on robusta and Liberia varieties of coffee has been reduced to

the original level of Rs. 41.35 per quintal. All powerloom units with three or four looms manufacturing cotton, rayon or silk fabrics are given complete exemption of excise duty payment provided they work only one shift. The concessions in regard to cotton textiles are in line with the assurance given by the Government spokesmen to the Cotton Mills Federation's representatives at New Delhi on 22nd March. Thus, the first 70 per cent of the production of automatic looms is exempted from the surcharge of 25 per cent and, out of the remaining 30 per cent output, any portion of the cloth exported will be entitled to refund of surcharge. The Finance Minister could have conveniently abolished the surcharge altogether, thereby avoiding several administrative difficulties which are not worth suffering. It must be remembered here that the cost of installing automatic looms is pretty high. Another modification covers yarn. The calculation of duty on yarn woven into fabric in composite mills is to be simplified by the proposed introduction of a compounded system of levy under which a manufacturer will be enabled to pay duty on yarn, together with the existing duty on fabrics at the rate of 1.2 nP per square metre.

The basic rates of import duty on art silk yarns has been reduced from Rs. 5.10 per kg. to Rs. 4.45 for yarns below 75 deniers, from Rs. 3.70 to Rs. 3.15 for 75 to 100 deniers, and from Rs. 3.10 to Rs. 2.75 for yarns above 100 deniers. The countervailing import duty rates, however, continue at the levels mentioned in the Finance Bill, the actual rates per kg. on the aforesaid three denier groups being Rs. 3.00, Rs. 2.25 and Re. 1.50, respectively. This concession had been announced earlier through a special notification.

As regards woollen yarn, provision has been made for alternative specific rates of duty for all yarns. The actual rates per kg. will be Rs. 2.10 for worsted yarn of 60 counts and above, Re. 1.60 for yarns below 60 counts and 40 nP for other worsted yarns. The duty on nylon twine (used for fishing nets) imported by fishermen's co-operative societies has been cut from 100 to 50 per cent, subject to the condition that the import is recommended by the Director of Fisheries.

The other commodities which have also benefited from the latest tax concessions are:—*Newsprint*: Import duty per quintal is reduced from Rs. 7.50 to Rs. 5 on unglazed or machine finished newsprint imported in reels, from Rs. 9 to Rs. 5.50 on other sorts and from Rs. 10.30 to Rs. 4.10 (original rate) on sheet newsprint for small newspapers. *Metals*: It is proposed to exempt by 25 per cent the duty charged on copper and brass sheets, circles, etc., which are issued out from rolling mills without trimming and cutting. The corresponding concession in the case of bronze sheets and circles will be 20 per cent. Exemption is also being given in respect of strips of copper and copper alloys used for making zari, stars and spangles. Further, strips and files recovered from scraps of copper alloy and used for making anklets, trinkets, etc., used by the poorer people as ornaments are also being exempted from duty. *Glass and glassware*: Factories employing not more than 20 workers and not using power are given exemption from duty in the case of glassware manufacturers who utilise broken glass as raw material; in the case of chinaware and porcelain, the limit is 15 workers. *Refrigerators*: The duty on refrigerators used for cold storage depots and food preservation, as well as that on air-conditioning machinery used not for comfort but for food preservation, is abolished. The countervailing duty paid at the time of import of compressors will be allowed when used in refrigerators produced in India. *Cosmetics and toilet preparations*: The limit of concession in the case of small manufacturers has been increased from 50 kg. to 75 kg. per month. *Medicines*: Clinical samples for laboratories and hospitals are exempted from payment of import duty upto a maximum limit of 5 per cent of the total duty-paid clearance. *Plastic moulding powders*: Powders manufactured from scraps of plastics are exempted from tax payment.

The Finance Minister must be given credit for making these adjustments which would help remove genuine hardships, without, at the same time, sacrificing substantial revenues. If he has not announced any other radical changes in his original tax proposals, it is not surprising. For the need for raising resources for implementing the third Plan is, as he himself reminded the House again, urgent and enormous.

ESTIMATES OF NATIONAL INCOME

THE *national income of India* (at *1948-49 prices*) *in 1959-60* was Rs. 11,760 crores as against Rs. 11,650 crores in 1958-59 and Rs. 10,480 crores in 1955-56. The *per capita* income at 1948-49 prices is placed at Rs. 291.6, as against Rs. 292.6 and Rs. 273.6. This is revealed by the eighth issue of the *annual paper on national income just released by the Central Statistical* Organisation. The estimates for 1958-59 are based on the methods of estimation followed for the earlier years and show a slight downward revision over the *preliminary estimates* published last year. The estimates for 1959-60 which are preliminary and based on partial material have also undergone a slight upward change as compared with the 'quick' estimates released in August last year. Unlike 1958-59 which recorded an all-round improvement over the previous year in both agricultural and non-agricultural output, the year 1959-60 registered only a marginal increase of Rs. 110 crores in the total net output. This was due to the fall in agricultural output in the year 1959-60, the contribution to national income from agriculture in that year was less than that in the previous year by Rs. 155 crores at 1948-49 prices. This, however, was more than offset by a rise of Rs. 265 crores in the contribution made by all the other sectors together.

Columns 2 and 3 of the statement below show the trend in net national output at current and at 1948-49 prices respectively during the last nine years 1951-52 to 1959-60. Columns 4 and 5 of the statement similarly set out the trend in *per capita* net output based on the 1941 and 1951 *population* Census figures. Census figures as on 1st March 1961 have since been announced by the Registrar General for all-India and for States. These figures are provisional and the rates of growth vary from State to State. Nevertheless, the figures in columns 6 and 7 have been worked out giving the trend of *per capita* net output based on population estimates, taking into account the all-India census figures of 1941, 1951 and 1961. These figures show a rise in National income in real terms of 12.2 per cent during the first four years of the second Plan period, as against 18.4 per cent over the first Plan period. Expressed at current prices, the national income stood at Rs. 12,840 crores in 1959-60, as against Rs. 12,600 crores in 1958-59 and Rs. 9,980 crores in 1955-56. The larger increase at current prices than at constant prices was, of course, due to increase in prices.

Year	Net national output (in Rs. 100 crores)		*Per capita* net output (in Rs.)			
			Based on 1941 and 1951 population census figures		Based on 1941, 1951 and 1961 population census figures	
	At current prices	At 1948-49 prices	At current prices	At 1948-49 prices	At current prices	At 1948-49 prices
(1)	(2)	(3)	(4)	(5)	(6)	(7)
1951-52	99.7	91.0	274.0	250.1	274.2	250.3
1952-53	98.2	94.6	266.4	256.6	265.4	255.7
1953-54	104.8	100.3	280.7	268.7	278.1	266.2
1954-55	96.1	102.8	254.2	271.9	250.3	267.8

1957-58	113.9	108.9	289.8	277.1	279.6	267.4
1958-59	126.0	116.5	316.5	292.6	303.0	280.2
1959-60 (preliminary) ..	128.4	117.6	318.4	291.6	302.3	276.9

MR. MACMILLAN'S M.I.T. SPEECH

The full text of the speech delivered by the British Prime Minister, Mr. Harold Macmillan, early this month at the Massachusetts Institute of Technology in the United States, is just available. The speech, comparable in some ways with the historic Fulton speech by Sir Winston Churchill in 1946, is a memorable essay in economic statesmanship and vision. These are precisely the qualities which will be increasingly required in the sixties, for, as Mr. Macmillan has so aptly put it, the real test in the struggle between communism and democracy will not be on the battlefield but in the market place. But the distressing fact today is that the means available to wage this economic struggle are circumscribed by a system of world trade and payments designed 15 years ago. The economic effect of the Sino-Soviet system and the economic force represented by the second Industrial Revolution in its scientific and technological sense have together underlined the need for larger economic units, transcending the familiar nation States, in the non-communist world and also newer international trading and financial arrangements to solve three supreme problems of the present time. These problems are how to maximise world trade, how best to organise assistance and capital to build up the less developed countries and how to finance an ever-increasing volume of trade and aid.

The British Prime Minister has not merely highlighted the problems but offered some very positive and constructive solutions for some of them. The first problem pertaining to world trade may well be solved partly, if not wholly, when the effort to create the largest area of free trade gets accelerated in the wake of possible success in European integration. How supremely important the present European effort is, may be seen from the following passage in Mr. Macmillan's speech:

"For us in Europe the urgent need is that of bringing together the Six and the Seven—now the Six and the Eight. I believe that we must and we can do this without detriment to our domestic interests or to our Commonwealth association and without injury to any other nation or group of nations. A comprehensive arrangements in Western Europe, not highly protective; looking outwards and not inwards; building up its own strength but ready to help others; this would be a real benefit to the whole Free World, both economically and politically. Economically it would take us nearer to a still bigger area of free trade. It would prevent much duplication of investment. It would stimulate trade and demand."

Since trade is any day better than aid, there is happily recognition in Mr. Macmillan's speech of the need for friendly adjustment between the European economic grouping and individual developing countries which are in a position to export manufactured goods. That such adjustment should be increasingly possible is borne out by the American agreement with Japan and the British agreement with Hong Kong, India and Pakistan in regard to textiles. So long as there is adherence to the broad rule that goods should be admitted as freely as possible into Europe, special modifications deemed necessary to prevent disruption of European industrial production may be easily negotiated with individual non-European countries. Still, trade would need to be supplemented by greater aid by the advanced countries to the less developed ones, and Mr. Macmillan's expectation seems to be that the newly constituted Organisation for Economic Co-operation and Development (O.E.C.D.), to be supplemented by the Development Assistance Group (D.A.G.), will organise aid in a more imaginative manner.

But the third problem of how to finance an ever-increasing volume of trade and aid will still be there, unless, of course, something like "a central banking system for all the countries of the Free World" is evolved. This, however, is an ideal solution which may be a long way off. Mr. Macmillan would, in the meantime, like to have an international arrangement under which there will be less imbalance of payments and a bigger credit base to finance expanding trade. His point that world trade has expanded four times in terms of money since before the last war but that the Free World credit base is only twice as big is quite telling in this context. The British Prime Minister has squarely posed the question as to why it is necessary to prevent the accumulation of reserves by particular countries. But he has suggested no specific means whereby the present imbalance of world payments and reserves can be eliminated or at least minimised.

ON THE ARENA

By The Archer

Private Sector Enterprise in the Construction of Highways

EUROPEAN experience seems to indicate that motorways would be constructed at a faster rate if private capital is attracted to road-building programmes than if the State was in charge of such projects. The U.K. Ministry of Transport has entrusted to a study-group the examination of the question whether the British motorist should be required to pay tolls on the new motorways, and its findings are expected to be announced shortly. An influential section of public opinion in the U.K. is not in favour of the imposition of tolls (except on new bridges and tunnels) and the A.A. is also reported to be opposed to the levy of charges on motorways. But elsewhere in Europe (as, for instance, in Italy and France) and in the U.S.A., the maintenance of highways, by collecting tolls from users, has been in vogue for several years, and has come to be recognised as a very effective method of achieving and sustaining progress. Italy was the first country to entrust the construction of motorways to private enterprise. The first *autostrade* were built in the early twenties. There has since been a combination of private enterprise and State participation. Companies who built the *autostrade* were usually given a thirty-year lease, at the end of which period the roads reverted to State control, and the toll was reduced to a nominal levy. There are about 700 kms. of highways at present in use, half of which have reverted in this way. At present, there is a project linking Milan and Naples by the *Autostrada del Sole* which is being financed up to 70 per cent by the Instituto della Reconstruzione Industriale, which is a State-controlled body with private shareholders, the balance of 30 per cent being borne by the State. The charge on this road is reported to vary according to the type and weight of vehicle, and is reduced on Sundays. A private car using the 125 miles from Milan to Bologna may pay the equivalent of about Rs. 13.33 and a truck may pay double.

This type of joint State-*cum*-private project is adopted also in France, and, in one stretch of 33 miles the toll charged is the equivalent of about Rs. 2. The spectacular Tancarville suspension bridge at the mouth of the Seine, which cuts the journey from Le Havre to Caen by about 65 miles, was erected by the Municipality of Le Havre at a cost of more than £5½ million, and the expenditure is being recouped by a graduated system of tolls, the small car paying the equivalent of Rs. 4.33 and the heavy truck more than double. It is in America that the toll system is most developed. There are eighteen major highways charging toll at the equivalent of about 10 nP per mile covering a distance of 3,250 miles mostly in the industrial north and north-east. All these are under State control and were built with public funds.

All this is of interest to us in the context of our need to have modern motorable highways connecting our large cities with each other, and with their feeder towns, as also the newly developed industrial centres and steel cities with the major consuming centres for movement of manufactured products. To begin with, these highways need not be of the same type or specifications as the *autostrade* in Italy or the *autobahnen* in Germany, for which the acquisition of property rights all along the way may be a major hurdle as also the by-passing of small towns that lie *en route*. But they must be very much wider than they are at present and of better structure and able to stand greater wear. A beginning could be made, for instance, with having such improved motorways replace the existing roads connecting Bombay with Poona, Calcutta with Asansol, Madras with Bangalore and so on, and entrust these constructions to private enterprises with power to levy tolls which will be justified by the improved amenities provided. Such highways might eventually be the answer for avoiding industrial concentration in the large cities or in their close vicinity, and might also facilitate a kind of wholesome ribbon development *en route* so that greater dispersal of industries (and population) is possible over a period of time. Perhaps, a study group, consisting of competent engineers, transport specialists and entrepreneurs, may be formed for examining the possibilities of developing super-motorways in the country, with the help of the private sector, benefiting, where possible, by the experience of countries like Italy and France in the matter of recouping the outlay through recovery of tolls.

Pattern of Ownership of Government Debt

From statistics published by the Reserve Bank of India it is found that the pattern of ownership of the combined Central and State *Government securities* as at the end of March *1960 is as follows*:

	Rs. (crores)	Percentage to total
1. Governments	262.9	10.2
2. Reserve Bank of India ..	466.9	18.1
3. Commercial and co-operative banks	732.5	28.4
4. Life Insurance Corporation ..	305.7	11.8
5. Other insurance	28.7	1.2
6. Provident funds	173.2	6.7
7. Industrial Finance Corporation and State Financial Corporations	3.2	0.1
8. Reserve Bank of India (a/c others)	41.2	1.6
9. Non-residents	34.5	1.3
10. Others (residual)	531.7	20.6
Total ..	2,580.5	100.0

Of the Governments' holdings of about Rs. 263 crores (item No. 1), the Central Government's share was only Rs. 5 crores, while the balance of Rs. 258 crores was held by State Governments under heads like Cash Balance Investment Account, Sinking Fund Investment Account, Zamindari Abolition Fund Account, Famine Relief Fund, Depreciation Fund, Electricity Reserve Fund, etc. In item No. 3, most of the holdings were of scheduled banks (Rs. 688 crores), the holdings of non-scheduled banks (Rs. 10 crores) and co-operative banks (Rs. 34 crores) being negligible. As regards item No. 10, a survey of about two-thirds (Rs. 345 crores) collected from fifteen scheduled banks in regard to securities held by them as agents/custodians on behalf of constituents revealed that Rs. 171 crores were on account of trusts, Rs. 57 crores were on account of local authorities, Rs. 38 crores on account of joint-stock companies and only Rs. 79 crores on account of individuals. Assuming the same pattern of distribution for the entire residual figure, it would seem that the total holdings of individuals are not likely to exceed Rs. 122 crores, that is 4.7 per cent.

This summary provides considerable food for thought to the Finance Ministry, for, as it would seem, the major portion of the amount borrowed by the Government is from sources controlled by it. The contribution of the private citizen, of his own volition, being only to the extent of 4.7 per cent, the irresistible conclusion follows that Government securities are not popular. The reasons can only be that their yields are poor, they have slumped in market value, and do not provide any cover against inflation. The future borrowing programmes of State Governments and the Central Government may expect support only from institutions under their control, for the commercial banks may also have to be counted out under existing conditions of acutely scarce resources.

Economic Survey of Switzerland—1960

Through the kind offices of a friend, I have just received a book published by the Union Bank of Switzerland containing an economic survey of the country for 1960, which provides most interesting and satisfactory reading; satisfactory in the sense that it talks of prosperity all round and in every sphere of economic activity. Much of what I record below are extracts from the book.

Generally speaking, the Swiss economy enjoyed a boom. A much bigger volume of residential building than previously, greater industrial capital expenditure and a high level of domestic consumption provided the main stimuli. While Swiss exports registered maximum figures, a lively state of business activity expressed itself also in the high import figures. Economic expansion was limited most of all by a shortage of labour. Although as many as 435,000 foreign workers, subject to special registration, were listed with the Swiss authorities, almost all sectors of the economy had trouble in finding adequate personnel. Exports in 1960 were 12 per cent higher than in 1959, and amounted to 8,131 million francs. The total value of imports in 1960 reached 9,648 million francs, which was 17 per cent higher than in 1959. The balance of trade thus showed a deficit of 1,517 million francs (as against a surplus of 758 million francs in 1959), but the payment surplus went down only 21 per cent because the income from invisible exports—tourist trade, capital revenues, services etc—had risen. The country's consumption of electrical energy showed a large increase of 2,029 million kw.h. The sales of the cement industry were expected to pass the 3-million-ton mark. There were increased influx of orders in the electro-technical and machine industries, the railroad engine factories, weaving loom factories and embroidery machine factories. The rolling stock industry was adequately busy, thanks to a big backlog of orders. Orders flowed copiously for the elevator industry, both from internal construction and from foreign markets. Motor truck factories were working to capacity, with a predominance of domestic business. While, in 1959, there had been a drop in the export of watches, exports during the first nine months of 1960 expanded 14.7 per cent to a total of 858.5 million francs. The various sectors of the woollens industry generally enjoyed a good degree of employment, and the stimulation of cotton industry which began at the end of 1959 was sustained. Silk and rayon weaving, silk ribbon manufacture, and the embroidery industry were all in prosperous condition, with a substantial backlog of orders and high sales, while the shoe industry had a very good year. The electro-chemical and electro-metallurgical industries were able to increase their output, while the continuing boom for bulk chemicals and pharmaceuticals which had been existing for some years was well maintained. The dyestuff industry raised its exports by about 20 per cent and the paper industry had an excellent year, with a production of 350,000 tons of paper and 130,000 tons of cardboard. The production of milk and milk products, including cheese, and of chocolates were on the increase, with offtakes at satisfactory price levels. By and large, the Swiss economy was enjoying, at the end of the year, a state of full employment.

There you are, a picture of dripping prosperity, and good tidings to surfeit. It is pleasing to hear that there does exist one country in the world where everything is bright and cheerful, where they buy from outside more than they sell and yet are cheerful about it, where vigorous all-round expansion seems to be delightfully easy and highly profitable.

Holidays Galore!

It seems to be almost a freak of modern humanism to propagate the theory of more leisure and less work, unmindful of the fact that large numbers of middle-aged people fade away more through ennui than increased activity. And so it happens that the easiest way of becoming thoroughly unpopular with people in this country is to suggest an increase in the hours of work and decrease in the number of holidays. Mr. C. H. Bhabha has thus courted a full measure of unpopularity by raising the subject in his speech at the Indian Banks' Association's Annual General Meeting in the third week of March in Bombay.

If progress is measured in terms of leisure enjoyed, we in India seemingly constitute the most progressive nation in the world. While the U.K. and the U.S.A. have ten and eleven public holidays, respectively, each year, and the Scandinavian countries and Belgium even less, we enjoy as many as twenty-seven holidays, but there is another Eastern country coming a close runner-up, namely, Japan with twenty-two holidays. However, our holidays are not of the same number for each State. For instance, Madras and Andhra have seventeen each, Kerala and Mysore nineteen each, West Bengal twenty-four and Bombay twenty-seven. By this yardstick, Bombay, which leads in the maximisation of leisure for its working people, is the most progressive State in the Indian Union! Bombay's holidays, however (quite a few of them are in honour of our national heroes) remind one of what Franklin wrote in *Poor Richard's Almanack:*

> "How many observe Christ's Birthday!
> How few his precepts!
> O! 'tis easier to keep holidays than commandments."

Indications are that, as more and more importance is given to the observance of sectional loyalties all over the country, there is likely to be a never-ending increase in the number of holidays. So it would be good to keep in mind what Bernard Shaw said in *Parents and Children*, namely, "A perpetual holiday is a good working definition of Hell."

THE DUNLOP RUBBER COMPANY (INDIA) LTD.

MR. JOHN LUCKHAM'S REVIEW

FURTHER MAJOR EXPANSION IN PRODUCTION PLANNED

THE demand for all the products of the Dunlop Rubber Company (India) Ltd., is running ahead of its production. The Directors have a plan for a further major expansion in the Company's business to meet this situation. The arrangement made with Dunlop Rubber Company Ltd., London, for finding foreign exchange is awaiting the consent of the Government. This information was given by Mr. John Luckham, Managing Director of the Company, in his speech at the Thirty-fifth Annual General Meeting of the Company held at Calcutta on Thursday, 27th April 1961.

The following is the full text of Mr. Luckham's speech:—

" GENTLEMEN,

" The Directors' report and accounts have been in your hands for some time, and, with your permission, I will take them as read.

The Year's Trading

" Our Ambattur plant reached full production during the year and, even with higher output from Sahaganj, we were still unable to meet the demand for our products. With the increasing demands of Government, vehicle manufacturers and transport operators, a difficult situation arose in the replacement market for truck and bus tyres. In consultation with the Government of India, we took a leading part in moves by the tyre industry to encourage the formation of Tyre Dealers' Associations to ensure equitable distribution of the sizes in short supply at list prices, and I am glad to say that the majority of these Associations have functioned efficiently and to the satisfaction of both Government and truck operators. The manner in which this task was carried out reflects great credit on both tyre dealers and consumers.

" Our tyres continued to find ready acceptance with consumers and we were able to make increased supplies of our Highway truck and bus tyres, which proved extremely popular. Our car tyre remains the first choice of the discriminating motorist.

" There was a further increase in bicycle production during 1960 and it became difficult to meet all the demands made on us for cycle tyres and rims. However, I am glad to say that we were able to step up our exports of cycle tyres to South-East Asian markets and thus make a contribution to Government's export drive.

" Sales of industrial rubber products increased partly as a result of additional output from the vee-belt expansion, mentioned in my speech last year. The equipment for an expansion of conveyor belting manufacture has been installed and trial production is in progress. With the increasing demand for this product during the third Five-Year Plan, we are confident of utilising this capacity in full.

" Dunlopillo sales showed a further gain, but, despite the substantially higher output achieved through increased productivity, we were still unable to meet the demand. The requirements of the car manufacturers show an upward trend and the fulfilment of the targets of the third Five-year Plan for vehicle production will necessitate an increase in our manufacturing capacity.

Expansion Plans

" You will see from the above that there is still a big demand for many of the Company's products which cannot be met, and the Directors have in hand a further major expansion of the Company's business, particularly in respect of our factory at Ambattur. This will require a substantial amount of foreign exchange and, in order to arrange this, a short visit to the U.K. was recently undertaken by myself and your Finance Director. I am pleased to say that, subject to Government approval, we are able to report that Dunlop Rubber Company Limited, London, are prepared to put the necessary sterling at our disposal initially in the form of a loan to be converted into equity capital at a later date. Negotiations and discussions with Government are now in progress, but the Directors are not yet in a position to put forward their recommendations regarding capital reorganisation.

" The consumption of natural rubber in India has been rising at a faster rate than productivity, and we are, therefore, increasingly dependent on imports. However, there are signs that long-term steps are being taken to improve production. Moreover, the opening of the Government-sponsored synthetic rubber factory in 1962 and the development of plans to produce locally other important raw materials such as rayon, rim strip, carbon black and certain rubber chemicals will greatly reduce the industry's import requirements, and so save foreign exchange.

Finance Bill, 1961

" The recent Budget proposals did not change the rate of company taxation, but they did enhance the amount of tax payable by companies through reducing the allowance in respect of development rebate from 25 per cent to 20 per cent. However, the increase in certain customs duties will have an adverse effect on costs, whilst the relief in respect of excise duty on cycle rims will not benefit our Company. The introduction of a slab system for charging excise on cycle rims on the same principle as cycle tyres, would have been more equitable.

" The reduction of the tax on bonus issues from 30 per cent to 12½ per cent is a step in the right direction, but we are of the opinion that this tax should not be applied to reserves created on account of share premiums.

Profit and Loss Account

" The profit for the year, after providing for depreciation, interest and taxation, was Rs. 1,24,56,228 as compared with Rs. 1,18,04,533 for 1959. As you will have seen from the Directors' report, the profit after tax as a percentage to sales declined from 4.56 per cent last year to 4.08 per cent. This was almost entirely due to the high cost during 1960 of imported natural rubber, which we were not able to recover fully in our selling prices.

" Excise duty is almost Rs. 1,72,00,000 higher than 1959 due to the higher volume of sales, on the one hand, and the new levy of excise duty on cycle rims which was effective from 1st March 1960, which accounted for approximately Rs. 59,00,000 of the increase. It is relevant at this stage to mention that the high excise duties leviable on our products absorb a considerable amount of working capital which earns nothing for the Company. This is a matter which is constantly under consideration by your Directors, and was represented to the Reorganisation Committee for Central Excise Duty when they visited Sahaganj recently.

" The tyre industry has borne a major burden of excise duty for many years and now the net has spread from the finished article to include certain raw materials, and has also been imposed on certain process materials inside the factories. The administrative difficulties and additional work which these latter extensions involve are considerable.

" The amount of bank overdraft interest this year has also substantially increased due to the higher working capital requirements arising from our increased trading activities and the increase in the rate of interest from 5½ per cent to 6 per cent from 1st October 1960.

" As you will have already observed, a sum of Rs. 17,00,000 has been transferred to development rebate reserve and a sum of Rs. 37,50,000 is appropriated to general reserve.

" The Directors are recommending an ordinary dividend for 1960 at the rate of 21.5 per cent subject to tax, which is the same rate as last year.

Balance Sheet

" The net increase in fixed assets during the year was approximately Rs. 22,00,000, principally on account of plant and machinery. Stock inventories increased by Rs. 84,00,000, on account of the higher level of output and sales, coupled with the increased cost of raw materials previously mentioned.

" Investments have risen by approximately Rs. 2,00,000 due to increased deposits with the Madras electricity system and the railways.

" Sundry debtors have increased in line with the larger volume of sales, as have also the current balances with the customs, railways and other authorities.

" On the liabilities side, the larger borrowings through bank overdrafts, usance promissory notes and acceptances have been necessary to finance the larger working capital required for the greater volume of output from both our factories.

Indianisation and Management Training

" In pursuance of our policy of progressive Indianisation of the management cadre, we continue to pay special attention to training which we regard as being of vital importance. Our staff must be kept fully conversant with the latest techniques and methods of manufacture and with future technical and production developments in the Dunlop Group. We are fortunate in being able to send selected personnel to our associated factories in the United Kingdom, Germany and France, and, in recent months, eleven senior employees from our factories have been overseas for this purpose. It is hoped that foreign exchange restrictions will not prevent us from continuing this policy.

" There are also growing facilities for normal management training within this country and in particular I would like to express our appreciation for the good work which has been done by the Administrative Staff College at Hyderabad. We are taking full advantage of the opportunities which that institution offers and several of our managers have already completed a course there.

Employee Relations

" Last year, I mentioned in my review the labour unrest early in 1960 at the Sahaganj Factory. Since then, I can report that labour relations there have been satisfactory. Established negotiating procedures have been followed, go-slow tactics have been discontinued, and discussions between management and workers have been fruitful, particularly in respect of increased productivity, with greater reward to our workers. I am hopeful that our relationships with our employees in both factories will continue to be good, and that our future problems can be satisfactorily solved in the constitutional framework that exists.

" We have worked towards building up a team spirit throughout our factory organisations, which will stand us in good stead in the future. Working and living conditions for our employees are regularly considered, and improvements have been made in welfare facilities and factory working conditions.

" I believe there is a growing realisation that the Company's achievements are attributable to everyone concerned—shareholders, management and employees, whether in the factory or the office. All are interdependent and the success and welfare of the Company relies on the contribution each one makes.

" I am sure that you will wish to join the Directors in extending their sincere thanks to all who have continued to give staunch and loyal service."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

BIHAR CABLE AND WIRE INDUSTRIES

The public issue of the Bihar Cable and Wire Industries Ltd. will open for subscription on 1st May and close on 10th May or earlier but not before 4th May. The issue amounting to Rs. 7.81 lakhs, consists of 48,092 equity shares of Rs. 10 each and 3,000 7 per cent., tax free, cumulative redeemable preference shares of Rs. 100 each. Of the equity issue of Rs. 4.81 lakhs, the Directors and their friends have agreed to subscribe Rs. 60,920 (6,092 equity shares), so that the amount offered to the public is Rs. 4.20 lakhs (42,000 shares), the whole of which has been underwritten.

The Company has taken over two units, which have already schemes for producing cables and wires, located at Digha, near Patna in Bihar. The Khemka Cable Works will produce 24 million yards of rubber insulated cables upto 660 volts for domestic industrial electrification and 600,000 yards of welding cables required for the installation of heavy and light structural constructions. The major part of the construction of the factory has been completed, and the plant and machinery are expected to be delivered in about three months. The Bihar Wire Industries has two schemes, one for the manufacture of 1,500 tons of galvanised wire per annum and another for the manufacture of 700 tons of barbed wire and wire nails per annum. The latter unit is expected to go into production in about three months, while the galvanised wire unit is scheduled to commence operation in January 1962.

The Company proposes to increase its wire drawing and galvanising capacity from 1,500 tons to 12,000 tons. It has applied for an industrial licence and is in touch with foreign firms for technical collaboration. The capital outlay on the new project is estimated at Rs. 39.80 lakhs, which is to be met partly from public subscription and partly through loans from credit institutions, including a loan of Rs. 5.75 lakhs from the Bihar State Financial Corporation.

THE NEW IMAGE OF JOINT-STOCK COMPANIES

ITS ACCEPTANCE WILL RESOLVE EXTERNAL AND INTERNAL PRESSURES

By D. L. Mazumdar, I.C.S.

Secretary, Union Ministry of Commerce and Industry, Company Law Administration

IT is a commonplace of textbooks on the growth and evolution of the modern industrial society to describe the joint-stock company, or the corporation as it is called in some parts of the world, as the most important institutional innovation in the field of trade and industry, comparable in its impact and ramifications with the invention, in the relevant technological field, of the steam engine as a source of motive power. Yet to most seasoned businessmen and their professional associates, namely the practising company lawyers and accountants, the joint-stock company is only a convenient legal device for trade and industry to be carried on by men of enterprise and practical imagination with the help of resources provided by others not so clever or enterprising within a legal frame, which not only lays down the broad outlines of its constitution, but also prescribes an elaborate system of rights and liabilities, under which organisation, capital and labour are brought together in a particular form of relationship which, it is claimed, constitutes the essence of private enterprise.

In this view, Company Law is regarded, essentially, as a legal code for the formal systematisation of the structure and mode of operation of a special type of economic institution and of a complicated nexus of relationship which binds and holds together the different interests which enter into the formation and management of joint-stock companies. This has been the traditional view of the joint-stock company in this country, as, indeed, it was also so, in the industrially advanced Western countries of the world as, for example, the United Kingdom and the United States of America, till a few years ago. The new image of the joint-stock company, which has recently emerged in those countries is, however, basically different from this traditional picture. It is this image which I should like to present to you, as briefly as I can, for it seems to me that a similar image is slowly but as surely emerging even in our country, and it may not be the part of practical wisdom for any of us to ignore the signs of the times. It is not easy to develop this theme adequately within a short space of time, but, in order to fix your thoughts, I would start off by saying that what I have described as the traditional view of the joint-stock company presents a wholly inadequate image of this institution, in legal theory as well as in the perspective of history; and that, in any case, it hardly takes into account the realities of power and authority which the corporation exercises in the modern society. For myself, this hiatus between the traditional view of the joint-stock company and the sociological reality which it now represents is the most important single factor which renders its harmonious functioning in a disciplined social order needlessly difficult.

Legal Theory

So far as legal theory is concerned, I need hardly point out that the company has always been recognised as a body corporate, with a separate personality of its own. A joint-stock company, in law, is not "property" which belongs to anybody including the shareholders; for the simple reason that it is not capable of being "owned." As has been expressly stated by a distinguished English writer, "A company is self-owning, possessing a corporate personality, which expressly gives it the power to hold property and to engage in specific activities," but it cannot correctly be regarded as "property," and, therefore, strictly speaking, it is a misnomer to talk of the "ownership" of a joint-stock company, just as it would be a misnomer to talk of the ownership of the Port Trust of Calcutta or say, the Institute of Chartered Accountants. Believe me, this is no mere legal hair-splitting. The important practical consequences, which follow from this legal concept of the joint-stock company, have, in fact, been indicated in many judicial decisions in England and also in this country, although these decisions do not appear, so far, to have made any appreciable impact on the traditional image of the joint-stock company in this country, and have, I fear, done little to influence the behaviour pattern of those in charge of their management. And yet, if our practical businessmen would only read, mark and inwardly digest the far-reaching implications of the dictum of Lord Justice Evershed, now I believe the Master of the Rolls in England, in the famous case of Short Brothers decided in the English Court of Appeal as early as 1947, they will be able to see for themselves, however dimly, the new image of the joint-stock company which has already emerged. "Shareholders are not in the eyes of the law," said Lord Evershed, "part-owners of the undertaking. The undertaking is something different from the totality of its shareholdings." If this is the true concept of the joint-stock company in legal theory, even hard-boiled lawyers must accept the fact that the fundamental interest of the joint-stock companies is a matter which must be deemed to be the concern not merely of shareholders—much less only of the directors or the management—but also of the entire community. This is not to deny the vital stake of the shareholders in a joint-stock company or their paramount responsibility for its good management but only to underline a fact which has been always implicit in the legal concept of a joint-stock company, namely, that a company is essentially a partnership in the widest sense of the word, between the promoters, organisers, the shareholders and the wider community in which it functions and whose interest must be secured as much by its activities as the legitimate private interests of those who engage in production, distribution and marketing. The striking of this balance among the interests concerned is, indeed, the basis of the best modern company practice in all advanced countries of the world, but it is only in a relatively few countries, including, perhaps, ours—if I may say so with some pardonable pride—that the provisions of the law have recognised, albeit partially, the social implications of the realities of corporate personality.

Early History

I shall now hurriedly turn to history. Those of you who are students of legal or economic history will recall that the charters of the earliest joint-stock companies or corporations were not merely instruments to organise their internal management; instead they created what were, in effect, branches of public administration. The companies of the mercantile period, you will recall, were charged with the responsibility for commercial regulation and fiscal administration in particular spheres of foreign trade and were equipped even with military forces and their own courts of law. To an Indian audience, the constitution, authority and the activities of the East India Company have only to be mentioned to illustrate this statement, but the East India Company was only a prototype of many other similar joint-stock companies or corporations in other parts of the world, which were created by specific charters. Thus, the first charter of "the Company of Adventurers and Planters of the City of London for the first colony in Virginia" in the U.S.A. founded in 1606 vested in certain "loving and well-disposed subjects" of His Brittanic Majesty, Knights and Gentlemen, not only "the right to take up the part of the royal domain in America for a colony but to exercise in it some of the powers of the English Crown, including the creation and management of military forces and the coinage of money." It is unnecessary to multiply instances. What I am trying to emphasise is that the joint-stock companies or corporations of an earlier age were created as much for a public purpose, namely, to serve as a branch of public administration in some specific fields in specific geographical areas, as for carrying on commercial activities properly so-called. Historically, therefore, the joint-stock companies created by special charters were entrusted with duties and responsibilities, together with the requisite powers and authority, which sought to bring about an adjustment between the public and the private interests, as these concepts were then understood. To quote an acute student of American legal history: "The charters of the seventeenth century were instruments by which private persons served public purposes; nineteenth century charters tend more and more to become instruments, by which private groups used the franchise granted by the State to serve their private interests."

The great change in the basic relations between the public and the private interest in the control of the organised sector of the economy came with the abandonment of the special Acts of incorporation which were the principal instruments for the incorporation of joint-stock companies till the beginning of the nineteenth century, and the adoption in their stead of the general laws of incorporation, e.g., the first comprehensive Companies Act of 1862 in England on which the First Comprehensive Indian Companies Act of 1866 was based. A series of similar general laws was passed in the successive years. It was under these general laws of incorporation, which replaced the special Acts of incorporation of earlier periods, that the joint-stock companies, for the first time, acquired the authority to draw up their own constitution, to set up their own management structure and to regulate their working methods and practices in such manner as they liked, within the overall framework of the prevailing general law relating to the incorporation, management and winding-up of companies. This was in marked contrast to the provision of the earlier special Acts of incorporation, which invariably laid down the limits of these powers and the manner in which they were to be exercised in relation to the State. It was this historical change which, again, made it possible for the promoters, organisers and the management of joint-stock companies, for the first time, to define for themselves the basic values underlying corporate activities without any guidance or control from the State as in the special Acts of incorporation in the earlier centuries.

Assumptions Reassessed

While these historical stages in the development of Company Law in the Anglo-Saxon countries are known to most students of legal and economic history, it is unnecessary to comment, in this context, on the underlying political, economic and social changes which brought about this development. I would, however, pause for a moment, at this point, to draw attention to one aspect of this historic development, which has been overlooked even by many serious students of legal history or mercantile law. This development, it will be recalled, coincided with the period of mid-Victorian liberalism, which held, more or less, its uninterrupted sway right upto the beginning of the twentieth century. This was also a period of rapid growth and expansion of corporate enterprise. That is why, during this period, the need for an adjustment between the basic private values underlying corporate enterprise and the fundamental values of the society in which corporations functioned was not readily felt and was therefore ignored. A change was, however, already in the offing. The great moral, spiritual and intellectual ferment, sparked off by the First World War and its aftermath, led to a prolonged and sustained mood of introspection all over the West. This necessarily led to a re-assessment of the fundamental assumptions and postulates underlying all significant social institutions, including joint-stock companies. The view was widely and increasingly held that, if the system of private enterprise as operating in the organised sector of the economy was to be preserved, strengthened and developed in the years to come, the existing internal and external tensions which impeded its growth and expansion must be removed. This, it was felt, could be firmly ensured only if the basic values underlying joint-stock enterprises could be integrated with the fundamental values implicit in the concept of the public interest, and, if the former were enabled to function in continuous harmony with the social environment in which they operated.

Recognition of this fundamental fact by the practitioners of trade and industry was understandably slow to come. For ideas, as much as life in the biological world, must go through their periods of gestation! However, shortly after World War II, and, indeed, as a consequence of the further stirrings of thought provoked by it, a rapid change came over the thoughts of many of the most seasoned businessmen in the U.K. and the U.S.A. To cut short a fascinating story in the post-war development of ideas on this subject, it would suffice if I

reproduce two representative extracts from the writings of two distinguished students of the contemporary corporate scene in these countries. Commenting on the formal recognition of their social responsibilities by businessmen in the United States of America shortly after World War II, one American observer said:

"Prior to World War II, much of their social thinking had been reflected in attacks on the New Deal and on organised labour, with strong feelings of persecution and bitter resentment against the authors of new restrictions. Nevertheless, the experience of the thirties combined with world-wide tendencies towards social control and socialisation of business, has led businessmen to think deeply about the condition which must be met if the private enterprise system is to continue as the basic economic organisation in this country.... It is only within the past few years that large numbers of business leaders have publicly acknowledged and actively preached the doctrine that they are servants of society and that management merely in the interests of stock-holders is not the sole end of their duties. Indeed, discussion of the 'social responsibilities of business' has become not only acceptable in leading business circles but even fashionable."

and again,

"In keeping with the businessman's production-oriented economics, he regards his primary responsibility to be the achievement of ever-expanding production. This calls for operating efficiency, research, incentives to workers, productivity, growth of capital, aggressive sales promotion, and low prices. In achieving the goal of increasing production, the businessman regards the making of a profit as his first and foremost duty. To him a profit is a house of cards. It cannot grow or provide more jobs or pay higher wages.... Having laid down this general principle, a considerable number of businessmen, however, express the view that the directors of a corporation are trustees, not alone for stock-holders or owners, but also for workers, suppliers, consumers, the immediate community, and the general public. According to this view, the board of directors should serve as a mediator, equitably balancing the legitimate interests of the several principal beneficiaries of corporate activity. The duty of the directors is to see that the interests of each group are fully recognised and protected."

In the list of progressive businessmen, the author includes the heads of many well-known American business houses, for example, the then Chairmen of the General Electric Company of U.S., the General Foods Corporation, etc.

Thinking in U.K.

A similar shift of thought was equally noticeable in thinking circles in the U.K. Many of you may recall the path-breaking book on *Ideals and Industry*, by the late Samuel Courtauld (of the famous House of Courtaulds) published in 1949, which made a profound impression, at that time, even on the most conservative and orthodox business circles in the U.K. I would not go into recent developments in that country, but would cite only a few comments by a well-known English writer as follows:

"Industry in the twentieth century," he comments, "can no longer be regarded as a private arrangement for enriching shareholders. It has become a joint enterprise in which workers and management, consumers, the locality and Government, all play a part. If the system which we know by the name of private enterprise is to continue, some way must be found to embrace the many interests which go to make up industry in a common purpose....

"A nation's institutions are the practical outcome of its prevailing philosophy, whether that philosophy is consciously held or not. We English take pride in our pragmatism and capacity to improve, and justify our confidence by the appeal to history. Our capacity to 'muddle through' is proverbial.... But we must not assume from this that we can safely leave our institutions to grow by themselves. Sir Henry Maine, in his now classic book *Ancient Law* has shown that, in progressive societies the formulation of social purpose in as precise a legal form as possible is essential to further social growth. Without it, democracy becomes impossible. Democracy can exist only when law is codified and written, and the greater or less happiness of a people depends on the degree of promptitude with which the gap between social opinion and law can be narrowed."

This observation, I need hardly add, was made not before but after the English Companies Act of 1948 was passed into law. The Report of the Cohen Committee in England on which the English law of 1948 was based was, unfortunately, completely untouched by the post-war developments in thinking on the role of joint-stock companies in the modern society, and, therefore, throws up an image of the joint-stock company which is basically unrelated to the realities of corporate authority, power and responsibility. Fortunately for England, in this, as in many other fields of English life, the hiatus between law and life has been largely bridged by the high average standard of corporate practice and corporate behaviour, on the part of the leaders of trade and industry in that country, much above the minimum standards laid down by the English law—a fact which the admirers of English ways and methods in this country do not always remember to emulate in practice.

In India

So far as our own Company Law is concerned, this is not the occasion to comment on the philosophy or the basic purposes underlying it, or to hazard any views on the success of its attempt to give shape and form, however, clumsily it may be, to the new image of joint-stock companies. I would, however, like to record for your information that, in course of my many discussions in the U.K. and the U.S.A. with learned and discerning students of the yet unexplored borderland of mercantile law, politics, economics and sociology, I have discovered that, while many detailed provisions of our laws have necessarily come as a surprise to many of them, they have had no difficulty in recognising the central fact that we, in this country, are striving, in our own way, to create the same new image of joint-stock company in this country, as has already emerged in other countries, may be more through rules and regulations based on them rather than through the example of enlightened business leadership on a large scale. In saying this, I need hardly add that I am referring to the views of those who, by study, training and experience, are capable of taking a global view of law in relation to the life which it seeks to regulate, and not to the views of the practitioners of the market place from those countries, who come over to us from time to time as consultants or experts to advise us on many matters, but who have not had the training or understanding to grasp the essential relativity of economic institutions and the varying role of laws in their application to such institutions.

In conclusion, I feel very strongly that, unless all of us, who are concerned or connected with the corporate sector in this country, and wish it well, recognise the new image of joint-stock companies which is slowly emerging at a distance, we shall never attain the heights which the organised private sector of this country is fully capable of reaching. I shall spell out my reasons for arriving at this conclusion:

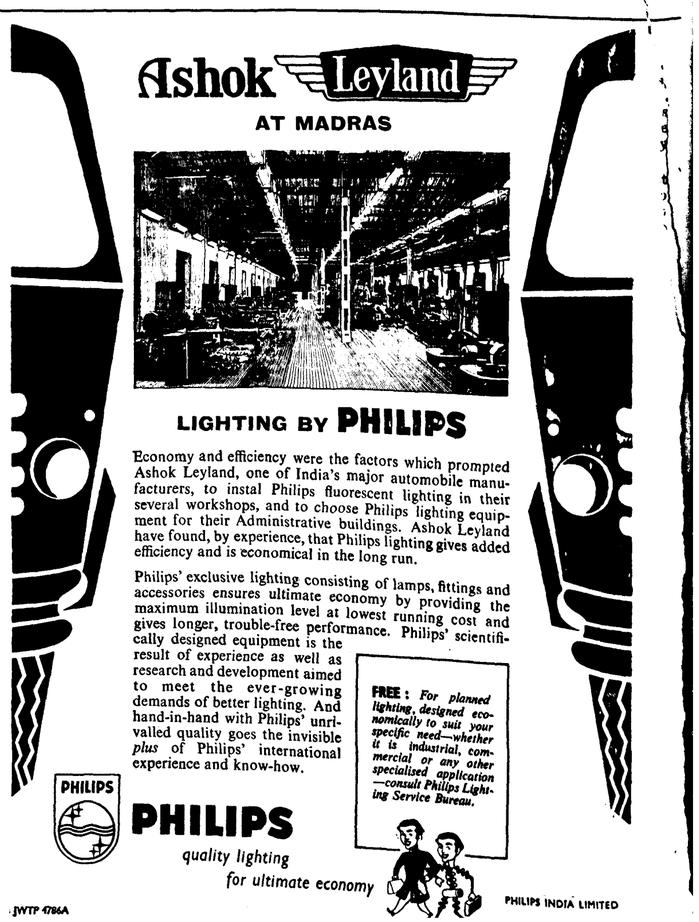
1. In the first place, as I view the corporate scene in the present and in the near future, it is the willing acceptance of this new image of the joint-stock company by all concerned that alone, it seems to me, can resolve the internal and external tensions to which our present-day joint-stock enterprises are inevitably subject, and which cannot be effectively eased by any other means.

2. Secondly, it is my belief that the acceptance of this image will enable the business community to find meaning and significance in many of the detailed provisions of the basic law relating to joint-stock companies, which now appear to them mostly as frustrating irritants, and thereby help them not only to be in tune with the social environment around them but also to further the accepted basic values of the society, while they promote their own business interests.

3. Thirdly, the recognition of this new image by the business community at large will, I feel confident, add new dimensions to the existing inadequate and somewhat perfunctory inter-relations between the accredited organs of trade and industry and the agencies of the State, thereby helping the former to make much deeper and more effective impact on the formulation and execution of our national policies.

When corporate methods and practices are impregnated with the basic values underlying the country's accepted social and economic policies, the conflict of the sectors will disappear. For a healthy body is always unconscious of the functioning of its limbs; it is only disease that makes us think of them!

Note: This article is adapted from a talk given to the Rotary Club of Calcutta on 11th April, 1961, by the author.



TRENDS IN WORLD TEXTILE TRADE
MORE COUNTRIES EMERGE AS COMPETITORS

From Our Special Correspondent

MANCHESTER, 18*th April*

MANCHESTER LETTER

EXPANSION of world trade in cotton cloth, already noted in 1959, continued in the following year and, as has already been mentioned, exports improved by about 11 per cent. In man-made fibre fabrics, total shipments last year were about the same as in 1959, after a two-year fall from the record level in 1957. Such are the basic details of the situation, but, when the part played by individual countries is investigated, some intriguing features are disclosed. The following table shows the comparative figures of shipments during the past two years from the leading exporting countries, extracted from the Cotton Board's quarterly summary and adjusted in some instances on the basis of performances in the earlier months of 1960:

(In million yards)

	1960			1959		
	Cotton	Rayon	Total	Cotton	Rayon	Total
U.K.	327.1	54.4	381.5	347.4	63.8	411.2
U.S.	435.5	158.7(a)	594.2	472.7	167.3	640.0
Japan	1,424.6	1,066.7	2,491.3	1,263.0	1,051.1	2,314.1
India	721.3	44.5(b)	765.8	850.2	19.6	869.8
Holland	340.0	80.4	420.4	303.4	86.4	389.8
France	521.1	140.6(a)	661.7	406.2	148.5	554.7
Germany	280.3	211.1(b)	491.4	242.7	218.3	461.0
Italy	114.4	195.4(b)	319.8	90.5	152.2	242.7
Belgium	276.4	92.8(a)	379.2	217.7	99.3	317.0
Hong Kong	306.9	31.2(b)	387.1	285.2	29.0	264.2
Portugal	180.2	3.0	183.2	123.7	2.4	126.1
Switzerland	63.0	29.1	92.1	64.5	80.9	105.4
Spain	183.8	27.5(c)	211.3	67.7	29.6	97.3
Pakistan	93.9	..	(c) 93.9	42.0	..	42.0
Poland	83.4	..	83.4	40.6	..	40.6
Czechoslovakia ..	146.8	..	(b) 146.8	137.5	..	137.5

Estimated on basis of (*a*) 11 months, (*b*) 9 months, (*c*) 6 months.

A year ago, the rise of France as an exporter of cotton goods was pin-pointed as the major development of 1959. Again the same country deserves first mention for its continued improvement, which has now lifted it to third place in the "Top Ten" table, whether the figures are based on exports of cotton goods only, or the combined total of cotton and man-made fibre fabrics.

A further dwindling of some 30 million yards in Lancashire's exports of cotton and allied goods meant another fall in the table last year, allowing Holland to step up into sixth position, after Japan, India, France, United States and Germany. In shipments of cotton goods alone, the United Kingdom dropped back a place—again to Holland—while Hong Kong has moved ahead of Germany as a cotton cloth exporter.

The number of countries shown in the table has been increased owing to the strides made by several areas in disposing of more textiles abroad. In particular, Pakistan, Poland and Czechoslovakia have entered the lists as competitors on an international scale; the first two countries have more than doubled their 1959 level of shipments.

Even more remarkable was the big offtake recorded by Spain in the first half of 1960. On an annual basis, the rate of shipments exceeded 200 million yards and the complete figures for the year, when available, will be viewed with interest. It is known that nearly 60 million yards of Spanish cotton grey cloth were received in British ports last year and there is no evidence that the rate of purchasing has recently declined.

A Necessity of Life

One of the aspects in dealing with the extensive arrivals of foreign goods into British ports which received considerable prominence when the phenomenon first arose was the effect of undue dependence on overseas purchases in times of emergency. Although international political trends are perhaps a little more settled than some years ago, this particular viewpoint has not received quite as much emphasis in recent discussions on the topic.

Mr. J. F. Simpson, Chairman of Simpson and Godlee, however, touched on the subject when he addressed a Canadian textile conference at Montreal earlier this year. Describing the three basic necessities of life as food, houses and clothes, he commented that building was firmly based at home and that it was difficult to imagine a state of affairs where supplies for the building industry were at the end of a 10,000-mile pipeline. "Why then cannot the same attitude of mind be brought to bear on the [illegible] industry?" he asked. "Why should Government after Government stand on one side and allow their home markets to be swamped by floods of garments from low-cost countries? There is only one effective method of dealing with this and that is by quota."

Under modern conditions and shift-working, the labour element in a pound of 30s American yarn, in the most up-to-date British mills, is as low as 9 per cent and in a yard of standard drill is 11¾ per cent, Mr. Simpson added. If labour costs in the East are roughly half those of the West, the price is only 4½ per cent higher than Eastern competitors. The gap between Western and Eastern wage rates, he continued, was closing and in any event, the difference between Japan and Lancashire is only the same (in an opposite direction) as that between Lancashire and the United States or Canada. On this basis, he believed there were grounds for hoping that the difference between Eastern and Western prices of grey cloth might be materially reduced over the next ten years.

The labour content in printing, however, Mr. Simpson continued, was higher, ranging around 30 per cent, dependent on the length of run. In engraving, it was a great deal higher, and in garment-making higher still. "I do not see how the Western industries can survive a free-for-all uncurtailed assault from the East on finished goods and I equally do not see why any Government in its right mind can blandly stand by and let that happen."

"Blind Faith" in the Future

Mr. Simpson expressed his conviction that, in made-up goods, the Government must act sooner or later. Hong Kong should not be encouraged to put up factory after factory in the blind faith that the Colony could for all time export uncontrolled quantities of apparel goods to the Western countries. Saner counsels prevailed in Japan, where the danger had been recognised of having too much of the national economy tied up in one particular industry.

Summing up his ideas on whether the Western textile industry can survive the challenge of their competitors in the East, Mr. Simpson said that he believed they could, not only because it would be political madness if these traditional industries were allowed to dwindle and die. "They will need protection by quota for some years, while re-equipment and reorganisation, particularly in Lancashire but also in Continental countries, goes on," he added. "Inter-industry talks should be encouraged and given Government support." Policy, he contended, should be conducted on a "live-and-let-live" basis, with a view to making the textile industry "a better financial bet for the investor, a securer job for the worker and a bit less of a permanent headache for the directors and management."

A forecast of further overseas expansion by Manchester textile engineers Mather and Platt Ltd. was given by Chairman Mr. William L. Mather in his "maiden" speech to the annual meeting. Warning of a tougher fight ahead in the drive for export sales, he told stockholders: "Even to retain our existing markets, overseas manufacture for all but the most specialised equipment is gradually becoming essential. We shall, therefore, require capital for overseas developments."

With world-wide export sales to their credit Mather and Platt are going all-out to boost their century-old trading links with Russia. Cost of the Company's stand at the British Trade Fair in Moscow this spring may be £30,000. Globe-trotting Mr. Mather, who took over the chairmanship a year ago, suggested that a part of the cost of overseas trade displays should be met by the national economy. "The success or failure rebounds to the national reputation and indirectly affects large numbers of firms who do not exhibit," he said.

European Unity Ahead?

Industrialists in other countries can hardly ignore the progress of the experiment in national collaboration arising from the concept of the European Common Market. Development of "The Six," containing the major cotton textile manufacturing areas on the Continent, has not escaped "growing pains" in the course of the initial stages of the venture but, according to reliable sources, there are signs that many of the problems are being successfully ironed out. Surplus capacity and obsolete machinery were the major factors influencing decisions in France, Italy and Belgium when the Common Market was instituted. In the meantime, the situation has altered as re-equipment has progressed; currency changes have also played their part in averting any clash between the textile industries in the respective countries.

An assessment of the position, undertaken by a Director of Political and Economic Planning, the independent research organisation, makes it clear that the introduction of modern equipment does not necessarily mean that production per worker will automatically increase. In Italy, despite the much wider installation of automatic looms, which are said to represent over 70 per cent of weaving capacity, single-shift working remains the general rule, resulting in actual utilisation of equipment of only 60 per cent.

Shifts in Overseas Markets

An even more fundamental issue facing the Continental cotton trades, no less than Lancashire, is the impact of arrivals of goods from countries whose economic circumstances are entirely different from those of the Western world. These include the low-cost producing areas of the East, as well as the State-controlled economies of the Communist-dominated bloc. Britain and Western Europe, prior to the first world war, provided more than 90 per cent of international exports of cotton cloth. The comparable total today is around 35 per cent, while Asiatic countries have gradually absorbed up to 45 per cent of the world market. Meanwhile, fabrics produced from man-made fibres have stepped up their competition with those manufactured from natural growths. One of the most important decisions made by the cotton trade associations of "The Six" is to ban the re-export of finished goods made from imported cloth with the Common Market area. Frequent references have been made to the concern expressed by European textile manufacturers about the possibility of Britain's entry into any Continental trade alliance, because of the door which might then be opened to a freer flow of such goods within Europe.—*All Rights Reserved.*

RAYON INDUSTRY MAKES PROGRESS

NOTABLE RISE IN YARN AND FABRICS OUTPUT

THE trend of consumption of textiles is such that it can be reasonably stated that rayon and other synthetic fibres will be required to meet a large part of the increasing demand for textiles in India in the coming years. This possibility, if not established fact, underlines the urgency of intensified research and other scientific work. It is to carry out such work that the Silk and Art Silk Mills' Research Association was sponsored by the art silk industry. Since its inception about three years ago, the Association has been endeavouring to direct, through its Institute at Worli (Bombay), research towards the investigation and improvement of raw materials used in the manufacture, weaving and wet-processing of silk and man-made fibres and fabrics, the development of machinery and appliances used in the industry, and the improvement of manufacturing processes for greater productivity. One of the important divisions of the Association is entrusted with the task of helping the industry to introduce quality control methods. These methods will, as Mr. W. R. Natu, Textile Commissioner, stated while inaugurating the Statistical Quality Control (S.Q.C.) course organised by the Association on Tuesday the 18th inst., ensure higher production, improvement in quality and lower costs. How important is the subject was well brought out by Mr. D. N. Shroff, President of the Association. He said:

"In these days of competition in the home and foreign markets, the importance of quality and cost needs no mention. Better quality at lower cost should be the slogan to permit us to stand the competition. This can be done by studying the cost structure at various stages of production and finding out the causes for higher costs. S.Q.C. methods aim at reducing the cost of the finished product by reducing the waste and rework and by improving efficiency. This results in standardising the production processes, working methods and ultimately the quality. . . . Quality control can be made fully effective only when persons at all levels are made quality and cost-conscious. This can be done by drawing up systematic training programmes in quality control within the mills."

The Silk and Art Silk Mills' Association was formed in 1939 with a meagre membership of 16 mills controlling 2,000 looms. It has since grown into a large body having 240 members together accounting for over 20,000 looms. The total number of units known to exist in the weaving sector is 3,883, having in all about 50,000 power-looms capable of producing 900 million yards of art silk fabrics on three-shift basis. Besides, approximately 45,000 handlooms are said to be weaving exclusively man-made fibre fabrics and an additional 51,000 produce mixed fabrics.

Progress in Second Plan

The progress achieved by the rayon industry has been phenomenal, particularly since the commencement of the second Plan in April 1956, as will be seen from Table I at the bottom of this page. The actual output of rayon fabrics in 1960 was 413.67 million yards. Though this is just 13.35 million yards more than the previous year's production, it represents an appreciable rise of as much as 170.67 million yards as compared with the production of 243.00 million yards in 1955. The improvement in fabrics output must be attributed to the significant rise in the quantity of rayon yarn spun, from a bare 15.17 million lbs. in 1955 to more than 45.68 million lbs. in 1960, or an increase of 30.51 million lbs. Practically the whole of the increase is accounted for by viscose yarn, the actual output of which has gone up from 12.84 million lbs. to 41.44 million lbs. The production of acetate yarn has improved by only 1.91 million lbs., from 2.33 million lbs. to 4.24 million lbs. The staple fibre yarn output has also gone up in the past five years; it amounted to 43.83 million lbs. in 1960, as against 28.02 million lbs. in 1955. The rise followed a considerably higher production of staple fibre, being 48.01 million lbs., as against 12.58 million lbs. Additional capacity has been licensed for 8.00 million lbs. At present, only one unit is producing staple fibre, that is, the Gwalior Rayon Mills at Nagda.

The notable rise in the production of rayon yarn has been rendered possible by the marked expansion in installed capacity. The total annual capacity is now of the order of 52.82 million lbs. (1960), as compared with 20.96 million lbs. in 1955. The expansion is entirely accounted for by the viscose sector the capacity of which has risen from 16.93 million lbs. in 1955 to 48.79 million lbs. in 1960, whereas the acetate yarn capacity has continued unchanged at 4.03 million lbs. Five units are engaged in the production of continuous filament viscose rayon yarn and one each in acetate yarn and cellophane.

The existing capacity of 52.82 million lbs. and the additional capacity licensed but not yet installed together come to 83.60 million lbs. In addition to viscose and acetate rayon yarn, licences have been issued for the setting up of factories to produce nylon, tyre cord and cuprommonium yarn; the licences cover a total capacity of 27.45 million lbs.

On the basis of the foreign exchange commitments allowed, the rayon and staple fibre industries are expected to achieve an installed capacity of 140 million lbs. by 1962-63. Expansion of these industries is envisaged up to 215 million lbs. in the third Plan. Considerable importance has been attached to the phasing of investments in the two industries, preference being given to the expansion of wood-pulp manufacture *vis-a-vis* further rise in the output of synthetic filament.

Yarn—Different Deniers

The production of the different deniers of art silk yarn and staple fibre yarn during 1960 is given below, figures in brackets relating to output in 1959.

(In thousand lbs.)

ART SILK YARN: *Viscose:* 75 Bt. 46 (11); 100 Bt. 3,902 (2,166); 120 Bt. 21,340 (16,184); 120 Dull 3,065 (2,228); 150 Bt. 12,097 (11,356); 150 Dull 167 (170); 300 Bt. 540 (679); others Bt. 284 (260); Total 41,441 (33,054).

Acetate: 100 Bt. 74 (15); 120 Bt. 938 (711); 120 Dull 226 (120); 150 Bt. 1,743 (1,228); 150 dull 493 (439); 300 Dull 691 (579); Others Dull 78 (77); Total 4,243 (3,169); Grand total 45,684 (36,223).

STAPLE FIBRE YARN: Upto 10s 122 (130); 11s-20s 3,528 (4,669); 21s-30s 2,263 (2,619); 31s-40s 3,538 (4,375); Above 40s 875 (733); Total 10,327 (12,526).

Note:—Bt.=Bright.

To the extent indigenous yarn production rises, there will be a saving of foreign exchange which would otherwise be spent for buying yarn abroad. The total value of art silk and staple fibre yarns imported during 1960 was Rs. 10.89 crores, the quantity involved being over 42.39 million lbs.

An idea of the more important varieties of art silk fabrics produced during the first eight months of 1960 and 1959, as well as in the whole of 1959, can be had from Table II.

The annual production of the art silk weaving industry on the basis of three-shift working is estimated at 900 million yards. Since the capacity is claimed to be more than what is actually required to meet internal consumption and export demand, no expansion is being allowed. It may be noted here that exports of art silk fabrics during 1960 aggregated about 16 million yards, valued at Rs. 3.30 crores. The export promotion scheme providing for incentive imports of art silk yarn, spares, etc., introduced in July 1959, has been continued. Provision has been made in the scheme for compulsory pre-inspection of fabrics intended for export. This is a welcome step, but, at the same time, it must be said that inspection of products, if it is to be really effective, should take place at all levels and not at the final stage only. What is wanted is, as Mr. Natu rightly emphasised, inspection all along the line from factory and, beginning with production process and cutting across every stage of departmental processing, to the final stage when the goods reach the shop window or are exported overseas.

EXCISE ON RAYON YARN

It is said that the question of sharing the burden of enhanced excise duty on rayon yarn between the spinners and weavers has been settled. The reported decision is that the increase should be borne by both spinning and weaving units in the proportion of 60 and 40 per cent, respectively. The credit for this compromise is given to the Textile Commissioner who held discussions with the representatives of the two sectors in Bombay some three weeks ago.

In the Central Government budget for 1961-62, presented on 28th February, it will be recalled, the excise duty on rayon yarn was raised by 66⅔ per cent—from Re. 1.80 to Rs. 300 per kilogram for yarn below 75 deniers, Re. 1.35 to Rs. 2.25 for 75-100 deniers and 90 nP to **Re. 1.50 for yarn** above 100 deniers. **The additional burden was** immediately passed on by the spinning units to the weaving mills in the form of higher prices for yarn supplied by them. The weaving interests protested vehemently against this action and urged the Government to see that the spinning mills themselves bore the entire incidence. They argued that the additional excise duty on indigenous yarn production, together with higher import duty on foreign yarn and increased excise on fabrics, would considerably affect the weaving industry, especially in small-scale units, which had already been subjected to great strain as a result of difficulties in obtaining raw materials, high prices at which it secures them, heavier wage bill and increased cost of machinery, etc.

It may be true that the cost of production in the weaving industry, just as that in several other industries, has gone up recently as a result of the factors mentioned above and that the additional tax burden has inflated the cost further. But it would be wrong to argue that the rayon yarn spinning sector should not pass on the burden of enhanced excise duty to the weaving mills. For the spinning sector, too, has been suffering from the impact of higher production costs. It is calculated that the cost of spinning one pound of yarn (2.2 lbs.=1 kilogram) now is higher by as much as 27 nP as compared with that three years ago. Notwithstanding the increase in cost, the spinning sector has continued to sell yarn at the same prices which were fixed voluntarily in April 1948 under a gentleman's agreement. This sector is also under the obligation to sell yarn to the weaving units on the basis of quotas fixed by the Textile Commissioner's Office every quarter.

The weaving units, however, complain that they have experienced great difficulties in obtaining their supplies of yarn from the indigenous spinners, in spite of the distribution system. They further allege that the spinners are selling yarn in the open market at unduly high prices and that even the ex-factory prices of yarn are so fixed that the spinners are making substantially large profits. To substantiate this contention, the following figures are cited:

(Rs. per kilogram)

Denier of yarn	Latest available open market rates*	Ex-factory price of indigenous yarn (f.o.r.) Bombay†	Price of imported yarn (c.i.f.)
100 Bright	15.40	9.40	5.84
201 "	14.92	8.60	5.05
150 "	13.55	7.90	5.05
120 Dull—I	16.15	8.85	6.18

* The rates are for B grade yarns produced by National Rayon Mills, Bombay.

† Exclusive of import duty. The rate of duty is Rs. 4.25 per kg., including the countervailing import duty rate of Re. 1.50.

While the weaving units attribute the wide difference between the ex-factory price and the actual market rates, our inquiries in responsible circles reveal that the difference is due largely to the sales of yarn at high prices by several weaving mills which, it is pointed out, find it more profitable to sell the yarn purchased against quotas in the open market, instead of using it themselves for producing fabrics. The weaving sector admits that some units do sell yarn in the open market, but point out that the sales represent only disposals that are followed by subsequent replace-

PRICE LINKING FORMULA FOR SUGAR

SUGAR-CONTENT OF CANE MUST BE THE MAIN DETERMINING FACTOR

VER since the commencement of the policy of fixing minimum prices for sugarcane as back as 1934, more particularly after the so- ed price-linking formula was mooted in 1953, een controversy has been going on between two sections of sugar industry, namely, mill- ners and cane growers. The representatives growers have gone on accusing the sugar ls of making large profits without suitably ring them with those who supply cane, ereas the spokesmen for the mills have been erting that the prices they are required to for the cane bought by them are considera- high, having regard to the low sucrose con- t of cane. The controversy would have been ided but for the powers-that-be who it is that e allowed political considerations to deter- ie the price. Mr. K. R. P. Aiyangar, Chair- n of the Tariff Commission, certainly put the ger on the right spot when he declared, in speech at the public inquiry in connection h the sugar price-linking formula at Bombay Friday the 21st inst., that persistence in cer- n wrong analogies has not only made agree- at between cane growers and crushers more icult but also left the door open to claims the other interests concerned in production, labour, and that, amidst all this contro- sy, only the consumers' interests appear to e mainly suffered.

The basic minimum prices of cane currently force—they have been continued in the ensu- season (1961-62) also—are Re. 1.62 per maund delivery at the gate of the factory and 1.50 for cane delivered at outstation produc- stations connected by rail. There is no ional basis whatever for fixing prices at se levels. Neither the cost of cane cultiva- n nor the estimated return to the grower if converts his cane into brown sugar (*gur* and *ndsari*) has been taken into account. Nor the prices of cane governed by the three er vital considerations: (1) quality of cane, probable estimated return to the grower m alternative crops, and (3) parity prices of portant articles of consumption for the cane wer such as foodgrains, cloth and kerosene. minimum prices fixed are very high, ac- nting as they do for as much as 50 per cent the actual cost of making sugar. A recent dy conducted in the Meerut and Muzaffar- gar districts of Uttar Pradesh, as quoted in a cial article which appeared in these columns weeks ago, showed that the cost of pro- tion (including wages for family labour, ned bullock labour, interest on fixed capital l rent for the owned land, per maund of arcane in 1954-55 was only 69 nP, as against minimum price of Re. 1.44 that was then vailing. This worked out to a return of 209 cent over the expenditure incurred, whereas corresponding return on irrigated wheat was y 129 per cent, the return and expenditure acre being Rs. 210 and Rs. 163, respectively. the sugarcane growers were also to receive same rate of return, the price of sugarcane uld have been fixed somewhere around 89 nP.

Cane Area Expands Markedly

In view of the high profitability of raising arcane thus, it is not surprising that there been a substantial increase in the area de- ed to cane. The total area under cane in two States of U.P. and Bihar during 1959-60 s 3,360,000 acres, as against 2,273,000 acres in 3-54, representing a rise of nearly 50 per cent r six years. Following the rise in acreage, quantity of cane harvested has also e up from 23.32 million tons in 1953-54 38.55 million tons in 1959-60. But the ality of cane grown has not only not proved but has actually suffered a set- k for the simple reason that the culti- or, since he is assured of a minimum ce linked to weight only, has not bothered grow the varieties of cane with higher rose content. The average recovery per cent sugar in cane has declined from 9.87 in 3-54 to 9.68 in 1959-60 in U.P. and from 10.05 9.43 in Bihar.

As if the minimum prices were too poor, cane growers clamoured for a share in the gar mills' profit and the Government conceded demand. And so came the price-linking rmula. The formula, it has been said, does promote cane yield per acre or production better quality cane giving a higher recovery of sugar. It has merely encouraged growth of cane acreage without regard to quality or yield of cane and even in areas not best suited for it. This policy also ignores the interests of the consumer, since an increase in the price of cane irrespective of the recovery factor merely tends to raise the price of sugar. The sugar industry is quite justified in contending that the formula is one-sided and inequitable, in that, while it entitles the cane growers to a share in mills' profit, it does not impose any obligation on them to share the loss, if any, arising from a fall in the quality of cane.

Cost of Cane Cultivation

Drawing attention to these contentions, Mr. Aiyangar observed:

"The manufacturing cost of sugar has been fully gone into by us (Tariff Commission) and, on the basis of regional schedules suggested by us, Government have approved this basis for fixing the price of sugar. This represents a fair price to the sugar industry. A similar costing has not, however, been attempted in respect of cane prices. The data we have received in this connection show extreme variations. Even the inquiries by experts have not shown reasonable agreement as to cost estimates for cane production in different areas. The statutory *minimum* price so called is, however, also the *fair price*, since Government, when fixing it, keeps in mind all the factors laid down in the relevant notification. While the purpose of enforcing a *minimum price* is that, over wide areas and for the majority of cultivators, the price fixed would give an adequate return comparable to what the cane grower gets from alternative crops, this feature marks it out also to be a *fair price*.

"Responsible opinion appears to hold that, even in the controlled areas where cane yield is low, the present statutory price gives to the cane growers a margin of return which compares favourably with that from alternative crops. It has, therefore, been contended that the price-sharing formula should apply only to the *extra* realisation, if any, of a producer over the statutory prices fixed on our cost schedules. As it partakes of a profit-sharing character, it should as such be subject to all such equitable cost incidents, fiscal and other items that fall on the person making a profit. On this basis, it would be anomalous if cane growers claim to share only in the extra earnings or profits but not in any loss incidental to fall in recovery, due to poor quality of cane, or refuse to allow the producer any fiscal or other cost incidents not specifically included in our cost schedule. This could be defended only in a scheme where the cane price is a *bare* or basic price payable by all consumers and not the vacuum pan factories only which consume less than one-third of the all-India output of cane."

A main factor that has prevented the enforcement of the statutory price-linking formula, to which Mr. Aiyangar alluded, is that it is complicated and difficult of application. As the *net* price realisation per maund of sugar can only be accurately known after the year's accounts are closed, its benefits cannot be derived by the cane growers immediately. Further, where there is no mutual confidence among growers and producers, the results based on such accounts are apt to be challenged thus delaying final settlement of deferred payment. The formula has also created a sharp division of opinion on what should be the fair share of the grower and what are the legitimate cost incidents of the crusher that should be allowed before determining the profit to be shared with the grower.

Bold Step Needed

Considering all the complexities and the inequitous nature of the price-linking formula, it would be better if a bold step is taken to link cane prices to the recovery percentage and duration factors applicable to a factory, as has been suggested by the U.P. Co-operative Cane Unions Federation. Referring to this suggestion, Mr. Aiyangar said: "Some experiments carried on by the Central Sugar Institute about evaluation and control of cane at certain selected centres in widely separated regions shows that an equitable system of fixing of cane price on sugar-content basis can be evolved and will prove more acceptable to the understanding grower than the so-called sharing or linking formula."

If the above suggestion were accepted, there would be no need at all for any controls on prices of either sugar or cane, excepting a minimum price, as in the case of cotton, which would operate only if and when there is to be a slump. The forces of demand and supply can be safely trusted to establish equilibrium prices for both the raw material and the finished product. This aspect has to be specially stressed in the context of the present situation when the main problem facing the country in regard to sugar is a large surplus produced at a high cost. This, as Mr. Aiyangar aptly remarked, is a burden to the domestic consumer and inhibits a sizable growth of internal demand, not to speak of the inability of Indian sugar to compete in world markets. To quote him again:

"While more production of cane, ensuring a long crushing season, and supply of quality cane with better recovery would redound to the advantage of sugar mills which they may be called on to share with growers under any linking formula, any such sharing will give only a marginal benefit compared to the basic price of cane itself. Better return from cane can only accrue from intensive cultivation of quality cane in suitable areas without needless diversion from other crops and by attaining better yields. Poor yields of cane in the largest growing areas of India, which also account for the greater part of our sugar output is at present the basic difficulty and results in the high price of sugar. Unless this situation is radically improved, any price-linking formula or payment of cane price on sugar-content basis alone will not stabilise the benefit to the sugarcane grower or sugar manufacturer. But the very fact that our country, which is one of the biggest growers of sugarcane, can, by providing proper incentive to the grower and manufacturer, produce sizable quantities of sugar for export, would also make it necessary that, for stabilising the industry, the price for cane and sugar should be properly correlated."

Controls Must Be Removed

This is quite a realistic assessment of the issue and one would wish that it would form the basis on which the Tariff Commission will evolve the formula. The present price-linking formula cannot at all achieve the objectives of creating a sustained rise in production, since spiralling costs affect the stability of the sugar economy. Mr. Aiyangar did well to highlight this aspect. As a solution to the problem of arresting the trend, he urged the need for a price formula for both the raw material and the finished product "which will directly link up with the quality of the raw material." Evidently, he is prompted by the anxiety to ensure that whatever benefits that are accruing to both the cane grower and the sugar mill are not withdrawn in any way. In other words, it would appear that the Tariff Commission chief wants the perpetuation of controls on the prices of sugarcane as well as sugar. It is, however, difficult to agree on this point. The mechanism of wholesale controls should not be resorted to when the supply position in respect of both sugarcane and sugar is highly comfortable. If the sugar industry is to grow on healthy and prosperous lines, it must have a reasonable amount of freedom, and any vexatious controls on prices, production, distribution and movement would tend to inhibit the growth of demand for sugar. After all, it is only when the sugar that is produced is consumed that the grower and crusher of cane can expect to make a reasonable profit. If the authorities are anxious to see that the cane growers are not exploited by sugar mills, they may continue the policy of fixing minimum prices for cane, but the minimum must be minimum and not more than even a fair price as is the case at present.

SOME RELIEF TO SUGAR MILLS

With a view to assisting the sugar industry to tide over the difficulties arising from the accumulations of heavy stocks, the Government of India has permitted the mills to defer, up to a maximum of three months, the payment of 25 per cent. of the total excise duty (including additional excise duty) on each consignment of sugar where it is cleared from the factories or other authorised non-duty paid premises for storage. An official announcement to this effect was made on Monday the 24th inst. It has, however, been made clear that the grant of this "extraordinary facility" would be limited only to actual clearances made on or before 30th September 1961 and would not in any case be extended beyond that date. Necessary procedures giving effect to the decision and providing simultaneously for the safeguards of the revenue administration are expected to be issued shortly. For details, the mills are required to contact the Collectors of Central Excise concerned.

A couple of days earlier, the Reserve Bank of India withdrew all margin requirements in respect of bank advances against sugar stocks held by the trade. This will enable traders to hold a larger amount of sugar stocks.

The Government of Bihar has decided to grant remission of cess to sugar factories at the rate of 12 nP per maund on all cane purchased by them from stations or centres situated at a distance of more than 30 miles during the period from 21st April to 7th May 1961. The decision has been taken in view of the increased pressure on sugar factories in Bihar due to excess production of sugarcane *vis-a-vis* their capacity to crush cane during the 1960-61 season. The Government has also decided to remit cess at the rate of 12 nP per maund on all cane that is purchased by the sugar factories during the current season from 8th May onwards.

INTERNATIONAL ASSISTANCE FOR ECONOMIC GROWTH

AN APPROACH FROM RECIPIENTS' POINT OF VIEW

By P. S. N. Prasad

ECONOMIC ADVISER, GOVERNMENT OF NIGERIA

[This article is based on the presidential address by the author at the third annual conference of the Society for International Development, Washington, D.C., U.S.A., held at Washington on 28th and 29th April 1961. The Society was founded in October 1957 by a small group of economists and officials working in the field of economic development. It has since then expanded and is represented by members in 70 different countries and over 2,000 in number coming from 200 organisations in the private and public sectors alike. Mr. Prasad is a member of the staff of the World Bank which has lent his services to the Government of Nigeria. The views expressed by the author are his personal and individual opinions. He has looked at the problem of international assistance for economic growth from the angle of underdeveloped countries. Mr. Prasad, it will be recalled, was the Economic Adviser to the Reserve Bank of India, before he went to Washington to represent India as its Executive Director on the Board of the International Monetary Fund, after which duty he was taken up by the World Bank as one of its economic advisers. Before his posting to Nigeria, he was the chief of the World Bank mission which did an economic survey of Libya at the request of the Libyan Government. He is, therefore, well qualified to voice the feelings and thoughts of underdeveloped countries.—ED.]

ON matters of economic development, there is a variety of perspectives that one could follow. I wish to confine myself here to a single tack—the role of international economic and technical assistance in economic development as a free-world exercise. First of all, I would like to turn to some of the very significant changes that have taken place recently both as regards the basic philosophy and in the organisational structure for providing economic assistance. The President of the United States conveyed, in his message to Congress on 22nd March, a statement which I am sure must be very welcome to the underdeveloped countries of the world. It outlined in very precise terms the attitude of the world's most highly developed industrial nation and one which has also taken upon itself the task of persuading other industrial nations of the world to make sacrifices for providing sizable assistance for economic growth. Judged, therefore, as the statement of a leading country, the broad aims and policy goals, outlined in this statement are, in my view, comparable only with the lofty sentiments outlined in the statement on the Marshall plan. It was particularly noteworthy that Mr. Kennedy placed the accent on the moral obligation and put it ahead of the political and economic obligations which he mentioned as resting on the advanced countries to assist the less developed countries to grow economically. This statement restored to the United States' attitude towards economic assistance the valuable note of idealism that characterised its foreign policy for many years but which had been lost in the most recent years, when military and strategic considerations pushed economic idealism into the background.

The President's clearcut emphasis on the separation of economic from other forms of aid is also very welcome news, especially to countries with some kind of economic discipline and well considered plans for development. These were the countries that in the past received a disproportionately limited attention in terms of assistance in relation to the worthwhileness of their economic programmes. Also, the relation that the President has sought to establish between economic assistance and sound economic programming provides at once an acceptable criterion as well as a logical basis for the aid programmes.

Long-term Loans

Particularly welcome to underdeveloped countries, I am sure, would be his proposal for emphasising development loans repayable on a long-term basis and at relatively low interest rates. At first sight, it might look as though this is a retrogression, from the point of view of the underdeveloped countries which have had opportunities to borrow from the Development Loan Fund dollars repayable in local currencies. While one would hope that such an arrangement would continue to be available as in the case of loans made under the PL 480 law, there is a distinct room for low interest dollar repayable loans, as a necessary supplement to assistance available on principles of conventional development banking. These principles make the life of a project coterminus with the length of the period of repayment of a development loan, even though the actual life of productive usefulness of the project may be very much longer than the period of repayment of the loan. Certain schemes, hydro-electric projects, for instance, are at a disadvantage when their long period of serviceability is not taken into account in calculating the rate of return from these projects. Such terms of financing, if applied in the past, would not have made possible the development of the railways in the United States, or the development of major irrigation works in India, both of which have had an enormous impact on the development of the two economies. A suitable effort in future at complementing conventional development finance, with assistance based on long-term low interest loan basis, as contemplated in the President's message, will help relieve underdeveloped countries of a real problem in finding finance for some of their worthwhile projects which, however, do not qualify when treated in a conventional way because of the artificial shortening of "the life of the project."

The underdeveloped countries would also watch with the greatest interest the results of the United States lead in organising Europe to provide economic assistance. In the countries of Europe itself, one must admit, there is a new awakening, one might even say a new idealism, in some of them at any rate, in their approach towards underwriting the needs of the less developed nations. There is an awakening, more particularly amongst the peoples of Europe, even more than amongst some of the Governments, for providing more and more of such assistance.

Newer Trends in Europe

Most of the underdeveloped countries, I am sure, will watch with considerable satisfaction these newer trends in Europe, because, in the minds of these nations, which are either colonial or ex-colonial countries, some at least of the European countries have been regarded as efficient in the arts of taking away resources than giving them away. Times, no doubt, have changed, partly under the pressure of the United States, and partly under pressure from the trends of public opinion in their own countries. A number of them, however, still have their special interests, their spheres of influence and even their colonies. A few of them have made it a practice, still current, of putting the smallest coin in the box and picking up the biggest flag for their effort. They reckon, as part of the sum total of what they term as economic aid, all manner of doubtful contributions that do not qualify for such a description, until the figures of aid added according to these criteria look surprisingly large and the concept of 'aid' itself has become somewhat disfigured in the process. One has to admit that some of these traditional patterns of economic relationships take time to readjust; but one hopes that it might be possible to persuade these countries to accept the idea of providing assistance in general terms and as an agreed proportion of national income, whatever the proportion may be that may be deemed reasonable rather than limit their interest to countries in their respective spheres of influence. It would be very much in the interest of the underdeveloped countries themselves, if they are not regarded as sheltered markets in the traditional colonial pattern, but as areas opened up for free competition in trade and investment and are provided with technical and economic assistance on a general and universal basis rather than be treated as helpless children tied to the apron strings of colonialisms. Such a breath of fresh air and free competition for the wards of the colonial countries would make whatever aid is given them go a longer way; would make development more rapid; would bring them up in a way that they are better able to stand eventually on their own feet. Of course, problems would still remain of lack of education and of technical skills, of shortfalls in administrative ability and so forth on the side of the underdeveloped countries; and problems of trade and investment adjustments as well as balance of payments adjustments in economies which survive on their colonies. Both these, I submit, should increasingly become the concern of internationally organised assistance.

Conscience Money?

Speaking of international economic assistance, one also sometimes hears it said that the giving of aid by Europe should be regarded as conscience money, or as a kind of recompense for the guilt of colonial exploitations of the past. Any such scale of measurement of past actions as a basis for future benevolence could hardly be useful or practical. On the other hand, if the countries that are now collectively described as the free world (though in the case of quite a number of them this description is purely euphemistic) have not only to hang together, but grow together, the industrialised group of nations from amongst them, would have to accept the evidence of history on one point. And, that is, that, as time goes on, the wealth of the nations based on organised industry steadily accumulates; that it is more stable; and that the relative trading strength between these countries expands steadily during the years of peace and war; but that the primary producing countries and those with agriculture as the basic occupation of life have to contend with vastly greater problems of instability, of price fluctuations, of weather, of quick changes in techniques or the emergence of synthetics. Yet, in the midst of all these changes, the primary producer remains an essential and inevitable link (or several perhaps), in the chain of the world's economic activity. Without a reasonable and stable income for him, the wheels of industry would not turn, and the ships will not carry the commerce of nations. He is an essential partner, if necessarily the more frail of the two partners, in the enterprise of an interdependent world economy. Just as in the United States through various expedients, a pattern has developed, in which, the industrial sector supports the economic activity of the farmer, underwriting his living standards, it would appear inevitable, in the long run, that, around the fabric of the world economy, a concept of partnership has to grow in which stability and a desire to help sustain each other's economic strength, as well as economic growth, will remain justified on grounds of enlightened self-interest. It would seem increasingly necessary that statesmen and economists should see more and more clearly the emerging outlines of a world economy and less and less the clashes and the sharp-edged conflicts of national and even sub-national vested interests.

Africa's Needs

It is against such a perspective, for instance, that one is sometimes distressed to meet with the expression of views which have their origin in calculations of private interests of nations and groups. Referring to the public international aid programmes being thought of for the African countries, for instance, one is told either that, in their present situation, the African countries cannot absorb aid in significant quantities; or that the African people do not understand those who give them something for nothing; and that they have in fact a better understanding of the methods and practices of the traders of the last century.

Whether or not this is true, African countries, like countries in any other region of the underdeveloped world differ vastly as between one nation and another; and differ too, in respect of their capacity to carry through development programmes and absorb aid. But, in the case of most of them, there is little doubt that there is room for a considerable inflow of international public economic assistance. In such fields as health and education, transport and power and communications, there is so much slack that has to be taken up that rapid expansion of public investment is both feasible and necessary for the very stability of these nations. In the case of at least one African country of which I happen to have some knowledge, the governing power accumulated abroad vast reserves on the ground that opportunities for investment were not available in the country. At the same time, there was not one single training college there for the training of elementary school teachers, a few of whom were being sent at considerable expense and social dislocation for the teacher, to the distant "mother" country. Nor were any opportunities provided in that for education in

New power in industry

On a 600-acre site at Durgapur, amidst intense activity, the scene is being set for yet another vitally important contribution to India's industrial growth—a contribution made possible through the vast technical knowledge of ACC-VICKERS-BABCOCK LTD. (A.V.B.), a new and powerful industrial group formed by The Associated Cement Companies Limited, Vickers Limited and Babcock & Wilcox Limited.

Already, considerable progress has been made in erecting this new Industrial Plant. Workshops are rapidly taking shape and foundations are being prepared for some of the most up-to-date machinery in the world. Very soon now the A.V.B. Plant will be ready to make its contribution to Indian industry, and to help Indian engineers overcome some of the difficulties which have faced them for so long.

MODERN EQUIPMENT

Some of the most up-to-date industrial equipment of its kind in the world is being installed in the new A.V.B. Plant, from the radio-active cobalt X-ray equipment capable of X-raying steel plates up to a thickness of 6" to the vast 3,000-ton hydraulic press, the largest in Asia, designed to bend steel plates of up to 5" thickness. The workshops of A.V.B. are thus fully equipped to manufacture machinery for the cement-making and mining industries, thermal power plant and industrial steam-raising equipment equal to the best in the world.

VITAL ROLES

THERMAL POWER: A.V.B. have the technical knowledge, the men and the machinery to participate in the supply of vital plant to be installed in Thermal Power Stations throughout India. They will make a notable contribution towards the target set by the Government of erecting boiler plant and thermal power plant to the value of Rs 34 crores per year by the end of the Third Five Year Plan.

CEMENT-MAKING MACHINERY: A.V.B. are already discussing projects which will enable them to supply machinery to help increase the output of cement for which the Government's target is 13 million tons per year at the end of the Third Five Year Plan. Not only will A.V.B. help to meet the exigencies of industrial expansion but they will ultimately contribute towards the earning of valuable foreign exchange through export.

SITE STRATEGICALLY LOCATED

A.V.B. have shown considerable foresight in the location of Durgapur as their base for operation. Close to the now well-known Durgapur Steel Project, they are within what is fast developing into the industrial heart of India. They are within easy reach of India's coal and general mining centres. The Port of Calcutta is only a hundred miles away, a factor which is of tremendous advantage for the import of special raw materials.

EFFICIENT STAFF

The new company has adopted a far-sighted policy regarding the housing of the staff at Durgapur. Resulting from this the AVB housing colony which is situated but a short distance from the factory site is one of the finest in India. The houses are modern and the colony itself will be completely self-contained with its own dispensary and its own shops, parks and playgrounds. Here will live the workers of the A.V.B. group from the man of the shop floor to the skilled engineers and advanced technicians, a team that will keep a close watch on this modern plant which will harness such a vital and powerful new force to Indian industry.

commerce, or banking or technology or administration or politics, or agriculture.

The infra-structures in many of these African countries also call for considerable investment by Governments. The development of existing infra-structure has been planned with a single eye on the development of external trade in some cases, but, in others, even this is in a pretty backward condition; and the development of facilities such as local transport, feeder roads, power for domestic and industrial uses, irrigation and of financial institutions, etc., has hardly been touched upon except on the surface. It is impossible for them to finance the necessary development out of their own resources. There is room, too, in the economies of these countries for a considerable investment in the private sector both from domestic and foreign sources. Certainly, in a whole number of newly independent African countries, there is no doubt in my mind, the capacity for absorbing sizable assistance exists.

Technical Assistance

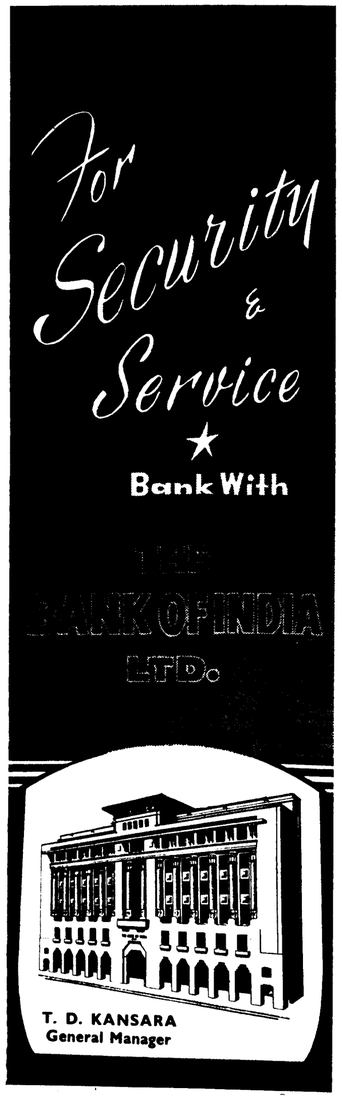
As with economic assistance, so with technical assistance, it is my firm belief, that everything is to be gained and little is to be lost by widening the international character of technical assistance. Such assistance as has been provided bilaterally by some of the developed countries to the less well-endowed ones has a whole lot of credit points in its favour. However, around many countries in the world, there is a considerable feeling of frustration with the achievements of technical assistance; and not a small amount of waste is involved in needless duplication, competition and jealousy between countries and agencies providing technical assistance.

Technical assistance is a noble concept and it will only succeed best when offered for its own sake and in the spirit of a missionary endeavour. There is a widspread belief, especially in some of the countries of Africa, that technical assistance, especially of the bilaterial variety, is offered by some countries, not as a missionary effort but rather in an effort to retain some of the positions of privilege in the economic and administrative organisations of the countries that have recently wrested independence in the political field. Whether this is fact or fiction is not so important as that it continues to hurt the good that there is in the whole exercise of technical assistance. Like economic assistance, therefore, if the offer of technical assistance is also placed on a multilateral basis and is offered increasingly through international institutions, the cause as a whole would stand to gain immensely. The more such assistance could be rationalised and internationalised, the more good it is likely to do with considerable economies in costs, even to those that bear the financial burden of technical assistance. In this matter, there is also room for a lot of improvement in utilising the skills available in some of the less developed countries themselves for providing such assistance to other developing nations. The accent lain on the giving of aid bilaterally at present precludes the use of such skills, even though it may be both economical as well as productive to employ the skills available in the less developed countries themselves. Similarly, would it not be better if the so called Commonwealth assistance provided by the United Kingdom is provided not only through United Kingdom nationals but by using skills obtainable from all the different parts of the Commonwealth with all its variety of colour and experience? In this arena, even more than in the matter of economic aid, it should be increasingly possible to sustain the *international* character of aid and increasingly offer it through the United Nations and other respectable international channels and place increasingly less emphasis on the bilateral and the somewhat narrowly nationalistic character of technical assistance.

Now to turn to another aspect of the problem of international assistance. While the present proposals for collaboration between the more advanced countries on the principles of this assistance are desirable and cannot be open to objection, it would be appropriate to endeavour to bring about, in course of time, a change in two directions. It would be increasingly desirable to make the underdeveloped countries receiving assistance also partners in the work of formulating the principles, rather than build up a complex category of patrons and wards. There is certainly an understandable need for the aid-giving countries to confabulate in secrecy or privacy, but over the longer period it should not be difficult, especially for the free countries of the world, to confer around a table and in the open, in order to discuss the principles and the programmes for international assistance. After all, the considerations that decide the merit or the lack of merit of proposals affecting the donor and the recipient are of general validity as well as interest, and the more the discussion of such proposals is made universal and public between the two categories of nations, the more it will be in accord with the self-respect of the community of free nations.

Disarmament

Equally again, though it remains very much of an ideal for the moment, one would like to stress the inevitable relationship or the obvious conflict between the world's needs for investment in economic growth, and the inhuman waste of the expenditures on armaments. It may not be in our generation that we might live to see the melting away of the colossal waste on defence equipment that may never be needed for defence. But, today, these expenditures do prevent the availability of resources needed to irrigate the parched areas of potential economic growth, and the arts and commerce of peace; on the other hand, it would be important, indeed, to dream of such an achievement. It may be that the realisation of such a dream in concrete reality may not be as far off as it might appear to us today. At least, the people of the underdeveloped countries to whom this conflict between the unfortunate race in armaments and the much coveted investment for economic growth remains all too vivid, cannot but press for modernisation and tolerance in international relations and for a persistent endeavour to find a way out of the colossal waste of resources involved in keeping up an incessant race between the two major industrialised sections of the world.



Notices

THE RAMNUGGER CANE AND SUGAR COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Twenty-fourth Ordinary General Meeting of the Shareholders of the Ramnugger Cane and Sugar Company Ltd. will be held at the Registered Office of the Company, 7, Wellesley Place, Calcutta, on Wednesday, the 24th May, 1961, at 12 noon, to transact the following business:—

1. To receive the Directors' Report and pass the audited Accounts for the year ended 31st August, 1960.
2. To declare a dividend on Preference Shares.
3. To declare a dividend on Ordinary Shares.
4. To elect Directors.
5. To appoint Auditors and fix their remuneration.
6. To transact any other business which may properly be brought before the Meeting.

SPECIAL BUSINESS

7. To consider and, if thought fit, pass with or without modification the following Resolution:

"RESOLVED that 100 acres of land from the Company's farms be transferred to the State of West Bengal by way of gift for the purpose of establishing a full-fledged Research Station by the Government thereon, and the Directors do take necessary steps for making the gift to the Government."

Explanatory Note

The Indian Central Sugarcane Committee has sanctioned the establishment of a Sugarcane Research Station in West Bengal during the Third Five-year Plan at a total cost of Rs. 13,75,356. The proposal was made by the Government of West Bengal and the expenditure will be shared between the Committee and the State Government. After some negotiations, the West Bengal Government have agreed to set up the Research Station in the area of the Company's factory, and they have requested the Company for a plot of land as free gift to the Government. It is expected that the Research Station will provide the Company firsthand benefit of latest agricultural practices, improved cane varieties and pest control measures, and it will also promote cultivation of good quality cane in the factory area.

NOTICE is also given that the Share Transfer Registers will be closed from the 9th May to 24th May, 1961, both days inclusive.

A member who is entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member of the Company.

By Order of the Board,
ANDERSON WRIGHT, LTD.,
Managing Agents.

CALCUTTA, 19*th April*, 1961.

THE SOUTH KARANPURA COAL COMPANY, LIMITED

THE BOARD OF DIRECTORS OF THE COMpany have recommended the payment of a dividend on Ordinary Shares at 2½ per cent per annum subject to deduction of tax for the year ended 31st August 1960.

By Order of the Board,
BIRD & CO., (PRIVATE) LIMITED,
Secretaries and Treasurers.

WORKING OF HINDUSTAN AIRCRAFT LTD.

ESTIMATES COMMITTEE PINPOINTS SHORTCOMINGS

THE Estimates Committee of the Second Lok Sabha has recently examined the reports and accounts of the Hindustan Aircraft Limited —a premier public enterprise under the control of the Union Ministry of Defence. The Committee's findings and recommendations are contained in its 124th report presented to the Lok Sabha a few days ago. By far the most disquieting finding is that this Company in the public sector has been unable to give any return on the invested capital during the 20 years of its existence. Although the Company had declared a dividend of Rs. 5.25 lakhs (at the rate of 3 per cent of the paid-up capital) only once in 1949-50, it was capitalised by the issue of additional shares to the shareholders. It was thus broadly true that the H.A.L. was throughout not in a position to give any return on the invested capital.

The contention of the Defence Secretary in this connection was "that they had not been very anxious to the paying of dividend by the H.A.L. and that it was thought better to plough back the surpluses into reserves." This contention would appear to suggest that adequate reserves have been built up during the period. But that is not actually the case, for the balance of reserves and surpluses of the Company at the end of 1958-59 was only Rs. 206 lakhs as against the paid-up capital of Rs. 1,080 lakhs. Thus the reserves are about 19 per cent of the paid-up capital; this proportion may go up to only 33 per cent even after excluding the proportionate investment on new projects. The Estimates Committee's finding is that this is not a satisfactory state of affairs, for the ratio of reserves to paid-up capital, in its opinion, should normally be 1 : 1. Incidentally, it may be pointed out that the aggregate ratio of paid-up capital to reserves of 1,001 companies in the private sector, worked out by the Department of Company Law Administration as at the end of 1956-57, was 1 : 1.1. No exception can, therefore, be taken to the Committee's view that the amount of reserves built up by the H.A.L. is very low, considering the fact that the Company has declared no dividends, except once, during the 20 years of its existence. That the Company has also not been able to finance, from its own resources, any significant portion of its expansion/development programme (for which the paid-up capital has had to be raised by Rs. 700 lakhs during the three years 1956-57, 1957-58 and 1958-59) is a no less distressing fact.

Profit-making Capacity Low

In the final analysis, this state of affairs has resulted from the relatively low profit-making capacity of the Company. The relevant facts are that the percentage of net profits (before tax and interest) to the total capital employed has come down from 3.0 to 2.2 and the percentage of net profits (after tax and interest) to net worth has also fallen from 5.8 to 3.3 during the four years ended 31st March 1959. Similarly, the percentage of net profits (before tax and interest) to sales, which rose from 6 in 1955-56 to 9 in 1956-57, has also been declining since then. Even after allowance is made for the investment on new projects, it is found that the percentage of profits (before tax and interest) to total capital invested on old projects comes to 3.5 per cent. It would thus appear that the profits on the established items of production are still low.

The only redeeming feature of the financial affairs of the H.A.L. is that the Company has provided Rs. 167 lakhs by way of depreciation upto 31st March 1959. Such depreciation on fixed assets has been provided at the ordinary income-tax rates which, according to the Financial Controller of the Company, are by and large adequate. But, according to the Estimates Committee, the normal rate of depreciation allowed by the Income-tax authorities is not likely to prove adequate in an industry like aircraft which is changing so rapidly and radically in a technological sense. It has, therefore, recommended that the special requirements of the aircraft industry in respect of depreciation be examined. Incidentally, this kind of plea may be applicable to some other industries like cotton textiles, chemicals, sugar and paper which find the present depreciation provision at normal income-tax rates to be inadequate for purposes of large-scale rehabilitation and modernisation.

The question arises whether the H.A.L. will be in a position to make larger provision for depreciation, to earn larger profits and to build up reserves. It may be able to do all this only if the pricing system under which the H.A.L. handles its work is changed and the cost of production brought down. As things stand, most of the work done by the H.A.L. is on 'cost-plus' basis. Under this pricing system, the margin of profit on I.A.F. manufacturing projects is fixed on an *ad hoc* basis, after taking into consideration the overall cost of the aircraft engines, the volume of work involved, the number of man-hours put in by the H.A.L. and the cost of the material utilised; this margin is 5 to 6 per cent on manufacturing projects and 10 per cent on overhaul. This 'cost-plus' pricing system is generally held not to provide an incentive to the manufacturer to be efficient and to minimise his cost. Experience in the U.K. also supports this view. The Estimates Committee has, therefore, recommended that the H.A.L. should work out in advance its expected costs properly and quote fixed prices on that basis. It is stated that only in such a situation can the profits be a true test of performance.

Production Cost High

As things stand, there has been an increase in the cost of production of all items of output at the H.A.L. One of the causes of the increase is that the average overhead expenditure has risen from 329 per cent on direct labour cost in 1957-58 to 392 per cent in 1960-61 in the case of aircraft. The view of the Financial Controller of the H.A.L. in this connection is that the ratio of 350 between labour and overheads would be quite reasonable for an aircraft factory. But this ratio, according to the Estimates Committee, is *prima facie* on the high side. Its considered finding is that, unless the ratio of overheads is brought down, it is unlikely that the cost of production can be appreciably reduced. That the ratio of overheads in the H.A.L. is on the high side is also confirmed by the difference in the costs of production of integral rail coaches manufactured at the H.A.L. and the Integral Coach Factory, Perambur. While the estimated cost of a rail coach at the H.A.L. is Rs. 1.56 lakhs, that of a coach at the Perambur Factory is Rs. 1.40 lakhs. It is stated that, at the H.A.L., the expenses on direct labour and overheads are more by Rs. 2,000 and Rs. 15,000, respectively. Thus, the higher cost of the H.A.L. coach is due to higher overheads. On this account also, the Estimates Committee's suggestion that the ratio of overheads should be brought down seems to be wholly appropriate.

On the related questions of wages and productivity, the Committee's finding is forthright. Any wage rise, it says, should be accompanied by a corresponding rise in productivity. The Committee has been led to give this finding, because, while the production of the H.A.L. over the period 1955-56 to 1958-59 rose by 34 per cent (from Rs. 521 lakhs to Rs. 698 lakhs), the expenditure on salaries, wages and bonus, etc., rose by 51 per cent (from Rs. 186 lakhs to Rs. 281 lakhs). The disproportionate increase in the wage bill certainly calls for examination. It is high time a productivity study was made to assess whether the large increase in the wage bill was fully justified and whether production could not be stepped up correspondingly. The Estimates Committee has thus made out a case for relating wages to productivity—a wholesome principle indeed, if it can be generally adopted in all major industries in both the sectors. A public sector enterprise should also serve as a model for other industries in this regard.

FORWARD MARKETS BULLETIN

(Monthly)

Published by Forward Markets Commission
Government of India, Bombay

REGULAR FEATURES

- A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
- Special articles on technical aspect of forward trading
- Extensive information relating to developments in futures markets
- Detailed commodity market reviews
- Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
- About 200 pages in print in crown ¼ size
- Attractive get-up

Annual subscription		Single copy

ESTIMATES COMMITTEE ON HINDUSTAN SHIPYARD

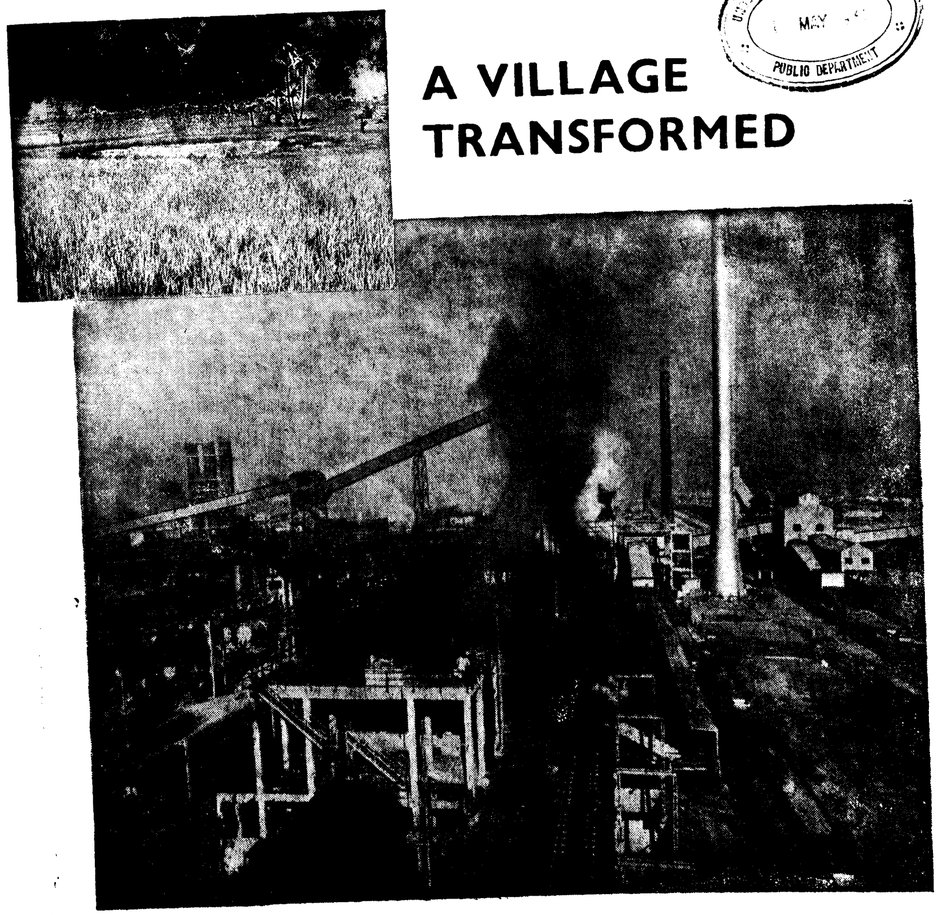
The annual reports and accounts of the Hindustan Shipyard Ltd.—a Government-sponsored company in which the Government of India holds two-thirds of the share capital and the Scindia Steam Navigation Company Ltd. the remaining one-third—for the years 1956-57 to 1959-60 have been subjected to a general examination by the Estimates Committee of the Second Lok Sabha. The problems of costs and pricing and subsidy figure prominently in this examination. The costs of construction of ships in the shipyard are almost on a par with the costs obtaining in Italy and France and are much lower than those in the United States and Australia. But they are certainly higher than in the United Kingdom, Germany, Japan and the Scandinavian countries. The principal reasons, given by the Directors of the Shipyard, for the high costs are: (i) low productivity and inadequacy of trained personnel, (ii) importation of machinery and equipment which form the bulk of the materials used, (iii) the need for holding large stocks of steel in standard sizes, and (iv) the high incidence of overheads. There seems to be some scope for reduction of costs. The Estimates Committee itself has urged that constant efforts should be made to increase productivity through proper training in modern methods, that overheads be controlled by strict economy and proper utilisation of resources and that a proper designing and estimating department be developed so as to eliminate dependence on foreign designs.

But these measures alone will not be sufficient, for the major factor responsible for high costs is the import of materials and steel. According to the Chairman of the Shipyard, shipbuilding in India is still mainly the assembling of a ship, because, in value, nearly 80 per cent of the materials (including steel) have to be imported. The cost of shipbuilding plates in India is a third higher than in the U.K. Moreover, while plates and sections are available to the U.K. yards in exact sizes, this is not so in India with the result that there is a greater amount of wastage. In this situation, only the Rourkela Steel Plant can come to the rescue of the Shipyard by making available shipbuilding steel in exact sizes and quantities required by the yard. It may be expected that there will then be an appreciable reduction in the costs of construction of a ship.

On the related questions of pricing and subsidy, the Estimates Committee has the following to say:

"Shipbuilding is subsidised in all countries, except in the U.K., which has a century-old tradition in ship construction. It may not be possible for the Hindustan Shipyard Ltd. to function efficiently without a subsidy in one form or another for some time to come. The Committee have elsewhere recommended the necessity of standardisation of ships built in the Hindustan Shipyard. The cost of such standardised ships should be capable of standardisation to a large extent. Based on such standardised costs, the Government may periodically determine the subsidy to be paid for each unit of construction related either to the tonnage or the cost. With this margin, the Shipyard should be able to quote competitive prices, if not the lowest world prices to the buyer. To the extent the actual cost of construction of a ship could be brought down, the profits of the Shipyard would go up. Failure to construct a ship within the permissible subsidy would indicate lack of efficiency on their part. The Committee suggest that Government may examine the possibility of revising the present basis of subsidy on the lines indicated above."

The Committee has pointed out the difficulties in applying the U.K. Parity Price Formula for determining the prices of Hindustan ships. The demand of shipowners that ships built in the yard be made available at the lowest world price is also dismissed on the ground that it would not be possible for the Shipyard to ascertain the price which would not be challenged by the buyers. The Committee's recommendations covering prices and subsidy seem to represent a golden mean under which neither the Shipyard can continue to rely fully upon Government subsidy to make up the difference between its actual cost of construction and the ruling world prices nor can the buyer hope to get Hindustan ships at the lowest world market prices. All the parties concerned—the Government which has paid a subsidy of Rs. 456 lakhs upto 1959-60 to the Shipyard, the Indian shipowner and the Shipyard, too—will continue to incur varying losses under the compromise formula suggested by the Estimates Committee. As far as the buyer is concerned, he would do well to console himself with the thought that, in view of the difficult foreign exchange position, he cannot normally expect to get readily sufficient foreign exchange to buy a ship in the world market even at the lowest available price. The Government, however, could help the shipowner by allotting sufficient foreign exchange for buying two ships abroad for every ship bought from the Hindustan Yard or in some such proportion, so that he may be able to spread out the high cost of Indian-made ships over his entire fleet and thereby be in a position to quote competitive freight rates for cargo in the world markets.



A VILLAGE TRANSFORMED

Once an obscure village, set amidst field and forest . . . today, a mighty steel town. In a little over two years, Durgapur is making world news!

Pig-iron for foundries, forging blooms and billets for re-rollers, sections for industry and sleepers for the railways are already being produced at Durgapur. More will follow as the construction of this giant steelworks nears the fourth and final stage.

BRITISH COMPANIES WORKING FOR INDIA

ISC 1

THIS IS ONLY AN ANNOUNCEMENT FOR INFORMATION AND NOT A PROSPECTUS

A copy of the Prospectus having attached thereto the documents required by Section 60 of the Companies Act, 1956, for Registration, has bee delivered to the Registrar of Companies, Bihar, Patna.

Certificate of Commencement of business has been obtained on the 31st January, 1961.

An application is being made to the Calcutta Stock Exchange Association Ltd. for enlisting the name of this Company for official quotation of ti shares of the Company.

THE SUBSCRIPTION LIST WILL BE OPEN AT THE COMMENCEMENT OF THE BANKING HOURS ON THE 1st DAY OF MAY, 1961, AN WILL CLOSE AT THE CLOSE OF THE BANKING HOURS ON THE 10th DAY OF MAY, 1961, OR SOONER OR LATER AS THE DIRECTORS MA DECIDE BUT NOT EARLIER THAN THE CLOSE OF BANKING HOURS ON 4th DAY OF MAY, 1961.

BIHAR CABLE & WIRE INDUSTRIES LIMITED

(INCORPORATED ON THE 13TH OCTOBER 1960 UNDER THE COMPANIES ACT, 1956)

SHARE CAPITAL

AUTHORISED SHARE CAPITAL .. .. **Rs 25,00,000**

Divided into :—

1,50,000 Equity shares of Rs. 10 each	Rs. 15,00,000
10,000 Preference shares of Rs. 100 each	Rs. 10,00,000
	Rs. 25,00,000

ISSUED SHARE CAPITAL .. .. **Rs. 10,00,000**

70,000 Equity shares of Rs. 10 each	Rs. 7,00,000
3,000—7% All tax free cumulative redeemable Preference shares of Rs. 100 each	Rs. 3,00,000
	Rs. 10,00,000

SUBSCRIBED AND PAID-UP CAPITAL .. .. .. **Rs. 2,19,080**

(i) 18,400 Equity shares of Rs. 10 each fully paid up (issued to the Vendors of two industrial units purchased being the consideration money paid)..	Rs. 1,84,000
(ii) 3,508 Equity shares of Rs. 10 each (issued to promoters, Directors, their friends and relations at par, against full payment in cash	Rs. 35,080
	Rs. 2,19,080

PRESENT ISSUE .. .. **Rs. 7,80,920**

48,092 Equity shares of Rs. 10 each	Rs. 4,80,920
3,000—7% All tax free cumulative redeemable Preference shares of Rs. 100 each	Rs. 3,00,000
	Rs. 7,80,920

OUT OF THE PRESENT ISSUE .. .. **Rs. 60,920**

6,092 Equity shares of Rs. 10 each have been agreed to be subscribed by Directors, their friends, relations against full payment in cash .. .. Rs. 60,920

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION .. .. **Rs. 7,20,0**

42,000 Equity shares of Rs. 10 each	Rs. 4,20,000
3,000—7% All tax free cumulative redeemable (at the end of 7 years) Preference shares of Rs. 100 each	Rs. 3,00,000
	Rs. 7,20,000

Except the purchase price paid to the Vendors as aforesaid no shar have been allotted or will be allotted for a consideration other than cash.

TERMS OF PAYMENT OF THE ABOVE SHARES

(i) 42,000 Equity shares will be payable as follows :

On application	Rs. 5 per share
On allotment	Rs. 5 per share

(ii) 3,000 Preference shares will be payable as follows :

On application	Rs. 50 per share
On allotment	Rs. 50 per share

Failure to pay the allotment money will render the share liable t forfeiture.

UNDERWRITERS

The entire issue of 42,000 equity shares has been underwritten b Messrs. Sadasukh Kabra & Co. of 2, India Exchange Place, Calcutta. In th opinion of the Directors the resources of the Underwriters are sufficient t discharge their obligation.

APPLICATION FOR SHARES

Applications for Equity and Preference shares should be made in th printed form accompanying the Prospectus. Applications for Equity share must be for a minimum of 25 shares or multiple of 25 shares and for Preferenc shares must be for a minimum of 5 shares or multiple thereof. All Applicatio forms properly completed must be lodged together with amount payable o application before the closing date of the Subscription List at the Registere Office or at the Head Office of the Company or at the offices of the Banker detailed in the Application forms.

The Directors do not bind themselves to allot the full number of share applied for and reserve the right to reject any application wholly or in par without assigning any reason thereof. Applications which are not complet or which are not accompanied by proper payment as above may not b considered.

BOARD OF DIRECTORS

(1) SHRI SATYENDRA MOHAN DHAR, C.I.E., I.C.S. (Retd.), Industrialist, (*Chairman*). Lately Agent, Tata Iron & Steel Co. Ltd., Jamshedpur. DIRECTORS' QUALIFICATION

The qualification of Directors shall be holdin of one equity share in the capital of the Company

OBJECTS OF THE COMPANY

The Company was incorporated on 13th da of October, 1960. The main object of the Com pany is to carry on business as manufacturers an dealers in nail-wires, wire drawing and galvanis ing, stranded wires, barbed wires, wood screws bolt and nuts, rivets and all other kinds of wire whether steel or otherwise and wire products an also to carry on the business as manufacturers of dealers in, importers, exporters and contractors o all kinds of cables, apparatus, insulated material required for electricity and telephone or are cap able of being used in connection with generation distribution, supply, accumulation and employmen of electricity.

HISTORY OF THE COMPANY

The Company has taken over two industria units, viz., Khemka Cable Works and Bihar Wire Industries, on and from 18th October 1960 as run ning concerns with all their assets and liabilities goodwill, trade marks, permits, licences, advantage etc., including rights on all immovable proper ties including those held under lease partly or fully constructed or acquired by the Vendors including plant and machinery, office furnitures, implements raw-materials created by the Vendors as on 18th October 1960 in terms of the agreement dated 15th November 1960, with the partners of the said two Vendors.

(1) The Unit Khemka Cable Works has a scheme to produce per annum 24 million yards of Rubber insulated cables upto 660 volts of various grades required for domestic and industrial electrification and the manufacture of 0.6 million yards of welding cables required for the installation of heavy and light steel structural constructions in both private and public sector. The cables to be manufactured by the Company will conform strictly to relative Indian Standard Specifications prescribed. The Unit has already acquired its Plant and Machinery which are likely to be delivered to the Company within another about three months and has also completed the major part of construction of factory sheds and buildings.

(2) The Unit Bihar Wire Industries has two schemes—the first is to manufacture 1,500 tons of galvanised steel wires per annum and the second scheme is to manufacture 700 tons of barbed wire and wire nails per annum. This unit for making barbed wire and wire nails is likely to go into production in another about three months' time since the machineries and raw materials have already been acquired and are likely to be delivered at factory site very shortly. The unit for manufacturing galvanised wire will go into production by January 1962 when all the Plant and Machinery is likely to be delivered to the Company.

BUSINESS PROSPECTS

Under the present phase of industrialisation, electrification and economic development in the country, the manufacture of electrical cables has an important and major role. With the advent of the Third Five-Year Plan and the progressive expansions of the existing industries and various programmes of rural electrifications, the cable and wire industry has very bright pospects. Inspite of manifold increase in the production of low tension distribution cables which has been raised by over 100 per cent between the year 1954-58 from 82.80 million yards in 1954 to 127.00 million yards in 1958, the indigenous production has not been able to meet the demand for these cables. The demand for these cables at the end of the Third Five-Year Plan is estimated to exceed 500 million Core Yards against the country's production of 214 million in the year 1959-60 which is less than half of the target set for 1965-66. The yearly increase in demand of 20 per cent leaves a wide gap between the demand and supply and thus assures this proposed factory a good market for its products and further increase in the production from time to time.

The demand for hard Bright Wires, Concrete Reinforcement Wires, Galvanised Wires used for stay wires, telegraphic transmission etc., Signal Wires etc., are largely imported as the indigenous production is not sufficient to meet the demand. In view of great industrialisation and expansion programmes undertaken in all phase of development in the country, the demand for such wires is likely to increase in the Third Five-Year Plan. The Company's plant for manufacturing of 1,500 tons per year will be helpful in reducing import and with the increased production of steel in the country, there is a good scope to increase the production of the wires by the Company. The Company proposes to increase its wire drawing and galvanising capacity from 1,500 tons per year to 12,000 tons per year and for this it is already in negotiation with the Central Government for grant of Industrial Licence and the Company is also in touch with foreign firms for technical collaboration.

MANUFACTURING LICENCES, RAW MATERIALS AND TECHNICAL PERSONNEL

With a view to boost small industries, the Government of India have decided that industrial undertakings, which employ less than 100 persons and whose fixed assets are less than Rs. 10 lakhs in value, can proceed without applying for licence under the Industries (Development and Regulation) Act. Since the fixed assets of the Company's each industrial units will be below Rs. 10 lakhs the Company does not need any manufacturing licence under the said Act. The Company has however received full support from the State Director of Industries who has recommended the setting up of the Company's industrial Units in Bihar and has issued required Essentiality Certificates for the import of Plant and Machinery and raw materials.

The Company has already been granted most of the import licences for import of Plant and Machinery and raw materials which have also been imported to some extent. Other Plant and Machinery as required for the second stage of production schedule will be imported very shortly.

Raw materials to run the Barbed Wire and Wire Nail unit has already been imported and this will be sufficient for about three months' consumption. Other import licences for raw materials are expected shortly. With the increased production of steel in the country, the Company does not foresee any difficulty in running its wire drawing and galvanising plant.

The Company has secured the services of fully qualified technicians with previous experience of working in similar units. This would enable the Company to bring the units into full production within the scheduled period.

LOCATION OF FACTORY SITE AND POWER

The present two industrial units of the Company are located at Digha, Patna, on Leasehold land. The construction of the Factory Shed and Office building for Cable Factory is nearing completion. Negotiation for the outright purchase of other plot of land is under progress with the owners of the said land which is expected to materialise very shortly. From the point of view of road and rail transport, the present site is very convenient. Adequate supply of electric power has already been sanctioned by Patna Electric Supply Co. Ltd.

CAPITAL OUTLAY AND SOURCES

Capital outlay and working capital

The estimate of requirements are as follows:

	Rs.
(1) Cost of erecting factory shed, office buildings and plant and machinery inclusive of transport, custom duty, erection at site, cost of land and preparation of site etc.	10.45 lakhs
(2) Other fixed assets	1.05 ,,
(3) Preliminary and development expenses including expenses on this issue and brokerage payable	1.50 ,,
(4) Working capital including accommodation from Bankers	26.50 ,,
(5) Any other expenditure ..	NIL
Rs.	39.50 lakhs

(A portion of the above expenditure can be deferred)

This amount will be made from the sources as follows:

	Rs.
(1) Subscription by the Directors and their friends including the Vendor' shares issued	2.80 lakhs
(2) Subscription of 42,000 Equity shares and 3,000 Preference shares offered for public subscription ..	7.20 ,,
(3) Other credits and advances	3.00 ,,
(4) Loan from Bihar State Financial Corporation against mortgage of immovable assets	5.75 ,,
(5) Bank accommodation against stocks, bills etc.	20.75 ,,
Rs.	39.50 lakhs

(To arrange Bank Accommodation of Rs. 20.75 lakhs a margin of Rs. 4.75 lakhs have been provided. Moreover, the entire banking accommodation is not required immediately since the other units will come into production later in early 1962 by which time the Company would have earned from other units going into production much earlier).

MINIMUM SUBSCRIPTION

The minimum amount which in the opinion of the Directors must be raised by the issue of shares in order to provide the sum required to be provided as per para (5) of Schedule II of the Companies Act, 1956, in accordance with which the Directors would proceed to allot by this Prospectus is the subscription of shares of the nominal value of Rs. 4,50,000 payable in cash.

PROFIT

On the basis of existing prices and after allowing costs, depreciation and other foreseeable contingencies in so far as those items can at present be estimated the Directors are of the opinion that, in the absence of any unforeseen circumstance, the Company should be in a position to pay reasonable dividends on the issue of Equity shares, possible in the very first year of the Company's working. The other similar large factories are making excellent profits and are paying good dividends.

The Company will be entitled to get the advantages of the development rebate and exemption from income-tax under Section 15(C) of the Income-tax Act and the shareholders will also be exempt from wealth tax on their holdings for a period of five years under Clause XX of sub-section 1 of Section 5 of the Wealth Tax Act.

The Company will also be entitled to sell its products at a higher rate to Government consumers as allowed under the Act for the benefit and encouragement to small-scale industrial units.

UNDERWRITING COMMISSION

The underwriting commission at 2½ per cent of the nominal value of the Equity shares now offered for public subscription is payable to the said underwriters.

BROKERAGE AND COMMISSION

The brokerage will be paid by the Company to the members of any recognised Stock Exchange and to the Bankers at Re. 1.20 nP per share in respect of Preference shares and 12 nP per share in respect of Equity shares allotted in respect of applications bearing their stamps. Brokerage on the same basis will be paid to the underwriters in addition to the underwriting commission on the shares allotted in respect of applications bearing their stamps. Brokerage will also be paid by the Company to the Managing Brokers at 7 nP per Equity share and at 50 nP per Preference share on shares allotted to public.

INSPECTION OF DOCUMENTS

Copies of the Memorandum and Articles of Association of the Company and copies of other documents and Agreements can be inspected at the Registered Office of the Company during the usual business hours until 14 days after opening of the subscription list.

NEW PRODUCTS AND PROCESSES

Improved Pasteuriser

AN improved pasteuriser has been evolved at the Central Food Technological Research Institute, Mysore. The pasteuriser, which has been patented, is stated to be an improvement over the equipment available in some of the industrially advanced countries. The colour, flavour, texture and vitamin content of many canned foods are most effectively preserved by high-temperature, short-time cooking or pasteurisation. Commercially, this is accomplished through flash-pasteurisation and agitation. Flash-pasteurisers are, however, suitable only for liquid food products like fruit juices and have not been successful in processing semi-fluid or viscous food products like fruit juice concentrates, pulps, pastes, soups, etc., and of canned fruits on account of their high viscosity.

Emulsions and Resins from Cashewnut Shell Liquid

A new process for making stable emulsions from cashewnuts shell liquid aldehyde condensate resins, their solutions and polymerised cashewnut shell liquid has been discovered. The emulsions obtained are rapid-drying and free from odour and fire hazard. They can be applied on wet as well as porous surfaces and the films obtained can withstand washing. These emulsions are suitable media for primers and possess tolerance to addition or corrosion inhibitors. Sealing pastes based on these emulsions can stand hot riveting.

Another process, also developed at the Institute, easily makes available isogel-stage cashewnut shell liquid resins either by condensing raw cashewnut shell liquid with aldehydes followed by heat processing at low temperatures or by condensing the heat-polymerised cashewnut shell liquid with aldehydes at room temperature under alkaline conditions. The resins so obtained are mechanically dispersed in suitable solvents. These dispersion resins give fast drying finishes which adhere to metals and which can be recoated with lacquers without lifting. They can be used for making rich paints and primers which, when applied on steel surfaces, give cathodic protection. Both the processes have been studied out in the laboratory and 2-2.5 gal. batches of the products have been prepared.

Dyeing of Wool

Conditions for dyeing protein and polyamide fibres like wool, silk and nylon with purified lac dye have been standardised as a result of investigations undertaken in the Department of Chemical Technology, University of Bombay. Dyeings of specific shades and fastness properties have been produced by employing suitable mordants. Procedures have been evolved for obtaining crimson, purple, orange-red and brown dyeings. Although lac dye has been used in India for dyeing silk and wool, systematic studies with respect to the range of shades obtained and fastness characteristics have not been carried out so far.

Moisture-proof Linings for Jute Bags

Search for moisture-proof packaging of hygroscopic fertilisers at Sindri has indicated that polythylene liner stitched to jute bag gives maximum protection against humidity. For protection of urea against caking, the thickness of the liner should be at least 0.002 in. Among the different linings, tested at the Sindri's Technological Department for moisture impermeability and ability to withstand rough handling were: polythene liners, crepe paper paster with bitumen to jute, two plies of bagging paper laminated and pasted with bitumen to jute and paper laminated and pasted with bitumen to jute and polyvinylidene chloride-coated jute bags. The results showed that polyethylene-line jute bags are superior to polyvinylidene chloride-coated or paper-lined jute bags. Polythene liners stitched to the jute bags are better than loosely inserted ones. The liner, larger in dimension, and the jute should be folded and doubly stitched so that there is less likelihood of moisture penetration.

Light Oil Reduces Hydrogen Production Cost

Imperial Chemical Industries proposes to spend £6 million for modernising a large section of a plant in Billingham—north-east England. A highly efficient process has been developed at the plant for making at a lower cost the hydrogen which is the first stage in the manufacture of ammonia, fertilisers and many of the other products. This process will use light oil as a raw material in place of the coke which is the present main basis of making hydrogen. Preliminary site work is already in progress and the new plants will come into use in 1963. Existing plants will continue to operate during the change-over and full production of all Billingham plant products will be maintained while the new scheme is being commissioned.

Hydraulic Broacher

A new type of hydraulic broacher which will considerably reduce the time spent in making certain equipment for the oil industry, has been produced by a British firm. Claimed to be one of the largest horizontal pull broachers made, the machine has been designed to cut to close tolerances the body cavities in gate valve forgings. These valves are extensively used in oilfield pipeline networks in sizes from 2 ins. to 6 ins. They are suitable for pressures ranging up to 15,000 lbs. per square inch. The machine is based on a standard broacher with certain specifications built in. It is claimed that the new broacher will complete the work on the valves far more quickly than conventional types. With a 100-inch stroke, it will—in only s.14 passes—produce a rectangular hole 5¼ ins. x 2¾ ins. from a 2.5/16 in. diameter starting hole. The machine is only 3 ft. 6 ins. high at the handling area. Features of the broacher are push button speed control over three ranges (from 1 to 21 ft. per minute), low height and a hydraulically-operated support pan which feeds the broach into the component automatically to ensure the broach is guided throughout its stroke.

Malted Milk Powder

A new process for producing malted milk powder has been developed at the Mysore Food Technological Institute. The process consists in mixing concentrated malt extract with milk powder, fats and carbohydrates followed by vacuum drying. A notable advantage of the process is said to be the use of milk powder in place of liquid milk and concentrated malt extract in place of mash liquor prepared from green or kilned malt, which eliminates the need for evaporation. Fifty-lb. batches of the milk products have been successfully prepared and found to compare favourably with imported products both in taste and flavour. The shelf life of the product is about one year at 37° C. Raw materials required for the process, namely milk, ragi, *jowar*, barley and wheat are all available indigenously. Total capital outlay on a plant having a capacity of 300 tons per annum is estimated at about Rs. 6.05 lakhs, and the equipment required includes vacuum shelf driers, powder filling unit, mixers, seamers and granulator.

Rubber Base Contact Adhesive

A rubber base contact adhesive capable of withstanding several hundred pounds of pressure per sq. inch, has been developed at the National Chemical Laboratory, Poona. Contact adhesives are extensively used in automobile, aircraft, and rail coach factories as also in the aluminium, steel, glass, ceramic and other industries. Apart from its utility as a general adhesive the new material can be used as an anchor coat in the manufacture of cellophane adhesive tapes. The new product is said to have been tested by several industries and is reported to be equal to or better in quality than some of the imported varieties.

AUDITORS' REPORT

We have audited the foregoing Balance Sheet of the Bombay Branch of the Mitsui Bank Limited, as at the 31st day of December, 1960, and also the foregoing Profit and Loss Account of that Branch of the Bank for the year ended on that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to sub-section (1) and (3) of Section 211 and sub-section (5) of Section 211 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purposes of our audit ;

(b) in our opinion, proper books of account as required by law have been kept by the Branch so far as appears from our examination of those books ;

(c) the Balance Sheet and Profit and Loss Account of the Bombay Branch of the Bank dealt with by this report are in agreement with the books of account ;

(d) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts subject to the notes thereon, give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet, gives a true and fair view of the state of the affairs of the Bombay Branch of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit of the Branch for the year ended upon that date.

H. MIYAKE,
Manager.

FINANCE COMMISSION *VERSUS* PLANNING COMMISSION

NO NEED FOR THE FORMER IN FUTURE

By Dr G. N. Arora

THERE is no gainsaying the fact that the Planning Commission, since its very inception has been playing an increasingly significant role in the sphere of federal finance in the country. This advance virtually amounts to making serious inroads into the functions of the Finance Commissions which have hitherto been the pivots in determining the Centre-States financial relations. The latter find the scope of their work as a result thereof considerably restricted. The exigencies of planning have required the Planning Commission to deal comprehensively with the finances of the Union and the States in the widest sense of the term, while the Finance Commission, though a statutory body, has only limited functions in the field to discharge, and these functions overlap, giving rise to anomalies. The Second Finance Commission was well aware of this fact and laid down for consideration whether the time was not ripe for a review of the constitutional provisions dealing with the financial relations between the Union and the States. Nothing perhaps could be done to set at rest the anomalies arising out of the working of two parallel bodies and the Third Finance Commission has now started functioning, with almost the same terms of reference as the Second Finance Commission had.

Under the provisions of the Constitution, a Finance Commission has to be appointed on the expiry of every five years or earlier if the President so desires. The Finance Commission has to make recommendations to the President on two specific matters and on any other matter referred to it by the President in the interests of sound finance. The two specific matters are: (i) the distribution between the Union and the States of the net proceeds of taxes which are to be, or may be, divided between them and the allocation between the States of the respective shares of such proceeds; and (ii) the principles which should govern the grants-in-aid of the revenues of the States out of the Consolidated Fund of India. The Planning Commission, on the other hand, owes its origin not to any Constitutional provisions but to the Directive Principles of State Policy in the Constitution, which became the frame of reference for national planning. Although these principles are not justiciable, they are the imperative basis of State policy. The resultant functions of the Planning Commission are to formulate a Plan for the most effective and balanced utilisation of the country's resources in close understanding and consultation with the Ministries of the Central Government and the Governments of the States; to allocate material resources in accordance with priorities; to scrutinise, co-ordinate, stimulate and watch the progress of various State and Central Projects; and to make recommendations to Government regarding allocation of funds, forms of State-aid and regulation of industries, trade, currency and credit.

Federal Finance

Federal finance implies the finance of the federal as well as the state governments, and the relationship between the two. It involves the use of the device of transfer of funds from the national to the regional governments in the federation, so as to effect not merely budgetary equilibrium for the economically backward states by making their resources equal to their needs, but also the economic equilibrium for the nation as a whole by enabling the federal government to follow the principle of public finance in its wider sense. The prosperity of the states, however, presupposes a reasonably strong and financially stable centre. These principles of federal finance are the guiding factors for the Finance Commissions in our country. They enjoin on them to make use of the balancing factors of shared taxes, and grants-in-aid of the revenues of the States not only to balance their budgets at the existing level of expenditure but also to fulfil as far as possible, the fiscal need of achieving economic equilibrium in the country, with the object of maximising national welfare. The Indian budgetary policy since 1952 has, however, been profoundly influenced by planning and, in the changed circumstances, the recommendations of the Finance Commissions do not go far enough to meet the ends in view. The Five-year Plans have now become an integral part of the budgets of the Union and the States and the basic needs of the States cannot be considered in isolation from the needs for development as embodied in the Plans. Even the other aim of achieving economic equilibrium in the country now requires the pursuit of a vigorous fiscal policy, as only that can bring about the greatest good of the greatest number and speed up the desired economic development. The terms of reference of the Finance Commissions undoubtedly enjoin on them to have regard to the requirements of the Five-year Plans, but their contribution in this direction has only been quite modest. The Planning Commission has, therefore, emerged on the scene to function as a high power body to regulate financial relations between the Centre and the States in accordance with the dictates of planned development. It ensures that the Plans of all regions are sufficiently integrated within themselves and with the overall national Plan. The priorities and the schemes in the State Plans are determined by it in consultation with the State Governments, after taking into account the requirements and resources of the States and the disparities in their development.

State Structure Respected

India carries out its planning with and through a federal system, in which the States are important units in their own right with their Plans accounting for nearly half the national planning budget. In planning both methods and aims, the State structure is respected, but they have to subserve the common goals and conform broadly to the national pattern of economic and social development as envisaged by the Planning Commission. The latter has successfully used the power of the purse in making national planning a success, achieving balances and avoiding wastes. In view of the facts that the financial resources of the States are inelastic and they have to depend upon the Centre for financing a very large portion of their development programmes, great importance is attached to the approval of the Planning Commission as a prerequisite to the release of funds by the Centre.

The Planning Commission, being a permanent body, devotes continuous attention to the whole field of development, including the financial aspect, which the Finance Commission does not. The functions of the Planning Commission are all-comprehensive and all-pervading. They well encompass within themselves many a function of the Finance Commission. As is apparent from the statistical analysis in the tables I to III on this page, the Planning Commission has moved far ahead in the sphere of federal finance as to overshadow the role of the Finance Commission.

TABLE I

Central Assistance to States for Plan Schemes as percentage of the Total State Plan Outlay

Five-year Plan	Central assistance to States (In crores of Rs.)	Total State Plan outlay (In crores of Rs.)	Column 2 as percentage of column 3
1	2	3	4
First	349.70	897.50	38.96
Second	1,050.00	2,044.05	51.37
Third	2,375.00	3,725.00	63.76

TABLE II

State Plan Expenditure as percentage of the State Total Expenditure

Year	Plan expenditure (In lakhs of Rs.)	Index (Base: 1957-58 =100)	Total expenditure (In lakhs of Rs.) (on Consolidated Fund and on Unfunded Debt Account)	Index (Base: 1957-58 =100)	Column 2 as percentage of column 4
1	2	3	4	5	6
1957-58 ..	347,13	100.00	187,480	100.00	25.25
1958-59 ..	399,74	115.16	140,584	102.26	28.43
1959-60 (R.E.)..	496,76	143.10	1623,40	118.08	30.60
1960-61 (B.E.)..	541,64	156.03	1716,71	124.87	31.55

TABLE III

Assistance to States (Shared Taxes+Grants) under the Finance Commission Award as Percentage of the Total Central Assistance to States excluding Loans (Shared Taxes+Grants+Contributions)

Year	Assistance under the Finance Commission Award (In lakhs of Rs.)	Index (Base: 1957-58 =100)	Total Central Assistance excluding Loans (In lakhs of Rs.)	Index (Base: 1957-58 =100)	Column 2 as percentage of column 4
1	2	3	4	5	6
1957-58 ..	158,97	100.00	231,37	100.00	68.71
1958-59 ..	201,47	126.73	289,47	125.11	69.60
1959-60 (R.E.)..	210,12	132.18	351,91	152.10	59.71
1960-61 (B.E.)..	209,96	132.08	375,88	162.46	55.86

With every successive Five-year Plan, a greater percentage of the total State Plan outlay is financed out of Central assistance to States, as, with every successive year, the plan expenditure of States constitutes a greater percentage of the States total expenditure. During the four years 1957-58 to 1960-61, the State plan expenditure has gone up by 56 per cent, as against the rise of about 25 per cent in State total expenditure. It is unquestionably the Planning Commission which determines the total State Plan outlay and the quantum of Central assistance to States for Plan schemes. Table III explains that assistance to States under the Finance Commission award is following a marked downward trend as percentage of the total Central assistance to States, excluding loans, though the fact remains that, during the period 1957-58 to 1960-61, the former has increased by 32 per cent. Total Central assistance to States, excluding loans has increased by over 62 per cent during the same period. During the same very period, resources (shared taxes + grants) transferred to the States as a result of the recommendations of the Finance Commission, have formed, on an average, only 22 per cent of the total State revenues on revenue account. The grants given under Article 282 of the Constitution on an executive basis as a result of negotiations between the Planning Commission, the Government of India and the State Governments, have introduced a striking change in the sphere of financial relations between the Union and the States. They do not fall within the purview of the Finance Commission but are a concern mostly of the Planning Commission. In the context of the Central aid to the States for Plan schemes, they are becoming increasingly important. Time is, perhaps, not far off when they will exceed the total assistance to States under the Finance Commission Award. They are already greater than the grants-in-aid of revenues given on the recommendation of the Finance Commission under Article 275 (1) of the Constitution. As observed by the Second Finance Commission, the latter will amount to Rs. 190 crores during the five year period, as against Rs. 275 crores likely to be received by the States during the same period under Article 282.

In assessing the needs of the States and determining their Plan outlay and the quantum of Central assistance therefor, the Planning Commission makes a thorough assessment of the existing resources of each State, its committed expenditure, the expenditure necessary for the Plan and the additional resources to be raised by it for meeting such expenditure. Thus the Planning Commission determines not only the Plan budget but also the normal budget for each State. What is later on presented to the State Legislature is almost a predetermined thing. In the context of this situation, it seems rather paradoxical for the Finance Commissions to make recommendations pertaining to the financial allocations to the States from the Centre after the States' shares in a Five-year Plan have been decided upon. The Finance Commission is concerned only with the revenue expenditure and consequently makes recommendations for the devolution of revenue resources. The Planning Commission, on the other hand, makes no distinction for purposes of the Plan between revenue expenditure and capital expenditure and our planned economy enjoins on it to see that the budgetary gaps of the States are fully covered by transfer of resources from the Centre. The Finance Commission, among other matters, makes recommendations relating to grants-in-aid of the revenues of the States under Article 275 of the Constitution, and the sums to be paid to those States having regard to the requirements of the current Plan and the efforts made by those States to raise additional revenue from sources available to them. The Planning Commission deals with the subject of Central assistance to States in a much wider perspective and is, perhaps, better placed to assess the budgetary needs and gaps of the States and to evaluate their efforts to intensify their tax efforts and effect economy in their expenditure.

It may, however, be pleaded that the Finance Commission in accordance with the provisions of the Constitution, has also to make recommendations relating to the distribution between the Union and the States of the net proceeds of taxes which are to be, or may be, divided between them and the allocation between the States of the respective shares of such proceeds. This function, of course, does not lie within the purview of the Planning Commission. But is it something very material? The importance of shared taxes as an instrument for effecting financial adjustment between the Centre and the States has diminished considerably and grants-in-aid instead have emerged on the scene as a significant factor in federal finance. There is hardly any differentiation left between the two, in view of the financial integration of the country, and both tend to serve the same purpose. In fact, the Indian Constitution places them on the same footing. The superfluous mechanism of shared taxes may, therefore, be dispensed with and only grants-in-aid may be allowed to hold good. As will be seen below, it is the Planning Commission that can most judiciously determine the grants-in-aid for various States.

It is a widely acclaimed principle of grants-in-aid that the eligibility of a State in a Union to grants-in-aid and the amount of such aid should depend upon its fiscal need in a comprehensive sense. In a planned economy, in which the Centre and the States have joined hands in fruitful partnership, it is only the priorities and provisions in the Plan that may provide a suitable basis for determining their respective fiscal needs and, consequently, the grants-in-aid from the former to the latter. The Planning Commission determines these priorities and provisions and lays down both for the Centre and the States the directions in which the available resources may be used both over short and long periods. In joining with all the States to formulate a national Plan, it underwrites its implementation in a large measure. It has a concern for seeing that States discharge their part of the obligations and for recommending to the Centre to use its own resources and its powers of management of currency and credit in the service of the whole Plan, including the State's obligations. In such a situation the grants-in-aid to States from the Centre can best be determined by the Planning Commission. Being a permanent body, it is in a position to make a thorough study of all the aspects of the States' economy, develop a balanced and integrated approach towards major national problems, keep itself abreast of the changing socio-economic conditions in the States and adapt its thinking to the changing needs of the economic and social structure. It is a repository of all relevant factual, statistical and technical data in the systematic collection, scientific analysis and objective interpretation. The Finance Commmissions are certainly not so favourably placed as the Planning Commission is to discharge these functions. Their scope of work is quite limited, approach quite modest and decisions quite moderate.

Two Parallel Bodies Unnecessary

In view of these considerations, it is, perhaps, desirable to eliminate the necessity of having two parallel bodies dealing with the same subject and making two separate assessments of the needs of the States. Only an organisation which is more effective and noted for the comprehensive character of its functions should stay. Which that organisation may be, is amply borne out by the above analysis. It has been noticed that the assessment of needs of the States by the Planning Commission and then by the Finance Commission simply amounts to unnecessary duplication of work and wastage of time and effort. To make matters worse, the States' approach to two bodies generally varies. In the forecasts of revenue and expenditure submitted to the Planning Commission, many of the States overestimate the yield from existing sources of revenue and underestimate their Committed expenditure. To the Finance Commission, the States generally submit conservative estimates of revenue and exaggerated figures of expenditure. The underlying idea of their approach to the Planning Commission is to get more matching funds from the Centre, while, in the case of the Finance Commission, the idea is to get a higher share in the proceeds of distributable tax revenue and a higher amount as grants-in-aid of revenues. It is really a difficult task to reconcile the two diverse approaches and assess correctly the fiscal needs of the States. It is, therefore, all the more desirable that there is only one organisation to make a scientific assessment of the needs of the States and deal comprehensively with the subject of devolution of resources from the Centre to the States. It hardly needs any emphasis that, of the two Commissions, the Planning Commission is the most suited to carry out these functions. It is the avowed policy of the Planning Commission to bring about balanced development of different parts of the country and extend the benefits of development to the more backward regions. The determination of the total size of the State Plans and the quantum of Central assistance are based on the criteria of population, area, completion of projects under execution, provision for utilising existing assets, power development and prevalence of unemployment, underemployment, economic backwardness, etc.

The Planning Commission has grown into an institution of great national importance. The fact remains that, though there is no mention of this Commission in the Indian Constitution and it has not been set up by a Parliamentary statute, it has come to stay as an organisation wielding profound influence in the socio-economic sphere. Great adventure in planning, adherence to broad objectives of a welfare State and the acceptance of the socialist pattern of society as the goal for the country have earned for it a place of pride in the country. Its role in the sphere of federal finance is overshadowed to by its bigger role in the field of economic development. But its work even in the sphere of federal finance is of far-reaching importance and far outweighs the work done by the Finance Commission.

The principal conclusion that emerges from the aforesaid analysis of the functions of the two bodies is that the Planning Commission is favourably placed to carry out, with utmost efficiency, impartiality and objectivity of judgment, not only its own functions but also the functions performed by the Finance Commission. Accordingly, there appears to be no necessity for constituting a Finance Commission. The Planning Commission could be conveniently empowered to perform some additional duties which the former is required to do. This may require some amendments to the Constitution and, perhaps, the functions of the Planning Commission may have to be regulated by law and not by mere conventions.

PLEA FOR COMMONWEALTH INDUSTRIAL CONFERENCE

The desirability of holding a Commonwealth industrial conference in the immediate future was stressed by Sir William McFadzean, the retiring President of the Federation of British Industries, at the annual meeting of the Federation held at London on the 12th inst. Drawing particular attention to the growth of economic co-operation between industrialists of the U.K. and those of other Commonwealth countries, Sir William observed that so many British firms had already established manufacturing subsidiaries in partnership with nationals of other member-countries "that we are fast developing a new and sturdy industrial Commonwealth."

Referring to the need for a settlement of the problem posed in Western Europe by the formation of the European Free Trade Association (E.F.T.A.) and the Common Market, Sir William stated that he did not underestimate the difficulties involved in their coming together in political and economic fields. In this connection, he referred to some of the general problems of, and prospects for, a settlement of the European question. To quote him:

"First, let us all recognise the urgency of finding solutions and the necessity for action, for the more the two blocs solidify, the more difficult their final coming together will be. Second, while our first loyalties must be to the E.F.T.A., just as the first loyalties of the Common Market countries must be to each other, I believe industry and commerce in every country concerned will make the most valuable contribution to any final settlement by striving might and main to keep business flowing at the maximum level between all countries—irrespective of tariff and other problems.... Third, I have been too deeply involved in this problem to do anything but sympathise with our own and other Governments' endeavours to find a solution. Settlement of certain matters in the political sphere may well be the first requirement, but I know that I am speaking on behalf of industrialists in many countries when I plead for no comprehensive settlement being effected without the vital interests of industry and commerce being fully consulted and taken into account. For, unless this is done, any settlement will be a patchwork and not a real and permanent solution."

Of Britain's industrial versatility, Sir William said that most of its industry was modern and efficient and, in fact, possibly at least one-quarter of its industrial production was concerned with goods unheard of 20 to 25 years ago. On industrial relations, he said that Britain lost, on an average, fewer man-hours a year through industrial disputes than practically any other Western country.

INDIAN INVESTMENT CENTRE

(An autonomous Body sponsored by the Government of India)

has opened its Office at

National Insurance Building,

Parliament Street, New Delhi-1

Telegraphic Address: "INCENTRE," New Delhi

Telephones: 48779, 47118 & 47119

JESSOP AND COMPANY LIMITED

TWENTY-NINTH ANNUAL GENERAL MEETING

CHAIRMAN, MR. B. P. SINGH ROY ON RAISING OF FURTHER SHARE CAPITAL

THE need for raising additional finance to meet the increasing outlay on the expansion and rehabilitation programmes of Jessop and Company Limited was stressed by Mr. B. P. Singh Roy, Chairman, in his speech at the Twenty-ninth Annual General Meeting of the Company held at Calcutta on Thursday, 20th April 1961. Mr. Singh Roy admitted that issue of further share capital would place additional burden on shareholders, but he was afraid the issue could not be postponed indefinitely. For, he said, the Company's borrowings from banks had exceeded the limit by Rs. 50 lakhs and that its securities, though they might be sufficient for getting some more accommodation from banks, would be too inadequate for the needs. Moreover, he felt that it was not only desirable but essential to maintain a proper balance between share capital and borrowings.

The following is the full text of Mr. Singh Roy's speech:

"GENTLEMEN,

"It is with pleasure that I welcome you today at the twenty-ninth annual general meeting of your Company. For want of suitable and comfortable accommodation in your head office, it was decided to hold the meeting in the room of the Bengal Chamber of Commerce. I hope this meets with your approval.

"As it will appear from the Board of Management's report, the year ended 31st October 1960 was not free from difficulties. The early part of the year was badly affected by shortages of steel. Things are no doubt better now, but we have a long leeway to make things really satisfactory. Though the availability of steel has improved, we find ourselves hampered by shortage of transport facilities both in bringing materials to our works and in removing finished products. The shortage of foreign exchange also affects us as many other concerns.

New BOX Wagon

"A factor which affected the working of the year under review was the prolonged delay in establishing manufacture of the new BOX wagon which replaced the old four-wheel covered goods wagon which was one of our chief lines of production. Because of the shortage of certain components, which the railways had contracted to supply, the outturn of these wagons in the year ended 31st October 1960 was only 145, representing sales value of about Rs. 61 lakhs. At such a rate of output, production was uneconomical. It should be realised that these wagons replace an older type of which we had thirty years' manufacturing experience, so that production ran at over 2,500 a year, or about Rs. 300 lakhs. The effect on the working of the Company, is, therefore, obvious. The position has since improved, and is still improving, but it has a long way to go before the old level can be reached.

"Another factor affecting the year's working was the contract for electric multiple unit coaches. This was an entirely new venture and, like all new ventures, relatively unremunerative in its early stages when all the teething troubles must be overcome. With the rapid industrialisation of the country, a company like yours is expected to make its contribution to the development of our industries and, in that connection, the undertaking of new lines of manufacture by this Company is not only desirable but essential.

Electric Multiple Units

"We expect to complete delivery of the 18 electric multiple units (3-coach) for Bombay in June 1961. After some considerable delay, we were given, in June 1960, a further order for 21 E.M. units (3-coach) with two spare motor coaches and 35 special trailers for Bombay. I regret to state that the import licence for the special electrical and mechanical equipment required has not yet been issued in spite of sustained efforts on our part. Until the import licence has been received, it is not possible for us to place orders for the equipment abroad and this means that there will be a gap in production of E.M.U. coaches of approximately seven to nine months. Apart from the dislocation this must inevitably cause in our works, due to break in continuity of manufacture, this shortfall in E.M.U. production is even more regrettable at this time when there is a pressing demand for such coaches.

"In order to fill the gap in production the coach works will take up the manufacture of broad-gauge motor and parcels vans and broad-gauge well wagons. The expansion to the coach works which I mentioned in my address last year is now nearing completion.

"Much of the essential plant for the new bogie works, which has been set up to manufacture the all-welded bogie for the BOX wagons, has now arrived and is being installed. Although further plant has yet to be received, we are now transferring manufacture of the BOX bogies to this works and this should ease the load on the structural works where this work is at present carried out.

"The demand for our diesel road rollers continues unabated and we are making strenuous efforts to raise production beyond the target of 200 rollers per annum. With this end in view, we are setting up a new works on our own land in Dum Dum, which will specialise on the manufacture of road rollers and allied equipment. Apart from freeing capacity in the existing structural and mechanical works where our road rollers are at present built, the new works will be better equipped to meet the growing demand which will rise further with the tremendous increase in road building in the third Five-year Plan.

"We have now finalised arrangements with our collaborators, Messrs. Aveling-Barford Ltd., England, to manufacture the transmission for our road rollers and the necessary amendment to our manufacturing licence has already been obtained from the Government of India. All the special purpose plants have been ordered from abroad and, when these are finally received towards the end of the year, we shall be able to take up the production of the transmission and will then have achieved almost 100 per cent indigenous content as the engine is now made in Madras.

Shortage of Skilled Workmen

"We are experiencing the greatest difficulty in recruiting skilled craftsmen for our works. The shortage of skilled workmen is a factor which must retard expansion of the engineering industry unless immediate steps are taken to train our young men along the right lines to meet the growing demand. This matter has been given the fullest consideration by your Board, and it has been decided to extend the present apprentice training scheme by setting up a training school on land we have in Dum Dum.

"You will have seen from the published accounts and the Board of Management's report that the works' output during the year under review was Rs. 906 lakhs, as compared with Rs. 648 lakhs during the previous year. This represents an increase of 40 per cent which, I hope you will agree, is a remarkable achievement in the course of one year. Owing to the still uncertain supply position of matching steel and of components, particularly those which have to be imported, it is rather hazardous to make a forecast of output during the current year 1960-61, but the trend of production in the first few months indicate that the year's output will probably increase by about 30 per cent over that of 1959-60. Our order book is excellent and the demand for our products continues to be good.

Power Supply

"As you will have read in the daily Press, there is an acute shortage of electric power prevailing at present and, should the position deteriorate any further, severe cut in the supply to our works may be imposed with most serious results. Your Board is watching the position anxiously. Since my address was printed, there has been further deterioration in the supply of electric power, due to the closing down of the Cossipore generating station. We have now been advised by the Calcutta Electric Supply Corporation that, from 17th April 1961, they have arranged to let us have our maximum power demand between the hours of 8.30 a.m. and 5.30 p.m., but no industrial power will be made available to us outside this period. This means that those sections of your works which operated on both day and night shifts will be restricted to working on a single shift only. This will necessitate the laying off of several hundred workmen while output will be seriously affected.

"I understand that, while the immediate power crisis is likely to be relieved by 8th May 1961, no real improvement can be expected for a further 6-8 weeks. I hope that no efforts would be spared to remedy this serious situation which would affect production not only of your Company but industrial output in general in this region.

Financial Position

"As you must have noticed, the Company's financial position has improved considerably in the last two years, but the continued rise in production and the need for expansion and rehabilitation are creating ever-increasing demand for additional finance. If, in addition, any important new line is taken up, demand for capital will be still greater. Your Board has so far avoided raising further share capital, which understandably would place additional burden on you, but I am afraid this cannot be postponed indefinitely. We have recently had the limit of our borrowing from bank increased by Rs. 50 lakhs. Our securities may be adequate for getting some more accommodation from the bank and we may succeed in doing so, but this will be too inadequate for our needs. Moreover, it is not only desirable but essential to maintain a proper balance between share capital and our borrowing.

"In the Board of Management's report, the circumstances leading to the decision to buy over Jessops—Calcutta Ltd., London, and to convert it into a wholly-owned subsidiary of your Company have been fully explained. The London Company has become a wholly-owned subsidiary with effect from 27th March 1961. I need only mention here that the purchase of that Company has been effected on very favourable and satisfactory terms.

"The enactment of a law towards the close of 1960 regulating the payment of dividend on preference shares has since set at rest the unfortunate controversy in this regard created by the Finance Act of the same year, although the solution is not wholly satisfactory from the point of view of the shareholders affected. For the financial year 1958-59, they received a gross dividend of 7.14 per cent and a net dividend of 5 per cent after deduction of income-tax, whereas, from 1959-60 onwards, these figures will be 6.50 per cent and 4.55 per cent, respectively.

Staff

"Gentlemen, I would like to make mention of the most valuable asset your Company possesses. I refer to the team of staff and workmen built up over the years and whose loyalty and hard work have enabled your Company to prosper and grow to its present size, in spite of some serious difficulties it had to face in recent past due to reasons well known to you. I am sure you would wish me to express our sincere thanks to all those in the Company's employ who have contributed to the excellent results shown in the accounts before you. We are now about to complete the preliminary work necessary for the introduction of the incentive system at our works, to which I referred in my address last year. As I then explained, this requires the most careful consideration as we handle a wide range of products.

"Finally, I cannot close without referring to the retirement at the end of March this year of Mr. S. S. H. Sitwell, a member of the Board. Mr. Sitwell has been in the Company's employ for over 32 years and we will greatly miss his wide experience and guidance."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

BENGAL COAL COMPANY LIMITED

CHAIRMAN, MR. STENHOUSE, EXPRESSES CONCERN OVER SHORTAGE OF POWER AND TRANSPORT

ADVANCE PLANNING OF POWER PRODUCTION URGED

IN his annual statement to the shareholders of the Bengal Coal Company Ltd., circulated along with the Directors' report and statement of accounts for the year ended 31st October, 1960, the Chairman, Mr. N. Stenhouse, has drawn attention to the serious power shortage in the country, particularly West Bengal, and the inability of railways to meet the ever-increasing demands of coal producers for transport facilities. The former, he points out, has inhibited and will inhibit industrial expansion and the latter has forced the Company to increase the despatches of coal by lorry to meet the demands of coal consumers. He called for a "farseeing policy" to provide ample power well before demand materialised, so that potential power-users may draw up their production plans in confidence.

The following is the full text of Mr. Stenhouse's statement:

"I have pleasure in reporting to the members of The Bengal Coal Company Ltd. on the operations of their Company during the year ended 31st October 1960.

The Year's Trading

"The income from coal sales increased by Rs. 53 lakhs to Rs. 6,89,00,000. As a result of a general increase in output, there has been a satisfactory improvement in the trading results, the profit before taxation being Rs. 16 lakhs higher than for the previous year.

"After providing Rs. 41,50,000 for taxation and transferring Rs. 21,00,000 to reserves, the Board are recommending a final dividend of Rs. 15 per share, less tax, on the ordinary shares, making Rs. 25 per share, less tax, for the year and thus maintaining the same dividend as for the previous year. Calculated on the capital employed in the Company, the dividend for the year represents a gross return of under 7.5 per cent per annum.

"Costs, however, continue to rise: safety measures, stores and spare parts—in a hazardous industry such as mining, there can be no question of providing anything but the best available. In spite of the high standard of mechanisation at many of your collieries, there has been a further increase of over Rs. 20 lakhs in 'salaries and wages,' the total expenditure under this heading amounting to some Rs. 3,33,00,000, or approximately Rs. 11 per tonne of coal raised.

Production

"You will observe that the words 'tonnes' and 'tons' are used in this statement. The reason for this is that, although the coal industry has now gone over to the metric system of weighment, the total output of coal in the country is still officially referred to in tons and not tonnes. One tonne=0.9842 of a ton.

"Raisings during the year increased by over 215,000 tonnes to a level of 3,096,500 tonnes, which constitutes a record in the long history of the Company. Mainly as a result of increased mechanisation, the Company's Poniati and Dishergarh collieries have recorded most satisfactory increases in their production. The only decline in output has been at Chanch colliery; the installation of the sand stowing plant is, however, nearing completion, and this will result in increased raisings from the colliery.

"In the context of the need for increased output of selected 'A' grade coal, which is so urgently required for the steel plants, the railways and other high priority consumers, it is interesting to note that the Company produces almost 30 per cent of the all-India output of selected 'A' coal. In addition to our large production of this grade of coal, we have also been developing seams of other grades, conscious of the need of selected 'B' and grade I coals by industrial consumers throughout the country. For instance, sinking to the Hatnal seam at Sodepore 9 and 10 pits has been completed and, although raisings from this seam during the year under review amounted to less than 2,000 tonnes, I am glad to be able to report that we are currently raising over 7,000 tonnes monthly from this new development, and production will increase steadily over the coming months.

"In my statement last year I referred to the introduction of a cess to assist deep, difficult and gassy mines. Unfortunately, we have not yet received any payment against our claims for assistance submitted some months ago, and it is now almost 2½ years since the introduction of this assistance was recommended by the Coal Prices Revision Committee. We believe, however, that payments will commence shortly, and we shall welcome this assistance. The Company operates many 'deep, difficult and gassy mines,' four of which are working either at a loss or making a negligible profit of under 50 nP per tonne.

"The quantum of stand stowed at the Company's collieries showed a most satisfactory increase from last year's figure of 772,000 tonnes to 1,122,000 tonnes. The increased level of stowing assistance received was applicable to the whole of the year under review, and consequently the gap between the total cost of stowing and the assistance which we received from the Coal Board narrowed to Rs. 6 lakhs compared with Rs. 9 lakhs in the previous year.

Third Five-year Plan

"The third Five-year Plan period commenced on 1st April 1961. The all-India coal target has been fixed at 97 million tons per annum, of which 62 million tons are planned to be raised by the private sector of the coal industry by 1965-66. This will mean increased raisings of 17 million tons per annum over the next five years by the private sector, the present annual level of production being approximately 45 million tons. In the light of this very substantial increase in the all-India production, we have submitted details to Government of plans to raise output at our existing collieries by at least one million tons per annum. This greatly increased output is, of course, largely dependent upon our receiving import licences for the necessary plant and machinery and on other factors which are at present the subject of discussion between the industry and Government. We are also planning the sinking of new shafts, the output from which, provided no obstacles occur, should materially increase still further the total raisings of the Company by the end of the third Plan.

Finance

"These very considerable expansion plans have necessitated the Company raising initially a total sum of Rs. 1,00,00,000 by way of the issue of 20,000 rights ordinary shares of Rs. 100 at a premium of Rs. 100 per share, and Rs. 60,00,000 debentures. It is satisfactory to record that these issues were oversubscribed, and the response from our shareholders to the rights issue and from the public to the issue of debentures has given great encouragement to the Board and to all connected with the Company.

Power Supply

"For too long, industry, particularly in West Bengal, has been working in conditions of electric power shortage. As new generating capacity in the area has come into operation the demand from industry has taken up all additional energy available and there is still a very large demand for power which just cannot be met. A result of this shortage has been the overloading of existing capacity with the recurrent breakdowns which must be expected from overworked plant. The output of the proposed new units to come into operation during the third Five-year Plan period will be more than required to meet the ever-increasing railway electrification, industrial and domestic demand, and we must anticipate that throughout the period electric power will continue to be in short supply. This is a situation which gives rise to serious concern and has inhibited and will inhibit the growth of industrial expansion so vital to the country.

"Planning to provide the power required as and when demand arises is not sufficient, and what is needed is a farseeing policy to provide ample power well before demand materialises so that potential users may themselves make their plans in confidence. During the next five years generating capacity must be planned to meet the estimated demands of 10 or 15 years hence.

"The third Five-year Plan depends, to a very large extent, on the increased output of coal. Much of the extra coal production will come from increased mechanisation of existing mines and, for this alone, increased supplies of electric power will be required over the next five years. I cannot stress too strongly the necessity for meeting the power requirements of the basic coal industry.

Labour and Welfare

"In my statement last year I referred to the improved amenities which were being provided for our workers by way of new quarters, water-supply, the extension of schools and co-operative societies, as well as medical amenities. We are at the same time increasing the recreational facilities by the provision of club rooms and sports grounds. These facilities are, I am sure, appreciated by the Company's employees, and it is satisfactory to report that labour relations during the year have been satisfactory.

Training

"To obtain the increased coal production now planned for the country, a very large number of additional technical personnel of all grades will be required to work in the mines. The Company attaches great importance to its training schemes which have been in existence for many years. Not only are we providing technical courses for 106 mining trainees, but we also hold classes for overmen and sirdars in our technical school at Sanctoria. In addition, we have under training at present at our two central workshops, with their attached hostels, a total of 107 mechanical and electrical apprentices, about half of whom will be available for absorption by outside collieries. It may interest you to know that six of our agents and colliery managers with first class Mine Manager's Certificates originally joined us as mining apprentices and received their initial training within the organisation.

Transport

"Stocks at the end of the year under review increased by almost 40,000 tonnes to a level of 94,000 tonnes, and the overall rail transport position has since deteriorated still further. The Company's collieries, however, have not suffered as badly as many others in the industry by reason of the fact that with the installation of modern screening plants, overhead bunkers etc., we are in a position to load large numbers of wagons in the form of block rakes in accordance with the present transport policy of Government. In spite of this, however, it is necessary to restrict raisings from time to time when stocks at individual collieries reach unmanageable proportions.

"In the absence of any definite assurance regarding the ability of the railways to meet the ever-increasing demands for coal transport, we have decided to increase considerably the despatches of coal by lorry to meet the demands of consumers situated within reasonable distance of our collieries. Our first large lorry weigh-bridge has been installed at Poidih colliery to cope with despatches by road from this and four of our other collieries.

"In addition to the new sidings which will be required to serve new pits, the capacity of old existing sidings has to be increased as and when additional output makes this necessary. I regret to state, however, that difficulties have been experienced in getting such work undertaken by the railways. In particular, the alterations to Parbelia siding have still to be completed, although application for the extension was made some four years ago. Because of this colliery's limited available space for receiving, loading and marshalling wagons, the output continues to be affected to the extent of about 20,000 tonnes per month.

"A very great deal of the credit for the satisfactory results in the past year is due to

(*Continued on page 818*)

EMPLOYERS WANT A RATIONAL WAGE POLICY

BONUS SYSTEM DESERVES TO BE SUBSTITUTED BY SOMETHING BETTER

THE question of a rational wage structure figured prominently in the speeches of the Presidents of the two leading employers' organisations in the country, namely, the Employers Federation of India and the All-India Organisation of Industrial Employers, delivered at their respective annual meetings held last week. Mr. Naval Tata, President of the Federation, raised the very pertinent issue of a wage level which the national economy could sustain. The Government and, even Industrial Tribunals, Mr. Tata pointed out, had been guided, in evolving and interpreting the wage policy, more by consideration of social justice than by the hard economic facts governing the implementation of the principles of social justice. One result of this neglect of the economic factors affecting wage policy was that apparently harmless decisions sometimes resulted in serious repercussions. Mr. Tata felt that the inflationary pressures in the economy were not unrelated to labour policy decisions. He pointed out, for instance, that, when prices of consumer goods rose, as a consequence of an imbalance between supply and demand, the expediency of mechanical wage adjustment through dearness allowance did, to a large extent, set in motion the spiral of wages chasing prices. He complained that no serious attention was paid to such a situation nor effective action taken for analysing the economic factors causing such imbalance. Very seldom the rectification of such disequilibrium was handled by appropriate authorities. Industrial Tribunals, which decided disputes regarding wages, Mr. Tata went on to add, had completely ignored economic factors; they had thereby accentuated such imbalance and, instead of pointing out to the Government the need for investigation into the economic factors that brought about the erosion of real income, they were perpetuating the wage-price spiral by merely awarding a series of *ad-hoc* increments.

Dual Standards

Having thus shown that the wage policy was neither grounded on, nor influenced to any appreciable extent by, economic facts, Mr. Tata proceeded to stress that it was not based on the concept of social justice either. In a country with a population of 438 million, the organised industrial workers and the employees in the public sector, he argued, formed a very small percentage of the total working population. The wage policy, which was sought to be based on principles of social justice for this small number of persons, was conspicuously out of tune with the remaining hundreds of millions. The resulting disparity in the standard of living between the two sections of the population was basically a violation of the fundamental concept of socialistic pattern of society at a time when the Government, through its taxation policy, was ruthlessly narrowing down disparities in income in respect of higher income groups. To that extent, Mr. Naval Tata maintained, it created a form of social injustice, in that workers in organised industries were able to enjoy wages and amenities far superior to those who were engaged in other sectors.

Mr. Tata, however, hastened to add that he was not suggesting that the wages of industrial workers should be levelled down to that of rural workers. What he did suggest, on the other hand, was that some effort should be made to raise the standard of living of the rural population before the wages of those workers, who were already infinitely better off, were sought to be raised further. What was needed, according to him, was an objective study to assess whether the country had sufficient resources to sustain a progressive wage structure envisaged under the present wage policy or whether there was room for holding the wage level at certain ceilings for the time being, till there was a modest improvement in the standard of living of the rural population.

Oversimplified System

The dual standard of social justice was evident in another respect, too, according to Mr. Tata. In most of the organised industries today, there was an oversimplified system of passing on the rise in cost of living to the industry by increasing the quantum of dearness allowance almost mechanically. This automatic device of adjusting the cost of living was denied to a large body of employees in the public sector. From this, Mr. Tata observed, one got the impression that the human stomach was considered elastic enough to adapt itself to different types of employers.

Arguing in a similar vein, Mr. Surottam P. Hutheesing, President of the All-India Organisation of Industrial Employers, pointed out in his speech that it was necessary to concentrate on the enforcement of the minimum wage legislation in the unorganised sector of the industry and in agriculture. Government's policy, in general, must aim at improving the lot of the most "disadvantaged class," instead of concentrating on improving only the better paid in organised industry.

Speaking about the wage level, Mr. Hutheesing observed that it was sometimes conveniently forgotten that the wage rate that an industry *should* pay must be related to the wage rate that the industry *can* pay in the particular economic circumstances it finds itself. The capacity of an industry to pay a given level of wages depended on the particular conditions of productivity and demand. The wages that an industry could pay must take account of the requirements of industrial growth. In this broader perspective, the problem of wage payment formed part of the general problem of economic growth. It became a decision of choosing between higher wages and more employment. He, therefore, strongly urged that the economic interpretation of the capacity of the industry to pay higher wages must take note of its possible effect on the ability of the industry to create employment.

Bonus

On the vexed question of bonus, both Mr. Tata and Mr. Hutheesing expressed almost identical views. In Mr. Tata's opinion, it was neither in the interest of workers nor of employers to continue this form of uncertain annual payment, because it raised hopes in the minds of workers, which, if unfulfilled, through no fault of the employer, would result in a feeling of serious frustration. Personally, he was in favour of abolishing bonus altogether and making suitable adjustments in the wage structure. He hoped that the Bonus Commission would give due consideration to this dangerous feature of bonus and would make such recommendations as would result in giving stability to wage structure in the country. This suggestion is to be warmly welcomed and it is in keeping with what this journal has advocated in the recent past. For, if accepted and implemented—one hopes that the Bonus Commission will find itself in agreement with it—it would have done away with a major cause of friction betwen employees and employers. But the time for generalisation on this question is long past. What is required now is a concrete scheme, or at least specific principles, for evolving a substitute for bonus. One regrets that Mr. Tata did not put forward any concrete proposals as to the basis on which the wage structure could be adjusted to compensate workers for the loss of bonus. One would like to know whether Mr. Tata's Federation has evolved a suitable formula or at least initiated a study of the question by experts and proposes to seek public support for it. It must be remembered that, unless unanimous decisions are reached by the Bonus Commission on this question, there is no likelihood of the Government accepting its recommendations.

Mr. Hutheesing pointed out that the bonus issue was vitiated by ill-conceived standards of bonus payment. While a court of law proceeded on the basis that it had no power to make contracts for the people, the decisions of the Tribunals often tended to be inconsistent. He also questioned the propriety of relating bonus to profits, because profit was the result of a host of economic factors related both to conditions of production as well as the state of demand.

The implications of some recent judicial interpretation of bonus for the public sector also came in for comment by Mr. Tata. He said that bonus had been held by the highest judicial authority in the country as a compensation against sub-standard wages. In other words, it was a supplemental burden which all employers were called upon to bear in order to bridge the gap between the "living wage" and the emoluments received by the employees. If this interpretation was accepted by the Government, then Mr. Tata did not see any reason why employees of the public sector should be denied bonus. Railwaymen the Post and Telegraph employees and the rest of the Central Government employees would, on this reasoning, undoubtedly be entitled to an additional remuneration, if not as bonus, at least as supplemental wage, in order to make good the deficiency between the living wage and the prevailing wages. Once the aforesaid principle was conceded, he pointed out, a concrete shape would have to be given to the concept of "living wage." This, he pointed out, would surely be a controversial problem by itself.

Price Control

The rising trend of prices of essential commodities, which has been the subject of much comment of late, also attracted the critical attention of Mr. Tata. He warned that any delay in arresting the incessant inflationary pressure was fraught with serious consequences. The remedy suggested by him to prevent the purchasing power of workers' wages from being eroded is similar to that advocated by Mr. Michael John, President of the I.N.T.U.C. Mr. Tata favoured the supply of principal necessities of life at controlled price through fair price shops organised by non-Governmental agencies or by other appropriate methods. The I.N.T.U.C. leader had suggested that prices should be controlled and the pay packets of workers should be insulated from the effect of inflationary rise in prices by subsidising food and other essential commodities and by enlarging and implementing schemes for providing housing and accommodation on easy terms.

It is, however, surprising that Mr. Tata who criticised the dual standards followed by the Government in regard to the application of its labour policies and pinpointed the need for devoting attention to workers in the rural areas, should have suggested that the principal necessities of life should be supplied to industrial workers at controlled prices through fair price shops, for, apart from suffering from many practical difficulties, it will only perpetuate the very inequality in the treatment of the two sections of the working population which he has so forcefully assailed. Does Mr. Tata want the industrial workers alone to be shielded from the effects of rising prices, leaving the rest of the population, including the neglected rural workers, to fend for themselves? Even conceding, for argument's sake, that some such favoured treatment is inevitable to get the best out of the industrial workers, the practicability of the proposal is open to question. There is nothing novel in the suggestion either. The experience of working the scheme of supplying industrial workers with the necessities of life at fair prices during war and early post-war years was not, as Mr. Tata himself will concede, happy enough to enthuse all employers to take to it. The problem of rising prices is part of the larger question of increasing production to match the expanding demand and cannot be treated in isolation. Those who suggest piecemeal solutions for it only betray either an inadequate understanding of the problem in its entirety, or their anxiety to safeguard their own position at the expense of the rest of the community.

EMPLOYMENT EXCHANGES

There are now over 300 employment exchanges in the country, of which nearly 170 have been opened during the second Plan, according to official figures now published. The objective is to have ultimately one employment exchange in each district. Apart from these exchanges, there are special employment exchanges like those at development projects which coordinate speedy deployment of surplus workers and supply trained manpower, exchanges in the collieries and university employment bureaus. In the last category are five bureaus set up on a pilot basis at the universities of Delhi, Calcutta, Kerala, Varanasi and Aligarh to provide not only employment assistance but information about opportunities and careers open to University students. During the third Plan this scheme will be extended to other universities.

Set up in 1945 for the limited purpose of helping the demobilised war personnel to be re-employed, the scope of the employment exchanges was later expanded to cover the displaced persons from Pakistan and subsequently they became a permanent feature to guide the new entrants to the labour force in gainful employment. Emphasis is being increasingly laid on the aspect of vocational guidance and training.

Employment information and assistance bureaus are also being set up on a pilot basis in Community Development blocks in different States to guide the young men in the villages in the matter of employment.

MAFATLAL GROUP MILLS REPORT BETTER RESULTS

STANDARD TO ISSUE BONUS SHARES

THE cotton mill industry, as readers are by now aware, had a fairly satisfactory year in 1960, even though in the second half of the year the cloth market was in a disorganised state of affairs, following the Government's persistent effort to bring down cloth and yarn prices. Larger sales and higher profit have been the experience of most mills, especially in the Bombay region. It would have been surprising, therefore, if the Mafatlal group of mills, which not only make high quality fabrics but has also a high-powered marketing section, were to report results contrary to the general trend. Actually, all the three mills of the group, namely, the Standard Mills Company Ltd., the Mafatlal Fine Spinning and Manufacturing Company Ltd., and the Sassoon Spinning and Weaving Company Ltd., have fared much better than most of the purely cotton mills during the year ended 31st December 1960. Thus, the sales of Standard increased by Rs. 76.03 lakhs to Rs. 697.06 lakhs, of the Mafatlal Fine by Rs. 27.79 lakhs to Rs. 272.70 lakhs and of the Sassoon Spinning by Rs. 44.17 lakhs to Rs. 576.15 lakhs. Their gross profits also have gone up as will be seen from the account of each company given below.

Standard Mills

The ordinary shares of the Standard Mills have been receiving considerable speculative support in the past one year or more on rumours that the Company was contemplating a rights issue to finance some new profitable undertaking for which it had received a licence. Speaking at the annual meeting of the Company's members last year, the Chairman referred to this rumour and conceded that the management was, in fact, considering such a project. He, however, pleaded his inability to give further details as the plans were still in a nebulous stage. Despite the uncertainty about a rights issue, the shares continued to command a high price which was given a further boost a few weeks ago on reports of a bonus issue. Those who had purchased the shares in this anticipation will now feel highly gratified to know that the Directors have decided to recommend the issue of bonus equity shares, in the proportion of two new shares for every five existing shares, by capitalising an amount of Rs. 43.90 lakhs out of Rs. 96.82 lakhs standing to the credit of the share premium account.

It will be recalled that a similar issue was recommended two years ago when one new share was issued for every five old held and that an amount of Rs. 29.95 lakhs was transferred from the share premium account to the share capital account. Thus the present bonus issue will be the second to be declared within the span of two years, a fact that speaks highly of the farsighted financial policy followed by the management.

It will however be realised that the above issue will not involve any change in the amount of capital funds invested in the business. But there will be an addition of 4.39 lakhs of ordinary shares to the number that is already outstanding and these will be eligible for a proportionate dividend next year.

Gross profit of the Company has shown a remarkable uptrend during the past four years as will be evident from the table below.

(Value in lakhs of rupees)

	1960	1959	1958	1957
Sale proceeds	6,97.06	6,21.03	6,01.31	5,79.26

* Subject to deduction of tax.

† On increased capital of Rs. 109.75 lakhs raised by the capitalisation of Rs. 21.95 lakhs.

It will be seen that the gross profit has increased from Rs. 89.15 lakhs in 1957 to Rs. 143.19 lakhs in 1960 or more than 60 per cent. The increase during the year under review alone is quite marked, being well over Rs. 40 lakhs or 40 per cent. Despite heavier provisions for depreciation and taxation as compared with the previous year, net profit for 1960 has reached the all-time high of Rs. 60.92 lakhs. Allocations to reserves have been stepped up from Rs. 10.53 lakhs to Rs. 27.36 lakhs. Thus, against the proposed transfer of Rs. 43.90 lakhs from reserves to the share capital account, the reserves have been strengthened by Rs. 27.36 lakhs. It is important to note that the bonus issue recommended is in addition to a cash dividend of Rs. 30 per share subject to deduction of tax, which incidentally is the highest declared so far.

The Rs. 100 paid-up ordinary shares of the Company are now being quoted at Rs. 588 ex-div. and ex-rights and fetch a yield of about 3.5 per cent net.

Sassoon Spinning

The profits of the Sassoon Spinning and Weaving Company Ltd. for the year ended 31st December 1960 have shown sizable improvement, despite the fact that the revenue from other sources had declined sharply by Rs. 11.14 lakhs as evidenced by the comparative table given below.

(Value in lakhs of rupees)

	1960	1959	1958	1957
Sales	5,76.15	5,31.98	4,96.69	5,43.63
Other income	38.35	49.49	27.92	4.16

Carry forward	0.25	..	0.06	0.12

* Subject to deduction of tax.

† On increased capital of Rs. 75.30 lakhs.

This somewhat paradoxical situation can be attributed to higher production during 1960 as disclosed by improved sales and increased closing stocks of process and finished goods. That the Company's products experienced good demand from overseas markets is evidenced by the fact that its premiums under export incentive scheme have increased by Rs. 1.66 lakh to Rs. 13.44 lakhs. Higher production and better sales have thus contributed to increased gross profits.

Net profit, too, has recorded an impressive rise of Rs. 6.34 lakhs to Rs. 17.74 lakhs even after heavier provisions for depreciation and taxation. It will be observed that the tax provision for the year is more than double that for the previous year. With the statutory development rebate reserve claiming Rs. 7.68 lakhs, the Directors have supplemented the profits available by a withdrawal of Rs. 3 lakhs from the general reserves to declare a dividend of Rs. 1.70 per share subject to deduction of tax which has absorbed Rs. 12.82 lakhs. The dividend at 17 per cent is decidedly low as compared with 25 per cent recommended last year, but it must be noted that it is on an increased share capital of Rs. 75.30 lakhs as compared with Rs. 37.70 lakhs in 1959.

The Company's ordinary shares of Rs. 10 each are currently quoted at Rs. 51.80 to give a net yield of about 2.3 per cent.

Mafatlal Fine

In spite of a fairly high rise of Rs. 27.79 lakhs in sale proceeds, gross profit of the Mafatlal Fine Spinning and Manufacturing Company Ltd. has increased only moderately by Rs. 6.70 lakhs to Rs. 69.47 lakhs for the year ended 31st December 1960.

In trying to find an answer to this situation one comes across the two items that loom the largest in the cost of production, namely, raw materials and stores consumed and salaries, wages and bonus. Although the former shows an increase of Rs. 12.35 lakhs over the corresponding figures for 1959, it is observed that there has been no material change in the percentage to sales of the cost of raw materials and stores consumed for the two years. One has, therefore, to come to the conclusion that the decline in gross profit has been brought about chiefly by the increase of Rs. 8.92 lakhs in salaries, wages and bonus as is disclosed by the following table:

(Value in lakhs of rupees)

	1960	1959	1958	1957
Sales	2,72.70	2,44.91	2,23.60	2,10.25
Other income	7.35	10.11	8.81	8.28

Carry forward	0.06	0.07	0.17	0.25

* Subject to deduction of tax at appropriate levels.

After providing Rs. 11.77 lakhs for depreciation and Rs. 20.05 lakhs for tax contingencies, the net profit has increased marginally by Rs. 2.42 lakhs to Rs. 31.64 lakhs. In view of the larger transfer of Rs. 7.55 lakhs to development rebate reserve as against Rs. 3.42 lakhs in 1959, transfer to general reserve has been cut down from Rs. 4 lakhs to Rs. 2 lakhs. Transfer to dividend equalisation reserve has, however, been maintained at Rs. 3 lakhs.

The slight increase in net profit has made it possible to declare ordinary dividends at a somewhat higher rate of Rs. 30 per share subject to deduction of tax which compares favourably with Rs. 29 (Rs. 25 + a bonus of Rs. 4) subject to tax declared in 1959.

Considerable progress has been made during the year in the reorganisation and renovation programme of the mills. A sum of Rs. 2.10 lakhs was spent on extension of buildings and of Rs. 30.13 lakhs on additions to machinery and equipment. Most of the machines have been installed and are reported to be working satisfactorily. In addition, machinery worth Rs. 7.31 lakhs is in transit.

The Company's financial position is sound. Against the paid-up share capital of Rs. 87 lakhs, reserves amounts to Rs. 156.68 lakhs or nearly twice as much. One wonders in this situation why the Company did not follow suit with the Standard Mills and declared a bonus issue.

An interesting feature of the balance-sheet is that assets other than fixed assets have been maintained in a highly liquid form. The total of investments, debtors, cash and loans and advances is Rs. 136.33 lakhs which is about twice the current liabilities including bank loans.

The Rs. 100 paid-up shares of the Company are being done around Rs. 865. At this price, the net yield works out to 2.4 per cent.

ESCORTS LIMITED

The Directors of Escorts Limited, New Delhi, have recommended a gross dividend of 16 per cent for the year 1960. The shareholders, under Section 15C, will enjoy the benefit of tax-free dividend upto the extent of about 25 per cent of the dividend. The total profits of the Company for the year are Rs. 24,28,456. After providing Rs. 7,80,000 for income-tax (Rs. 6,30,000 in 1959), and Rs. 3,32,761 for depreciation (Rs. 1,24,300 in 1959), there remains a net profit of Rs. 13,15,980, out of which the Directors have set apart Rs. 3,04,652 for development rebate reserve and Rs. 2,70,000 for general reserve (Rs. 1,90,000 in 1959).

The Company has made satisfactory progress in setting up the factory for X-Ray equipment under Westinghouse Licence and expects to be in production before the end of the year. Pistons manufacture has progressed according to plan. It is putting up a factory for the manufacture of motor cycles and scooters, for which an industrial licence has been issued, and 23 acres of land has been acquired in Faridabad (near Delhi). The Company has negotiated the purchase of plant and machinery under long deferred terms of payment to the extent of Rs. One Crore. All payments for these projects are payable in rupees and no foreign exchange is involved. The Company has further decided to increase the production capacity of pistons from 300,000 to 500,000 per year. Similarly, the subsidiary companies, Goetze (India) Private Ltd. and Sharpedge Private Ltd., have planned to expand their production.

The Company has also been given industrial and import licences for manufacture of railway shock absorbers and heating elements. To meet the capital requirements for all the new projects, the Directors have decided, subject to the permission of the Controller of Capital Issues, to issue new rights shares on the basis of one for one equity shares at a premium of Rs. 3 per share. They have also decided to issue 9 per cent preference shares to the extent of Rs. 8 lakhs, most of which is expected to be allotted to foreign collaborators against technical 'know-how' and supply of plant and machinery.

The equity shares of the Company are currently quoted at Rs. 23.

ALCAN MALAYAN COMPANY

The first aluminium rolling mill in the Federation of Malaya will be built by Alcan Malayan Aluminium Company Ltd. This new Malayan industrial development which has been granted a pioneer certificate is being established by Aluminium Ltd. of Canada which will finance the enterprise and furnish technology. Construction is expected to start immediately on a 15-acre plant site at Petaling Jaya, near Kuala Lumpur. The new plant will cost approximately M$4 million. The rolling mills will have a capacity of 2,000 tons per year of flat aluminium sheet, circles and building sheet, using aluminium ingot as raw material imported from Canada. The production from the mill will provide aluminium end product manufactures in the Federation and Singapore with these rolled products for further fabrication and uses. Aluminium household utensils are made from circles and there is an established Malayan market for aluminium sheet for rubber estate equipment building products and transportation applications. The new Alcan plant will have a modern four-stand two high rolling mill train with furnaces for melting and annealing as well as semi-fabricating equipment. Corrugated aluminium building sheet will be one of the materials produced.

SMART RISE IN PROFITS OF BENGAL COAL

COMPANY PLANS HUGE EXPANSION

IN refreshing contrast to the declining trend of sale proceeds and gross profits in the past three years, the financial results of the Bengal Coal Company Ltd. (Managing Agents: Messrs. Andrew Yule & Co. Ltd., Calcutta) for the year ended 31st October 1960 show a welcome all-round improvement. The Company's gross sales have jumped up from Rs. 721.69 lakhs in 1959 to Rs. 782.31 lakhs and the gross profit from Rs. 99.62 lakhs to Rs. 123.59 lakhs. In fact, the sales proceeds for 1960 are even better than the gross sales of Rs. 752.69 lakhs attained in 1957, which was comparatively a prosperous year for the Company. The growth in sales is clearly the result of higher output and larger despatches secured from the increased mechanisation at the Company's Poniati and Dishergarh collieries and the rising demand for coal in the country. It is interesting to note that the Company's collieries are producing almost 30 per cent of the all-India output of selected 'A' graded coal. The raisings in the year under review were 3,096,576 tonnes as against 2,880,896 tonnes in 1959 and 2,862,170 tonnes in 1958. The production during the year under review constitutes a new record in the history of this premier largest coal company in India. Though the purchases of coal (in terms of value) were slightly lower by Rs. 8.79 lakhs at Rs. 33.14 lakhs, the despatches increased from 3,062,662 tonnes in 1959 to 3,213,541 tonnes. The recovery in sales and output is also reflected in the colliery and other expenses, which went up sizably from Rs. 530.90 lakhs to Rs. 598.87 lakhs.

The net profit of the Company has registered a substantial increase of Rs. 10.39 lakhs to Rs. 43.85 lakhs. Of course, this improvement is much less than the marked expansion of Rs. 23.97 lakhs in gross earnings noted earlier. This is largely the result of bigger depreciation and taxation provisions—the former is higher by Rs. 3.50 lakhs at Rs. 23 lakhs, and the latter (which includes cess also) by Rs. 9.06 lakhs at Rs. 49.50 lakhs. The remuneration for the Managing Agents, too, has absorbed Rs. 1.02 lakh more than the previous year's figure of Rs. 6.22 lakhs. The net profit of Rs. 43.85 lakhs is supplemented by Rs. 3.62 lakhs, being the provision for liabilities no longer required and by Rs. 10.20 lakhs being the unappropriated surplus brought forward from last year's account. Out of the total of Rs. 57.67 lakhs available for distribution, the Directors have judiciously set aside Rs. 14 lakhs to general reserves (as against Rs. 8.10 lakhs only in the previous year), and Rs. 7.37 lakhs (Rs. 6.42 lakhs in 1959) to development rebate reserve. Thus, almost the entire increase in net profit has been utilised to strengthen the reserves. The shareholders get only the same dividend as last year, namely, 25 per cent per annum, taxable. Let the critics of the private sector should run away with the impression that this is too large a dividend, it is necessary to add that this dividend represents a gross return of 7.5 per cent on the capital employed. That the carry forward is a shade higher than the amount brought in is proof enough to show that the management has given a high priority to conserve the bigger portion of the profit for financing its expansion plans.

A synoptic view of the Company's progress in the past three years can be had from the following comparative table:

(In lakhs of rupees)

* Subject to deduction of tax.
† Less income-tax paid by the Company.

The Company has big plans for increasing its output in the third Plan period. As the all-India targets for coal in the third Plan has been fixed at 97 million tons per annum, of which 62 million tons are planned to be raised by the private sector, the Directors have submitted to the Government details of the Plan for raising the production at the Company's existing collieries by at least one million tons per annum. This greatly increased output is, of course, dependent upon the Company receiving import licence for the necessary plant and machinery. The Company is also planning the sinking of new shafts which is expected to increase materially its raisings of coal by the end of the third Plan. In order to meet the financial requirements of the proposed expansion scheme, the Company recently offered 20,000 ordinary shares of Rs. 100 each at a premium of Rs. 100 per share as rights shares to the shareholders as on 8th December 1960. The issue, which was oversubscribed, provided a sum of Rs. 40 lakhs. In addition, the Company invited applications for subscription to Rs. 60 lakhs in 6¼ per cent debenture-stock and this, too, was more than fully subscribed. The success that attended the Company's invitation for new capital, despite the low profit margin of coal industry in general, reflects partly the tremendous confidence the Company enjoys among investors and partly the relatively easier conditions in the long-term capital market.

The Directors' report makes a pertinent reference to the power supply position in West Bengal, which is inhibiting the growth of industrial production. As much of the extra coal production will come from increased mechanisation of existing mines, the Directors have emphasised that much greater supplies of electric power will be required in future. The difficult transport situation has adversely affected the Company along with many other coal companies. Stocks as at the end of the year had increased by 40,000 tonnes to a level of 94,000 tonnes. Even this well-managed Company, which has introduced mechanical loading facilities in most of its mines, found it necessary to restrict raisings from time to time when stocks at individual collieries reached unmanageable proportions, as railways were unable to lift them.

The Company's financial position, as reflected in its balance-sheet as on 31st October 1960, is quite satisfactory. Thus, the paid-up capital of Rs. 120 lakhs is supplemented by reserves and surplus amounting to Rs. 216.74 lakhs. The borrowings at Rs. 65.43 lakhs cannot be considered to be excessive, having regard to the Company's size and the scale of its operations. The other current liabilities at Rs. 270.31 lakhs are more than adequately covered by current assets aggregating Rs. 413.64 lakhs (investments Rs. 13.40 lakhs; stores and spares Rs. 141.66 lakhs; stock-in-trade, plant in transit and loose tools Rs. 55.60 lakhs; sundry debtors Rs. 144.72 lakhs; loans and advances Rs. 37.36 lakhs; and cash Rs. 20.90 lakhs). Thanks to the policy of expansion followed by the Company, the gross block stands at Rs. 745.30 lakhs, the additions made during the year being Rs. 54.75 lakhs. This has been well written down to Rs. 258.89 lakhs, the depreciation provided so far being as much as Rs. 486.41 lakhs.

The Rs. 100 fully paid-up ordinary shares of the Company are currently quoted at Rs. 354 *cum-div.* On an *ex-div.* basis and at the current rate of dividend, the yield on them amounts to 5.2 per cent per annum, free of tax.

"SCCO"

For removing heavy scale from large metal surfaces, such as rust, old paint, and incrustations giving the metal renewed surface for painting, etc. These cup brushes are used on high speed flexible shafts electric or pneumatic tools and can be driven at higher speeds being of sturdier construction than the lighter crimped wire types. A good friend for Foundry men.

BANGALORE WOOLLEN'S SALES IMPROVE

PROFITS, HOWEVER, LOW

THANKS to the sustained demand for its cotton and union cloths and the satisfactory price fetched by the small quantity of fine woollen goods produced, the Bangalore Woollen, Cotton and Silk Mills Company Ltd., another company belonging to the Binny Group, was able to improve its sales marginally by Rs. 21.09 lakhs to Rs. 573.09 lakhs for the year ended 31st December 1960. For the second year in succession, production in all departments suffered on account of the retirement of long-service workers in the first half of 1960 under the Gratuity Scheme introduced in the previous year. By reorganisation, however, efficiency was restored and there was a marked improvement in operations during the later months of the year. The Directors report that this efficiency has since been maintained.

A further reduction in licences for the import of wool necessitated restriction of production in the fine section of the woollen mill. Production in the silk section was again limited by the difficulty in obtaining adequate supplies of foreign as well as indigenous spun silk yarn.

Despite the improvement in turnover, gross profit declined by Rs. 13.14 lakhs to Rs. 64.31 lakhs, mainly as a result of high prices of cotton and the replacement of coal by oil as fuel necessitated by the difficulties experienced in obtaining the former. Percentage to sales of cost of raw material and stores consumed thus rose significantly to 52 per cent during the year from 47 per cent. in 1959.

Thanks, however, to the sharp cut of Rs. 6.70 lakhs in the provision for taxation, there was only a modest fall of Rs. 6.33 lakhs in net profits as disclosed by the following comparative table.

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales of cloth, yarn and waste..	5,73.09	5,52.00	5,54.15	5,48.44

Raw materials and stores consumed	2,97.42	2,61.02	2,95.03	3,16.02
Salaries, wages and bonus ..	1,48.71	1,16.62	1,08.47	1,03.21
Payment relating to previous years	1.22	0.67	0.15	0.10
Other expenses	80.14	88.10	80.88	76.86
Gross profit	64.31	77.45	73.33	47.09
Depreciation	15.80	14.78	14.89	13.78
Taxation	19.80	26.50	29.50	13.00
Managing Agents' remuneration.	5.41	6.54	6.35	5.78
Net profit	23.50	29.83	22.59	19.18
Development rebate reserve ..	3.87	1.76	1.50	5.59
General reserve	2.50	2.00	6.00	..
Deferred taxation reserve ..	..	..	..	5.00
Dividends—				
Preference shares* ..	0.47	0.86	0.86	0.86
Ordinary shares ..	12.15 (10%)	12.15 (10%)	12.15 (10%)	12.15 (10%)
Tax liability on ordinary dividends borne by the company..	5.21	5.36	..	..
Carry forward	2.49	2.62	2.98	2.90

* Preference share dividends for 1960 at 7.80 per cent. taxable. Other years 6 per cent. tax-free.

A further sum of Rs. 5.87 lakhs, excluding Rs. 2.65 lakhs set aside as additional provision for retiring gratuity, has been transferred to the reserves. But as there is a drop of Rs. 0.20 lakh in the carry forward from the appropriation account, the increase in reserve funds is by Rs. 5.67 lakhs to Rs. 167.36 lakhs. The paid-up capital is Rs. 127.50 lakhs, of which only Rs. 6 lakhs are in preference shares. The total of owned funds thus comes to Rs. 294.86 lakhs. Against this, the written down value of the fixed assets and the cost of capital works-in-progress is Rs. 93.69 lakhs or about 32 per cent of the total capital funds employed. Additions to gross block during the year amounted to Rs. 19.52 lakhs, including the transfer of Rs. 17.87 lakhs from the capital works-in-progress account. The value of gross block is Rs. 398.24 lakhs. Current assets, including investments but excluding investment against special liabilities, total Rs. 309.45 lakhs and exceeded the current liabilities less provision for gratuity by Rs. 216.06 lakhs. The current assets are maintained in a highly liquid form.

The foreign wool that is now available to the Company is being used for the production of union cloths and, since the supply is insufficient to meet demands from other lines of manufacture, the Directors report that they have been forced to decide upon the closure of the woollen mill at Hebbal and that this will take place at the end of May 1961.

The Rs. 100 paid-up ordinary shares are now quoted at Rs. 204 to yield 5.2 per cent net.

W.I.M.CO. MAINTAINS PROGRESS

RESERVES REPLENISHED FURTHER

IN spite of a substantial improvement in sale proceeds from Rs. 1,761.21 lakhs in 1959 to Rs. 1,834.16 lakhs, the gross profit of the Western India Match Company Ltd. (Managing Agents: The Swedish Match Company, Bombay) for the year ended 31st December 1960 has registered only a modest rise of Rs. 2.33 lakhs to Rs. 149.84 lakhs. This is mainly due to the increase in excise duty from Rs. 1,042.44 lakhs to Rs. 1,066.65 lakhs and the expansion in expenses other than raw materials from Rs. 344.28 lakhs to Rs. 364.52 lakhs. Consequently, the profit margin (ratio of gross profit to sales) has gone down from 8.4 per cent to 8 per cent. The Managing Agents' remuneration is only a shade higher at Rs. 12.64 lakhs (Rs. 12.37 lakhs in the previous year) and depreciation has been stepped up slightly from Rs. 18.06 lakhs in 1959 to Rs. 19.02 lakhs in the year under review. The provision for taxation is actually lower by Rs. 1.20 lakh at Rs. 51.15 lakhs. After making these essential allocations the net profit works out to Rs. 67.03 lakhs representing an increase of Rs. 2.30 lakhs over the previous year. This net profit is supplemented by Rs. 72,000, being the amount of tax refund in respect of earlier years and a sum of Rs. 4.21 lakhs, the balance brought forward from the previous year. Out of the total of Rs. 71.96 lakhs available for distribution, the Directors have set aside altogether Rs. 23.42 lakhs, or about one-third, to different reserves. The corresponding figure for the previous year is Rs. 18.15 lakhs, so that the amount conserved this year is substantially more than last year. A breakdown analysis of these transfers shows that the general reserve gets Rs. 8.82 lakhs as against Rs. 16 lakhs last year; Rs. 12.73 lakhs are ploughed back as a provision for contingencies, as against *nil* last year, and Rs. 1.87 lakhs (as against Rs. 2.15 lakhs in 1959) is transferred to development rebate reserve. The Directors have decided to maintain the dividend at 16 per cent per annum subject to tax, giving a net return of 11.2 per cent which compares a little favourably with the tax-free dividend of 11 per cent declared by the Company for a number of years in the past.

The progress of the Company since 1957 is depicted in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds (gross) ..	18,34.16	17,61.21	15,65.09	12,84.96

* Subject to deduction of tax.

The financial position of the Company, as disclosed by the balance-sheet as on 31st December 1960, is quite satisfactory. The paid-up capital of Rs. 275 lakhs is supplemented by reserves and surplus of Rs. 194.73 lakhs. During the year the Company did not have recourse to borrowings from banks, and its other current liabilities, amounting to Rs. 251.14 lakhs, are well covered by current assets totalling Rs. 447.38 lakhs (investments Rs. 4.17 lakhs, stores and tools Rs. 57.23 lakhs, stock-in-trade Rs. 147.47 lakhs, sundry debtors Rs. 20.92 lakhs, and cash Rs. 129.40 lakhs, loans and advances and banderols held in trust Rs. 76.32 lakhs and banderols held in trust Rs. 12.16 lakhs). During the year under review the Company made additions to the block account of the value of Rs. 19.57 lakhs taking up the total value of gross block to Rs. 480.29 lakhs, which is written down to Rs. 270.22 lakhs. Further, there is an unallocated capital expenditure amounting to Rs. 3.27 lakhs.

In order to reduce the monopoly the Company has been having in the supply of matches and to encourage employment in the cottage industry sector, the Government has restricted the Company's capacity to make matches. In view of this, the Company took to manufacture of paper a couple of years ago, but here, too, the Government has made the position difficult by fixing the ex-factory prices at levels considered unremunerative. The following extract from the Directors' report will enable the reader to get an idea of the outlook for the Company:

"The Government of India are still experimenting to decide what should be the standard execution for match boxes. Up to the end of 1959, the manufacture of boxes containing 50 sticks was permitted, but this execution was then withdrawn and only the 40's and 60's executions remained. In the last Budget of the Central Government, excise duty rates have been so amended as to encourage the manufacture of the 50's execution and to discourage 40's and 60's. In this country, with its insufficient resources of match timber, 50's is not the ideal execution; it will lead to waste of wood, because of the need for more boxes when the contents of each are reduced from 60 to 50 sticks and also to a likely shortage of matches. The capacity of your Company has for some time been restricted by Government to what it is today. On account of these repeated changes in Government's policy, it is again difficult to forecast their effect on the working of the current year.

"The Paper Mill is working satisfactorily, but the prices fixed by Government on the recommendation of the Tariff Commission do not give a fair return."

The Company's problem of securing spare parts for its machinery will be solved if the shareholders sanction a special resolution whereby the spare parts proposed to be manufactured by the Vulcan Trading Company, an associate of the Swedish Match Company, could be purchased by W.I.M.Co.

The Rs. 100 fully paid-up shares of the Company are currently quoted at Rs. 279 *cum-div.* On an *ex-div.* basis, and at the current rate of dividend, the yield on them is 4.1 per cent per annum, free of tax. Before the budget, the shares were standing in the neighbourhood of Rs. 265; thereafter, they jumped up to Rs. 314, on hopes that the reduction in the bonus tax from 30 per cent to 12½ per cent would induce the management to capitalise a part of the Company's reserves. Subsequently, after the publication of the Directors' report and statement of accounts, they retreated to as low as Rs. 270, as the hopes were belied. The prospects of the Company issuing bonus shares *in the near future* are not bright. It is true that the Company has sufficient reserves for offering at least one bonus share for every three now held, but there is no imbalance between the block account and the paid-up capital. Again, the profit cover for dividend is not that large as to leave a comfortable margin for ploughing back at the present scale, after maintaining the dividend on the capital increased by such a bonus issue.

(*Concluded from next column*)

the net block stands at Rs. 488.77 lakhs, the depreciation provided being Rs. 115.64 lakhs. The current assets at Rs. 383.69 lakhs are well above current liabilities of Rs. 145.29 lakhs, by a comfortable margin of Rs. 238.40 lakhs.

The restrictive import policy of the Government has severely affected the growth of this Company, in that it found it very difficult to expand its output to meet the demand for its products. At the end of the year stocks of raw materials at all operating units were critically low. An intensive programme for the development of suitable indigenous sources of raw materials was continued throughout the year. Although considerable progress has been made in this direction, certain basic raw materials required will still have to be imported, as they are not available indigenously.

The Company has a programme for substantial expansion of the Trombay plant, the products of which have a great demand in the expanding economy of the country. The expansion programme of the Metals and Ores division will be completed during the current year. An extensive re-equipment programme for the two battery plants of the Company, which was undertaken during the year, is expected to result in improved operating efficiencies and economies in the manufacture of this major product line.

The Company's shares are quite popular and are regarded by investors as a first class growth scrip. The Rs. 10 paid-up ordinary shares are now being quoted at Rs. 56, at which rate the net yield is no more than 2.25 per cent per annum. A year ago, these were quoted at Rs. 48 *cum-right* to give a net yield of 3.4 per cent.

HIGHER PROFIT OF UNION CARBIDE

IMPORT POLICY RETARDS SALES

UNION Carbide India Limited (Chairman and Managing Director: Mr. J. R. Galloway, Calcutta) which manufactures a wide range of chemicals and plastics as well as various types of batteries and cells, besides producing high quality zinc alloy strips and plates, has had successful trading in the year ended 25th December 1960. The improvement in results is due to the increasing demand for its battery products and sale of a larger number of flashlight cases. The earnings of the Metals and Ores division also improved, thanks to increased output and sale of a wide range of zinc products. The income from the sale of plastics and chemicals was, however, lower, as compared with the previous year, on account of restrictions on imports of raw materials.

Sale proceeds have a consistent record of growth since 1955, the year in which it was converted into a public limited company and Indian investors were allowed participation. Sales have advanced by Rs. 52.74 lakhs to Rs. 822.67 lakhs. The rise of 6.8 per cent in sales during the year under review was, however, lower than that of 27.2 per cent recorded in the previous year. Reflecting mainly the growth in production, there has been a rise in the value of raw materials and stores consumed from Rs. 283.81 lakhs to Rs. 330.60 lakhs. The payment of excise duty has also increased from Rs. 47.51 lakhs to Rs. 71.10 lakhs, a part of which must be attributed to an increase in Central excise duty levied on dry batteries from 10 per cent to 15 per cent *ad valorem* with effect from 1st March 1960. It is, however, encouraging to note that the ratio of gross profits to sales, around 20 per cent, has been maintained on account of a considerable drop in other expenses from Rs. 320.49 lakhs to Rs. 235.13 lakhs. After providing Rs. 21.03 lakhs for depreciation and Rs. 61.38 lakhs for taxation, the net profit is higher by Rs. 13.21 lakhs to Rs. 86.41 lakhs. The provision for taxation is lower by over Rs. 3 lakhs, but there has been an increase of about Rs. 4 lakhs in the transfer to depreciation. The transfer to reserves has been stepped up by Rs. 5 lakhs to Rs. 32.30 lakhs, while, once again, a sizable amount of Rs. 46.71 lakhs is being carried forward as unappropriated surplus. The payment to shareholders has been maintained at 18 per cent subject to tax, but the amount required for this purpose is higher by Rs. 14.34 lakhs on account of payment of final dividend on the increased capital.

The following comparative table shows at a glance the financial results of the Company for the last four years:

(In lakhs of rupees)

	For the year ended 25th December			
	1960	1959	1958	1957
Sale proceeds	8,22.67	7,69.93	6,06.07	5,85.35

* Subject to deduction of tax.

The paid-up capital of the Company was increased during the year from Rs. 200 lakhs to Rs. 280 lakhs by the issue of 8 lakh shares of Rs. 10 each at a premium of Rs. 2.50 per share in the ratio of two new shares for every five shares held. The issue was made to finance the various new undertakings and came into effect from 1st June 1960. Reserves and surplus have increased from Rs. 158.99 lakhs to Rs. 214.96 lakhs, an increase of Rs. 55.37 lakhs, of which Rs. 28 lakhs is in share premium account which now stands at Rs. 58 lakhs. Due to the capital expenditure for the construction of new plant and replacement of existing equipment, the gross block account has increased by Rs. 231.41 lakhs on top of a rise of Rs. 103.32 lakhs in the previous year. The major part of this expenditure was for the chemicals and plastic plant at Trombay which has now gone into production. The total of gross block is Rs. 804.41 lakhs and

(*Continued in previous column*)

SHARP RISE IN SHREE NIWAS COTTON'S PROFIT

DIVIDEND ENHANCED ONCE AGAIN

THE year ended 31st December 1960 was a highly profitable one for the Shree Niwas Cotton Mills Limited (Managing Agents: The Marwar Textiles Agency Private Ltd., Bombay), despite the high cost of cotton, increase in the wage bill, the dislocation caused in the movement of cotton textiles by the unhelpful statements made by the Union Minister for Commerce and Industry and the reduction in ex-mill prices effected under the agreement between the Government and the India Cotton Mills Federation. The profitability of the Company during the year considerably increased from 8.72 per cent in the previous year to 15.76 per cent during the year under review. This is largely the result of complete modernisation and renovation programme carried out in the last few years. The gross profit for 1960 has increased by over 76 per cent to Rs. 70.53 lakhs from Rs. 40.07 lakhs for 1959, although the total sale proceeds of cloth, yarn and waste are lower at Rs. 447.30 lakhs, as against Rs. 459.15 lakhs. The profit for the year is the highest on record, and even surpasses the previous high figure of Rs. 65.68 lakhs registered in 1951, the year of the Korean boom.

The better profits have enabled the Directors to increase the dividend to 18 per cent subject to tax, from 15 per cent subject to tax for 1959. This is the third consecutive increase in the last four years and the net dividend is well over the latest tax-free dividend of 10 per cent for 1958. Out of the gross profit, the provision for taxation has been stepped up by Rs. 10.26 lakhs to Rs. 19.36 lakhs and that for depreciation by Rs. 3.63 lakhs to Rs. 14.14 lakhs. The remuneration to Managing Agents is higher at Rs. 4.90 lakhs, as against Rs. 2.52 lakhs in the previous year.

The progress achieved by the Company can well be ascertained from the following comparative table covering the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds of cloth, yarn and waste	447.30	459.15	417.57	379.06

* Subject to deduction of tax.

It is computed by the Directors that the Wage Board award means an increase of Rs. 6.50 lakhs in the wage and salary bill. The following figures taken from the Company's report show the extent to which the average income per annum per worker in its mill has gone up since 1945:

	Rs.
1945	861
1950	1,071
1955	1,683
1958	1,864
1959	2,101
1960	2,310

The gross block of the Company has been steadily rising in the last few years on account of a systematic tackling of the problem of rehabilitation and renovation of the machinery within the resources available at the Company's disposal. As at the close of 1960, the gross block stands at Rs. 190.86 lakhs and the net block at Rs. 107.01 lakhs, following the provision of Rs. 83.85 lakhs for depreciation. During the four years ended 31st December 1960, the Company incurred a capital expenditure of Rs. 105.54 lakhs and sold old plant and machinery, etc., which fetched Rs. 26.75 lakhs, so that the net addition to gross block is of the order of Rs. 78.79 lakhs.

A feature of the Company is its large investments in other companies amounting to Rs. 84.86 lakhs, of which Rs. 43.74 lakhs are in debentures of Shree Madhusudan Mills Ltd. and Rs. 26.73 lakhs in the ordinary shares of that mill. The market value of quoted investments (of Rs. 70.80 lakhs) alone is Rs. 88.44 lakhs, exceeding even the total investments by Rs. 3.57 lakhs. The unquoted investments are Rs. 14.07 lakhs.

The paid-up capital of the Company at Rs. 84.80 lakhs consist of Rs. 80 lakhs in 80,000 ordinary shares of Rs. 100 each and Rs. 4.80 lakhs in 4,800, four per cent preference shares of Rs. 100 each. Reserves and surplus amount to Rs. 65.48 lakhs as against Rs. 51.95 lakhs in the previous year. As against the drop of Rs. 6.59 lakhs in secured loans at Rs. 128.81 lakhs, the unsecured loans have advanced by Rs. 16.66 lakhs to Rs. 20.97 lakhs. The current assets at Rs. 202.51 lakhs are well above the current liabilities at Rs. 103.93 lakhs.

The entire ring frame department of the Company's mill has now been completely renovated. With the replacement of remaining ten ring frames, the whole of the spinning department has been equipped with the latest type of humidification and ventilation plant. One new mercerising machine has also been installed during the year and now the mercerising capacity has increased so much that the entire production can be mercerised.

Further, an expansion programme involving an outlay of Rs. 45 lakhs is in hand and eight new American combers will be erected shortly. The Company has entered into agreement with Messrs. Cluett Peabody and Co., Inc. of U.S.A. for the use of "Sanforized" trade mark. The new sanforizing machine will start functioning by the end of the current year. The Company has also placed an order for 96 automatic looms and the same is likely to be received early next year. It will thus be seen that the Company is following a progressive policy in regard to production.

It is heartening to hear that the fabrics produced by the Company command a ready market. As a result of renovation and modernisation, the Company would be able to diversify its products and produce fine and superfine varieties suitable for the changing pattern of consumption in the country. With the completion of modernisation and renovation programme, the Company's mill now stands at par with many of the progressive units in the industry. The results of the Company for the current year can be expected to show a further improvement.

Since the close of the year, the paid-up capital of the Company has been increased by the issue of 10,000 equity shares of Rs. 100 each in the ratio of one new share for eight shares held.

The current market quotation for the Rs. 100 paid-up ordinary shares of the Company is Rs. 257, giving a net yield of 4.9 per cent on a net dividend at Rs. 12.60 per share.

TYRE TUBE VALVE MANUFACTURE

A new company under the name of Schrader Scovill Duncan Ltd, has been formed in India with an authorised capital of Rs. 2 crores. An agreement to this effect has been concluded between the Scovill Manufacturing Company, U.S.A., and Duncan Brothers & Co. Ltd., Calcutta. The A. Schrader's Son Division of the Scovill Manufacturing Company is the world's oldest and largest tyre valve manufacturers. In the beginning Duncan Brothers & Co. Ltd., and its associates in India will hold 49 per cent shares and the rest will be held by the Scovill Manufacturing Company which will also provide the technical know-how. The share capital is expected to be divided fifty-fifty basis between the participants and, later on, the new Company will invite public participation in the share capital. The plant will be located near Bombay and is scheduled to commence operation in January 1962. This will be the first plant of its kind in India and represents yet another "first in the field" for Duncan Brothers & Co. Ltd. which has recently been associated with the setting up of plants for woolcombing and manufacture of carbon black.

At present the vehicle tyre tube valves used in India are imported from the Schrader factory in Birmingham, U.K., at a cost of much foreign exchange. Production of the valves will be doubled by the end of the third Plan. It is estimated that this operation would then be in a position to save the much needed foreign exchange. In addition, as Schrader's have no manufacturing operations in Asia or Africa, it is expected that tyre tube valves manufactured in India will be exported to neighbouring countries and thus help augment India's foreign exchange earnings.

COMPANY MEETINGS AND DIVIDENDS

NEW BEERBHOOM COAL CO., LTD. Annual General Meeting, Calcutta, 3rd May 1961. Dividend: Re. 1.60 per ordinary share (includes interim dividend of Re. 0.60 per share), subject to deduction of tax. Transfer books remain closed from 17th April to 3rd May 1961, both days inclusive.

CHEMICAL AND ALKALI DISTRIBUTORS LTD. Annual General Meeting, Bombay, 6th May 1961. Dividend: 20 per cent. Transfer books remain closed from 10th April to 6th May 1961, both days inclusive.

SHREE NIWAS COTTON MILLS LTD. Annual General Meeting, Bombay, 8th May 1961. Dividend: Rs. 18.00 per share, subject to deduction of tax, payable on and after 13th May 1961. Transfer books remain closed from 15th April to 6th May 1961, both days inclusive.

KOHINOOR MILLS LTD. Annual General Meeting, Bombay, 10th May 1961. Dividend: Rs. 15.00 per share (includes interim dividend of Rs. 5.00 per share), subject to deduction of tax, payable on and after 23rd May 1961. Transfer books remain closed from 18th April to 10th May 1961 both days inclusive.

SIRSILK LTD. Annual General Meeting, Somajiguda, Hyderabad, Andhra Pradesh, 11th May 1961. Dividend: *Nil*. Transfer books will remain closed from 1st to 14th May 1961, both days inclusive.

LAKSHMI COTTON MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 15th May 1961. Dividend: Rs. 25.00 per ordinary share, subject to deduction of tax, payable on and from 22nd May 1961. Transfer books remain closed from 18th April to 9th May 1961, both days inclusive.

SASSOON SPINNING AND WEAVING CO., LTD. Annual General Meeting, Bombay, 15th May 1961. Dividend: Re. 1.70 per share, subject to deduction of tax, payable from 22nd May to 30th August 1961.

MAFATLAL FINE SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 15th May 1961. Dividend: Rs. 30.00 per ordinary share, subject to deduction of tax, payable from 22nd May to 30th August 1961.

SENDRA COAL CO., LTD. Annual General Meeting, Calcutta, 15th May 1961. Dividend: Re. 0.50 per share, subject to deduction of tax, payable on or after 30th May 1961. Transfer books will remain closed from 8th to 15th May 1961, both days inclusive.

WESTERN INDIA MATCH CO., LTD. Annual General Meeting, Bombay, 15th May 1961. Dividend: Rs. 16.00 per share, subject to deduction of tax, payable on and after 16th May 1961. Transfer books remain closed from 19th April to 16th May 1961, both days inclusive.

UNION CARBIDE INDIA LTD. Annual General Meeting, Calcutta, 15th May 1961. Dividend: Re. 1.05 per share (final), subject to deduction of tax. Transfer books remain closed from 24th April to 15th May 1961, both days inclusive.

STANDARD MILLS CO., LTD. Annual General Meeting, Bombay, 16th May 1961. Dividend: Rs. 30.00 per ordinary share, subject to deduction of tax, payable from 22nd May to 30th August 1961.

NEW SHORROCK SPINNING AND MANUFACTURING CO., LTD. Annual General Meeting, Ahmedabad, 19th May 1961. Dividend: Rs. 60.00 per ordinary share, subject to deduction of tax, payable from 23rd to 31st May 1961.

BHARAT COMMERCE AND INDUSTRIES LTD. Annual General Meeting, Calcutta, 19th May 1961. Dividend: Re. 0.50 per ordinary share, subject to deduction of tax. Transfer books remain closed from 24th April to 19th May 1961, both days inclusive.

VIJAYALAKSHMI MILLS LTD. Annual General Meeting, Coimbatore, 26th May 1961. Dividend: 12 per cent or Rs. 12.00 per share, subject to deduction of tax. Transfer books will remain closed from 6th to 26th May 1961, both days inclusive.

NATIONAL RAYON CORPORATION LTD. Annual General Meeting, Bombay, 15th June 1961. Transfer books will remain closed from 10th May to 8th June 1961, both days inclusive.

FERTILISERS AND CHEMICALS TRAVANCORE LTD. Taxable dividend of 6 per cent or Re. 0.60 per ordinary share for the year ended 31st December 1960. Transfer books will remain closed from 1st to 20th June 1961, both days inclusive.

JAWAHAR MILLS LTD. Taxable dividend of 15 per cent or Re. 0.75 per share, for the year ended 31st December 1960. Transfer books will remain closed from 12th to 26th May 1961, both days inclusive.

INDORE MALWA UNITED MILLS LTD. Taxable dividend of Rs. 8.50 per ordinary share, for the year ended 31st December 1960, payable on or after 3rd July 1961.

ASSAM MATCH CO., LTD. Taxable dividend of 18 per cent or Re. 1.80 per share, for the year ended 31st December 1960.

BELSUND SUGAR CO., LTD. Taxable dividend of Re. 1.40 per share, for the year ended 30th September 1960.

AMAR DYE-CHEM LTD. Taxable dividends of Rs. 12.00 per old ordinary share and Rs. 7.50 per new ordinary share, for the year ended 31st December 1960, payable on and after 5th July 1961. Transfer books will remain closed from 5th to 20th June 1961, both days inclusive.

TRAVANCORE OGALE GLASS MANUFACTURING CO., LTD. Taxable dividend of 10 per cent or Re. 1.00 per share, for the year ended 31st December 1960. Transfer books will remain closed from 18th to 31st May 1961, both days inclusive.

BALARAMA VARMA TEXTILES LTD. Taxable dividend of 9 per cent on ordinary and 'B' ordinary share, for the year ended 31st December 1960. Transfer books will remain closed from 29th May to 12th June 1961, both days inclusive.

RAJALAKSHMI MILLS LTD. Taxable dividend of 12 per cent or Rs. 6.00 per ordinary share, for the year ended 31st December 1960. Transfer books will remain closed from 24th April to 12th May 1961, both days inclusive.

(UNDER GOVERNMENT) 1 - MAY 1961 PUBLIC DEPARTMENT

SYNOPSES OF COMPANY REPORTS

Empire Jute Co., Ltd.

(*Managing Agents:* Messrs. McLeod & Co., Ltd., Calcutta.)

Annual General Meeting—29th April. Dividends payable on or after 15th May.

Working Results:

	For the year ended 31st July (In thousand rupees)	
	1960	1959
Sales	1,23,06	1,29,36
Gross profit	13,96	11,12
Transfer to Managing Agents' remuneration	1,08	83

N.B.—Adjustments include the balance brought forward from the previous year; transfer from reserves and provision for doubtful debts if any and sales tax receivable from Government in respect of previous years if any.

* Includes additional 30% on Preference dividends for 1 the years 1959 and 1960.

Extracts from the Directors' report: The mills continued to work in accordance with the main and supplementary working time agreements of the Indian Jute Mills Association, and as loom hours were purchased the mills worked an average of 259 looms on double shift during the period under review. Certain new preparing machinery was installed during the year and this improved the working efficiency of the mills.

Except for a closure for 6 days due to a dispute in the spinning department, labour relations were fairly satisfactory during the period.

The reduction in the stock position of raw jute in India at the end of June, 1960, and the Indian crop not being sufficient to allow normal working during the current season, curtailment of production has been necessary throughout the industry in the current year to conserve raw jute supplies.

Accounts in brief as at 31st July 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	25,00,000	Gross block	1,14,03,496

Carry forward	45	1,89

N.B.—Adjustments include the balance brought forward from the previous year; amounts transferred from reserves; provisions for wealth tax and inter-State sales tax written back and other credits items relating to previous years written back.

* Includes additional 30 per cent on Preference dividends for the years 1959 and 1960 under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: The Company's difficulties were increased during the year due to sporadic labour trouble and the mills lost 6 working days owing to a complete closure due to a strike in June 1960. The mill efficiency was poor due to this labour unrest despite completion of the modernisation of the preparing and spinning departments of the mill. All these factors have been reflected in the poor working results of the Company for the period under review. There has been an improvement in labour relations during the year but the mill efficiency is still not up to the standard required. The Appeal against the Award in respect of Bonus to workers for 1955 which had been preferred in the Supreme Court as advised in the Directors' previous report, has been withdrawn and the matter amicably settled between the management and the labour union. In June 1960 a bonus of 8 weeks basic wages was paid to all workers in settlement of all claims for bonus up to and including 1958.

Accounts in brief as at 31st July 1960 are as under:—

	(5%p.a.)	(15%p.a.)
" " Preference	56*	35
	(7%p.a.)	(7%p.a.)
Carry forward	39	2,34

N.B.—Adjustments include the balance brought forward from the previous year; the amounts transferred from reserves; wealth tax and inter-State sales tax written back and adjustment of Managing Agents' commission paid in respect of previous year.

* This includes the additional 30% on Preference dividends for the years 1959 and 1960.

Extracts from the Directors' report: The mills continued to work in accordance with the main and supplementary working time agreements of the Indian Jute Mills Association. Curtailment of production has, however, had to be effected in the current year to conserve raw jute supplies due to the short jute crop.

These mills are dependent to a large extent on locally grown jute and have experienced two short crops of inferior quality. *Bimli Jute* which is a late crop and is not marketted until December has had to be purchased on an ever rising market and trading conditions have been extremely difficult during the period under review and the current year.

The Company's difficulties were increased during the year due to labour trouble and the mills lost 38 working days due to strikes during April-June, 1960. The Mill efficiency due to this factor was poor despite completion of modernisation of the spinning section of the mill. All these factors contributed to the poor working of the Company throughout the period. There has been an improvement in labour relations during the current year but the mill efficiency is still not up to the standard required.

Raw jute prices in Pakistan rose to unprecedented levels when it became evident that there would be a shortage in world supply. The prices of raw jute followed the same pattern in India early in October 1960. Various measures were taken by the Indian Jute Mills Association and the Forward Markets Commission to arrest the rise of price in raw jute and finished goods during November which had a temporary effect. Further measures were necessary as prices continued to rise, and the I.J.M.A. have now fixed maximum jute prices and mills are not allowed to purchase above these prices.

The Reserve Bank of India imposed credit restrictions on advances to Jute Mills against their stocks of raw material and finished goods, and this has had an adverse effect on the raw material purchasing power of this Company. These mills require to hold raw material stocks until the arrival of new crop *Bimli Jute* in November, and this it will not be possible to achieve because of high prices, bank credit restrictions and inadequate supplies.

Accounts in brief as at 31st July 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	35,15,000	Gross block	1,20,98,261

	(7.5% p.a.)	(3% p.a.)
" " Preference	38*	21
	(9.1% p.a.)	(7% p.a.)
Carry forward	28	26

N.B.—Adjustments include the balance brought forward from the previous year and amounts transferred from reserves if any.

* Includes additional dividend of 2.1 per cent. for the year 1959.

Extracts from the Directors' report: The fleet was fully occupied throughout the year, and this is reflected in the higher freight receipts. There was a further increase in freight earnings from jute carried from Assam, and the Company is now firmly established in Dhubri and Kolabunda. Prospects for the current year are satisfactory, and with the progressive development of industry in Assam the demand for shipping space in Calcutta is good.

The new tug referred to in the report on the previous year's accounts was commissioned on 1st October, 1960. It has provided much needed additional towing capacity on the shallow reaches of the Brahmaputra river in the northern part of East Pakistan and in Assam.

Messrs. Andrew Yule & Co., Ltd., ceased to act as managing agents of the Company on 15th August, 1960, and their appointment as secretaries and treasurers of the Company for a period of five years from that date has been approved by the Central Government.

Accounts in brief as at 31st October 1960 are as under:—

Liabilities	Rs.	Assets	Rs.

	(9.1% p.a.)	(10% p.a.)
Carry forward	80	81

N.B.—Adjustments include the balance brought forward from the previous year; development rebate reserve on block sold; excess unclaimed dividends forfeited if any, written back if any and † Calculated in accordance with Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: Raisings for the year were 7,14,376 tonnes compared with 6,56,767 tonnes in the previous year and 6,31,697 tonnes in the year ended 31st October, 1958. Despatches amounted to 7,16,944 tonnes compared with 6,46,381 tonnes and 6,36,497 tonnes in the two previous years.

The raisings for the year constitute a record in the history of the Company; and, in particular there was a very satisfactory increase in the output of Selected "A" coking coal at Victoria and Victoria West Collieries. As a result of the increase in the ceiling of assistance for sandstowing sanctioned by Government, the net cost to the Company of stowing at Victoria and Victoria West Collieries has decreased from Rs. 3,09,000 to Rs. 1,92,000, and the quantum of sand stowed at these two collieries has increased by about 1,00,000 tonnes to 6,71,000 tonnes during the year under review. Arrangements to develop the Dobrana Seam at New Kendah Colliery are proceeding satisfactorily, and at Barmondia Colliery increased raisings are now being obtained from the Disher-garh Seam.

An offer of 1,42,098 ordinary shares of Rs. 10 each as *Rights Shares* was made to the members of the Company on 11th January, 1961 at a premium of Rs. 4 per share. The issue provided a sum of Rs. 19,89,352 and was oversubscribed.

Accounts in brief as at 31st October 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	19,76,230	Gross block	1,62,48,573

Proposed dividends (taxable):		
5½ per cent. Preference	79	2,68*
Ordinary	1,10	Nil
	(10% p.a.)	
Carry forward	3	1

N.B.—Adjustments include the balance brought forward from the previous year; amount transferred from contingency reserve and the amount transferred from general reserve if any.

* This includes an amount of Rs. 1,81,500 being the dividend on the second preference shares for the years 1952-53 to 1957-58.

Extracts from the Directors' report: The working results during the year under review have

been satisfactory in spite of increases in the cost structure. However, efforts have been made to reduce the same to the minimum and ensure maximum efficiency.

The Company continued to receive orders from the Railway Board for manufacturing wagons. The present orders envisage manufacture of a type of wagon radically different in design from those made by the Company previously. This will involve careful planning and also additional machinery. Necessary applications for importing the same have been made and licences are awaited.

The Company has also been fairly busy with civil construction activities but in this field there has been severe competition as several new contractors have entered the field and tenders have to be quoted on very economical rates.

The Company has, during the year under review, finalised arrangements for the manufacture of *Vibrators* and *Floor Cranes*. It is expected that in the final stages 1,000 *Vibrators* and 900 *Floor Cranes* will be manufactured annually. Collaboration arrangements in respect of the manufacture of *Floor Cranes* are being finalised with a reputed *American firm* and we hope, progressively to undertake manufacture of the complete hydraulic equipment necessary for these cranes in India. It is expected that these products shall be in the market before the end of 1961.

The Company intends to approach the Shareholders in the near future for further capital for these expansions and necessary sanction from the Controller of Capital Issues has been obtained in this behalf.

Accounts in brief as at 31st July 1960 are as under:—

N.B.—Adjustments include the amount brought forward from the previous year and profit on sale of land.

† Includes additional dividend for four months from July to October 1960.

Extracts from the Directors' report: *Tea*: A total crop of 10,44,395 pounds was manufactured during the year and this includes 10,327 lbs. tea manufactured from bought leaf. The entire stock of tea unsold as on 31st October 1960 has since been sold and realised Rs. 5,13,499. The Company was allotted 6,22,545 lbs. export quota representing a release of 67 per cent of the Estate Best crop.

Coffee: A crop of 165.001 metric tonnes was harvested during the year and delivered to the Coffee Board. This excludes the crop picked from Cornellion Estate for account of the buyers.

The tea crop for the year 1960-61 is estimated at 4,53,600 kilograms (equivalent to 10,00,000 lbs.) at an all-in cost of Rs. 3.52 per kg. (Rs. 1.60 per lb.) The coffee crop is estimated at 47 tonnes to be harvested at an all-in cost of Rs. 7,914 per tonne.

Accounts in brief as at 31st October 1960 are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital* ...	19,67,076	Gross block	33,15,743
Reserves and surplus ...	12,27,845	—Depreciation	5,71,179
Other liabilities ...	11,30,651	Net block ...	27,44,564
		Current assets	7,27,494
		Cash ...	8,53,511
Rs.	43,25,572	Rs.	43,25,572

*Issued ordinary share capital was increased from Rs. 8,58,538 to Rs. 17,17,076 by issue of 4,29,269 bonus shares of Rs. 2 each on 16th November 1959.

Sirsilk Ltd.

Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta)

Annual General Meeting—11th May.

Working Results:

	For the year ended 30th September (In thousand rupees) 1960	1959
Sales (chemicals, yarn & fabrics) ..	2,28,04	2,81,54
Closing Stock ..	46,24	48,11
Gross profit ..	17,72	14,99
Transfer to Managing Agents' remuneration ..	12	12
Transfer to Depreciation ..	14,00	—
Net Profit ..	3,60	14,87
Adjustments ..	—3,23	—18,10
Total available balance ..	37	— 3,23
Carry forward ..	37	— 3,23

N.B.—Adjustments include only the debit balance brought forward from the previous year.

Extracts from the Directors' report: After adjusting the loss brought forward from the previous year, there remains surplus of Rs. 37,513 which is proposed to be carried forward. In view of the inadequacy of profits for the year, full depreciation could not be provided.

The production during the year was almost stationary. There was rise in the cost of production consequent upon the increase under various heads including salaries and wages.

The working results, though considered satisfactory in the context of labour situation at the factory, were not upto expectation for want of any further improvement in the quantity as well as quality of production.

The Company is in negotiation for technical collaboration with some foreign parties of repute to carry out its expansion and modernisation programmes.

The management as reported in the Directors' report of the previous year had to declare a lock-out for a period of one month during September-October, 1959. The factory had to be closed further for about a week during June, 1960, as a result of faction fight among the workers. The labour union in disregard of the code of discipline and the agreements entered into with the Company, raised various disputes which were referred to the Industrial Tribunal by the State Government and they are pending before it and/or High Court of Andhra Pradesh and/or the Supreme Court. In general, the labour unrest, serious indiscipline and acts of violence continued throughout the year affecting adversely the working of the Company. The management is taking all necessary steps towards improvement of labour-management relation.

BENGAL COAL COMPANY LIMITED

(Concluded from page 809)

the staff at all levels in our coalfields organisation. In addition to the very competent mining staff, we have well qualified teams of electrical and mechanical engineers and surveyors, and we are also fortunate to have men of high calibre in charge of the medical, labour, legal, and other departments of the Company.

"Our Chief Mining Engineer, Mr. F. G. Massmann, has had a most successful first year in his appointment, and I thank him, and Mr. Ll. D. Hughes, the Deputy Chief Mining Engineer, and the other senior members of the staff, for all their hard work; they shoulder very heavy responsibility and their conscientious devotion to the interests of the Company and its 21,000 employees is an inspiration to us all."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

Notices

THE SOUTH KARANPURA COAL COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of the South Karanpura Coal Company Limited will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Monday the 29th May, 1961, at 11 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st August, 1960, and to receive the Directors' and the Auditors' reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

AS A SPECIAL BUSINESS

5. To consider and, if thought fit, to pass with or without modification the following Resolution of which a notice has been received by the Company from a Shareholder under Section 257 of the Companies Act, 1956, which will be proposed as an ordinary Resolution.

"That Sir Walter Michelmore be and is hereby appointed a Director of the Company."

6. To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as a special Resolution, namely:—

"Resolved that the Company may borrow money from time to time from its Secretaries and Treasurers provided the Secretaries and Treasurers are agreeable so to lend, bearing interest at a rate lower than the prevailing Bank rate as may agreed upon between the Secret[illegible] and Treasurers and the Director the Company but so that the m[illegible] lent shall not at any time ex[illegible] Rupees three lacs in the aggreg[illegible] which may be repaid by the Comp[illegible] without notice and shall be re[illegible] within three days of Demand Secretaries and Treasurers."

The Share Transfer Register of the C[illegible] pany will be closed from the 15th May to 29th May, 1961, both days inclusive.

By Order of the Board,

BIRD & CO. (PRIVATE) LT[illegible]

Secretaries & Treasu[illegible]

CALCUTTA, 21st *April*, 1961.

Notes:—(*a*) A member entitled to at[illegible] and vote at this meeting may appoint a p[illegible] to attend and vote in his stead. A proxy [illegible] not be a member of the Company.

(*b*) The relative explanatory statem[illegible] pursuant to Section 173 of the Companies [illegible] 1956, in respect of the Special Businesses set above are annexed hereto.

(*c*) The Dividend, if declared, will be [illegible] on or after 14th June, 1961, to those memb[illegible] so entitled whose names appear in the C[illegible] pany's Books on the 29th May, 1961, or to t[illegible] mandatees. No application for Dividend w[illegible] rants is necessary.

EXPLANATORY STATEMENTS

With regard to item No. 5 it is pointed [illegible] that Sir Walter Michelmore was appointed additional Director and the Chairman of [illegible] Board with effect from 14th October, 1960, terms of Section 260 of the Companies Act, 1[illegible] he now vacates his office and in view of vast experience in the affairs of the Compa[illegible] your Directors recommend the adoption of [illegible] resolution in the best interest of the Compa[illegible]

With regard to item No. 6, it is pointed [illegible] that the Company may require tempora[illegible] financial accommodation from time to time a[illegible] as the Secretaries and Treasurers are prepar[illegible] to lend money to it at a rate of interest whi[illegible] is more favourable then the Company cou[illegible] have obtained from its Bankers, it is propos[illegible] to take advantage thereof. Section 370 of t[illegible] Companies Act, 1956, as well as relative claus[illegible] in the Articles of Association of your Compa[illegible] empower your Company to take loans from t[illegible] Secretaries and Treasurers at a rate of intere[illegible] to be agreed upon between them and the Boa[illegible] The Auditors of your Company are of t[illegible] opinion that granting of loans by the Secr[illegible] taries and Treasurers constitute a service [illegible] them in terms of Section 360 of the Act a[illegible] that such arrangement should be approved [illegible] the shareholders by special Resolution pursua[illegible] to the above section. Counsel's opinion on t[illegible] question is to the contrary but in order to r[illegible] move any doubt in the matter it is propos[illegible] to pass a special Resolution confirming t[illegible] arrangement.

Sir Walter Michelmore, Director and mem[illegible] ber of your Company, is also a Managing Dire[illegible] tor of Messrs. Bird & Co. (Private) Ltd., t[illegible] Secretaries and Treasurers of your Company.

To the extent indicated above, the Secre[illegible] taries and Treasurers of the Company may b[illegible] deemed to be interested in the business referre[illegible] to in the resolution.

PRESIDENCY JUTE MILLS COMPAN[illegible] LIMITED

ANNUAL GENERAL MEETING OF MEMBERS

NOTICE IS HEREBY GIVEN THAT TH[illegible] Register of Members and the Share Tran[illegible] fer Books of the Company will be closed fro[illegible] the 2nd May to 16th May, 1961, both day[illegible] inclusive.

By Order of the Board,

McLEOD & CO. LTD.,

C. HOCKLEY,

Secretary,

Secretaries & Treasurers.

CALCUTTA, 18th A[illegible]

MONEY SUPPLY BETTER

(*From Our Own Correspondent*)

BOMBAY, 26*th April*

Following the return of funds from upcountry centres to banks, the conditions in the short-term money market are gradually becoming comfortable and the borrowers are in a position to obtain their requirements, albeit for only essential purposes. The turnover was, therefore, quite substantial. The comfortable supply position is slowly having its impact on the interest rates. Thus, the inter-bank call money rates among exchange and larger banks as well as among smaller banks, which were ruling firm at 5½ per cent for the past several weeks, have come down to 5 per cent. Other short-term interest rates are, however, unchanged at the levels quoted below:

Notice money:	
3 days or more	3
Term deposits :	
(i) 3 to 30 days (inclusive) ...	3
(ii) 31 to 60 days	3¼
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of 91-days' Government of India Treasury Bills sold through weekly tenders disclose that as against an invitation for Rs. 2 crores, the amount offered was Rs. 2.20 crores. Of these, tenders for Rs. 2 crores were accepted at the average rate of Rs. 2.750 per cent per annum.

The Reserve Bank of India's statement for the week ended 21st April 1961 shows, as compared with that for the previous week, a net decline of Rs. 30.89 crores in notes in circulation, bringing down their total to Rs. 2,007.65 crores. As the notes held in the Banking Department have risen by Rs. 11.50 crores, the aggregate notes issued have declined by Rs. 19.39 crores only. Foreign securities, which went down last week by as much as Rs. 5 crores, have remained unchanged at Rs. 118.01 crores, but the balances held abroad have fractionally gone up by Rs. 81.40 lakhs. Consequently, the total foreign assets are higher by that amount at Rs. 128.80 crores. The deposits of banks with the Reserve Bank have further gone up by Rs. 13.36 crores, on top of an expansion of Rs. 3.11 crores in the previous week. Their total now stands at Rs. 87.06 crores. The assets side shows that other loans and advances have shrunk by Rs. 16.34 crores to Rs. 126.27 crores, which include borrowings against usance bill of the order of Rs. 25.81 crores. Over the week, such borowings have fallen by as much as Rs. 7.49 crores.

A decline of Rs. 4.20 crores in demand deposits and an expansion of Rs. 7.02 crores in time deposits have been disclosed by the Scheduled banks' statement for the week ended 14th April 1961. But as the total deposits of the State Bank of India have declined by Rs. 6.69 crores, the deposits of the other scheduled banks have not actually suffered any setback. The borrowings from the Reserve Bank have fallen by Rs. 3.55 crores; of this, decline against usance bills is of the order of Rs. 34 lakhs only. Their borrowings from the State Bank of demand nature are also lower by Rs. 1.52 crore, but those of time variety are slightly higher by Rs. 50 lakhs. The assets side shows that advances and bills have declined by Rs. 5.82 crores, which according to some bankers is due to the tapering off of the busy season, especially in the agricultural sector. The total advances and bills discounted now stand at Rs. 1,309.53 crores, as against Rs. 1,128.17 crores a year ago. The advances and bills of the State Bank of India account for a fall of Rs. 2.38 crores in the week under review. The investments of the scheduled bank, as a whole, have registered an expansion of Rs. 9.12 crores, but, as the investments of the State Bank have increased by Rs. 11.38 crores, those of the other scheduled banks must have actually declined by Rs. 2.26 crores.

There was good inquiry for only short-dated issues in the gilt-edged section. Medium and long-dated loans were neglected. The prices generally remained unchanged. In the Central loans section, 2¾ per cent 1962 and 3½ per cent 1966 bonds moved up fractionally by 15 nP and 5 nP respectively. The prices of State loans remained steady, with the exception of 4 per cent 1970 Maharashtra loan which firmed up by 15 nP to Rs. 99.25.

In the foreign exchange section, the rupee was slightly easier vis-a-vis the U.S. dollar. Thus, the banks' selling and buying rates went up by 50 nP and 75 nP to Rs. 478.75 and Rs. 475.50 per 100 dollars, respectively. In the New York exchange market, the pound sterling weakened further. The latest available rates are: 279.580-279.610 cents per £ for spot and 278.290-278.320 per £ for three months' forward. Over the week, sterling has declined by 0.92 cent in spot and 0.50 cent in forward.

DEMAND FOR LINSEED SLACK

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 24*th April*

In the absence of buyers and generally dull conditions owing to cut in electricity power, the factories having to work shorter hours and during night time only, demand for linseed has slackened. Prices have been marked down. Mills are interested in small quantities only.

The oil market has remained steady, as stocks are getting less in the mills and sellers are not inclined to do much business either for ready or for forward deliveries.

The oilcake market has firmed up, local stocks are diminishing and buyers cannot get their full requirements.

The latest quotation for ready May delivery is Rs. 25 per maund.

BULLION FIRM

(*From Our Own Correspondent*)

BOMBAY, 26*th April*

The bullion market ruled easy in the earlier sessions of the week, but picked up strength on Saturday which persisted till the close today. The initial easiness was due to reports of poor offtake in upcountry centres and selling by some Calcutta and Delhi operators. Consequently, both gold and silver tended to decline. The recovery from Saturday onwards was the result of improvement in demand and hopes of a further improvement in offtake in the coming weeks. The commencement of business in the second *Jeth* delivery in silver yesterday and in gold today also imparted strength to the market. This was interpreted to mean that there would be no prospect of starting in the foreseeable future the six-monthly bearish contract. Not only were the earlier losses completely recovered but today's closing rates were much higher than those prevailing on Wednesday last week. The undertone of the market was distintly firm.

The daily average offtake of gold and silver during the week was 7,200 tolas and 19 bars, respectively, as against 7,500 tolas and 25 bars in the previous week. Average daily arrivals were 6,000 tolas of gold (4,500 tolas last week) and 16 bars of silver (23 bars). The floating stocks of the two metals are estimated at 45,000 tolas and 600 bars.

Adjustment rates fixed today were Rs. 122.80 per 10 grams of gold and Rs. 203.00 per kilogram of silver. The corresponding rates for last week were Rs. 120.20 and Rs. 202.05, respectively.

Reflecting the excellent support for ready gold, the premia commanded by it over the first *Jeth* settlement increased from Re. 1.30 to as much as Rs. 4.10 and that in silver continued to be high, being Rs. 3.75, though it is slightly lower than Rs. 4.00 prevailing a week ago. Over the week, ready gold spurted by Rs. 2.60 to Rs. 123.05 and silver by 95 nP to Rs. 203.00.

The first *Jeth* settlement in gold began the week at Rs. 118.70, as against the previous close of Rs. 119.15, and, after easing to Rs. 118.10 on the 21st inst., moved up to touch a high of Rs. 120.00 today, before finishing at Rs. 119.95. The net rise over the week was 75 nP. The second *Jeth* settlement opened at Rs. 118.90 today and finished at Rs. 119.15. Since the rate for transferring commitments from the first to second settlement was 75 nP against bears, the bulls in the first settlement were required to pay a margin of Rs. 8 per 10 grams.

The silver first *Jeth* settlement fluctuated between Rs. 197.25 and Rs. 199.70 before winding up the week at Rs. 199.25, as against Rs. 198.05 on Wednesday last week. Trading in the second settlement commenced at Rs. 197.20 yesterday. The closing rate today was Rs. 197.60, the highest and lowest levels touched being Rs. 198.00 and Rs. 197.15, respectively. Margin at the rate of Rs. 300 per bar on was operative on bulls in the first settlement, since the backwardation rate, that is, the *budli* payable by bears to bulls for the transfer of commitments, was more than a rupee—Re. 1.60 yesterday and Re. 1.65 today.

The world price of gold in the London market improved during the week from $35.07½ to $35.09¼ per fine ounce. Ready gold advanced from 250*s*. 7½*d*. to 251*s*. 0½*d*. Ready and forward silver declined by ⅛*d*. each to 79⅝*d*. and 79⅜*d*., respectively. Ready silver in New York, however, continued unchanged at 91.375 cents.

The following table shows the trend of the market during the week under review:

	26-4-1961 (closing)	High	Low	19-4-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	123.05	123.10	118.95	120.45
Forward:				
Jeth*	119.95	120.00	118.10	119.15
Sovereign	94.25	94.25	93.75	93.75
SILVER				
Ready (.996 fine)	203.00	203.45	200.50	202.05
Forward:

New York—				
Silver	91.375 cents	—	—	91.375 cents

* 31st May settlement. † 1st June settlement.

N.B.—The quotation for gold is per 10 grams (about 0.86 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

BRISK CLEARANCE IN KIPS

(*From Our Own Correspondent*)

MADRAS, 24*th April*

Arrivals of E. I. tanned hides and calves were moderate and clearance by shippers was brisk, because stock holders were willing to shade their prices to some extent. Export trading was small, as importers were not following Madras levels which were uneconomical to dressers. Tanned cow hides lower grades were in good demand for inland trade.

Tanned skins were steady to firm. Export trading was small. There was good demand for middle class sheep for export.

The next German auction will take place on the 26th inst. when 45,000 pieces goat skins and 47,000 sheep skins will be offered for sale. The London public sales will be held on 1st May when 100,000 goat and 80,000 sheep skins will be available.

JARILLA APRIL CONTRACT EXPIRES

(*From Our Own Correspondent*)

BOMBAY, 26*th April*

The uneventful career of the Jarilla April contract came to an end on Tuesday the 25th inst. The contract went off the board at the official rate of Rs. 678. There was no business in the contract since the 23rd inst. when it closed at Rs. 556 (per three quintals). The higher final rate fixed by the E.I.C.A. is explained by the wide disparity between the spot and futures prices. Total tenders against the contract amounted to 1,050 bales consisting of 650 bales of 216F, 300 bales of Laxmi A, 50 bales of Laxmi B and 50 bales of Cambodia (C). There were no tenders on the last tendering day, namely, the 25th inst.

It will be recalled that official trading in the contract commenced on 18th October 1960 when the cotton supply position was extremely tight and trading in cotton was subject to number of restrictions. The trend of prices of the contract since then reflected, to some extent, the change in supply position of cotton. From the opening level of Rs. 567.25 on 18th October 1960, the contract advanced to Rs. 614 on 21st December 1960 before starting its downward march which brought it down to Rs. 554 on 14th February 1961. The prospect of a good crop and abundant supply of U.S. cotton prevented the contract from showing any sustained firmness since then.

The Jarilla August contract failed to derive any strength from the higher rate fixed for the April contract or the complete absence of tenders on the last notice day. With mills obliged to buy short-staple U.S. cotton, refusal being at the risk of forfeiture of Indian cotton quota, and the quota allotment for 4.5 million bales of Indian cotton (which is about the same as the new crop arrival to the market) already made, there is no prospect of any shortage of cotton to meet present needs or those of the immediate future. Supply, on the other hand, is, if anything, comfortable. Selling prompted by these considerations led to a setback in futures prices today. The August contract, which had, early in the week, attracted support prompted by good spot advices and strong rumours of an export quota for Kalagin and Wagad cottons, gave way to selling, receding to Rs. 568.25 today. The following table indicates the trend of prices of the contract during the week:

(In rupees per three quintals)

	26-4-61	*High*	*Low*	19-4-61
I.C.C. Jarilla				
April 1961	678*	678	566	560
August 1961	566.75	575.75	564.50	566.75

*on 25-4-61

In the spot section, following the release of quota for Indian cotton to those whose mills had agreed to import U.S. cotton there was good demand for popular varieties such as Vijay, Digvijay Kalyan and Laxmi. In fact, some Ahmedabad, Bombay and Southern mills bought as much as 15,000-20,000 bales of Vijay and Digvijay in one day. Towards the close of the week, interest flagged and mill buying tended to shrink. Export interest was noted in Kalagin and Wagad. Shippers bought sizable quantities in anticipation of quota. Stray demand is reported in zoda and yellow pickings for export purposes.

Demand for foreign cotton is mainly confined to U.S. cotton. Sizable purchases are reported daily. Out of the 300,000 bales of U.S. cotton contracted for, as per the recent P.L. 480 agreement purchases to date amount to about 50,000 bales. The exchange of U.S. cotton for Indian cotton subject to certain conditions, permitted by the Textile Commissioner, has enabled the mills to go in for U.S. cotton freely for, if they find themselves in possession of U.S. cotton in excess of their requirements they can sell it to the trade in exchange for Indian cotton, provided this does not involve any further demand for Indian cotton from the selling mills. The trade, in its turn, can sell it to any mill, provided the buying mill reduces its Indian cotton quota proportionately or parts with an equal quantity thereof to the trade in exchange for U.S. cotton.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri: Vijay 910; Kalyan 805; Digvijay 950; Hubli Laxmi 1,000. American G.M. 1" 1,200.

The cotton futures in Karachi market ruled easy during the week. Lack of overseas demand and slow domestic mill offtake was responsible for the easiness. The N.T.R.G. May contract declined from Rs. 71.35 last week-end to Rs. 70.80. The July contract too receded from Rs. 71.15 to Rs. 70.80. Spot prices too were easy.

Cheerful conditions prevailed in the Alexandria cotton futures market during the week. A revival of foreign inquiries, coupled with some local trade buying on mill account, touched off a general buying movement which pushed values higher. Both the long-staple Karnak and medium-staple Ashmouni contracts made handsome gains. The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: May 70.15; July 70.55.

Ashmouni: April 63.90; June 62.95; August 62.45.

The declining trend noted in the Liverpool cotton futures market last week gathered momentum during the week. Selling became more general while buyers were reserved. Advices from New York had nothing to inspire confidence. Local demand too was slack. Easy communication from the yarn and piecegoods market imparted further weakness to the market. Both the American and American type contracts were marked down. Sudan cotton contracts at Liverpool, however, ruled

quietly steady. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: May 23.85; July 24.30, October 24.00; December 24.25.

American cotton mixed growth contract: May 24.25; July 24.65; October 24.25; December 24.65.

Sudan: May, July, September 31.75.

Cotton futures in New York suffered a further setback during the week. Buying interest was at a low ebb, reflecting the quiet conditions in the yarn and piecegoods market. The steady increase in certified stocks also acted as a damper. Futures values consequently receded.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	25-4-61	18-4-61	11-4.61
Spot	33.80	33.65	33.50
May	32.60	32.75	33.16
July	33.25	33.30	33.65

BLACK PEPPER RISES SLOWLY

(Messrs. Parekh and Co.)

BOMBAY, *26th April*

Malabar black pepper during the entire period of three weeks ended 26th April adopted stonewalling tactics with improvement in prices rather slow, pending the clearer picture of Sarawak new crop. Ready Malabar ungarbled moved up from Rs. 363 to Rs. 387 and garbled from Rs. 374 to Rs. 399. Turnover on the Cochin Exchange was small with prices fluctuating both ways the highest and the lowest for May delivery being Rs. 411 and Rs. 388, respectively. July delivery forged ahead to Rs. 423 to come down to Rs. 416 under bear selling. At the time of writing, May delivery is hovering around Rs. 405. Comparatively higher prices ruling for ungarbled at Cochin over Calicut are attributed to shortage of supply in Alleppey area. Calicut is quoting at Rs. 375 for ungarbled.

Two outstanding events of the week are: (1) Deterioration in the political situation in Cuba and Algeria. (2) The Forward Markets Commission has reduced by Rs. 20 per quintal the margin deposits payable by traders to the India Pepper and Spice Trade Association at Cochin. The new rate of margin deposit will be Rs. 30, as against Rs. 50 per quintal. Cochin appears to be anxious for the development of bigger turnover in delivery contracts which has recently shrunk to a very low figure. The only way for expanding the business on the Cochin ring is to allow the establishment of the second ring at Bombay for the hedge and the switch business between the two important markets in the ultimate interest of the export trade.

Prices in Singapore are firmly held. Stocks in Singapore are reported to be in the hands of strong parties which are unwilling to part with them unless at their price. Reduction in the estimate of Sarawak new crop proved to be a supporting factor. The Sarawak Government is estimating the new production at 8,000 tons, while the private agency puts it at a low figure of 6,500 tons. The overall improvement in white pepper at London from 40d. to 44½d. is due to fresh buying and short-covering by bears who sold short under the expectation of higher production of Sarawak pepper during the season 1961. White and black pepper at Singapore are quoted at Str.$190 and Str.$152½, respectively.

Spot at New York is also firmly held at $0.47½. Bids from Singapore are conspicuous by their absence, while India is often offering a small quantity at about $0.44 to $0.45 to test the market.

The statistical picture of pepper during 1961 appears to be healthy. As such, a sizable improvement in prices is envisaged in the near future as soon as New York dealers come in the market to cover their autumn requirements which they should do in a month or two. It may happen earlier once the New York dealers are convinced that the exporters at the origins are strong enough to hold and that their policy of putting one against the other proved fruitless.

Demand for ready pepper in Bombay remained small and selective. Yet sellers were not exhibiting any anxiety, as there was no replacing parity with the terminal markets on the coast. Ready is quoted at Rs. 205 to Rs. 225 per 50 kilos.

• • • • •

The all-India final estimate of black pepper for 1960-61 puts the area and production at 234,700 acres and 26,200 tons, as against the partially revised estimates of 233,800 acres and 26,300 tons, respectively, for 1959-60. The increase in acreage is due to the larger area sown to the crop in Kerala State because of favourable weather conditions at the time of sowing. The nominal decrease in production of black pepper in the current year is accounted for by Kerala State the factor responsible for it being unfavourable weather conditions at the time of flowering and growing periods of the crop.

ALLOCATION OF ART SILK YARN

(From Our Own Correspondent)

BOMBAY, *26th April*

The Textile Commissioner has announced the basis for the allocation of indigenous art silk yarn to art silk powerloom weaving units during the current (April-June) quarter. The basis is the number of loom-shifts worked on art silk yarn by such units in the October-December 1960 quarter, the rate of allocation being 0.65 kg. per loom per shift in the case of units which are submitting monthly returns in the prescribed form regularly to the Office of the Textile Commissioner; in the case of units not submitting such returns the rate of allocation will be 0.4 kg. per loom per shift, provided such units submit the returns in the prescribed form immediately and in any case not later than the 30th inst. In order to ensure supplies of art silk yarn against the allocation cards issued by the Office of the Textile Commissioner in the current quarter, it has been decided to indicate in the allocation cards the names of spinners who will supply the yarn. It will be ensured, as far as possible, that the art silk weaving units which are regular customers of particular indigenous yarn manufacturers will continue to receive the yarn from such manufacturers.

The above notification has failed to influence the trends in the yarn market. For traders are more anxious to know the outcome of the discussions held by the Textile Commissioner recently with the representatives of both spinning and weaving units on the question of sharing the burden of additional excise duty on yarn. They have, of course, noted the Press report that, in accordance with the suggestion made by the Textile Commissioner, the Central Government has decided that the additional burden should be borne by spinners to the extent of 60 per cent, the balance being shared by the weavers. But official confirmation of the report is still lacking.

Meanwhile, there are rumours that the Government is considering a proposal to earmark out of every 100 lbs. of yarn produced by indigenous manufacturers 30 lbs. exclusively for the export promotion of rayon fabrics. Details of the proposal are, however, not available.

In view of the aforesaid reports and rumours, advices from consuming centres are not encouraging. The handlooms and powerlooms are said to be not inclined to buy on a large scale. It is not, therefore, strange that the yarn market is moving rather indecisively. Thus, indigenous art silk yarns and 120 Japan have tended to move up, while 150 Japan and spot 60 x 1 Cupressa Bemberg yarn have suffered a setback to prices. Bemberg yarn and other imported yarns are quiet with practically no change in quotations. Among staple fibre yarns, 40×2 spots and April contract have recorded a rise, but June settlement has receded. Cotton yarns, too, are irregular. Coarse counts have suffered some losses, whereas medium counts are better and fine counts are unaltered at last week's levels.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	26-4-1961	19-4-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)		
April	2,560.00	2,560.00
June	2,600.00	2,600.00
Spot	2,545.00	2,672.00
120 Japan (per 100 kg.)	1,570.00	1,556.00
150 Japan (per 100 kg.)	1,737.00	1,750.00
120 Italy (per 100 kg.)	1,501.00	1,501.00
150 Italy	1,737.00	1,737.00
Staple fibre yarn—40 × 2		
April (per 90.72 kg.)	932.00	920.00
June	892.00	905.00
Century (per kg.)	10.55	10.45
Kohinoor (per kg.)	10.45	10.45
Cotton yarn (per bundle of 10 lbs.)—		
10s Modern	18.75	19.00
20s New Great	21.50	21.37
30s Simplex	27.00	26.75
40s Madura	32.37	31.50
60s Finlay	65.40	65.40
80s Mahendras	68.68	68.68

OILSEEDS IRREGULAR

(From Our Own Correspondent)

BOMBAY, 26*th April*

A divergent trend was in evidence in the oilseeds market during the week under review. Thus, groundnut and castorseeds ruled easy, while linseed and cottonseed firmed up. The easiness of the former was due mainly to pressure of arrivals and absence of overseas demand for oils. Although some countries were reported to be interested in castor oil, firm orders were lacking. Groundnuts lacked support as buyers were anticipating a further fall in prices, following larger arrivals from the South where the current season's crop is estimated higher at 95,000 tons as against 80,000 tons in the previous year. Linseed, however, met with good support and edged forward. Cottonseed too, attracted some speculative buying on hopes of official permission for entering into barter agreements for import of essential items against export of cake.

Trading in groundnut futures was at a standstill. Ready lots tended to recede for lack of support. Nizam bold eased by 25 nP to Rs. 53.50. Groundnut oil ex-mill ready was done at Rs. 21.95, as against Rs. 22.30, last week-end.

Castorseed May 1961 came in for selling and fell from Rs. 176.00 to Rs. 173.50. The September position dropped Re. 1.13 to Rs. 178.82. Ready Madras was quoted 25 nP lower at Rs. 34.25. Ready Kanpur shed 13 nP to Rs. 32.87.

Linseed May 1961 contract gathered 6 nP to Rs. 36.62.

The September 1961 contract improved from Rs. 36.91 to Rs. 37.06. Bold ready was done at Rs. 36.37 as against Rs. 36.25 and oil at Rs. 15.60, as against Rs. 15.50.

Cottonseed May 1961 contract advanced from Rs. 93.75 to Rs. 94.50 today. The September delivery rose from Rs. 94.25 to Rs. 95.25. Nigerseeds and kardiseeds lacked buyers and eased.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	26-4-1961	19-4-1961	12-4-1961
	Rs.	Rs.	Rs.
Groundnut			
May,1961	—	220.00	220.00
August 1961	—	—	—
Nizam bold	53.00	53.75	53.00
Coromandel ready	53.50	54.00	53.25
Khandesh quality	54.00	54.00	53.25
Oil ex-mill ready*	21.95	22.30	22.50
Railway receipts*	21.70	22.10	22.00
Castorseed			
May 1961	173.50	176.00	175.87
September 1961	178.62	180.00	180.62
Ready Madras	34.25	34.50	34.75
Ready Kanpur	32.87	33.00	33.37
Oil B.S.S.†	15.25	16.30	16.50
Oil commercial†	16.10	15.45	15.70
Linseed			
May, 1961	36.62	36.56	36.91
September 1961	37.06	36.91	37.37
Bold ready	36.37	36.25	37.37
Oil ready†	15.60	15.50	16.25
Cottonseed			
May 1961	94.50	93.75	93.50
September 1961	95.25	94.25	94.50
Niger seed	41.00	41.50	41.50
Kardi seed	26.50	27.25	27.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEAS DECLINE

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 18*th April*

Approximately seven and a half lakhs kilogrammes were offered in Sale No. 16 held on Tuesday, 18th April. Quality in general showed a further seasonal decline. There was good demand but prices were irregularly lower for all descriptions. Plain and low medium descriptions were well supported at a drop of 5 to 15 nP below last. Mediums and good mediums were easier by 20 to 30 nP. Highgrowns were in good demand but these also declined by 20 to 30 nP following quality. A few invoices however, sold at around last rates. There was strong enquiry for black leaf descriptions which sold well. C.T.C. and legg cut types followed the easier trend of the market. Whole leaf grades were easier, particularly orange pekoes.

	1961	1960
	Rs.	Rs.
Low medium	4.40-4.55	3.95-4.05
Medium	4.55-4.70	4.20-4.50
Good medium	4.75-5.05	4.85-5.50
Nilgiri B.O.P.	Rs. 5.00-6.60	

The average price realised in sale No. 16 was Rs. 4.77 per kilo as against Rs. 4.83 a week ago and Rs. 5.20 in the corresponding sale last year.

Sale No. 16: A quantity of 224,000 kilogrammes were on offer in dust sale No. 16 held on Thursday, 20th April 1961. A slight decline in quantity was noticeable amongst dusts offered this week. There was good demand in particular for coloury mediums which were firm to dearer. Mediums with clean leaf appearance were well sought after and are quoted steady. Highgrowns were well supported but these were also slightly easier following quality. Residuals and fibrous kinds continued to be the weakest feature of the sale and were much easier. C.T.Cs and legg cut types and C.P.C. types sold well but these also shared in the downward trend of the market.

The average price realised in dust sale No. 16 was Rs. 4.54 per kilo as against Rs. 4.57 a week ago and Rs. 4.81 in the corresponding sale last year.

Export quota: The market has been active and a fair amount of business has taken place at ¼ nP per kilo in special licence.

Colombo: Six million pounds were offered during this week. There was strong general demand. Good liquoring teas were dearer whilst others were irregular and lower. Mediums were dearer by 5 to 10 cents. Low growns were barely steady. Dusts met with strong demand.

London:—*North Indian and other growths*: The market was firm to dearer for all descriptions except C.T.C. with poor appearance.

Ceylon and South Indians: In Tuesday's sale 23,092 packages were offered of which 7,218 packages were from South India. There was good demand. Poorer descriptions were dearer by 2d. and the remainder were very strong.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale* 17: 3,95,000 kilograms. Good but irregular demand. Plain and low medium 5 to 15 nP easier. Medium and good medium 10 to 20 nP lower. Nilgiris irregular and easier."

TEAS FIRM UP

(From Our Own Correspondent)

CALCUTTA, *25th April*

Steady conditions were in evidence during last week's sales for domestic consumption. Prices advanced. This tendency had been due to the acute need of internal stockists to replenish themselves. Internal consumption has been running at a higher level than a year before, and it is estimated that with the growth of the tea drinking habit and an increase in the standard of living of the people, domestic consumption has increased by a few million lbs. in the last 12 months. The shortfall in output as well as the good demand for export were factors which led to good marketing in the season just on the verge of closing.

Although tea stocks in the United Kingdom are higher for this time of the year, at last week's sales in Mincing Lane both Ceylon and North Indian teas were dearer. This was due to the belief that the new marketing season would start well and prices would be dearer. It is expected that the first teas of this year would begin to arrive earlier than usual. For, the weather in the gardens has been good and a drought like last year is not anticipated. At this rate, production in North-east Indian gardens is expected to be greater than last year. Such increased output was not expected to come in the way of marketing since world consumption had increased and would absorb not only any increase in India's output but also in the output of other producing areas.

Following a sudden reduction in liner space, prompt shipping of tea for participation in London auctions has been affected.

Dusts on offer in the internal sales held last week here amounted to 23,512 chests. The clear medium and good C.T.C. teas were a strong feature and on keen competition prices advanced. However, the fibrous teas of this category were difficult to sell. The bright lines in the legg-cut Dooars opened easy, but sold well as the sale progressed. However, all other teas of this category eased in an irregular trend. Among orthodox teas, which generally eased, the few small and bright lines were steady. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.60 to Rs. 7.10, medium Assam dust Rs. 5.80 to Rs. 6.30, legg-cut dust Rs. 4.50 to Rs. 5.20, medium Assam dust Rs. 4.40 to Rs. 4.75, and plain orthodox dust Rs. 4.30 to Rs. 4.40.

Leaf on offer amounting to 789 chests met with good demand and at irregular rates.

JUTES CLOSE LOWER

(From Our Own Correspondent)

CALCUTTA, *25th April*

Thanks to the continued dry weather raw jute prices were maintained at higher levels earlier in the week under review. Since, however, mills withdrew from the market despite an outstanding quota, prices declined gradually and closed lower on balance. It was believed that there was little of the old crop left now. This was evident from the rumour that the mills would like to reduce working hours from the beginning of May until new crop movements started. Earlier in the week, in line with fibre, jute goods tended to harden but, as the buying support was lacking, prices moved down. The possibility of a reduction in output during May did impart a regaining influence during mid-week. Nevertheless, the recovery was not sustained in the absence of buying support. And so closing levels for the week were lower on balance.

At this time of the year, heavy rains can hardly be anticipated. However, the absence of thundershowers in the past two weeks enabled those interested to spread quick rumours that the new crop prospects had been affected. These rumours received a momentum when upcountry prices rose markedly. There was, of course, the genuine fear that the hot spell might damage the young plants in the highland areas and that resowing in such areas might be necessary. While anxiety in regard to the fibre situation looms large, the reluctance of overseas buyers to support the goods market has put the mills in a difficult situation. It is argued on behalf of mills that prices of goods have not risen proportionately with the rise in fibre prices and that, even at the present level of prices for goods, the mills are finding it difficult to produce economically. The mills are evidently in a helpless position, but look forward to the continued custom of foreign buyers in the forthcoming season, since, if the crop turns out to be a bigger one, prices of fibre and goods can be reduced. Much depends on the chancy rain-god and an earlier monsoon will be much welcome. For all practical purposes, the coming month will turn out to be a crucial one.

The news of lower consumption of burlap in the U.S.A. during March—70 million yards, as against 73 million yards in February—was not discouragingly noted against the background of somewhat unsettled market conditions. Stocks at the end of March were 237 million yards, representing a fall of 9 million yards as compared with end-February. It should, therefore, be inferred that the U.S. is exhausting its stocks and is reluctant to purchase against replenishment in the present boosted-up conditions. It is also noted that production in mills here in March was higher at 87,500 tons, as against 77,400 tons in February. The increase is explained by the greater number of working hours in March, that is, 187, as against 161.5 in February. Note was taken of the report that in 1960, jute goods earned Rs. 133.66 crores in foreign exchange, an increase of Rs. 24.37 crores over 1959. How much of the increase had been due to the increased prices can easily be imagined. It is common knowledge that the increased prices have displeased many an overseas buyer and have given a push to substitutes and bulk handling methods.

In Pakistan, fibre prices have hardened. New crop forward has gained about Rs. 2 a maund; only two or three weeks ago, sellers were pressing buyers for business. Earlier in the week, in sharp contrast to the weather in this part of the subcontinent, thundershowers were reported in some districts in Dacca and prices in the Narayanganj market moved down sharply. However, this was only a temporary phase, as prices soon recovered, following keen activity by buyers. Although the U.K. had not been very active, bulk purchases by China and Rumania have certainly raised sellers' ideas leading to display of reserve and to the hardening tendency. It was thought that U.K. buyers would have to enter into forward deals now, since the apprehension was that prices were likely to move up. Meanwhile, Pakistani cuttings are ruled out of the Calcutta market at the current high prices. Instead of cuttings, mills are purchasing mesta and bimli which can be further

torily used. Hemp has been experimented by mills and, though it is not a real substitute for cuttings since it has to be batched before use, its price is competitive *vis-a-vis* cuttings. This factor is likely to lead to increased growth of hemp; however, the present supply position is limited. In the Narayanganj market, expor firsts were quoted over the week-end at Rs. 380 per bale, as against Rs. 370 earlier, and lightnings at Rs. 370, as against Rs. 360, while cuttings were unchanged at Rs. 240 a bale. Pakistan's export of raw jute up to 15th April in the current season were only 28.32 lakh bales, recording a decline of 12.82 lakh bales as compared with the corresponding period last season. Such a sharp fall is not explained, but it is apprehended that this has been due to greater use of substitutes.

In the goods market, ready B. twills opened lower on Tuesday at Rs. 178, as against the overnight closing of Rs. 181, and ready hessian 40" 10 oz. at Rs. 60.25, as against Rs. 61.50. The decline was due to lack of response to offers made to buyers. Despite selling pressure from mills, business taking place continued to be at a low ebb on Wednesday and, as a result, B. twills declined to Rs. 175 and hessian 40" 10 oz. to Rs. 59. The speed of the declining tendency was slowed down on the next day, following some short-covering in the bazar. B. twills being quoted at Rs. 174.50 and hessian 40" 10 oz. at Rs. 59.00. On Friday, prices gained on rumours that the mills were inclined to reduce their working hours in order to meet the fibre shortage situation. B. twills recovered to Rs. 176 and hessian 40" 10 oz. to Rs. 59.25. The power shortage has no doubt affected mills' working, but the situation has hitherto been met by staggering of working. Since the higher prices were not supported, B. twills fell to Rs. 174.50 over the week-end and hessian 40" 10 oz. to Rs. 59.00. While the latter construction declined to Rs. 58.75 yesterday, B. twills maintained Rs. 174.50. There was covering business done in heavy goods and interest on Government account was reported.

The fibre market was quiet, after opening steady. The mills which had yet to buy against quota already issued kept away from the market. The opening and closing rates for ready delivery old crop are given below:

(In Rs. per maund, old crop delivery against April-May)

	Opening	Closing	Decline
Assam bottoms ...	60.50	57.50	3.00
Northern bottoms ...	60.00	56.50	3.50
Daisee bottoms ...	63.00	59.50	3.50

TIN RALLIES

(From Our Own Correspondent)

CALCUTTA, *25th April*

The Finance Minister's announcement of a reduction in the excise duty by 25 per cent on copper and brass sheets, circles, etc., issued from rolling mills without trimming and cutting, is evidently directed as a concession to utensil manufacturers. A corresponding concession of 20 per cent in the case of duty on bronze sheets and circles was also announced. In order to free the poorer people who wear brass and copper ornaments, the Finance Minister has exempted strips and alloys recovered from copper scrap alloy for making anklets, trinklets, etc. The duty on strips of copper and copper alloys used for making zari, stars and spangles is also exempted. The small-scale utensil manufacturers in Northern India had desired complete exemption. In the same way as the exemption granted to manufacturers of zari, stars and spangles, utensil manufacturers who are mostly poor should also have been exempted from the duty.

Industry circles are, however, unable to understand as to how copper and brass alloys can be picked up by the Finance Minister for levy of the excise. The 1949 Fiscal Commission, presided over by Sir V. T. Krishnamachari, the recommendations of which were accepted *in toto* by the Government, has stipulated that, during the period of protection, industries should not be burdened with excise duties. It is thought that a word of explanation is necessary from the Government in order to bridge the apparent conflict.

The feature of trading in the metal market during the week under review was the striking gain in the price of tin, following good demand against the continued background of a weak stock position. It opened at Rs. 1,282.50 per 100 kgs. and steadily rose to Rs. 1,324.75. The rise followed keener advices from Singapore and a further deterioration in the stock position, thanks to increased demand. On the London Metal Exchange, tin opened at £834½ a ton and hardened to close at £846. The local supply position in zinc was also far from satisfactory and the price, after being higher at Rs. 329.75 per 100 kgs., closed at Rs. 326.75. The London price at £83⅜ per ton revealed a fractional gain. Virgin lead was unchanged here at Rs. 130 per 100 kgs. Copper scrap was in good demand.

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *24th April*

Quiet to steady conditions were witnessed in foodgrain prices during the week under review thanks to good consumers demand. Arrivals of *rabi* grains is gathering momentum and would soon be felt in the market. Further fall in prices is anticipated by trade. Wheat average quality is now quoted here at Rs. 14.50 to Rs. 15.25 per maund and farm better produce at Rs. 15.50 to Rs. 16 a maund. Arrivals are now at an average of 750 to 1,000 mds. which are being lifted mostly by consumers. Winnowing and threshing operations are in full swing as weather is favourable for such operations. Rice prices are, however, stationary as superior quality rice is reaching here from Saharanpur and Dehradun side although better demand from consumers is reported. Week-end prevailing prices were: rice *sela basmati* Rs. 28 to Rs. 30, superior Rs. 32 to Rs. 38, *ramajwayan sela* Rs. 23 to Rs. 23.50, *raimunia sela* Rs. 25, *mainpuri sela* Rs. 20.25 and *gainda* Rs. 20.25 a maund.

Despite good arrivals, at the rate of an average of 500 maunds daily, from Punjab and also locally, gram prices improved fractionally during the week-end, thanks to firm advices from Punjab prompted by good consumer demand. Gram Punjab is now quoted at Rs. 12.75 to Rs. 13 and local at Rs. 12.25 to Rs. 12.50 a maund. Barley prices are also steady in sympathy with gram at Rs. 10.50 and *bejhar* at Rs. 9.50 to Rs. 11, a maund, according to quality. Arrivals of these coarse grains amount to 200 mds. each daily. Maize is not in demand even at low price of Rs. 11.25 to Rs. 13, a maund, while *bajra* attracted buyers for seed purposes at Rs. 17 a maund. *Jowar* and *guwar* were much in request. Week-end prevailing prices are: *jowar* brown Rs. 12 to Rs. 12.75, white Rs. 14 to Rs. 14.50, *guwar* Rs. 13 to Rs. 14.50 a maund.

In pulses, peas attracted good demand. Off-take at the week-end is seven wagon loads to east U.P. and Madhya Pradesh. Further despatches are hampered as loading is restricted, being available only on allotment of wagons. Daily arrivals were heavy at an average of 2,000 maunds. Local stocks has swelled to 12 *khatties* of about 800 mds. each. New *arhar* also attracted demand from grinders for *dal* and, although old stocks of 7 *khatties* is lying flat, prices of new *arhar* ruled steady. Daily arrivals are about 300 mds. Other pulses are quietly steady. Prevailing prices (in rupees per maund) are: peas *dara* 10.12 to 10.25, farm white 10.50 to 11.50, peas *dal* 11.75, *arhar* 12.25 to 13, *arhar dal* 15.75, *urd* 19.25 to 21, *urd dal* 24, *moong* 19 to 23, *moong dal* 25, *massor* 12 to 14.50. *massor dal* 15 and gram *dal* 15.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, *24th April*

Sugar prices ruled steady at Rs. 108.67 per bag during the week. There was good demand prompted by export prospects. The Government is out to arrange exports at any cost. Supply position of sugar is, however, comfortable for the present as the U.P. Government has allowed free sale of unsold quotas and announced that, in future, 50 per cent of quota would be sold in the open market. Demand was slack.

Sugar prices declined during the week in the Muzaffarnagar market. Supply position was comfortable and demand was lacking. Dry sugar was quoted even below the controlled price at Rs. 107.25 a bag. Control price is Rs. 107.69 per bag. Damaged sugar of 1959-60 season was quoted much lower at Rs. 99.50 to Rs. 100 per bag. Dry stocks with some factories of 1959-60 season production were not being lifted even at Rs. 36 a maund, as against controlled price of Rs. 37.85 a maund. 50 per cent quota of month of March released by State Government was not lifted.

Export outlook for sugar is not considered very satisfactory. Pakistan is reported to be buyer of only 75,000 tons. About 81,000 tons of sugar has, however, already been exported to West Asian countries through I.S.M.A. Despite Government efforts to export heavy quantity of 5 lakh tons to U.S.A. it was reported that in the recent allocation made on non-quota basis India did not figure in the allocation.

Khandsari attracted brisk demand from east U.P., Rajasthan, M.P. and Madhyabharat some inquiries were also received from Punjab and Gujerat. Prices advanced by 37 nP to Re. 1 per maund. *Khandsari* production was reported 25 per cent lower, as compared with last year. Latest prices were: inferior Rs. 27 to Rs. 30, superior Rs. 32 to Rs. 38, crystal Rs. 33 to Rs. 37.50.

Ready *gur* prices registered fractional gains to be quoted at the week-end at Rs. 15 to Rs. 15.25 a maund and dry *kotha* was quoted at Rs. 15.25 a maund. Daily arrivals dropped to about 100 mds. which were lifted by consumers and as loading is restricted, available only by allotment, *gur* stock is unchanged at 70,000 mds. Stocks of *futwa pansera* quality were reported about 6 lakh mds. in the markets here. Sowing of cane for next crop is now almost complete.

Gur prices ruled steady to firm in the Muzaffarnagar market during the week on good demand, coupled with fall in daily arrivals. Demand for *Chaku* was from Gujerat, Punjab, M.P. and Calcutta. Prices improved Re. 1.25 to Re. 1.50 a maund. *Shakker* attracted good demand from Rajasthan and North Gujerat and prices spurted to touch new heights.

Future *gur* prices ruled both ways during the week in bouts of selling and buying and *gur Baisakh* and *Ashad* is today quoted at Rs. 14.08 and Rs. 15.03 respectively, as against week's opening at Rs. 14.06 and Rs. 15.10. *Gur Fagun* is now quoted at Rs. 13.83 as against Rs. 13.80 quoted last Monday.

A factory to produce small diesel-powered tillers is expected to be set up in South India by a private party. The proposed factory is expected to start production on the basis of a three-year progressive manufacturing programme. The production capacity will be about 12,000 small diesel-powered tillage units.

The use of metric weights and measures will become compulsory throughout the country with effect from the beginning of next financial year 1962-63.

Note :—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. J—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of December 1960 amount to 11.33 crores of rupees.

ABBREVIATIONS. N—Nominal. (ƒ) Income-tax free. * Loans held entirely by the Trustees. † Bombay State Transport. A—Held by Government of India. B—Taken up by State Bank of India. C—Held by Commissioners. D—Domestic Loan not marketable. †† Rate of Interest reduced from 6 to 3 per cent. with effect from 1st June 1944. ‡ Rate of Interest reduced from 6½ to 4 per cent. with effect from 1st April, 1935. —Interest free for first 13 years. ‡—Interest free for first 7 years. Z—Ex eight instalments but inclusive of accrued interest. M—At the option of the Government after three months' notice. K—On September 1966 or later at the option of Government after three months' notice.

MARKET GOSSIP

(*Concluded from page* 783)

being the amount required for meeting the repayment and interest obligations on past loans. How far and to what extent the foreign aid needs will, in fact, be met is anybody's guess. Mr. Black is reported to have told the Washington meeting that India's immediate requirement of $638 million (Rs. 303.69 crores) is only the beginning, as more additional foreign loans, grants and investments will be needed in each year of the third Plan. Evidently, this amount of $638 million is the first instalment of aid that India has sought from the consortium. The spokesmen for India are believed to have pleaded that the major portion of the sum will have to be freely available for making payments anywhere, so that India will be able to cover the estimated deficit in balance of payments in the current year. The urgency of such assistance will be clear from the fact that foreign assets now aggregate less than Rs. 129 crores which cannot be run down any more, while any difficulty in financing essential imports will have serious impact on the economy as a whole. It is, therefore, somewhat disconcerting to hear that the meeting of consortium of nations was adjourned without coming to any decision. It could have been some consolation to this country if its foreign exchange requirement for the current year at least had been conceded.

While the chances of India securing the requisite foreign assistance for the third Plan are still hopeful, it has to be stressed that its exports must find expanded outlets abroad. The problem is of equal importance to other underdeveloped countries as well. It is gratifying that many in the West have recognised such importance. Speaking at a Press conference in Paris the other day, Mr. Kristensen, Secretary-General of the O.E.E.C., for instance, declared that "we must all have economic growth; it will benefit not only our members but the underdeveloped countries, because we shall be better customers for them and buy more of their exports." It is with the objective of ensuring such growth that the Economic Policy Committee of the O.E.E.C. set up two special Working Groups at its meeting in Paris last week. One of them is asked to assemble comparative statistics of national rates of growth and assess the factors that have made some countries grow faster than others; it has been asked to present a preliminary report to the next meeting of the Committee, scheduled to be held at Paris on 25th and 26th July 1961. The other Group is entrusted with the task of studying the effects of monetary, fiscal and other policy instruments on the world payments position.

The constitution of the two Groups followed the discussions on the findings of the Committee of O.E.E.C. experts. The report of the Committee is expected to be published shortly. The two main conclusions arrived at in the report are: (1) Britain and the U.S. must adopt policies ensuring a higher long-term rate of growth. (2) The O.E.E.C. members should pursue liberal tariff policies in the G.A.T.T. and, if need be, reduce tariffs unilaterlly as a way of keeping industrial costs down by means of foreign competition, as France has just done. The experts have sounded a note of caution by pointing to the present risk of inflation in Western countries. They are reported to have said: "The pressure of wages on costs could have dangerous repercussions, because the possibilities of an increase in productivity are more limited now than in previous years. Price stability will no longer be helped, as in 1960, by reductions in the prices of imported raw materials and farm products."

Now that the urgency of action to solve the international balance of payments problem has been well recognised, it is left to the two O.E.E.C. Working Groups to put forward concrete proposals. Needless to say that the successful implementation of these proposals will depend to a considerable extent on the degree of co-ordination of policies among the member-countries of the O.E.E.C., which is to become the Organisation for Economic Co-operation and Development later this year.

Jute Mills Still in Distress

The Indian Jute Mills Association is contemplating to effect a further cut in production in member-mills. A delegation of the Association, led by Mr. B. L. Bajoria, was in New Delhi on Thursday this week, with a plea for official consent to the move. The reaction of the Commerce and Industry Ministry to the plea is, however, not known at the time of writing.

Apparently, the jute industry continues to be in distress, notwithstanding the 12 per cent sealing of looms and reduced working week of 42½ hours already in force. There is persistent shortage of raw jute supplies and prices are ruling pretty high. "Arrivals of raw jute," to quote a recent report, "have declined in upcountry centres and Cossipore, indicating that little fibre is now being held by cultivators and stockists." The inflow of raw jute from East Pakistan is also said to be considerably restricted, in view of the fact that the mills in that country are themselves faced with the problem of scarcity. To add to the disquieting raw material supply position, the working of mills in West Bengal has been dislocated as a result of power cut. The jute mills, therefore, fear that they will suffer heavy losses, if they are not allowed to close down for one week each in the months of May and June. A few units are said to have actually laid off some workers.

A section of jute trade, however, contends that the short supply of raw jute is not as acute as is made out by the I.J.M.A. Its contention is that the mills are deliberately making the present move, in order to depress raw jute prices. It claims that some jute mills themselves are opposed to any further cut in production. It will be interesting to note here that, while raw jute prices have been ruling steady, the prices of jute manufactures for forward delivery have been tending to fall. This is due to expectations of bigger jute crop in the 1961-62 crop year. Reports about forward deals in raw jute in Pakistan also point to a downward trend. This development has induced the foreign buyers of jute goods to defer their orders, confining their purchases only to meet their immediate requirements. It has also emboldened the jute trade in Calcutta to clamour for the re-opening of futures markets in jute and jute goods. The I.J.M.A., however, is believed to be opposed to this move on the ground that it is quite premature to take a decision. It is, of course, obvious that, if futures trading were permitted now, there would be a big depreciation in the value of inventories with mills.

All this discussion pertains to the next season. In the meantime, a further curtailment of production of jute goods seems to be inevitable, at least until the end of July or August, when the new crop usually arrives in the market in fairly large quantities. It is said that, at the current level of consumption, the mills will have just enough jute to carry on till the beginning of July. It will be better to conserve the available supply (estimated at no more than 2.33 million bales for the period April-August) rather than to face the problem of acute supplies and spiralling prices later in the coming months.

TEXTILES

(*Concluded from page* 794)

ments, or what is called "exchanges of yarn," which take place because of: (1) uncertainty regarding issue of import licences necessitating purchases from the market and subsequent disposal when imported goods arrive, due to financial inability to keep large stocks; (2) face value restrictions which do not allow the weaver to import the yarn of the required denier to the full extent of his licence; (3) change in the demand for the fabric in both domestic and foreign markets which renders redundant the yarn imported; and (4) allotment of indigenous yarn of such deniers and qualities as the spinners may choose. The weaving units, therefore, say that "as long as quotas are granted by the Government on the basis of loom-shifts actually worked, the yarn is being consumed by the weavers and not being misused."

The aforesaid story is by no means convincing and does not fully explain the actual situation in the rayon yarn trade. The authorities will do well to hold a thorough investigation, in order to find out the real causes for the high prices of yarn prevailing in the market, before they give effect to the reported solution. There is something rotten somewhere in the kingdom of art silk weaving industry. Its terrible misuse of incentives given for increasing exports of art silk fabrics and the consequent suspension of the scheme for a long time provides sufficient cause to suspect the *bona fides* of the claims made by it. By compelling the spinning units to bear the major portion of the latest increase in excise duty, the Government is unnecessarily losing income-tax revenue, because to that extent the assessable profit of these units will come down. Another disadvantage is that the margin of profit by middlemen, among whom there is a large amount of tax evasion, is allowed to remain at a high level, because of the short supply of rayon yarns. Was not the objective of raising the excise duty on these yarns to mop up a part of the unearned profits of distributors? How is this objective going to be achieved under the present arrangement? Surely, there is need for second thoughts on the compromise evolved by the Textile Commissioner.

LABOUR

(*Concluded from page* 810)

In 1960, on the average nearly 43,400 vacancies were notified every month to the employment exchanges by different categories of employers. The State Governments, with over 21,300 vacancies, were the largest group, followed by Central Government departments, with nearly 10,100 vacancies. Private employers, with some 7,100 vacancies, came next and quasi-Government and local bodies, with nearly 4,900 vacancies, were last in the order. While the Central and State Governments make full use of the employment exchanges, a number of quasi-Government and statutory bodies also canalise recruitment through them. The facilities of the exchanges are also availed of by development projects.

Under an Act of Parliament enforced last year, all employers in the public as well as private sectors, who employ 25 or more persons, have to notify the vacancies under them to the employment exchanges before filling them up. This is perhaps one of the reasons why the number of vacancies notified to the exchanges in 1960 was about 8,000 more per month than in the previous year. In 1960, 305,553 people were found jobs through the exchanges, as against 271,131 in the year before.

At the end of 1960, the number of persons on the live register of the employment exchanges throughout the country was slightly over 1.6 million. Surveys have, however, shown that a significant proportion of those registered are people who are already employed but seek better positions. Some employment seekers register with more than one exchange. That more and more women are seeking employment is seen from the number of women registering for employment. In 1960, over 14,800 women sought employment opportunities through the exchanges every month, nearly 1,000 more than in the previous year. On an average, 1,740 women were provided jobs every month through the exchanges last year. The monthly average for 1959 was 1,470 women placed.

At 72 of the 300 exchanges, job seekers are being provided vocational guidance and advice regarding employment. Special sections have been set up for this purpose at these exchanges. During the third Plan such sections will be opened in another 100 exchanges.

WEEK'S STOCK EXCHANGE TREND

TRAINING OF CO-OPERATIVE PERSONNEL

OUT of a distaste for middlemen, developed partly from textbooks in the pre-independence era and partly from profiteering during war years, and the promotion of co-operatives for marketing cottage industry products patronised by a large section of Congress leaders in the days of the struggle for independence, Co-operation has won the abiding affections of the party-in-power. The Movement has come to be regarded as a panacea for all ills, irrespective of its suitability. It is thus that Co-operation holds a big place in India's plans for economic advancement. Its importance is progressively rising with the passage of each Plan. Accordingly, in the third Plan, there will be more co-operatives in all spheres of activity than in the first and second Plans. It is, therefore, no exaggeration to say that training and education of administrative personnel for manning the Co-operatives were never more important than they are today. And it was in the fitness of things that a ten-member Study Team was constituted by the Central Government in November 1960 to examine the adequacy or otherwise of the existing arrangements for training and education of co-operators, as well as Government personnel and make appropriate recommendations for improving them.

Under the existing arrangements, the training of the departmental and institutional staff is looked after by the Central Committee on Co-operative Training, appointed jointly by the Reserve Bank and the Government of India in 1953. The training of the senior staff at Poona and of the intermediate staff at five centres is solely the responsibility of the Central Committee, the entire cost being met by the Reserve Bank of India. So far, 543 senior officers and 1,216 intermediate officers have been trained at these centres. The candidates at these centres are given various concessions, including free tuition, rent-free lodging, travelling allowances, stipends during the period of training, etc. Further, the Co-operative Extension Officers are also trained by the Central Committee at eight centres, the entire cost of the training being met by the Government of India. Nearly 3,000 officers have been trained by now and 400 more are receiving training at various centres. In addition, the Central Committee is conducting special courses, at the cost of the Reserve Bank, on land mortgage banking and co-operative marketing, and refresher courses for the lecturers. Under this programme, 1,254 officers have been trained in co-operative marketing and 381 in land mortgage banking.

In its report published a few days ago, the Study Team has re-stated the main objectives and principles underlying the training programmes and made several recommendations pertaining to the education of Government and institutional officials and non-officials. These recommendations, which are on the lines proposed by Sir Malcolm Darling, have only served to underline the new dimensions that co-operative training and education have acquired in the context mentioned at the outset. But some of its proposals are highly controversial and the authorities should carefully weigh the pros and cons before acting on them. One of these pertains to 'decentralisation' of the training centres for the senior and intermediate personnel, and another to the constitution of a National Board for Co-operative Training in the place of the present Central Committee. Both of them seek to bring about far-reaching changes in the existing set-up. It is said that, on these two specific questions, the views of the various individuals and institutions concerned were not elicited by the Team. If this is true, the Study Team cannot claim to have made a dispassionate study of all the relevant facts before making its suggestions. Luckily for the deciding authorities, there is a special note and a minute of dissent on this subject from two members of the Committee, so that they can come to fair conclusions after considering the arguments from both sides. The first one is from Prof. K. Subramanyam Naidu, a former Registrar of Co-operative Societies of the composite Madras State and also of Andhra, and a former Chief Officer of the Rural Credit Department of the Reserve Bank and later of the State Bank, and now a Professor of Co-operation. The other note is from Dr. J. C. Ryan, a former Registrar of Co-operative Societies of the composite Madras State, and now the Chief Officer of the Rural Credit Department of the Reserve Bank. With their life-long careers in Co-operative Departments, they have brought out, forcefully and logically, the inadvisability of, and the risks involved in, the changes contemplated by the aforesaid recommendations.

It is generally recognised that non-official bodies at the State level, namely, the co-operative unions, should ultimately be responsible for co-operative training and education. But, barring two States, no such unions have been established anywhere, a fact pointed out in the Report itself. This feature is mainly attributable to the absence of non-official leadership, resources and organisation. It will take quite a long time for filling this gap, though it must be conceded that necessary steps must be taken to build up these unions as quickly as possible. It is noteworthy that the Study Team has recognised all this. Nevertheless, it is in a hurry to decentralise co-operative education and training facilities. Its solution is that, wherever there are no co-operative unions, the respective State Governments should be entrusted with the task of administering the training centres. This suggestion is not in keeping with the spirit and ideals of Co-operation. As has been rightly stated in both the notes of dissent, this only means 'departmentalisation' of management on a permanent basis and not 'decentralisation'. It is significant that even the Team concedes, though not in so many words, that the so-called 'decentralisation' will be only on paper, inasmuch as the States will act only as 'agents', since all the expenses will be borne by the Centre. In the course of the past five years, it may be noted, the cost to the national exchequer is placed at no less than Rs. 12.75 crores. Further, many of the States will not even be able to feed their centres adequately without depending on other States for trainees. What is more, even for the appointment of staff, the approval of the "National Board" will be necessary.

The majority of the Study Team seems to have been taken in by the theoretical advantages of 'decentralisation' (as, for example, the facility for taking into account local problems) which are of a minor importance. But the dangers of 'decentralisation' in the present state of the unpreparedness at the State level and in the context of the urgency of third Plan requirements for trained personnel do not seem to have been fully realised. The fact that the banker to the Governments and all banks, namely, the Reserve Bank, has been closely associated with the training programmes has bestowed certain advantages on the training centres, as, for instance, recruitment of competent staff from all the States, effective arrangements for practical training in suitable institutions located in any part of the country, provision of tutors, honoraria and other allowances, etc., which would not have been possible otherwise. As is pointed out in one of the dissenting notes, the problems facing the Co-operative Movement in various States are so diverse and the stage of development of the Movement so uneven that, for imparting sound training, teachers with varying background will have to be drawn from various States, while giving, at the same time, adequate importance to local problems.

There are several other serious problems that might arise as a consequence of the proposed decentralisation. It is only too well known to need repetition how co-operative departments sometimes become convenient tools for political parties or even individuals. Target-mindedness is another danger. Not long ago, in his report, Sir Malcolm Darling had stated that " . . . . with the strong political pressure behind the Plan, there is a real danger that those who have to keep them in view may become so target-minded that the target, instead of being means to an end, becomes an end itself." In checking this attitude, training institutes play a vital role. There is a real advantage in an autonomous institution like the Reserve Bank,

far removed from the influence of State Governments, being in charge of training the most important co-operative personnel, both institutional and departmental, at least till such time as non-official bodies are fully established.

As Prof. Naidu has explained in his note, the Reserve Bank's close association with the administration of training of co-operative personnel is necessary not merely because of its historical association with it but also because the Co-operative Movement today is largely a credit movement and it is in the credit movement that the Reserve Bank has a vital stake. The accommodation made available by the Reserve Bank to the co-operative credit agencies is of the order of Rs. 108 crores. This is expected to expand to Rs. 480 crores by the end of the third Plan. It is but logical, therefore, that the Reserve Bank should be vitally concerned with the training of the personnel who are entrusted with the administration of these funds and should regard the training programme "as an insurance for its financial interests." It is pertinent to recall here that the Reserve Bank is training the officers of commercial banks in the Bankers Training College managed by it and there has been no suggestion from anyone that this facility should be left to the association of banks themselves.

It is precisely this close association of the Reserve Bank that is sought to be removed now by the formation of a National Board for Co-operative Training, in the place of the present Central Committee, and through the proposed 'decentralisation'. The National Board will only be an advisory and policy-making body, without a secretariat and it will be less effective and useful than the present Central Committee, which has been endowed with executive and administrative functions and has been provided by the Reserve Bank with an efficient secretariat. The absence of strong co-operative unions at the State level will make the Board more ineffective than would be the case even otherwise. The idea of a National Board presupposes the existence of dynamic non-official bodies at the State level as they have to be represented on it. But no such bodies exist at present. To the extent such representation is needed, it can always be provided by broad-basing the existing Central Committee, as suggested by Dr. Ryan in his minute of dissent.

The issue involved appears to be whether the economic and business aspects of co-operatives, or their non-economic aspects, should be emphasised. In some of the recommendations, the Study Team has emphasised the need for educating even non-members and officials and for drawing more and more people into the co-operative fold. Could this be done by failing to make the co-operatives successful as business and economic units? If the achievement of this goal is to be ensured, it is necessary that, in the present circumstances, no far-reaching changes are brought about in the management of training centres. In fine, one does not find a convincing and valid case for such a change in the Team's report. Apart from upsetting the arrangements built up through painful experience over a period of years, the taxpayers' money also is involved here. Should this be wasted on schemes which do not appear to be sound? But this does not mean that nothing should be done to remove the deficiencies in the existing set-up.

STATE FARMING IN INDIA

STATE farming for purposes of scientific experiment and demonstration, plant and animal breeding, evolution of improved seeds and cultural practices, and so on, has a recognised place in any agricultural economy, be it individualist or collectivist. Such farming is generally on a very limited scale, covering a very small proportion of a country's cultivated area, and makes no directly significant contribution to the quantum of agricultural production. Even in the Soviet Union, where it is in vogue on a relatively larger-scale than elsewhere, it employs, as of 1959, only 4.5 million agricultural workers, as compared with the 21.5 million engaged by the collective farms. It must also be remembered here that the impetus to greater State farming in Russia—in 1953 only 2.3 million agricultural workers were employed in State farms—has been provided by the crash programme, launched in 1954, of ploughing up millions of acres of virgin and long-fallow land. The ready availability of large blocks of hitherto uncultivated land in an advanced industrial country like the Soviet Union where supply of agricultural labour has been becoming scarcer and scarcer has also meant that bigger State farms—their average size has increased from 6,500 acres in 1948 to 21,250 acres in 1958—could benefit by fuller mechanisation and larger-scale operation. These twin conditions, namely, availability of large extents of virgin land and scarcity of labour, do not obtain in most parts of this country, and so State farming on any significant scale—significant from the point of view of its contribution to agricultural production—is to be ruled out, the limited success of the Central Mechanised Farm at Suratgarh in Rajasthan State notwithstanding.

It is the working of this 30,000-acre Suratgarh State Farm, set up by the Government of India in August 1956 by using the gift of Russian agricultural machinery and equipment valued at Rs. 75 lakhs, that has brought the question of State farming to the fore. The Estimates Committee of Parliament has also recently reviewed the working results of the Farm which had under cultivation 2,293 acres in 1956-57, 4,347 acres in 1957-58, 14,154 acres in 1958-59 and 26,480 acres in 1959-60. The Farm made profits in three out of the four years under reference, the figures being Rs. 7,600 in 1956-57, Rs. 5,48,000 in 1958-59 and Rs. 42,000 in 1959-60; it incurred a loss of Rs. 1,27,000 in 1957-58 due to failure of monsoon. The total value of farm output was about Rs. 26 lakhs and Rs. 32 lakhs, respectively, in the two later years. But the results are not quite flattering when presented in terms of cost of production per acre and income per acre as under:

Year	Cost of production per acre	Income per acre
	Rs.	Rs.
1956-57	183	187
1957-58	133	104
1958-59	146	185
1959-60	122	113

The redeeming feature, however, is that the cost of production includes the element of depreciation on account of machinery and buildings. This element has accounted for about Rs. 1,50,000 in 1956-57, Rs. 1,90,000 in 1957-58, Rs. 4,70,000 in 1958-59 and Rs. 7,10,000 in 1959-60. It would appear that, for purposes of depreciation provision, the gifted Russian machinery is treated as if it had been purchased. This is as it should be, for, in a commercial enterprise of the kind, adequate depreciation would have to be provided for. But, after this provision has been made, the net annual profit is found to be rather low when set against the second Plan outlay of about Rs. 1.43 crores (exclusive of the value of the Russian machinery) on the Suratgarh scheme. Here, however, the provision for interest on capital to the tune of Rs. 1,30,000 in 1959-60 must also be taken into account while judging the profitability of the Farm.

Even after allowing for these redeeming factors by way of depreciation provision and interest provision, the fact remains that the Suratgarh Farm has not fully come up to expectations. For one thing, the Farm has so far confined its activities to the raising of pedigree seeds of crops suited to local soil and climatic conditions; it is yet to take up the more profitable activities of developing orchards and pedigree breeds of cattle, sheep and poultry. The Estimates Committee's findings show that there is no optimum utilisation of labour and staff, that a suitable crop pattern for ensuring optimum results is yet to be made, that there is need for improving and stabilising water-supplies to the farm, that flood control measures in the area have not been adequate, and that the alkalinity of the soil will have to be removed before perennial irrigation facilities become available. The working of the Farm is bound to improve greatly when these shortcomings are removed. The Damle Committee's recent recommendation that, in view of the availability of cultivable land and scarcity of labour in Rajasthan, a site close to Suratgarh may be chosen for establishing another State farm of the kind also confirms in a way the potentialities of the Suratgarh Farm. But the only snag here is that the area is susceptible to floods which, in practice, have been a serious drawback to the functioning of the Suratgarh Farm and which will be an equal drawback to the proposed second farm, if they are not minimised by timely control measures. Since the Estimates Committee has given this warning, it may be expected that a final decision will be taken on the setting up of the second farm near Suratgarh itself only after the Rajasthan Government takes up the execution of its flood control scheme in the area.

As things stand, only the State of Rajasthan will have the required facilities—availability of large and compact blocks of State-owned land, perennial irrigation expected from the Rajasthan Canal, etc.—for operating mechanised farms of the Suratgarh type. The fact that the Dam'e Committee's extensive combing of the country for large blocks of land of the size of 30,000 acres as possible sites for mechanised State farms in other States did not succeed in locating such blocks may be recalled in this connection. This is, indeed, a disconcerting fact when State farming is deemed desirable for certain purposes like animal husbandry and orchards. After all, cereal production involves the use of a larger extent of land, whereas abundant supplies of green fodder for cattle can be had from a relatively smaller extent of land. The fantastic idea that a State farm should be of a size of 30,000 acres is an impossible one in a country where State-owned cultivable waste are just 50 million acres widely scattered in the different States. A realistic size can conceivably be no more than 10,000 acres in one compact block in the circumstances of this country. It may not be difficult to locate a block of this size in each State, provided the requirement that perennial canal irrigation should be in prospect is waived wherever sub-soil water can be tapped or rain water stored in tank for irrigation purposes. The water requirement will also be less if the emphasis in State farming is more on animal husbandry and orchard of citrus trees, papaya, etc., than on cereal production. That greater emphasis on horticulture and animal husbandry would be more worthwhile is also supported by the experience of Russian State farms, in which the unit area yields of grain are much less than on private plots, but the yields of grapes and other fruit and of milk are substantially more than in collective farms and private plots. On all these grounds, therefore, there is a case for locating a State farm of a moderately large size of 10,000 acres in each State, so that pedigree seeds of crops, pedigree breeds of cattle and saplings of fruit trees could be more easily and scientifically developed and made available for multiplication by individual farmers.

ALUMINIUM IN THIRD PLAN

AT least three questions of interest to the aluminium industry, in general, have received forthright treatment in the speech of Mr. K. C Mahindra, Chairman of the Board of Director of the Indian Aluminium Company Ltd., at the annual general meeting of the Company. Two of these—the uncertainty of wagon availability and the incidence of the excise duty—are hardly open to controversy. Mr. Mahindra's point in regard to the transport question is that, inasmuch as the aluminium industry does not enjoy special priority in the matter of rail transport of its products and of coal needed by it, his Company is forced to increase its inventories thereby tying up extra capital, or to utilise the more costly road transport. Presumably, the Aluminium Corporation, which is the only other unit in the aluminium industry at the present time, is also inconvenienced by the transport bottleneck. As for the incidence of the new excise duty levied on aluminium products since last year, there is the anomalous position of the duty being levied on all shipments of ingot from the Indian Aluminium Company's smelters to its fabricating plants. Since, strictly speaking, excise duty should be payable only on shipments to customers, Mr. Mahindra's criticism that there is "double taxation" now seems to be valid. His suggestion that the Company be allowed to move ingot and fabricate it "in bond" would mean that no duty need be paid on ingot which is ultimately wasted in fabricating plants, as "melt loss" is never recovered. The Central Board of Revenue should not find it difficult to accept this suggestion.

The only controversial point in Mr Mahindra's speech pertains to the subject of expansion of the aluminium industry. His criticism has been particularly directed against the official talk of raising the third Plan target for aluminium production from 87,500 tons to 150,000 tons and, may be, even to 200,000 tons. As current consumption is only of the order of 44,000 tons, current proposals (as yet by no means "firm") to revise the target will mean a ten-fold jump over current production. Thus exports will take care of any over supply, according to Mr. Mahindra, is a mirage, for India as a high-cost producer, cannot hope to compete in the world market on level terms with strong international groups. He has, therefore, come out strongly in favour of what he calls "tempered planning," so as to avoid the risks inherent in over-expansion. It is difficult to agree with Mr. Mahindra on this question of expansion, for the demand for aluminium, which is a versatile metal with a variety of uses, seems to have been under-estimated.

In this connection, the estimate of demand for aluminium by the end of the third Plan may well be recalled. This is as follows:

(In long tons)

Industry	Present demand	1965-66 demand
Building and Construction ...	2,000	3,000
Household and commercial supplies	10,500	12,500
Transportation	6,000	13,000
Electrical industry	18,600	40,000
Food and farming	900	1,500
Canning and packaging ...	3,500	7,500
Miscellaneous	2,500	4,000
Total	44,000	81,500

In the above table, there is an obvious under-estimation of the demand for aluminium in building and construction, for it is well known that this metal has a greater future as a substitute for steel. Since steel may continue to be in short supply in spite of the commissioning of the three pubic sector steel plants, the demand for aluminium from building and construction industries is bound to go up many times more than its current estimate. But there is also an opposite view to the effect that, when the three steel plants go into full production, the costlier aluminium will lose ground in the building industry and in the transportation field (railways and automobiles). It would appear that, as far as demand is concerned, there is a case for re-estimating it. And such an estimation may justify a higher target of at least 150,000 tons for aluminium production in the third Plan, in view of the more likely trend of steel demand outstripping supply throughout the third Plan period. Moreover, the ease with which aluminium can replace other non-ferrous metals like copper, lead and zinc—all of which are mainly imported—is an additional factor to be considered in this context. It may be recalled here that the annual demand for copper will be 170,000 tons, for lead 55,000 tons and for zinc 150,000 tons by the end of the third Plan. If imports of these three non-ferrous metals are to take place at such levels, the foreign exchange requirement on their account alone will come to about Rs. 80 crores. It is here that the substitution possibilities of aluminium hold out the prospect of reduced imports of copper, lead and zinc.

Against this desirable target, present and additional capacity figures for primary aluminium production are as under:

(In long tons per annum)

Units	Present	Additional capacity in third Plan
Aluminium Corporation ...	2,500	5,000
Indian Aluminium Company	15,600	10,000
Hindustan Aluminium Corporation	—	20,000
Tendulkar Industries ...	—	20,000
Madras Aluminium Company	—	10,000
Total	18,100	65,000

If further expansion is deemed desirable, it may be more economical to permit the existing and proposed units to raise their capacities, if necessary, to 40,000/50,000 tons. Licensing of more units of 20,000 tons capacity on the dubious ground of avoiding industrial concentration or of ensuring development of the industry on a regional basis may not be desirable. Caution is called for, if at all, only in respect of three factors. The first is that the deposits of bauxite ore on which new schemes are based would have to be field-tested for quality or reserves. Secondly, firm and continuous power would have to be assured to an industry like aluminium which is a heavy consumer of electricity. And, thirdly, the results of the new process that is being developed by a foreign producer of aluminium—a process under which the expected capital cost of an aluminium unit is about Rs. 2,500 per ton, as against Rs. 8,000 per ton under the two existing processes which have been standard for the last 70 years—would need to be known before large-scale expansion is actually launched. It is stated that the foreign firm which is engaged in this experiment expects to have its new plant commissioned early in 1962 with a production capacity of 6,000 to 8,000 tons of primary aluminium per year. If this pilot plant proves, as it well may, that the estimated savings in capital and operating costs will be realised in large-scale operations, it would, of course, be prudent on India's part to take advantage of this technological revolution in the aluminium industry. But this would mean India having to wait for a long time and face the risk of a shortage of aluminium in the latter half of the third Plan and in the beginning of the fourth Plan. The question as to which risk this country should take must be carefully examined at expert level.

MARKET GOSSIP

Bank Chairmen Speeches

THE season for speeches of bank chairmen is practically over, with the Chairman of the Punjab National Bank coming in the last. The annual meeting of the Central Bank of India has had to be postponed, owing to a technical flaw under the Companies Act of which one of the shareholders took undue advantage to the discomfort of the vast majority. Consequently, the speech of the Central Bank's Chairman has not been published, but, since it was circulated to the shareholders present at the meeting before its commencement, it is unlikely to be amended to any considerable extent.

To be the last in the list has certain advantages, for the person concerned can benefit from the statements made by others before him and avoid their pitfalls. At the same time, he will also have the disadvantage of having to find something new to say. Mr. R. N. Goenka, Chairman of the Punjab National, has performed this task excellently. He has presented the problems pithily and precisely, besides endeavouring to state the solutions for some of them in a forthright manner. Typical instances are his classification of savings, his comments on the Reserve Bank's credit restraints and his plea for some special incentives to big banks for opening branches in rural areas in order to tap the savings of agriculturists.

Every bank chairman has offered solutions to one or more problems confronting the country, in general, and the banks, in particular. In this respect, the quality of bank chairmen speeches in India has undergone a welcome improvement. It is to be hoped they will improve further in the coming years. The points made by all of them must be examined by the Reserve Bank and the Finance Ministry alike to see whether the commercial banks' contribution to the economic growth of India could be more significant, in terms of both quantity and quality, than has been the case so far.

Problem of Bank Deposits

All bank chairmen have welcomed the move to introduce deposit insurance, though some have done so grudgingly. This fact itself is suggestive that the scheme now being drafted by the authorities will be of very modest proportions, covering less than one-fifth of the total deposits. The maximum sum proposed to be insured for a deposit holder in a bank may be no more than Rs. 1,500. This is too small an amount for the scheme to be of any use for that type of middle class people who badly need such protection.

On the issue of interest rates, there has been no unanimity among bank chairmen. But, generally speaking, none of them seems to be in favour of any further increase in the rates of interest on either deposits or advances. The difference of opinion is on the point whether the fractional increases that have already been given effect to were necessary at all. The aversion of Indian bank chairmen to high interest rates is well known. But this does not necessarily mean that they are right. The argument that an increase in interest rates on deposits has no incentive merit does not hold water. The very fact that the bulk of banks' deposits today is of time nature disproves it effectively. It is common knowledge that, before the inter-bank agreement was clamped on depositors, banks used to compete for deposits by quoting higher interest rates. One of the attractions for depositors in small banks is the high rate of interest offered by them and those who are tempted are by no means ignorant people. Did not even I.C.S. officers and others of similar order keep their funds with the Palai Central Bank in fixed deposits? Surely, they knew that there were bigger and sounder banks. And yet they preferred the Palai Bank, because it offered a rate of interest substantially higher than that allowed under the inter-bank agreement of which it was not a member. Again, in recent months, several people have transferred their funds from banks to industrial companies and well-known managing agency houses, for the simple reason that they could earn better rates of interest. It is, therefore, unrealistic to argue that interest rates have no influence on the trend of deposits and, if banks think that they could continue to have an upward trend in deposits, even if their rates of interest were out of line with the prevailing market conditions, they would soon be disillusioned. They tried that theory in 1959 and 1960, with the unpleasant result of seeing a substantial part of their funds moving out of their control.

Timely and realistic adjustment of interest rates, after taking a view of the future trend of demand for bank credit, is only one of the means, though a very important one at that, by which banks can ensure a sustained upward trend in deposits. This means must necessarily be supplemented by others. Spread of banking habit over a larger section of the population is also an important way in which more deposits can be attracted into the banking system. Now, this proposal covers a wide field, from the opening of more branches to introduction of new services and improvement of existing ones. The suggestion that banks should be helped by the Government to open more branches in rural areas through some fiscal concessions is nothing new. It has been made by many before, including this journal, but has failed to evoke the necessary response from the authorities. In view, however, of the pressing need for more resources for the banking sector, it is high time the Government accepted it. If industries can be given tax concessions by way of several special write-offs, there is no reason why banks, too, should not be shown similar concessions for expanding the area of their operations, subject to suitable stipulations and safeguards.

Growth of bank deposits is also related to the pace of economic activity in the country and the balance of payments position. Since economic activity is continuously expanding, it is certain that, after an interval of some more months, bank deposits are bound to rise again. Further, the large payments that are being made to the Government by way of taxes will soon find their way back to the banking system through Government expenditure. In fact, the sharp rise of Rs. 40.50 crores in the deposits of banks in the two weeks ended 8th April 1961 must be attributed more to payment of bills by the Governments which are always heavy at the close of every fiscal year than to an increase of ½ per cent in deposit rates following the revision of the inter-bank agreement. As for balance of payments, the position is likely to improve in the coming months when foreign aid for India's Plan, about which talks are going on abroad, starts flowing in. One could at least hope that the deflationary effect of a large adverse balance of trade on bank deposits felt in the past 12 months might not be repeated in the next 12 months.

While there are thus reasonable chances of bank deposits looking up, the growth is unlikely to be of the magnitude necessary for comfortably meeting the increasing demand for bank credit which is very likely to be of a much bigger order. It is this prospect that prompted the Governor of the Reserve Bank to say some time ago that tight money conditions would be a feature of the Indian capital market for quite a few years to come. This, however, is not something about which one should worry very much, because it is only tight money conditions that will induce economy and efficiency in the use of capital, a quality in which India of today is sadly lacking.

U.K. Credits for India

The signing of the two agreements providing for loans amounting to Rs. 53 crores (£40 million) from the U.K. to India at New Delhi on the 1st inst. was just a formal affair. For both the loans were agreed to in principle in September last at a meeting between India's Finance Minister and the Chancellor of the Exchequer held in London. One of the agreements provides for a credit of Rs. 40 crores (£30 million) for financing a few projects, including expansion of the heavy electrical machinery plant at Bhopal, a fertiliser factory at Nahorkatiya, a new security paper mill in Hoshangabad and equipment for a cable manufacturing unit in West Bengal. The other agreement covers a loan of Rs. 13 crores (£10 million) given as a measure of support to India's balance of payments during 1961-62. Arrangements have been made for drawings on this loan to begin immediately. With the total of India's foreign balances having gone down to as low a level as Rs. 123.33 crores, this is doubtless a heartening and most welcome development. Both the loans are repayable over a period of 25 years, no payment being required in the first seven years as regards the first loan and until 1966 in the case of the second. The rate of interest is not specifically stated. If it is to be on the basis agreed to on previous loans, it will be at the rate at which the British Treasury borrows plus ½ per cent as service charge. But this is too high a rate. It would be desirable to have it reduced to the same rate at which the U.S. is giving similar loans to India.

A feature of the aforesaid two loans is that the bulk of them is not tied to any specific project, with India being free to use them for buying such British capital equipment and machinery as it decides. Even the entire loan of Rs. 13 crores meant to strengthen India's balance of payments position can obviously be used for financing maintenance imports as well. As, however, both the loans have to be spent only in Britain, they are not untied loans in the sense they can be used for buying goods anywhere in the world. Apparently, Britain has chosen to stick to this condition on the ground that its balance of payments position is not strong enough for giving such convertible loans.

Power Shortage and Policy

Although the latest news about the power situation in the country indicates signs of a slight improvement in certain regions, the position is still far from satisfactory. The recommissioning of the two thermal power generating units at Durgapur, the breakdown of which had resulted in an acute power famine in the Calcutta region, has brought some relief. In his statement on the power situation in Calcutta in the Rajya Sabha, Mr. Jaisukhlal Hathi, Union Deputy Minister for Irrigation and Power, assured the members that the situation would improve further, when a 30 M.W. unit at the Calcutta Electric Supply Corporation's New Cossipore power station starts functioning in a week's time. Two more 30 M.W. generating units at the Cossipore power station will be commissioned, the first by 18th May and the second by the middle of June when the power supply is expected to be normal.

This improvement is unfortunately not country-wide. The position in other parts of the country continues to be serious. Gujarat, in the Western region, is the worst sufferer. Hundreds of major and minor industrial establishments in S. Gujarat are said to be affected by the power famine. The Baroda Municipality is reported to have completely cut off power supply to its industrial consumers and, consequently, more than two hundred and fifty small and big units, including certain textile mills, have had to close down completely. The Gujarat State Electricity Board has attributed the power crisis to the failure of the railways to move sufficient quantities of coal to the thermal power stations in the State.

In Madras, the cut in power supply has been put off till the 15th inst., when the situation will be reviewed and appropriate action recommended. Power shortage in Andhra Pradesh has forced industrial units in Hyderabad and Secunderabad

SHARE MARKET EASY

VALUES GENERALLY MOVE DOWN

(From Our Own Correspondents)

BOMBAY, *4th May*

TRADING on the Stock Exchange during the week was of a mixed pattern. Thus, while the gains recorded by steels, textiles and a few miscellaneous industrials last week were extended further, there was a setback to values at other counters. The firmness of steels was engendered by speculative support based on expectations of higher retention price for steel. Operators seemed to have ignored the decline in the production of the Indian Iron and Steel Company and the power cut in the Calcutta region. A few textile scrips attracted attention in hopes of bonus issues by several mills having large reserves. Quite a number of other scrips in both cash and forward lists, however, were subjected to selling, but fresh buying support was lacking. For power cuts in many parts of the country and fear of statutory enforcement of Wage Board Awards, as is being done in the case of cotton textiles, gave rise to the apprehension that profits of companies would be affected. Even prospects of India getting large-scale foreign assistance for the third Plan failed to instil confidence among operators. The under-tone of the market was easy.

Among steels, Tata Steels met with sustained buying and advanced from Rs. 147.75 to Rs. 152 on Tuesday. After declining to Rs. 150.25 the next day, they improved again to Rs. 151.25 today before finishing at Rs. 150.75. The net gain over the week was Rs. 2.50. Indian Irons firmed up from Rs. 27.20 last week-end to Rs. 27.75 today and closed fractionally lower at Rs. 27.50. Mukand Irons rose from Rs. 28.25 to Rs. 28.50 before finishing at Rs. 28, showing a net loss of 35 nP over the week.

Selected textile shares, as already stated, elicited good support. Under the impetus of rumours of a possible bonus issue, **Centurys jumped** up from Rs. 611 last week-end to Rs. 623 today. At this level profit-taking set in and the rate declined to Rs. 619. Kohinoors spurted from the week's opening of Rs. 289.50 to Rs. 303.50 on Tuesday and declined subsequently to close at Rs. 299.50. The net gain over the week was Rs. 9. Simplex and Podars put on a rupee each to Rs. 188 and Rs. 149, respectively. Standards gathered a rupee to Rs. 1,487. Tata Mills were firm at Rs. 51, as also Swans at Rs. 600. Gokaks at Rs. 183 and India Uniteds at Rs. 15.56. Finlays, however, slumped by Rs. 22.50 to Rs. 325 reflecting disappointment of operators over the failure of bonus issue to materialise. Khataus receded by Rs. 8.75 to Rs. 522.50. Shree Nivas eased by Re. 1 to Rs. 267. Swadeshis were a shade lower at Rs. 269.

Cement shares drifted downward. Orissas dropped 40 nP to Rs. 14.56. Digvijays shed 25 nP to Rs. 152.25. A.C.Cs, however, attracted special support on reports that the Company's negotiation for the sale of its assets in Pakistan worth Rs. 2 crores were progressing satisfactorily. They improved from Rs. 157.50 to Rs. 160.50, but finished lower at Rs. 158.

Sugar shares ruled easy. Belapurs encountered selling and declined from Rs. 289 last week-end to Rs. 285 on Saturday and, after improving to Rs. 288 on Tuesday, moved down thereafter and touched Rs. 285.50 today. The net loss over the week was Rs. 3.50. New Svadeshis declined by Rs. 4 to Rs. 326. Phaltans dropped a rupee to Rs. 139.50. Walchandnagars eased by a like amount to Rs. 202. Maharashtra Sugars were done 50 nP lower at Rs. 200. Hindustan Sugars were well favoured and hardened by Rs. 13.75 to Rs. 340.

Rayon shares lacked support. **Baroda Rayons** were unchanged at Rs. 131. The Company will issue right shares to its existing shareholders in the ratio of two new shares for every five shares held and not one new share for every two held as was stated in these columns two weeks ago. Gwalior Rayons were dull at Rs. 45.50, same as last week. Indian Rayons receded by a rupee to Rs. 63.50. The Company proposes to issue at par 145,000 new equity shares of Rs. 100 each to existing shareholders in the ratio of one new share for each old share and 30,000 preference shares of Rs. 100 each at par in the ratio of six new shares for every eleven held. South India Viscoses, on the other hand, attracted buying and improved by Re. 1.50 to Rs. 161.

In the shipping group, Scindias declined further by 16 nP to Rs. 14.08. Great Easterns were neglected at Rs. 14.50. Automobile shares suffered a setback. Premiers were marked down by Rs. 2.50 to Rs. 167.25. Hindustan Motors eased by 8 nP to Rs. 19.92.

Dyes and chemicals, too, were quoted lower. Indian Dyestuffs declined by Rs. 10 to Rs. 480. Amar Dyes shed Rs. 5 to Rs. 381.25. Dhrangadhras were done Rs. 2 lower at Rs. 129. Colour Chems eased by Re. 1.25 to Rs. 350. Adarsh Chemicals and Alembics lost 50 nP each to Rs. 78 and Rs. 265, Tata Chemicals (new) softened by 12 nP to Rs. 17.46. Synthetics, however, provided a bright spot, the quotation jumping up by Rs. 26 to Rs. 178. Dharamsis were also well favoured, shares advancing by Rs. 8.75 to Rs. 273.75 and the new ones by Rs. 11.25 to Rs. 271.25. Citrics were better by Re. 1.50 at Rs. 56.50.

Engineering shares were subdued. Mackenzies encountered selling and declined by Rs. 5.75 to Rs. 133. Premier Constructions eased by Rs. 3 to Rs. 192.50. Asian Cables receded by Rs. 2.50 to Rs. 108.50. Jyotis were done 50 nP lower at Rs. 181.50. Larsen and Toubros receded by a like amount to Rs. 42.50. Mahindras dropped 24 nP to Rs. 19.76. Telcos, however, rose from Rs. 329.50 last week-end to Rs. 331.75 but came in for selling and finished lower at Rs. 329.50, same as last week. But Alcock Ashdowns moved up by a rupee to Rs. 323. Cooper Engineerings gathered Rs. 2 to Rs. 166. T. Maneklals spurted by Rs. 25 to Rs. 425.

Among miscellaneous industrials, Anil Hardboards fell by Rs. 5 to Rs. 282.50. Tata Oils receded by Rs. 2 to Rs. 75. Indian Investment Trusts declined by a like amount to Rs. 79. Polsons were dull at Rs. 177. Bombay Burmahs, however, recorded a rise of Rs. 4.50 over the week. After opening at Rs. 598, they moved up to Rs. 610 on Tuesday before finishing at Rs. 603 today. Wimcos picked up Rs. 2 to Rs. 275. Premier Tyres improved by a like amount to Rs. 104. Hindustan Levers found buyers 55 nP higher at Rs. 47.30. West Coast Papers gathered a rupee to Rs. 203. Jayant Papers hardened by 50 nP to Rs. 60.50.

* * * *

Calcutta Stock Exchange

CALCUTTA, *3rd May*

Thanks to the healthier technical position arising from bear-selling which followed the Estimates Committee's recommendation regarding investment of L.I.C. funds, and diversion of funds for a number of equity issues—the Goodyear and Madras Rubber issues attracting a good portion of funds—speculatives gathered attention and scored modest gains to close at highest levels of the week. The issuance of good corporate results, grant of British loans aggregating £40 million for the third Plan and indications of power situation easing following resumption of normal supply to the Calcutta Electric Supply Corporation by the D.V.C. were the factors that encouraged sentiment. The anxiety stemming from the decision of the Aid-India Club to postpone giving India financial assistance was mellowed down on the news that Prof. Galbraith, U.S. Ambassador in India, is proceeding to Washington for consultations. Meanwhile, the grant of British loans would, it was thought, go a long way towards maintaining industrial progress. The easing of monetary stringency on the eve of Government loan programme was also hailed with satisfaction. It should be said that conditions for a buoyancy were thus set; but the fact that there was no hectic activity should be attributed to the extreme caution exercised by operators.

Among coals, the low levels attracted buying support and Burrakurs were pushed up to Rs. 20.44 from Rs. 19.50. At Rs. 359, Bengals scored Rs. 5, with Central Indias picking up 56 nP at Rs. 13.62. New Beerbhooms were better at Rs. 23.37, while East Indians changed hands at Rs. 35.25, as against Rs. 35.50 previously, and Equitables at Rs. 31.25, as against Rs. 31.75. Western Bengals were firm at Rs. 9.00. Amalgamateds were fractionally better at Rs. 25.19.

In an otherwise featureless jutes, Birlas, on interested attention induced by expansion prospects and rumours of an imminent rights issue, mustered strength to rise from Rs. 38.62 to Rs. 40.56, but closed lower at Rs. 38.12 on profit-taking. Anglo-Indias were unchanged at Rs. 198, while New Centrals met with support to rise from Rs. 19.87 to Rs. 21.75.

Engineerings were accorded greater support on prospects of the power crisis resolving. Texmacos met with support at the lower level, thanks to last week's recession on adverse corporate rumours, and from Rs. 20.30 recovered to Rs. 20.75 to recede to the opening level. The possibility of an earlier announcement of retention prices for 1960-62 released enthusiasm. Jessop and Cos. improved from Rs. 21.37 to Rs. 22.37, with Britannia Engineerings recovering from Rs. 13.31 to Rs. 14.06.

On good corporate news and/or rumours, several features were recorded in miscellaneous industrials. Following expansion possibility and prospects of rights and/or bonus issues, Dunlop Rubbers were lifted to as high as Rs. 51.75 from Rs. 49.50. On bonus rumours, Indian Coppers rose from Rs. 5.27 to Rs. 5.51. National Cables were fully steady at Rs. 37, as the bonus rumours were revived. British Paints gained from Rs. 23.37 to Rs. 24.62 and the rate was considered as sufficiently attractive bearing in mind the issue price was Rs. 15. Indian Cables at Rs. 37.75 added a fractional gain on rumours of good dividend. Reports of good working were reflected in Isaac Holdens rising from Rs. 12.00 to Rs. 12.37. Indo-Burma Petroleums after rising from Rs. 29.87 to Rs. 30.67 closed firm at Rs. 29.50. Aluminium Corporations recovered from Rs. 18.25 to Rs. 18.75.

Although teas recorded a lower volume of business, features were not wanting. Thus Basmatias changed hands at Rs. 32.12, as against Rs. 31 previously. Nagaisurees recovered from Rs. 210 to Rs. 211. Betjans were firm though unchanged at Rs. 30.62, while Bagmaris receded to Rs. 25.50 from Rs. 26.12. Kilcotts were a few nP better at Rs. 20.56.

* * * *

Madras Stock Exchange

MADRAS, *3rd May*

Activity on the Madras Stock Exchange was restricted practically throughout the week under review, with prices showing a tendency to fall. A few select shares, of course, changed hands in slow dealings. Plantations were dull. Coffee shares in particular were subjected to selling pressure which resulted from the concern over the persistently downward trend of prices. The crop just delivered to the Coffee Board's pool was believed to fetch no more than Re. 1.75 per point, as against Rs. 2.50 a few years ago. Textiles met with only moderate support. Sugars were listless. Miscellaneous section buying was selective.

Among teas, Lucky Valleys were quiet at Rs. 13.25, same as last week. Hailyburias were unchanged at Rs. 14.75, as also Chembras at Rs. 3.80. Some scrips hardened only fractionally. For example, Blue Mountains gained 5 nP to Rs. 3.08. Neelamalais which had shed 16 nP last week recovered 7 nP to Rs. 4.50.

In the coffee group, Consolidated Coffees dropped 20 nP to Rs. 22.70. Cowcoodys shed 5 nP to Rs. 5.25. Savamalais eased by 5 nP to Rs. 3.40. Sheveroys were quoted lower by 3 nP at Re. 1.70. Coffee Lands declined by 50 nP to Rs. 19. Rajendras, however, remained steady at Rs. 12.50.

Rubbers generally tended to move up. Cochin Malabars gained a naya paisa to Rs. 7.71. Malankaras hardened by 15 nP to Rs. 18.75. Kailas gained 3 nP to Rs. 5.03. Mercaras were done at Rs. 8.90 as against Rs. 8.80 last week. Thirumbadis went up by 10 nP to Re. 1.65. Travancore Rubbers were fully maintained at Rs. 10.70, while Pullangodes shed 2 nP to Re. 1.76.

In the sugar section, Andhras were steady at Rs. 26.85 *ex-div*. K.C.Ps put on 15 nP to Rs. 23.62 and Travancores 15 nP to Rs. 10.60. Deccans improved by 5 nP to Rs. 14.10.

Textiles presented a mixed trend. Thus, Buckinghams were taken down from Rs. 216 to Rs. 213. Laxmis closed at Rs. 164 as against Rs. 165. Maduras dropped 35 nP to Rs. 35.90. Coimbatore Cottons eased by Re. 1 to Rs. 174. Adonis, however, picked up 10 nP to Rs. 10.75. Vijayeswaris gained Rs. 2.75 to Rs. 126. Coimbotore Murugans improved by Rs. 2 to Rs. 116. Travancore Rayons increased by 35 nP to Rs. 37.75, South India Viscoses by Rs. 3 to Rs. 161.50 and Rayalaseems by Rs. 2 to Rs. 134. Radhakrishnas shed 25 nP to Rs. 31. Rajalaxmis eased by 50 nP to Rs. 79.

In the miscellaneous section, notable increases were recorded by Madras Cements and Textools; the former gained as much as Rs. 5 to Rs. 96 and the latter Rs. 2 to Rs. 181. Rallis improved by 50 nP to Rs. 136.50. MacDowells changed hands at Rs. 35.12, as against Rs. 34 last week. Central Scientifics strengthened by 30 nP to Rs. 6.60. Seshasayee Industries dropped 50 nP to Rs. 12. Transformers declined by 80 nP to Rs. 9.10. Western India Plywoods were done at Rs. 244, as against Rs. 246. Ogale Glass shed 20 nP to Rs. 5.90. Madras Aluminiums were quiet at Rs. 23, Sen-Raleighs at Rs. 25, Seshasayee Papers at Rs. 7.12, Spencers at Rs. 24.25, and Tube Investment at Rs. 283.

HINDUSTAN LEVER LTD.

Apropos our review of Hindustan Lever Ltd., published in our issue of 1st April, 1961, Mr. P. L. Tandon, Vice-Chairman, of the Company, writes:

"It is mentioned in the third paragraph of the article that:

'... One may wonder as to why the Company has raised the dividend level while reducing the share of profit ploughed back....'

"In actual fact, the Company's share of profit ploughed back has gone up very considerably, as shown in the statement at the end of the first column of the article. As against Rs. 74.67 lakhs retained (and ploughed back) in 1959, the Company ploughed back Rs. 104.7 lakhs in 1960. Our profit retention has been a very healthy one, both as an amount and as a percentage, as the following figures will show:

Year	Profit retained and ploughed back	Ploughed back as %age of profits	Dividends
	Rs. lakhs	%	%
1957 ...	22.24	22.2	14
1958 ...	45.08	35.0	15
1959 ...	74.67	35.8	24
1960 ...	104.70	41.9	26

"In actual fact, the dividend figures for 1957 and 1958 should be grossed up to equate with 1959 and 1960 at $\frac{100}{70}$ being the new tax on shareholders, which makes 1957 and 1958 equal to 20 per cent and 21.4 per cent, respectively.

"May I also correct a possible wrong impression regarding the provisions of Section 23A of the Income-tax Act and the dividends declared by the Company. Unilever Limited who, as you know, hold 90 per cent of the share capital of Hindustan Lever Limited are a company in which the public are substantially interested within the meaning of Section 23A. As such, Hindustan Lever Limited do not attract the provisions of that section."

U. CO. BANK

In our review of the working of this Bank during 1960, which appeared on page 626 of *Commerce* dated 8th April 1961, it was stated that profit (before taxation) has gone up from Rs. 60.42 lakhs to Rs. 67.43 lakhs. As the profits have been arrived at after taking into account all the taxes payable by the Bank, the relevant sentence should read: Profit (after taxation) has gone up from Rs. 60.42 lakhs to Rs. 67.43 lakhs.

In our review on the Mafatlal Group Mills appearing in the issue dated 29th April 1961 (page 812), the market value of Standard Mills ordinaries was shown, through oversight, as Rs. 585 *ex-dividend* and *ex-rights*. The correct price is Rs. 1,435, on the basis of which the yield works out to 1.5 per cent net. The error is regretted.

NEWS IN BRIEF

INDIA paid Rs. 24.65 crores in foreign exchange as payment of interest on foreign loans during 1960-61.

Owing to technical difficulties during commissioning, the thermal power generation programme of the Damodar Valley Corporation is behind schedule by about seven months.

The Bill to consolidate and amend the law relating to income-tax and super-tax has been referred to a Select Committee of the Lok Sabha. The Committee is expected to submit its report in the first week after the next session commences.

A World Bank Mission will carry out a detailed survey of vehicular traffic on the Grand Trunk Road and its branch roads from the 3rd to 28th inst. It is being undertaken in connection with the proposed Calcutta-Durgapur Expressway.

The cotton textile mills' production in March 1961 is provisionally placed at 150 million lbs. of cotton yarn and 421 million yards of cotton cloth. At the end of March 1961, the composite mills of the industry held an estimated stock of 132,000 bales (of 1,500 yards each) of unsold cloth and 127,000 bales of cloth sold but not lifted.

It is understood that the State Trading Corporation has finalised arrangements for importing Rs. 2 lakhs worth of watches from the Soviet Union. As these watches will be medium-priced ones, it is likely that the total number to be imported will be about 4,000 watches. The distribution of these will be through normal trade channels.

The total consumption of crude oil in India during the third Plan period will be 13.5 million tons, according to Mr. K. D. Malaviya, Minister for Mines and Oil. Of this quantity, about 1.5 to 2 million tons will be imported. The total refining capacity is estimated to be of the order of 11 million tons, 6 million tons in the private sector and 5 million tons in the public sector.

The National Register Unit of the Council of Scientific and Industrial Research enrolled 12,803 scientific and technical personnel during the year 1960-61, thus bringing the total strength to 63,514. The "live register" maintained by the Council gives the names of 1,200 unemployed scientists and engineers. The strength of the scientists' pool has been raised from 100 to 200.

It is proposed to erect a 48-inch telescope, the biggest in S. E. Asia, at Hyderabad, by the Osmania University, for carrying out geophysical studies. The cost of the erection is estimated at Rs. 18 lakhs, which will be borne by the University Grants Commission. The State Government will assist the University in acquiring the site and laying of road, power and water supply.

The banks in Kerala now under moratorium will be amalgamated with other banks before the middle of June. The Travancore Forward Bank, the Orient Bank and the Bank of New India will be merged with the State Bank of Travancore, the Vynaad Bank with the South Indian Bank of Trichur and the Scasiya Midland Bank and Bank of Kerala Ltd. with the Canara Bank Ltd.

The Union Government has rejected for the present the plea of the Indian Jute Mills Association for a block closure of jute mills, in view of raw jute shortage. The Government's view is that it is too early to make a formal decision in the matter and that the position should be reviewed in the latter half of May when stocks as well as crop prospects can be assessed more precisely.

Steps are being taken to set up two pilot plants to produce edible groundnut cake, one at Bombay and the other at Madras. The equipment for the former is now being received by the mill selected for this purpose. The United Nations International Children's Emergency Fund has offered equipment for the plants costing Rs. 60,000 each. Each mill is expected to produce 3,000 tons of edible groundnut oil cake per annum.

The Industrial Committee on Coal Mining has approved of the scheme for building 100,000 cheap houses by 1965-66. The Coal Mines Labour Welfare Fund is expected to utilise the whole amount of Rs. 6 crores at its disposal for the purpose. If necessary, the existing welfare cess of 49.21 nP on coal and coke will be raised to Re. 1, in order to meet additional funds for construction of more houses.

Pakistan is willing to supply India a substantial quantity of gas either from Sui in Baluchistan or from the yet undeveloped Marl fields, according to the report of the first round of exploratory talks between the delegations of the two countries. India is interested in purchasing a substantial quantity of gas provided it is assured of a long-term supply. The price of the gas will depend on the quantum and period of supply and the points of delivery.

A package programme for groundnut crop, to be implemented as a pilot project during the third Plan period in six major groundnut-growing States in India, has been prepared by the *ad hoc* Committee of the Indian Central Oilseeds Committee. The programme covers an area of 25,000 acres in each State. The Central Committee will sanction a sum of Rs. 2 lakhs for each State towards the cost of operation, staff, equipment, etc.

The heavy soda ash plant of Sahu Chemicals and Fertilisers of Sahupur was inaugurated by Mr. C. B. Gupta, Chief Minister of Uttar Pradesh, on 28th April. The plant produces ammonium chloride and light and heavy soda simultaneously with the use of a process that is claimed to have been adopted for the first time in the world. In the initial stages, it will produce 30,000 tons of heavy soda ash per annum, as against its capacity of 40,000 tons.

A Bill so to amend the Coal Mines (Conservation and Safety) Act as to raise the limit of excise duty on coal from Re. 1. to Rs. 4 per ton was passed by the Lok Sabha this week. The increase in duty is considered necessary to meet the enhanced expenditure on subsidy for the transportation of coal by sea to coastal States in Southern and Western India from May 1961, as well as for the construction of aerial ropeways in the Jharia and Raniganj coalfields.

The Tariff Commission has taken up the question of fixing fair retention prices for iron and steel produced by the Tata Iron and Steel Co., Ltd., and the Indian Iron and Steel Co., Ltd., during 1960-62. The Commission has been asked to include in the proposed retention prices an element for payment of interest and repayment of advances made to the two Companies. The terms of repayment will be settled soon after a decision is taken on the issue.

The Government of W. Bengal will examine the possibility of finding more land for tea plantation in the State to enable the industry to increase production during the third Plan period. There are 333 tea gardens, covering about 600,000 acres of land. About 50 per cent of the gardens are small, having no surplus land. According to the Tea Gardens Advisory Committee, about 60,000 acres of fallow land and forests may be available as surplus.

The continuous merchant mill, the last of the five rolling mills to be provided under the "ISCON" contract to the Durgapur Steel plant, was put into commission on 28th April. This marks the completion of the Durgapur Steel Works, with the exception of the wheel and axle plant which is expected to go into operation in a few months' time. The merchant mill is capable of producing annually 250,000 tons of a wide range of products, including rounds, squares, flats and angles upto 4" x 3".

A sum of Rs. 21 crores has been set aside in the third Plan, in order to help landless labour to settle on the land. This was revealed by Mr. Shriman Narayan, Member of the Planning Commission, in his speech at the first meeting of the Central Advisory Committee on Agricultural Labour held at New Delhi on 29th April. It is proposed to distribute about five million acres of land to 700,000 families of landless labourers in the different States. A sum of Rs. 10 crores is likely to be found for the construction of houses for agricultural labourers.

Out of the eleven cotton mills remaining closed since 1958, only five can be revived and the rest have to be scrapped, according to Mr. Manubhai Shah, Union Minister for Industry. According to him, the financial difficulties of managements, obsolete conditions of machinery and legal proceedings instituted for the winding up of mills do not permit the re-opening of the six mills. Of these, three are in Uttar Pradesh and two each in Madras, Orissa and Rajasthan. The Government is now running 19 mills under Government controlled management.

From Abroad

The World Bank has approved of a 20-year 5¾ per cent loan equivalent to $22 million to the State Railway of Thailand to finance the six-year modernisation programme.

The Ghana and Mali Republics signed on 29th April, a bilateral agreement under which they grant each other the right of civil air operations. The two countries have undertaken not to cut fares in the other country.

At their meeting held at Mexico City, on 27th April, the Latin American coffee producers agreed on a reduction of 20 per cent in export quotas during the period April-June 1961. They have agreed to suppress all price reductions on lower quality coffee for export.

Australia has made its first sale of wheat to Egypt for nine years, with orders aggregating 100,000 tons for shipment upto June next. Until the early 'fifties, Egypt was a substantial buyer of Australian Wheat. About half of its record harvest of 270 million bushels has already been sold.

A double taxation agreement between Pakistan and the U.K. was signed in London on 24th April. The agreement relates to taxes on income and is given retrospective effect in the U.K. with effect from 6th April 1960, the date on which the previous agreement (signed on 10th June 1955) ceased to operate.

The Iraq Government budget for 1961 places the estimates of revenue at £112 million and expenditure at £120 million. The Government's dependence on oil has been reduced by tapping other sources of revenue. The share of oil in the total estimated revenue is £100 million, of which 50 per cent has been allocated to the various development projects.

The "big five" banks of Britain, namely, Barclays, Lloyds, Midland, National Provincial and Westminster, are between them sending 33 members of their staffs to man their stands at the British Trade Fair which opens in Moscow on 19th May. The object is to be of service to British exhibitors and visitors, as well as to explain the various aspects of British banking system to the Russian people.

An Economic and Monetary Council to advise on New Zealand's economy has been established by Mr. Holyoake, Prime Minister of New Zealand. The prime task of the Council is to report on the principal problems affecting costs and internal price stability and provision of finance for expanding agricultural and manufacturing industries. It can also report on any other monetary reforms it thinks desirable.

Krupps of West Germany have decided not to embark on ventures in countries which have no agreement with W. Germany guaranteeing German investments against expropriation. They want that the tax position must be clear and that there should be agreements for avoidance of double taxation. No exports will be made against payment in shares of companies outside Germany. Where important parts of a Krupp export order are manufactured locally in the country of delivery, it may be possible to accept shares in payment for the know-how involved.

The U.K. shipyards have received orders for 61 ships aggregating 131,000 gross tons for the first quarter of the year as compared with 53 ships with 196,000 gross tons in the same period in 1960. Contracts for three ships aggregating 25,000 tons were cancelled. It is stated that orders are at their lowest level for 15 years since the autumn of 1957. The gap between demand and output of British yards is said to have been responsible for a reduction of nearly 4 million tons gross in the industry's order book.

A fortnightly session of the Brussels diplomatic conference of maritime law, organised jointly by the Belgian Government and the International Atomic Energy Agency concluded at Brussels on 29th April. At this conference, 53 countries signed a convention which provides for payment by shipowners upto £1,785 for death or injury to passengers arising from negligence by the Company, its servants or agents. The convention lays down that the fault or neglect of the carrier shall be presumed, unless the contrary is proved, if the death or injury arises from ship wreck, collision, stranding, explosion or fire.

A report on the working and administration of company law in Ghana, together with a draft Companies Bill and an Incorporated Private Partnerships Bill, has just been published. The report was prepared by Prof. L. C. B. Gower of London University. It contains information on one-man companies. According to the report, there is no doctrine of *ultra vires* so far as outsiders are concerned. It provides for compulsory no-par-value shares and ban on non-equity shares. The proposed legislation relating to partnerships is based mainly on the English Act of 1890, but it provides the firm with a corporate personality.

The British Motor Corporation has announced details of a £3.5 million assembly plant at Austin's Longbridge Works. This is only a part of the £49 million expansion programme chalked out by the Company. The Company now produces vehicles at a rate of 750,000 units a year, the full current capacity of the group's factories. Of the 250,000 extra vehicles the expansion programme is designed to produce—making a total of 1 million vehicles a year—about 150,000 will come from the new plant. The plant is expected to be completed in November next and this will raise the capacity of Austin Longbridge Works to 10,500 vehicles a week. It is claimed to be the most advanced assembly building in the world. Handling problems in this plant have been reduced to little more than pressing buttons. There are about 20,000 feet of overhead and floor conveyors in the 960-foot long building.

PERSONAL

MR. D. C. Kothari, Senior Partner of Messrs. Kothari and Sons, Madras, has been nominated a member of the Central Advisory Council of Industries.

Mr. Uma Shankar, General Manager, Bombay Telephones, has been appointed Deputy Director-General, Posts and Telegraph Directorate, New Delhi.

Mr. H. C. Dasappa, M.P., has been appointed Chairman of the Estimates Committee of the Lok Sabha for the next term (1st May 1961 to 30th April 1962).

Mr. J. N. Sen Gupta, Member of the Forward Markets Commission, has been appointed Member of the Tariff Commission. In his place, Mr. Syed Noor has been appointed.

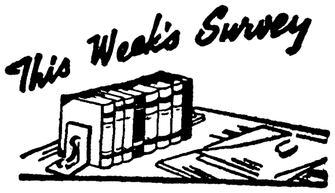
Mr. Sevantilal Maneklal Sheth, Mr. Chandulal Kanji and Mr. Jhamandas Thakurdas Talreja have been elected President, Vice-President and Honorary Secretary, respectively, of the Bombay Sugar Merchants' Association for the current year.

Mr. Dahyabhai V. Patel has been elected President of the Western India Automobile Association, Bombay, for the current year. Mr. Indrakant C. Patel and Mr. Himatlal V. Gandhi have been elected Vice-Presidents.

Mr. N. D. Gulhati, India's chief negotiator in the Indus water talks, has been appointed Chairman of the Commission of Technical Experts on the sharing of Krishna and Godavari waters among the States of Andhra, Mysore and Maharashtra.

Mr. L. Sawhny, Executive Assistant to the Chairman of Tata Industries, Mr. N. A. Palkhivala, an eminent advocate of the Bombay High Court and an authority on taxation and company law, and Mr. J. R. Jenk, Managing Director of Tata AG, have been appointed to the Board of Tata Industries.

Mr. C. A. Pitts, Commercial Director of I.C.I. (India) Private Ltd., has been appointed a Managing Director of the Company. He joined I.C.I. in England in 1938 and came to India in 1940. In addition to his appointment as Managing Director of I.C.I. (India) Private Ltd., he is also Managing Director of the Alkali and Chemical Corporation of India Limited and Chairman of the Board of Governors of the East India Clinic Limited.



AVRO OR LOCKHEED ?

THE Union Ministry of Transport and Communications has been desperately anxious for some time to replace the obsolete Dakotas flown by the Indian Airlines Corporation by a better type of aircraft wherever the Viscount service could not be introduced for practical reasons. It went in for Herons at one time and found, to its sorrow, that they were worse than the Dakotas which they were to have replaced. The Ministry thus had committed a costly mistake, for the Herons had to be sold out at a loss. As if to make up for this mistake, it sponsored a sound proposal received from the renowned Lockheed Corporation of the United States for the establishment of a civilian aircraft factory with a possible export potential and with no foreign exchange commitment to the country. It is presumably this Lockheed project that has been given up recently in view of the opposition from the Planning Commission and the Defence Ministry. The Commission's contention in this connection seems to have been that there is no room for another aircraft factory, besides the Defence Ministry's Kanpur unit for manufacturing Avro-748, and that the comparative technical evaluation report of the Avro and Lockheed projects has led to the conclusion that the Avro is a more suitable aircraft for transport purposes. And the Defence Ministry has been of the view that the Kanpur factory, with an initial production capacity of three planes per month, will be in a position to meet India's requirements of transport planes both for the I.A.F. and the civil airlines. But the Transport Ministry is by no means convinced that the actual performance of the Avro-748 is likely to be better than that of Lockheed aircraft. From the reply of Dr. Subbarayan, Minister of Transport and Communications, in the Lok Sabha and from his Ministry's latest order for five Fokker Friendships to replace as many Dakotas, it is possible to infer that the Ministry is still hoping to be vindicated in its stand and thus be in a position to revive the Lockheed project for consideration. The Minister's statement that "we have to wait patiently for some time" and that there is currently no alternative except to await the performance of the Avro-748 has a significance of its own.

Now the focus of attention should, therefore, be on Kanpur, where the first manufactured model of Avro-748 is scheduled to be ready for flight in the latter half of this year. The British manufacturers believe that, while there might be delay in the completion of flight tests due to unforeseen difficulties, the production of the planes, scheduled for the latter half of 1962, can be adhered to. But the whole thing will depend on whether the model finally obtains the certificate of airworthiness from the British manufacturers. Even if the project ultimately fails in the sense that the plane cannot be produced for use by the I.A.F. and the I.A.C., there will be no financial loss for the Government of India, for the agreement with the British firm provides for its paying to India the entire amount spent by the latter in connection with the project. But any such failure will certainly mean further delay in the development of a civilian aircraft industry in India. The chances are that, in the event of failure of the Avro project, the Lockheed Corporation may be invited to come in and go ahead with its project with greater expedition. It is still too early to say whether the Transport Ministry has lost or the Defence Ministry has won.

UNEMPLOYMENT RELIEF

Agreement in principle is reported to have been reached by the States' Labour Ministers, at an informal meeting held at New Delhi this week, that an unemployment relief fund should be established during the third Plan period. The details of the scheme are yet to be worked out for which a three-man committee, consisting of the Labour Ministers of Maharashtra, Madhya Pradesh and Rajasthan, has been appointed. The exact size of the fund, the manner in which it is to be administered and the nature of the relief to be provided, etc., have not been finalised, but it seems that what the Union Labour Ministry, which mooted the suggestion, has in mind is not unemployment insurance of the kind obtaining in Britain or the U.S. but an entirely different scheme which seeks to prevent unemployment resulting from closure of units by helping them to tide over temporary financial difficulties, by taking over sick units for temporary management and by retraining workers thrown out of employment for alternative occupations.

This form of help to industrial units has necessarily got to be selective, as the size of the fund is limited and also because not all dying units deserve to be rehabilitated. But even this limited form of aid, in the manner proposed, involves industrial management and financing. It is, perhaps, for this reason that it is admitted by the Labour Ministry that the scheme should be administered in co-operation with the Ministry of Commerce and Industry. But, as the latter is already charged with the responsibility of reviving and running industrial units which have closed down, will not the Labour Ministry's move constitute duplication of work? Of course, the funds made available for revival of closed units and helping weak ones could be augmented as unemployment relief or preventive measure. But is there really need for a fund to be administered by a Ministry which has no experience in industrial financing or management?

If, however, the fund were to be utilised for paying cash compensation for the unemployed for a specified period, as is done in Britain or the U.S., these difficulties would not arise. But, in view of the magnitude of the unemployment problem confronting the country, any scheme of cash payment, however modest, would require a much bigger amount than the Rs. 2 crores (is it per annum or just to begin with?) envisaged under the proposed scheme. If, however, the authors of the scheme are thinking of giving relief only to those who are threatened with prospects of unemployment—which is what they seem to have in mind—it would mean adoption of double standards, as, for every one person who is likely to lose his job, there are hundreds who are already unemployed and get no relief whatever from the State. The fact is that since there is no prospect of the unemployment problem being solved in the foreseeable future, let alone during the third Plan period, such relief, if it is to be provided for all, would have to be a continuing one. The enormity of the task is such that it poses a formidable challenge and it is unwise to embark on a scheme without carefully counting its cost and estimating the chances of success.

COFFEE INDUSTRY

Robusta coffee seed is now sold in retail at about Rs. 2.73 per lb. Of this price, the return to growers of coffee is a bare 80 nP and taxation amounts to 31 nP (excise duty 19 nP and sales tax 12 nP), or a total of Re. 1.11. One would want to know how the balance of Re. 1.62 is accounted for. Whatever be the answer, the return to growers is too low to cover adequately enhanced production costs. It is forecast that the coffee growers may receive as little as Re. 1.75 per point for the crop just delivered, as against Rs. 2.50 a few years ago. The price is certainly an uneconomic one and, as Mr. M. M. Appaiya, Chairman of the Coorg Planters' Association, warned when he addressed the annual general meeting of the Association at Mercara last week, if steps are not taken to give a better return to the grower, the decline of the industry is inevitable. The force of this warning would be appreciated fully if it were borne in mind that the coffee growers have no control over either the export prices or internal consumer prices.

Mr. Appaiya was not, however, correct when he remarked that the tax burden on coffee was unduly heavy; "I do not think," he said, "any other commodity is the object of so much tax burden (39 per cent on robustas and 33 per cent on arabica)." For the basis on which he calculated the percentage of taxes is the return received by the growers (Rs. 90 for robustas and Rs. 94.30 for arabica per cwt.), whereas it should actually be the retail prices of coffee. On this basis, the incidence of taxation works out to about 10.4 per cent which is not heavy. Mr. Appaiya would have done better if he had, instead of asking for a reduction in tax burden, presented a stronger case for suitable increase in return to growers. He did, however, plead for some relief in agricultural income-tax, so as to enable the coffee producers to replant the unproductive coffee stands of over fifty years. He urged the Government to consider the question of treating coffee replanting as normal estate expenditure.

The Coffee Board's policy of marketing under bulks was criticised by Mr. Appaiya. Stating that the policy had acted adversely to the demand of Indian coffees, he observed: "The distinctive qualities of some of our coffees that made them so well known were forgotten by the system of bulk sales. The protected markets and the fair prices we have enjoyed in the past few years, coupled with sales in bulk, have tended to dampen the pride we once took in our coffees, and the consequence has been an accent on quantity rather than quality." There is considerable force in this statement and, as this journal itself has stressed time and again, the Coffee Board must reorient its marketing system and it will do well to consider the proposals put forward by the United Planters' Association of South India in this regard.

The Coorg Planters' Association Chairman highlighted another important aspect of the coffee industry, namely, that pertaining to wages. He laid emphasis on the need for tackling the problem of wages in its correct perspective, due consideration being given to the fixation of norms for works. In support of this plea, he alluded to the predominance of small coffee growers and the high employer-employee ratio of 1 : 2 in this group. Out of the 9,600 growers in Coorg, roughly 9,300, we are told, are small growers who together own about 32,000 acres, or over 50 per cent of the total coffee area. Mr. Appaiya contended that, since work on coffee plantations is essentially agricultural in nature, wages to workers on these should have some relation to those paid to workers in other agricultural fields. This suggestion is, however, unworkable for the simple reason that plantations constitute scientific agriculture on a large scale which is supposed to be more profitable than subsistence agriculture and workers employed therein have necessarily to be paid more than the workers engaged in, say, rice fields. These days, no Government will be able to implement a wage policy which is not related to the profits made in the industry concerned. The suggestions of employers, if they are to carry conviction to workers, must be in keeping with the spirit of the times. The remedy for the difficulties of small growers of coffee lies in their getting together and merging themselves into viable economic units.

PROBLEMS OF FOOD PRESERVERS

The adverse conditions under which the food preserving industry is functioning in this country were very elaborately described by Mr. B. B. Sardeshpande, Chairman of the All-India Food Preservers Association, at the eighteenth annual conference of the Association held at Bombay on the 3rd inst. He appealed to Mr. P. K. Sawant, Maharashtra's Minister for Agriculture, who inaugurated the conference, to set an example to other States by extending all possible assistance in the matter of supplies of different standard vegetables, such as tomatoes, peas and beans of cannable varieties. There are, of course, a number of issues raised at the conference, which were clearly beyond the scope of the State Government, and Mr. P. K. Sawant was not slow in directing the organisers of the conference to secure the redress of their grievances from the Central Government. Such, for example, was the demand of the Association for securing sugar at world market prices. Considering that our country has now a surplus of 1.35 million tons of sugar and that the Government is trying to dispose of this quantity by subsidising its exports at world prices, the Association is clearly on firm grounds in asking the Government to grant sugar to the food preserving industry at world prices. As the entire demand of this industry is not likely to exceed 5,000 tons per annum, the plea for subsidised supplies cannot be considered to be unreasonable. The Association has rightly stated that such a concession will enable the country to earn more foreign exchange than what could be secured by the export of sugar as such. The supplies of subsidised sugar to the food preserving industry would also benefit a number of other ancillary industries as, for instance, the container industry, and provide more remunerative employment.

Another grievance which the food preserving industry has to suffer is the heavy ocean freight rate from India. The freight rate on such items from Australia to the U.K. works out to an equivalent of Rs. 65 to Rs. 67 per ton of 40 cubic ft. whereas the corresponding rate from India to the U.K. or European ports is as high as Rs. 130. In order to help export promotion of preserved and canned foods, the Association has further suggested that the Export Directorate should investigate the methods of avoiding inordinate delay in loading and unloading at the ports. This is also a reasonable suggestion and the authorities concerned should take appropriate steps expeditiously to avoid delays in ports.

The food preserving industry, too, has its tax-grievances and the sponsors of the conference did not miss the opportunity to ventilate them, undeterred by the stubborn attitude of the Finance Minister. It would appear from what they said that the Government has taken away by one hand what it has given by the other. Thus, the subsidy of Rs. 500 per ton on tinplate is largely neutralised by the increase in the excise duty on the same by Rs. 200 per ton. Another related grievance is that the subsidy is applicable to tin containers used for fruit and vegetable products only and not for cans used for preserving fish, meat, cereals and lentils. It is not clear why the Government should be so niggardly as to deny this assistance to the packing of these products too. It is a well-known fact that the scope for exporting preserved fish to the U.S. and other developed countries is very good. Incidentally, the Association has made a plea that the subsidy be extended to glass containers also. The Chairman made a pertinent reference to the land ceiling legislation and stated that horticultural lands should not be subjected to such legislation, as it would hamper the progress of this industry.

MR. HUNTER ON TEXTILES

In just one sentence, Mr. E. F. G. Hunter, Chairman of the Binny group of textile mills, impressively summed up the cotton textile situation when he addressed the recent annual meetings of the two Companies. He said: "The artificial limitation on production of cotton textiles by the mill industry, effected by the control of looms and spindles installed, has produced in India's expanding economy the conditions which could lead to an inflationary rise in cotton textile prices, especially as third Plan targets appear now to be outdated, having in mind the provisional figures of the recent census." It does not need any thorough study of economics to prove that the cloth-consuming potential of the country will increase substantially in the coming years, what with the rising population and the improvement in the living standards of the masses. Such an increased potential can be satisfied fully and at a reasonable price only by a suitable expansion in the production capacity of the more efficient, large-scale mill sector. If the authorities fail to recognise this aspect and continue to place an undue reliance on the high-cost, small-scale decentralised sector, the consequences are bound to be very disquieting.

The mill industry must be allowed not only to expand its capacity but also to modernise its equipment and rationalise the methods of production. It is here that the need for adequate tax relief is urgent. Instead of appreciating this need, the Government has imposed a heavier tax burden on the industry. Mr. Hunter was pointed in his criticism of taxation. The fresh imposts on cotton textiles proposed in the 1961 budget, he declared, were unjustifiable and, in the light of the concern expressed by the Government over cotton textile prices, illogical. He considered it particularly unfortunate that the proposals for additional excise duty on cloth and the new excise on yarn had not been framed so as to make their impact and the manner of collection quite clear. He also characterised the excise on automatic loom production as unwarranted. To quote him: "Any form of penalty which does not apply equally to all mills can only be considered discriminatory and this levy is certainly no incentive to progress or to modernisation. The B. & C. Mills, which have a high proportion of automatic looms, have always done their best to earn foreign exchange by exporting. . . . Your Company's exports improved in 1960 and this improvement was against the trend of the country's textile exports. How then can it be said to be equitable, if Government, while encouraging mills to export, on the one hand, dampens their enthusiasm by introducing such an unfair impost?"

The answer to the poser raised by Mr. Hunter is obvious. Besides the unfair impost, the Government announced recently that import entitlements for dyestuffs and chemicals earn under the export promotion scheme could used only upto 65 per cent of their face valu One wonders, as Mr. Hunter does, whether t Government really appreciates the effect some of its decisions on mills that are deavouring to export more and more, especia in the context of growing competition in wo textile trade. The plea of Mr. Hunter for allo ing the mills the exports of which consist tirely of dyed and finished products to util all their import licences for dyestuffs for th own purposes does not seem to be unreasonab particularly in view of the necessity for porting more varieties of cloth the foreign change value of which is high.

LEGISLATION FOR TEXTILE WAG

The Bill introduced in the Rajya Sabha Mr. Abid Ali, Union Deputy Minister Labour, to give statutory effect to the reco mendations of the Cotton Textile Wage Bo has not come as a surprise. For sufficient in cations had been given by the Union Labo Minister, Mr. G. L. Nanda, in the past that, the recommendations of the Board were not cepted by all the mills, except, of course, th exempted for special reasons, the Governm would be forced to bring in legislation to force the award. It is said that, of the 444 t tile mills, 18 have been exempted from award by the Government. Of the remain 426 mills, only 375 have accepted the rec mendations in principle and even they are plementing the award in various stages. T leaves 51 mills, which have either reservati or have completely ignored the award. It is intransigence of these 51 units that has for the Government to have recourse to legislat

For the purpose of enforcing the provisi of the Bill, the industry would be divided i two categories, namely, those establishments Bombay City and Island, Ahmedabad, Calcu Delhi, Madras State, etc. and those in all other areas. The prescribed increase in basic wage of Rs. 8 in the first category Rs. 6 in the second category will have ret pective effect from January 1960. The Bill

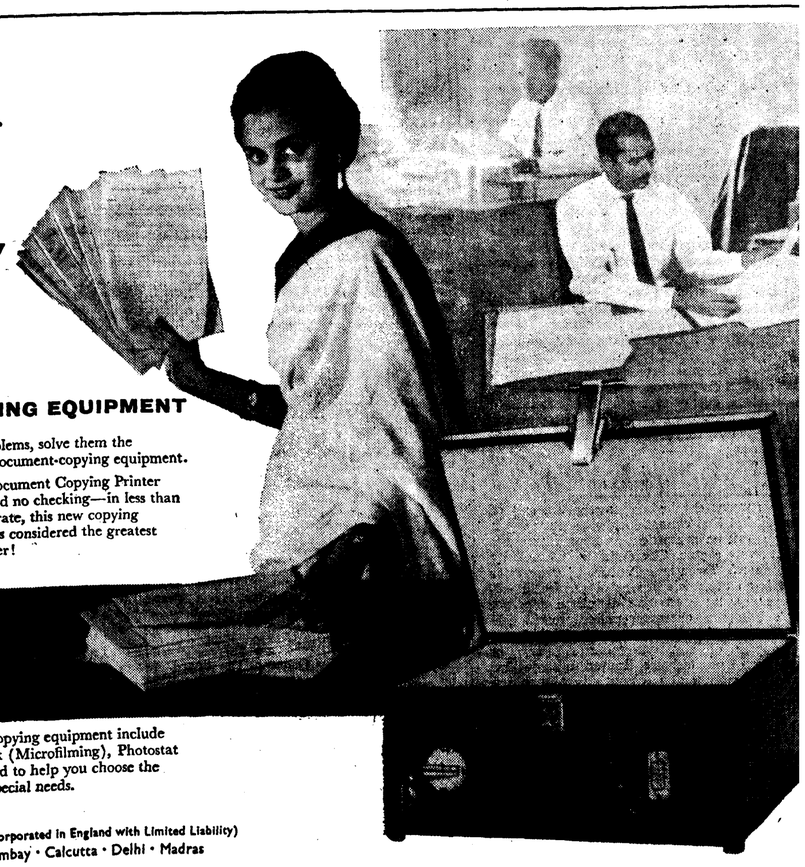
with
Kodak
DOCUMENT-COPYING EQUIPMENT

Whatever your copying problems, solve them the *modern* way—with 'Kodak' document-copying equipment.

For instance, the 'Kodak' Document Copying Printer gives clear copies, which need no checking—in less than two minutes. So easy to operate, this new copying aid—now made in India—is considered the greatest invention since the typewriter!



Other 'Kodak document-copying equipment include Verifax, Duostat, Recordak (Microfilming), Photostat and Statfile. We will be glad to help you choose the right equipment for your special needs.

ON THE ARENA

By The Archer

How Does a Leader Come Into Being?

I HAVE read an answer to this question somewhere, and, though I forget where, yet I remember the answer. A leader is one who finds himself, by design or accident, in the midst of a crowd. The crowd is not static; there is a great deal of activity, and lots of pushing and elbowing. Invariably, it divides itself into two sections, the right wing and the left wing, but there is a perpetual onward march. The right wing moves towards the left and the left towards the right. Some of those in front move from one wing to another until the apex gets thinner. Finally, one man emerges alone in front and at the head of both wings; he turns back and halts the jostling. There is a lull in the pushing, for everyone behind is tired; and, seeing one person at the helm, all are ready to believe that he is the leader, and are prepared to listen to him. And that, in short, is the way most leaders in democratic societies have discovered themselves.

Why then should there be any large-scale excitement about a deputy leader? The simplest way to bring into existence a deputy leader would be for the leader to look into the crowd, pick out one whom he likes or fancies or has confidence in, and say, "Hey, mister, you there in the second row, third on the right from the centre, please come over and be my deputy," and, of course, everyone is bound to shout 'Jai', or should, by all the laws of averages, crowd psychology, democratic discipline, etc. The whole thing is so simple that I cannot understand what all the excitement was for in Delhi during the last one week. Or, have I been indulging in oversimplification? If so, it is only in assuming that the leader chooses his deputy and his team, not the entire body that has gathered. The leader always chooses the individuals to constitute his team, so why have a different procedure for choosing the second-in-command? Anyway, the whole *tamasha* is over. The 'election' of a deputy leader has been postponed, or, as the announcement goes, the P.M. has been authorised to take such action as he thinks fit, including postponement of the election.

A man who has an ulcerated stomach spends all his thought on his stomach. Similarly, a society, with a sick and aching election complex, is for ever preoccupied with thoughts of contests. I confess, of course, that my aversion to the rough and tumble of electioneering is fifty years old, and began when I was defeated in a contest for the monitorship of my class. I was foolish enough to base my candidature on the fact that I was considered to be the best pupil in the class and had won the first prize; but I was a tiny little fellow, and my opponent a big bully with many pounds of brawn. Even my class teacher was unable to help me win, and so I had to slink away with my tail between my legs. Since then, I have begun to believe that, while there was no such thing as peaceful co-existence in electioneering contests, the greatest impairment to the health of large numbers of people took place during such contests, out of worry to the candidates and fear to the electors. The less we have of them the better for peace on earth and goodwill towards men.

There Must Be a Way Out

Government employees may be the salt of the earth, but that cannot justify the imposition of income-tax on gratuities paid to employees in the private sector. The definition of gratuity in Chambers's Twentieth Century Dictionary is that it is an acknowledgment of service, usually pecuniary; but even this definition does not bring out its real character under present conditions. In a majority of cases, it is a lump-sum payment of, say, one month's salary for every year of past service, limited to a specified number of years, and is essentially alimentary, a wherewithal to arrange for some provision for the remaining years of an employee's life after superannuation. In most instances, it helps the employee to purchase a house or buy an annuity, for he has no pension to depend upon, and rarely gets another job. It is, indeed, cruel to take away a sizable chunk out of such a payment towards income-tax and utterly illogical to treat as 'income' what is basically a capital payment offered as benefit for long years of service. In Britain, the income-tax law does exempt gratuity from tax, but, in India, it does not, and the reason, it is stated in some quarters, is that there is a suspicion that such exemption might enable employers to practise tax evasion through collusion with employees. I have no knowledge as to how such collusion can take place in an organised manner over a wide area, but, in any event, I feel that, even so, the way to stop such evasion is not by penalising every beneficiary. The Finance Minister is reported to have stated that the exemption granted to gratuity paid by Government is part of its revised pension system, and that, if the gratuity scheme in the private sector conforms to this pattern, the grant of exemption will be considered. This, indeed, is the correct answer to the problem; the *non possumus* approach of denying the benefit because of the possibility of collusion is, I repeat, cruel. As in the case of provident funds, Government should formulate rules for recognition (by the Commissioners of Income-tax) of gratuity payments, and *insist* on employers conforming to them, so that the benefit is passed on fully to the beneficiary. Gratuities paid in accordance with statutory provisions or under the awards of labour tribunals would seem to be fully protected and are either exempt from income-tax or the tax is payable by the employers. But those paid outside these awards, as, for instance, to the supervisory staff of scheduled banks (other than the State Bank of India) are not. A bank official drawing a monthly salary of Rs. 1,000 and paying an annual tax of about Rs. 740 on his salary, will, if he receives a gratuity of fifteen months' salary on retirement, have to pay a tax of about Rs. 2,200 that year on his total income, and a loss of Rs. 1,460 from a gratuity of Rs. 15,000 is, indeed, something that will cause a pang, apart from the fact that the gratuity itself will hardly fill the gap (in his budget) between his monthly earning of Rs. 1,000 (while in service) and nothing after retirement for, perhaps, a little more than two years even under the adoption of the most austere standards of living. In this context, it will be of interest to note that the Taxation Enquiry Commission of 1953-54 (Vol. 2, page 143, para 34) has recorded the following view:

"It must be recognised that restriction of relief to these two forms of savings, namely, insurance and provident funds, gives a certain degree of stimulus to investment in Government securities and other comparatively less risky forms of investment, and correspondingly restricts the scope for risk-bearing equity investments. Theoretically, there is a case for including other forms of savings within the relief; if all forms of savings could be included, we shall have found a way by which income-tax is converted into what in effect would become a pure spending tax. The problem would be to find forms of savings or to work out administrative procedures which prevent liability to abuse of any wider extension of the relief."

The question is on the anvil now, and I hope that the Select Committee which is concerned with the comprehensive codification of the Income-tax Law will find a way to protect gratuity payments from the imposition of tax. In the meantime, Government may consider the alternative of waiving income-tax on all gratuity payments, provided they are directly invested in Government of India 15-year annuity certificates; this would be within the ambit of the suggestion made by the Taxation Enquiry Commission referred to above.

Advances to Industries—Revised Re-thinking

As New Delhi sees it *today*—may be, it will change its mind again—banks should play a major role in the matter of making industry finance. In other words, banks are expected to curb long-term and medium-term loan accommodation to industrial enterprises and confine themselves to their historical role of providing short-term accommodation for working capital. The position is, of course, very perplexing, because the Reserve Bank has, during the past three or four years, been giving positive encouragement to commercial banks to enter the field of medium-term advances (and, of course, there is a tendency for the dividing line between medium-term and long-term getting thin, and sometimes obliterated after the advances are made), and, it would seem (as hearsay reports go) that, in closed conferences and discussions, the Reserve Bank authorities have been waving away the "historical role" concept propounded by the orthodox gentry of the banking world as being chicken-hearted and entirely unsuited to the dynamics of current Indian economic development. The creation of the Refinance Corporation and introduction of the guarantee scheme of advances to small-scale industries lead one to the inevitable interpretation that the Reserve Bank has not been of the Finance Ministry's new way of thinking in this matter in the recent past. Monetary stringency has created problems for the banking system, and the absence of liquidity in the block advances made to industry is accentuating them. There is an anxiety complex all round, especially because industries do not seem to be very willing to reduce their debt-equity ratio. The cat that has lapped up the milk will always prowl round the kitchen.

The Reserve Bank might—I don't know if it will—ask the scheduled banks to bring down their advances, but, as I have stated on an earlier occasion, lending moneys is easy, losing deposits is also easy but recovering moneys is the most difficult thing during a period of accelerated industrial activity. It was not without substance that Harold Bateman published, almost thirty-five years ago, one of his most scintillating cartoons, under the caption "The man who paid off his overdraft," featuring a jaunty and immaculately dressed city businessman, who had fully repaid the advances he had obtained from his bank, walking out of the bank manager's room with a broad smile and a cigar in his mouth, respectfully seen out by the manager himself, and cheered by all the employees craning their necks over the counter, for, was he not a phenomenon worthy of the greatest adulation? Seasoned bankers know by years of personal experience that it is folly to give the go-by to the orthodox tenets of commercial banking; it produces (a) biological discomfort in banks through delayed peristalsis and imbalances in the metabolism of industries, and (b) increases the cholesterol content both in the tissues and blood stream of industries. (Sorry—I should not be using these mixed metaphors.)

It is difficult to get a break-up of the statistics of bank advances into short-term and medium-term, but I reckon that they are likely to be somewhat disturbing. With a persistent demand for finance for various purposes, there is a recurring tendency for moneys getting gradually sluiced into non-flexible ventures, so that more and more people, besides banks, get tied up into knots. That is why most banks are finding it beyond their resources to accommodate their constituents fully even for their working capital needs.

Adherence to the orthodox tenets of commercial banking is as important for banks as adherence to chastity in civilised human society. Once a slight transgression is permitted or encouraged, discretion becomes a casualty and the desire to live dangerously asserts itself. But, of course, I am assuming that chastity is a virtue!

Notice

THE BENGAL FLOUR MILLS COMPANY LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the above-named Company that the Annual General Meeting (being the one hundred and twenty-seventh Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 31, Netaji Subhas Road, Calcutta, on Friday, 19th May, 1961, at noon, to consider the Accounts of the Company for the year ended 31st December, 1960, and to transact other ordinary business.

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 8th May 1961 to 19th May 1961, both days inclusive.

By Order of the Board,

BALMER LAWRIE & CO., LTD.,
D. MANSON,
Secretary,
Managing Agents.

31, NETAJI SUBHAS ROAD,
CALCUTTA, *21st April*, 1961.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

DELHI LETTER

INDIA'S OIL POLICY ELUCIDATED

MR. MALAVIYA IS LOGICAL, BUT NOT PRACTICAL

(From Our Special Correspondent)

NEW DELHI, *2nd May*

MR. K. D. Malaviya, Minister for Mines and Oil, embarked on an elaborate defence of the Government's oil policy in the Rajya Sabha last week which was curious in some ways. He had been less explicit on some of the matters he now mentioned, when, quite recently, he replied to the debate in the Lok Sabha on the demands for grants of his Ministry; since then, reports have appeared in the Indian Press to the effect that one of Mr. B. K. Nehru's tasks in New Delhi was to apprise the Government of the prejudice created abroad by India's oil policy and the impression which persists that India has been rejecting offers of substantial private investment in this field because of the desire to restrict all development to the public sector. Possibly such reports inspired Mr. Bhupesh Gupta's charge that senior officers were trying to influence adversely the implementation of the Government's policy; Mr. Malaviya gallantly came to their rescue, pleading that senior officers have sometimes to discharge duties which become onerous and complicated and "when they make a particular type of effort to make a success of their schemes, it should never be misconstrued to mean that they are trying to influence in an adverse way the implementation of our policy."

Mr. Black's Bluntness

While no one knows what kind of brief Mr. B. K. Nehru carried back on this particular matter to the Washington meeting of the Aid-India Club on 25th May, Mr. Eugene Black's address to the U. N. Economic and Social Council (on 24th April) gives some indication of the reactions of even close and sympathetic friends of India to the rigidities of Indian policy. Mr. Black was deliberately blunt on this occasion and observed that population growth was threatening to nullify all efforts to raise living standards and went so far as to say that "we may have to abandon for this generation our hopes of economic progress in the crowded lands of Asia and the Middle East." While international agencies could not do much in this field, Mr. Black said that Governments could act—though he did not amplify how. His purpose, however, was to warn that population growth increased the penalties for breaking the rules for successful economic development and to underline the fact that capital was short and had to be stretched as far as it could possibly go. The test of any economic policy in an underdeveloped country was whether it prompted maximum economic growth and, if it did not, he declared that "we must look very closely at any doctrines which are put forward to excuse this sacrifice of economic advancement."

A significant aspect of Mr. Black's speech is the complete absence of any of the usual references to the adequacy of the capital outflow from the advanced countries or of better trade with the underdeveloped.

He took it for granted that the industrialised countries have shown willingness to help and stressed that, while all the evidence pointed to a greater flow of aid in the coming years, there was a limit to the funds that capital exporting countries were willing to provide. Thus, there appears to be a shift of emphasis at the higher levels from more aid and grant of easier terms to better use of available capital. In regard to Germany, which is often criticised for being too niggardly in its measures for assistance, Mr. Black spoke in generous terms, referring to that country as the largest provider of funds for the World Bank.

The crucial portion of his address, however, was the stern warning to the developing countries. "They cannot afford," he said, "to waste scarce resources by putting prestige ahead of real need, by ignoring hard economic calculations, by *refusing to accept productive capital while they debate for years the respective roles of public and private enterprise.*" (Italics ours—ED.)

The Context

The reference in this part of the speech to Indian economic policy is too obvious to be missed and in no other field of development has it become more controversial and important as in oil though it is valid to a lesser extent in coal. In regard to the latter, the World Bank has already made it clear that it will give aid only to private coal companies. No similar occasion has arisen in regard to aid for oil projects as such, but, when overall economic aid in several forms has to be discussed, the question whether all the available resources of a country are being utilised becomes relevant and whatever be the Government of India's case on this matter, it has not been able to convince outside observers—who are by no means unsympathetic to its plans—that the best use has been made of the resources to which India has access.

Mr. Malaviya's defence of the Government's policy has to be viewed in this context. At several places, it is ambiguous and often lacks the coherence and precision of language needed for an official policy statement, but the main purport of it was that Standard-Vacuum had originally obtained permission for establishing a 0.92-million-ton refinery but had later expanded its capacity to 1.94 million tons and that Burmah-Shell had similarly expanded from its original proposed capacity of 1.5 million tons to 2.8 million tons. In both cases, Government had consciously permitted them to double the capacity because of the need for their products and this, according to him, disproves the charge of ideological bias laid against the Government—which he described as "an incorrect and a cruel criticism."

Economic Question

The motive for such criticism, according to the Minister, was the fear of the oil companies about the growth of two sectors in a manner which may eventually compel them to reduce their cost and their working. He, therefore, promptly proceeded to affirm that the Government was quite reasonable and would not grudge them the profits they make "out of their own toil and out of their own capital," so long as they left the Government alone to mine, refine and distribute the oil discovered in the country. In his characteristic style, Mr. Malaviya declared that it was "a purely cent per cent economic question for us to have refineries of our own if we produce our own oil." His overwhelming desire seemed to be to avoid forcing Indian crude oil on the foreign companies when they could get their own crude very cheap from their own sources. Was there a suggestion here that Indian crude will be costly by comparison? One cannot say, but, if it was really so, the costs of public sector refining and distribution should be extraordinarily cheap if the competition with the private oil companies should be such as to embarrass the latter and create apprehensions about the profitability of their own operations, as Mr. Malaviya suggested.

The substance of Mr. Malaviya's thesis was that, for an estimated consumption of 13 million tons at the end of the third Plan, two million tons will comprise products which will have to be imported and that the private sector refineries and present plans for public sector units (at Nunmati, Barauni and Gujarat) will suffice to meet the rest of the demand. Over and above this, he was in no hurry; he was willing to contemplate the rise in population and prosperity taking consumption to higher levels, but quite unwilling to mortgage the future of the public sector by giving away refining capacity in advance. At this stage, the Minister appeared a model of prudence and circumspection, refusing to plan prematurely or incur unnecessary capital expenditure ("merely because there is some money readily available just now!") and only too conscious of the transitional stage of our oil industry to make the mistake of losing the initiative of the public sector. Solemnly refuting the charge that there was any doctrinaire or ideological approach, Mr. Malaviya affirmed that, nevertheless, there were certain ideas and ideologies behind the perspective for the development of the oil industry within the framework of the Government's initiative, control, management, operations and ownership, which is envisaged in the Industrial Policy Resolution.

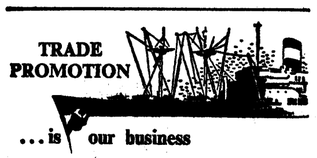
No Obstinacy?

It is obviously difficult to say whether all this will "remove the impression which might have been created in very high circles in important sections that there is obstinacy." Mr. Malaviya wants to have it both ways; on the one hand, the Industrial Policy Resolution is regarded as imperative, dictating the course of action so far adopted which he, as a member of the Government, cannot modify; on the other, the Minister claims that he is always prepared to take a liberal view, to make "small repairable dents in this policy" against the background of realities, in order to make a success of planning.

The public in this country which has no means of knowing what actually was offered by the oil companies and rejected by the Government, may consider this an example of sweet reasonableness and find it quite acceptable if the many little internal inconsistencies can be ignored. It is unlikely that even abroad amongst the aid-giving nations there would be any inclination to say more on the subject which may give the impression of special pleading for the private sector here or interference with our domestic economic policy. But Mr. Eugene Black's unusual bluntness is a portent; out of his long experience in providing aid for developing countries, he recently developed the theory that the diplomacy of aid consists in illuminating choices open to national leaders and leaving the latter to opt for the most feasible courses of action. There was no suggestion of "strings" of any kind, nor is there any now; but one choice which has been brightly illuminated by his recent outspoken warning is that the object of inducing industrial nations to part with more and more capital for aid may be insufficiently achieved if there is no willingness to use it in the most efficient ways. Being logical about the Industrial Policy Resolution—assuming Mr. Malaviya is that—may not be enough.

A petro-chemical complex is likely to develop in due course around Nunmati (Gauhati) and Barauni based on the refinery gases from the public sector refineries being built at these two places. About 25,000 tons of refinery gas will be available annually at Nunmati and 70,000 to 75,000 tons at Barauni. The figures relate to a refinery capacity of 750,000 tons and two million tons per annum, respectively. A number of proposals for the utilisation of these gases for petro-chemical industries are in the preliminary stages of formulation. These have yet to crystallise into firm demands for refinery gas. In the intervening period, it is proposed to utilise a part of the gas to produce 20,000 tons of liquid petroleum gas at Barauni for use as domestic fuel and for sale to industrial consumers. This quantity can be increased up to 60,000 tons per annum. A new proposal to set up a smaller L.P.G. plant at Nunmati is also under consideration. The balance of refinery gas not converted into liquid petroleum gas will be used for power generation and for fuel purposes in the two refineries until such time as there is a demand for it commercially.

The Committee on Improvement of Agricultural Statistics, set up at the conference of Directors of Land Records and Agricultural Statistics in September 1960, held its first meeting at New Delhi on 28th and 29th April 1961. The Committee revised the land record forms of the Punjab, Delhi and Himachal Pradesh which will serve as models for other States. The revised forms are expected to help in collecting more agricultural statistics of a more useful quality. It also discussed the question of recording the extent of areas under mixed crops in the northern and western States of the country. In his speech at the meeting, the Chairman of the Committee, Dr. R. N. Poduval, said that land record forms should provide for the collection of all basic agricultural statistics and that uniform concepts and definitions should be adopted so as to achieve inter-State comparability. Dr. Poduval added that the Committee would continuously examine the progress made in the revision of land record forms and the improvements to be effected in the quality and content of agricultural statistics.



Australia, New Zealand, and Fiji offer opportunities to exporters and importers and the International Division of the Bank of New South Wales can help those interested.

The Bank's complete banking service includes such specialized facilities as trade and industrial enquiries, economic and trade information, and a complete travel service. The Bank, through more than 1,000 branches and agencies, is closely and constantly in touch with industry, business, and agriculture in the areas it serves.

ENSURING WORLD MONETARY STABILITY

MR. JACOBSSON CALLS FOR CLOSER CO-OPERATION

ADDRESSING the Economic and Social Council of the United Nations two weeks ago, Mr. Per Jacobsson, the versatile Managing Director of the International Monetary Fund, comprehensively reviewed the external payments problems of the member-nations and dealt at length with the steps which the Fund was taking for achieving international monetary stability. At the outset, Mr. Jacobsson pertinently referred to the overall economic developments in the world in 1960. He informed the Council that, in spite of continued difficulties and problems for some countries and areas, industrial production for the world as a whole was 6 per cent higher in 1960 than in the previous year and world economy had another year of substantial growth. It was in the industrial countries in Western Europe and in Japan that the increase in production was most marked. An average increase of nearly 20 per cent in the imports of these countries, brought about an increase in world trade by no less than 10 per cent. Describing the effect of this development on primary producing countries, Mr. Jacobsson said that the rise in world demand had meant an increase in their exports by some 6 per cent, which proved for many of those countries of considerable help in securing higher receipts in their balance of payments, even though the general level of raw material prices tended to decline slightly during the year. But, on the whole, the important characteristic of last year, according to Mr. Jacobsson, was that the pronounced boom conditions in a great many countries was not accompanied by any increase in the general price levels on world markets for both primary products and manufactured goods. This feature had borne out Mr. Jacobsson's earlier prediction that the era of world-wide inflation would soon be a thing of the past. The Managing Director of the I.M.F. then referred to the peculiar conditions in Canada and the U.S.A., the two countries which have been passing through a period of adjustment clearly connected with the halt in inflationary price increases in the expectation of more stable prices. In Canada, the special problem was the continuing reduction in the volume of business investment from the levels attained in 1957. In regard to the U.S., Mr. Jacobsson averred that the recent adjustment had led to only a slackening of activity rather that a sharp setback in business. He saw a distinct improvement in "the basic position of the balance of payments" of the U.S. Thus, merchandise imports fell slightly but exports rose from $16.2 billion in 1959 to $19.4 billion in 1960 and there was an export surplus of $4.7 billion. It was, however, the movements on capital account—movements of short-term funds and private long-term capital investments abroad—which caused an overall deficit of $3.8 billion. He went on to add:

"It should be remembered, however, that when domestic capital flows out, foreign assets are acquired, and there is also the possibility of a return flow. It is too early to tell whether any substantial amount of short-term funds has yet returned to the United States, but for the last three months the strain on the dollar has been much diminished. This has, I think, helped people to form a more realistic opinion about the intrinsic strength of the dollar, particularly when they bear in mind that, even after the recent reductions, the gold stock of the United States still amounts to $17.5 billion and is nearly as large as the combined gold holdings of all the other member-countries of the Fund. Even with the magnitude of existing short-term dollar liabilities, this is a very strong position."

Improved Liquidity Position

Turning to the industrial countries other than the U.S., Mr. Jacobsson observed that the remarkable expansion in their volume of production over the last decade had by and large been accompanied by an impressive improvement in their liquidity position, helped as it had been by the outflow of gold and dollars from the U.S. over recent years. The result was that the reserves of these other industrial countries were some two and a half times as large as they were in 1950. A number of them had, therefore, felt that their balance of payments position was sufficiently strong to make possible the formal acceptance of the obligations of convertibility for their currencies envisaged in the Articles of Agreement of the Fund. In February this year, nine countries in Europe together with Peru and Saudi Arabia had accepted the convertibility obligations of Article VIII, which requires them to avoid restrictions on current payments, multiple exchange rates and discriminatory currency practices. And, what was more important, if they ever again wished to resort to such measures, they would have to consult the Fund and obtain its prior approval. Mr. Jacobsson informed the Council that in all twenty-one member-countries were currently subject to the provisions of Article VIII.

Less Developed Nations

Referring to the non-industrial countries of the world, Mr. Jacobsson stated that a few had been able to increase their international reserves in 1960. But, in many cases, the reserves were not clearly adequate, particularly in the light of the expansion in the foreign trade of these countries. Nevertheless, his advice to them was as follows:

"Even if their primary objective is to direct resources towards investment for the further development of their economies, many of them would probably be wise if they could strengthen their reserves, for, by doing that, they would increase their creditworthiness, and thereby attract more resources from abroad on a continuous basis. At the same time, they would then have a more adequate cushion against fluctuations in the prices of their main export products."

The speaker further informed the Council that, as a result of the difficult reserve position of a number of the less developed countries, they had requested assistance from the Fund, so that, during 1960, the entire drawing of $280 million was made by only the less developed countries. In contrast, several of the industrialised countries actually made advance repayments to the Fund. Thus, the drawings made by France and the United Kingdom in the year 1956-58 were fully repaid to the Fund in 1960. In all, repayments amounting to $650 million in 1960, exceeded the drawings by almost $400 million and this resulted in strengthening the liquidity position of the Fund itself.

The Managing Director then gave a long account as to how this improved liquidity position of the Fund had enabled it to enter into stand-by arrangements with as many as seventeen countries, under which the countries concerned were to be given liberal assistance in meeting their balance of payments difficulties.

Need for Co-operation

Welcoming the emergence of many new States in the world, Mr. Jacobsson observed that there were two seemingly opposite tendencies in the world: one was the political fragmentation caused by the establishment of many new independent States and the other was economic integration by the formation of trading areas in Europe and in Latin America. Stressing the paramount need for monetary co-operation in these circumstances, he emphatically observed:

"Undoubtedly, countries wish to regulate their own affairs with all the rights and powers inherent in independence, but, at the same time, they are fully aware of the fact that, in this complex and shrinking world they must co-operate with each other in many fields, including the monetary and financial fields. The acceptance of currency convertibility has not in any way diminished the need for monetary co-operation. One may even say that it has had precisely the opposite effect. As a result of currency convertibility, national economies are much more closely inter-related, and changes in prices, monetary conditions, and other economic developments in any one country react more quickly on others. It is clear that no single country can determine the price levels on world markets. The efforts of the monetary authorities to prevent any marked tendencies to either inflation or deflation will thus be heavily influenced by developments abroad. The monetary authorities in the various countries must, therefore, if and when the need arises, be prepared to agree upon the main lines of policy required to achieve reasonable stability of prices."

Elaborating the need for international monetary co-operation, the Managing Director of the Fund explained that, as a result of the greater convertibility of currencies and the widespread relaxation of exchange controls, the opportunities for movements of funds from one country to another had substantially increased—for instance, to take advantage of interest rate differential. There was clear evidence that there had been appreciable movements of commercial bank balances and of funds held by large international companies. Recent example of such movements occurred in the wake of the revaluations of the German mark and the Dutch guilder. Though these revaluations were intended to help establish equilibrium in the world payments position, the rumours about further exchange rate revaluations led to substantial movements of hot money. Counter measures had been taken through the co-operation of Central banks and he had no doubt that it was the determined policy of the countries-concerned to strengthen the exchange rate structure at present rates.

Present System Superior

With his flair for economic history, Mr. Jacobsson made an interesting comparison of the present situation with that thirty years ago, as will be seen from the following extract from his speech:

"At the end of 1960, central banks and governments, other than those of the Soviet bloc, held reserves amounting to nearly $60 billion, of which $38 billion was in gold, $10½ billion in dollars, the equivalent of $7 billion in sterling and some $4 billion in various other currencies. In addition to the consideration that interest can be earned on holdings of foreign exchange, the countries that hold part of their reserves in that form find it useful and convenient to do so partly because the two main reserve currencies are also the two main trading currencies of the world. The system under which most countries hold their reserves partly in gold and partly in reserve currencies is the present-day version of 'the gold exchange standard.' This was the system which, as you know, was built up in the decade after the First World War, but the difficulties then confronting the world, and the lack of international co-operation, led to the breakdown of the system. While it may be an open question whether any monetary system could have passed unscathed through the events of those years, there are, I think, two specific reasons why the system broke down. In the first place, the exchange reserves of many of the European countries had been acquired by large-scale short-term borrowing in the 1920's. Once the crisis set in, these short-term loans were not renewed and the reserves melted away. Today, on the other hand, countries have by and large earned their exchange reserves from current international transactions. The second weakness of the system of the 1920's was the absence of any international agency standing behind the national reserves. The Fund now holds that position, and the enlargement in the Fund's resources of currencies and gold by the equivalent of $5 billion, as a result of the increases in quotas in 1959 and 1960, is therefore of particular importance. Thanks to the added resources available in the Fund, which now total the equivalent of almost $15 billion, the present gold exchange standard has a strength that was lacking in its predecessor of thirty years ago."

I.M.F.'s Financial Assistance

Explaining the wide scope of the financial assistance given by the Fund and the need for flexibility in its operations, Mr. Jacobsson observed as follows:

"All members, large and small, have access to the Fund's resources under adequate safeguards, and I would like to point out, as I did in my statement at the annual meeting of the Board of Governors last September, that assistance by the Fund is given for a variety of reasons, and should not be regarded as available merely in emergencies. The authorities in a number of countries, such as Australia, the United Kingdom, and the United States, have also made it clear that they share this understanding and that they count on their country's drawing rights in the Fund as part of their effective reserves, and that they would not hesitate if necessary to make use of these rights.

"The international monetary system can never be a rigid system with fixed and permanent arrangements. It must be such that it can develop with the varying growth of the individual national economies and with the evolution of their financial and monetary needs and potentialities. Accordingly, the tasks and methods of operation of the International Monetary Fund should not be fixed, but must be responsive to the changing needs and conditions of its members. When the Fund began its operations in 1946, most currencies were still subject to the strict exchange controls set up during the war, and trade was still largely carried on through a network of bilateral trade and payments arrangements. Today trade and payments restrictions and discriminations have generally been removed and nearly all international trade takes place on a multilateral basis, with the more important currencies convertible under the Fund Agreement. As the situation has developed, the Fund has been reviewing its activities and adjusting its practices, so that it will be able to meet more adequately the needs of its members in this new world of freer trade and convertible currencies."

Changes in Drawings

The speaker then referred to the change in currencies which have been drawn from the Fund. For the first ten years of its life, the Fund was primarily an agency from which member-countries drew U.S. dollars and made repayments in dollars or gold. But, in view of the new tendency towards free convertibility of a number of currencies, it was appropriate for drawings to be made in the currencies of countries with a strong payments and reserve position. Mr. Jacobsson reported that much progress was taking place along these lines and that, in 1960, almost one half of all drawings were in currencies other than U.S. dollar.

Mr. Jacobsson told the Council that with greater freedom for movement of funds, attention had been focussed on the extent to which the Fund can finance adverse balances of payments on more than current account. As some of the provisions of the Fund, in particular Article VI, Section 1, did not prevent the use of the Fund's resources for capital transactions of reasonable amount required for the expansion of exports, etc., the Fund was currently engaged in examining the legal and policy aspects of these provisions. Another important matter which was engaging the attention of the Fund was the method by which the Fund's resources could be supplemented. Mr. Jacobsson was of the view that the Fund should be sparing in the use of its gold for this purpose, particularly because the gold holdings should be treated as a reserve to be used only in situations in which no suitable alternative was available. The most appropriate method to supplement the Fund's resources, according to him, was the conclusion of a network of stand-by arrangements with the main industrial countries under which the Fund would be able to use increased amounts of their currencies, whenever the need for such use arose.

Assistance to Poor Countries

Mr. Jacobsson concluded his long speech to the Economic and Social Council by reverting to the financial assistance extended by the Fund to the less developed countries and observed:

"The Fund's particular concern in the less developed, as in other, countries is to assist them to have a healthy balance of external payments and to maintain monetary stability at home. But the value to a country of the Fund's work is not limited to what the Fund does in its direct relations with that country. It is well to remember that the earning possibilities of the primary producing countries depend, as we have seen, very much on the general state of world trade, as influenced largely by business conditions in the leading industrial countries. Therefore, the Fund's efforts to promote international monetary co-operation, to facilitate the expansion and balanced growth of world trade, to promote exchange stability and to pursue its other purposes are in the interest of all its members. Despite the many problems that remain to be solved, great improvements have been made in the world's economic and financial structure, and with the help and understanding of member countries, there should be real opportunities for consolidation and further advance."

It will thus be seen from the aforesaid quotation that there is very little that the Fund can do to solve the balance of payments problems of developing countries such as India. Its contribution to their progress can only be indirect.

CONSTIPATION AND PILES

Habitual constipation can cause piles or hæmorrhoids, a condition where the veins within and immediately outside the rectum become swollen. Because of the pain it becomes more difficult and distressing to evacuate the bowel. The constipation gets worse and so do the piles with painful fissures. It follows that, if the acute pain and discomfort caused by the piles can be relieved, evacuation of the bowels will be made easier. Hadensa does just that. It brings prompt relief from pain and itching. With its continuous use, the piles shrink and complete relief is obtained. Hadensa, the well-known German pile remedy, contains no narcotics. It is nonstaining and is easy to use. A small plastic cannula with instruction for use is supplied in each package. If piles is your problem, Hadensa is the answer. Try Hadensa today. Now manufactured in India.

DZ-952

VYSYA BANK LIMITED

A substantial expansion in deposits and advances, a sharp rise in income by way of interest, discount, commission and exchange and almost a doubling of the profit are the main highlights of the results of the Vysya Bank Limited (Chairman: Mr. Y. S. Gopalakrishna Setty, Bangalore) for the year ended 31st December 1960. Contrary to the general trend of deposits for banks as a whole during 1960, the deposits of the Vysya Bank have gone up from Rs. 184.88 lakhs in 1959 to Rs. 200.97 lakhs in the year under review. Thanks to the pressure of demand for bank accommodation from trade and industry, advances also have registered a marked expansion from Rs. 106 lakhs to Rs. 135 lakhs—representing an increase of more than 30 per cent. This has taken up its credit ratio (ratio of advances to deposits) from 57.3 per cent in 1959 to 67.1 per cent.

The expansion in advances is clearly reflected in the growth of income from interest and discount, as well as from commission and exchange—the former has gone up from Rs. 9.10 lakhs in 1959 to Rs. 13.72 lakhs and the latter from Rs. 1.46 lakhs to Rs. 2.12 lakhs. But as the interest paid has increased substantially from Rs. 5.45 lakhs to Rs. 8.59 lakhs and the other expenditure from Rs. 4.45 lakhs to Rs. 5.73 lakhs, the profit (before taxation) has increased only moderately by Rs. 64,000 to Rs. 2.29 lakhs.

The Directors have provided Rs. 98,000 for taxation (Rs. 75,000 in 1959) and have transferred Rs. 82,000 to reserves (Rs. 42,500 in 1959). After these allocations, a sum of Rs. 47,517 is proposed to be distributed to ordinary shareholders, for paying a nominal dividend of 4 per cent, subject to tax, giving a net return of only 2.8 per cent per annum.

The Bank's paid-up capital at Rs. 11.88 lakhs is supplemented by reserves of Rs. 4 lakhs. Its investments have increased from Rs. 50.07 lakhs in 1959 to Rs. 73.77 lakhs. With cash at Rs. 31.53 lakhs the liquidity ratio (the ratio of investment plus cash to deposits) works out to 54.7 per cent, which is quite above the normal standards.

The total amount of loans for industrial development in the private sector granted by the Industrial Finance Corporation has crossed the Rs. 100-crore mark.

LONDON LETTER

THE ECONOMIC REGULATOR

POLL TAX MAY NOT BE SUPPORTED

From Our Own Correspondent

LONDON, *28th April*

MR. Selwyn Lloyd, when he presented his first budget last week, obviously intended to go down in history as the Chancellor of the Exchequer who both set the economy free and put reins on it to keep it in check if necessary. He was bent on breaking away from tradition, abandoning the principles which had guided Chancellors of the Exchequer for the past 50 years of taxing where the weight could best be borne. Then, despairing of the ordinary financial controls and determined not to accept the Socialist view of the need for physical controls, he has invented brand new controls to give elasticity to Government policy.

Relief To Big Incomes

His first step regarding taxation was entirely logical. If one operates a capitalist economy which is dominated primarily by the profit motive, then it is crazy to expect that economy to work if you take away most of the profit. The West Germans have appreciated that point and have made their system of taxation regressive above certain income levels, so that relatively the more a man earns the less tax he will pay. This is social anathema, but, in terms of productive incentive, it works. Mr. Lloyd proposes to give Britain a similar incentive by cutting down the rate of surtax paid by the higher income earners—the entrepreneurs, managers, etc. The effect has been dramatically described in terms of the salary paid to the Director of Imperial Chemical Industries, who was recently appointed as chairman of the British Transport Commission, with a mandate to put the British Railways on a paying basis. This gentleman's salary was £24,000 a year, of which, of course, he only keeps about a quarter; but, under the new arrangements, he would keep as much if his gross salary were to be slashed in half.

Tax on Industry

The City was generally overjoyed by this unexpected bonus on high earnings, but took less kindly to Mr. Lloyd's proposal to finance it out of the profits of industry by increasing profits tax. This is a contradictory proposal by the Chancellor, if, while appealing for more investment, he cuts away at the funds which are normally used for investment by businesses themselves. On this matter, he has no friends.

Having set the British economy free to operate more actively under the personal profit motive, Mr. Lloyd then introduced his new economy regulators. The Chancellor has made it very clear that he wants to cut down personal consumption (except, perhaps, the personal consumption of the highest income earners) and he is not content to wait from one Budget to the next before applying tax changes to this end. He recognises also that the economy and personal spending might need a stimulus at times. He has thus taken powers, entirely novel in British fiscal history, to be able to alter the rates of purchase tax and excise duty as he sees fit (though within certain limits) without going to Parliament. Thus, he hopes that, by pushing up the duties on tobacco, spirits and the wide range of domestic articles which are subject to purchase tax, he would cut down personal spending and nip inflation in the bud.

Whether the limitation on his powers would, in practice make his action effective enough is another matter. It is, indeed doubtful whether this sort of interference with consumer purchasing power would have much immediate effect; that is to say, on the basis of limited increases. It is a sort of weapon which might act, if it could be applied drastically enough, but, then, it becomes so unpopular that Governments hesitate to use it.

Poll Tax

His second regulator is the poll tax. This was born of the Government's irritation when the motor industry, finding its business dropping drastically, nevertheless held on to its labour force (by cutting down the number of days' work), instead of letting men go out to other industries which remained short of labour and where the labour could have made a better contribution to Britain's capital goods and export industries. So Mr. Lloyd proposes to tax pay-rolls. Even his friends have been quick to point out that this could work in quite the wrong way from the way he would like—a firm faced with a sudden tax on its wage bill might react by getting rid of its married women and old men employees none of whom could easily fit into the alternative industries, while still holding on to its vital workers—just the ones who are needed elsewhere. The general impression at this date after the Budget is that the proposal is still-born.

* * * *

LONDON, *29th April*

ALGERIA AND UNITED EUROPE

With the Budget excitement over, the City of London became obsessed with international factors. The stock markets bobbed about like puppets responding to the strings of the Cuban and Algerian fiascos. The Cuban affair is an American concern and, while it has weakened American prestige on this side of the Atlantic, it is of no significance in intra-European affairs. Very different has been the effect of the Algerian revolt, the last stages of which are still being played out.

Your Correspondent was in France at the time the revolt took place and was struck to observe two things, the second of which is now beginning to have its long-term damaging effect. The first was, of course, the obvious military insecurity of metropolitan France as wide open to an invasion by its own overseas armies as was ever the ancient Roman Empire. The second was the division of French opinion on policy towards Algiers, a division going right through into the peasant classes where the idea of *Algerie Francaise* is as strong as ever. This division, coupled with the military coup, has made people on this side of the Channel feel, once again, that France is an unreliable political partner.

U.K. and Common Market

For so long the British Government has been trying to edge its way into the Common Market with the figure of de Gaulle barring the way. France was the strong man of Europe in the political sense as Germany was in the economic sense, and de Gaulle had to be cajoled into accepting Britain as a European partner. Suddenly, the figure of de Gaulle has trembled. France has been shown as a divided country, a country in which the army can shake the Government, and a country wedded to old-fashioned ideas of colonial dominance.

It is true that the diehards have lost and enlightened France has won, but the question here is—How strong is this enlightened France, after all? This is not a question which the British Government itself is raising, but it is one which is agitating many of its supporters.

Nevertheless, in a talk this week to the foreign Press, the Chancellor of the Exchequer continues to insist that British policy aims still to find a basis for negotiations between the European Economic Community and the European Free Trade Association. "Co-operation," said the Chancellor, "is essential in our modern world. This is an essential element now in our economic thinking and action. So, if I am to sum up Britain's economic aims in 1961, I must say that they are, first, to maintain the strength of the pound sterling; secondly, to increase the competitiveness of the British economy; and, thirdly, to further the fullest co-operation in the international institutions that will help to keep world trade expanding and will promote world development."

But the Chancellor is no longer Foreign Secretary and it remains to be seen whether, in the impending Anglo-French talks, Britain's desire for union is still as strong or whether, while still desiring union, the Government will make no further concessions to France as the price. But whether Britain's union with Europe comes sooner or later, co-operation in the Chancellor's sense is here to stay. Tariffs are coming down, quotas and currency restrictions are dead and international money rates are to be aligned. These practical processes cannot, fortunately, be shaken even by the vagaries of political temper.—*All Rights Reserved.*

COTTON GROWING IN CAUVERY DELTA

BENEFITS OF A SUMMER CROP

By M. S. Sivaraman

ADVISER, PLANNING COMMISSION, NEW DELHI

[One of the chief aims of the third Five-year Plan is fuller utilisation of manpower resources. A successful approach to this problem, described in this article, may be of topical interest and, if properly implemented, it can add Rs. 30 crores to the annual income of the cultivators of the Cauvery delta. Possibilities of summer cropping of cotton or groundnut exist in parts of many States, if local problems are solved through local efforts.—Ed.]

OVER 1,800 years ago, the early Chola kings constructed an anicut across the Coleroon at the head of the Cauvery delta for diverting the waters of the river to irrigate the tract now comprised in Tanjore district. Since then this area has grown paddy from year to year between July and January. From February to July there is very little of cultivation except for green manure crops and catch crops of greengram or blackgram which are harvested by April. Where the soil is light, summer groundnut is grown in parts of Pattukottai division with splash irrigation from temporary wells: and sugarcane occupies a very small part of the cultivated area.

The net area irrigated by the Cauvery in Tanjore district is 12 lakh acres and paddy is cropped on 14 lakh acres every year. The problem of utilising land that lies fallow during the summer months and keeping farm labour busy in the off-agricultural season had defied solution for centuries, for there is very little water in the rivers and canals after February. During summer, the stiff clayey soils crack badly forming wide fissures as a result of intense heat and even drought-resistant crops grown as green manure like wild indigo sometimes suffer from want of moisture. Attempts were made in the Agricultural Research Station, Aduturai, to fit in an occasionally irrigated cash crop like cotton after the harvest of paddy and though the experiments conducted between 1934 to 1939 showed that Cambodia cotton could be grown during the fallow period, no further progress was made because cotton remained on the land from February till the end of September and the yield obtained was about 500 lbs. of seed cotton which was not sufficiently attractive. The prolonged duration of cotton led to considerable delay in transplantation of the paddy crop that followed which made it susceptible to attacks of pests and diseases in November, which a more mature crop could have resisted.

However, the vast potentialities of changing the agricultural picture of the delta by keeping the farmers and their womenfolk busy with cotton cultivation and picking during the summer months attracted my attention when I was Collector of Tanjore district in 1942. The question of growing cotton in the paddy fallows was therefore revived by me when I was Director of Agriculture in Madras State in 1947. Many problems and difficulties cropped up and the matter was pursued in great detail until practical solutions were found for all these. By 1954 it was shown that even small cultivators in a major part of the Cauvery delta could take to the cultivation of cotton as a profitable off-seasonal crop and at the same time improve the yields of paddy even when two crops of paddy are grown on the same land from July to January.

Major Problem

The first major problem was to find a type of cotton which could be raised in January-February and harvested by July when the field has to be got ready for the first crop of paddy. The long duration Cambodia varieties tried earlier were obviously unsuitable and though strains of early maturing Cambodia cotton had been evolved by 1947-48, even the shortest duration types remained too long in the field and interfered with the timely cultivation of paddy. I therefore suggested varietal trial of other short duration cottons at the Research Stations at Aduturai and Pattukottai. It was soon found that among those that were tried, Punjab-American cotton 216-F with a staple length of about 15/16" could be harvested before the middle of July, provided the crop was established in the field sufficiently early. The yield obtained was over 1,000 lbs. of seed cotton per acre and this was very encouraging.

In the beginning attempts made to bring the soil of paddy fields to a proper condition of tilth before the cotton was sown delayed the sowing: for the stiff paddy soil remains wet for a long time and when ploughed in the moist state, thick clods are formed which can be broken only at considerable expense. This difficulty was got over by dibbling the cotton seeds without ploughing the land or removing the paddy stubbles. In about a week after the harvest of paddy the top soil is in a sufficiently dry state for dibbling the seeds by gently pressing them with the finger into the soil. To facilitate sowing in lines strings are stretched across the field 2 ft. apart and two or three seeds are sown per hole along the strings, the distance between holes being 9 inches. A month later when the field is nearly dry, weeding is done, the stubbles are removed and one plant alone is retained in each hole. Ammonium sulphate is used as fertiliser at the rate of about 1 cwt. per acre and the crop is then irrigated. The crop requires occasional irrigation depending upon weather conditions and it is possible to obtain acre yields of over 1,000 lbs. of *kapas* and get a net income of Rs. 300 to Rs. 400 per acre.

By 1951 it was definitely established that cotton could be grown profitably in the interval between the harvest of the second crop of paddy and the transplantation of the first crop provided facility for occasional irrigation is available: but even where such facility exists the average cultivator will not raise cotton until it is actually proved that the cultivation of this crop will not affect the yield of paddy. Experiments were therefore carried out in Aduturai and Pattukottai and these showed that the cultivation of cotton provided about 10,000 lbs. of green manure per acre for the next paddy crop and helped to open up the deep clay soil. In the result, there was a slight increase in the yield of the succeeding paddy crops.

Irrigation

The problem of providing irrigation in the summer months still remained to be solved and this proved to be the most difficult: for water is not then available for irrigation in large areas. There are not many wells in the fields and most of the existing wells in village sites yield brackish water. The output of water in the field wells is limited as the rate of recuperation in the stiff clayey soils is poor and the construction of wells is beyond the capacity of the average cultivator as the sides have to be protected by a steening of bricks throughout the entire depth of the well. There are two such open wells in the Aduturai Research Station which yield on pumping 30,000 gallons of water in two hours. The wells are about 25 ft. deep and though there are borings in the wells 140 ft. deep which help to increase the supply, it takes five hours for the water to get back to the old level in the well. Any large-scale development of cotton in the off season would naturally depend upon the availability of assured irrigation and on the face of it the problem appeared to be insuperable.

Tube-wells

At my instance an experimental tube-well going down to 60 ft. was installed in the Aduturai Station and this gave a continuous supply of 4,000 gallons of water on pumping. But after some days the soil near the lower end of the tube caved in and water-supply stopped completely. This experience was depressing. It was at this time that I happened to visit the private farm of an enterprising farmer, Mr. K. S. Vengu Chettiar, of Mayuram, a few miles away from Aduturai. This farm, situated in a light sandy tract not far from the Cauvery, produced extensive crops of vegetables in the summer. Mr. Chettiar had installed a tube-well 6 inches in diameter going down to about 30 ft. and was able to pump 20,000 gallons an hour continuously. It occurred to me at once that the answer to the problem I had in mind was to tap the first supersaturated aquefer. In a delta, soil formation consists of varying depths of clay, alluvium, fine sand, coarse sand, etc. and our aim should be not to go below the first deep layer of coarse sand—a layer which is bound to get replenished every year during the irrigation season. Mr. Vengu Chettiar could get perennial supply of water, because the aquefer which he tapped got replenished without any lowering of the level of sub-soil water.

After the experience of the collapse of the Aduturai tube-well, caution had to be exercised by not keeping the lower end of the tube-well open. A filter at this end embedded in coarse sand could prevent caving in of the soil. A filter point was therefore immediately obtained from Calcutta and this consisted of 6 ft. of pipe 4" in diameter with ½" to ¾" diameter holes drilled about 1" to 1½" apart along 5 ft. length of the pipe. This was covered over by brass wire mesh and protected by perforated brass sheet. The filter was installed at the Aduturai Research Station at a depth of about 35 ft. in about 10 ft. natural layer of coarse sand and water was pumped with a 5 h.p. electric pump. The result was truly amazing. A constant flow of 12,000 gallons of water per hour was obtained and this remained unabated even when the pump was worked for 24 hours without stop. Two filter points of 4" diameter were soon installed at close distances and connected by a T-piece. Pumped with a 7 h.p. motor this gave a discharge of 20,000 gallons of perennial supply. Never before was such a plentiful supply of water obtained from underground in the stiff clays of Aduturai!

The filter point shallow tube-well was the real solution to the problem of summer irrigation in the absence of which the fertile lands in the Cauvery delta would lie fallow for five months. An average tube-well could irrigate not less than 10 acres of summer cotton. A scheme was thereupon placed before the Government for experimental sinking of 100 filter point tube-wells in different parts of the delta. This was sanctioned in December 1951 and, before the end of March 1952, 102 tube-wells were sunk and this roused great enthusiasm among many cultivators. There was no element of subsidy in this scheme and the entire charges of installation, cost of the pipe and filter point worked out to about Rs. 400 to Rs. 500: the cost of the engine and pump ranged from Rs. 1,500 to Rs. 2,000 and cultivators were given the necessary loan repayable in five annual instalments.

Scheme Extended

In 1952 the filterpoint scheme was extended to the deltas of the Godavari and the Kistna and other important rivers. The success in the Northern deltas was immediate and spectacular. In particular, the filterpoints proved to be a great boon to the Kistna ryots for starting sugarcane cultivation in February-March when there is usually no water in the canals. A prominent ryot of East Godavari enthusiastically described the new device for tapping the water of the Godavari stored underground as the beginning of an era of great significance to the Godavari cultivators even as Sir Arthur Cotton's anicut across the river helped to utilise the surface water for the first time, hundred of years ago.

In order to extend filterpoints more rapidly, the method of installation was simplified by the use of improvised equipment which could be operated by unskilled *mazdoors* after two or three days of training. It took only a day or at the most two days to install a filterpoint and have it tested for satisfactory performance. By 1954-55, the cost of the filter was also brought down, on my suggestion, by the use of coir. The coir filter, which could be made by the village blacksmith, consists of four pieces of iron flats riveted to two pipe rings of 3" to 4" diameter and coir is wound over it. It was found that the coir filter helped to obtain 15 to 25 per cent more water and the cost of the filter was Rs. 15, as against about Rs. 80 for a brass filter. Coir lasts longer, whereas brass gets corroded in some places where the underground soil is even very slightly saline or alkaline. As most cultivators could not afford to go in for power-driven pumps, an inexpensive plunger pump costing about Rs. 200 was devised on my suggestion and this could be operated by a pair of bullocks going round in a circle. One of these bullock-driven pumps was installed in Aduturai to serve as demonstration and the discharge obtained was 2,500 gallons an hour, and this was more than what could be got from a *mhote*.

In the first flush of enthusiasm, the cultivation of cotton extended to over 1,000 acres within two years but the farmers found it difficult to market the cotton. A co-operative cotton ginning and marketing society was organised in 1954 at Aduturai so that cultivators of that area could get their cotton ginned and obtain competitive prices. But soon there was a serious setback and very few were willing to

TEXTILE WORKERS' EARNINGS RISE

MILLOWNERS REITERATE PLEA FOR LIMITING IMPORTS

From Our Special Correspondent

MANCHESTER, *25th April*

MANCHESTER LETTER

RETURNS issued by the Ministry of Labour covering average earnings of workers in the British industry have been published at half-yearly intervals for many years, providing comparisons between conditions ruling each six months. The direct relationship of these figures, however, was broken in the April 1960 survey when the basis was altered due to changes in category and the omission of the average wage obtained by all workers in each particular section. Now that the October levels have been calculated, however, it is possible to regain some comparison with the previous half-year. Details not only of industry as a whole, but of various branches of textiles, are shown below:

	Men (over 21)	Youths (under 21)	Women (over 18)	Girls (under 18)
	s. d.	s. d.	s. d.	s. d.
Man-made fibre output:				
April, 1960	284 0	133 9	144 8	100 0
October, 1960	295 0	138 6	146 1	101 6
Spinning and doubling:				
April, 1960	236 9	126 8	146 8	109 0
October, 1960	238 2	135 4	148 3	114 4
Weaving:				
April, 1960	247 11	120 2	154 4	101 2
October, 1960	255 7	128 4	158 0	105 6
Hosiery and knitwear:				
April, 1960	297 9	125 1	146 5	98 0
October, 1960	318 7	136 8	154 4	107 9
Narrow fabrics:				
April, 1960	247 6	117 8	132 10	98 4
October, 1960	249 8	120 2	135 10	108 4
Made-up textiles:				
April, 1960	230 6	110 4	114 5	88 4
October, 1960	239 11	119 5	124 10	90 1
Textile finishing:				
April, 1960	250 11	127 6	130 6	98 7
October, 1960	261 1	134 9	136 11	101 0
All textiles:				
April, 1960	258 6	124 8	148 3	100 1
October, 1960	266 4	131 7	148 0	106 5
All industries:				
April, 1960	282 1	123 1	145 0	93 1
October, 1960	290 8	130 0	148 4	98 10

The upward spiral in earnings cannot be ignored, particularly in view of subsequent economic developments. The survey itself covers approximately seven million employees, most of whom are in manufacturing industries. Textiles at the time were passing through a flourishing phase, when the mills were working flat out to cope with an exuberant demand, and it is scarcely surprising that the figures indicate a substantial rise in earnings, despite the fact that an official wage advance had been conceded earlier in the year. The main features remain generally undisturbed; men in such occupations as spinning and doubling, and even textile finishing, receive considerably less than the average in all industries, but especially in weaving the rates secured by women workers are in excess of the national average.

Incentive for Youngsters

The attractiveness of wage rates for juveniles in several textile sectors is also a point which can well be taken up by those engaged in recruitment of labour. Girls in spinning, doubling and weaving, for example, are taking home substantially larger pay-packets than the general level of workers. As compared with the April returns, some reduction occurred in the number of hours being worked in spinning mills six months later. The October average was 47.3 hours for men, as against 48.3 in April, although the average for women was practically unchanged at 41.8 hours.

In the weaving section, the latest returns show men operating looms for 54.7 hours, as against 45.9 hours six months previously; in the case of women, the figure was again very slightly lower at 41.7 hours. In the textile finishing branch, the average hours worked by men was reduced from 51 to 50.5 during the six months.

Closures Still To Come?

A Lancashire textile leader has warned that "more and more" firms in the doubling section of the cotton industry will have to close their doors unless speedy action is taken to limit imports of low-priced yarns from abroad into Britain. Mr. Fred Bottomley, Chairman of the Yarn Doublers' Association, speaking at the annual meeting, said that the doubling section had been hardest-hit by these imports. For many firms, it was not simply a question of having to suffer some modest but irritating reduction of profits but of finding their livelihood and that of their workers in jeopardy.

"Some observers outside the industry may perhaps have come to the conclusion that members of the cotton industry have developed an obsessional neurosis about imports," said Mr. Bottomley and added: "The spectator at a boxing match, however, never feels the effects of the punches; similarly, observers outside the textile industry do not appreciate the effect of the blows received by the industry as a result of virtually unrestricted imports."

Fixing Limits

The opinion that definite limits should be imposed on the arrival of all types of foreign cotton goods, whether from Commonwealth countries or other sources, is certainly gaining ground. Among several trade spokesmen who have recently made this point is Mr. Geoffrey Livsey, Chairman of Mutual Mills, Heywood, who has warned shareholders of the serious position now arising. "Most of the countries concerned prohibit, or at least restrict, the amount of textiles which can enter their own markets," he says. "It is now vital that our own Government should take similar action, especially when dumping can be conclusively proved."

Allayed to the fears of keener competition is the fact that to maintain supremacy in any department means spending a lot of money these days. Mr. Livsey mentions the large number of costly experiments and sampling necessary prior to marketing, which is particularly apparent in the newer synthetics. Each fibre has its own individual properties in the finished cloth, as regards washability, strength, abrasion, handle, etc. The exceptionally high cost of experimentation is, as he says, disturbing, but equally very essential if rivals are to be outmanoeuvred.

Shorter Hours and Output

The hard facts of economic life are now showing themselves in the returns issued covering production and employment. Absenteeism due to illness is a regular complication for producers in the early months of the year and the February figures reflected this unfortunate seasonal trend. Output of single yarn was almost 1,000,000 lbs. weekly below the comparable rate in 1960, when, of course, the "big push" was going on to meet the extensive demand before the final mill closures at the end of March.

Another factor which is bound to show up more clearly in the months ahead is the full impact of the shorter working week. February was the first month in which this development was wholly apparent, as the system was introduced in mid-January. Cloth production was even more severely affected, being 2,440,000 yards weekly below the February 1960 level.

After the build-up of labour which occurred in the second half of last year, the most recent figures are frankly disappointing. In February a fall of 630 occurred and manpower is now nearly 1,500 below the point reached at the end of November.—*All Rights Reserved.*

(*Concluded from previous page*)

invest on improvement of land for providing extra irrigation facilities in view of the uncertainty created by the then impending land legislation. Now that the position has become clearer and the rights of landlords and tenants have been codified and the size of future holdings is also fixed, a fresh start has to be made to enthuse the cultivators for growing cotton in summer. The profit from cotton cultivation in the first year itself would exceed the total investment on irrigation and this should be sufficient incentive to make rapid progress. When fully developed the Cauvery delta alone can produce over 600,000 bales of long-staple cotton every year worth about Rs. 60 crores.

Other Benefits

The local production of large quantities of cotton seeds will provide the cattle which are now ill-fed with nutritive feed. Extensive provision of summer irrigation will help to start the paddy nursery early in the season without depending on supplies from the river. Paddy can then be transplanted with the commencement of irrigation in the channels and this in itself will result in higher yields. Early cropping leads to early harvest and early start of the second crop of paddy which can thus escape serious damage from pests in November. There can be no doubt at all that the agricultural prosperity of the Cauvery delta is closely linked with the proper exploitation of the waters of the river stored underground. Now that a way has been shown, the follow up can not be difficult and this consummation will be a complete fulfilment of the dream of the ancient Cholas to use the Cauvery to enrich the delta.

REPORT OF THE AUDITORS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by law have been kept by the Bank so far as appears from our examination of the records in London and proper returns adequate for the purposes of our audit have been received from the branches in India, none of which has been visited by us. We have examined the foregoing Balance Sheet and Profit and Loss Account which are in agreement with the said records and returns. In our opinion and to the best of our information and according to the explanations given to us the said accounts are properly drawn up so as to disclose the state of the Bank's affairs in India as at 31st December 1960 and the profit of the branches for the year ended that date on the basis required by the provisions of the Companies Act 1956 (India) and the Banks Companies Act 1949 (India) as amended up to 19th September 1960.

AMERICAN LETTER

PRESIDENT KENNEDY MAKES A MESS OF CUBAN AFFAIR

MANY SOFT SPOTS IN ECONOMY

From Our Special Correspondent

NEW YORK, *28th April*

THE United States got a bad beating in Cuba which had almost immediate business repercussions. President Kennedy's first major international political fiasco was not helped in any way by the statement of former President Eisenhower, whom Mr. Kennedy had invited for luncheon, advice and consultation. They spent one hour and 25 minutes together. Knowing Mr. Eisenhower as I do, to me, it was a devastating remark for Mr. Eisenhower to say, as a parting remark, to the Press: "I say, I am all in favour of the United States supporting the man who has the responsibility for our foreign affairs."

How far the United States actually went in supporting anti-Castro factions is unknown. All evidence points to the fact that anti-Castro forces have been given camps and training facilities in the U.S. and in some Latin Republics and that the U.S. Central Intelligence Agency has been involved in these activities.

Rightly or wrongly this has given the U.S. a black eye, particularly after the blistering attacks by Washington spokesmen in answer to attacks by Havana. There was no doubt left that there was no love lost between the two Governments. The Cuban affair, it is felt, could lead to a major world explosion.

How Mr. Kennedy will and can extricate himself from this situation is difficult to predict. The British lean towards the view of sealing off Cuba through the United Nations.

Events are moving quite rapidly. After a promising spring upturn in many lines, the Cuban fiasco has put dampers on the economy. The prevailing uncertainty has elevated one word in the U.S. vocabulary. You hear it *ad nauseam*, "retrenchment," instead of expansion.

"We shall wait a while and see what happens." This is the usual answer now to any proposals which are being made. First quarter dividends have also been poorer than expected. Despite that, the stock market has put up a remarkably good performance.

The decline in business so far is somewhat below the level a year ago. But the drop is spotty. The Government has pronounced more than 100 "disaster areas" in the major category and an equal number of "minor disaster areas." The criterion is that 6 per cent of the labour force is out of work.

The civil war in France over Algeria has not helped matters here business-wise, nor is the situation in Laos, where, through adroit manœuvring, the Chinese and Russians have now almost control of that country's key points. These and other events have affected the commodity markets here, naturally.

There has been some improvement in durable goods, excluding automobiles. The first increase in five months occurred in February. The primary factor in the increase was the large Government defence contracts for aircraft and instruments, rather than private business.

Consumer income dropped, owing to smaller labour pay-rolls. Other income and dividends also fell. About half of the drop was in manufacturing, followed by construction. Consumer income declined gradually, despite the fact that retail sales rose in terms of dollars because of higher prices.

Unemployment continues as a matter of concern in the United States, although there has been some recent improvement. Much figures showed 65.5 million people gainfully employed, against 64.6 million in the preceding month and 64.3 million 12 months previously.

The respective unemployment figures were 5.5 million in March, about 5.7 million in February and 4.2 million in March, 1960. There are two major angles to this picture. It is a combination of lay-offs, owing to reduced markets in some lines and a steady increase in the labour force.

The combination of the two, in addition to other factors, such as automation, had led to the declaration of the so-called major and minor disaster areas. Lurking in the background, too, are politics. A state of emergency, real or unreal, makes it so much easier to get spending appropriations passed and signed by the President. Senators and Congressmen from those areas can point with pride how they have helped their constituencies which makes it easier to get re-elected the next time.

Manufacturers' inventories are still quite low, but the national and international uncertainties have brought about caution and no real optimism outside of the glorious future of their respective industries, painted by chairmen in their annual reports to stockholders.

Car loadings have improved, but the financial condition of the railroads is still deplorable, particularly of those in the eastern part of the U.S. At the moment, freight car loadings are better than in the most recent past, but they are considerably below those of a year ago.

The continued outflow of gold since 1957 has now brought U.S. gold stocks slightly below the total of all foreign government and private liabilities. The 1960 deficit in the U.S. balance of international payments was about $3,800 million.

AUDITORS' REPORT TO THE SHAREHOLDERS

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion, proper books of account have been kept by the Company as required by Law so far as appears from our examination of those books.

We have examined the Balance Sheet of Mercantile Bank (Agency) Private Limited, as at 31st December, 1960, and the above Profit and Loss Account for the year ended on that date which are in agreement with the books of account. In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required, and the Balance Sheet gives a true and fair view of the state of the Company's affairs as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the results for the year ended on that date.

REPORT OF THE BOARD OF DIRECTORS FOR THE YEAR ENDED 31st DECEMBER, 1960

GENERAL

As shown by the Balance Sheet as at 31st December, 1960, the Company's Authorised Capital of Rs. 10 lakhs has been fully issued out of which Rs. 5,00,500 has been paid up and is held on Deposit account with Mercantile Bank Ltd., Calcutta.

As in previous years, the year under review shows no profit or loss as the transactions of the Company are incorporated with those of the Parent Company, Mercantile Bank Ltd.

DIRECTORATE

Mr. Basil Gill retires this year from the Board by rotation but being eligible offers himself for re-election.

AUDITORS

Messrs. Lovelock & Lewes retire and being eligible offers themselves for re-appointment as Auditors for the ensuing year.

For the Board of Directors,

Dated the *4th January*, 1961.

INDIA'S COTTON TEXTILE EXPORTS

PROSPECTS NOT PROMISING

By Sripati Ranganadha

THE target for exports of cotton textiles proposed and conceded at the Buxton Conference in 1952 was 1,000 million yards a year. This estimation being reasonable and within the means of probability, the Planning Commission also recognised the need for attaining this goal. The main justification for such a large export is to earn foreign exchange. The second Five-year Plan envisaged an average annual earning of Rs. 750 million foreign exchange through textiles during the period. The total value of foreign exchange exports of cotton piecegoods and other textiles earned in 1959 was Rs. 633.49 million. Mr. Lal Bahadur Shastri recently pointed out at the conference of the Indian Society of Advertisers that the success of India's Plans depends more upon exports than anything else that augment our foreign exchange resources. Besides the national urgency to earn foreign exchange, Mr. Shastri maintained that the export promotion itself was "a highly rewarding and fascinating adventure." In view of this importance, let us analyse the present potentialities and future possibilities of foreign markets for our textile industry.

At present, there are more than 70 international markets that are thrown open to our cotton textiles ranging from the coarsest sheetings and furnishings to the finest voiles, poplins and suitings. Only 15 countries import a sizable volume of India's cotton textiles. In 1959, 86.23 per cent of the entire cotton piecegoods exports (814.60 million yds.) was absorbed by these 15 countries. The following table shows the principal export markets and their intake of Indian cotton piecegoods in 1959:

Rank	*Destination*	*Million yards*
1.	United Kingdom	166.54
2.	Sudan	149.62
3.	British East Africa	64.77
4.	Australia	49.06
5.	Burma	37.63
6.	Malaya and Singapore	37.61
7.	Aden	36.14
8.	U.S.A.	31.64
9.	Ethiopia	23.47
10.	British West Africa	23.26
11.	Afghanistan	20.72
12.	Canada	18.63
13.	Persian Gulf Ports	16.49
14.	Saudi Arabia	14.90
15.	Ceylon	11.98
	Total	702.46

As for the future possibilities, there are two adverse factors that stand in bold relief. They are: foreign competition and establishment of cotton mills in almost all countries. Every country knows the importance of textile industry to its economy, as it is a highly profitable one. Accordingly, countries that want to strengthen their economic development, obviously think of this industry as one of the foremost enterprises which they could establish and expand either in centralised or decentralised form. Pakistan, Ceylon, Burma, Indonesia and even Thailand are examples of the latter type. With the underdeveloped countries bent on self advancement, there is every likelihood of their taking to this industry increasingly. In the light of this consideration, there is no point in entertaining hopes of vast expansion in cotton textile exports.

Possibility Limited

It must be recognised that development of foreign markets is governed very often by political and other similar considerations rather than the comparative cost facilities. In fact, it does not matter "what India desires but what the foreign buyer will buy for economic reasons of price, etc." If one bears this idea in mind, one will find that the possibility of exploring new markets for this industry seems to be rather limited.

There are at present, four principal textile producing countries in the world, namely, the U.S., U.K., Japan and India. These countries have to share the major part of the world market. We should not, however, overlook the potentialities of Soviet Russia and her satellite countries. It is conceivable, due to unforeseen amicable international relations in some other future date, the U.S.S.R., Czechoslovakia and Hungary may spring up as exporters of, and competitors in, cotton textiles. Similarly, the People's Republic of China might also emerge as our competitor, if its slogan "twenty years compressed into one day" turns out to be a reality.

Countries such as Latin America, Africa and S.E. Asia are potentially large consumers of cotton textiles. For reasons of geopolitics, South America would prefer to import cotton piecegoods from the U.S., the U.K. and Europe rather than from India. S. America being closer to the U.S. and having been under the latter's influence for a long time, her interests and currencies are closely associated with the U.S. as compared with India. Similarly, most of the countries of S.E. Asia and parts of Africa having been once under the European impact, their interests naturally have been looked after by the latter. The countries economically dependent upon the U.S. may have the possibility of buying American textile goods.

There are certain countries such as the Netherlands, W. Germany, Italy and Spain with modern techniques of production and export promotion that have already entered the field as exporters of and competitors in world cotton textile markets.

Synthetic Fibres

Another point is worth considering. The demand for Indian cotton piecegoods has been dampened of late owing to the growth and expansion of the foreign synthetic fibre industries of U.S. and Japan.

It is reported that E. Africa has been importing India's textiles which accounted for 60 per cent of its entire exports. At present, the Indian textile trade is facing a grave threat due to the changing tastes of the people who are in favour of Japanese artificial silk fabrics. Some years back, E. Africa was importing 14 million yards of spun rayons. In 1957, its imports of these fabrics shot upto 130 million yards. Due to increased tariffs, the figure came down to 84 million yards in 1958. At present, the East Africans are said to be avidly after the spun rayons which Japan contributes between 85 and 90 million square yards. Upto 1958, India used to export cotton textiles to E. Africa to the tune of 120 million square yards and it fell to 90 million square yards in 1959 owing to increased tariffs.

Against this background, the prospects for India's export trade in cotton textiles are far from optimistic. The Kanungo Committee was of the opinion that it would be very difficult to meet the target aimed at by the Planning Commission. If the internal market for cloth expands faster than the external one, the Committee felt that it would be difficult to conceive the export of even 1,000 million yards. If, on the contrary, the internal demand, were to drop, as is more likely, the other countries, which had hitherto been importing our cotton textiles, would not be in a position to absorb as much as they would do normally. In fact, such a state of affairs would invariably reflect the general economic trend prevalent in many parts of the world. For instance, India's exports fell from 843.91 million yards in 1957 to 587.22 million yards in 1958. A similar trend of depression prevailed in the U.K., Japan, and the U.S. also during the same period. The following table showing the exports of cotton textiles by important supplying countries supports this statement:

(In million yards)

Year	*India*	*U.K.*	*Japan*	*U.S.A.*
1955	815.49	554.52	1,138.92	551.72
1956	744.23	474.15	1,252.04	518.88
1957	843.91	455.76	1,458.87	559.36
1958	587.22	384.08	1,245.33	505.52
1959	843.91	347.42	1,267.25	472.72

Source: India: Jt. C.C. Bombay, Dy. C.I.S., Calcutta: U.K.: Board of Trade, U.K.; Japan: Cotton Spinners' Association; U.S.A.: Cotton Board, U.K.

The Government of India is interested in promoting and stimulating the export of cotton textiles "not in the negative sense of removing restrictions and reducing duties but in a positive way by raising quality and improving services." There are many complaints of malpractices against Indian shippers. Not long ago, there were some instances where profits of 50 per cent and more were made on exports to Ceylon and other places where handloom products marked 6 yards measured only 4.75 yards on arrival at Ceylon and *dhotis* marked 2 yards were found to measure only 1.75 yards. Mr. W. R. Natu, Textile Commissioner to the Government of India, pointed out, while inaugurating the Central Committee meeting of the Indian Council of Foreign Trade recently, that much of our lucrative trade in handloom cloths was lost in the U.S. owing to the unethical practices adopted by some of our exporters. He maintained that different prices were quoted for the same material and that this was one of the factors that discouraged foreign buyers from entertaining Indian piecegoods.

Points To Ponder

The sustained economic growth of a country is by and large based on its exports. Therefore, exports should be encouraged even at the expense of domestic consumption. As indicated earlier, it is not the desire to export that matters but the existence of an appreciable foreign response to consume our exports that will bring success to export drive. To create an atmosphere of repeat purchases, three factors, besides consumer's survey and market research, present themselves, namely, export promotion, competitive price and quality of product.

The constant and continuous discussions of foreign experts regarding the planned export promotion is a welcome gesture. The recent conference of the Indian Society of Advertisers is in the right direction. The domestic manufacturers and exporters could pool their techniques together and advertise their products in a collective way so as to reduce the overall total costs of the entire undertaking. Export promotion is one of the expensive items in distribution costs. At the present moment, the question of export is not the concern of individual advancement but, in the words of Mr. Lal Bahadur Shastri, of national prosperity.

The Government of India, in order to stimulate trade on organised lines, set up the Cotton Textile Export Promotion Council in 1954. The Council is a non-profit-making institution which stands for five basic principles. They are:

1. To promote export-consciousness among the cotton textile manufacturers.

2. To make cotton textile goods reach the ultimate foreign consumer through sustained export promotion.

3. To obtain all possible trade information of the constant and continuous all-out effort in terms of market potentialities, consumer preferences, consumer surveys, trade delegations, etc., and thus disseminate the knowledge to the manufacturers and exporters by means of direct mail, an inland edition of *Texprocil Bulletin* and so on.

4. To create a favourable impression about our cotton textile goods on foreign buyers, the Council seeks to patronise our exports through exhibitions, showrooms, direct mail literature like the *Texprocil Bulletin* (Overseas Edition), informative brochures, advertising campaigns and so on.

5. To eliminate the sharp trade practices of some of our exporters, the Council has endeavoured to bring in line a standard contract which has been accepted by the trade in India. Similarly, an export packing standard has come into use and enforced on the cotton textile industry. Further, all possible trade disputes between exporters, importers and manufacturers will be considered and eventually a conciliation would be reached.

As for selling at a competitive price, Mr. W. R. Natu deprecated the exporters' obsession for luring short-run profits. He went a step further and pleaded for the willingness to suffer losses in the short-run. In telling brevity, he maintained that "export incentive schemes are merely props to put our house in order and they cannot be continued indefinitely. We must be prepared to sell at a lower price for sometime and if need be suffer losses so as to get a hold on world markets."

The Government has provided an incentive drive to exporters through what is known as Export Promotion Scheme. This scheme came into being in 1958. According to it, exporters will get the required quota in terms of cotton, colours and chemicals and textile machinery in proportion to their effective export performance. It was reported that certain manufacturers did not bother to improve the quality of their exports, but they were just exporting with a view to securing an import quota. Such a tendency will undermine the prestige of an exporting country and tell heavily on future exports.

Under the protection of the Cotton Textiles Fund Committee, the Government of India has sponsored the PTEX and Factual Pre-Shipment Examination Schemes to promote and foster exports. This scheme is designed to improve the quality of textiles exported and provides the overseas buyers an opportunity of having pre-shipment inspection by an impartial agency. At present, these services are rendered free of cost.

A VILLAGE TRANSFORMED

ISCON

INDIAN STEELWORKS CONSTRUCTION CO. LTD.

Once an obscure village, set amidst field and forest . . . today, a mighty steel town. In a little over two years, Durgapur is making world news!

Pig-Iron for foundries, forging blooms and billets for re-rollers, sections for industry and sleepers for the railways are already being produced at Durgapur. More will follow as the construction of this giant steelworks nears the fourth and final stage.

BRITISH COMPANIES WORKING FOR INDIA

ESTIMATES COMMITTEE URGES REDUCTION IN SUGAR PRICES

COST OF GROWING CANE NEEDS TO BE ASSESSED

THE Estimates Committee of the Lok Sabha, in its report on the Directorate of Sugar and Vanaspati and National Sugar Institute, Kanpur, published a few days ago, has stated certain plain facts concerning the sugar industry that deserve utmost consideration. The Committee is particularly candid in its references to the issues pertaining to sugar and cane prices. We are glad that the views expressed by it on these issues are more or less similar to those which this journal has been emphasising time and again for quite a long time now. To take, for instance, the question of fixing minimum sugarcane prices. The Committee says:

"The Committee do not feel happy over this position and consider it important that an assessment is made early of the cost of production of sugarcane in different areas, in order to fix the minimum price of sugarcane to be paid to the producers, having regard to the provisions of clause 3(1) of the Sugarcane (Control) Order 1955. . . . The longer the time taken in settling the question of price linking, the more complicated the problem will become, because of the number of agriculturists, particularly those who supplied small lots of cane."

The clause 3(1) of the Sugarcane (Control) Order, it will be recalled, specifically lays down that the minimum price of cane payable by sugar mills is to be fixed on the basis of five notable factors: (1) cost of cane production; (2) return to grower from alternative crops and the general trend of agricultural commodity prices; (3) availability of sugar to consumers at a fair price; (4) price at which sugar is sold; and (5) recovery of sugar from cane. None of these factors is taken into account in fixing minimum prices. The result is that the minimum prices have turned to be maximum prices and account for a very high proportion of the cost of producing sugar. It costs on an average about Rs. 22.19 for a mill of average efficiency to produce one maund of sugar (exclusive of cane cess Re. 1.95, co-operative societies commission and driage 52 nP, excise duty Rs. 10.70, selling expenses 4 nP, and return on capital employed Re. 1.91). Of this Rs. 22.19, the cost of cane alone comes to as much as 76 per cent—Rs. 16.82, to be precise. What is worse, the cane growers want a share in the sugar mills' profit too.

It is somewhat surprising that the Estimates Committee has not made any comments on the so-called price-linking formula. All that it has done is to voice a plea for settling the question early and to suggest that the Tariff Commission be requested to expedite the submission of the report as much as possible. It has, however, drawn attention to the payment of higher cane prices than the statutory prices by sugar mills in Maharashtra and Gujarat States and commended the example for emulation by mills in other regions. Everyone knows that the quality of cane should be the main criteria for determining its price, but political considerations deter any step to adopt the criteria. It is equally surprising that the Committee has failed to highlight the urgency of reducing the high level of cess on cane crushed for making sugar.

World Prices Compared

Thanks to the high minimum price of cane, the incidence of cess and the heavy burden of excise duty, the price of Indian sugar is considerably higher than the rest of world price. The data collected by the Estimates Committee reveal that the retail price of sugar in India is Re. 1.02 per *seer*, whereas it is no more than 35 nP in Peru, 43 nP in Brazil, 46 nP in Panama, 54 nP in Cuba, 35 nP in Aden and 58 nP in Indonesia. The Committee has done well to pinpoint the need for lower prices. To quote it:

"The desirability of bringing down the price of sugar in India to the price obtaining in the international market is important not only from the point of view of exporting sugar but also for the purposes of making possible increase in the export of fruit preservations where sugar is an important raw material. India is already becoming surplus in its sugar and, with the many irrigational projects, the prospects are, indeed, bright for the sugar industry. The surpluses are going to be quite large. It would be difficult to prevent the farmers from resorting to a commercial crop like sugarcane along with the foodgrains. In such circumstances, the need for approximating the indigenous price of sugar to that in the international market cannot be over-emphasised. . . . It would be interesting to see the similar break-up of the sugar price in other countries, for that would indicate a way to plan for the reduction of it in India. The Committee would urge the Government to indicate to the industry the various ways of bringing about this approximation in price between Indian and international prices."

It is in this context that the Committee gives the following figures pertaining to cane yield and sugar recovery in some leading countries:

	Per-acre yield (Tons)	Recovery (Per cent)	Yield of sugar per acre (Tons)
India	14.49	9.89	1.433
Hawaii	62.05	10.46	6.489
Java	56.20	11.49	6.440
Peru	41.14	12.33	5.076
Japan and Formosa ..	28.27	12.93	3.657
Australia	21.34	14.33	3.060
Egypt	30.42	9.97	3.032
Puerto Rico	24.16	12.23	2.956
Philippines	27.08	8.45	2.287
Cuba	17.12	12.25	2.095

Sugar in the Deccan

The generally low per-acre yield of cane and poor recovery of sugar from cane in India must be attributed to the utter disregard shown by the grower to the quality aspect, since he is assured of a high minimum price for whatever cane that he produces, as well as to lack of mechanised operations in small plots of land, especially in the States of Uttar Pradesh and Bihar. The disadvantages are not so much in evidence in the Deccan where the mills own their own plantations and grow cane on scientific basis. The average per-acre yield and sucrose-content of cane grown in these plantations are both pretty high—53.5 tons and 11 per cent, respectively; some mills have a higher recovery per cent, namely, 12.72 and 12.98. It must be said to the credit of the Estimates Committee that it has drawn special attention to this aspect. It "sees no reason why the results obtained in the Western region could not be reproduced by the same methods of cultivation in other parts of the country." While the plantations in Maharashtra are undoubtedly a model for the rest of India, it must be borne in mind that climatic conditions in U.P. and Bihar are not as favourable as in Maharashtra and, consequently, even if their techniques of production were adopted, the yields would be appreciably less. Nevertheless, they would lead to a substantial improvement over the present state of affairs.

Incidentally, the tribute paid by the Estimates Committee to the performance of the plantations of the Deccan sugar companies needs to be borne in mind by the Central Government and the President of India before according their consent to the Maharashtra Government's Bill on land ceiling.

Price Control

On the issue of price control, the Estimates Committee has merely recorded the Government's desire not to disturb the existing pattern, as the alternative to it is to take over the entire production of sugar and resort to State trading which is not called for. Could the Committee not have disputed this contention? Even when the Committee studied the position, it was clear that the supply position would be comfortable and the case for decontrol was pretty strong. The Committee has, however, suggested that the question of relaxing controls on sugar may be expeditiously examined, though it hastens to add that, if a decision is taken to relax the controls, careful watch may be kept on its repercussions to ensure that no scare about shortage of sugar is again created in the market. Two pertinent points have been stressed in this connection. First, sugar releases must be made at regular intervals so as not to cause inconvenience to the sugar factories. Secondly, there should be no attempt on the part of State Governments to make profits on the sale of an essential commodity like sugar.

The Estimates Committee has made a brief reference to the progress made by the sugar industry and has a word or two to say about the future expansion. The chief conclusions arrived at by it are as follows:

The Committee considers it unfortunate that there has been a shortfall in the additional capacity of sugar industry planned to be raised during the first and second Plan periods. Now that the plant and machinery are being manufactured indigenously, there should be no difficulty in making good the shortfall in the third Plan period.

If the target of sugar production for the third Plan is to be achieved, it is necessary that applications for grant of licences are processed expeditiously.

The Committee feels that a co-operative, being a joint endeavour of a number of people, cannot come up so readily or easily as a joint-stock company and placing the two on a par is not likely to encourage co-operative development. The Committee would like a more positive approach in the matter so that preference to co-operatives is really effective. There should not be too great a readiness to prefer joint-stock companies on the ground that co-operatives were taking time in coming up.

The Committee is of the opinion that the policy for location of new sugar factories needs to be carefully laid down. Both regional considerations and suitability of the particular sites may guide the choice of location.

Co-operatives

The Committee's statement that preference to sugar co-operatives must be really effective is based on ideological, and not economic, grounds. Why should such preference be given, when the joint-stock enterprises possess the requisite finance and entrepreneurial ability to deliver the goods to the community speedily and more cheaply. If the price the consumer pays for his requirements of sugar is to be lower, the joint-stock sugar mills must be given all the encouragement and assistance needed to undertake expansion and modernisation programmes. It is common knowledge that the cost of putting up additional production capacity will be considerably higher in the case of a new project than in that of an existing unit, if it can command adequate cane supplies.

Even if new factories are to be set up in certain regions, the existing sugar mills may be allowed to evince interest in them, as they have the benefit of experience and managerial ability and, therefore, can do better than the co-operatives. Alternatively, formation of new joint-stock companies by new entrepreneurs can be encouraged, if the entrepreneurs are willing to find the bulk of the capital that is required. If necessary, a condition may be imposed, in the case of both the alternatives, that, in issuing capital to the public, they should give preference to sugarcane growers and other investors in the areas concerned. Such a condition will give the growers and local investors the best of both worlds—the service motive of the co-operatives and the profit-motive of the joint-stock companies—without the State Governments having to bother themselves with the flotation of co-operative sugar factories, financing them and running them. By nature and outlook, the co-operatives, especially in large-scale factory operations involving an investment of some Rs. 2 crores each, cannot be as efficient as joint-stock companies. Further, the latter can mobilise the people's savings more effectively than the co-operatives. This is evident from the fact that, in the case of almost all the sugar co-operatives that have so far been established by the Government, the bulk of the capital has been provided by the Government.

SUGAR WORKERS' WAGES

The President of the Indian Sugar Mills Association, Mr. D. D. Puri, has instructed all the constituent members of the body immediatly to implement the award of the Wage Board for sugar industry. The instruction has followed the appeal by the Union Food and Agriculture Minister, Mr. S. K. Patil. The Association had earlier expressed the inability of the industry to implement the award unless the Government helped it to clear the stocks at the mills and tide over its financial difficulties. It had demanded, among other things, an increase in the sale price of marketable sugar. Meanwhile, the U.P. Government has ordered the sugar factories in the State to implement the recommendations of the Central Sugar Wage Board with retrospective effect from 1st November 1960. The implementation of this order will mean an immediate minimum increase of Rs. 18 in the monthly wages of nearly 80,000 workers employed in the 70 sugar factories of the State.

SUGAR PRODUCTION AND STOCKS

Sugar production during the month of March 1961 was 502,000 tons, as against 444,000 tons in March 1960. This brings the total production for the season 1960-61 upto 31st March 1961 to 2,290,000 tons, as against 2,057,000 tons produced in the corresponding period of the previous season.

The offtake of sugar from factories during March 1961 was 225,000 tons, as against 152,000 tons, the total despatches (including despatches for exports) upto the end of March 1961 being 875,000 tons, as against 781,000 tons.

The total closing stocks of sugar with factories as on 31st March 1961 was 1,957,000 tons, as against 1,418,000 tons on the same date last season.

ALL-INDIA SURVEY OF TEA GARDENS

CONCRETE SCHEME FOR ASSISTANCE URGENT

THE reported move of the Tea Board to conduct a comprehensive survey of tea gardens, with a view to assessing the problems confronting the industry in different regions, deserves to be welcomed. The proposed survey, it is said, will cover all aspects pertaining to production and marketing, as well as their economic and technical requirements. On the basis of the findings, the Board will determine the extent and nature of financial, scientific and technical assistance that would be required by the tea estates for augmenting output and improving quality. Simultaneously with this survey, there will be an enquiry into the living conditions and pattern of expenditure of tea garden workers. To start with, the surveys will be confined only to the Darjeeling district in West Bengal where the cost of tea production is said to be very high and a number of tea bushes are unable to produce quality teas because they are too old.

The findings of the aforesaid surveys will be awaited with much interest. It is to be hoped that they will be completed as early as possible, so that the Government may formulate a concrete scheme for actively assisting the tea industry in its task of fulfilling the third Plan production target of 900 million lbs., to be achieved by 1965-66. The scheme should be quite comprehensive in coverage so as to provide for increased supply of fertilisers to tea gardens, expanded transport facilities for taking fuel, fertilisers, stores, etc., to the gardens and for bringing back made-tea, suitable adjustments in the multiplicity of taxation on tea—Central, State and local—and measures for ensuring that consumption of tea keeps pace with production. The need for such a scheme is urgent in all conscience, considering the keen competition that is growing in the world tea trade from countries where the production of tea has risen markedly and cost of production is comparatively lower.

Losing Ground Abroad

That Indian tea is gradually losing ground in foreign markets will be evident from the downward trend in exports. The quantity of tea actually shipped in the calendar year 1960 was 429.42 million lbs., valued at about Rs. 120.05 crores, as against 467.73 million lbs. (Rs. 126.39 crores) in 1959 and 505.90 million lbs. (Rs. 133.53 crores) in 1958. The fall of 38.31 million lbs. in exports during 1960 was accounted for entirely by North Indian tea, the actual shipments of which were 342.32 million lbs., as against 384.34 million lbs. in 1959. The exports of South Indian tea, however, were slightly higher at 87.10 million lbs., as against 83.39 million lbs. In contrast, tea exports from Ceylon, Indonesia and East Africa registered a rise. It is estimated that these countries exported last year 415.8 million lbs., 77.09 million lbs. and 90.02 million lbs., respectively, the corresponding figures for 1959 being 380.95 million lbs., 64.94 million lbs. and 80.78 million lbs.

There would appear to have been a slight improvement in tea exports since the current year began, but it is difficult to say whether the trend will continue in the coming months also. The total shipments of tea in the first quarter of the year amounted to 98.75 million lbs., as against 90.49 million lbs. in the corresponding quarter of 1960. It is reasonable to assume that a part of this improvement in exports was due to a slight reduction in the export duty on tea announced in the last budget, a relief which became effective from 1st March 1961. The following table gives the destination-wise exports of Indian tea:

(In million pounds)

Countries	January-March		Whole of	
	1961	1960	1960	1959
United Kingdom ..	54.06	47.25	256.09	276.91
Irish Republic ..	4.00	2.98	18.97	16.72
U.S.S.R. ..	4.48	2.57	22.16	26.75
Rest of Europe ..	4.53	5.76	16.16	24.25
U.S.A. ..	5.01	6.13	19.25	23.19
Canada ..	4.85	5.21	16.41	16.94
Iran ..	3.39	2.04	8.78	8.26
U.A.R. ..	8.31	12.06	91.90	96.17
Sudan ..	3.15	0.46	8.52	22.26
Others ..	6.97	6.06	26.48	26.29
Total ..	98.75	90.49	429.42	467.73

The low level of Indian tea exports must be attributed partly to the substantial increase in prices which, in turn, has been due to the rising tendency of production costs and heavy tax burden. The modest reduction in export duty from 1st March last was a recognition of the heavy tax burden, but the extent of relief to tea gardens was very little, inasmuch as the excise duty was increased. The trend of prices fetched at the various auctions is indicated below:

(In rupees per kilogram)

	Latest available	Beginning of 1961	A year ago
At Calcutta:			
For export	5.34	5.03	5.05
For internal consumption—			
Dust	5.01	5.15	4.41
Leaf	4.39	4.34	3.86
At Cochin:			
(For internal consumption)—			
Dust	4.54	4.80	4.81
Leaf	4.77	4.89	5.20
At London (quality tea)	12s. 1d.	14s. 3d.	13s. 11d.

Note:—Quotations for Calcutta are inclusive of excise duty.

The advance in tea prices in India is the result of increase in excise duty on loose tea and the growing pressure of domestic demand—the annual rate of increase in domestic consumption of tea is about 15 million lbs.—on a reduced supply following the setback to production in North India. The tea crop actually harvested during 1960 was just 696.1 million lbs., as against 716.1 million lbs. in 1959. The decline was accounted for solely by North-East India where output fell from 561.2 million lbs. in 1959 to 527.0 million lbs. in 1960. Production in South India, however, improved from 154.9 million lbs. to 169.1 million lbs. It may be noted here that tea production in Ceylon during 1960 was higher by 23 million lbs. at 436 million lbs. Production in Indonesia and Africa was also better last year. The production of tea in India during the last five years is compared with those of the other principal countries in the following table which shows to what extent the African countries have expanded their output of tea:

(In million lbs.)

Country	1960	1959	1958	1957	1956
India ..	696.10	716.10	713.50	678.90	667.00
Of which shareof:					
N. E. India ..	527.00	561.20	555.80	528.40	540.10
South India ..	169.10	154.90	157.70	150.50	126.90
Ceylon	436.00	413.00	413.15	397.77	375.58
Indonesia	96.25*	96.43	102.65	108.87	94.65
Pakistan	39.96	57.72	56.41	46.43	55.04
Kenya	29.52	26.91	25.18	22.02	21.27
Nyasaland	29.28	23.78	22.29	18.09	20.80
Uganda	9.84	9.49	8.26	8.02	6.80
Tanganyika	8.87	7.79	6.33	6.13	5.95
Mozambique	81.27	90.02	N.A.	N.A.	N.A.

* On the basis of output for the first eight months of 1960.

An analysis of the trends in the important tea producing countries as highlighted by Mr. N. S. Coldwell at the last annual meeting of the Indian Tea Associations reveals that, in Ceylon, despite some political uncertainties in the course of last year, the position is reasonably satisfactory; production and exports are rising, and quality has not deteriorated. Ceylon's advantages on the world seaways are obvious and the country has the advantages of very short lines of communication between the gardens and the sea. (Some of India's teas travel 1,200 miles before they even reach Calcutta.) Indonesia remains stuck at approximately the 100-million pound mark; still only half the pre-war production. How far this now represents a permanent state of affairs it is difficult to say, but it is clear that the remarkable rate of recovery made immediately following the war has not been maintained and that one of the traditional suppliers of tea is now short by a hundred million pounds. The African territories might be said to constitute a threat to India's common tea areas, because African teas pay no tax and are produced by estates which have been able to avoid the mistakes of the pioneers. There are no restrictions over the importation of fertilisers, tea chests, and other necessities, and there is little taxation on those engaged in the industry, and none upon the product itself. There is no doubt that potentially China can be a very real danger to India.

Government Help

By virtue of it being the largest employer of organised labour in India and one of the stable earners of much precious foreign exchange every year, the tea industry is certainly entitled to a more generous treatment from the Government than what it has received so far. How exactly the Government should help the industry was impressively brought out by the Chairman of the Indian Tea Planters Association when he addressed the recent annual meeting of the Association a month back; a brief reference to the speech was made in these columns three weeks ago. The suggestions of the Chairman are as follows:

1. There should be a provision for a loan of Rs. 15 crores for replanting and replacement of tea in the third Five-year Plan.

2. The Government should create a Tea Finance Guarantee Fund to help the estates in raising funds for capital expenditure urgently needed for the renovation and expansion of plant and machinery.

3. The industry must have its full quota of ammonium sulphate and it should not be discriminated against in charging the price of this fertiliser.

4. Export duty on tea, the Assam road tax and the West Bengal entry tax must all be withdrawn.

5. There should be adequate propaganda in favour of tea to expand its consumption within and outside India.

6. A loan of Rs. 16 crores for the plantation labour housing scheme must be provided for in the third Plan. Provision for subsidy in the scheme must be on the same scale as in industrial housing scheme.

7. The phasing of improved labour housing should be reduced from 8 to 4 per cent.

The above suggestions deserve the sympathetic consideration of the authorities to the extent to which the acceptance of these suggestions will not entail considerable burden on the exchequers or deny reasonable amenities to labour. It has to be admitted that the tea industry and the consumer will have to make their contribution to the economic development of India which by itself will lead, as we pointed out on a previous occasion, to a broadening of the domestic market for tea. Nevertheless, the demands of tea industry for active encouragement and understanding of Governments must be conceded, so that the industry will address itself to the task of achieving the third Plan target with reasonable confidence.

Responsibility of Tea Industry

It is also necessary to stress, at the same time, that the industry should give no cause for complaint that it is neglecting the tea bushes or following a short-sighted policy of bleeding the bushes to death in order to get maximum production. It is alleged that some of the producers, particularly those who took over gardens from the British owners by paying a heavy price, have not been devoting adequate attention to the question of maintaining the tea bushes in good condition and that, in their anxiety to get a high income from the estates to compensate for the high prices at which they bought them, they have been mercilessly plucking more tea per bush than is desirable for the health and longevity of the plant. This is said to be one of the reasons why many gardens are now in need of rehabilitation and their cost of production has become high. This development, coupled with continuing changes in the ownership of tea gardens, has induced some members of Parliament to suggest nationalisation of tea industry. This is undoubtedly a desperate solution which will prove to be a case of remedy being worse than the disease. But the complaint itself is not without some foundation. The associations representing tea producers must, therefore, do something effective on their own initiative and volition which will help remove the cause of the complaint. They must evolve a code of conduct for their members in regard to maintaining a minimum level of efficiency in their gardens. In fine, the industry must set its house in order, if its demands for fiscal relief and financial assistance are to win the approval of the authorities.

BONUS FOR TEA WORKERS

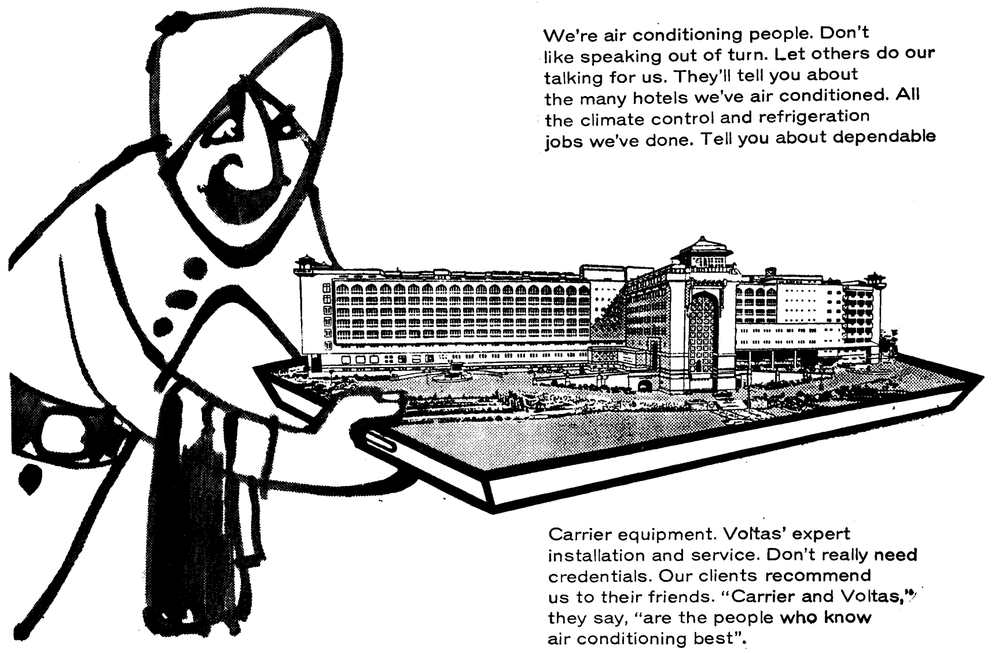
The 800,000 workers employed in the tea plantations of North East India will get bonus for the years 1959, 1960 and 1961. An agreement to this effect was signed at the meeting of the Plantation Industrial Committee's Bonus Sub-Committee held at Calcutta on 26th April 1961. The bonus payable to all categories of workers per year is fixed at 14 per cent of the profits of the companies. A further 1½ per cent for 1959, 1 per cent for 1960 and ½ per cent for 1961 will also be paid to different pools for bonus payment in lean years when there is no profit or when the profit is inadequate.

The Punjab Government has appointed an eleven-member committee, with the Secretary of Agriculture Department as Chairman, to consider measures and make recommendations for the development of green tea industry in the State.

Carrier serve you faithfully at the Ashoka Hotel, New Delhi

We're at your service 24 hours of the day. Constantly. Quietly. Reliably. Our main concern: your comfort. At the Ashoka we keep you cool in summer, warm in winter. Protect you from dust, damp and insects, too.

We're air conditioning people. Don't like speaking out of turn. Let others do our talking for us. They'll tell you about the many hotels we've air conditioned. All the climate control and refrigeration jobs we've done. Tell you about dependable



Carrier equipment. Voltas' expert installation and service. Don't really need credentials. Our clients recommend us to their friends. "Carrier and Voltas," they say, "are the people who know air conditioning best".

POSTS AND TELEGRAPHS IN THIRD PLAN

HIGHER PRIORITY NEEDED FOR TELEPHONES

THE progress of plans for the development of postal and telegraphic facilities in the second Plan period and the allocation for the same purpose in the third Plan show that a rather low order of priority has been assigned to this field of development. The progress during the second Plan period was, of course, better than in the first Plan period. The shortfall in expenditure in the second Plan to the extent of about Rs. 3 crores was mainly under "local telephone services"; this was due to a drop in the price charged by the Indian Telephone Industries. The number of telephones installed came up nearly to the physical target of 180,000 laid down in the second Plan. If the Department did not derive full advantage of the drop in the price charged by the Indian Telephone Industries by installing more telephones, it was due to the emergence of foreign exchange restrictions in the year 1957 and the ban on buildings.

It was also a fact that, during each of the years 1956-57 to 1958-59, more than 33 per cent of the sanctioned works, each costing over Rs. 5 lakhs, had not been taken up during the year in which funds were obtained from Parliament. This non-utilisation of funds in such a large proportion of the cases, according to the representatives of the Department, was due to the difficulty of land acquisition. But there was some improvement in the year 1959-60, for, out of 169 works undertaken by the Department, only in respect of 33 works was no expenditure incurred.

There was a slight shortfall in the achievement of the target for telephone lines also in the second Plan. The achievement was 176,000 lines, as against the target of 180,000. In regard to a number of telephone exchanges costing over Rs. 25 lakhs which had been sanctioned a long time back, the work had not yet commenced in some cases, while, in others, there had been heavy delays. These delays had occurred either in acquisition of sites or in construction of buildings.

A Suggestion Turned Down

A question as to the feasibility of enlisting the financial assistance of private entrepreneurs for important projects of telephone expansion as in the U.S.A. was recently raised, in this connection, by the Estimates Committee. The representative of the Department, who appeared before the Committee, stated in reply that most of the telephone systems in the world were run by the State, the Bell Telephone System in the U.S.A. being one of the few exceptions. In a field like that, he said, it was necessary to have an integrated system for the entire country. In India itself, there were a number of private telephone companies in the past and, after very careful consideration, Government decided to departmentalise those systems. While it might be possible to secure financial assistance for certain projects from outside sources, it was not possible to entrust the management of the telephone system to a private firm, indigenous or foreign. But, at the same time, the fact remained that the Department, too, would not be in a position to provide in full the required telephone facilities. According to the Department's representative himself, the unsatisfied demand for telephones at the commencement of the third Plan would be of the order of 200,000 and the additional demand expected to be generated in the third Plan period would be 500,000. An amount of Rs. 175 crores would be required to provide all the 700,000 telephones and the complementary trunk exchanges, cables and other facilities. This, however, would have a foreign exchange component of only Rs. 10 crores.

The third Plan allocation for posts and telegraphs as a whole, however, is only Rs. 68 crores which is very much less than what the Department had asked for. At first, the Department wanted Rs. 275 crores and then it reduced the figure to Rs. 120 crores on the understanding that the Planning Commission would allocate Rs. 80 crores, leaving Rs. 40 crores to be found from its own resources. Ultimately, even this amount was not sanctioned. The final allocation of Rs. 68 crores approved by the Commission is, however, exclusive of Rs. 30 crores to be met from the Department's own resources which presumably include the Rs. 29 crores that has been lying with the Government as the accumulated surplus of the Department. With such limited funds placed at its disposal, the Department, it is stated, would not be in a position to meet even urgent demand for telephones, as the number of applicants on its waiting list at the commencement of the third Plan is itself 200,000. Perhaps even this number in the waiting list is an underestimate of the real demand, for, it is common knowledge that many people do not submit applications because they know that with a heavy backlog of outstanding applications, it would hardly be of any use applying for new connections.

In fine, the position will continue to be one of extreme stringency in the field of telephones. Posts and telegraphs are given such a low order of priority that they are not included in the core of the Plan. On the other hand, the Department is asked to accord a very high order of priority to the provision of telephones in the industrial projects which are coming up. The Department has so far failed in its attempt to get some loans from the Ministry of Finance out of the D.L.F. and other funds. It is recognised that most of the present difficulties are due to shortage of telephone instruments, cables, wires and exchange capacity. According to a business representative, who tendered evidence to the Estimates Committee, at least two more factories are needed for the production of telephones, exchange equipment and cable wires. Looked at from the point of view of the size of the third Plan and the pressing demand for telephones, the existing capacity is grossly inadequate.

Remedy

What, then, is the remedy? As the Department will not be in a position to satisfy anything more than a small part of the demand—it is officially stated that achievement in the third Plan period will be about the same as in the second Plan—it may be worthwhile to consider a slight modification of the present policy and negotiate, if possible, with the Bell Telephone Company of the U.S.A. to install telephone networks in the new industrial areas and also to establish a factory for the manufacture of telephones in India on the lines of the Indian Telephone Industries Ltd. It may be possible to have this kind of foreign collaboration with the public sector or with some private parties. The inflexible official stand that it is not possible to entrust the management of the telephone system to a private firm, indigenous or foreign, seems to be rather unwise in the present situation which demands a more dynamic approach consistent with the tempo of industrialisation. If it is thought that strategic considerations rule out foreign participation in this field, there can conceivably be a compromise approach under which one or more telephone manufacturing units are set up in the private sector while new telephone networks established with foreign collaboration are subjected in some way to the ultimate control of the Department for strategic reasons. As a public utility, a telephone network, even while operated and managed as a private enterprise, can be subjected to a loose kind of State control in normal times and stricter control in times of emergency. Co-ordination of private telephone networks with the Department is only a matter of detail and should be quite capable of achievement.

If the authorities think that they cannot make a departure in their present policy, then they should at least make more resources available to the Department. Something effective must be done to speed up establishment of a sufficient number of telephones which constitute a vital means of communication in a modern economy. Telephones are as important as transport and they should be given the same priority that is given to it. To say that nothing more could be done than is envisaged in the third draft Plan is to admit failure of the public sector to provide an essential service.

O.E.E.C. RECOMMENDATIONS ON ENERGY POLICY

The O.E.E.C. Council has recently adopted a recommendation designed to help each member-country in framing its energy policy in the light of its own national interest, legislation, economic structure and need for development, but taking into account the needs and possibilities of the O.E.E.C. area as a whole. This recommendation is based on the Energy Committee's study of the O.E.E.C. Energy Advisory Commission's report *Towards a New Energy Pattern in Europe*, published in January 1960. The first part of the recommendation urges member-countries, when seeking solutions for the various problems arising in the energy sector, to take into account a series of conclusions which are given below:

Long-term energy policy should be based on the assumption that there will not be any lasting shortage of energy supplies in Western Europe before 1975. It should attach the utmost importance to securing plentiful supplies of low-cost energy, at the same time leaving the consumer the greatest possible freedom of choice. Everything should be encouraged that may lead to a more rational use of energy.

The expansion of indigenous energy resources should be developed or encouraged in so far as they can be exploited in sound economic conditions. Governments should permit, as far as possible, the application of a more flexible price policy for coal. Better methods of marketing energy and especially coal, should be encouraged and the greatest importance attached to the transformation of coal into secondary forms of energy. Measures should be kept in view to provide a rapid remedy for any shortages or surpluses, while ensuring that they have the smallest possible effect on an economic pattern of energy consumption.

In order to prevent distortions in the energy market, it is recommended that the ideal situation, in which the prices of the different forms of energy reflect the costs and scarcities of individual types of energy, should be borne in mind, so as to ensure that each is used for the purpose in which it can be employed to best advantage. As far as practicable, fiscal policy should be designed in such a way that taxes, charges and customs duties do not lead to the preference of a less economical for a more economical form of energy. It should be ensured that transport rates do not introduce an element of distortion into national and international competition. Governments should generally refrain from preventing sound economic management of production, transport and distribution of the different forms of energy and bodies controlled by public authorities should normally make sufficient provision in their prices for return on capital.

A number of the conclusions refer especially to coal-producing countries. These member-countries should encourage the concentration of production in mines where prospects for productivity and cost are favourable, and should take care that any action taken to overcome the technical and social difficulties of the coal industry does the least possible damage to the structure and economic development of the supply and use of energy as a whole. They should give thought to the possible difficulties that might be created by a pension scheme attached exclusively to the coal industry in the case of stable or slowly declining employment in coal-mining and take full account, when determining energy policy and economic policy in general, of the social and human problems involved in any reduction of employment in coal-mining.

RAILWAY STATISTICS FOR 1959-60

The Railway Board has just published Volume II, containing statistics, of its report on Indian Railways for 1959-60. The statistics are detailed and comprehensive. They pertain to capital-at-charge, gross revenue receipts, working expenses, dividend to general revenues, balances in the reserve funds, mileage of railways, rolling stock in service, passenger and goods revenue, train and engine mileage relating to steam, diesel and electric locomotives, fuel consumption, number of staff, etc. One statement pertaining to train mileage according to the type of locomotive is particularly interesting. It shows that, while the train mileage relating to steam locomotives has increased from 213.8 million (train miles) in 1956-59 to 216.5 million in 1959-60, that relating to diesel locomotives has increased from 3.2 million in the former year to 6.4 million in the latter. The train mileage done by electric locomotives, excluding suburban services, rose from 3.2 million to 3.7 million. What is noteworthy is the relatively more rapid growth of diesel traction.

BRITISH IRON AND STEEL FEDERATION

At the Annual General Meeting of the British Iron and Steel Federation recently, Mr. C. R. Wheeler, President, gave the estimate that U.K.'s crude steel output in 1961 might reach a total of 24½ million ingot tons. He looked further forward and expected that demand would grow by 1965 to about 30 million tons, as compared with 24½ million tons in 1960. Companies' plans, he said, already envisaged a steel capacity of 34 million tons by that year, as compared with 27 million tons in 1961. According to the Annual Report of the Federation, the focus of concern is now clearly moving away from the post-war problems of shortage to the possible dangers of over-expansion. But it is expected that companies, and, within its own sphere, the Federation, will take active steps to bring demand up more nearly in line with development field at home and by pressing still harder for bigger exports abroad.

L.D. STEEL CONVERTERS AT ROURKELA

In the brief note entitled "Progress at Rourkela", published on page 570 of our issue dated 1st April 1961, it was stated that the L.D. steel converters were designed and supplied by the West German firm of DEMAG. This is incorrect. The whole L.D. steel-making plant, including the converters, were entirely designed, supplied and erected by Messrs. VOEST of Linz, Austria, who are the pioneers and inventors of the world-renowned L.D. steel process which is being increasingly preferred to the traditional open hearth furnace. Messrs. VOEST, it may be noted, are having large orders from all over the world for the manufacture of L.D. plants.

NEW PRODUCTS AND PROCESSES

New Adhesive for Surgical Use

DOCTORS at Tokyo University's Medical School have succeeded in closing an incision made in an appendix operation by applying an adhesive, instead of by the conventional stitching method. By this "revolutionary adhesive" method, claimed to be the first to be attempted in the world, an incision was closed within two minutes, according to the physicians. The new method, which it is said, may in the near future replace the centuries-old needle-and-thread method of closing incisions, has been developed by a group of 11 doctors, headed by Prof. Seiji Kimoto of the Medical School. They launched the study of the adhesive method last February. The early part of their study was spent in search of the right kind of adhesive applicable on human bodies. After a series of trials and errors, they found that the Eastman 910, an American synthetic resin adhesive normally used in electricity, met all the qualifications for the method—applicable on wet organs, harmless to human organs, easy to sterilize, non-deteriorative at normal body temperature, having strong and quick adhesive power, and absorbable within a few weeks into human organs. Since then, they have executed a series of experiments on medical applicability of the adhesive with some 60 dogs and 20 rabbits. It was proved that cuts on skin, veins, windpipes and intestines were closed in a matter of two minutes with the use of the adhesive. The adhesive on the cuts was absorbed in about a week, leaving little trace of the cuts according to the doctors. Assured of the successful results of these experiments, the team applied the adhesive method on a human body for the first time last December. They placed a drop of the adhesive on an incision made in an appendix operation of a male patient, and left the part for five minutes. The first human experiment of the adhesive method proved to be a success, and the patient was able to leave the hospital only two days after the operation. The adhesive closed the cut so tightly that only a thin line remained on the patient's abdomen, instead of ugly scars left by the conventional stitching method. The doctors applied the new method successfully on two other cases in late January.

New Automobile Speed Governor

A new type of speed governor for motor vehicles has been developed by the British car firm of Rover Ltd., of Birmingham, England. The governor, said to be the first of its kind, is connected to the speedometer cable so that drivers can reach top speeds in low gears. In many countries there are maximum speed limits and many customers have requested a governor to be fitted. This governor, which costs £21 in the U.K., can be used on most makes of cars. The system is arranged to be conscious only of vehicle road speed, and the road speed limit it dictates is, therefore, independent of the vehicle transmission gearbox ratio in use at any given time. It is not intended to control engine speed, doing so only by reason of the relationship existing between engine speed and road speed. The limiting speed provided by the system may easily and quickly be varied by the use of interchangeable colour-coded control springs, a range of which is available to meet requirements. When the vehicle is stationary, or is being driven at any speed below the desired limit, the centrifugal switch contacts are open and the throttle control unit permits the carburettor butterfly to be positioned in the normal manner by the accelerator pedal. Whenever a speed of about two m.p.h. above the desired limiting speed is reached the switch contacts close positively to operate the relay, and, by energising a solenoid in the throttle control unit, to shut the butterfly down to idling. The vehicle then decelerates until, at about three m.p.h. below the desired limit, the switch breaks contact, and the solenoid releases the butterfly to an opening corresponding with the accelerator pedal position.

Terylene Bags for Plant Breeding

A novel use for Terylene has been found by the Genetics Section of the Forestry Commission Research Branch in Edinburgh. Since April 1960, the Commission has been experimenting with non-woven Terylene bags for isolating female flowers when control-pollinating pine and larch trees. Previously paper bags had been used for this purpose. The bags are placed over branch tips bearing female buds from a fortnight to a day before the female flowers become receptive and before pollination takes place. This prevents outside contamination from stray pollen. When the bud breaks into flower, the bag is pierced by a hypodermic syringe containing pollen from specially selected trees and pollen is blown on to the flowers. After pollination the bag is sealed again for a further ten days, after which it is removed. This method ensures that the parentage of the resulting seed is known. By planting the resulting seedlings on different forest sites and by assessing their vigour and form, the best parents can be selected. These parents will provide the seed for future forest planting stock.

Electronic Ticket Seller

An electronic system to provide ticket selling offices throughout the U.K. and Europe with up-to-the-minute information on the availability of airline seats on all flights operated by the British Overseas Airways Corporation, is to be set up, it has been announced in London. The system will also give information on the flights of other airlines associated with B.O.A.C.; in each case the information will be available for flights over a period up to 20 weeks ahead.

The equipment is to be supplied by the London firm, Standard Telephones and Cables, Ltd., who says that details of flight information will be stored centrally—by electronics—at a terminal in London. It will serve about 100 sales personnel using special keying sets within the depot itself and the installation is expected to be ready for service later this year. The system will then be extended, using telegraph circuits, to various points in London including London Airport. And then further geographical extensions over standard telephone channels are to be made quickly to large centres in the U.K. such as Birmingham, Belfast, Manchester, Leeds, Glasgow and then to a number of cities in Europe. With the new system, the 'availability' information is given automatically in a few seconds and in the initial phases booking will be carried out by telephone or teleprinter. The 'status' information will be kept up-dated in the central magnetic store by control clerks. In the later phases, this up-dating and seat inventory will be accomplished automatically. Seats will be booked by a single push button.

Chemical Aid for Concrete Construction

A material which has increased the scope and effectiveness of anti-corrosive preparations used in light-weight concrete construction and other fields, is now being produced for the first time in commercial quantities by a U.K firm of industrial chemists, Watford Chemical Co., Ltd. The material is known as tetrahydroxyadipic acid and, since the firm started commercial production recently, more than 90 per cent of its output has been exported, chiefly to the U.S.A. and Sweden.

Its main application is in the field of light weight concrete construction. It is essential in this type of construction, that the metal used in reinforcing be permanently protected against corrosion. A drawback is, however, that cold-setting anti-corrosive dips frequently set solid in as little as 30 minutes. The addition of tetrahydroxyadipic acid in the correct quantities results in the preparation remaining fluid for an infinitely longer period—and consequently removes the time factor problem when coating these metals. The firm claim that tetrahydroxyadipic acid has other potential uses in the textile industry and in plastics, pharmaceuticals and cosmetics.

Portable Nuclear Power Plant

A portable nuclear power plant—the first of its type in the world—is now in operation at the National Reactor Testing Station near Idaho Falls, in Idaho, U.S. The plant, known as the Mobile Low Power Reactor Number 1 (ML-1), is the first ever built in which gas, heated in the core, is used to drive a turbine and then is returned to the co in a closed cycle. The Atomic Energy Commissic says its ML-1, designed for use in remote area will be coupled with power conversion equipmer capable of producing 300 to 500 kilowatts of ele tric power. The entire plant, weighing abou 38 tons, can be transported by cargo aircraf truck-trailers, trains or barges in six packages.

New Drug Heals Injuries Faster

A new drug, buccal varidase, which reduc swelling and discoloration and speeds healing bruises and other injuries, has been developed b Lederle Laboratories of Cyanamid Internation The drug is said to activate a mechanism in th blood and tissues that thins the fluid which co lects in the injured area. By breaking down th membrane, which seals off the hurt tissues, it al speeds the penetration of antibiotics and the body own defence substances.

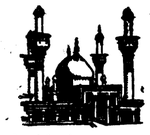
A New Tempting Fish Bait

A tempting fish bait called Marinesol has bee developed in Japan. Marinesol is, as its name in plies, a bait containing chemical ingredients. It a scientifically-prepared colloidal solution th swiftly dissolves in water, spreading an appetisir aroma of fish food. Marinesol is sold in aluminiu containers of various sizes ranging in weight fro a few ounces to over a half ton.

Testing Endurance of Car Bodies

A specially designed shaking machine for mo rational tests of the endurance of car bodies ar chassis has for some time been in use at the Saa Aircraft Company's automobile division at Trol hättan, Sweden. The test machine was shown a recent automobile industry exhibition, "Billia in Stockholm, where it is said to have attracte great interest. When a car is tested in the machir the wheels roll on rotating drums equipped wit screwed-on blocks which make the car continual bump against the "road." Both the speed of th drums and the size of the blocks can be varie The foremost advantage of the new testing metho is said to be that many cars can be tested und identical conditions with directly comparable r sults as to the resistance against vibrations ar bumpy roads. Another advantage is that no driv is needed during the test. The "shaking-machin cannot, however, completely replace the usual te driving on highways and tracks.

A tale of Twenty-two Cities



From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia; these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

Incorporated in England by Royal Charter 1889 with Limited Liability.

HEAD OFFICE: TEHERAN, IRAN (TEHRAN). (P.O. BOX 1620)

BRITISH INDIA CORPORATION LIMITED

CHAIRMAN, MR. H. S. CHATURVEDI, EXPRESSES CONFIDENCE IN THE COMPANY'S FUTURE

1960, A YEAR OF SATISFACTORY WORKING

"THE year 1960 may well be reckoned as a year of consolidation. We are now in a position to launch a programme of rehabilitation and modernisation without which we cannot prosper in this age of growing competition." This was how Mr. H. S. Chaturvedi, Chairman of the British India Corporation Limited, summed up the present position of the Company at the Forty-first Annual General Meeting held at Kanpur on 26th April, 1961. Although the Company's woollen, cotton textile and sugar mills still faced many problems, which they shared with other units in the country, 1960 was a good year, in that it was a year of steady progress on all fronts.

The following is the full text of Mr. Chaturvedi's speech:

"GENTLEMEN,

"It is my happy privilege to welcome you to the Corporation's forty-first annual general meeting.

"The audited accounts and the Directors' report for the year ended 31st December 1960 have been duly issued to the shareholders, and with your permission, I shall take them as read.

"In my address to shareholders last year, I referred to the turn for the better in the Corporation's affairs, after a period of great anxiety, and to the improved trading results for 1959. It gives me great pleasure to be able to report steady progress and further improvement in 1960. The net profit before taxation during the year amounted to Rs. 90,93,242, as compared with Rs. 63,09,042 in 1959, showing an increase of nearly Rs. 28 lakhs. The Corporation's recovery is further reflected in the reduction of the bank overdraft by over a crore of rupees, as compared with last year.

"On the side of dividends, you will notice from the Directors' report that all arrears on preference shares will now be cleared, and that it has at last been possible to recommend the declaration of a dividend on the ordinary shares. In considering the dividend policy, your Directors are of the view that, in order to strengthen and sustain the Corporation's financial position in the interest of future development, it is essential to plough back into the business a reasonable part of the profits. Accordingly, a sum of approximately Rs. 31 lakhs has been retained in the business out of the available trading surplus. In addition, a sum of Rs. 10.20 lakhs, that being the net surplus from the sale of fixed assets, has been transferred to capital reserve and Rs. 1.67 lakhs, that being the profit on the realisation of investments, has been transferred to investment reserve.

Secretaries and Treasurers

"The appointment of the Corporation as Secretaries and Treasurers for five years of the Elgin Mills Company Ltd., Cawnpore Textiles Ltd., Cawnpore Sugar Works Ltd., Champarun Sugar Company Ltd., Saran Engineering Company Ltd., and Brushware Ltd., all of which were formerly under the Managing Agency of Begg, Sutherland & Co. Ltd., is a significant landmark in the history of the Corporation. Begg Sutherlands, which, since 1946, has been a wholly-owned subsidiary of the Corporation, will, I hope, soon be merged with the parent company. The appointment of the B.I.C. as Secretaries and Treasurers of the above six companies, will ensure continuity of sound management and will, I sincerely hope, be in the best interests of those companies.

"I now propose to comment briefly on certain aspects of the working and activities of the Corporation's woollen textile, leather, cotton textile, and sugar units.

Woollen Mills

"The Lalimli and Dhariwal Mills have, on the whole, done well in maintaining satisfactory production. These units, which were the first of their kind to be established in India, have achieved a unique reputation over the years for the superior quality of their products. It has to be borne in mind, however, that the manufacture of specialised lines, for which there is a great demand, requires high grades of imported wool. In order to preserve their good reputation and to maintain production at two-shift level, regular supplies of Merino and other high grade wools have to be assured. To this end, the Corporation seeks the sympathetic and timely assistance of the Government in granting adequate import licences for raw materials essential for the production of specialised lines.

"In my address last year I referred to the urgency of rehabilitating the plant and machinery of our woollen branches. Most of the machinery is about fifty years old, and some of it dates back to 1880. A stage has been reached when productivity is bound to suffer if steps are not taken to rehabilitate the present plant, much of which is now obsolete and uneconomic. To earn foreign exchange, which is so vital to the future of the country, we must first improve our competitive power in the production of high quality goods at reasonable prices. This will to a great extent depend on our ability to modernise the existing plant.

"Our technicians have prepared a blueprint of rehabilitation programmes with the aid of foreign experts, and we shall soon be approaching the Government for import licences to implement the first part of the scheme.

Leather Branches

"The Corporation's leather branches, as you will observe from the Directors' report, have in 1960 made a small profit for the first time since 1953. This sign of slow but sure recovery from a very serious situation is naturally gratifying to us. The incidence of excise duty on leather footwear, and the shortage of good quality hides are, however, factors which adversely affect our leather industry.

"The value of exports from the leather branches in 1959 amounted to Rs. 44 lakhs. In 1960, the value had increased to Rs. 55 lakhs. I am also glad to report that recently the Cooper Allen branch has obtained a substantial order for the supply of boots to the National Cadet Corps.

Cotton Textile Units

"The Corporation's two subsidiaries, Elgin Mills Company Ltd., and Cawnpore Textiles Ltd., have shown very satisfactory results. Trading conditions for the cotton textile industry were, on the whole, favourable during the year under review. The satisfactory performance of the mills was, however, due mainly to the maximum utilisation of productive capacity, and concentration on new lines, which have increased the range of their products.

"The export contribution of the cotton textile units has been outstanding, and export orders valued at approximately two crores of rupees were executed during the year.

"Though cotton textile prospects are on the whole good, the recent Budget proposals in the shape of additional excise duty and other duties on dyes, chemicals, packing materials and yarn for manufacture of cloth will have the effect of increasing production costs of cotton cloth.

Sugar

"The six sugar factories in the group achieved improved working results during the season 1959-60. Due to a substantial increase in the production of sugar and decline in internal consumption resulting in the heavy accumulation of sugar stocks, the sugar industry is, however, passing through a critical phase. The position is such that the sugar factories in the group are finding it difficult to pay for sugarcane and also to meet the Governmental dues in the form of purchase tax and excise duty. We now depend upon Government to take effective action to overcome this crisis in the sugar industry, which is particularly serious in U.P. and Bihar, where the group's factories are situated.

Labour

"I am glad to report that relations with workers have been, on the whole, reasonably satisfactory. Far be it for me to suggest that there have been no differences. They do arise from time to time, and we have endeavoured to approach their problems in a spirit of goodwill. The Corporation maintains three settlements for our workmen, the running costs of which are about Rs. 3½ lakhs annually. Besides housing at nominal rates, the amenities provided include free dispensaries, libraries, playgrounds, schools, and free educational facilities for workmen and their families. To maintain our good relations, your Directors have decided to make an *ex-gratia* payment of two annas in the rupee to all workers on their basic earnings in 1960.

Year of Consolidation

"The year 1960 may well be reckoned as a year of consolidation. We are now in a position to launch a programme of rehabilitation and modernisation, without which we cannot prosper in this age of growing competition. The year 1960 was encouraging in the sense that it was a year of steady progress on all fronts. For this, credit goes, to a great extent, to our workmen and employees in all grades, who have by their loyal services contributed to the prosperity of the B.I.C. as a whole. I thank all of them sincerely. It is in a spirit of sober confidence that we can now face the future.

"In the end I must thank my worthy co-Directors who have sustained me with excellent advice and co-operation.

"It is now my pleasure to move that the Directors' report be adopted and that the accounts for the year 1960 be passed, but before this resolution is seconded, I shall answer, to the best of my ability, any questions which shareholders may like to ask on the Directors' report and accounts now before you."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

THE HINDUSTAN COMMERCIAL BANK LTD.
Head Office at **Birhana Road, Kanpur**
and
38 BRANCHES AT IMPORTANT CENTRES
All types of banking business transacted. Locker facilities available at Agra, Calcutta (Netaji Subhas Road), Hardoi, Kanpur (Birhana Road), Kanpur (Aryanagar), Lucknow (Aminabad), Meerut Cantt., New Delhi and Varanasi Branches.
Attractive rates offered for deposits and reasonable rates charged on advances
Loans against Post Office Savings Certificates and Treasury Savings Certificates granted at low rates of interest.

RAMTIRTH (HINDI MONTHLY)
Editor: Yogiraj Shri Umeshchandraji
Published every month by Shri Ramtirth Yogashram — Bombay
MORE THAN 160 PAGES PER ISSUE
THE MAIN IDEA BEHIND THIS MAGAZINE IS TO DEVELOP THE PHYSICAL, MENTAL AND MORAL ASPECT OF THE COMMON MAN
Annual Subscription Rs. 5/- only. Single Copy 65 nP. only.

UMESH YOGA DARSHAN (First Part)
In Four Languages: English, Hindi, Gujarati and Marathi
(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.
It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART
A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.
Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES
are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered
An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.
Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

SOARING PRICES: DESTINATION MOON!

AN HISTORICAL PERSPECTIVE

By Som Dev

PERHAPS one cannot even pretend to believe today that, 600 years ago, the insignificant paisa could fetch either eight *seers* of rice or five *seers* of wheat or two *seers* of ghee or four *seers* of sugar. Incredible as it may seem, it is not something out of grandma's treasure of phoney tales; it is a fact established beyond all doubt by authentic ancient books, travelogues and authoritative historical data. And what about today? Better go out marketing with just one pice in your pocket. Only then you can realise the terrible amount of shrinkage in value the poor paisa has undergone over the last six centuries, the account of which is a long tale of silent suffering. Enemy number one of the paisa was Tuglaq who made a surgical amendment to its constitution. The British Government of India went one step further and took out the tummy of the helpless coin to transform it into a ring. After independence, our Government also did not leave the unfortunate coin alone; it insisted on its pound of flesh, with the result that the helpless new paisa had to bid adieu to whatever little plumpness was left, to become its now current, slender, streamlined self. And, who knows, if this trend continues, it might become transparent one day in the not too distant future? Let us wait and see how many more storms of encroachment the paisa weathers without protest.

400 B.C.

The earliest available historical information in regard to the price structure of commodities dates back to about 400 B.C. Written around that period, Kautilya's *Artha Sastra* records that State control, under the supervision of a separate department, prevailed to check steep fluctuations and maintain market stability. State policy required that commodities available in abundance should be procured from all places, to be retailed at a uniform rate, which could be varied a little according to the pressure of demand. Dealers not selling at fixed rates were liable to be punished with a fine of 5 to 200 maunds. Average rates prevailing at the time are almost unbelievable today: The actual rates per maund were As. 4 for rice, wheat and ghee, As. 6 for unrefined sugar and 2 pice for common salt.

Fah-e-yan's Account

Fah-e-yan, a Chinese traveller, came to India during the reign of Chandra Gupta II. He writes that shells were commonly used for purchasing general commodities. A "dinar" per head was sufficient for subsistence for a whole year. A dinar weighed 3 quarters of a tola of gold and was equivalent to Rs. 32.

Similar rates are recorded in the writings of Huent-sang, Albaruni, etc., who toured India at a later period. In fact, these rates remained more or less constant for nearly 1,700 years and no major change took place till Khilgi's reign.

Thirteenth and Fourteenth Centuries

Ibna-batuta, an African traveller, has given to history a detailed account of the then market prices prevailing in Delhi and other States of this land of plenty. Out of this whole account, the rates obtaining during the rule of Allouddin Khilgi, thirteenth century, and Mohammed Tuglaq, fourteenth century, make very interesting reading in comparison:

(In jatels per maund)

	Khilgi	*Tuglaq*
Wheat	7½	12
Barley	4	8
Rice	5	15
Gram	5	4
Ghee	20	Re. 1-7
Unrefined sugar		Re. 1

Note: Jatel of that time was the equivalent of the modern paisa and a maund weighed 14½ *seers* of today.

Considering the current skyhigh cost of living, subsistence was indeed very cheap in the reign of Khilgi and Tuglaq, with wheat going at 7½ pice and 12 pice per maund, respectively. Khilgi exercised rigid price control; the prices of everything from a needle to a horse were fixed. Tuglaq, on the other hand, was not so strict with state control of market. Some specimen rates of the Tuglaq period are: Sheep—Re. 1 per head, ox Rs. 2, 30 yards length of cotton cloth Rs. 2. A price list prepared by Shahabuddin, a traveller who visited India in the Turk period, proves that wheat was dearer than rice, selling at double the price of the latter. The price for a maund of rice was As. 3 and 3 gandas, which meant 5 maunds for a rupee, whereas wheat was selling at 2½ maunds per rupee. A maund of meat cost As. 7, hen one anna, 1 ganda. The prices of the livestock market fluctuated locally. According to *Humaun-Nama*, one rupee could purchase four she-goats. Bengal was by far the cheapest region for all provisions.

Sixteenth Century

Aena-e-Akbari gives a graphic account of the reign of Akbar. Moghul rule had by then been firmly established in India. This was the golden era of peace and all-round plenty. Although there was no price control, yet the increase previously prevailing prices registered was nominal. Before listing some market quotations of the sixteenth century, one fact should be taken special note of. The maund of this period was equal in weight to 26 *seers* of today, whereas that of the Khilgi period weighed only 14½ seers. The rates were:

Per maund	*Prevailing price*	*Current coinage*
	Dams	nP.
Wheat	12	30
Barley	8	20
High quality rice ..	110	250
Ordinary rice	20	50
Gram	8	20
Ghee	80	200
Unrefined sugar	56	164
Refined sugar	128	320
Common salt	16	38

Seventeenth Century

According to *Aurangzeb-Nama*, the rates prevailing in A.D. 1721 during Aurangzeb's rule were: Rice 1½ maunds per rupee; edible oil—21 *seers* per rupee and ghee—10½ *seers* per rupee.

East India Company's Rule

The years following the Moghul period brought in their wake unrest and upheavals of unprecedented magnitude. Taking advantage of rivalries and disunity rampant in India, the East India Company subjugated the States one by one and soon its mighty web covered the whole of the country. The Company's administration, as contrasted to the administration of other rulers upto date, was the most corrupt and unsuccessful, the obvious reason for this black rule being the preoccupation of the Company with the maximum exploitation for the benefit of Britain. As a sequel to the ceaseless battles, famines, and corrupt policies the Company was pursuing, prices went spiralling up and there was grave deterioration in the standard of living of the Indians.

According to Dr. Natabakajan's Report, the price of rice, which was selling at the rate of 1¼ maunds for a rupee at Patna in 1807, rose continuously over the next 60 years till it touched the rupees-10-a-maund mark. The following indices indicate the continuance of this upward trend in later years:

Year	*Rice*	*Wheat*
1863	83	81
1900	146	110
1913	153	109
1920	340	199.6

The terrible famines that plagued India from time to time, particularly the two famines of Bengal (1770 and 1864), the famines of Deccan and Rajputana in 1802, the famine of 1844 and the famine of United Provinces 1868 played a prominent role in pushing up the price-line. The sale price of rice in Bengal before 1868 was As. 12 for a maund; it shot up to Rs. 10 a maund afterwards.

Introduction of rail transport at this stage had its own tragic consequences. Scarcity conditions of one famine-stricken area now started influencing the distant markets also. At the time of the famine of 1846, *bajra* was being retailed at the rate of 27 *seers* for a rupee in Gujarat when available supplies were drained for the famine-stricken area. The rate in Gujarat registered a corresponding rise and one time stood at nine *seers* for a rupee. Another example of the negative impact of rail transport is that of Khandesh which was marketing *bajra* at 61 *seers* per rupee. When in 1868, supplies were requisitioned for U.P. which was in the clutches of a famine, the Khandesh market took an adverse turn and stood at the incredible 12½ *seers* per rupee.

Other Countries

But India is not the only country which has been hit hard by ever-increasing prices; it has lots of fellow travellers who are nursing a similar wound. Tempestuous prices have stormed in practically every country of the world. According to the *Everyday Encyclopedia*, increasing wheat prices in Britain took this course:

Period	*Price*
	s.
1261 to 1354	5½
1362 to 1452	14½
1583 to 1642	36
1643 to 1772	42

The upward trend continued thereafter. The price index of commodities in 1920, taking that of 1782 as 100, stood at 251, the main reasons for this increase being rise in population, insufficient production, high demand and rapid industrialisation. As a corollary of the Industrial Revolution, capital was concentrated in the hands of a few which had far-reaching ill effects. But, of all the countries similarly afflicted, India was the worst hit. In other countries, income and purchasing power were also increasing to keep pace with advancing prices, but India being an exception, lagged behind. Then to its unfortunate lot fell the two prostrating world wars. Since then, it has been tottering under the enormous burden of soaring prices which has not been lessened even by Independence. The following facts and features bear testimony to this statement:

(Per maund)

Year	*Rice*	*Wheat*	*Sugar*	*Coal*
	Rs.	Rs.	Rs.	Rs.
1920	1-4-0	..	..	..
1939	4-8-0	..	12-8-0	0-2-0
After Independence				
1950	40	14	35	5
1956 (August) ..	50	19	35	7
1958	50	18	34	8-4-0
1960	55	20	50	11

Ghee and Milk

Legend has it that rivers of ghee and milk actually flowed in India once. They may be flowing even today, who knows, but this is certain that, if at all such rivers are traversing India, they are following secret courses hidden from the eye and far from the reach of the layman who is like a dizzy fly taking a ride on the merry-go-round of time—the wheel which has whisked him away from the ancient era of plenty in which, according to *Manu Smriti*, the sale of milk, ghee, curd, water, oil, honey and *gur* was forbidden. But this is a modern, mechanical age and not the ancient age of Manu. The following table has its own tale of woe to recount:

(In Rs. per maund)

Year	*Milk*	*Ghee*
1891	3-8-0	..
1901	4-4-0	..
1911	5-4-0	..
1939	5-8-0	17
1953	22-0-0	80
1958	30-0-0	200
1960	35 to 40	210
		260

HUGE NYLON IGLOO FOR DELHI FAIR

One of the most intriguing items at the Indian Industries Fair at Delhi in November will be a huge nylon "airhouse"—an igloo-like skin of tough coated nylon fabric which literally has no visible means of support. It is held up solely by a constant supply of low pressure air blown in by electric fans.

The airhouse on show will measure 70 ft. by 40 ft. by 20 ft. but bigger ones can be made. It is light in weight, easy to handle, folds into a compact bundle for storage and transport, is completely waterproof and extremely strong and durable. Absence of supporting poles makes it particularly suitable for temporary warehousing, travelling exhibitions, emergency hospitals and so on. In Britain a house has been built beneath one.

The airhouse at the Delhi Fair will be shown by British Nylon Spinners Ltd., the largest producers of nylon yarns in Europe and the Commonwealth, who will use it to house an impressive display of a hundred different articles made from nylon yarns. These will include immensely tough and long-lasting conveyor belting and a wide range of fishing nets of types now used extensively in India and elsewhere because they last longer and catch more fish.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

"Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company." It must be distinctly understood that in giving the consent, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to the same.

A Licence has been granted to the Company by the Central Government for effecting substantial expansion of this industrial undertaking, a copy of which is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of the Prospectus having attached to it the documents required by Section 60 of the Companies Act, 1956, has been delivered to the Registrar of Companies, in Mysore, Bangalore, for registration.

The Subscription List will open at 10-30 a.m. on the 15th day of May 1961 and will close at 3-00 p.m. on the 17th day of May 1961, or later at the discretion of the Directors.

APPLICATIONS MUST BE MADE FOR A MINIMUM OF 8 SHARES OR MULTIPLES THEREOF, EACH LOT OF 8 SHARES MADE UP OF 3 EQUITY AND 5 PREFERENCE SHARES.

THE MYSORE KIRLOSKAR LIMITED

Yantrapur P. O., HARIHAR (Mysore State).

(Incorporated on the 7th day of April 1941, under the Mysore Companies Act, and now an existing Company within the meaning of Section 3 of the Companies Act, 1956.)

The Mysore Kirloskar Ltd. have decided to issue 15,000 Equity shares of Rs. 100 each and 25,000 Redeemable Cumulative Participating Preference shares of Rs. 100 each. The Preference shares are redeemable not before the 30th day of June 1975 but not later than the 30th day of June 1980.

The Preference shares bear a firm return of 8% if the Company declares dividend below 12½% on Equity shares. If the Company declares more than 12½% but less than 15% dividend on Equity shares, the preference shares will get 9%; and if the dividend declared on Equity shares exceeds 15%, the Preference shares will get 10%. This will be the maximum dividend payable on Preference shares.

UNDERWRITERS TO THE ISSUE

THE LIFE INSURANCE CORPORATION OF INDIA, Jeevan Kendra, J. N. Tata Road, Bombay 1.

Messrs. R. R. NABAR & CO., Share & Stock Brokers, 31, Dalal Street, Fort, Bombay 1.

MANAGING AGENTS

MESSRS. KIRLOSKAR ASSOCIATES, Yantrapur P.O. Harihar (Mysore State.)

REGISTERED OFFICE

YANTRAPUR P.O. HARIHAR (MYSORE STATE)

OBJECT OF THIS ISSUE

The object of this issue is to provide finance for the expansion scheme and programmes of the Company.

PROSPECTUS AND FORMS OF APPLICATION

Copies of the Prospectus and Forms of Application may be obtained from the Registered Office of the Company or from Messrs. R. R. Nabar and Company, Share, Stock and Finance Brokers, 31 Dalal Street, Fort, Bombay 1.

BROKERAGE

Brokerage at the rate of one per cent will be paid to the Brokers who are members of any of the recognised Stock Exchanges in India, on allotments made in respect of applications bearing their stamps.

CEMENT FOR THE NATION

Again and again

There is never any water to waste in our country, for a wayward monsoon can ruin our harvests and bring our industries to a standstill. These graceful, skyward concrete cooling towers enable industries to use the same water again and again.

And cement concrete is equally vital for the great dams and hydro-electric projects that are helping industries to bring new prosperity to India.

COMPILATION OF INDUSTRIAL STATISTICS—I

ROOM FOR IMPROVING DEFINITIONS

By A Statistician

WITH effect from the calendar year 1959, the Government of India in the Cabinet Secretariat launched the first statutory survey of industries under the Collection of Statistics Act, 1953 (32 of 1953) and the Collection of Statistics (Central) Rules, 1959. With the launching of this survey, the Censuses of Manufactures so far conducted under the Industrial Statistics Act, 1942, the Census of Manufacturing Industries Rules, 1945 and the Sample Surveys of Manufacturing Industries came to an end. The statutory survey marks off a new phase in the collection of basic industrial statistics in India. In what follows an attempt has been made to examine the special features of the *Annual Survey of Industries* and how the scheme of the survey differs from the earlier scheme of the Census of Manufactures.

Collection of Statistics Act, 1953 (32 of 1953) and the Collection of Statistics (Central) Rules, 1955

The Collection of Statistics Act, 1953 is a comprehensive legislation, the various provisions of which have been designed to collect data on various subjects listed in Section 3 of the Act from establishments, factories, workshops, mines, quarries, enterprises, companies, co-operative societies, firms, public utilities, commercial undertakings, banking and insurance companies, financial corporations, shipping and navigation concerns, brokers dealing in shares, stocks and securities and commodities, advertising consultants, light railways, transport undertakings, plantations (rubber, tea, coffee or cinchona), forwarding and clearing agents and any other concern which is declared as commercial concern by the Central Government by notification in the official *Gazette*. While the Industrial Statistics Act, 1942 authorised collection of statistics from factories only, the Collection of Statistics Act, 1953 authorises collection from a wider field covering almost all economic activities. In terms of International Standard Industrial Classification, the Act empowers the appropriate authorities to collect data from Major-Group—"01 Agriculture and Livestock production—Plantation" in Division 0 to "Major-Group—84, Personal Services" in Division 8. Statistics can be collected relating to any of the following matters:

(*a*) any matter relating to any industry or class of industries,

(*b*) any matter relating to any commercial or industrial concern or class of commercial or industrial concerns, and in particular, any matter relating to factories,

(*c*) any of the following matters so far as they relate to welfare of labour and conditions of labour, namely, (1) prices of commodities; (2) attendance; (3) living conditions including housing, water-supply and sanitation; (4) indebtedness; (5) rent of dwelling houses; (6) wages and other earnings; (7) provident and other funds provided for labour; (8) benefits and amenities provided for labour; (9) hours of work; (10) employment and unemployment; (11) industrial and labour disputes; (12) labour turnover; and (13) trade unions.

The Act, *inter alia*, provides for penalties for non-compliance with the various provisions of the Act, and for improper disclosure of information to any unauthorised persons. The Act confers powers to call for information or returns and right of access to records or documents. These provisions are similar to those provided in the Industrial Statistics Act, 1942.

Delay in Framing Rules

Although the Act was brought into force on 10th November 1956, it took nearly three years to frame the Rules. The Collection of Statistics (Central) Rules, 1959 were finally notified in *Government of India Gazette* on 2nd January 1960. The Rules framed are broadly patterned on the lines of the Census of Manufacturing Industries Rules, 1945, framed by the various State Governments under Section 12 of the Industrial Statistics Act, 1942, with the exception of one provision which is a definite improvement over the Census of Manufacturing Industries Rules, 1945. The particulars and items on which data can be statutorily demanded by the Statistics Authority have been stated in sufficient details in Rule 4, thus dispensing with the forms of return, questionnaires or schedules forming a part of the Rules as was the case with Census of Manufacturing Industries Rules, 1945. This innovation has introduced flexibility in the matter of collection of data, as the schedules can be modified suitably at any stage within the provisions of Rule 4 of the Collection of Statistics (Central) Rules, 1959. Under the Census of Manufacturing Industries Rules, 1945, the forms of returns which formed a part of the Rules as Scheduled II could not be modified without going through the legal process of issuing draft amendments and final amendments to the Rules. Indication of the particulars on which data are required in the notice to be served under Rule 3 under the Collection of Statistics Act, 1953 is sufficient compliance with the Collection of Statistics (Central) Rules. The definitions of various concepts and terms used and the degree of detail with which data on various 'particulars' are required become matters of drafting the forms of return and instructions. This gives ample scope for manœuvrability and flexibility in the matter of collection of details under various heads so long as such collection remains confined within the framework of Rule 4 of the Rules.

The Government of India in the Cabinet Secretariat (Notification No. SO 462, dated the 18th February 1960) has directed that statistics shall be collected relating to all matters pertaining to: (*a*) commercial concerns as defined in clause (*b*) (ix) of Section 2 of the Collection of Statistics Act, 1953; (*b*) industrial concerns; and, (*c*) factories.

By the same notification the Government of India has appointed the Chief Director, National Sample Survey, Cabinet Secretariat, as Statistics Authority under Section 4 of the Act.

Design, Scope and Coverage of the Survey

An integrated scheme, designated as *Annual Survey of Industries*, has been formulated for the collection of basic industrial statistics by conducting censuses and sample surveys on a statutory basis. The scheme envisages conducting of—

(i) Census in respect of all factories employing on any day 50 or more workers with the aid of power and 100 or more workers without the aid of power, and,

(ii) sample survey in respect of the factories employing 10 to 49 workers with the aid of power and 20 to 99 workers without aid of power, and industrial concerns, happened to be selected in the probability sample for the survey year under consideration.

The *Annual Survey of Industries* replaces the following surveys conducted till the calendar year 1958:

(i) The Census of Manufactures conducted under the Industrial Statistics Act, 1942. This Census was carried on annually from 1944 to 1958 on a statutory basis, with the exception of first two and last two years, when it was conducted on a voluntary basis.

(ii) The Sample Surveys of Manufacturing Industries initiated in the year 1951 in the then Directorate of Industrial Statistics on a voluntary basis. Since 1951, this survey was being conducted annually by the Directorate of National Sample Survey, Cabinet Secretariat, Government of India.

The *Annual Survey of Industries* extends to all factories registered and licensed under the Factories Act, 1948 and industrial concerns as defined under clause (*d*) of Section 2 of the Act, with the exception of the following:

(1) Iron ore mining; (2) metal mining except iron ore mining; (3) stone quarrying, clay and sand pits; (4) salt mining and quarrying; (5) chemical and fertiliser mineral mining; and (6) non-metallic mining and quarrying not elsewhere classified.

As in the censuses and sample surveys of manufacturing industries, the establishments owned, managed or controlled by the Ministries of Defence and Railways and training workshops attached to the technical institutions have been excluded from the *Survey*. The geographical coverage of the *Survey* is determined by the provisions of the Collection of Statistics Act, 1953. According to sub-section (2) of Section 1 of the Collection of Statistics Act, 1953, the Act extends to the whole of India except the State of Jammu and Kashmir. However, the factories in Jammu and Kashmir are being covered on a voluntary basis.

One single form of return, consisting of Parts I and II, has been designed. The two parts together are prescribed for factories employing *on any day* 50 or more workers with the aid of power and 100 or more workers without the aid of power and industrial concerns (Mines and quarries happened to be selected in the probability sample.) Part I has been prescribed for factories employing 10 to 49 workers with the aid of power and 20 to 99 workers without the aid of power happened to be selected in the probability sample. Part II contains certain extension blocks for industries engaged in the manufacture or production of articles mentioned in the First Schedule to the Industries (Development and Regulation) Act 1951. The following extension blocks are to be filled for such industries.

Block (22). Consumption of raw materials other than fuels, electricity, lubricants, etc (excluding intermediate products) during the year.

Block (23). Products and by-products (excluding intermediate products) made for sale during the year.

Block (28). Stocks of fuels, raw materials and products at the end of the year.

A classified list of materials and products in respect of which information relating to consumption, production and stocks has to be reported has been given in Appendix V to the Memorandum on Concepts, Definitions and Procedures, which forms a part of the form of return and notice letter.

The following new information which was not collected at any time either in the Censuses or Sample Surveys of Manufacturing Industries will be collected for the first time under the Annual Survey of Industries:

1. Equipment other than power equipment installed.
2. Categorisation of workers into skilled, semi-skilled and unskilled for factories in category (i) and industrial concerns in category (ii).
3. Installed capacity of production.
4. Sales effected during the year by type of consumer.
5. Management and labour relations.
6. Particulars of training facilities given by the factory.
7. Particulars relating to industrial research.

A memorandum containing the Collection of Statistics Act, 1953, the Collection of Statistics (Central) Rules, 1959, definitions, concepts, instructions, procedures, industrial classifications and product classification has been printed separately and it forms a part of the form of return and notice served under Section 5 of the Collection of Statistics Act 1953.

Concepts, Definitions and Terms

Concepts, definitions and terms used for the *Annual Survey of Industries* broadly conform to the concepts and definitions used in the statutory Censuses of Manufactures and the voluntary Sample Surveys of Manufacturing Industries. The various concepts and definitions used are examined in what follows in the context of proposed International Standards in Basic Industrial Statistics.

Definitions

The following definitions have been adopted from the Factories Act, 1948 and the Payment of Wages Act, 1936 and the Rules framed thereunder:

A. Factories Act:
1. Manufacturing process.
2. Factory.
3. Worker.
4. Persons holding positions of supervision or management or employed in a confidential position.

B. Payment of Wages Act, 1936:
1. Wages.

Manufacturing Process

The definition of "manufacturing process" given in clause (K) of Section 2 of the Factories Act, 1948 is a mechanical definition mainly designed to cover all those premises where any of the following processes are carried on:

(i) making, altering, repairing, ornamenting, finishing, packing, oiling, washing, cleaning, breaking up, demolishing, or otherwise treating or adopting any article or substance with a view to its use, sale, transport, delivery or disposal, or,

(ii) pumping oil, water or sewage, or,

(iii) generating, transforming or transmitting power, or,

(iv) printing by letter-press, lithography, photography or other similar work or book-binding, which is carried on by way of trade or for purpose of gain, or incidentally to another business so carried on, or,

(v) constructing, reconstructing, repairing, refitting, finishing or breaking up ships or vessels.

The Factories Act is primarily a social legislation and its main objectives in the matter of

benefits of its various provisions to a maximum number of workers and employees employed in factories. It, therefore, seeks to cover all establishments engaged in "factory production," provided these establishments conform to the definitions of a "factory" given in Sections 2(*m*) (i) and 2(*m*) (ii) of the Act. This definition of a "manufacturing process" is at variance with the economic concept of manufacture. According to the economic concept, "manufacturing" means mechanical or chemical transformation of substances into new products. The adoption of a definition given in the Factories Act, 1948 has resulted in the coverage of many industries which cannot be strictly classified under "manufacturing" according to economic concept. The following are some examples of industries covered under the *Annual Survey of Industries*:

(1) Groundnut, cashewnut decorticating and oil manufacturing; (2) electricity generation and transformation; (3) water pumping stations; (4) laundries; (5) cinema studios; and (6) cold storage plants.

The inclusion of establishment falling under these industries makes the Census and Sample Surveys, a survey of "factory industries" and not "manufacturing industries." The only alternative to resolve this anomalous situation is to take away the survey from the present base of the Factories Act and evolve a new definition of "manufacturing process" which would conform to the economic concept.

Establishment

The concept of establishment, recommended by the Statistical Commission, U.N., broadly conforms to the concept of an establishment, registered and licensed under the Factories Act, 1948 and the Rules framed thereunder, except for the fact that Factories Act, 1948 covers establishments which have not been recognised as "manufacturing" under the International Standard Industrial Classification, the concept of an establishment recommended by the Commission is in conformity with a definition of a factory under the Factories Act. Section 4 of the Factories Act, 1948 which confers powers on the State Government "to declare different departments or branches of a factory to be separate factories or two or more factories as a single factory," may distort slightly one to one correspondence in some cases, but such distortion would make negligible difference in the overall picture.

Worker

The other definition which has been taken from the Factories Act, 1948 relates to a "worker" as defined in Section 2(1) of the Act. Having adopted the definition of a "worker" verbatim from the Factories Act, 1948, a proviso has been added to the definition *excluding* persons holding positions of supervision or management or employed in a confidential position as defined under the Rules framed under Rule 64 of the Factories Act, 1948 by various State Governments. This is likely to create an impression that the exact significance and import of the definition of a "worker" has not been fully appreciated. The definition *per se* includes persons holding positions of supervision or management or employed in a confidential position. Hence the proviso which excludes such persons becomes infructuous and meaningless. The only implication of Section 64 of the Rules framed thereunder is that the persons notified as holding positions of supervision or management or employed in a confidential position are exempt from the provisions of "Chapter VI—Working Hours of Adults," i.e. Sections 51 to 66 of the Act. Once the concepts and definitions "manufacturing process" and "worker" have been assigned the same meanings as given under the Factories Act, 1948, any qualifying provisos and clauses which are repugnant to the spirit and letter of these legal definitions have no force and reliance. As stated earlier, the Factories Act, 1948 is primarily a labour legislation designed to regulate the conditions of work and service and to provide certain basic welfare facilities and in order that the benefits of its various provisions may accrue to as many employees as possible, the term "worker" has been so defined that "any person employed, directly or through any agency, whether for wages or not, in any manufacturing process, or in cleaning any part of the machinery or premises used for a manufacturing process, or in any other kind of work *incidental to or connected with the manufacturing process, or the subject of the manufacturing process*," is a worker within the meaning of the Factories Act, 1948. The definition, as can be seen, is exhaustive as well as flexible and any person irrespective of the nature of work performed by him can be brought within the scope of the definition, provided it can be proved to the satisfaction of the executive and judicial authorities that the person was employed on any kind of work "incidental to or connected with the subject of manufacturing process." This comprehensiveness and flexibility in practice mean unfettered freedom to the factory owners to include persons who cannot strictly be called "operative" as understood in common parlance. There would be little harm, if all the factory owners include uniformly the same categories of personnel, but, in the absence of any definite guidance provided by the Act or the Rules in the matter, the factory owners include all those persons whom they consider as "worker" within the definition of the Act. In some establishments, clerical, watch and ward staff are included, while in others they are excluded. There is no uniform practice and hence the statistics of employment collected according to the definition of a "worker" under the Factories Act, 1948 do not precisely relate to the employment of skilled and unskilled operatives as is commonly believed. It is a mixed bag and no one knows the relative proportions of various categories of personnel included.

Supervisory Personnel

Persons holding positions of supervision or management or employed in a confidential position are declared to be such under the Rules framed under the Factories Act, 1948 by the various State Governments. There are wide divergences in the Rules framed by various State Governments. The persons who have been designated to hold positions of supervision or management or employed in a confidential position in one State are not necessarily the same persons in any other State. For example, the following persons who have been designated to hold positions of supervision or management or employed in a confidential position under the Bombay Factories Rules, 1950, have not been designated as such under the Rules of other States:

(1) Assistant engineer, (2) storekeeper, (3) inspector, (4) boiler *sarang* and attendants, (5) labour officer, (6) mechanic, (7) chargeman, (8) workshop overseers, and (9) jobbers and *muccadams*.

While Madras and Bihar have designated Labour Welfare Officers as persons holding positions of supervision or management or employed in confidential position, other States have not done so. Examples can be multiplied to show the divergences in the Rules framed by the various State Governments. It will thus be seen that the expression "persons who hold position of supervision or management or employed in confidential position" does not connote the same meaning in all the States.

In addition to these divergences in the Rules, the saving clauses to the Rules have conferred wide powers on the Chief Inspectors of Factories to notify any category of persons as holding positions of supervision or management or employed in a confidential position. According to provisions contained in sub-section (5) of Section 64 of the Factories Act, 1948, the Rules framed under this section "*remain in force for not more than three years*," after which they are to be modified, revised or replaced in the light of the experience gained and difficulties encountered in implementing the provisions.

All these diversities, coupled with periodical changes in the lists, would introduce wide variations in data rendering temporal and spatial comparisons impossible. This defeats the purpose of the Censuses and Sample Surveys which have been planned on a uniform basis and conducted simultaneously throughout India. Maintenance of uniform methods, concepts, definitions and procedures is an essential prerequisite of a Census and Sample Survey like *Annual Survey of Industries* so that data collected can be compared over time and space. But the diversity in the Rules permits the factory owners in various States to report figures according to the Rules prevalent in their respective States. The correct procedure could have been to indicate the various categories of persons by broad functional status. For example, persons other than operatives can be classified into different categories by functional status as under:

(1) Administrative personnel.
(2) Technical personnel.
(3) Clerical and office personnel.
(4) Specialised workers.
(5) Commercial personnel.
(6) Directing personnel.
(7) Owners continuously employed.

Examples of persons falling under each category should be provided in the instructions for the guidance of factory owners and field staff. Doubtful and peripheral cases should be referred back to Statistics Authority for clarification.

(To be continued)

ORIENT PAPER MILLS LIMITED

Registered Office:
Brajrajnagar, Dist. Sambalpur (Orissa)

NOTICE TO DEBENTURE-HOLDERS

Redemption of Debentures of Rs. 1 Crore issued in Denomination of Rs. 1000 or fraction thereof in the year 1951

THE COMPANY, AS ALREADY NOTIFIED, had, in exercise of the option vested in it under the terms of issue of the said debentures, decided to extend the date of redemption of debentures from the 31st March, 1961 to 31st March, 1971, subject to the sanction of the Central Government. The Central Government has declined to accord sanction to the same but has, however, allowed the Company to postpone the redemption of debentures till the 30th June, 1961.

Notice is hereby given that the above debentures will accordingly be redeemed on the 30th June, 1961 on which date the principal with interest up to that date will be paid to the registered holders of debentures on presentation and surrender of the debentures duly discharged at the office of the Company at "Eastern House," 14, Radha Bazar Lane, Calcutta. The debentures will cease to bear any interest after the said date.

The Debenture Transfer Books of the Company will be closed from the 19th to 30th June, 1961, both days inclusive.

By Order of the Board,
B. K. VYAS,
Secretary.

8, INDIA EXCHANGE PLACE,
CALCUTTA, *the 28th April*, 1961.

THE PUNJAB NATIONAL BANK LIMITED

MR. R. N. GOENKA ON MOBILISATION OF SAVINGS

BANKS MUST BE ENCOURAGED TO OPEN BRANCHES IN RURAL AREAS, HE SAYS

THE view that the authorities had not approached the problem of generating savings scientifically was expressed by Mr. R. N. Goenka, Chairman of the Punjab National Bank Ltd., in his speech at the One hundred and fourteenth Annual General Meeting of the Bank held at New Delhi on Wednesday, 26th April 1961. The problem, he declared, was sought to be dealt with in a somewhat haphazard and hackneyed fashion. Mr. Goenka laid particular emphasis on the need for special efforts to mobilise available money in the hands of agricultural classes unaccustomed to the banking habit and to canalise such money into the banking sector. Stating that the State Bank of India did not seem to have effectively tapped this valuable field, he urged the authorities to permit, nay, encourage, the bigger scheduled banks to open branches in rural areas under a well-thought-out scheme, including a cover in part against losses therefrom for a period of years. These matters, he said, must engage the immediate attention of the authorities.

The following are extracts from Mr. Goenka's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a hearty welcome to the 114th annual general meeting of the Bank. The report of the Directors for the year ended 31st December 1960, along with the balance-sheet and profit and loss account, have been with you for some time.

New Offices

"During the year 1960, the development of your Bank's business continued to progress. In pursuance of our policy of extending representation by opening new offices in developing centres, 16 new offices were opened during the year, making the total number of our offices at the close of the year 408.

Balance-sheet 1960

"You will observe from the profit and loss account for the year 1960 that the profits of your Bank at Rs. 121.23 lakhs, including Rs. 3.19 lakhs brought forward and after providing Rs. 12.82 lakhs for the employees gratuity trust fund and for contingencies, were higher than last year by Rs. 32.54 lakhs. A sum of Rs. 12.50 lakhs has already been utilised for payment of an interim dividend of Re. 1 per share subject to tax, leaving a balance of Rs. 108.73 lakhs for appropriation. Provision for income-tax has been made at Rs. 53 lakhs, and Rs. 11 lakhs have been transferred to the reserve fund. A sum of Rs. 27 lakhs has been provided for bonus to staff and Rs. 1 lakh for charity. The Directors have recommended a final dividend of Re. 1 per share, subject to tax, making a total of 20 per cent, subject to tax, the same as last year.

"During the year 1960, the profits of the banking industry showed an all-round improvement, due to a higher level of advances throughout the year and the increase in lending rates from October 1960.

Deposits

"But the accretion of deposits into the banking system during the year 1960 has been disappointing. During the second half of 1960, the downward trend of deposits has been a matter of major concern. The deposits of all scheduled banks during this period declined by Rs. 78.34 crores, and it is noteworthy that the decline in deposits was mostly in respect of fixed and savings deposits. Your Bank also experienced the same trend. While our fixed and savings bank deposits declined during the year, our current deposits registered an increase, and the aggregate deposits, which stood at Rs. 141.16 crores at the end of 1959, declined slightly to Rs. 139.48 crores at the end of 1960.

"The withdrawal of P.L. 480 funds from the State Bank of India is partly responsible for the general recession recorded by all scheduled banks, but the failure of the Palai Central Bank and its effect on the banking system may have acted as a contributory factor. There has also been some competition from hire-purchase companies, chit funds and industrial houses which pay higher rates of interest, causing a diversion of funds which would otherwise have accrued to the banking system.

"Measures are now being taken to strengthen the banking structure in order to restore public confidence. The insurance of bank deposits has been accepted in principle and, although the big banks may have to bear the greater part of the cost of the scheme, it is a step in the right direction in the context of the present position of banking in the country. Legislation has also been enacted giving powers to the Reserve Bank of India to effect the amalgamation of smaller and weaker units with bigger and stronger ones. Under this scheme, your Bank has already taken over the Indo-Commercial Bank Ltd., Mayuram, Madras, as from 25th March 1961. This institution had 25 branches in South India and in due course will, I hope, form a very valuable addition to our organisation in the South.

Advances

"The decline in deposits, specially in the field of time deposits, has to be considered in relation to the marked increase in advances of the scheduled banks by about Rs. 204 crores last year. The increase in advances, which have now reached an all-time peak figure, is an indicator of the demands of industry and trade on the banking system. The significance of this marked increase, however, is generally not correctly appreciated in responsible quarters. There is no denying that the operations within the organised banking system in themselves do not provide the full picture of the scope and extent of money transactions in the country. There is a considerable amount of money that operates outside the banking system, the extent of which is difficult to gauge. I am referring not only to what is called black money but also to the money in the hands of the agricultural and fixed income groups which may not be so categorised. I am not concerned in seeking a remedy from the operation of this type of money in the market, but I certainly wish to indicate to the authorities that the imposition of blanket controls on the apparent side of the money market offers little solution in dealing with either problems of inflation generally or of checking commodity prices specifically. A tightening of credit with all its concomitant reactions can only make it difficult for the legitimate needs of organised industry and commerce to be met particularly at a time when we are supposed to be embarking on another stage of planned development. The shortage of foreign exchange may slow down the tempo of industrial development in the earlier years of the third Plan. It is, therefore, all the more necessary for the authorities to decide whether they should now revert to the policy of expanding the credit base similar to what was adopted in the fall of 1956 and in the spring of 1957 by making the Reserve Bank's rediscounting facilities liberal and its attitude cooperative so that industrial development is not retarded for reasons of tight money conditions.

"The total credit extended by your Bank increased by Rs. 21 crores or 29 per cent during the year, constituting 67.06 per cent of our deposits, as compared to 51.37 per cent at the end of the preceding year. The ratio of advances to deposits of other scheduled banks, excluding the State Bank, moved up during the same period from 65.55 per cent to 72.53 per cent. It is our policy, as far as possible, to diversify our advances for the better employment of our resources and to meet the genuine needs of the expanding economy of the country. Our advances to industries at the end of October 1960 represented 54.6 per cent of our total advances including Rs. 3.4 crores advanced to small-scale industries. It has always been our practice to encourage advances to small-scale industries wherever possible. We believe that only by the creation and development of small-scale industries can the nation's production be diversified and given a broad base for the future.

Investments

The high level of advances of the Scheduled banks and the fall in deposits during 1960 were responsible for a fall in their investment portfolios. Your Bank's investments declined by Rs. 20.47 crores approximating to the increase in advances. At the end of the year, our investment-deposit ratio at 29.2 per cent was higher than the average of 25.5 per cent of all other banks, excluding the State Bank of India, indicating a comparatively higher liquidity.

Economic Situation

"I shall now proceed to review the economic situation in the country and endeavour to assess the increasing role which banks will have to play in the implementation of the plans for the economic development of the country. The economic position of the country on the eve of the third Five-year Plan indicates that the rate of economic growth has gained perceptible momentum. The industrial foundation of the economy has been strengthened. There have been setbacks of varying degrees and, while these might be said to be natural in a developing economy such as ours, it cannot be denied that some of these are avoidable, as the essence of planning is that it foresees the emergence of tangential forces in a fast developing economy and makes provision against the impact of the adverse effects of such forces on the economy.

"The three major problems which have beset the country during the past year have been the rise in the price level, the inadequacy of domestic savings and the strain on the overseas balance of payments position. Wholesale prices recorded an increase of 6.5 per cent during 1960, as compared with 4.1 per cent in 1959 and 2.1 per cent in 1958. In this regard, it is significant that, while up to 1958 increases were mainly in respect of foodgrains, since 1959 the increases have also been extended to industrial raw materials and finished goods.

Savings

"Savings in India have so far been below official expectations. They have been estimated at 8 per cent of the national income for 1960, as against 9.7 per cent expected to be achieved by the end of the second Five-year Plan. The basic problem of generating savings in the country has not been approached by the authorities scientifically. This is sought to be dealt with in a somewhat haphazard and hackneyed fashion and the introduction of prize bonds is a typical instance of the adoption of such methods to deal with a vital problem. Savings can be divided into three categories: corporate savings, savings by the well-to-do and savings by the low-income groups. I shall not say anything here about the first group. This is largely a matter for the fisc and for the administration, whose responsibility it is to see that such savings are properly utilised. In regard to the second, this group of late wants larger and quicker returns on investment. The less speculative element in this field has been going in for investment which would appreciate in value or which would not at least depreciate in value. The share market and house building appear to be two of its favourite fields of operation. The savings that Government seems to be keen on encouraging is from the large mass of the low-income group, and here even the fringe of the problem has not been touched. It may look like a paradox if I say that the classes habituated to save for security reasons, namely, the fixed-income groups, which include the salariat, are being progressively impoverished by the steady drop in the real value of wages. The new entrants in this field, mainly the industrial workers, are not as a rule accustomed to save. We, perhaps, on our part, by broadening and strengthening the banking structure and with the added safety that may be provided to the public by the introduction of deposit insurance, could encourage and foster the banking habit by an organised drive to get people to keep their money with banks.

Special Effort Wanted

"The agricultural classes, which of late have prospered, may not fit into one or two of the groups mentioned above, in view of the fact that the bulk of them are not accustomed to have any banking account, while they have with them resources that can reasonably be expected to be banked. A special effort has to be made to bring these people into the banking sector. This has become all the more necessary after the nationalisation of life insurance business, because there is no longer the same keen competition between the various insurance companies to gain command of the resources of the rural areas. It may be said that the State Bank's policy of rapid extension of branch banking should have met this need. Undoubtedly the State Bank in this type of development is in a position of vantage in that its losses from such new branches are covered by guarantors. Nevertheless, or perhaps for this very reason, the State Bank does not seem to have tapped effectively this valuable field. My contention will be that, for the purpose of effectively mobilising available money in the hands of a class unaccustomed to the banking habit and canalising such money in the organised banking sector, the bigger scheduled banks must be permitted, nay encouraged, to open branches in the rural areas under a well-thought-out scheme not necessarily excluding cover in part against losses therefrom for a period of years. These matters must engage the immediate and serious attention of the authorities.

The Need of the Hour

"There is one aspect, and in my opinion a very important aspect, which bankers are prone to forget. There is large scope for banking in this country, enough to give every one a satisfactory share in the business. But the business has to be developed. And it can be done only by healthy competition in rendering service and not by the crude spirit of rivalry which is so often in evidence. The appropriate spirit and methods of genuine enterprise must be brought into play.

"The need of the hour, however, is a significant increase in the quantum of time deposits with banking institutions, as otherwise they would not, even with the utmost encouragement from Government's economic policies and full co-operation from the Reserve Bank, be able to meet the demands made on them by industry and trade. In this connection, it would be interesting to note that, even in a country like the United Kingdom, where the cheque-using habit is reasonably well developed, the bigger banks have been trying out various forms of personalised services to attract new clients. In this country, the link between the bank manager and his non-industrial and non-trade client is yet to be established. With the increase in the range of our operations provided by the expansion of branch banking, we are now well set to consider such schemes, and your Board will give this matter their earnest consideration during the coming months.

"With regard to the strain on the overseas balance of payments position, I fear, although perhaps fear is not the correct word, that this problem will be with us for many years to come. Although we received considerable foreign aid during the year from many friends and well-wishers, for which we are very grateful, our foreign exchange reserves declined by Rs. 69 crores and have now reached what may be considered an irreducible minimum. The only relief that we can now expect must, therefore, come from further foreign aid and exports. The former will, I have no doubt, be forthcoming; but we cannot progress without intensifying our own efforts, and we must export more.

"It is clear that, in order to keep the economy working at the existing productive capacity, it is not possible to curtail imports any further, but, at the same time, the foreign exchange situation does not warrant any increase in our imports. Apparently, the only answer is to increase exports. Unfortunately, our experience of the past two years is not very encouraging as far as an increase in exports of traditional goods is concerned. In fact, India's share in the total world trade has been continuously declining. To retain established markets and open new avenues for exports, prices must be competitive, and this may not be possible unless certain fiscal and labour policies are amended.

Third Five-year Plan

"With these problems and prospects, we have embarked upon a much bigger effort towards planned development. The third Five-year Plan aims at an investment effort of Rs. 7,500 crores in the public sector and Rs. 4,100 crores in the private sector. Although planned investment efforts during the third Plan are as big as the actual investment realised during the first two Plans, deficit financing has been limited to Rs. 550 crores, as compared with Rs. 1,100 crores undertaken during the second Plan period. While this is to be welcomed, the target of Rs. 1,710 crores for additional taxation during the third Plan may prove difficult of attainment unless the national income increases considerably in the meantime.

"Our duty, gentlemen, is to conduct the affairs of your Bank in the best traditions of banking in the interest of national development. We will continue to do our best in this direction and leave nothing undone which will contribute to the continued expansion of our institution and to the enhancement of its capacity to serve the nation in its developmental efforts."

Note:—*This does not purport to be a record of the proceedings of the annual general meeting.*

A LARGE INDIAN PUBLIC COMpany intends to appoint an assistant to the Managing Director. The appointment carries prospects of eventual promotion to the Board in an executive capacity for a man possessing the requisite qualifications, which include preferably membership of one of the Institutes of Chartered Accountants, experience in modern methods of financial control and management accounting, knowledge of industrial legislation and ability to deal with personnel problems at different levels. There is no fixed scale of remuneration for this appointment but a good salary with commensurate allowances, depending on age and experience, will be paid to the successful applicant.

Reply, stating age and giving full particulars of experience, along with the names of two Referees, to Box No. 974, C/o "Commerce", Brady House, Veer Nariman Road, Fort, Bombay.

INDIAN ALUMINIUM COMPANY LIMITED

MR. K. C. MAHINDRA WARNS AGAINST RISKS OF OVER-EXPANSION

PLEA FOR PRUDENT UTILISATION OF RESOURCES

A WARNING that great risks were inherent in the over-expansion of capacity in aluminium industry was struck by Mr. K. C. Mahindra, Chairman of the Indian Aluminium Company, Limited, while presiding over the Twenty-third Annual General Meeting of the Company held at Calcutta on Thursday, 27th April 1961. The warning was prompted by what he called a "wild scramble" that had ensued among the top-flight producers of the world to stake a claim in the developing market in India. It was strange, Mr. Mahindra declared, that, in the specialist field of aluminium, there should emerge a movement reminiscent of old, old colonial days and ways; crude and half-baked schemes, based on little or no field investigations or market surveys, and not even presuming to be economically viable, were presented to the public in India, endorsed by reputed concerns of international renown. He also alluded to the offer of plant and techniques from a communist country that had provided the opportunity for a Minister to say that a new aluminium unit would be set up in the public sector, a consequence which, he was sure, would be irksome to many of the new aspirants.

The following is the full text of Mr. Mahindra's speech:

"I have pleasure in welcoming you to our twenty-third annual general meeting. The Directors' report submitted to you along with the audited accounts for the year 1960 provides information on the year's operations. I am happy to report that production and sales again reached new high levels in 1960. The steady progress which your Company has been making over past years is reflected in the financial accounts which are before you now for your consideration.

"During 1960, your Company earned a net profit of Rs. 12 million, as compared to Rs. 8 million in the previous year. A large part of this increase was due to the much smaller provision for development rebate in 1960. Nevertheless, you will agree that the financial results are gratifying. This has enabled your Directors to recommend the payment of a higher dividend this year at Re. 1.50 per ordinary share. Dividend on the preference shares has been recommended in accordance with the Preference Shares (Regulation of Dividends) Act 1960, and the Company's Articles of Association. The Directors have proposed a transfer of Rs. 5 million to the general reserve and a carry-forward of Rs. 4.99 million under surplus account. You will no doubt appreciate that, in a capital-intensive industry like aluminium, it is prudent as well as necessary to plough back a portion of our surplus so as to meet the requirements of a growing industry like ours.

Dividend

"For the last few years, the corporate shareholders of this Company have been enjoying—in respect of the ordinary shares issued in late 1956 and those issued upon conversion of loan stock since 1957—the benefits of Section 56A of the Indian Income-Tax Act, that is, exemption from super-tax on dividends. It now gives me considerable pleasure to announce that the benefits of Section 15C of the Indian Income Tax Act, which provides for five years' tax holiday for newly established industrial undertakings for which your new smelter at Hirakud qualifies, will be available to all shareholders, both ordinary and preferred. For the year 1960, the Income-tax Officer has authorised your Company not to deduct tax on 12 per cent of dividends and we propose to act accordingly. The percentage of 12 per cent has been fixed on a provisional basis and the shareholders will have to wait until the Company's tax assessment for the year 1960 is completed before the full and final estimate of this benefit is obtained and on the basis of which tax relief, if any, may be claimed by the shareholders in their own assessments.

"Because of our plants being located in different parts of the country, a very serious problem which we have to face is that of transport. The uncertainty of wagon availability forces the Company to increase its inventories thereby tying up extra capital and also compelling the Company to utilise more costly road transport.

"Coal is a commodity most seriously affected and it appears there is no remedy for the immediate future. The railways claim that they are carrying all the traffic that they are supposed to according to the second Plan estimates. Various remedial measures are being discussed by the Government especially for the high priority industries, e.g., steel, public utilities, etc. But for industries like aluminium, which enjoy no special priority, the prospect of improvement in transport bottlenecks do not appear to be hopeful. The Company is pursuing this matter with the Government in the hope that some action may be taken to solve our difficulties in this regard.

Excise Duty

"Last year, I spoke to you about the new excise duty levied on aluminium products. During the year 1960, we have faithfully collected Rs. 5.5 million as excise duty from our customers and paid this amount over to the Central Government. We are, however, worried about the way in which excise officials are interpreting the duty regulations. Excise duty is normally payable on shipments to customers, but not so in the case of aluminium. The officials have ruled that duty must be paid on all shipments of ingot from our smelters to our fabricating plants. Thus, excise duty must be paid on all aluminium in the pipeline and in our fabricating plants. From our annual statements, you will see that we have so far paid no less than Rs. 1 million on this account. The requirements of working capital for this capital-intensive industry are thereby further increased, and so also is the debit for interest. In addition, duty paid on ingot which is ultimately wasted in fabricating plants as 'melt loss' is never recovered. Thus you get an amazing result: the producer of aluminium is paying excise duty on something which is non-existent and can be shipped to nobody.

"In our opinion, the above difficulty and the unwarranted expenses arising therefrom can be easily and sensibly eliminated by allowing us to move ingot and fabricate it 'in bond.' Such a procedure is not very uncommon, but so far it has not been possible to persuade the excise officials to see our point of view. Our losses on this score will multiply as our current expansion projects are put into commission, and it is desirable that the Central Board of Revenue take steps to remove this unfair burden at an early date.

"Under the 1961-62 budget proposals, the Government has extended the scope of excise duty to include aluminium pipes and tubes. Further burdens have been imposed on your industry by way of increased customs duty on imported machinery and reduction of tax concession in the form of development rebate. These proposals will have the effect of further increasing our cash requirements.

Expansion Programme

"As to the Company's expansion programme, satisfactory progress is being made at all locations. Barring any untoward happening, it is expected that the second extrusion press at Alupuram and the additional potline at Hirakud will be ready to go into operation before the end of the year. Expanded facilities at Belur and Muri are likely to be ready by the middle of next year. Your Directors are anxious that your Company continue to play its leading part in the development of aluminium industry in India and, with this in view, proposals for further expansion of the Company's activities are under constant review.

"1960 has been a good year for India and a particularly eventful one for the aluminium industry. The last 12 months have witnessed a more than ordinary increase in the tempo of economic activity. A high level of industrial output, especially in steel, buoyant Central revenues, a slight improvement in export earnings, despite initial setbacks, are some of the significant gains recorded. The year ended on an optimistic note and the outlook for 1961 is heartening.

"Last year from this forum, I extended a hand of welcome and co-operation to two new entrants in the aluminium industry. I did not know then, nor did I anticipate, the wild scramble which has since ensued amongst the top flight producers of the world to stake a claim in the developing market in India. It does appear strange, and perhaps ironic, to me that international groups would take a leaf out of the Indian book of experience—a book which ruefully reveals our short horizons, our quest for the quick rupee, our inability to learn the long and tedious track to true industrialisation. There may have been justification 20 years ago for such mental attitudes, inasmuch as the protectorate or colonial era in India deprived the nationals of the country of learning by experience the vicissitudes of industrialisation. With the withdrawal of the British, the hitherto financial and the trading classes in India plunged into the industrial vortex hurry-scurry in many directions, but still with an eye for a quick rupee. They did not stop to take a long-term view; they did not stay to learn from the industrial revolution in Europe of the mid-nineteenth century or even from the latter hot-house developments in U.S.S.R. Last quinquennium has, however, showed a welcome change and long-term investments have become fashionable. It is, therefore, doubly strange that, in the specialist field in which your Company has pioneered the way, there should emerge a movement reminiscent of the old, old colonial days and ways. Crude and half-baked schemes, based on little or no field investigations or market surveys, and not even presuming to be economically viable, are presented to the public in India, endorsed by reputed concerns of international renown.

"The deposits of bauxite ore on which the schemes are based have not been thoroughly field-tested for quality or reserves. Availability of firm and continuous power nor the ultimate costs thereof have been assured. Costs of production, in some cases based on questionable exchanges of metal for raw materials and/or equipment, have not been spelt out and are bound to be unnecessarily high. We in India should look at these proposed new schemes carefully before supporting them, and we should look at them through the factual eyes of experience and viability and not be carried away by mere enthusiasm for expansion.

A Throw-back From West

"But why this sudden display of interest in the Indian markets? We know that aluminium industry in the West and in North America has had a bad two years; there is a glut of primary metal and smelters have been working on restricted production. In Europe where smelter operations do not match the requirements of the fabrication units, conditions are not so depressing, and North American groups have moved *en masse* into the European markets. India is slowly emerging as perhaps a desirable non-aligned area and, may be, quick rupees can be made. It surprises me, however, that, when our own planning techniques are being remodelled and reshaped in the light of experience over a decade, a throw-back emerges as a gift from the West. Alignments of resources with projections of demand become awry and we have begun to wonder if there has not been gross underestimation of what the country has in physical resources for aluminium development and what the country can consume. Our friends from the West did not perhaps reckon with the one obvious consequence of such a presentation, namely, the overall socialistic thinking of the planners. If the development of a basic commodity like aluminium is such a gold mine, Government would not like to be left out. Offer of plant and techniques from a communist country has provided the opportunity for a Minister to say that a new aluminium unit will be set up in the public sector!—a consequence which, I am sure, will be irksome to many of the new aspirants.

"Rational misjudgments do occur in every large effort, but, where there are scarcities of resources and of technical knowledge, where the purchasing power of the market is phenomenally low and, therefore, will take time for the upward geometrical surge, there is critical need for prolonged and deep look into the purposes and end-products of investments and of potential investors. Aluminium industry is voracious in its appetite for capital. To produce a ton of primary aluminium, one needs an investment in capital equipment and facilities almost ten times what it would need to produce a ton of steel. Let us look at the picture-projections for the next five years.

Third Plan Target

"The demand for all non-ferrous metals during the third Plan period is expected to go up and, since aluminium is the only non-ferrous metal which can be indigenously produced, in adequate quantities, considerable thought is being given to its development. The Draft Outline of the Plan has set the target at 87,500 tons by 1965-66. Out of this, 52,500 tons are already in production or under construction, while work on the balance of 35,000 tons is expected to start shortly. As against this, the country is currently consuming around 44,000 tons of metal.

"Recently, however, there has been talk of raising the target for aluminium production to 150,000 tons and, if I am to add up the pending proposals, supply target would be nearer 200,000 tons—a five times jump over current consumption within five years. That exports will take care of oversupply is a mirage, for India cannot hope to compete in the world market on level terms with strong international groups. We know that, with our scattered deposits of ore, expensive power and comparably more expensive costs of installation, India will remain a high cost producer. Oversupply has its own quick nemesis and, while I favour planning on an ambitious scale, I would nevertheless counsel prudence in weighing the adverse effects which might result from commitments which are premature for the stage of development which the industry has reached in this country. There is no surer way to discourage investment than to encourage overoptimistic growth and invite idle capacity—a fact that has been amply demonstrated even in highly developed economies. Moreover, India is currently power hungry, and its bauxite resources, though apparently considerable, are far from being proven in quantity and quality sufficient to sustain a prodigal rate of growth. The economic supply of these major raw materials is vitally important to the health of the aluminium industry, and, in my view, the country cannot afford to embark too hastily or too lavishly upon new and grandiose schemes, without the most careful thought for the prudent utilisation of these resources.

New Process

"A noteworthy development, which also suggests the wisdom of temperate planning, and which is of great potential importance to the nascent industry of this country, is the announcement made by our Canadian associates, Aluminium Limited, that a basically new process—the first major technological change in the method of manufacturing aluminium—is about to be put into semi-commercial operation in Canada. The process, if fully successful, will not appreciably reduce the large power requirements of the existing process, or its dependence upon bauxite, but it does give promise of considerable savings in other elements of production cost, and particularly of substantial reduction in capital costs. The new experimental plant will be completed early in 1962, with a production capacity of six to eight thousand tons of aluminium per year. It is expected that operation on this scale for a couple of years or so will be required to determine whether the estimated savings in capital and operating costs can be realised in large-scale operations.

Risk of Over-expansion

"In the light of these impressive possibilities, which we are watching with interest and care, the risks inherent in over-expansion take even clearer form. However, there are many factors to be considered in the formulation of future plans, and all are receiving the constant and critical attention of your management. We do not intend to keep static, but neither will we lose touch with realities and sound business principles, and I express the hope that Government, in its planning, will continue to maintain a similar outlook.

"We have lost during the year the able direction of Mr. Vance Echols, who retired from India for family reasons. His contribution to the Company's progress was dynamic and we were sorry to lose his services. Pending the appointment of a new Managing Director, the Board entrusted the charge to Dr. Horwood who has been with the Company for some years, but unfortunately is also due to leave shortly. Your Board realises that quick changes in top management are not healthy, but, in specialised fields where talent is very scarce, it is inevitable that movement of skilled personnel must go on until we are able to develop such resources indigenously and in plenty.

"Once again, I am sure that shareholders would wish me to convey their thanks to the Company's able management team and to workers and staff who have served the Company well during the past year."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

KILLICK INDUSTRIES LIMITED

CHAIRMAN MR. A. N. HAKSAR, REVIEWS WORKING OF THE COMPANY

SUBSIDIARIES SHOW BETTER RESULTS

ADDRESSING the Annual General Meeting of Killick Industries Limited, held at Bombay on Friday, 28th April 1961, Mr. A. N. Haksar, Chairman, briefly reviewed the progress of the Company. He drew attention to the improvement in the working of the Company's subsidiaries. Looking to the future, Mr. Haksar said that good Managing Agents performed a most useful function and expressed the hope that the Government would continue to recognise their usefulness.

The following is the full text of Mr. Haksar's speech:

"GENTLEMEN,

"The report and accounts for the year are not as satisfactory as I would have liked them to be. Although I have no wish to make any excuses, I would like the shareholders to appreciate that during the year under review, we were subjected to certain strains and stresses and were forced to incur certain expenditure which I sincerely hope is not of a recurring nature. Overall, I can hope that 1961 will show a modest improvement over the current year. The Managing Agency side of the business will, I think, definitely show better results. I cannot be so sanguine regarding our subsidiaries, Killick Nixon and Co. Ltd., and Stamco Industries Ltd., but I believe that these companies will eventually become useful earning members of the group though it will take some time.

"The Kohinoor Mills has, one can hope, turned the corner. New machinery has been installed and improvements in working are already evident. The results for 1960 are substantially better than those of 1959 and would have been better still if large amounts had not been paid out in retrenchment and other compensation.

"The electricity companies continue to enlarge their service to their respective communities. The enormous expansion in demand for power for industry and homes in the Bombay suburban area has created difficulties over the procurement of materials. In turn this has meant that applications for power are running ahead of services connected. The Surat Electricity Company, in common with the rest of the licensees in South Gujarat, has been subject to control on new connections and its diesel plant is being called upon to bear an increasing burden to sustain the interests of the South Gujarat Grid. The Ahmedabad station is more than fully loaded and in fact steps are being taken by the Government to effect measures to bring about some form of rationing of power. This is most unfortunate but absolutely necessary. The silver lining in the cloud, however, is that 60 m.w. of new plant is scheduled to be brought into commission—30 m.w. by March 1962 and the balance one year thereafter.

Export of Manganese Ore

"The Shivrajpur Syndicate Ltd. increased its sales of manganese ore in the last year but, I am afraid, this increase was mainly due to the fact that, during the year, manganese ore exports were permitted against barter transactions by the Government. Otherwise, Indian manganese ore continues to be uncompetitive, generally speaking, in the international market. It is well known that many new mines have been developed in recent years in several countries such as Brazil, South and West Africa, etc. During the same period, f.a.s. costs of Indian ore suffered unavoidable increases due to additional imports such as increased royalty rates and railway freights. The latter difficulty remains unresolved even today and, unless adequate relief is granted soon, I cannot visualise an encouraging future for Indian manganese ore exports.

"The Hingir-Rampur Coal Company's position has shown considerable improvement although, in common with other collieries, it is faced with a serious shortage of railway wagons for the movement of coal supplies, and recently the stocks have reached an unprecedented high level with the result that production of coal has had to be curtailed.

"The steel file factory at the Chandivli Industrial Estate has been suffering from labour problems. It is to be hoped that the union will show a more positive spirit of co-operation to enable this factory to improve its contribution to your company's profits. There is no doubt in my mind that, given stable conditions and trouble-free working, this factory can make considerable profits.

Subsidiaries

"Turning to the affairs of the Company's subsidiaries, you will notice that the working results of Killick, Nixon and Co. Ltd. show a considerable improvement compared to the previous year. From a loss of Rs. 2 lakhs for the year 1958-59, the Company has shown a reasonable profit of Rs. 1.25 lakhs for the year 1959-60. There have been some setbacks during the current year, but every effort is being made to rectify the position.

"Stamco Industries continue to show a loss but I believe that the measures now being undertaken will reverse this tendency. I am very pleased to report that consequent to the visit to the Stamco factory by two Directors of Caribonum Ltd., Leyton, U.K., which is one of the major manufacturers and suppliers of carbon paper and stationery products throughout many markets of the world, that company has agreed to provide financial and technical assistance to develop our production and sales. While no spectacular results should be expected in the near future, I believe that this company will eventually take its rightful place in the industry in India today.

"Although our new subsidiary, A. R. Haseler Ltd., shows a loss up to 30th September 1960, the date of acquisition by Killick Industries Ltd., the working since that date has shown an improvement, which I hope will continue.

"We expect to receive a handsome return during the current year on our investment in Snowcem India Ltd., which company is now developing a considerable demand for its products and hopes to continue to increase its range of cement speciality products.

Future

"What of the future? In the immediate years ahead, your Company will continue to have great responsibilities as Managing Agents of large-scale industrial undertakings. I have always believed, and continue to believe, that the good managing agents serve a most useful function and I trust that Government will continue to recognise their usefulness. Nevertheless, in the circumstances obtaining today, I think you will agree that it is only prudent that your Company takes steps to broaden the range of its activities by investing in industrial undertakings either directly or through subsidiary companies. Although, at the moment, the industrial potential of Killick Industries Limited and the subsidiary companies is not all that I could wish, I believe that this diversity of business will, in due course, not only contribute to the country's expanding economy but will directly benefit you all as shareholders of this Company."

Note: *This does not purport to be the proceedings of the annual general meeting which can be seen by any shareholder on request.*

BANGALORE WOOLLEN, COTTON AND SILK MILLS CO., LTD.

CHAIRMAN, MR. E. F. G. HUNTER'S SPEECH AT ANNUAL MEETING

MODIFICATION OF EXPORT INCENTIVE SCHEME URGED

THE contradiction in the Government's fiscal and price policies in regard to cotton textiles was pointed out by Mr. E. F. G. Hunter, Chairman of the Bangalore Woollen, Cotton and Silk Mills Company Ltd., at the Seventy-eighth Annual General Meeting of the shareholders of the Company held at Bangalore on 25th April 1961. Mr. Hunter remarked that while, on the one hand, the Government was imposing a heavy excise duty on cloth, on the other, it was asking the industry to cut cloth prices. He expressed the fear that the new excise duty on automatic looms would only retard progress of modernisation. Mr. Hunter drew attention to the pitfalls in the export incentive scheme and urged that they be remedied soon, lest exports of cloth should be affected.

The following is the full text of Mr. Hunter's speech:

"GENTLEMEN,

"It is my privilege and pleasure to welcome you to this annual general meeting of The Bangalore Woollen, Cotton and Silk Mills Company Ltd. and I propose, with your permission, to take as read the Directors' report and the accounts and balance-sheet for the year 1960.

"Trading conditions in textiles during the year under review improved considerably and your Company was again able to dispose of its full production at satisfactory margins. I particularly wish to mention the continued popularity of our union fabrics, 'Cotswol' and 'Angola' which we are, with encouraging success, beginning to establish in overseas markets. We continue to receive substantial orders for Angola from the Government of India for supply to the Defence Services. Unfortunately, difficulty in obtaining import licences for wool makes it impossible to satisfy the demand for these fabrics in the home market.

"It is because of the shortage of imported wools and the concentration of the heavy woollen industry in North India, the chief consuming market, that your Directors decided to discontinue manufacturing superior rugs and blankets.

"The manufacture of coarse woollen rugs has been uneconomic for some time due to falling demand and competition from handloom weavers. This fact caused your Directors to decide to stop manufacture and the coarse section was finally closed in December 1960.

"The shortage of spun silk continued to be acute and in consequence the demand for filature silk fabrics increased. Production in the filature department is steadily increasing and we were able, during the year, to start up a number of looms which had been out of commission for some time. It is hoped that during the coming year, we will be able to commission more looms in the silk section but this depends on high quality Mysore filature silk being available at reasonable rates.

Shortage of Cotton

"Shortage of cotton during the year, due to the failure of the 1959-60 Indian cotton crop, was a source of considerable anxiety to both Government and the industry. Rationing and the imposition of ceiling prices were two measures introduced to meet the situation. Imports of short-staple American cotton were made for the first time and imports of long-staple cotton were increased. The larger quantities of long-staple varieties which thus became available, enabled your Company to step up its production of fine shirtings, etc. I am pleased to say that there is every promise that the 1960-61 Indian cotton crop will be satisfactory. However, Government has, with a view to improving the stock position, decided to continue, for the time being, the controls imposed, and to import more short-staple American cotton. It will indeed be encouraging if the carryover at the end of the cotton year in August is normal.

"In December 1960 agreements were signed with the workpeople's representatives and with those of the clerical grades, implementing, with effect from the 1st January 1960, the recommendations of the Central Wage Board for the Cotton Textile Industry. The agreements reached resulted in substantial increases in wages being given and a further increase to workpeople will become due on the 1st January 1962. Both agreements are to remain in force until 31st December 1964.

"The rationalisation measures introduced in accordance with the agreement signed in 1959, resulted, after an initial setback due to a large number of long-service workers taking advantage of the service gratuity, in improved efficiency. The agreement signed in December 1960 and referred to earlier provides for the appointment of joint committees to consider further rationalisation in pursuance of the recommendations of the Central Wage Board. I have every hope that further progress will be made during the current year.

Fiscal Policy

"The new trend in revenue-raising by indirect taxation, which was taken a step further by the Finance Minister in his budget of this year, is, despite the failure to give other reliefs, most welcome as it will spread over the whole community the cost of India's development. In my opinion, however it is unfortunate that, in doing so, the Finance Minister has increased the already heavy levies of excise duty imposed on cotton textile goods. This increase, which must affect the price to the consumer, is the more difficult to comprehend when another Government Department is urging the cotton textile industry to reduce prices. In response to Government's plea, the industry has already voluntarily agreed to regulate prices and these had to be fixed after taking into account the substantial increase in the cost of cotton and the burden of higher wages which the industry must bear as a result of the implementation of the Wage Board recommendations. Meantime, the Central Government has referred to the Tariff Commission the question of fair prices for cotton textiles and yarn.

"Your mills are particularly affected by the new excise levy on automatic loom production, which is subject to relief according to export performance. It is the opinion of your Directors that insufficient thought was given to the effect of this levy before it was introduced and, in any case, any form of penalty, which does not apply equally to all mills, can only be considered discriminatory. This levy will retard progress and modernisation.

Export Incentive Scheme

"Your mills, for a variety of reasons, have not been large exporters of cotton piecegoods, but their 1960 performance showed an improvement. If they are to increase their exports, they must continue to enjoy the full benefit of the Government's incentive schemes. It, therefore, came as a great disappointment to learn that mills will now only be entitled to use 65 per cent of their hard-earned dyestuff incentive import licences. This means that mills, such as yours, which do not sell grey cloth, will have to buy the major part of their dyestuffs and chemicals at high prices from other import licence holders, thus increasing costs and making it more difficult to compete in overseas markets. Incidentally, the effect of the scheme, which is designed to benefit indigenous dyestuff producers, will be to cause them to pay higher prices for their raw materials.

"This matter has been drawn to the attention of the authorities so that they are aware of the effect this decision will have on the country's export endeavours, and I very much hope that an exception will be made in the case of mills such as yours who utilise fully, for their own purpose, any dyestuff licences they can earn.

"In accordance with the terms of the Preference Shares (Regulation of Dividends) Act, 1960, which received the assent of the President of India on the 28th December last, the dividend on the Company's 6 per cent cumulative preference shares has been amended to a dividend of 7.8 per cent, from which the Company is obliged to deduct tax pursuant to Section 18(3D) of the Indian Income-tax Act. An additional dividend of 1.8 per cent was declared and was paid on the 17th February 1961 to adjust the dividend already paid in respect of the year 1960. Henceforth the preference dividend will be paid by two instalments each of Rs. 3.90 per share less tax on the 1st January and the 1st July of each year.

"The Companies (Amendment) Act, 1960, also received the assent of the President of India on 28th December 1960 and was brought into effect from that date and the accounts before you have been drawn up in accordance with the Companies Act, 1956 as amended by the new Act. Many new restrictions have been imposed on companies, and many of the new provisions, for example those affecting inter-corporate investment, the payment of dividends, special audits, etc. have no parallel in any other country in the world and must further inhibit good management and enterprise. Many of the two hundred and eighteen clauses of the new Act will mean more paper work and time-wasting form filling, which, besides adding to cost, must result in a diversion of effort and create new difficulties for administration.

Managing Agency

"It was mainly because of the various restrictions on managing agents imposed by the Companies Act, 1956 and the further restrictions which were at the time contemplated by the Amending Bill, since enacted, that Binny & Co. (Madras) Ltd. decided in 1959, after consultation with your Directors, to relinquish the office of Managing Agents of your Company which they did by tendering their resignation with effect from 31st December 1960.

"The resignation of the Managing Agents was provisionally accepted by the Board of Directors but, in accordance with the provisions of Section 342 of the Companies Act, 1956 will not be effective until accepted by the Company in general meeting and as you will have seen from the notice convening this meeting, the Managing Agents' resignation is the subject of a resolution to be considered later.

"With the approval of the Government of India, Managing Directors were appointed to take over the management of the Company from 1st January 1961. The Managing Directors appointed have all had long experience in the management and business of your Company, and in this way continuity has been ensured. Officers and staff, who had previously been engaged as employees of Binny & Co. (Madras) Ltd. on the business of your Company, also accepted employment with the Company from the 1st January 1961 and I am pleased to report that the transfer of the management, which had been carefully planned, took place without any hitch and caused no disturbance whatever to your Company's business.

"I am sure you will wish to join the Directors in expressing thanks to the retiring Managing Agents, Binny & Co. (Madras) Ltd., and their staff for the valuable services rendered to your Company since the Managing Agency Company was incorporated in 1920 and under whose management your Company has indeed expanded and prospered.

"On your behalf I would also like to record appreciation of the services of the Mill Manager and the officers, staff and the workpeople at the mill for their loyalty and for their efforts in 1960.

"In conclusion I should like to express my appreciation to my colleagues on the Board for their close help and co-operation at all times and also to pay tribute to the valuable services rendered to your Company by Mr. E. J. M. Leigh, who, during the thirty-two years he was associated with your Company, made a valuable contribution to its progress and prosperity. Mr. Leigh resigned from the Board at the end of 1960 prior to retirement."

L.I.C.'S SERVICE TO POLICYHOLDERS

ESTIMATES COMMITTEE EXPRESSES DISSATISFACTION

AN entire chapter of the hundred and thirty-fourth report of the Estimates Committee (Chairman: Mr. H. C. Dasappa) on the Life Insurance Corporation of India is devoted to a critical examination of the services rendered by the Corporation to its policyholders. This by itself is an indication of the importance which the Committee attaches to this aspect of the Corporation's functioning. It cannot be denied that the Committee is right in doing so, for insurance, like banking, is a personalised service and the insuring public will judge the insurer, as the banking public would judge the banks, mainly by the quality of the services rendered. Service to policyholders includes everything done by or expected of an insurer from the time a policy is issued to its final settlement. Such servicing, as is common knowledge, is continuous as well as varied and comprise mainly (1) issue of premium notices to and collection of premia from policyholders, (2) grant of loans to policyholders on the security of policies, and (3) settlement of claims by maturity or death.

Complaints

The Committee has examined how the Corporation has been rendering these services as well as the nature of complaints regarding them. It is only after this study the Committee has thought fit to suggest methods for improving the services.

Complaints regarding premium notices generally relate to non-receipt, or delay in issue, of premium and default notices. The Chairman of the Corporation admitted, during evidence before the Committee, the presence of such complaints and stated that they were being investigated and appropriate action taken. The Committee, however, considers that investigation of individual complaints received, though certainly desirable, may not be sufficient remedy for the state of affairs that is indicated by the complaints, for not all cases will be brought to the notice of the Corporation through written complaints. The ordinary man, the Committee has rightly pointed out, will judge the performance of the L.I.C. by the efficiency and promptness of service to policyholders. It is essential, therefore, that effective steps should be taken to improve the servicing, so that there may be no room for such complaints.

Place of Premium Payment

The Corporation's insistence that premium should be paid only at the branch office where the relevant policy records are kept, has caused considerable inconvenience to policyholders. The earlier practice of accepting premium in any office has had to be discontinued. The Chairman of the Corporation explained to the Committee the reasons for the change in practice. According to him, it was found, after investigation of complaints about non-receipt of premium receipts, that the branch offices had to forward the amount of premium or intimate its receipt to the appropriate offices which took time. Further, at the time of paying the premium, policyholders did not give complete details of policy number, address, mode of payment, etc. which necessitated enquiries having to be made about these details. In order to avoid complaints about non-receipt of premium receipts, the Corporation had decided to ask policyholders to pay premium at the office where their policy papers were being maintained.

The Committee naturally is not satisfied with this explanation. It concedes that the withdrawal of this facility has, as already stated, caused much inconvenience and hardship to policyholders and has, therefore, suggested that the feasibility of reverting to the earlier practice may be reconsidered. The Committee was told that the difficulty pointed out by the Corporation's Chairman was not insurmountable. There is no exaggeration in this suggestion, for every premium is paid along with the relevant notice which contains all the details of the policy, including the place of issue and the name of the agent. All that the receiving office has to do is to copy down the particulars in a register when payment is received from which advice can be sent to the office concerned later on. Alternatively, a duplicate of the reminder may be sent to the policyholder with a request that payment of premium should be accompanied by the duplicate, as it is required to be forwarded to the office where the relevant records are maintained. It may be pertinent to note here that payment for trunk calls can be made from any post office. If the Postal Department could do this service, there is no reason why the L.I.C. should not do so.

Grant of Loans

The procedure governing the grant of loans by the Corporation to policyholders has also been examined by the Committee. The procedure, it points out, is far from simple. The Branch Offices of the Corporation, which procure business, are not authorised to grant loans to policyholders on the security of policies. Such applications have to be preferred to the Divisional Offices. Further, the loans, which carry interest of 6 per cent. cannot be repaid before a period of six months and, even thereafter, repayment is not accepted, unless tendered in full. It was represented to the Committee that there was considerable delay in the grant of loans by the Corporation, whereas the erstwhile insurers of good standing sanctioned such loans in a few hours.

The Chairman of the Corporation, in his evidence before the Committee, agreed that he would examine the question of simplifying the procedure of grant of loans and making the surrender value of cash policy available to the branch concerned and authorising it to grant such loans in most cases. He also admitted that the procedure of not accepting the repayment of loans, until after six months of their payment and in lump sum, was wrong.

The Committee considers that delays in the grant of loans defeat the very object for which loans are applied for by the policyholders. It has expressed the hope that immediate attention would be paid to these matters and action taken to simplify the procedure for the disposal of loan applications by empowering the Branch Offices to grant loans upto a specific amount. It has further suggested that a time limit should be fixed for the disposal of such applications. Another suggestion is that the desirability of charging a lower rate of interest on such loans should be examined. It should also be possible, suggests the Committee, for the L.I.C. to accept repayment of loans within six months of the loan, giving a proportionate rebate of interest which is taken in advance, and in instalments, the minimum of which may be prescribed.

Surrender Value Low

The Committee points out that the surrender values of the L.I.C.'s policies are extremely low. Since the amount of loan obtainable on a policy depends on its surrender value, it has suggested that the matter may be examined so as to bring the surrender value of L.I.C. policies on a par with leading insurance companies abroad.

The following table gives a comparison of the surrender values of L.I.C. policies with those of the policies of some of the leading insurance companies.

Guaranteed Cash Surrender Values

Amount of policy Rs. 10,000	L.I.C.	Sun Life	Norwich Union
Endowment 10 years :	Rs.	Rs.	Rs.
5 years	1,290	4,420	4,230
10 ,, (policy matures) ..	..	..	..
Endowment 15 years :			
5 years	850	2,600	2,400
15 ,, (policy matures) ..	1,910	5,980	5,770
Endowment 20 years :	..	..	..
5 years	630	1,700	1,520
10 ,, ...	1,420	4,020	3,780
15 ,, ...	2,200	6,750	6,530
17 ,, ...	2,520	7,970	..
19 ,, ...	2,830	9,200	..
20 ,, (policy matures) ..	..	..	..
Endowment 25 years :			
5 years	500	1,210	1,010
10 ,, ...	1,130	2,920	2,630
15 ,, ...	1,760	4,890	4,590
17 ,, ...	2,010	5,770	..
19 ,, ...	2,260	6,710	..
20 ,, ...	2,380	..	6,090
22 ,, ...	2,630	8,250	..

The delay in claims settlement, which has been the cause of much complaints, has also attracted the critical attention of the Lok Sabha body. It was informed that 73,082 claims of policyholders for a total amount of Rs. 14.04 crores were outstanding on 1st January 1960, distributed according to duration in the following manner:

(Amount in crores of rupees)

	By death		By maturity	
	No.	Amount	No.	Amount
Outstanding :				
For more than 12 months	15,006	3.9	18,804	1.96
For more than 6 months but less than 12 months	4,004	1.14	4,559	0.58
For more than 3 months but less than 6 months	2,913	0.81	2,581	0.37

The Chairman of the Corporation, in his evidence, informed the Committee that instructions had been issued that action to settle maturity claims should be initiated two months before the policy matured and that the cheque should be sent to the policyholders on the date of maturity. Many of the outstanding maturity claims shown in the above statement, it was further pointed out by him, were paid-up policies, the payees of which were not traceable at their old addresses. As regards death claims, it was stated that the Corporation had issued instructions that, if the death took place two years after taking a policy, the claims should be settled as early as possible. But, if a death took place within two years of taking out a policy, an investigation should be made into the causes of the death and it took some time to settle the claim, except in the case of death by accident.

Delay in Claims Settlement

The Committee admits that settlement of death claims may take a little more time than settlement of maturity claims; but it points out that the number of outstanding maturity claims is also very large. With its network of field offices and agents, it should not be difficult for the Corporation to trace the policyholders of paid-up policies if action in that direction is initiated sufficiently in advance. The representative of the Ministry of Finance told the Committee that the position regarding outstanding claims made "bad reading" and assured it that the Government would pursue the matter more zealously.

The Committee feels—very rightly, of course—that the delay in the settlement of claims is undesirable, as it results in unnecessary hardships to the claimants. Such delays, particularly when the Government has guaranteed the payment of the sum assured to policyholders, tend to expose the Government itself to criticism. It has, therefore, recommended that the Government should call for

BUCKINGHAM AND CARNATIC COMPANY LTD.

CHAIRMAN'S SPEECH AT ANNUAL MEETING

REDUCTION IN IMPORT ENTITLEMENTS WOULD ADVERSELY AFFECT INCENTIVE FOR EXPORT

IN his speech at the Annual General Meeting of the Buckingham and Carnatic Company Ltd., held at Madras on Friday, 28th April 1961, Mr. E. F. G. Hunter, Chairman, drew attention, among other things, to the disincentive effect of the change made in the Government's export promotion scheme in regard to cotton textiles. Under the scheme, mills are entitled to import licences for dye-stuffs and chemicals according to their export performance. The recent alteration of the scheme whereby import entitlements earned through exports could only be used up to 68 per cent of their face value would, Mr. Hunter feared, adversely affect the incentive for export. Equally harmful in its effect, he said, was the excise duty on automatic looms, although it was subject to relief on export performance. Any form of penalty, Mr. Hunter pointed out, which did not apply equally to all mills could only be considered discriminatory.

The following is the full text of Mr. Hunter's speech:

"GENTLEMEN,

"It is my privilege and pleasure to welcome you to this annual general meeting of the Buckingham and Carnatic Company Ltd., and with your permission I propose to take as read the Directors' report and the accounts and balance-sheet for the year 1960.

"Trading conditions showed a marked improvement during the year under review. That better conditions prevailed in 1960 was indeed fortunate, as your Company, along with others in the cotton textile industry, had to meet a substantially higher wage bill as a result of the implementation of the recommendations of the Central Wage Board for the Cotton Textile Industry. The improvement in the demand for cloth experienced in 1960 and so far maintained in 1961, it is hoped, will continue in order that the industry may retain the capacity to meet the heavier burden. But demand alone is insufficient and if the industry is to remain capable of paying higher wages—to be increased again in 1962 in accordance with the Wage Board recommendations—and to continue to prosper, it will also be necessary to increase production, by implementing "rationalisation as soon as possible" which the Central Wage Board stressed in their recommendations. You will be pleased to learn that negotiations have commenced with the labour union to implement the Wage Board's recommendations in respect of rationalisation and agreement has been reached on the procedure to be followed. I most sincerely trust that tangible results will be achieved during the current year.

Cotton Supply

"As stated by the Chairman in his speech last year, the textile industry then faced a serious crisis owing to the failure of the Indian cotton crop during the 1959-60 season. However, by strict controls, rationing and the import of short-staple American cotton, Government was able to keep the industry supplied, though mills had to pay much higher prices. Also, larger allocations of long-staple foreign cotton were made to mills to enable them to spin finer counts and to reduce consumption of Indian cotton.

"Despite these measures the carryover of Indian cotton at the beginning of the current cotton year was as low as 9,98,000 bales, that is, approximately 46 per cent less than at the beginning of the previous season. Fortunately, the 1960-61 cotton crop is promising and a total yield of 52.25 lakh bales is expected. Rationing and other controls are still in force and to improve the stock position Government has decided to import more short-staple American varieties. Prices, however, continue at a high level and it is feared that mills will have to pay inordinately high prices for the short-staple American cotton to be imported.

"Although, as noted in the Directors' report, your Company's sales reached a record figure, yardage of cloth produced was, due to finer production, lower by comparison with the previous year. However, the improvement in your Company's exports was against the trend of India's exports of textiles during 1960 and reflects the resolution with which this particular aspect of your Company's business was pursued. The incentives offered to those who make this effort in the overseas markets, where conditions and competition are getting increasingly difficult, serve as a great encouragement and it is hoped that Government's present tendency to water down these incentives will be reversed.

"For the satisfactory sales of your Company's products in India we have much to thank the wholesale and retail dealers throughout the country and shareholders will be interested to know that, at the instance of a number of the larger retailers in Madras, an All-India Binny Group Dealers' conference was held in Madras early in February 1961. Over one thousand dealers from all over India, representing all the territories of our guarantors, attended. The conference, which was held in the Rajaji Hall and Gardens, which were kindly loaned by the Government of Madras, was a great success in every way and gave your sales organisation an excellent opportunity of dealing with day-to-day problems and difficulties. Mr. Kanungo, the Union Minister for Commerce, very kindly attended the opening session.

Excise Duties

"The policy of extending indirect taxation by the application, in the budget of 1961, of further excise duties, will have the effect of spreading the collection of tax over the community as a whole, and, in my view, is to be welcomed, even though the new duties have not been accompanied by any proposals for reducing direct taxation or for providing incentives. However, one would have thought that the levies by way of excise duty and handloom cess already borne by the cotton textile mill industry, which on the sales of your Company in 1960 together amounted to over Rs. 54 lakhs, were heavy enough and that the fresh imposts on cotton textiles proposed in the 1961 budget were unjustifiable and, in the light of the concern expressed by Government over cotton textile prices, illogical. It is particularly unfortunate that the proposals for additional excise duties on cloth and the new excise duty on yarn were not framed so as to make their impact and the manner of their collection quite clear, as following their announcement the industry was thrown into considerable confusion.

"The subsequent decision to compound the proposed duty on yarn into a duty on cloth was welcomed by mills, but the introduction of an excise levy on automatic loom production, subject to relief on export performance, is unwarranted. Any form of penalty, which does not apply equally to all mills, can only be considered discriminatory and this levy is certainly no incentive to progress or to modernisation.

"The B. & C. Mills, which have a high proportion of automatic looms, have always done their best to earn foreign exchange by exporting. As I mentioned earlier, your Company's exports improved in 1960 and this improvement was against the trend of the country's textile exports. How then, can it be said to be equitable if Government, while encouraging mills to export on the one hand, dampens their enthusiasm by introducing such an unfair impost.

"Your mills do not export grey cloth. The exports are all dyed and finished products which require large quantities of indigenous and imported dyes and chemicals. Under the export promotion scheme, according to their exports, your mills are entitled to licences for dyestuffs and chemicals and so when it was recently announced that import entitlements so earned could only be used to 65 per cent of their face value, one began to wonder whether Government really appreciates the effect of some of its decisions on mills such as yours which, over the years, have a record for exporting of which they are justly proud.

"I can assure you that representations have been made in the proper quarters and I hope that wiser counsels will prevail so that those mills, such as yours, which utilise all their import licences for dyestuffs for their own purposes, will not have to surrender 35 per cent of their value to indigenous dyestuff manufacturers.

"The artificial limitation of production of cotton textiles by the mill industry, effected by the control of looms and spindles installed, has produced in India's expanding economy the conditions which could lead to an inflationary rise in cotton textile prices, especially as third Plan targets appear now to be outdated having in mind the provisional figures of the recent census. But the textile industry, conscious of the need to maintain a stable economy, and in response to Government's appeal, has voluntarily regulated its prices. Meantime, the Government of India has appointed a Tariff Commission to inquire into fair prices for cotton textiles and yarn.

"As members will have seen from the souvenir booklet issued with the annual accounts, your mills were honoured, on the 20th February 1961, by a visit from His Royal Highness The Prince Philip, Duke of Edinburgh. It was my privilege, and that of some of my colleagues on the Board, to conduct His Royal Highness around the mills, and I gained a strong feeling that he was most impressed by everything he saw. It was the most memorable occasion and it was indeed a great distinction for your Company to be selected for the visit.

"Turning now to the dividend, the rate recommended by the Directors will bring the total distribution for the year 1960 to more than 50 per cent of the assessable income, less the tax thereon, and the provisions of Section 23A of the Indian Income-tax Act, which apply to this Company, will, therefore, be met by the declaration of the final dividend proposed.

"In accordance with the terms of the Preference Shares (Regulation of Dividends) Act, 1960, which received the assent of the President of India on the 28th December last, the dividend on the Company's 7½ per cent cumulative preference shares has been amended to a dividend of 9.75 per cent, from which the Company is obliged to deduct tax pursuant to Section 18(3D) of the Indian Income-tax Act. An additional dividend of 2.25 per cent was declared and was paid on the 17th February 1961, to adjust the dividend already paid in respect of the year 1960. Henceforth, the preference dividend will be paid by two instalments each of Rs. 4.875 per share, less tax, on the 1st January and the 1st July of each year.

Companies Act

"The Companies (Amendment) Act, 1960, also received the assent of the President of India on 28th December 1960, and was brought into effect from that date, and the accounts before you have been drawn up in accordance with the Companies Act, 1956, as amended by the new Act. Many new restrictions have been imposed on companies, and many of the new provisions, for example those affecting inter-corporate investment, the payment of dividends, special audits, etc., have no parallel in any other country in the world, and must further inhibit good management and enterprise. Many of the two hundred and eighteen clauses of the new Act will mean more paper work and time-wasting form filling, which besides adding to cost, must result in a diversion of effort and create new difficulties for administration.

"It was mainly because of the various restrictions on managing agents imposed by the Companies Act, 1956, and the further restrictions which were at the time contemplated by the Amending Bill, since enacted, that Binny & Co. (Madras) Ltd., decided in 1959, after consultation with your Directors, to relinquish the office of Managing Agents of your Company which they did with effect from 31st December 1960. With the approval of the Government of India, Managing Directors were appointed to take over the management of the Company from 1st January, 1961. The Managing Directors appointed have all had long experience in the management and business of your Company, and in this way continuity has been ensured. Officers and staff, who had previously been engaged as employees of Binny & Co. (Madras) Ltd., on the business of your Company, also accepted employment with the Company from the 1st January 1961 and I am pleased to report that the transfer of the management, which had been carefully planned, took place without any hitch and caused no disturbance whatever to your Company's business.

(*Continued on next page*)

TURNOVER OF KOTHARI TEXTILES UP

HEAVY DEPRECIATION REDUCES PROFIT

HOW the persisting cost inflation in the country is adversely affecting some of the medium-scale units in the textile industry is clearly shown by the financial results of the Kothari Textiles Limited (Managing Agents: Kothari and Sons, Madras 1) for the year ended 31st December 1960. Thus, in spite of a marked expansion in sale proceeds from Rs. 140.89 lakhs in 1959 to Rs. 178.38 lakhs—a rise of more than 20 per cent—the gross profit has gone up by only Rs. 1.73 lakhs to Rs. 28.40 lakhs. Two sets of factors are responsible for this phenomenon. First, during the year under review, the Indian cotton crop was quantitatively a failure, the output having fallen to a meagre 3.8 million bales, as against the normal production of about 5 million bales. As a consequence, the prices of cotton shot up to unprecedented levels and the Company had to spend Rs. 92.55 lakhs on raw cotton, as against Rs. 71.07 lakhs in the previous year. The other factor which caused a big spurt in expenses was the sharp increase in salaries, wages and bonus for the workers. The Wage Board's proposals have made an invidious distinction in the case of mills in the Madras State, inasmuch as in addition to an average increase of Rs. 8 in the basic wage, they were obliged to increase the dearness allowance suitably fully to neutralise the rise in the cost of living with 1939 as base. These recommendations have clearly increased the financial burden on the mill under review and its wage bill has jumped up from Rs. 22.39 lakhs in 1959 to Rs. 33.97 lakhs in the year under review.

Though the commission for Managing Agents has fallen from Rs. 1.87 lakh to Rs. 1.19 lakh, the provision for depreciation has almost been doubled to Rs. 16.30 lakhs from Rs. 8.83 lakhs in the previous year. Taxation absorbs Rs. 1.10 lakh, as against nil in 1959. The upshot is that the net profit has sharply fallen from Rs. 15.97 lakhs for 1959 to Rs. 9.81 lakhs. The Directors have, therefore, supplemented the net profit by withdrawing Rs. 2.25 lakhs from the reserves. The provision for development rebate is also lower at Rs. 4.05 lakhs (Rs. 7.47 lakhs in 1959). Consequently, the net resources conserved during the year under review through transfer to reserves amount to Rs. 1.80 lakh only. The Directors have decided to distribute a dividend of 10 per cent, taxable, or a net of 7 per cent, which is the same as that for the previous year but much below the tax-free dividend of 10 per cent declared for 1957.

The Company's progress since 1957 can be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December		From 1-7-57 to 31-12-58	From 1-7-56 to 30-6-57
	1960	1959		
Sale proceeds	178.38	140.89	158.72	81.06
Stocks	31.70	29.25	23.31	18.25
Expenses*	158.29	120.57	102.31	81.65
Gross profit	28.40	26.67	2.42	11.99
Managing Agents' commission	1.19	1.87	..	0.62
Depreciation	16.30	8.83	2.40	5.79
Taxation	1.10	..	..	0.30
Net profit	9.81	15.97	0.02	5.28
Transfer from reserves	2.25	..	1.00	..
Transfer to reserves	..	..	..	..
To development rebate reserves	4.05	7.47	..	..
Dividends				
6% preference	1.40	1.54	1.62	1.00
Ordinary	6.72 (10%)†	6.72 (10%)†	..	3.79 (10%)
Carry forward	0.44	0.56	0.32	0.92

* Of this, raw cotton consumed was Rs. 92.55 lakhs in 1960, Rs. 71.07 lakhs in 1959, Rs. 98.46 lakhs in the eighteen months ended 31-12-1958 and Rs. 49.41 lakhs in the year ended 30-6-1957.

† Subject to deduction of tax.

During the year under review, the export performance of the Company was quite satisfactory. It earned a foreign exchange of Rs 27.45 lakhs, representing about 40 per cent of the mills' total cloth production. As a result, the Company received Rs. 4.93 lakhs under the export incentive scheme. The Company is vigorously pursuing its policy of renovating and expanding its productive capacity. As many as 12,000 new spindles at K. Vadamathurai unit have been brought into production and all the 24,192 spindles licensed for this unit have been working two shifts from June 1960. Towards the end of 1960, a set of eight high production Whitin combers and requisite preparatory machinery were installed at the mills. Cone winding machines have also been incorporated in both the mills.

A clear idea of the expansion programme due to be carried out in the current year can be had from the following extract from the Directors' report:

"One further cone winding machine is expected to be delivered during this month. During the year, an order was placed for a new blow room line as well as for 30 additional cards with a view to improving further the quality of yarn. The carding engines are expected by the middle of this year and the blow room line towards the end of the year. To improve the humidity conditions in the weaving shed, an order has been placed for additional humidification equipment. Work pertaining to the extension of the existing buildings to house the additional cards has been undertaken during this year."

The Company's paid-up capital at Rs. 85.20 lakhs is supplemented by reserves and surplus of Rs. 27.96 lakhs. The gross block and net block stand at Rs. 184.63 lakhs and Rs. 118.99 lakhs, respectively, the difference between the two representing the depreciation provided so far. It would appear that the Directors have an idea of issuing fresh capital in the near future, for they are raising the authorised capital from Rs. 1 crore to Rs. 2 crores. It is proposed that, out of the one million shares of Rs. 10 each to be created, 200,000 shall be preference shares and the balance of 800,000 ordinary shares. The total current liabilities (including secured and unsecured loans of Rs. 100.54 lakhs) amount to Rs. 124.93 lakhs. As against these, there are current assets of the order of Rs. 119.60 lakhs (investment Rs. 6.55 lakhs, stocks Rs. 86.68 lakhs, stores Rs. 7.38 lakhs, sundry debtors Rs. 3.76 lakhs, cash Rs. 2.96 lakhs and loans Rs. 11.77 lakhs). It will be seen that borrowings from banks are well over Rs. 1 crore, thereby indicating that an increase in paid-up capital will not be unwarranted. Only, the Company's profit-margin is not large enough to support a bigger capital structure. Perhaps, the position in this respect may improve when the modernisation and expansion programmes are finally completed.

The outlook for the Company for the current year appears to be good. The extensive renovation programme, to which a reference has been made earlier, is bound to improve the quality of the goods manufactured by the mills. On the export side, however, the prospects are uncertain, because the political turmoils in Congo, which is one of the main outlets for the Company's goods, are still not showing any signs of coming to a happy end.

The Rs. 10 fully paid ordinary shares are being currently quoted at Rs. 13 *cum-div.* On an *ex-div.* basis, and taking the current rate of dividend, the net yield on the shares is 5.7 per cent per annum.

LEYLANDS TAKE-OVER STANDARD-TRIUMPH

Sir Henry Spurrier, Chairman and Managing Director of Leyland Motors Ltd., stated last week that the merchant bankers, Helbert, Wagg & Co. Ltd. and J. Henry Schroder & Co. Ltd., had confirmed that the offer of Leyland Motors Ltd. to acquire the issued capital of Standard-Triumph International Ltd. had now been accepted by the required majority of Standard-Triumph shareholders. Valid acceptances have been received in respect of over 90 per cent of both the 5½ per cent cumulative preference shares and the ordinary stock. The offers have now been declared unconditional, subject only to quotation being granted for the new preference and ordinary stocks of Leyland.

(*Concluded from previous page*)

"I am sure you will wish to join the Directors in expressing thanks to the retiring Managing Agents, Binny & Co. (Madras) Ltd., and their staff, for the valuable services rendered to your Company since the present Company was incorporated in 1920, and under whose management your Company has indeed expanded and prospered.

"On your behalf I would also like to record appreciation of the services of the Mill Manager, Mr. Molyneaux, who was appointed a Managing Director with effect from 1st January 1961, to his officers, staff and the workpeople at the mill, whose efforts in 1960 have contributed to the satisfactory results recorded in the accounts before you.

"I should be failing in my duty if I did not express my gratitude to my colleagues on the Board of your Company for their unstinted help and co-operation at all times.

"Before concluding I would also like to refer to the valuable services rendered to the Company by Mr. E. J. M. Leigh who had been associated with your Company for over 32 years, and was your Chairman from 1958 up to the end of 1960. Mr. Leigh retired from India in February 1961."

Note:—*This document does not purport to be a report of the proceedings of the general meeting.*

IMPROVED RESULTS OF GOKAK MILLS

DIVIDEND STEPPED UP

THE results of the Gokak Mills Limited (Managing Agents: Forbes Forbes Campbell & Co. Ltd., Bombay) for the year ended 31st December 1960 reveal a substantial improvement over those for the previous year which was a particularly lean one for the Company. The sales for the year are a record in the history of the Company, amounting as they did to Rs. 385.17 lakhs, as against Rs. 290.75 lakhs, an increase of 32.4 per cent in a year. The gross profit earned amounts to Rs. 44.19 lakhs, as against a mere Rs. 3.25 lakhs for the previous year. The results for 1960 are not strictly comparable with those for the previous year which witnessed an unprecedented shortage of water-power and breakdown of diesel engines. Apart from the fact that this handicap was overcome in the year under review, the main reasons for the marked rise in profit are "higher machinery utilisation, improved sales realisations and economy in operation." The net profit, after providing Rs. 15.64 lakhs for depreciation, amounts to Rs. 26.08 lakhs, in refreshing contrast to a loss of Rs. 5.20 lakhs for the previous year. The better results have prompted the Directors to step up the dividend from Rs. 6, subject to tax, for 1959 to Rs. 14, subject to tax, per share of Rs. 100 each. This is equal to a net dividend of Rs. 9.80 per share. While this dividend is well above the 8 per cent per annum, free of tax, for 1958 and 1957, it is substantially below the 13 per cent and 15 per cent for the years 1956 and 1955, respectively.

The following comparative table reveals at a glance the progress of the Company in the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales of yarn and waste	385.17	290.75	282.61	254.66
Stocks of finished goods	25.13	10.08	13.16	51.63
Cotton consumed	253.81	198.74	159.17	183.38
Expenses	106.38	86.80	74.28	79.54
Gross profit	44.19	3.25	10.09	13.59
Managing Agents' commission	2.47	0.50	0.02	0.01
Provision for—				
Depreciation	15.64	7.95	6.54	3.69
Taxation	..	..	0.52	0.69
Net profit	26.08	—5.20	3.01	9.20
Transfer from reserves	..	10.99	3.90	4.00
To reserves	19.05	2.89	2.99	8.04
Dividends	6.83* (14%)*	2.83* (6%)*	3.90 (8%)	3.90 (8%)
Carry forward	0.21	0.01	0.04	0.04

* Subject to deduction of tax.

During the past four years, the Company has incurred heavy capital expenditure on improving its plant and machinery. Such expenditure was of the order of Rs. 120 lakhs; the additions to block account during the year under review alone was Rs. 34.42 lakhs. The gross block account now appears at Rs. 221.45 lakhs. The net block stands at Rs. 114.31 lakhs after providing Rs. 107.14 lakhs for depreciation. The new machinery installed and brought into operation during the year are as follows:

Two high draft speed frames, six cone winders, three cheese winders, fifteen medium doublers and six heavy doublers.

In addition to the foregoing, a number of speed and ring frames were converted to Casablanca system of drafting. The power position of the Company is likely to improve greatly with the commissioning of a Diesel generating set of 1,000 kw. capacity.

As against the paid-up capital of Rs. 48.81 lakhs, all in ordinary shares of Rs. 100 each, the reserves and surplus amount to Rs. 45.45 lakhs, thanks to the substantial additions during the year. It is heartening to note that the secured loans, apart from the 6 per cent debenture capital of Rs. 40 lakhs, have gone down to Rs. 18.37 lakhs from Rs. 44 lakhs at the end of 1959. The current assets, exclusive of investments at Rs. 2.10 lakhs, amount to Rs. 85.67 lakhs and exceed the current liabilities at Rs. 44.87 lakhs by a large margin of over Rs. 40 lakhs. It will thus be noted that the Company's financial position is quite impressive.

It must, however, be noted that the Company has a contingent liability of Rs. 17.65 lakhs representing the demand of employees for bonus for 1958 and 1959. If this claim were to materialise, it would make a big dent in the resources of the Company.

The current market quotation of Rs. 100 paid-up shares, at Rs. 185 *cum*-dividend, gives a return of 5.6 per cent, tax-free, on a net dividend of Rs. 9.80 per share.

SHIVRAJPUR SYNDICATE RESTORES DIVIDEND

BONUS HOPES NOT MATERIALISED

ONE of the largest producers and exporters of manganese ore from the country, the Shivrajpur Syndicate Limited (Managing Agents: Killick Industries Ltd., Bombay) has recorded improved results for the year ended 30th November 1960. The output from the mines increased from 70,422 tons in the previous year to 76,161 tons, though it was still substantially lower than the 91,626 tons produced in 1957-58 and 92,748 tons in 1956-57. The shipments and deliveries effected during the year, however, substantially increased to 92,529 tons, as compared with 60,995 tons in the previous year, thanks to many barter deals and the facilities provided by the Government to speed up exports.

The receipts from sales of ore amounted to Rs. 124.92 lakhs, as against Rs. 86.66 lakhs in the previous year, an increase of 44.1 per cent. A point that needs to be borne in mind, in this connection, is that 1958-59 was a year of depression for manganese.

Reflecting the increase in shipments, the closing stocks are lower at Rs. 28.34 lakhs, as against Rs. 34.93 lakhs a year before. It is noteworthy that, in spite of the increase in output and sales, the expenses have dropped by Rs. 1.36 lakhs to Rs. 89.68 lakhs. The gross profit for the year has increased nearly fourfold to Rs. 28.98 lakhs. The net profit, after increased provisions for depreciation, taxation and commission to Managing Agents, amounts to Rs. 14.80 lakhs, as against only Rs. 1.73 lakh for the previous year. The better profits has enabled the Directors to restore the distribution to shareholders to Rs. 8 per share of Rs. 10 each (made up of a dividend of Rs. 5 and a bonus of Rs. 3), albeit subject to deduction of tax, whereas for years prior to 1958-59, it was Rs. 8 per share tax-free.

The following comparative table reveals at a glance the working of the Company during the last four years:

(In lakhs of rupees)

	For the year ended 30th November			
	1960	1959	1958	1957
Ore sales (gross)	124.92	86.66	144.69	173.99
Closing stocks	28.34	34.93	23.10	24.24

* On increased capital.
† Subject to deduction of tax.

The balance-sheet of the Company reveals a very sound position. As against the paid-up capital of Rs. 10.46 lakhs only, all in ordinary shares of Rs. 10 each, the reserves and surplus amount to Rs. 81.10 lakhs. The paid-up capital is disproportionately small as compared with the size of the block account also. The net block stands at Rs. 62.54 lakhs, after depreciation amounting to Rs. 44.02 lakhs. With the lowering of the bonus tax from 30 per cent to 12½ per cent in the budget, and in view of this feature of the financial position, the shareholders had anticipated a bonus issue, but this has not materialised. The soundness of the financial position can also be ascertained from the absence of secured loan as well as from the large excess of current assets over current liabilities. The secured loan, which stood at Rs. 18.62 lakhs a year before, has been completely wiped off. The current assets at Rs. 88.51 lakhs, exclusive of investments at Rs. 3.02 lakhs, are well above the current liabilities aggregating Rs. 62.85 lakhs.

The prospects for the Company seem to be better, in view of the change in export policy and satisfactory progress in development and mining operations.

According to the new export policy for manganese ore, which came into force from 1st January 1961, no movement quota will be required to move the ore on the Western Railway and as such the ores can be moved freely to the port of Bombay for the next three years.

The development of the third level in the Shivrajpur underground progressed satisfactorily and the raisings of high grade ore were on an increased scale. The production of high grade ore from Pani Mines was on a satisfactory basis consistent with demand. The Bamankua Mine, which produces mainly the low grade ore, had no operation during the year, as all commitments could easily be met from Shivrajpur and Pani Mines.

The following quotation from the Directors' report will be of special interest to readers:

"In view of the numerous deposits of manganese ore which have recently been developed in countries much closer to the consuming centres and the fact that the production of steel in the U.S. at present is considerably below its rated capacity, the demand for this commodity has been somewhat subdued. The decision of the Government not to permit for the time being, any steel-manganese barter deals is also responsible to a certain extent for the poor offtake of Indian manganese ore. However, it is generally felt that the demand for manganese ore may show some improvement towards the end of the current financial year."

The current quotation of the Rs. 10 paid-up shares is Rs. 83 *cum*-dividend. On an *ex*-dividend basis and on a net dividend of Rs. 5.60 per share, the net yield is 7.2 per cent per annum.

ADONI SPG. AND WVG. CO., LTD.

The financial results of the Adoni Spinning and Weaving Company Ltd. (Managing Agents: Messrs. Kothari and Sons, Madras) for the year ended 31st December 1960 clearly suggest that the Company has at last emerged from the initial period of difficulties. The Company, which has a purely spinning mill, has taken nearly five years to declare a maiden dividend. This is, of course, contrary to expectations that one entertained when the Company was started, but it is equally true that the fortunes of cotton textile industry also took unexpected turns for the worse following changes in the Government's policies. The sale proceeds of the Company have jumped up from Rs. 71.94 lakhs in 1959 to Rs. 129.92 lakhs in the year under review, representing an expansion of more than 60 per cent. As a result, the gross profit has more than trebled from Rs. 6.62 lakhs in 1959 to Rs. 21.97 lakhs, taking the profit margin substantially up from 8.9 to 16.9 per cent. The main reason for this remarkable rise in sales and profit is increase in production following the coming into operation of the whole complement of its spindles and an improvement in the workers' efficiency. The prices of yarn reached high levels in sympathy with cloth prices. The profit for the year under review would have, in fact, been larger but for the additional burden arising out of the Wage Board Report and the reduction in profit-margin consequent on the acceptance of the voluntary price control measures.

Out of the gross profit of Rs. 21.97 lakhs, the Directors have provided Rs. 1.30 lakh (as against Rs. 10,000 in 1959) for Managing Agents' commission and Rs. 9.24 lakhs for depreciation, as against a bare Rs. 99,000 in the previous year. This leaves a net profit of Rs. 11.43 lakhs (Rs. 5.53 lakhs for 1959) available for distribution and appropriation.

The Company has succeeded in adjusting all the previous miscellaneous expenditure and in paying off all arrears of dividend on preference shares including that for the year under review. The Directors have also been able to recommend a maiden dividend of 8 per cent (taxable) on ordinary shares, giving a net return of 5.6 per cent. The amount set aside to development rebate reserve has been reduced to Rs. 1.09 lakh from Rs. 5.44 lakhs last year. No other amount has been transferred to reserves.

A bird's-eye view of the progress of the Company can be had from the following table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957

* For six years ended 31st December, 1960.
† Subject to deduction of tax.

During the year under review, 24,000 spindles were worked for three shifts. The Company installed four doubling machines and one cone winding machine at a total cost of Rs. 2 lakhs. Another noteworthy feature of the Company's working during 1960 was the introduction of a recognised dealership scheme, under which recognised dealers on certain terms and conditions in the various markets have been allotted certain monthly quotas of various counts depending upon the preference and the capacity of the respective markets. The scheme is stated to be working satisfactorily and is expected to stand the Company in good stead in lean years also. The Company's mills did not have much serious difficulty in obtaining the required supplies of raw cotton, because it secured a large quantity of upcountry Indian cotton at comparatively cheap prices before the imposition of control and was also able to purchase cotton in the neighbourhood of Adoni at competitive prices. In order to conserve the available quotas of Indian cotton, the Directors also judiciously diversified the mill's production and produced finer counts in larger quantities.

The Company's paid-up capital of Rs. 49.93 lakhs is supplemented by reserves and surplus of Rs. 7.13 lakhs. The secured loans amount to Rs. 24.09 lakhs and unsecured loans to Rs. 6.76 lakhs. The current liabilities and provisions (including loans) at Rs. 49.30 lakhs are in excess of current assets amounting to Rs. 42.87 lakhs. The gross block of the Company as at 31st December 1960 is Rs. 79.93 lakhs and it is written down to Rs. 63.48 lakhs, of which Rs. 6.98 lakhs represent additions to the gross block during the year under review. The Company intends to undertake capital works costing another Rs. 6.5 lakhs. These include a heating unit required for maintaining production at normal levels during monsoon and winter seasons.

The Company hopes to maintain its performance during the current year at least at the level of the previous year, as the disadvantage from the reduced yarn prices is likely to be balanced by the advantage following from the improvement in cotton crop. The Company may also be in a position to pay a better dividend on ordinary shares, as the preference dividend will absorb only a small amount in the current year and not as much as Rs. 7.67 lakhs as allocated out of the profits for 1960 because of past arrears.

The Rs. 10 fully paid-up ordinary shares of the Company are available on the Madras Stock Exchange at Rs. 10.70 *cum-div.* On an *ex-div.* basis and at the current rate of dividend, the net yield on them works out to 5.5 per cent per annum.

STERLING GENERAL INSURANCE CO.

A sizable increase in gross premium and a threefold rise in underwriting profit are the outstanding features of the results of the Sterling General Insurance Company, Ltd. (General Manager and Managing Director: Mr. M. N. Seth) for the year ended 31st December 1960. Gross premium amounted to Rs. 1.37 crores, as compared with Rs. 1.20 crores in 1959, representing an increase of about 14 per cent. Net premium, however, declined from Rs. 44.80 lakhs to Rs. 38.72 lakhs, thanks to heavier reinsurances during the year. The claims experience showed an improvement of 5.3 per cent. Thus, the overall claim ratio, which was 74.1 per cent in 1959, declined to 68.8 per cent in 1960. Reflecting the higher gross premium written, the management expenses were slightly higher. Despite the continued heavy losses in the miscellaneous department, the aggregate underwriting profit of the Company from all departments increased from just over half a lakh of rupees in 1959 to Rs. 1.56 lakhs. This was largely due to more careful underwriting by the Company and the weeding out of undesirable business. In spite of the higher profit, the Directors have not raised the dividend, but have maintained it at the previous year's level of 9 per cent per annum, subject to tax. Instead, they have chosen the more prudent course of making provision for the rainy day by strengthening the reserves. As a result, the percentage of underwriting reserves to net premium now stands at 52.92 per cent, an increase of one per cent over the year.

The following table summarises the working results of the Company for 1960, as compared with those for the previous two years:

(Rs. in lakhs)

	Year ended 31st December		
	1960	1959	1958
Fire:			
Net premium	14.78	17.23	14.16
Claims	7.33	7.09	6.12
Commission	—0.93	0.90	0.92

Net premium	21.14	24.53	26.78
Claims	18.29	21.55	25.50
Commission	—3.69	—4.95	1.17
Expenses	14.30	13.23	12.65
Reserves	10.57	12.26	16.18
Underwriting profit/loss (+)	—6.07	—1.38	—3.04
Dividend	1.34 (9%)	1.26 (9%)	0.68 (5%)
Carry forward	0.045	0.01	0.03

The underwriting profit, after meeting expenses of management, claims and reserves amounted to Rs. 1,55,796. Income from investments and other receipts amounted to Rs. 1,39,836. Gross profit thus amounted to Rs. 2.96 lakhs, to which has been added Rs. 1,417 brought forward from last year's account and Rs. 406, being dividends forfeited, making a total of Rs. 2.97 lakhs. The appropriation of this amount is indicated in the table above.

THE STERLING GENERAL INSURANCE COMPANY LIMITED

ANOTHER SUCCESSFUL YEAR

PREMIUM EXCEEDS RS. 1 CRORE 37 LAKHS

ASSETS EXCEED RS. 1 CRORE 9 LAKHS

THE Seventeenth Annual General Meeting of the Sterling General Insurance Company Limited was held on 29th April 1961. The following is an extract from the Directors' Report and Accounts:

During 1960, the year under report, the premium of the Company showed a further marked increase to Rs. 1,37,16,103 as against Rs. 1,20,13,846 in 1959. Due to heavier reinsurances, however, the net premium income of the Company was Rs. 38,72,471 as compared to Rs. 44,80,619 in the previous year. The reserves in the Fire and Miscellaneous Departments have been maintained at 50 per cent. as before, being the maximum rate required under the Code of Conduct. The reserves in the Marine Department are maintained at 100 per cent for Hull and 88 per cent for Cargo, giving an average of 90 per cent (79 per cent in 1959).

After payment of claims and providing necessary reserves for outstanding claims, and writing off of bad debts, and making necessary provision for depreciation in investment, the profit including the small amount brought forward amounts to Rs. 2,97,455 (compared to Rs. 2,20,287 in 1959). The Company has declared a dividend of 9 per cent subject to tax on the equity capital, the same as in 1959.

New Capital Issue

The Company has received permission from the Controller of Capital Issues for issue of Cumulative Preference Shares 10 per cent subject to tax and it is likely that this issue will shortly be placed in the market.

INSURANCE

(*Concluded from page 860*)

periodical returns of outstanding claims and ensure that their settlement is not delayed. It is suggested that a time limit may be laid down for the settlement of both death and maturity claims and that investigations into early death claims, about the settlement of which there are many complaints, may be specially conducted by senior officers.

The Committee has also commended the suggestion that it would be desirable to levy an interest on delayed payment of claim, say, after a period of three months, as worth examination. It has also recommended that, in order to enable a correct appreciation of the position of each Zone, and from year to year, the figures of outstanding claims should be classified into maturity and death claims Zone-wise, their value, period for which they are outstanding, etc., and published in the annual reports of the Corporation.

The question of bonus, though it does not fall strictly within the purview of service to policyholders, is equally important, in that any delay in the declaration of bonus or issue of bonus warrants reflects badly on the Corporation's reputation for efficiency. The Committee points out, in this connection, that the first valuation report was presented to Parliament 19 months after the expiry of the period to which it related. Even this report was not final, as the objections raised by the Controller of Insurance on the value of some of the assets as well as adjustment to the life fund, had not been settled. The bonus warrants declared on the basis of this valuation have not been issued to policyholders so far. The Committee considers this regrettable, more so, because the Government's share of the surplus emerging from the valuation has already been paid.

The Corporation has also not so far furnished the valuation returns relating to the second valuation covering the two years ended 31st December 1959. Under the Insurance Act, as applied to the Corporation, these are required to be submitted within a period of nine months, that is, by 30th September 1960. The delay has been attributed to the time taken in the finalisation of the scheme of differential bonus in the manner suggested by the Government. The Committee points out that the Corporation did not even approach the Government for extension of the period of submission of returns which could only be given up to a period not exceeding three months, thus making a total of 12 months. Even this maximum period has been exceeded and yet the returns have not been furnished. In the light of this experience, none can take objection to the suggestion of the Committee that a time limit should be fixed for finalisation of valuation reports and their submission to Parliament. One would like to know whether the failure of the Corporation to submit returns in time attracted the penalty prescribed under Section 102 of the Insurance Act to which other insurance companies are liable, should they fail to submit returns in time.

In conclusion, the Committee points out that servicing of policyholders leaves much to be desired. When this point was raised in the Rajya Sabha last week, the Finance Minister agreed with the criticism and admitted that appropriate steps should be taken to remedy the present state of affairs. One reason given by the Corporation for this was that as it was laying more emphasis on the expansion of its business, adequate attention could not be paid to the servicing aspects. Naturally, the Committee is not satisfied with this explanation and feels that, even if the new business targets have to be cut down, it would be better to ensure servicing of the existing policies. The Ministry of Finance agreed with this view. The Committee considers, and rightly so, that, under the nationalised set-up, the services offered by the Corporation should not only be as good as that rendered by the erstwhile insurers but very much better. It has suggested that effective steps should be taken forthwith to improve the position in this regard. One way of doing so, according to it, is to make the branch offices responsible for all types of services for which they have no responsibility at present.

AMERICAN LETTER

(*Concluded from page 839*)

Partly responsible for this development is not only the direct investment of U.S. companies overseas but the acquisition of licensing agreements, a device also used by foreign firms here. According to Government records, 650 U.S. concerns have entered into such licensing agreements with unaffiliated foreign firms. Last year, more than 100 American companies paid $22 million to foreigners for the use, or ownership of their patents, processes, etc. In 1957, U.S. firms received about $140 million in gross returns from patent licensing and other technological arrangements with foreign firms. Such agreements are mounting steadily. Licensing receipts from Japan now constitute 10 per cent of the total.

United Nations

While howling demonstrators swarmed in various areas of New York—some pro- and some anti- Castro—two observations are in order. Most demonstrations took place in good weather for the benefit of cameras and their organisation was such that they must have been rehearsed and paid for. Meanwhile, delegates are scratching their heads how to make financial ends meet. Subscriptions from the Kremlin are overdue and there have been extra expenses in the Congolese expedition with, perhaps, more to come. Thus, demands are being made now for calling a plenary session in the autumn to clear up financial matters.—*All Rights Reserved.*

SURVEY

(*Concluded from page 831*)

also stipulated salary scales for junior and semi-clerks for the two categories of cotton mills and these also are to take retrospective effect from 1st January 1960. The enactment, of course, would not affect the existing arrangements where the basic wage and scales of pay of other amenities and benefits are better than those recommended by the Wage Board. Nor would it preclude any worker or clerk or their unions from entering into an agreement for more favourable or advantageous rights and privileges than those stipulated by it. This, of course, could only be done through voluntary agreement with the employer, for, as we shall show presently, no dispute can be raised on the demand for a higher wage or salary.

The Bill sets out the procedure for the recovery of arrears of wages and salary. According to it, any worker can, without prejudice to other methods of recovery, apply to the State Government for recovery of arrears of wages, as revised under the new enactment, which thereupon would issue a certificate authorising the Collector to proceed to recover the amount as arrears of land revenue. In case of dispute about the precise amounts due to any particular claimant, the State Government may refer the matter to the Labour Court or Industrial Tribunal for adjudication and arrange for the recovery on the basis of the Court's decisions.

The Bill also seeks to give statutory effect to the recommendation of the Cotton Textile Wage Board that, once the scales of wages and salary recommended by it are implemented, no further claims for higher wages should be put up for a period of five years. Accordingly, it lays down that, once the law is enforced, strikes, lockouts, and industrial disputes based on wage disputes would become illegal for a period of five years from January 1960.

The present Bill has naturally given rise to speculation whether it would be a model for enforcing the awards of the other Wage Boards. Although the Government has not given any indication that it has abandoned the policy of persuasion in favour of legislative compulsion to enforce the awards, it is reasonable to presume that it will not hesitate to have recourse to legislation should it be found necessary. The reason for bringing forward the present Bill is given as the unsatisfactory response from the industry to the award. If this reasoning is applied to the other industries for which recommendations have been made by the respective Wage Boards, a much stronger case for legislation can be made out by the Government. In the case of the cement industry, out of 32 establishments, only 10 have fully implemented the award of its Wage Board, seven have partially implemented it and 15 have completely ignored it. In the case of jute, although 100 mills belonging to the Indian Jute Mills Association have accepted the award in full, some units, especially in U.P. and Bihar, have not even accepted it in principle, much less implemented it. Even in the sugar industry, which is considered to be financially better off than the three industries mentioned above, the implementation of the Wage Board award has been delayed. The President of the I.S.M.A. has found it necessary to issue a special appeal to all the sugar mills to observe the award both in letter and spirit, despite the financial difficulties following accumulation of heavy stocks and only limited availability of accommodation from banks.

Legislation could certainly have been avoided if the industries had accepted the recommendations of the Wage Board and implemented them whole-heartedly. It is true that some units have genuine difficulties in implementing the award and that they deserve lenient treatment which could be extended to them on merit through negotiations with the workers concerned. But others should not expect, nor do they deserve, exemption from the award. Although industrial units, which accept the respective awards and implement them, may have to foot a higher wage bill for the time being, they will only stand to benefit in the long run because of the stipulation in the award that no fresh wage demands should be made or strikes or go-slow tactics resorted to for a period of five years from the coming into force of the award. Moreover, there is a tacit understanding with employers as a body that the Wage Board's awards should be unanimously accepted and faithfully observed. Failure or refusal to do so will be a breach of faith, besides being not conducive to maintaining cordial relations with the working class.

The 12-day seminar on "promotion of tourism," sponsored by the E.C.A.F.E. in co-operation with the Government of India, the International Union of Official Travel Organisations and the U.N. Bureau of Technical Assistance, concluded at New Delhi on the 2nd inst. The various recommendations it made cover creation of a tourist bias in the administrative machinery of the Governments at all levels and establishment of a machinery for co-ordinating the various aspects of the development of tourism within the country and region-wise at the highest official level. Further, it suggested co-ordination between private and public sectors in each country according to its requirements and traditions. It also pleaded for the removal of travel barriers and simplification of irksome customs formalities.

	(18% p.a.)	(18% p.a.)
Carry forward	1,43	1,97

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: The trading result of the year has been satisfactory. The Company's factory worked to its full capacity and sales were good.

During 1960 the Company's Dhubri factory produced match boxes containing 40 sticks exclusively. In the latest Budget of the Government of India, matches excise duty rates have been so revised as to encourage the manufacture of boxes containing 50 sticks and to render uneconomical the manufacture of 40's and 60's. It will consequently be necessary for the Dhubri factory to switch production to boxes containing 50 sticks. In scarcely more than a year Government have again compelled the Company to change the stick contents of the match boxes and modify the production and marketing arrangements. The effect of this on the current year's working is difficult to forecast, and it is likely that results will be less favourable than in 1960, particularly as the capacity of the Company's factory is limited by Government to what it is today.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	30,00,000	Gross block	41,63,859

	(10% p.a.)	(10% p.a.)
Preference	71	90
	(5% p.a.)	(5% p.a.)
Carry forward	42	27

N.B.—Adjustments include the balance brought forward from the previous year and excess depreciation provided in 1958 written back if any.

Extracts from the Directors' report: Though the trading conditions were better during the year under review, the benefit was almost entirely offset by the increase in the prices of raw cotton and other stores. Further the Textile Industry was saddled with an additional burden consequent upon the Central Wage Board's recommendations to increase the wages of mill workers from 1st January 1960. This has resulted in increasing the Company's Wage Bill by approximately Rs. 3.47 lakhs per year. Over and above this, during the year under review the dearness allowance has been reinstated, making a further increase in the Wage Bill of Rs. 6.78 lakhs in comparison with the previous year.

The total cloth production for exports of the Mill has been of Rs. 42.40 lakhs during the year, which forms 19.20 per cent of the total production of the Mill. With a view to rationalise the pattern of production, considerable change has been brought about in the production, the effect of which will be felt in the coming year.

Yarn prices, have also been revised downwards as in the case of cloth as from 1st of August 1960. Yarn sales during the year have been of Rs. 35 lakhs.

During the year, Rs. 37,894.73 was expended on the Company's buildings and new machinery of the value of Rs. 1,09,484 was installed in the Company's Mill. Orders for *Bleaching Plants, Hot Air Stenter, Felt Calender, Chainless Merceriser etc.* for Rs. 22,00,885 have been placed, which are expected to go into production in the last quarter of this year. With the installation of these plants, more than 60 per cent of the production of both Lakhshmi and Vishnu will be processed in the plant. In addition, further orders for Rs. 1,31,364 for machinery has been placed.

The Mill requires considerable renovation which will be taken up in stages. Consequently capital expenditure is likely to go up in the coming years. The matter is receiving active consideration of the directors.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	48,00,000	Gross block	2,00,14,262
Reserves and surplus	54,95,635	—Depreciation	1,54,85,274

N.B.—Adjustments include the amount transferred from depreciation, renewal and extension reserve and excess depreciation provided in 1958 written back if any, but do not take into account the previous years' losses.

* Managing Agents' remuneration is only upto 15th August 1960.

† At 7 per cent. per annum or at Rs. 31.08 per share as required by the Preference Shares (Regulation of Dividend) Act, 1960.

Extracts from the Directors' report: The total cloth production for exports of the Mill has been of Rs. 70.33 lakhs during the year, which forms 30.77 per cent of the total production of the Mill.

The Mill requires considerable renovation which will be taken up in stages. Consequently capital expenditure is likely to go up in coming years. The matter is receiving active consideration of the Directors.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	47,66,500	Gross block	1,94,58,806

N.B.—Adjustments include only the debit balances brough forward from the previous year.

* For two years 1959 and 1960.

Extracts from the Directors' report: The directors are happy that the results of the working for the year under review have been satisfactory. It is particularly gratifying that the old losses have now been completely wiped off and depreciation and development rebate for the year under review have, according to law, been provided for. A sum of Rs. 9 lakhs has also been provided on account of depreciation for the previous years. The unprovided depreciation for the previous years now amounts to about Rs. 8 lakhs only. In view of the satisfactory result of the year under review, the directors have pleasure in recommending a maiden dividend on both preference and equity shares. For preference shares, the dividend is for two years—1959 and 1960.

The directors are happy to report that the spinning plant at Nagda worked satisfactorily throughout the year and the different yarns including the coloured varieties manufactured by the Company's mill continued to enjoy popularity in the various consuming centres.

There were 17,600 ring spindles and 8,864 doubling spindles installed in the mills as on 1st January 1960. During the year, 2,640 ring spindles were added, thus bringing the installed capacity to 20,240 ring spindles and 8,864 doubling spindles as on 31st December 1960. As reported last year, the directors had planned to raise the capacity of the plant to 30,000 ring spindles but it is regretted that owing to delay in the delivery of machines the expansion programme could not be implemented in time. It is now expected that the expansion is likely to be completed by about the middle of the current year.

As stated last year, the directors have been exploring the possibilities of expanding the activities of the Company. The Company's bid of Rs. 22 lakhs has been accepted for the acquisition of the composite textile mill with 302 automatic looms and 15,000 spindles situated at Nanjungud near Mysore belonging to Kapila Textiles Mills Ltd., (in liquidation) by the Official Liquidator subject to the confirmation of the Mysore High Court. The decision of the Court is awaited. The Company has also received a licence for the manufacture of H.T. and L.T. porcelain insulators in the State of Rajasthan. Efforts are being made to acquire another Staple Fibre Spinning Unit for which negotiations are going on. A few other schemes are also engaging the attention of the directors who are endeavouring to find some new avenues which may have reasonable chances of being profitable. The directors are examining the various proposals and a decision as to which of the project or projects are to be given priority will be taken in due course.

As against the debit balance of over Rs. 42 lakhs in 1954, the Company now enjoys a sound financial position, having paid off all dividend liabilities on preference shares and having built a reserve of Rs. 4,70,250, on account of development rebate. The price of the equity share has now increased from below Rs. 2 in 1954 to over Rs. 20. In view of the satisfactory working of the spinning plant at Nagda, and possibilities of increase in the activities of the Company, the directors look forward to an optimistic future.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	80,00,000	Gross block	82,31,326
Reserves and surplus	5,64,625	—Depreciation	19,64,326
Other liabilities	18,69,462	Net block	62,67,000
		Block in progress	3,21,759
		Current assets	19,66,201
		Cash	18,79,127

GOVERNMENT OF INDIA
MINISTRY OF RAILWAYS
(Railway Board)

Tender No. S-15 of 1961

GLOBAL TENDER ENQUIRY FOR STEEL MATERIALS.

THE MINISTRY OF RAILWAYS (RAILWAY Board), Government of India, propose to purchase from established and reliable producers a quantity of about 34,630 tons of steel materials such as Plates, Sheets, Structurals and Spring Steel.

The schedule of requirements has already been despatched to those who have quoted earlier for Board's Tender No. S-13. Any other prospective tenderers who may like to participate may obtain the schedule free of cost from any of the following offices during working hours.

1. Director, Railway Stores, Ministry of Railways (Railway Board), Room No. 337, Rail Bhavan, Raisina Road, New Delhi.
2. Director General, India Stores Department, Government Buildings, Bromyard Avenue, Acton, London W-3.
3. Director, India Supply Mission, 2536, Massachusetts Avenue, N.W., Washington 8 D.C.

Tenders will be received by the undersigned upto 12.00 Hours on the 25th May, 1961, and opened in the office of the Railway Board at 2.30 p.m. on the same day.

G. P. BHALLA,
Director, Railway Stores,
Railway Board.

NEW DELHI,
Dated 26th April 1961.

MONEY AGAIN STRINGENT

(From Our Own Correspondent)

BOMBAY, *3rd May*

Conditions in the Bombay short-term money market, which were fairly comfortable at the beginning of the week, showed signs of hardening from Tuesday onwards. As the demand from both Indian and Exchange banks is running at a high level, the inter-bank call money rate remained firm at 5 per cent per annum. Only a few scattered transactions for small amounts were done at 4½ per cent per annum. The other rates, too, remained unchanged as follows:

Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive) ...	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91-day Treasury Bills of the Government of India sold through weekly tenders showed that the total amount offered and accepted was Rs. 2 crores, against an invitation of an equivalent amount. The average rate of accepted tender was 2.750 per cent per annum, which is the same as in the previous week. 91 days' intermediate Treasury Bills sold from 26th April to 29th April amounted to Rs. 2.55 crores. Their sales are being continued beginning from 3rd inst.

The statement of the Reserve Bank of India for the week ended 28th April 1961 shows that notes in circulation have declined by Rs. 25.21 crores, as compared with that for the previous week, bringing down the total notes in circulation to Rs. 1,982.43 crores. As the notes held in the Banking Department have gone up by Rs. 10.27 crores, the notes issued have shrunk by Rs. 14.94 crores only. Foreign securities have registered a decline of Rs. 5 crores and as the balances held abroad have also shrunk by Rs. 48 lakhs, the total foreign assets have gone down by Rs. 5.48 crores to Rs. 123.33 crores. Deposits of banks with the Reserve Bank of India have also receded by Rs. 8.90 crores. Their total now stands at Rs. 78.16 crores. On the assets side, other loans and advances have fallen by Rs. 80.21 lakhs to Rs. 125.47 crores, which include borrowing against usance bills amounting to Rs. 21.09 crores. Over the week, they have declined by Rs. 4.72 crores.

The Scheduled banks' statement for the week ended 21st April 1961 discloses a fall of Rs. 44 lakhs in demand deposits and of Rs. 3.80 crores in time deposits. But, as the State Bank's deposits have shrunk by Rs. 9.84 crores, it is clear that the deposits of the other Scheduled banks must have actually increased. The borrowings from the Reserve Bank of India are lower by Rs. 15.55 crores and, of this, the decline in borrowings against usance bills is of the order of Rs. 7.49 crores. Their borrowings from the State Bank of demand nature have also contracted by Rs. 2.89 crores, whereas those of time variety have increased by Rs. 1.33 crore. On the assets side, advances and bills discounted (bank credit) have shrunk by Rs. 7.59 crores, bringing down their total to Rs. 1,301.96 crores, as against Rs. 1,126.30 crores a year ago. Advances and bills of the State Bank are only a shade lower by Rs. 34 lakhs in the week under review. The investments of Scheduled banks as a whole have receded by as much as Rs. 22.05 crores, of which fall the State Bank has accounted for Rs. 20.72 crores.

As most of the institutional investors are conserving their resources for the new loans, which will be launched shortly, there appears to be no interest for the existing loans. The upshot of this is that prices of a few Central and State loans have actually declined, albeit slightly. Thus, in the Central section, the 3 per cent 1966-68 loan has receded by 20 nP to Rs. 95.85 and the 3 per cent 1970-75 first development loan by 15 nP to Rs. 90.85. 3½ per cent 1974 has shed 10 nP to Rs. 99.60 and 3½ per cent 1968 is lower by 5 nP at Rs. 98.75. 3½ per cent 1962 gained 5 nP to close at Only 3½ per cent 1962 gained 5 nP to close at Rs. 99.90. The prices of State loans remained unchanged barring a drop of 5 nP to Rs. 98.35 in Andhra 4 per cent 1969 and of 10 nP to Rs. 98.50 in 4 per cent 1967 U.P. loan.

In the foreign exchange section, the rupee remained steady in relation to the U.S. dollar. The banks selling and buying rates were unchanged at Rs. 478.75 and Rs. 475.50 per 100 dollars, respectively. In the New York Exchange market, the pound sterling slightly weakened. The latest available rates are: 279.490-279.530 cents per £ for spot and 278.260-278.30 cents per £ for three months forward. Over the week sterling has declined by 0.09 cent in the spot and by 0.03 cent in the forward.

LINSEED DULL

(Messrs. A. Bradley and Co.)

CALCUTTA, *1st May*

The linseed market was rather lifeless during the week under review and prices showed little movement either way. The general undertone remained firm, but trading was very limited. Stocks of seeds were fair. Crushers were not keen to buy much, owing to shorter working hours due to electricity power cut.

The oil market was stagnant, although prices were fairly firmly held. Business was almost at a standstill, as millers were not showing much interest for forward delivery, only small quantities of ready goods changed hands daily.

The oilcake market was firm, good local business being done daily at increasing prices. Stocks were limited, due to mills' shorter working hours.

Ready May delivery was quoted at Rs. 25.37 per maund.

BULLION DISTINCTLY EASY

(From Our Own Correspondent)

BOMBAY, *3rd May*

A distinctly easy trend was in evidence in the bullion market during the week under review. Gold encountered selling, thanks to heavy arrivals, while offtake was poor. The daily average arrivals were 11,750 tolas, as against 6,000 tolas in the previous week. Offtake was of the order of 4,250 tolas, as against 7,200 tolas. There were reports suggesting large inflow of contraband metal. Consequently, prices suffered a setback. In sympathy with gold and following increased offerings from Delhi and Calcutta interests, silver also drifted downward. The daily average arrivals and offtake were 14 bars and 20 bars, respectively, as against 16 bars and 19 bars last week. The floating stocks in the City are reported to be around 40,000 tolas of gold and 400 bars of silver.

Adjustment rates fixed today were Rs. 120.70 per 10 grams of gold and Rs. 201.60 per kilogram of silver. The corresponding rates for last week were Rs. 122.80 and Rs. 203.00, respectively.

The first (*Adhik*) *Jeth* settlement in gold was subjected to selling and moved down from Rs. 119.95 to Rs. 118.20 today before finishing at Rs. 118.50. The second *Jeth* settlement receded in the course of the week from Rs. 119.15 to Rs. 117.30. The closing was a shade better at Rs. 117.50. The backwardation charge—that is the *badli* payable by bears for getting the commitments transferred from the first (*Adhik*) to the second settlement—which stood at 45 nP throughout the early part of the week, exceeded 50 nP yesterday and today. The bulls in the *Adhik* settlement were, therefore, required to pay a margin of Rs. 8 per 10 grams.

The premium commanded by ready gold over the *Adhik* settlement declined from Rs. 4.10 last week-end to Rs. 2.45 today. The closing rate for the metal today was Rs. 120.95, as against Rs. 123.05 on Wednesday last week, a drop of Rs. 2.10.

In silver, the first (*Adhik*) *Jeth* settlement began the week at Rs. 198.70, as against the previous close of Rs. 199.25, and gradually eased to touch a low of Rs. 197.10 on 29th April. After recovering to Rs. 198.15 today, it finished lower at Rs. 198.10, a net loss of Re. 1.15. The second settlement retreated from Rs. 197.60 to Rs. 195.50 yesterday (Tuesday), but recovered to Rs. 196.50 today. Since the rate for transferring commitments from the first to the second settlement continued to be against bears to the extent of more than a rupee—the actual rate today was Re. 1.60—margin at the rate of Rs. 300 per bar was operative on bulls in the first settlement throughout the week.

Ready silver came in for selling and declined from Rs. 203 to Rs. 199.75 on Saturday. After rising to Rs. 202.30 yesterday, it receded to Rs. 200.90 before closing at Rs. 201.60. The premium commanded over the *Adhik* settlement narrowed down from Rs. 3.75 to Rs. 3.50.

The world price of gold in the London market was slightly lower at $35.07½, as against $35.09½ last week. Ready gold receded from 251s. 0½d. to 250s. 10½d. Ready and forward silver were unchanged at 79¾d. and 79¾d., respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week under review:

	3-5-1961 (closing)	High	Low	26-4-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	120.95	122.05	120.80	123.05
Forward:				
Jeth Adhik*	118.50	119.45	118.20	119.95
Jeth 2nd	117.55	118.75	117.30	119.15
Sovereign	94.25	94.75	94.25	94.25
SILVER				
ready (.999 fine)	201.60	202.30	199.75	203.00
Forward:				
Jeth Adhik*	198.10	198.90	197.10	199.25
Jeth 2nd	196.50	197.30	195.50	197.60
London—	2-5-1961			25-4-1961
Silver Ready	79¾d.	—	—	79¾d.
Silver Forward	79¾d.	—	—	79¾d.
Gold	250s.10½d.	251s. 0½d.	250s. 9½d.	251s.0½d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 31st May settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

METALS CLOSE LOWER

(From Our Own Correspondent)

CALCUTTA, *2nd May*

Following the improved supply position, metals ruled quiet as the week progressed and closed lower on balance. Tin opened at Rs. 1,322.75 per 100 kgs. and closed lower at Rs. 1,303.00. The report of greater imports in the last month caused prices to fall, although, with good demand, the supply position did not ease to the extent indicated by higher arrivals. On the London Metal Exchange, the price opened at £844 per ton and eased to £842. The decline was attributed to the recovery in Singapore being below earlier expectations.

Electrolytic copper at £234½ per ton was higher by £4½. The rising trend was attributed to confused political developments in France. Locally, copper scrap prices recorded declines, as, with increased imports of virgin metal, scrap was less in demand. Berry quality scrap eased to Rs. 479.50 per 100 kg. from Rs. 482 and utensil scrap to Rs. 447.50 from Rs. 453.

Electrolytic zinc was less in demand as compared with last week and that explained the fall in price here to Rs. 317.00 per 100 kgs. from Rs. 326.75.

Virgin lead was unchanged at Rs. 130.00 per 100 kgs.

COTTON FUTURES SUBDUED

(From Our Own Correspondent)

BOMBAY, *3rd May*

With the expiry of the April contract, the August contract is the only running contract at present. Normally, therefore, this contract should have attracted buying. But it continues to lack support. This is attributed to (1) the delay in announcing the eagerly awaited quota for Kalagin and Wagad, (2) the issue of a global import quota of 200,000 bales of long-staple cotton and (3) the compulsory allotment of U.S. cotton for mills which have no alternative but to take them up if they do not want to have their Indian cotton quota forfeited. Compulsory import of 300,000 bales of U.S. cotton thus being a certainty, and with the prospect of another 200,000 bales of long-staple foreign cotton coming into the country under the latest quota, mills showed a reluctance to make purchases of Indian cotton in the ready market. The lack of demand in the spot market is reflected in the futures section which rules subdued. The readiness of the Indian Cotton Mills Federation, reiterated again at a meeting of its Committee held last weekend, to purchase cotton with a view to stabilising prices should it be found necessary, has failed to have any effect on the market. For, the Federation's willingness to do so has been known for quite some time. What the trade was expecting was a confirmation of the report that the Federation would buy certain varieties of Gujarat cotton, the prices of which have been declining of late. But the Federation remained silent on this question. The Federation is reported to have urged the Government to release an export quota of 40,000 bales of Kalagin and Wagad, but, from the market point of view, the effect of this recommendation was offset by its simultaneous suggestion not to permit any further export Bengal *Deshi*. Due to the abovementioned reasons the Jarilla August contract has failed to attract buying support. During the week under review, the contract moved narrowly on alternate bouts of buying and selling. The net change over the week is small. The contract is currently quoted at Rs. 567 (per three quintals), as compared with the last week-end quotation of Rs. 568.25.

Mill demand for ready cotton was confined to certain popular varieties such as L. 147, Vijay, Digvijay, Laxmi and Kalyan. Mills were reluctant to pay high prices. U.S. cotton continued to attract buyers. Spinners, who were anxious to get their Indian cotton quota, made sizable purchases of U.S. cotton. The Textile Commissioner has categorically stated, in answer to representations made by some mills for exemption from the requirement to purchase American cotton allotted to them, that these allotments are compulsory and that no exemption will be made nor any request for it entertained.

Interest in other foreign varieties, especially East African and Sudan cotton, revived soon after the announcement of the global quota. Of this quota, 50,000 bales will be reserved for distribution as retention quota under the export promotion scheme and the balance, comprising 100,000 bales of 1-3/16" staple and above and 50,000 bales of 1-1/16" and above but below 1-3/16", will be distributed to mills on the basis of the allocation of these categories of cottons in 1959-60. The shipment period will be from 1st July 1961 to 31st December 1961.

Export interest was confined to Kalagin and Wagad cotton. Sizable purchases are reported by shippers in anticipation of quota. Bengal *Deshi* was neglected. The prospect for an additional quota for this cotton is at present dim.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Hubli Laxmi 1,015; Wagad 715; American cotton 1" G.M. 1,255-1,270; B.P. 52 (UNUG) 1,320; Bugosa (UNUG) 1,305; Jinja 1,250-1,235; Sudan XG6S 1,471; P2L 1,540; PIL 1,600.

The easy trend noted in the Karachi cotton futures market last week gathered momentum during the week under review. Selling prompted by lack of domestic inquiries and poor export demand resulted in a setback in values. The N.T.R.G. May contract receded to Rs. 69.45. The July contract declined to Rs. 69.95. Spot prices too tended to ease. Exports of cotton from Karachi from the commencement of the season, that is, from 1st September 1960 to 6th April 1961, aggregated 375,263 bales (of 400 lbs.), as against 409,450 bales in the corresponding period of the previous season.

In contrast to the firm trend noted last week, the Alexandria cotton futures market ruled easy during the week. Both the long-staple Karnak and medium-staple Ashmouni contracts receded. Favourable weather news and the slackness of export interest were the influencing factors. Sudan cotton continued to offer stiff competition to Egyptian cotton.
