VOL. CII. No. 2600 BOMBAY, 4th FEBRUARY 1961 PRICE Rs. 2

CONFUSION IN COFFEE

THE Indian coffee industry is currently up against problems which it had collectively ignored for well over a decade. The entire coffee policy of the Government was founded on one uncertain and highly vulnerable base—high export prices. Luck in the export market held for 12 years in a run and almost everybody forgot to think ahead as to what would happen when the boom in the world coffee market yielded place to depression, as, indeed, it has done in the past year and a half. India is one of the few coffee-producing countries in the world, with an internal market which absorbs the bulk of its produce and has an almost unlimited consumption potential for the future. It produced 49,000 tons in the last season, of which a little over 29,000 tons were absorbed by the internal market. There is no other coffee-producing country in the world with so large an internal market for its produce. With so great and positive an advantage, how come that coffee policy suffers from such weakness and confusion? Before a satisfactory answer to the coffee problems can be found by a process of realistic and reasonable thinking, the relevant facts have to be known.

Coffee is the only commodity marketed by a Statutory Board in India. All coffee growers have to surrender their entire crop to the Board's Coffee Pool. The Board, as reconstituted in 1955, is composed of several interests and is a miniature Parliament by itself. So, on the question of efficient disposal of the crop, a decision has to be taken not only by those who produce the coffee but also by groups and interests who have no abiding interest in the produce. But the Board is not the ultimate authority; the Board and all its actions and its officers are controlled by the Government of India. By this arrangement, it becomes possible for the producers, the Board and for the Central Government separately to disown responsibility for coffee policy and blame one another for the results when they are the wrong ones.

From October 1952, and upto almost the end of 1959, the paramount consideration of the Government's policy in regard to coffee marketing was satisfaction of the home market. By 1960, the wheel had turned half the circle and is currently at the opposite pole, namely, maximum exports possible. The Board, as a wholly controlled subsidiary department of the Government, has to bend its pliable knees to the 180° change in the marketing policy. The producer would not have minded either way, if the prices were satisfactory. When they are not, he uses the Board as his channel for ventilating his grievance. Unfortunately for the grower, coffee has a highly vocal consumer. The latter will buy milk, salt, oilmanstores, clothes and other necessities at ten times the prices prevailing before the first Plan or World War II without demur, but would, with a hundred letters to the Press and the Board, protest violently against any rise in coffee prices.

Coffee has been having a pricing mechanism which is not known to most people in India. From 1950 to 1960, the internal price of coffee was fixed *below* what was accepted as the minimum return payable to the grower. In 1953, the Government rejected its own Cost Accountant's cost figure of nearly Rs. 2.50 per point as being too high and arbitrarily fixed Rs. 2.25 as the minimum return payable to the grower. And, what was more, internal sales were actually made on the reserve price fixed at Rs. 2.06 per point. The difference was expected to be made good from the extra earnings on exports. In other words, the home consumer was subsidised out of coffee's export earnings. Such a policy could last only so long as exports fetched fancy prices. The actual payments to the grower were, however, slightly higher, as production increased and with it, exports also.

In order to enable the reader to appreciate the serious plight in which the coffee grower finds himself today, it is necessary to give a picture of the prices received by him. Hence the following table:

Year	Price per point* Rs.	nP
1950-51	2	27
1951-52	2	75
1952-53	2	32
1953-54	2	84
1954-55	2	37
1955-56	2	56
1956-57	2	81
1957-58	2	51
1958-59	2	45
1959-60	2	20†

**Point* is a rating adopted by the Board for calculating payment for each type and variety of coffee in the Pool. The value of Plantation A is taken as 80 points per cwt. †Estimated.

The most important point to be noted from the aforesaid figures is that the payment on the 1959-60 crop is falling below the rate of return received by the grower a decade previously and is less than even the fair cost of production arrived at by the Government Cost Accountant himself some eight years ago. Surely, as readers are aware, there has been a tremendous increase in cost of production everywhere; since then, the plantations, in particular, have been subjected to heavy taxation and large expenditure on labour amenities. It must now be obvious why the growers are gravely perturbed. It is true that, during the decade of favourable prices, they increased the size of the crop from 18,600 tons to 53,000 tons, as also the yield per acre from 181 lbs. to 451 lbs., but this has not been sufficient to cover all the increases in cost of production. Internal consumption has increased from 18,000 tons to 29,000 tons during the same period—a substantial increase but far smaller than the weight of increase in production. Moreover, a rise in internal consumption has meant an increase in the cost of subsidising it.

Against this background in the internal market and the industry's progress in production must be viewed the world coffee situation. During the decade under review, the level of world coffee production increased, almost as spectacularly as Indian production, from 2.03 million tons to 4.47 million tons, whereas world exports staged only a modest increase, from 1.68 million tons to just 2.47 million tons. The world surplus, therefore, burgeoned from a mere 350,000 tons to 2,000,000 tons. At the end of 1960, there were 40 million bags of exportable coffee with the producing countries in the American Hemisphere and that surplus will increase as additional quantities begin to accumulate from current crops. The world price of coffee, after going up to 89 U.S. cents per pound in April 1954, moved down to around 36 cents in April 1959, a level which has been maintained with difficulty since then. On parity, the price equivalent at any Indian port for comparable coffee would be Rs. 174 per cwt., or fully Rs. 20 per cwt. below the net price required for making a minimum return of Rs. 2.25 per point.

Some degree of steadiness to world prices have been imparted by a scheme of retention under the International Coffee Agreement. But this arrangement has led to substantial additions to stocks in producing countries. During 1959-60, the size of the retained stocks out of the then crop by American Hemisphere producers was 1,937,000 tons and of non-American participants in the scheme 62,600 tons. Government-held stocks in the three largest producing countries alone rose by 1.4 million tons and were, as of 30th June 1960, equivalent to one year's world consumption. India is not a party to the International Coffee Agreement and is not committed to any retention scheme. But, even if it were a party to it, it is quite unlikely that the economy of its coffee industry would fare better. Accordingly, a careful examination of the Government's, or the Coffee Board's, marketing policy has become urgent. Now that the pressing need for foreign exchange has compelled the Government to lay the stress on maximum exports of India's best coffees, it is pretending that it has always been holding to that course and indifferent to the demand of the home market. The public, on its part, is clamouring for low prices and high quality, as is evident from innumerable letters in the Press, newspaper editorials and private complaints. The grower finds that, despite his efforts to step up production to cover the swiftly increasing costs, he is losing the game, what with the world price against him and caught as he is in the statutory grip of the Coffee Board. To the grower, the Board can do nothing right with its elephantine gait and ponderous procedures and its apparent subjection to detailed Government control. Confused and bewildered by the speed with which opinions change with the market, the Board has to defend itself against the charges of the growers, the trade and the consumers about its past and without any clear idea about its future.

The present ills of coffee industry are traceable to the absence of forward thinking and planning, which in turn are due to defective Government policy. The Government deprived the industry of its responsibility for marketing and took it on its shoulders. This Government interference itself is the outcome of heady prosperity in coffee industry in the previous ten to twelve years, as the politicians in power in the early fifties wanted to please the consumer by compelling the grower to sell coffee at subsidised prices. This solicitude has bred a feeling among consumers that they are entitled to a continuance of this privilege for ever, a privilege which they are not enjoying in respect of any other commodity in daily use. They would not care to realise that world economic reality would catch up with them one day. The Government officials administering the Coffee Act, with the periscope view of the coffee situation from afar, were first casual and indifferent and now they are somewhat puzzled as to why there should be such a fuss when no coffee grower appears to have gone to the wall.

There is no doubt that coffee is in for a bad time. But it is also true that, by reorientating coffee policy, by making the grower really responsible for marketing decisions concerning his

coffee, by reorganising procedures and methods, by enlarging the production base and by expanding the home and overseas markets, the producers of Indian coffee could face the future with confidence. Grower attention is being increasingly focussed on the weird and outdated multi-channel sales, auction by closed bids, export sales by calling tenders, restricting the trade only to registered dealers, undercutting private retail trade under the guise of propaganda and many other ritualistic practices that have grown up under the enormous banyan tree that is the Board today. Those who understand their coffee insist that Indian coffee, produced and processed properly, type for type, is the finest in the world and would sell at a premium if only it were advertised and marketed well. They say that, provided cost is covered, coffee should be made freely available in the home market for any dealer or buyer, subject only to the requirements of India's export drive. There are ample supplies of other grades and types for the Indian market and all restrictions on the quantity offered for sale should go.

Some of these reforms are overdue and will probably be accepted by the Board and the Government. There is, however, a fundamental issue which may be overlooked, but should not be, as it is the core of the problem. A centralised form of marketing may be good from the point of view of exercising greater control over prices. But, if it has no advantage to offer to the grower, he may wonder why there should be any pooled marketing which only helps to chain him to several procedural handicaps and to extend the distance betwen him and the consumer. The important point is that, even if the grower is likely to receive not so good a price, he may accept the situation if he is a party to the decisions that are made for the disposal of his produce. With a Board which is no longer compact and has lost its character as a tight and competent deliberative body with the responsibility for marketing a crop received from some 50,000 growers, the voice of the growers is lost in a cacophony. The organisational defect of the Board is that it is controlled neither by the Government with a full sense of direct responsibility for what is being done and what needs to be done nor by the growers who know where the shoe pinches them and how to rectify it. Consequently, the constitution of the Coffee Board and its functions must be reformed first. The next important thing is to realise that the inherent advantage of a large potential internal market must be fully exploited, not to reduce the exportable quantity (which will have to be sold at a loss) but to increase the exports with a minimum loss.

The larger the home market for coffee, the greater the industry's capacity to export a larger volume at a loss. On the probable export of 22,000 tons from the current crop at an overall export value of Rs. 129 per cwt., the producers would lose about Rs. 19 per cwt. on the export, but the net loss on the total crop of 53,000 tons would be around Rs. 12 per cwt. If exports were increased without expanding the size of the internal market, this loss would steeply rise to a level which cannot be borne by the Indian producer. On the other hand, if the home market increases to 40,000 tons when the total crop rises, as it well may, to 62,000 tons and the same quantity of 22,000 tons are exported, the net loss to be borne by the grower on exports would be reduced to Rs. 8 per cwt. It would, therefore, be the soundest of all coffee policies to plan for the maximisation of production and to conduct a hard drive for the expansion of the home market. It is a static attitude to view the prospects of coffee in terms of a non-expanding internal market in the belief that it will allow for greater exports. This will not happen unaccompanied by a deep crisis in coffee economy which will defeat the purpose altogether. There are many growers who believe that, if only marketing procedures are corrected, coffee will sell by itself. This is as wrong as the Government belief that home market expansion is the first enemy to guard against in an export drive. The home market must expand and so also total production and exports. Marketing methods must, of course, improve, but, while coffee can be efficiently carried to the market, it does not necessarily follow that that alone will lead to an increase in consumption. The grower, the Board and the Government must, therefore, give closer and more urgent attention to the ways and means of expanding the internal market. India offers a larger opportunity here than any other coffee-producing country in the world.

PRESIDENT KENNEDY'S MESSAGE

PRESIDENT Kennedy's first "State-of-the-Union" message, delivered before a joint session of the U.S. Congress on 30th January 1961, is having its reverberations round the world—from China to Peru. "A noble utterance, nobly delivered," as one American commentator has described it, the address bespeaks mature statesmanship on the young President's part. More than statesmanship, it is his eloquent dedication to the goals of peace and liberty that marks him out as a great leader of the forces of freedom with which Communism has yet to learn to co-exist. There can be no mistaking his determination to convince the leading Communist powers of the utter futility of "aggression and subversion" as means to world domination. Nor, indeed, can it be doubted that his call for open and peaceful competition between the democracies and the communist countries for prestige, for markets, for scientific achievement and even for men's minds is one of transparent sincerity. The new President's promise of greater support to the United Nations Organisation "as an instrument to end the cold war instead of an arena in which to fight it" and his proclaimed intention to explore promptly all possible areas of co-operation with the Soviet Union "to invoke the wonders of science, instead of its terrors" also fall into the same pattern of hope—the hope of peaceful co-existence with Communism. While President Kennedy shares this hope with men of goodwill in other lands, he also seems to think that it will be doomed to disappointment if there is economic and military weakness in the democracies—weakness which Communism can readily exploit.

The new Administration is, therefore, determined to improve its economic tools not only to develop and sustain a higher rate of economic growth within the United States which is the biggest "arsenal of democracy" but also to help the entire non-Communist world in the construction of a sound and expanding economy. As, however, the recession trends in the American economy itself have to be successfully reversed, it is scarcely to be expected that the U.S. Government will be able to finance, on its own, massive programmes of aid to a whole range of undeveloped and underdeveloped countries which are subjected to Communist pressures and designs. President Kennedy's proposal for establishing an Organisation for Economic Co-operation and Development which will pool the investible resources of the N.A.T.O. allies is understandable in the context of his own statement that, "while we (the U.S. Government) are prepared to assume our full share of these huge burdens, we cannot bear them alone." An organisation of this kind for providing multilateral aid to the poorer countries is frankly thought of as a "towering and unprecedented response" to the challenge of world Communism. Since there is to be a larger commitment, under the proposed set-up, to long-term development of the recipient countries through orderly planning, the outlays are bound to be heavy—so heavy that the United States may have to contribute, in absolute terms, more than what it does now, although the N.A.T.O. allies, too, notably West Germany, France and the U.K., will be contributing larger shares to the pool. That the United States Government has every intention of providing greater aid to the underdeveloped countries, notwithstanding its appeal to other advanced countries to contribute more of their resources for the purpose, is evident from President Kennedy's special aid programme for Latin America, his proposals to expand the food-for-peace programme and to form a national peace corps, enlisting the services of American technicians for work in foreign lands. The Kennedy Administration is, thus, prepared to participate with its allies in "a new and more effective programme for assisting the economic, educational and social development of other countries and continents."

But greater American participation in such a multilateral aid programme will necessarily depend on the speed and scale of economic expansion in the United States itself. It is here that President Kennedy's treatment of the "state of the economy" gives some "cause for concern," as he himself has said. It is now generally conceded that there is a disturbing trend of recession in the American economy, as evidenced by a fall in the profitability of business. The return on equity of all manufacturing concerns has declined from 13 per cent in 1955 to 9 per cent in 1960. In every major industry, the capacity to produce is much greater than effective demand; in 1960, for instance, the economy operated only at about 80 per cent of its manufacturing capacity. There is also a long-term decline in capital investments. A million unsold automobiles are in inventory, and five and a half million Americans are without jobs. The unemployment problem is particularly acute in a hundred chronically depressed areas of the country. Yet, paradoxically, this recession is not a slump, for prices have continued to rise, albeit slightly. Uncompetitive prices of American goods have also meant a relatively slower expansion in exports which, in their turn, have accentuated the balance of payments problem. Holders of dollars abroad have also converted them into gold in such quantities as to cause a substantial drain in the country's gold reserves.

But a redeeming feature of the 1960 balance of payments situation is that the deficit was the result more of an increase in private capital outflow seeking new opportunity than of a fall in exports. According to the latest trends, exports of merchandise are happily well above imports. President Kennedy has taken note of these trends in declaring that his Administration will not increase the dollar price of gold from $35 an ounce or distort its value in any way. The payments deficit will be eased during the current year only by such measures as promotion of American exports at stable prices, curb on undue spending of private dollars abroad, attracting foreign investment and travel to the United States and sharing of foreign aid burdens with the N.A.T.O. allies. These measures are surely reasonable. It redounds greatly to the credit of the Kennedy Administration that it does not propose to resort to panicky exchange controls and restrictive trade practices, or to weaken America's commitments round the world. That the external value of the dollar will be maintained is certain, all the more so because America's gold and international monetary reserves and its enormous assets abroad will impart, in the ultimate analysis, strength to the dollar.

There is, however, some cause for anxiety on the score of domestic price stability. President Kennedy has, of course, promised this, but he has chosen to call it "relative." The increased Federal spending that is visualised by way of greater unemployment relief, aid to depressed areas, a new housing programme, etc., may well increase the budgetary deficit in 1961-62, unless, of course, more revenues result from the expected stimulation of the economy by better utilisation of manpower especially in the depressed areas. It may be that judicious tax reliefs are also under contemplation to stimulate the economy. Already capital goods producers are hopeful of better business performance in the second quarter of the year, if, besides the stimulus proposed through house building and road construction, tax concessions, by way of liberal depreciation allowances and so on are given. The President's assurance that he will make readjustments only within the framework of the Eisenhower budget for 1961-62 gives the impression that there will be no resort to 'created money' for federal spending on anti-recession efforts. His clear statement that it is his "current intention to advocate a programme of expenditures which, including revenues from a stimulation of the economy, will not of and by themselves unbalance the earlier (Eisenhower) budget" is a pointer to the U.S. Government's anxiety to maintain the internal value of the dollar so as not to provide one more cause for upsetting its external value. If, as the President has said, his Administration makes certain that the dollar will continue to be as "sound as a dollar," it will be the happiest augury for greater economic strength among the democracies in the critical years ahead. The measures he has outlined both on the side of external payments and on that of internal spending seem to be the barest minimum necessary to arrest and then to reverse the recessionary trends, for, without them, the present mild slow-down in industrial production, as measured by the fall in the Federal Reserve Index from the peak of 111 in January 1960 to 103 in December last, is more likely to develop into a severe recession with worse consequences not only to the United States but to the world in general. "A stitch in time saves nine"—that, perhaps, is the approach of the Kennedy Administration to his country's current economic problems which the Eisenhower Administration did not have the time to solve in the closing months of its tenure.

MARKET GOSSIP

MUCH of the current activity in the share markets is of a speculative nature. Some of the professionals were successful in giving a boost to steel and rayon shares by spreading rumours which had a semblance of truth. It was stated, for instance, that the Government's announcement of an increase in the retention price of steel was imminent. This rumour could be easily believed, because an announcement on this question has been overdue. And it was spread at a time when iron and steel shares were standing at levels which seemed attractively low. The speculators could, therefore, pull up the counters by a sizable amount: Tata Ordinaries from about Rs. 138 to Rs. 148 and Indian Irons from Rs. 23 to Rs. 24.80. Currently, they are a little low, but this is understandable, for a substantial rise is usually followed by some profit-taking. Moreover, the rumour has not yet proved correct, though three weeks have passed since its commencement. The rise in iron and steel shares had an infectious effect on the other sections. Even investors are tempted to buy when it is seen that the market is taking a turn for the better.

Basically, the trend of the market is uncertain, because of the forthcoming Central budget. Logically speaking, a bullish budget is difficult to envisage. Apart from the fact that the Government has to find the money for the third Plan, it may want to provide additional proof to the electorate well before the 1962 General Elections that it has no soft corner for capitalists. The way in which the Maharashtra Government has hit the joint-stock sugar companies by subjecting their sugarcane plantations to land ceiling is, perhaps, a straw in the wind. Sources close to this Government are said to have told the Deccan sugar company interests that they need not waste their breath by drawing attention to the exemptions given by other States, for the latter, too, would, soon or later, follow the example of Maharashtra. This probably is the significance of Mr. Nehru's consent and blessings to the Maharashtra Land Ceiling Bill.

The determination of the Maharashtra Government to implement the Land Ceiling Bill without effecting any change in it in favour of sugar factories having their own farms is clearly reiterated in the address of the Governor, Mr. Sri Prakasa, to the joint session of the Maharashtra Legislature on Thursday. He said that this measure would help "establish economic and social justice by removing disparities in land holdings" and characterised the non-exemption of sugar factories from the Bill as "a noticeable feature." There is no sufficient ground for being optimistic that the Centre would in some way intervene in favour of sugar companies. The attempt made by one of the leading sugar industrialists of Maharashtra to bring Prime Minister Nehru and take him round the sugarcane farms, so that he could see for himself the successful efforts made by the companies to revolutionise agricultural practices, has yielded negative results. Another Union Minister has expressed the view that, if cotton mills could successfully function without having their own cotton farms, there is no reason why sugar factories, too, should not be able to do so. This Minister is not such a simpleton as to be unaware of the anomalies in this comparison, or of the undoubtedly great strides that have been made by the sugar factories in Maharashtra in raising the productivity of land as compared with cotton growing that is being carried on by individual farmers. His remark is a gentle reminder that it is useless on the part of Deccan sugar industrialists to oppose the Maharashtra Government's move, as it is a *fait accompli*. We are sure that Mr. Chavan himself must have made this point pretty clear when the industrialists met him last week. The only alternative now left to them, according to a wise observer, is to make sure that the factories will be closely associated with the cultivation of cane, so that they can ensure that no deterioration takes place in the cultivation and supply of cane. It is understood that, in this respect, Mr. Chavan is quite willing to do his best for the factories.

Pakistan Copies India

India can legitimately claim to have provided many an example to Pakistan in economic management, including the manner in which the salaries of working journalists are determined. A report from Karachi, received on the 2nd inst., says that banks in Pakistan have taken steps, apparently with the support of their monetary authorities, to promote an inter-bank agreement on rates of interest payable on deposits. The draft agreement is on lines similar to the one prevailing in this country. Only, the rates of interest are a little lower than here. The maximum rates (in percent per annum) proposed are as under:

7 to 15 days' "house money"—2½, 16 to 30 days' money—2¾, one to six months' term deposits—2¾ over six up to twelve months' deposits—2¾, over 12 but upto 24 months—3, over 24 but upto 36 months—3½, over 36 but upto 48 months—3¾ and over 48 months—4, savings bank deposits—2 per cent.

Branch Audit of Banks

Some of the stringent provisions of the recently amended Companies Act have already started affecting the joint-stock companies. The amended Act under Section 228(3)(a), for instance, requires the accounts of every branch office of a company, including a branch office established either by an auditor appointed at the annual general meeting or by a qualified person appointed by the company, unless a branch office is specifically exempted from this requirement by the Department of Company Law Administration. The joint-stock commercial banks in the private sector would be vitally affected by this provision if it would not be that the State Bank of India and its subsidiaries have been straightaway exempted from the above provision and the other banks naturally thought that this was one more discrimination against them *vis-a-vis* the State Bank of India. Some bankers are of the view that their competitive strength would be reduced by this discrimination, as they would have to incur considerable expenditure on organising branch audit as required by the law. It is said that banks having a large number of branches all over the country are bound to suffer on account of the new requirement, because, in many of the inland centres, it would be extremely difficult to secure the services of a qualified auditor at a reasonable cost. The banks, therefore, requested the Government to exempt all the banking companies from the operation of Section 228, at least for the current year, and then to review the position for subsequent years. It is reliably learned that, in reply to this representation, the Company Law Administration has clarified that, under the powers conferred under sub-section 4 of Section 228, the Government has no authority to grant exemption to all banks in general. But it has expressed its willingness to consider sympathetically applications submitted to it by individual banks concerned, provided the exemption is justifiable on the grounds mentioned in Rule 4 of the Branch Audit Exemption Rules of 1960, namely, (1) the company carrying on activities other than those of manufacturing, or processing, or trading has made satisfactory arrangements for the scrutiny and check of the accounts of the branch office by a responsible person; (2) that a company has made arrangements for the audit of the accounts of the branch office by a person otherwise qualified for appointment as a branch auditor, even though such person is an employee of the company; and (3) having regard to the turnover of a branch office, an auditor for that branch is not likely to be available at a reasonable cost.

The Government has published in the *Gazette of India* the appropriate forms and procedures and the banks have been asked to submit, along with the application for exemption, a fee ranging from Rs. 10 to Rs. 50, depending on their capital structure. The Company Law Administration might also grant exemption in any future year, if a banking company were to ask for it.

It would be seen from the foregoing account that the Government has taken a reasonable attitude in this matter. While the complaint of discrimination against banks in the private sector *vis-a-vis* the State Bank is justifiable in theory, it is a moot point whether all the banks in the private sector have effective arrangements of their own for internal audit as is the case with the State Bank of India and almost all foreign banks operating in this country. It is unnecessary to add that it would be in their own interest to build up an efficient and uncorruptible system of internal audit. Incidentally, it would be desirable for the Company Law Administration to work in collaboration with the Reserve Bank in granting exemptions for banks from the legal requirement under reference.

Taxation and Foreign Capital

There can be no two opinions on the view that a speedy development of a capital-scarce economy like that of India is possible only when foreign assistance (loans and grants) is supplemented by a fairly large inflow of private capital investment. Such an inflow depends more on the climate that exists in the recipient country than on the conditions obtaining in countries from where capital moves out. The climate is essentially conditioned by the economic and fiscal policies of the administration. Judged by this yardstick, it may no doubt broadly be said that the outlook for foreign investment in India is favourable, as witness the freedom of remittances of profits and dividends, as well as repatriation of capital, double taxation agreements entered into with the Governments of some countries, and the desire to participate in the U.S. Government-sponsored scheme for insurance against risk of nationalisation, expropriation, etc. But there are still a few deterrents that continue to curb a freer flow of foreign investments into India. Mr. S. P. Chambers, Chairman of the Imperial Chemical Industries (United Kingdom), who is on a short visit to this country, drew pointed attention to three chief deterrents at a Press Conference in Calcutta on Wednesday this week. These are: High rates of taxation, some alleged "discrimination" against foreign firms operating in India exposed to double or even triple taxation, and the "apparent absence of equity" in treating preferentially the foreign exchange earning industries of the country. Characterising these as disincentives for many foreign enterprises willing to undertake capital risks, Mr. Chambers pleaded for a suitable adjustment of the tax system. He, however, added that he was not asking for any radical changes in tax policy. He is reported to have observed:

"The high taxes in India trim the incomes of scientists and compel them to work always under the shadow of an anxiety for their future provision. A lot of capital that the Government tries to get from high taxes can come from personal savings, if the tax rates are liberalised. By trying to get more from taxes, the Government is discouraging the creation of sources of taxes. The operation is frustrating."

Mr. Chambers, who has specialised on tax matters and has intimate knowledge of India's tax system, has certainly not criticised the tax system for criticism's sake. He has done it with the most sincere intention of seeing India making rapid strides in its economic development. The Company he heads, it will be recalled, is one of the leading foreign concerns actively participating in India's development projects. Special mention must be made of the I.C.I. collaboration with the Government of India in the manufacture of industrial explosives. Mr. Chambers did concede that it is, in spite of somewhat incongruous features in the tax system, there had been a steady flow of capital from abroad, it was because foreign investors, such as the British accustomed to take a long-range view of business prospects in a country, considered India suitable for capital outlay. The I.C.I., he added, particularly thought that India was a very good place to work in. He, however, hastened to point out that even the I.C.I. might have to "simplify" some of its operations in India, with a view to lessening the impact of the Indian tax load on its shareholders who were not getting a fair deal in respect of their investment.

The observations of Mr. Chambers are, indeed, very pertinent and quite timely. It is to be hoped that they will be borne in mind by the Union Finance Minister while finalising the proposals for inclusion in the 1961-62 budget to be presented to Parliament this month-end. He will surely have given a considerable impetus to the tempo of industrialisation if only he concedes the businessmen's just demands for a reduction in corporate taxation, withdrawal of the differential taxation of certain types (such as wholly-owned) of foreign companies, abolition of the tax on capitalisation of reserves and share premium accounts, and concessions in personal taxation.

W. Europe's Monetary Policy

One of the important issues that are now being actively considered in Western Europe relates to the formulation of a common monetary policy. A recent Press report from Paris avers that the need for such a policy with the long-term objective of common currency has been greatly felt especially by the six member-nations of the European Economic Community. Indeed, it is said that encouraging progress has been made at the periodic meetings of the E.C.E. countries' Finance Ministers which are also attended by the spokesmen of central banks of the countries concerned. Before, however, such a policy can be finalised, there will have to be a series of consultations not merely among Common Market circles and the seven-member "Outer Seven" area, including Britain and the United States. The consultations will naturally centre round solutions which would rule out the possibility of the devaluation of the U.S. dollar in terms of gold, what with the categorical declaration by President Kennedy that the U.S. Administration "shall not take any action to increase the dollar price of gold from 35 dollars an ounce," and that it "will not distort the value of the dollar in any fashion; that is a pledge."

It is in the aforesaid context that the six-point monetary policy put forward by Mr. Jean Monnet of France assumes significance. Mr. Monnet, it may be noted, has been the "moving spirit" behind the Common Market. Briefly summed up, his plan is as follows:

1. The Governments of the U.S. and European countries must jointly pledge themselves to common effort at stabilising the currencies of the West through measures other than dollar devaluation in terms of gold.

2. There should be a freer movement of investment capital both to and from the U.S. For this purpose, those tax regulations which discourage investment in the U.S. should be revised. Simultaneously, the flow of American savings for investment abroad should be stimulated.

3. The U.S. and the European countries must work together to co-ordinate their interest rates so as to prevent 'hot' money movements stimulated by differing rates of interest.

4. The U.S. may have to launch a more vigorous export drive.

5. Western Europe, the Common Market in particular, may speed up tariff reductions which presumably include cuts in the C.M. tariffs on American imports.

6. The new Organisation for European Co-operation and Development will be a more suitable instrument for the co-ordination of American and European monetary policies than the International Monetary Fund.

Although these suggestions have been mooted oft and on in the past, they do not appear to have received the attention they deserve. By commending them for acceptance again, Mr. Monnet has certainly highlighted the urgency of giving effect to the suggestions. The alternative to these suggestions is competitive devaluation of currencies, a solution which will thwart the efforts of the U.S. and other Western countries to speed economic growth and provide aid to the underdeveloped countries. The importance of a smoothly working international system based on a free flow of trade and funds is well brought out by the Chairman of the Midland Bank Ltd., Viscount Monckton of Brenchley, in his latest statement to the shareholders of the Bank. Such a system, he stresses, presupposes absence of built-in obstructions (such as maintenance of high gold reserve requirements against central bank liabilities, statutory limitations on interest rates movements, differences in official attitudes towards private purchases of gold and private gold holdings, and adoption of special measures to block an unwanted inflow of foreign-owned funds), as well as a readiness on the part of Governments and central banks to give due weight to the impact of their actions upon the external situation and international flows of capital and credit.

Attitude Survey—A New Aid for Industry

Almost every one has ideas as to how things should be organised in the office, factory or farm in which one works. But not all can have them shaped the way they would like. Of course, not all one's ideas would be good; some may be theoretically sound but practically unworkable and some neither. There is also a fair chance that some will meet both tests.

Is it worthwhile, then, to gather individuals' opinions and to scrutinise their practical worth? Well, there are quite a few firms in Britain which

(Continued on page 224)

SHARE MARKET TURNS QUIET

PRE-BUDGET UNCERTAINTY

(From Our Own Correspondents)

BOMBAY, *2nd February*

ALTHOUGH twenty-six days are still to go for the presentation of the Central Government budget for 1961-62, the share market has developed the usual pre-budget uncertain mood. Forecasts about the contents of the budget vary widely, some fearing a further load of taxation (direct as well as indirect) and others expecting actual relief. In view of these conflicting forecasts, operators are naturally hesitant to extend their commitments either way. Business put through, as a consequence, is restricted, with the exception of textiles and engineering shares which are eliciting good support on hopes of encouraging future. In some counters, there has been a setback to prices, thanks to the inclination on the part of some parties to lighten commitments with the approaching end of the account period (tomorrow), lower advices from Calcutta and delay in the announcement of higher retention prices for steel.

Steel shares drifted downward during the week under review, reflecting the disappointment of operators over the delay in official decision regarding prices. Tata Steels began the week at Rs. 147.75, as against the previous close of Rs. 146.75, and, after moving indecisively, receded to Rs. 145 today before finishng at Rs. 145.25. The net loss over the week was Re. 1.50. Production at the steel works during January 1961 was 144,200 metric tons of pig iron, 149,300 tons of steel ingots and 117,600 tons of saleable steel, as against 143,200 tons, 153,600 tons and 115,800 tons, respectively, in the previous month. Indian Irons, which had firmed up from Rs. 24.64 to Rs. 24.80 on the opening day of the week (Friday, 27th January), declined to Rs. 24.36 today. Mukand Irons improved from Rs. 23.24 to Rs. 24.48 on Monday and Tuesday, but eased thereafter to Rs. 23.86.

Under the impetus of renewed buying support influenced by hopes of better working of mills during the current year following expansion of production and plentiful supplies of raw cotton at reduced prices, textiles recorded further additions to values. Standards were particularly sought after by some bull operators and forged ahead from Rs. 1,022 to Rs. 1,092, after being higher still at Rs. 1,115. Morarjees spurted by Rs. 12 to Rs. 340, Khataus by Rs. 7.50 to Rs. 450 and Gokaks by Rs. 6.50 to Rs. 171.50. Indores and Podars picked up Rs. 3 each to Rs. 133 and Rs. 138, respectively. Shree Niwas hardened by Rs. 2 to Rs. 242. Mysores gathered a like amount to Rs. 59.50. Elphinstones and New Greats rose by a rupee each, the former to Rs. 64 and the latter to Rs. 195. Bombay Dyeings advanced from Rs. 60.60 to Rs. 62.40 on 30th January, but declined to Rs. 61.30 today. The net gain over the week was 70 nP. Centurys rallied from Rs. 477.50 to Rs. 486.50 on Monday. At this level, profit-taking set in and the quotation receded to Rs. 476 today. The closing was better at Rs. 476. India Uniteds gained 28 nP to Rs. 14.44 and Apollos 6 nP to Rs. 1.54. Finlays were firm at Rs. 330, as also Simplex at Rs. 168 and Tata Mills at Rs. 41.25. Svadeshis, however, came in for selling and dropped Rs. 5.50 to Rs. 234. Kohinoors also encountered selling and eased by Rs. 5 to Rs. 272.50. B.R. Cottons lost Rs. 4 to Rs. 22 and Central Indias Rs. 2 to Rs. 102.

Sugars continued their downward march on apprehensions of a severe impact of the Maharashtra Land Ceiling Bill on the finances of joint-stock sugar companies. Kesar Sugars were hammered down from Rs. 232.50 to Rs. 157.50. Belapurs, after rising from Rs. 306.50 to Rs. 310.50 early in the week, sagged thereafter and touched Rs. 302.50 today. The net loss over the week was Rs. 4. Maharashtra Sugars shed Rs. 3.50 to Rs. 193.50. Walchandnagars and Phaltans declined by Rs. 2.50 each to Rs. 227.50 and Rs. 150.50, respectively. Bhopals were quiet at Rs. 29. Changdeos were neglected at Rs. 29.50. The Directors of the Company have declared a lower taxable dividend of Rs. 2.50 per share for the year ended September 1960, as against Rs. 2.82 taxable for the previous year. Ravalgaons were unaltered at Rs. 104. A lower dividend of 10 per cent on increased capital has been proposed for the year ended 1959-60, as against 17 per cent for the previous year.

An irregular trend was in evidence in the cement section. Associated Cements moved up from Rs. 150.50 to Rs. 152 on Tuesday, 30th January, but declined to Rs. 151.25 today, a rise of 75 nP over the week. Dalmias gathered 4 nP to Rs. 11.28. Digvijays, however, shed 50 nP to Rs. 149.50. Sone Valleys lost 16 nP to Rs. 4.68 and Orissas 12 nP to Rs. 13.60. Jaipur Udyogs were quiet at Rs. 11.56.

Among automobiles, Premier Automobiles softened by Re. 1.50 to Rs. 166, following the reported large-scale disinvestment by an institutional investor. The news that the Government had approved of the Company's project for the manufacture of sheet metal components for Dodge trucks and Fiat cars had no effect. But Hindustan Motors rose by 36 nP to Rs. 19.92 (they were higher still at Rs. 20.16 today), due to reports envisaging the possibility of a large D.L.F. loan to the Company for financing the expansion scheme. Among shippings, Scindias declined by 32 nP to Rs. 14.20, reflecting the disappointment of operators over the fall in gross profit from Rs. 3.48 crores in 1958-59 to Rs. 2.67 crores in 1959-60. Great Easterns eased by 10 nP to Rs. 14.84. The extraordinary general meeting of the Company held on Tuesday this week passed resolutions seeking to amend the articles of the Company for the early repayment of the 5½ per cent redeemable (1965) preference shares amounting to Rs. 25 lakhs.

Engineering shares attracted the persistent attention of investors. Coopers advanced by Rs. 9.50 to Rs. 173. Telcos rallied from Rs. 290 to Rs. 298 on Tuesday. Thereafter, they drifted lower owing to profit-taking and wound up the week at Rs. 294, a rise of Rs. 4 over the week. Larsen & Toubros rose by Rs. 2.50 to Rs. 37.50. Mahindras improved by Re. 1.64 to Rs. 21.24 on reports that the Government has sanctioned the Company's scheme for expanding the production of jeeps. New Standard Engineerings gathered a rupee to Rs. 169. Alcock Ashdowns, however, encountered some selling and dropped Rs. 5 to Rs. 255. Premier Constructions eased by a rupee to Rs. 192.

Among miscellaneous industrials, Indian Dyestuffs were in the limelight, their quotation jumping up by Rs. 45 to Rs. 470. Alembics strengthened by Rs. 13 to Rs. 235. Colour Chems and Poly Chems put on Rs. 7.50 each to Rs. 315 and 222.50, respectively. But Synthetics and Chemicals fell by Rs. 5 to Rs. 122, notwithstanding the statement of the Chairman at the recent statutory meeting that the construction work of the Company's plants is progressing satisfactorily. Dhrangadhras eased by Rs. 4 to Rs. 118, despite the rise of Rs. 30 per ton in the price of caustic soda announced by the Government this week, while Tata Chemicals gained 28 nP to Rs. 17.80. Amar Dyes dropped Rs. 3.75 to Rs. 365.75. National Rayons were bid Rs. 11 higher at Rs. 500; at one time today, they were higher still at Rs. 505. Gwalior Rayons picked up 65 nP to Rs. 42.75; they had touched Rs. 44.50 earlier in the week. Indian Rayons gained 50 nP to Rs. 52. But South India Viscose receded by Rs. 3 to Rs. 148 on some distress selling by an operator who could not get a few hundred shares transferred to his name. Baroda Rayons, too, eased by Re. 1 to Rs. 123. Polsons were well favoured and rose by Rs. 7 to Rs. 159. Voltas hardened by Rs. 2 to Rs. 259 on hopes of higher dividend. Indian Hume Pipes moved up from Rs. 164 to Rs. 166.50. Anil Hardboards encountered selling and eased by Rs. 5 to Rs. 290. West Coasts lost 50 nP to Rs. 180.50. Bombay Burmahs began the week at Rs. 555 and, after advancing to Rs. 567 on Monday, drifted lower to touch Rs. 553.50 today, as against Rs. 554.50 on Wednesday last week.

* * * *

Madras Stock Exchange

MADRAS, *1st February*

Equities on the Stock Exchange continued to move up during the week under review, thanks mainly to enlarged support from professional operators. Textiles were well favoured, though a few shares encountered selling on reports of fresh restrictions on imports of piece-goods into Ceylon. Teas ruled steady on encouraging advices from auction centres. Coffees staged a smart rally. Rubbers were firm on reports of steadily expanding demand for natural rubber, consumption of rubber during January-November 1960 was higher at 40,350 tons, as against 34,600 tons in the same period in 1959. Sugars elicited good investment demand. Banks ruled firm. Electricals were in request and some selected scrips scored handsome gains. Among miscellaneous industrials, chemicals and engineerings hardened, while papers and some cement shares tended to look down.

In the textile section, Lakshmis spurted by Rs. 3 to Rs. 154. Vijayalakshmis were marked up by a like amount to Rs. 89. Coimbatore Cottons improved from Rs. 158.50 to Rs. 160. Travancore Rayons rose by 90 nP to Rs. 34. Maduras put on 25 nP to Rs. 36, following the announcement of a dividend of 15 per cent taxable for 1960, as against 12½ per cent taxable for the previous year. Kotharis hardened by 10 nP to Rs. 12.10. Metturs were fully steady at Rs. 369, Premiers at Rs. 225 and Vasantas at Rs. 236. Coimbatore Spinnings were fancied at Rs. 44, Pankajas at Rs. 59 and Rang Vilases at Rs. 40. South Indias lost Rs. 3.50 to Rs. 150. The Directors of the Company have decided to increase the capital by the issue of new equity shares of Rs. 100 each to existing shareholders in the ratio of two shares for every five held at a premium of Rs. 5 per share. The present issued equity capital is Rs. 3.50 crores.

Among teas, United Nilgiris improved by 25 nP to Rs. 23.50. Twyfords were higher by 10 nP at Rs. 12. The trading unit of the Company's shares has been raised from 50 to 100 shares. Periakaramalais gathered 7 nP to Rs. 3.57 and Chembras 5 nP to Rs. 5.55. Devasholas were fully maintained at Rs. 30.50. But Peermades fell by 30 nP to Rs. 22.20. Blue Mountains shed 5 nP to Rs. 3.88. The Company has been given permission by the Controller of Capital Issues to issue 1,050,000 new shares of Rs. 2 each at a premium of 45 nP.

There was brisk activity in the coffee group. Consolidated Coffees rose by Re. 1.05 to Rs. 23.25, following reports of better crop in the Company's plantations. Coffee Lands were higher by 20 nP at Rs. 18.50. Ossoors moved up by 25 nP to Rs. 3.40 and Wartyhullys by 13 nP to Rs. 3.25. Ouchterlony Valleys strengthened by 5 nP to Rs. 4.60. Mysore Coffees were maintained at Rs. 5.40, Amalgamated at Rs. 13.15 and Rajendras at Rs. 14.

Among rubbers, Cochin Malabars scored a gain of 25 nP to Rs. 7.55. Highlands improved by a similar amount to Rs. 14.70. Midlands rose by 20 nP to Rs. 11.35. Malankaras and Rajagiris were steady, the former at Rs. 18 and the latter at Rs. 19.05.

A feature of trading in the sugar section was the spurt in United Breweries from Rs. 87 to Rs. 95. Cauverys attracted good support, the quotation advancing by a rupee to Rs. 40.75. E.I.Ds firmed up by 75 nP to Rs. 40.75. Travancores put on 15 nP to Rs. 10.70. Deccans were fully steady at Rs. 14.80, India's at Rs. 12.85 and Mysores at Rs. 59.75.

In the miscellaneous section, Aluminium Industries hardened by 70 nP to Rs. 22.80, Textools by 50 nP to Rs. 173.50 and Standard Motors by 15 nP to Rs. 16.85. Ashok Leylands picked up 5 nP to Rs. 8.70. Among chemicals, F.A.C.Ts rose by 55 nP to Rs. 9.85. Metturs put on 10 nP to Rs. 13. Travancores were well maintained at Rs. 15.50, as also Mysore Fertilisers at Rs. 10.90 and Mysore Chemicals at Rs. 26.10. Cements were irregular. India cements moved up by 41 nP to Rs. 6.05, while Orissas were lower by 25 nP at Rs. 13.55 and Dalmias by 5 nP at Rs. 11.15.

Calcutta Stock Exchange

CALCUTTA, *1st February*

Not because of the reported decision of the Government of India to grant an increase in steel retention prices but because of the belief that they are undervalued, judging from improved prospects and from the belief that the existing shortage for coal and limestone supplies would not be prolonged, steels received greater attention during the week. After touching a high of Rs. 24.84, as against Rs. 24.34 earlier in the week, Indian Irons met with profit-taking and declined to Rs. 24.38 but rose again to Rs. 24.80 before closing at Rs. 24.70. Other engineerings, however, were only about firm and some impressive rises were recorded in miscellaneous industrials. The report that industrial production in 1960 was impressive and that exports of light engineering goods rose by 45 per cent acted as a stimulus for investment buying in selected counters. But, in other sections, caution was in evidence, the budget anxieties preventing any lengthening of commitments. Although it was generally believed that there was hardly any scope for increasing direct taxation, there was the fear that, in his attempt to raise resources for the third Plan, the Finance Minister might tap new sources. Some quarters argued that, if the Finance Minister felt the need to raise taxes, he would do this during 1961-62 rather than next year which is an election year. The talk of a remote possibility regarding revision in coal prices attracted attention to coals. This followed reports that, in reply to the Fuel Ministry's desire that collieries should undertake compulsory loading on Sundays, the industry pointed out that, since Sunday loading would call for payment of double wages, this could be compensated only by increased coal prices. The interim relief accorded to jute mill workers chilled sentiment for jutes, if any further chilling was necessary, besides the further spurt in fibre prices and the unions' opposition to a reduction in working hours. It was thought that the share market had reached a stage to expect stimulus for a fresh bout of activity.

Notice

THE RAGHUVANSHI MILLS LIMITED

11-12 Haines Road, Bombay-13

NOTICE IS HEREBY GIVEN THAT THE Thirty-first Annual General Meeting of the Company will be held at 3 p.m. on Saturday, the 25th February 1961, at the Registered Office of the Company, 11-12, Haines Road, Mahalaxmi, Bombay-13, to (*a*) receive and adopt the Audited Balance Sheet and Profit and Loss Account of the Company, together with the Directors' Report, for the year ended 31st March 1960; (*b*) declare a dividend on Ordinary Shares; (*c*) elect Directors, and (*d*) appoint Auditors for the financial year ending 31st March 1961.

Copies of the Notice together with the Explanatory Statement and the Audited Balance Sheet and Profit and Loss Account for the year ending 31st March 1960 have been posted to the Members at their last given addresses.

The Register of Members of the Company will be closed for transfers from Monday, the 20th February 1961 to Monday, the 6th March 1961 (both days inclusive).

By Order of the Board of Directors,
For THE RAGHUVANSHI MILLS LIMITED,
For RAVINDRA MAGANLAL & CO. PRIVATE LTD.,

SURENDRA MAGANLAL,
Director,
Managing Agents.

BOMBAY, *23rd January 1961.*

NEWS IN BRIEF

THE Madras Government has decided to nationalise all long-distance bus transport routes of over 120 miles. Short-distance routes are also expected to be taken over later in stages.

The Government of India has extended the export incentive scheme for cotton textiles in its present form and subject to the same rates of incentive as are currently allowed upto 30th June 1961.

West Germany has agreed to extend the time limit for the repayment of about DM 98 million, which India has borrowed for financing the Rourkela project. India has already paid DM 49 million out of the DM 147 million due for payment by the end of March 1961.

The Indian Society of Advertisers, Bombay, has decided to organise a three-day advertising conference at New Delhi which will discuss the role of marketing and advertising in export promotion. The conference will be inaugurated by Prime Minister Nehru on 27th March.

The agreement on technical assistance from France, concluded initially in 1958, has been extended by one more year. Under this agreement, France has given facilities for training about 100 Indians in that country, apart from providing services of about 50 French experts for development projects in India. The agreement is subject to annual review.

A newly constructed factory in the Industrial Estate in Mysore City has commenced manufacture of Jawa motor cycles, in collaboration with Czechoslovakian firms. This unit is expected to manufacture annually 15,000 motor cycles of three varieties, namely, 2.5 h.p., 1.75 h.p. and 1.5 h.p. The first batch of motor cycles is expected to be on the road by the middle of this month.

It is reported that the Central Government is considering a proposal to set up a corporation to administer the Kolar gold mines after the Mysore Government hands over the mines. In the proposed corporation, the Centre will hold the majority of shares, the Mysore State Government being relegated to the status of a minority shareholder.

The World Bank is expected to send an expert team to study the Indian capital market shortly, with the object of assessing its potentialities for financing industrial expansion during the third Plan period. The last World Bank mission to this country had expressed itself in favour of stepping up the rate of self-financing by Indian industry, thereby reducing reliance on bank credit and other institutional sources of finance.

An expert body called "Seismic Committee" has been constituted, with Dr. K. L. Rao, a senior member of the Central Water and Power Commission, as Chairman. It will advise the Government on steps to safeguard the major dams proposed to be built up in the seismic belt along the Himalayan range, particularly in Assam and North Bihar. Japan and Italy are said to have successfully constructed large structures in seismic zones.

The International Criminal Police Organisation (Intropol) has conceded India's request to hold a special session of all member-countries for co-ordinating action against counterfeiting of currency. India's appeal followed the large-scale counterfeiting of its currency by international gangs brought to light some time back. Many other countries, such as Pakistan, Cambodia and Ghana, which have also similar experiences, supported the appeal.

The second furnace of the Durgapur Steel Works in West Bengal was lit by Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, on the 2nd inst. It has the same capacity as the first one (namely 1,250 tons per day), inaugurated by President Dr. Rajendra Prasad on 29th December 1959. Upto the end of 1960, the first furnace had produced 320,000 tons of pig iron. The Steel Works, when completed, will have three blast furnaces, each with a capacity of 1,250 tons per day.

The Madras Legislative Assembly has passed an amendment to the Madras State Aid to Industries Act 1922, which seeks to liberalise conditions governing grant of aid to industries in the State. The amendment stipulates that only those applications for aid exceeding Rs. 25,000 must be placed before the Board of Industries for advice. It also provides for the grant of loans on personal security of the applicant. Another new provision is the right of appeal granted against a decision granting or refusing to grant aid under the Act.

The Madras General Sales Tax (Amendment) Bill 1961 was passed by the Legislative Assembly last week. The amendment seeks to provide statutory force to the Government notification issued on 19th October 1960, deleting "tinned, canned, bottled or packed foods or provisions (other than those mentioned under items 24 and 29)" from the first Schedule of the General Sales Tax Act. The items included in the first Schedule are liable to single-point tax of six per cent at the point of first sale in the State. Under the amended Bill, the aforesaid products willl be reverted to multi-point tax at two per cent.

Ashok Leyland Ltd., Madras, has introduced an incentive scheme from the beginning of 1961. This is an improvement on the group production [illegible] scheme which has been in operation for the past eighteen months. Under the new incentive scheme, opportunity is given to every worker to increase his earnings by conscientious work. For the manufacture of each component, a time limit is allowed and incentive bonus is paid on the basis of hours saved by each worker in the different categories in the machine shop, chassis assembly and engine assembly.

The Planning Commission has approved of a proposal made by the Government of West Bengal to set up a 300,000-kw. thermal power station near Bandel at a cost of Rs. 29.9 crores. The proposed station will comprise four units, each generating 75,000 kw., and supply power to the railways and industries in the Calcutta area. It will be connected with the State Government's power station at Durgapur through a 100-mile kV. link. The cost of the Bandel station is expected to be met out of a loan from the U.S. Development Loan Fund. The State Government will later double the capacity of the station at a cost of Rs. 22.5 crores.

The foundation-stone of India's first watch factory was laid by Mr. Manubhai Shah, Union Minister for Industries, at Bangalore, in the vicinity of the State-owned Hindustan Machine Tools. The watch factory, which will be in the public sector, is being started in collaboration with the leading Japanese firm, Messrs. Citizens Watch Co., Ltd. The plant, which will cost Rs. 2.5 crores, will have an annual capacity of 240,000 watches on a single-shift basis. The watches to be produced in the first instance will be of two types, 'gents' and 'ladies'—both models incorporating latest improvements and fashions. The selling price of the watches, though not finally fixed, is expected to be below Rs. 100 apiece.

The Powerhouse No. 2 in the Kundah Hydro-electric Project on the Nilgiris Hills, Madras, was formally inaugurated a fortnight ago by Mr. Gordon Churchill, Minister for Veteran Affairs, Canada. The Canadian Government has given aid amounting to $26 million in the form of plant and machinery under the Colombo Plan. The Project, initially inaugurated in 1956, seeks to harness the waters of the Kundah river and generate firm power of 343,000 kw., with an installed capacity of 420,000 kw. in two phases. The initial phase of the project, costing Rs. 35.14 crores, is expected to be completed in all its aspects by June 1961, adding a total installed capacity of 180,000 kw. to the State Power Grid.

The recommendations made by the Central Wage Board for the jute industry regarding interim relief for workers has been accepted by the Government of India. The Government has decided to ask the jute mills to implement the recommendations as soon as possible. The recommendations are: (1) Every worker—whether permanent, temporary or *badli*—should be paid interim relief at the rate of Rs. 2.85 per month from 1st December 1960 to 31st December 1960 and at the rate of Rs. 3.42 from 1st January 1961. (2) The arrears of interim relief upto 31st December 1960 will be paid to the respective workers on or before 15th February 1961. (3) The amount of interim relief from 1st January 1961 onwards will be paid each month in one lump sum on the first pay day of the next month. (4) In the case of workers who did not or do not work for the entire month, or for calculating wages due for any broken part of a month, for example, by going on leave or sick leave, etc., the amount of interim relief payable to them will be worked out on the same principles as dearness allowance. (5) The amount of interim relief shall be paid as a separate item till the final award of the Wage Board and will be adjusted according to that award.

From Abroad

U.S. consumer expenditure rose to a record level of $332,000 million in the fourth quarter of 1960, as against $328,300 million in the previous quarter.

The Australian Barley Board is currently negotiating with Communist China the sale of a part of its current year's record barley crop. China is also reported to be interested in buying 32 million bushels from Australia.

The Government of Ghana has published a Bill which seeks to prevent gold mining companies abandoning mines without the permission of the Government. The penalty for contravention of the law will be a maximum fine of £100,000 or £1,000 a day.

For the first time in the U.K., a helicopter has been used for the laying of a pipeline. It completed in 4½ hours an operation which normally would have taken at least ten days. The aircraft, a Widgeon helicopter of British United Airways, was fitted with a specially designed lifting gear. It laid 2,000 feet of eight-inch steel piping across the rain-swept Thames marshes at Cliffe.

The U.K. imported 287.1 million lbs. of unmanufactured tobacco during the first ten months of 1960. Of this, 40.8 million lbs. were from India. Total British imports were 45.4 million lbs. more than those for January-October 1959, and India's share increased by 4.3 million lbs., followed by Rhodesia and Nyasaland (84.4 million lbs). India was the third largest supplier. Supplies of all types from Commonwealth countries rose to 156.6 million —16.5 million lbs. more than that in the corresponding period in 1959.

The policy of the Life Insurance Corporation of India in East Africa is to invest there itself as much funds as are required to meet its policy liabilities in that country. This was disclosed last week by Mr. P. A. Gopalakrishnan, Chairman of the Life Insurance Corporation, at the inaugural function of the ten-storeyed building, newly constructed by the Corporation at a cost of Rs. 26 lakhs at Nairobi, Kenya. Dr. F. G. Kiano, Minister for Commerce and Industry, Government of Kenya, inaugurated the building.

PERSONAL

MR. G. R. FERGUSON, President of the Caltex East Company, New York, has arrived in Bombay in the course of an inspection tour of the South-East Asian offices of Caltex.

Mr. G. L. Mehta, who had expressed a desire to resign the chairmanship of the Hindustan Shipyard Ltd., Visakhapatnam, has agreed to continue.

Mr. Edward R. Murrow, well-known American journalist and radio-television commentator, has been chosen by President Kennedy to be Director of the U.S. Information Agency. Mr. Donald M. Wilson, Washington correspondent of *Life* magazine, has been appointed Deputy Director.

Sir Peter Roberts, Chairman of the Wellman Smith Engineering Corporation Ltd. in the U.K., has been appointed Deputy Chairman of the Indian Steel Works Construction Company Ltd. (I.S.C.O.N.), a consortium of British engineering companies which has undertaken the construction of Durgapur Steel Works, West Bengal.

Mr. D. D. Puri and Mr. M. N. Pittie have been deputed by the Indian Sugar Mills Association to make an on-the-spot study of the prospects for exporting Indian sugar to the U.S. Mr. Puri, who is the President of the Association, which is handling sugar export trade, has already left for the U.S. Mr. Pittie is due to follow him shortly.

Mr. James E. Potts, Regional Director for Operations in the Far East of the Union Carbide International Company, division of Union Carbide Corporation, U.S., and formerly a resident Managing Director of Union Carbide India Ltd., has been appointed Vice-President of the International Company.

Mr. J. E. Trainer, Executive Vice-President and a Director of the Firestone Tyre and Rubber Company, Akron, Ohio, U.S., has arrived in Bombay. During his stay in India, Mr. Trainer will acquaint himself with the progress made so far in regard to the establishment of the Synthetic Rubber Factory, at Bareilly, being put up by Synthetics and Chemicals Ltd., in collaboration with Firestone. He is also understood to discuss plans for expanding the Firestone tyre manufacturing capacity in India.

Twelve West German collieries with an aggregate annual output of 3.8 million tons have been closed since early 1958 to cut costs and rationalise production of the coal industry which is trying to hold its own on the fuel market. Another 2 million tons of annual output were dropped by integrating 28 smaller collieries into 13 new large units. Four more collieries with an aggregate production of 2.4 million tons are scheduled to be closed. Between 1958, when the coal sales crisis began, and 1960, W. German coal production was cut back by about 7 per cent.

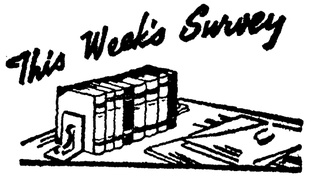
One of the largest sheet steel producers in the U.K., the Steel Company of Wales, has gone on a short week (from 42 to 38 hours), following the decline in the demand for sheet steel, mainly from the motor car and durable industries. The other two producers, John Summers and Richard Thomas and Baldwins, are also considering the new situation. The weakness in steel demand is said to be confined to the lighter products, sheet strip and tin-plate. But demand for heavy sections and plates from the constructional and capital industries is still strong.

West German trade unions this year are asking for wage boosts of up to 20 per cent as well as for longer vacation with pay and still shorter working hours. This was revealed at a conference of the Confederation of German Employers Organisation, which, after a review of the 1961 labour scene, has warned that price rises are "inevitable," if employers meet such demands in full. The Confederation has urged both the unions and the employers not to raise demands or make concessions incompatible with their responsibility for the common good. "Our overriding aim," the Confederation states, "continues to be to safeguard the purchasing power of the Deutsche Mark."

West German exports to Russia and East European countries amounted to DM 1,471 million in the first eleven months of 1960, as compared with DM 1,078 million for the comparable period in 1959. Imports were worth DM 1,356 million, as against DM 1,183 million. By countries, the Soviet Union came first with a total trade volume (sum total of exports and imports) of DM 1,014 million, followed by Poland (DM 537 million), Czechoslovakia (DM 465 million), Hungary (DM 357 million), Rumania (DM 274 million) and Bulgaria (DM 180 million). W. German trade with these countries amounts to only about 4.7 per cent of its total foreign trade.

The Ceylon Government has announced sharp increases in duty on a wide range of imports together with a general 5 per cent increase on all imported wares, except food and such other items as books which had been allowed duty-free in the past. It also clamped down a virtual ban on the import of diamonds, soap, jaggery, bicycle tyres and tubes, while placing controls on a variety of items including chinaware, radios, electrical appliances, motor [illegible], cosmetics, footwear, biscuits, coffee and [illegible]. Import of cloth will not be allowed except on individual licences. Importers are asked to cancel all outstanding orders in respect of cotton piecegoods, cloth and stuffs, pure wool, fabrics of synthetic fibre and spun yarn, *saris* of any material and handloom garments.

UNDER SECRETARY 6 FEB 196 PUBLIC DEPARTMENT



CEYLON OIL BILL

THE industrial policy of Mrs. Bandaranaike's Government in Ceylon is being given, it would appear, an increasingly socialist orientation, much more so than in India. Under this policy, not only some basic industries but quite a few consumer goods industries, too, are reserved for the expansion of the public sector. That this reservation probably comprehends nationalisation of existing private enterprises in the industries concerned is not a wholly unwarranted suspicion, for two at least of the Government's proposed measures carry with them the implication of full-fledged ultimate socialisation. One of these is the recently announced scheme for State-owned tea estates and collectivisation of the manufacturing process—a scheme under which State-owned estates are expected to compete with private enterprise. And the other measure proposed is the highly controversial "Ceylon Petroleum Corporation Bill," designed for the purpose of establishing a State-sponsored corporation to import oil and handle oil distribution to the nationalised bus transport, Government departments and armed forces "in the first instance."

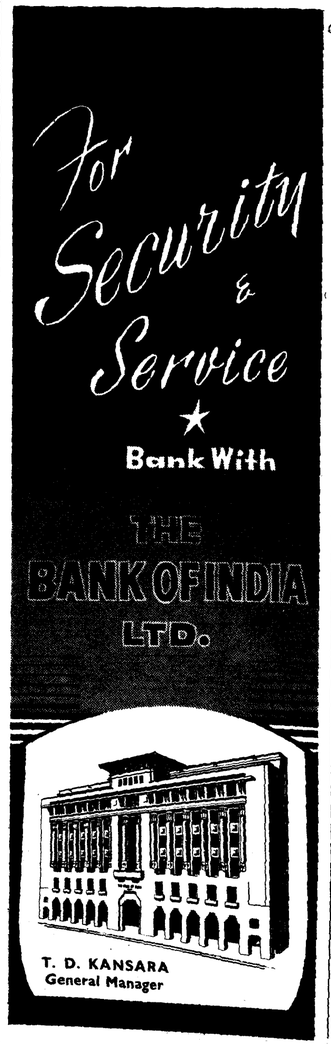
It looks as though the proposed Petroleum Corporation in Ceylon, unlike the Government-owned Indian Oil Company Ltd. which will confine its operations to the marketing of a part of the imported petroleum products as well as those of the Barauni and Gauhati refineries under construction in the public sector, may ultimately take over the private oil trade in that country. This inference is supported by some disquieting provisions in the Bill. The most disquieting feature of the Bill is that it provides for the eventual take-over of the foreign oil companies but does not lay down any definite date for their expropriation, thus making it impossible for them to plan their business operations in the meantime. The provisions in the Bill granting tax exemption to the State-sponsored Corporation and power to fix minimum prices as well as to acquire oil companies' assets in the shape of storage facilities and pipelines are also deemed unfair. And, what is worse still, there is no provision laying down the basis on which compensation for the take-overs would be fixed. The Shell Company, for instance, has taken exception to these provisions, presumably on the ground that they are designed to drive the foreign oil companies out of business. As this Company alone owns pipelines and installations in Ceylon valued at £2 million and has been investing there at the rate of £375,000 a year over the past five years, its anxiety is understandable. And its plea for the inclusion of a phrase such as "fair and equitable compensation" in the relevant section of the Bill is also reasonable, for, otherwise, there will be no safeguard against totally inadequate compensation.

On the whole, the oil companies have taken up a moderate stand, in spite of their fear that their business assets and interests in Ceylon might be completely taken over sooner or later. They have welcomed competition from the proposed Corporation which, according to one report, is likely to import oil from Russia at 20 per cent less than the ruling world market price. But what they object to is the provision for acquiring their storage facilities and pipelines, for these assets would be used by the Corporation to compete with the very companies from which they were acquired. The Ceylon Government's counter-argument is that some of the oil storage tanks and the main pipelines from the Colombo docks to the tanks had only been leased by the Government to the oil companies. Although all the facts in this connection are not known, the inference is still possible that the companies run the risk of being deprived of a part of the facilities which they have always been using. The provision relating to minimum prices may also come to be used to the detriment of the oil companies which now get a net profit of only two cents on a gallon of oil. If the Governments of the U.S.A. and the U.K. have also made representations on the above lines to the Ceylon Government, they do not amount to "interference in the internal affairs of another country," as it has been officially described. If the legitimate interests of foreign investors cannot be safeguarded through such representations or negotiations, foreign capital will only be frightened away from the Asian underdeveloped countries which need it so badly. What Ceylon does may have wider repercussions in the region.

WORLD RICE CROP IN 1960-61

The Fifth Session, just concluded in New Delhi, of the F.A.O. Consultative Sub-committee on the Economic Aspects of Rice has reviewed the world rice situation in 1960 and taken stock of the crop estimates for 1960-61 and trade outlook for 1961. Although paddy production is still greatly dependent on uncertain rains, it is somewhat reassuring to be told that its upward trend since after the bad crop year, 1957-58, continues to be maintained. While production in terms of milled equivalent in the world (excluding U.S.S.R., Eastern Europe and Mainland China) was 87 million metric tons in 1957-58, it rose to 95 million tons in 1958-59 and to 99 million tons in 1959-60. According to the F.A.O. Sub-committee's present forecast based on provisional crop estimates, production in the current year, 1960-61, will have reached a record level of about 102 million tons. Most of this expansion is centred in the Far East which normally accounts for about nine-tenths of world rice production, and the countries which expect improved harvests in the current year are India, Ceylon, Indonesia, Japan, Malaya and the Philippines. It should be remembered here that the estimates for the world as a whole and for the Far East do not include Eastern Europe and U.S.S.R., or China where crops are reported to have been severely damaged by drought and floods.

It is rather disquieting that the upward trend in production in recent years, especially in the Asian countries, has not been accompanied by any substantial decline in their imports of rice. The import demand of the Far East in 1960 was stronger than in 1959, and a number of Asian countries, including India, Indonesia and Pakistan, increased their imports. The only Asian countries which increased their rice exports in 1960 are Burma and Thailand, the surplus producers. In most of the Far East, therefore, the larger supplies resulting from increased production have not been adequate to meet the consumption requirements of increasing populations. For India, the deficit in rice supplies continues to be a problem, in spite of its increased production in recent years. It is, indeed, a sad commentary on this country's agriculture that self-sufficiency in production has all along been eluding its grasp, with the result that it has been importing rice at the rate of half-a-million tons a year during the last five years and will be importing from the United States alone, under the 1960 P.L. 480 Agreement, a total of one million tons in four years' time. But there is a silver lining in the cloud as far as India is concerned. It is that four out of the seven districts coming under the Intensive Agricultural Programme (assisted by the Ford Foundation in India) are mainly rice-growing irrigated tracts. It is in greater production, and not in lower consumption, that a solution to the problem of rice scarcity would have to be sought. The effort to switch consumer preference from rice to coarser foodgrains is not likely to yield the desired result, because, in the context of a larger and wider diffusion of incomes resulting from development, the all-too-natural tendency on the part of erstwhile poorer folks to go in for a finer foodgrain like rice cannot be so easily curbed. Whatever be the long-term trends in rice production and consumption, the outlook for supplies in India, as in other Far East countries, barring Mainland China, in 1961 is distinctly rosy, particularly because rice exporting countries generally anticipate the same size of production as in the last crop year.



CALCIUM CARBIDE INDUSTRY

Judged from the standpoint of production, the calcium carbide industry has amply justified the tariff protection (present duty: 50 per cent *ad valorem*) given to it for the last four years from 1956-60. During this period, the industry has trebled its production, from 2,936 tons in 1956 to 8,964 tons in 1960. But in view of the fact that calcium carbide is a basic chemical used in the manufacture of several important chemicals and materials which find extensive uses as solvents, plastic resins and intermediates and the threefold increase in the demand for it expected in the third Plan period, it is necessary that the industry should not only maintain the rate of progress achieved in recent years but also improve upon it. The industry has asked for continuance of protection for a further period of five years.

Opening the public inquiry into the question of continuance of protection beyond 31st December 1961, held at Bombay on 30th January, Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, reviewed the progress of the industry during the past four years and gave an idea of the size of demand for calcium carbide in the third Plan period and the expansion in output and capacity required to meet this demand.

In 1956, at the time of the first inquiry, the Birla Jute Manufacturing Company, Ltd., Calcutta, was the sole producer of calcium carbide on a commercial scale. Since then one more factory has come into production in Madras. This belongs to Industrial Chemicals Ltd. The present rated capacity of the two units together is 16,939 tons per annum, as against 4,116 tons in 1958. Another unit, the Calico Mills (Chemical Division), with a capacity of 14,228 tons, is expected to go into production this month. Two more units, one in Delhi and the other in Kerala, have been licensed. The former is expected to start production only some time towards the close of the third Plan period, while the latter is expected to commence operations in October 1962. Assuming that the two units will be commissioned into production as scheduled, the total capacity will have risen to 56,537 tons by 1964.

As usual, estimates of domestic demand for calcium carbide vary widely. The draft third Plan visualises that domestic demand would be of the order of 60,963 tons in 1965-66, as compared with 20,321 tons in 1960-61. The Development Wing's estimate comes near about this figure, 60,000 tons in 1964, to be precise. One prospective producer estimates the demand to be well over 67,000 tons even by 1964, while an importer of calcium carbide puts it at as low as 50,803 tons.

Actual production of calcium carbide, as already noted, is much below capacity at present. Thus, while the total capacity of the existing two units adds up to 16,939 tons, production is only half of this at 8,964 tons in 1960 which, nevertheless is three times the output in 1956. Production is, however, expected to increase rapidly to 41,000 tons per annum in 1964. It will still be about 20,000 tons below the prospective demand (Development Wing's estimate) in that year. Consequently, imports of calcium carbide will have to be continued even in 1964, if the demand is to be fully met. At the same time, if the foreign exchange situation does not improve by that time, there will be no alternative to cutting them down. In fact, due to restrictions, imports during the past four years have shown a progressively downward trend. From 9,742 tons, valued at Rs. 52.93 lakhs, in 1958, imports have declined to 8,566 tons valued at Rs. 41.51 lakhs in 1959. Imports during the first nine months of 1960 aggregated 5,214 tons valued at Rs. 26.18 lakhs.

It is evident from the foregoing facts (taken from Mr. Aiyangar's speech) that, in spite of the expanding demand and restriction on imports, 50 per cent of production capacity still remains unutilised. The principal raw materials required for the manufacture of calcium carbide are limestone, hard coke, petroleum coke, charcoal electrode paste for electric furnace, mild steel sheets and consumable stores. Barring petroleum coke and mild steel sheets, which are in short supply, all the other items are available indigenously. Why is it then that 50 per cent of the capacity is unutilised? One of the handicaps of the industry, according to Mr. Aiyangar, is insufficient supply of power and high rate of electricity charges. This, however, can only partly explain the underutilisation of capacity. It is to be hoped that the Tariff Commission will bring to light the inhibiting factors and make suitable recommendations to enable the industry to expand production.

U.K.'S EXPORT PROMOTION

The cause of export promotion is as much a matter of concern to industrially advanced countries as it is to the developing countries like India. Although the nature of difficulties faced by the two types of economies on the export front is not necessarily the same, there are certain basic prerequisites of export promotion in a competitive world market which hold true for both. These prerequisites include, among others, the need for maintaining competitive price, quality and effective salesmanship as well as prompt delivery. These conditions can be fulfilled only by the sustained zeal and alertness of industrialists and shippers themselves, though a Government may be able to help in the process. Private business bodies in the U.S., the U.K., West Germany, France and Japan are fully aware of this requirement and have played a positive role in expanding exports in the post-war period. A letter of warning sent to all British exporters by the leading commercial bodies in the U.K. last week is an instance in point. The letter, which insists that exporters should not break delivery dates, is signed by Sir James Hatchison, Sir William McFadzean and Mr. E. R. Mayor, Presidents of the British Chambers of Commerce, the Federation of British Industries and the National Union of Manufacturers, respectively. The provocation for sending this reminder to British businessmen is the downward trend in the U.K.'s exports and the prospect of more competition in the coming months.

Without mincing words, the letter plainly says that "broken delivery dates may well be the main reason why our exports in so many fields are lagging." It adds, "What is needed in our view and that is why we are writing to you, is a strong lead from the top,... so that managers, staff and employees at all levels are made aware that to fall down on delivery is simply not good enough, because it does real harm not only to the company but also to the country and to all our interests." It is emphatically asserted that "the problem is not a matter for the Government. It is one which the industry must tackle for itself." This letter is indeed typical of the meticulous care with which details of export trade are attended to by the representative bodies of industry and trade in the U.K. There is obviously a moral to be drawn from this letter, for the benefit of commercial bodies in this country as well.

It is stated that factual evidence has been received by the Associations that "late, often very late, delivery is too common today among a wide range of British industry and among companies large and small alike." A closer scrutiny of the letter, however, reflects the growing anxiety of the British industry over its none-too-satisfactory export performance in 1960. While its exports rose only by 6 per cent last year, imports rose by as much as 14 per cent. The following table shows at a glance the trend of the U.K.'s trade with major areas in 1960:

	Imports (c.i.f.)		Exports (f.o.b.)	
	£ million	Percentage change over a year	£ million	Percentage change over a year
By areas:				
Sterling area	1,515.3	+ 5	1,422.4	+ 6
Common market	602.2	+ 19	514.3	+10
E.F.T.A. (Outer Seven)	403.8	+ 19	380.7	+10
North America	942.8	+ 38	529.3	— 6
South America	311.7	— 3	171.2	+11
Total	4,556.5	+ 14	3,536.3	+ 6
By categories:				
Food	1,545.2	+ 2	196.8	+ 4
Fuel	482.9	+ 3	132.5	+11
Basic materials	1,068.3	+ 14	..	..
Semi-manufactures	906.2	+ 37	..	..
Chemicals	176.6	+ 27	316.6	+ 8
Textiles	135.8	+ 39	301.9	+ 5
Made-up clothing	60.1	+ 45	47.6	+ 4
Machinery	171.5	+ 34	638.1	+14
Electrical goods	54.0	+ 34	233.8	+ 1
Road vehicles, aircraft	74.6	+117	505.3	+ 3

Source: *The Economist*, London.

It is evident from the table that imports from North America alone were higher by 38 per cent, as against a fall of 3 per cent in British exports to the former. The rate of growth of imports from the Common Market countries and also other E.F.T.A. countries were higher than the expansion of its exports. Categorywise, too, export performance of most of the manufactured goods was by no means impressive. Viewed against this background, the appeal made to British exporters by their own representative bodies is evidence of the vigilance that is being exercised by them.

SEMINAR ON SALES TAX

In his inaugural address to the seminar on sales tax, organised by the Bombay Sales Tax Practitioners' Association on 21st and 22nd January, Mr. N. A. Palkhiwala, the distinguished authority on Income-tax Law, struck the correct note when he observed that a seminar served to exchange thoughts and that, unless new thoughts were brought into being and cultivated, there could be no progress in legislation. True to the habits of their profession, which calls upon its members to undertake prodigious study of intricate tax statutes and even more complicated judicial decisions, the lawyers who gathered at the seminar, instead of merely passing resolutions and making extempore speeches of a meandering character, conducted the seminar in four technical sessions, each session concentrating on a specific issue. In the first session, the basic question of who constitutes a dealer for the purpose of sales tax legislation was very elaborately dealt with by Mr. R. V. Patel, an expert on sales tax legislation. Citing as many as 214 different judicial decisions pertaining to the diverse aspects, such as the meaning of dealers, the controversy over the exemption of agriculturists, the continuity and profit motive as the essence of the concept of business, the units of assessments falling within the meaning of the definition of dealer, Mr. Patel made a determined effort to cover almost

ON THE ARENA

By The Archer

The Casual Remarks of Mr. Nehru

THE correspondent of a London newspaper who thought he had secured a scoop when he flashed the news that Mr. Nehru was seriously thinking of retiring from the Prime Ministership any time now, must be nursing a grievance against him after he issued his statement on 24th January that he had no thought of doing so in the foreseeable future. Mr. Nehru has stated that what he mentioned to the correspondent was in the nature of casual remarks about the future, and has dealt with the report in the same way as he would with some dust on his white achkan,—a swipe with his kerchief and it disappears. One can understand the sudden generation of speculation about "After Nehru—what, who and why" as soon as the newspaper report was published, because Mr. Nehru had himself been referring in the past to the age of seventy as a good age to retire, and he is now seventy-one. But we now know that those references to a gracefully retirable age must also have been 'casual' and, therefore, not quotable as his considered decision. I suggest that there should be no references to Mr. Nehru's retirement till he completes his eighty-first birthday, nine years later. We will then have enough time to discuss the theme "After Nehru—what, who, why," and, if necessary, add at the end "Oh God!"

* * * *

The Queen's Visit

One of his biographers writes of Mr. Nehru as one who, in all the tumult of his extraordinary life, can still think, untrammelled by the circumstances. On Mr. Nehru's own admission, however, his thoughts, actions and speeches are often influenced by the people round about him and immediately before him. "I go out and see masses of people, my people, your people, and derive inspiration from them. There is something dynamic and something growing with them and I grow with them. I also enthuse with them." This is what he is reported to have said at a conference of Irrigation and Power Engineers in New Delhi in November 1952. Some such communion of thoughts must have taken place at his last Press conference at New Delhi. Finding that some of the Press correspondents were not very complimentary about the exuberant and elaborate arrangements that were being made in Delhi for Queen Elizabeth's visit, he joined forces with them, and not being able to 'enthuse' with them, he groused with them even more than they did, and completely untrammelled by the circumstances of the Queen's visit. He gave expression to some very radical personal views on the question of spending money on roads, which, if accepted by Local authorities all over the country, might make life very miserable to everybody including himself. According to newspaper reports of the Press conference, we are told that, talking about rural and city roads and priorities. Mr. Nehru was personally in favour of the Japanese practice where the roads in Tokyo were possibly the worst in the world. "The Government there deliberately kept it so, diverting all available funds for educational purposes. This view personally rather appealed to him and he was quite prepared for it. But the newspapers themselves would raise a hue and cry about the bad state of the roads." (Why the newspapers alone? What about automobile manufacturers, dealers, owners, transport organisations, owners of commercial vehicles, the Commerce and Industry Minister who is keen on affording psychological satisfaction to middle class persons by providing them with small cars, and the Minister for Industry who has sponsored the cheap car scheme, the car of the people by the people for the people? Even cyclists and cycle rickshaw riders will start shouting until they get hoarse. As for buyers of the hundreds of new scooters which will be manufactured, they will have to learn riding on the crests of the potholes which will abound the roads. Are things as bad in Tokyo? I wonder!) To me it seems that Mr. Nehru's remarks about the adaptability of the Tokyo example are in the nature of 'casual' remarks and should not be subject to logical scrutiny. There is, of course, the inherent danger that the underlying philosophy may be accepted by Local authorities in the country, most of whom are chronically impecunious and would jump at any excuse to avoid expenditure on roads. On the one hand, Mr. Nehru would abuse us for our adherence to a bullock-cart civilisation, and, on the other, when an occasion warrants, he will find an excuse for asking us to remain static in some fields, in the name of austerity, perhaps. What makes Mr. Nehru so utterly lovable is the frequent escapes which he manifests from the cold realm of rationality and logic.

I think it is Lin Yutang who, in one of his books, decries an excess of rationality and extols the virtues of the British for having good tentacles in their brains for sensing danger and preserving life. He believes that Englishmen employ bad logic, but have a perfectly sound mind. He is convinced that, if we were all completely rational beings, we would degenerate into automatons and our minds would merely register impulses as unfailingly as a gas meter. In his view, the English have borne this in mind, and have achieved success in all their efforts, not by logic, but by using their tentacles. I am reminded of all this at present, because our Prime Minister is a product of British tradition and, in the formative years of his life, of British culture. Subconsciously, perhaps, he has acquired the habit of dropping logic, whenever he senses danger to the preservation of true values in life, and letting himself be guided by the tentacles in his brain.

I have not had a look at the extensive face-lifting which has taken place in Delhi, but having had experience of what takes place in all big cities before the visits of foreign dignitaries, I guess that working people have been subjected to a lot of inconvenience here and there by road blocks, diversions and the like, and, were, consequently, somewhat annoyed. That can be no excuse, however, for linking the issue with the visit of the Queen, and making it appear as though the general feeling in the country was that the arrangements were far too elaborate, extravagant and exhibitionistic. I also believe that it is a terminological inexactitude to call all that was done by the name of "face lifting!" This expression indicates an operation aimed at smoothing and firming the face and might, perhaps, be suitably applied to what takes place in large cities in foreign countries. As for our cities, they are much too fragile to stand an 'operation' and our laws are such that no major alteration can take place without ten years of litigation. They can well undergo a lot of face washing, scraping and scrubbing, some shaving, of course, and, in extreme cases, some cosmetic application. It is just too bad that even these create dislocation to normal life, but that is because our Local bodies have a lackadaisical manner of getting through the work. To link all this (and much of it was routine pre-Republic Day work) with the Queen's visit and ask the Prime Minister to show cause why, etc., was very uncharitable. Mr. Nehru was quite right in saying "You must ask the Corporation. I cannot examine each and every road. But, as I have told you, I have tried to moderate the enthusiasm." Mr. Nehru appears to have gone to the extent of even writing a letter to the Corporation about it. Well, what more can be done?

The Tiger of Sawai Madhopur

Most of us are accustomed to a measure of old world courtesy in dealing with guests and in providing for their receptions on a scale which is often more than we can afford. The instinct of being overgenerous is almost national. At the same time, thanks to the democratic way of life to which we are accustomed in our joint families, we are also reconciled to cynical criticism from junior co-parceners of the doings of the *karta* or *karnavan* or managing member. There is thus nothing very strange in all the apparently rude remarks which have appeared in the Press regarding the lavish expenditure, pomp and feudal magnificence which was in evidence in the Jaipur reception. The British dignitaries who formed the Queen's entourage are, I assume, quite capable of taking in their strides, all that they have been reading. Such of us as have been worried about the lack of good manners seen in public criticism of so-called extravagance in honouring an invited guest, may take consolation in the fact that, even a section of the British Press has been against the tiger shoot in Sawai Madhopur and has accused the Duke of Edinburgh of wanton killing. I do not know if this particular tiger has been identified as a scholar or saint, but all tigers, as far as I know, live by killing, and deserve the extreme penalty of the law, if the I.P.C. could be applied to them. As for the *Ahimsak* party whose Secretary is reported to have observed a four-day fast in protest against the tiger shoot, he would do better by directing his attention to more heinous acts of cruelty against human beings in this sordid world. Incidentally, he calls for observance of 24th January as Tiger Day. If his suggestion is accepted and it is included among national holidays, let it be on the 25th instead, so that we may have two days together. One day is as good as another for Tiger Day.

Fire Stops Cricket

During the commentary on the cricket match in Madras, Vizzy was heard to remark that, to a long list of what had stopped cricket matches in the past, such as a player being bitten by a snake, a player being drowned when trying to retrieve the ball, a fieldsman being crushed between two railway engines when chasing a ball, someone being killed by a hit, an umpire being bumped off the field, rain setting in, and snowfall, Madras had the distinction of adding one more mishap, namely, fire. The fire to the thatched roof of the stadium sent hundreds of spectators scurrying out for safety, but, fortunately, there were no casualties. The leader of the Opposition in the Madras Legislative Council has poured a withering fire of criticism on both the Madras Corporation and the Madras Government and has demanded that, in future, no thatched sheds should be permitted to house large congregations. "Let us boil in the hot sun than risk disaster under a so-called shade" is what he said. I am in entire agreement with him, but I am not in favour of our boys and girls being allowed to boil in the hot sun either. Apart from the biological process being unenduring, the result will not be as satisfactory as in the case of boiled potatoes whose skins can be peeled off and the tubour is fairer in colour and much smoother. Jokes apart, I don't think a stadium should be called a stadium, and should not be licensed, unless it has a roof over it as the Brabourne Stadium has in Bombay. Test matches are long-drawn affairs and four to five days of exposure to the elements is capable of causing permanent impairment to the health of young people. One complete stadium in each big city with roof is not much to ask for and, if Municipal Corporations cannot afford to erect and maintain them, Government or the community should arrange for their erection.

Moratoria for Banks

There is something very mediæval in the way in which the moratorium granted to the Indo-Commercial Bank has been extended from time to time, the latest being by three months up to 24th March 1961. The Act provides for a maximum period of six months and it looks as though the authorities propose to avail themselves of the full permissible period. I daresay there must be many practical difficulties arising out of amalgamation, but human ingenuity and goodwill cannot be so bankrupt as to discover a way of resolving such difficulties in quick time. Most of the depositors of the I.C.B. must be persons of slender means and to them, the ultimate happiness of seeing the bank amalgamated with a stronger institution cannot bring as much solace as immediate access to at least a portion of their funds. I have known of cases of two banks amalgamating without any moratorium at all, so that, from the book-keeping angle, at any rate, there can be no insuperable difficulty. If there is the likelihood of hard bargaining on both sides, the Reserve Bank is there to arbitrate and give an award. One practical way of ending the agonising suspense would be to collect a few of the management in both institutions and lock them up in a room (as we do with jurors) and not release them until they arrive at agreed decisions. Could this be tried, I wonder!

AMERICAN LETTER

PRESIDENT KENNEDY DOES WELL IN CHOOSING HIS TEAM

BUSINESS OUTLOOK UNCERTAIN

From Our Special Correspondent

NEW YORK, *28th January*

THE new Kennedy Administration at Washington has taken a very aggressive stand towards expansion in business, at least orally. Even President Kennedy's adversaries admit that his inaugural message was a masterful job in delivery and in timing.

Throughout the proceeding, the outgoing President Eisenhower beamed. The reasons for this were, perhaps, twofold. First, the 70-year-old Dwight D. Eisenhower, the oldest President the United States ever had, was obviously delighted to relinquish his authority to the youngest President the U.S. ever had, 43-year-old John F. Kennedy. Secondly, President Kennedy, in his first policy speech, followed, internationally, the same line which his predecessor did.

In U.S. domestic affairs, the incoming Democratic Kennedy Administration is, of course, more liberal than the outgoing Eisenhower regime. It is stated that the business and industrial community of the U.S. expects again inflationary pressures rather than deliberate conservatism displayed under the Eisenhower regime. This may be an over-simplification, but this view persists. However, at this point, economically, socially and politically, the new Administration can be judged only by the Cabinet and other appointments which have been made and affirmed readily by the U.S. Senate. About 90 per cent of them have been very good. The new President had sense enough to surround himself with outstanding experts in their fields.

In so doing, at least in my opinion, he has demonstrated that he knows that he does not know everything. A particular choice of good sense was the appointment of Mr. Dillon as Secretary of the Treasury.

Mr. Dillon is a member of an old Wall Street firm family and he knows his way around, nationally and internationally. I am writing this completely, objectively. I did not vote for Mr. Kennedy. I voted for Mr. Nixon. But the more I see of President Kennedy, the better I like him.

U.S. World Trade

Expectations are that the U.S. will export $19,500 million worth of merchandise this year. It is also anticipated that imports will be about $15,000 million. These were the balance of payment predictions by the National Foreign Trade Council here.

Despite an obvious trade surplus of $4,500 million, the balance of payments' group of the Council forecast a $1,900-million deficit in the overall balance of payments. It would be the fourth year of a deficit in the U.S. overall international transactions.

The forecasts are compiled on the basis of statements by economists and financial officers of leading U.S. corporations. In brief, the predictions indicate that foreign trade will proceed on a relatively even keel and exports and imports will be up slightly from 1960 levels.

These estimates are predicated on an improvement in the level of business activity and a reasonable stability of prices. In all these discussions, questions were raised about the degree of confidence in the U.S. dollar, foreign aid programmes and other matters. It is expected here that there will be a sharp decline in the outflow of private capital this year, a slight rise in U.S. Government capital spending and only minor changes for such items as travel and transportation.

To sum up, the Council suggests that, in 1961, U.S. dollar availabilities will be $800 million less than in 1960 down to the level of $29,300 million, excluding strictly military aid. But this is still about $700 million higher than in 1959.

There is an intensive drive on in the U.S. to put a stop to the outflow of gold. In recent weeks, the outflow has averaged approximately $100 million a week. There is now a movement afoot—I would not call it a propaganda campaign, because it is not—that the U.S. has been entirely too generous with its former and present allies, formerly poor and now fairly comfortable, or rich.

Readers in India should realise this situation in their own interest. This does not mean, however, that the new Kennedy Administration will clamp down on foreign aid, *per se*, for monetary reasons. I doubt it. But the danger signals are visible.

Summary of U.S. Business

As stated in previous despatches, the air of uncertainty and pessimism is appalling—in my opinion, unjustifiably so. There are austerity programmes in the major companies, with cutbacks in employment, while the national income rises and the national product goes up, shifting from the manufacturing to the service industries.

There is nothing wrong with that. It is a matter of evolution—*tempora mutantor et nos mutumamur in illis*, as the Romans said.

At any rate, there is an air of pessimism, rather than optimism here which is reflected in the stock markets. The chances are that these uncertainties are completely unfounded, but they exist, nevertheless.

Pessimism is not justified by the facts. Savings in the leading 100 savings banks in the U.S. rose 3.5 per cent last year to a total of $23,800 million. It is a near-high for the savings banks. People save, rather than spend.

United Nations News

Mr. Adlai Stevenson, who was defeated twice by popular vote in attempting to gain the Presidency of the U.S., took office the other day, at the appointment of President Kennedy, as Ambassador to the United Nations.

While he has been nice to me on several occasions, he is not liked universally. He is a Chicago lawyer, with a very good command of the English language, but he is also glib and many people distrust him. Mr. Stevenson was not well received at the U.N.

Otherwise, the U.N. was concerned with Africa, mainly with the Belgian Congo. The problems in this area have grave economic and other consequences.

Refugees and their economic functions in another land was another point on the agenda. Many of these people have played important parts when they emigrated. Related to the question of refugees is that of racial minorities and the prevention of discrimination and protection. It was agreed that this has profound economic implications. Even though the discussions did not end with a definite conclusion, or decision, the fact remains that some very valuable think matter has been provided by several nations, including India, which in the end will make for the betterment of mankind.—*All Rights Reserved.*

The Italian State-owned Oil Company will set up a $25 million refinery in Ghana, under an agreement signed last week at Accra between the representatives of the Ghana Government and the visiting Chairman of the Oil Company, Dr. E. Mattei. The Italian firm will finance the construction of the refinery which is expected to start production within two years. Ten years after the production starts, the Ghana Government will be given half share in the refinery. Oil companies distributing oil in Ghana will have to buy products from the refinery. They will be allowed to contribute up to half of their requirements for crude oil for refining; the rest of the crude oil will be supplied by the *Ghaip*, the Ghana company being formed to run the refinery. Oil companies operating in Ghana at present are Shell-B.P., Mobil and Texaco.

With the introduction of a Japanese tramp service, run by Nissen Kissen Kaisha on the Pakistan-Africa route, a freight war has started with the Conference Lines, which has been operating there previously. The Pakistani Jute Mills Association has entered into an agreement with the Japanese firm for shipment of jute goods at a minimum freight rate of 25s. per ton, as against 150s. levied by the Conference Lines until recently. The agreement, it is said, visualises monopoly handling of all Pakistani jute goods cargoes for African ports by the Japanese. Consequently, the Conference Lines has reduced the freight by 84 per cent to 25s. Subsequently, the Japanese firm reduced freight on raw jute as well to 25s., as against the Conference Lines' rate of 70s. less 10 per cent.

PAINLESS PAYMENTS

ANOTHER STEP IN EXPORT DRIVE

(From Our Own Correspondent)

LONDON, *26th January*

THE system of making payments in the United Kingdom is to undergo a transformation at the beginning of March along lines already familiar on the Continent. The system there is known as the Giro system and is followed not only by banks but also by post offices for people without bank accounts.

LONDON LETTER

In this country the scheme, which has been initiated by the Committee of the London Clearing Bankers, is to be restricted to the banking system. Instead of a customer paying his bills by cheque or through a postal order or money order bought at a post office, he will be able to arrange with his bank or any bank to make his payments for him. Briefly, a debtor will prepare a list of the bills he is paying with the names of his creditors and the addresses of his creditors' banks. The list may cover hundreds of accounts; the number is immaterial. He will make the one payment to the bank or his account can, of course, be debited with one charge, and the bank will arrange for the creditors to be credited, each with his individual amount.

Saving in Time

From the point of view of the debtor with a great many bills to settle periodically, this system will represent a great saving in time if not in direct expense. At the moment in the U.K., there is a tax of 2d. on each cheque and postage is 3d., and another 1d. certainly goes between paper, envelope and time of addressing. Under the new system, the debtor will pay a charge of 6d. per customer, for the comprehensive service, and will have to do nothing more than prepare the list of payments to be made.

From the banks' point of view, they will gain inasmuch as they will have the cash in hand in respect of payment received instead of being out of money between the time they credit their customers and are reimbursed through the debtor being charged.

Readiness to Identify

In a sense, it is a system conceived by the banks for the banks and they are, no doubt, gainers, but customers gain, too, in this great simplification of the technique of paying routine periodic accounts. The system has been discussed in British banking circles ever since the war and it is one which is capable of adoption by all countries, but, of course, the essence of it is that the recipient of the money, the creditor, must have a bank account. To this extent, it differs from the Continental Giro system, because there the post offices come into the scheme and they arrange to pay people who have no bank accounts. So far as the commercial community is concerned, success will, however, depend upon the banks' readiness to identify payments credited to customers' accounts, so that the creditors can know which of their debtors has paid them and which is still outstanding.

Exports Council

This week has also seen the creation, announced by the President of the Board of Trade, of the new Western Hemisphere Exports Council. This is in reality an extension of the Dollar Exports Council which concentrated on North and Central America. The Dollar Council is to remain in existence for the time being, partly because the U.S.A. is this country's largest single market. But with a convertible £, dollars have lost their unique importance and all non-sterling money is equally attractive. Hence, the Latin American countries are now brought into this sphere of Britain's sales drive, and the composition of the Council covers banking houses specialising in Latin American trade and industrial firms having a big stake in that trade. Steel, cotton, chemicals, petroleum, motor cars, shipping and engineering are represented by Directors of the leading British firms and the hope of the Government and Industry is that the formation of this Council will be of some help towards a mutual solution of the problem of expanding Britain's exports to the Western Hemisphere.—*All Rights Reserved.*

FOREIGN AID FOR INDIA'S DEVELOPMENT

AUTHORISATIONS SO FAR AGGREGATE RS. 2,728 CRORES

NEARLY three-tenths of the public sector's third Plan outlay of Rs. 7,500 crores (financial ceiling) is to be met out of external assistance, according to the Draft Outline as has been approved by the National Development Council. The actual amount of assistance expected is put at Rs. 2,200 crores. It is difficult to say categorically whether this expectation will, in fact, prove correct. A rough indication will, however, be available after the forthcoming meeting of the Aid India Club scheduled to be held at Washington during the second week of April next. The Club, as readers are aware, consists of five countries of the free world, that is, the U.S., the U.K., West Germany, Canada and Japan; Italy, France, Switzerland, Sweden and the Netherlands have also been approached by the World Bank to join the Club. The offers of assistance for the third Plan already made aggregate Rs. 977.19 crores, of which the share of the U.S. is Rs. 6.07.62 crores (P.L. 480), the balance representing the aid offers from Soviet Russia (Rs. 238.11 crores), the U.K. (Rs. 46.67 crores), West Germany (Rs. 28.34 crores, Czechoslovakia (Rs. 23.10 crores), Yugoslavia (Rs. 19.05 crores), and Poland (Rs. 14.30 crores).

The anticipated assistance of Rs. 2,200 crores for the third Plan represents a rise of Rs. 376 crores as compared with the total authorisations amounting to Rs. 1,751 crores during the first and second Plan periods upto the end of December 1960. Including the third Plan aid offers of Rs. 977 crores, the aggregate authorisations of assistance from external sources so far come to Rs. 2,727.78 crores. The major portion of this aid, amounting to as much as Rs. 2,091.57 crores, is in the form of loans, while credits are of the order of Rs. 636.21 crores, according to the fourth annual report on external assistance just published by the Union Finance Ministry. The report gives a comprehensive account of the economic and technical assistance authorised and received so far from the various external sources, including friendly countries, international agencies and private organisations

Of the foreign aid authorisations aggregating Rs. 2,727.78 crores (including the third Plan offers) upto the end of December 1960, Rs. 394.22 crores were made in the first Plan period and Rs. 2,333.56 crores in the second Plan period. These sums are exclusive of (a) assistance received in the form of suppliers' credit, as, for example, from Japan, France and Switzerland; (b) Rockefeller Foundation grants; (c) gift shipments from private voluntary agencies in the U.S., (d) assistance under Titles I and III of P.L. 480; (e) aid from the Netherlands being mostly in the nature of technical assistance; and (f) aid from Switzerland for logging equipment) valued at about Rs. 1.6 lakhs).

Unutilised Balance Large

The table at the bottom of the page gives the country-wise breakdown of authorisations, the sums actually utilised and the unutilised amounts as at the end of March 1960 (fourth year of the second Plan). It will be seen from this table that, out of the total aid authorisations of Rs. 2,333.56 crores made since the second Five-year Plan began on 1st April 1956, almost Rs. 914 crores were announced during the nine months ended December 1960. A large part of this amount is specifically earmarked for the third Plan. The total amount of aid available for utilisation during the first three years of the second Plan was Rs. 1,617.26 crores (including the first Plan carry-forward of Rs. 197.64 crores), but the amount actually utilised was no more than Rs. 691.49 crores, so that the balance available at the end of March 1960 was pretty large, being Rs. 925.77 crores. This wide gap between available assistance and its actual utilisation is attributable to two factors, namely, delay in the release of funds by donor countries and failure on the part of the Government of India and other agencies to implement in an energetic manner the projects for which assistance is given.

U.S.A.

The single largest friend of India is the U.S. which has so far made aid authorisations amounting to Rs. 1,480.32 crores—Rs. 974.64 crores as loans and Rs. 505.68 crores as grants—representing more than 50 per cent of the total authorisations from all sources. Excluding the wheat loan of Rs. 90.31 crores and the T.C.A. programme aid of Rs. 130.03 crores made in the first Plan period, the amount authorised since the second Plan began comes to the massive figure of Rs. 1,259.98 crores. The details of the loans and grants—in crores of rupees—are given below:

Wheat loan 90.31; T.C.A. programme 208.84 (71.43 as loans and 137.41* as grants); P.L. 480: 878.37 (510.10 as loans and 368.27† as grants); Development Loan Fund 199.71‡ (loans); U.S. banks credit 5.90 (loans); and Ex-Imp Bank 97.19 (loans).

* This sum includes (1) Rs. 31.92 crores representing the rupees equivalent of the dollar value of agricultural commodities imported under P.L. 480 (of this amount, Rs. 18.99 crores are expected to be received as a part of the three development assistance loans and the balance is to be received either in the form of grants for agreed projects or to be utilised by the T.C.M. for meeting rupee expenditure on technicians, participants, etc.) and (2) $20 million loan for the Orissa iron ore project but excludes amounts obligated towards U.S. technicians, participants and miscellaneous.

† The amount excludes Cooley Funds and amounts retained by the U.S. Government.

‡ The sum excludes $3.9 million granted direct to the Ahmedabad Electricity Company, Ltd.

Soviet Russia

With the exception of grants amounting to Rs. 1.15 crore made in the form of gifts of machinery and equipment, the whole of the Russian aid consists of medium-term loans over a period of twelve years and carrying interest at 2½ per cent. The total amount of credits covered by agreements signed upto the end of October 1960 is about Rs. 322.53 crores (2,709 million roubles). The total credits of Rs. 383.41 crores include Rs. 64.38 crores for the Bhilai steel plant, Rs. 59.53 crores for the establishment of a heavy machine building plant, coal mining machinery plant, optical and ophthalmic glass factory, thermal power station and enterprises in the Korba coalfields, Rs. 9.49 crores for the drugs project, Rs. 11.90 crores for Barauni oil refinery, and Rs. 238.11 crores for the projects under the third Plan.

United Kingdom

The assistance received from the U.K. is mostly in form of credits (Rs. 162.66 crores) for vital development projects such as the Durgapur steel plant and oil pipeline at Naharkatiya, as also for import of capital goods by both public and private sectors. The credits include Rs. 35.33 crores for Durgapur steel plant (E.C.G.D. credit of Rs. 20.00 crores and Lazard credit of Rs. 15.33 crores), II E.C.G.D. credit of Rs. 38.00 crores for capital goods, III E.C.G.D. credit of Rs. 4.00 crores for oil pipeline, IV E.C.G.D. credit of Rs. 25.33 crores for financing payments due in sterling to firms in Britain, U.K. general credit of Rs. 13.33 crores, and third Plan commitments of Rs. 46.67 crores. Assistance has also been received in the form of grants for the supply of books and equipment (about Rs. 46.67 lakhs), as well as experts and training facilities for Indians under the Technical Co-operation Scheme of the Colombo Plan.

Canada

Of Canada's total aid authorisations aggregating Rs. 106.28 crores, outright grants account for a considerably large part—Rs. 90.57 crores—the balance being the two wheat loans of Rs. 11.51 crores and Rs. 4.20 crores. Among the projects to which Canadian co-operation has been extended, the outstanding ones are the three dams, Kundah, Mayurakshi and Umtru and the NRX Atomic Reactor at Trombay. In the field of transport, Canada has supplied 120 locomotives, some 50 boilers and railway sleepers for the Indian railways and components for the assembly of about 1,300 vehicles for the Bombay State Road Transport Undertaking. Canadian assistance has been made available to the rural electrification programme, in the form of 250 generators of varying capacities for installation in rural communities all over the country which are beyond the limits of the existing grid systems. The Government of Canada has also supplied wheat worth about Rs. 38.1 crores (about $80 million) and non-ferrous metals worth about Rs. 18.1 crores (Rs. 38 million).

Australia and New Zealand

The entire aid from Australia and New Zealand is in the form of outright grants, their respective shares being Rs. 12.27 crores and Rs. 3.43 crores. Aid from Australia covers supply of agricultural commodities as well as equipment for various development projects (Tungabhadra irrigation and power project, Ramagundam thermal power project, All-India radio and rolling stock for railways. The assistance from New Zealand is received generally in the shape of cost grants for specified projects, though some equipment has also been supplied in a few cases such as rail-road tankers for Bombay milk scheme, dairy equipment for Kaira Milk Union and Hariphatta Farm in Calcutta, and seed-dressing apparatus for the Directorate of Plant protection.

West Germany

Barring the Rs. 28.34-crore assistance for the third Plan, the entire balance of aid authorisations amounting to Rs. 122.24 crores has been made since the second Plan began; no aid was given during the first Plan period. The major portion of the aid (Rs. 120.15 crores) represents loans—Rs. 74.83 crores for Rourkela steel plant, 'other' credits of Rs. 19.05 crores (signed on 6th January 1959), first credit of Rs. 14.18 crores (signed on 27th May 1960) and second credit of Rs. 14.18 crores (signed on 1st July 1960).

Japan

The Government of Japan has established a line of credit amounting to approximately Rs. 23.8 crores in favour of the Government of India, through the Export-Import Bank of Japan. Under the terms of the agreement, signed on 4th February 1958, the credit was to be utilised over a period of three years from 1st April 1958 to 31st March 1961 for the import of capital goods from Japan, including equipment for the railways, hydro and thermal power generation and transmission, dam construction and coal and ore mining and processing, besides ships, port equipment, industrial machinery for rayon, pulp, fertiliser and caustic soda plants, machine tools and such other items as might be mutually agreed upon. The credit will carry interest at the normal rate of interest charged by the World Bank. Repayment commences after the expiry of three years and is to be completed over the succeeding seven years. At present, the rate of interest charged is 5½ per cent.

Artist's impression of the Worli Dairy nearing completion—the largest in India to handle liquid milk

ANOTHER GIANT DAIRY... AT BOMBAY

BOMBAY will soon get an additional 200,000 litres of milk with the commissioning of the Worli Dairy Project. This giant modern dairy is one of the major projects undertaken by the Maharashtra State Government with UNICEF aid. It will ensure the large-scale supply of wholesome, pasteurised milk for Bombay's millions of men, women and children.

Against world-wide competition, Larsen & Toubro Limited and its Principals have secured the contracts for the supply and erection of the most modern dairy plant and equipment in the world — WRIGHT HARGREAVES Milk Reception and Can Washing Equipment, SILKEBORG Milk Processing Plant, UDEC Bottle Washing and Bottle Filling Equipment, CONTINENTAL Package Steam Boilers, and LAUR. KNUDSEN High Tension and Low Tension Switchgear and Motor Starters. Coordination and erection have been entrusted to Larsen & Toubro Limited.

Pioneers of Dairy Engineering

The Worli Dairy, which will initially supply 200,000 litres of milk a day, is designed to accommodate plant and equipment capable of producing 1,000,000 litres a day at a later stage. The Project will have at its disposal the experience in Dairy Engineering which L & T has accumulated over two decades. A pioneer in the field, Larsen & Toubro Limited has planned and erected over 50 per cent of the dairies in India—some of them among the country's largest!

Local Manufacture

In order to make the country progressively self-sufficient, L & T has been manufacturing at its Powai Works many items of Dairy Equipment which are increasingly forming a part of the plant and machinery being supplied to several schemes.

SHORTER WORKING WEEK IN MILLS

MAN-MADE FIBRES OUTPUT RISES MARKEDLY

From Our Special Correspondent

MANCHESTER, *24th January*

NOW that the shorter working week has come into operation in Lancashire mills, its effect on the level of output is a matter for much concern within the trade. Whereas earlier reports had indicated that quite a number of units, particularly on the weaving side, would be prepared to adopt overtime working until May, it now appears that only a small minority of firms will work the additional 2½ hours a week permitted under the agreement.

MANCHESTER LETTER

Latest returns covering November last show that single yarn production was at its highest rate for any month of 1960, except May. In weaving, cloth output was the second highest monthly production since the end of the first quarter last year, when the scrapping scheme was completed. A rise of 850 was also recorded in the number of operatives on the books of employers in spinning and weaving, bringing the available labour force to 185,560 as compared with a low-point of 183,890 at the end of March 1960. The corresponding manpower figure at the end of November 1959 was 195,040.

A significant feature of the labour situation is that, in the spinning branch, a fall of 5,640 occurred over the twelve-month period, but, in weaving, the reduction was only 3,320. The drift of workers from doubling mills continued, although on a minor scale, and there are now 650 fewer operatives in this branch than towards the end of 1959.

Position in Bolton

Statistics underlining the trends which have been noticeable throughout the industry as a whole are now issued by the Bolton Master Spinners' Association, describing the position in the Bolton and Leigh areas. Output per week between the beginning of 1959 and the closing months of 1960 showed an increase of 2.4 per cent, although there was a reduction of 13.5 per cent in the number of operatives on the books. Spindles in place were cut by almost half in less than two years.

As the reports explains, a considerable amount of machinery was idle at the beginning of 1959, whereas at the present time spindle activity is about 96 per cent. The extension of shift-working in the mills is also emphasised by the fact that over 30 per cent of the operatives in this area are now engaged on systems of working other than the normal single day shift. Among the problems which arose when wider shift-working plans were adopted was the provision of suitable transport facilities and the inadequate street lighting in the side streets of some towns. The Association says that most of the fears expressed failed to materialise on transport, although representations on the poor lighting have had to be made.

"Although it is frequently stated that higher wages would make the industry more attractive, the plain fact is that there is a general shortage of labour and the textile industry is no worse off than is the case generally," adds the report. "It was thought that the reorganisation scheme would cause serious unemployment in Lancashire, but in the event it has not done so. The staffing at mills which have adopted a shift system of working is reasonably satisfactory and, with the growth of confidence, we are convinced that our wages and conditions of employment will attract more and more people into the mills."

More Garments Imported

Not surprisingly, in view of the persistent and unchecked growth of imports of all types of cloth and made-up goods into this country during the past twelve months, the recently issued annual reports of the Manchester Chamber of Commerce sections made constant comment on the situation. The garment manufacturers are now feeling the effect of this trade to a greater degree than in recent years and, in particular, the purchases from Hong Kong received considerable prominence.

In the four years before the agreement with the Colony was adopted, imports of clothing cost around £7 million annually; in 1959, they jumped to £10 million and the estimate of last year's arrivals was £15 million. Hong Kong now realises the monetary advantage of exporting made-up goods, as against piecegoods, but, if the voluntary pact is not renewed, it is suggested that there might once again be a concentration on the shipment of grey cloth from the territory.

Imports of knitted goods from all sources during the past year also continued to rise. In the first nine months, the increase by value was 51 per cent higher and the Chamber's sectional report described the total as "reaching a dangerous level." Hong Kong has increased her share of this business from 7 per cent in 1958 to 32 per cent by 1960.

Quoting Board of Trade returns, the China and Far East section pointed out that British exports of all kinds of goods to Hong Kong in the first ten months last year were valued at £31.7 million, as against £29.4 million in the same period of 1959. But British imports from the Colony were also up—from £27 million to £35.8 million. The largest group of imports from Hong Kong was clothing and footwear, which accounted for nearly half the total value at £16.2 million, a rise of £5.0 million. Cotton yarns and fabrics were virtually unchanged at £8.2 million and miscellaneous textile goods cost £1.9 million.

Record Fibre Output

A 15 per cent rise in output of man-made fibres in the United Kingdom took place in 1960, the aggregate of 591.99 million lbs., being an increase of 78.0 million lbs. over the previous year, according to the British Man-Made Fibres Federation. This represented a new record level of output, as 1959 was itself a record year. The 1958 total was 421.51 million lbs.

Both filament yarn and staple fibre output created new peaks, being 268.61 million lbs. and 323.38 million lbs., respectively. Viscose rayon production accounted for about 75 per cent of total output, despite the expansion achieved by nylon, terylene, acetate and the acrylic fibres. For the first time last year, the output in December was not a monthly record. Partly owing to the Christmas holidays and partly due to stoppages for maintenance after the busiest year in the trade's history, the total was 47.10 million lbs., against 50.79 million lbs. in December 1959.

The Federation points out that one influence on staple output was a cutback in production intended for the tufted carpet trade, which a year previously had been buying on almost panic scale, through unjustified fears of shortages. Signs of a revival in this trade are now apparent, but demand for industrial yarns showned a decline in December, probably influenced by the effect of the motor trade recession and the call for tyre cord fabrics.

Royal Exchange Bid Opposed

Opposition to the £2,400,000 bid made by City Centre Properties Ltd., controlled by London financiers, Mr. Charles Clore and Mr. Jack Cotton, for Manchester's Royal Exchange has been openly expressed by the Directors. In a circular to stockholders advising them to reject the cash and share exchange offer, the Directors said that they did not intend to accept the bid in respect of their own personal holdings.

The statement reveals that more than one other company had indicated its readiness to make a similar offer when the City Centre bid was announced but when the Royal Exchange Directors met last week one interested party had withdrawn and no further offer had materialised.

Owing to changing conditions of trade, the subscription income in 1939 had fallen to less than half the 1923 figure, but rents had increased by 26 per cent. In the last decade, the statement says, subscription income has fallen from £48,854 to £38,408, but rents and heating charges increased from £40,582 to £151,854. The ordinary dividend has increased from 3 per cent to 11½ per cent. The Directors expect to pay a final dividend of 8½ per cent making 12½ per cent for the whole of 1960.

A development plan involving a reduction in the floor space of the Exchange and an increase in office accommodation has been under active consideration since the beginning of last year. Planning permission has been obtained for a three-year development programme and arrangements have been made to finance the earlier stages of the reconstruction, partly from the Royal Exchange's own resources and partly on a temporary basis from the bankers. Permanent finance through a rights issue to ordinary stockholders is proposed in due course which would give them in a tangible form some part of the appreciation in the value of the property.

When a bid of 25*s.* was made for the ordinary stock in 1957, the Directors recommended its rejection. At that time, the land and building was professionally valued at £2,250,000. Since then, further capital appreciation has ensued and the valuers have estimated the current value at £2,650,000, as against the book value of £1,499,048.—*All Rights Reserved.*

COTTON CULTURAL AND GINNING PRACTICES IN U.S.

TEXTILE PRODUCTIVITY TEAM RECOMMENDS THEIR ADOPTION HERE

THE report of the Indian Productivity Team for the cotton textile industry contains extensive references to cotton growing in the U.S. and recommendations for adoption in this country of some of the agricultural practices followed there. In particular, it has suggested that the "one variety law" for growing cotton existing in California has considerable possibilities for improving seed cotton and thereby the quality and yield of Indian cotton. Another suggestion is that suitable central organisations should be established in cotton-growing areas for classification, quality-checking, testing and distribution of ginned cotton at low cost.

The Team also feels that there is need to establish a standard for each mixing of cotton for specific counts. This would require built-in controls to check the quality that goes into the standard mix. Blending hoppers have also been recommended in place of manual mixing to achieve uniformity in mixing.

It is noteworthy that "the one variety law," according to which only the officially recognised variety can be grown in specified areas, already exists in India under the Cotton Transport and Cotton Control Acts. Some of the protected areas and the varieties grown, given in brackets, are: North Gujerat (Kalyan), Middle Gujerat (Vijay), Khandesh (Virnar), Vidarbha (H. 420 and Buri 0394): Marathwada (Gaorani 6 and 12). The progress made in extending the choice varieties to other areas has, however, been slow, thanks to the failure on the part of the States' Agriculture Departments to enforce the provisions of the Act.

Revolution in Cotton Farming

It is evident from the recommendations of the Team that it was impressed by the cultural and picking practices followed in the U.S. and their remarkable results in terms of yield and quality of cotton. In fact, cotton growing in the U.S. has undergone a virtual revolution in the past 30 years or so. An idea of the remarkable changes that have taken place in the science of cotton cultivation and its advantages can be had from a review of cotton production in the U.S. made by no less a person than Mr. Howard Stovall, President of the Cotton Council International, at the annual meeting of the International Federation of Cotton and Allied Textile Industries held at Amsterdam in September-October last year.

Before the second World War, according to Mr. Stovall, practically all cotton in the U.S. was still produced on family-type farms or under the tenant system on larger farms which involved mostly hand labour. About 70 per cent of this cotton was produced east of the Mississippi river. Cotton production has moved west and, with this westward movement, has become more and more concentrated in commercialised and mechanised farms. During the last 20 years, the number of cotton farms has gone down by 60 per cent and the average output per farm has more than doubled. Thus, the average yield has increased from 190 lbs. in 1940 to 470 lbs. per acre in 1960 while the area devoted to cotton has fallen from 29 to 16 million acres.

During and since World War II, farm labour, under the process of urbanisation, left the farm in large numbers. Due to the scarcity of labour supply, wage costs soared. The cotton farmer has, therefore, been forced to mechanise his operations through sheer economic necessity. He had to find ways of producing cotton with less and less labour. This trend is expected to continue.

No Change in Cost

The man-hours required to produce a bale of cotton have been cut from 260 to 80 over the last 20 years, largely because tractors are used in preparing planting and cultivating the land. If the cost of machines, chemicals and other costs are taken into account, the total cost of production, according to Mr. Stovall, has not changed as much as suggested by productivity figures.

Machines are fast replacing manual labour in the harvesting of cotton as well as in cultivation. While 10 years ago, only 6 per cent of the cotton crop was harvested mechanically, today 43 per cent is picked by machines. In the western region, the percentage is as high as 83. Gins have become fewer in number, larger in size and more complicated in design.

This revolution in cotton production has, no doubt, had some influence on the quality of cotton too. Changes in genetics, production and cultivation methods and marketing practices, though they contributed to higher output and yield, have also resulted in some deterioration in quality.

In the last 10 or 15 years, according to Mr. Stovall, the number of varieties of cotton grown in the U.S. declined sharply. Thus, whereas 10 to 15 years back, 50 varieties were in general use, now 10 varieties account for more than 90 per cent of the American cotton crop. This had greatly reduced quality differences due to varietal factors. The fibre strength of American cotton has increased, so that only a few varieties now average below 80,000 pounds breaking strength, whereas, 20 years ago, only an occasional variety was stronger than 80,000 pounds. Again, there is today only one area in the U.S. that produces cotton of less than one-inch staple, whereas 20 years ago, the great bulk of the crop was less than one inch staple. In fact, according to Mr. Stovall, these varieties and strains of American upland cotton are now being grown throughout most of the cotton-growing regions of the world. This is proof of the success of American cotton breeders' efforts in quality improvement.

American farmers are now using better judgment in fertilisation, cultivation, selection of seeds, chemical weed control, etc., than ever before. All this should tend to produce a more uniform cotton crop, better developed bolls and stronger and more uniform fibre.

It is perhaps in the ginning of cotton that the greatest changes have occurred in the U.S. When most of the cotton was picked by hand, a family would pick for a week, before accumulating a bale of cotton. Each day's picking was spread out in the sun to dry and cure. It was then stored to wait until one or more bales of cotton were accumulated before taking them to the gin. In this interval, the moisture content dropped to a low level. The sap went out of the seed. The fibre was air-cured, air-dried and ready to process.

Such, however, is not the case with mechanically harvested cotton. Each mechanical picker will pick as much as 50 to 75 hand pickers. There is simply no place to spread this volume of cotton to dry in the sun. It is, therefore, brought directly from the field to the gin where it has to be dried and cleaned before ginning. For this purpose, gins have driers and cleaning machinery. Defective ginning sometimes causes damage to the quality of cotton. The Government's cotton marketing policy also, according to Mr. Stovall, has adversely affected quality to some extent, because it encouraged, in some cases, over-drying and over-machining of cotton.

Future Trends

The President of the Cotton Council has this to say on the probable future trends in cotton growing and ginning:

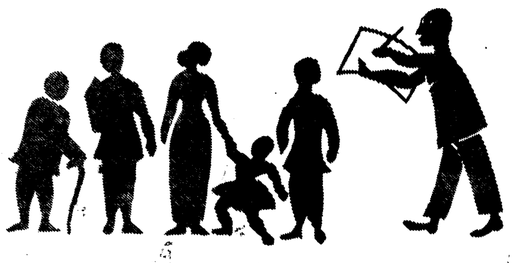
"In the field of genetics, our plant breeders and experiment stations are diligently working to improve the cotton plant to make it more adaptable to the changed conditions of mechanisation and to improve the cotton fibre to enhance its spinning qualities. The development of the smooth leaf cotton, which we hope will go a long way towards solving some of our problems of quality associated with the plant, is only one of many such improvements in the offing in the experiment stations.

"In cultivation, harvesting, and ginning, the inherent qualities of the fibre can be preserved. Misuse of technology and malpractices through ignorance should no longer occur. A tremendous educational campaign has been under way all year throughout the length and breadth of

(*Continued on page 224*)

CENSUS 1961

10 February—5 March



Between these dates every person will be counted in our country, in cities or in the remote villages, in the hills or in forests, at sea or on shore.

The counting will start on 10 February and end at sunrise on 1 March. To make doubly sure that every one has been included in the Census, there will be a revisional count between 1 and 5 March. Make sure that the entire family is counted, from the oldest to the youngest.

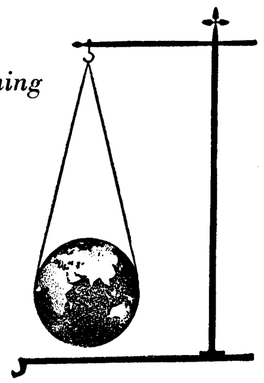
The enumerator has a heavy responsibility. Please help him in his task.

All census information will be strictly confidential and fully protected.

Issued by Government of India

DA60/543

Weighing the world up...



. . . even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

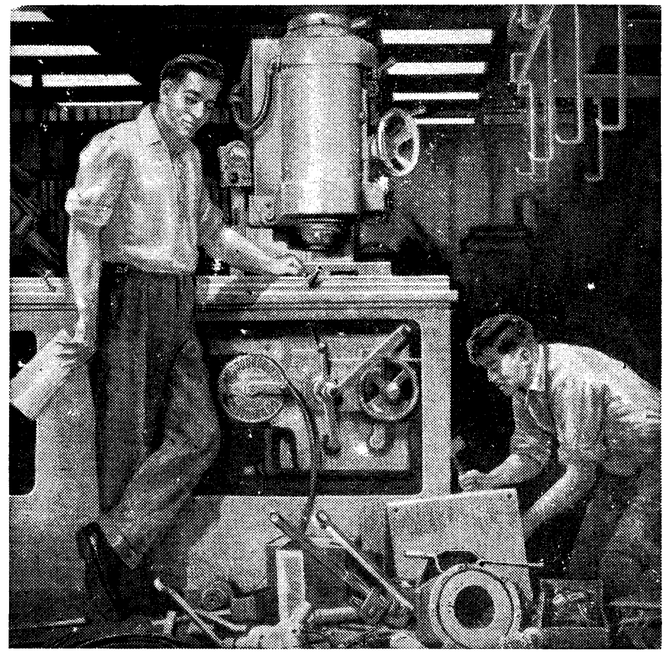
BIRKMYRE BROTHERS LIMITED

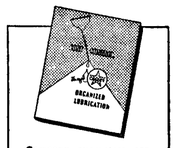


His costs will go up this month...

Because he has had a machine breakdown and has had to replace costly parts which were ruined by faulty lubrication. This didn't have to happen —a Caltex Lubrication Survey could have spotted the trouble—solved the problem.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

This service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.



Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

CESS ON CANE CRUSHED BY SUGAR MILLS

COMMITTEE URGES EFFECTIVE UTILISATION

THE Central Government is expected to issue shortly a special ordinance seeking to legalise the imposition of cess on all the sugarcane that enters the mills in Uttar Pradesh and other States. This step has been necessitated by a recent judgment of the Supreme Court which held the U.P. Sugarcane Cess Act 1956 as unconstitutional and invalid. Section 3 of the Act, it may be noted, empowers the Uttar Pradesh Government to impose a cess not exceeding As. 4 per maund on the entry of cane into the premises of a factory for consumption, use or sale therein. Entry 52 of the State List II of the Seventh Schedule to the Constitution reads as: "Tax on the entry of goods into a 'local area' for consumption, use or sale therein." Delivering the majority judgment of four to one, Mr. Justice Das Gupta of the Supreme Court is reported as having said:

"The word 'local area' in Entry 52 of the Constitution (when the area is a part of the State imposing the law) is an area administered by a local body like a municipality, a district board, a union board, a *panchayat* or the like. The 'premises of a factory' cannot, therefore, be a local area. Section 3, which empowers the Governor to impose a cess on the entry of sugarcane into the 'premises of a factory,' does not fall within Entry 52 of the State List and, therefore, the law under this section is beyond the legislative competence of the State Legislature. As this section is not severable from the Act, the entire Act, namely, the U.P. Sugarcane Cess Act 1956, is invalid and must be struck down."

Objection to Cess

Whatever be the constitutional validity or otherwise of the U.P. Sugarcane Cess Act or the Central Government's move to legalise the Act, the fact remains that the levy of a tax on a raw material such as the cane cess is as a rule wrong in principle. The rate of cess is so high that it ceases to be a cess and becomes an excise duty for all practical purposes. It is, as the former Tariff Board pointed out in 1950, "particularly objectionable when imposed on the raw material of an industry which has been nursed by the consumers all over the country for a period of 18 years and for which they have made a heavy sacrifice during all these years." But the objection to the cane cess is not on the ground of imposition as such but because of the fact that the rate of cess in several States is, as already stated, pretty high and, what is more, that the proceeds of the cess are not being utilised properly and wholly for work connected with development of sugarcane. The spate of criticisms levelled against the cess led to the appointment (on 9th March 1956) of a joint committee of the Development Council for Sugar Industry and the Indian Central Sugarcane Committee, with Sardar Lal Singh as Chairman, to consider the question of levy of cess on cane and its utilisation. After collecting detailed information regarding the rate of cess, receipts from cess, expenditure incurred on sugarcane research and development by various States, requirements of research and development in different tracts, etc., the Committee finalised its deliberations in March last year. The report of the Committee was one of the important items that came up before the Development Council at its meeting held at Shakkarnagar (Andhra Pradesh) a fortnight ago.

Two considerations invest the recommendations of the Joint Committee with special significance. One, since the revenue derived every year by State Governments by way of cane cess runs into several crores of rupees, one is perfectly justified in asking that the cess be reduced to a level sufficient to yield a revenue for the purpose for which it is imposed. The amount actually collected by way of cane cess in all the States aggregated Rs. 30.57 crores in the first Plan period and Rs. 48.07 crores in the second Plan. It is expected to be higher still at Rs. 60.00 crores in the third Plan, as will be seen from the table in column one. A sum of Rs. 12 crores per annum is too much to be spent on the development of a single agricultural crop even if intensive efforts are made by the State agricultural departments. Two, they must be used properly so as to ensure cane development work on effective lines. It will be of interest to note here that sugarcane occupies a unique position among agricultural crops, in that, while the area under its cultivation is only 1½ per cent of the total cultivated area, it accounts for about 5 per cent of the agricultural income.

Cane Cess Revenue
(In crores of rupees)

State	First Plan (1951-56)	Second Plan (1956-61)	Third Plan (1961-66)
Uttar Pradesh ..	20.17	26.12	31.00
Bihar	5.54	7.84	9.75
Bombay	3.10	7.06	8.50
Punjab	0.06	0.99	1.63
Andhra Pradesh ..	0.59	3.56	5.13
Madras	0.20	0.38	0.54
Mysore	0.91	2.12	2.85
Others (non-cess levying States)* ..	Nil	Nil	0.60
Total ..	30.57	48.07	60.00

* Madhya Pradesh started levying cess from 1959-60.

In its report, the Committee declares that sugarcane has been receiving scant attention and the funds invested in the development of the crop are far from adequate. As against the total cess collections of Rs. 30.57 crores in the first Plan period, the amount spent on cane development (including expenditure on irrigation and road development programmes) was only Rs. 10 crores. An amount of the same order is expected to be spent on cane research and development (including roads only) in the second Plan out of the estimated total proceeds of Rs. 40.87 crores. Drawing attention to this, the Committee says:

"Experience over the last decade has amply shown the inadequacy of the development programme, since the position of acre yield and recovery of sugar remains at the same deplorably low level of about 14 tons of cane per acre and 10 per cent recovery of sugar, as against a yield of 80 tons per share in Hawaii and a recovery of 13 to 14 per cent obtained in Australia. It is, therefore, high time that serious notice is taken of these hard facts, particularly when the third Five-year Plan is in the making, because, unless the present standards of cultivation are improved, the sugarcane industry, particularly in the North, is in danger of being wiped out."

Not Too High

The Committee has estimated the aggregate revenue receipts of Central and State exchequers by way of cane cess and sugar excise during the third Plan period at Rs. 360 crores. As against this huge amount, the Committee puts the amount required to finance the coordinated programme of cane development (principally for road development in sugar factory areas and for improved seed distribution) at Rs. 100 crores. Another Rs. 100 crores, it is said, will be needed by way of loans for the construction of masonry wells and tube-wells, as well as for the purchase of fertilisers, plant protection equipment, etc. Stating that the loans will be returnable with interest and as such cannot be classed as expenditure, the Committee observes: "Thus the expenditure involved in the programme envisaged will be about Rs. 100 crores spread over the period of the third Five-year Plan. This will constitute less than 28 per cent of the expected total revenue from cess and excise, leaving a surplus of Rs. 260 crores. Considering the vital importance of the sugarcane crop to millions of cultivators in the country affecting the overall agricultural economy of a number of major States like U.P., Bihar and the Punjab, this expenditure should not be considered too high or disproportionate."

The Committee has strongly recommended that the entire proceeds from the cane cess should be earmarked for cane development at least for some years to come. In support of this recommendation, it observes:

"While the position of objectives and implications has remained obscure, the very fact that cane cess is levied only on sugarcane supplied to sugar factories makes it appear that it was meant to improve the condition of such cane. . . . . A perusal of the figures of actual requirements makes it clear that the needed outlay would be of the order of Rs. 20 crores per annum during the third Plan period. If the entire cess proceeds amounting to Rs. 12 crores expected annually are earmarked for the purpose, only a balance of Rs. 8 crores would be left to be met from the excise revenue. This amount, that is, Rs. 8 crores, would constitute 13 per cent of the expected revenue from excise. The loans would be returnable and constitute production investment. Even out of the expenditure of Rs. 20 crores per annum (or Rs. 100 crores for the entire Plan period), irrigation and road development, two major items of the programmes, account for 73 per cent of the total, and these items would benefit not only sugarcane but other crops also, including the food crops. It would thus be noted that, even if the above recommendations of the Joint Committee were wholly accepted, the sugarcane crop would still contribute to the general revenues over 86 per cent of the income from sugar excise amounting to over Rs. 52 crores per year. It has to be kept prominently in mind that all such expenditure would constitute an item of very profitable investment, in that it shall earn rich dividends. The 100 crores of rupees invested as proposed would help to attain the third Plan target of 30 lakh tons of sugar per annum which would mean an additional revenue of Rs. 110 crores, that is, a revenue of Rs. 360 crores during the third Plan, as against a revenue of Rs. 250 crores during the second Plan, to the State and Central Governments. The return would thus amount to 110 per cent over the third Plan period."

Cess Reduction

It will be noted that the Committee has not asked for a reduction in the rate of cess. Apparently, it must have felt that such a demand would fall on deaf ears. It has, therefore, proceeded to suggest schemes of capital expenditure of a development nature for which a cess is not usually raised. In the case of quite a few other agricultural crops, the rate of cess is only nominal, confined to a few naye paise, sufficient to cover the cost of research, model farms and procreation of good seeds, and not for building roads or constructing minor irrigation works. Finance for these items of capital expenditure is usually found through borrowing or from general revenues. The proper thing to do, therefore, would be to reduce the cess to three or six naye paise and either merge the balance with the Central excise or create a separate State excise which should be limited to a specified period for specified purposes and withdrawn as soon as the purposes are served. The Committee's recommendations may be based on practical considerations, but they are not scientific. Its sole aim has been only to suggest ways and means of spending the large amounts collected by way of cess.

Unorthodox though the Committee's recommendation may be, it constitutes a new approach to the problem of sugarcane cess utilisation. It is to be hoped that the State Governments would pay attention at least to these modest recommendations of the Committee and take steps to ensure that the cess proceeds are utilised for the purpose of improving productivity of land used for raising sugar.

A METAL BOX OPEN TOP CAN !

Simple though it looks, the 'Open Top' Can in which processed fruits, vegetables, fish, milk or butter comes to you is a container scientifically designed to protect and preserve perishables over long periods. The Open Top Can allows processing of the contents *after* they are hermetically sealed, thereby killing all disease-carrying and other germs. Wherever necessary, Open Top Cans have an inner coating of a chemically inert lacquer that effectively prevents interaction with the metal of the container itself. Thus, Open Top Cans prolong the life of perishable products, allow round-the-year selling, encourage wide distribution and thus help to stabilise prices.

Metal Box, leaders in the packaging field, have been supplying Open Top Cans in India for nearly a quarter of a century. This is only one example of their wide range of scientifically designed containers that deliver consumer goods to you.

METAL BOX

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack over Rs. 100 crores worth of consumer goods every yeo

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products • **GENERAL LINE CONTAINERS** for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc. • **COMPOSITE CONTAINERS** of cardboard & metal • **COLLAPSIBLE AND RIGID TUBES** for toothpaste, ointments, adhesives and pills • **CROWN CORKS** for carbonated drinks • **R. INDIA'S PLAN FOR FOOD UNBALANCED

NEED FOR RAISING PRODUCTION OF MILK NEGLECTED

By Dr. P. V. Sukhatme

DIRECTOR, STATISTICAL DIVISION, F.A.O., ROME

THE importance of protective foods in the dietary of India hardly needs to be stressed. This is well recognised and yet the *per capita* availability of milk seems to have gone down in the course of the last ten years. At present, the *per capita* availability of milk proteins in India is of the order of no more than three grams a day, against a figure ten times as large for Europe and some 15 times for North America. The gap in animal proteins is even larger. Milk is indispensable for children and expectant and nursing mothers. Inadequate supply of milk proteins not only leads to deficiency diseases, but what is more important seriously retards the growth of children, weakens their resistance to diseases and diminishes physical vigour and working efficiency. I recognise that the pulse protein availability in the country is fairly adequate on *per capita* basis, but pulse protein can hardly be recommended for infants after they are weaned. Moreover, pulse proteins have a much lower biological value as compared with milk proteins. The latter, as is well known, resemble more closely in pattern the proteins constituting human tissues, and for this reason are more readily assimilable than are the pulse proteins. If one were to look into the progress of nutrition in other countries, one finds that there is a tremendous shift in the composition of diet with heavy emphasis on animal products as compared with that of cereals hundred years ago as shown below:

	France 1840	*U.K.* 1880	*France* 1954-57	*U.K.* 1954-57	*India* 1954-57
Cereals ...	271	137	111	88	130
Potatoes	234	134	129	98	11
Meat ...	20	41	69	68	1.5
Eggs	—	5	10	12	0.2
Milk ...	—	97	89	149	40.4

In contrast, the intake of animal products, including milk, in India even today is much below that of the level in the U.K. and France a hundred years ago. While admittedly there are climate and other differences between West and East, difference in diet must be considered as significant in the light of improvements in health which are known to have taken place in those countries during the last hundred years or so, e.g., expectation of life in the West has increased twofold, infant mortality has gone down to some one-fifth of the figure some hundred years back. In contrast, the average duration of life of an Indian is less than half of that of a person in the U.K. or France and the infant mortality in India is 100 against about 20 in the U.K. Comparable statistics of morbidity are not readily available but I am sure that Indians have unquestionably much less resistance to fight diseases than an average person in the U.K. or France mainly owing to the very low intake of protective foods, especially milk. Although a part of this improvement is undoubtedly due to the general advance in medicine and public health, there is general agreement that the shift in composition of diet over the last century has materially contributed to the decrease in mortality rate, increase in longevity and greater resistance to disease.

Costa-Rican Experience

I cannot resist here the temptation to quote from an experience recently repoted from Costa Rica. While an average Costa Rican gets about, adequate calories, mostly from carbohydrates, it was found, in the course of building a runway, that a Costa-Rican worker lacked stamina and working efficiency as measured by his capacity to carry stones for the purpose. The relevant figures shown in the table below will show that the carrying capacity increased some fourfold in the course of four years as a result of the change in diet made possible by the Pan American Airways which provided a large intake of protective foods based on the experience in U.S.:

Year	*Cubic metric of stone*
1943	240
1944	838
1945	1,025
1946	1,157

Although the need for protective foods is recognised, I am not sure we have quite realised in this country the incidence of malnutrition and the colossal dimension of the problem to fight it. In a short article such as this it is not possible to provide evidence to show the dimensions of the problem but I estimate that about two-thirds of India's population suffers from serious malnutrition. Undernourishment is also widespread but the degree of undernourishment as compared with that of malnutrition is marginal in character. I estimate that about a quarter of the population is undernourished. One would expect for these reasons that the third Five-year Plan would provide adequate programme to increase the availability of protective foods, especially milk. The least one would expect is that economic forces would be taken into consideration in determining the targets for production of milk, but this is obviously not done in the Plan. Approach to Agricultural Development in the third Five-year Plan prepared by the Ministry of Food and Agriculture shows that the programme for increasing agricultural production is based on expenditure elasticity and the growth in total expenditure over the five-year period but the Draft Plan put out by the Planning Commission does not appear to incorporate the increase for milk recommended by the Ministry. This is all the more surprising, since the price of milk relative to foodgrains has much increased in recent years, showing relative shortage of milk. What further puzzles me is that the Draft Plan provides for only a very meagre programme for increasing milk production, as compared with that for foodgrains and commercial crops, even though, as I said, economic considerations call for increase in milk production at least comparable to that in foodgrains and commercial crops. While I admit that the demand for grain is increasing even though their supply is already nutritionally adequate, the demand for milk, too, is increasing and that *three times as fast* as for grains. This will be clear from the figures of expenditure elasticity of demand that are available with the Planning Commission. In other words, it is imperative that India should aim at a much higher increase in production of milk than that planned for cereals. But, actually, the Plan provides for a much reduced figures for increasing milk production. I am afraid that the increasing imbalance between the demand for and the supply of milk that has been in evidence in recent years would only be accentuated in the coming years, resulting in a further steep rise in the price of milk.

I believe the main argument which has probably weighed with the Planning Commission in not going the whole hog with the need for suggesting adequate target for milk production is that milk requires several times more land than that needed for producing foodgrains of equal nutritive value. Consequently, any major shift in emphasis from foodgrains to milk production would only greatly increase the already heavy pressure of population on land, at a time when measures to overcome undernutrition through the easiest and cheapest method must receive higher priority. While not denying the need for providing adequate calories in the cheapest manner without increasing pressure on land, I am afraid it is a mistaken notion that the cost, in terms of land, of increasing milk production is necessarily several times more than that of increasing cereal production. India has a large animal population, larger than any other country of the world which *in any case is being maintained* and the milk yield is dismally low. But it is precisely this situation which provides a silver lining in the cloud. If milk yield is sought to be raised from the *existing* stock instead of increasing the total stock, then it can be shown that the land cost of producing additional milk through additional feed is not higher than that of producing foodgrains. Experiments have shown that milk yields can be increased by at least 50 per cent, if not more, by providing additional feeds to the

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

NEW PUBLICATIONS

Problems in Indian Economics. By Prof. P. C. Jain, M.A., M.Sc. (Econ.), London. Department of Economics, Allahabad University. Published by the Chaitanya Publishing House, 5-A University Road, Allahabad-2. Pages: 646. Price: Rs. 11.50

THE fact that the book under review has entered its sixth edition is an eloquent testimony to its popularity with University students. All the chapters in this edition have been thoroughly revised and brought up-to-date. In the process, the book has grown much bigger in size and richer in contents. A special feature of this edition is the addition of a new chapter on the Draft Outline of the Third Plan.

Prof. Jain has presented a detailed study of the major economic problems in India, in their appropriate historical perspective. The book is divided into five sections dealing with agriculture and co-operation, industry and labour, trade tariffs and transport, currency, banking and finance as well as public finance and planning, consisting, in all, of 57 chapters. The critical approach of the author has rendered the treatment of the subjects quite lively. It must, however, be noted that copious quotations given by the author even in the descriptive parts of the book do not make for smooth reading. There are also some factual inaccuracies in a few quotations given in the book. For instance, in the paragraph on agricultural produce, the author has quoted as follows from some source which, incidentally, is not mentioned: "Oilseeds such as groundnut, linseed, castor, beans, rape and sesamum are grown in northern Madras and cotton in the southern and northern areas of the Deccan Plateau and in the Punjab." This leaves out many other major areas of production of these commodities. These are only minor defects in a book which otherwise serves well the needs of the students of Indian economics. Prof. Jain's analytical acumen, coupled with his academic detachment, has made the book both instructive and interesting to students and general readers alike.

The New Science of Management Decision. By Dr. Herbert A. Simon. Harper and Brothers, Publishers, 49, East 33rd Street, New York 16, New York. Price: $2.50

The highly complicated nature of the organisational structure and problems of business and industry nowadays invests the need for taking rational decisions on important policy matters by management with utmost significance. There is, of course, no single well laid down basis on which such decisions can be arrived at, inasmuch as the basis differs widely not only in respect of different types of industry and business but also in regard to problems confronting any one individual firm or group of firms. But, where turnover is sufficiently large, electronic devices and computers can be usefully used to help managements take correct decisions. In this field, the industrially advanced countries of the West, especially the U.S., have achieved remarkable progress. How the electronic devices are being extended to the control of judgment as well as to routine operations is lucidly described in this book by Dr. Herbert A. Simon, an eminent social scientist of the U.S.

The first chapter of the publication is devoted to a brief discussion of the valuable part played by decision-making in managing an enterprise. The decision-making process, according to Dr. Simon, consists of three phases: (1) intelligence activity (searching the environment for conditions calling for decision); (2) design activity (inventing, developing and analysing possible courses of action); and (3) choice activity (selecting a particular course of action from those available). After illustrating these three phases of decision, Dr. Simon distinguishes between two "polar" types of decisions—programmed and non-programmed. He then examines briefly (in the second chapter) the traditional techniques for making the two types of decisions. His study reveals that we have not had in the past adequate knowledge of the processes involved in decision-making in complex situations. "Human thinking, problem-solving and learning," to quote him, "have been mysterious processes which we have labelled but not explained." He, however, admits that it cannot be said that traditional techniques have failed—decisions do get made daily in organisations—nor can it be said that we may not do very much better in future, as our knowledge of decision-making process grows.

Dr. Simon examines next the new techniques for programmed decision-making. They include operations research, mathematical tools (such as linear programming, dynamic programming, game theory and probability models) and the modern digital computer conceived as a device for exploring, by numerical analysis, the properties of mathematical systems too large or too complex to be treated by known analytic methods. By way of a general conclusion, he says that the automated factory of the future will operate on the basis of programmed decisions produced in the automated office beside it. It is here that Dr. Simon describes the startling innovations in the area of "Heuristic" programming, that is, developments that have penetrated the mechanics of human thinking, allowing us to apply this new knowledge of unravelling significant mysteries of man's mind.

The analysis of Dr. Simon covers not only the types of business problems which can be handled by automated processes but also current scientific developments in automating non-repetitive types of decisions. Reflecting upon the organisational and social implications of these rapid technical developments, he projects certain certainties to future probabilities. To him, the future business organisation will be a complex man-machine system in which executives and other white-collared workers collaborate with computing machines in processing information and making the decisions—both routine and novel—for conducting business.

Money at Work—A Survey of Investment. Editor: Milton Grundy. Published by Sweet and Maxwell Ltd., London. Sole Agents for India: N. M. Tripathi Private Ltd., Princess Street, Bombay-2. Pages: 244. Price: Rs. 14

Since the forms of investment in an economy are wide and varied, one has to be very careful about choosing the type in which one should put his savings. While no single yardstick is available to indicate the best way of investing one's savings, there are many experts who can tender advice as to the best use of savings. The advice naturally differs from investor to investor. Broadly speaking, investors fall into two categories—the orthodox who prefer stocks and shares, property, insurance, and the like and the unorthodox who prefer silver, jewellery, furniture, glass, coins, books, stamps and pictures. Both these investors will find in the book under review ideas on how best to invest their money.

The book is divided into two parts. Part one is devoted to orthodox investment. As many as nine experts have presented a number of new ideas. In the second part, the experts, numbering eleven, have put forward a host of suggestions about jewellery, furniture, coins, etc. Mr. Milton Grundy, the Editor, has himself contributed a most useful introduction in which he impressively assesses the tax factors that have to be taken into account while making investments.

"The Eastern Economist" Annual Number 1961. Editor: Mr. E. P. W. da Costa, M.A. (Oxon). United Commercial Bank Building, Parliament Street, New Delhi. Pages: 254. Price: Rs. 10

The theme of this year's Annual number of *The Eastern Economist* is "India and North America." The choice is particularly appropriate, because, with the resumption of the reins of administration by the Democratic Party in the U.S., a new chapter in Indo-American relations may be said to have begun.

The phenomenal growth of the U.S. economy in the past hundred years has been the envy of the entire free world. To what extent the picture of Indian economy over the next forty years would approximate the pattern of growth of the U.S. is the central theme of the economic review which forms the core of the study. The conclusion reached is that the expansion of the market under the force of numbers, if not under the rapid rise of individual income, will give India, at the end of this century, a system comparable in national income with America of two decades ago. In terms of national income, and assuming that the progress of the Indian economy under the two Five-year Plans will be extended over the next forty years, India will have, in A.D. 2000, a national income of about $200 billion at the current rate of exchange, or two-fifths of the current U.S. national income of $500 billion.

In addition to this special section, there is also the customary review of Indian economy in 1960. The Number, as usual, bears the distinctive stamp of individuality of *The Eastern Economist*.

Far Eastern Economic Review 1961 Year book and Asian Textile Survey. Editor: Mr. Dick Wilson, 209, Windsor House, Hongkong. Price: H.K. $10

This is quite a useful publication, containing interesting reviews of the recent trends in the economies of all the Asian countries as assessed against the background of political conditions. The review of each country gives a brief resume of the political set-up and conditions in the fields of finance, trade, agriculture, industry, power and transport. The number is replete with statistical tables, charts and photographs. The publication also contains a survey of Asian textiles, covering the present manufacturing and trading position in all the principal producing and consuming countries in Asia, as well as in countries which are just beginning to replace imports by products of their own industry. At the end of the *Yearbook* are a currency conversion table, advertisers index and publishers information box. In the course of the leading article, the Editor of the *Yearbook* has sought to picture in general terms the economy of the Asian region as a whole. Recalling, in particular, the ideas of regional economic co-operation, which was raised at the last meeting of the E.C.A.F.E., the Editor says that "unfortunately, jealousies and misunderstandings prevented anything substantial emerging, but at least the main points about regional co-operation received a good airing."

Capital's Annual Review of Trade, Commerce and Industry. Editor: Mr. George Barrell, 5 Mission Row, Calcutta, Pages: 148. Price: Rs. 5

This number serves a sumptuous fare of instructive reading. The list of contributors contains, as in the past, many distinguished names such as Vera Anstey, Neil McInnes, Asoka Mehta, P. S. Lokanathan, Mary Sur, and N. Das. The subjects covered are wide and varied, ranging from India's take-off problem to economics of Indian education. Some of the articles, which are of topical interest, are: "The Uneven Progress of Indian Agriculture," "Fiscal Prospects for the Third Plan," "Development of Overseas Communication Services," "Raising Plan Resources from the Rural Sector," "Influence of Management on Productivity," "Significance of Economic Integration of Europe," "Role of Private Sector in the Third Plan," etc.

The number also contains the customary review of the trends in the principal branches of Indian economy which makes it a useful reference volume.

FIRST GEOLOGICAL MAP OF ASIA AND THE FAR EAST

After six years of concerted effort and with the support of all Asian countries, the first geological map of Asia and the Far East has now been completed under the sponsorship of the United Natons Economic Commission for Asia and the Far East (E.C.A.F.E.) in co-operation with the Commission for the Geological Map of the World of the International Geological Congress. The map is on a scale of 1: 5,000,000, the scale used for geological maps of other continents. It is divided into six sheets, with an index map showing the status of geological mapping of Asian countries and an explanatory brochure.

The need for a map of this kind was first expressed by Asian countries at E.C.A.F.E.'s Regional Conference on Mineral Resources Development held in Tokyo in 1953. At that time, Asia was the only continent that did not have a regional geological map. It was considered that such a map would be not only of scientific interest, but also of practical value to those interested in the development of mineral resources of Asia and the Far East. Since geological structure has little to do with geographical or political boundaries, to ascertain the mineral potential of a country it is not enough to know the geology of that country alone, but reference has to be made to the geology of neighbouring countries. These were the practical considerations which demanded early completion of a geological map for Asia.

Asian Governments showed ready response by supplying country maps for compilation, and making voluntary financial contributions towards the preparation and printing of the map. In connection with this project, Afghanistan created a Geological Survey Department in order to complete immediately a country map for the purpose of compiling an Asian map. A number of other countries speeded up their national geological maps also because of this. Malaya and Thailand organised a joint geological survey of border areas in order to clear up many geological problems common to the two countries. Australia, France, the Netherlands, New Zealand, and the United States have been preparing a geological map for Oceania, including the Pacific islands, which will complement the Asian geological map.

With the completion of the map, steps have been taken by E.C.A.F.E. for the preparation of other regional maps, including an oil and natural gas map, maps showing the distribution of known mineral resources, a map showing potential mineral-bearing areas and a regional structural map.

VITAL NEWS
for every businessman

The management of the Times of India group of publications has decided to change the name of the proposed daily financial newspaper from 'The Financial Times of India' to 'The Economic Times'.

The change is designed to meet certain technical requirements, but the management is happy that the new title with its wider significance accords better with the newspaper's main field of coverage—the economic development of the country.

The newspaper which will consist of eight pages will be published on all days of the week and will be priced at 20 nP. per issue.

The Economic Times will contain information vital to every businessman, business house, investor, banker and student of economic affairs. With its comprehensive and objective coverage of economic developments in India and the world over, *The Economic Times* promises to keep its reader better informed than ever before.

"THE ECONOMIC TIMES" WILL CONTAIN:

- **Economic news and comment** of world-wide and Indian interest
- **Complete coverage of all six Indian stock exchanges** and those in London and New York
- **Spot news on planning and development** from regional economic bureaux and news about aid and collaboration from foreign correspondents
- **Extensive reports on the hundreds of commodity markets** in India; statistics, tables and graphs on economic trends
- **Periodic economic newsletters** from State capitals
- **Exclusive information from India and abroad** for the import and export trade
- **Investment guidance** by experts; critical analysis of company balance sheets
- **Articles on current topics** by well-known economists; informed leading articles

The Economic Times will be a newspaper that no businessman can afford to do without.

THE ECONOMIC TIMES

SUBSCRIPTION RATES:
Local and through authorised agents: Yearly Rs. 73.00, Half-yearly Rs. 36.50, Quarterly Rs. 18.25
Local and through authorised agents (where agents get supply by air): Yearly Rs. 91.25, Half-yearly Rs. 45.75, Quarterly Rs. 23.00
By post in India, Pakistan & Ceylon: Yearly Rs. 80.50, Half-yearly Rs. 40.25, Quarterly Rs. 20.25
By post to Aden, Burma & other countries: Yearly Rs. 102.25, Half-yearly Rs. 51.25, Quarterly Rs. 25.50

THE ECONOMIC TIMES, The Times of India Building, Dr. Dadabhoy Naoroji Road, Bombay 1

WT-ET 1396

POPULARITY OF GOLD AT RECORD HIGH LEVEL

AN AMERICAN VIEW ON GOLD MOVEMENTS

[" A barbarous relic." This was how Lord Keynes once described gold in the context of its role as a means of settling balances on international trade account. But, in recent years, things have changed so significantly that gold has, once again, regained its pre-eminent position. It is on gold that the value of U.S. dollar depends and the soundness of dollar greatly influences the trend of world economy. What is the present world gold picture? What are the implications of the continued U.S. gold drain? What is Russia's attitude towards gold? These issues have been discussed in some detail in a special study published in the January issue of the Monthly Letter *of the First National City Bank of New York. In view of the great importance attached to the problem all over the world, the article reproduced here will be read with much interest.*—ED.]

THERE is more interest in gold today than at any time during the past quarter century. Americans have become aware that the U.S. gold stock, so long the symbol of the paramount strength of the U.S. dollar, has declined to its lowest point since 1940. People are asking searching questions about the significance of the gold outflow for their jobs and savings.

On the threshold of 1961, gold not only attracts attention but also commands renewed respect. Few people any more would call gold "a barbarous relic," as the British iconoclast Keynes did a generation ago. The demand for the metal by foreign central banks and Governments shows the prestige it has retained in the minds of those responsible for national monetary reserves. Demand for gold jewellery attests to the appreciation of people for the enduring value as well as beauty of the metal. The widely publicised gold rush in the London market has abated; but some feeling of suspense will persist until the new U.S. Administration shows by deeds its firmly expressed intention to defend the present value of the dollar and its soundness.

Russia, too, is in the world gold picture at the turn of the year. According to an official announcement, a new heavy rouble is being created equal to a gram of gold or $1.11.

World gold production (excluding Russia) reached a new post-war peak in 1960—for the seventh consecutive year. Worth some $1,180 million, last year's output was 4-5 per cent above 1959. It was over $400 million higher than in 1945, at the end of the war, but still about $100 million below 1940, the all-time high.

Estimated Gold Production in 1960

(In millions of dollars)

	$
Union of South Africa	750
Canada	160
United States	58
Australia	38
Ghana	32
Southern Rhodesia	20
Colombia	15

Republic of the Congo	13
Japan	11
Mexico	11
All Others*	58
Total*	$1,180

* Excluding U.S.S.R., Mainland China, and countries in their orbit.

The post-war rise in output is primarily explained by the increase in South Africa, which has made rich new discoveries and achieved economies of production to offset rising wage costs. In Canada, where the industry is offered Government subsidies, output has held for five years within a range of $158-160 million.

Russia's gold output is a guarded secret. Western observers put it somewhere between $350 and 600 million annually. We are less in the dark regarding the gold Russia sells in Europe to balance out its international payments. From gold import statistics of other countries one can guess that the U.S.S.R. exported some $250 million worth of gold annually during 1957-59. Russian offerings on the London market in the first 10 months of last year were running at half the rate of 1959.

Rising Private Demand

Gold mined in the United States is sold, at $35 per ounce, either to the U.S. Treasury or to companies and dealers licensed by the Treasury to buy gold for use in industry and the arts. Use for these purposes, including some entirely new industrial applications, has increased during recent years and now exceeds our current gold output; the difference is made up by releases from monetary stocks. Net consumption in 1959 amounted to $88 million as compared with $63 million in 1958 and $45 million in 1955. There is no gold coinage in the United States and residents are allowed to hold at home only coins of recognised numismatic value, they may hold gold outside of United States territory.*

A major part of newly mined gold is sold in the London market, reopened in 1954. While the U.S. Treasury sells gold only to monetary authorities, the London market is open also to private interests. However, except for licensed domestic users, only residents of non-sterling countries may buy gold in London. Trading is generally conducted in U.S. dollars.

A comparison of new gold supplies (from free world output and estimated Russian sales) with year-to-year increases in the total of official gold stocks makes it possible to get an approximate idea of the amounts absorbed by the arts and industry or by private holders.

* Excluding U.S.S.R. etc. ‡ Jan.-Sept.
† Residual figures. N.A.—Not available.
Source : Derived largely from *International Financial Statistics*, except gold production for 1960, which is a tentative estimate based on incomplete data.

Although data for 1960 as a whole are not yet available, it is apparent that the addition to official reserves out of new production was curtailed. The increase in the first nine months, according to the International Monetary Fund, was $520 million. It is doubtful if much was added to this total during the fourth quarter when private demands increased substantially.

Sources of Europe's Gold Gains

The deficit in the U.S. balance of payments has been supplying European central banks with dollars far in excess of needs for current payments. They have used some of these dollars to buy gold from the U.S. Treasury and also in the London market.

The following table helps trace the origin of changes in foreign monetary gold stocks during the past three years. The United Kingdom, the Netherlands, Belgium, Switzerland, and Austria—and also Japan—made substantial purchases from the U.S. Treasury. On the other hand, Italy and France made most of their gold purchases in the London market or elsewhere; Germany has bought no gold in the United States since early 1955.

‡ Through June 30, 1960. Additional $200 million of gold was purchased from the United States in the third quarter of 1960.

¶ Through June 30, 1960.

§ Through March 31, 1960. Additional $15 million of gold was purchased from the United States in the third quarter of 1960.

Sources: Derived from data in *Federal Reserve Bulletin* and *International Financial Statistics*.

Beginning in the third quarter of 1960, with strengthening private demands driving up the London price, official gold buying shifted more and more to the U.S. Treasury, which sells at a fixed price of $35.0875 per fine ounce ($35 plus ¼ per cent handling charge). The London market price firmed slowly from a monthly average of $35.09 in June to $35.22 in September. Following the flare-up to $40 per ounce on 20th October, the London gold price settled down to $35.84 in November and $35.54 in December. Central bank buying in London ceased altogether as the price rose, though it normally would come forward to prevent a decline to $35 or less. The U.S. Treasury, which offers $34.9125 per fine ounce, has not been an important buyer on balance since 1956-57.

U.S. Gold Loss

There has been a decline of $5 billion in the U.S. gold stock during 1958-60. The drop came fast in 1958 as our balance of payments weakened sharply, while generous Congressional appropriations and an easy money policy created fears of renewed inflation. The Federal Reserve's shift to a restrictive credit policy, supplemented by the Administration's successful efforts to rebalance the budget, helped check the gold outflow during 1959 and the first half of 1960, despite the persistent large payments deficit. The accelerated gold loss during the second half of last year—notwithstanding a remarkable improvement in our merchandise trade balance—appears to have been aggravated by apprehensions that a new Administration taking office this month might use inflationary finance to spur economic activity and growth.

It should be noted that changes in the U.S. gold stock have been affected by transactions with the International Monetary Fund. Since the Fund's establishment, the gross total of gold taken from the official reserves of member-countries and paid to the Fund runs to no less than $3.8 billion. Of this amount, $688 million was initially transferred by the United States in 1947, and a further $344 million in June 1959, in payment of the gold portion of our subscription. Additional sums have moved from the United States to the Fund as other nations have purchased gold from the Treasury to pay the gold portions of their own subscriptions or to repay in gold, as required by the Fund statutes, part of their currency drawings. For example, France two months ago purchased $117 million of gold from the United States to make the bulk of its final repayment of drawings received in dollars and German marks in 1957-58. A substantial part of the Fund's gold has, however, come back to the U.S. Treasury, following the Fund's investments in dollar securities.

The United States now holds almost 45 per cent of the free world's monetary gold stock—approximately the same proportion as in the late 1920's. In 1949, when the U.S. stock was at its peak, the figure was 70 per cent—a clearly excessive share. The wheel has thus turned full circle.

It is not so much the fact that our gold stock today is no more than $17 or 18 billion that is a matter of concern. It is the rate of loss that causes apprehension. There has been, however, no run on the U.S. stock in the sense of wholesale conversions of dollar holdings into gold. In fact, foreign holdings of dollars continued to increase last year.

Russia also attaches vital importance to gold. It is outranked only by South Africa as a gold producer. It sells some of its gold against sterling and other currencies and has an accumulated stock estimated by Western observers at somewhere between $4 and 8 billion.

Russian monetary theory adheres to the traditional view that gold is the foundation of currency. The rouble has a legally prescribed gold content and Russia's central bank is required to cover its note issue with a 25 per cent gold backing. This, it is thought, makes Russian currency "tokens of gold." Karl Marx said in *Das Kapital* that "only in so far as paper money represents gold, which like all other commodities has value, is it a symbol of value."

But Russia's attitude toward gold has not always been true to this classical concept. Lenin wrote in 1921 that "when we conquer on a world scale, I think we shall use gold for the purpose of building public lavatories in the streets of several of the large cities of the world." So long as capitalism remained strong, however, Lenin regarded gold as an indispensable weapon in Russia's hands: "We must save the gold..., sell it at the highest price, buy goods with it at the lowest price." High-ranking Russians have repeatedly advocated a rise in what they call the "artificially low price of gold" imposed by the United States.

The Russian rouble has suffered a number of devaluations under the Soviets, typically involving some degree of confiscation of the fruits of saving. Against this background, Russia's announcement last November that the rouble, beginning from 1st January would be "worth" more than the dollar stirred some wonder. What is to be done, from January through March 1961, is to convert old roubles, nominally worth 25 cents, into "heavy" roubles at a rate of ten to one; at the same time, a zero will be removed from all prices, wages, and values. The new heavy rouble becomes equal to $1.11 in U.S. money.

The operation glosses over the fact that the old rouble is devalued from 25 to 11 cents, or by 56 per cent. In the absence of any tinkering, the new rouble—replacing as it does ten old roubles "worth" 25 cents each—should be "worth" $2.50. Instead, it is put at $1.11.

The 25 cent rouble was—it is generally agreed—grossly overvalued; Russia itself recognised the fact when it established in 1957 a special tourist rate of 10 cents to the rouble. The currency reform puts Russian domestic prices more in line with prices abroad. This will simplify comparisons of relative costs of exports and imports of various goods and make for easier calculation of the profitably and economic advantage derived from foreign trade. It reduces the need to subsidise exports and thus makes Russia less exposed to charges of "dumping."

The question remains as to whether nations receiving Soviet credits, and trading with Russia, might be pressed to accept the rouble as a currency in which they would conduct trade and keep monetary reserves—as they do in dollars and sterling.

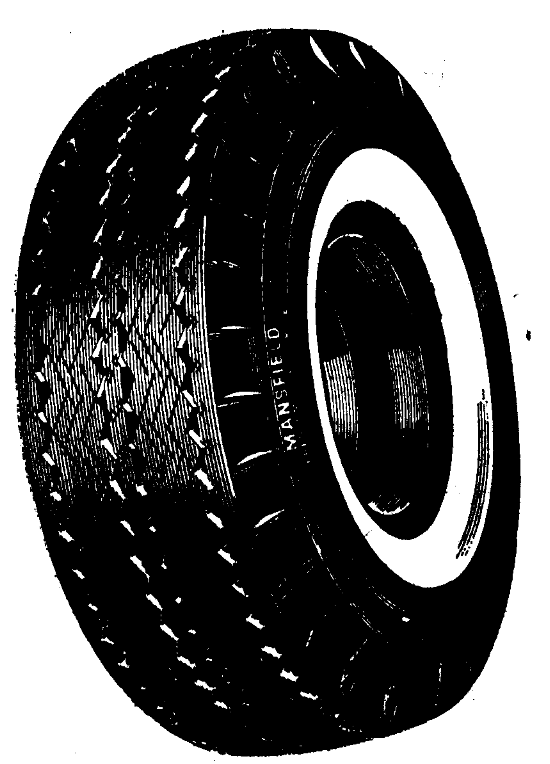
To accept rouble credits is one thing; to keep funds in roubles by free choice is another. Money in Moscow is blocked money, subject to the strictest exchange control in the world and usable only at the pleasure of the authorities. Money in New York is freely spendable or lendable, practically anywhere, for citizen and foreigner alike. So long as we maintain this condition, keep our prices stable, and preserve equivalence of the dollar to gold, the rouble can never offer a serious challenge.

Like the Russians, we cannot do business in gold alone. There is not enough of it. And, in any case, the metal cannot compete with credit for convenience in effecting payments Trade and prosperity cannot survive without credit, without trust in performance upon promise. The present gold problem thus reduces itself to keeping trust in dollars—by repressing inflationary tendencies as they arise and dealing with the balance-of-payments deficit through means that preserve and protect the freedom of people to use their dollars as they think best.

*The U.S. Government has withdrawn this exemption after this article was prepared.—ED.

STATE BANK OF TRAVANCORE
(Subsidiary of the State Bank of India)
Now offers, with the co-operation of the State Bank of India, complete Banking services in connection with the trade and commerce of the industrially fast developing State of Kerala.
CURRENT ACCOUNTS AND SAVINGS BANK ACCOUNTS opened and FIXED DEPOSITS AND SHORT-TERM DEPOSITS received on attractive terms.
THREE-YEAR AND FIVE-YEAR CASH CERTIFICATES are issued at 4% and 4¼% compound interest respectively.
All types of Internal and International Banking Business transacted.
For further particulars, please apply to nearest Branch or Head Office.
Branches at Bombay and all important commercial centres in South India.

LINKED IN LEADERSHIP



Two major firms stretch halfway across the world to collaborate in a gigantic venture, to give a boost to India's tyre and tube industry.
The Madras Rubber Factory—India's largest manufacturer of tread rubber compound—and the Mansfield Tyre and Rubber Company, Ohio—one of the oldest, and sixth largest manufacturer of tyres, in terms of units produced, in the United States—join hands to manufacture Mansfield truck and car tyres and tubes at Madras.
When in full production, the new factory will be producing over 3,00,000 tyres and tubes per annum.
A part of this production will be exported overseas.

FINANCIAL PROBLEMS OF ELECTRICITY UNDERTAKINGS

UNION MINISTER'S STATEMENT UNHELPFUL

BY the end of the second Plan, there will be a total generating capacity of 5.7 million kw. of power, and 35,000 circuit miles of 11 kV. and higher voltage lines will be laid. According to present proposals, the third Plan is expected to add 7.6 million kw. of generating capacity and extend the transmission network by about 80,000 circuit miles. But this third Plan programme, it is admitted in the address of Mr. Hafiz Mohammad Ibrahim, Union Minister for Irrigation and Power, at the annual general meeting of the Federation of Electricity Undertakings of India, would not be adequate to meet the rising power demand in the country. It is his considered opinion that shortages are likely to persist in certain areas. Mr. S. M. Zubair, Chairman of the Federation, has also underlined the need for gearing the economy "to achieve power capacity running well ahead of power demand." It may be recalled, in this connection, that, according to one estimate referred to in this column of *Commerce* of 7th January 1961, the total power demand by the end of the third Plan may well be of the order of 20 million kw., if all the industrial and agricultural projects are executed according to schedule. Where, thus, a higher target for power is manifestly necessary, the planners would do well to assign a bigger role to the private electricity undertakings than what is indicated by their suggested outlay of Rs. 50 crores (not including the Rs. 75 crores needed for normal expansion) during the third Plan period. By all accounts, this will be an extremely meagre outlay in the private sector as compared with the proposed outlay of Rs. 1,020 crores in the public sector for the power programme. If existing electricity undertakings are liberally permitted to expand and new undertakings are licensed in the interests of the national economy in terms of the Industrial Policy Resolution itself, it may be that the private sector will be able to make a more significant contribution to power supply. But this will be possible only on the condition that the acute financial problems of the electric supply industry are solved betimes.

It is in this context that the case, put forward by Mr. Zubair in his speech at the annual general meeting (held over the week-end at Bombay) of the Federation of Electricity Undertakings of India, for a higher return to the industry compels consideration. That the present statutory return of 6 per cent (official Bank rate of 4 per cent *plus* 2 per cent) laid down in the financial code of the Electricity (Supply) Act of 1948 is "grossly inadequate" is the conclusion drawn by Mr. Zubair in the light of financial trends in the electric supply industry. The most disquieting trend at the present time is that electricity shares, which were regarded as "blue chips" at one stage, are being quoted at a heavy discount. The net result, as Mr. Zubair has pointed out, is that expanding undertakings are unable to raise resources as electric supply shares as media of investment have come to be suspect; indeed, there is large-scale disinvestment in the industry. Another disquieting trend is that State Electricity Boards and State Governments continue to acquire electric supply undertakings, whether at times when options to purchase under licences arise or under *ad hoc* legislation providing for premature acquisition, as is being done in Madras and Andhra.

Plea for Higher Return

These two disquieting trends call for further examination. As far as the first trend is concerned, something would have to be done to reverse it. The Federation has suggested that this could be done by increasing the statutory return by one per cent *plus* an additional half per cent in case the Government finds it difficult to work out a formula to deflect to the investor savings in company tax between 51.5 per cent and 45 per cent. If this representation, which is still under Government's consideration, is favourably disposed of, the ground lost through the change in the tax pattern introduced by the Finance Act of 1959 and through the rise in the lending rate of the Reserve Bank to Scheduled banks without the official Bank rate itself being upgraded would be retrieved. The industry will then have a level of return, just sufficient to attract capital and the return itself will be really tax-free. While the Minister for Irrigation and Power has not committed himself to the Federation's demand for raising the "standard rate" of return, making the return tax-free and creating deferred taxation reserve, he has at least given the cheerful news that the Centre has persuaded the State Governments to permit the electric supply licensees to put the savings in taxation resulting from the 1959-60 Budget proposals into a reserve which will rank *pari passu* with the licensees' own capital, Some of the State Governments have already accepted this advice and if other State Governments also follow suit, the licensees' requirements will be met to some extent.

As for the second disquieting trend, namely, acquisition of electric supply undertakings in some States, Mr. Zubair's criticism is that some State Governments are diverting their Plan resources for acquiring existing undertakings which are rendering useful service. His point is that there is no need for nationalisation when the licensees' undertakings are already rigidly controlled. While the Central Government's policy continues to be that acquisition of electricity undertakings should not be resorted to if they involved merely displacement of existing licensees doing useful work, the actions of some State Governments have not been in accordance with the spirit of that policy. The Minister, however, does not seem to agree with the Federation on this question. This is what he has to say:

> "Because of the limited resources and certain other difficulties, it is possible that some of the private undertakings might not have been able to render satisfactory service to the public. In such cases, I feel it would be in the interest of the undertakings themselves as well as the public to integrate them with the systems of the Electricity Boards. No undertaking which has been functioning efficiently is normally acquired during the currency of the period of licence."

Revision of Electricity Rates

If, as the Minister says, some of the private undertakings which have been acquired in recent years have not functioned efficiently, their poor results must have been due to the fact that, with their inadequate statutory return, they could not raise finance for development. On the other hand, the State Electricity Boards have been in a privileged position, obtaining finance from the State Governments at a low rate of interest. As competent and efficient functioning is linked with development, appropriate incentives for the latter are called for. A revision of electricity rates is also considered necessary, because, according to the Federation, the present rates in most of the power systems are below cost rates. So long as the State Electricity Boards are in a way subsidised through low rates of interest for the finances provided to them, the uneconomic electricity rates may not be much of a problem to them. But the private undertakings, now paying interest rates ranging between 6 and 7 per cent on the advances given by scheduled banks and 6½ per cent on the moneys lent by the Industrial Finance Corporation of India, have to be contented with a 6 per cent return on the 'capital base.' The grievance of the electricity undertakings that, although their returns are low, they are called upon to supply a basic service cheaply to other industries which are operating at greater profit, has a lot of force in it.

While the Federation's Chairman has thus provided more than one argument to support its case for a higher return and consequently an increase in electricity rates, the Minister for Power has unceremoniously dismissed the whole thing in the following words:—

> "I cannot agree with the view that rates for power obtaining at present in most of the power systems are below cost and that there should be no reluctance in permitting an increase therein to enable the industry to earn a higher return. Electricity being a basic industry, a primary tool of production and almost a necessity of the present-day life, it is very necessary to keep a careful watch over its rates. The interest of the consumers has to be safeguarded while helping the licensees to the extent found desirable to improve their financial operations to attract larger investment."

It is strange that the Minister has not adduced any evidence for his view that rates for power at present are not below cost. The only ground on which he has turned down the industry's demand for a higher return is that the interest of the consumer is supreme. It would be an unwarranted inference to suggest that there is a conflict between the consumer interest and the reasonable expectation of electricity undertakings for an economic return. A small rise in rates may bring about greater expansion in the private sector of power generation and provide more power to industrial consumers who will otherwise be incurring losses through shortfalls in production caused by power shortage. It has been well said, as Mr. Robert L. Garner told the annual meeting of the International Finance Corporation in his presidential address last September, that the most expensive kilowatt of electricity is the one which industry needs and cannot get.

No Encouraging Pointer

There is no knowing that Indian industry will get all the electricity it needs during the third Plan period. Performance during the second Plan period provides no encouraging pointer to what may be achieved during the third Plan. While the second Plan will have installed an additional generating capacity of only 2.3 million kw. at an aggregate cost of about Rs. 525 crores (Rs. 460 crores in the public sector, Rs. 37 crores in the private sector and Rs. 28 crores by industrial establishments producing their own power), the third Plan is expected to achieve an additional capacity of as much as 7.6 million kw. at an estimated cost of Rs. 1,070 crores (Rs. 1,020 crores in the public sector and Rs. 50 crores in the private sector). How a more-than-threefold increase of additional generating capacity can be achieved with just a twofold increase of outlay, is by no means clear. The Minister has not indicated how this feat is going to be performed. It may be that the Power Ministry's plans for standardising construction practices will result in some economies in construction costs. And the proposals for paying greater attention to the inter-connection of power grids so as to bring about more efficient operation of plant may also lead to some economies. But it is doubtful if all these economies will be of sufficient magnitude to obviate the need for a larger financial outlay. It is not improbable, therefore, that the public sector's achievement may fall short of its target. The otherwise certain deficit in power supply can, however, be made good by the private sector if a larger provision is made for outlays in the licensees' undertakings, many of which have, in spite of regulatory shocks, plans for large-scale expansion but continue to be starved of finance even for normal development. These pioneers in the field of power development, as the Minister himself has described them, can be depended upon to make an even more significant contribution than in the past if only their unsolved financial problems are satisfactorily tackled with expedition.

AMERICAN NUCLEAR POWER PROGRAMME

Twenty-three new civilian-use nuclear power plants are under construction in the United States, or in blue-prints. They will cost close to $1,000 million—and plans are progressing for additional, more powerful atomic stations. That, says the Atomic Energy Commission (A.E.C.) in its report for the year 1960, adds up to "a picture of a soundly developing atomic energy industry."

Activities covered in the annual report indicate, A.E.C. says, "that this country is at least close to the point where investment in large nuclear power plants in certain areas may be considered economical over the life of the plants." A.E.C. has cautioned, however, that "we cannot predict exactly when we will achieve costs for nuclear power that can be considered competitive with fossil-fuelled conventional plants."

During the past year two more nuclear plants—the Dresden (Illinois) and Yankee (Massachusetts) atomic stations with a combined capacity of 290,000 kilowatts—went into operation, generating electricity for homes and factories. Within the next two years, the report adds, "648,000 additional kilowatts of nuclear capacity will be completed." By the end of 1962 the United States will have an installed nuclear capacity of more than one million kilowatts.

On radioisotopes, the report says, "we are exploring new ways of putting radiation to work—in the preservation of foodstuffs and sterilisation of medical supplies." The number of licensed isotope users increased from 5,417 in 1959 to 5,907 in 1960. Shipments of isotopes abroad for use in medicine, agriculture and industry was up to 4,857 from 3,252 in 1959.

NEW PRODUCTS AND PROCESSES

Wet-brushing Machine for Textiles

A TEXTILE machinery factory at Tilburg (Holland) manufactures a wet-brushing machine which brushes textiles intensively, uniformly and with a deep gloss in one operation, thereby eliminating the conventional method of brushing the same fabric several times. The rate of travel of the fabric may be controlled by means of a variator irrespective of the speed of the brushes. The areas of contact between fabric and brushes can also be adjusted independently, the adjustment being such that it is even possible for the fabric to run clear of one or more brushes. The adjustment can be read off a graduation on each brush roller. By means of a fabric-tension regulator the fabric can be brushed more or less intensively. Fluff etc. is captured in a collecting trough. An immersion tank arranged free from the machine is provided with a heating element so that the fabric can be given a very deep gloss. After passing through the immersion tank the fabric is fed between the squeezing rollers, then via a stretching device and a brake drum along three high-speed brush rollers, namely two copper trimming brushes and one hair brush, which effect the brushing treatment. The fabric subsequently passes through a felt roller which imparts the after-gloss. Finally, the fabric is rolled up tight and uniformly by a drawing roller. Wherever necessary the machine is designed in stainless steel, ebonite or plastic to prevent objectionable corrosion phenomena. The brushes are driven by a 5 h.p. electric motor, the drawing roller and winder by a 2 hp. electric motor. The variator has a control range of 1:25.

Steel and Polythene Drums

To meet the requirements for efficient and safe packing for the transport of aggressive and sensitive products such as acids, caustic solutions, salts, foodstuffs and many compound chemical products a drum factory at Amstelveen (Holland) has started the production of drums consisting of seamless inner drums made of polythene by the American Delaware process which are contained in steel outer drums, chemical resistance thus being combined with mechanical strength. The drums are provided with sealable 64-mm (2½") screw caps. A polythene ¾" bibcock fits into the ¾" axially arranged opening in this screw cap. The outer drum has a detachable cover to facilitate the removal of the inner drum for cleaning or inspection. The steel cover is secured by means of a clamping ring, screw bolt and nut. The capacity of the drums is 205,100, 60 or 30 litres. The inner drum of the largest and heaviest types has a capacity of about 205 litres and weighs about 4 kg.; the steel outer drum has an outside diameter of about 61 cm., an outside height of about 91 cm. and weighs about 25 kg. The smallest type with an approximate capacity of 6½ imp. gal. has an inner drum weighing about 0.75 kg. (1½ lbs.) while the steel outer drum with an approximate capacity of 6 kg. (13 lbs.) has an outside diameter of about 32 cm. and an outside height of about 50 cm. The smallest type can also be supplied with a bottom having a reduced diameter to facilitate stacking. Fibre or plywood outer drums can be supplied for special purposes. The drums conform to the very stringent specifications of the British Ministry of Transport and the I.C.C. (Interstate Commerce Commission, U.S.A.) specifications, and are registered at the Bureau of Explosives in New York. They have also been approved by the Inspector General of Shipping, The Hague, as ocean-borne packing of various chemicals.

Automatic Dispensing Equipment

The quality of a product obtained by mixing various solid and/or liquid substances largely depends on the constant ratio in which the quantities of substances to be incorporated in the product are supplied. To keep this ratio as constant as possible a Dutch electrical engineering concern (Philips N.V.) has designed electronic dispensing equipment capable of automatically controlling the whole dispensing process (proportioning, weighing, discharging and recording), according to a preset course. This automatic equipment consists of separate standardised and exchangeable push-in units fitting into a chassis intended to be built into 48-cm. (19") panels. This flexible assembly can be adapted to a wide range of dispensing problems by the correct choice and combination of units. The equipment is suitable for such proportioning as is required in the foodstuff and raw material industry, the manufacture of plastics, the chemical pharmaceuticals sector, etc. One of the latest designs is being used for the production of concrete mix which requires highly accurate proportioning of the various components (sand, gravel, cement and water) to conform to the specifications laid down for the continually varying mixing ratio. The whole equipment is controlled from a measuring panel, the quantities required being set by means of a selector. The whole process develops automatically when the starting-button is pushed.

The various components are weighed by means of three pressure boxes and four pull recorders. The values measured can be read off from an indicator provided with three graduations for sand, gravel, and cement and water respectively. A zero indicator with a round graduation shows the difference between the value set and the quantity weighed, pointing to zero when the values are equal. In addition, the quantities actually weighed are represented in figures. The weights are printed by a printing mechanism stating the quality code and serial number of the charge. If required, it can be shown with reference to these data that the mix supplied is made up to specification.

Replacement for Carburettor

A gas injection system, which can replace the carburettor of any ordinary car, yielded a fuel saving of 8.04 per cent when fitted to a Ford Consul recently, claim the makers Simms Motor Units Ltd., London. They say that the system increased acceleration from 0 to 30 m.p.h. by 19.4 per cent and from 0 to 70 m.p.h. by 24.8 per cent. The device weighs only 3 lb. and is said to be far cheaper than any other gas-engine fuel injection system presently available commercially. A specially-designed cam is used to control the injection of the fuel so that it is fed in when the air velocity is at a maximum: it achieves this by creating a lifting movement of only one-thousandth of an inch. The valve unit incorporates a flexible plastic-type material—adapted for the purpose when neoprene man-made rubber was found to swell. The device saves on costs because it has a single pump instead of a series of multiphased pumps as used for injecting fuel into diesel engines and this pump is controlled by a centrifugal governor. It also incorporates a special mixture control unit operated by a heat-sensitive element which controls the air feed to the fuel during engine warm up.

Colouring Pottery

A pottery firm in the U.K., Wengers Ltd., has developed a new medium for colours (replacing oils and fats) which, they claim, simplifies decoration and cuts costs. Savings of up to 25 per cent are reported in the manufacture of certain classes of pottery. The manufacturers say the savings have been achieved because the colours are supplied ready mixed, cutting out the process of mixing by the decorators and cutting down the number of firings and the number of times pieces of pottery have to be handled. The new colours do not run and so several colours can be applied before firing. And it is claimed that the new method enhances the brilliance and holding qualities of the colours. The new medium can be used for colouring all kinds of china, earthenware and decorated ceramics from the cheapest to the most expensive lines. It will also help individuals who make pottery as a hobby.

Pocket Oiler

Traditionally oil-cans generally leak, do not allow for dosage of the oil required, and are so bulky and disagreeable to carry that one rarely has them on hand when needed. To remedy these inconveniences, a Swiss company has developed an oiler called the "Lubristyl" which is shaped like a fountain pen. Its use is simple and clean: the point is placed on the spot to be oiled and moderate pressure applied. The hollow needle retracts to open the oil container valve, thus letting exactly the required amount of oil flow out. Any excess oil can be sucked back through the needle by releasing the pressure abruptly. The oiler can be filled simply by removing the head of the oil container. When not in use, a cap protects the point and this handy little gadget can be carried in pocket or hand bag without the slighest risk of spots or smudges. The "Lubristyl" is claimed to be not only ideal for countless industrial applications, but also has its place in every household.

Fly-killing Paint

A British manufacturer has perfected a paint that kills flies. Called "Lakil" it contains an insecticide which spells death to all flying or crawling insects. Once they cross surfaces painted with Lakil, ants, flies, bluebottles, moths, wasps, woodworms and such other insects absorb the poison and—an important point—head for the open air before dying. The makers, J. Manager and Sons, Ltd., Kingsland, state that Lakil is particularly suitable for rooms used for preparing or storing food. Garbage cans, too, can be treated effectively. The paint is applied in the usual way and can be used on exterior as well as interior surfaces. The insecticide is reactivated by washing and remains effective for two years. Four types of Lakil are manufactured—primer, undercoat, gloss, and clear, which can be applied over other paint.

Jacknife Lampost

A British company has developed a street lighting column that bends in the middle for easier maintenance. Called the "Jackknife" the column has a hinge half way up to make the lantern fitting accessible from the ground.

The weight of the hinged section is taken by a counterbalanced spring housed in the column just above the hinge and it is operated by a worm and wheel acting through a screw push rod. This, in turn, is operated by a standard quarter-inch electric hand drill plunged into the base supply.

The manufacturers say the column should more than halve conventional maintenance costs. It can be set to work sideways and other models are being designed for double arm brackets to go on dual highway central strips.

Fire-resistant Paint

Pearl Varnish Co., Ltd., S. Wales has developed a paint which gives their products a decorative and flame resistant finish. Specially developed for fibre insulation board and hardboard products, the fire retarding paint is applied in the conventional way. When exposed to heat, the several constituents of the paint fuse together to form an impervious film over the surface. This film prevents the inflammable gases contained in the board to pass out into the air, and also keeps the oxygen in the air from entering the board, thus impeding ignition.

Drip-dry Shoes which Massage the Feet

Drip-dry shoes which not only can be washed inside and out with soap and water but also massage the feet of the wearer are now being manufactured in Britain for men, women, and children. Made of plastic, the shoes are manufactured by a process of injection moulding which takes little more than 10 seconds. The manufacturers (The Dunlop Rubber Company Ltd.) claim that "Utrilon", the material used in the manufacture of this new style of footwear, is resistant to water, acids, petrol, oil, and grease. The shoes have a sponge cushion under the ball of the foot which acts as a shock-absorber and reduces walking fatigue.

The insoles form numerous air-ways which allow for full ventilation and insulate against heat and cold. The makers say that this insole is made of material which promotes electrostatic changes; massaging the foot, helping the blood circulation and reducing perspiration. In addition, it is claimed that, after a few days' wear, the insole takes on the contour of the wearer's foot, making the shoes virtually "tailor-made."

Translation Machine

Mitsubishi Electric Manufacturing Company of Japan has produced translation machine for English-Japanese translation. The machine can transform a simple English sentence into Japanese in some 30 seconds. By changing the memorised vocabulary in the machine, any language can be translated. The machine can also be used as an electronic computer.

EMPLOYEES' PROVIDENT FUND SCHEME

FORTY-SEVEN INDUSTRIES NOW COVERED

WITH the addition last year of mica factories, mica mines, plywood industry, automobile servicing and repairing industry, cane farms owned by sugar factories, rice milling, *dal* milling and flour milling, forty-seven industries have been brought under the purview of the Employees' Provident Fund Act, as compared with only six industries in 1952 when the Act was brought into force. At the beginning, the Act was applicable to all establishments engaged in any of the "covered" industries employing 50 or more persons (20 or more in the case of newspaper establishments) and having existed for more than three years. But by virtue of an amendment made towards the close of last year, the Act is now applicable even to smaller units in the "covered" industries, that is, those that employ 20 or more persons. The smaller units employing 20 or more, but less than 50, persons will, however, be covered, only when they have been in existence for five years. Establishments belonging to the Government or a local authority were originally exempted from the operation of the Act but this discrimination between public and private undertakings was removed in 1958 and the Act now applies uniformly to both the sectors. As regards co-operatives, only those which are working without the use of power are exempted.

An employee in a "covered" establishment, other than an excluded employee, is eligible for membership of the Fund, provided his basic wages, including dearness allowance and cash value of food concessions, if any, do not exceed Rs. 500 per month. Previously, individuals whose monthly emoluments exceeded Rs. 500 per month subsequent to their becoming members of the Fund could contribute only on Rs. 500 per month. The rules have since been amended to enable such an individual and his employer, if they so desire, to contribute *ad valorem*. So far as working journalists are concerned, no salary limit is applicable and it is compulsory on all of them, irrespective of the salary they draw, to contribute to the provident fund.

The qualifying period for the membership of the Fund had so far been one year's continuous service or actual work for not less than 240 days during a period of twelve months. This condition has of late been liberalised, so that an employee, who actually worked for not less than 240 days during a period of 12 months or less, becomes eligible for membership of the Fund. Thus, a regular worker can become a member of the Fund without having to complete 12 months.

Membership and Contributions

Total membership of the Fund, according to the Annual Report on the working of the Employees' Provident Fund Scheme for 1959-60, issued by the Central Board of Trustees of the Fund, increased from 2.54 million on 31st March 1959 to 2.7 million on 31st March 1960. Of these, 1.67 million were in unexempted establishments numbering 6,551 and 1.03 million in exempted establishments aggregating 822. 87 per cent of the employees were members of the Fund in exempted establishments, while the percentage was lower at 85 in unexempted establishments.

Total contributions (of both employees and employers) to the provident funds during the year ended 31st March 1960, amounted Rs. 16.36 crores, as against Rs. 14.59 crores in the previous year. The rate of contribution continued to be 6¼ per cent of both basic wages and dearness allowance, including cash value of any food concessions, and an equal contribution by the employer. A member can, however, voluntarily contribute, as his share, upto 8¼ per cent of basic wages and dearness allowance. The proposal to raise the rate of provident fund contribution from 6¼ per cent to 8¼ per cent in respect of the initially covered six industries, namely, cement, cigarettes, electrical, mechanical or general engineering products, iron and steel, paper and textiles, has been referred to a specially constituted Technical Committee. This Committee has been asked to examine which of these industries are unable to bear the additional financial burden. Its report is awaited.

In view of the constant complaints from retiring members that claims settlement take a long time, it is heartening to note from the report that every effort is being made to ensure prompt payment of provident fund dues to outgoing members or their nominees. Despite the unusually large number of claims received during the year (104,000, about 25,000 more than during the previous year), it is said that all claims, except a few, were normally paid within ten days of their receipt in the regional offices of the Provident Fund Commissioner. Total claims settled during the year amounted to Rs. 4.16 crores, bringing the total claims setttlement since the inception of the scheme to Rs. 10.33 crores, covering 328,000 claims.

The investible surplus of the Fund continued to be invested exclusively in Central Government securities. But, during the year under review, the pattern of investment was slightly altered to fetch a higher yield. Thus, investments in medium-dated securities were reduced from 20 per cent to 10 per cent while that in 12-year N.P.S. and T.S.D. certificates was increased from 10 per cent to 20 per cent. Investment in long-dated securities continued to account for 70 per cent of the total. The total yield from investments amounted to Rs. 2.09 crores in 1959-60, as compared with Rs. 1.58 crores in 1958-59, Rs. 1.09 crores in 1957-58 and a mere Rs. 13.39 lakhs in 1952-54. The book value of the investments of the Fund stood at Rs. 74.83 crores on 31st March 1960. The market value was higher at Rs. 75.67 crores.

Investments

This Journal had, in the past, argued that the policy of investing provident funds exclusively in Central Government securities required to be altered, because it deprived the members of the Fund of the opportunity of earning an extra ½ per cent or so, which they would otherwise have had, if the funds were permitted to be invested in State Government securities and other authorised securities of the local bodies and public sector undertakings bearing the guarantee of State or Central Government also. It is encouraging to note that this argument has carried conviction at least with the Board of Trustees of the Fund which has decided to press the Central Government to permit investment of a larger percentage of funds in higher interest-yielding securities. It is to to be hoped that the Government will not raise any objection to this very pertinent suggestion.

A problem that attracted considerable attention and was the subject matter of discussion at the meetings of the Board of Trustees was how to assist the outgoing members or their nominees or heirs in cases where the employers had not paid in full the amount of provident fund contributions. The Central Provident Fund Commissioner had suggested the constitution of a special reserve fund for the purpose. The Board agreed with the suggestion and recommended to the Government that a special reserve fund be constituted for this purpose by an initial transfer of some funds from the reserve and forfeiture account of the Fund. The workers' representatives on the Board were firmly, and very rightly in our opinion, opposed to any reduction in the rate of interest payable to members in order to finance this fund. They were right because an employer who has not paid his dues to the provident fund of his workers had no right to exist. He deserves to be severely dealt with. This does not mean that deserving cases should not be helped, if it could be done without a reduction in the rate of return to the members whose contributions have been paid.

The Government accepted the Board's recommendation and issued instructions that a special reserve fund be created by an initial transfer of Rs. 20 lakhs from the reserve and forfeiture account and that payments from the special reserve fund be restricted, for the time being, to three cases only, namely (1) on retirement or superannuation of a subscriber at or after he attained the age of 55, (2) on the death of the subscriber, and (3) in the case of permanent disability of a subscriber certified by a medical board set up by the Board of Trustees or by an authority decided upon by it. The special reserve fund shall be operated as an imprest and as soon as the arrears, against which payment has been made from the the said Fund, have been recovered from the employers such amount shall be paid back into the special reserve fund. It is to be hoped that the Provident Fund Commissioner would expedite the collections from the defaulting employers.

While the report claims that the scheme is steadily gaining popularity among the employers also (the number of establishments covered on a voluntary basis rose from 53 in 1958-59 to 95 in 1959-60), it also draws attention to the fact that exemptions granted to a number of establishments had to be cancelled, because of either default or delay in investing provident fund collections in Central Government securities. In a few cases, exempted establishments voluntarily surrendered their exempted status, due, presumably, to the trouble involved in maintaining accounts, granting loans, etc. and harassment. Nevertheless, the number of exempted establishments at the end of the year under review increased to 822, as compared with 764 at the end of the previous accounting year. The number of subscribers falling under these establishments also increased from 1.02 million to 1.03 million, representing 87 per cent of the total number of their employees.

It is noteworthy that recovery of outstanding amounts recorded good progress during the year, thanks to the vigorous enforcement of recovery measures. Thus, a sum of Rs. 2.09 crores was realised against recovery cases filed during the year and the overdues of the preceding year; this was more than twice the amount recovered in the previous year. In spite of this, however, as many as 1,747 cases involving Rs. 2 crores of rupees, were pending at the end of the year, indicating the need for sustained effort in this direction.

As readers are aware, the Provident Fund Commissioner is empowered to take two kinds of coercive measures, (1) recovery of overdues as arrears of land revenue and (2) prosecution of a defaulter-employer for failure to pay the dues. Commenting on the effectiveness of these measures, the annual report points out that, despite prayer for deterrent punishment, the law courts generally viewed the offences more or less as technical and, consequently, the fines imposed were small in amount. In order to make prosecutions more effective, the State Governments were requested to consider the alternative of launching prosecution for criminal misappropriation and criminal breach of trust wherever warranted. The State Governments were also requested to enhance punishments in suitable cases. It was also suggested that the non-payment of provident fund dues and non-submission of returns prescribed under the scheme should be made a continuing offence. There is no indication in the report about the outcome of these requests to State Governments.

Defaulters

The defaulting employers are doing a great disservice to employers as a whole by not paying their share of contributions to provident fund. It is, however, necessary to make a distinction between those defaulting employers who are in genuine difficulties and those who subtly play the game of non-payment and misappropriation. The former deserve sympathetic treatment and they should continue to be permitted to pay the arrears in suitable instalments. But the latter merit exemplary punishment.

Although it is unwise to anticipate the recommendations of the Technical Committee which is examining the question of raising the rate of provident fund contribution from the point of view of the capacity of the industries to pay, there is no doubt that the extension of the scope of the Act to more industries and the reduction in employment strength of individual establishments from a minimum of 50 persons to 20 persons for the Act to be made applicable will put a heavy burden on administrative machinery of the Fund. So far, it has discharged its widening responsibilities creditably and there is no reason to think that, in future, it will prove unequal to the task, provided the administration is adequately staffed and the State Governments extend their full co-operation to it in the implementation of the amended Act.

Facilities for training in Industrial Training Institutes will be increased to cover over 1,00,000 craftsmen at a time, as against the present arrangement for training 37,000 technicians, according to Mr. Gulzarilal Nanda, Union Minister for Labour. The Minister told the fourth meeting of the National Council for Training in Vocational Trades held at New Delhi on 25th January that the number of industrial training institutes, which is now 160, will be increased to 300 in another three years. The period of training for instructors had been increased from five months to nine months to enable them to acquire the required skill in the crafts that they specialise in.

The Minister emphasised the value of apprenticeship schemes in various industries and urged the starting of short-term courses for workers in big industries. He suggested that arrangements should be made to bring the training programmes now conducted by different agencies in the public and private sectors within the purview of the National Council for Training in Vocational Trades to ensure the maintenance of proper standards and in this connection made special mention of training in certain trades in the existing large scale industries.

TRADE PROMOTION ... is our business

Australia, New Zealand, and Fiji offer opportunities to exporters and importers and the International Division of the Bank of New South Wales can help those interested.

The Bank's complete banking service includes such specialized facilities as trade and industrial enquiries, economic and trade information, and a complete travel service. The Bank, through more than 1,000 branches and agencies, is closely and constantly in touch with industry, business, and agriculture in the areas it serves.

Enquiries may be made through your own bankers or direct to

BANK OF NEW SOUTH WALES

SPURT IN GROUNDNUT PRICES

SUPPLY POSITION DISTINCTLY UNFAVOURABLE

ONE of the most striking features of recent trends in commodity markets is the pronounced firmness of groundnuts and groundnut oil. This is contrary to the world trend; the current world prices are lower than those a year ago. Thus, whereas the prices of groundnut and groundnut oil in India today are Rs. 880 and Rs. 2,000 per ton, as against Rs. 840 and Rs. 1,600 respectively a year ago, in the London commodity market, prices have come down from £125½ to £122 per ton for groundnut oil (BWA 3/5 per cent) and £77½ to £71 per ton for groundnut seed (Nigerian). A few days ago they were as low as £112 and £64, respectively. The higher prices in India are obviously due to supply not being equal to demand. Some may say that excessive speculation has been responsible for the upward trend; others may attribute it to defects in Government's export policy. Both may be right. But the basic factor is provided by the law of supply and demand. Speculation and mistakes in policy can at best only aggravate the trend, but they cannot always remain the prime factor and sustain the upward trend even over a long period.

Production

India, it may be noted, accounts for over 40 per cent of the total area under cultivation of groundnuts in the world, as also for about 33 per cent of aggregate production. Nevertheless, the quantity of India's crop entering into world trade has become almost negligible, as domestic consumption has gone up markedly. There has been a notable improvement in the production of groundnuts in recent years. This, however, has fallen short of the rapidly expanding demand for this commodity. The index number of production of groundnuts (base 1950-51=100) touched 130.2 in 1959-60, which represents an increase of over 30 per cent in a decade. But this does not mean that 1959-60 was a record year. The credit for establishing a high record goes to 1958-59 and there was a substantial setback from it in 1959-60. During the current crop year (1960-61), the output was even less mainly on account of unfavourable weather conditions during the sowing period. The result is that groundnut's production performance in the second Plan period is less impressive than in the first Plan. Thus, in the first Plan period, the production index went up by 20 per cent. (that is from 93 in 1951-52 to 112.4 in 1955-56). This rate of growth has not been maintained in the second Plan period, the index having gone up only slightly, from 127.2 in 1956-57 to just over 130 (estimated) during 1960-61. In absolute terms, the output of groundnuts (in shell) amounted to only 4.39 million tons in 1959-60, as against 4.20 million tons in 1956-57, the first year of the Plan. It may be noted, in passing, that the per-acre production in India is too low, being only 640 lbs., as against 1,519 lbs. in China and 887 lbs. in the U.S.

The following table shows at a glance the trend of production and area under the cultivation of groundnuts in 1960-61 (unofficial estimate), as compared with the previous five years:

	Area ('000 acres)	Production ('000 tons)
1960-61*	15,400	4,300
1959-60	15,305	4,390
1958-59	14,575	4,812
1957-58	14,876	4,436
1956-57	13,450	4,200
1955-56	12,692	3,801

* Latest trade estimates.

State-wise

The Andhra State is the leading producer of groundnuts in India, contributing as it does for about 25 per cent. Next come Maharashtra and Gujarat (that is, the former Bombay State) which produced 1.4 million tons in 1959-60. Production in these leading producing States were lower in 1959-60, as compared with the previous year. But there was some improvement in the other producing centres, such as Madras, U.P., Mysore and the Punjab. The following table shows the State-wise acreage and production in 1959-60—the latest year for which final official estimates are available—as against the previous year:

	Area ('000 acres)		Production ('000 acres)	
	1959-60	1958-59	1959-60	1958-59
Andhra	2,899	2,649	978	1,003
Maharashtra and Gujarat ..	6,404	6,069	1,422	1,762
Madhya Pradesh ..	1,098	1,091	228	350
Madras	1,856	1,848	896	888
Mysore	2,129	2,029	544	537
Punjab	167	153	59	52
Rajasthan ..	212	167	54	46
U.P.	452	478	175	143
Other States ..	88	91	28	31
Total ..	15,305	14,575	4,390	4,812

World Output

Besides India, the major producers of groundnuts are China (output in 1958-59 being 2.8 million tons), the U.S. (832,000 tons), French West Africa (1.1 million tons), Nigeria (761,000 tons), Burma (284,000 tons), Argentine (235,000 tons), South Africa (189,000 tons) and Sudan (128,000 tons). The world production of groundnuts touched a record level at 13.1 million tons in 1958-59. It is estimated that in 1959-60, world production (including India) fell by about 600,000 tons to 12.5 million tons. In 1960-61, the world crop position has been better. According to the information so far available, the output in the former French West Africa (including Senegal, Republic of Mali and Niger) has gone up from 855,000 metric tons in 1959-60 to 1.1 million tons during the current year, in Nigeria from 640,000 metric tons to 850,000 metric tons, in Argentine from 209,000 metric tons to 250,000 metric tons. In South Africa and Sudan, however, the output is lower by 10,000 metric tons each at 160,000 metric tons and 100,000 metric tons, respectively. In China, too, production is said to have suffered a setback following drought last year but reliable data are not so far available for that country. It is estimated that, following the improvement in the crop position in the major producing countries other than India, world net export surplus of groundnuts and groundnut oil in the calendar year 1961 will reach a record level of about 900,000 metric tons, as against 730,000 metric tons in 1960 and 855,000 metric tons in 1959. This picture clearly explains why world prices today are lower than those a year ago. In fact, reports of better supply position began as early as in May last leading to a downward price curve. This trend would have continued, but for the latest reports from China which show that the Chinese crop in the current year would be lower than that in 1959-60. There has also been a revival of strong buying from East European countries. Nevertheless, as already noted, the recovery in prices in the last few days has not been sufficient fully to offset the fall suffered in the latter half of 1960 and early 1961.

Domestic Prices

In recent times, the movement of groundnut prices in India have been virtually independent of world trends. This is for two reasons. First, basically, the growth of domestic demand is running ahead of production. Secondly, the need for ensuring adequate supplies for domestic consumers has been compelling the Government to restrict exports. In the last two years, the pressing foreign exchange situation has been forcing the Government to encourage exports of limited quantities through provision of incentive schemes. But, ultimately, this move only reacts on the domestic price levels, because there is no real surplus for export.

Domestic prices of groundnut oil are influenced mainly by the production of groundnuts and also, to a less extent, that of rapeseed and sesamum, on the supply side. The growing population pressure and also industrial needs are the influencing factors on the demand side. Another factor on the demand side is the volume of exports in groundnut oil permitted by the Government. Prices have been on the high side since 1958, when the ban on exports of groundnut oil was first removed and the export drive was reinforced by offer of special incentives to exporters. The following table shows wholesale price indices for the last decade in respect of groundnut and oil:

	Groundnuts	Groundnut oil
1952-53	100	100
1953-54	127	120
1954-55	82	77
1955-56	79	74
1956-57	111	104
1957-58	108	105
1958-59	117	107
1959-60	131	118
April 1960	144	130
July 1960	150	137
November 1960	139	138
December 1960	N.A.	N.A.

The soaring prices of groundnut and groundnut oil have defied all official attempts at checking them. The selective credit controls of the Reserve Bank and also special margins and ceilings imposed on hedge trading by the Forward Markets Commission have no sustained impact on the trend of prices. In Bombay, Nizam bold is currently quoted at Rs. 48.50 per 50 kilograms, as against Rs. 44 a year ago.

"Vanaspati"

The demand for groundnuts and grounnut oil from the manufacturers of *vanaspati*, which contains over 90 per cent. of groundnut oil, has been steadily improving during the last few years. While groundnut production rose by about 30 per cent. during the last decade, the output of *vanaspati* has almost doubled. The following table shows the trend in the production of *vanaspati* from 1950 to 1960:

	Tons
1950	172,437
1951	171,851
1952	190,448
1953	191,182
1954	230,243
1955	260,330
1956	255,146
1957	300,942
1958	293,781
1959	320,000
1960	337,000

As already mentioned, exports of groundnut oil, and much more so the absence of any definite policy in regard to them, have led to hoarding and speculation. The cheap credit made available to agriculturists through cooperatives in Madras, Andhra and Gujarat has helped farmers to withhold production from the market and bargain for better prices. Indian prices for groundnut oil have been well above world prices by £30 to £40 per ton. In order to compensate for the loss on exports of oil, the Government has linked the exports of oil to exports of groundnut oilcake which has a favourable export market. In 1960, the demand for cake, however, was not as good as it was in 1959. So, this scheme was not quite a success. Consequently, towards the close of 1960, other incentives were given such as import of copra in which there was a shortage in the domestic market. Exports of groundnut seeds are not permitted, with a view to letting the country have the benefit of crushing operations. An exception is, however, being made with regard to H.P.S. groundnut seeds, as it has a good market in North America and Western Europe. The following table shows the aggregate exports of nuts, oil, hydrogenated oil and oilcakes during January-September 1960, as compared with the corresponding period in 1959 and also the whole years 1959 and 1958:

(Quantity in tons and value in rupees lakhs)

	Jan.-September		Whole year 1959	1958
	1960	1959		
Groundnut seed :				
Quantity ..	27,806	22,877	27,419	3,036
Value	273	199	237	21
Groundnut oil :				
Quantity ..	1,604	17,706	41,340	888
Value ..	25	264	574	14
Hydrogenated oil :				
Quantity ..	3,708	1,900	2,680	2,582
Value	65	41	56	53
Groundnut oil cake :				
Quantity ..	71,242	85,606	134,665	79,525
Value	284	321	521	265
Defatted meal :				
Quantity ..	191,528	188,548	268,609	131,246
Value	692	671	983	412
Total value ..	1,339	1,496	2,371	765

It will be observed from the table that, in 1960, exports of groundnut seed fared better than in 1959 or 1958, but those of oil suffered a drastic fall. *Vanaspati* exports nearly doubled, while oilcake and defatted meal

HEAVY FALL IN SCINDIA STEAM'S PROFIT

RISING EXPENSES AND SEVERE COMPETITION MAIN CAUSES

HOW the persistent depression in the world freight market and rise in costs of operation have been adversely affecting India's nascent shipping industry, is vividly illustrated by the financial results of the Scindia Steam Navigation Company Ltd. (Chairman: Dharamsey M. Khatau, Bombay) for the year ended 30th June 1960. The gross earnings of the Company had already suffered a setback even during the previous financial year when they had dropped by Rs. 47 lakhs. As a result of the growing international competition in shipping, higher operation costs, excessive delays in Indian ports, leading to a low turnround of ships and uneconomic freight rates in the coastal and adjacent trades, the Company's earnings have undergone a further deterioration, bringing the gross profit for 1959-60 down to Rs. 266.91 lakhs from Rs. 348.31 lakhs for 1958-59. At this level, the gross profit has not been sufficient to cover even the essential provisions such as the depreciation and development rebate and the Company has had to dip into the reserves even to pay a token dividend of 3 per cent (60 nP per share of Rs. 20 each) gross or a net of 2.10 per cent (42 nP per share). As the Company had added some new ships to its fleet in 1959-60, the Directors have had to provide a larger amount for depreciation and development rebate reserve aggregating Rs. 284.10 lakhs as against Rs. 244 lakhs in the previous year. If allowance is made for this factor, it is seen that the Company has actually sustained a loss of Rs. 19.73 lakhs.

In their report to the shareholders, the Directors have explained the various forces responsible for the unenviable plight of the Company. First, the freight rates have remained at uneconomic levels. In spite of the continuing imbalance in the available tonnage in the world and its utilisation, the principal maritime nations of the world are vying with one another to increase their respective fleets and are thus aggravating the problems of shipping companies of developing nations. Secondly, uneconomic freight rates have been prevailing in the coastal and adjacent trades, too. And, thirdly, the delays to ships, especially to ships employed in coal voyages, at loading and discharging ports, and the poor despatch obtained have considerably increased the losses in coastal operations.

The cargo lifted and the freight earned by the Company have shown some improvement. The cargo lifted, for example, has increased from 2,453,738 tons to 2,676,600 tons, while the freight earned has moved up from Rs. 1,658.65 lakhs in 1958-59 to Rs. 1,835.79 lakhs in 1959-60, a rise of no less than Rs. 177.14 lakhs. But this has not improved the Company's profit margin, because expenses have staged a sharper increase, namely, from Rs. 1,418.61 lakhs to Rs. 1,664.09 lakhs, an increase of Rs. 245.48 lakhs. The increases in expenditure have occurred mainly under charter hire, stevedoring charges, marine dues and claims. At the same time, other incomes, too, have dropped by as much as Rs. 26.61 lakhs.

In order to give a nominal dividend of 60 nP per share on 56,32,294 shares, the Directors have decided to withdraw the requisite amount of Rs. 33.79 lakhs from the general reserves. As stated earlier, the Directors have provided in all Rs. 284.10 lakhs for depreciation and development rebate reserve, the share of the latter being Rs. 101 lakhs. The Directors have described this provision as special depreciation representing statutory development rebate reserve, as required under the Income-tax Act.

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Freight and passage money	18,77.45	16,86.76	13,85.56	12,46.03
Other incomes	53.55	80.16	51.72	35.63
Expenses	16,64.09	14,18.61	10,47.14	9,11.18
Gross profit	2,66.91	3,48.31	3,99.54	3,70.48
Directors' remuneration	2.54	3.18	4.15	13.67*
Provision for:				
Depreciation	1,83.10	1,63.00	1,44.18	1,15.19
Taxation	..	40.00	24.00	31.00
Net profit	81.27	1,42.13	2,27.21	2,10.68
Transfer to development rebate reserve	1,01.00	81.00	90.00	72.00
Transfer to other reserves	..	0.95	56.00	58.00
Transfer to debenture sinking fund	..	10.00	10.00	10.00
Transfer from reserves	33.79	20.00	..	..
Dividend	33.79 (3%)†	73.22 (6½%)†	70.40 (6¼%)	70.40 (6¼%)
Carry forward	—16.13	3.60	6.65	5.84

* Managing Agents' commission. † Subject to tax.

It is needless to state that, in view of heavy fall in profit, the Directors could not provide anything for any other reserve funds. The Directors had allocated Rs. 10 lakhs for the debenture sinking fund in the previous year, but, as the Company has bought back debentures of the face value of Rs. 1.58 crores they feel that the appropriation to this fund is not necessary now. It may be noted, in this connection, that the outstanding debentures are still of the order of Rs. 3½ crores, as against which the balance to the credit of sinking fund is only Rs. 1.24 crores.

Table in column 1 shows at a glance the Company's performance in the last four years. It will be seen from the table that the Company is carrying forward a debit balance of Rs. 16.13 lakhs, in contrast to a surplus of Rs. 3.60 lakhs brought in. No provision has been made for tax liability, probably because the Company has no taxable profit. The abolition of managing agency and its replacement by special salaries to the two Executive Directors (Mrs. Sumati Shantikumar Morarjee and Mr. Shantikumar Morarjee) has benefited the Company to some extent, as will be seen from the table.

In spite of continued adverse circumstances confronting the industry, the Scindia Steam has pursued its policy of gradual expansion of its tonnage. The Company's gross tonnage of cargo steamers has increased by 4,114 to 255,327. Besides, it has a passenger-*cum*-cargo tonnage of 10,587, giving a total capacity of 265,914 g.r.t. In the report for 1958-59, the Directors had stated that, out of the two ships on order with the Lubeck yard, one ship was expected to be delivered in July 1960. The said ship was secured by the Company on the scheduled date and has been named *Jaladurga*. Of the two ships for which order was placed with Messrs. Mitsubishi Heavy Industries Reorganised Ltd., Kobe, under the Yen Loan agreement, the first, named *Jalakrishna*, was received in June 1960. The second ship is expected to be delivered this month. The Company has also placed an order for a 17-knot ship of the Japanese type with the Hindustan Shipyard at Visakhapatnam.

During the year, the cost of addition to the Company's fleet amounts to Rs. 3.41 crores, as against Rs. 2.79 crores in 1959. This brings the total cost of the fleet to Rs. 34.57 crores. The depreciation provided so far aggregates Rs. 9.59 crores, leaving the net value of the fleet at Rs. 24.98 crores. Payments on account of steamers under construction amount to Rs. 134.87 lakhs and other fixed assets (net) to Rs. 21.56 lakhs. Investment (at cost) are of the order of Rs. 8.84 crores, including those in Government securities accounting for Rs. 5.55 crores. The other current assets aggregate Rs. 9.72 crores, of which cash balances represent Rs. 2.98 crores. The total loan liabilities (including those secured by 4½ per cent 1963 debentures) amount to Rs. 15.29 crores and other current liabilities and provisions Rs. 7.22 crores. Of the former, loans from the Government of India amount to Rs. 9.30 crores and overdrafts from banks Rs. 1.05 crores. The excess of assets over liabilities is Rs. 22.58 crores represented by a paid-up capital of Rs. 11.39 crores, all in ordinary shares of Rs. 20 each, and reserves and surplus of Rs. 11.19 crores. Thus, almost each share has a backing of almost 100 per cent by way of reserves, that is, a break-up value of Rs. 40.

The Directors' report does not give any indication regarding the outlook for the current year although more than six months of the year had passed by the time the report was prepared. These six months were no better than 1959-60 to any significant extent. Nor are conditions propitious for the coming six months. The latest dec'sion of the Government that imports of goods bought with the help of U.S. Export-Import Bank loan should be brought to this country only through either U.S. ships or Indian ships may help relieve the situation to some extent.

Anyway, investors are still shy of buying shipping shares, as is evident from the fact that most of them are being quoted at a heavy discount. This is rather heavy in the case of Scindia shares. Thus, the Rs. 20 fully paid-up shares of the Company are being currently quoted at Rs. 14.48 *cum-div*. A few weeks earlier, they were lower still at Rs. 13.96. A year ago, they stood at Rs. 16.92. On an *ex-div*. basis, the latest quotation gives a yield of 2.98 per cent per annum, free of tax.

The fortunes of shipping companies have been fluctuating and it is quite possible that the present cycle of depression will soon yield place to a favourable phase. Having regard to this factor, purchase of shipping shares will be a risk worth taking, though it is undoubtedly a speculative risk.

NATIONAL ROLLING FARES WELL

OUTLOOK PROMISING

THE working of the National Rolling and Steel Ropes Limited (Managing Agents: The Associated Industrial Development Company (P) Ltd., Calcutta) during the year ended 30th June 1960 reveals a trend of much promise, as per the published accounts of the Company for the period. The gross profit for the year under review amounted to Rs. 34.29 lakhs—nearly double the amount for the previous year. The provisions for depreciation and taxation absorbed Rs. 8.86 lakhs and Rs. 12.50 lakhs, as against Rs. 4.86 lakhs and Rs. 1.60 lakhs, respectively, in the previous year. The dividend on equity capital was more or less maintained, inasmuch as it declared a taxable dividend of 13 per cent, as against a tax-free dividend of 10 per cent per annum for the previous two years.

A steady and progressive development is noticed in the Company's activities. There was substantial increase in its earnings in view of increased sales, higher output and better realisation. The sales went up by Rs. 46.27 lakhs in the last year and had nearly trebled in the course of the last few years. The Company is on the rate contract of the Director of Supplies and Disposals of the Government of India for the regular supply of steel wire ropes. The continued support of the Central and State Governments has been acknowledged in the report of the Directors. The supply position in respect of raw materials had considerably improved and the mill had been able to show increased output, though still working on single-shift only.

It may be recalled here that the year 1958-59 had been a relatively less remunerative one as compared with the previous years, as well as 1959-60. Sale proceeds had fallen during that year which was reflected in the lower profit (gross) of the Company at Rs. 16.57 lakhs. This may be attributed to an extent to the loss of production following the lockout declared in the mills. The production and labour relations appear to have taken a turn for the better ever since. Early in 1959 the Company had entered into an agreement with the workers, and the management expects better results and smooth working of the mill in future.

Messrs. Somerset Wire Company Ltd., Bridgwater, and Messrs. George Elliot & Co. Ltd., Cardiff, are the technical consultants of the Company for manufacture of steel wire and wire ropes.

The development and steady progress of the Company in the last four years will be evident from the following figures relating to its working:

(In lakhs of rupees)

	For the year ending 30th June			
	1960	1959	1958	1957
Sales	1,89.68	93.41	1,15.76	52.88
Closing stock	9.08	12.26	13.48	17.39
Opening stock	12.26	13.48	17.39	8.85
Raw material consumed	78.90	56.98	74.51	40.47
Salaries, wages and bonus	12.47	10.28	11.40	9.59
Other expenses	18.28	10.00	12.10	11.66
Gross profit	34.29	16.57	18.36	11.36

Carry forward	1.31	0.26	0.23	0.34

* Equity dividends for 1960 subject to taxation, while for other years tax-free.

The Company has maintained its borrowings very low in the last two/three years. In view of its profitable working for some years now, it has been in a position to liquidate its borrowings and wipe off the secured loans, turning over Rs. 29 lakhs, during the years 1957-59. It has also repaid the loan from the Industrial Finance Corporation of India, advanced early in 1953, for financing its development programme, on the mortgage of the mills' fixed assets. The total liabilities by way of secured loans amount to a mere Rs. 2.04 lakhs at the end of June 1960. Current liabilities and provisions are Rs. 39.90 lakhs, as against which there are current assets of the order of Rs. 65.97 lakhs. Reserves and surplus aggregate Rs. 31.50 lakhs.

The capital of the Company was Rs. 15 lakhs in 1954-55, consisting of Rs. 10 lakhs ordinary and Rs. 5 lakhs preference. This was raised to Rs. 55 lakhs in the next year, with a view to financing the development programme, by the issue of ordinary shares for Rs. 30 lakhs and redeemable preference shares for Rs. 10 lakhs. In 1959-60, the Company redeemed the entire preference capital (6 per cent cumulative, tax-free) of Rs. 15 lakhs at a premium of 10 per cent, from out of the profits of the Company and by transfer of sums from the reserves for this purpose.

The results of the last few years have been to satisfaction. The borrowings of the Company have been brought down. The output of the mill may be expected to go up in view of better labour relations and improvement in the supply of raw material. The future of the Company, therefore, offers much hope. The equity shares of Rs. 10 fully paid up are presently quoted at about Rs. 19.50 to give a tax-free yield of 4.6 per cent.

ASHOK LEYLAND'S PERFORMANCE

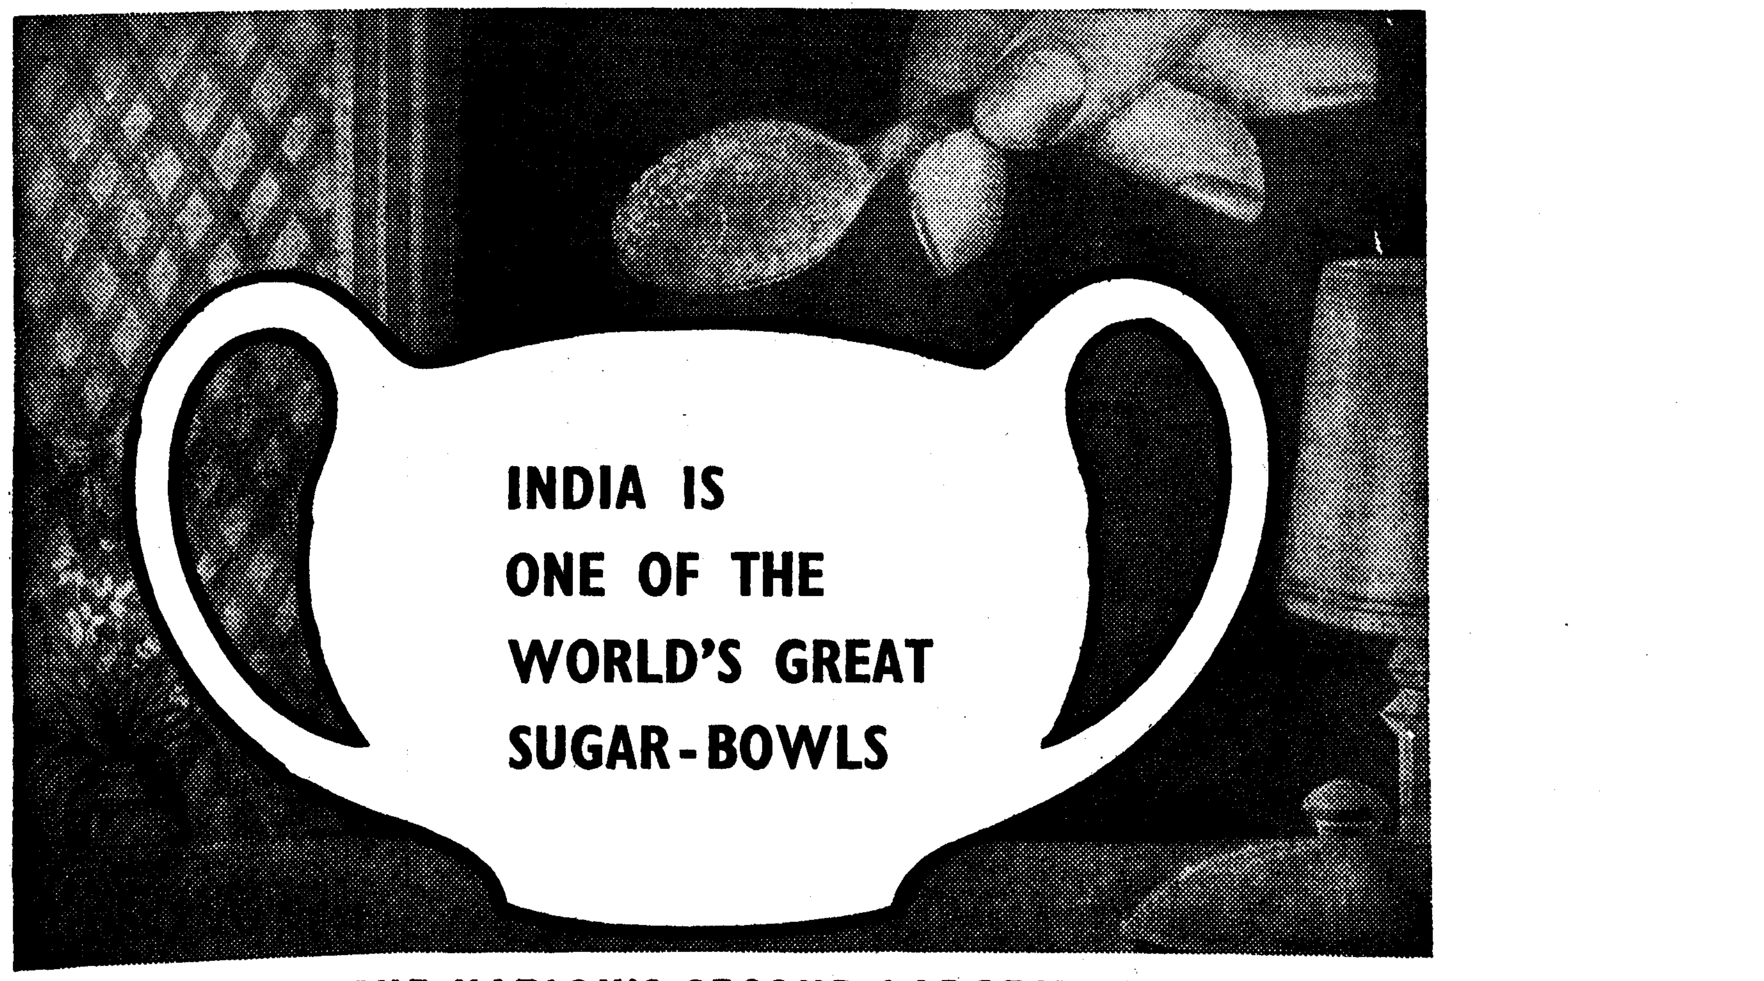
With a record-breaking month in December 1960, Ashok Leyland Ltd., Madras, smashed five Indian records for the output of heavy-duty diesel truck and bus chassis. With an overall increase in production of 42 per cent as compared with the year 1959, the Company announced that the records broken included the highest monthly production of heavy-duty truck and bus chassis in December 1960, thus creating a record in deliveries and a record in turnover of Rs. 175.00 lakhs for the month.

Customers in India—private operators, State and Municipal Transport Undertakings, projects and others—have benefited by this production increase and deliveries in 1960 were up by nearly 350 per cent as compared with 1955 when the Company started operations. The vital export market had its share of business, too, with Ashok Leyland Comet bus chassis valued at over Rs. 8 lakhs being shipped to Ceylon for use by the Ceylon Transport Board in Colombo. The Company's best sellers were the Comet bus chassis and the 7/8 tons payload Comet truck chassis, all powered by the Ashok Leyland 0/350 100 b.h.p. diesel engine. Sales of the short wheelbase tipper chassis have also shown a marked increase.

Production of Ashok Leyland Comet UE. 350 6-cylinder diesel engines based on the popular Ashok Leyland 0/350 unit for installation in industrial machines has been very encouraging. Almost the entire output of over 150 engines has been delivered to Kirloskar Pneumatic Company, Ltd., Poona which is using these compact units in conjunction with Broom and Wade portable air compressors. In spite of delivering Comet chassis to the value of Rs. 7½ crores during 1960 and heavy Tiger and Titan vehicles and industrial engines to the value of over Rs. 1.25 crore, the value of unfulfilled contracts held by the Company is in the region of Rs. 20 crores.

GAS CYLINDERS (INDIA) LTD.

A new company by the name of Gas Cylinders (India) Ltd. has been incorporated with its head office at Calcutta. The Company intends to manufacture gas cylinders, with the assistance of foreign collaborators. Initially, the capacity of the plant would be approximately 60,000 pieces per annum and this capacity is expected to meet the maximum requirements of the country. The Government of India has given the necessary sanction. The Company has planned to start the production by the end of the current calendar year. The Company's authorised capital is Rs. one crore and it is likely to come to the market shortly.



SUGAR IS THE NATION'S SECOND LARGEST INDUSTRY

Sugar-cane and its products have been known to India from 5,000 B.C. Sugar production flourished in the country centuries ago. The Chinese Emperor Tai Tsung (627-650 A.D.) was so enamoured with the Indian product that he sent his men to this country to study it.

Today the industry is closely knit in the fabric of our national life and is the second largest industry in the country. To 1,90,000 factory workers and two million cultivators, it is the daily bread. To the nation, it is a "Kamadhenu" yielding the highest excise duty for any commodity—revenue for 1958-59 being Rs. 52.27 crores, Rs. 70.49 crores for 1959-60 and expected Rs. 78 crores for 1960-61.

Maharashtra Sugar Industry has no mean share.

Pioneers in twenties and early thirties founded this agro-industry with commendable foresight and effort. Its composite factory-farms revolutionised cane agriculture in Maharashtra and established suitable varieties and cultural practices. Today the industry is justifiably proud of its outstanding achievements on farms which hold their own with world figures. Average sugar-cane yield on these factory-farms is 53.5 tons/acre against all-India average of 14.5 tons/acre and against published world standards set by Java and Hawaii States respectively at 56.20 and 62.05. Maharashtra Sugar Mills and Godavari plantations are prouder still with their respective yields at 62.5 tons and 64.1 tons per acre this season. Yield of sugar per acre in Godavari Sugar Mills Farms 7.36 and Maharashtra Sugar Mills farms 7.80.

For the sake of agricultural productivity

SYNOPSES OF COMPANY REPORTS

Neelamalai Tea and Coffee Estates Ltd.

THE directors of the above Company [Managing Agents: Messrs. A. V. Thomas and Co. (India) Ltd., Madras] present the audited accounts of the Company for the year ended 30th June 1960.

Tea—Crop and cost of production: The tea crop harvested during the season, together with the costs is given below:—

	Estimates	*Crop harvested*	*Crop secured*
	1959-60	1959-60	1958-59
	Lbs.	Lbs.	Lbs.
Sutton	4,50,000	4,61,350	3,71,300
Katary and Bhawani	9 00,000	9,68,849	7,75,660
Total ...	13,50,000	14,30,199	11,46,960

With the favourable weather conditions the estates had, the tea crop has exceeded the estimate by 80,199 lbs. The prospects for the season 1960-61 are also bright. The total *F.O.B.* cost per pound was as follows:—Estates' cost of production Re. 1.49, excise duty, export duty and cess Re. 0.14 and labour bonus and gratuity Re. 0.12. There has been a general increase in cost of materials, fertilisers and transport charges, which has been responsible for the higher cost of production.

Tea Sales: The average price realised was Rs. 2.54 per lb. compared to Rs. 2.55 realised last season. Regular shipments of the Estates' teas have been sent to London and U.S.A. during the year and the prices secured were satisfactory.

Coffee crop:—The crop secured was 1,668.67 (1,782.28) cwts. against an estimate of 3,000 cwts. The coffee crop during the season was not satisfactory, owing to poor blossom showers and unfavourable weather conditions in the subsequent months. The prospects for the season 1960-61 are promising. The entire crop had been delivered to the Coffee Pool as usual. The cost of production was Rs. 228.29 per cwt. against Rs. 220.84 per cwt. last season.

The profit for the season amounted to Rs. 6,44,743 (Rs. 3,22,208) to which is added the balance brought forward from the previous season of Rs. 5,482 (Rs. 78,274) making a total of Rs. 6 50,225 (Rs. 5,38,482 including Rs. 1,38,000 being excess provision for taxation not required). Out of this, the directors have transferred to reserve for taxation Rs. 2,85,000 (Rs. 1,64,000) leaving a balance of Rs. 3,65,225 (Rs. 3,65,482 after transferring Rs. 9,000 to development rebate reserve). This amount the directors recommend to be disposed of as under:—

By payment of a dividend on preference shares at 5 (5) per cent, subject to deduction of income-tax, absorbing Rs. 90,000 (Rs. 90,000), by payment of a dividend on equity shares at 7½ (7½) per cent, subject to deduction of income-tax, amounting to Rs. 2,70,000 (Rs. 2,70,000) and by carrying forward to next year Rs. 5,225 (Rs. 5,482)

The increase, if any, in the dividend on preference shares as per provisions of the Preference Shares (Regulation of Dividends) Act of 1960 will be given effect to and the amount of increased dividend will be paid to the preference shareholders, when the Bill is passed into Law.

Estimates for the season 1960-61:

	Tea		*Coffee*	
	Crop Lbs.	*Cost of production per lb.* Cents	*Crop* Cwts.	*Cost of production per cwt.* Rs.
Sutton	4,75,000	138.61	..	..

Parasea Collieries Ltd.

The directors of the above Company (Managing Agents and Secretaries: Messrs. Deepchand Kishenlall, Calcutta) present the audited accounts of the Company for the year ended 31st December 1959.

The Company's profit for the year after providing Rs. 94.315 (Rs. 85 273) for depreciation, Rs. 27.612 (Rs. 28.579) for development rebate and Rs. 1.07.000 (Rs. 1.70 000) for income-tax is Rs. 1,07.849 (Rs. 90.362 after providing Rs. 6.950 for doubtful debts); with the balance brought forward from last year of Rs. 3.885 (Rs. 7.674) making a total available sum for disposal of Rs. 1.11.734 (Rs. 98 035) The directors propose payment of dividend in the following manner:

Dividend on 8,000 taxable preference shares at 5½ per cent. per annum absorbing Rs. 44,000 (Rs. 32,450) and dividend on 83,400 ordinary shares at Re. 0.62 (Re. 0.50 per share tax-free) per share, absorbing Rs. 51,708 (Rs. 41,700). Both dividends subject to deduction of tax as prescribed in Finance Act, 1960. This leaves a balance of Rs. 16.026 (Rs. 23,885) out of which Rs. 15 000 (Rs. 20,000) is to be transferred to general reserve, and the balance of Rs. 1,026 (Rs. 3,885) is to be carried forward to the next year's accounts.

Output and Despatches

	For the year ended Dec. 1959 (In tons)	*For the year ended Dec.* 1958 (In tons)
Raisings	1,57,231	1,68,996
Despatches ...	1,43,761	1,58,880
Stock after boiler consumption ...	12,660	7,714

During the year under review, the output has slightly decreased as compared with that of the previous year due to reduced working faces, as the working had approached the boundary of the area of the Company in Jambad top and bottom seams which are being worked at present. The despatches were also lower due to non-availability of the required number of empty wagons. The directors are trying their utmost to keep the working expenditure in control. The Company is trying to make arrangements for sand stowing to enable it to start pillar cutting in some sections of the present working. Sinking of the new pits in Kenda seam is in progress but various difficulties had to be faced by the management during the year under review, and the progress was not as expected. It will not be possible to get raisings of coal from these pits by the end of 1960 as reported last year and the directors expect the same during 1961.

Accounts in brief are as under:—

Woodcote Estates Ltd.

The directors of the above Company (Managing Agents: Messrs. Goodall & Co., Coonoor, Nilgiris present the audited accounts of the Company for the year ended 30th June 1960.

Crop, Cost and Prices

Crop—	*Actual* Pounds	*Estimated* Pounds
Estate	78,431	80,000
Bought leaf	13,646	25,000

Cost per pound Re. 1.52.

Average selling price per pound Re. 1.96.

The net profit including adjustment amounts to Rs. 2.080 (loss of Rs. 3,755). To this is added the balance brought forward from last year of Rs. 2,528 (Rs. 10,183) making a total of Rs. 4.589 (Rs. 6,428). Out of this amount the directors recommended payment of a dividend of 6¼ per cent tax-free on the preference capital absorbing Rs. 3,900 (Rs. 3,900) leaving a balance to be carried forward of Rs. 689 (Rs. 2,528).

Estimates for 1960-61 provide for an estate crop of 40,000 kgs. and leaf to be purchased outside 13,000 kgs.

Accounts in brief are as under:—

Ahmedabad Advance Mills Ltd.

The directors of the above Company (Secretaries and Treasurers: Tata Industries Private Ltd., Bombay) present the audited accounts of the Company for the year ended 30th June 1960.

The gross profit for the year, before providing for retiring gratuity. depreciation and development reserve amounted to Rs. 29.36.850 (Rs. 10.99.711). After deducting provision for retiring gratuity Rs. 75.000 (Rs. 15.000). depreciation Rs. 11.60.323 (Rs. 9.50.000) and development reserve Rs. 6.00.000 (Rs. 1.00 000) the profit comes to Rs. 11.01.327 (Rs. 34.711). To this is added the balance brought forward from the previous year's accounts of Rs. 11.155 (Rs. 11.155). transfer from development reserve of Rs. 2,00,000 (*Nil*) and transfer from general reserve No. 1 for payment of the proposed dividends on:—Preference shares amounting to Rs. 65,000 (Rs. 71,429) and ordinary shares amounting to (*nil*) (Rs. 2.80,000) leaving an amount available for disposal of Rs. 13 77,482 (Rs. 3,97,295). From this sum the directors have appropriated to general reserve No. 2 Rs. 9.00.000 (Rs. 34,711). The directors now recommend the following dividends for the year ended 30th June 1960:—A dividend at 5 per cent per annum free of income-tax (Rs. 6.50 per share gross or Rs. 4.55 net) on preference shares, calculated on the basis laid down in the preference shares (Regulation of Dividends) Bill, 1960 as amended, absorbing Rs. 65,000 (Rs. 71,429) and a dividend of Rs. 10 (Rs. 7.00) per share, subject to deduction of tax at source, on ordinary shares, absorbing Rs. 4,00,000 (Rs. 2,80,000) leaving a balance to be carried forward of Rs. 12,482 (Rs. 11,155).

During the year under report, a sum of Rs. 13 lakhs was spent on new plant and equipment, the main items of machinery bought being a Whitin combing set, a drying range and a water softening plant, of which the combing set and the water softening plant were received under the Export-Import Bank Credit Scheme. Under the same scheme the Company had applied last year for 4 Whitin drawing frames for which it obtained an import licence. The sanforizing machine for which the Company holds a valid import licence for more than a year now has not yet been imported as the question of royalty payment is yet to be decided. An import licence for the 96 automatic looms referred to in last year's report have not yet been received. The directors are, however, hopeful that they shall get the licence soon, now that the deferred payment agreement between the Governments of India and Japan has been finalised.

From 16th February 1960 the Stock Exchange placed the equity shares of the Company on the *Cleared Securities List.*

At the extraordinary general meeting held on 31st March 1960, shareholders approved of the appointment of Tata Industries Private Ltd. as Secretaries and Treasurers of the Company from 16th August 1960. The Central Government have since given their approval to the appointment on the terms and conditions approved by the shareholders, subject to certain modifications.

The installed capacity of the mills is 49,168 spindles and 1,016 looms with a processing capacity equal to 80 per cent of the total volume of production.

Accounts in brief are as under:—

Central India Spinning, Weaving and Mfg. Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Tata Industries Private Ltd., Bombay) present the audited accounts of the Company for the year ended 30th June 1960.

The directors regret to report a working loss of Rs. 8,93,325 (Rs. 52,69,282) for the year under review. The loss is mainly due to unsatisfactory trading conditions for a substantial part of the year under review and due to further increases in the cost of production and heavy interest charges during the period of re-organisation.

The value of new plant and equipment installed during the year under report amounted to Rs. 7,05,000 and new construction works completed have cost Rs. 4.23,000.

At the extraordinary general meeting of the Company held on 31st March 1960, shareholders approved of the appointment of Tata Industries Private Limited as Secretaries and Treasurers of the Company from 16th August 1960. The Central Government have since given their approval to the appointment on the terms and conditions approved by the shareholders, subject to certain modifications.

The installed capacity of the Mills is 1,15,188 spindles and 2,064 looms.

Balrampur Sugar Co., Ltd.

The directors of the above Company (Calcutta) submit the audited accounts of the Company for the year ended 30th June 1960.

The shareholders are aware that Tulsipur Factory of the Company, under a scheme of arrangement passed by the shareholders and sanctioned by the Hon'ble High Court of Calcutta, has already been transferred to Tulsipur Sugar Co., Ltd. The accounts for the year under review, therefore, show results in respect of Balrampur Factory only.

The results for the period after providing for all charges and taking into account earlier provisions for liabilities no longer required show a profit of Rs. 3,11,989 (Rs. 4,48,321) to which has to be added the balance brought forward profit from the previous year of Rs. 45.327 (Rs. 59,415) making a total of Rs. 3,57,316 (Rs. 5,07,736). From this amount the following appropriations have been made: For depreciation Rs. 1,12,350 (Rs. 1,08,409), for development rebate reserve Rs. 1,30,500 (Rs. 42.000) and for provision for taxation Rs. 10,000 (Rs. 1,30,000) leaving a credit balance of Rs. 1,04,466 (Rs. 1,57,327 after providing Rs. 70,000 for rehabilitation reserve). This balance, the directors recommend, should be disposed as follows:—

In payment of dividend at Re. 0.20 (Re. 0.40) per share, subject to tax deduction at source, on 2,80,000 shares for the year ended 30th June 1960, absorbing Rs. 56,000 (Rs. 1,12,000) leaving a balance to be carried forward to next account of Rs. 48,466 (Rs. 45,327).

The duration of season during the year under review was 124 days, against 128 days in the previous year. The cane crushed was higher at 25,70,489 maunds as compared to 21.74,072 maunds during the previous season. The recovery was also higher at 9.94 per cent. against 9.43 per cent in the preceding year. The crushing of higher quantity in a shorter period with better recovery is partly attributable to the extensions and reconstructions carried out in the factory. In order to achieve still better efficiency, it is necessary that the crushing capacity is increased to minimum 1,200 tons a day from approx. 1,000 tons a day, which capacity has been reached by the factory now. Therefore, a phased programme of further extensions and reconstructions has been taken in hand and the directors hope that within 2/3 years period, the Company should reach its target.

In accordance with the decision of the Government of India, the export quota of sugar for this Factory was fixed at 1.934 bags. Since the Indian Sugar Mills' Association has decided to accept sugar for export out of production of 1960-61 season, the same shall be delivered out of next year's production.

During the year under review the directors have issued 2.80,000 ordinary shares of Rs. 2.50 each to the existing shareholders in the proportion of one ordinary share for each existing ordinary share held in the Company. These right shares rank *pari passu* in all respects with existing ordinary shares except that they do not participate in the dividend declared for the year under review.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Indian Plastics Ltd.

The directors of the above Company (Kandivli, Bombay) present the audited accounts of the Company for the year ended 31st March 1960.

The accounts show a balance of Rs. 3,62,288 (Rs. 2,87,670) at the credit side of the profit and loss account, including the amount brought forward from the last year. The directors propose to distribute the available amount in the following manner:—To depreciation Rs. 1,63,960 (Rs. 1,49,775), to development rebate reserve Rs. 40,960 (Rs. 15,468), to dividend on 22,500 preference shares at 5½ per cent. subject to deduction of tax absorbing Rs. 1,23,750 (Rs. 84,825) and to carry forward Rs. 33,618 (Rs. 2,547 after providing Rs. 24,304 for wealth tax and Rs. 10,841 for income-tax).

The Company has entered into negotiations with Messrs. Graetz Kommanditgesellschaft, Altena, West Germany, who are one of the leading manufacturers of *Radios* and *Television* sets and parts thereof. The negotiation has been successfully completed and the collaboration agreement entered into. The necessary application for the approval of the collaboration agreement has been submitted to the Government of India and their sanction is awaited. The directors are also considering the scheme for manufacture of some of the major *Radio Components*, which are at present imported, in this factory. The Company has also introduced the *Transistorised Radio Receivers* during the year under review which has received appreciable admiration from the listening public.

The Company has also entered into collaboration with Messrs. Bakelite Gesellschaft MBH of West Germany, whose name is synonymous with *Plastic Moulding Powders and Resins.* The terms of the collaboration agreement have also been approved by the Government of India.

Accounts in brief are as under:—

Agarpara Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. B. N. Elias & Co. Private Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st March 1960.

The accounts of the Company reveal, with the carry over of Rs. 25,002 (Rs. 16,782) from the previous year and after providing Rs. 5,99,972 (Rs. 4,34,994) for depreciation and Rs. 5,10,000 (Rs. 3,95,000) for taxation, a balance of Rs. 12,86,065 (Rs. 18,39,972) which the directors recommend to deal with as follows:

To transfer to development rebate reserve Rs. 5,50,000 (Rs. 85,470), to transfer to contingency reserve [for payment of 30 per cent. tax deducted at source of preference dividends, payable after enactment of Preference Dividend Bill, now before Parliament] Rs. 30,000 (*nil*), to payment of proposed dividends at 10 (5 per cent. tax-free) per cent. on 6,00,000 ordinary shares, subject to deduction of tax Rs. 6,00.000 (Rs. 3,00,000), and to proposed dividends at 7 per cent. on 10,000 preference shares Rs. 70,000 (Rs. 70,000) leaving a balance to be carried over to next year of Rs. 36,065 (Rs. 25,002 after transferring Rs. 9,71,500 to general reserve; Rs. 3,25,000 to machinery replacement reserve; Rs. 85,470 to development rebate reserve and Rs. 63,000 for wealth tax).

In accordance with the working time agreement of the Indian Jute Mills' Association, the Mill worked 48 hours a week with 14 per cent of their looms sealed till 20th June, 1959, 12½ per cent. sealed from 22nd June, 1959 to 24th August, 1959, and thereafter with 9 per cent. sealed till the end of the year.

The modernisation of the preparing and spinning sections of the Company's Mill is now almost complete. The Company has embarked on a scheme of modernising the weaving section as well and import licences have been granted for the import of 24 *Automatic "One Mack" Looms* from the U.K. The Company has taken a loan from The National Industrial Development Corporation for its spinning modernisation programme.

The complement of *Carpet Backing Looms* at the Company's Mill has been increased during the year and further expansion is in progress. All looms under the expansion programme have been supplied by The Oriental Electric & Engineering Co. and the directors are pleased to report that they are working very satisfactorily.

Notice

ASSOCIATED BATTERY MAKERS (EASTERN) LIMITED

NOTICE TO SHAREHOLDERS

THE ACCOUNTS OF THE COMPANY FOR the year ended the 31st August 1960 exhibit a net profit, allowing for depreciation, of Rs. 52 Lakhs. After providing for taxation and reserves, bringing in the balance from the last account and deducting the amount of the interim dividend declared before the public conversion of the Company in January 1960, the amount available is Rs. 20 Lakhs.

The Board of Directors has resolved to recommend to the shareholders at the forthcoming Annual General Meeting that a final dividend be declared at the rate of ten per cent subject to tax.

By Order of the Board,

H. M. COX,
Secretary.

CALCUTTA, *27th January* 1961.

COMPANY MEETINGS AND DIVIDENDS

SHEVEROY ESTATES LTD. Annual General Meeting, Kondappanaickenpatty, Kannankurichi, Salem, 13th February 1961. Dividend: 9 per cent or Re. 0.18 per share, subject to deduction of tax. Transfer books will remain closed from 7th to 13th February 1961, both days inclusive.

INDIAN OXYGEN LTD. Annual General Meeting, Calcutta, 14th February 1961. Dividend: 15 per cent subject to deduction of tax. Transfer books remain closed from 28th January to 14th February 1961, both days inclusive.

SPENCER AND CO., LTD. Annual General Meeting, Madras, 17th February 1961. Dividend: 18 per cent or Re. 1.80 per share (includes interim dividend of 6 per cent or Re. 0.60 per share), subject to deduction of tax. Transfer books will remain closed from 10th to 17th February 1961, both days inclusive.

KIRLOSKAR ELECTRIC CO., LTD. Annual General Meeting, Rajaji Nagar, Bangalore, 18th February 1961. Dividend: 9 per cent or Re. 0.90 per share, subject to deduction of tax. Transfer books will remain closed from 6th to 20th February 1961, both days inclusive.

KIRLOSKAR BROTHERS LTD. Annual General Meeting, Kirloskarwadi, District Sangli, 20th February 1961. Dividend: Re. 1.75 per share (net). Transfer books will remain closed from 11th to 26th February 1961, both days inclusive.

HENLEY CABLES INDIA LTD. First Annual General Meeting, Bombay, 20th February 1961. Transfer books will remain closed from 6th to 20th February 1961, both days inclusive.

STRUCTURAL ENGINEERING WORKS LTD. Annual General Meeting, Bombay 21st February 1961. Dividend: Rs. 12.00 per share, subject to deduction of tax, payable on and after 1st March 1961. Transfer books will remain closed from 6th to 21st February 1961, both days inclusive.

SCINDIA STEAM NAVIGATION CO., LTD. Annual General Meeting, Bombay 22nd February 1961. Dividend: Re. 0.60 per share, subject to deduction of tax, payable on or after 1st March 1961.

JAM SHRI RANJITSINGHJI SPG. AND WVG. MILLS CO., LTD. Annual General Meeting, Bombay 23rd February 1961. Dividend: Rs. 42.00 per share (net), payable on and after 15th March 1961. Transfer books will remain closed from 16th to 23rd February 1961, both days inclusive.

KATAKHAL-LALA BAZAR RAILWAY CO., LTD. Annual General Meeting, Calcutta, 24th February 1961. Transfer books will remain closed from 10th to 24th February 1961, both days inclusive.

BURDWAN-CUTWA RAILWAY CO., LTD. Annual General Meeting, Calcutta, 24th February 1961. Transfer books will remain closed from 10th to 24th February 1961, both days inclusive.

AHMADPUR-KUTWA RAILWAY CO., LTD. Annual General Meeting, Calcutta, 24th February 1961. Transfer books will remain closed from 10th to 24th February 1961, both days inclusive.

BANKURA-DAMODAR RIVER RAILWAY CO., LTD. Annual General Meeting, Calcutta, 24th February 1961. Transfer books will remain closed from 10th to 24th February 1961, both days inclusive.

AHMEDABAD ELECTRICITY CO., LTD. Interim dividend for the half-year ended 30th September 1960, at the rate of 5 per cent per annum or Rs. 2.50 per ordinary share, subject to deduction of tax, payable on and after 24th March 1961. Transfer books will remain closed from 11th February to 1st March 1961, both days inclusive.

COMPANY REGISTRATIONS

INDIAN RUBBER REGENERATING CO., LTD. Business: To reclaim rubber from rubber scrap. Authorised capital: Rs. 1,00,00,000. Public company. Address: Kamani Chambers, Nicol Road, Ballard Estate, Bombay.

PULPA INDUSTRIES LTD. Business: Manufacturers of all kinds of paper, board and pulp. Managing Agents: Oriental Timber Trading Corporation Private Ltd. Authorised capital: Rs. 50,00,000. Public company. Address: 59, Apollo Street, Fort, Bombay-1.

WYETH LABORATORIES PRIVATE LTD. Business: Manufacturers of chemicals and pharmaceuticals, etc. Authorised capital: Rs. 2,00,00,000. Private company. Address: Steelcrete House, Dinshaw Wacha Road, Back Bay Reclamation, Bombay.

SOMAIYA ORGANIC CHEMICALS PRIVATE LTD. (Managing Director: Mr. S. K. Somaiya.) Business: Manufacturers of acetic acids, alcohol, etc. Authorised capital: Rs. 50,00,000. Private company. Address: Fazalbhoy Building, Mahatma Gandhi Road, Fort, Bombay.

FIBRE SPINNERS PRIVATE LTD. Business: Manufacturers, spinners and dealers in synthetic fibres, etc. Authorised capital: Rs. 50,00,000. Private company. Address: 6C, Sindhu House, Nanabhai Lane, Near Flora Fountain, Fort, Bombay.

INDUSTRIAL ENGINEERING DIE WORKS PRIVATE LTD. Business: Manufacturers of machine parts, fabrication, die casting and general engineers. Authorised capital: Rs. 10,00,000. Private company. Address: New Stock Exchange Building, 4th Floor, Apollo Street, Fort, Bombay-1.

KHOSLA PLASTICS PRIVATE LTD. Business: Manufacturers and traders in all kinds of plastic goods, electrical goods, etc. Authorised capital: Rs. 10,00,000. Private company, 43, Aundh Road, Kirkee, Poona-3.

N.B.—All the above companies are registered in the State of Maharashtra.

ORIGIN AND OBJECTIVES OF O.E.C.D.

MAJOR MECHANISM FOR EFFECTING HEALTHY ECONOMIC GROWTH

PLANS have now been completed for the reconstitution of the Organisation for European Economic Co-operation (O.E.E.C.) into the Organisation for Economic Co-operation and Development (O.E.C.D.). Meeting in Paris in December, Ministers from the eighteen full members of the O.E.E.C. and the two associate members—the U.S.A. and Canada—finalised and signed a convention which will now be submitted to Parliaments. The O.E.C.D. will come into being as soon as the Convention has been ratified or approved by at least fifteen signatory countries, which it is hoped will be by autumn of this year. In many respects, the new organisation will aim to carry on the same types of economic co-operation already established successfully by the O.E.E.C. But its constitution is different, reflecting the changed needs of the 1960s; and it is a change of profound significance, says the *Bulletin for Industry*, published by the Information Division of the British Treasury, that the U.S.A. and Canada will be full members.

The negotiations which culminated in agreement on the O.E.C.D. Convention began in January 1960, at a special economic conference in Paris of the twenty O.E.E.C. countries and a representative of the European Economic Community (E.E.C.). The main issue was the need to adapt economic co-operation within Western Europe and with North America to meet new conditions—first, the great increase in the economic strength of Europe since the creation of the O.E.E.C. in 1948; second, the emergence of European regional groups (E.E.C. and E.F.T.A.); third, the urgency to provide aid to less-developed countries all over the world. The January Conference took three steps. It set up a Group of Four to study and report on the problems of bringing into being a reconstituted O.E.E.C., it established a Trade Committee competent to study (among other matters) relations between the E.E.C. and E.F.T.A., and it recognised the decision of some of its members to found a Development Assistance Group (D.A.G.), as a forum in which countries already giving aid could co-ordinate their ideas and experience. The second and third of these activities were initiated immediately while the broader plans for the new body were taking shape. They will now be brought together within the framework of the O.E.C.D. itself.

The D.A.G.

The Convention for the O.E.C.D., and a detailed report spelling out the way in which the new body would work, were produced for the December Ministerial Conference by a Preparatory Committee which had been set up following the report of the Group of Four. The O.E.C.D. will promote policies directed towards achieving the highest sustainable economic growth and employment in member-countries consistent with financial stability.. As part of its work in contributing to economic expansion in less-developed countries throughout the world, it will establish a Development Assistance Committee (D.A.C.) to take over from the D.A.G. Co-operation on trade questions through the O.E.C.D. should offer new opportunities. The basic aim is to contribute to the expansion of world trade on a multilateral, non-discriminatory basis. The very important specific trade responsibilities of the O.E.C.D. are: confrontation of general trade policies and practices at regular intervals and whenever requested by a member (this function is without precedent in the O.E.E.C.); examination of specific trade problems primarily of interest to members and their overseas territories; and examination of any short and long-term trade problems currently being considered by the Trade Committee which remain outstanding. Under the last heading come problems raised for members by the separate existence of the E.E.C. and E.F.T.A.

Although the O.E.E.C.'s Code of Liberalisation, which played a valuable role while European countries were throwing off the trade restrictions necessitated by war-time and post-war conditions, is not to be carried forward in the new body, there are to be no withdrawals from the existing level of liberalisation. On the contrary, members intend to pursue their efforts to develop trade in accordance with their international obligations. The valuable experience of O.E.E.C. is to be drawn on where relevant, and the need to consider trade questions from the widest possible viewpoint is fully accepted. For the effective achievement of these trade objectives the report of the Preparatory Committee recommends:

"that the O.E.C.D. should, *inter alia*, look to the work done by the O.E.E.C. on the subject matters in question, including in particular those dealing with balance of payments difficulties, to the extent that this work is relevant to and consistent with its functions, in order to benefit for its own assessments from the experience previously gained; it should be guided by the common spirit of co-operation achieved in O.E.E.C. which proved so useful when difficulties arose in the past and which will equally characterise the reconstituted Organisation."

Mr. Dillon's Observations

The U.S., according to Mr. Douglas Dillon, Treasury Secretary, regards the O.E.C.D. as a major mechanism for promoting healthy economic growth both within the Western countries and throughout the free world. By enabling these countries to act in concert, the O.E.C.D. "can bring great intellectual, scientific and economic resources to bear upon the great tasks before the world." What are these great tasks? Answering this poser, Mr. Dillon observed, in mid-December last, as follows:

"First, there is the vital necessity of increasing and improving our (Western world) economic and technical assistance to the newly-developing countries of the free world. Many of them have only recently achieved political independence. They are learning that political independence is a hollow and fragile thing without economic progress. Their peoples are no longer willing to accept poverty as a normal state of existence. They are determined to gain for themselves the benefits of industrialisation and they are determined to improve their living standards. The political and social context within which the newly-developing countries seek these objectives will depend to a critical degree upon the resources made available to them by the industrialised countries of the free world.

"Outside aid, essential though it may be, is not in itself enough to meet the needs of the developing countries. We must also help them develop their own resources and institutions in order that they may become self-sustaining. Through the O.E.C.D., we can greatly facilitate our effective provision of these resources. In this connection, we warmly welcome the recommendation of the Preparatory Committee that Japan should be associated with this important work.

"Second, there is the need for our economies to attain and to maintain the highest sustainable rate of economic growth. If we are to meet the expanding needs of our peoples—if we are to increase the resources we make available to the less-developed countries of the free world—and if we are to advance the principles of freedom, our own economies must expand at a high rate and produce more and more of the goods and services which are demanded by our peoples and required for our common well-being and security.

"In pursuing this common objective, we must strive for an increasingly harmonious expansion of our economies since, as I have said, they are becoming increasingly interdependent. And we must never forget that economic policy decisions by each of our Governments also have significant repercussions on the economy of the entire free world. It is for these reasons that we have agreed in the convention we are signing here today to intensify and improve our consultation and co-operation on economic policy matters.

"Finally, we have agreed in the convention that we will work together to promote policies to expand world trade on a multilateral, non-discriminatory basis, in order to contribute to free world growth and prosperity. In this effort, we will be able to draw on the fine spirit of co-operation which has characterised the work of the O.E.C.D."

Mr. Dillon then went on to add:

"It is essential, in the troubled conditions which face us today, that the benefits of our work in the O.E.C.D. reach down to the ordinary citizen. It is fitting, therefore, that our convention calls upon member-Governments to consult and co-operate, not only to improve the economic well-being of our peoples, but to promote their social advancement as well.

"This is a goal to which the U.S. attaches great importance. Many of you will recall that the U.S. emphasised this aspect of international co-operation in the Act of Bogota, which was signed last September by the nations of the Americas. It is our hope that the various committees of the O.E.C.D. will be concerned with the social implications of their activities. It is also our hope that the secretariat will include specialised personnel concerned with social questions, in order to assure adequate support for this aspect of the work of the O.E.C.D.

"The O.E.C.D. convention is a good convention. It is broad and flexible. It provides a framework which will enable our new organisation to develop and adjust as circumstances require. What we do in the O.E.C.D. will be fruitful to the extent that we work together in seeking solutions for the important economic problems crying for our attention. The U.S. intends to co-operate wholeheartedly in this task. And, in this task, we are fortunate in having as Secretary-General a man of the capabilities and stature of Thorkil Kristensen, to whom we look for leadership in carrying out the mandates upon which we have agreed.

"We have, in truth, entered into a whole new era in free world economic co-operation. The steps we have taken toward closer economic co-operation will, I am confident, help bring us forward to new heights of prosperity and well-being as members of a peaceful and secure community of free nations which offers the fullest opportunity for every human being to achieve a better life in freedom."

INDIA'S PLAN FOR FOOD UNBALANCED

(*Concluded from page 202*)

existing stock. In this context, I may refer to the article by Ram Dayal, published in the March 1960 issue of *Agricultural Situation in India*, for evidence on the point without making it unduly long.

Target Must Be Revised

In view of these considerations I feel that there is a strong case for stepping up the target of milk production. The least we ought to do is to take into consideration the economic forces much in the same way as these have been taken into account in drawing up targets for food-grains and commercial crops. It is likely to be argued that milk production will cater to the needs of the higher-income group people whereas first priority ought to be given to demands of the low-income groups. While this is true, I notice from the Second Labour Enquiry Report that over 20 per cent of the expenditure on food of the low-income group is spent on milk in the Punjab, Rajasthan and other milk-producing States. Besides, there is undoubtedly a great demand for milk from urban areas. The factor which seems to limit milk consumption at present is the low milk production more than the purchasing power of the people. It is, therefore, to be hoped that the whole question will be studied afresh by the Planning Commission and adequate steps will be taken to revise the target for milk production.

Before concluding this brief article, it is necessary to make one more point. Statistics of milk production and consumption are most unsatisfactory in India. The only work that has been done to collect statistics of milk production on a scientific basis is the one carried out by the I.C.A.R. But this is on a limited scale. The only survey to determine food consumption whose results are available in published form is the one carried by the N.S.S. in 1949-50. It is learned that the N.S.S. has repeated the nation-wide survey of food consumption during the last 10 or 12 years, but the quantitative results of these surveys have not been published. Consequently, we have no means of judging whether milk consumption has increased or decreased since 1949. The scrappy evidence that is available suggests that milk availability has decreased, notwithstanding the attempts made in the earlier plans to seek increased production and availability. Unless one knows the shift in the patterns of consumption, it seems to us exceedingly difficult to prepare an adequate agricultural plan for production which can take into account not only the economic forces but also the nutritional consideration. I have always felt it rather awkward that a Ministry should undertake responsibility for planning without having the means at its disposal to collect statistics or even power to call for statistics already collected by the N.S.S. Surely, the hands of the Directorate of Economics and Statistics deserve to be strengthened in the course of the third Plan period and the Directorate, jointly with I.C.A.R., should be enabled to undertake a nation-wide effort at collecting and publishing statistics of milk production and consumption.

Notice

EASTERN INVESTMENTS LIMITED

THE BOARD OF DIRECTORS HAS DECIDED to recommend to the forthcoming Annual General Meeting of the Members the following dividends for the year ended 31st December 1960, subject to deduction of tax under Section 18(3D) of the Income Tax Act at the time of payment—

On Taxable Cumulative Preference Shares a final Dividend at 2½ per cent making a total of 5 per cent per annum, plus the sum which would increase the stipulated rate by 11 per cent, less Income-tax at the Company's rate of 20 per cent.

On Ordinary Shares at 14 per cent per annum.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA, *25th January*, 1961.

HEAVY DEMAND FOR BANK CREDIT

(*From Our Own Correspondent*)

BOMBAY, *1st February*

Hardly anything new has happened in the money market this week. The trend is one of acute stringency. The demand for bank credit is heavy. Banks are finding it difficult to attract fresh deposits at the prevailing rates. Nor are they prepared to pay more for them. They have either to borrow from the Reserve Bank at penal rates of interest or turn down some of the demands for credit. Some of them are said to be doing both. It is reported that one of the big banks has increased its rate of interest on advances by a further ½ per cent, in order to discourage the pressure for more accommodation.

The inter-bank call money is nominally quoted at 5½ per cent. We advisedly say nominally because not much business is taking place even at this rate.

There is no change in the rates of interest for house money repayable on notice and short-term deposits. These are as follows:

House Money: (i) Notice of 3 days upto and including 21 days: 2 per cent. (ii) Notice of more than 21 days: 3 per cent.

Term Money: (1) 31 days and over but upto and inclusive of 60 days: 3½ per cent. (2) 61 days and over but less than 12 months: 3½ per cent. (3) 12 months: 3¾ per cent.

The results of the sale of 91-day Treasury Bills through weekly tenders show that the total amount offered was unchanged at Rs. 2 crores during this week. The average rate of accepted tenders is, however, a shade higher at Rs. 2.585 per cent per annum, as against Rs. 2.580 per cent per annum in the preceding week. The sales of 91-days' Intermediate Treasury Bills indicate that buyers' interest in them is flagging. During 25th January to 28th January 1961, these Treasury Bills drew in only Rs. 5 lakhs, as against Rs. 1.14 crores in the period from 18th January to 21st January 1961. Nevertheless, their sale is being continued.

A decline of Rs. 5.38 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 27th January 1961. This brings the total notes in circulation to Rs. 1,909.47 crores. Notes held in the Banking Department have increased by Rs. 5.78 crores and the total notes issued by Rs. 39.68 lakhs.

The foreign securities portfolio of the Issue Department shows no change at Rs. 128 crores. But, as the balances held abroad by the Banking Department have increased by Rs. 23.50 lakhs, the total foreign assets are up by that amount at Rs. 147.67 crores.

The deposits of banks with the Reserve Bank have expanded by Rs. 1.56 crores to stand at Rs. 78.27 crores. There has been a rise of Rs. 1.82 crores in other loans and advances given by the Reserve Bank which include borrowings by the Scheduled banks also. There is an increase of Rs. 1.65 crores in advances against usance bills which now stand at Rs. 18.81 crores.

The Scheduled Banks' statement for the week ended 20th January 1961 reveals that the aggregate deposit liabilities have declined by Rs. 6.47 crores. Inter-bank borrowings of demand variety have increased by Rs. 2.19 crores, and of time variety by Rs. 42.61 lakhs. Total borrowings from the Reserve Bank are down by Rs. 10.84 crores, though those against usance bills have increased by Rs. 2.57 crores. Borrowings from the State Bank of demand and time nature have gone up by Rs. 13.72 lakhs and Rs. 1.13 crores respectively. Advances and bills (bank credit) have staged a rise of Rs. 5.08 crores, as against a rise of Rs. 7.78 crores in the preceding week, taking their total to about Rs. 1,213 crores. A year ago, this item stood at Rs. 1,008 crores. The falling trend in investment witnessed in the previous two weeks has persisted during the week under review also, the fall being Rs. 18.55 crores, on top of the decline of Rs. 18.03 crores in the preceding week. As in the week ended 13th June 1961, this fall in Scheduled Banks' investment portfolio is mainly accounted for by the fall in investments held by the State Bank of India.

The statement of the State Bank of India for the week ended 20th January 1961 discloses a fall of Rs. 7.85 crores in deposits, whereas advances have increased by Rs. 16 lakhs. Money at call and short notice also shows an improvement of Rs. 46 lakhs. The total cash has staged a sharp increase of Rs. 9.75 crores, while investments have contracted by Rs. 19.35 crores.

The gilt-edged market continues to be listless. The turnover is greatly restricted for want of buyers. No change has been made by the Reserve Bank of India in its policy of open market operations. Only very marginal changes have taken place in prices. In the Central loans, both 3 per cent 1963-65 and 3 per cent 1964 have recorded a slight rise of 5 nP, while 3 per cent 1986 (Conversion loan of 1946) has actually declined by 30 nP. All other Central loans are steady. Among the State loans, 4 per cent 1971 Maharashtra Loan and 2½ per cent Z.A.C. Uttar Pradesh Loan have moved up by 25 nP each, while 4 per cent 1969 Gujerat Loan and 4 per cent 1969 Madras Loan have gained fractionally by 5 nP.

In the foreign exchange section, the rupee-dollar rate has moved up, the banks' selling and buying rates for ready T.T. standing at Rs. 477.25 and Rs. 474.00 respectively, per 100 dollars, whereas a week ago these rates were at Rs. 477.00 and Rs. 430.50 respectively. The sterling-dollar rate has also recorded some change. The latest available rates are: 280.410-280.440 per £ for spot and 279.860-279.890 cents per £ for three months' forward. As compared with the rate as on 25th January, the spot rate shows a decline of 0.22 cent.

BULLION PRICES SAG AFTER EARLY RISE

(*From Our Own Correspondent*)

BOMBAY, *1st February*

The bullion market continued to rule firm in the earlier sessions but developed a sagging tendency yesterday which persisted today also. The earlier firmness was engendered by fears of an acute shortage in supplies of both gold and silver, following the persistently upward trend of offtake in the wake of diminishing arrivals. Thanks to brisk demand from upcountry centres, some bulls also sought to manipulate the market by trying to corner as much of the floating stocks as possible. Consequently, both the metals continued to march forward and established fresh all-time peaks on Monday—ready gold Rs. 121.65 and silver Rs. 209.25. Subsequently, however, the two metals encountered selling induced by apprehensions of intervention by the Forward Markets Commission and rumours regarding possible regulation of forward trading in Delhi and Calcutta centres. There was also some liquidation by tired bulls. Values, as a result, tended to look down. Nevertheless, today's closing rates were higher than those on Tuesday last week.

The average daily offtake of gold and silver during the week was less than in the previous week, being 4,250 tolas and 15 bars, as against 5,500 tolas and 18 bars. Daily arrivals averaged 4,750 tolas of gold and 23 bars of silver, those a week ago being 4,725 tolas and 24 bars, respectively. The floating stocks of gold are reported to be around 50,000 tolas and of silver are estimated at 500 bars.

Adjustment rates of gold and silver were fixed today at Rs. 120.65 and Rs. 207.65, respectively. The delivery order rate for *Maha* (February) settlement in gold was Rs. 121. The clearing rate for *Fagun* settlement was also the same, namely, Rs. 121.

The *Maha* (February) settlement in gold rose from Rs. 120.40 to Rs. 121.55 on 30th January but declined thereafter and touched a low of Rs. 120.20 today, before going off the board at Rs. 120.55. *Fagun* (March) settlement fluctuated between Rs. 121.65 and Rs. 120.55 and wound up the week at Rs. 120.90. Both the settlements were on a par at Rs. 120.75 on Saturday, 28th January, and Rs. 120.95 yesterday (Tuesday, 31st January). Today, the rate for transferring commitments from the *Maha* to *Fagun* settlement was against the bulls to the extent of 40 nP, as against 5 nP on Tuesday last week. On Monday, 30th January, the bulls in *Maha* settlement were required to pay a margin of Rs. 6 per 10 grams, following a rise of more than Rs. 5 from the starting rate.

In silver, the *Maha* settlement began the week at Rs. 207.85, as against the previous close of Rs. 206.80 and, after improving to Rs. 209.30 on Monday, receded to touch Rs. 206.50 today. The closing was distinctly better at Rs. 207.40. Commencing the week at Rs. 207.80, the *Fagun* settlement rose to Rs. 208.60 yesterday and, after declining to Rs. 206.30 today, finished higher at Rs. 207.05, a drop of Re. 1 over the week. The rate for transferring commitments from the *Maha* to *Fagun* settlement was against bears throughout the week; the actual rate increased from 40 nP on Friday to 65 nP on Monday but narrowed down to 35 nP today.

In the ready section, gold was quoted on a par with the forward (*Maha*) on Saturday and yesterday, but commanded a premium of 40 nP today when the closing rate stood at Rs. 120.90, as against Rs. 120.45 on Tuesday last week. Ready silver was on a par with the forward (*Maha*) except on two days when it commanded a premium —5 nP on Saturday and 25 nP today. The rate for the metal fluctuated between Rs. 209.25 and Rs. 206.90 before finishing today at Rs. 207.65, as against Rs. 206.90 on Tuesday last week.

The world price of gold in the London bullion market touched $35.36½ per fine ounce on 31st January, the lowest level to be seen since 19th October 1960, as against $35.40-$35.55 a week before. The decline followed President Kennedy's pledge not to raise the dollar price of gold given in his "State of the Union" Message to the Congress on 30th January. Despite the decline, the price was still one per cent above dollar parity and higher than any price registered from the reopening of the London gold market in 1954 upto 19th October 1960. In sympathy with the world price and owing to the firmness of the pound sterling *vis-a-vis* the dollar, ready gold in London eased from 252*s.* 8*d.* to 252*s.* 5*d.* Ready silver in London advanced from 79¾*d.* to 79¾*d.* and the forward from 79¾*d.* to 80*d.* Silver in New York, however, continued to rule unchanged at 91.375 cents.

The following table shows the trend of the market during the week:

	1-2-1961 (closing)	High	[Low]	24-1-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.

FURTHER FALL IN COTTON

(*From Our Own Correspondent*)

BOMBAY, *1st February*

In spite of the issue of the long-awaited third instalment of Indian cotton quota by the Textile Commissioner on the 26th January, the cotton futures market ruled easy during the week under review. There are at least three reasons for the failure of the quota to have any influence on futures prices. First, the assurance given by the Textile Commissioner, which was again reiterated by him at Coimbatore on the 24th ultimo, that extra quotas of cotton would be given to mills for working third shifts, has dispelled fears that adequate supplies may not be available. Secondly, crop outlook has undergone a major change for the better. Current estimates place the crop at over 50 lakh bales. The large arrivals of new crop in the local and up-country markets also indicated a good crop. On top of this, there is the prospect of more imports of P.L. 480 cotton from the U.S. These factors have brought about a change in the psychology of the market too. The shortage psychosis has yielded place to a feeling that supplies will be sufficient to meet the demand. This change brought forth nervous liquidation also. Consequently, the I.C.C. Jarilla April futures lost further ground during the week.

The contract opened the week at Rs. 583.50. After a brief spell of firmness, which was due to reports of rising mill consumption of cotton, it steadily declined to Rs. 572.50 today. The net loss over the week is Rs. 12.75.

In the spot market at Sewri, the quota has not revived mill activity to the extent expected. This is because most of the mills, especially those in Bombay, had made large purchases earlier on a subject-to-quota basis. Heavy arrivals of new crop in Gujarat and the commencement of marketing of Laxmi and Jaydhar crops in the South induced upcountry mills also to keep off the Bombay market in anticipation of a further fall in prices. Moderate mill buying is, however, noted for popular varieties such as Vijay, Digvijay, L.147, CO2, Khandesh and Kalyan. Failure of demand to revive in the wake of large arrivals has exerted a downward pressure on prices.

The quota announcement said that mills, which had already been allotted a quota equivalent to 55 per cent of their consumption last season, would be given a further allotment to the extent of 20 per cent while those mills which had received a total allotment of 40 per cent, would be given 35 per cent. This quota thus brings the total quantity allotted to all mills to 75 per cent of their consumption last year.

One more week has passed without an official word about the second export quota. Exporters are disappointed that the cogent plea made by them for an additional quota has fallen on deaf ears. Some seem to have given up all hopes of an immediate quota while some others are reported as covering superfine and choice Bengal *Deshi* in anticipation of quota.

Barring stray buying in Sudan and East Africans, interest in foreign cotton was subdued.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Digvijay 940, 1,000; Vijay 945; L.147 1,025; Moglai 780; 197/3 825; CO2 1,290; Ganganagar 960; B.P. (U.N.U.G.) 1,385; Sudan G35 1,830; Busoga (U.N.U.G.) 1,375.

Quiet conditions prevailed in the Karachi cotton futures market during the week under review. As the January contract expired on 25th January at Rs. 73.75, operators' interest was centred on the March contract which, however, declined from Rs. 72 last week-end to Rs. 71.50 yesterday, thanks to speculative selling prompted by favourable crop reports. The switch-over of purchases to the May contract also contributed to the decline. Spot prices too showed a sagging tendency. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi, the figures in brackets being the ruling prices a fortnight ago:

Sind *Deshi* 106 (109); Punjab *Deshi* 104 (107); 4F Punjab Roller 90.05 (91.40); S.G. 95.05 (95.90); 289F Punjab Roller 97.55 (97.90); S.G. 102.50 (102.50).

Easy conditions prevailed in the Alexandria cotton futures market during the week. Values receded on selling by speculators and lack of export interest. Turnover, however, was limited as most operators were waiting for the announcement of Sudan cotton policy to enter into fresh commitments. Both the long-staple Karnak and medium-staple Ashmouni contracts were marked down. The following table indicates the extent of the fall in prices during the week. The figures in brackets are last week's closing quotations:

(In tallaris per lb.)

Karnak: March 71.85 (72.32), May 72.20 (73.25).

Ashmouni: February 59.35 (60.30), April 60.35 (61.70), June 61.60 (62.70).

Export sales of Egyptian cotton from 1st September to 31st December 1960 amounted to 426,772 bales of 720 lbs., as against 697,763 bales in the corresponding period of last season. Actual shipments during the period, however, amounted to only 240,000 bales, as against 290,000 bales. It is noteworthy that, in spite of efforts by the authorities to rectify the imbalance in the export destinations of Egyptian cotton, 60 per cent of shipments this season have so far gone to Communist countries, as against only 31 per cent to West European countries, U.S.A., India and Japan.

Buoyant conditions prevailed on the Liverpool Cotton Exchange during the week. Cotton

futures advanced on firm support prompted by better New York advices and keen demand from domestic mill buyers. Both the American and American type contracts rallied. The net gain during the week ranged from 30 to 45 penny points per lb. The Sudan contracts, however, were quietly steady. The following are the latest available quotations—in pence per lb.—from Liverpool (the figures in brackets being last week's closings):

American cotton one-inch staple contract: March 23.30 (22.90); May 23.60 (23.30); July 23.90 (23.60) and October 24.35 (23.90).

American cotton mixed growth contract: March 23.60 (23.20); May 23.95 (23.60); July 24.50 (24.20) and October 24.70 (24.25).

Sudan: March, May, July 34.75 (34.75).

Trading conditions in the New York cotton futures market remained practically unchanged. Turnover was limited and price movements narrow. Uncertainties about the support prices for 1960-61 continued to restrict business. The prevailing opinion is that the 1961 support levels will be fixed at 75 per cent of parity. Allowing an estimated premium of 185 points for middling inch over the "average of the crop," that should work out to a support level of 30.94 cents for middling and a resale price (at 115 per cent of the support price) of 35.58 cents. Adding 125 points, a usual premium for New York futures over the value of spot middling at average location, the result is a maximum value of 36.83 cents for futures during the coming autumn. The minimum price below which entry into loan becomes more profitable than tender is 32.19 cents.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	31-1-61	24-1-61	17-1-61
Spot	32.25	32.25	32.25
March	32.20	32.20	32.04
May	32.65	32.66	32.52
July	33.16	33.15	32.90

GROUNDNUT EXPORT QUOTA

(From Our Own Correspondent)

BOMBAY, 1st *February*

In the oilseeds market, groundnuts met with renewed buying support, following the fresh export quotas for H.P.S. groundnuts and expeller cake, while castorseed, linseed and cottonseed suffered a distinct setback mainly on account of larger arrivals. The Government of India has announced the release of a further quota of 20,000 tons of H.P.S. groundnut for export in 1961 and a quota of 20,000 tons of groundnut cake (expeller variety) for export in the first half of the year. Exports will be allowed by all shippers including established shippers) on production of firm sale contracts in the form of cable offer and cable acceptance on first-come-first-served basis. In order to ensure execution of contract the shippers will be required to furnish bank guarantee equal to 10 per cent of the f.o.b. value in the case of H.P.S. groundnut and 5 per cent of the f.o.b. value in the case of groundnut expeller cake. An individual ceiling of 500 tons has also been fixed in the case of groundnut expeller cake exports. It may be recalled that an export quota of 20,000 tons of H.P.S. groundnut kernels had been released last month.

The export quota has been released at a time when the supply position continues to be tight. Therefore, there was brisk activity in spot groundnuts and oils. Futures contracts, too, were firm, the prices knocking at the ceilings. Trade circles felt that, though the current prices of H.P.S. groundnuts were well below world market prices, there was bound to be good demand from Canada. Besides, there were reports of enquiries from some Communist countries. So far as the U.K. was concerned, however, the immediate prospects were not considered to be favourable. Crushers and *vanaspati* manufacturers were keen buyers of groundnuts earlier in the week. The upward trend of prices was halted somewhat towards the close of the week, thanks to sizable profit-taking at higher levels and better arrivals of new crop from Hyderabad. Groundnut May contract rose from Rs. 217 to Rs. 218.50, before closing today at the last week's level. The February contract was maintained at the ceiling level of Rs. 220. Nizam bold rose by a rupee to Rs. 48.75. Coromandels improved from Rs. 48.50 to Rs. 49, after touching Rs. 49.50 earlier. Oil exmill put on 25 nP to Rs. 20.50.

In distinct contrast, castorseeds came in for heavy bull liquidation, following larger offerings from Andhra. The reports of growing pressure of Brazilian oil supplies at lower prices, too, dampened the enthusiasm of bulls. Castor May 1961 contract fell by Rs. 5.75 to Rs. 170.50. Ready Madras gave way from Rs. 34.75 to Rs. 33.75. Kanpur eased by 75 nP to Rs. 32.75. Oil B.S.S. moved down by 45 nP to Rs. 14.65 and Commercial by 40 nP to Rs. 13.80.

Linseed ruled weak, despite support from some upcountry operators. Arrivals were larger and they were expected to increase further in the next few days. Business for oil export, however, continued to be absent, in view of the wide disparity between Indian and world prices. Linseed May 1961 contract eased from Rs. 35 to Rs. 34.41. Bold ready declined by Re. 1.25 to Rs. 35.50. Oil shed 35 nP to Rs. 16.10.

In sympathy with the raw cotton market, cottonseeds lost much ground. May contract fell by Rs. 4.75 to Rs. 88. February 1961 contract were marked down by Rs. 4.50 to Rs. 87.75. In the ready section, Whites eased by Re. 1.20 to Rs. 18.80. Berars declined by 60 nP to Rs. 18.80. Non-whites lost 50 nP to Rs. 18.80.

Sesame also ruled easy. The easiness was due to larger arrivals. Bold variety fell from Rs. 340 to Rs. 330. Oil declined by 25 nP to Rs. 25.25.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	1-2-1961	24-1-1961	18-1-1961
Groundnut	Rs.	Rs.	Rs.
February 1961	220.00	220.00	220.00
May 1961	217.00	217.00	218.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BEMBERG YARN RALLIES

(From Our Own Correspondent)

BOMBAY, 1st *February*

There was a rally in prices of forward Cupressa Bemberg yarn (60 x 1) during the week under review. The rally followed excellent support lent by bulls who tried to extend their commitments in the April delivery on hopes of enlarged enquiries from consuming centres. Other art silk yarns moved rather indecisevely, as operators preferred to await emergence of a clear picture regarding demand from weaving units. Disappointment was expressed over reports regarding the rejection of large quantities of rayon goods (meant for export) offered for inspection. Note was taken of the drop in the export price of rayon goods during the year 1960. Although the quantity shipped was higher at 34.51 million yards, as against 17.30 million yards in 1959, the value of exports was lower at Rs. 3.53 crores, as against Rs. 3.73 crores. Staple fibre yarns met with good support and registered an improvement in prices. Cotton yarns ruled irregular. Thus, coarse and medium counts were quiet due to the declining tendency of raw cotton prices, while finer counts evoked enquiries and tended to look up.

Cupressa Bemberg yarn (60 x 1) April contract forged ahead from Rs. 2,390 to Rs. 2,500. February delivery spurted by Rs. 15 to Rs. 2,460. Spot Cupressa was fully maintained at Rs. 2,425. 150 deniers Japan encountered selling and fell by Rs. 28 to Rs. 1,625. 120 Italy was quoted at Rs. 1,323, as against Rs. 1,322 last week-end. 120 Japan was well favoured, the quotation rising by Rs. 12 to Rs. 1,411. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade dropped 7 nP to Rs. 11.48, while 120 Bt. cones 1st grade gathered 3 nP to Rs. 13.16.

Staple fibre yarn (40 x 2) February settlement advanced by Rs. 14 to Rs. 828. April delivery picked up Rs. 10 to Rs. 8.17. Spot Kohinoors spurted from Rs. 9.61 to Rs. 9.90. Centurys rose by 6 nP to Rs. 9.61.

In the cotton yarn section, ten counts Podars eased by 12 nP to Rs. 17.50. Moderns were neglected at Rs. 18.75. Thirty counts Simplex were quiet at Rs. 26.50, as also New Greats at Rs. 26.37. Forty counts Maduras shed 13 nP to Rs. 31.87, but Minaxis put on 25 nP to Rs. 32.25. Sixty counts Gokaks improved by a rupee to Rs. 49. Finlays were firm at Rs. 66.66. Eighty counts Finlays gained Re. 1.01 to Rs. 81.81. Mahendras were fully steady at Rs. 69.69.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those a week ago.

	1-2-1961	24-1-1961
Art silk yarn—	Rs.	Rs.
60/1 Cupressa Bemberg (100 kg.)		
February	2,460.00	2,445.00
April	2,500.00	2,390.00
60/1 Cupressa Bemberg spot	2,425.00	2,425.00
150 Japan (per 100 kg.)	1,411.00	1,399.00
150 Japan (per 100 kg.)	1,625.00	1,653.00
120 Italy (per 100 kg.)	1,323.00	1,322.00
Staple fibre yarn—		
40 x 2 February (per 90.72 kg.)	828.00	814.00
40 x 2 April (per 90.72 kg.)	817.00	807.00
40 x 2 Century (per kg.)	9.61	9.55

80s Finlay	81.81	80.80

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 31st *January*

Malabar black pepper moved downward during the fortnight, except for a day or two when prices improved under fresh buying by bulls following the news that New York bought a sizable quantity of Lampong from Singapore from $0.42½ to $0.43. Ready garbled at Cochin, after losing ground to Rs. 381, is now hovering around Rs. 394. The undertone, however, was quiet, owing to continued lull in foreign inquiries and underselling by Lampong. February delivery came down from Rs. 426 to Rs. 400 before recovering to Rs. 404, with thin turnover. Ungarbled at Cochin is quoted at Rs. 375 per quintal. Calicut is listed at Rs. 375 per quintal. The significant feature of the market was steadiness which was more due to holding off of growers and some support from inland inquiries, despite seasonal arrivals. Inland buying, however, is likely to taper off after a fortnight or so. Thereafter, if foreign inquiries, particularly from the U.S. continue to be as sparse as they are today, the market is likely to go down, as the growers may become tired sooner or later.

Though Russia is reported to be out of the market, there are some inquiries from other East European countries which have so far proved a supporting factor. Conversely, the present thaw in the political situation resulting from the statements of Mr. Krushchev and Mr. Kennedy is acting as a deterrent to higher prices. A section of the marketmen opines that Malabar black pepper may suffer the same fate as Sarawak which now appears to be keen sellers at a decline after waiting in vain for higher prices.

White pepper in London established a new low level of 51½d. under anxiety of sellers to sell before the advent of the new crop of Sarawak and Muntok.

Spot in New York, after improving to $0.47 under pressure of buying by some grinders, came down to $0.45½. Bulls in New York tried to push up the market, but, when they saw that Lampong was eager sellers, they withdrew.

Ready pepper in Bombay is nominally quoted at Rs. 215 per 50 kilos.

TEAS FIRM UP ON GOOD DEMAND

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 24th *January*

A total of 400,000 kilograms was on offer in Sale No. 4 held on Tuesday 24th January. A further seasonal improvement in quality was noticeable. There was good demand but at irregular rates. Plain, lowgrown and low medium descriptions opened quietly but firmed up towards the close with better support for fannings than broken grades. Improved quality mediums and good mediums came to a dearer market, but where quality showed little change, brokens were steady but fannings tended easier. Highgrown brokens met with only fair demand, many being withdrawn without bid, but similar fannings were sometimes dearer. Black leaf brokens were barely steady whilst there was less competition for fannings suitable for the Middle East. Whole leaf grades came to an irregular market with orange pekoes generally firm to dearer. C.T.C. and legg-cut descriptions were firm. Tippy teas were dearer to buy.

	1961	1960
	Rs.	Rs.
Low medium	4.60-4.90	4.63-4.85
Medium	5.00-5.35	4.85-5.18
Good medium	5.35-5.80	4.85-5.40
Quality	6.00-8.40	5.20-8.82

The average price realised in Sale No. 4 was Rs. 5.23 per kilo as against Rs. 5.11 in the previous week and Rs. 5.14 in the corresponding sale last year.

Dust Sale No. 4:—139,000 kilograms was offered in Dust Sale held on Friday 27th January. There was very strong and active demand. All descriptions met with keen competition and were irregularly dearer up to 20 nP, buyers emphasising more on colourey mediums which sometimes advanced more. There was good enquiry for residuals which were fully firm. Highgrowns continued in demand and sold at dearer rates following quality. C.T.C. and legg-cutt types also shared in the upward trend of the market, although these sold at irregular rates.

The average price realised in Dust Sale No. 4 was Rs. 5.12 per kilo as compared with Rs. 5.00 last week and Rs. 4.32 in the corresponding sale last year.

Export Quota:—There are still large sellers at ½ nP per kilo with very few buyers.

Colombo:—Just over 6¼ million lbs. were offered and met with less demand at lower rates. Best liquoring highgrowns were irregular following quality whilst the lesser kinds eased 10 to 20 cents. Fannings met with fair demand throughout the sale but were easier.

London: North Indian and other growths:—In Monday's auction the demand was selective with prices for most descriptions irregular and occasionally easier following quality, but plain sorts came to a firm market. Plain broken pekoe remains at 3/9d.

Ceylon and South Indians:—In Tuesday's sale there was fair general demand and prices were easier by 1d. for most of the descriptions.

At the time of going to the press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No. 5*:—516,000 kilograms. Good general demand. Market fully firm to dearer. More interest in improved quality highgrowns."

TEAS WELL SUPPORTED

(From Our Own Correspondent)

CALCUTTA, 31st *January*

There was good demand for the teas on offer during yesterday's export sales. Prices, however, were irregular. Tea bookings to the United Kingdom during the week were satisfactory but the fact that much forward space was freely available showed that tea shipments are likely to fall in the near future.

The offerings during yesterday's sales amounted to 73,274 packages. Medium B.Ps were steady.

Fannings however, met with irregular demand. The better types recorded small gains in prices. Plain brokens were firm, and fannings fetched higher rates. Black Dooars B.O.Ps were also a strong feature. Fannings, however, had an irregular market. Best Darjeelings were taken at firm rates, but others eased. Tippy teas met with good demand.

Among C.T.Cs, the best autumnal teas were supported at higher rates, while the balance attracted buyers at rates lower by 10 to 20 nP. Medium and secondary grades lost 10 nP, and medium Assam B.O.P. and O.Fs 10 to 20 nP. The brighter liquoring types of the latter category, however, registered some occasional spurts.

In legg-cuts, the poorer stalky teas eased but the stylish leaf grades were steady.

The quotations per 1 kg., inclusive of excise duty, were: Best Assam C.T.C. fannings Rs. 5.80 to Rs. 6.30, best Assam C.T.C. B.P. Rs. 5.70 to Rs. 6.10, clean black pekoe Rs. 5.20 to Rs. 5.45, medium fannings Rs. 4.90 to Rs. 5.15, plain fannings Rs. 4.80 to Rs. 5.00, medium B.P. Rs. 4.70 to Rs. 4.90, and plain B.P. Rs. 4.50 to Rs. 4.65.

JUTES MOVE UP

(From Our Own Correspondent)

CALCUTTA, 31st *January*

The week under review witnessed a substantial addition to prices of raw jute and jute goods. This followed good buying interest. Local operators were busy covering in goods, but mills were reserved. However, there was no lack of offers in jute and, whenever buyers showed interest, their full requirements were met without difficulty, though the prices paid were higher. This was due to official estimates of good crop. The increase in fibre prices, it was noted, had raised the cost of production in mills. The recommendation for interim relief to workers as made by the Wage Board and now accepted by the Government was also considered to raise cost of production. Each worker, whether he is permanent, temporary or *badli*, is entitled to be paid Rs. 2.85 per month for three months up to December and an additional wage Rs. 3.42 per month from this month, is to be paid separately and adjusted to the final award as and when made. The interim relief is applicable to all mill workers in all parts of India, but it is stipulated that the workers of the Katihar mill are entitled to the relief at the rate of Rs. 3.42 per month effective from September last. Earlier, there were rumours that the Board had recommended an interim relief of Rs. 5 per worker per month.

Statistics relating to jute goods for 1960 reveal that consumption in the United States fell by 40 million yards. This has caused much concern in trade circles here and the question is asked whether this has been due to the use of more substitutes or to a fall in business activity. Since unemployment in the U.S. has increased in recent months and the Kennedy Administration is applying itself to the task of injecting fresh stimulus in that country's economy, this is equivalent to saying that business activity in the U.S. had been affected. That should have been one of the causes for the lower consumption of burlap. However, reports that American buyers are going in for substitutes in view of the high prices in India have been received from time to time in recent months. Whatever be the cause for the fall in U.S. consumption of burlap, there is no denying the fact that prices of hessian must come down and that India can hardly afford to lose business with the U.S.

Mills are shy in entering into forward commitments in goods for fear of the rise in fibre prices making their deals uneconomic. If the foreign buyer cannot be certain about supplies in the near future, he cannot be blamed if he looks out for substitutes sellers of which are able to enter into forward commitments. As though the problems of mills are not enough and acute, labour troubles are also fastly brewing in. There is much opposition from labour unions to the decision of mills to curtail working hours from 48 to 42½ a week, and workers have been asked to abstain from work on 13th February as a mark of protest. The reduction in working hours, it is said, will lead to a reduction of Rs. 5 to Rs. 7 in the monthly wages of weavers and mechanical staff and 5 per cent retrenchment of workers in other sections. The workers want the mills to defer implementation of the decision to reduce working hours. If working hours are not reduced and the mills cannot also seal looms, it is apparent that a more acute and serious shortage would raise fibre prices to such prohibitive levels as to force the mills to prefer a general close-down until the next crop.

News has now come that a Japanese shipping company is offering very stiff competition with the older Bank Line in carrying Pakistan raw jute and jute goods to ports in East and South Africa. The firm has reduced its freight to 25s. a ton. The Bank Line was charging 150s. per ton before cutting the rate to 25s., following the Japanese firm's efforts to get a monopoly of all jute goods shipments to African ports. The Japanese firm is now said to be desirous of carrying raw jute also to African ports at the same rate as for goods, that is, 25s. per ton, as against 70s. or so charged by the Bank Line.

Prices of fibre in the Pakistan markets were unchanged during the week. Support from overseas buyers was limited and, at this rate, it would appear that the season would close in Pakistan with a good carry-over. Balers were inactive. Although overseas buyers had completed their big purchases of this season, balers were left with about 400,000 bales more awaiting disposal. Arrivals from upcountry markets to Narayanganj were meagre and the opinion that this was due to very little stocks left with farmers was repudiated by reports of the improved financial position among growers, at any rate among large-scale landowners.

On Tuesday last covering business was a feature of trading, in the Calcutta goods market. Local operators chased each and every offer. As a result, ready B. twills were fully steady at Rs. 196 and ready hessian 40" 10 oz. to Rs. 64. Inquiries were received from overseas markets, and business was done with Cuba for heavy Cees against delivery in February-March. In view of the uptrend in fibre prices, mills were reluctant to enter into commitments in goods. On Wednesday, B. twills scored to Rs. 202 and hessian 40" 10 oz. to Rs. 66.85. Australian buyers bagged about 6,500 bales of woolpacks for deliveries extending upto June. Covering business was keener than the day before, and heavy Cees were constantly sought after. Offers were extremely limited and sellers ruled the day. Inquiries from overseas countries continued to be received, but, since mills had withdrawn, shippers could not make offers. On Friday, B. twills rose further to Rs. 203 and hessian 40" 10 oz. to Rs. 66.90. Covering business continued to be done over the weekend in an excited way B. twills were pushed up to Rs. 206 and hessian 40" 10 oz. to Rs. 67.75. Following covering demands again, B. twills closed higher at Rs. 207 yesterday, while hessian 40" 10 oz. were fractionally lower but firm at Rs. 67.00.

Sellers in the fibre market were reserved. Arrivals were meagre and, despite the fact that the quota of mills was smaller by about 400,000 bales for this week, prices shot up induced by the shortage. The labour's dissatisfaction at the decision of mills to reduce working hours imparted also strength. The opening and closing quotations for the chief varieties of ready jute per maund were as follows:

	Opening	*Closing*	*Gain*
	Rs.	Rs.	Rs.
Daissee bottoms ...	61.00	66.00	5.00
Northern bottoms ...	58.00	64.00	6.00
Assam bottoms ...	59.00	64.50	5.50

FOODGRAINS RECEDE

(From Our Own Correspondent)

HAPUR, 30th *January*

Foodgrains turned bearish towards the weekend, thanks to more winter rains which had brightened *rabi* crop prospects. Wheat, after early gains, drifted lower, to be quoted on Monday at Rs. 17.37 a maund for average quality and upto Rs. 18.75 for farm produce. Daily arrivals in the local market continued to be small, but consumer demand was being met by heavy sales of wheat and wheat flour through Government-sponsored ration shops. Winter rains were received over a wide area of the Punjab, U.P. and other parts of Northern India and crop prospects were said to be very bright now.

Rice was almost stationary during the week. New produce rice was still reaching the market and supply position of rice was reported to be satisfactory. The latest prevailing prices are:—*sela basmati* Rs. 28 to Rs. 30; *ramajwayan* Rs. 24; *raimunia* Rs. 25; *mainpuri* Rs. 21; *gadda* Rs. 19.75 a maund.

Gram eased further by 25 nP a maund to Rs. 16.50 a maund for Punjab variety, as stockists were anxious sellers, in view of bumper crop prospects. Bearish Punjab advices, too, imparted weakness. *Bejhar* also eased slightly to Rs. 12.50 a maund for inferior quality and Rs. 12.75 for *moongia* variety. Barley was quoted at Rs. 12.62. Maize drifted lower to Rs. 12.50 to Rs. 13.25 a maund, as local stocks were still heavy at 30,000 maunds and the stockists were anxious sellers, as maize was losing seasonal consumer demand. *Bajra* was also not in request, prices being lower at Rs. 14.75 to Rs. 15.25 a maund. *Jowar* lost 25 nP a maund to Rs. 12.75 and *guwar* white quality was almost stationary at Rs. 13.25.

Among pulses, peas and *arhar* ruled quietly depressed, despite poor stocks with trade (5 *khatties* of peas and 8 *khatties* of *arhar*). The coming crop prospects were very bright and the harvesting of new peas would begin by the end of February, while that of *arhar* would be as late as early May. New *urd* and *moong* were still reaching the local market from outside the State of U.P. in sufficient quantities. The latest prevailing prices (in rupees per maund) were:—peas *dara* 13.25; farm white 14.37; peas *dal* 14.50; *arhar* 13.37; *arhar dal* 17.50 to 18.50; new *urd* 19; *moong deshi* 18.50; from South 20; *massor* 15 to 17.

SUGAR IMPROVES

(From Our Own Correspondent)

HAPUR, 30th *January*

Sugar prices improved by about Re. 1.50 per bag during the week to be quoted on Monday at Rs. 112 per bag wholesale and retail Re. 1.09 per *seer* in the open market. The persistent efforts of the Union Government to export sugar to the U.S. at an early date acted as the main bullish factor. Sugar production in the current season was said to be going on vigorous in all factories in the State, as cane supplies were adequate, the price paid being Re. 1.50 to Re. 1.62 per maund, as against the open market price of cane at Re. 1 to Re. 1.25 a maund paid by crushers manufacturing *khandsari* and *gur*.

Sugar prices also improved fractionally in the Muzaffarnagar market. Spot delivery was quoted at Rs. 109.25 to Rs. 109.75 a maund, following prospects of exports to the U.S. The reported decision of the U.P. Government to release 50 per cent of its quota for free sale was unfounded, as no orders had been received as yet.

Khandsari ruled steady during the week on brisk demand from Madhya Pradesh, Maharashtra and Rajasthan. The Punjab and eastern U.P. also evinced interest. Daily arrivals of *khandsari* in the Muzaffarnagar market were about 5,000 maunds which were readily lifted. The latest prevailing prices were: inferior Rs. 26 to Rs. 31; superior Rs. 31.50 to Rs. 35; crystal Rs. 32.50 to Rs. 37.50; *boora* Rs. 32.50 to Rs. 36; old Rs. 22 to Rs. 30; and galawat quality Rs. 14 to Rs. 18 a maund.

Ready *gur* ruled quietly depressed during the week, as demand was slack. Loading facilities were easy, but, on Sunday when loading for *gur* was free, only six wagonloads were despatched. Local stocks mounted to 32,000 maunds and daily arrivals were at an average of 3,500 to 4,000 maunds. Arrivals, however, dropped on Monday to 500 maunds, due to inclement weather and rains. Prevailing prices were: *pansera* Rs. 13.25 to Rs. 13.50; *balti* Rs. 13.50; *chowrsa* Rs. 13.50; *shakker* Rs. 15.50 a maund.

Gur firmed up in the Muzaffarnagar market on brisk support from the Punjab, Gujerat and Madhya Pradesh stockists. Total arrivals during the current season were put at 776,000 maunds, the corresponding figure last year being 845,000 maunds. Prevailing prices were: *Chaku* Rs. 14.25 to Rs. 15.50; *laddo* Rs. 14.25 to Rs. 15; *rusker gur* Rs. 7.50 to Rs. 10 per maund.

Future *gur* ran down sharply on continued bear pressure. *Fagun* delivery was quoted on Monday at Rs. 13.84 and *baisakh* at Rs. 14.76, as against the week's opening of Rs. 14.18 and Rs. 14.92, respectively.

Sowing of cane crop for next season has begun. Large-scale sowings will, however, take place only in February.

BASE METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 31st *January*

Base metal prices ruled firm to steady during the week under review, thanks to good support and encouraging reports from overseas. Copper scrap supplies were tight and the "berry" quality hardened to Rs. 220 a cwt. from Rs. 218. Utensil scrap remained unchanged but firm at Rs. 204. In New York, the price, after an initial fall, rose to close higher. An influencing factor was the decision of Anacondas to reduce production by 10 per cent. On the London Metal Exchange, electrolytic copper closed lower at £217½ a ton, as against £220½ earlier, but the lower levels met with support. Tin in London, at £785 a ton, gained £4¾ owing to keen interest shown by Continental buyers. Despite some fresh arrivals, the local quotation was fully firm at Rs. 581 a cwt. The fresh receipts failed to augment stocks as they were readily absorbed. Zinc in London closed fractionally higher at £78¾ a ton. The local quotation was, however lower at Rs. 165 a cwt., thanks to high prices which discouraged buyers. Lead was quiet at Rs. 63 a cwt. Demand was slack. In London, the rate gained to £63¾ from £63¾.

LINSEED SUBDUED

(Messrs. A. Bradley & Co.)

CALCUTTA, 30th *January*

A slight reaction appears to have set in the seeds market and prices have declined somewhat during the week, following some offers from upcountry for new crop, April/May delivery at reduced prices which local mills have been buying; the turnover has been fair. Ready suppliers are still at a premium as stocks are limited. The oil market has been quiet as buyers are hesitant now to do any business at high prices, hoping to do better by waiting. The oilcake market is dull; foreign buyers are still not showing much interest except at lower prices. The latest quotation is as follows: Ready Rs. 29.50 nP per maund.

Notice

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LIMITED

THE BOARD OF DIRECTORS HAVE DECLARED an interim dividend of 3 per cent tax-free in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, on preference shares and 6.25 per cent subject to tax on equity shares for the year 1960-61. The dividends are payable to the shareholders standing in the registers of the Company as on 20th February 1961.

The Share Transfer Books of the Company will remain closed from 6th February 1961 to 20th February 1961, both days inclusive.

The dividend warrants will be posted to shareholders on or after 20th February 1961.

By Order of the Board,
SESHASAYEE BROTHERS (PRIVATE) LIMITED,
Managing Agents.

METTUR DAM R.S.
15th *January* 1961.

SURVEY

(*Concluded from page* 191)

every point and ably gave his opinions on the controversial issues.

The question of vicarious liability was the subject matter of the second technical session. It is well known that many a time, the taxing authorities find that the person who is initially liable in law has ceased to exist. This may happen due to death, insolvency, transfer of a proprietory business or by the dissolution of an association, such as a partnership, firm, Hindu joint family or a limited liability company. In order to plug loopholes that may emerge in such circumstances, the tax authorities generally incorporate in the respective legislation a suitable clause to pin the liability of one person on another who is related to him in some way or other. The Bombay Sales Tax Act of 1959, for instance, includes a specific provision in Section 19 to put the obligation of payment on the legal heir, in case of death of the original dealer. The author of the technical paper brought out certain anomalies in the above provision and it is to be hoped that the sales tax authorities in Bombay would modify the provision concerned in the light of the various suggestions made at the seminar.

The third technical session critically examined the concept of 'sale' for the purpose of sales tax. Several controversial questions, such as whether building and works contractors could be included within the meaning of the definition of dealer, whether hire purchase contract could be considered as constituting a sale and whether sales tax should be paid on packing materials, were very ably discussed. The last mentioned question was whether the cost of packing materials formed part of the taxable turnover of the dealer. It was pointed out by one of the participants that merely because the goods contained in packing materials were exempt from taxation, it did not necessarily follow that the exemption covered the packing materials also. A dealer, it was opined, was, therefore, liable to pay sales tax on that part of sale which constituted the cost of packing materials. In his speech, Mr. N. A. Palkhiwala also alluded to this question and averred that the right decision on it would be given when it was brought before the higher courts.

At the fourth technical session, Mr. N. C. Mehta, another distinguished sales tax practitioner of Bombay, outlined the scheme of an ideal sales tax law. He rightly observed that the only way to minimise the difficulties of traders was to have certain basic provisions, uniform in the sales tax laws of all the States. He made three important points. First, important definitions, turnover limits for fixing liability for the payment of tax, provisions for filing returns, assessment, appeals, revisions could be made on an agreed basis without impairing the revenue needs of the States. Secondly, the present vagueness in sales tax laws in regard to the position of commission agents, packing materials, repair and labour contracts, sale of goods on instalment system of payments and electricity needs to be removed. And, thirdly, in order to help the dealers and others to know the law in its true perspective, it is essential to leave only a few details outside the statutes, so that the wide scope that now exists for Sales Tax Departments to interpret the law may be narrowed down. From this point of view, the naming of all the executive authorities in the Sales Tax Act and specifying their respective powers and duties would promote better administration of the sales tax laws.

The need to minimise the danger of multiple taxation which is increasing as a result of the new tendency to levy purchase tax was also stressed by Mr. Mehta. He pertinently observed that a provision should be made for the avoidance of double taxation on the same transaction, once in the hands of the seller and a second time in the hands of the purchaser. Another suggestion put forth by him for simplifying the sales tax laws pertained to the need for defining the precise scope of the various entries in different schedules of the Act. The need in this connection, according to him, is to avoid altogether a separate mention of disputable items, because it has been the experience that vagueness of entries in the schedules adds to many practical difficulties both for dealers and the Department. As the present provision regarding vicarious liability does not restrict the liability to a reasonable period, Mr. Mehta suggested that the dealer should be vicariously liable for others' dues "for the year in which the transfer, etc. takes place and one year prior to that." This, too, is a reasonable suggestion. It may be noted here that a similar provision is found in the proviso to Section 26(2) of the Indian Income-tax Act and no difficulty has been found in its working. Further, Mr. Mehta referred to the question of filing returns and stated that, in the present sales tax law, the time limit provided for filing revised returns was very short. Another defect referred to by him was the lack of promptness in the matter of assessment. Again, the dealers were put to a lot of suffering by making them pay a tax not anticipated by them. All these deficiencies point to the need for an early assessment in any ideal scheme of sales tax.

Yet another important subject to which Mr. Mehta drew attention was the drawback pertaining to the exercise of revisional powers. It is well known that the present provision is discriminatory against the dealers. A dealer is barred from approaching the higher authorities for revision of the appeal order. He has a choice of second appeal to either the Tribunal or the Commissioner, but the time limit for both is only sixty days, whereas the sales tax authorities have two years for the exercise of their revisional powers. It is, therefore, a just demand of the dealers, which Mr. Mehta voiced, that they too should be given a period of two years for going to the Commissioner for getting an assessment revised. The sales tax authorities should also consider the revision of orders of the subordinate officers where the interests of the dealer suffer.

The foregoing review of some of the main points made at the seminar would show clearly the painstaking efforts made by the organisers and participants to highlight the defects in sales tax laws in this country. Most of the views expressed and suggestions made at the seminar are the results of arduous study and prolonged experience of men who are skilled enough to unravel the intricacies of sales tax laws and refer mainly to the Sales Tax Act of Maharashtra. Their labours would be well rewarded only if the sales tax administration in the various States in general and of Maharashtra in particular, were to modify the provisions of the law in the light of the suggestions made at the seminar. It would be an ideal thing if similar seminars could be organised in all the States and if, occasionally, they could be held on an all-India basis as well. It is gratifying to find that the top bosses of the sales tax administration in the Maharashtra State associated themselves with the activities of the seminar and did not view it in a hostile spirit. This speaks highly of their desire to know the other side of the case and to deal with the problems sympathetically. Incidentally, Mr. Palkhiwala paid a handsome tribute to the Maharashtra sales tax authorities as being fair-minded and respecters of the decisions taken at all-India level in regard to inter-State and Central sales taxes.

BANKING

(*Concluded from page* 194)

Initially, there was some delay in utilising the credit on account of certain procedural difficulties which were subsequently overcome. It is expected that loan applications for the full amount of the credit would be sent to the Japanese authorities in the very near future. As a result of the meetings convened by the World Bank in August 1958 and March 1959, to discuss the question of ensuring an assured flow of external assistance to India, the Government of Japan made available two credits of $10 million (Rs. 4.76 crores approximately) each. The first $10 million credit, which is in the nature of a ceiling for suppliers' credits, has been completely utilised on account of imports from Japan on deferred payment basis. The terms and conditions of the second $10 million credit are yet to be negotiated with the Government of Japan.

A yen credit worth $8 million (Rs. 3.81 crores) was offered by the Government of Japan for the mining equipment required for the Orissa iron ore project. The Japanese firm of consultants employed for the purpose submitted a report towards the end of 1959. The report was examined and accepted by the Government of India, Ministry of Steel, Mines and Fuel in April 1960. Tenders have been invited from various firms in Japan. The orders are yet to be placed.

Czechoslovakia

Credit amounting to Rs. 23.10 crores has been made available from Czechoslovakia for the third Plan to purchase machinery and equipment for the third stage of the foundry forge plant, heavy machine tools building plant, heavy electrical plant and for such other industrial projects as may be mutually agreed upon. The credit carries interest of 2½ per cent. and is repayable in eight equal annual instalments.

Repayment of the credit and payment of the interest accrued thereon shall be credited to a separate account styled as the Indo-Czechoslovak Credit Repayment Account to be opened by the Reserve Bank of India in the name of the State Bank of Czechoslovakia. The amount in this account will be used by the Czechoslovak Foreign Trade Corporation for the purchase of goods in India and the unutilised balances, if any, will be converted into free pounds sterling in accordance with such understanding as may be reached in this behalf.

Rumania

Under an inter-Governmental agreement signed on 20th October 1958, Rumania has granted a credit of Rs. 5.23 crores which will cover the total cost of technical assistance, design, and the plant and equipment to be supplied for the oil refinery at Gauhati. The rate of interest is 2½ per cent and the credit is to be repaid over a period of seven years. So far, a total amount of Rs. 70.89 lakhs has been paid to the Industrialexport of Czechoslovakia which has undertaken to design the refinery, supply equipment and materials for process units and auxiliary installations, etc.

Other Countries

The assistance given by other countries is as follows:

Yugoslavia: Rs. 19.05 crores for the purchase of ships and import of capital goods and equipment for projects mutually agreed upon. Rate of interest is 3 per cent, repayment being in equal consecutive semi-annual instalments.

Norway: Norway's contribution is provided in the form of financial and technical assistance for fisheries development. The total assistance upto the end of March 1960 was Rs. 2.19 crores.

Poland: Poland has granted a credit of Rs. 14.30 crores for import of machinery and equipment for industrial projects in the third Plan. Rate of interest is 2½ per cent and repayment in eight equal yearly instalments.

France: Under an agreement signed on 23rd January 1958, the Government of France facilitated the financing of the manufacture and delivery of capital goods by French suppliers upto Rs. 24.1 crores during a period of 12 months from the date of the agreement. Financing facilities for a further amount of Rs. 24.1 crores were given upto 23rd January 1960.

Netherlands: The Netherlands Government has been extending technical and financial assistance with a view to accelerating the desalinisation of the saline soils along the coast of Saurashtra, its share in the total cost (Rs. 37.07 lakhs) of the scheme being Rs. 19.05 lakhs. Assistance has also been rendered to the scheme for economic utilisation of carcasses and scientific flaying and curing of hides.

Switzerland: A credit agreement was signed on 30th July 1960 with the Government of Swiss Confederation. Under this agreement, the Swiss Government has agreed to facilitate the opening of transfer credits for payments to suppliers in Switzerland for capital goods required for India's development programme. The total amount of Swiss supplies of capital goods which may give rise to granting of transfer credits will be 100 million Swiss francs (about Rs. 11.1 crores). The credit will be provided by a consortium of Swiss Banks on mutually agreed terms. Each transfer credit is to be repaid within a period of 10 years from the date it is made use of. No repayments will be required during the first three years and the credit is to be repaid in equal half-yearly instalments over the remaining seven years. An agreement was signed on 18th November 1960 with a consortium of Swiss banks for credit facilities upto the amount necessary to finance the first instalment of 60 million Swiss francs. The rate of interest would be 3½ per cent above the official discount rate of the Swiss National Bank.

Finland: An agreement was concluded between the Governments of India and Finland in the year 1957 with a view to promoting forestry development in India.

World Bank

The World Bank has so far granted to India loans amounting to Rs. 315.28 crores—Rs. 219.44 crores to the public sector and Rs. 95.84 crores to the private sector. The projects covered by the various loans are given below:

(Amount in million $s)

Public sector: Agriculture 7.20; Railways 327.80; D.V.C. 52.22; Koyna 25.00; Air-India 5.60; Calcutta Port 29.00; Madras Port 14.00.

Private sector: Tata Iron and Steel 107.00; Indian Iron and Steel 50.02; Trombay 23.75; I.C.I.C.I. 20.00.

Other Sources

The other sources from which India has obtained assistance are the U.N. Technical Assistance Board (Rs. 6.01 crores upto end of 1959—amount approved for expenditure in 1960 is Rs. 86.28 lakhs and during 1961 and 1962 Rs. 1.95 crore); U.N. Special Fund (Rs. 4.16 crores); W.H.O. (Rs. 1.24 crore upto end of 1959—estimated expenditure in 1960 is Rs. 23.80

lakhs); U.N.I.C.E.F. (Rs. 10.99 crores upto March 1960, excluding Rs. 2.49 crores provided for defraying freight charges); Ford Foundation (Rs. 14.22 crores to the Government of India and Rs. 4.96 crores to private agencies or a total of Rs. 19.18 crores upto October 1960); and Ford Foundation (Rs. 5.4 crores upto September 1960).

MORE BANK PROFITS

Punjab National's Profit Better

A marked rise is noted in the profit of the Punjab National Bank Ltd. for 1960. Thus, it has risen from Rs. 84.15 lakhs (for 1959) to Rs. 117.99 lakhs. The profit, which is subject to audit, has been arrived at, as in the previous year, after making payment to employees' gratuity fund trust and providing for contingencies. The bulk of the increase in the Bank's profit has been absorbed by the provision for taxation which has been stepped up substantially from Rs. 17.50 lakhs to Rs. 53 lakhs. Bonus to staff gets Rs. 2 lakhs more at Rs. 27 lakhs. The amount transferred to reserves has, on the contrary, been reduced from Rs. 17 lakhs (in 1959) to Rs. 11 lakhs. As in the previous year, a sum of Rs. 1 lakh has been transferred to charity account. The Directors have already utilised Rs. 12.50 lakhs towards payment of an interim dividend of Re. 1 per share, subject to tax. They have now recommended a final dividend (taxable) of Re. 1 per share (or 10 per cent), making a total distribution of 20 per cent which is the same as in 1959. This means that the tax-free dividend in the hands of shareholders is at the rate of 14 per cent. The dividend absorbs Rs. 25 lakhs, leaving a balance of Rs. 4.18 lakhs to be carried forward to the next year, as against Rs. 3.19 lakhs brought in this year.

Canara Industrial and Banking Syndicate

In consonance with the general trend of bank profits, the net profit (subject to audit) of the Canara Industrial and Banking Syndicate Ltd. for the year ended 31st December 1960 has shown an improvement, rising from Rs. 20.02 lakhs to Rs. 25.25 lakhs. After adding the small amount of Rs. 29,000 brought forward from the previous year's account, the Directors have transferred Rs. 7.50 lakhs to reserves which is the same as in the previous year. This brings the total reserves inclusive of share premium of Rs. 1 lakh to Rs. 42.50 lakhs. The provision for taxation absorbs Rs. 9.64 lakhs, as against Rs. 5.50 lakhs in 1959. The allocation for bonus to staff is a shade lower at Rs. 1.75 lakh. The Directors have decided to maintain the dividend at 20 per cent. subject to tax, which would give a tax-free return of 14 per cent in the hands of shareholders. The dividend takes up Rs. 6.36 lakhs, leaving Rs. 29,000 to be carried forward to the next year. The total deposits of the Bank as at the close of 1960 were higher at Rs. 18.80 crores as compared with Rs. 17.08 crores at the end of 1959.

State Bank's Profit Goes Up

A smart rise from Rs. 1.87 crores to Rs. 2.18 crores in profit is disclosed by the preliminary results of the State Bank of India for the year ended 31st December 1960. After adding to the net profit a sum of Rs. 55.87 lakhs, being the surplus of the previous year, the Directors have made substantial increase in the allocations. The transfer to the reserve fund has been raised by Rs. 5 lakhs to Rs. 25 lakhs, the provisions for the staff welfare fund and the staff co-operative housing fund have been doubled to Rs. 5 lakhs and Rs. 10 lakhs, respectively. The allocation to the pension fund has also been increased from Rs. 6.96 lakhs to Rs. 7.29 lakhs. The dividend to shareholders absorbs Rs. 15.47 lakhs more at Rs. 127.97 lakhs, following the declaration of a higher dividend of 22.75 per cent (taxable) as against 20 per cent (taxable) paid for 1959. On a tax-free basis, the dividend for 1960 works out to 15.925 per cent. as against 14 per cent for 1959. The surplus left to be carried forward is Rs. 56.20 lakhs, as against Rs. 55.73 lakhs in the previous year.

Hongkong and Shanghai Bank

The profit of the Hongkong and Shanghai Banking Corporation for the year ended 31st December 1960 has increased substantially from HK $28.13 million (for 1959) to HK $42.19 million, equivalent to £2.64 million. The profit (subject to audit) also includes the dividends received from subsidiaries. As in the previous years, the Directors have decided to utilise an amount of HK $4 million for writing off Bank premises and to pay a final dividend of £2 10s. per share as against a dividend of £1 17s. 6d. per share in 1959. The balance to be carried forward to the next year is slightly higher at HK $2.2 million as against HK $2.12 million in the previous year. The transfer of £1.28 million from the inner reserves to the general reserves brings the latter account to £15 million. The Directors have decided to subdivide the existing shares of 125 dollars into five shares of 25 dollars each.

MARKET GOSSIP

(Concluded from page 187)

will answer "yes," because their efforts have already given good results. It is not necessary for firms in Britain to take the trouble of going about ascertaining the views of individual employees. They can ask independent research bodies to do the necessary investigations and make a report, in the light of the findings, containing recommendations for reorganising or streamlining production processes. The National Institute of Industrial Psychology is one such research body which has specialised in "attitude-surveys," as such investigations are called. For over a quarter of a century, the Institute, which is an independent, non-profit-making organisation financed partly by industry and partly by the Government, has conducted such investigations in individual concerns.

At the specific request of concerns, the Institute sends trained staff to hold a series of confidential interviews with employees, including supervisors, managers and even manual workers, to find out what they think is wrong with the organisation and how it can be put right. The Institute has already made nearly a hundred such surveys. In fact, it is said that an important motor car accessories company conducts continuous attitude surveys in its factories.

Some of the striking results obtained by attitude surveys in terms of efficiency in factories and offices were reported at the annual meeting of the Institute held in London this week. A survey was conducted by the Institute in the yarn mills of an asbestos concern where both workers and management had complained that spinners were not properly trained and that distribution of bobbins to the operatives was unsatisfactory. The spinners said that the "sliver truckers"—the workers who collect the bobbins from a central control point—were too young or inefficient and that the spinning was consequently disorganised. As a result of the unsatisfactory distribution of bobbins, many spinners had got into the habit of going to fetch bobbins for themselves. This led to further confusion. As a result, there was considerable discontent among workers and labour turnover was high.

After studying the Institute's reports of these grievances and the recommendations of the investigators, the company selected "sliver truckers" more carefully, doubled their number and also appointed trainers for them. These and other changes suggested by the investigators cost the company more than £27,800 a year. But, in less than two years, productivity increased sufficiently to cover this. The efficiency of spinners rose by between 5 and 10 per cent and labour turnover fell from 90 to 50 per cent. The number of workers who failed to earn incentive bonus was reduced from 40 to 4. Furthermore, the quality of the product steadily improved and orders fulfilled which, it was admitted, would not have been possible but for the attitude survey.

This, however, is not an isolated case. Another example of the effectiveness of this disciplined form of "industrial self-criticism," as it has been aptly called, is provided by an engineering company which manufactures machinery for plastics industry. A survey undertaken by the Institute showed that most of the supervisors and about an equal number of managerial staff, office workers and operatives thought that the factory routine was too lax. They complained about "clock watching," excessive time for washing, poorly finished work and a general failure to administer reprimands or praise when deserved. The production control system was also criticised, because materials and components were not available when required so that frequent interruption of production occurred. Acting on the recommendations of the survey team, the company tightened up discipline, reorganised production controls and "progress watching" with commendable results.

One question suggests itself as one reads such reports. If factory and office organisation, which have attained high standards in Britain, still leaves so much room for improvement, how much more scope for streamlining would there be in India where it is much below British standards? When one talks of more production in this country, one instantly associates it with more investments in new plants and machinery or additions to old ones. Seldom is it realised that fuller and more scientific utilisation of existing equipments would also take us to the same goal, at least to a considerable extent and definitely at less cost.

COTTON

(Concluded from page 198)

the cotton belt by National Cotton Council, the American Cotton Shippers' Association, and most of the regional cotton organisations like the Delta Council of Missisippi and the Plains Cotton Ginners of Texas. They all are teaching the "Do's and Dont's," of cultivating, harvesting and ginning. The educational programme has reached down to the grass roots. We expect at least three-fourths of the actual operators of mechanical cotton pickers, and cotton gins have now been through one or more of these specialised training schools.

The cotton industry in the U.S. has become intensely quality-conscious. Mr. Howard Stovall confidently asserts that cotton growers, too, through their ability to evaluate the production of research and to absorb the teachings of education, are, and will continue to be, in a position to deliver top quality cotton to spinners.

COMMERCE AND INDUSTRY

(Concluded from page 212)

were able to maintain their levels. The last mentioned two items have been the principal winners of foreign exchange. The permission given to export these residue commodities has also a direct bearing on the domestic prices of groundnut seeds and oils.

While it is admittedly important to secure foreign exchange, exports of groundnut oil, seeds and cakes only aggravate the domestic price situation. The export quota of 20,000 tons of H.P.S., announced this week, provides ample testimony to this statement. The new quota has imparted fresh strength to the groundnut market.

WEEK'S STOCK EXCHANGE TREND

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CII. No. 2601 BOMBAY, 11th FEBRUARY 1961 PRICE Rs. 2

PRE-BUDGET PLEA FOR TAX REFORM

THE Central Budget for 1961-62, due to be presented on a Tuesday 17 days from now, will be a crucial one. The Finance Minister has to indicate in it the manner in which he proposes to raise the funds required for the third Plan, not to mention the mounting defence commitments. It would, indeed, be an odd thing, if he were not to do so, for the year coincides with the first year of the third Plan. Faced as he is with this situation, the temptation to impose additional taxation must be great for him. It is, however, to be hoped that he will skilfully balance the need for more resources with the need for providing incentives to the people for working harder and saving more than they are doing at present. Taxation in this country is nearly the highest in the world. The taxes on individuals, especially in the upper income group, are *the* highest. On top of it, there are several inequities in the system. The current rate of corporate taxation is not intolerably high and the system has been simplified in the last two years after Mr. Morarji Desai took over the Finance portfolio. Credit must be given to the Government for providing accelerated depreciation allowances, development rebate, tax holiday for a limited period and a small concession on income from inter-corporate investments. These features have been helpful in stimulating fresh investments in industry. But there is still scope for considerable improvement in quite a few directions, especially where double and triple taxation occurs. The Director-General of the National Council of Applied Economic Research, Dr. P. S. Lokanathan, has, therefore, done a timely service to the country by releasing to the Press the main conclusions of a study of "Taxation and Private Investment" organised by the Council, highlighting the lines on which the system of direct taxation can be improved without much loss of revenue to the Exchequer. It is now upto the Finance Minister to profit by this study and streamline the tax system to serve effectively the purpose of speeding up the country's economic growth.

Three objections are usually raised by Treasury spokesmen to any plea for relief and reform in direct taxation. First, in this country of wide disparity between the poor and the rich, the latter must not mind bearing a rate and system of taxation designed to facilitate a gradual redistribution of wealth and thereby a reduction in the existing glaring disparity. This is one of the basic objectives of India's tax system. In his explanation of the scope of the Council's study, Dr. Lokanathan has made it clear that it does not question the socialistic goal of fiscal policies. But the Council has approached the subject on the assumption that, "as the role of the private sector is going to be significant in India's mixed economy, no fiscal system should operate in such a way as to militate against the efficient working of this sector." The Council has thus been purely objective in its study and its approach should, therefore, be acceptable to the Government which is unduly allergic to any criticism of its undefined and vague socialist pattern of society.

The second objection is based on the need for more revenue for implementing the development plans. The authors of the study have not been completely oblivious of this point; they have not suggested any basic alterations in the system. They, however, concede that there will be some loss of revenue, but they point out, convincingly enough, that, "as the changes proposed would lead to a higher rate of industrial growth, there would be a much needed widening of the tax-base which could make up for any loss of revenue in the short period." The Council is, of course, not the first to advance this argument. This journal itself has done it on several occasions in the past. But the Government has been extremely slow in recognising the merit of this contention. Perhaps, the Council will have better luck than others. Now that income-tax receipts are buoyant, conditions are propitious for the Government to heed the Council's impartial advice and pave the way for speedier economic growth. If the Government considers this as a risk, it is, in our view, a risk worth taking. Why not try it for the next five years and see the results? If they are not satisfactory, it can always go back to the system that is in force now.

The third objection stems from the assumption that the existing system is not as bad as it is made out to be. Support for this view is sought to be found by pointing to (*a*) the establishment in recent years of quite a few new industries and expansion of several of the existing units in the private sector, (*b*) the increase in the number of collaboration arrangements with foreign private capital, and (*c*) the avidity with which shares of new companies are being taken up and scrips of existing companies are being supported on the Stock Exchanges even at levels at which the yield is ridiculously low. The authors of the N.C.A.E.R.'s study have in a way tried to meet this misleading argument. In the absence of full text of the report, it is not possible to say how effectively they have done this job. But the summary appearing in the daily Press shows that they do not clearly agree with the contention on the following grounds:

"The adverse effects of higher taxes have been offset by other factors, such as the building up of essential overheads, the expansion and diversification of demand resulting from Government expenditures and the provision of a sheltered market in the case of many important commodities. The climate for investment has no doubt been favourable on the whole, but some disquieting features exist. *The rate of aggregate savings has not kept pace with the rate of investment, nor do corporate savings show a rising trend.*" (Italics ours).

It is quite possible that the authors of the study have provided enough data to support the aforesaid conclusions. But there is already enough evidence in the Reserve Bank's analysis of trends in corporate finance. It clearly shows that borrowings account for more than a third of the finance for industrial development, while the share of equity capital has been no more than 10 per cent. It is the policy of cheap money followed till very recently that has facilitated this trend and clouded the adverse effects of high taxation. During the past ten months, there has been some change in monetary policy, but the concession in favour of higher interest rates policy has been halting and half-hearted. The firmness of share markets is quite an unreliable factor for judging either the extent of savings and capital formation or the soundness of tax policy, for the trend of share markets is influenced by a variety of factors, including sentiment and psychology. An inadequate increase in the supply of good equities has itself been one of the chief causes for the rise in share values.

Before referring to the specific suggestions made in the study, it would be useful to quote here the authors' rationale for them. After recognising that the basic tax rate introduced by the new scheme of company taxation is "eminently fair and reasonable," the authors state their case as follows:

"However, private savings are of crucial importance in the context of a decline in savings on Government account in recent years and an increasing reliance of public sector investment on private savings. In an underdeveloped country, with a high level of direct taxes, the tax system should be deliberately designed to secure the objective of stepping up the rate of savings. But the structure of direct taxes in India cannot be said to be geared to promote personal savings, particularly consumer savings. Actually, beyond certain levels of income and wealth, the cumulative impact of personal taxes tends virtually to eliminate the incentive and ability to save of active entrepreneur-investors. ...

"In order to maintain a steadily rising rate of growth of private investment in the coming years, it is necessary to ensure that the rate of private savings is stepped up and that increasing amounts of funds flow into the field of industrial investment. Also, if it is desired to encourage the promotion of new ventures by new entrepreneurs, it would be necessary to make possible the accumulation in the hands of individuals of funds large enough to enable them to start and run enterprises on efficient lines."

The authors of the study corroborate the conclusions advanced by the critics of the existing tax system when they observe that it "now operates in such a way that, after a level of wealth and income, the disposable income of an individual tends to fall with every addition to his wealth through savings. At this level, the incentive to save is virtually eliminated, unless the individual adopts various tax avoiding devices. At still higher levels of wealth, the sum of income and wealth tax liabilities will first equal and then exceed the entire income of the individual." Readers of this journal will recall, in this connection, the series of articles contributed by Professor Russi Jal Taraporevala two years ago in which he impressively brought out this very point.

It would now be appropriate to review the suggestions made in the Council's study. They have been rearranged by us in the order in which we think they should be given priority:

1. The tax on bonus shares and capitalisation of share premia should be abolished. This

is an atrocious levy which imparts to India's tax system a strong element of expropriation. It has no case to exist even for a day longer.

2. Section 23A must be modified in such a way as to make it more flexible and to encourage the emergence of small entrepreneurs and medium-sized units. This reform would be perfectly in keeping with the fundamental objectives of the Government.

3. The tax on dividends received from inter-corporate investments should be substantially reduced, if not abolished. In most countries of the free world, incomes from inter-corporate investments are either totally exempted or only a small portion of them is subjected to tax. This relief is necessary to promote inter-corporate investment, an important way in which rapid industrialisation can be brought about and is being followed throughout the world. It is also necessary for attracting foreign private capital and facilitating its participation with indigenous capital in the establishment of new ventures. The case for this relief has been very ably stated by the authors of the study.

4. There should be some reduction in the pace of progression of super-tax at very high income levels applicable to individuals. The study has rightly come to the conclusion that "the disincentive of diminishing disposable income tends to operate at too low a level to allow entrepreneurs to accumulate sufficient funds for investment in new lines of activity."

5. No individual should be asked to pay by way of wealth and income taxes more than 100 per cent of his entire income. The relief suggested here is quite modest, for the consensus of demand made by quite a few critics is that the combined incidence of all taxes should not exceed 80 per cent.

Quite a few more modifications of the aforesaid type, involving little or no loss to the Exchequer but capable of imparting a sense of justice among investors and boosting the rate of development, can be suggested. But if, in the forthcoming budget, the Finance Minister gives effect to at least the first four suggestions listed above and defers the rest to subsequent years, he will be giving a flying start to the third Plan.

TRANSPORT POLICY ISSUES

THE mountain has not laboured in vain; it has brought forth at least a mouse. So, indeed, has the Neogy Committee on Transport Policy and Co-ordination produced, after 18 months of prodigious labour and study, a "preliminary report," the only specific recommendations of which pertain to the problem of co-ordination between the railways and the nationalised road transport undertakings in the States operating largely passenger services. There are, thus, no recommendations in this report on the Committee's main terms of reference bearing on the evolution of a long-term transport policy, the role of the various means of transport in the next five to ten years against the background of such a long-term policy, and a suitable mechanism for the co-ordination of the different means of transport. But the report is not without some merit, though it lends itself to be criticised as an essay in procrastination or evasion. The merit is that it has analysed the present transport situation and formulated a series of issues on which the public and transport specialists are expected to give their views. Although this is a rather novel way of eliciting informed public opinion and that, too, in a second round, it seems to be necessary in the interests of evolving "a rational scheme of co-ordination" between road transport and railways "as part of a sound long-term policy." But, at the same time, it looks very much like a dilatory tactic at the present time. Even the way in which the Committee has presented the pros and cons of the problem of co-ordination lends itself to different and contrary interpretations.

But, perhaps, the Committee has striven hard to be as objective as possible. Its own bias, if any, one way or the other, by implication or otherwise, should interest us less than its new questionnaire on alternative "ways of securing co-ordinated development of road and rail transport on equal terms." Public opinion can be usefully expressed on the issues raised by the Committee in the hope that it may complete its labours and produce the final report at an early date. The three alternatives presented by the Committee for road-rail co-ordination are the most relevant ones for immediate consideration here. The first of these is free, unrestricted competition between different forms of transport; the second is co-ordination through appropriate Government regulation; and the third is possible integration of all the road and rail services into one single unit so as to achieve co-ordination from within the authority responsible for the joint management of all forms of transport.

While the extreme theoretical implication of the first alternative may be railway denationalisation, that of the second may be complete road transport nationalisation. Since it is too late in the day to think of railway denationalisation, it is a matter for consideration how free competition can be brought about between railways and road transport. Such an examination is all the more necessary, because of the standing threat of nationalisation of goods transport by road. Although, for the present, an assurance has been given by the Government that the transport of goods by road will not be nationalised during the third Plan, the threat as such continues to be there and will become very real if the third alternative is not ruled out here and now. It should not be forgotten here that, with the railways being already a nationalised enterprise and the passenger services of road transport being progressively nationalised as part of State policy, the trend in favour of nationalising goods transport of road will be in relentless operation, unless, of course, it is reversed unambiguously. As for the second alternative, the Committee itself has referred to the fact that "regulation has not met with complete success in other countries" and also expressed its view that "to rely on regulatory measures, to be devised *ad hoc* as and when any signs of unhealthy competition appear, will not be the right answer to the questions confronting us." The Committee's virtual rejection of the second alternative and its "emphatic view that it would be wrong to dismiss the first and third alternatives" still provide no clue to its own preference. At one place, the Committee seems to be against the first alternative; here it presents the view that "the railways have a large number of obligations which are not shared by road transport" and that "to establish equal terms of competition between them, therefore, presents numerous problems." But, at another place, it seems to be against the third alternative; here it says that "nationalisation of the entire road transport system will itself raise many problems, though it may be achieved by suitable stages." To say that the Committee is inclined either in favour of the first alternative or in favour of the third would only be a case of wish being father to the thought. The blissfully non-committal and ambivalent approach of the Committee is strikingly brought out by the following quotation:

> "Our transport system has to develop a great deal during the next ten years, if it is to keep pace with the programmes of industrial development on which we have embarked. It is essential that we should take a long-term view of the question and, in doing so, we should not hesitate to consider any changes in respect of our existing policies regarding the railways and roadways, however radical they may seem, if they are likely to secure a more efficient and economic development of our transport system as a whole."

It would appear from this statement, ambivalent though it be, that the Committee is at least having an open mind and can conceivably be convinced in favour of a modified form of the first alternative, namely, scope for a reasonable degree of competition between the principal means of transport, if the road transport interests and users of road transport make out a cogent and unanswerable case therefor. Our own view is that the first alternative will be both logically and pragmatically compelling, if it is approached from the triple point of view of freedom for the user to choose the most suitable means of transporting his goods, of scope for all means of transport to develop without any cut-throat competition between them, and of judicious use of capital resources in the most economic services. If there is to be real co-ordination between railways and road transport on equal terms—a kind of co-ordination in which there will be no place for cut-throat competition or for artificial regulation of traffic offerings—by far the best method of ensuring it would be to constitute a statutory and independent Rate Fixing Committee on the lines of the Inter-State Commerce Commission in the United States. Such a committee should consist of representatives of railways, road transport services, inland steamer services, civil aviation, coastal shipping, trade and industry, and the user-public. Maximum freight rates for the different means of transport can be fixed from time to time by this Committee—rates at which or below which the various transport services shall be free to avail of as much of the traffic offerings as possible.

Any fear that road transport might deprive railways of a part of their traffic by quoting competitive rates much below the maxima fixed by the Committee would be unwarranted for one simple reason. It is that, in spite of the present circumstance that the cost of road haulage is roughly two annas per ton-mile on the average as compared with the average of one anna per ton-mile in the case of railways, road transport is being increasingly sought after by users who, in an expanding economy, have to move a larger volume of goods more speedily. Where larger traffic offerings can be reasonably expected for both railways and road transport, the best course would be to let each system function on commercial lines and to treat the profits from railways and the tax revenues from road transport (after meeting road maintenance and administration charges) as if they belonged to a single pool. The idea here is that, if, by any chance, the railway profits fall, the Exchequer will have received more by way of motor vehicle and income taxes from the road transport sector. What is lost on the swings, if at all it is lost, will be made good on the roundabouts.

It is against this background that some of the questions framed by the Committee in regard to the issue of "free competition" would have to be further considered. This consideration can be done here by way of answers to some of the more important questions. These answers are given below:

1. It should be possible to relieve the railways of their obligation to provide uneconomic services which do not pay, on the ground that they should not provide uneconomic services. It should also be possible to discontinue a particular section of a railway, such as a branch line, if it is proved to be a source of continuous loss. For instance, almost the entire narrow-gauge section of 3,181 miles can be dismantled, because it has always been working at a loss and, as of 1958-59, has earned only Rs. 3.7 crores (gross), as against working expenses of Rs. 6.3 crores, and its average operating cost per ton-mile, including terminal charges, is 26 nP, as compared with 12 nP in the case of metre-gauge lines, 8 nP in the case of broad-gauge lines and 12 to 15 nP in the case of road transport.

2. The railways should not be free to quote competitive rates which may differ in different areas and for different customers. If they are asked to carry traffic at uneconomic rates, it would mean that they are subsidised.

3. If the railway rate on coal is increased to the level of the rate on iron ore so as to enable the railways to earn an additional income of, say, Rs. 23 crores per annum, as compared with the present total earnings from coal of about Rs. 40 crores, it will not affect coal-using industries other than electric undertakings, for what such industries pay additionally on coal haulage can be made good by their sending finished goods by road.

4. It should be possible to ensure the availability of adequate transport facilities, by providing the requisite number of vehicles, at a reasonable cost in the less developed areas, hilly tracts and places served by narrow-gauge lines.

These are only some illustrative answers which are, by no means, exhaustive. They are only intended to convey that road transport, with its inherent advantages in terms of speed and certainty of delivery, especially in the matter of short- and medium-distance traffic, could be given greater scope for development in a system of healthy competition which can ensure the commercial character of both railways and road transport. It will be possible for both modes of transport to operate as public utilities, if economic rates of operation are rendered possible by the structure of rates determined by the Rate Fixing Committee suggested in this article. In view of the fact that business firms, which are increasing in number from year to year, will find it possible to have a quicker turnover of their capital through speedy haulage by road transport, freer scope for this mode of transport is a vital desideratum. That will also mean an acceleration of industrial expansion. It is to be hoped that the Committee will ultimately, but expeditiously, recommend a rational and sound long-term transport policy consistent with the requirements of an expanding economy.

MARKET GOSSIP

SENTIMENT in the share markets is alternately swinging from optimism to pessimism about the forthcoming Central Budget proposals. The share markets began the year rather sceptically of the view that there would be no increase in direct taxation. Then, they felt that there would not be any appreciable increase in tax burden. Last week, they were pessimistic again. But, since Monday this week, the pessimism has receded to the background, yielding place to cautious optimism. A considerable section of the market has been contending that Mr. Morarji Desai is a realist and that, if he cannot give any relief or even tone down some of the harsh features of the present system of direct taxes, he will at least desist from making it more harsh. Its conviction seems to have been strengthened to some extent by the conclusions and suggestions of the experts who carried out a study of the impact of the present tax system on private investment under the auspices of the National Council of Applied Economic Research. Anway, the vast majority of operators are hoping for the best and there is no inclination on the part of speculators to build up a heavy short position.

New Issue Boom Over

Three weeks ago, we referred in these columns, albeit briefly, to the end of the craze for shares of new companies. All available evidence since then only serves to confirm the fact that the craze for such issues is definitely over. Premiums on such issues have either disappeared or declined steeply from the fantastic levels that were common till about July 1960. In fact, in some cases, some of the issues are now quoted at a discount. The following table substantiates this statement:

Name of issue	Highest price touched	Current price
	Rs.	Rs.
Synthetics and Chemicals Ltd.	230.00 premium	54.00 premium
Zenith Steel Pipes Ltd.	3.00 "	0.25 discount
Seshasayee Paper and Boards Ltd.	3.50 "	0.85 "
General Tyres Ltd.	1.75 "	Par
Raymon Engineering Works Ltd.	1.00 "	3.50 "
Andamans Timber Industries Ltd.	0.75 "	2.50 "
Hindusthan Twyfords Ltd.	7.00 "	3.37 premium
Isaac Holdens (India) Ltd.	7.00 "	2.87 "
East Anglia Plastics (India) Ltd.	17.00 "	5.06 "
Citric India Ltd.	85.00 "	6.00 "
Baroda Rayon Ltd.	75.00 "	21.50 "
Premier Tyres Ltd.	60.00 "	21.50 "
Hindustan Aluminium Corporation Ltd.	2.50 "	Par
Usha Martin Black Ltd.	1.75 "	Par

In part, this change is to be welcomed. A more healthy situation has resulted, in which investors make a cool-headed assessment of income and growth prospects before applying for new issues. The rampant speculation, which was encouraged by the certainty of heavy oversubscription, has ceased.

There is the fear, however, that, as the number of new issues offered for public subscription increases, as they will do in the next few months, the satisfaction over conditions in the stock market may give place to anxiety. Already, oversubscription is not as common as before. There have been cases where even good concerns with attractive prospects and first-rate foreign collaboration have only just managed to secure the capital they asked for and, in others, the underwriters have had to take a part of the public offer, because of poor response. Examples in this respect are Thakur Paper Mills Limited and Mahendra Electrical Limited. In the case of the Madras Aluminium Limited, it is believed that the underwriters had to take up approximately 25 per cent of the issue.

There can be no doubt that this trend will become more pronounced as time goes on. It is doubtful whether new investible funds are coming into existence as fast as the demand for them is growing. In such conditions, there is the danger that the expansion of the private industrial sector may receive a setback. With all its defects, the stock market boom of 1960 made it possible for a large number of new industrial enterprises to be launched. With the end of the boom, private industry may soon have to face the old difficulty of finding capital for development. The credit curbs applied by the Reserve Bank have reduced the amount of funds available for new issues against overdrafts. Furthermore, savings have been eroded by the existing high level of taxation and the flow of fresh investible funds has been reduced to a trickle. In this context, the remarks made at a Press conference in Calcutta by Mr. S. P. Chambers, Chairman, I.C.I., London, to which a reference was made in these columns last week, are significant. He pointed out that, even in the Soviet Union, taxation was more realistic than in India. He also described as self-frustrating the Indian Government's efforts to raise a lot of capital and resources from taxation because they were discouraging to greater investment by foreigners in India.

The argument heard during the boom that the activity of the stock market and specially of new issues demonstrated that taxation could not be considered heavy, has now lost even the shadow of justification. It is to be hoped that the Budget proposals for 1961-62 will be based on present conditions and those that are likely to exist in the future, rather than on the artificial and misleading conditions of the 1960 boom.

Shares and Dividends

Should the dividends deducted from quotations for shares after they become *ex-div.* be gross or net? There would appear to be some confusion among the investing public over this issue, in view of the different ways of expressing quotations. The correct position is explained below by taking the example of the shares of Associated Cement Companies Ltd:

The dividend declared by the Company for the year 1959-60 was Rs. 12 gross. Since the Company paid on behalf of shareholders 30 per cent tax to the Government, the net dividend to shareholders works out to Rs. 8.40. This means that the *cum-div.* quotation for the scrip included only the net dividend, that is, Rs. 8.40, and not gross dividend. After the payment of dividend fell due, the shares came to be quoted *ex-div.* Naturally, the deduction of dividend has been Rs. 8.40. Only persons whose incomes do not exceed the taxable limit and who have obtained exemption certificates are entitled to a dividend of Rs. 12 from the Company without deduction of tax. It is supposed here that the shares in question were purchased by him before the closure of transfer books.

Raising Textile Output

The question of augmenting cloth production was, once again, considered by the Committee of the Indian Cotton Mills' Federation at its meeting held on Wednesday this week. Here is the gist of what was decided at the meeting:

"... the regional associations should go into the question in greater detail. In particular, they should examine the question from the point of view of the availability of coal and electricity, besides seeking the co-operation of labour for multiple-shift working ... the Bombay and Ahmedabad mills should take early steps for introducing third-shift working wherever possible. Further, all centres should explore the ways and means of increasing production by introducing the relay system and the staggering of holidays. Negotiations should be initiated with labour unions and the good offices of the State Governments should be sought for this purpose."

It will be seen from this brief account that the Federation has merely reiterated the importance of achieving higher cloth production through third-shift working, etc. How far and to what extent will the call of the Federation bring about an increase in output is anybody's guess. There is, of course, one favourable factor which points to the possibility of higher production, namely, adequate supplies of cotton. A rise of 10 per cent in production as desired by the Federation means that the actual output in 1961 should be about 5,548 million yards of cloth and 1,910 million lbs. of yarn, as compared with 5,044 million yards and 1,737 million lbs. produced last year. In order to spin 1,910 million lbs. of yarn, approximately 5.66 million bales (of 400 lbs. each) of cotton are required. As against this quantity, the estimated available supply during the current cotton season (1960-61) is nearly 7.73 million bales comprising the crop of 5.30 million bales (latest unofficial estimate), previous season's carry-forward stock of 1.48 million bales and imports of 953,000 bales.

Raw Cotton—Unwarranted Fears

The fear of a glut developing in the cotton market in the near future and its possible repercussions on next year's production, expressed in some quarters, is exaggerated. Nay, it is unwarranted. It is the fairly substantial decline in ready cotton prices in the past week that has given rise to this disquieting talk. The current spot price of Moglai Jarilla 25/32", the basis of the hedge contract, for instance, is Rs. 670 per three quintals, as against the ceiling price of Rs. 693 which was also the ruling price at the beginning of the year. Futures prices, too, have shown a persistent downward trend and are currently ruling at about Rs. 45 per three quintals below the rate prevailing at the beginning of the year. As compared with the prices a year ago, which were all above the ceilings, current rates are no doubt low. But it must be remembered that, last year, prices were abnormally high. Almost all varieties were quoted well above the ceiling, the premium having been as high as Rs. 150 per candy in some cases. It is common knowledge that last year's spurt in prices was due to the sharp setback to production which was a mere 3.8 million bales. When the crop turns out to be normal, as it is expected to, this season, prices too are bound to seek lower levels. Only, if prices go down to unduly low levels, will there be any reason for concern.

Viewed in this light, it looks as though the fears expressed in some quarters about hardships to growers and possible diversion of acreage from cotton are just propaganda by interested parties. It is unfortunate that, when the need for bringing down the price level is considered to be the number one problem to be solved for the success of the third Plan, the first signs of a recession in prices should be viewed with so much alarm.

The suggestions reported to have been made by the East India Cotton Association, Bombay, for dealing with the situation are, in our opinion, premature. The E.I.C.A. is understood to have recommended to the Textile Commissioner, *inter alia*, the abolition of mill quotas and release of certain varieties of short-staple cotton for export to siphon off the surplus supply and thereby arrest the falling trend of prices. It is true that, when the cotton supply situation actually becomes normal, there is no need for quotas, but it is unwise to abolish a *system*, which has enabled the mills to get regular supplies at ceiling prices, at the first signs of a return to normalcy. Moreover, none can be so sure of a crop of 5.2 to 5.3 million bales (present estimates), for there is still scope for the weather to play mischief, especially in regard to the late-maturing crops. It would be interesting to recall here that the 1959-60 crop was estimated at 4.25 million bales at the end of January 1960 last season, but the actual output turned out to be about 450,000 bales less at 3.8 million bales.

More realistic and tenable is the alternative suggestion made by the E.I.C.A., namely, that mills should be advised to purchase cotton against their quotas within a specified period. This suggestion has been endorsed by the Indian Cotton Mills' Federation which, at a meeting held in Bombay on Wednesday this week, directed the mills to make their purchases of cotton quickly, in order to improve the tone of the market. The Federation, however, recommended that the quota system should be retained.

The question of permitting export deserves to be carefully examined. Those who favour export of certain varieties such as Kalagin and Wagad point out that these crops have suffered a quality deterioration in the current season and that domestic mills are, therefore, not interested in them. If an outlet is not found for this cotton, they point out, accumulation of inferior stocks would not only depress prices further but also have adverse effects on the production of these cottons in the next season. It is further pointed out, in support of this contention, that the supply of Kalyan and Jarilla, which are good substitutes for these cottons, is adequate to take care of any possible internal demand for this type of cotton. If all these calculations are correct, there is a case for permitting export of such qualities as are not wanted by mills now and for which demand is not likely to arise in future. But, if the lack of demand for them is a temporary phenomenon, it is unwise to allow the apparent surpluses to be wiped off. It is high time a long-range policy for cotton was evolved. If there is going to be a surplus above normal requirements, it is advisable to build up a buffer stock, so that it can be utilised in lean seasons instead of having to go in for heavy imports of foreign cotton as was done during the last season. A buffer stock will also have a healthy and stabilising influence on prices.

W. German Help to U.S.

It is, indeed, a happy coincidence that, on the very day President Kennedy sent to the Congress a special message containing a series of steps to eliminate the U.S. overseas payments deficit, to end the strain on Treasury gold stocks and to sustain foreign confidence in the dollar—that is, on Monday the 6th inst.—the West German Government officially announced a fourfold programme of action to help the U.S. out of its balance of payments difficulties. The programme envisages (*a*) immediate repayment of $587 million of West Germany's post-war American debt; (*b*) payments at once of $325 million for American supplies, including $200 million for supplies to be ordered this year; (*c*) financing from Germany's own aid fund development projects up to $75 million now being worked out by the Development Loan Fund in Washington; and (*d*) enhancement of German contribution to the N.A.T.O. infra-structure programme from 14 to 20 per cent, thereby relieving the U.S. of $12 million annually which it would otherwise have to pay. West Germany has also expressed its readiness to lend a part of its own development aid funds (as long as they are idle) to the D.L.F., subject to payment of interest, besides agreeing to the utilisation of drawing rights on the I.M.F. in D-marks upto the full German quota.

At the same time, the German Government has expressed the hope that, of the remaining debt it owes to the U.S. Government, it will be allowed to use a sum of $200 million to pay off the German citizens whose properties in the U.S. were confiscated during the war.

The above proposals, it is estimated, will make available to the U.S. about a billion dollars ($1,000 million). This is not an inconsiderable sum; it is equal to about one-seventh of Germany's gold and net foreign exchange holdings and one-fourth of the U.S. balance of payments deficit in 1960. President Kennedy has estimated that this gap in the current year will only be $2,000 million, in which case the offers made by Germany will suffice to cover half the deficit. It needs to be noted here that, if the U.S. accepts the German offers, Germany has to make a similar gesture in regard to the war-time debts it owes to Britain and France also.

While these offers of W. Germany, together with its earlier measures such as reduction in the Bank rate, prolonged Bundesbank's credits to World Bank and the Government's decision not to tie its own credits for the needy countries to German deliveries, reflect that country's anxiety to relieve the stress on international payments position, the U.S. seems to feel that Germany is not doing enough. The U.S. official reaction to the latest proposals, a recent report from Washington says, has been noticeably sparse and, "among the U.S. public and in Government circles, there is a widespread impression that the Bonn suggestions in their present form still do not come up to U.S. expectations." It is, however, conceded that the proposals constitute a concrete basis for future negotiations. Mr. Dean Rusk, U.N. Secretary of State, did state at a Press conference immediately after the West German proposals were announced that the whole problem would be further negotiated. It will be interesting to know the final understanding that would be reached between the U.S. and West Germany. Meanwhile, observers in the West, especially the U.S., emphasise that West Germany should not reduce the aid already promised to developing countries on the ground that it is making large payments to the U.S., nor couple the repayment of war debts with a return of German property confiscated by the U.S. during the second world war.

EQUITIES LOOK UP

TEXTILES WELL FAVOURED

(From Our Own Correspondents)

BOMBAY, *9th February*

EQUITIES on the Stock Exchange moved rather irregularly on Friday, but tended to look up after the new account period started on Monday the 6th inst. The rise in values followed speculative support induced mainly by the belief that the Central Government Budget for 1961-62 might not contain any fresh direct tax proposals but actually provide some relief, particularly in regard to taxation of bonus shares. There were also scattered investment enquiries stemming from encouraging outlook for industries. The continued improvement in the offtake of both cotton and rayon textiles, hopes of a fall in the prices of industrial raw materials, and renewed rumours regarding an early increase in steel retention prices also favourably influenced the sentiment of the market.

In the steel section, Tata Steels, which had declined from Rs. 145.25 to Rs. 144.25 on Friday, moved up thereafter and touched a high of Rs. 146.75 today. At this level, some profit-taking set in and the scrip finished at Rs. 146.25. The net gain over the week was one rupee. Indian Irons rose from Rs. 24.36 to Rs. 24.60 before closing at Rs. 24.48. Mukand Irons gained 24 nP to Rs. 24, after being higher at Rs. 24.24.

Textiles were well favoured. Operators noted the call of the Cotton Mills' Federation to the member-units to step up production through third-shift working, relay system and staggering of holidays. Standards continued to be sought after and spurted by Rs. 22 to Rs. 1,114. Centurys advanced by Rs. 9 to Rs. 487. Minervas by Rs. 8 to Rs. 72 and Kohinoors by Rs. 5.75 to Rs. 278.25. Indores hardened by Rs. 5 to Rs. 138. Shree Niwas strengthened by a like amount to Rs. 247. Svadeshis put on Rs. 4.50 to Rs. 238.50. Gokaks and Ahmedabad Advances gathered Rs. 3.50 each to Rs. 175 and Rs. 168, respectively. Elphinstones increased by Rs. 2.50 to Rs. 66.50 and Tata Mills by 95 nP to Rs. 42.20. Bombay Dyeings rose from Rs. 61.30 to Rs. 62.40 but finished at Rs. 61.80. Apollos were firm at Re. 1.54, B.R. Cottons at Rs. 22, Central Indias at Rs. 102, Finlays at Rs. 330, India Uniteds at Rs. 14.44, Khataus at Rs. 450 and Simplex at Rs. 168. Morarjees, however, encountered selling and dropped Rs. 4 to Rs. 336.

Among electrics, Tata Powers moved up by Rs. 8.75 to Rs. 1,020, Hydros improving by 25 nP to Rs. 101. Ahmedabads gathered 70 nP to Rs. 86.50. Bombay Suburbans were firm at Rs. 84.

In the banks section, Denas hardened by Rs. 2.50 to Rs. 58. Bank of Indias rose by Rs. 2 to Rs. 119.50. Centrals put on a rupee to Rs. 57, 'A' shares being fully steady at Rs. 59. United Commercials increased by 50 nP to Rs. 65.50. Barodas, however, declined by 80 nP to Rs. 94.50 and Unions by 4 nP to Rs. 6.48.

Sugars suffered a further fall in values, owing to the refusal of the Maharashtra Government to exempt the cane farms attached to sugar mills from the Land Ceiling Bill, though some comfort was derived from the statement of the Revenue Minister in the Legislative Assembly that nothing would be done to retard the progress made by the industry. Phaltans fell by Rs. 4.50 to Rs. 146. Walchandnagars receded by Rs. 2.50 to Rs. 225. Belapurs began the week at Rs. 296, as against the previous close of Rs. 302.50, and, after moving up to Rs. 307 today, finished lower at Rs. 302. The net loss over the week was 50 nP. Changdeos were quiet at Rs. 29.50, as also Bhopals at Rs. 29 and Ravalgaons at Rs. 104. Oudh Sugars (a U.P. concern) met with special support and recorded a rise of Rs. 4 to Rs. 200.

Cements tended to look down with the exception of Associated Cements which hardened by Re. 1.65 to Rs. 144.50 *ex-div.* Digvijays declined by a rupee to Rs. 148.50, Jaipur Udyogs by 34 nP to Rs. 11.24, Orissas by 8 nP to Rs. 13.62 and Bone Valleys by 4 nP to Rs. 4.64.

In the automobiles group, Hindustan Motors picked up 28 nP to Rs. 20.20, while Premier Automobiles lost Rs. 2.25 to Rs. 163.75 on the reported large delivery at the last settlement by an institutional investor. Among shippings, Scindias were firm at Rs. 14.20, but Great Easterns eased by 32 nP to Rs. 14.52.

Engineering shares continued to attract good attention by investors. Alcock Ashdowns scored a gain of Rs. 9 to Rs. 264. Telcos strengthened by Rs. 5 to Rs. 299, after being higher still at Rs. 304.75 on Tuesday the 7th inst. Cooper Engineerings hardened by Rs. 2 to Rs. 175. Kamanis rose by Re. 1.08 to Rs. 16.44, New Standard Engineerings by Re. 1 to Rs. 170, Larsen and Toubros by 25 nP to Rs. 37.75 and Mahindras by 12 nP to Rs. 21.36. Premier Constructions, however, came in for selling and dropped Rs. 4 to Rs. 188. Among minings, Shivrajpurs spurted by Rs. 8 to Rs. 79 on expectations of higher dividend. Indian Coppers gathered 18 nP to Rs. 4.88 on reports of higher production and expectation of a right issue at least in the current year.

In the miscellaneous section, Alembics advanced by Rs. 12 to Rs. 247 and New India Industries by Rs. 10 to Rs. 410. Despite rumours regarding a possible upward revision in excise duty on rayon goods, rayon shares met with good buying support. Indian Rayons spurted by Rs. 12.50 to Rs. 64.50, Nationals by Rs. 8 to Rs. 508 and Gwaliors by Re. 1.25 to Rs. 44. South India Viscose was done at Rs. 147.50 *ex-right*. Bareda Rayons, however, lost Re. 1.50 to Rs. 121.50. Synthetics improved by Rs. 7 to Rs. 129, Polychems by Rs. 2.50 to Rs. 225 and Dhrangadhras by Re. 1 to Rs. 119. But Indian Dyestuffs shed Rs. 10 to Rs. 460. Amar Dyes Rs. 3.75 to Rs. 360 and Adarsh Chemicals Rs. 2 to Rs. 60. Bombay-Burmahs rallied from Rs. 553.50 to Rs. 564.50 yesterday but declined to Rs. 558 today. The net rise over the week was Rs. 4.50. Wimcos gained Rs. 2 to Rs. 260. Philips Carbons were better by a rupee at Rs. 16.52. Isaac Holdens gathered 24 nP to Rs. 8.48. Greaves Cottons rose by Rs. 3.50 to Rs. 155.50. Voltas gathered 50 nP to Rs. 259.50. Tata Chemicals picked up 36 nP to Rs. 18.16 and Oils 30 nP to Rs. 74.80. Anil Hardboards, however, declined by Rs. 11 to Rs. 166, Ceat Tyres by Rs. 5 to Rs. 225 and Premier Tyres by Re. 1.50 to Rs. 96.50.

Calcutta Stock Exchange

CALCUTTA, *8th February*

Apart from bullish activity in Indian Irons and a few features in coals, jutes and miscellaneous industrials on interested buying, the Stock Exchange presented a dull phase during the week under review. Yesterday's trend revealed a modest recovery. While operators and investors were generally disinclined to increase commitments in view of Budget uncertainties and several rumours now circulating, activity in steel shares was encouraged by continued expectation of an increase in retention prices. The view that the reported, yet unconfirmed, increase of Rs. 25 a ton would not affect the return to shareholders, as the same would be towards the increased cost of production, appears to have been ignored in the bullish enthusiasm the talk of increase had released. That the gain in price was insignificant showed how even bulls became cautious. However, the fact that, despite shortage of coal and limestone and a fall in the quality of coal, production of the Indian Iron and Steel Company, Ltd., in January had been satisfactory prevented profit-taking to get the upper hand and this aspect aided the price to stabilise at the improved level during the week. Pig iron produced was higher at 112,649 tons (111,516 tons in the previous month), and saleable steel at 71,540 tons (61,395 tons) comprising semis 14,912 tons (20,437 tons) and finished steel 56,628 tons (40,958 tons), while steel ingots at 83,787 tons (86,424 tons) recorded a small decline. This good result, despite difficulties encountered, also evoked enthusiasm. The higher production in Jamshedpur was another factor which imparted steadiness. It was noted that optimistic reports relating to the forthcoming budget were not reflected in Bombay advices—a factor that explained the caution here. Selected coals continued to be bought on expectations of foreign aid for expansion, while the announcement of good corporate results highlighted activity in miscellaneous industrials. The increased output this season failed to attract attention in sugars, as export prospects were not considered to be bright. In jutes, the satisfactory dividends for the Bird-Heilgers group of mills were noted, but the difficult fibre supply position shrouded activity in a general way.

On interested buying, Burrakurs, among coals, rose to Rs. 19.06 from Rs. 18.50. For the same reason, Equitables at Rs. 28.56 were higher by more than one point, while Central Indias shaded to Rs. 11.37 from Rs. 11.53. South Karanpuras at Rs. 11.87, after being tractionally better, receded to Rs. 11.69. Bengals scored to Rs. 319.50 from Rs. 314. At Rs. 7.50, Western Bengals recorded a small gain. Amalgamateds were unchanged at Rs. 21.31.

The lower levels in jutes attracted buying and, though the volume of business was lower, the threshold suggested recovery. Kelvins were pushed up from Rs. 136 to Rs. 149, with Anglo-Indias at Rs. 165 scoring a gain of Rs. 10. Another feature was the rise in Budge Budges from Rs. 127.50 to Rs. 129. Caledonians changed hands at Rs. 125, at which the gain was Rs. 5. Gouripores were put through at Rs. 333, as against Rs. 325, and Kinnisons at Rs. 147, as against Rs. 144, while Nuddeas sagged from Rs. 46.50 to Rs. 45.25 and New Centrals from Rs. 18.62 to Rs. 18.12. Ganges at Rs. 10 disclosed a small loss, as did Kanknaras at Rs. 75.50. Megnas were quiet at Rs. 11.12, Birlas moving down from Rs. 29.12 to Rs. 28.75 and Empires from Rs. 15.28 to Rs. 14.50.

Engineering shares were about firm. Indian Irons opened at Rs. 24.53 and at one time receded to Rs. 24.35. A recovery set in to raise the rate to Rs. 24.82 but fell to close at Rs. 24.39. Texmacos were quiet at Rs. 22.70. Jessops recovered to Rs. 20, after being lower at Rs. 19.87. Guest Keen Williams were better at Rs. 38.06, but Braithwaites were unchanged at Rs. 31.50.

On expectations, and/or reports of good corporate results, miscellaneous industrials recorded some features. On a good dividend, Electrical Construction Equipment were better at Rs. 12.44. National Pipes and Tubes continued to be in good demand and at Rs. 23.94 were fully steady. Rallis were a late feature for the jump to Rs. 137 from Rs. 132. Ballarpore Papers, carrying a rights issue, were better at Rs. 72. On good working report and a dividend of 25 per cent taxable, Angelo Bros. were firm at Rs. 22. Hindustan Motors gained to Rs. 19.75 from Rs. 19.44. Dunlop Rubbers recovered to Rs 41.37 from Rs. 30. Union Carbides, though unchanged, were firm at Rs. 48.75

Among teas, Ranicherras recovered to Rs. 16.50 from Rs. 16.19, Nagaisurres at Rs. 163 being higher by Rs. 3. Mohemas eased from Rs. 12.31 to Rs. 11.50 and Brooke Bonds from Rs. 15.50 to Rs. 15.

Madras Stock Exchange

MADRAS, *8th February*

Distinctly steady conditions prevailed on the Stock Exchange during the week under review. Investment support was in evidence in several counters, barring sugar shares which encountered some selling and drifted lower. There was a fair volume of turnover in both cleared and cash scrips. Operators seemed to be somewhat optimistic about the forthcoming Central Government Budget. Textiles generally ruled firm, thanks to better advices from piecegoods and yarn markets. Reports from Ceylon indicating relaxation in restrictions on imports of low-priced textiles to that country were welcomed. Banks and electricals evoked larger enquiries. Among miscellaneous industrials, cements and chemicals were particularly cheerful.

In the textile section, Coimbatore Cottons attracted good attention and firmed up by Rs. 9 to Rs. 169. Coimbatore Spinnings advanced by Rs. 5 to Rs. 49. Lakshmis spurted by Rs. 2 to Rs. 156 before closing at Rs. 153. Rang Vilasas strengthened by a rupee to Rs. 41. Travancore Rayons hardened by 40 nP to Rs. 34.40. Radhakrishnas gathered 37 nP to Rs. 29.12. Kotharis put on 15 nP to Rs. 12.25. Bangalore Woollens were fully maintained at Rs. 195.50, Cambodias at Rs. 9.90, Metturs at Rs. 369 and Premiers at Rs. 225. Buckinghams, however, dropped Rs. 4 to Rs. 191, following selling by some quarters.

Among teas, United Nilgiris strengthened by 40 nP to Rs. 29.90. Chembras were quoted at Rs. 3.85 *ex-right*, as against Rs. 3.55 *cum-right* last week. Haileyburias improved by 25 nP to Rs. 13.90. Peermades picked up 12 nP to Rs. 22.30. Blue Mountains rose initially from Rs. 3.88 to Rs. 3.95, but declined subsequently to Rs. 3.93, the net gain over the week being 5 nP. Periakaramalais gathered a like amount to Rs. 3.62. Devasholas were fully steady at Rs. 30.50, Nilgiris at Rs. 6.41 and Nonsuchs at Rs. 26.40. But Coonoors were neglected at Rs. 27.25, following the announcement of the final dividend of 7½ per cent, making a total of 17½ per cent, taxable, for the year ended September 1960, as compared with 20 per cent, taxable, for the previous year.

Coffees ruled firm. Coffee Lands rallied from Rs. 18.50 to Rs. 19.50. Amalgamateds rose by 40 nP to Rs. 13.65. Wartyhullys gained 10 nP to Rs. 3.35. Mysore Coffees put on 5 nP to Rs. 5.45. Ouchterlonys gathered 4 nP to Rs. 4.64. Oscoors were a shade higher at Rs. 3.41. Bababudins were firm at Rs. 8.75. The Directors of the Company have declared a dividend of 8 per cent for the year ended June 1960, as against 12½ per cent for the previous year. Consolidated Coffees rose from Rs. 23.25 to Rs. 23.35, before finishing at Rs. 23.15. Kumergodes shed 7 nP to Rs. 4.70. The Company has maintained the dividend for the year ended October 1960 at 20 per cent, taxable.

In the rubber section, Thirumbadis spurted by 27 nP to Re. 1.77. There were rumours that the Company was contemplating to dispose of the Calicut Estate. Midlands rose by 15 nP to Rs. 11.50 and Highlands by 5 nP to Rs. 14.75. Cochin Malabars were fully steady at Rs. 7.55, while Rajagiris declined by 5 nP to Rs. 19.

Sugars, as already stated, drifted lower. Cauverys fell by a rupee to Rs. 138. East India Distilleries eased by 50 nP to Rs. 40.25. Deccans declined from Rs. 14.80 to Rs. 14.50, before closing at Rs. 14.65. The net loss over the week was 15 nP. Travancores and Mysores were quiet, the former at Rs. 10.70 and the latter at Rs. 59.75. United Breweries, however, met with special support, the quotation forging ahead from Rs. 95 to Rs. 110.

A rise of Rs. 3 to Rs. 133 in the quotation of Rallis, following the announcement of the maiden dividend of 4 per cent, taxable, for the year ended August 1960, was a feature of trading in the miscellaneous section. Among cements, Indias and Dalmias hardened to Rs. 6.15 and Rs. 11.25, respectively. Orissas were firm at Rs. 13.55 and Travancores at Rs. 8.60. Among chemicals, Metturs rose by 35 nP to Rs. 13.35 and F.A.C.Ts by 27 nP to Rs. 10.12. Mysore Fertilisers were maintained at Rs. 10.90 and Mysore Chemicals at Rs. 26.10. Among others, Leylands put on 7 nP to Rs. 8.77 and Aluminium Industries 3 nP to Rs. 22.83. T. Stanes were fully maintained at the last week's level of Rs 36.

COAL PRODUCTION IN PUBLIC SECTOR

With a total producton of a little more than a million tons of coal in January 1961 from the collieries in the public sector, the rate of production, it is claimed, has now exceeded 12.4 million tons per year, as compared with an annual rate of 5.1 million tons in June 1960. It is thus sought to be made out that the second Plan's target of 12 million tons in the public sector for the end-year has been reached and even slightly exceeded. This manner of comparing performance with the target is somewhat misleading. If production in January this year has come to a million tons and it continues to be maintained at this monthly level in the next 11 months of the current year, it will virtually mean that the second Plan's target of annual production will be achieved only in the first year of the third Plan.

NEWS IN BRIEF

THE next meetings of the Import Advisory Council and the Export Promotion Advisory Council will be held at New Delhi, the former on the 6th and the latter on the 7th of next month.

Yugoslavia has agreed to build a cement factory in Assam, under a contract signed at Belgrade last week between the Assam Cement Ltd. and the Zagreb Ingra Enterprise.

The Hindustan Teleprinter Ltd., Madras, the first teleprinter factory in the public sector, is expected to manufacture 170 teleprinters by the end of this year. It will attain full production—1,000 machines annually—by 1963-64. Messrs. Olivetti of Italy are providing technical collaboration in the project.

The view that the present surplus of copper in the world is only a temporary phenomenon has been expressed by Sir Ronald Prain, Chairman of the Rhodesian Selection Trust Group of Companies, who is now in India at the invitation of the Federation of Indian Chambers of Commerce and Industry. Production cutbacks announced by the major producers, according to him, will eventually help stabilise prices.

A training scheme for secretaries of co-operative farming societies has been formulated by the Government of India. The scheme envisages the setting up of 15 training centres initially at an estimated cost of Rs. 58 lakhs. The proposed centres, which will train about 600 persons, will function in close co-operation with the extension training centres started under the community development programme.

Production of tea in India during 1960 was lower at 696.1 million lbs. as compared with 716.1 million lbs. in 1959. The decline was accounted for solely by North-East India, where output declined from 561.2 million lbs. to 527 million lbs. Production in South India, however, improved from 154.9 million lbs. to 169.1 million lbs. Ceylon's output of tea in 1960 was higher by 23 million lbs. at 436 million lbs. Production in Indonesia and Africa was also better last year.

The Kerala Agrarian Relations Bill, 1957, the Jenmikaram Payment (Abolition) Bill, 1957 and the Kerala Agriculturists Debt Relief (Amendment) Bill, 1958 have received the President's assent. These Bills, as initially passed by the Kerala Legislative Assembly, were reserved by the State Governor for the President's consideration under certain Articles of the Constitution. Later, they were returned to the Assembly, which modified them in the light of the President's directives.

The official indices of wholesale prices and industrial production in India are expected to be revised soon in the light of the report of the official Committee, headed by Mr. K. B. Lall, Additional Secretary to the Commerce and Industry Ministry. In this report, the Committee is believed to have opined that 1952-53 can no longer be a suitable base year for measuring the movements of prices and production because "the texture of the country's economy has radically changed since then."

The National Council of Applied Economic Research, New Delhi, has suggested, in a report to the Government of Mysore, that a deep sea port should be established at Mangalore, in view of the good prospects for traffic in general cargo and iron ore. The report is the first of a series of studies proposed to be conducted by the Council on Mangalore and Malpe ports at the request of the State Government. In the meantime, West Germany and Italy are understood to have expressed their willingness to assist in the development of Mangalore port, if India agrees to supply them iron ore on a long-term basis.

The foundation-stone of a Rs. 10-crore acetate moulding powder plant at Calcutta was laid by Dr. B. C. Roy, Chief Minister of West Bengal, last week. The plant is being put up by the East Anglia Plastics Ltd. It will produce at a later stage its own primary raw material, namely, cellulose acetate flakes. The end products of cellulose acetate range from kitchen utensils to telephone and tool handles. The raw material for cellulose acetate can be derived from alcohol and cotton linters, which are the by-products of sugar and cotton, respectively.

From Abroad

The Swedish Government has decided to abolish the upper age limit for people entering civil service or taking other jobs with State agencies in general.

The Bank of England has agreed to refinance the final 18 monthly instalments of export credits granted to firms by banking organisations in the U.K. This facility will enable the banks concerned to convert this portion of export credits into liquid assets.

A 24-member commission has been appointed by King Mahendra of Nepal to investigate the present structure of taxation in the country and to recommend measures to raise revenue from this source. Mr. Tanka Prasad Acharya, a former Premier, is the Chairman of the Commission.

Gross fixed investment in industry in West Germany amounted to DM 13,720 million during 1959, about 8 per cent. more than in 1958. By major groups of industries, the investment goods industries (which include a wide range of consumer durables) invested DM 3,870 million (an increase of 18 per cent over 1958), the 'soft' consumer goods industries DM 1,820 million (8 per cent), and the basic and production materials industries (including a.o. steel, cement and chemicals) DM 5,080 million (up 5 per cent.)

Austria has agreed to give a credit of about $28 million to the World Bank consortium, assisting India in the implementation of the third Plan. This represents almost double the offer of $14 million made last year. The credit is also for a longer term than originally envisaged. The Austrian State-owned steel works is also expected to provide Hindustan Steel with machinery and other equipments. The agreement followed talks which Mr. S. Boothalingham, Secretary of the Union Ministry of Steel, had with the representatives of the Austrian Government at Vienna last week.

The Ceylon Government has decided to allow the import of cloth, the c.i.f. value of which is less than Rs. 2 a yard, without a permit. The decision is presumably prompted by the need to afford relief to people who would otherwise have been hit by the all-round increase in import duties and restrictions imposed recently in a bid to conserve foreign exchange. The concession will not, however, extend to banian cloth and sarongs on which protective restrictions have been in force. The concession will benefit trade with India which has been the major supplier of low-priced textiles to Ceylon.

The Indonesian Government has signed a contract for three complete cotton spinning factories—a total of over 90,000 spindles—with Messrs. Platt Bros., well-known British manufacturers of textile machinery. The contract covers the supply of all necessary machinery and equipment, as well as prefabricated factory buildings, electrical power generators, and technical services. Value of the machinery and buildings is about £5 million. This is the first contract to be signed between Indonesia and the U.K. in which payment is to be made on the basis of the extended credit terms made available last year for British exports to Indonesia. A special feature of the contract is that full technical and training services are to be provided, along with the machinery and buildings. Indonesian technicians will be trained overseas, and a team of U.K. experts and engineers will be made available in Indonesia.

Rice (in terms of paddy) production in India during 1960-61 is estimated at about 45.5 million tons—substantially higher than the previous record output of 1958-59—according to the latest Commonwealth Economic Committee's *Rice Bulletin*. Thailand expects a crop of more than 7.3 million tons—some 200,000 tons more than in 1959-60. Burma's crop is, however, estimated slightly lower at 6.77 million tons. The U.S. has a larger harvest, estimated at 2.43 million tons. Exports from Thailand and Burma in January-November were considerably higher than in 1959, although the level of exports from both countries has fallen in recent months. Cambodian exports in the first ten months of the year were two-thirds higher than a year earlier. Exports from South Viet-Nam in January-September were nearly double those in the first nine months of 1959. During January-October, India imported 325,000 tons of rice and Ceylon 213,000 tons from Burma.

Substantial increases in British National Health Service charges and contributions were announced by Mr. Enoch Powell, Minister for Health, in the House of Commons on the 1st inst. The charges for prescription will be raised from 1*s.* to 2*s.* an item, with effect from 1st March 1961 and the N.H.S. contribution will be enhanced by 1*s.* a week (10*d.* from the employee and 2*d.* from the employer) for men from the beginning of next July. The charges for dentures, spectacles and amenity beds will also be raised; welfare foods will be sold at prices which cover cost. As a result of these increases, the proportion of gross health service expenditure borne by the Government will fall in 1961-62 to the lowest level since 1949-50. The Exchequer will bear 70.7 per cent of the cost, as compared with 76.3 per cent if the charges had remained the same. The estimated gross expenditure of £850 million on health services in 1961-62 will be distributed as follows: Exchequer: £601 million, contributions: £148 million, charges: £50 million and other revenues: £51 million.

PERSONAL

MR. A. D. Calhoun, Senior Vice-President of the First National City Bank of New York, has arrived in Bombay on a visit to the Bank's branches in India.

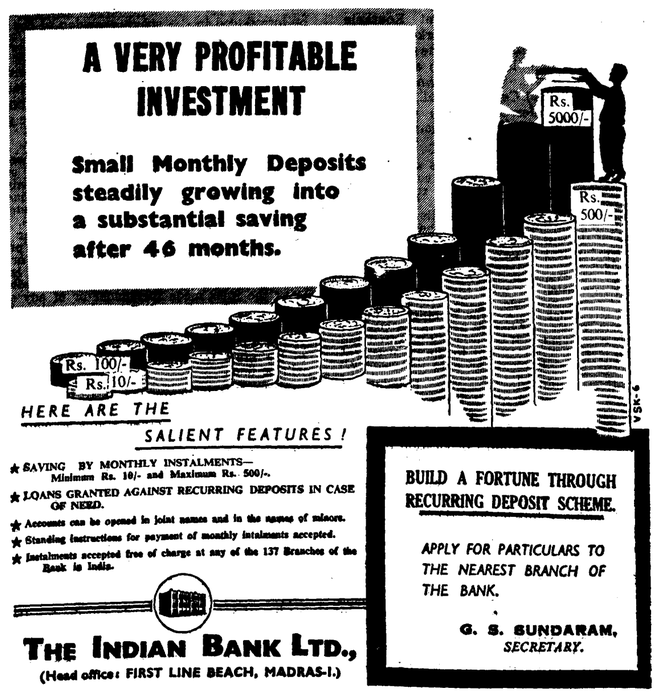
Mr. J. K. Michie, Chairman of National and Grindlays Bank Ltd., accompanied by Mr. G. T. Gillespie, General Manager, has just completed a visit to the Bank's branches in India in connection with the recent merger with the Eastern branches of Lloyds Bank Ltd.

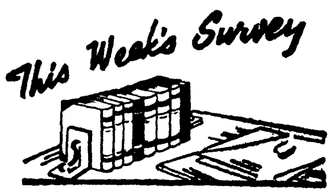
Mr. Stevenson, a representative of the British Iron and Steel Federation, Mr. T. Wakefield, a senior official of the British Iron and Steel Corporation, and Mr. P. Beckwith, Assistant Sales Manager, Messrs. Dorman Long Steel Ltd., have arrived in India on a business-*cum*-study tour.

Mr. Ulrich Neumann, President of the West German firm M.A.N., has arrived in New Delhi to hold negotiations with the Government of India in connection with the proposal to manufacture big-size marine engines in the public sector. He will also suggest the site for locating a heavy steel structural manufacturing plant in Northern India.

Mr. C. R. Wheeler, Chairman of Guest Keen Iron and Steel Company Ltd., Additional Vice-Chairman of the Associated Electrical Industries Ltd., and a Director of the Steel Company of Wales, has been appointed President of the British Iron and Steel Federation for 1961, in place of Mr. R. F. Summers.

Mr. S. K. Venkatachalam, until recently Deputy Secretary in the Union Ministry of Transport and Communications in the Department of Transport (Shipping), has taken over charge as the Senior Deputy Director-General of Shipping, Government of India, Bombay, *vice* Mr. C. P. Srivastava, who has been appointed Managing Director of the State-owned Eastern and Western Shipping Corporation.





PROF. VAKIL'S WARNING

LIKE an expert physician who correctly diagnoses from symptoms the nature of a disease, Prof. C. N. Vakil, who needs no introduction to readers, has clearly indicated the economic malady from which the country is suffering at present. Prof. Vakil could not have chosen a better theme for his third lecture, in the series "Visvesvaraya Lectures" under the auspices of the Indian Institute of Economics, Hyderabad, delivered by him recently, than the problem of national unity and national integration from the economic point of view. For it is common knowledge that there are some strong forces of disunity and disruption which, if not checked effectively and in time, may thwart all attempts at raising the woefully low living standards of the teeming millions. Special mention must be made of the growing regionalism or linguism resulting in the development of a type of State patriotism, the "sons of the soil theory"—that is, reservation of employment opportunities created in any particular State for the people of that State only—and its offshoot, "the key posts theory." Indeed, there is no exaggeration whatever in the warning of Prof. Vakil that, "in some cases, the situation assumes a fanatic form, dangerous for the country's growth and safety, generating weakness, instead of strength for progress."

That the country has been confronted with a serious disintegrating situation was no doubt recognised at the Bhavnagar session of the Indian National Congress early last month, as witness the special resolution on national unity and integration passed thereat. But no practical steps to carry out the spirit of the resolution were suggested. Prof. Vakil did well to draw attention to this lapse and said: "Mere resolutions will not undo the harm that is being done by the prevailing disintegrating tendencies in the country. It is an irony of the situation that some Congress Ministries in power in some States are doing exactly the opposite of what is preached in these resolutions to which they are a party in their capacity as Congressmen."

Prof. Vakil was by no means exaggerating the evil. Nor was he alone in cautioning the country against the danger. The country could not have forgotten the riots at Rourkela (Orissa) Steel Works where workers hailing from outside the State were the target of violent attacks. Similar incidents are not absent in other States. The Chairman of the Indian Iron and Steel Company, Ltd., Mr. Biren Mookerjee, also referred to this disquieting development in his statement to shareholders in the following words:

"There has been for some time an agitation sponsored by some trade unions and several of the State Governments to insist on the restriction of jobs to those popularly described as 'sons of the soil.' If this principle is carried to its logical conclusion, it will amount virtually to the negation of the right of the citizen as a member of the Union to seek employment in any part of the Union territory, a right which has been virtually guaranteed to him by the Constitution. Also, it is bound to result in retaliation by some States who may be affected by the principle rigidly applied against them by any other State. The mobility of industrial labour, which is of benefit both to the workers and their employers, will be seriously impaired and cause no small embarrassment to the management of industrial establishments all over the country."

Another industrialist, Mr. Lakshmipat Singhania, also voiced his feelings against such slogans as the "sons of the soil" and "children of the State," *vide* his speech at the annual meeting of the Aluminium Corporation of India (page 29, *Commerce* of 7th January 1961).

All this is disquieting. Unless the regional or parochial considerations yield place to a spirit of national integration, there is no hope of the country achieving a self-generating economy in the reasonable distance of time. It is in this context that Prof. Vakil put forward the following five constructive suggestions:

1. There should be perfect mobility of capital, managerial skill, technical skill and labour within the country. The existing and proposed restrictions on employment must be removed immediately without any mental reserve.

2. Movement of goods within the country should be free from restrictions.

3. In order to help the free mobility of men and goods referred to above, transport facilities are to be improved.

4. English will be a good supplement to the regional language for the acquisition of additional new current knowledge; it will be good for all-India purposes.

5. We should have adequate training for leadership in all walks of life; this involves reorientation of university education and other forms of higher education, with emphasis on specialised practical training in some branches.

It is difficult not to agree with any of the aforesaid suggestions. In fact, they are milder than even those advocated by the States Reorganisation Committee for ensuring the unity of the country. If there is to be a balanced economic progress of the country as a whole, it is of the utmost importance that national integration must be brought about in actual practice without any delay. It must, of course, be admitted that the backward regions need policies of special treatment, but their need must not be stressed too much to overlook conditions of equality of opportunity in the gains of economic progress. The implication here is that, while measures are necessary to equip the different States with what Prof. Vakil described as "the minimum socio-economic overheads" (such as transport, electricity, road systems, and facilities of technical and general education), earnest attempts must be made to create conditions favourable for the mobility of the two vital potentialities of economic growth, namely, mobility of capital and mobility of labour. Capital formation in any State of the Indian Union must be regarded as Indian capital free to be invested anywhere else in the Union. Sons of the soil are sons of India first and last. In highlighting this aspect, Prof. Vakil has certainly thrown a challenge to the powers-that-be. Will they be bold enough immediately to take steps to put a break on the policies that serve to strengthen the forces of disintegration?

CESS ON SUGARCANE

By a special Ordinance promulgated this week, the President of India has validated the collection of cess on sugarcane by the U.P. Government in the last ten years amounting to about Rs. 45 crores under three different State Acts. The issue of the Ordinance has been necessitated by a recent judgment of the Supreme Court which held that the cess was unconstitutional and invalid. The Ordinance only validates the collection of cess already made and does not give statutory enforcement to its continuance. The Government of Uttar Pradesh has, therefore, decided to replace the cess on cane by a tax on the purchase of cane by sugar mills, as well as by certain *gur*, *rab* and *khandsari* manufacturing units. An official Bill is to be introduced in the ensuing session of the U.P. Legislative Assembly. Meanwhile, the State Governor has promulgated an Ordinance providing for the levy of the aforesaid tax and the regulation of *gur*, *rab* or *khandsari* manufacture in the State. The details of the Ordinance which came into force on the 2nd inst. are given below:

A purchase tax will be levied in the case of a factory at the rate of 19 nP per maund of sugarcane and in case of other types of manufacturing unit 4 nP per maund. No unit which has not already obtained a licence under the U.P. *Khandsari* Sugar Manufacturers Licensing Order 1960, shall, without obtaining a licence from the Sugar Commissioner, carry on or undertake any process connected with the manufacture of *gur* or *rab*. The Sugar Commissioner may, in case of contravention of any of the provisions of this Ordinance or of the rules made thereunder or of any of the conditions of the licence, suspend, cancel or refuse renewal of the licence granted or renewed under this Ordinance. Any person aggrieved by an order of the Sugar Commissioner may prefer an appeal to the State Government whose decision thereon will be final.

The U.P. Govenment's move to replace cess on cane by a purchase tax may be followed by similar measures in other States as well. Such a replacement, while it sets right what is judicially held wrong, can in no circumstance justify the tax in principle, inasmuch as it tantamounts, as this journal has ere now pointed out, to the imposition of tax on raw material. Since, however, the cess on cane has become a part of the structure of taxation in the U.P. and other States, we would urge that the State Governments should at least reduce the rate of cess to a more reasonable figure—say, about three or six naye paise per maund—and utilise the whole proceeds purely for the purpose of improving the yield of cane, its quality and marketing. The balance may be retained as purchase tax and added to their general revenues. It is too much to expect any State Government to give up any part of its existing revenues when they are asked to find more resources for the third Plan.

Be that as it may, the U.P. Government has done well to extend the scope of the tax on the purchase of cane to include the decentralised sector of the sugar industry also, that is, *gur* and *khandsari* manufacture, though the rate of tax is much lower than that payable by sugar mills, beinb 4 nP, as against 19 nP. This step, together with the strict regulation of manufacture of *gur*, *rab* and *khandsari*, will surely reduce the capacity of the decentralised sector to compete with sugar mills for the available supplies of cane. It is needless to mention here that, by checking large diversion of cane supplies to *gur* or *khandsari* production, a lot of wastage of sugar is avoided, because the recovery of sugar in the decentralised sector is only two-thirds of that in the mill sector.

BRITISH TRADE UNIONISM

An illuminating lecture on British Trade Unionism was delivered in the City under the auspices of the Tata Institute of Social Sciences, Bombay, by Lord Morrison, a former Deputy Labour Prime Minister of Britain, who is on a visit to India at the invitation of the Sir Dorab Tata Trust. Lord Morrison, who was intimately connected with the trade union movement in Britain, and had himself had a hand in shaping its destinies, made certain observations on British trade unionism which are of interest to India. Specially noteworthy are his comments on general strikes and the relation of trade unions and politics. He maintained that a general strike with political implications was very questionable. The British general strike of 1926 was one such which was resisted by the Conservative Government with all its might. Lord Morrison said that most trade unions and Labour Party leaders had come to regard it as a mistake and it was doubtful whether it would happen again, unless it were against a *coup d'etat* by a possible military or other dictatorship when it would be justified. This is a point which politicians and trade union leaders all over the world would do well to ponder.

In Britain, trade unions came into politics because it was a logical extension of trade union activity. It was felt that the unions and the socialists should be independently represented in Parliament, for there were plenty of employers in Parliament already. It, however, took time for the trade unionists to realise how natural it was that they should promote a Labour Party and support its candidates. So the bulk of British trade unions were, in politics, associated with the Labour Party and cast important votes at the Party's annual conferences. It was true, however, he said, that two to three million union members out of a total membership of eight million, did not vote for the Labour Party; but the majority did vote for it.

The distinguished Labour Peer pointed out that association with the Labour Party did not prevent the Trades Union Congress, nor individual workers, from making separate pronouncements on public policy. The Labour Party, too, did not seek to interfere with the industrial policy of the trade unions and it would be strongly objected by trade union leaders if it did. It was this aspect, said Lord Morrison, which distinguished socialist trade unions in Britain from communist trade unions in other countries or even communist-dominated unions in Britain.

A comparison of British trade unions with those in India reveals some similarities and many differences. Trade unions in India, too, are allied with political parties. But, unlike in Britain, where the relationship between the Labour Party and the trade unions is in the nature of a partnership based on equality and independence, in India, trade unions are, to all intents and purposes, mere adjuncts of political parties. Far from being equals, joined together for promoting mutual interest and strength and to serve the interests of the country as a whole, trade unions in this country have become the handmaids of political parties, with their leaders dutifully taking orders from their politial bosses.

Another important point of difference is that, while in Britain trade union loyalties are almost entirely for the Labour Party, in India every political party worth the name, excepting the newly-founded Swatantra Party, has trade unions affiliated to it or under its control. Consequently, industrial peace in India is more vulnerable to political rivalries between parties. These rivalries are also bound to be reflected in inter-union relations. Trade unionists in India need to be reminded that they stand to gain more by remaining independent than by submitting themselves to political control, for they can then set all political parties seeking to woo them. Their primary concern should be protection for workers' interests—a fair wage, good working conditions and better housing. Only then can trade unions overthrow their present surveillance and stand independent of the machinations of political parties.

PUBLIC UNDERTAKINGS

Public undertakings in India are no longer experimental ventures. They have come to stay as a permanent feature of the industrial landscape of the country. Thanks to the encouragement of a socialist-minded Government, the public sector has shown a tendency for prolific growth since independence. Although, originally, only public utilities were thought fit to be brought under Government management, either directly or through independent corporations, now the field has been expanded to cover diverse industrial and commercial undertakings including banking, insurance, export trade and even distribution of cement and petroleum products.

Public sector enthusiasts in India would do well to listen to what a confirmed Socialist like Lord Morrison has to say on economic controls and the management of public undertakings. In the second of the three Dorab Tata Memorial Lectures which he delivered at Bombay last week, Lord Morrison observed:

"Economic planning and control is legitimate, but we should not engage in these things merely for the fun of it. There is no need to apply controls to everything. Otherwise, they can become irritant, instead of help to the economy. If overdone, they could choke desirable initiative and constitute an improper interference with freedom, including that of the small businesses. Economic direction for the mere sake of it is a mistake and is liable to represent an irritant and to encourage excessive bureaucracy."

Tracing the evolution of Public Corporations in his country, Lord Morrison said that, in Britain, as the Government ventured into more complicated services and commercial businesses, doubt began to be expressed whether, in these cases, straight civil service administration was right. So the Government sought to apply the principle of public ownership combined with business management. Public Corporations originated thus. The Boards of such Corporations, said Lord Morrison, were, so to speak, responsible to the nation. Although the responsibility for the day-to-day management rested with the Boards, on matters of wider policy, it was competent for the Minister to give a decision by general direction. He recalled how some politicians tried their best to get the Ministers to interfere in day-to-day policy, which would have made it difficult for the Corporations to function efficiently. Thus he pointed out that when the Labour Government's Public Corporations started to function, the Conservatives, supported by some Labour M.Ps, were leaning over backwards to persuade the Government to interfere with the Public Corporations through frequent questions in Parliament. Since similar attempts are common in our Parliament, it would be pertinent to quote Lord Morrison on this point:

"If you make a Board responsible for the day-to-day management, you cannot have Ministers constantly trying to interfere with the undertaking though they have certain powers of general direction. This argument represented the parliamentary dilemma. And there is one amusing and sometimes annoying habit of all Parliaments, namely, that they do not feel themselves obliged to be logical. They want the best of both worlds. Parliament, indeed, has tended to underestimate the opportunities for questions and debates which it has. Everything a Minister does or can do about Public Corporations are matters for parliamentary questioning and debate. So the parliamentary opportunities as to the Boards and the consumer or their councils are considerable. There is the appointment of the Boards, raising of capital and a large number of other things. These matters can be raised by means of parliamentary questions. The opportunities for debate are fully extensive. For example, on the Queen's Speech, on motions for the adjournament, on Supply Days, on Bills promoted by Public Corporations relating to their work and on the Annual Reports and Accounts which the Corporations must send to the Minister for presentation to Parliament. Later, there was established a House of Commons Select Committee on nationalised industries—which the Trade Union Congress and I feared would be a nuisance—but it has done better than might have been anticipated."

What Lord Morrison implied in these remarks was that while Parliament had every right to know what was happening, it should not frequently try to elicit information on the working of State-owned commercial corporations by using the "question hour," as this procedure is not conducive to their smooth and efficient working.

Giving his estimate of the working of Public Corporations, Lord Morrison said that gas, electricity, civil aviation, cables, and wireless were among the financial successes of Public Corporations in Britain as was the post office an example of successful, direct Government management. Coal and railways, he maintained, had not been successful, because of "their imperfect history under private ownership," and also, in the case of the latter, because "the Conservative Government has thrown overboard the idea of co-ordination between road and rail." On the whole, according to Lord Morrison, these enterprises are great and successful experiments in public ownership. He felt that, in the present-day changing business conditions, even Public Corporations, if they were to be successful, should be flexible both in their structure and management. This is undoubtedly a pragmatic view.

WHEAT MISSION'S RECOMMENDATIONS

The world wheat situation continues to cause anxiety to the major producing countries. For supply has been far in excess of demand. World wheat crop (excluding that of mainland China) is estimated to have gone up from 215 million tons in 1959-60 to 221 million tons during the current season, with the effective demand lagging behind by about 60 million tons or so. If there has still been a measure of stability in prices, such is due primarily to the ingenious export policies pursued by the Governments concerned and also to steps taken under the International Wheat Agreement, apart from restrictions imposed on the production of wheat in the major producing countries, which still provide tremendous technical possibilities of expanding output. Paradoxically enough, the underdeveloped countries like India, with their rapidly expanding population, have been afflicted by a crucial shortage of cereals. With availability of foreign exchange in these countries being limited, they can import wheat only by transferring the resources badly needed for industrial development, which will be detrimental to their long-term interests. Further, while the possibilities of expanding wheat production have increased in such advanced countries as the U.S., U.S.S.R., Canada and Australia, the position in the developing countries continues to be unsatisfactory in this respect. The wheat situation is, therefore, likely to become more and more uncontrollable in course of time, unless ways are found in good time to ensure free flow of this commodity on easy terms to places where there is a large potential market for it. What is more important today is not any artificial price support for wheat in the major producing countries, but a rational solution to the problem of bridging the gulf between the supply of, and the demand for, wheat.

Viewed against this background, the recommendations of the International Wheat Mission, which visited India, Indonesia and Japan some time back, are quite welcome. The Mission, appointed by the Wheat Utilisation Committee, which was founded in 1959 jointly by Argentina, Australia, Canada, France and the U.S., comprised representatives of Australia, Canada and the U.S. It had been asked to make a thorough study of the problems of, and prospects for, wheat consumption in the visiting countries. In its report to the Committee, the Mission has made a strong plea to make available to India

The Quest for a National Bird

IT is reported that, on a recommendation from the International Committee for Bird Preservation, the Union Government proposes to adopt an Indian bird as a national symbol. The International Committee was founded in 1922 to co-ordinate the efforts of the different countries for preservation of bird life, especially in the case of migratory birds. For instance, one country might pass laws for protection of ducks which bred there, but, as these birds migrated to another country during winter, they might be shot down there by sportsmen. Again, one country might place an embargo on the export of birds' feathers, but the embargo cannot be effectively enforced unless the countries of destination agreed to ban such imports. Problems like these could be solved only by international cooperation and the International Committee came into being with the undermentioned statement of objects:

> We believe that wild bird life is of great importance in the world in helping to preserve the balance between species which Nature is constantly seeking to adjust, that birds have a great importance for science, exercise a great æsthetic influence on all right-minded people, and are of great value to mankind as food, as destroyers of rodents and injurious insects, and as incentives for reasonable field sports. We believe that, through ignorance, selfishness and from undue desire for gain, mankind is reducing the number of birds in many countries at an alarming rate, having, in fact, exterminated from the earth various interesting and valuable species.

India joined the International Committee in 1952 and set up a Board for Wild Life Preservation which is entrusted with the care and protection of wild animals as well as birds. And now the quest is on for a suitable national bird.

If the underlying idea is to afford protection from extinction, the job is one for ornithologists, assisted by geneticists, biologists, botanists and the like. But, if the choice is for a national symbol, a variety of emotional considerations may have to be examined, although some of them may be scientifically irrelevant. I believe that first ideas on the subject suggest the choice of one among the following birds: the great Indian bustard, the sarus crane, the peacock, the broad bill, the fairy blue and the shama. Also mentioned are the parrot and the mina.

The bustard is, no doubt, a fine big fellow, with a very pronounced yellow beak, four feet or over in height and weighing, on an average, ten pounds. But his name is a factor against him; if misspelt, especially in newspaper headlines, the whole nation may be held to ridicule. Imagine, for instance, the embarrassing effect of a misspelt 'bustard' in headlines like: "Bustards seek sanctuary in Maharaja's palace," or, "State Government keen on protecting bustards." Engineers and mechanics may not, perhaps, feel particularly shocked at a mutilation of the word, because they are accustomed to referring to one of their tools as "Bastard File" which is the name by which the type of steel file predominantly in use in our country is technically known. No one knows why, unless it be that a bastard file is very rough and highly abrasive on account of the minimum number of teeth cut in it. How shocking the name can be to a sensitive person not accustomed to its use is illustrated by what happened in one of the hastily erected fabricating factories in England when the war had just begun. One of the girl recruits who was reporting to the foreman received her briefing thus: "Run up to the tool room, Miss, and get yourself an eighteen-inch bastard, and then report to Bay No. 4." She stood petrified for a second, turned and walked out of the factory, and that was the last that was seen of her.

The second preference is for the peacock, colourful, pompous, vain and flippant, strutting about all the time, piercingly full-throated and noisy—all of them characteristics which do not go well with our socialistic pattern of life. Besides, the peacock enjoys a mythological halo about him and needs no extra protection. Of the other birds under consideration, the parrot has the best claim, but the bird is a slogan singer, and we have already a surfeit of them among our countrymen. Parrots are also known to have created serious trouble among good friends. I know of a case which happened in the early thirties: A civilian officer who was proceeding to the U.K. on leave left his parrot with an Anglo-Indian Forest Officer to be looked after. When he returned six months later and took back the pet home, he was horrified to hear him shout "Paddy is a dirty dog. Paddy is a ruddy drunkard." Of course, Paddy was his name for short, and there was no doubt where the parrot had heard these crisp delineations of his character.

The bird that seems to fill the bill is the crow with the zoological name of *Corvus impudens*, indicating its main characteristic, namely, extreme impudence and mischievousness. It does not migrate and will never be contaminated by foreign culture; it will remain cent per cent *swadeshi*. It has all the traits of an amusing reprobate, eats filth from the garbage bin, lays its eggs in the nest of another bird and is a confirmed protagonist of the efficacy of social parasitism. It has, however, the admirable democratic virtue of sharing anything eatable with others of its fraternity, inviting them with raucous cries to share and share alike. Above all, the crow is the bird that has given rise to the term "crow-catching" which, as is well known, is a very difficult thing to do, nevertheless very remunerative even as a whole-time job in official circles. A bird with so many recognisable and predictable human traits seems to be the obvious choice for a national symbol.

In the context of our present-day problems —political, social and industrial—should we not choose an insect also as a national symbol—for instance, the ant? Ants are constituent members of a most well-ordered society and are eminently rational. They have evolved a very efficient socialist state, are hard-working, instinctively sensible and extremely thrifty. Zoologists believe that ants subject themselves to an extreme degree of social regimentation and are a highly disciplined lot. They work, perhaps, eighteen hours a day, have high sense of duty and no sense of rights, and maintain perfect amity in the community. I vote for a movement for the study of ant culture and the insect's elevation to high national honour.

Expansion in Automobile Industry

I believe Telco is on the onward march for doubling its production of trucks and Ashok Leyland will place five thousand heavy commercial vehicles per year on the road. Simpson & Co. Ltd., who are the makers of the largest number of Perkins Diesel Engines for conversion of petrol-driven trucks and as original equipment on Hindusthan's commercial vehicles, will now be allowed to manufacture their own chassis and transmission. So there will be a fifth manufacturer of commercial vehicles in the country. Hindusthan Motors will be permitted to manufacture their own diesel engines, while Premier Automobiles, it is understood, will arrange to take over the manufacture of Meadow's Diesel Engines from Automobile Products of India. The existing manufacturers of passenger cars are also undertaking expansions to increase their outputs. Standard Motors have arrangements in train for producing pick-up vans and one-ton trucks for commercial purposes with Standard Vanguard Engines. In addition to the reported move for manufacture of scooters in Mysore State, Enfield India Ltd. has been granted licence to produce six thousand scooters per year, in addition to their Royal Enfield Motor Bicycles. They say it never rains but pours!

With all the projected increases in the output of the automobile industry, how are we going to find the road space to drive them and park them? The roads in our major cities, where the vehicles will concentrate, are admittedly incapable of accommodating the traffic which is to be envisaged, and are designed, aligned and surfaced to provide only for bicycles, rickshaws and tongas. Already, most of the arterial highways running through our cities are death traps for unwary pedestrians. As for the internal city roads where business premises have sprung up in increasing numbers, the development has been so wayward and haphazard that there seems to be no way of solving the traffic problem. Calcutta and Madras, in particular, have become problem cities for traffic regulation and the latter is still carrying on with outmoded types of conveyances which flourished in the days of Hyder Ali and Tippu Sultan alongside modern fast-moving vehicles. The only thing that has ceased to exist is the palanquin, but the passage of automobiles through the main roads is at no better speed. Concentration of residential accommodation within urban areas is causing more and more congestion and the demand for buses to carry people to their places of work is perpetually on the increase. It is all a vicious circle and will continue to be so, unless a powerful break is put on unplanned development and major operations are undertaken to widen roads and surface them properly.

• • • •

Domestic Refrigerators

It is good to hear that Kelvinator of India has started construction of a factory at Faridabad for the manufacture of domestic refrigerators and that four thousand of them will be produced in the first year, the output being stepped up to ten thousand units a year later. But the intriguing point about the announcement is that the first model off the lines will have a capacity of 9.5 cubic feet. This indicates that the planning is for large families, and, as the cost will also be relatively high, it is mainly for the high-income groups. Domestic refrigerators are articles which directly contribute to better, saner and economic living, and are durable consumer goods which should rank high in priority in the list of articles whose production in increasing numbers might tend to reduce inflation. They should, therefore, be made in smaller sizes of three and five cubic feet, enough to hold some vegetables, fruits, milk, curd, meat and fish. They should also be priced low enough for people in the middle-income group to buy. If Kelvinator India is not interested, someone else should be found to make these small cabinets which will go a long way to improve the standards of life and comforts of the middle classes.

Tailpiece

The Ranchi correspondent of a leading newspaper has reported that machines worth several lakhs of rupees, purchased by the National Coal Development Corporation, are lying idle at the collieries at Kargali, Bokaro and Giridih, as they were found unsuited to the requirements of the concerned collieries. It is also reported that the machines have been lying dumped in the open and are now believed to have become useless through rust and corrosion. I am not prepared to believe that this assessment can be factually correct. Surely these machines can be eventually used for washing linen! Did you hear me say 'dirty' linen?

SANDOZ PRODUCTS LTD.

The new pharmaceutical plant of Sandoz Products (Private) Ltd. at Kolshet, near Thana, in Bombay was inaugurated by Dr. S. Radhakrishnan, Vice-President of India, on Saturday the 4th inst. The factory is licensed to manufacture seven basic pharmaceutical products, the most important of which are calcium and ferrous gluconates, as well as for the local finishing of all Sandoz specialities in many forms, including ampoules, tablets, syrups, powders, granules and ointments. Besides pharmaceuticals, the factory produces softening agents and other dyes in powder form for textiles and agro-chemicals. There are three well-equipped chemical, biological and micro-biological laboratories which ensure the high standard of Sandoz pharmaceuticals. There is also a special development laboratory entrusted with the task of establishing shelf life of formulations and arriving at stabler pharmaceuticals. The factory stands in an area of 58 acres and has a staff of over 300.

Sandoz Products (Private) Ltd. is a joint Indo-Swiss venture. Sandoz Limited of Basle in Switzerland is one of the world's leading pharmaceutical manufacturing firms. It has 25 affiliated companies and five jointly owned factories overseas. The plant at Kolshet is claimed to rank amongst the largest and most modern. In 1947, Sandoz Products Ltd. was registered as a private company, with head office in Bombay, purely for the purpose of importing and distributing Sandoz products. Six years later, the Company decided to apply for a licence to manufacture the items within the country.

Inaugurating the pharmaceutical plant, Dr. Radhakrishnan complemented Sandoz for making drugs of standard quality and stressed that India needed several factories of this kind to improve the conditions of the health of the masses. In his speech, Mr. M. Cuttat, Swiss Ambassador to India, stated that Sandoz of Switzerland "has transferred a factory to India which would become independent in respect of the pharmaceuticals the plant would produce." Welcoming the guests, Dr. D. Tuor, Managing Director of the Company, declared that the inauguration of the plant was a landmark in that it represented the change in the pattern of life of Sandoz in India from trading to manufacture.

LONDON LETTER

ECONOMIC TRENDS

CAPITAL FORMATION BETTER

(From Our Own Correspondent)

LONDON, *3rd February*

THE news that the gold and convertible currency reserves have risen by another £5 million after allowing for a subscription of £4 million to the liquidation of the European Payments Union, that is, an effective £9 million increase on current account, means that the increase in the reserves has now been continuous for over a year. It is an unfortunate fact that the balance of payments is still running adversely, and the increase in the reserves can only be on capital account. It is at least clear that there has not yet been any outflow of funds, either to Europe or America.

The latest data on the balance of payments established that, over the twelve months up to the third quarter, between 1959 and 1960, the balance deteriorated from a surplus on current account of £43 million to a deficit of £101 million; a deterioration of £144 million. Since most of this deterioration relates to goods and services, it is assumed that it is the measure of the extent to which, over that period, the U.K. was consuming more than it was producing. On the other hand, there are many indications that the rise in domestic expenditure was much reduced in 1960. There were thus two conflicting trends operating that year: first, a falling increase in the rate of expenditure and, secondly, a rising increase in the rate of imports, all this reflecting a decline in domestic output. This decline has been accentuated by a decline in exports.

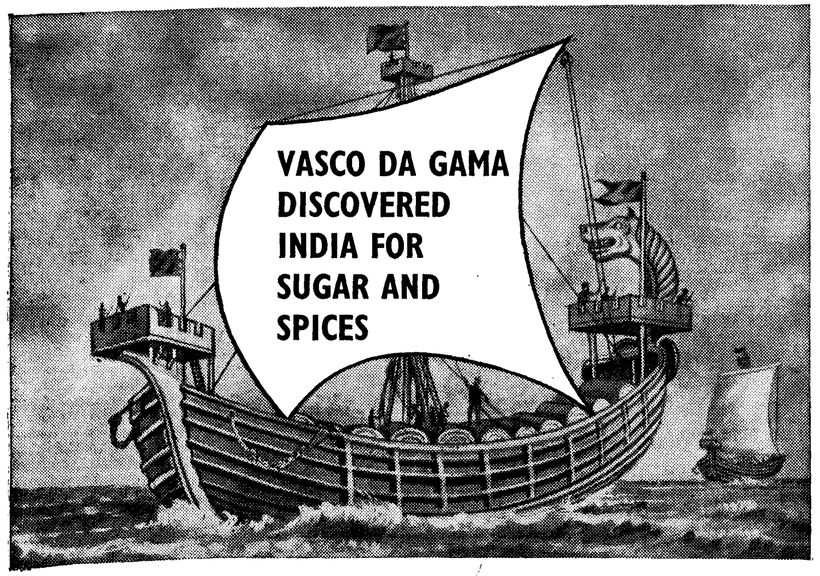
It is the rise, albeit still in the rate of expenditure, that has given such concern to the Government, and yet it is difficult to see that, more recently, this has anything to do with private consumer spending. Indeed, the Treasury analysis on annual income and expenditure indicates that, in 1960, the consumer spending was at a lower rate than consumer earning, and that what was going up was *Saving*. The increase in expenditure has thus been going towards the formation of capital. Fixed investment was clearly rising up to and including the third quarter of 1960, and this investment was mainly private and mainly in the manufacturing industries.

The implication of all this—that savings have been increasing and private capital formation has been increasing—is that the disturbing growth in imports has been diverted to formation of capital. If the balance of payments has to be adverse, then it could not be adverse in a better cause.

Interest Rates

This thought brings us back to the question of international interest rates, the difference between which has enabled Britain to furnish her imports. Apparently, since most European countries became fully convertible two years ago, interest rates have become the major factor governing the movement of funds between countries. The volume of such international funds or "hot money" is now considered so large

(*Continued on page 261*)



TODAY SUGAR MUST DISCOVER EXPORT MARKETS!

India is the home of sugar-cane. At the turn of this century, paradoxically, it was one of the poorest producers of sugar and among the largest importers of the commodity. As late as 1925–26 the country imported Rs. 15,83,36,000 worth of sugar. Today the country produces all the sugar it needs and more!

Behind this phenomenal achievement lies the massive effort of the sugar industry. Given the proper climate of operation, enough sugar can be produced to earn vitally-needed foreign exchange. To compete in the world market, it is necessary to produce cheap sugar which in turn depends on the price of sugar-cane. Today the cost of sugar-cane alone is more than the international price of sugar. Production of cheap cane is therefore a catergorical imperative.

Maharashtra Sugar Industry leads the way here. Its emerald green carpet of lush sugar-cane as if level cut by a master gardener is a feast to the eye. On the lands where surrounding agriculturists produce on an average 27 to 45 tons of sugar-cane per acre, 64.1 tons and 62.5 tons are average yields on the entire Godavari and Maharashtra sugar plantations. This is a heartening occurence, with results on individual plots going above 90 tons. The results are phenomenal, particularly as they are achieved with maximum economy in the use of manures and water, ensuring the cheapness of the cane for world competition in export to earn foreign exchange for India.

For the sake of agricultural productivity

BANKING COMPANIES ACT AMENDED

MOVE TO EXPEDITE MERGERS AND RECONSTRUCTION

FOLLOWING almost on the heels of the second amendment to the Banking Companies Act, which was passed by Parliament only in the month of September 1960, the President promulgated, on the 4th inst., a new amending Ordinance, which enables the State Bank of India to amalgamate with it any other banking institution and authorises the Reserve Bank to lay down conditions for the reconstruction and amalgamation of banks. Inasmuch as the new Ordinance would facilitate an early end to the present state of uncertainty and suspense which the constituents and borrowers of the banks under moratorium are experiencing, the Ordinance needs to be welcomed. In all, there are some nine banks which have been granted moratorium, since the enactment of the amending legislation four months ago. Of these nine banks, five are in Kerala, one—the Indo-Commercial Bank Ltd.—is in Madras, two are in Maharashtra and one in Delhi. In the case of some of these banks, the moratorium was initially granted for only two months, but, subsequently, the period was extended. The Indo-Commercial Bank has actually been under moratorium since 24th October 1960. In the case of the five Kerala banks, the moratorium granted by the Reserve Bank expires on the 18th March 1961. The moratorium period of some other banks is due to end during the next few days. But even at this stage, the schemes for amalgamation or reconstruction are not ready. There are several reasons why the moratorium arrangements have dragged on for such a long period without reaching the stage of finality. The terms of amalgamation, for instance, are not acceptable to all the parties concerned. The draft scheme of amalgamation of the Indo-Commercial Bank with the Punjab National Bank, formulated by the Reserve Bank of India, has been considered by many shareholders of that Bank as analogous to a scheme of liquidation. It is maintained by several depositors and shareholders of the Indo-Commercial Bank that it is most unfair to them, as it does not provide for any goodwill in the list of assets. It is pointed out, in this connection, that the Punjab National Bank would acquire about 20 branches of the Indo-Commercial Bank along with thousands of loyal constituents, premises and trained staff.

Lesser of Two Evils

Some of the transferee banks have also sought clarification in regard to the conditions under which they would have to effect the proposed amalgamations. The clarification relates, *inter alia*, to the status and conditions of service of the employees of the banks proposed to be amalgamated, the question of the rights of their shareholders and the interests of the depositors. All these complaints and queries and the resulting clarifications have caused delay in effecting the mergers. The issues raised are of a type that there could be endless arguments by parties who are really not interested in bringing about speedy integration of the weaker units with stronger ones. One way of ending this controversy is to empower someone who can apply the veto. But under the amending legislation of September last, the Reserve Bank did not have any authority to impose a merger scheme on the amalgamating or reconstructing banking companies. The new Amending Ordinance seeks to fulfil this gap. This remedy may strike some as too drastic, undemocratic and, therefore, unconstitutional. But something has to be done to eradicate the weakness in Indian banking caused by the existence of a large number of sub-standard banks. So long as the Reserve Bank takes care to see that the bigger banks which are asked to absorb small sub-standard banks do not take undue advantage of the latter's plight, the remedy may be accepted as lesser of the two evils.

The solution provided in the Ordinance for protecting the status and service conditions of the employees of banks, the assets and liabilities of which are proposed to be taken over, is quite reasonable. It is laid down in the Ordinance that the employees of such a bank would get for a period of three years the same remuneration and would be governed by the same terms of services as were obtaining immediately before the date of the order of moratorium. At the end of the three-year period, the employees would be entitled to the same remuneration and the same conditions and terms of service as are obtaining in the bank which has taken over. This is subject to the proviso that the qualifications and experience of these employees are the same or equivalent to those of employees of the absorbing bank. The Amending Ordinance further provides that any differences arising in regard to the qualification and experience of the employees shall be referred to the Reserve Bank, whose decision will have to be deemed final. Employees who do not wish to serve in the absorbing bank will be entitled to receive payment of compensation, retrenchment and other benefits due to them under law. It will thus be seen that the authorities have been quite fair in handling the case of employees. They stand to lose nothing. On the contrary, there is every prospect of being a member of a bigger institution within a short period of three years. They have also the freedom to leave with full compensation and try their fortunes elsewhere.

Reserve Bank's Powers

The Ordinance empowers the Reserve Bank to deal effectively with the controversial question of the interests of the shareholders and depositors. In the case of a bank which is sought to be reconstructed, the Reserve Bank has to prepare a scheme laying down provisions for assets, powers, interests and liabilities of the banking company on its reconstruction, in the case of amalgamation, the Reserve Bank has authority for providing for a change in the Board of Directors, alteration of the memorandum and articles of association, reduction in the rights of depositors or creditors and also payment in cash where shareholders prefer such a course or where shares cannot be allotted to them. The Reserve Bank, of course, will first submit its scheme of amalgamation to both the banks concerned and amend it in the light of their observations wherever they are reasonable. The final authority rests with the Central Government to which the Reserve Bank has to refer the scheme. The Government will then enforce it after making such modifications as are found necessary.

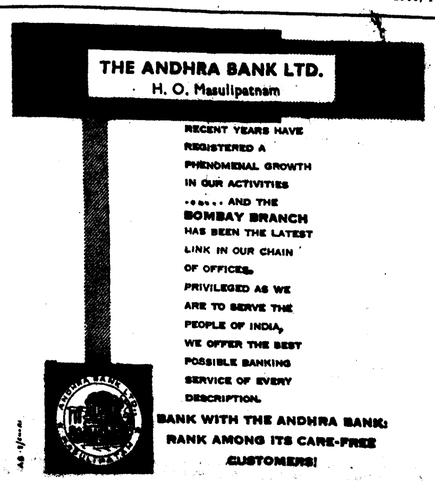
The main virtue of the new procedure is that it will shorten the period of uncertainty and suspension, caused by moratorium. It will expedite the process of amalgamation or reconstruction at least in the case of those banks to which the moratorium may be applied in future. The clients of banks which are already under moratorium have undoubtedly suffered hardship. This is particularly true of the five banks in Kerala. The moratorium on these banks, coming as it has in the wake of the closure of the Palai Central Bank, has practically paralysed business activity in Kerala to a considerable extent. It is stated that, as existing advances were being recalled, and fresh advances were not available, prices of agricultural commodities have come down. Unemployment is reported to be increasing and several business people and factory owners who were dependent on these banks for accommodation are said to be in distress. Some of them, it is apprehended, may even fail. The repeated extensions of the moratorium period, especially in the case of the Indo-Commercial Bank, it is stated by many critics, who are affected by the moratorium, have been due to the procedure and the method adopted by the Reserve Bank. Fresh inspection and the revaluation of the assets and liabilities undertaken by the Reserve Bank of India has been mainly responsible for the delay. Prolonged periods of moratorium are likely to shake the confidence of depositors of even the other small banks, who are also apprehensive that their turn may also come sooner or later.

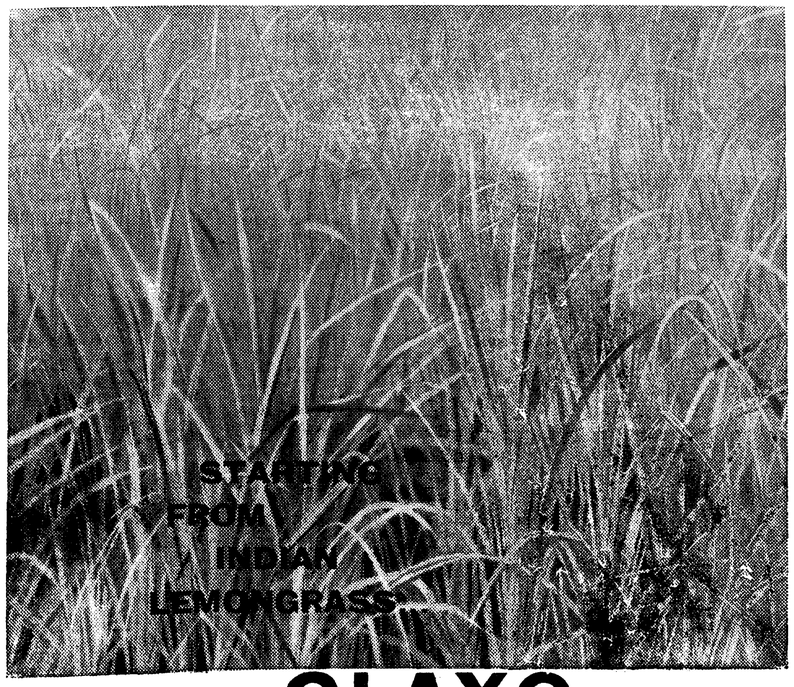
Amalgamation with State Bank

The provision in the Amending Ordinance enabling the State Bank of India to absorb any other bank may also cause further loss of confidence among the small banks, as they may fear that they may be taken over by the State Bank at the will of the Government. The amalgamation of banks with the State Bank of India has been made possible by including the State Bank in the definition of banking institutions in the parent Act. Hitherto, such amalgamation was not possible as the State Bank of India was not governed by the Banking Companies Act but by a special statute. According to reliable sources, one of the few banks now under moratorium in Kerala State will be the first to be amalgamated with the State Bank.

While the policy of securing sounder banking units is commendable, the small banks, along with the indigenous bankers cater to a particular class of borrowers, who may not be in a position to satisfy the stringent conditions of creditworthiness enforced by the bigger scheduled banks. The smallness of the unit of operation may itself not be without some social value in a country like India. Preserving smaller banks would help decentralisation of the credit structure, a development which should be welcomed in the context of the overall objectives of economic planning adopted by the country. The Union Finance Ministry and the Government of India must, therefore, think of ways and means of ensuring that the small banks which are sound and well run are not adversely affected by the steps now being taken to eliminate the sub-standard banks. The one thing which must be straightaway enforced for this purpose is insurance of deposits. It is regrettable to find that the authorities have no clear conception of the problems which they are trying to tackle and the repercussions of the solutions they want to adopt.

The period of moratorium granted by the Central Government to the Prabhat Bank Ltd., Delhi, and the Bank of Nagpur Ltd., Nagpur, has been extended up to and including 8th March 1961 under sub-section (2) of section 45 of the Banking Companies Act, 1949. The two Banks were originally granted moratorium from 8th October 1960 and 27th November 1960, respectively.





GLAXO

NOW MANUFACTURE

VITAMIN A

WHOLLY IN INDIA

FOR THE FIRST TIME IN INDIA, in Glaxo's new factory at Thana, near Bombay, all the stages of Vitamin A manufacture are now in operation.

Designed by Glaxo chemists and engineers in the U.K. and erected with their help by Indian colleagues, the factory can provide all India's requirements of Vitamin A—a vitamin essential to the pharmaceutical and processed food industries.

A feature of the factory is the manufacture of Beta-ionone, the basic starting material in Vitamin A manufacture. It is being produced from Indian lemongrass oil. Thus, Glaxo India is making use of India's natural resources.

Not only will this chemical plant save foreign exchange, but earn it. For, high-grade Beta-ionone, so far made only abroad, will now be exported. So India will earn much more foreign exchange than by the export of lemongrass oil alone.

Vitamin A is just the first product of Glaxo's new Fine Chemical project at Thana. Soon cortisone, hydrocortisone, prednisone and prednisolone (already made by Glaxo from intermediates) will be completely synthesised there. Other products will certainly follow—all of them being a significant contribution to India's development in the Fine Chemical field.

GLAXO—FIRST AGAIN!

INDUSTRIAL DEVELOPMENT OF KERALA

CITY CONFERENCE HIGHLIGHTS POSSIBILITIES

THE one-day Kerala Development Conference held this week in our City—well known as the commercial capital of India—should help to turn the spotlight on the industrialisation of Kerala—one of the problem States. The main purpose of the conference, which was organised by the Kerala Development Conference, Bombay, an organisation sponsored by Keralites in the City, with the active support and assistance of the Kerala Government, was to present to the people outside the State, particularly the industrialists, the problems of Kerala and to "seek their help and guidance in solving them." The conference, which was well attended (an indication of the sympathetic response of the City's business community), was inaugurated by Mr. V. V. Giri, Governor of Kerala. The Kerala Government was represented by the State's Ministers for Industries, Transport and Labour and Law and Revenue.

Political instability and economic backwardness, coupled with a high degree of unemployment, especially among the educated classes, had earned for Kerala a certain amount of notoriety in the rest of India. All the three major political parties, the Congress, the P.S.P. and the Communist, had been in power by turn in the State for periods of varying duration. None of these parties, the Congress included, seriously addressed itself to solving the number one problem of the State, namely, unemployment, which is the result of the failure of industrial development to catch up with the rapid rise in population. Instead, the parties were engaged in endless, petty political squabbles, leaving the more urgent problems of the State unattended. After the signal defeat of the Communist Party in the last mid-term election, a coalition Government of the Congress and the P.S.P. was formed which is still in power in Kerala.

Belated Realisation

The realisation seems to have at last dawned on the ruling parties that the neglect of the economic problems of the State has cost them and the people of the State dearly and that, unless attention was devoted to their solution, the electoral success, which they have achieved, would again prove to be short-lived. This realisation is, perhaps, at the back of the current efforts of the Ministry to speed up the industrialisation of the State. Belated though it is, the move must be welcomed as a constructive approach which is in refreshing contrast to the unseemly political wranglings which had so far marked the Kerala scene.

In his inaugural address, Mr. V. V. Giri, the Governor of Kerala, who is taking a keen and active interest in the development of the State, dealt at length with the opportunities that existed in the State for starting industries and the incentives which the Government offered to promote the formation of new enterprises. He said that more opportunities existed in the State for industrialists than was generally realised. In two important respects, according to him, Kerala offered unique opportunities. One was the State's natural resources—its valuable and varied raw materials, mineral resources and forest wealth which, in some form or other, could be useful for a variety of industries. The other was the supply of water and electricity. The total water resources of the State was of the order of 2,500 T.M. c.ft. per annum which represented 5 per cent of India's total water potential. The hydro-electric potential of the State, of 2.1 million kw., also amounted to 5 per cent. of India's total. At present, hardly 21 per cent of this potential was utilised and, even after the completion of the schemes under execution, only about 38 per cent of the State's hydro-electric potential would have been harnessed. By the end of the third Plan, the total installed capacity would expand to 546,500 kw. This would not only meet the estimated demand in the State of 365,000 kw. but would also make available power for export to the neighbouring States.

Assistance to Industries

The prospects for plentiful supply of power (will it really be cheap?) in the State was thus bright, said the Governor. But this alone was not sufficient inducement for new industries to be started in Kerala. Realising this, the State Government had offered assistance to large-scale, medium- and small-scale industries. Help for large-scale industries included (1) provision of land by acquisition, if necessary, (2) supply of power, (3) assistance for obtaining licence for the establishment of the industry and for import of machinery and for obtaining raw materials, and (4) financial participation, in suitable cases, either by direct investment in shares or by way of loans, guarantees, etc.

In addition to these, the Government would itself undertake, the Governor averred, to develop industrial townships having water, communication and power facilities where a number of medium industries could be located. Medium industries would also be eligible for loans on liberal terms from the Kerala Financial Corporation.

The assistance offered for small-scale industries consisted of provision of factory accommodation at concessional rates in Industrial Estates, supply of machinery on hire-purchase terms, credit facilities at low rates of interest, assistance in securing raw materials, marketing and training facilities. The stores purchase policy of the Government was also such as to favour the products of indigenous enterprises in preference to those which originated from outside the State. All these, according to Mr. Giri, were an index of the keenness of the Government to help private industrialists to start new industries. He disclosed that, apart from these, the State Government was earnestly considering a proposal for the establishment of an Industrial Development Corporation and a Small Industries Corporation to provide loans to those who wanted to start new undertakings or expand existing ones.

Labour Situation

Natural advantages and liberal Government assistance cannot in themselves constitute sufficient inducement for private enterprise, especially from outside the State, to start industries in Kerala if one of the basic conditions for industrial development is lacking. This is the existence of a peaceful and co-operative labour force. It is fairly well known that labour in Kerala is educated, enlightened and efficient. But rightly or wrongly, the impression has gained currency outside the State, that it is militant and irresponsible. All the political parties in the State should share the blame for creating this impression. For they have always sought to use the workers, who are highly organised in Kerala, to further their political ends. Mr. Giri therefore did well to correct the misunderstanding and to give a clear picture of the labour situation obtaining in the State As one who has been intimately connected with the labour movement for over four decades, Mr. Giri's observations on this particular aspect has added weight inasmuch as they constitute the most informed, reliable and authoritative statement on the labour situation in the State so far made.

Mr. Giri said that both employers and employees, of whatever shades of political opinion, were now agreed on the need for lasting industrial peace in the State. What they wanted, he averred, was not mere truce but peace. One of the extreme leftist leaders, according to Mr. Giri, had this remark to make at a conference of leaders from all sides:

"Truce is transient and smacks as though a perpetual war between labour and management is going on. What we want is peace, peace that can bring prosperity for the workers, profit for the employers, price-reduction for the consumer and the general welfare of all."

This spirit is fully reflected in the resolution passed by the Industrial Relations Board, a tripartite body, at a conference held recently.

The resolution is as follows:

"That for an accelerated programme of industrial development and expansion of employment opportunities so vital to the country that co-operation of labour and management is the essential prerequisite, especially at the present juncture. With this end in view, the Board calls upon labour and management to agree to further promote good industrial relations during the period of the third Five-year Plan and, as a first step, to emphasise on joint consultations and mutual negotiations and if the differences are not resolved then (if they still remain outstanding), to resort to voluntary conciliation and arbitration. The Board also requests the parties to endeavour to preserve industrial peace for the consummation of this objective."

Workers Not Irresponsible

Mr. Giri said that whatever might have been the experience in the past, in the last one year or so there was not a single major dispute in any industrial undertaking in the State. He pointed out that statistics of industrial disputes and man-days lost published in the past had given a wrong picture of the labour situation in the State. He found, when he went into them, that even small and frivolous differences had been enumerated as industrial disputes, thereby artificially inflating the figures. As a result, labour in Kerala came to have a stigma of irresponsibility which was not true. It was not realised outside the State, he added, that labour in Kerala was very co-operative and fully alive to its responsibilities. Workers in Kerala, he admitted, were fully conscious of their rights and were union-minded. But that did not make them less efficient or less disciplined.

In fact, according to the Governor, in most of the leading industrial undertakings of the State, unions had entered into long-term agreements with the management and, once an agreement was reached, the unions, irrespective of their political affiliations, scrupulously honoured it. The Code of Discipline and the Evaluation and Implementation Committee had greatly helped to foster a better climate of industrial relations in the State. In fact, thanks to these, while, on the one hand, aggressiveness of some unions had been softened, on the other, employers had been dissuaded from seeking redress through resort to law courts. Mr. Giri claimed that a pronounced sense of responsibility in handling industrial relations on the part of employers and an attitude of responsiveness on the part of the workers had been evident all-round. The State's Ministers for Law and Revenue and Labour and Transport pledged, on behalf of the Government, all encouragement and assistance, financial and others, for industrialists from outside the State to start industries in Kerala.

Scope for New Ventures

The scope for new industries in the State is immense. Its rich raw material and forest resources still remain largely unexploited. Apart from a few modern factories and small industrial units producing chemical fertilisers, rayon, aluminium, cement, etc., the bulk of the industrial undertakings in the State consists of small units of the traditional type producing cashew-nut, tiles and bricks and a few other items which are not basic in an economic sense. The largest employment (400,000) in the State is provided by the coir industry, which is technologically the least advanced. In addition to expanding existing units, new lines of production have to be explored.

An idea of the industrial potentialities of the State can be had from two publications prepared in connection with the conference and distributed there, one a souvenir published on behalf of the conference by Dr. P. A. Nair, and the other, a brochure entitled "Towards an Industrialised Kerala." To mention only a few of the industries which could be started: There is scope for producing synthetic rubber, fertilisers, synthetic resin and the entire field of petro-chemical industries. The large-scale manufacture of titanium dioxide, by the titanium factory at Trivandrum, facilitates the production of paint and other related industries. The greatest possible scope is for the production of the newest metal, titanium, which has wide application in all industrial and aviation fields. Tapioca starch, produced in plenty in the State, can form the basis of many valuable chemical and pharmaceutical products. The rich forest resources offer much scope for paper and wood-pulp industries. A full picture of industrial possibilities will be made available shortly. The National Council of Applied Economic Research has already made a study of the industrial potentialities of the State and it is expected to submit a list of "candidate industries" which, in the Council's opinion, are capable of being started in the State.

It is evident from what has been said above that Kerala has natural advantages, valuable raw materials, good transport system and plentiful supply of labour which is literate and enlightened, and adequate power. The Government has now offered to assist businessmen and co-operate with them. All this is welcome. But the Kerala Government would do well to bear in mind that industrialists from outside the State will judge the attitude of the Government towards industry more by the treatment it gives to existing industries in the State than by the promises it makes. The provision of every encouragement to existing industrialists in the State itself to start new ventures and expand established industries and offer of the same terms to those from outside the State could do more to attract outside *entrepreneurs* to the State than any public relations jobs of the kind now being attempted.

Protect your Office and Industrial Buildings with

Snowcem

SUPERIOR, LOW-COST, WATERPROOF CEMENT COATING.
Available in a wide range of colours

To protect your mill, factory or office building, Snowcem is the ideal coating material. Longer-lasting, more durable, Snowcem creates brighter decoration at a more economical cost.

Snowcem does not rub, flake or peel off and can be cleaned.

Snowcem coated surfaces are hard, waterproof and resist penetration of damp. Subsequent applications do not require any special preparation of surface.

YOU CAN BRUSH OR SPRAY SNOWCEM ON:
Concrete
Most wall and fibre boards
Asbestos cement sheets
Cement/Sand renderings
Cement/lime/sand renderings
Roughcast and pebbledash
Sand-lime bricks
Stock or facing bricks
Concrete blocks
Concrete bricks
Clinker and other lightweight concrete blocks.

FREE ADVICE:
Our Civil Engineers are available to advise you how Snowcem can be applied to *your* building and give it longer-lasting, decorative protection.

Silvicrete *White Cement is the base of* Snowcem

Manufactured by: SNOWCEM INDIA PRIVATE LTD. BOMBAY
For detailed illustrated Instructions Booklet and further inquiries, contact
Sole Selling Agents For India: KILLICK, NIXON & CO., PRIVATE LTD.
31, Murzban Road, Bombay 1.
Regional Selling Agents: Balmer Lawrie & Co. Ltd. Calcutta 1., Martin Burn, Ltd. Calcutta 1., Bird & Co. (Private) Ltd. New Delhi 1., Best & Co. Private Ltd. Madras 1., Harrisons & Crosfield Ltd. Quilon.

Also Available:
Impermo
CEMENT WATERPROOFING COMPOUND
Impermo is well-known as a most economical and superior water-repellent material in powder form for adding to cement to overcome the penetration of damp through cement, mortar or concrete.

OVERSEAS TRADE IN TEXTILES

EXPORTS FALL, WHILE IMPORTS INCREASE

From Our Special Correspondent

MANCHESTER, 31st *January*

MANCHESTER LETTER

FINAL returns covering overseas trade in cotton and allied goods shipped from and entering British ports during 1960 follow the lines already clearly indicated during the earlier part of last year. The eclipse of exports by comparable imports first encountered in 1959 became almost total in character in the succeeding twelve months.

Anyone who has watched the trend of shipments over the past few years knows quite well how the situation has altered and is fully aware of the reasons for the big change in climate. Crippling tariff barriers and the protection of newly established industries in developing areas make the exporter's task a frightening one, while Britain's home market remains one of the few where foreign suppliers can hope to make inroads without undue interruption.

More Imports

The violent switch in Britain's position from a predominantly net exporter of cotton and allied textiles to the marked preponderance of imports over little more than a decade is shown in the following table:

	(In thousand sq. yds.)				(In thousand lbs.)	
	Cotton cloth		Rayon, etc., cloth		Cotton yarn	
	Exports	Imports	Exports	Imports	Exports	Imports
1949 ..	903,578	348,800	160,708	51,600	82,061	1,960
1950 ..	822,473	286,920	189,568	55,280	70,986	14,480
1951 ..	864,375	376,640	217,206	99,240	65,481	31,720
1952 ..	710,813	179,680	149,794	29,260	35,722	7,280
1953 ..	700,905	98,640	176,826	44,400	41,920	2,360
1954 ..	637,378	267,187	175,256	67,331	40,481	10,721
1955 ..	554,504	299,470	133,747	65,415	35,563	14,019
1956 ..	474,159	306,173	129,822	74,249	35,822	16,794
1957 ..	455,760	416,252	111,239	73,490	37,636	14,727
1958 ..	383,818	386,638	84,168	47,145	26,771	14,635
1959 ..	347,637	537,145	63,724	37,764	22,920	21,512
1960 ..	327,090	727,707	54,355	58,419	21,113	38,648

The 1960 balance-sheet shows the value of imports at £67,391,633 and exports at £62,970,262. In the case of man-made fibre yarns and woven fabrics, imports cost £15,447,764 and shipments earned £29,353,734. The rise in the cost of imports compared with 1959 was over £23 million in the case of cotton goods and £5 million in man-made fibres.

Leading Buyers

The final results confirm that export losses in cotton cloth in some directions were offset by slight gains in West African territories, offering a crumb of encouragement to Lancashire shippers. The leading buyers during the year were (in thousand square yards, with 1959 comparisons): Australia 44,365 (52,234), South Africa 40,888 (40,556), Nigeria 36,801 (28,053), New Zealand 28,046 (26,579), Ghana 24,760 (22,283), Rhodesia and Nyasaland 18,258 (22,352), Irish Republic 17,775 (15,145), Belgian Congo 10,865 (15,232) and Sierra Leone 10,034 (6,671).

Because the Board of Trade returns do not specify many different countries supplying cotton grey cloth to the United Kingdom, the figures for the past year present unusual gaps. The major factor is the very big increase in purchases from "other foreign countries," which incorporates anywhere outside the Commonwealth, other than the Irish Republic, France, China and Japan. These shipments to Britain rose from below 7 million yards in 1958 to 25,599,000 yards in 1959 and to 125,114,000 yards last year.

Among the Commonwealth territories, India stepped up her sales to Britain very substantially, grey cloth arrivals increasing from 184,618,000 yards to 222,921,000 yards. Pakistan also did better, with 39,471,000 yards, as against 31,544,000 yards. The annual rate of shipments from Hong Kong, however, declined from 132,908,000 yards in 1959 to 104,775,000 yards last year, but, in this connection, it must be recalled that the movement of made-up garments from the Colony to this country has recently shown a big advance.

Lancashire spinners were very anxious about the situation when they discovered that the voluntary arrangements with Hong Kong and other Eastern Commonwealth countries did not include any restrictions on the cotton yarn trade. Although details of the suppliers are not given, their fears about increasing purchases of foreign yarn have been fully borne out during 1960. Imports, in fact, nearly doubled.

Yarn Shipments Setback

As in the case of cloth, the shipments of cotton yarn from the United Kingdom last year suffered a further setback, although the quantity involved was not very substantial. At the same time, a fall of nearly 2 million lbs., represents a 10 per cent drop in this trade now that it has dwindled to such an extent compared with even 10 years ago.

Australia remains by far the largest customer, having taken 8,845,000 lbs. of Lancashire-made cotton yarn in 1960 against 7,736,000 lbs. in the previous year. The other main markets are Canada (2,509,000 lbs., as against 3,029,000 lbs.); New Zealand (1,993,000 lbs., as against 2,561,000 lbs.); Irish Republic (1,471,000 lbs., as against 1,641,000 lbs.) and Pakistan (1,327,000 lbs., as against 360,000 lbs.)

Man-made fibre yarns were the only section in which an improvement in exports occurred, maintaining the revival in this trade which began in 1959. Over the year shipments aggregated 48,457,000 lbs., as against 45,109,000 lbs. In this case, India is still the biggest consumer, taking nearly 8 million lbs., although this represents a drop of about 1,500,000 lbs. Shipments to Australia exceeded 6 million lbs. and other leading markets were South Africa with nearly 4 million lbs., the Irish Republic with 3,600,000 lbs., and Syria with 3,350,000 lbs.

A new link-up of the cotton and man-made fibres industry at organisational level has been announced. Four employers' associations in the spinning and doubling branches are to merge their functions, having received "overwhelming support" for the establishment of a new central organisation from more than 400 firms involved. As a result, the British Spinners' and Doublers' Association (Cotton and Allied Textile Industries) is to be formed to take over the former activities of the Federation of Master Cotton Spinners' Associations Ltd., the Yarn Spinners' Associations, the Yarn Doublers' Association and the Rayon Staple Spinners' and Doublers' Association. The new organisation will begin to operate at an agreed date between 6th April and 30th June.

Labour Shortage in Cotton

A manpower shortage is preventing many more Lancashire mills introducing shift working. Sir Alfred Roberts, General Secretary of the Cardroom Workers' Amalgamation, one of the three principal cotton unions, said last week that many mills which received the necessary permission months ago had been unable to develop their plans for shift working, because they could not get the operatives. But Sir Alfred, in a report to union members, gave figures to illustrate how shift working is being extended in Lancashire spinning mills. Over a period of 15 months, the average number of hours worked per spindle each week had risen from 43.4 to 52 hours—an increase of 20 per cent.

Productivity had also increased substantially since the reorganisation schemes were introduced. Output per worker in spinning had increased by over 10 per cent since June 1959. Said Sir Alfred: "This increase in output is all the more remarkable when account is taken of the number of mills which have instituted shift working, consequently reducing the weekly hours worked by operatives."

Cotton Trade Affairs

Another increase in the number of company liquidations affecting British cotton firms took place last year, there being 174 such cases as compared with 118 in 1959. There was, however, only one actual bankruptcy, as in the previous year, and no instances were reported of deeds of arrangements or receivers being appointed. Liquidations were mainly concerned with the formal disposal of assets in the completion of the legal proceedings arising from firms withdrawing from the industry under the reorganisation plan. Such schemes are put forward when reconstruction, amalgamation or giving up of business is contemplated and all creditors are paid in full. Among the 168 companies involved, 46 were spinning firms, 72 manufacturers and 30 merchants and agents. Creditors' voluntary liquidations last year numbered three, as against nine in 1959. As in the previous year, only two compulsory liquidations were recorded, both involving firms of merchants and agents.

New company registrations increased from 128 in 1959 to 149 last year, but the nominal capital concerned was again lower at £694,900, as against £945,300. Seven spinning firms were involved in new registrations, 19 manufacturers, three doublers, five finishers, 87 merchants and agents and 28 miscellaneous textile traders.—*All Rights Reserved.*

FORWARD MARKETS BULLETIN

(Monthly)

Published by Forward Markets Commission
Government of India, Bombay

REGULAR FEATURES

- A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
- Special articles on technical aspect of forward trading
- Extensive information relating to developments in futures markets
- Detailed commodity market reviews
- Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
- About 200 pages in print in crown ¼ size
- Attractive get-up

EXPANSION OF SUGAR INDUSTRY

FRESH ANNUAL CAPACITY OF 1.4 MILLION TONS TO BE ADDED IN NEXT FIVE YEARS

IF the development programme for the sugar industry (white sugar sector) were implemented successfully according to schedule, the annual installed capacity of the industry will expand in the next five years by 1.4 million tons to 3.5 million tons. Excluding the second Plan carry-forward of 400,000 tons, the additional production capacity of sugar covered by the third Plan is one million tons. The additional capacity will result partly from the setting up of new sugar mills and partly from the expansion of existing units. The Government of India, it will be recalled, announced its decision to licence fresh capacity, in addition to what had been covered under the first and second Plans on 6th August 1959, in view of the likely increase in the consumption of sugar during the third Plan period and the time required for the establishment of new capacity.

Before reviewing the progress made in accordance with the Government's decision of August 1959, a reference may be made to the progress under the licences granted to sugar industry during the first and second Plan periods. At the commencement of the first Plan, the sugar industry had a total capacity to produce just 1.5 million tons of sugar, of which nearly 78 per cent was in Northern India and the remaining 22 per cent in Maharashtra, Gujarat and other States in the South. The target of installed capacity fixed to be achieved at the end of the second Plan (1960-61) was 2.5 million tons calculated on the basis of 120 working days in a year and average recovery per cent of 10; the target of production was put at 2.25 million tons. This target has not only not been fulfilled but has actually exceeded to a considerable extent; the actual output in 1959-60 is an all-time peak of 2.42 million tons and the anticipated level of production in the current season is higher still at 2.70 million tons.

Capacity Licensed So Far

As against the second Plan target of 2.5 million tons (installed capacity), licences had been issued by the end of December 1960 for the establishment of 53 new sugar mills (excluding the 1,200-ton factory at Pondicherry for which permission was given last year), with a total daily cane-crushing capacity of 52,350 tons and for the expansion of 71 existing units with a total additional crushing capacity of 37,130 tons per day, or a total of 89,480 tons per day. These schemes cover an additional capacity of 1,016,000 tons sugar per annum. But the capacity actually established so far is said to be a little over 600,000 tons. Of the 53 new factories, 34 units (including three which commenced operation after the current season began on 1st November 1960) have already gone into production, 34 existing mills have completed their expansion plans and some others have carried out past expansions.

The State-wise distribution of the additional capacity licensed against first and second Plan targets and the progress of implementation are shown in Table I. It will be seen from it that, out of the 53 new factories licensed, co-operative mills account for as many as 38, the remaining 15 units being in private or joint-stock companies. While practically all the latter mills have gone into production, the progress made in the setting up of co-operative units has been rather slow, in spite of all the official support—financial or otherwise.

A striking feature of the development programme is the licensing of more capacity in Maharashtra, Gujarat and other States in the South, as a result of which the share of these States in the aggregate installed capacity of sugar industry has increased from 22 at the beginning of the first Plan to 37 at present, while that of North India has receded from 78 to 63. This shows that sugar industry is dispersed over a wider area now than before. A further dispersal is expected during the third Plan period also. The greater and greater stress laid on the expansion of sugar industry in the Deccan and Southern regions is to be welcomed, considering that the tropical conditions of these regions are more suitable for sugarcane development than the sub-tropical climate of North India.

The Development Council for Sugar Industry had first recommended a production target of 3.00 million tons for the third Plan. This journal was, perhaps, the first to point out that the target was a conservative one, inasmuch as it did not take into account (a) the nutritional requirement of sugar (estimated by experts at nearly 23.00 lbs.) by India's growing population, (b) the possible increase in consumption of sugar if its price was brought down to a reasonable level, and (c) the need for earmarking a portion of output for purposes of buffer-stock, not to speak of the exigency of meeting export demand. But the Draft Outline of the third Plan merely accepted the Development Council's recommendation and fixed the target of sugar production at 3.00 million tons. The more responsible section of the industry warned against the danger of sugar output failing to keep pace with the rapidly growing demand, unless the target was stepped up straightway, as it would require at least three years to bring additional capacity into existence. It is gratifying that the authorities have paid heed to the warning and decided to raise the capacity target to 3.5 million tons by 1965-66.

Third Plan Schemes

As against the aforesaid target, the Government of India has already given its approval to granting licences covering nearly 500,000 tons of capacity in the form of 20 new factories and expansion in 49 existing units, the details of which are given in Table II. As in the first and second Plans, preference is being given to co-operatives. Thus, out of the 20 new units licensed, 14 are co-operatives. All the six new units licensed in the State of Maharashtra are co-operative sugar mills. From the experience gathered so far, one wonders whether it is safe to place great reliance on the co-operative units to meet a substantially large part of the expanding demand for sugar in the coming years.

Assuming that the third Plan target of sugar production, namely, 3.5 million tons, will, in fact, be achieved, the question is whether such an achievement will enable the consumer of sugar to get his requirements at reasonable prices. The answer to the poser is a definite "No," so long as the sucrose-content in sugarcane continues to be poor (the all-India average at present is a bare 10 per cent), the defective system of linking cane prices to quantity irrespective of quality considerations is continued and the incidence of taxation is pretty heavy, being as much as 30 per cent of the price of sugar. There is also the possibility that the consumers may be asked to pay higher and higher prices in order to subsidise exports of sugar abroad. Viewed thus, the urgency of maintaining a high level of sugar production through an all-round improvement in efficiency in the farms as well as factories cannot, indeed, be over-emphasised.

SUGAR IN MADRAS

Large stocks of sugar have accumulated in Madras State and the Government of India is being requested to stop sending supplies from factories in the North for at least two months. This was disclosed by Mr. M. Bhaktavatsalam, Home Minister of Madras, during question time in the Legislative Assembly on 31st January. Mr. Bhaktavatsalam said that the Government of India allotted every month 11,000 tons of sugar to the State, and this was being reallotted to stockists in various districts, according to their past consumption. The stockists, in their turn, distributed the stocks to the retailers and bulk consumers, according to the permits issued by the Collectors and District Revenue Officers concerned. The quantity of sugar allotted to the State in the six months ended 30th September 1960 was 66,000 tons. Sugar output in the State during the same period was 30,742 tons. Replying to a question whether the Government had received any complaint from anywhere in the State regarding paucity of sugar supply, and if so what action had been taken, Mr. Bhaktavatsalam said:

"The persistent complaint I have been receiving from various quarters—the co-operative stores and factories producing sugar—is that there is a lot of sugar remaining unsold and they feared they would be incurring loss. Therefore, I am addressing the Government of India that they need not send North Indian sugar for at least two months."

JUTE CULTIVATION AND MARKETING

I.C.J.C.'S ECONOMIC RESEARCH SECTION DOES USEFUL WORK

MUCH interesting light on some of the aspects of jute cultivation and marketing has been thrown by the Economic Research Section of the Indian Central Jute Committee in its annual report for 1958-59. Although the report covers a period that is nearly two years old, the broad conclusions arrived at therein do give an idea of the economics of growing jute which, besides being the basic raw material for one of the largest industries in India, provides employment to thousands of agriculturists. The conclusions are based on the results of investigation carried out in 265 farms distributed over ten selected centres. These farms account for about 24.25 per cent of the total cultivated land under jute in the selected centres, namely, Barasat, Samsi, Monoharpur and Belakoba in West Bengal, Chakia and Purnea in Bihar, Barpeta Road and Nowgong in Assam, and Bhadrak and Kendrapara in Orissa.

Taking all the ten centres together, the average overall cost of producing jute in 1958-59 is calculated at Rs. 18.17 per maund, inclusive of the value of family and hired labour (human and cattle), purchased as well as home-produced seed and manure, and rent in cash and kind; the calculation is on the basis of the operational per-acre cost of Rs. 167.04 and rent of Rs. 19.91 and the per-acre yield of 10.29 maunds. Including the overhead charges (such as interest on capital) estimated at Rs. 2.10, the overall cost of jute production comes to Rs. 20.27 per maund. The average per-acre cost of production in Barasat, Samsi, Chakia, Barpeta Road and Bhadrak is put at Rs. 215.53, of which human labour accounted for Rs. 159.58 (or 74.04 per cent), cattle labour for Rs. 24.03 (11.15 per cent), seed for Rs. 3.49 (1.62 per cent), manure for Rs. 10.01 (4.64 per cent), insecticide for 67 nP (0.31 per cent) and rent for Rs. 17.75 (8.24 per cent). The average gross receipt from sale of jute, exclusive of the quantity given away as store rent, was Rs. 188 per acre. Deducting from this amount the total cash expenses (including rent paid in cash), the net cash earning from each acre of land sown to jute works out to Rs. 129. Even at the centres showing loss on business accounting, there was some net cash earning. Alluding to this, the report says:

"So long as this position is maintained, jute cultivation is not likely to be given up. Though for the work done by the grower and the members of his family, they should normally expect to get the same wages as that of hired labourers, what actually happens in the event of a loss as we have calculated is that the return to family labour is reduced by the amount of loss incurred on jute. But the jute grower, including his family members, has to submit to this lower rate of return, because there is hardly any alternative employment for them in the villages. Besides, they are badly in need of producing a cash crop so as to enable them to meet their urgent cash commitments."

Jute and Paddy

On an average, about 86 man-days labour and 42.75 cattle-days' labour had to be employed per acre of land under jute for completing all the operations. As much as 89 per cent of human labour came from the growers' own families. The daily wage rates varied from Rs. 2.65 in Barpeta Road to Re. 1.08 in Chakia. The average quantity of farmyard manure used per acre of land was 39.17 maunds, the cost of which represented about 5.06 per cent of the operational cost. An idea of the comparative economics of jute and paddy cultivation can be had from the figures given below:

	Unit	Jute	Paddy	Ratio between jute and paddy
Area sown per farm	Acres	0.87	2.98	0.29
Total cost per acre (including rent)	Rs.	186.95	129.13	1.45
Yield per acre	Mds.	10.29	13.87	0.74
Cost per maund	Rs.	18.17	9.31	1.95
Price per maund	Rs.	19.18	11.10	1.73
Net profit per maund	Rs.	2.55	3.09	0.83
Man-days per acre		85.94	41.99	2.04
Cattle-days per acre		42.75	38.14	1.12
Quantity of manure per acre	Mds.	39.17	7.15	5.48
Paid cost (operational) per acre	Rs.	68.55	29.81	2.13

The study of the comparative economics of jute cultivation under traditional and improved methods reveals that, even under adverse weather conditions, an additional input of Rs. 46 per acre in the improved method of cultivation gave an additional output of more than four maunds per acre, thereby lowering the cost of production by about Rs. 2 per maund. In other words, the yield from an additional investment of 24 per cent being higher by 40 per cent., the cost per unit of output was 10 per cent less. The amount of net profit earned per acre from a larger output was higher still, being Rs. 39.65 on an average, as against only Rs. 6.66 under the traditional method. Improved methods of cultivation involve use of ammonium sulphate (about 87 lbs. per acre), in addition to farmyard manure (96 lbs.), sowing in lines by seed drill, and inter-culture operations by using wheel hoe (including weeding, harrowing and thinning). There are, however, said to be some practical difficulties in this type of farming, particularly in respect of mechanical weeding. As a result, the economy in labour input cannot be secured to the extent desired. The need is, therefore, stressed for a considerable improvement in the design and performance of the wheel hoe, so that it may be operated in different conditions.

Prices and Marketing

The I.C.J.C.'s Economic Research Section has also made a study of mofussil prices of jute, as well as marketing and transport of jute. The study shows that a lion's share of the growers' income from jute is spent on the purchase of foodgrains, especially during the lean months of July-October. Judged in the light of price relationship of jute and rice witnessed in the economic investigation centres, there was no price incentive for jute during 1958-59 which might induce the growers to put more land under jute in the following season, that is, 1959-60. Fourteen secondary markets were surveyed in 1958-59. The important findings of the survey are as follows:

Prices of raw jute declined considerably during the year. Transaction in fibres between the growers and the *kutcha* balers direct at the baling centres was less in many cases as compared with the previous year. Arrivals of mesta increased during the year and its position in the internal fibre market appeared to have been secured. Distances between the grower's hut and *kutcha* baler's godown is often great and, in many cases, transport is not only difficult but costly as well. Growers, therefore, more often than not prefer to dispose of their marketable surplus to the itinerant middlemen or balers' representatives who visit them and the nearby huts at regular intervals. Consequently, middlemen enjoy an enviable position and the bulk of the marketable surplus passed through them.

Financing

A brief reference to the pattern of financing the raw jute trade may be made now. The *kutcha* balers disposing of their jute at the spot markets in Calcutta received financial accommodation from the *aratdars* at rates of interest varying from 6 to 9 per cent. Besides, advances were made on production of railway receipts or equivalent documents. Payments thus realised covered upto 85-90 per cent of the value of consignment at market rates. The jute mills also made advance payments to growers. Several commercial banks, including the State Bank of India, provided credit facilities to established and reputed firms against acceptable securities or hypothecated jute. The interest rates in most cases was 6½ per cent. The financial condition of small intermediaries who performed the useful function of assembling and transporting jute from the interior was far from satisfactory.

Barring markets in Orissa, no other jute market experienced any acute transport difficulty. Where possible, rail communication via Pakistan was extensively used in preference to all-India rail route, as the former was not only quicker but also cheaper.

Market intelligence for raw jute and mesta, as well as for jute manufactures, were collected from Calcutta and some mofussil markets. Data relating to arrivals and prices of jute in a few centres were collected and forwarded by investigators to the S.T.C. offices at Calcutta and Delhi. Reports received from selected Indian markets for jute goods revealed that about 77 per cent of turnover was in sacking which predominantly consisted of D.W., B. twill and half bags. D.W. bags accounted for the largest proportion, 61 per cent. of the total. In regard to hessian, a large volume of business passed through Bombay, Delhi, Kanpur, Madras and Amritsar markets, while business in Hapur, Cuttack and Hyderabad remained at a low level, as usual. A study of the overall consumption pattern of jute goods in the selected markets showed that the busy season for the marketing of jute goods generally synchronised with the harvesting periods of *rabi* and *khariff* crops. Price movements in jute goods markets were largely influenced by the trend of the Calcutta market.

A sympathetic fall in sacking prices in the markets under study undoubtedly helped to restrict the price differential from becoming unfavourable to the sellers in the selected markets. Lower levels of sacking prices, therefore, did not act materially against the incentives of the sellers for offering a larger business in sacking. On the other side, while a pronounced downward trend in prices of sacking was noticeable in selected markets, hessian prices witnessed a fair stability in close sympathy with the Calcutta market. Prices fluctuated both ways within narrow limits and annual average prices of the different centres, including Calcutta, recorded only a narrow fall ranging from 1 to 4 per cent from the previous year's annual average. With the increase in the consumption of new jute goods in the internal markets, a sizable increase in the consumption of old gunny bags was also noticed in each of the selected markets. Amritsar, Delhi and Hyderabad commanded a very large volume of business in comparison with others.

Training Growers

The scheme for training jute growers in the commercial grading of jute continued during 1958-59 for the fifth year in succession. The extended programme of work included propaganda, holding of conferences and group meetings, discussions regarding post-harvest operations, collection of data and information on jute sales by growers. Information regarding jute seed position, retting facilities, etc., was also collected. Besides, dissemination of Calcutta jute market prices was carried out by the parties in the interior who also collected a few items of information from balers pertaining to the local standard of assortment of jute. The Economic Research Section also handled a considerable volume of miscellaneous work such as supply of material in connection with questions in Parliament, preparation of market reviews, collection and compilation of statistical data, and answering of several trade enquiries.

It will be evident from the foregoing account that the Economic Research Section of the Central Jute Committee has been doing much useful work. The success of its efforts will be judged by the extent to which the quality of the jute grown improves and the cost of cultivation reduced. It is scarcely necessary to emphasise that the results of research work, however valuable they may be, will be of no avail, unless they are effectively and speedily carried to the fields and followed there. The cultivators must be enabled fully to appreciate the importance of intensive methods of jute growing.

AN IDEAL JUTE SPECIES

Experiments conducted at the Indian Agricultural Research Institute, New Delhi, bid fair to evolve an ideal variety of jute combining the good qualities of the two species now cultivated in India—*Corchorus olitorius* and *Corchorus capsularis*. The former grows on high ground, has a wide range of adaptability and is tolerably resistant to diseases and pests. It has a tall, unbranched stem and produces the strong, brown *Tossa* fibre used commercially. *Corchorus capsularis* is resistant to floods and drought, has a white fibre which is somewhat weak, and is more susceptible to diseases and pests.

If the good qualities of these two species can be combined an ideal jute plant possessing a strong white fibre and adaptability to grow under a wide range of environmental conditions can be evolved. Since 1900, there have been attempts to make this cross. In 1956, a systematic study of the reasons for the failure of the cross was initiated by the Division of Botany of the Indian Agricultural Research Institute under a second Five-year Plan scheme. It was found that the embryo in a cross between these two species died at a very young stage with the result that no good seed was produced. By grafting the two species upon each other and by using pollen treated with X-rays, the embryo could, however, be made to grow normally and give rise to good seeds. Hybrids were thus produced for the first time in 1959 and the progenies of the hybrids were grown during 1960. The hybrids showed various interesting combinations of the characters of the two parents.

A new variety, which marks an improvement over the parent species, may be produced in the near future as a result of the experiments at the Institute. This would be a significant contribution towards solving the shortage of raw material which the jute industry is at present facing.

WANTED—BIGGER ROLE FOR THE ENGINEER IN MANAGEMENT

MAJOR-GENERAL HARKIRAT SINGH'S PLEA

THE annual general convention of the Institution of Engineers (India) was held at Bombay over the week-end. Its highlight was the presidential address of Major-General Harkirat Singh, a military engineer of high standing. This address was, in the main, devoted to the theme of management of engineering activities. The new President, who has succeeded the eminent engineer, Dr. K. L. Rao, quoted a number of authorities to drive home the point that "an engineer is basically a manager" and that the natural managerial abilities of senior engineers should, therefore, be utilised by putting them in the ranks of top management and administration of engineering and technical enterprises or departments. The various arguments put forward by Maj-Gen. Harkirat Singh in support of this plea would merit recapitulation.

The basic arguments are that the military strength of a country is primarily dependent on its technical strength and its industrial potential, that the economic growth of India, which is still the hungriest country in the world, is of vital importance both for its defence and for sustenance of its cultural life, and that economic growth can be accelerated by having the highest standard of management and administration of engineering and industrial activities so as to make the maximum use of the country's resources of men and materials. As nearly 70 per cent of all development activities under the Five-year Plans require engineer appreciation, planning and execution, the crucial role played by engineers is apparent. As Professor M. S. Thacker said, in his presidential address to the Institution of Engineers (India) in 1956, "development lies within the domain of the engineer," who is concerned with the techniques of design and development in the practical application of scientific and industrial research. Industrial economics, production engineering, industrial psychology and production management—all these come within the scope of engineering. That the function of management—defined as the organisation and control of human activity directed to specific ends—could be better discharged by the engineer is brought out in the following quotation from a lecture given by Sir Ewart Smith to a joint session of the Institutions of Civil, Electrical and Mechanical Engineers in England:

"It would appear that the basic training and subsequent experience which are normal for the professional engineer should be pre-eminently suited to the development of good managerial qualities. Every engineering activity has a clear and immediate purpose, the achievement of which demands planning, decision, and control. The engineer is brought up on the idea of change and progress. He has to carry responsibility for his work and results more directly than in almost any other profession, his mistakes are there for all to see, and he has either to correct them or to live with them—a most salutary fact. Engineering, too, always depends on co-operative action with other people. The engineer is exceptional also in having the opportunity to see management from the underside, and to gain experience of rank and file reactions during his period of practical training. Thus, the professional engineer should be well equipped to undertake wide managerial responsibilities. It is beyond question that he normally does so with success in his own field."

Bureaucratic Shackles

Although engineers are thus in a position to discharge managerial responsibilities, Maj.-Gen. Harkirat Singh has noted that very few of them have been entrusted with senior management in either the private or public sector. Not only in the field of industries established in the public sector but also in other departments concerned with public works, irrigation, electricity, posts and telegraphs, civil aviation, road transport, port development, telecommunications, etc., secretaries both at the Centre and in the States are generally I.C.S. or I.A.S. officers. In many States, even the chairmen of the State Electricity Boards are drawn from these services, and in some places even technical education and training are not in the hands of engineers. This, perhaps, explains why, according to the general opinion of competent engineers, India's engineering and industrial activities are working only at about 75 per cent efficiency. The subordination of the technician or the engineer to the "mere" or "pure" administrator in the higher rungs of service in the public sector has meant "bureaucratic shackles" for the former. The result is that technical departments are directed by non-technical men who are in no position to take competent decisions on technical matters. As Mr. C. L. Handa said, in his address at the annual general meeting of the Punjab Centre of the Institution of Engineers in December 1959, "the engineers have an unenviable position in the present set-up, because they are made responsible for the achievement of targets without being given the necessary authority." And, according to Mr. Kanwair Sain, "the relationship between persons in the secretariat and those in the technical services is becoming more and more remote."

The present unsatisfactory state of affairs can be set right, if it is recognised that a "bureaucratic climate" is not an essential ingredient of democracy. Given such recognition, the rest is easy, and Maj.-Gen. Harkirat Singh's practical suggestions for the needed reforms in the administrative machinery will be seen in their proper perspective. His first suggestion is that centralised engineering services should be instituted, because the engineers who have to deal with the main rivers, roads and communications and power distribution systems—all of which cross State boundaries will not otherwise develop a national outlook. The second suggestion is that senior engineers should take on the secretaries' duties in addition to their own technical duties, so that they may then have the necessary authority commensurate with their responsibility. And the third suggestion is that, in view of the fact that all States have a number of Chief Engineers (for irrigation, electricity, etc.), there should be an Engineer Board in each State, with the various Chief Engineers as its members and with a whole-time Chairman. The Chairman of this Board should co-ordinate the work of various Chief Engineers and of other engineering and technical enterprises in the State and also have, under his control, five directorates concerned with personnel, administration and training, centralised planning, works study, research, development and standardisation, and engineer stores and plant.

Senior Posts Just a Hundred

These three suggestions, if implemented together, may well impart to the technical and engineering departments the dynamism that modern engineering practice needs. After all, there should be no difficulty in doing this, for the senior posts involved will number just one hundred or so. If experienced and competent engineers, who are in a position to do greater creative work, are entrusted with managerial authority, the results are bound to be much better in terms of expeditious construction of and productive efficiency in engineering and industrial enterprises. It would be unfortunate if this case for the "engineer-manager" is mistaken for any thirst for power on the part of senior engineers. Surely, there can be no uncharitable suggestion here that engineers, who are so anxious to play a fuller part in the exacting war against poverty, want power either for its own sake as many politicians do or for self-aggrandisement.

INDIA'S MARITIME NAVIGATION IN 1958

The Department of Commercial Intelligence (Calcutta), Government of India, had just published statistics of the maritime navigation of India for the year 1958. It is seen therefrom that the figures of tonnage of vessels which entered and cleared in the foreign trade in 1958 are 12.15 million tons and 9.73 million tons, respectively. The figures of aggregate tonnage of Indian vessels which entered and cleared in the coasting trade with cargoes in that year are 5.3 million tons and 6.4 million tons respectively; the respective figures covering British vessels are 2.5 million tons and 3.3 million tons; and the figures covering other non-Indian vessels are 3.7 million tons and 4.5 million tons. Figures of total cargo (foreign and coasting) handled at major ports of India during 1957 and 1958 are given below:

(Million tons)

	Imports		Exports	
	1957	1958	1957	1958
Calcutta	5.30	5.17	4.60	4.25
Bombay	4.35	3.64	1.95	1.67
Madras ...	1.86	1.82	0.60	0.64
Visakhapatnam ...	1.01	1.26	1.27	1.15
Cochin	1.44	1.36	0.49	0.55
Kandla	0.50	0.84	0.25	0.19
Total ...	14.55	14.08	9.20	8.45

CENTRAL RAILWAY IN 1959-60

The Central Railway authorities have just published an attractively got-up brochure giving facts and figures concerning the railway's performance and position in 1959-60. The financial results of this railway for the year are given below:

	(Rs. crores)
Capital outlay	236.8
Passenger earnings	23.1
Other coaching earnings	6.4
Goods earnings	49.8
Sundry earnings	2.0
Working expenses	56.8
Net earnings	24.5

Figures of commodity-wise loading show that, in the year 1959-60, as many as 739,519 wagons were loaded on the broad-gauge section, of which 110,951 wagons were loaded with coal for the public. The respective figures for 1958-59 are 714,571 and 112,823. It will be seen that less wagons were loaded with coal in the year under review than in the previous year. On the metre-gauge section, only 75,563 wagons in all were loaded with different commodities in 1959-60, as compared with 79,690 in 1958-59.

Ticketless travel on the Central Railway has been on the increase. In 1959-60, as many as 779,255 passengers travelled without tickets or with improper tickets as compared with 707,358 in 1958-59. Total charges including excess charges collected from persons on demand in the two years are Rs. 18.0 lakhs and Rs. 16.6 lakhs, respectively.

O.E.E.C.'S NON-FERROUS METALS STATISTICS FOR 1959 AND 1960

The O.E.E.C. has just published the statistics pertaining to non-ferrous metals for 1959. The relevant report brings up-to-date the statistical information on production, consumption, imports and exports and metal uses at the first processing stage. A statistical series for aluminium end-uses is included with figures for 1958 and 1959; this means that, for the first time, the flow of processed aluminium to the various consumer industries has been put on a comparable basis for European countries.

The topical interest of the publication is enhanced by the brief survey (Part 1) on market developments in 1960 made at the end of October, which also includes short-term forecasts on the activity of European non-ferrous metals industries. 1960 was a record year for European non-ferrous metals production and consumption as well as for imports. The upward trend of activity continued unabated for the first nine months. Progress in processing industries, particularly for aluminium and copper, has been quite spectacular and the production of aluminium and copper semis and castings is reported in some countries to be 25-30 per cent up on the first half of 1959. Although some new capacity has come with service, deliveries are still abnormally slow in some cases. In the zinc processing industry, the greatest expansion was made in die-castings and brass products. According to the experts, zinc and aluminium die-castings are now meeting with more and more competition from plastics, e.g. for motor vehicle accessories. Demand for lead products remained stable but demand for nickel steel and anodes was stimulated by the insistence on better finishing for consumer durable goods and the export market.

The second part of the report describes the expansion of European non-ferrous metals industries in the nineteen-fifties. The progress made by producer and consumer industries and the changes that took place during this period in the pattern of European consumption and trade are set forth in this analysis, which is based on the statistics collected during the last ten years and related to the general economic background during this period.

The non-ferrous metals industry in the O.E.E.C. countries has been in continual expansion since 1950, to a much more marked degree than any other areas in the Western world. Both production and consumption rose by over 50 per cent and net imports more than doubled, thus increasing considerably the overall dependence of the area on raw materials supplied from outside. Whereas the O.E.E.C. area has maintained its proportion of output in the Western world at slightly more than one-quarter, its relative importance as consumer increased and is now approaching that of the United States.

N P C PRODUCTIVITY JOURNAL

(Bi-monthly)

First of its kind. A Must for Good Business. Next issue contains views of Jawaharlal Nehru, Gulzarilal Nanda, Khandubhai Desai, Naval Tata and other experts; case studies, latest literature on Productivity; also research-based findings. Subscription nominal Rs. 9 for a whole year, including postage. Write immediately to Executive Director, National Productivity Council, 38, Golf Links, New Delhi.

NEW PRODUCTS AND PROCESSES

Para-aminophenol

AMINOPHENOLS find wide applications as developers for photographic negatives, in the synthesis of dyestuffs, particularly of azo and sulphur dyes and in the pharmaceutical industry as intermediates for the manufacture of various compounds such as phenacetin, methacetin, etc. These chemicals are not so far manufactured in India and the local demands are met from imports. Aminophenols can be produced from corresponding nitrobenzene by a variety of chemical reactions. But these methods involve the use of costly intermediates which have themselves to be prepared by a series of operations from coal tar primaries. The electrolytic reduction of nitrobenzene and m-dinitrobenzene gives corresponding aminophenol directly and is thus more advantageous than ordinary chemical methods. Working on these lines know-how for the electrolytic production of p-aminophenol and 2:4-diaminophenol from nitrobenzene and m-dinitrobenzene respectively has been developed at the Central Electro-chemical Research Institute, Karaikudi.

The process consists in reducing a suspension of the corresponding nitrobenzene in dilute sulphuric acid in an electrolytic cell. The same cell can be used for the manufacture of both aminophenols. In one cell amalgamated copper or monel rotating cathodes and perforated lead sheet anodes with porous pot diaphragms are used. For the manufacture of p-aminophenol, cell voltage is maintained at 3.8-4.6 volts, bath temperature at 80-85° C. and current density at 20 amp./dm². Under these conditions yields of 65-73 per cent are possible. Optimum conditions for 2:4 diaminophenol are current density of 30 amp./dm², cell voltage of 3.8-4.8 volts and bath temperature of 100° C. Yields of 50.56 per cent can be obtained. The following advantages have been claimed for the process:—(1) The acid required is of lower concentration and can be repeatedly used. (2) High current density reduces the duration of electrolysis and consequently results in less electrode investment. (3) Use of rotating cathode permits easy design of high capacity cells, requiring less floor space than cells using stationary cathodes. (4) The process is simple and the raw materials are comparatively cheap.

Fuel-oil Additive

Among exhibits at the 1961 Engineering, Marine, Welding and Nuclear Energy Exhibition will be a furnace fuel-oil additive, developed for use at sea during the war and now marketed by Duramis Fuels Limited, "Murrills," East Street, Portchester, Hampshire, England. Duramis is a mildly acidic liquid with a specific gravity of 1.025 and a flashpoint of 265° F. (130° C.), which dissolves rapidly and uniformly through a tank of fuel, so that no special mixing is required. Its main function is to absorb the small amount of peracetic acid present in the fuel, which otherwise acts as a catalyst in the formation of free carbon, thereby leading to incomplete combustion, to increased emulsification of the oil with water and to the formation of bituminous or asphaltic sludges. The effectiveness of the additive in this respect was demonstrated in a Government sponsored laboratory test, when the carbon content of an oil was reduced from 0.24 per cent to 0.04 per cent after treatment with 0.1 per cent Duramis. In another test the reduction was from 0.6 per cent to *nil*. By promoting complete combustion, Duramis also helps to reduce the sulphur trioxide content of the flue gases, thereby inhibiting the formation of sulphuric acid and corrosive soots which attack the flues and chimneys. In addition, the additive has been found to lower the surface tension of fuel oil, which increases the rate of combustion and gives a better air/oil mixture with less excess of air, by reducing the size of oil droplets from the atomiser. As a result, all carbon in the fuel is consumed, the CO_2 content of the flue gases is increased, and chimney temperatures are lowered. A public authority operating cross-channel ferries, who use about 14,500 gallons of Duramis a year, are reported to have made a saving of 5.7 per cent on fuel for a 2 per cent increase in cost per ton during trials.

All-Glass Insulating "Paper"

Varying applications are being found for Tissuglas—described as an all-glass insulating "paper"—which has been developed in the U.S. to solve unusual electrical, thermal and electronic problems. The material is supplied in sheet form and is made from extremely small glass fibres on a specially adapted paper-making machine. It is uniform in texture and electrical resistance and is claimed to have unusual properties as an insulating material. Its melting temperature is above 1,200 degrees F. and thickness ranges from .0006 to .012 inch. One of the newest applications for Tissuglas is as a base for electroluminescent lamps which are in the form of flexible panels as thin as 1/16-inch. It is also being used as a component for printed circuit materials in which it is laminated with very thin copper foil. The material is produced in rolls up to 36-inches wide and can be obtained in the U.K. through A.M.F., 4-6, Saville Row, London, W.1.

Safety Device for Machinery

A photo-electric device which will give warning of the slowing down or stoppage of machinery used in continuous processes is being produced by Hird-Brown, of 244, Maraland Road, Sale, Cheshire, England. The device, which can sense changes in rotation and other movement, is claimed to be particularly useful where machinery is left unattended. It is suitable for "watching" many kinds of mechanical action—rotating shafts, fans, rollers, reciprocating shafts and conveyors—and can be arranged to give an audible or visible alarm or initiate correction should there be a failure.

PERSPECTIVE FOR STEEL OUTLINED—I

INDIA MAY NEED 110 MILLION TONS BY 2000 A.D.

By Dr. M. N. Dastur

[An interesting perspective of the demand for steel in India was the central theme of Dr. M. N. Dastur's Sir M. Visvesvaraya Lecture at the annual meeting of the Institution of Engineers (India) held at Bombay during the week-end. Dr. Dastur also examined the economic and technological conditions necessary for expanding the production of steel. He pleaded for a careful exploration, development and conservation of the raw materials required for steel-makng and particularly cautioned against exhausting India's high grade manganese ore by exporting it indiscriminately. He highlighted the latest technological developments in steel-making, which showed that Russia was not behind others in adopting the most modern and highly efficient processes. Dr. Dastur made many pertinent points in an impressive manner, some of which, especially those relating to the rate of growth that India should achieve in steel, are contrary to the views urged by the school of thought in favour of a lower steel target. As these, too, require to be widely known, we are publishing in these columns a condensed version of Dr. Dastur's illuminating address. Dr. Dastur, it may be noted, is a well-known consultant on metallurgical industry. He is the author of the project reports on alloy and tool steel plant at Durgapur and the fourth steel plant proposed to be sited at Bokaro.—ED.]

THE role of steel in a developing economy is dependant on the pace and pattern of industrialisation adopted. A good beginning with social overheads like railways, irrigation and power, having been made in the first Plan, the second Plan was drawn up with greater weightage to industry, especially heavy industry. This has led to a debate over the relative importance of agriculture and industry in the Indian economy. Interestingly, it was Sir M. Visvesvaraya who was the first to make out a consistent and well-argued case for industrial development in his book *A Planned Economy for India*, published in 1934. The outline of a ten-year national plan he put forward in the book was the precursor of the Five-year Plans of the post-Independence period.

It is widely recognised that even the development of agriculture in today's conditions requires a strong industrial base. Major increase in food production in the second Plan is believed to be directly attributable to measures relying heavily upon science and technology, such as improved seeds, major irrigation and fertilisers. The case for rapid industrialisation, therefore, rests not merely on industrialisation, *per se*, but also on the patent need to rehabilitate agriculture itself.

Not surprisingly, therefore, there is, notwithstanding the debate I referred to, wide agreement in the country over the need for rapid industrialisation, spearheaded by the heavy industry sector. The Federation of Indian Chambers of Commerce and Industry, the most representative body of its kind, holds that the industrial priorities for the third Plan should include "the attainment of the level of near-self-sufficiency in heavy machine building" and "considerable expansion in respect of other producer goods industries including steel, chemicals and coal."

Making the Right Choice

The development of heavy industry, as the third Plan visualises, will take place side by side with expansion of consumer goods industries to ameliorate the living conditions of the common man. The whole Plan is predicated upon the assumption that consumption will rise by over 4 per cent per annum. There is no dispute that consumption standards need to be raised faster; however, should we settle for a strategy of growth that maximises immediate benefits, but jeopardises the long-term prospects or should we opt for a pattern of development which, while not bringing immediate benefits on the same scale, will ultimately make possible much higher rates of economic growth and consumption than otherwise? It is really, therefore, a question of making the right choice between present needs and future hopes.

It is a commonplace that development itself brings into being conditions for its furtherance. In many ways, the choice of investments is decisive in determining the tempo. Our attempt, therefore, should be to give priority to those investments which induce the largest amount of investment in subsequent periods. For instance, it has been shown that an expenditure of Rs. 450 crores in basic industries today could bring into being a complex of heavy industries, which will enable us to equip a large number of new industrial units with an annual output running into hundreds of crores.

Indeed the balance of payments outlook makes it obligatory that India should increasingly rely on indigenous capital goods, if development is not to be arrested by the scarcity of foreign exchange. Hence, the immediate and compelling need to develop machine building and other heavy industries, requiring, in turn, the continuing expansion of steel industry to provide an assured supply of the basic raw material. This point of view is now widely acknowledged, and was given authoritative expression by Mr. H. V. R. Iengar, Governor of the Reserve Bank of India, in his address at the annual meeting of the Bureau of Industrial Statistics on 30th November 1959, when he said that "if a steel plant had been put up during the first Plan period, India would have not only got the plant cheaper, but also saved considerable foreign exchange spent to import steel."

Role of Steel

The key role of steel in economic development can also be shown with a degree of mathematical accuracy by analysing the correlations between *per capita* consumption of steel and other major economic variables, such as national income *per capita*, the value of industrial production *per capita* and consumption expenditure *per capita*. One such study recently made by the Economic Commission for Europe showed that steel consumption increases at a rate faster than industrial production in the early stages of economic development. Once the industrial base is established, every increase in steel consumption brings about a large increase in industrial production, national income and living standards.

Some people argue against steel expansion on the ground of its low employment potential but this is like calculating the benefits of a power plant in terms of the number of people employed directly by it. Indian data being lacking, I shall quote the estimates of the American Iron and Steel Institute which show that every worker employed in the steel industry creates factory jobs for another eight in plants which could not come into existence without an assured supply of steel. In addition, the steel industry creates jobs in non-manufacturing industries like mining, transportation, construction, etc., not included in the ratio cited above.

A recent study of the degree of interdependence of industries is of exceptional interest in judging statistically the role of steel in the economy. It shows the extent to which one industry interlocks with others, indicating the "forward and backward linkage effects." It is found that industries with the highest linkage effects provide maximum growth stimuli. It is interesting to note that the steel industry provides the maximum linkage effect, as it consumes the largest value of products from other industries and provides the maximum value of raw materials for further consuming industries.

One may, therefore, generalise that "underdeveloped countries are not so foolish and so exclusively prestige-motivated in attributing prime importance to this industry." This is also borne out by my own experience in Peru, Brazil, Columbia and Venezuela where I was associated with the planning of the first steel plants. There were grave doubts there in some quarters about the economics of the plants because of the low level of demand at the time and the raw materials situation in these countries. Yet, it is interesting to note that "even before the new steel plants were completed, they had to be expanded.

Planning for Steel

In the foregoing section, I attempted to show that heavy industry alone can provide a reliable foundation for rapid and sustained economic growth. In fact, even advance in agriculture will increasingly call for higher industrial outputs. This provides then the rationale for accelerating the development of the steel industry, a point which seems to have been better appreciated in China.

This is evident from the fact that, in the last eight years, while steel output in China multiplied more than twelvefold, production in India only doubled. While some Chinese statistics may be of doubtful accuracy, I, for one, have no doubt, after seeing the Chinese industry in 1959, that it is pushing forward boldly and rapidly.

Cement-Steel Ratio

The development of the steel industry has so far been very halting in our country which is sharply brought out by the unusual ratio obtaining between the output of cement and steel. It is not suggested that cement production be curtailed, only that steel output must increase more sharply than hitherto so that eventually a ratio similar to that found in other industrialised countries begins to obtain.

Estimating Future Steel Requirements

It will be appropriate at this stage to attempt a forecast of future steel requirements in India. As installation of new steel capacity together with development of ancillary facilities, such as new mines, washeries and railways, is a time-taking process, planning for steel has necessarily to be done on a long-term, or perspective basis. Consequently, while planning for 1965-66, we have to keep in mind the possible requirements of the fourth, fifth and succeeding Plan periods, in order to ensure continuing expansion of existing capacity and initiation of new capacity at appropriate intervals.

Forecasts of future steel requirements can be made by a number of methods such as establishing a correlation between steel consumption and national income. But this will not be realiable in a country like ours where growth accelerated by planning, is changing the components of national income. For us, much more dependable is the "end-use," method, which works out the steel component of various industrial and construction targets laid down by our planners, thus arriving at an aggregate of demand from various sources. The exercise is based on the use of predetermined norms of steel required per unit of production or construction, the norms themselves having been established as a result of empirical study.

Using this method, my colleagues and I estimate steel requirements at about 12 million tons by 1965-66 to meet the production targets set down in the third Plan. Expansion of this order is well within our capabilities.

Even at the level of 12 million tons, we shall achieve a *per capita* consumption of only 26 kg., as against the current *per capita* consumption of 40 to 70 kg., in many Latin American countries with predominantly agricultural economies. Proceeding beyond 1965, on the basis of levels of *per capita* consumption corresponding to the degree of industrialisation and increase in national income, envisaged at successive stages in the country's long-term perspective plans, we arrive at an estimate of consumption reaching the 19 million level by 1970; 28 million by 1975; and 110 million tons by the end of the century. These 110 million tons of steel will give us a *per capita* consumption of 130 kg. which means that we shall then barely reach the current levels of Japan and Italy.

Provision for Future Expansion

It is important to keep this perspective of development in our mind in the decisions we take today. After all, there are only comparatively few locations where large plants could be economically located in any country, more so in India where coking coal deposits are concentrated in a small area. If we aim to get to a capacity of over 100 million tons in the next forty years, we shall have to rely, as other countries have done, upon a few large steel complexes to provide the bulk of the capacity. This will not preclude the setting up of a large number of smaller plants to disperse steel capacity to meet regional demands and stimulate local development.

In drawing up the layout for a new plant, we should, therefore, provide sufficient space for many-fold expansion. Such provision will add only a negligible amount to present costs, but will pay off handsomely in the future. Larger the plants, the greater the economies realised in capital and operational costs. Whereas the typical integrated steelworks of a few decades ago was usually a million-ton capacity, today 10-12 million-ton plants are considered desirable wherever possible.

If the steel industry is to develop at the pace we visualise, we must also attempt to insulate the programme from the uncertainties of foreign credits and aid. This implies that the progress of heavy machine-building industries must proceed apace, unhampered by delays we have suffered in the past. The serious quest for self-sufficiency will require an imaginative policy of looking ahead not merely to create new equipment capacity but also to mobilise the productive potential already existing in India.

UNDER PUBLIC DEPARTMENT 13 FEB 1961

Outlook For Raw Materials

The expansion of steel capacity requires urgent attention to the raw materials base of the industry. The quality and extent of our resources have caused anxiety. While iron ore reserves are one of the largest and best in the world, the known reserves of good coking coal are comparatively low and the ash content is high. The availability of suitable fluxes with low insolubles for steelmaking is even more critical.

This state of affairs emphasises the urgency of stretching out supplies through the upgrading of high-ash coals by washing, by petrographic preparation to permit large mixture of non-coking coals in the blend, by the use of self-fluxing sinter in the blast furnace burden and other technological improvements to reduce specific coke consumption. Such efforts in the U.S.S.R. have reduced coke consumption by 35 per cent between 1930 and 1958. The use of similar techniques should also make it possible to bring down the coke rate per ton of pig iron in India by one-third in the near future.

It cannot be too strongly emphasised that the coal and limestone positions allow absolutely no ground for complacency. The large investments being made in steel plant facilities are likely to be rendered idle, unless, taking a lesson from the second Plan, there is a sustained and co-ordinated effort to survey, investigate, raise and transport these materials to the steel plants. The long-term outlook is likely to be improved by new discoveries of raw materials. Between finding new deposits and delivering them to steel plants there is, however, a long preparatory period—for instance, six to eight years in the case of coal.

Need to Conserve Manganese

At this point, it is necessary to sound a note of warning regarding indiscriminate export of some of our raw materials. For instance, it has long been thought that our reserves of good manganese ore are practically inexhaustible and it has, therefore, been exported at a rate of a million tons a year for the last several decades. Already our growing ferro-manganese industry is experiencing shortages of the high-grade ores. Therefore, for the magnitude of steel production required in the future, the good ores must be conserved by preventing indiscriminate export of such ores and beneficiating low-grade ores.

Technological Possibilities

I should now like to review some of the major technological trends in the metallurgical field, and how these could be utilised to conserve our critical resources and enable the Indian steel industry to expand rapidly.

The blast furnace is the starting-point of metallurgical processes in a steel plant. During the last ten years, engineers and and scientists have taken a close, critical look at the technology and economics of iron-making, and have achieved a substantial increase in blast furnace productivity and a consequent decline in coke rates.

The presence in the blast furnace burden of materials of varying size allows the gases to escape up the stack without effective use of their heat content or reducing ability. Consequently, coke consumption is increased and iron output decreased. Therefore burden preparation to ensure uniformity in size and composition is the first step in raising blast furnace performance.

The attempt to utilise iron ore fines led to their agglomeration by sintering. Soon it came to be realised that the use of sinter has also other far greater advantages. Today, sintering is recognised all over the world as the most important development for increasing iron product on at low cost and also conserving raw materials. Unfortunately, in our country, while there is much talk about conserving critical materials such as coking coal, one of the most useful conservation measures—the use of self-fluxing sinter—has not received the attention it fully merits at Indian steel plants. It will be interesting to note here that blast furnace production is raised by 45 to 60 per cent and coke rate lowered by 25 to 40 per cent when using 100 per cent sinter in the burden. The best results are obtained when sinter as a proportion of the burden exceeds 60 per cent. The success of early work on sintering Domnarvet in Sweden and subsequently at the Appleby-Frodingham Works in England and at Russian steel plants has led to an upsurge in sinter production all over the world.

Size of Blast Furnaces

The trend in iron-making is towards larger blast furnaces. During the last sixty years, the blast furnace has grown steadily from a small unit producing about 100 tons per day to modern giants with outputs of over 3,000 tons per day. The reasons for a large blast furnace are that its larger output reduces unit operating costs, and also gives a small but significant saving in coke. Further, there is a considerable reduction in capital cost per ton annual capacity. In view of these technological trends, it would be desirable for the large integrated steelworks in India to standardise on blast furnaces of about 1,700 cu.m. working volume, with a rated capacity of 2,000-3,000 tons per day. There is nothing inherent in our raw materials which could prevent us from using furnaces of this size to advantage.

Another very important development is the use of high pressure inside the blast furnace to improve its performance. The operation of blast furnaces at elevated top pressure increases iron production, reduces dust losses, and consequently reduces the production cost of iron. The objections to use of top pressure such as high maintenance and blower costs, are more than compensated by better performance. In Russia, the advantages of top pressure have been appreciated and the mechanical problems solved, so that today more than 80 per cent of U.S.S.R. blast furnaces are operating on pressures upto 22 lbs.

The supply of additional external heat in the blast has been known to decrease the carbon consumed at the tuyeres per ton of iron and consequently increase the iron production rate. Currently blast temperatures of 1,000/1,100° C. are being used. Further, fluctuations in humidity under Indian conditions and the trend towards high blast temperatures, call for the use of steam for the controlled humidification of the air.

Another interesting development is the injection of natural gas, coke oven gas or oil into the smelting zone of a blast furnace. Recent investigations by the U.S. Bureau of Mines on an experimental blast furnace using natural gas showed reduction in coke consumption by about one-third over the base period and caused a 30 per cent increase in pig iron production. In India, where natural gas and heavy oils are not likely to be abundant, the injection of coke oven gas into the blast furnace needs consideration.

Steel-making

We turn now to steel-making, that is the refining process by which iron is converted to steel. The molten iron from the blast furnace contains numerous elements—such as carbon, manganese, phosphorus, sulphur and silicon—which must be removed by oxidising them out of the bath; the oxidised impurities then combine with the flux to form slag.

The quality of available raw materials, particularly their phosphorus content, has a major influence on the selection of the appropriate steel-making process. Three technically feasible alternatives could be considered under Indian conditions, for large-scale steel-making: (*a*) Duplex process—(Acid Bessemer—Basic Openhearth), (*b*) Basic Openhearth and (*c*) Basic Top-Blown Oxygen LD process.

Duplex Process: The conventional duplex process, using acid converters and basic openhearths, requires higher capital investment and operating costs, and gives lower yields than one-stage refining operations. With the advent of faster pneumatic processes and improved openhearths, the duplex method is becoming obsolete except under very special circumstances.

Basic Openhearth: The basic openhearth today produces the bulk of the world's steel. One of its major advantages is its technical flexibility: it can produce quality products from a wide variety of raw materials. Also, the metallic charge to the furnace can vary from all-cold-scrap to 80 per cent hot metal from the blast furnaces.

Use of Oxygen: In the last decade, while there has been spectacular progress in the LD and other pneumatic processes (Kaldo and Rotor), a number of refinements improvements have also been made in the openhearth process. The most important of these is the increasing use of oxygen, both for flame enrichment to accelerate heating and melting, and by direct insertion through roof lances for oxidation of the steel. The combination of the two methods, that is flame enrichment and direct oxidation, can increase productivity by 40 to 50 per cent and at the same time decrease the fuel consumption.

One of the important consequences of the use of oxygen is that the higher temperatures inside the furnace call for the use of the more refractory basic bricks in openhearth roofs.

Another line of development which is improving openhearth economics is the increase in furnace size from average of about 40 tons per heat in the twenties to an average of about 200 tons per heat in U.S.A. and U.S.S.R. today. The largest furnaces are those of 500 and 600 ton capacity in U.S.S.R. and China which are capable of production rates approaching 100 tons per hour. Furnaces with heat size of 800 to 900 tons are now being designed, each furnace to produce about three-fourths of a million tons of ingot steel annually. This increase in heat size not only improves output but also lowers fuel and refractories consumption.

The openhearth process revitalised by these recent improvements is thus better able to meet the challenge of the LD converter and other pneumatic processes which have made very big headway in the last few years.

LD Process: Although the first commercial LD plant came into operation in Austria only eight or nine years ago, there were 46 converters with an annual capacity of 12.5 million tons by 1957, and another 50 vessels will have been brought into operation by next year taking the total LD capacity to some 26 million tons.

The process combines the advantages (comparatively lower capital investment and rapid refining rate) of a pneumatic converter operation with the flexibility of an openhearth to some extent (use upto 35 per cent scrap) and produce a variety of steels of openhearth quality. Steel can be finished to desired analysis and contains very low nitrogen. The LD process is well suited for the production of all sections and is particularly suited for deep-drawing quality sheets.

While a few years ago, the average LD converter size was only about 40 tons—such as the converters installed at Rourkela—today, converters of 200 tons capacity are being installed. It is thought that the heat size of LD converters will increase in the near future to over 250 tons, giving a production of about 200 tons per hour per vessel.

Lower Costs

The development of large converters has increased the attractiveness of the L.D. process in comparison with conventional openhearths. A recent study made by us indicates that the capital cost of a two-million-ingot-ton-per-year meltshop using three 120-150 tons LD vessels (including oxygen plant) would be about Rs. 200 million, as compared with a cost of about Rs. 350 million for an openhearth shop of equivalent capacity with six 500-ton furnaces plus desiliconising—that is the LD plant would cost only about 60 per cent that of the openhearth shop. The LD process in this case was advantageous not only in terms of capital cost, but also was lower by Rs. 20 per ingot ton in production cost.

In view of the above considerations—the lower capital and operating costs and suitability in the context of raw materials and scrap available, it is believed that the LD process should produce 30 to 35 per cent of the total steel in India in the next ten years. Indeed, the share of the LD process all over the world is expected to rise from under 10 per cent at present to 20 to 25 per cent of the world's steel production. However, to maintain a proper overall scrap and fuel balance inside an integrated steel plant, the openhearth will continue to find an important place.

Other oxygen steel-making processes of great interest are the Kaldo process developed in Sweden and the Rotor process in West Germany. Until recently, both processes have been operated on a small scale. These new developments must be watched with interest by Indian steel-makers, as they promise to combine the speed of the LD process with the versatility of the openhearth.

(To be continued)

INCOME, OUTPUT AND EMPLOYMENT IN THIRD PLAN

BALANCED DEVELOPMENT NOT PROVIDED FOR

By V. S. Mahajan

IF the marginal capital-output ratio is 3:1 and the rate of population growth is something like 1.8 per cent annually, then to achieve a 5 per cent growth in the real national income during a year at constant prices, we need net investment of about 20 per cent, that is, 20 per cent of national income should be available in the form of savings for further investment. If prices start rising 4 to 5 per cent a year, then the rate of incremental investment would have to be something like 25 per cent, that is a quarter of national income.

What is the experience of the Indian economy? During the past nine to ten years—the period approximately covering India's first two Plans—the rate of savings has hardly moved from 6 per cent to 8 per cent, while the investment rate has moved pretty fast. It was probably around 11 per cent last year. (Even an investment rate of 11 per cent, with a lower capital-output ratio of 2.3:1 and population growth of 1.8 per cent, would, at constant prices, hardly yield 2.5 per cent growth in national income, that is 50 per cent of the rate originally assumed by the planners. Of course, with 4 to 5 per cent growth in prices annually, admitted by the planners themselves, the rate of growth would still be smaller.)

Thus, one finds that more importance has been given to the rate of investment than to savings. Such gap in resources was partly covered by foreign loans and partly by deficit finance. (The foreign loans and deficit finance, during the second Plan have been of the order of Rs. 982 crores and Rs. 1,170 crores respectively, or nearly 47 per cent of the aggregate public sector investment.) Further, investment in the second Plan has mainly been on basic and heavy industries and relatively less attention has been devoted to agriculture. The result has been 20 per cent rise in the cost of living index. This negatives the planners' own assertion, that is, while heavy industry created demand for consumer goods, it does not produce these goods. The moral they drew was that simultaneously efforts should be made to augment production of consumer goods. Was this done in practice? There was, unfortunately, not a very realistic programme of food production—the major item in an average verson's cost of living in India. It was, perhaps, thought that food would grow by the grace of God, as had happened during the closing years of the first Plan. But nature, unfortunately, has not been so kind.

Foreign Exchange Lost

Further, in regard to production of other basic consumer goods—cloth, vegetable oil, etc. —much reliance had been placed on the cottage sector (not even small industries, what to talk of large industries, the latter being penalised to feed the cottage infants. The result was obvious. While, on the one hand, the cost of production of these goods rose steadily, their production, on the other, could barely keep pace with the growing demand. This put further pressure on prices. Also due to our expensive production policy and lack of modernisation, both of which are the direct results of the Government's Industrial Policy, India has lost much of its export markets in cotton textiles to Japan, Hong Kong and even Pakistan. Thus, it has lost foreign exchange at a time when it is needed badly.

The necessity for encouraging the cottage (hand) sector rose from its labour-intensive character. In other words, with unemployment mounting day after day and underemployment rising steadily in the rural sector, as a result of population explosion, employment planning became absolutely essential. (Had the programme of industrialisation pushed up with slightly more vigour in the first Plan, India could have avoided, to some extent, such ugly state of affairs at the beginning of the second Plan.) But where could employment be created so rapidly? The Karve Committee's Report on (mostly) Village and (less) Small Industries provided an answer. Only cottage industries could absorb millions of these unemployed and underemployed people. Consequently, these industries were made the second leading sector of growth, next to iron and steel and other basic and heavy industries. It was also argued that this policy would also help to lower the incremental capital-output ratio, and thus allow the economy to obtain larger production with minimum of cost. But one is at a loss to understand as to why such precise ratio as 2.3:1 was selected in the second Plan. This shows that the Planners were very optimistic of the capital-output ratio as a useful tool in economic planning. How far this ratio has actually materialised is anybody's guess.

Again, the number of jobs that have actually been created through labour-intensive techniques of production is not known. One guess is that, during the first four years of the current Plan, not more than 6 to 6.5 million jobs have been created in agriculture, industry and services, while another 1.5 to 2 million jobs are expected to be created during the last year of the Plan. (See B. N. Dattar's article on "Employment in the third Plan," originally published in the *Yojana*.) In all, roughly 8 million jobs may be said to have been created in the second Plan, as against more than 5 million jobs in the first Plan, where very little emphasis was put on employment and industrialisation. The second Plan had started with a backlog of 5.5 millions of unemployed and 10 millions were further suggested to be entering the labour market during the currency of the Plan. It may, however, be pointed out that this figure of 2 millions labour force entering every year in the market is based on the old conception of population growth around 5 millions a year. Recently, the population has grown at a much faster rate, something like 7 to 7.5 millions a year. Thus, on a conservative guess, not less than 3 millions of additional labour force may be said to be entering the market recently, which calls for an upward revision of the backlog figures of the labour force, at the close of the second Plan, from 8 millions to something like 10 to 11 millions.

Things May be Worse

Consequently, with a backlog of 10 to 11 millions of unemployed, at the beginning of the third Plan, the progress of employment via cottage industries can hardly be said to be satisfactory. As a matter of fact, the country has double the unemployed people now than it had at the beginning of the second Plan. Things would still be worse, when one takes into account the number of underemployed in the rural sector.

So where have the things gone wrong? Obviously there has not been a real employment planning. Things have been more or less left to chance. And even such chance-taking has as well proved expensive. It has been so, because, first, we have diverted resources from more productive to less productive activities, and, secondly, as already pointed out, the less productive activities have proved costly from the point of view of cost of production as well as from that of generating additional employment. Finally, we have made a switch-over to modern methods of production, even though these may be on a small scale, more difficult and costly than labour-intensive methods of production.

Here an important issue arises. What could India do when it is faced with a serious unemployment problem? In other words, how else could we create so many jobs? Of course, this is the real rub, namely, how to multiply employment at a rapid rate. Is there any magic by which this can be achieved?

I shall take up this issue in the next section of this paper. Let me summarise here the main points of this section. I started this article by stating that, for a given capital-output ratio and a given population growth rate, the country needs a particular rate of savings and investment, in order to achieve desired rate of growth in the national income. To attain a 5 per cent rate of growth, India would require nearly a quarter of its national income available for further investment. But experience so far indicates that the rate of investment has not been, on an average, even half of this figure. None has any accurate data on the marginal capital-output ratio during the second Plan in order to make an upward or downward adjustment in the rate of growth. (Incidentally, V. V. Bhatt has worked out a ratio of 3 : 1 for the second Plan. If this ratio is correct, which at least appears to be more realistic, then the rate of growth of real national income would still be smaller. See his article, "Capital-Output Relationship in the Plans," *Yojana*, 24th July 1960.) It has also been seen that the savings ratio (including foreign exchange) in the economy has lagged far behind the investment rate, the gap being filled through deficit financing, foreign loans and foreign aid. The policy of putting less emphasis on agriculture and encouraging cottage industries at the expense of more efficient large-scale industries has made development expensive in terms of rising cost of production and cost of living. Such a programme has also failed to provide employment opportunities on the scale originally expected. This means that, if there had been a proper balance between different sectors of production—agriculture, industry (large, small and cottage), commerce, etc.—India's economic development would have been less costly and probably more employment-generating.

How far have the planners digested these lessons while preparing the Draft of the Third Plan?

It is encouraging to note that they have more than realised that self-sufficiency in food is essential if India is to avoid such gaps in food supply as has been witnessed recently, and which can be a disturbing feature in the rate of development. In fact, self-sufficiency in food has been accorded a second place among the five objectives of the third Plan, and nearly a quarter of the total (projected) expenditure both in public and private sectors would directly and indirectly benefit agriculture. This is a right approach, for, in every growing economy, food must be given the top priority, otherwise much of the useful effort would be wasted through the inflationary spiral.

Land Reform Policy

It must, however, be added, that a mere laying down of physical targets of food production and working out the financial resources involved would not suffice. The spirit with which the programme is executed and the creation of proper social climate are also vitally important.

JAY ENGINEERING WORKS LTD. CALCUTTA-31

USHA

To take an instance. The land reform policy in different States has produced an omnibus type of legislation, which hardly shows any uniformity in land ceilings, etc. even in two States. As a result of imposition of land ceilings, much of the capital investment in rural areas has tended to shift to urban areas, thereby depriving villages of what little private capital they had access to. Further, the distribution of small bits of land among landless workers and small farmers looks like distributing poverty in a country with severe shortage of land and heavy pressure of population. Could this not be one of the factors responsible for depressing agricultural production during recent years? If the country is better prepared in other respects —more irrigated land, more fertilisers, better agricultural implements, new and improved varieties of seed, intensive efforts of Community Projects to raise farm output, etc.—the lag in agricultural production on account of failure of nature will not be as large as it is today.

A Big Handicap

The matter may be considered from another angle also. By parcelling out land in small bits, India will be discouraging commercial farming. Unlike the existing more developed economies, where commercial farming both helped and sustained large-scale industrialisation, either subsequently or simultaneously, we do not have a class of commercial farmers in India. This is a big handicap and much of this owes to the British land policy which created a privileged class of intermediaries between the actual tillers of the soil and the State. This class had hardly any interest beyond collecting the land revenue. And what the national Governments have done recently is merely to put a ceiling on the privilege of this class, without simultaneously attempting to encourage a class of commercial farmers.

An important prerequisite for the creation of this class of commercial farmers is to encourage farms of suitable commercial sizes. How far co-operative farming can take up the role of commercial farming is a debtable issue. If past experience is any guide in this direction, then the role of co-operatives in encouraging commercial farming appears to be limited.

All these issues, land reforms, commercial farming, appropriate incentives, etc., have been referred to in this article to show the magnitude of the agricultural problem. Unless these issues are properly integrated with the agricultural plan, there may be no smooth sailing.

So much about agriculture. What about employment? This is the fourth aim of the Plan: "To utilise to the fullest extent possible the manpower resources of the country and to ensure a suitable expansion in employment opportunities." Strangely, it is preceded by the aim to expand the basic industries like steel, fuel and power and to establish machine building capacity. This shows that our planners have consciously or unconsciously given more importance to basic industries than to human beings. It is true that basic industries are necessary for self-sustained growth. But self-sustained growth becomes less meaningful when millions of human resources are either unemployed or underemployed. All in all, the Plan is heavy industry-biassed and is not properly balanced with employment needs.

Productive Employment

It is logical that we should base our industrial programme with a view to providing full (productive) employment. Of course, this cannot be done overnight. It will take time. But, at the same time, unless a concerted effort is made in this direction, and gear our planning machinery to this end, we may delay it unnecessarily.

As regards housing—one of the most starved items that needs immediate attention and also one which has a vast employment potential—the less said the better. The responsibility for providing this basic need is left almost entirely at the doors of the private sector, and how slowly and how erratically this sector has moved in this direction is well known. Most of the building activity that has occurred in cities, has been in the shape of luxury flats and multi-storeyed office blocks, for the simple reason that such construction yields rich dividends on the capital invested in the shortest possible period. The progress made in building houses for the low-income groups is poor, with the result that nearly three-fourths of the population is forced to live in slum areas.

What is worse, the position is steadily worsening. For example, the socio-economic survey of Poona has revealed that, in 1957, nearly 65 per cent of the people in the city lived below the poverty line and the percentage of people below the destitution line increased from 15 to 25 during 1951 to 1954. (See Tarlok Singh's article on "Urban Rural Trends in India," published in the *Yojana*.) Almost similar results were shown by the socio-economic survey of Calcutta, published recently. What does the Planning Commission propose to do in this respect? Mere building of machine-making capacity, which is stated to be one of the most important objectives of India's planning, will not bring about self-sustained growth. Such growth process can be had only by planning for the balanced development of the various sectors of the economy, including the most important sector of manpower.

Facilities Wanted

It will thus be seen that the third Plan, too, lays inadequate stress on buildings, roads, and other construction and allied activities as well as on small industries with efficient methods of production and large consumer industries (especially cotton textiles) all of which could both create and sustain large employment opportunities and also improved supplies and distribution of consumer goods. Unless India has good village to market roads, its efforts to accelerate agricultural production would not bring the expected results. Unless India has well developed factory sites, housing estates, water, electricity and telephone facilities in rural areas, it can hardly expect decentralisation of (private) industrial activity and thereby avoid over-concentration of such activity in a few large cities. Unless we bring the entire country within the fold of the market economy—instead of having small islands of isolated markets—we would hardly be able to create market for modern (mass-producing) units, only which can bring about lower and uniform prices in different areas.

In the ultimate analysis, it is the overall growth of the market economy which would help to generate and sustain steady growth. If we do not take care of the rural sector and integrate it with the urban sector, our work would only be half complete. It is generally agreed that in order to stop rapid migration to cities, it is necessary to create enough employment potential in rural areas. This obviously has to be done in non-agricultural activities, as agriculture is overcrowded.

Whether the marginal capital-output ratio is 2.6:1 or 3:1 in the third Plan, it is safe to conclude that much would depend upon our ability to maintain a proper balance between the different sectors of the economy. Further, if the capital-output ratio has to be as low as possible, in the interest of larger rate of growth with minimum cost component, it is necessary that the price line of essential consumer and basic goods is maintained. In other words, there must be adequate production of these goods in the country, the distribution machinery should be efficient, and there should be a programme of countrywide markets where the common man in rural areas is made an active participant in the process of growth.

It is only out of a higher rate of growth of output and full (productive) employment that India will be able to extract a higher share of revenue, which would be available for self-sustained growth without disturbing the price line. If a large section of the community is unemployed, the rate of growth would necessarily be small, as much of such aggregate production would be consumed by these non-earning and partially earning members. The rate of growth of savings would also be slow as savings ultimately emerge from the surplus available over immediate consumption.

FARGO

DIESELS

in national service

Fargo diesel trucks are doing more than their fair share of work at projects because of their rugged construction and ability to carry more loads at less cost per trip. No matter what the load and however tough the going, they are first-class for service, performance and economy

THE AUCKLAND JUTE COMPANY LIMITED

NOTICE OF DIVIDENDS

THE BOARD OF DIRECTORS HAS SANCtioned payment of the following Dividends subject to deduction of tax under Section 18(3D) of the Indian Income Tax Act.

Interim Dividends for the year ended 31st March, 1961.

On Cumulative Preference Shares @ Rs. 2.75% increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, i.e. making a total of Rs. 3.575%.

On Redeemable Cumulative Preference shares @ Rs. 2.25% increased by 30% thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, i.e. making a total of Rs. 2.925%.

On Ordinary Shares @ Rs. 7 per share.

Additional Dividends for the year ended 31st March, 1960.

On Cumulative Preference Shares @ Rs. 1.65% per annum.

On Redeemable Cumulative Preference Shares @ Rs. 1.35% per annum.

The Dividends will be paid on or after 6th March, 1961, to those Shareholders (or their mandatees) whose names appear in the Company's Books on 21st February, 1961.

The Share Transfer Registers of the Company will be closed from 9th February, 1961 to 21st February 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LTD.,
Managing Agents.

IMPORT POLICY OF PAKISTAN

MORE RAW MATERIALS ALLOWED

PAKISTAN is half-way through the first year of the second Plan (June 1960 to July 1965). The growth of the tempo of its planning has inevitably led to stresses and strains on the economy, as is the case with any developing country embarking on an ambitious scheme for economic growth. Pakistan's position has been made more difficult by the continuing heavy expenditure on defence which is unproductive. Although the new military regime has chosen to eschew reliance on direct deficit financing for resource mobilisation, there has been a steady increase in the price level at the rate of about 4 per cent per annum because domestic production of necessities of life has been inadequate to meet the high rate of population growth and the increase in the purchasing power in the hands of the people. There have been serious shortages of food and industrial raw materials, in particular, necessitating substantial imports of these commodities. Nevertheless, the import policy has generally been quite restrictive in view of what is claimed to be a none-too-satisfactory balance of payments situation. The new regime has, however, been somewhat responsive to the grievances of consumers, as is evident from some of the measures of liberalisation adopted in the import policy for the current half-year beginning from January 1961. Apparently, the Government seems to have been influenced mainly by the increase in foreign exchange earnings in 1959-60, following the introduction of the bonus scheme for export promotion. It may be noted, in passing, that under the export bonus scheme, exporters of certain goods are given transferable import licences, which fetch a large premium in the domestic market.

Automatic Licensing

Under the import policy for the current licensing period, 62 items have been placed under automatic licensing. As a result, 118 industries would receive all their requirements of raw materials and spare parts on an automatic basis. Some 51 industries have been given licences on the basis of 110 per cent of assessed capacity on single shift. It may be recalled that, during the previous period, there were only 14 industries which were entitled to automatic facilities. The remaining industries had been licensed at 100 per cent for only those items of their requirements which were under automatic licensing, with the import of residuary items being made under bonus licensing. Not all units chose to use bonus licences for this purpose, with the result that a number of industries did not find it possible to go into full production. In the new policy, it is said that 8 per cent of all industries are being given licences for all their requirements in full to ensure better utilisation of installed capacity. But as the concession applies only to a limited range of industries, the results are not likely to be much impressive.

Another feature of the import policy is the introduction of repeat licensing system. Accordingly, repeat licences are being issued as soon as goods against one licence have been shipped and the importer presents copies of bills of lading, duly certified by a Scheduled bank. It is expected that an efficient importer will be able to get at least two shipments within a shipping period.

Three items have been removed from the licensing list, namely, ammunition, beads and false pearls, as also arms. While the production of ammunition has been commenced indigenously, imports of the other two items are being permitted under the bonus scheme. Commercial licences for the import of clocks and watches are also not given, since they can be imported under the bonus scheme. Yet another new provision in the import policy relates to the Government's decision to relate industrial licensing to export performance of industrial units. Accordingly, the units, which show a good record of exports, get preferential treatment in the matter of licensing for expansion.

Scope for Improvement

While the new import policy, in general, has been well received by the industrial community, there is dissatisfaction among some of the consumers over the continuation of the overall restriction on imports. But this is unavoidable in the present context. There is at any rate still room for streamlining the import policy in many respects. In this connection, Dr. Anwar Iqbal Qureshi, a leading economist and business consultant in Pakistan, writes in his weekly letter, *Economic Review*, that "there is scope for rationalisation and for providing relief to consumers without any substantial loss of revenue or foreign exchange." Elucidating his point, he observes:

"The policy of the Government should be to allow as much imports of consumer goods as are compatible with our foreign exchange resources, which, we fully well know, are limited. We further suggest that as many of import items as are possible should be under O.G.L. In case the limited foreign exchange resources of the Government do not allow the import of any item upto about 125 per cent of its quota of 1953 under commercial licence, we suggest complete ban of token imports under commercial licence. These should be allowed only under bonus licences. The foreign exchange thus saved should be devoted for imports of more essential goods. We would like to go a step further and suggest that imports should be either under commercial licence or under bonus but not under both. Such a policy leads to loss of foreign exchange without any tangible benefit to the consumers.

"When a category is renounced from a commercial licence and subjected to imports under bonus imports, appropriate reduction should be made in the import duty. For instance, the import duty of 100 per cent on watches of all categories subject to import under bonus licence cannot be justified. This equally applies to the import of art silk, yarn and fabrics. The Government should adopt either one, that is, high import duties or the other, that is, imports under bonus. There is little justification in charging high import duties on goods imported with bonus voucher. To be more specific, we suggest for the serious consideration of the Government that import of motor vehicles and small cars upto the value of Rs. 7,500 should be subject to a suitably lower import duty than is the case at present, and these should all be imported under licences."

Dr. Qureshi has made a fervent plea to liberalise imports of coffee. To quote him:

"We would also like to utilise this opportunity to urge upon the Finance Minister to treat coffee not as a luxury but a common requirement of the intellectual classes which brings some relief to the monotony of life. It is about a year and half ago that the nominal import duty of 36 per cent *ad valorem* on coffee was raised to 80 per cent. The amount that this duty brings to the exchequer is rather limited and the hardship which it imposes on the coffee drinkers is quite severe. The market price of two-ounce tin of Ness Coffee (instant) is Rs. 5.63 in Karachi while its f.o.b. London price is Re. 1.63. The larger disparity is probably explained by limited amount of commercial licensing and profiteering on the part of the importers. The price of ordinary ground coffee in Pakistan is Rs. 10 per pound, while it can be imported from India at Rs. 2 per pound when there is a glut. Would it be asking too much to import coffee freely from India under special agreement, and charge the old rate of import duty?"

Admittedly, Dr. Qureshi's suggestion, if accepted, is bound to be of mutual benefit to both Pakistan and India. It is to be hoped that the question of coffee will be discussed in detail between the representatives of the Governments of India and Pakistan when they meet next for review of the existing trade agreement.

Sustained Vigilance

There is no doubt that sustained vigilance is called for in respect of imports in the interests of safeguarding the balance of payments position. Improvement in the balance of payments position was indeed an important objective of the first Five-year Plan to be achieved by increasing exports, import substitution and economising non-development imports. Actual foreign exchange earnings during the Plan period were, however, only Rs. 955.4 crores, which compares unfavourably with the target of Rs. 1,050 crores. The Pakistan Planning Commission, in its publication, *The Second Five-year Plan*, attributes the shortfall in earnings mainly to "inadequate increase in domestic production, a decline in world trade and increased demand at home for exportable goods." Foreign aid and foreign private investments were also lower at about Rs. 507 crores, as against the original expectation of Rs. 612 crores. The balance of payments position worsened further on account of a sharp deterioration in the terms of trade—the terms of trade index declined by about 40 per cent between the first quarter of 1955 and the last quarter of 1959—as also by the serious food shortage leading to substantial imports of foodgrains. The following table shows the trend in Pakistan's foreign exchange earnings since 1954-55:

(In crores of rupees)

	1955–56 *	1957–58	1959–60 †	Total 1955–60
Raw jute ..	94.1	85.8	81.8	421.5
Jute manufactures ..	8.5	13.3	22.0	68.5
Raw cotton ..	51.0	24.6	16.8	150.9
Cotton manufactures ..	3.2	3.4	20.0	42.9
Hides and skins ..	4.9	5.0	4.0	25.1
Wool	8.5	7.8	7.7	41.7
Tea	3.1	2.0	4.0	15.5
Miscellaneous exports ..	20.3	10.9	20.0	79.5
Invisible receipts ..	19.5	19.8	20.7	109.8
Total ..	213.1	172.6	197.0	955.4

* Adjusted for devaluation of rupee in 1955.

† Planning Commission's estimates.

Decline in Exports

Annual exports during the first Plan period continued to be lower than those in 1955-56. In 1957-58, it had declined to Rs. 172.6 crores, as against Rs. 213.1 crores in 1955-56. It may be noted that, owing to devaluation of the Pakistan rupee in July 1955, jute manufactures and cotton goods made much headway (partly on account of the clearance of accumulated stocks) in 1955-56. As is evident from the table, the impact of devaluation, however, was short-lived. But exports picked up considerable momentum once again in 1959-60, thanks to new incentives. An important point of interest is the change in the composition of exports. Jute and cotton, both in raw and processed form, still account for 80 per cent of Pakistan's total earnings from commodity exports, but jute manufactures and cotton goods amounted to about 25 per cent of the total in 1959-60, as against only one per cent in 1954-55. Exports of quite a few manufactured goods also tended to move up.

The following table shows the trend of projected and actual foreign exchange expenditures, earnings and deficit during the first Plan:

(In crores of rupees)

	Projected	*Actual*
Expenditure financed by :		
Pakistan's resources ..	1,050	938.5
Project and commodity aid and technical assistance ..	385	303
Foodgrain aid ..	177	161.8
Private foreign investment ..	50	42.5
Total ..	1,662	1,445.5
Total foreign exchange earnings ..	1,050	959.4
Deficit	612	490.1

Source : Planning Commission of Pakistan.

In spite of smaller earnings, the actual deficit was substantially less than the deficit projected in the Plan. This was due principally to reduction in the imports of consumer and development goods, raw materials and spare parts for machinery.

Second Plan

In the second Plan, exports are expected to go up by 15 per cent. But this will not be sufficient even to meet the expenditure on maintenance imports. The position is explained in the second Plan as follows:

"The balance of payments has in the past faced serious strains chiefly because of increased import requirements and heavy deterioration in the terms of trade. Foreign aid and loans and foreign private investment have largely helped the economy to stand these strains. During the second Plan period the foreign exchange earnings of the country will increase by about 15 per cent but this will not be enough even to meet non-development import requirements; the entire development import requirements, estimated at Rs. 650 crores, will have to be financed from foreign aid and from private foreign investment. With the addition of balance of payments support (Rs. 150 crores), foodgrain aid (Rs. 100 crores) and extraordinary aid to meet part of the rupee finance of the Indus Basin replacement works (Rs. 70 crores), the total foreign resources needed amount to Rs. 970 crores. If these requirements of external assistance are not met, the implementation of the Plan will not be possible. External assistance will play a critical role in enabling the economy to develop in a manner which should have a favourable impact on the balance of payments in later years. It is expected that by 1965, foreign exchange earnings will increase much more rapidly and substitution of domestic production for imports of all kinds will be much more substantial. With the successful implementation of the Plan the need for balance of payments support and foodgrain aid should be eliminated, and it should become possible to finance development imports increasingly from the country's own resources."

The total of foreign exchange earnings through exports during the second Plan period are expected to go up to Rs. 1,060 crores, or to an annual average of Rs. 212 crores, which compares with the annual average of Rs. 191.2 crores in the first Plan period.

Indo-Pak Trade

A short account of the recent trends in Indo-Pakistan trade will not be out of place in this context. The trade between the two countries was put on a rational basis, with the signing of the limited payment agreement in December 1959. This was superseded by a protocol to the trade agreement in March 1960 (effective for two years) which, among others, fixed the value of commodities to be exchanged either way higher at Rs. 4.10 crores, as compared with only Rs. 2 crores under the earlier limited payments agreement. The following table shows the trend of trade between the two neighbours:

(In crores of rupees)

	Imports from Pakistan	Exports to Pakistan	India's balance of trade
1952	29.14	46.34	+17.20
1953	19.41	7.62	—11.79
1954	17.82	10.09	— 7.73
1955	25.08	8.71	—16.37
1956	20.91	8.08	—12.83
1957	13.40	6.77	— 6.63
1958	6.27	7.16	+ 0.89
1959	5.45	6.31	+ 0.86
1960 (January-September) ..	11.26	6.47	— 4.79

India bought more goods from Pakistan in 1960 (January-September) than in the previous year. This has resulted in an adverse balance of payments to the tune of Rs. 4.79 crores, as compared with a surplus of Rs. 86 lakhs in 1959. It is, at any rate, a good augury that of late Indo-Pakistan relations have changed for the better and, consequently, there has been some expansion in the trade between the two countries. Admittedly, there is considerable scope for further improvement in the trade between them.

WORLD ECONOMIC SURVEY, 1959

The *World Economic Survey, 1959*, published by the United Nations, is the twelfth in the series of comprehensive reviews of world economic conditions. A special study of this survey examines post-war investment trends and policies in the industrial countries, in the underdeveloped countries and in the centrally planned economies. In the industrial countries, taking the period 1950 to 1958 as a whole, the share of resources devoted to productive investment has varied from 9 per cent in Belgium to 21 per cent in Norway. In some three-fourths of the underdeveloped countries studied, investment increased annually at a rate exceeding 5 per cent, between 1950-51 and 1957-58; in most countries, this was reflected in an increase in the share of total resources allocated to investment. In this period, the annual rate of growth of total (public and private) investment in the underdeveloped countries has ranged from 2 per cent in Brazil to 13 per cent in India and 15 per cent in Burma. In the centrally planned (Communist) economies, gross fixed investment as percentage of national income has ranged from 15.6 per cent in East Germany to 28.2 per cent in Czechoslovakia in the period 1949 to 1958.

The Ashoka Hotel

AT NEW DELHI

LIGHTING BY PHILIPS

Occupying an area of 20 acres, the Ashoka Hotel—the largest project of its kind in India—stands out as another shining example of Philips specialised lighting.

The lighting is so essentially a part of the whole conception that it presents an architectural masterpiece which belies the fact that it is achieved by artificial means.

Philips exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy through maximum illumination level at lowest running cost and gives longer, trouble-free performance Philips' scientifically designed equipment is the result of experience, research and development to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

DA60/649

KIRLOSKAR ELECTRIC'S PROFIT DECLINES

EXPANSION AND DIVERSIFICATION TO CONTINUE

A FALL in the demand for electric motors and transformers and the consequent underutilisation of the industry's productive capacity show their distinct impact on the financial results of the Kirloskar Electric Company Ltd. (Managing Agents: Messrs. Kirloskar Associates, Harihar) for the year ended 30th June 1960. The Company's sales of motors and transformers suffered a substantial setback, declining from Rs. 219.20 lakhs in 1959 to Rs. 183.75 lakhs in the year under review. This has adversely affected the earning capacity of the Company. The gross profit has come down by Rs. 2.64 lakhs to Rs. 25.24 lakhs. The fall in the Company's output is clearly reflected in the reduced consumption of raw materials, stores and spares, which has contracted by Rs. 34.57 lakhs between 1959 and 1960.

The Company's net profit has, however, not shown a marked diminution. Such works out to Rs. 10.14 lakhs, as against Rs. 10.53 lakhs for 1958-59. This is explained by the fact that the Managing Agents' remuneration has been reduced by Rs. 45,000 to Rs. 1.92 lakhs and the tax provision has been cut down by Rs. 2.42 lakhs. The amount set aside for depreciation, on the contrary, has been stepped up a little from Rs. 5.36 lakhs to Rs. 5.98 lakhs.

The appropriation policy of the Company for 1959-60 does not show any marked change. The total amount ploughed back to various reserves has been slightly lowered from Rs. 3.45 lakhs to Rs. 3.07 lakhs, but the transfer to development rebate reserve is Rs. 19,000 more at Rs. 2.65 lakhs. Thus, on balance, there has been only a fractional fall in the amount ploughed in. A break-up of the transfers to reserves shows that the reserve for rehabilitation and modernisation gets Rs. 50,000 more than in the previous year at Rs. 2 lakhs and also the loan redemption fund account which is being strengthened by Rs. 90,000, as against Rs. 80,000 in the previous year.

Taking into account the reduced earning capacity of the industry and having regard to the need for conserving resources for future expansion of the Company, the Directors have recommended a slight reduction in the dividend to shareholders (the Company has only equity capital) from 10 per cent (taxable) to 9 per cent (taxable). The proposed dividend is equivalent to 6.3 per cent tax-free and represents a cut for the second year in succession. It may be noted here that the dividend for 1958-59 at 7 per cent tax-free itself was lower than the 7½ per cent per annum paid for the preceding two years.

The following comparative table shows at a glance the working results of the Company for the last four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sale proceeds	1,83.75	2,19.20	1,97.68	1,67.18

	(9%)*	(10%)*	(7½%)	(7½%)
Carry forward	0.03	0.04	0.04	0.06

* Subject to tax.

Undeterred by the decline in sales, the Directors of the Company have decided to pursue their efforts at expanding and diversifying the activities of the Company. It is stated that the Company has already received the sanction of the Government of India under the Industries (Development and Regulation) Act 1951 for increasing the manufacturing capacity of electric motors from 180,000 h.p. per annum to 400,000 h.p. per annum. They are taking energetic steps to implement this expansion project as expeditiously as possible. This shows that they are confident of the outlook for the Company. In fact, they clearly say in their report to the shareholders that "there are enough grounds for taking an optimistic view of the total business of the Company" for the next year.

In the previous financial year, the Company had issued additional capital of Rs. 5 lakhs, taking up the total issued capital to Rs. 45 lakhs. This left a balance of only Rs. 5 lakhs out of the authorised capital. During the year under review, the Company issued this balance of Rs. 5 lakhs and this issue was actually oversubscribed.

A significant development having considerable bearing on the prospects for the Company is the successful conclusion of an agreement with Messrs. ASEA of Sweden, the world-renowned manufacturers of electric equipment. The shareholders of the Company would recall that they had already authorised their Directors to invest in the shares of Kirloskar Switchgear Ltd., a company which was to be floated in collaboration with Messrs. Siemens of Germany. But as this collaboration could not be secured, the Directors have entered into an agreement with Messrs. ASEA of Sweden. Under this agreement, the name of the Company has been changed to Kirloskar Asea Ltd. It will have an authorised capital of Rs. 1 crore and the foreign collaborators would take up 30 per cent of the issued capital; they would also make available to the new company a loan of Rs. 10.50 lakhs for meeting the foreign exchange requirements for the purchase of machinery and equipment at a suitable rate of interest.

The main features of the collaboration agreement with Asea are as follows:

(1) The collaboration agreement will cover, among other things, the manufacture of motor control gear and switchgear. (2) The agreement would be for a period of ten years. (3) A royalty of 2½ per cent on the net invoiced value and 5 per cent in regard to certain special items. (4) Asea Electric India, Private Ltd. will be the sole distributors for the products manufactured by the new company. (5) The new company will have a right to export the products manufactured, to certain countries abroad, as detailed in the agreement. (6) Asea will provide training facilities for the new company's personnel in its plants in Sweden for reasonable periods at the new company's expense. (7) Kirloskar Electric Company Ltd. will have the right to obtain its entire requirements of motor circuit breakers and starters from the new company.

To begin with, Kirloskar Electric will invest Rs. 3 lakhs in the Company. The investment in the new Company would be of considerable benefit to Kirloskar Electric, as the former would supply the starters which are badly needed to be supplied along with the electric motors.

The Company's paid-up capital as at 30th June 1960 is Rs. 44.38 lakhs, all made up of equity shares, supplemented by reserves and surplus amounting to Rs. 28.79 lakhs. The Company has been making substantial additions to its fixed assets year after year. During 1959-60, the addition to fixed assets amounted to Rs. 17.41 lakhs as against Rs. 13.58 lakhs added in the previous years. This brings the total of fixed assets to Rs. 95.49 lakhs. The depreciation provided so far aggregates Rs. 42.64 lakhs, leaving the book value of the block account at Rs. 52.85 lakhs. The current assets standing at Rs. 101.68 lakhs provide ample cover for the current liabilities and provisions of the order of Rs. 81.63 lakhs.

The Rs. 10 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 13.12 *cum-div.* On an *ex-div.* basis, the share offers a tax-free yield of 5 per cent per annum.

(*Concluded from next column*)

lakhs. There is, however, still an intangible asset of Rs. 6 lakhs, representing preliminary expenses to be written off.

The Rs. 100 fully paid-up ordinary shares of the Company are being currently quoted at Rs. 139 *cum-div.* On an *ex-div.* basis, the return works out to 3.16 per cent per annum, tax-free.

The Company's factory has a crushing capacity of 800 tons per day and crushing takes place in two stages, between August and October (special season) and December and April (main season). It owns a farm of 450 acres, besides taking on lease 1,300 acres of sugarcane farm. It hopes to produce during the current year more sugar than it did in 1959-60.

CAUVERY SUGARS' MAIDEN DIVIDEND

FINANCES BEING STRENGTHENED

THE financial results of the Cauvery Sugars and Chemicals Ltd. (Secretaries: Parry and Company Ltd., Madras) for the year ended 30th June 1960 show a distinct improvement over those for the previous year. The total sales of the Company staged a sharp rise from Rs. 108.32 lakhs to Rs. 128.86 lakhs and the gross earnings have gone up from Rs. 17.35 lakhs to Rs. 20.20 lakhs. A maiden dividend of 6 per cent taxable (or 4.20 per cent, tax-free) has been recommended by the Directors. The Company's performance would have been distinctly better but for the illegal labour strike which cost the Company Rs. 1.27 lakh, in addition to loss of sugar worth Rs. 2.35 lakhs following delayed crushing of cane.

Although the Cmpany was established in 1948 on a small scale, it was only in 1956 that its capital structure was expanded and public participation was invited by an offer of 20,000 6 per cent tax-free cumulative preference shares of Rs. 100 each and 20,000 ordinary shares of Rs. 100 each at par. The Company's factory, which is near Tiruchirapalli, commenced production in July 1958. Capital was taken from the public in easy instalments of Rs. 25 each between June 1956 and July 1957, when the final call of Rs. 25 was made. The investors in the equities of the Company have thus had to wait for nearly four years to get a modest maiden return of 4.20 per cent, tax-free. The shareholders are, of course, entitled to the benefit of Section 15 (C) of the Income-tax Act.

Because of accelerated depreciation allowances under the Income-tax Act, the Company is not liable to pay any corporate taxation. The Directors have, however, wisely provided a sum of Rs. 1.96 lakh to taxation equalisation reserve, as the relief is purely temporary and represents only a deferment of taxation until later years. A sum of Rs. 6.05 lakhs has been set aside as development rebate reserve being 75 per cent development rebate against the profits for 1959-60. The provision for depreciation is Rs. 4.80 lakhs, as against Rs. 4.56 lakhs for 1958-59. The following table shows at a glance the trend of financial results as compared with those for 1958-59:

(Value in lakhs of rupees)

	For the year ended 30th June	
	1960	1959
Sales	1,28.86	1,08.32
Closing stocks	17.61	20.20
Excise duty paid	33.11	29.10
Manufacturing and other expenses	75.29	60.67

6 per cent. preference	1.20	4.25*
Ordinary	2.40	..
	(6%)†	
Carry forward	0.73	0.21
Cane crushed (in tons)	67,807	84,012
Sugar produced (in tons)	6,310	7,745
Sugar recovery	9.30%	9.22%

* For 3 years ended 30th June 1959. † Subject to tax.

There has been a perceptible improvement in the financial position of the Company during the year. Thus, there has been a further reduction of Rs. 2.50 lakhs in the loan taken from the I.F.C. and the surplus of floating assets over current liabilities and provisions has recorded a marked improvement from a mere Rs. 2.69 lakhs at the end of June 1959 to as much as Rs. 12.14 lakhs. Briefly, the latest financial position (as at 30th June 1960) is as under:

The paid-up capital of the Company aggregates Rs. 60 lakhs, one-third of which is in 6 per cent. tax-free cumulative preference shares of Rs. 100 each. The reserves and surplus amount to Rs. 13.14 lakhs. The Company has made an addition of Rs. 4.72 lakhs to its fixed assets during 1959-60, taking the gross block to Rs. 95.55 lakhs. The depreciation provided so far aggregates Rs. 9.60 lakhs, leaving the net book value of the block account at Rs. 85.95 lakhs. The outstanding loan from the I.F.C. has been brought down from the original level of Rs. 35 lakhs to Rs. 30 lakhs. The current assets are of the order of Rs. 45.95 lakhs and they adequately cover the current liabilities at Rs. 33.81

(*Continued in previous column*)

SPENCER MAINTAINS PROGRESS

FINANCIAL POSITION STRONG

ONE of the fairly big organisations of its kind in India, Spencer and Company Ltd. has its activities almost similar to any local retailer or distributor, as well as those of a wholesaler. Addressing the last annual general meeting on 29th January 1960, the Chairman listed the activities of the Company that contributed to the trading profit as under:

Wholesale and retail trade 27 per cent, drugs and pharmaceuticals 24 per cent, hotels and catering 14 per cent, home furnishing 8 per cent, aerated waters 4 per cent, cigars 2 per cent, tea 5 per cent, refrigeration and air-conditioning 10 per cent and sundries 6 per cent.

The progress of the Company is being well maintained and the accounts for the year ended 30th June 1960 provide sufficient evidence of that. Sales and receipts from hotels, bakeries, laundries, catering, etc., improved from Rs. 3.71 crores to Rs. 3.79 crores. The improvement is, however, not in line with the increase of over Rs. 74 lakhs recorded last year. The selling prices had to be maintained in order not to create consumer resistance, while costs kept on rising. Consequently, the profit-margin has contracted and both gross and net profits are fractionally lower, the former at Rs. 23.12 lakhs and the latter at Rs. 11.06 lakhs, the corresponding figures for 1958-59 being Rs. 23.26 lakhs and Rs. 11.52 lakhs, respectively. The dividend on ordinary shares has been maintained unchanged at 18 per cent taxable or 12.60 per cent tax-free.

A scrutiny of the profit and loss account for 1959-60 shows that consumption of stores have gone up from Rs. 7.76 lakhs to Rs. 8.59 lakhs. Office and establishment charges, other than items shown specifically, have increased from Rs. 8.72 lakhs to Rs. 9.65 lakhs. The provision for depreciation has been raised from Rs 2.64 lakhs to Rs. 3.56 lakhs. A striking item in the profit and loss account is an increase in interest paid from only Rs. 0.45 lakh to Rs. 1.33 lakhs. This can be attributed to increases in loans secured and unsecured (from Rs. 2.54 lakhs to Rs. 23.53 lakhs) which in turn is due to additions to fixed assets of Rs. 19.10 lakhs to Rs. 75.62 lakhs. Because of lower taxable profit, the provision for income-tax is slightly lower by Rs. 0.60 lakh at Rs. 8.50 lakhs. On the receipts side in the profit and loss account, the amount of net dividend received has increased from Rs. 0.71 lakh to Rs. 1.25 lakhs reflecting the expansion in investments in the previous year of over Rs. 16 lakhs. Of the investments in Parke Davis (India) Private Ltd. and Electronics Limited, the dividend on Electronics shares was received and included in the accounts but the dividend on the shares in Parke Davis (India) Private Ltd. for the year ended 30th November 1959 at the rate of 22 per cent and amounting to a net figure of Rs. 1.54 lakhs, was received in November 1960. The same will be taken into account in the current year. The closing stock of Rs. 106.30 lakhs is substantially higher than the opening stock of Rs. 91.70 lakhs, mostly on account of stocks of finished goods.

The following comparative table provides at a glance a picture of the Company's progress since 1956-57:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sales and receipts	3,79.24	3,70.98	2,96.56	3,19.25
Other income	11.66	8.90	8.84	11.12
Expenses	3,67.77	3,56.97	2,82.89	3,04.84
Gross profit	23.12	23.26	22.00	26.51
Provision for—				
Depreciation	3.56	2.64	2.45	1.99
Taxation	8.50	9.10	10.90	13.65
Net profit	11.06	11.52	8.65	8.22
Excess provisions written back	0.53	0.57	2.50	2.09
To reserves and provisions	1.46	0.87	1.87	..
Dividends—				
6½% 'A' Preference	1.51	1.51	1.03	1.07
8½% 'B' Preference	3.13	3.13	2.14	2.22
Ordinary	7.20	7.20	6.00	6.00
	(18%)	(18%)	(15%)	(15%)
Carry forward	7.56	8.51	9.18	9.08

Note:—The dividends for the year ended June 1959 and 1960, on both ordinary and preference shares, are subject to deduction of tax, whereas for the previous two years they are shown after deduction of tax.

The controversy over payment of preference dividends as per the provisions contained in the Finance Acts of 1959 and 1960 surrounds this Company also. The auditors in their report have expressed the opinion that excessive dividends have been paid on both 'A' and 'B' preference shares. Their view is that the Company ought to have made two deductions from the preference dividends, first the proportionate part of the income-tax paid by the Company on its own income out of which the dividends were paid and then at the rate prescribed by Section 18 (3D) of the Income-tax Act, as per the Articles of Association of the Company. But the Directors feel that, based on the Articles of Association of the Company and on the Income-tax Act, only the tax at the rate prescribed by Section 18 (3D) of the Income-tax Act ought to be deducted from preference dividends and this has been done. Deductions of tax from future preference dividends, according to them, will be effected in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act 1960.

The expenses for the year under review includes a sum of Rs. 1.17 lakhs being bad debts due to the unfortunate failure of an importer in West Germany. The Directors say that every effort was made to recover the outstanding, but, as it was irrecoverable, the amount had to be charged to the profit and loss account.

The Company's premises at Kanpur, which were being used for the manufacture of carbon dioxide gas, were converted into a modern and hygienic canning factory, with a view to placing on the market tinned fruits and vegetables of the best quality. The result of this venture for the year was a loss of Rs. 1.28 lakhs, but the Directors are hopeful of the future prospects and anticipate a considerable improvement in the current year itself.

The paid-up capital of the Company stands at Rs. 100 lakhs, comprising Rs. 23.20 lakhs in 6½ per cent 'A' cumulative preference shares, Rs. 36.80 lakhs in 8½ per cent 'B' cumulative preference shares and Rs. 40 lakhs in ordinary shares, all of Rs. 10 each. Reserves and surplus aggregate Rs. 109.48 lakhs. The gross block of the value of Rs. 153.82 lakhs has been written down by over 50 per cent to Rs. 75.62 lakhs. Current assets (excluding investments) are of the order of Rs. 179.44 lakhs and exceed loans, current liabilities and provisions amounting to Rs. 87.96 lakhs by a sizable amount. The book value of investments is Rs. 41.59 lakhs, of which Rs. 23.83 lakhs are in quoted investments and Rs. 17.76 lakhs in unquoted investments. The market value of quoted investments is Rs. 26.92 lakhs, that is, Rs. 3.09 lakhs higher than the book value. It will thus be noted that the financial position of the Company is quite strong.

The current market quotation for the Rs. 10 paid-up ordinary shares, at Rs. 22.60 *cum-div.*, gives a yield of 5.6 per cent on a net dividend of Rs. 1.26 per share (gross dividend Rs. 1.80).

(*Concluded from next column*)

Rs. 58 lakhs, both for working finance and capital expansion. Against this, a net addition of about Rs. 42 lakhs has been made to the block.

The following is a synopsis of the Company's latest balance-sheet (as at 30th June 1960):

(In lakhs of rupees)

Liabilities		Assets	
Capital	54.95	Gross block	102.33
Reserves and surplus	42.39	*Less*—Depreciation	42.89
Loans	85.60		
Current liabilities & provisions	52.74	Net block	59.44
		Current assets	176.11
		Cash position	0.13
Total	235.68	Total	235.68

The Company has entered into collaboration agreements with certain foreign firms, with the consent of the Central Government, for the expansion of its business, mainly with regard to manufacture of prestressed concrete pipes, structural work using Ceno patent method, high pressure penstocks for hydro-electric schemes, etc., licences for import of plant and machinery have also been obtained. The Company has also been granted a licence to import a Galvanising Bath which will facilitate execution of big jobs for fabrication of transmission towers. A scheme for the manufacture of boilers in India with a renowned foreign firm has also been finalised.

The Company is understood to have sufficient orders on hand and also contracts with the Bombay Municipal Corporation valued over a crore of rupees. With the general tempo of activity increasing, particularly in the context of developmental planning in the country, a progressive tone of working may be expected. The equity shares of the Company (Rs. 100 paid-up) are presently quoted at Rs. 230 and the yield works out to 3.65 per cent, free of tax.

STRUCTURAL ENGINEERING EARNS LESS

DIVIDEND REDUCED AGAIN

THE year 1959-60 has turned out to be less remunerative for the Structural Engineering Works Ltd. [Managing Agents: Messrs. Bhagat and Sons (Private) Ltd., Bombay], inasmuch as the gross profit at Rs. 17.35 lakhs is 18 per cent less than that (Rs. 21.33 lakhs) for 1958-59. This has reflected itself on the equity dividend. After the regular rate of dividend to preference shareholders, a lower taxable dividend of 12 per cent (amounting to a tax-free dividend of about 8.4 per cent) on ordinary shares has been proposed which, incidentally, is the lowest for the last few years. The dividends were as high as 17 per cent (taxable) for 1958-59 and 26 per cent (taxable) for 1957-58.

During the year under review, the realisation from sales and work executed by the Company came down by about Rs. 8 lakhs, while the operating charges rose by Rs. 11 to 12 lakhs, a third of which is accounted for by the rise in the wage bill. The result is lower earnings for the period, as already noted. The Company's establishments at Mulund and Calcutta could not work to full capacity, in view of the prolonged fabrication work and laying of pipes for the different stages of the Vaitharna-*cum*-Tansa Pipeline Scheme of the Bombay Municipal Corporation, as also due to various difficulties, stated to be beyond the control of the management. The keen competition that persisted in the structural steel fabricating industry eventually forced the Company to accept work at more competitive rates than before.

The comparative results of the Company's working in the last few years is detailed in the following table:

(Value in lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sales and work done	94.46	1,02.37	89.91	1,26.46

* To facilitate comparison all *equity dividends* are adjusted at approximate taxable rates.

In general, the year 1958-59 was the most profitable year for the Company in the last few years. Increased output, better realisation and lower operating charges, all led to higher earnings for the year ended 30th June 1959. The Company's Calcutta establishment went into production in February 1959. Negotiations with the Central Government for obtaining licence to fabricate light and heavy structural works in that establishment, in addition to pipes as at present, are in progress.

In the last five-six years, a steady development is noticed in the Company's activities and many new lines of operation have been added. The developmental programmes for the substantial increase in the volume and value of the Company's operations were financed from out of the borrowings from banks as also by the issue of fresh capital. The authorised capital of the Company, which was Rs. 50 lakhs, was doubled in the year 1959 to the present amount of Rs. 1 crore. The paid-up capital was gradually increased from Rs. 15 lakhs in 1956 to Rs. 54.95 lakhs at the end of June 1960 (nearly four times) by the issue of additional equity shares and redeemable cumulative preference shares. It is understood that further capital is proposed to be issued by the Company shortly, with a view to meeting its additional financial requirements for the developmental activities planned for the near future.

In the same period, that is, 1956-60, the borrowings of the Company have risen by over

(*Continued in previous column*)

SYNOPSES OF COMPANY REPORTS

Sheveroy Estates Ltd.

THE directors of the above Company [Managing Agents: A. V. Thomas and Co. (India) Ltd., Madras] present the audited accounts of the Company for the year ended 30th June 1960.

Coffee Crop:—Crop secured during the season amounted to 2,01,804 Kilos or 3,971—2—1 (1,919.30) cwts. at a cost of Rs. 112.02 (Rs. 212.96) per cwt., against the estimate of Cwts. 3,600. The entire crop has been delivered to the Coffee Pool, and the stock has been valued at Rs. 2.37 per Point, which works out to Rs. 178.51 per 50 Kilos or Rs. 181.16 per cwt.

After providing for depreciation and all expenses, except the taxation liability, the accounts for the year ended 30th June 1960 show a profit of Rs. 2,14,976 (loss of Rs. 27,979) to which is added the balance brought forward from last year of Rs. 1,431 (Rs. 53,785) making a total of Rs. 2,16,407 (Rs. 97,806 after transferring Rs. 72,000 from dividend equalisation reserve). Out of this amount the directors have transferred to provision for taxation Rs. 70,000 (Rs. 12,000) and to dividend equalisation reserve Rs. 24,000 (*nil*) leaving a balance of Rs. 1,22,407 (Rs. 85,806) available for distribution. The directors recommend payment of a dividend of 9(6¼) per cent for 1959-60, subject to deduction of income-tax, absorbing Rs. 1,21,500 (Rs. 84,375) leaving to be carried forward Rs. 907 (Rs. 1,431).

Estimates for 1960-61:—Coffee crop has been estimated on the blossom at 4,500 cwts. at a cost of Rs. 109.94 per cwt. It is hoped that the estimated crop will be secured, provided the gardens do not experience any adverse weather conditions.

The subsidiary company viz., The Yercaud Coffee Curing Works Ltd., is making steady and satisfactory progress.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.

Jam Shri Ranjitsinghji Spg. & Wvg. Mills Co., Ltd.

The directors of the above Company (Managing Director: Mr. Bhairuratan Damani, Bombay) present the audited accounts of the Company for the year ended 30th June 1960.

The results for the year show a profit of Rs. 3,07,255 (loss of Rs. 1,37,089). But after providing for depreciation Rs. 1,73,575 (*nil*) and for development rebate Rs. 60,500 (*nil*) the profit shown in the account comes to Rs. 73,180 (loss of Rs. 1,37,089). To this amount is added the amount transferred from dividend equalisation reserve of Rs. 98,240 (*nil*) and provision for doubtful debts reserved Rs. 4,282 (*nil*) making a total of Rs. 1,75,702 (a total debit of Rs. 7,14,341 including previous year's loss brought forward of Rs. 5,77,252). From this amount is to be deducted provision for development rebate pertaining to previous year Rs. 77,400 (*nil*) leaving a balance of Rs. 98,302 (a final debit balance of Rs. 7,02,807 after deducting Rs. 10,794 being refund of income-tax and Rs. 740 being excess provision of wealth tax). From this the directors recommend the declaration of a dividend of Rs. 60 (*nil*) per share of Rs. 1,000 each, subject to deduction of tax which will absorb Rs. 93,240 (*nil*). The accumulated losses for the previous years amounting to Rs. 6,97,745 has been adjusted against the reserves of the Company.

Consistent with the directors' policy of renovation, new machineries over Rs. 3 lakhs were installed and put into commission during the year under review. The directors also initiated an elaborate scheme of modernisation involving a capital expenditure of Rs. 27,50,000 and approached the National Industrial Development Corporation Ltd. for financial assistance. The Corporation was satisfied with the working of the Mills and was convinced over the necessity of financing the unit. They approved the scheme as presented by the Company and granted a loan of Rs. 25,00,000 [being their 90 per cent share of the total scheme], the balance of Rs. 2,50,000 [being the Company's 10 per cent share], to be met from the Company's resources. The loan is repayable in fifteen equal yearly instalments, bearing a rate of interest at 5 per cent per annum.

During the year, the failure of crop shot up the cotton prices and mills experienced acute difficulty in procuring their adequate requirements. The supply position was, however, eased by the timely introduction of quota system by the Textile Commissioner; but the steep prices of cotton together with a high increase in the dearness allowance contributed to the heavy cost of production. The management could, however, stem over this difficulty due to their policy of renovation and show the present favourable results. It is hoped that before the close of the current financial year, the scheme of modernisation will be completely implemented and the Company will be able to show much encouraging results in proximate future.

Accounts in brief are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ...	15,54,000	Gross block	66,77,134
Reserves* ...	11,26,682	*Less*—Depreciation ...	35,48,365
Liabilities ...	54,99,674		
		Net block ...	31,28,769
		Stock-in-trade	33,28,128
		Stores, etc. ...	4,92,436
		Book debts ...	10,34,092
		Investments	32,800
		Cash ...	1,64,131
Rs.	81,80,356	Rs.	81,80,356

*Reserves are shown after deducting the debit balance of Rs. 6,97,745 in the profit and loss account.

Kirloskar Brothers Ltd.

The directors of the above Company (Managing Agents: Messrs. Kirloskar Sons and Co., Kirloskarvadi, District Sangli) present the audited accounts of the Company for the year ended 31st July 1960.

The year's working after meeting all expenses of operation, management, and after providing for depreciation, development rebate, taxation and bonus to employees [excluding the employees of Kirloskar Press] shows a profit of Rs. 6,99,418 (Rs. 6,17,942). To this has to be added the balance brought forward from last year's accounts of Rs. 12,462 (Rs. 7,056) making a total of Rs. 7,11,880 (Rs. 6,24,998). Out of this amount the directors have transferred to general reserve Rs. 85,000 (Rs. 60,000), to deferred taxation reserve Rs. 1,11,845 (Rs. 89,500) and to rehabilitation reserve Rs. 1,00,000 (Rs. 1,00,000) leaving a balance of Rs. 4,15,035 (Rs. 3,75,498). From this amount the directors recommend the payment of a dividend for the year ended 31st July 1960 at the rate of 10 (12) per cent subject to deduction of tax at source under Section 18 (3D) of the Income-tax Act, absorbing Rs. 4,03,169 (Rs. 3,63,036) leaving a balance of Rs. 11,866 (Rs. 12,462) to be carried forward to next year's account. It will be noted that the rate of dividend, considering the issue of bonus shares during the year, works out to more than 12 per cent which was paid last year.

Full production capacity could not be utilised during the year under report owing to a slight setback in the demand for pumps as also due to inadequate supply of essential materials. Also the trading sales have registered a fall owing to the fall in demand.

Expansion and Modification: The Company has signed a licence agreement with The Bullard Company, U.S.A., under which the latter will collaborate with this Company in the manufacture of *Vertical Turret Lathes and Horizontal Boring Machines* to their design. In order to meet a part of the foreign exchange required for the plant and machinery for the manufacture of these machine-tools, the Company has obtained a foreign currency loan of Rs. 25 lakhs from the Industrial Credit and Investment Corporation of India, Ltd., Bombay.

The Company has been granted a licence to start a small branch factory at Dewas in Madhya Pradesh. The Company has approached the Government of Madhya Pradesh for acquisition of the necessary land and it is hoped that the Company would be given possession of land shortly. As soon as the land is made available to the Company, further steps will be taken for setting up a branch factory. The Company has also been granted an Industries Licence to manufacture hermetically sealed compressors required for air-conditioning and refrigeration industry.

The accounts of the Kirloskar Pneumatic Co., Ltd., Poona, a subsidiary of this Company, has shown a profit of Rs. 24,762 which has been set off against previous loss. As the subsidiary has made a profit, this Company has received a royalty of Rs. 43,661 for the period 1st April 1959, to 30th June 1960, in terms of the agreement between this Company and the Kirloskar Pneumatic Company Ltd., Poona, out of which the royalty for the period 1st April 1959, to 31st March 1960, amounts to Rs. 22,239.

During the year, the Company increased its capital by issue of one bonus share for every four equity shares held by the shareholders on 26th October 1959. These bonus shares are eligible for dividend in respect of the year ended on 31st July 1960. Also during the year, the Company issued 20,000 new equity shares which were offered to the existing shareholders whose names stood in the Company's register on 6th February 1960 in the ratio of one new equity share for every eight shares held by them. The directors have allotted 19,794 shares out of this issue so far. These new equity shares are eligible for dividend for only 6 months of the year ending 31st July 1960 as per the terms of issue.

STATUS QUO IN MONEY CONTINUES

(From Our Own Correspondent)

BOMBAY, *8th February*

There is nothing new to report in the short-term money market. Stringency continues, as the demand for funds is heavy and supply does not expand except through borrowings from the Reserve Bank which are quite expensive. Inter-bank call money is quoted at the self-same rate of 5½ per cent. The rates for house money and term deposits are unchanged. There has been no increase in the lending rates of banks either.

The results of the sale of 91-days' Treasury Bills through weekly tenders show that the total amount offered was Rs. 2 crores during this week also. The average rate of accepted tenders remained unchanged at Rs. 2.585 per cent per annum. Sales of 91-days' intermediate Treasury Bills fetched only slightly larger amount of Rs. 7 lakhs, as against Rs. 5 lakhs in the preceding week. Banks are not evincing any interest in Treasury Bills, which is quite in keeping with the general stringency prevailing in the money market.

The Reserve Bank of India's statement for the week ended 3rd February 1961 discloses, as compared with that for the previous week, an expansion of Rs. 19.76 crores in notes in circulation. This brings the total notes in circulation to Rs. 1,929.25 crores.

The foreign securities held by the Issue Department are still unchanged at Rs. 128 crores. But as balances held abroad have gone down by Rs. 40.81 lakhs, the total foreign assets have declined by that amount to Rs. 147.26 crores.

The deposits of banks with the Reserve Bank have contracted by Rs. 6.14 crores to stand at Rs. 72.13 crores, while the other loans and advances given by the Reserve Bank show a rise of Rs. 13.97 crores; these include borrowings by the Scheduled banks also. There is an expansion of Rs. 3.55 crores in advances against usance bills which are now of the order of Rs. 22.35 crores.

The Scheduled banks' statement for the week ended 27th January 1961 shows that the total deposit liabilities have increased by Rs. 9.41 crores. Inter-bank borrowings of demand nature have gone up by Rs. 76.27 lakhs, and of time nature by Rs. 14.22 lakhs. The aggregate borrowings from the Reserve Bank are up by Rs. 2.27 crores, while those against usance bills have risen by Rs. 1.65 crores. Borrowings from the State Bank of India of demand and time nature have staged a rise of Rs. 83.07 lakhs and Rs. 21 lakhs respectively. Advances and bills (bank credit) have expanded by Rs. 11.05 crores on top of the increase of Rs. 5.08 crores in the preceding week, taking their total to Rs. 1,225 crores. A year ago, this portfolio stood at Rs. 1,020 crores. Investments have advanced by Rs. 3.74 crores as against a decline of Rs. 18.55 crores in the preceding week. As the rise in the investments held by the State Bank during the week is of the order of Rs. 4.79 crores, the investment portfolio of Scheduled banks excluding the State Bank are actually down by Rs. 1.05 crores.

The State Bank of India's statement for the week ended 27th January 1961 reveals a further contraction of Rs. 3.65 crores under deposits on top of a fall of Rs. 7.85 crores in the preceding week. Advances have continued to expand—the rise in the week being Rs. 1.87 crores. Money at call and short notice shows an improvement of Rs. 47 lakhs. The total cash resources have fallen by Rs. 1.86 crores, but investments have increased by Rs. 4.79 crores as noticed earlier.

The gilt-edged market is showing some signs of recovery presumably on account of some special buying by the Reserve Bank of India. A few deals have been reported in short-dated issues of the Central Government such as 3½ per cent. 1963 and 3½ per cent 1964. But the turnover is limited as there are no buyers. The prices of some of the Central loans have staged a fractional improvement. For example, 2½ per cent 1961, 2½ per cent 1962, 3 per cent 1963-65 and 3 per cent 1964 have each recorded a rise of 10 nP, while 3 per cent 1966-68 and 3 per cent 1970-75 have improved by 15 nP and 20 nP respectively. Demand for some State issues has also been more pronounced. The 4 per cent 1969 Andhra, 4 per cent 1969 Madras, 4 per cent. 1969 Mysore and 4 per cent. 1969 U.P. have each gone up by 10 nP.

In the foreign exchange section, the rupee-dollar rate has moved up for the second week in succession, the banks' selling and buying rates for ready T.T. standing at Rs. 477.75 and Rs. 474.50 respectively per 100 dollars. A week ago these rates were Rs. 477.25 and Rs. 474.00 respectively. This reflects the slight weakening of sterling in terms of dollar. The sterling-dollar rate has gone down a little. The latest available rates are: 280.170-280.200 per £ for spot and 279.630-279.660 per £ for three months' forward. As compared with the rates as on the 1st February, the spot rate shows a decline of 0.24 cent.

LINSEED DULL

(Messrs. A. Bradley and Co.)

CALCUTTA, *6th February*

There has been very little change in the linseed market. Owing to poor demand for seeds and oil, a slightly easier tone has developed. Availability is still scarce, and, with only limited enquiries from local crushers, business has been negligible.

In the oil market, with no appreciable stocks held by either manufacturers or dealers, prices have not shown much decline. The tendency, however, is quiet, with sellers more in evidence than buyers.

The oilcake market is quiet. U.K. buyers are still quoting lower prices.

Ready is quoted at Rs. 29 per maund.

BULLION PRICES RECOVER

(From Our Own Correspondent)

BOMBAY, *8th February*

After presenting an easy trend in the earlier sessions of the week, the bullion market developed a firm tendency yesterday (Tuesday) which gathered further momentum today. The earlier easiness was due to poor fresh buying support following the end of the first phase of seasonal demand and lack of encouraging advices from other commodity markets. Consequently, both gold and silver encountered selling and values suffered a setback. The sentiment of the market, however, changed since yesterday, thanks to revival of buying and paucity of offerings. It was reported that offtake by Delhi interests was increasing. Values, as a result, staged a rise. Not only were the earlier losses completely recovered but today's closing rates were higher than those prevailing at the end of last week.

The average daily arrivals of gold and silver during the week were smaller than those in the previous week, being 4,650 tolas of gold and 20 bars of silver, as against 4,750 tolas and 23 bars, respectively. Offtake of gold was 4,000 tolas per day on an average and that of silver nine bars. The corresponding figures for last week were 4,250 tolas and 15 bars. The floating stocks in the city are reported to be around 75,000 tolas of gold and 500 bars of silver.

Adjustment rates fixed today were Rs. 121.30 per 10 grams (0.85 tola) for gold and Rs. 208.10 per kilogram (85.7 tolas) for silver.

The *Fagun* (1st March) settlement in gold began the week at Rs. 120.80, as against the previous close of Rs. 120.90, and declined to touch a low of Rs. 119.80 on Friday the 3rd inst. After moving narrowly thereafter, the settlement firmed up to Rs. 120.80 yesterday and Rs. 121.65 today before finishing at Rs. 121.55.

Ready gold encountered selling in the earlier sessions, the quotation moving down from Rs. 120.90 to Rs. 119.85 on the 3rd inst. Subsequently, it recovered and stood at Rs. 121.65 today. The closing was lower at Rs. 121.55, at which rate it was quoted on a par with forward.

In silver, the *Maha* (2nd February) settlement went off the board at Rs. 207.35 on Thursday the 2nd inst., as against Rs. 227.40 on Wednesday last week. The *Fagun* (1st March) settlement eased from Rs. 207.05 to Rs. 206.40 on Friday and, after fluctuating narrowly, recovered to Rs. 208.20 today. At this level, some profit-taking set in and the settlement finished lower at Rs. 207.85.

Ready silver was quoted at a premium over forward throughout the week, though the actual premium declined from 60 nP last week to 25 nP today. The closing rate for the metal was Rs. 208.10, as against Rs. 207.65 on Wednesday last week, the highest and lowest levels touched being Rs. 208.45 (today) and Rs. 207 (on Friday and Monday).

The world price of gold in the London bullion market declined further during the week, from $36.36½ to $35.20 per fine ounce. Traders noted the twelve-point programme to strengthen the U.S. economy recommended to the Congress by President Kennedy as well as the offer of West Germany to help the U.S. strengthen the dollar. Following the decline in world price of gold and owing to the persistent firmness of the pound sterling *vis-a-vis* the dollar, ready gold in London receded from 252*s.* 4*d.* to 251*s.* 3*d.* Ready and forward silver, however, continued unchanged at 79½*d.* and 80*d.*, respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of the market during the week:

	8-2-1961 (closing)	High	Low	1-2-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	121.55	121.65	119.85	120.90
Forward:				
*Fagun**	121.55	121.65	119.80	120.90
Sovereign	93.80	93.80	93.25	93.25
SILVER				
Ready (.996 fine)	208.10	208.45	207.00	207.65
Forward:				
Fagun†	207.85	208.20	206.40	207.05
London—	7-2-1961			31-1-1961
Silver Ready	79½d.	—	—	79½d.
Silver Forward	80d.	—	—	80d.
Gold	251*s.* 3*d.*	252*s.* 3*d.*	251*s.* 1*d.*	252*s.* 4*d.*
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 1st March settlement. † 2nd March settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, *6th February*

The kip market ruled firm during the week, despite selective inquiries from the U.K. Inland demand for lower grades was good. There was brisk clearance of cow calf skins by shippers to the Continent at steady prices. But sales of buff calf were patchy.

Demand for tanned goat skins was mostly for medium and heavy weights, while lighter averages ruled weak. There was no change in the tanned sheep section.

Shipments during January 1961 were: 2,098 bales cow hides, 152 cow calf, 22 buff hides, 196 buff calf, 294 goat skins and 389 sheep to U.K. ports; 120 cow calf, 59 buff calf, 722 goat and 349 sheep to Continental ports; 88 buff hides, 85 buff calf, 261 goat and 9 sheep to the U.S.A.; and 11 goat and 229 sheep to Japan.

COTTON FUTURES REACT

(From Our Own Correspondent)

BOMBAY, *8th February*

Sentiment in the cotton futures market has undergone a complete transformation. Fears of shortage of cotton and non-availability of the desired qualities have given place to apprehension of a glut. A few weeks ago, he who had staked a fortune as a bear, would have been counted as indeed a bold man. But now those who predict a sharp rise in price is considered so. Many factors have combined to bringing about this change in the attitude of operators. They are: (1) expectation of a bumper crop of 5.3 to 5.4 million bales (latest private estimate); (2) heavy and early movement of new crop and the consequent break in ready prices in the terminal markets; (3) large arrival of foreign cotton (391,400 bales (of 400 lbs.) from the beginning of the season till 21st January 1961, as against 171,598 bales in the corresponding period of the previous season); and (4) the prospect of even heavier arrivals during the rest of the season. Heavy and persistent selling prompted by these factors resulted in a virtual landslide in futures values. For instance, I.C.C Jarilla April 1961 contract slumped from Rs. 572 (per three quintals) last week-end to Rs. 556.50 on Monday, a decline of Rs. 16 in just four days. Since then, however, a slight recovery has been in evidence, which is mainly a technical one, although it has been influenced by the bullish interpretation of the current cold spell. Consequently, the contract has improved slightly and is currently quoted at Rs. 564, nearly Rs. 8 higher than the lowest level.

The recession in futures and the fall in prices at the terminal markets have weakened spot prices too. Arrivals, especially in the Broach and Surti tracts, are mounting and mills are postponing purchases in anticipation of a further fall in prices. Obviously, they cannot be expected to enter a declining market. Moderate buying of Vijay, Digvijay, etc., by Southern mills is reported. Bombay mills, except those that are needy, are marking time to make bulk purchases.

The perceptible decline in cotton prices has caused concern among growers and a section of the trade. The East India Cotton Association, Bombay, is reported to have put forward the following suggestions to the Textile Commissioner to deal with the situation: (1) suspension of compulsory surveys as long as prices remained at the present low levels; (2) abolition of mill quotas; or, in the alternative, asking mills to buy cotton within a prescribed period according to the quota released to them; and (3) release of an export quota of one lakh bales for Kalagin and Wagad which has suffered quality deterioration and is not, therefore, wanted by mills in the country.

On the part of growers, those in Gujarat are reported to have convened a meeting to consider the "difficult situation" created by accumulation of stocks and the consequent financial difficulties, while none denies the need to take measures to peg cotton prices at reasonable levels, lest there should be diversion of acreage from cotton during the next season, nobody seems very optimistic that the Government will abolish the survey and quota systems forthwith, or release a large export quota. For the Government is not likely to overlook the fact that the weather is still capable of doing mischief.

Export interest in Bengal *Deshi* was subdued, thanks to the delay in the announcement of quota. Shippers are inquiring for Kala and Wagad in anticipation of a quota.

Foreign cotton evoked only stray demand. Selected Sudanese and East African varieties found buyers.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Vijay 898; Digvijay 990; Khamgaon 860; Kalyan 785; Sudan G4S 1.725; G34 1.565.

Favourable crop reports and increasing seasonal pressure led to a further fall in futures price in the Karachi cotton market. Export demand was not sufficient to sustain the market. Support of domestic spinners was weak. Consequently, futures declined further. N.T.R.G. March reacted from Rs. 71.50 to Rs. 69.80. The May contract shed Re. 1.80, over the week, to Rs. 69.50. Spot prices, especially those of *Deshi* varieties, tended to be steady. Sind *Deshi* was unchanged at Rs. 106 and Punjab *Deshi* at Rs. 104.

In contrast to the easiness witnessed last week, Alexandria cotton futures market staged a smart recovery during the week. This was due partly to technical factors and partly to speculative support. Prompted by reports that that U.A.R. was likely to conclude a barter deal with Japan according to which the former would exchange its cotton for galvanised sheets from Japan. Both the long-staple Karnak and medium-staple Ashmouni contracts improved on moderate support. The following are the latest available quotations—in tallaris per lb—from Alexandria, the figures in brackets being last week-end rates:

Karnak: March 72.37 (71.85); May 72.95 (72.20); July 73.80 (72.85).

Ashmouni: February 60.77 (59.35); April 61.45 (60.35); June 61.67 (61.40).

The U.A.R. Government is reported to be increasingly becoming worried at its failure to maintain the sale of Egyptian cotton to the free world countries of the West and at the growing proportion of exports which is being taken up by the communist countries. The Government's target for the current season is to sell at least half of its total cotton exports to the West. India and Japan. But the Soviet bloc, including Yugoslavia, has already absorbed 1.5 million cantars out of 2.1 million cantars exported since the start of the season. China and East Germany, which were both major customers last year, have yet to enter the market. With the prospect of little improvement in Western demand, it appears that the percentage of total exports going to the communist bloc during the entire season will be above last season's 50 per cent.

Quietly steady conditions prevailed in the Liverpool cotton futures market during the week.

Values moved in a narrow range in thin trading. Net change in prices was negligible. The Sudan contracts were a shade easy, thanks to lower Khartoum advices. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March 23.30; May 23.60; July 23.95; October 24.40.

American cotton mixed growth contract: March 23.60; May 23.95; July 24.55; October 24.75.

Sudan: March, May, July 34.50.

Listless conditions prevailed in the New York Cotton Exchange during the week. Turnover was limited owing to the uncertainties about the new Administration's cotton policy. Price movements were narrow and showed only small changes over the week. The Bureau of Agricultural Economics announced the mid-January parity price for cotton at 38 83 cents per lb. as against the mid-December parity of 38.50 cents. The loan rate for this year's crop will be linked to this rate.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	7-2-61	31-1-61	24-1-61
Spot	32.25	32.25	32.25
March	32.10	32.20	32.20
May	32.60	32.65	32.66
July	33.10	33.16	33.15

ART SILK YARNS BUOYANT

(From Our Own Correspondent)

BOMBAY, *8th February*

Buoyant conditions prevailed in the yarn market during the week under review. Cupressa Bemberg yarns evoked excellent support from operators who feared that the coming weeks would witness an acute shortage of supplies. Whatever stocks that were available were quickly absorbed and prices staged a sharp rally. Other art silk yarns also scored handsome gains, in view of the continued restrictions on imports. Enquiries from consuming centres were also expected to broaden considerably in future. Staple fibre yarns were well supported at higher levels on reports that export business in fabrics woven from these yarns was improving. Cotton yarns, too, were firm. The firmness was engendered by good buying by handlooms and powerlooms in North India.

Cupressa Bemberg yarn (60 x 1) February contract forged ahead from Rs. 2.460 to Rs. 2.515. April contract strengthened by Rs. 20 to Rs. 2.520. Spot Cupressa rallied from Rs. 2.425 to Rs. 2.535. 120 Italy advanced by Rs. 27 to Rs. 1.350. 150 Japan spurted by Rs. 15 to Rs. 1.640. 120 Japan rose by Rs. 9 to Rs. 1.420. Among indigenous yarns, National Rayons 150 Bt. cones first grade strengthened by 31 nP to Rs. 11.79. 120 Bt. cones first grade picked up 30 nP to Rs. 13.46.

Staple fibre yarn (40 x 2) February delivery improved by Rs. 12 to Rs. 840. April contract increased from Rs. 817 to Rs. 836. Spot Centurys gained 22 nP to Rs. 9.83. Kohinoors were fully maintained at Rs. 9.90.

In the cotton yarn section, ten counts Podars were firm at Rs. 17.50, as also Moderns at Rs. 18.75. Twenty counts New Greats changed hands at Rs. 22. Thirty counts Simplex recorded a rise of 25 nP, today's closing rate being Rs. 26.75. New Greats gathered 13 nP to Rs. 26.50. Forty counts Maduras advanced by 38 nP to Rs. 32.25. Minaxis were done at Rs. 32. Sixty counts Gokaks and Finlays were fully steady, the former at Rs. 49 and the latter at Rs. 66.66. Eighty counts Finlays had buyers at Rs. 81.81, same as last week, while Mahendras encountered selling and declined by Re. 1.01 to Rs. 68.68.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those a week ago.

	8-2-1961	1-2-1961
	Rs.	Rs.
Art silk yarns—		
60/1 Cupressa Bemberg (100 kg.)		
February	2.515 00	2.460 00
April	2.520 00	2.500 00
60/1 Cupressa Bemberg spot	2.535 00	2.425 00
120 Italy (per 100 kg.)	1.420 00	1.411 00
150 Japan (per 100 kg.)	1.640 00	1.625 00
120 Italy (per 100 kg.)	1.350.00	1,323.00
Staple fibre yarns—		
40 x 2 February (per 90.72 kg.)	840 00	828.00
40 x 2 April (per 90.72 kg.)	836 00	817 00
40 x 2 Century (per kg.)	9 83	9.61
40 x 2 Kohinoor (per kg.)	9.90	9.90
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.50	17.50
20s New Great	26 50	26.37
40s Madura	32.25	31.87
60s Gokak	49 00	49.00
80s Finlay	81 81	81.81

OILSEEDS SUBDUED

(From Our Own Correspondent)

BOMBAY, *8th February*

There was stale bull liquidation in castorseeds and cottonseeds during the major part of the week under review, following heavy arrivals. Groundnuts and linseed, too, tended to move down in sympathy. Towards the close, today, however, there was some recovery aided by reports of unusual cold wave in major producing centres which was considered to affect adversely the oilseeds crops. The recovery, of course, was not marked enough to make up for the losses incurred earlier, so that today's closing prices were generally well below those last week-end.

Larger arrivals of new crop castorseed from Nizamabad led to a sharp break in values. The reports of steady increase in the pressure of cheaper oil supplies from Brazil in the American and Continental market also imparted weakness. Even Indian prices ruling much above world levels, shippers withdrew from the market. The decline in castor oil prices would have been more appreciable but for rumours of scattered enquiries from U.K. sources, especially in the later seasons of the week. Castorseed May 1961 contract fell from Rs. 170.50 to Rs. 168.37, before closing at Rs. 169.12. Ready Madras eased from Rs. 33.75 to Rs. 33 on Monday, but recovered slightly to Rs. 33.25 today. Oil Commercial dropped 30 nP to Rs. 13.50.

Offerings of groundnuts by Gujerat and South Indian interests, together with easiness of castorseeds prompted bulls to unload a part of their holdings. But *vanaspati* manufacturers and crushers were cautious buyers. Values, as a consequence, moved down, though some recovery was in evidence as the week progressed. Groundnut May 1961 contract declined from Rs. 217 to Rs. 216.50, but recovered to finish at the last week's closing level of Rs. 217. February contract was quiet at Rs. 220, the ceiling price. Nizam bold eased from Rs. 48.75 to Rs. 47, before closing at Rs. 48.25 today. Coromandal and Khandesh quality lost 50 nP to Rs. 48.50. Railway receipts shed 45 nP to Rs. 19.85 and oil ex-mill 35 nP to Rs. 20.15.

In the absence of any fresh buying support, linseed ruled easy. The disparity in the Indian prices of linseed oil and the rapid improvement in supply position virtually dampened the enthusiasm of bulls. May 1961 delivery closed lower by 35 nP at Rs. 34.06. Bold ready was marked down by Rs. 2.25 to Rs. 33.25. Oil gave way from Rs. 16.10 to Rs. 14.70.

Cottonseeds suffered a distinct setback in the beginning of the week, in sympathy with the raw cotton market. May 1961 contract lost a rupee to Rs. 87; it was quoted lower still at Rs. 86.75 at one time on Monday. February 1961 contract declined by 25 nP to Rs. 87.50, after touching Rs. 86.50 earlier in the week. In the spot section, both Berars and non-whites eased by Re. 1.05 to Rs. 17.75. Whites were neglected at Rs. 18.50.

Distinctly easy conditions prevailed in the sesame section. Arrivals were heavy, while fresh support was lacking. Bold varieties declined from Rs. 330 to Rs. 310 (per 250 kgms.). Sesame oil eased by Re. 1.25 to Rs. 24.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	8-2-1961	1-2-1961	24-1-1961
	Rs.	Rs.	Rs.
Groundnut			
February 1961	220 00	220 00	220 00
May 1961	217 00	217 00	217 00
Nizam bold	48.25	48.75	48.00
Coromandel ready	48 50	49 00	48.50
Khandesh quality	48 50	49.00	48 50
Oil ex-mill ready*	20.15	20.50	20 25
Railway receipts*	19.85	20.30	20.00
Castorseed			
May 1961	169.12	170.50	176.25

Kardi seed	27.00	27.00	26.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER WEAK

(Messrs. Parekh and Co.)

BOMBAY, *8th February*

Malabar black pepper suffered a setback during the week for want of foreign enquiries, ungarbled coming down from Rs. 377 to Rs. 360 and garbled from Rs. 392 to Rs. 375. February delivery on the Cochin Exchange receded from Rs. 404 to Rs. 380 under liquidation by stale bulls. Further fresh liquidation for February delivery or switching from February to March is expected during the coming week. If the present sluggishness in foreign demand continues, fresh drop in ungarbled and garbled is generally envisaged in sympathy with February delivery, evening up of which should be done on or before the 15th inst. Growers and bulls among the traders are resisting lower prices. The week's resistance level is Rs. 1,100 for ungarbled. But, if this level is pierced through, a new low level below Rs. 1,000 is likely to be established, since there will be no fresh buying on the part of any East European countries, as London market is reported to be flat at 48d. for white and at 34½d. for black. Generally London market is looked upon as a barometer of pepper prices in Europe. Further, as is usual, New York is likely to buy only to cover its immediate requirements in the declining market. Most of the Malabar produce also showed downward tendency with undertone nervous affected by countrywide stringency in money market and pseudo-economic crisis resulting from the moratorium on four or five important banks and fear of further moratorium for smaller units which have been working as bankers to grocers and small assemblers in the interior in Kerala.

Singapore is reported to be in doldrums. The movements are narrow with prices irregular and occasionally easy, as nobody is willing to take up the leadership of bull market, in view of the sizable stock in Indonesia, Sarawak and Singapore and owing to the proximity of the new season which generally starts in May in Sarawak and in June in Sumatra. Weakness in rubber in Singapore has proved to be a discouraging factor and brought forth some liquidation in white pepper. Most of the holders are exhibiting anxiety to liquidate their holdings at every rise in prices.

New York market also showed irregular trend without any definite indication for the future. Outsiders are taking interest neither on the New York Exchange nor in spot, as pepper has lost all incentives for investors. Grinders are closing in expectation of further drop in the prices barring political exigencies. Spot in New York is quoted at $0.45½.

London established this month a further low level at 48d. for white and 34½d. for black. Culcutt is sellers at Rs. 365 per quintal. Fresh pressure of arrival is expected to develop in Tellicherry area in the immediate future.

In Bombay, ready pepper is also weak and is quoted at Rs. 208 per 50 kilos, in view of the dull in demand and owing to anxiety on the part of stockists to liquidate.

FAIR DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *31st January*

Sale No. 5, held today, amounted to 516,000 kilograms. Quality was well maintained and in some cases showed improvement. The market opened with good general demand which continued throughout the sale. Plain and low mediums were well competed for and sold at fully firm to dearer rates, with fannings grades meeting rather less enquiry. Mediums and good mediums met with good support and were steady and, in cases where quality showed improvement, advanced in prices. Highgrowns continued irregular with the exception of a few invoices with improved quality which sold at dearer rates. There was useful support for legg-cut and C.T.C. types which tended dearer. Whole leaf grades were strong and sold at rates above last. A small selection of tippy teas met with useful inquiry.

	1961	1960
	Rs.	Rs.
Low medium	4.65-4.95	4.52-4.85
Medium	5.00-5.40	4.81-5.18
Good medium	5.40-5.80	5.18-5.62
Quality	6.00-8.95	5.73-9.81

The average price realised in Sale No. 5 was Rs. 5.16 per kilo, as against Rs. 5.23 in the previous week, and Rs. 5.29 in the corresponding sale last year.

129,000 kilograms were offered in Dust Sale No. 5 held on 2nd February 1961. There was a useful selection of dusts on offer. The market opened to strong demand which strengthened as the sale progressed. Prices for most descriptions were dearer by 5 to 10 nP with buyers paying more for coloury mediums. Highgrowns were well supported and were quoted steady. There was good demand for C.T.C. and legg-cut types which were also firm to dearer.

The average price realised in Dust sale No. 5 was Rs. 5.12 per kilo as compared with Rs. 5.12 in the last week and Rs. 4.45 in the corresponding sale last year.

Export Quota: There are still large sellers at ¼ nP per kilo with no ready buyers.

Colombo: 7,000,000 lbs. were offered this week which met with good but irregular demand. Teas from western districts were generally easier with the exception of improved quality teas. Uvas declined by 10 to 15 nP whilst lowgrowns were quoted barely steady.

London:—*North Indian and other growths*: There was good general demand. Best liquoring teas were firm whilst others met a selective market and prices were irregularly easier. Plain BP is quoted at 1d.

Ceylon and South Indians: In Tuesday's sale 25,257 packages were offered of which 6,534 packages were from South India. There was fair general demand. Prices were irregular and sometimes tended little easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:—

"*Sale No. 6*:—372,000 kilograms. Strong general demand, particularly for plain and low medium sorts, which are 5 to 10 nP dearer. Medium and good medium dearer with improved quality. Highgrowns very selective demand."

QUALITY TEAS DEARER

(From Our Own Correspondent)

CALCUTTA, *7th February*

Good demand continued during yesterday's export sale in tea. Quality teas were dearer. Steadier conditions in last week's internal sales also raised prices. The steady improving trend in both the sales is an indication of the approaching closure of the season. This is also evident from the declining demand for forward space for tea shipments. Not only is this usually the period when tea shipments begin to fall but this year the production has been lower as a result of the earlier drought. This week's shipments were, however, satisfactory.

The interesting information that Iran has about 44,000 acres of land under tea (all in northern Iran), producing about 10,000 tons a year, was given by the leader of the visiting tea delegation from Iran headed by Mr. Morteza Mansoury, chief of the Iranian Tea Organisation. Iran's consumption of tea is 20,000 tons per annum, of which imports India accounts for about 6,000 tons and Ceylon for 4,000 tons. Mr. Mansoury indicated that Iran hoped to increase imports from India to about 8,000 tons this year. If the probable increased offtake would mean a proportionate fall in Iranian offtake from Ceylon or whether this should be attributed to increased demand, was not indicated by him. The Shah takes a personal interest in tea growing as well as marketing, Mr. Mansoury added.

During last week's sale for internal consumption, dusts on offer amounted to 21,253 packages. Good general demand pushed up prices and, as the sale progressed, conditions became steady. Orthodox dusts were bid at firm rates, the small brighter liquorings receiving greater attention. Legg-cut Dooars were also firm, with the smaller Tea being in keener demand. Medium C.T.Cs were unchanged, while the brighter teas recorded small gains. The best C.T.Cs following quality, were irregular. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.00 to Rs. 6.40; medium Assam C.T.C. dust Rs. 5.60 to Rs. 5.80; legg-cut dust Rs. 5.15 to Rs. 5.40; medium Assam dust Rs. 5.05 to Rs. 5.35; and plain orthodox dust Rs. 4.85 to Rs. 5.00.

Green teas contained in the leaf offerings of 545 packages were a strong feature. Other teas were fully firm.

Offerings during yesterday's export sales aggregated 72,339 packages. Prices were irregular depending on quality. Demand was strong. Well-made whole leaf grades met with keen attention, while the poorer stalky teas eased. Tippy teas were taken at irregular rates. While the better Darjeelings eased, the poorer types were steady. Medium B.P.s were unchanged, and similar fannings were firm. Medium Assam B.O.Ps and O.Fs came to a declining market, but the brighter liquoring teas met with good attention. Dooars B.O.Ps were firm at last rates, while the better O.F.s declined. Plain brokens and fannings were in good demand, with legg-cut teas easing in an irregular trend. Generally, good support was accorded to the best autumnal teas and mediums and secondary teas were firm. The balance of the offerings eased from 10 to 20 nP generally. The quotations per 1 kg. inclusive of excise duty were:

	Rs.
Best Assam C.T.C. fannings	5.80-6.40
Best Assam C.T.C. B.P.	5.80-6.20
Clean black pekoe	5.20-5.45
Medium fannings	4.90-5.10
Plain fannings	4.80-5.00
Medium B.P.	4.70-4.90
Plain B.P.	4.55-4.65

JUTES RECOVER AFTER EARLY FALL

(From Our Own Correspondent)

CALCUTTA, *7th February*

Thanks to resistance offered by mills following the delay in the issue of weekly I.J.M.A. quota, raw jute prices at one time during the week under review recorded a substantial reduction. But soon after the news of the release of a quota of 400,000 bales was available on Friday, a recovery set in. Nevertheless, the closing rates were below the opening levels.

The official final estimate of the jute crop has not yet been issued; usually, the estimate used to be published by the end of December, and the delay this year is taken as proof of official admission that the crop would now amount to even less than 5.7 or 5.8 million bales, which was the figure given earlier. Further, fresh arrivals of jute are very low in quality and this feature is attributed by some to prove that the marketing of all good jute has been completed. This belief is not, however, shared by many. It is felt that not much further proof excepting the high prices of this season is necessary to enable the inference that the financial condition of the cultivators had considerably improved, and, that being so it is more than probable that the marketing of a good portion of the jute crop is being delayed to be effected at the tag-end of the season. Meanwhile, fresh arrivals are not only of a low quality but are a liberal mixture of all the poorer varieties.

As planned, mills began working the reduced week from Monday last, and efforts are now being made to avert the proposed strike by workers on the 13th inst. as a mark of protest against the reduction in working hours. The Labour Commissioner is to meet representatives of both employers and employees later this week with a view to bringing about an understanding. There is the realisation in official circles that the mills have not acted wrongly by reducing working hours. Although in the Government's opinion the fibre supply position has improved, the improvement has not been as substantial or as steady as to justify a full working week. The labour unions have alleged that there is, in fact, no fibre shortage but that an artificial shortage has been brought about by those interested. Although this allegation is deserving of examination, it is the general belief in the market that the crop is lower and at the same time movements from the interior agencies have not been as smooth as usual suggesting hold-up all the way including by the well-to-do landowners and medium-scale cultivators. In view of the recent transfer of several looms from hessian to sacking, it is thought that the saving in fibre as a result of reduced working hours would not be as much as earlier expected. As a result, output would also be not as low as a reduction of 2½ hours. Mills have fibre with them to last about six to eight weeks only and, since the mills have to keep on buying all the time unlike last year when major purchases were completed by December, recent restrictions on bank advances have further strained the financial position of mills. It is to be hoped that, in view of the peculiar nature of the present crisis, some relaxation is allowed.

Now that fibre prices have started declining, it is to be hoped that movement from interior is accelerated. The I.J.M.A. has more than once stated that, if only the fibre supply position shows signs of improvement, it will reconsider its decision and increase output. Prices of goods this week followed closely the trend in fibre market, and the good support goods have been enjoying in the last week or two has been deduced as proof by a section of the buyers and that the threat from substitutes in imaginary, not real.

Burlap prices in New York also registered a decline during the week, with the 7½ oz. hessian moving down to 12.20 cents per yard from 12.35 and the 10 oz. hessian to 16.30 cents from 16.60 cents. In Calcutta, on Tuesday last, holders became nervous, following the impressive fall in fibre prices. Profit-taking followed and, though Australian buyers showed interest in cornsacks, ready B. twills fell from Rs. 207 to Rs. 202.25 and hessian 40" 10 oz. from Rs. 67 to Rs. 66. Conditions on Wednesday were listless, B. twills declining to Rs. 200.50 and hessian 40" 10 oz. to Rs. 65.50. Support at lower levels was soon accorded, but the volume of business was not adequate to maintain prices and the result was that, on the next day, B. twills at Rs. 199.50 and hessian 40" 10 oz. at Rs. 65 registered the lowest levels of the week. At this stage, there was the news of a fresh quota of fibre for mills and an improvement in fibre prices was followed, B. twills rising to Rs. 201.50 and hessian 40" 10 oz. to Rs. 66. This was on Friday. Over the week-end, a further recovery was in evidence to push up B. twills to Rs. 204.50 and hessian 40" 10 oz. to Rs. 67.25. With the rise in fibre prices and the keen interest in goods, B. twills rose to Rs. 206.50 yesterday and hessian 40" 10 oz. to Rs. 67.85.

Fibre prices recorded a zigzag trend. As stated, arrivals were poor and were taken up in no time. In view of the delay in issue of quota to mills, Assam bottoms gave way early in the week from Rs. 64.50 to Rs. 61 per maund but over the week-end recovered to Rs. 62.50. The course of price movement is reflected in the following table:

(Rs. per maund—ready delivery)

	Opening	Low levels touched	Closing	Loss
Assam bottoms ...	64.50	61.00	62.50	2.00
Northern bottoms ...	64.00	60.50	62.00	2.00
Daisee bottoms ...	66.00	64.50	65.50	1.50

FOODGRAINS EASIER

(From Our Own Correspondent)

HAPUR, *6th February*

Easier tendency was in evidence in the foodgrains market during the week under review. *Rabi* crops had very much brightened, due to recent rains over a wide area. Some damage was, however, reported to crops owing to hailstorm and gusty winds in some areas and sunny weather is now needed for healthy progress of crops. The Union Ministry of Food was reported to be considering the prospect of creating one wheat zone throughout the country, thanks to comfortable food situation and expectations of a good crop this year. The Ministry, however, would watch the rice situation for a year or so before abolishing the restrictions on rice movement.

Wheat here recorded a modest fall during the week to be quoted on Monday at Rs. 17.50 a maund for average quality and Rs. 18.87 for better farm produce. The prices on the corresponding date last year were Rs. 19 and Rs. 20.50, respectively. Arrivals during the week were nominal and trading was almost at a standstill, owing to continued cloudy weather and rains. The stock position with both Central and State Governments was, of course, comfortable. The wheat stock at present was about 1.5 million tons and import of American wheat under P.L. 480—over 4 million tons a year—will take place as scheduled and this would help in building up a good buffer-stock. The State Government is reported to be selling about 40,000 maunds of wheat.

Rice continued to rule quiet, *sela basmati* quoting at Rs. 27 to 29; *ramajawyan* at Rs. 23 *raimunia* at Rs. 24; *mainpuri* at Rs. 20.75 and *gadda* at Rs. 19.87 a maund. Supply position of rice was satisfactory, with local stocks at about 10,000 maunds.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, *6th February*

Sugar ruled quietly steady at Rs. 111.75 per bag wholesale and Rs. 1.09 per *seer* retail in the open market, as against the controlled prices of Rs. 108.50 and Rs. 1.01, respectively. Production is going on vigorously, as cane supplies to factories are adequate, the price paid being Rs. 1.50 to Rs. 1.62 per maund fixed by the Government, as against the open market price of Rs. 1.06 to Rs. 1.25 a maund paid by crushers manufacturing *gur* or *khandsari*. The U.P. Government has imposed a purchase tax at the rate of 19 nP per maund of sugarcane purchased by factory and 4 nP a maund by other types of manufacturing units. A fresh release of 50,000 tons of sugar for export has been made and another 200,000 tons released for sale. The supply position of sugar is easy, as the major part of the releases of last two months have not been lifted.

Sugar ruled steady at Rs. 109.50 to Rs. 110 per bag in the Muzaffarnagar market for spot delivery. Cane supplies to factories were hampered slightly due to rains during the week.

Brisk demand for *khandsari*, from Madhya Pradesh, Eastern U.P. and Rajasthan accounted for a further rise of 50 nP to Re. 1 per maund in the price of the commodity. Arrivals, however, were negligible due to rains. New production, too, was hampered. Prevailing prices were: *khandsari* new Rs. 31 to Rs. 35.50; inferior Rs. 29 to Rs. 31; crystal Rs. 33 to Rs. 37.50; *boora* Rs. 32 to Rs. 36; old Rs. 27 to Rs. 30 per maund.

Gur arrivals during the week were very poor, due to rains and inclement cloudy weather throughout the week. Demand, too, was poor and loading was mostly restricted. A sharp fall in ready *gur* prices was also reported from the producing areas of the South and prices here were depressed to be quoted in the week-end at: *pansera* Rs. 13.37 to Rs. 13.62; *balti* Rs. 13.50, *shakker* Rs. 15.50 a maund.

Ready *gur* also sought lower levels in the Muzaffarnagar market during the week, as advices from Southern markets of Ankapalli and Kolhapur were discouraging. Arrivals were poor and prevailing prices were: *Chaku* Rs. 14.25 to Rs. 15.50; *pansera* Rs. 14 to Rs. 14.37; *laddoo* Rs. 14.25; *shakker* Rs. 15 to Rs. 18 a maund.

Gur futures ran down sharply during the week on continued bear pressure: *Fagan* and *baisakh* opened at Rs. 13.84 and Rs. 14.78, respectively, last Monday and were quoted today near the worst levels of the session at Rs. 13.64 and Rs. 14.44, respectively.

Sowing of cane for next crop has begun and large-scale sowings would only be possible as soon as weather becomes sunny.

SURVEY

(*Concluded from page 231*)

wheat on "concessional terms" or as grants-in-aid, as India cannot pay for food imports from its depleted foreign exchange reserves. Apparently, taking a lead from P.L. 480 agreements with the U.S., the representatives of the Wheat Utilisation Committee have suggested that wheat could be sold to the Government of India for payment in rupees. The donor Governments have been asked to consider the desirability of having mutually agreed rupee expenditure proposals ready in advance, "so that they could be included in the annual readjustments of India's Five-year Plans." The Mission has expressed the firm conviction that "it is in the interest of the member-Governments of the Wheat Utilisation Committee and indeed of all nations friendly to India, that this country should be assisted to achieve as rapidly as possible a degree of development sufficient to enable a continuing improvement to be made in nutritional levels and standards of living within a self-sustaining economy which no longer has need for external assistance."

The Mission has estimated that there will be a deficit in cereals and pulses in India to the tune of four to five million tons over the next two years, to be supplied through imports, simply to maintain the present level of consumption. For at least three years afterwards, similar quantities will be required, in order to realise an improvement in Indian diet. According to the Mission, these deficits can be met by the provision of wheat. If these suggestions are accepted by the countries which sponsored the team, it will mean that more wheat under arrangements similar to P.L. 480 will become available to India from a wider source. The U.S. has already been generous in this direction. Canada, too, has been giving, albeit on a small scale, wheat to India in the form of either outright gift or loan, with a part of their rupee proceeds being spent on mutually agreed projects. Australia also has provided India with a small gift of wheat. But both of them, as well as Argentine and even France, can be distinctly more liberal than they have been.

LONDON LETTER

(*Concluded from page 233*)

that it can menace the reserves of almost any country, as the case of America has shown.

The first reaction of central bankers to this problem has been to consider whether there might not be greater co-ordination in the matter of interest rates. But this is to ignore the importance of domestic factors in causing rates to be difficult. In America, for instance, the new President would probably like to initiate a boom based on cheap money. While in London, the Prime Minister, still bothered about inflation, wants to lower interest rates much more cautiously. Germany reduced her interest rates as a contribution towards stopping the outflow of American gold, only after a great deal of pressure. Obviously as much co-operation as is possible in these matters is desirable, but, equally obviously, not much might be possible while individual countries maintain their separate economic policies. A better solution might almost be on the lines of that adopted by Germany and Switzerland: to prohibit the inflow of foreign funds. Yet this is hardly likely to appeal to British bankers who thrive on such movements and who can point to many occasions such as the present, when the inflow of funds can help the economy. No general principles can be set down, but it may be that the International Monetary Fund will consider the problem big enough to warrant consultation between all central banks.—*All Rights Reserved.*

Note :—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 11 marked 'E' are not included. J—Commenced from 2nd Jan., 1959. K.—Five year prize bonds were issued from 1st April 1960 and the total outstandings at the end of October 1960 amount to 10,64 lakhs of rupees.

STOCK & SHARE QUOTATIONS

Abbreviations :—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares :—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts :—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts. 6 and 12, for instance, indicate the months of June and December respectively. Reserves include general and other reserves and all other funds, which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less sales, if any and stands for the gross figures except where otherwise indicated.

Dividends :—Dividends for completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

All preference shares are taxable unless otherwise stated.

***These shares carry the right of a preferential dividend at the rate of 8 per cent. (of which only 5 per cent. cumulative) per annum. In the event of a winding-up these shares have a preferential claim to repayment of capital.

† Only 7 per cent. of the 10 per cent. dividend is cumulative.

†† In addition to the fixed cumulative dividend of 5 per cent. these shares carry the right to receive a non-cumulative dividend of 3 per cent. per annum and also to participate in further dividend of 2 per cent. per annum rateably with ordinary shares. They have a preferential claim to repayment of capital and arrears of dividend.

††† These shares can be redeemed at Rs. 105 at any time by special resolution.

§ Capital and dividend unconditionally guaranteed by the Dunlop Rubber Co., Ltd.

RAILWAY BUDGET

THE Railway Budget for 1961-62, presented this week to Parliament, has a twofold significance. In the first place, the revised estimates contained therein for 1960-61 virtually complete the picture of financial results and physical performance of the Indian Railways in the second Plan. And, secondly, it is the budget for the first year of the third Railway Plan. There is thus equal attention in the budget speech of Mr. Jagjivan Ram, Union Minister for Railways, to both the second and third Plans. But the lessons that he has drawn from the Railways' performance in the second Plan seem to have been ignored in the third Plan's first-year budget. By far the most crucial lesson is that "the increases in the fares and freights have been much lower than the relative increases in the wage bill and in the prices of stores consumed by the Railways." This factor explains why the Railways have been able to make a gross contribution, during the five-year period 1956-61, of only Rs. 480 crores (covering expenditure on open line works on the revenue side and expenditure chargeable to the Depreciation Reserve Fund and Development Fund) towards their own second Plan outlay of about Rs. 1,120 crores. This means that the Railways' own internal resources for financing their second Plan represent 43 per cent of their total outlay. The budget for 1961-62, which provides for an outlay of Rs. 260 crores in that year under the Rs. 1,255-crore third Railway Plan, does not improve matters in this respect, for it allocates only Rs. 100 crores (out of the said Rs. 260 crores) chargeable to the Depreciation and Development Funds and Open Line Works (Revenue). Actually, it will not be Rs. 100 crores but only about Rs. 84 crores, for the estimated net surplus in the 1961-62 Budget for appropriation to the Development Fund will be no more than Rs. 8.5 crores. The Railways' own internal resources for financing their third Plan's first-year outlay account for only about 32 per cent of that outlay (Rs. 260 crores). At the existing level of fares and freights, therefore, the pattern of self-financing in the Railway sector in the third Plan period will not be any different from what emerges from the budget for 1961-62.

FINANCES AT A GLANCE

* In lieu of tax on passenger fares.

It may be that the Government will not be reconciled to this state of affairs throughout the third Plan period. That the Railway Ministry is seriously thinking in terms of increases in fares and freights, sooner or later, could be inferred from four arguments advanced by the Minister in his budget speech. There is, first of all, the argument that the annual *per capita* cost of staff has increased from Rs. 1,476 in 1955-56 to Rs. 1,880 in 1960-61. Secondly, the price of coal consumed by the Railways has increased by about 40 per cent between March 1956 and December 1960. The third argument is on the score of the uneconomical haulage of coal which brings in only 3.33 nP per ton-mile on broad and metre gauges alike, as against the costs of 3.80 nP per ton-mile on the former gauge and 5.79 nP on the latter. There is, above all, the argument that the tendency towards a progressive growth in the volume of traffic in low-rated goods like foodgrains, salt, oilseeds and ores, carried at freight rates less than the cost to the Railways, continues.

But all these arguments have not currently persuaded the Railway Minister either to propose a revision of passenger fares or to bring about a more remunerative structure of freight rates in accordance with his own recognition that "the heavier preponderance of low-rated traffic expected to be carried in the third Plan will have the effect of increasing the proportion of working expenses to gross earnings." The result is that the budget estimates for 1961-62 do not reveal any substantial buoyancy in traffic receipts.

The passenger earnings, after deducting the proceeds of the passenger fares tax now merged with the fares in accordance with the latest (1960) Railway Convention, will be about Rs. 132 crores, as against Rs. 131 crores in the revised estimates for 1960-61. The goods earnings, however, show an increase of about Rs. 26 crores in the budget estimates as compared with the revised estimates for 1960-61. This increase has been estimated on the basis that the Railways will lift an additional freight of about 15 million tons in the budget year, as against an actual additional traffic of about 10 million tons in 1960-61. Whether that much additional traffic can be moved in 1961-62 is doubtful, considering that, in 1960-61, there has been a shortfall of about 7 million tons, as compared with the 17 million tons of additional traffic anticipated in the budget for that year. The two minor adjustments now proposed in the budget—the raising of the special surcharge on small consignments from the present 10 per cent to 20 per cent and the raising of the minimum distance charged for coal from the present 42 kilometres to 70 kilometres and of the minimum charge for coal moving over shorter distances from the present range of Rs. 4.25-Rs. 4.98 per ton to a uniform minimum of Rs. 5 per ton—are not expected to bring in anything more than a crore of rupees at the most. But the expectation here is not so much revenue as some relief to the Railways from possible diversion of short-lead traffic to the road. This, incidentally, is an index of the pressure under which the Railways will be working in the first year of the third Plan. If, as a consequence of such pressure, the goods earnings fall short of the budget estimates, it will not be surprising. For all practical purposes, therefore, it may be taken that the budget estimates of gross traffic receipts are not substantially more than either their budget or their revised estimates for 1960-61.

Any possible shortfall in gross traffic receipts may ultimately mean that there will be no net surplus for appropriation to the Development Fund to which Rs. 23 crores of expenditure on some Plan schemes in the budget year

will be charged. Since, under the Railway Convention of 1960, the appropriation to the Depreciation Reserve Fund and the payment to States of a subvention of Rs. 12.5 crores in lieu of the tax on passenger fares are fixed and the dividend to General Revenues will be necessarily Rs. 65.3 crores (at 4.25 per cent on the estimated capital-at-charge of Rs. 1,740 crores after deducting the capital-at-charge of strategic lines, etc.), there will not be much room for increasing the net surplus.

Nor is there much scope for effecting any sizable economy in ordinary working expenses, what with the additional obligations arising from the Pay Commission's recommendations. There is, therefore, a clear case for budgeting for a net surplus of not less than Rs. 25 crores in 1961-62, so that no temporary loans from General Revenues need be advanced to the Development Fund during the year. A judicious but substantial increase in passenger fares as well as in the freight rates of low-rated commodities will accordingly be inevitable. It would be far better to make a beginning now in the budget year itself and complete it in the next year, so that the internal resources for financing the third Railway Plan will be at least 50 per cent of its total outlay. Incidentally, such an early determination of the railway freights for the duration of the third Plan will also be helpful to the private sector in planning its industrial expansion programmes.

There is no doubt that the third Railway Plan will be more exacting than the second. As the Railway Minister himself has implied in a way, the Railways may not be equal to the task of carrying an increase in traffic from 54,000 million ton-miles to 93,000 million ton-miles, for the increase of 39,000 million ton-miles is more than double that achieved in the second Plan. Further, the tentative allocation of resources for the third Railway Plan is not appreciably more than the provision under the second. In saying that the Railways cannot be expected to move *all* additional goods traffic (of which 75 per cent will be accounted for by coal, steel, cement and iron ore in the third Plan period) and that, therefore, there must be priorities in movement, the Railway Minister has clearly conceded the need for a larger allocation of freight to the road transport sector.

DOLLAR TO BE STRENGTHENED

THE dollar price of gold in the London market, which had jumped up to as high as $41 per fine ounce on 20th October 1960 due to speculative buying born of fears of a devaluation of the dollar, is back to the normal level. The price is now in the neighbourhood of $35.17 which is well within one per cent of the official parity. President Kennedy's economic messages to Congress on the 2nd and 6th inst., giving an outline of his plans for effectively tackling the recession at home and the balance of payments deficit, have been responsible for restoring normalcy to the gold market. His reiteration that there would be no devaluation of the dollar and that he was confident of reviving the U.S. economy without generating inflationary forces seems to have had a decisive influence on the market. In his message of the 6th inst., Mr. Kennedy unequivocally declared: "The United States official dollar price of gold can and will be maintained at $35 an ounce. Exchange controls over trade and investment will not be invoked. Our national security and economic assistance programme will be carried forward.... The full strength of our total gold stocks and other international reserves stand behind the value of the dollar. Those who fear weakness in the dollar will find their fears unfounded. Those who hope, for speculative reasons, for an increase in the price of gold will find their hopes in vain." These are plain words and reflect his determination to ensure that the dollar continues to be regarded "as good as gold" throughout the world.

Before outlining his plans, Mr. Kennedy gave some interesting data about the balance of payments position which he described as "one that justifies concern but not panic or alarm." The U.S. has been having a payments deficit for the past one decade, except in 1957, the year of the Suez crisis. It was due not to exports falling short of imports but to the inadequacy of export surplus to cover (*a*) military expenditure abroad, (*b*) private American investment abroad, and (*c*) Government economic assistance and loan programmes. Between 1951 and 1957, the balance of payments deficit averaged at one billion dollars per annum. Nevertheless, the U.S. gold reserves at the end of 1957 were slightly better at $22.9 billion, as against $22.8 billion seven years earlier. The reason for this strength lay in the fact that foreign countries accumulated their dollar balances, instead of converting them into gold. The growth of U.S. obligations to other countries, mainly Western Europe and Japan, helped to strengthen their monetary systems and restore convertibility of currencies, thus freeing world trade and payments from exchange control. Mr. Kennedy conceded that this development in international trade "was of benefit to the export trade of the U.S.," but added that it had placed upon his country a special responsibility, namely, "that of maintaining the dollar as the principal reserve currency of the free world." In 1958 and 1959, the U.S. suffered a sharp increase in the balance of payments deficit—$3.5 billion in 1958 and $3.8 billion in 1959. The chief causes of these large deficits were lagging exports and rising imports. The foreign countries who benefited by these surpluses decided to take more of their dollar earnings in gold and to hold less in dollars. In 1960, the surplus of U.S. exports over imports was as large as $5.8 billion, as against $2.2 billion in 1959, but still there was a net balance of payments deficit of $3.8 billion, of which $1.7 billion were met in gold and $2.1 billion in accumulation of dollar balances by foreign countries. The reasons for the deficit were: favourable interest rates abroad, a high rate of growth and good investment prospects in Europe, and some speculative fears concerning the future value of the dollar. It is estimated that the outward flow of short-term money was between $2 billion and $2½ billion. On this basis and assuming no reduction in U.S. military expenditure abroad and economic assistance to underdeveloped countries, the basic deficit would be $1.5 billion and it is, Mr. Kennedy averred, "of manageable proportions."

The overall picture of the U.S. foreign assets and liabilities supports this conclusion. The current U.S. gold reserve of $17.5 billion is more than 1½ times the foreign official dollar holdings. The uncommitted gold reserves, that is, the surplus of gold after making allowance for the U.S. currency reserve, is only $6 billion, but the currency reserve, too, "can be freed," to quote Mr. Kennedy, "to sustain the value of the dollar." In addition, the U.S. has a quota of $4.1 billion in the International Monetary Fund which can be drawn, if necessary. And Mr. Kennedy has given notice that he will do so, if the situation warrants. The existing gold reserve alone is sufficient to cover 90 per cent of *all* foreign dollar holdings. In addition to its liquid international reserves, the U.S. has other large assets abroad, both short and long term. West European countries alone owe the U.S. Government $2.9 billion by way of long-term debts. U.S. private short-term assets abroad are estimated at $4.5 billion and long-term assets (including both plants owned directly by American companies and securities of foreign business concerns and Governments owned by Americans) are well over $44 billion. The latter amount exceeds foreign investments in the U.S. economy by some $28 billion. This is a picture of formidable strength, proving beyond doubt that the U.S. has "a strong solvent position" and that "powerful resources stand behind the dollar."

Mr. Kennedy's pledge to defend the dollar at $35 per ounce is thus not a vain boast. Nor is his warning to international speculators hollow. Moreover, with its total assets abroad exceeding $50 billion and with a strong net creditor position, the U.S., as a nation, would be a heavy loser, if it were to allow the external value of its currency to go down. It is, therefore, bound to defend it to the fullest extent possible. Furthermore, the free world cannot afford to withdraw all its dollar balances into gold. If the U.S. is forced to mobilise and withdraw its short-term balances abroad in order to defend the dollar, the currencies of Western countries, many of which are still having controls on movement of capital, would be in a sorrier plight than the dollar is today. It, therefore, pays nobody, except the adversaries of freedom and speculators, to argue, as some economic commentators do in Western Europe, that the only or the best solution to the U.S. balance of payments problem is an increase in the dollar price of gold, which in other words means a devaluation of the dollar. This solution, if adopted, would tantamount to placing a premium on world-wide inflation, besides giving a huge bonus to South Africa, Russia and the speculators who have hoarded gold in recent months hoping against hope that its dollar value would be increased sooner or later.

While, basically, the U.S. economy is strong, it cannot continue to have a balance of payments deficit of the order of $1.5 billion per annum year in and year out. It has to achieve overall equilibrium sooner or later. One way of establishing it will be to expand exports further. There is full recognition of this point in Mr. Kennedy's message. The U.S. will intensify its export drive and the Export-Import Bank has been asked to study methods whereby American exporters can be placed on a basis of full equality with their competitors in other countries. The President has stressed the need for improving the competitive capacity of American goods. He proposes to create an advisory committee on labour and management policy to encourage productivity gains, advance automation, induce adoption of sound wage policies and ensure price stability. Another way will be closer international co-operation under which countries which accumulate large dollar balances and other foreign currencies will make them over for financing the expanding world trade, instead of converting them into gold and burying it in the vaults of their central banks. It is in this context that the I.M.F. will have to play a new role, that of a super central banking institution for the whole free world. The U.S. President has directed the Treasury Secretary to initiate studies for strengthening the I.M.F. and effectively using it for both furnishing the needed increases in reserves and providing the flexibility required to support a healthy and growing world economy.

The problem to be solved is one of expanding the pool of international liquidity in a manner which will not place a strain on the currency of any one country. This is an old problem, comprehended and discussed even before World War II came to an end, resulting in the present Bretton Woods twins. One might have to go back to the original Keynes Plan, envisaging the creation of a new unit of international reserve currency such as "bancor" or "unitas". Mr. Kennedy's suggestion implies that the U.S., the U.K., and Germany, in particular, must be prepared for a radical transformation in the functions and powers of the I.M.F. Anyway, the coming months will witness a lot of discussion on this old subject and the economists in this country, particularly in the Reserve Bank and the Union Finance Ministry, will do well to brush up their memory, follow up the ideas that have already been expressed in the Western world—the "Triffin Plan" and the "Bernstein Plan," for instance—so that they may be in a very good position to understand the implications to India of any new plans for international monetary cooperation that may emerge, to guide the country along right lines, and to suggest suitable modifications for safeguarding the needs of underdeveloped countries.

Mr. Kennedy has also put forward a series of proposals, both fiscal and monetary, long-term, as well as short-term, designed to reduce the flow of U.S. savings for investment in developed countries, to attract foreign private investments to the U.S. and to encourage foreign Governments and central banks to hold dollar balances, instead of converting them into gold which yields no return. Thus, he proposes to pay on the funds held by them in the U.S. higher rates of interest than those offered to domestic banks and investors. He will soon take steps to prevent the abuse of foreign "tax havens" by U.S. capital abroad as a means of tax avoidance and to see whether the present tax laws are stimulating the flow of American investments to the industrial countries in undue amounts. He will, however, make sure that the remedial action proposed by him does not penalise legitimate private investment abroad. Fully realising that economic progress at home is the first requirement for economic strength abroad, he is determined to arrest the present recession in the U.S. economy. To this end, he has initiated a series of measures, including a novel departure in monetary policy, namely, raising interest rates for short-term and reducing them for long-term. Many are sceptical of the success of this step, as they feel that, in a free capital market, with no exchange controls, it will be difficult to maintain any significant disparity between short-term and long-term interest rates. There can be two opinions on most of the moves that are being made by Mr. Kennedy to defend the dollar. Not all of them can be a cent per cent success. But it cannot be denied that they are in the right direction and that he is energetically trying to protect the dollar, without injuring the interests of other nations and weakening the defence of the free world.

MARKET GOSSIP

Maharashtra Budget

EXCEPTING for the cursory survey of the progress of Maharashtra during the decade of planning and the brief reference to the financial aspect of the third Plan, there is not much in the 1961-62 budget speech of Mr. S. K. Wankhede, Maharashtra's Finance Minister, delivered on Wednesday this week. It is, on the whole, a pedestrian performance. One wonders whether the Finance Minister could not have given some details pertaining to the more important development schemes that would be undertaken in the ensuing year, the first year of the third Plan. All that he has said is merely this: "There will have to be a programme of substantial investment on items leading to improvement in the basic productivity of agricultural land; the third and subsequent Plans will have to be more employment oriented than their predecessors; a more fruitful solution to the problem of unemployment will have to be sought in industrial growth and ancillary economic activity; industrial growth will have to be increasingly oriented to rural areas."

The Finance Minister's observations on the resources aspect of the State's third Plan envisaging an outlay of Rs. 390 crores are confusing to a degree. This drawback apart, he has thrown no light on the manner in which he proposes to fill the gap between the resources expected to be available and those that will be required. In one place, the gap is shown at Rs. 70 crores and in another at Rs. 52 crores. Again, his approach to raising finance for implementing the Plan seems to be somewhat conflicting. Thus, in one place, he emphasises the urgency of supplementing revenue surpluses by resort to measures of additional taxation, for which a target of Rs. 52 crores has been suggested by the Planning Commission, but says, in another context, that the people of the State are already bearing a high tax burden. This is, indeed, tight rope walking. Does Mr. Wankhede want to give the impression to the Finance Commission that the State is badly in need of more liberal financial assistance from the Centre than it has had so far?

Coming to the Maharashtra Government's budget proper for 1961-62, one finds that it discloses a small revenue deficit of Rs. 7 lakhs, the estimates of revenue and expenditure being Rs. 110.62 crores and Rs. 110.69 crores, respectively. These estimates cannot be compared with estimates for the current year (1960-61), because the latter include transactions of the undivided Bombay State for the month of April 1960. Instead of clubbing the revenue deficit with the deficit on capital account and then indicating the means of covering the overall deficit, the Finance Minister of Maharashtra has dealt with the revenue Plan expenditure and capital expenditure separately. The revenue Plan expenditure for 1961-62 is to be limited to Rs. 12.41 crores. Excluding the Central assistance of Rs. 8.00 crores, receipts of Rs. 70 lakhs from Plan schemes and the accumulated balances of earmarked funds amounting to Rs. 2.71 crores, there is a gap of Rs. 1 crore. This small gap is proposed to be met by additional taxation measures to which we shall refer presently. The capital expenditure for 1961-62 is put at Rs. 46.88 crores (inclusive of net receipts of —Rs. 1.98 crore on capital account after meeting non-Plan expenditure), whereas the resources available are estimated at no more than Rs. 28.52 crores (Centre's assistance Rs. 15.80 crores, State's share of small savings Rs. 14.00 crores, and internal resources of autonomous public enterprises Rs. 70 lakhs). The uncovered gap thus comes to Rs. 16.38 crores. The Finance Minister has announced that he will meet this gap partly by raising open market loans and partly by withdrawing from the cash balance account.

The major portion of the additional tax revenue of Rs. 1 crore is proposed to be raised by the upward revision in passenger tax on road transport from 10 to 15 per cent. This measure, which is expected to yield Rs. 60 lakhs, does raise the cost of motor bus travel, but the incidence of the increase in tax may not be felt perceptibly. In any case, people have to pay for the Plan and they should not grudge this tax. If they wish to minimise the effects of this increase, they should travel less frequently. Only, to the extent the increase reduces the passenger load carried by buses, the transport undertakings will earn less. It may be noted here that the State Transport Undertaking carries 75 per cent of passengers by road, the balance being the share of private operators. And so it would appear that the problem of replacement, let alone expansion, in motor transport will be more pressing than what it is today.

The four other tax measures proposed by the Finance Minister are (1) imposition of a sales tax of 3 per cent on kerosene (revenue yield put at Rs. 30 lakhs); (2) withdrawal of certain sales tax concessions granted to the textile industry; (3) enhancement of sales tax on groundnuts from 1½ to 2 per cent; and (4) inclusion of dyes, chemicals, drugs and medicinal preparations under the residuary Entry No. 22 of Schedule E in Sales Tax Act. Barring the levy of sales tax on kerosene, the other measures represent only minor adjustments and their incidence is negligible. As for kerosene, it is true that this fuel is subject to sales tax in some neighbouring States. But there is no denying the fact that the levy will inflate the cost of living of middle and poorer classes which depend on kerosene for giving them light and power for kitchen. One reason given by the Union Oil Ministry for introducing the public sector into the field of distribution of kerosene and other petroleum products is to provide an element of competition with the foreign oil companies and bring down prices. This journal's contention has been that this is only lip-service to consumers. The Maharashtra Government has provided one more proof of that contention.

Latest on Bonus Commission

So much has been said and written about the chairmanship of the proposed Bonus Commission that any further comment on it would be regarded as just another voice in the chorus. But, in view of the developments that have taken place since we last wrote on the subject, it is necessary to review the situation, as it obtains at present, so as to provide a background to the understanding of further developments that are in the offing.

As the employers had made known, in no uncertain terms, their disapproval of the proposed chairman of the Commission, the Union Labour Minister, Mr. Gulzarilal Nanda, called a meeting of the Standing Labour Committee to ascertain the views of the parties concerned, explain to them the Government's stand and to finalise the Commission's terms of reference. The Committee, which is a tripartite body, met in New Delhi on the 10th inst. Apart from mutual exchange of views, nothing tangible has resulted from the meeting. Mr. Gulzarilal Nanda made clear the Government's stand on the question and sought to justify and convince the employers that Mr. M. R. Meher, President of the Industrial Court, Bombay, was a good choice for the chairmanship of the Commission. He is understood to have urged the employers not to be obsessed with the issue of the composition of the Commission, as the latter was not a tribunal asked to give an award which was binding on the parties but only an advisory body called upon to study the bonus question and make recommendations. He also assured the employers that the Commission's recommendations would be accepted, only if they were unanimous or that only such recommendations as were unanimous would be implemented.

The Minister had no objection to making the Commission tripartite in character by giving re-

Mr. SORAB B. MEHTA

It is with profound sorrow that we record the passing away of Mr. Sorab B. Mehta, Secretary and Publisher of *Commerce*, on Tuesday the 14th inst. Mr. Mehta was just 59; he was born on 13th January 1902. His death was very unexpected, for, until the last day when he developed sudden heart trouble and succumbed to it, he was quite hale and hearty. After working successfully as an officer in the head office of Messrs. W. H. Brady & Co., Ltd., Bombay, he was appointed the Secretary of Commerce (1935) Ltd., early in 1935, when *Commerce* moved into this city from Calcutta. Mr. Mehta served the Company ably and with unstinted devotion to duty and contributed in no small measure to the financial success of the journal. Verily, in his demise, Commerce (1935) Ltd. has lost a person who was its Secretary in the true sense of the term.

presentation on it to employers and workers alike. But he firmly turned down the demand that Mr. Meher should not be the chairman. Mr. Nanda pointed out that it was not possible to get a sitting judge of the Supreme Court to preside over the Commission and he was not in favour of appointing a retired judge of that Court. The question of finding a suitable judge of a High Court was presumably not examined.

Employers' representatives are reported to have asked for some more time to give an answer whether a tripartite Commission would be acceptable to them. They are understood to have pointed out that they had no mandate to commit themselves either way and could do so only after consultation with the constituent members of the organisations which they represented. Accordingly, a time-limit of six weeks has been given to them. The three central organisations of employers, namely, the Employers' Federation of India, the All-India Organisation of Industrial Employers and the All-India Manufacturers' Organisation, are expected to consider the entire issue *de novo* some time next week. It would appear that a section of employers is now opposed to the idea of boycotting the Commission, as it feels that such a course would only serve to antagonise both the Government and trade unions.

The workers' representatives have fully approved of the choice made by the Government. The spokesmen of the I.N.T.U.C. said at the aforesaid meeting that their organisation strongly objected to the employers starting a controversy over an appointment which the Government had a right to make. They argued that Mr. Meher was a man of considerable experience on the issues pertaining to the complex question of bonus. They contended that, if Mr. Meher could not be the chairman of the Commission simply because he had decided bonus disputes, then even Supreme Court judges, who had handled bonus cases, would have to be ruled out for this post. They made the further point that, if the Government were to change its mind in deference to the wishes of employers, the trade unions might have to change their attitude to the question.

The subject figured in Parliament on Wednesday this week during question hour. Mr. Nanda disclosed that the terms of reference of the Commission would be finalised only after the question of personnel was settled. A meeting of the representatives of employers and workers had been convened for April to consider the terms of reference. An indication of all the issues the Commission would be asked to examine was also given by Mr. Nanda. He stated that it would be open to the Commission even to suggest the elimination of bonus and its replacement by some other system. It would also be open to it, according to Mr. Nanda, to relate bonus to additional production or other factors. Asked whether the Government proposed to bring legislation to enforce the decisions of the Bonus Commission, Mr. Nanda said that, if the parties agreed to implement the decision, there would be no need for legislation. But he said that legislation could not be ruled out altogether. This remark seems to contradict the assurances reported to have been given by him to employers' representatives to the effect that only the unanimous recommendations of the Commission would be enforced.

Rural Savings

The need for augmenting rural savings for stepping up the overall rate of economic development has all along been felt. The main difficulty about estimating available rural savings, in contrast with their urban counterpart, is that there is no authoritative data throwing light on the magnitude of rural savings and the pattern of their utilisation. The reported decision of the Reserve Bank of India to organise a new All-India Rural Survey, covering all aspects of rural life, especially the pattern of savings and investment in the rural sector, should, therefore, be welcomed. Although a final decision with regard to the exact scope of the survey or its design has not yet been taken, the Reserve Bank has convened a conference of representatives of State Statistical Bureaus to be held in Bombay on 6th and 7th March. The State Statistical Bureaus are likely to be associated with the Reserve Bank in the organisation and management of the survey. The new survey is expected to throw up a substantial volume of data about the structure of rural life in this country. The Reserve Bank authorities have, however, not yet taken any decision whether a Committee of Direction, like the one appointed for the 1951-53 Rural Credit Survey, is to be set up for guiding the work of the survey and drawing important inferences from the data for future policy-making.

Air Cargo Freights

For some time past, the scheduled airlines have been thinking of reducing the air cargo freight rates. In his speech at the sixteenth annual general meeting of the International Air Transport Association (I.A.T.A.) held at Copenhagen in September last, its Director-General, Sir William P. Hildred, had emphasised that, in view of the expansion in the carrying capacity of all airlines, all possible efforts should be made by them for securing bulk cargoes. Subsequent to the agreement reached in the month of October 1960 to reduce the passenger fares, the need for a similar agreement among the scheduled lines on freight rates, at least for some key routes, became even more pronounced. It was with this purpose that talks were held at Paris this week. An attempt was made to reach an understanding on freights rates, over the North Atlantic air route at least. The Conference, however, could not come to any agreed decision. While carriers were generally agreed on the necessity for lower rates to fill the increasing capacities of their new fleets, they are reported to be having serious differences of opinion as to the method of attaining the objective. Some carriers wished to attract new and bulk traffic by offering substantial general rate cuts across the board at progressively higher volume points, whereas some other airlines wanted to achieve this end through the development of new and volume traffic by offering similar reductions within a system of commodity classifications derived from the existing structure of specified commodity rates. Although the Conference discussed all possible combinations of these two alternatives, it failed to iron out the differences in the two approaches.

The meeting, however, agreed that the cargo rate pattern in Europe, the Middle East and Africa should not be changed. It also set up a group to meet in three months' time to make an interim and intensive study of the European rating structure, with a view to simplifying it and introducing new promotional features for European cargo. The results of this study are expected to be introduced in 1962. There is a lot of speculation in commercial circles as to the possible repercussions of the failure of the Conference to come to an agreed decision. Some observers have confidently predicted that there would be a vigorous freight rate war. It is noteworthy that, as soon as the breakdown of Paris talks became known, the Pan-American Airways declared that it would cut the trans-Atlantic cargo rates by as much as 63 per cent on 10th April 1961, if there was no agreement before that date. The Seaboard and Western of the U.S.A. is also proposing cuts of upto 70 per cent in volume shipments. Pan-American intends to

SHARE MARKET FULLY STEADY

VALUES MOVE UP SLIGHTLY

(From Our Own Correspondents)

BOMBAY, *16th February*

BARRING sugars and few other counters which encountered selling, the share market ruled fully steady during the week under review. Buying support was perceptible, thanks to optimistic hopes about the Central Budget due to be presented to Parliament on Tuesday the 28th inst. The hopes were especially strengthened after the publication of the Railway Budget which did not contain any measures to raise passenger fares and freights. The imposition of only a very light burden in the Maharashtra Budget for 1961-62 also helped to sustain the hope.

First class preference shares were well fancied at higher prices on expectations of some relief in taxation. Morarjees advanced by Rs. 3.30 to Rs. 70.30. Andhra Valleys picked up Rs. 2.50 to Rs. 1,048.75. Stanvacs hardened by a like amount to Rs. 91.50. Hindustan Motors and Amar Dyes rose by Rs. 2 each to Rs. 190 and Rs. 100, respectively. Khataus put on Re. 1.50 to Rs. 72. Gwalior Rayon 'A's were done higher at Rs. 107, as against Rs. 105.50. Tata Steel 1st Preference gathered a rupee to Rs. 136. Jaipur Metals gained 50 nP to Rs. 57 and Tata Hydros 25 nP to Rs. 101.25. National Rayons were firm at Rs. 70, as also Amalgamated Electricitys at Rs. 77 and Premier Construc tions 3rd Preference at Rs. 5.32.

Among steels in the equity section, Tata Steels moved from Rs. 146.25 to Rs. 147.75 on Friday the 10th inst., but drifted lower thereafter and touched Rs. 145.50 today. The net loss over the week was 75 nP. Indian Irons rose from Rs. 24.48 to Rs. 24.80 before finishing at Rs. 24.56. The Company is expected to obtain a licence for the setting up of a factory to produce cast iron spun pipes at Indore or Ujjain with an annual installed capacity of 60,000 tons. Mukund Irons fluctuated between Rs. 24.12 and Rs. 23.52 and wound up the week at Rs. 24, same as last week.

Under the impetus of good buying orders, textiles recorded sizable gains. Morarjees spurted by Rs. 7 to Rs. 343. Svadeshis strengthened by Rs. 5 to Rs. 243.50. B. R. Cottons, Central Indias, Osmans and Standards hardened by Rs. 4 each to Rs. 26, Rs. 106, Rs. 49 and Rs. 1,118, respectively. At Rs. 490.50, Centurys were higher by Rs. 3.50. Kohinoors registered a rise of Rs. 3.25, today's closing rate being Rs. 281.50. Khataus improved by Rs. 2.50 to Rs. 452.50. Indores rose by a rupee to Rs 139. Bombay Dyeings gathered 70 nP to Rs. 62.50, after being higher at Rs. 62.80. Simplex were firm at Rs. 168, Podars at Rs. 138, Finlays at Rs. 330, Apollos at Re. 1.54 and Shree Niwas at Rs. 247. Gokaks, however, came in for selling and dropped Rs. 6 to Rs. 169. Swans softened by Rs. 2.50 to Rs. 495 and New Greats by Rs. 2 to Rs. 193.

Sugars were subjected to persistent selling pressure, following the publication of the White Paper on the Maharashtra Land Ceiling Bill which strongly justified the inclusion of cane farms attached to sugar mills under the purview of the Bill. Walchandnagars moved down by Rs. 12.50 to Rs. 212.50. Belapurs receded from Rs. 302 to Rs. 293. Maharashtras dropped Rs. 4 to Rs. 186. Phaltans and Oudhs eased by Rs. 2 each, the former to Rs. 144 and the latter to Rs. 198. Changdeos were neglected at Rs. 29.50, as also Bhopals at Rs. 29.

Cements were irregular. Associated Cements lost a rupee to Rs. 143.50. Orissas shed 8 nP to Rs. 13.44 and Sone Valleys 4 nP to Rs. 4.60. Digvijays, however, attracted special support and rallied from Rs. 148.50 to Rs. 155. Ashokas gained 14 nP to Rs. 8.76 and Jaipur Udyogs 4 nP to Rs. 11.16.

Among automobiles, Premiers picked up 75 nP to Rs. 164.50. Hindustan Motors were better by 4 nP at Rs. 20.24. Shippings tended to rise. Great Easterns rose by 24 nP to Rs. 14.76. Scindias improved by 12 nP to Rs. 14.32.

In the engineering section, Coopers advanced by Rs. 4 to Rs. 179. Larsen and Toubros put on 25 nP to Rs. 38 and Kamanis 28 nP to Rs. 16.72. Alcock Ashdowns were fully maintained at Rs. 264. But Telcos declined by Re. 1.50 to Rs. 297.50, after being higher at Rs. 302.25 on Saturday the 11th inst. Premier Constructions eased by a like amount to Rs. 186.50. Mahindras fell by 76 nP to Rs. 20.60. New Standards lost 50 nP to Rs. 169.50. Texmacos shed 12 nP to Rs. 23.16.

Dyes and chemicals in the miscellaneous section did not show any definite trend. Thus, some shares tended to look up, while others moved down as will be seen from the following table:

	16-2-1961	9-2-1961	*Net rise (+) or fall (—)*
	Rs.	Rs.	Rs.
Adarsh Chemicals ..	84.50	60.00	+24.50
Alembic	256.25	247.00	+ 9.25
Dhrangadhra	121.75	119.00	+ 2.75
Colour-Chem	317.50	315.00	+ 2.50
Tata Chemicals new ..	16.80	16.44	+ 0.36
Amar Dye new ..	337.50	362.50	—25.00
India Dyestuffs ..	450.00	460.00	—10.00
Poly Chem	222.50	225.00	— 2.50
Synthetics	128.00	129.00	— 1.00
Chemo Pharma ..	25.60	26.00	— 0.40

Among other miscellaneous industrials, Wimcos were well favoured, the quotation advancing by Rs. 5 to Rs. 265. New India Fisheries hardened by Rs. 8 to Rs. 89.50, Anil Hardboards by Rs. 6 to Rs. 172, Indian Hume Pipes by Rs. 3 to Rs. 169.50, Voltas by Re. 1.75 to Rs. 261.25, Philips Carbons by Re. 1.24 to Rs. 17.76, and Hindustan Levers by Re. 1 to Rs. 44. Killicks were firm at Rs. 99.50 and Tata Chemicals at Rs. 18.16. Baroda Rayons gained Rs. 2.50 to Rs. 124. South Indian Viscose were done at Rs. 138.50 *ex-right*, as against Rs. 147.50 *cum-right* last week (not *ex-right* as was inadvertently mentioned). National Rayons, however, came in for selling and fell by Rs. 6 to Rs. 507; at one time on Friday, they were lower still at Rs. 498. Bombay Burmahs receded from Rs. 558 to Rs. 555.50. Gwalior Rayons shed 15 nP to Rs. 43.85.

Calcutta Stock Exchange

CALCUTTA, *15th February*

Against the background of optimism created by rumours, some intelligent and some otherwise, that the Finance Minister would be content with the increased revenues he collects now from direct taxes as a result of a generating economy and that he would not choose a pre-election budget for increasing indirect taxes either, the Stock Exchange displayed steadiness during the week under review and many firm spots leading to impressive gains were in evidence in most sections. If, therefore, the budget does not contain any unpleasant surprises, apart from minor adjustments here and there, by the time the budget is announced in Parliament, operators would find that these had already been discounted. The lack of an official announcement regarding increase in steel retention prices was a disappointment but if, despite this, steel shares were well fancied, it was due to the increasing output and the sober expectation that the shortage of coal and limestone would only be a temporary phase. Encouraging corporate results and the rising industrial output led to keener attention of investors to miscellaneous industrials, while the decline, small though it was, in fibre prices under the impact of rumours of imminent official measures under the Essential Commodities Act to curb speculation, and the reported proposal of the I.J.M.A. to fix voluntarily maximum prices for fibre, made jutes look attractive at their present low levels, touched as a result of continued weakness for weeks together now. Coals once again came to the forefront, as firm proposals for foreign aid for the industry were thought to have been mooted. Sugar mills shares, on the other hand, were quiet and paper mills could only muster nominal support for replacement buying. Teas opened firm and, as the week progressed, selective interest not only improved the turnover but led to several bright spots. It is now believed that the loss in production as a result of the 1960 drought would be more than compensated by the increased prices being realised at the auctions.

Coals recorded a higher volume of business. The several protests on the existing coal shortage only highlighted the important role for this industry. The demand for coals was due to the belief that officialdom would accord every assistance in the industry's search for foreign assistance to increase production. East Indians forged ahead from Rs. 31.31 to Rs. 33, with Bengals being as high as Rs. 345, as against Rs. 324.50 a week ago. At Rs. 20.19, Burrakurs recorded a modest gain, as did South Karanpuras at Rs. 12.75. Raneegunges were firm at Rs. 16.50. Equitables changed hands at Rs. 30.87, as against Rs. 30.25 previously. Borreas spurted from Rs. 20.50 to Rs. 23.25. At Rs. 20.50, New Beerbhooms were higher by more than a point, Central Indias being pushed up from Rs. 12.19 to Rs. 12.72 to close at Rs. 12.69. Karanpuras picked up nine points to Rs. 210. Amalgamated improved from Rs. 21.69 to Rs. 23.44. Pench Valleys realised Rs. 19.81, as against Rs. 19.50 previously. Dhemo Mains scored to Rs. 8.87 from Rs. 7.87.

Interest in textiles was limited. Jayshrees hardened from Rs. 15.37 to Rs. 16.57 before closing at Rs. 15.94. J.K. Rayons rose to Rs. 15.87 from Rs. 15.31 but finished at Rs. 15.75. Keserams were quiet at Rs. 29.31, as were Dunbars at Rs. 24.37.

In jutes, Howrahs at Rs. 22.25 recorded a small gain. New Centrals opened at Rs. 17.75 and closed at Rs. 19.12, after realising even a high rate of Rs. 19.37. Barnagores were put through at Rs. 117, as against Rs. 116, but closed lower on balance at Rs. 115.50, while Birlas closed fractionally higher at Rs. 28.87. Ganges were unchanged at Rs. 10, while Fort Glosters eased from Rs. 210 to Rs. 208 and Nuddeas from Rs. 45.25 to Rs. 44.25.

Engineerings were steady. Indian Irons opened at Rs. 24.45 and gradually gained to Rs. 24.78 to close at Rs. 24.60. Texmacos at Rs. 22.90 were a few naye paise higher. Jessops met with good support to harden from Rs. 19.75 to Rs. 20.62. Guest Keen Williams were firm at Rs. 38.27. J.K. Steels, after being higher at Rs. 21.06, eased to Rs. 20.19. Braithwaites gave way from Rs. 31.50 to Rs. 31.25 and Britannia Engineerings from Rs. 13.69 to Rs. 13.56.

Teas met with more inquiries and, on selective attention, some rises were recorded, especially in Dooars gardens. Birparas were traded at Rs. 166, as against Rs. 162 previously. Hantaparas were driven up to Rs. 144, as against Rs. 132. Huldibaris picked up Re. 1.25 to Rs. 23.25. Kilcotts rose to Rs. 18.56 from Rs. 17.62. Ranicherras were as high as Rs. 18.31, as against the opening of Rs. 16.75. Bormahjans at Rs. 16.50 gained Re. 1.50, Brooke Bonds being pushed up to Rs. 16.62 from Rs. 15.50. Bishnauths were better at Rs. 21.06, but Teloijans eased to Rs. 24.50 from Rs. 24.87. Borpukris had buyers at Rs. 16.06, the gain on balance being Re. 1.34. However, Hattikhiris gave way to Rs. 10.50 from Rs. 10, while Margaret Hopes at Rs. 14 recorded a smart gain. Betjans spurted from Rs. 23.31 to Rs. 25.12, Teesta Valleys being unchanged at Rs. 13. Gairkhattas gathered Rs. 2.50 at Rs. 141.

Miscellaneous industrials also recorded a good many features. On interested support following a dividend of 4 per cent as against *nil* in the previous eight years, Rallis touched a high of Rs. 142.50, after opening at Rs. 138, to close firm at Rs. 140. Union Carbides were lifted from Rs. 48.75 to Rs. 51.62. Indian Cables advanced from Rs. 32.62 to Rs. 33.81, following interest on technical consideration. National Cables increased by more than one point at Rs. 31.87. National Pipes were difficult to be found and Indian Oxygens were fully steady at Rs. 41.75, as against Rs. 41.12 earlier. On technical considerations, Rohtas Industries at Rs. 20.31 gained Re. 1.44. Electric Constructions were steady at Rs. 13.25 at which a small gain was also recorded. Balmer Lawries were pushed upto Rs. 219 from Rs. 218, while Jardine Hendersons were pushed down from Rs. 65 to Rs. 63. India Paper Pulps were lower at Rs. 18.69 and India Steamships touched a low of Rs. 8.94. Titaghur Papers were unchanged at Rs. 39.25.

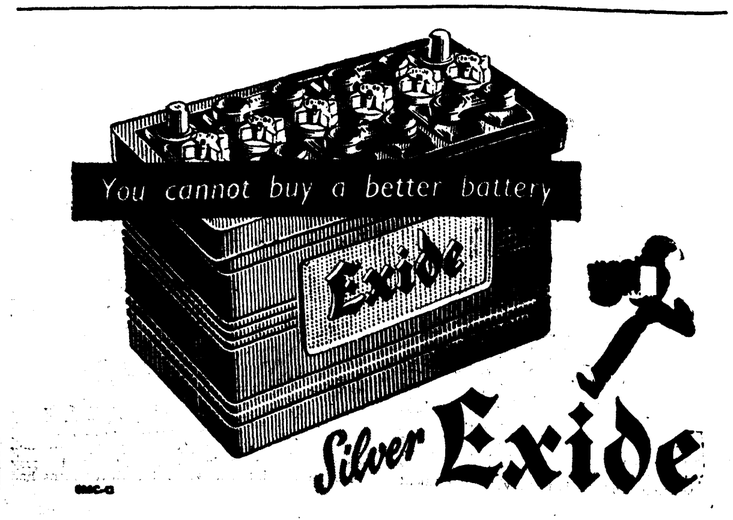
* * * *

Madras Stock Exchange

MADRAS, *15th February*

Dull conditions prevailed on the Stock Exchange during the week under review. Turnover was limited and values moved narrowly, the general tendency being downward. Operators were reluctant to enter into fresh commitments either way in view of pre-budget uncertainties. Textiles ruled easy, thanks to lack of follow-up support. Teas were subdued, despite reports of good offtake at auctions. Coffees, however, were somewhat cheerful. A few leading scrips scored handsome gains. Rubbers were also well maintained, following the

(*Continued on page* 316)



NEWS IN BRIEF

CENSUS operations began all over India on the 10th inst. and will continue for over three weeks. About a million enumerators are working on the project to collect socio-economic data covering about 80 million households.

A twenty-member delegation from Yugoslavia arrived in India on the 9th inst. to discuss with the Government of India details regarding the utilisation of a credit of Rs. 19.05 crores offered for the third Plan.

The number of subscribers to the Coal Mines Provident Fund Scheme, which came into effect in May 1947, was about 349,000 in 1959-60. The total accumulation in the Fund at the end of October 1960 was about Rs. 20.89 crores.

India imported 51,780 tons of virgin copper during 1960, as against 45,430 tons in the previous year. The quantity of zinc imported during the year amounted to 61,146 tons, as against 47,100 tons. Lead and tin imports were 21,752 tons and 3,257 tons, respectively, as compared with 23,612 tons and 4,404 tons.

All-India Radio proposes to install 57 new transmitters, mostly of medium wave, during 1961-62, the first year of the third Plan. The total cost of the transmitters will be about Rs. 3.39 crores. The bulk of the foreign exchange involved is being provided under various credit agreements with other countries.

The Government of India, in consultation with the Punjab and Rajasthan Governments, has set up a fourteen-member Control Board to ensure efficient, economical and early execution of the Bhakra and Beas Project, comprising the Beas-Sutlej Link and the dam at Pong and all connected works in the Punjab, Rajasthan and Himachal Pradesh.

Under new arrangements agreed at a conference of directors of the Commonwealth Agricultural Bureau in London last week, India is to be given free 11 volumes of each of the Bureau's 13 or 14 journals or abstracts which are published every year for the benefit of agricultural research workers. Previously, India was entitled to only six journals.

The second giant generator of 90,000 kw. capacity of the left bank power-house at Bhakra was commissioned a fortnight ago. Like the first generator of the same capacity commissioned in November last, the power produced by the second generator will also be supplied to the Nangal Chemicals and Fertiliser Factory set up across the Nangal Dam. The remaining three units of similar capacity will also be commissioned at an interval of three months each. The third unit which is being assembled will be ready for trial run shortly.

A Bill seeking to prohibit Central Government employees from going on strike has been drawn up by the Government of India and is awaiting the approval of the Cabinet. No provision is made in the Bill for the creation of joint consultative machinery on the lines of Whitley Councils, but it is stated that such a machinery can be established by an order of the Government after the Bill is passed in the forthcoming Budget session. Meanwhile, State Governments have been asked to take similar measures covering their employees, if they so desire.

The Textile Commissioner has invited applications from interested parties for the installation of a finishing plant for woollen textiles. The plant will have to be set up in the Punjab State, preferably Amritsar, Jullundur and Ludhiana areas. Those entrepreneurs who are prepared to install indigenous machinery or import minimum machinery without expenditure of foreign exchange will be given preference. Applications should reach the Textile Commissioner on or before 31st March 1961, with a copy forwarded to the Union Ministry of Commerce and Industry, New Delhi.

As on 1st November 1960, as many as 61,044 registered foreigners were reported to be resident in India. On 1st December 1959 their number was 55,653. These figures do not include children below the age of 16 years, nationals of Commonwealth countries and foreign diplomats and officials, etc., who are not subject to registration. Among the residents registered were: Tibetans—16,833, Chinese—12,460, Afghans—6,920, Americans —4,688, Iranians—4,079, Germans—3,434, Burmese —1,685, Russians—1,623. Italians—1,161, Portuguese—1,157 and French—982.

The Central Government is considering the question of setting up an advisory committee on direct taxation in order to help assessees get over procedural difficulties. Disclosing this at a meeting of the All-India Manufacturers Organisation at Bombay last week, Mr. B. Gopala Reddy, Union Minister for Revenue and Civil Expenditure, revealed that the Government was also examining the question of modifying the existing Revenue Recovery Act so that income-tax officers of the Central Government could take over from district collectors the task of collecting income-tax arrears from those in far-off district towns and other places.

The foundation-stone of the Rs. 1.5-crore cooperative sugar mills at Morinda in the Punjab was laid by Sardar Pratapsingh Kairon, Chief Minister of the State, on the 7th inst. The mill, which will go into production from the next season, will have a crushing capacity of 1,200 tons a day. This is the fourth co-operative sugar mill in the State. The three other units are located at Rohtak, Bhogpur and Panipet. The share capital of the new factory will be Rs. 50 lakhs, of which Rs. 20 lakhs will be contributed by the State Government and the balance by the cane-growers of the area. The Industrial Finance Corporation is expected to grant a long-term loan of Rs. 100 lakhs.

The U.N.E.S.C.O. Research Centre of Social and Economic Development in Southern Asia will continue its activities for a further period of four years from 1961 to 1964, under an agreement signed at New Delhi recently between the U.N.E.S.C.O. and the Government of India. Located in New Delhi, the Research Centre was started initially in Calcutta in January 1956. The principal tasks of the Centre have been to collate and interpret the existing research material on the social sciences, provide documentation to assist social scientists to co-ordinate their work, undertake pilot studies to stimulate further research, organise research on behalf of Governments, universities and other institutes and provide training facilities for research.

A cess at the rate of 30 nP per kilogram will be levied on all rubber produced in India, with effect from 1st April 1961. It will be collected by the Rubber Board. The cess on sole crepe will continue to be levied and collected from the producer, the manufacturer being liable to pay the cess on all other grades of rubber according to the quantities bought or otherwise required by him from April onwards. For every 100 lbs. of rubber, the producer will get a price which will be Rs. 6.25 lower than the present controlled price. The Rubber (Amendment) Act 1960 empowers the Rubber Board to call for the accounts and other documents in regard to purchase, acquisition or use of rubber and to prove their correctness.

Twenty-eight new Bills are expected to be introduced durng the Budget session of Parliament which commenced on the 14th inst. Of these, two will replace the ordinances promulgated by the President recently—the U.P. Sugarcane Cess Validation Ordinance and the Banking Companies Amendment Ordinance. Important among the other Bills are the Central Government Employees' Relations Bill which will ban strikes by Central Government employees and provide for consultative machinery, the Income-tax Amendment Bill to give effect to the recommendations of the Law Commission and the Direct Taxes Enquiry Committee, and the Bill to merge the tax on passenger fares with railway fares with effect from the beginning of the next financial year as recommended by the Railway Convention Committee.

India had a larger adverse balance of trade to the extent of Rs. 364.71 crores during the calendar year 1960, as compared with only Rs. 319.39 crores in 1959. The increase in deficit was due to the rise in imports which amounted to Rs. 1,000.40 crores, as against Rs. 939.87 crores. A part of the rise in imports was, of course, covered by an increase in exports from Rs. 620.48 crores to Rs. 635.69 crores. In December 1960, the latest month for which figures are available, the adverse balance of trade was lower at Rs. 5.59 crores, as against Rs. 6.71 crores in the previous month and Rs. 11.49 crores in the corresponding month of 1959. Exports at Rs. 69.96 crores showed an improvement of Rs. 7.96 crores and Rs. 55 lakhs, as compared with November 1960 and December 1959, respectively.

* * * *

From Abroad

Malaya, the Philippines and Thailand have decided to set up working committees of experts to lay the detailed foundations of an Association of South-East Asian States. The Association is intended to foster economic and cultural ties between countries of the region.

The U.K.'s exports of farm machinery and tractors set up a record in 1960. In the first eleven months of the year, their total exceeded by £12 million, the previous record of £105 million in the whole of 1959. During the same period, tractor production was 15 per cent higher. Overall production rose by 11 per cent. The leading exporters of tractors, Messrs. Ford and Massey-Ferguson, both achieved increases in sales.

Jute industry in Pakistan has been brought within the scope of the export bonus incentive scheme. The industry is, however, required to use not less than 50 per cent of the bonus vouchers earned for the import of looms and spindles required for expansion and for modernisation of equipment, in addition to its requirements of spares and raw material.

The American Zinc, Lead and Smelting Company has decided to cut production of metallic zinc by 10 per cent during the first half of 1961, as compared with the corresponding period last year when the output was 73,700 tons. For this purpose, it has discontinued production at three mines at Tennessee and a smelting plant at Illinois. The cutback in production, it is stated, has been necessitated by "heavy inventories of zinc products."

World production of natural rubber aggregated 1.76 million tons during the first eleven months of 1960, according to the International Rubber Study Group. The total consumption was well above production, being 1.83 million tons. Stocks of natural rubber were maintained at about 685,000 tons towards the end of November. World output of synthetic rubber during the same period is estimated at 1.74 million tons and consumption at 1.63 million tons.

The British motor car industry had a record output of 1,352,728 cars in 1960, as against only 1,189,973 in 1959. Exports increased from 568,971 to 569,916—another record figure. Production of vans, trucks and buses reached an all-time high of 457,972, as compared with 370,484 in 1959. Exports, too, were a record, with 146,134 vehicles, valued at £104 million, being shipped. The total value of the British motor industry's exports for 1960 was nearly £618 million.

Exports of wheat from Canada were lower by 1.2 million bushels at 108.5 million bushels during August-November 1960, that is, the first four months of the current crop year, as compared with the corresponding period in 1959. But exports of wheat from the U.S. rose sharply from 128.9 million to 203.9 million bushels. Shipments from Australia and Argentina also went up from 34.4 million bushels and 19.0 million bushels to 41.1 million bushels and 31 million bushels, respectively.

The Government of Pakistan has lifted controls on prices and distribution of 29 commodities, including building materials, such as iron and steel, cement, plates and sheet glasses, sanitary and water-supply fittings and building hardware, as well as caustic soda, drugs and medicines. There are, however, still 15 commodities subjected to controls. These include tea, sewing machines, edible oils and *bidi* leaves. Earlier, the Government had removed restrictions on the price and distribution of cotton yarns and cloth.

One of the "Big Five" motor manufacturers in Britain, namely, the Rootes Group, has decided to retrench 850 workers because it considers that short-time working is uneconomic and that the only rational way of adjusting its organisation to the fall in demand for cars is permanently to reduce its labour force. The remaining 7,000 workers who have now been employed on short weeks (between 2½ to 4 days) will be put back on full time. Meanwhile, Ford Motors has decided to return to a four-day week (from the present three-day week, started since 16th January). It is said that this reflects an improvement in the demand for cars partly owing to last month's relaxation of hire-purchase restrictions and partly to seasonal factors.

A five-year plan to aid developing countries in demographic studies and census evaluation is currently being considered by the United Nations. John D. Durand, representing Secretary-General Hammarskjoeld outlined the plan before a meeting of the U.N. Population Commission last week. Mr. Durand is the Assistant Director of the U.N. Bureau of Social Affairs, in charge of the population branch. The emphasis of the programme proposed to be undertaken between 1961 and 1965 will be based on substantially increasing technical assistance to developing countries in a number of ways. The plan includes strengthening of the Regional Centre for Demographic Training and Research for Asia and the Far East, located in Chembur, Bombay, assistance in the training of more personnel in demographic techniques and on-the-job training of a limited number of internes in the centre, programme for consultants to assist Governments in the analysis of census and encouragement of demographic research projects, and development of a Regional Centre for Demographic Research in Africa, to begin in 1962.

The Government of Chile has obtained the approval of the International Monetary Fund for the immediate drawing of Argentine pesos amounting to $16 million, and a stand-by arrangement authorising additional drawings up to the equivalent of $75 million over the next twelve months in currencies held by the Fund. The resources provided by the Fund are to be supplemented by additional financial support amounting to $30 million from the U.S. Government and $30 million from a group of private banks. The stand-by arrangement is intended to help the Chilean Government maintain its programme of economic stabilisation, despite the financial difficulties created by the earthquakes of last May and uncertain prospects for the world price of copper, Chile's principal export commodity. The Government's programme is based on cautious credit policies and on plans to reduce its budgetary deficit, which is to be financed by non-inflationary methods. The exchange system is to be maintained free of restrictions with the exchange rate permitted to fluctuate in response to fundamental market forces. Chile's drawing of Argentine pesos is the first to be made from the Fund in a Latin American currency. It is to be used in partial settlement of a balance amounting to $32 million, in favour of Argentina, which has accumulated under a bilateral trade and payments arrangement between the two countries, which has been terminated as of 31st January 1961.

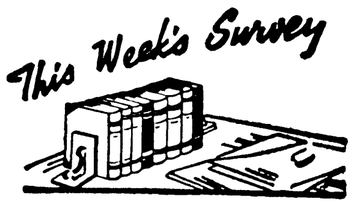
PERSONAL

MR. F. E. H. GODDARD, Manager, The Chartered Bank, Bombay, has been elected Vice-President of the Bombay Chamber of Commerce and Industry for the year 1961-62.

Mr. K. Sreenivasan, Director of the South India Textile Research Association, Coimbatore, has been awarded a fellowship by the British Textile Institute, Manchester. The fellowship, the highest diploma given by the Institute, is made for "a substantial contribution of the advancement of knowledge within the industry," which includes thesis or lectures.

Mr. D. L. Mazumdar, I.C.S., Secretary, Department of Company Law Administration, Union Ministry of Commerce and Industry, is the Chairman of the Research Programme Committee of the Department of Company Law Administration, which has been reconstituted for a period of two years from the beginning of January 1961. The members of the Committee are: Mr. C. P. Mukherjee, Mr. J. S. F. Gibbs, Dr. R. C. Cooper, Dr. R. K. Hazari, Dr. N. S. R. Sastri and Mr. S. N. Desai.

Mr. Cyril Underwood, a senior research officer in the British Cotton Industry Research Association (Shirley Institute), is arriving in India shortly as adviser to the South India Textile Research Association. He will advise the Director of the Association in initiating, organising, and co-ordinating research activities in the various fields affecting the textile industry. His services have been made available under the Technical Co-operation Scheme of the Colombo Plan for a period of two years. The South India Textile Research Association hopes to take up the study of problems relating to the improvement of handloom techniques, and Mr. Underwood is expected to assist in this.



ENGINEERING INDUSTRIES

THE Engineering Association of India, which claims to be the largest single organisation representing the engineering industry in the country, has a total membership of approximately 1,000 firms. Its Department of Statistics and Research has recently completed a survey of engineering industries in India and is able, in the light of that survey, to proffer advice on the starting of new industrial enterprises. These facts alone are impressive enough to invest the Association's views on industrial questions with a certain authoritativeness. Most of these views, expressed against a background of support to official policies governing heavy industries, are constructive even where they are critical. Mr. R. L. Rajgarhia's presidential address at the 18th annual general meeting of the Association at Calcutta over the week-end also falls into the same pattern.

Mr. Rajgarhia was on unassailable ground when he stated that the third Plan's steel target was not at all on the high side. If anything, he said, it was modest, considering the time lag that would be involved in the completion of the projected Bokaro plant and the proposed expansion schemes of the existing public sector steel plants. Apart from the demand for steel as now assessed, there was also a big unsatisfied demand which had not been properly assessed. Mr. Rajgarhia was, therefore, of the view that steel might not be available by 1966 in quantities and categories required by the engineering industries. This was not an exaggerated fear, for the "free licensing" list, on which a number of engineering and non-engineering industries were placed early in 1960, was known to have happily led, within a very short time, to some substantial investment in small- and medium-scale industries. Since additional capacity is being continuously established in engineering industries, increased demands by them for graded pig iron, steel sections, alloy, tool and special steels, etc., will have to be anticipated and provided for. The current shortages in their supplies cannot be allowed to continue if the engineering industries are to produce more and better products for the foreign market as well. The Government's current proposals for an alloy and special steel plant at Durgapur, an additional steel plant based on Neyveli lignite and Salem iron ores, five or six pig iron plants (each with a capacity of 100,000 tons) in the private sector and possible manufacture of alloy, tool and special steels in the private sector also are calculated to allay the anxieties of engineering units which have been complaining about shortages in the raw materials required by them.

But, in spite of all these plans and proposals, it looks as though critical shortages might continue throughout the third Plan period—shortages which are not likely to be met by adequate maintenance imports. Mr. Rajgarhia's plea, in this connection, for a certain order of priorities under which the relatively older engineering industries would be assured of maintenance imports irrespective of whether or not they are financed by their export earnings poses a difficult question. His point that there is no immediate prospect of the engineering industries earning sufficient foreign exchange for financing maintenance imports does not square with the Engineering Export Promotion Council's view to the effect that there are greater export prospects now for Indian engineering goods than before. If even the engineering industries cannot hope to export some of their products, the effort and expense involved in export promotion drives will have no justification. Are export prospects for engineering goods as gloomy as was sought to be conveyed by Mr. Rajgarhia who said that it might take the engineering industries not less than 15 years more to be able to earn sufficient foreign exchange for financing their maintenance imports? If the official expectation that all maintenance exports should be financed through the export earnings of the industries concerned is unreasonable, the stand of the engineering industries that they should not be strictly expected to earn any foreign exchange is no less unreasonable. By far the fairer approach on the part of the Engineering Association would be to say that it will encourage its members to explore honestly all export possibilities but that maintenance imports should not be wholly tied to export earnings.

Some other suggestions in Mr. Rajgarhia's address are, however, less controversial than the one relating to maintenance imports. There is, for instance, the suggestion that some industrial plant and machinery, instead of being produced on the basis of additional capacity set up for the purpose, should be manufactured in parts and as side lines by the established engineering workshops which have spare capacity. A related suggestion is to the effect that manufacturers of industrial plant should not think in terms of having their own servicing departments—tool room, foundry, forge, etc. —but depend on independent engineering units for supplies of castings, forgings, gears, fixtures, dies, and so on. A third suggestion is that technological institutions be set up in close proximity to each steel plant, so that they could provide refresher courses for those already employed, besides training new technical personnel. These suggestions would involve appropriate action at the administrative level also. Since the heavy industry projects in the public sector and the engineering units in the private sector will be increasingly complementary to each other, the administrative approach should also be increasingly aimed at co-ordination of production, especially in ancillary lines. The constructive suggestions of the Engineering Association, therefore, deserve to be considered for action by the powers-that-be.

EXEMPLARY PUNISHMENT

The conviction, by the Federal Court in Philadelphia, of some leading U.S. electrical manufacturing companies (among them the Westinghouse and General Electric are the largest) of criminal violation of anti-trust laws has come as a dramatic climax to a long legal battle between the firms and the Anti-Trust Division of the U.S. Department of Justice. In addition to fines aggregating $2 million on the companies concerned, seven of their top executives have been awarded prison sentences of 30 days each.

The companies were charged with criminal collusion in price-fixing for electrical equipments which is illegal in the U.S. The present case originated from complaints by the Tennessee Valley Authority, first in 1955 and then again in 1959, that it was receiving identical, as well as high, bids for work put to tender. The T.V.A. complained that, as a result of this, it had to give no less than 27 per cent of its contract to firms abroad, especially British firms. Although the companies supplying the T.V.A. at first refuted the charges, prosecutions launched by the Department of Justice led to the conviction of five of them. Conviction followed conviction, until almost all firms in the electrical manufacturing industry were under fire. The collapse came when Allis-Chalmers, one of the largest companies, pleaded guilty to the eight charges levelled against it. Other firms too followed suit and pleaded guilty or offered no defence to such charges as fixing prices and rigging bids on heavy electrical equipments of a total sale value of $1.75 billion a year.

The jail sentence awarded to the executives is generally considered as a turning point in the administration of anti-trust laws. Hitherto, the U.S. Courts were inclined to take the view that those who violated anti-trust laws were not criminals and should not be sent to jail. The conviction and sentence in the case under reference are expected to have a lasting effect on U.S. business practices and psychology. Already, as a result of recent convictions, prices of electrical goods in the U.S. are reported to have sharply declined. Bidders for steam turbines and power transformers are now quoting prices which are 30 per cent less than those asked a year ago. Prices of other items too have fallen. There has also been a perceptible fall in the value of shares of almost all companies manufacturing electrical goods. As India is going in more and more for American-made power plants, the event is of more than academic interest to it.

It is noteworthy that anti-trust legislation in the U.S., which aims at curbing monopoly trends in the economy, is about three-quarters of a century old, having started as early as 1890 with the Sherman Anti-Trust Act. But it has not so far succeeded in preventing price-fixing arrangements or other monopoly practices as is evident from the present case which involved some of the largest and world renowned manufacturing firms. Similar anti-monopoly legislation exists in many countries. Comparable legislation in the U.K., for instance, is the Restrictive Trade Practices Act. The Restrictive Trade Practices Court recently declared the whole system of organised car distribution in the U.K. as being against public interest and imposed fines on some firms for violating the provisions of the Act.

These cases and convictions have a lesson for businessmen throughout the world. It is that they are legally and morally bound to respect the law. Belonging as they do to what Prof. Arnold Toynbee who call "the dominant minority," they should set an example for others in the matter of obedience to law and good conduct in society. Any lapse on this score is likely to be seriously viewed and the punishments prescribed by the courts will justifiably tend to be deterrent rather than merely just.

TECHNICAL MANPOWER

India's planners cannot claim to have assigned in the 'fifties as high a priority to the training of technical manpower as the Soviet planners accorded to it in the 'thirties in Russia. The result is that, even after ten years of planning, there are critical shortages in the supply of technologists and engineers in this country. Both Mr. Jehangir Ghandy and Mr. G. L. Mehta, who recently spoke on the subject, have, therefore, done well to offer some practical suggestions for improving matters in this crucial field. Mr. Ghandy's speech at the meeting of the Eastern Regional Committee of the All-India Council for Technical Education over the week-end is notable for its two timely pleas on the eve of the third Plan's inauguration. The first plea is for greater emphasis on the training of cadres for mining, metallurgy and other fields of specialisation where the present shortage is the most critical. And the other is for speedier implementation, by all State Governments, of the improved salary scales for staff recommended by the Union Government, in order to prevent the "flight" of teaching talent from technical institutions to better-paid positions elsewhere and to encourage young men of good academic record to opt for a career in teaching. The scheme of awarding teaching scholarships of Rs. 350 to Rs. 400 a month in a number of selected institutions, it may be recalled in this connection, has been in operation only in the eastern region since 1960, thanks to the initiative taken by Mr. Jehangir Ghandy. But it has covered only 50 candidates so far. Mr. Ghandy's suggestion that this programme be enlarged to meet further staff requirements during the third Plan would, therefore, need to be seriously considered for implementation in all other regions.

Mr. G. L. Mehta's Convocation Address at the Indian Institute of Technology, Kharagpur, on the 4th inst., is notable for two practical suggestions contained therein to meet the shortage of technologists in many fields. One of these is that the standards of technical education in universities and other institutions should be raised, so that those who graduate from them may be better equipped to take over the teaching functions now carried out by qualified technologists. This would release some of these technologists from universities and technical institutions for more specific and important work for which they have been trained. And the second suggestion is that greater effort should be made in regard to training within industry for the dual purpose of training technicians and discovering candidates who have an aptitude for taking up academic training and becoming qualified technologists. This latter suggestion is presumably addressed to the private sector which has to compete with the public sector for securing the services of qualified technologists. Since the private sector requires more and more technologists not only for operating its existing and future industries but also for training technologists to devise new products, new processes, new equipment, new materials of construction and new designs, it should not expect that its entire requirements of technical manpower will be met by the State-sponsored institutions.

The present rate of outturn of engineering personnel (both degree holders from colleges and diploma holders from polytechnics) seems to be low. As of 1960, the annual outturn of degree holders is only 5,300 (as compared with 120,000 last year in Russia) and that of diploma holders 10,400. The total number of degree-holding engineers at present in service is just 50,000. According to Dr. A. N. Khosla, Member, Planning Commission, although the rate of outturn of engineering personnel has greatly increased in the second Plan period as compared with the first, there is an acute and all-round shortage of such personnel and this shortage will be further accentuated with the rising tempo of development. The estimated requirements of degree holders and diploma holders during the third Plan period are 46,000 and 80,000, respectively—requirements which, it is stated, will be more or less met by the programme of expansion. But a closer look at some relevant figures would show that this expectation may not be wholly fulfilled. What is relevant here is the present annual intake of colleges and polytechnics; as of 1960, this is 13,200 students in the case of colleges and 24,000 in the case of polytechnics. Since a degree course in engineering involves training over a period of four or five years, there will be an outturn of probably 10,000 graduates only in 1965 on the basis of an intake of 13,200 students in 1960, whereas the average annual outturn itself during the third Plan period will have to be 10,000 degree holders. A similar reasoning in the case of diploma holders, on the other hand, may show that their actual outturn will correspond, more or less, to an annual rate of 15,000 during the third Plan period, inasmuch as the intake of students by polytechnics has reached the high figure of 24,000 as of 1960. By and large, however, there will be underproduction, and not overproduction, of engineering personnel during the next five years.

The actual outturn of engineering personnel may not correspond to the third Plan's targets, for there is also the additional bottleneck in the form of shortage of teachers in almost all engineering institutions in the country—a shortage ranging upto 40 per cent. Even the engineering teachers at present are not uniformly first-rate men; quite a good proportion of them are stated to be only second rate. If even some of these teaching technologists are to be pulled out, in terms of Mr. G. L. Mehta's suggestion, for more specific and important work elsewhere, there will be a further deterioration in the standards of teaching. Since no such thing can be permitted to take place, more foreign technical assistance is clearly called for in this line. It is well known that such assistance rendered by highly qualified technologists and engineers at crucial points has a catalytic effect on development. Mr. G. L. Mehta's view that "if dependence on foreign technical assistance is excessive, it might inhibit the development of local technology" cannot be wholly applied to the teaching line in which there is a critical shortage of engineering personnel. The foreign exchange component of Rs. 18 crores of the third Plan's technical education programme (costing in all Rs. 157 crores) may not be sufficient, for it includes the cost of equipment also. If the U.N. Special Fund and the International Development Association were to decide in favour of fuller assistance for the programme, it would help remove the bottleneck in the teaching line. If the machines to produce machines are a 'must,' more engineer-teachers to train engineers would also need to be attracted from all advanced countries as much for meeting the current shortage of teachers as for raising the standards of technical education.

The latest news that two American educationists have just visited the Engineering College at Madras as the forerunners of a team of four engineering professors is most heartening in this connection. These professors, it is stated, will teach engineering teacher-trainees at the Engineering College at Madras for at least one year starting in June. This assignment of American professors to the Madras college is scheduled for three years. A similar assignment of five American professors to the Poona Engineering College is also expected. Even with the addition of these two institutions, only five engineering colleges in India will operate such assignments. If more engineering colleges and technical institutions come to be similarly assisted by other advanced countries and by the specialised agencies of the U.N., the problem of teacher-training will be satisfactorily solved. Otherwise, there will be no case for starting new institutions in a hurry.

BOLT AND NUT INDUSTRY

The bolt and nut industry is one of the oldest engineering industries in India, its development having taken place simultaneously with the growth of railways and structural engineering industries. The industry gained considerable momentum during the last world war when imports were severely curtailed. The demand for nuts and bolts in the country was about 50,000 tons towards the end of the war, of which 30,000 tons were produced within the country, while the remaining 20,000 tons were imported from the U.S. under lease-lend arrangements. Thereafter the growth in the tempo of industrialisation in the first and second Plans gave an added impetus to the expansion of the industry. The current annual installed capacity is about 97,000 tons in the organised sector. Besides, the small sector is said to have developed the capacity to produce as much as 25,000 tons. This rapid expansion, being not always based on any scientific or planned lines, has not, however, proved to be an unmixed blessing to the industry. Mr. K. L. Chowdhary, President of the Indian Bolt and Nut Manufacturers Association, in his address at the first annual meeting of the Association last week at Calcutta, disclosed that considerable capacity remained unutilised. What is more, with the construction of the public sector steel projects coming to an end, the demand from this major source has fallen off. Mr. Chowdhary urged both the Centre and State Governments not to license any further capacity for ordinary bolts and nuts so long as the present licensed capacity remained unutilised. While Mr. Chowdhary's plea deserves to be given due attention by the licensing authorities, there is reason to believe that the demand for nuts and bolts is bound to go up, in view of the further expansion of engineering industries, railways and construction activities envisaged in the third Plan.

The impressive performance of the industry on the export front in recent years also gives room for optimism in regard to its ability to secure overseas customers, and thereby to ensure the utilisation of idle capacity. Exports of bolts and nuts spurted, in terms of value, from Rs. 38,300 in 1958 to Rs. 81,800 in 1959 and still further to Rs. 4.68 lakhs in 1960. Mr. Chowdhary observed that India's products compared well with those of other countries so far as quality was concerned. It would appear that but for the high price of steel and unfavourable freight rates which Indian exporters have to meet (as compared with exporters in Japan and other countries), exports would have gone up still further. In order to promote exports, Mr. Chowdhary suggested (1) a reduction in the price of steel supplied to the industry, (2) inclusion of dog spikes, round spikes, fish bolts and nuts in the O.G.L. list for exports, and (3) relaxation in customs formalities in respect of exports of fasteners to Pakistan. He also made a fervent plea to ban completely the imports of those items in which India has a surplus. The Government of India now permits imports of these products upto 2½ per cent. It may be noted here that imports can be fully dispensed with only when Indian manufacturers diversify their pattern of production to include special types of fasteners for machines, automobiles, radios, etc. Besides, the industry has necessarily to keep track of the various technological improvements taking place in other countries.

The scope for expanding exports or cutting imports will ultimately depend upon the industry's capacity to maintain its competitive position. This is mainly a function of production and costs, particularly of raw materials. Mr. Chowdhary complained about the non-availability of quality raw materials. Apart from the high price of steel in general, limit bars in class VII and class II steel are not produced in the country. Mr. Chowdhary called upon the Government to permit the import of such steel for the use of his industry. He also wanted import licences for taps and dies to be given to actual users until indigenous production catches up with the domestic demand. The industry's claim for these measures of assistance is strengthened by its good performance on the export front.

PLAN PUBLICITY

While addressing the meeting of the State Directors of Information at New Delhi recently, Mr. R. K. Ramadhyani, Secretary, Union Ministry of Information and Broadcasting, said that "while public enthusiasm for efforts to implement the Plans has been aroused, they still have to carry it to a level where all lent a willing hand in it." "Public enthusiasm" in this context means "public consciousness of the tasks which face the country and of the steps being taken to grapple with them." It is Mr. Ramadhyani's claim that the media of information have had a definite effect in bringing about this public consciousness. This claim

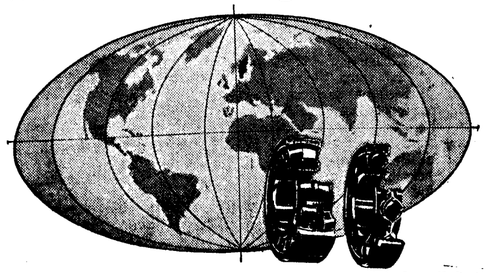
grew the SKF world-wide organization



The place was Sweden—the year 1907, when Sven Wingquist invented the first self-aligning ball bearing, which revolutionized the bearing industry.
Manufacturers liked the new type of bearing and demand for it became world-wide.
With the passing of time SKF has grown with the industry it serves.
Today you will find SKF at work on all types of machinery in every industry, filling the intricate precision requirements of the jet aircraft, to the tough needs of huge construction units. Wherever a bearing is required, SKF will meet the requirement—with the finest bearing in the world.

Shortage of Wagons to Carry Coal

THE coal crisis, it is stated, is wagon-made, but I say it is man-made; that would be a more factual way of describing it. The shortage is going to have worse effects on the health of the nation's economy than, say, a shortage of sugar on the health of people. But there was intense excitement in Parliament, a couple of years ago, when sugar was in short supply, but there seems to be no excitement now about the coal shortage which has affected every State in the Union, and every major industry in the country. It is stated that over 60,000 tons of coal is awaiting transhipment at the State-owned Singareni collieries in Andhra Pradesh, and the possibility of the mines having to slow down output has led the Andhra Government to urge the Coal Controller to expedite movement of the accumulation. Funnily enough, industries in Andhra itself have suffered through lack of coal, many moulding factories having closed down, not having fuel. This reminds me of the saying that the milk vendor with an accumulation of butter goes abegging for ghee, because he has no frying pan to melt the butter. In Madras State, cement factories, textile mills and brick-laying industries have suffered on account of coal shortage. The Travancore Cements has switched over to furnace oil, while textile mills in Madurai and Pondicherry have resorted to procuring coal by sea at much higher cost than by rail. Many engineering units in Maharashtra face the threat of closure through lack of coke. Industries in Gujarat are contemplating a switch-over to furnace oil with the possibility of a 30 per cent increase in cost of production. Railway bookings in Saurashtra are reported to be at a standstill, especially for oils, oilseeds, oil-cake and solvent extracts. Small-scale industries in Orissa have had a cut of 85 per cent in normal coal supplies. Textile mills in Madhya Pradesh have adopted a 35 per cent cut in production. Industries in Rajasthan, especially engineering, glass and oil, have all curtailed production.

This catalogue can go on, with greater detail but serves little purpose except in the comforting (?) assurance that everybody has had a raw deal. It all points to a complete failure of planned co-ordinated effort; that such a position should exist just before the inauguration of the third Five-year Plan is most exasperating. What do we do? One suggestion is that we transport as much as possible by sea, but little thought is given to the enormous increase in cost. Another suggestion is to take to the use of furnace oil, and here again, the problem of effecting technical alterations to plants, and the high cost of operation are not being taken into account. A third suggestion is to have a national pool of rail and sea freight for coal which will result in evening out the cost to all industries in all zones, but will this solve the problem of physical movement which seems to be at a standstill now?

In the meantime, academic discussions are going on about how to co-ordinate rail-road transport and the propriety of allowing railways to control the policies relating to other forms of transport, serving little social purpose at this time of crisis. What seems to be of immediate and urgent importance is not co-ordination of rail-road transport, but co-ordination of rail-rail transport, an integrated effort between the different railway zones for a massive movement of coal for the next one month of 31 days of 24 hours each day. And, for the next five years at least, there should be no talk of any co-ordination between sea, road and rail transport, for, we can afford to generate and sustain a lot of competition between the three, as we may need all of them at their peak performance.

Take Your Leave By Our Leave

It is stated that the Union Home Ministry has suggested, in a circular, that Government servants should be asked to take leave at re-maintenintervals, preferably annually. Quoting the export earnings the agency report credits the is unreasonable, the assuring (although trite) industries that they shdirable, in the interest of pected to earn any foreigrvice, that Government uitable intervals, and refreshed. Although this is a truism, it is based on hopes, more often than not, unrealised. Returning 'refreshed' is itself very doubtful, because it is during leave that most people attend to a multitude of harassing family affairs and settlements; but returning 'keen' is against all law of averages.

No Government circular puts forward any bright idea without quoting a fundamental rule which establishes the negation of all prescriptive rights. In this case F.R. 67 is quoted, namely, that leave cannot be claimed as of right. When the exigencies of service so require, discretion to refuse or revoke leave of any description is reserved by the authority empowered to grant it. The Home Ministry has explained that these provisions have been made in the rules, because it is not always possible to let all who want leave at a particular time to have it at the time, and there is a limit beyond which depletion of staff cannot be permitted without dislocating the work of an establishment. But they are not intended to be so used as, in effect, to abridge the leave entitlements of the staff. In cases where a number of applicants cannot be granted leave at the same time, the sanctioning authority has been requested to draw up a phased programme, so that the employees could take leave by turns. The explanations and consequential directives are eminently logical, but the snag, in implementation, is its utter dependence on the uncommon common sense of the "empowered authority," as would be seen in the two true stories relating to D and P which I recount below.

D was a junior executive in charge of the correspondence department of a large business organisation. He had to open all inward mail received by post as well as by messenger delivery and distribute the letters to the various sections in the office; also, he had to collect and despatch all the outward mail through special messengers, if local, and in good time to catch the post for outside destinations. Harassed by the limitations of time, D could never leave his desk for lunch, so he contented himself with a couple of sandwiches and coffee during the lunch interval, but found that his staff of twenty-four clerks disappeared in a body between the hours of 1 and 2 p.m. each day for their midday meal. They were neither 'keen' nor 'refreshed' after two p.m. and poor D was invariably snowed under an unseemly accumulation of dak. Hitting on the bright idea of staggering the lunch exodus, D drew up an office order dividing the clerks into six batches of four each, and directing each batch to take an hour off, commencing from 10 a.m. and ending at 4 p.m., the working hours being from 9 a.m. to 5 p.m. The most satisfied batches were the third and fourth who went out between 12 noon and 2 p.m. for an hour each, but those who were asked to eat 'lunch' at 10 a.m. or 11 a.m. or at 2 p.m. and 3 p.m. were just petrified with horror at the perversity of the staggering. The outcome of this bright effort at rationalisation was that D was shifted from the correspondence department to the record and morgue department, where all that he had to do was to issue for reference and receive back old records and vouchers and carry on a relentless war against termites, cockroaches and rats. That D was more in his element in his second supervisory job than in his first was revealed when he published a very interesting brochure on "Extermination of Pests"; he certainly could not have written on "Human relations in office management."

P was the officer in charge of the accounts department in a bank and was a stickler for discipline. The fatal week for him was the one before the half-yearly closing of accounts when he allowed no clerk to take even a day off. But senior clerk Narayan, with a number of sons, daughters and grandchildren, decided he must have two days off to officiate at the performance of an auspicious family ceremony in a distant shrine. All arrangements had been concluded including railway reservations, and Narayan's leave application was on P's table, supported by a saffron-coloured invitation to attend the function. P flew into a rage, and, despite Narayan's importunities, flatly refused to permit him the leave of absence. The situation became tense. Narayan opened his eyes wide, looked at the ceiling, shifted his feet, wrung his hands, held his head in them, mumbled a few words and was about to turn back, when he heard P shout "Get back to your seat; you heard me say No." That was the last straw. Narayan went into hysterics, or so it seemed. He wept, rent the air with shouts, kicked his feet, pounded the ground with his fists, frothed from the corners of his mouth, and raised such a ballyhoo that the bank hall was invaded by employees from other departments, customers, the police, the bank's military guard, everyone. There was pandemonium. From the floor above came the senior executives and the General Manager, and it was with much effort that Narayan was lifted off the floor and carried into a room. The G.M. was able to appease him and get his version of the story. He was granted the leave and an extra one week to recoup his health. Some of his colleagues who saw him later in the day stated that he had a very satisfied look on his face, and bore no evidence of the nerve-shattering experience which he was seen to have gone through. Poor P was on the mat before the boss for a full two hours after the event, and was eventually bundled out to a distant mofussil branch. A memorandum was inserted in his service record detailing the facts of the case with the G.M.'s note to the effect that P was lacking in a knowledge of human psychology. As for Narayan, he stayed on in service for a further seven years, recounting to his juniors the tale of how he got away with the convincingly exasperated performance which he staged for the benefit of the underdogs in the service.

Needless to say, these incidents took place over thirty years ago, and may not happen now in a business house or a bank. The Shop Assistants Act ensures an even distribution of working hours and banking has become an industry, while the white collar bank workers have had themselves 'emancipated' by the adoption of trade union technique. Supervising officials of banks have to adopt the line of least resistance in all staff matters, on pain of being pilloried for mishandling the human resources of the institution. I am not sure if the position is any better in the larger Government offices where the staff find safety in numbers and efficacy in mass demonstration. I should like to have a look at the tough guy who will have the courage to refuse leave outright and take shelter under F.R. 67. The hum and haw which is heard through the crevices of the Home Ministry circular does not afford much protection to an "empowered authority" who attempts to put his foot down; he is bound to discover that it is as difficult to refuse leave, as to persuade people to take leave, and, in either case, obstinacy at lower levels gets condoned more easily than firmness at the higher ones. Indeed, it is a difficult world for supervisory officials.

* * * *

A CORRECTION

Writing of the crow in my last week's column I stated that, as a confirmed protagonist of the efficacy of social parasitism, it lays its eggs in the nest of another bird. I regret to say that the latter portion of this is an error. It is not the crow that lays its eggs in the nest of another bird. Another bird lays its eggs in the crow's nest, and the crow nestles on those eggs with as much care and zeal as on its own.

I.M.F. ROLE TO BE EXPANDED

From Our Own Correspondent

LONDON, *11th February*

LONDON LETTER

THE new American President's speech on how he proposes to cope with the American outflow of gold and overall balance of payments deficit has been studied in this country with a very direct interest. For there are so many measures that the American President might take to protect the domestic economy which could have very adverse effects on this country and the sterling area, generally. There could be a move back towards severe protection, thus damaging British prospects of retaining America as the biggest single export market, and there could be severe cuts in the amount of economic aid and investment made available for the under-developed countries. But, in fact, Mr. Kennedy has done none of these things and appears prepared to treat his country's problem in a balanced and unhysterical way. The figures themselves could easily have led to a different approach, for, in spite of a commercial export surplus of $5,800 million in 1960, which was more than 2½ times as high as that for the previous year, the U.S. ended 1960 with an overall deficit of some $3,800 million.

Where did the $9,600 million go? Military expenditure absorbed $3,900 million, economic assistance and investment by the Government absorbed $3,400 million, and the rest, about $2,300 million, was a capital outflow in search of either higher income or higher security outside the United States.

The President decided in his approach to the problem to separate the capital outflow from the rest. The previous Administration had already passed a law prohibiting American nationals from holding gold overseas. This could not prevent them from holding investments overseas but the Administration is satisfied that such an investment outflow is a temporary phenomenon. It is to be dealt with somehow if it persists and the President proposes to make the International Monetary Fund come more readily to America's, as well as to anyone else's, assistance, to cope with this kind of problem. American gold reserves are still $17,500 million, and the country has the right to draw on the I.M.F. $4,100 million. This right Mr. Kennedy proposes should be exercised more frequently in future, leaving gold reserves untouched. Had this policy been followed in the past year, the whole of the dramatic capital outflow which has caused such a stir on the world gold markets, and has so affected confidence in the dollar, would have been financed at a cost of about half the drawing rights, without any American gold leaving the U.S.

This attitude envisages a greatly expanded role for the I.M.F. to dispossess the U.S. of her self-given title of "the principal banker of the free world."

Real Deficit

Eliminating the hot money problem, America was left in 1960 with a balance of payments deficit of $1,500 million, which the Administration did not regard as a serious figure. They do not therefore propose to touch the basic military expenditure, although they are going to seek all manner of economies in the way of procurement as well as disposal of resources that may help reduce somewhat the amount of spending. The foreign aid programme is also not to be reduced, and the intention is, indeed, to expand it. Any gap which remains should be closed by some small discouragement of personal imports by American tourists and some larger encouragement of American exports, partly by closer attention being paid to what the Government might do to help and partly by more co-operation with European organisations. Encouragement will also be given to foreign funds to stay in the U.S.A. by authorising the payment of favourably discriminating rates of interest on balances and by offering specially attractive investment opportunities.

London, therefore, expects to see the capital outflow from the U.S.A. gradually dry up and expects to meet rather more American competition in the world's export markets. All this means a gradual hardening of the dollar, but the world is spared an outbreak of American deflation.—*All Rights Reserved.*

SURVEY

(*Concluded from page 279*)

is presumably based on some sort of a survey to assess the impact of Plan publicity. The broad picture emerging from the survey is that the output of educative information has attracted notice and that a majority of observers have found it useful and interesting. Films have been found to be the most popular vehicle, followed by visual publicity; song and drama, although popular, have been inadequate in volume.

These conclusions of the survey may or may not be reliable. If there is any doubt about their reliability, it will be because of the very poor response ratio (12 per cent) in the sample (7,750) which, too, may or may not have been drawn on such scientific lines as to represent a cross-section of the country's population. In any case the validity of conclusions, based on the replies of 943 respondents out of 7,750 persons to whom questionnaires were sent, is open to doubt. Even the broad conclusion that the impact of Plan publicity is definite and on a country-wide scale is, therefore, not quite tenable. It may be that the statistical advisers of the Programme Evaluation Organisation of the Planning Commission will be able to devise ways and means of getting this very important survey redone on scientific lines by random sampling. How far Plan publicity has influenced the public to act in one or more desired ways would also need to be assessed through a survey of this kind. For, as Mr. Ramadhyani has rightly emphasised, the innumerable smaller projects in rural areas need the villager's initiative which, in turn, "could be invoked by an understanding of the aims, necessities, and the means of achievement." If the objective of publicity programmes during the third Plan period is "to clarify its aims, enlist enthusiasm for them, arouse the will to attain them, explain ways and means of achieving them, highlight needs of co-operation and emphasise advantages of exchange of information by discussions in various forums," the degree of success so far attained in the matter of second-Plan aims, if it can be reliably measured in a sample survey, may have useful lessons for the Ministries of Information at the Centre and in the States.

PRICE FIXATION BY TARIFF COMMISSION

BASIS ADOPTED NEEDS REORIENTATION

(By A Special Correspondent)

IN recent years, a number of enquiries have been conducted by the Tariff Commission for the purpose of determining fair ex-works prices of industrial products, such as iron and steel, tinplate, antimony, cement, rubber tyres and tubes, locomotives and boilers, zinc, acetate yarn, caustic soda, chlorine, hydrochloric acid and bleaching powder, paper and sugar. The price-fixing function of the Tariff Commission appears to be assuming greater importance than its primary function of determining the desirability and the quantum of protection to be accorded to industries.

In almost all such enquiries, the principal preoccupation of the Commission seems to be to keep prices from increasing. This desire to serve the interests of consumers is no doubt inspired by the best of intentions, but the excessive emphasis which the Commission has attached to this aspect of the question has caused it to ignore the urgent need to increase production at the fastest possible rate. The whole approach has been vitiated by the assumption, conscious or subconscious, of a conflict of interest between producers and consumers, in which the Commission, on behalf of the Government, has to protect consumers against the exploitation of producers.

The very fact that the question of price fixation has arisen and been referred to the Commission is a presumption that the supply of that particular commodity has failed to keep pace with the rise in demand. The obvious and the only really effective remedy for such a situation is a rapid increase in output. Instead of recognising this and fixing prices which would leave producers with incentives to raise production as quickly as possible, the Commission has generally followed the shortsighted policy of fixing prices at a level that left no such incentives. It is evident that such action will not really benefit the consumers, but will only perpetuate shortage and high prices. Greater production, not more rigid controls, is the key to lower prices.

Striking Example

The most striking example of this is West Germany. Dr. Ludwig Erhard describes, in his book *Prosperity Through Competition*, how, when he became Minister for Economic Affairs, he decided to remove the controls that were choking production. "Turn the people and the money loose and they will make the country strong" was the principle on which he worked. He began in 1948 by ending rationing and price controls, at a time when even with severe rationing, there were scarcely enough goods to meet the people's elementary needs. Thus began the bold experiment in Marktwirtschaft or the free market economy, which has made West Germany, only a few years after total defeat and destruction, into one of the most prosperous nations of the world. The core of Professor Erhard's philosophy is simple and has universal application. "The most successful means for the achievement and retention of prosperity is competition. Only by competition can an economy expand to serve all people, especially in their capacity as consumers and dissolve all advantages that do not result directly from higher performance. Free competition thus leads to progress and profits for the whole social order."

To those who maintain that the analogy of West Germany has no relevance to Indian conditions, the example of the Indian sugar industry may be cited. As long as controls lasted, production was low. Between 1950-51 and 1957-58, when the industry was not subject to rigid controls, production rose continuously (except for 1953-54 when there was a failure of the cane crop) and reached the record figure of 20.06 lakh tons in 1956-57. With the imposition of control in North India in July 1958, the position deteriorated and production declined to 19.18 lakh tons in 1958-59. In the current year, however, as a result of the incentives offered by the authorities, production is expected to touch the all-time record of about 27 lakh tons.

It is no exaggeration to say that the Commission approaches its task with a preconceived bias against producers and tends invariably to whittle down the claims put forward by producers. As a result, the prices fixed by it are, almost always, uneconomic and tend to impede the ability as well as the desire to set up new productive capacity.

It is to be noted that concern for the interests of the consumer do not appear to be so important a consideration when the Government itself is a producer or supplier. This is borne out by the successive increases in railway freight rates and by the high prices at which the State Trading Corporation has been selling cement to the public.

A fair price is one which will leave the industry concerned with sufficient funds, after meeting expenses of operation and administration, to provide a fair return to investors and to enable rehabilitation of plant and equipment and expansion to take place. Judged by this criterion, the prices fixed by the Commission in many cases, cannot be considered fair or such as to serve the genuine interests of consumers.

In cases where a single price has been fixed for all the units in an industry, e.g., in paper, it has been the practice of the Commission to base the prices on the costs of the representative unit of production. It is evident that, if a shortage of that product exists and it is necessary to increase output quickly, even the marginal producer should be enabled to earn a reasonable return. If the price is based on the average costs of all producers or the cost of the representative unit, the producers whose costs are above the average will have to suffer losses and curtail activity. It is difficult to see how such prices will be conducive to rapid increase of output.

"Contingency Allowance"

In determining fair prices, it is essential that a "contingency allowance" should be added to the cost estimates to allow for increases in costs that may occur during the period when the prices fixed by the Commission remain in force. This is particularly necessary in view of the rising trend in prices of raw materials, wages, freight and almost every item entering into cost of production and distribution. The Commission does not appear to follow a uniform or consistent policy in this matter. In one case, that of sugar, it has not provided a "contingency allowance" at all. In others, the allowance has proved to be quite inadequate. It has often happened that, even by the time the Commission has submitted its report to the Government and action has been taken thereon, costs have increased so as to absorb the entire "contingency allowance," with the result that no margin exists for the inevitable future increases in costs. This means that all such increases will have to be met out of the already meagre return on capital. The industry can no doubt make out a case for an upward revision of prices to allow for increases in costs that have occurred, but even where such adjustments are made, there is a considerable time lag, during which costs rise still further. Even in the steel industry, which enjoys the advantage of an escalator clause, there have been a number of cases of increases in cost elements not covered by this clause. For example, the composition of various products (product mix) has varied from the estimates made by the Tariff Commission, and, since these increases are not allowed in the retention prices, the steel companies are at a disadvantage. No allowance was made in the revised retention price for the increase in the ash content of coal which raised costs.

The "contingency allowance" of Rs. 2 per ton in the case of cement has been more than absorbed in the first year since price fixation by increases in various items of cost. The 5 per cent "contingency allowance" in paper has been offset by additional cesses and duties, including royalty on leases of bamboo forests. The allowance of Rs. 20 per ton allowed in the price of caustic soda has proved insufficient in the case of certain units, which are obliged to maintain their own thermal power stations. The allowance of Rs. 10 per ton for soda ash has not been enough to cover the rise in raw material, freight, etc.

It is essential that, in fixing prices, the "contingency allowance" should be sufficient to provide for anomalies in the costing methods as well as all likely increases in costs and that, when the industry asks for an upward revision of prices on account of cost increases, decisions should be taken with all possible speed.

Concept of Return on Capital

It is necessary that expenditure on bonus, gratuity and managing agency commission should be regarded as elements in cost, for purposes of price fixation and not as charges on the return on capital.

The concept of a return to capital is, in its very nature, different from the remuneration for management. Those who manage a company, whether they are managing agents or directors or secretaries and treasurers, are performing a service quite distinct from the contribution of capital. As such, the return to those who contribute capital must not be mixed up with the payment to those who do the work of management. If a managing agent is paid as commission a percentage of profit, that does not alter the fact that what he is contributing to the company is the service of management and not capital. When the Tariff Commission investigates the question of what constitutes a fair return on capital, it is not justified in lumping this with the entirely different matter of the payment to those who manage the company. Hence it is necessary that managing agency commission and all other forms of managerial remuneration, whether calculated as a percentage of profits or not, should be excluded from the return to capital and provided for separately as elements in cost.

The same argument applies to bonus to labour. Whether such bonus payment is calculated as a percentage of profit or not, it is a payment to labour and not a return to capital. Those who provide the capital will get what is left, after all such payments, to managing agents, labour, etc. That alone is the true return to capital.

Inclusion of these extraneous elements in the Tariff Commission's allowance of a "fair" return on capital employed reduces the effective or real return to capital, while it inflates the nominal return and creates a false impression that shareholders are benefited substantially, with all the psychological and political reactions that such an impression is likely to produce. In the interests of fairness and straight thinking, it is desirable that the Tariff Commission should determine a fair return to capital as such and that the other elements should be put where they properly belong, that is, in the cost estimates. Much misunderstanding and prejudice against investors could thereby be avoided.

Depreciation as an element in cost is calculated at the usual income-tax rates, that is, on the original or historical value of the assets and not on their replacement value. Since prices of machinery and plant have risen steeply in

the past few years, the amount of depreciation allowed by the Commission in fixing prices, is not enough to replace the equipment, which has reached the end of its working life. In a period of rapid technological change, such as this, it may be necessary to replace plant and equipment even before they have ended their useful life, because improvements have rendered them obsolete. This is quite impossible out of the depreciation reserves that the Tariff Commission has contemplated in fixing prices. Lack of adequate provision for depreciation involves capital erosion, in the sense that equipment will not be replaced as it wears out or becomes obsolescent. Particularly in the case of export industries, this would react adversely on productive efficiency and on the ability to face foreign competition. The shortage of foreign exchange for planned economic development makes it essential that such uneconomic practices should be avoided. It is necessary either that depreciation should be calculated on the replacement cost and not the historical cost of the assets or that separate rehabilitation allowance be provided in the determination of prices.

The National Council of Applied Economic Research recently conducted an enquiry into "Replacement Cost in Industry." One of their principal recommendations reads as follows:

"The National Council of Applied Economic Research recommends that depreciation allowances to cover replacement costs of the fixed assets of a firm should be made legally obligatory. It also urges that, in estimating the replacement cost, the firms should be asked to take account of increases, if any, in the price of the relevant assets. . . . For this purpose, the Central Government should undertake the task of compiling index numbers of prices of important types of machinery used in our industries."

Rehabilitation

The case for a rehabilitation allowance as an element in the selling prices fixed by the Tariff Commission has already been set forth above. If law or accounting procedure insists on depreciation being based on the historical cost of assets, the case for a rehabilitation allowance becomes irrefutable. Yet the Tariff Commission has not followed a uniform procedure in this matter. In the case of certain industries, steel and cement for example, a rehabilitation allowance has been provided, whereas, in others, such as paper and sugar, no such provision has been made.

Bonus to Workers

Even the Supreme Court has held, in connection with the determination of bonus to workmen, that rehabilitation should be considered as a prior charge, in deciding whether a surplus available for distribution as bonus exists or not. Since the necessity for provision for rehabilitation has been recognised by the highest court in the land, it is hard to see why the Tariff Commission should refuse to include provision for such a purpose, in the determination of fair prices.

The older units in industries whose plant and equipment were acquired when prices were much lower than now are the ones which suffer most as a result of the refusal of the authorities to recognise and provide for so important a requirement. They are virtually forced to permit capital erosion or to raise the necessary finance for the purpose of rehabilitation from other sources.

The Tariff Commission's views regarding the basis and the rate of return to be allowed on capital in the computation of prices has varied from time to time and from industry to industry. Before 1955, its general practice was to allow a rate of 10 per cent on gross block. Since then, however, it has based the return on "capital employed" in the calculation of which the value of net assets is taken into account.

In determining the 'fair' return on capital employed for the cement industry in 1958, the Tariff Commission took as its starting point, the 10 per cent return on capital employed, which it had fixed for the rubber tyre industry in 1955. It argued that between 1955 and 1958 rates of taxation applicable to companies and rates of interest had increased. In addition, scales of wages and emoluments to labour and staff had increased, resulting in the need for increased allocations under bonus, gratuity, etc. As all these elements had to be provided for in profits, the Commission considered that a rate of return at 12 per cent on capital employed should be allowed to the cement industry. Since then, the Commission appears to have decided that a 12 per cent return on capital employed would be adequate in almost every case. This rate has been applied both to the paper and sugar industries.

This uniform rate of return to capital employed, irrespective of the different circumstances in each case, can hardly be regarded as scientific. Conditions vary from industry to industry and what is a fair return to capital in one industry may be quite inadequate (or possibly more than adequate) in the altogether different circumstances prevailing in another industry. One would have expected the Tariff Commission to examine the problems and needs of each industry separately and to assess the necessary return to capital in the light of such data, instead of assuming that investors in cement, paper and sugar should all get the same return. Is it the Tariff Commission's intention that all capital should yield the same return, irrespective of the industry in which it is invested, irrespective of risk or other factors? If this principle were fully implemented, it would be a matter of indifference to investors, which industry they chose to put their savings into.

Furthermore, the 12 per cent return on capital employed is intended not only to provide dividends to ordinary and preference shareholders, but interest on loans, managing agency commission and taxation. Allowing for these various charges, the net return to equity shareholders will hardly amount to 4 per cent. Calculations made for the sugar industry show that it works out to 3.86 per cent and for the cement industry 3.82 per cent. This rate of return is too low to attract new equity capital for the setting up of new productive capacity. In present market conditions, it is difficult to raise even preference capital at less than 9 per cent.

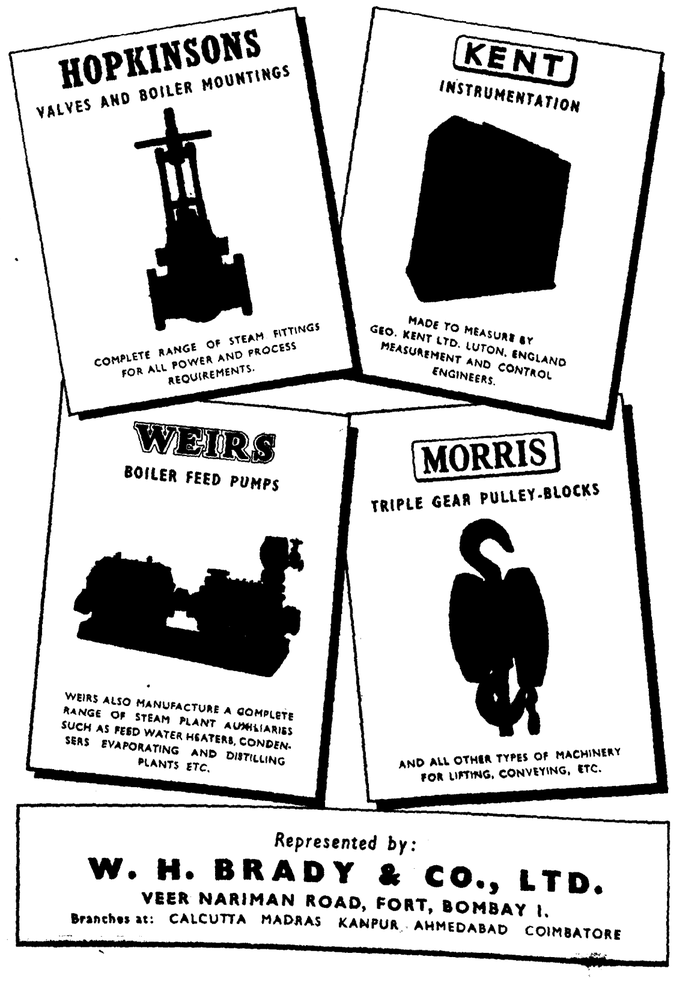
Once again, the Government applies a different standard to its own enterprises. According to Mr. Manubhai Shah, Union Minister for Industry, the net return in public sector undertakings, on the total capital employed is required to be about 15 per cent. Yet private investors are limited to 12 per cent which in reality amounts to less than 4 per cent on equity capital.

A return on capital, to be "fair," must be sufficient to offer incentives to increased investment. This condition is not satisfied when the return allowed for price fixation is so meagre as to be even lower than the yield obtainable on fixed-interest bearing securities, such as debentures and preference shares.

What Indian Industries Need

What Indian industries need at present is the creation of conditions in which it will be possible for them to expand their productive capacity and modernise their equipment. Only increased production can overcome the shortages and high prices which have necessitated price fixation by the Tariff Commission. One of the chief reasons for the relatively high cost of production in Indian industries is the old and often obsolete machinery in use. The productivity of labour is thus kept down and labour costs are, in consequence, high. It is most necessary that new and up-to-date equipment should be installed as rapidly as possible. The example of West Germany is again instructive. After World War II, German industrial reconstruction resulted in new and modern equipment, whereas little modernisation of equipment took place in Britain. This largely accounts for the present prosperity of West German industries, as compared to those of Britain. The Tariff Commission would do well to bear in mind, in the fixation of prices, the intimate relation between rehabilitation and modernisation of equipment, productivity of labour and economic prosperity.

To sum up. The price-fixing activities of the Tariff Commission are intended to make the commodities in question available to consumers at the lowest possible prices. This objective can be achieved only if there occurs a substantial rise in output. It is necessary, therefore, that conditions should be created in which producers will have incentives to expand and modernise productive capacity. Only then will competition be allowed to operate in the direction of promoting greater efficiency, lower costs and ultimately lower prices.



2 1 FEB 1961 PUBLIC DEPARTMENT

TARGETS FOR SCRAPPING IN TEXTILES

SOME SCHEMES LIKELY TO GO AHEAD WITHOUT GOVERNMENT AID

From Our Special Correspondent

MANCHESTER, *7th February*

MANCHESTER LETTER

LANCASHIRE cotton finishing firms have agreed to scrap sufficient machinery to qualify for a Government grant towards the cost of financing the reorganisation schemes for the finishing section of the industry. In the Cotton Board announcement, no figures were given to indicate by how much the minimum scrapping targets have been exceeded, but some trade circles suggested it was a reasonable assumption that the margin was a small one, for it is still possible that the schemes, or at least a part of them, will have to go ahead without Government aid.

The Board's announcement said that it was still possible for some production units over which the realisation companies were carrying on negotiations to be withdrawn from the schemes. This could result in the amount of machinery offered for scrapping, either in the schemes as a whole or in any one of the sections into which they are divided, being reduced below the minimum figures on which the Government insists before it will pay two-thirds of the cost of compensating the owners of works which decide to close down. In this event, said the statement, the schemes would remain effective, but the cost, or a part of it, would have to be borne by the industry.

The section of the finishing industry dealing with woven cloth had to offer for scrapping machinery capable of dealing with 534,500,000 yards of cloth. Plant offered and accepted by the Cotton Board and applications now being negotiated with the realisation companies, exceed this figure, says the Board's statement. Bleaching plant to deal with 68,200,000 yards of cloth, dyeing, raising and finishing machinery to process 284,200,000 yards and printing plant to handle 88,800,000 yards had to be earmarked for the scrap heap, and all these targets have been achieved. So has the target set for the yarn processing section, machinery to cope with 25,200,000 lbs. of yarn.

A Near Thing

The finishing scheme has undoubtedly been the "problem child" confronting the authorities since the fundamental principles of the 1959 redundancy plans were laid down. In the first place, the absence of a suitable unit of machinery, such as a spindle or a loom, created lengthy argument before an agreed basis of compensation could be established.

The actual arrangement, although capable of being calculated by individual firms, was sufficiently obscure to present a rather mysterious picture to the outside world, and even to those engaged in other sections of the industry. The compensation payable is: "The aggregate of an amount equal to 10s. 0d. per £1 of the written down value of all plant and machinery and an amount equal to 3s. 0d. per £1 of the turnover (less the cost of direct materials) of the unit during the last complete financial year ending not later than 31st October 1959."

Contrast in Response

Subsequently, the finishers have had six months in which to decide which works to scrap. It is significant that the full period has elapsed, with eleventh-hour applications being submitted, compared with the speed at which the spinning and weaving sectors rushed to register machinery for dismantling. The earlier schemes, however, provided more incentives in the way of a bonus for quick decisions and the ability of millowners to scrap part of their plant and not only entire production units.

At the same time, the finishers knew from the beginning that they were committed to cut out their deadwood and that, come what may, they would be expected to finance at least part of the operation. If the spinners and weavers had failed to achieve their objectives, the whole plan would have collapsed; in finishing, it has merely been a question as to whether the targets would be reached and the Government would pay two-thirds of the scrapping cost, or whether the industry would be left to foot the bill without any additional aid.

Cloth Prices Compared

From time to time, Lancashire traders are called upon to defend themselves against charges that their price levels have risen out of line with the general movement of values. The latest denial that yarn and cloth prices have risen too far and too fast has come from Mr. R. F. Armitage, Chairman of Armitage and Rigby (Holdings) Ltd., who has pointed out that there is a general tendency to ignore the "completely uneconomic starting point from which, eighteen months ago, price increases began to emerge."

In this connection, the latest Board of Trade index numbers, based on 100 in 1954, covering cotton and rayon fabrics, together with comparisons since the beginning of 1959, before the reorganisation scheme was launched, may be of interest:

	Cotton cloth	*Rayon cloth*
1959		
January	91.8	100.6
April	87.0	100.6
July	87.3	100.6
October	93.0	101.0
December	..	..
1960		
January	98.9	108.8
February	99.8	108.8
March	101.9	113.9
April	102.6	113.9
May	102.9	113.9
June	103.7	113.9
July	104.0	114.2
August	104.2	114.2
September	104.7	119.6
October	106.5	119.8
November	107.7	122.0
December	107.7	122.0

A significant factor is the substantial advance which has taken place in prices for rayon cloth during the past twelve months. On the same basis, it should be pointed out that (with 100 representing the 1954 average), the December 1959 index number for raw cotton was 73.6 and, a year later it had risen less than three points to 76.3. On the other hand, the quotation for cotton yarn in December 1959 was 93.8 in relation to the 1954 level and, by November last year, there had been a rise to 102.3.

More Employers Merge

Following the lead of the employers' organisations in the spinning section of the Lancashire cotton industry, similar steps to streamline the trade association structure are being taken in the weaving branch. Members of the Cotton Spinners' and Manufacturers' Association and the Rayon Weaving Association have approved a merger of the two bodies after detailed proposals had been drawn up by a joint working party.

A statement issued in Manchester indicated that the combined organisation will come into operation in April, the new title being the United Kingdom Textile Manufacturers' Association. Various changes in internal organisation and committee structure will be introduced to enable the interests of all members to be more effectively promoted. There are nearly a thousand firms engaged in weaving cotton and man-made fibres.

Jobs in Mills

About 120,000 people are now working in new industries in what were once Lancashire cotton mills. The estimate was given in a report to the Lancashire and Merseyside Industrial Development Association. Some 40,000 jobs have been provided by firms, covering a wide range of products, which have taken over mills recently closed under the reorganisation scheme in the cotton industry. The Association was told that, of the 550 mills closed between 1951 and 1960, approximately 380 had been reoccupied. More than 200 mills still remain vacant and available for new industry.—*All Rights Reserved.*

WORRALL'S TEXTILE AND ENGINEERING DIARY

The 1961 edition of the Diary, like the seventy-one editions which preceded it, is a useful advertising medium with the sales-message before potential buyers throughout all sections of the textile industry. Published by the well-known firm, Messrs. John Worrall Ltd. of England, the Diary contains an interesting review of the recent trends in the cotton, silk and jute mills in India and Pakistan, a comprehensive Buyers' Guide of machinery, accessories, chemicals, mill supplies and other equipment, and a list of advertisers' trade marks, designs, brand names, etc. The Mills' section gives a panoramic view of every phase of textile spinning, manufacture and processing. The corresponding classified sections enable the users of the Diary, especially those engaged in buying or selling of yarn and finished fabrics, easily to locate the firms engaged in the manufacture or processing of any specific type. In view of the growing importance of man-made fibres, the publishers have introduced a new feature which describes the various characteristics of all the known man-made fibres, with particulars of the trade names under which they are produced and sold.

Copies of the Diary can be obtained direct from Messrs. John Worrall Ltd., Central Works, Oldham, England, by sending a sterling draft for Rs. 17.75 (including cost of packing and delivery to the customers' address).

DEVELOPMENT OF SILK INDUSTRY

GOVERNMENT ACCEPTS WORKING GROUP'S RECOMMENDATIONS

RAW silk production in India would be of the order of 5.26 million lbs. by 1965-66, that is, the last year of the second Five-year Plan, if the efforts to implement the development programme drawn up for the sericulture industry were to meet with complete success. This is the target recommended by the Working Group on Sericulture which has been accepted by the Government of India. The Working Group consisted of eight members, representing State Governments and the industry and was presided over by Mr. H. C. Dasappa, M.P. The Group fixed the target on the basis of detailed information regarding the different sectors of the industry obtained as replies to the questionnaire circulated among the State Governments, extensive travelling, and discussions with the organisations and prominent persons connected with the industry.

The bulk of the production target of 5.26 million lbs. fixed to be achieved in 1965-66, namely, 4.00 million lbs., is earmarked for mulberry silk, the share of non-mulberry silk being 1.26 million lbs. The total target is only 260,000 lbs. more than that (5.00 million lbs.) envisaged in the Draft Outline of the third Plan and represents a rise of 1.56 million lbs. as compared with the anticipated production of 3.70 million lbs. in 1960-61 (last year of the second Plan). The total outlay on the entire programme as estimated by the Working Group is Rs. 10 crores, as against Rs. 5 crores earmarked in the second Plan and the actual expenditure of Rs. 1.3 crores incurred in the first Plan period.

Seems Doubtful

It, however, seems doubtful whether the provision for an increase of 1.56 million lbs. in raw silk production during the third Plan will, in fact, be realised, because the performance in the second Plan period has not been encouraging. The quantity of raw silk actually produced, which went up by 1.2 million lbs. in the first Plan period—from 1.9 million lbs. in 1950-51 to 3.1 million lbs. in 1955-56—increased by just 600,000 lbs., the estimated figure for 1960-61 being no more than 3.7 million lbs. The target fixed was 4.0 million lbs. (mulberry silk 3.0 million lbs. and non-mulberry silk 1.0 million lbs.). The Working Group reports that, in terms of value, the extent of the rise in production during the first three years of the second Plan was 10 per cent or Rs. 62 lakhs in mulberry silk and 15 per cent or Rs. 27 lakhs in non-mulberry silk. According to the Group, while there was a slight decline in filature silk output, a new line of quality production in the shape of cottage basin raw silk was noticeable. The overall increase in the level of subsidiary employment in mulberry and non-mulberry silk on account of higher production during 1958 is estimated at 140,000 persons. The latest data collected by the Group indicated that about 2.8 million persons were deriving their livelihood by practising sericulture. The total income of rearers is said to have increased by about Rs. 66.75 lakhs during the first three years of the second Plan. The following table shows the progress made in the sericulture industry:

(In lbs.)

	1959	1958	1955	1950
Raw silk production				
Mulberry—				
Filature	280,813	291,095	319,224	203,011

Production of noil yarn	Nil	65,149	53,966	111,697*

* Figures relate to 1951.

Large-scale financial assistance has been rendered by the Government of India through the Central Silk Board to the State Governments for sericulture development. The total amount sanctioned by the Board during the first four years of the second Plan (1956-57 to 1959-60) was Rs. 209.75 lakhs, made up of grants Rs. 145.52 lakhs and loans Rs. 64.23 lakhs. But the expenditure actually incurred was only Rs. 94.90 lakhs (grants Rs. 73.91 lakhs and loans Rs. 20.99 lakhs), the percentage of utilisation being a little over 45.

Prices Still High

In the second Plan report, it was clearly stressed that, as silk fabrics had to compete in the market with other textiles, the stability and expansion of the industry could be ensured only by continuous efforts at improving the quality and reducing cost. But this objective has still not been fulfilled, as witness the continued high level of prices. Filature raw silk (20/22 deniers) is currently quoted in Bangalore at as high as Rs. 80.48-Rs. 83.23 per kilogram (about Rs. 36.58-Rs. 37.83 per lb.), as against the f.o.b. price of Rs. 47.32 (Rs. 21.50 per lb.) and the landed cost (with duty) of Rs. 75.13 (Rs. 33.68 per lb.) for the Japanese 22/22 of grade silk. Viewed thus, the Planning Commission has, indeed, done well to lay greater emphasis on the need for bringing down the prices of raw silk. "The principal aim of the third Plan," says the Draft Outline, "will be to reduce the cost of production of raw silk through programmes for increasing the yield per acre of mulberry, to create a sound seed organisation and to replace a large number of the traditional *charkas* by cottage basins."

The study undertaken by the Working Group on sericulture has brought out very clearly the fact that the industry suffers greatly for want of adequate and timely supplies of examined silk-worm seeds. It is here that the Group alludes to the phenomenal development of silk industry in Japan due mainly to the successful efforts of the silk-worm *graineurs* in producing healthy and disease-free seeds. It has recommended the setting up of two types of seed institutions for the preparation of cross-breed layings of F_1—one for ensuring sufficient supplies of foreign race seed cocoons and the other for many available local race seed cocoons required for preparing cross-breed layings for industrial purposes. Among the measures to build up seed organisation, the Group mentions separation of seed areas from industrial areas, reduction in the present number of silk-worm races and grainages, introduction of chawki rearing on a large scale, and subsidy to selected rearers for multiplication of seed cocoons. In regard to non-mulberry seed, the Group urges steps to organise basic seed supply stations in each State and sub-stations in important cocoon producing areas for producing industrial seed, selecting seed rearers, and demarcating seed and industrial areas, as well as to establish three central stations, one each for *mugha* and *eri* in Assam and one for *tasar* in Bihar.

Research

The Working Group has also underlined the importance of co-ordinated research work in sericulture which, it would appear to feel, can be ensured if the research institutes at Berhampore and in the States are taken over by the Central Silk Board. The institutes, it observes, should address themselves to the task of evolving new and improved silk-worm races. Further, the Group recommends that a number of scholarships and fellowships be instituted to attract qualified men and that qualified officers, with scientific aptitude, be deputed to Japan for a period of two to three years. At the same time, it emphasises, Indian sericulture will need the advice of foreign experts for some time to come.

Drawing attention to the urgency of evolving high-yielding mulberry strains, the Working Group states that attempts must be made to experiment with different varieties of mulberry

MORE PIPES
to meet the nation's needs

IISCO

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

RAISING COAL PRODUCTION

TEN-YEAR PERSPECTIVE NEEDED

By A Special Correspondent

IF ever there was a time for a pragmatic approach to the problems of coal industry, this is it. Our planners have obviously overestimated the potentialities of the public sector in allocating to it an additional target of 15 million tons of increased coal production in the second Plan. On the basis of available figures, production in the public sector collieries at the end of 1960 is likely to reach 5.5 million tons, as against a target of 15 million tons, a shortfall of 9.5 million tons. In contrast, it may safely be assumed, on the basis of the break up figures available to date, that output in 1960 of collieries in the private sector will be 45 million tons, thus fulfilling its second Plan target. The position, however, becomes grave when considered against the shortage of wagons and the coal requirements of the steel industry which have grown from 3.3 million tons in 1956 to 12 million tons today. By the end of the third Plan, the steel industry's annual requirements will rise to 23 million tons.

Despite an estimated increase of 30 per cent in steel production in 1960, it would not be possible to achieve the production of 2.6 million tons of finished steel in the year ended March 1961, the last year of the second Plan, as estimated in the draft outline of the third Plan. With an estimated production of 1.9 million tons of finished steel in the calendar year 1960, the most that could be hoped for in the year 1960-61 was 2.1 million tons. This would mean a shortfall of 500,000 tons. This shortfall in actual output of steel is attributed to shortage of good quality coking coal and other raw materials for the industry. It is stated that steel industry in the private sector has been working below 20 per cent of its rated capacity due to these difficulties. If this kind of difficulty is to be avoided in future, coal production should be planned on a 10-year basis.

Coal production is proposed to be stepped up from 60 million tons to 97 million tons in the third Plan period. The achievement of the target will not be an easy task because of various factors. As mentioned earlier, the shortfall in the second Plan target of 60 million tons is likely to be 9.5 million tons. The additional production to be achieved at the end of the third Plan, therefore, will not be 37 million tons but approximately 46.5 million tons. The allocation of the additional production between the public and private sectors is 20 million tons and 17 million tons, respectively. Thus, the additional burden on the public sector collieries will be 29.5 million tons (part of this shortfall is likely to be made up by the private sector collieries if the latest amendment of the coal policy works well—namely, Government's intention to give special permission to individual units in the private sector to work new and non-contiguous areas where the raisings from such areas had to be ensured to make up the total production required). This change of heart is all very well up to a point. But the crux of the whole problem is where will capital for development come from? To obtain good quality metallurgical coal deep mining is necessary and to sink new shafts it may take anything from three to four years to attain full production. This means that companies will have to spend enormous sums for expanding production of good quality coal. Capital requirements of the industry are large and must come mainly from ploughing back of reserves. This cannot be done, unless collieries obtain a fair margin of profit. It is precisely because this policy of ploughing back of profits was not followed by the National Coal Board in the U.K. that Britain today has to spend large sums to modernise her pits to maintain an output little different from that of 30 years ago.

In October 1958, the Reserve Bank of India made an interesting study of 1,001 companies which included 53 coal companies. The profitability of equity capital as measured by the ratio of profits after tax (distributed *plus* retained profits) to net worth (paid-up capital *plus* all reserves—other than taxation and distributable provisions—and balance of profits), which is perhaps a more appropriate index of profitability, revealed an overall decline from 9 per cent in 1955 to 8.6 per cent in 1956. It is significant to note that, in the same year, this ratio ranged from 10 to 15 per cent in iron and steel, tea and other plantations, cement and shipping while it was under 3 per cent in coal. In fact, the Government itself has to borrow at 4 to 4½ per cent and first-class preference shares, which are virtually unsaleable today, offer a return of approximately 9 per cent. Dividends as a percentage of paid-up capital were 7.5 per cent in the case of coal, against 10.7 per cent in cotton textiles, 11.7 per cent in sugar, 11 per cent in paper, 16.1 per cent in tea and 20.2 per cent in other plantations.

It is claimed by the industry that present prices leave an inadequate margin of profits for expansion and it is precisely for this reason that coal companies find it difficult, if not impossible, to secure funds from the capital market through 'rights' issues. In the February 1959 *Bulletin* of the Reserve Bank of India, some interesting information was given regarding the sources and uses of funds of selected industries during 1957. These statistics revealed that the paid-up capital of 39 coal companies increased by only 1.9 per cent, as compared with the previous year, whereas in the case of cement and iron and steel, increases of 21.5 and 27.3 per cent, respectively, were recorded. This clearly indicates that new capital for coal mining is very shy, in view of the treatment which the industry receives and, therefore, the resources of coal companies for increasing output are limited only to current profits which in themselves are inadequate. It is only after several years that the Bengal Coal Company, the largest unit in the industry, was able to issue fresh equity capital for a small sum of Rs. 40 lakhs in December 1960. But one swallow does not make a summer.

It is pertinent to point out that the increases in coal prices up to the present have only been sufficient to implement the numerous labour awards since 1947. No account has been taken of the steady rise in railway freights, the prices of stores, plant and equipment, housing, power, etc. If the third Plan target is to be achieved and the steel plants, both in the public and private sectors, are to operate at full efficiency, incentives must be given to coal producers and the first step in this direction would have to be an increase in coal prices.

The next major problem which confronts the coal industry is transport. In the Bengal and Bihar coalfields, the average coal wagon supply per day in 1960 was 4,629, as against a minimum daily requirement of 5,000. When our planners were thinking in terms of putting up steel plants in the public sector, did they not visualise the need for more wagons to supply the blast furnaces with coal? If they did, it would not have been necessary for the two private steel producers as well as the two public sector plants at Rourkela and Bhilai to slow down their production. The wagon shortage also delayed the commissioning of the third blast furnace in each of these two plants and the starting of the plant at Durgapur. The delay in the establishment of coal-washeries in the public sector to reduce the high ash content of coal, has also resulted in lower steel production. The failure of the Government in this regard has resulted in a national loss, in that crores of rupees worth of steel production capacity lies idle. What the country needs is a small permanent Board at the Centre, composed of men with some knowledge of transport, to plan actively the co-ordination of all forms of transport.

Last but not least, while the present foreign exchange difficulties are appreciated, Government should give the coal industry special priorities for foreign exchange for modernisation and expansion of plant, so that the third Plan target of 97 million tons can be achieved, even if this means a reduction in the steel target and in the allocation of resources for other projects. In the words of the World Bank Mission which recently visited India, "the overriding need now is to get more coal quickly and other considerations should be subordinate to this purpose."

It will be seen, in the light of the foregoing survey, that a substantial increase in coal prices is overdue. The official reason for insisting on keeping down prices of coal is to avoid the resultant cost and price increases in other consuming industries. But statistics prove that the cost of coal expressed as a percentage of total production costs of various industries, is not large. Any further refusal to grant an adequate price increase, when the country is on the threshold of the third Plan, will surely retard industrial development.

AID FROM CANADA

Following discussions between Canadian and Indian officials, allocations have been made for the $25 million which Canada has given as capital assistance to India for 1960-61. A sum of $7.0 million is made available for import of wheat, $11.7 million for import of urgently needed non-ferrous metals, $600,000 for the completion of the Canada-India Reactor project which is in its final stages and $3.5 million for the third stage of the Kundah hydro-electric project in Madras State which has already received financial assistance from Canada under the Colombo Plan. Discussions are proceeding for the allocation of the balance of $2.2 million. In all cases where Canadian aid takes the form of commodities, the Government of India has agreed to establish counterpart rupee funds out of the sale proceeds of such commodities. As in the past, these counterpart funds will be utilised to cover the local costs of economic development projects agreed upon by the two Governments.

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

WORLD MARKETS FOR RUBBER

NATURAL RUBBER *VERSUS* SYNTHETICS

WHAT is the outlook for natural rubber? This question has now assumed world-wide importance, in view of the persistently growing popularity of synthetic rubber. It is no doubt admitted that the trend of world consumption of natural rubber will continue to be upward in the coming years, one estimate for 1970 being 2.500 million long tons, as against 2.085 million tons in 1960 and 1.960 million tons in 1950. But the pace of increase in synthetic rubber consumption is considered to be very much faster. By 1970, the world, we are told, will be consuming synthetic rubber at an annual rate of 4.500 million tons, as compared with 1.65 million tons in 1960 and a bare 700,000 tons a few years earlier, that is, 1950. If this forecast is to prove correct, the share of synthetic rubber in the total world consumption of rubber, which has already risen from 26.4 per cent in 1950 to 44.0 per cent in 1960, will go up further to as much as 64 per cent by 1970, while that of natural rubber, which has fallen from 73.6 per cent (1950) to 56 per cent (1960), will drop to just 36 per cent ten years later.

The foregoing brief account will indicate that synthetic rubber has already made and will continue to make considerable inroads into the market for natural rubber, thanks to the vigorous research now being pursued to improve the quality and characteristics of synthetic rubber, particularly in the U.S. which accounts for the bulk of world production. One single company, the U.S. Rubber Company, alone plans to spend during 1961 no less than 69 million Malayan dollars on research and development on synthetic rubber production and similar products. Nevertheless, the scope for a continued high level of demand for natural rubber is quite vast, provided, of course, supply is large, price competitive and quality good. This is the impression one gets from the latest assessment made by Mr. M. G. Wren, Head of the Chemical Division of the Rubber Research Institute of Malaya. The assessment is based on his recent tour of American and Canadian research laboratories working on synthetic rubber during which he had personal discussions with more than fifty scientists on the current situation concerning natural and synthetic rubbers.

No Serious Rival

At present, according to Mr. Wren, there are no signs of a serious rival to natural rubber that would sweep the board and render plantation rubber uneconomic to produce. In his opinion, if the supply of total rubber exceeds demand, their natural rubber stands a very good chance of securing a high proportion of the market for "natural type" elastomers, since it can afford to undersell any "synthetic natural" likely to be available in the near future. Mr. Wren, however, warns against any sense of complacency and urges the need for launching a rigorous research policy in the field of natural rubber, as in the case of the synthetic. To quote him: "Provided continued and well planned efforts are made in the fields of research, development of new products and technical service to consumers, there is no reason why natural rubber should not maintain its place in world markets."

The three new synthetic rubbers, now known as synthetic naturals, are Cis-polybutadiene, Cis-polyisoprene and Ethylene-propylene. Of these, the first one is said to have proved of particular interest to American and Canadian research workers; it has been found to have better resistance to road wear and more bounce than natural rubber or Styrene-butadiene type rubbers used to make the bulk of American tyres today. But this synthetic rubber and the other two suffer from certain drawbacks. These according to Mr. Wren, are as follows:

Cis-polybutadiene: It is not very sticky in its unvulcanised state; this presents problems for the tyre builders. But perhaps what is of more concern to the actual users is the tendency of the finished tyre tread to "chunk out" (an expression which means piece of the tyre tend to chip off in use.) Technologists in the laboratories dealing with these problems agree that the only solution at present is to use a blend of Cis-polybutadiene and natural, but work on these problems is by no means completed and it does not necessarily mean they will not be overcome eventually.

Cis-polyisoprene: Although this new synthetic behaves better in the factory (it has been claimed that it can be used for making 100 per cent. synthetic lorry tyres—previously not possible because of heat build-up in tyres made of older types of synthetic), it is more difficult to produce as a raw material and does not give a tyre which performs as well in service as Cis-polybutadiene. Apart from its ease in handling in the factory, particularly in the moulding of tyres, Cis-polyisoprene is somewhat inferior to natural in many of its other important characteristics.

Ethylene-propylene: This is undergoing close research scrutiny; it was first produced in Italy. Whilst this rubber is judged to have properties distinctly inferior to those of natural, it is viewed as a potential rival to Styrene-butadiene rubber (known as S.B.R. for short), which was the general purpose rubber developed during the last world war and known in those days as G.R.S. Ethylene-propylene rubber has proved to be a very different raw material to what the manufacturers are used to handling. It requires special chemicals and techniques to handle and manufacture such things as tyres. A particular difficulty is the fact that this type of synthetic has very poor "tack" (stickiness), which means problems in building such things as tyres and conveyor belts. Unlike the previous two synthetic materials mentioned, it cannot be used at all with other rubbers. It has, however, one advantage over all other rubbers; it possesses excellent resistance to attack by ozone and oxygen and so it lasts a long time under certain conditions.

The total production of the three improved varieties of synthetic rubbers mentioned above will be at an annual rate of 230,000 tons in the U.S. and Canada within the next year or so. The exact quantity of each type produced will depend on the demand for it. Most of the plants that are being set up can be used to produce any of them.

Selling Prices

Mr. Wren has also given an account of the selling prices of new rubbers and how they compare with the price of natural rubber. According to him, Cis-polybutadiene and Cispolyisoprene are likely to sell for 30 U.S. cents per lb. The price can be expected to stabilise somewhere between 25 cents and 28 cents by the time full production is achieved. Ethylene-propylene-rubber, which is considered to be inferior to the other two new synthetics mentioned, is expected to sell at 24 cents per lb. initially and possibly even 20 cents when in full production. This low price is possible because of the very cheap raw materials which can be used. It is, however, stated that this type of rubber is a competitor not of natural rubber but of S.B.R. and Butyl which have never claimed to be as good as natural or able to replace it wholly in tyres. In spite of these comments, it is obvious that an enormous research effort is still being made by synthetic rubber manufacturers to obtain a material sufficiently close to natural rubber, so that the latter can be replaced 100 per cent. by synthetic materials. At present, they are very close to achieving this and will probably do so within the next year or two. But the price of the new rubbers produced for this purpose will be as high or higher than that of the present general purpose synthetic rubber (S.B.R.). Natural rubber selling at 25 cents (75 Straits cents) should then compete easily with the new stereo specific polymers. At a slightly lower price for natural rubber, it would appear that the "synthetic natural" rubbers would become uneconomic to produce.

It thus appears that the Ethylene-propylene is the only cheap new synthetic rubber which shows properties comparable with general purpose synthetic rubber. Mr Wren feels that it may replace the latter but is unlikely to replace natural rubber. There are, he says, no hints of any startling new developments in synthetic rubber and he quotes three experts. One of them told him: "Most of the easy ones have already been examined and further research in the field of hydrocarbon polymers can now be expected to yield diminishing returns." Another expert said: "There is no duplicate for natural rubber yet." Still another stated: "As we learn more about natural rubber, we are surprised to find what a good job nature has done." What better evidence is required to prove that natural rubber will doubtless have its place, whatever be the competition from the synthetics? But this should not engender a spirit of complacency among natural rubber producers who must spare no effort to expand production, improve quality and maintain a reasonable level of prices.

a leaking roof-or flooded floor...

...will drive business from your door

Certainly there is no need for this to be so. In fact, why live or work under damp, miserable conditions—why allow your property to deteriorate around you? Have it protected from dampness of ceiling, walls and floors, from acid and alkali action, by Shalimar Tar bituminous based protective materials.

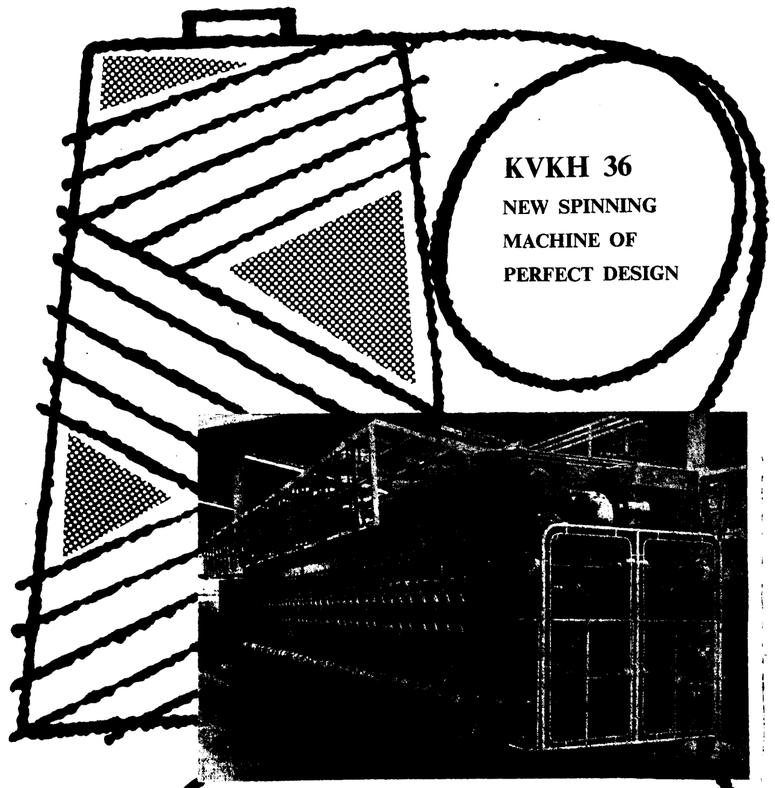
INT STP 51B



In Czechoslovak Socialist Republic a new spinning machine for the production of the viscous cord fibres for tyres has been manufactured.
This machine fulfils all high requirements of the most up-to-date machines—operates continuously from the shaping of the fibre up to the spooling of the finished fibre on the bobbin. The reliable operation is secured by its simple and purposeful structure. This machine produces the best quality fibres of high strength. The attendance of it is very easy.
KVKH 36 machine is designed with 36 fibre spinning spots divided by a box type structure in 6 fields with 6 spinning spots each and can be delivered in right hand as well as left hand design.
These machines represent a reliable and profitable investment in your operation.

COMMERCIALISE AIR TRANSPORT

NEED FOR REDUCING FARES AND ENCOURAGING CARGO SERVICE

By Wing Commander R. Vaughan-Fowler, R.A.F. (Retd.)

THERE is something unrealistic about air transport. The atmosphere with which it surrounds itself is reminiscent of the Arabian Nights and magic carpets. In the first decade of air transport, this approach was understandable but, today, air transport is a serious competitor of both sea and rail transport; so it should take itself seriously.

The spirit of adventure that enabled the early pioneers to surmount seemingly unconquerable obstacles still pervades our air transport enterprises. However, the level of efficiency to which aircraft have been developed places them in the forefront of transport vehicles. So by rights they should hold the leading position in the field of commercial transportation. In a sense they do, because they offer comfortable and luxurious travel for passengers and carry specialised cargo, but the rates charged for these services are so high that air transport is beyond the financial reach of most people and nearly all cargo. A survey carried out in America, where use of aircraft is on a level yet to be attained in any other country, disclosed that 70 per cent of Americans have not only not flown, but have never considered it. In India, the Indian Airlines Corporation carry some 700,000 passengers a year. Barely half of this number are Indian nationals. Not one person in 1,000 of our population is able to use air transport.

These facts are a reflection on the air transport industries of the world as well as the aircraft manufacturers. The air transport operators have set themselves to serve a minute fraction of the public, instead of developing their vehicles in such a way that they can carry the greatest load for the longest distance for the least cost.

Senseless Craze

The major objective of air transport has been speed, and this has developed into a senseless craze. Let us take an example from our domestic air services operated by the I.A.C. This nationalised Corporation has no competition except that of the railways. While the shortest time by rail from Bombay to Delhi is 25 hours, the 'Viscount' services do the journey in slightly under three hours. The time saving is 22 hours. What is gained by introducing faster aircraft so as to save perhaps 15 to 30 minutes?

Would it not be beneficial to the travelling public to introduce a type of aircraft that could still do the journey in under three hours but by virtue of its advanced design the fares could be reduced by a third? This is perfectly practical and aircraft capable of offering cheaper air travel already exist!

At the same time, the types of aircraft available have the ability to carry a considerable load of cargo without in any way disturbing the passenger accommodation. With adequate accommodation for both passengers and cargo, it would be easy to procure a very high percentage of the maximum-permissible payload. This opens the way to lowering air fares and cargo rates. What is more, during the hours of darkness when few passengers desire to travel, these same aircraft could be used for all cargo services. This would mean that, in one way or another, they could be kept flying round the clock, except for the few hours necessary for routine maintenance. A very high aircraft utilisation could be achieved and this would reduce overall costs per mile flown.

Air Cargo

Another advantage is that, in the off season for passengers, the aircraft can still maintain high capacity loads by carriage of cargo. Air cargo has never been keenly canvassed for the domestic air services, because the available aircraft have not got the capacity to carry the loads.

With mounting industrialisation all over the country and industry no longer being confined to Calcutta, Bombay and Madras, the demand for movement of products to keep the markets supplied must increase beyond anything so far imagined. In many classes of manufactured goods, the use of air transport for distribution is more economical. Many factors have to be taken into account.

Goods with a limited sales life such as medicines, drugs, films, and perishable products can be sent by air freight to great advantage. To give another interesting example. British-made suits are in considerable demand in the Americas. The air freight charge per suit is 8 shillings. Suits packed and sent by sea have to be pressed before sale and this costs 5 shillings, so in practice by use of lightweight containers in which suits travel hung ready to wear, the air freight delivery only adds three shillings to the sale price. Also, the suits arrive direct from the makers ready to sell and wear.

Manufacturers of motor vehicles not only use airlift to deliver whole cars, but most of the spares distribution is also done by air. This saves enormous sums in capital tied up in stocked spares depots all over the place. A local stockist in India can supply a spare next day, if it is delivered from an Indian factory by air freight.

To achieve this air transport service, it is imperative to ensure that the right type of aeroplanes are employed.

Over the Indian domestic air routes, where competition is non-existent and the speed advantage is already so great over any form of surface transport, the primary objective must be to reduce cost per seat-mile for passengers and per ton-mile for cargo. The whole future of successful air transport in this country depends on adhering strictly to this principle.

Canada's Example

There is nothing to be gained by adding more speed. Operators claim that high speed reduces the cost per seat-mile, but this is not proving to be the case. American Airlines, the largest domestic operator in the U.S.A., condemns all present aircraft as second rate, and these include the Boeing 707 and DC.8, and in fact all the present jet aircraft. This charge is based on the *fact* that, in operation, these aircraft are proving to be no more economical than the DC-7c. All the claims that higher speeds would reduce operating costs and lower the seat-mile rate have proved to be nothing more than sales propaganda. In fact, these new aircraft are proving more costly to operate per ton-mile.

In Canada, Trans-Canada Air Lines (T.C.A.), whose chief executive is a hard-headed Scot, an aircraft capable of carrying 139 passengers, or a mixed load of passengers and cargo at higher speed than the Viscounts, has been introduced, with the result that fares are being cut by 25 per cent and, in some cases, for special journeys or bulk travel, the reductions amount to nearly 50 per cent.

The United States operators, who are in direct competition with T.C.A. over routes connecting Canada and the U.S., have accused T.C.A. of undercutting, undermining and sabotaging the business. The fact is, and I have this direct from the T.C.A's chief executive, the economy of operation of the aircraft selected make these lower air fares and cheaper air freight rates entirely possible.

It is contended here that India requires economy class air services, operated with aircraft designed to carry an easily variable mixed payload of passengers and cargo, or all passengers or all cargo.

Ground Facilities

Provided the right types of aircraft are employed in the air, one-third of the road to financial success has been covered. The remaining two-thirds of the road to success are entirely dependent on the efficiency of the ground facilities and the commercial administration. Even the most economical aircraft imaginable would produce losses, if the airline's ground organisation were inefficient or even out of date.

Expenditure on staff training on a lavish scale is an essential prerequisite to successful airline operation! For example, an airline operator who pays little attention to aircrew training, perhaps regarding it as almost a luxury except for the bare minimum to keep within the regulations, is liable to suffer astounding losses due to careless flying. Let us assume that the monthly average flying hours on routine air services amount to 10,000 and that, in every hour flown, two minutes' flying time is wasted. Twenty thousand minutes equals approximately 333 hours. Even the old Dakota, with which all are familiar, cost the operator approximately Rs. 600 per hour flying, so the bill for wasted flying time totals Rs. 1,99,800 per month or roughly Rs. 24,00,000 per annum.

But this is only one of the holes through which hard-earned income can disappear quickly. Aircraft are critical vehicles to handle. As they can carry only comparatively small payloads, it is important that great care is taken to ensure that excess fuel is not carried, for this tends to reduce the payload. Poorly trained traffic staff, without the help and guidance of qualified Flight Despatchers, who are not employed by all airline operators, can be the direct cause of sending aircraft away with hundreds of pounds less payload than should be on board.

Take a flight from 'A' to 'B' for which cargo pays one rupee per pound. Due to faulty or careless calculation, the average loss per flight could be 200 lbs.; it could very easily be much more. These flights operate twice a day in each direction, that is, four flights a day fly light by Rs. 200 payload, which comes to Rs. 2,92,000 per annum. An operator with ten routes loses Rs. 29,20,000 per annum.

Airport facilities play a vital part in the economy of the air services using them. If navigational aids are lacking, air traffic control is slowed up and traffic congestion leads to aircraft waiting on the ground to take off, or cruising overhead waiting to land. With the big jet airliners, delays of this nature are extremely costly. At congested airports in the U.S., big jets are sometimes held for 40 minutes during the taxi out to take-off point. During this time, they will consume two tons of fuel. A big jet held overhead for 30 minutes will involve the operator in nearly Rs. 5,000 additional expenses including fuel consumed unnecessarily.

Poor ground communications cause delays, because reports of the route conditions are not available for the final make up of the flight plan. Weather reporting is a vital necessity, but, if the reports come in late, even an hour after they are drawn up by the Met Office, their value may be entirely lost; conditions can change so quickly. Aircraft leaving one airport for another, perhaps 1,200 miles away, cover the distance in just over two hours. Reports of the departure time may not be received at the destination airport till it is too late to warn them of weather closing down, making a diversion necessary. This sort of thing frequently happens during bad weather periods such as our monsoon. Many hours of unnecessary flying are the result.

The additional cost to the operators is fantastic. A diverted flight involves handling perhaps 120 passengers at a little used airport where facilities do not exist on the scale required. Passengers have to be fed and kept amused to offset the annoyance of the delay. The operator has to maintain staff at diversion airports which are not otherwise used.

It is, therefore, vital to economic operation of air services that airports are fully equipped with every essential navigational aid. The big jet aircraft, to earn their living and show a profit, have to be kept flying and every hour's delay *en route* is knocking time off the annual utilisation figure.

Engineering

Naturally, the safety of the air services rests largely on the sustained soundness of the engineering facilities that take care of the aircraft. In order to maintain high utilisation per aircraft, the time spent in the workshops must be the minimum.

The operator who equips his workshops with the most modern engineering aids for care and maintenance is going to recover the capital expenditure on this equipment in a comparatively short time. Also, the air services will operate at a profit, provided other facilities are equally good.

Well-stocked stores of spares are essential. A small fitting costing perhaps only Rs. 5, if not readily available when needed, can hold a five-million-dollar airliner grounded.

Public Appeal

Air travel or airlift for cargo is far too costly for the vast majority to even consider its use. The operators have got to find ways and means to reduce operating costs. During the last two years, there has been a mounting outcry against high air fares. The International Air Transport Association has warned its members that economy must be the pass word for the future. But there is precious little indication that anybody is taking any notice.

The much publicised air fare reductions have not amounted to anything substantial. Five

(Continued on page 313)

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS.

SOUTHERN INDUSTRIAL CORPORATION LTD.

MADRAS

(Incorporated as a Private Limited Company on 10th May 1955 and converted into a Public Company on 15th September, 1960)

A copy of the Prospectus has been filed with the Registrar of Companies, Madras. Licences have been obtained from the Government of India for effecting substantial expansion of the existing undertaking. It is to be strictly understood that in granting these licences, the Government of India do not take any responsibility for the soundness of the undertaking, or for the correctness of any of the statements made or opinions expressed in regard to it.

The Subscription List will open at the commencement of the banking hours on the 22nd day of February 1961 and will close on Monday, 27th February 1961, at 5 p.m. or later at the discretion of the Board of Directors.

SHARE CAPITAL

	Rs.
AUTHORISED:	
5,00,000 Equity Shares of Rs. 10 each	50,00,000
ISSUED, SUBSCRIBED AND PAID UP :	
60,000 Equity Shares of Rs. 10 each	6,00,000
PRESENT ISSUE:	
90,000 Equity Shares of Rs. 10 each	9,00,000
Out of the Present Issue :—	
(a) Reserved for firm allotment	1,65,000
(b) BALANCE OFFERED TO THE PUBLIC — 73,500 EQUITY SHARES OF Rs. 10 EACH	Rs. 7,35,000

The shares now issued and allotted will not be entitled to participate in the interim dividend of 10 per cent. declared on 22nd November 1960 but will be entitled to participate in the final dividend that may be declared for the year 1960, in proportion to the amounts paid up on the shares respectively, *pari passu* with the existing shares irrespective of the fact that the said new shares have not been outstanding during the year 1960. The said shares will participate *pari passu* with the existing shares in proportion to the paid-up capital and in all other respects rank *pari passu* with the existing shares.

The amounts payable in respect of shares of the present issue are as follows :—

With application	Rs. 2.50 per share
On allotment	Rs. 2.50 per share

The balance of Rs. 5 in two calls of Rs. 2.50 per share at intervals of not less than three months between each call, the first of such calls being not earlier than three months from the date of allotment of shares. Failure to pay the allotment money or any call when due, will render the share liable to forfeiture.

BOARD OF DIRECTORS

1. SHRI M. A. CHIDAMBARAM (*Chairman*), Businessman, Adayar House, Madras 25.
2. HIS HIGHNESS MAHARAJA FATESINGHRAO PRATAPSINHRAO GAEKWAD, Maharaja of Baroda, Laxmi Vilas Palace, Baroda. Ruler, Member of Lok Sabha.
3. SHRI KESHUB MAHINDRA, Gateway Building, Apollo Bunder, Fort, Bombay 1. Industrialist.
4. SHRI V. R. RAJARATNAM, Retired Inspector-General of Police, Madras, 6, Victoria Crescent, Egmore, Madras 8.
5. SHRI T. S. NARAYANASWAMI, Businessman, No. 2 Dr. C. P. Ramaswamy Ayyar Road, Alwarpet, Madras 18.
6. SHRI V. N. SUBBARAYAN, Retired Commissioner, Corporation of Madras, No. 26 Nowroji Road, Chetput, Madras 31.
7. SHRI K. VARUGIS, Company Executive, No. 14 Monteith Road, Madras 8.

UNDERWRITERS AND BROKERS

(1) MESSRS. P. R. SUBRAMANYAM, 70-A, Stock Exchange Building, Apollo Street, Fort, Bombay.
(2) MESSRS. J. R. MOTISHAW & CO., 32 Apollo Street, Bombay 1.
(3) MESSRS. A. B. PANDIT & CO., 32 Apollo Street, Bombay 1.
(4) MESSRS. MACONOCHIE & CO., 16 First Line Beach, Madras 1.
(5) MESSRS. SOMAYAJULU & CO., Andhra Insurance Buildings, 337 Thambu Chetty Street, Madras 1.
(6) MESSRS. G. M. PYNE, 14 India Exchange Place, Calcutta 1.

MANAGING BROKERS

MESSRS. P. R. SUBRAMANYAM, 70A Stock Exchange Building, Apollo Street, Bombay 1.

LEGAL ADVISERS

(1) MESSRS. R. NARASIMHACHARI and N. VARADARAJAN, Advocates, 4 Dr. Rangachari Road, Madras 4.
(2) SHRI S. GOVIND SWAMINADHAN, Barrister-at-Law, High Court, Madras 1.

AUDITORS

MESSRS. FRASER & ROSS, Chartered Accountants, McLean Street, Madras 1.

BANKERS

THE UNION BANK OF INDIA LIMITED, Madras.

REGISTERED OFFICE

No. 6 ARMENIAN STREET, MADRAS 1.

OBJECTS

The Company was incorporated as a Private Limited Company on 10th May 1955 for the several purposes set forth in the Memorandum of Association and was converted into a Public Limited Company on 15th September 1960.

The main object of the Company is to manufacture and sell all varieties of wire products including Wood-screws, Gate Hooks and Eyes, Ship Chains and Flexible Shafts as well as other objects set out in detail in the Memorandum of Association of the Company.

HISTORY AND BUSINESS

Since its incorporation in 1955, the Company has been working the wire products section of the factory which now produces 25 sizes of Wood Screws, 7 sizes of Gate Hooks and Eyes, 4 sizes of Shortlink Ship Chains, 4 sizes of Tinmen's Rivets and [illegible] of various types of Machine Screws. A total of 454 tons of Wire were processed in the year 1959. These "Tower Brand" products are very well received by the market and the entire production is booked in advance by dealers and agents against allotments.

PROSPECTS

The Company has obtained an Industrial Licence under the Industries (Development and Regulation) Act for the manufacture of Flexible Shafts and Flexible Shaft Machines in collaboration with Messrs. Otto Suhner Ltd., of Brugg, Switzerland. An experienced Engineer has returned from Switzerland after undergoing training. Shipments of machinery are expected to be completed by February 1961. With the spare capacity available on the ordered machines, the entire requirements of the Automobile Industry in India for Speedometer Cables can also be produced.

Machinery has been installed for the production of Dowell Screws and Phillips recessed head screws and for Electro-plating.

The expansion of the Wood Screw Industry from an installed capacity of 50,000 gross per month on single shift to 70,000 gross has been licensed under the Industries (Development Regulation) Act. Import applications for additional machinery required are pending with Government.

An application has been made to the Government of India to permit expansion of the Flexible Shaft section by installing machines required for the manufacture of various types of remote control cables such as Automobile Choke and Brake Cables. As these items are entirely imported at present it is expected that Government will consider our application favourably in view of the foreign exchange saving possible.

TECHNICAL COLLABORATION

The Company has entered into an Agreement, dated 1st July 1958 with OTTO SUHNER LIMITED, of Brugg, Switzerland.

MANAGEMENT

The Management of the Company will vest with the Board of Directors. Mr. M. A. Chidambaram is the Chairman of the Board and a whole-time Director on the following remuneration for his services to the Company in supervision and control in the affairs of the Company, namely, Rs. 3,000 per month sanctioned by Special Resolution dated 18th July 1960. Mr. M. A. Chidambaram has, however, consented to take only Rs. 2,500 per month as his remuneration for his services with effect from 1st January 1961.

CAPITAL REQUIREMENTS AND MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allotment is Rs. 9,00,000 and it is intended that the proceeds of the present issue will be utilised as follows:—

	Rs.
Plant and Machinery	6,25,000
Buildings	1,75,000
Towards Working Capital ...	25,000
Expenses of the Issue	75,000

The Directors are satisfied that adequate additional working capital will be available by means of normal borrowings from Bankers.

UNDERWRITING COMMISSION

Underwriting commission at the rate of 2½% of the nominal value of the Equity Shares underwritten is payable to the underwriters, Messrs. P. R. Subramanyam, J. R. Motishaw & Co., A. B. Pandit & Co., Maconochie & Co., Somayajulu & Co. and G. M. Pyne respectively in accordance with the terms and agreement contained in letters dated 2nd February 1961 from the said underwriters and the Company's acceptance of each of them dated 2nd February 1961.

UNDERWRITINGS

The Shares of the present issue amounting to Rs. 9,00,000 are underwritten by the following Underwriters:—

	Total Capital underwritten	Capital reserved for firm allotments	Balance offered unconditionally for public subscription
	Rs.	Rs.	Rs.
1. Messrs. P. R. Subramanyam, 70-A, Stock Exchange Building, Apollo Street, Bombay, 1. 40,000 Shares of Rs. 10 each ..	4,00,000	75,000	3,25,000
2. Messrs. J. R. Motishaw & Co., 32 Apollo Street, Bombay, 1. 10,000 Shares of Rs. 10 each ..	1,00,000	18,000	82,000
3. Messrs. A. B. Pandit & Co., 32 Apollo Street, Bombay, 1. 10,000 Shares of Rs. 10 each ..	1,00,000	18,000	82,000
4. Messrs. Maconochie & Co., Mercantile Bank Buildings, 16 First Line Beach, Madras, 1. 10,000 Shares of Rs. 10 each ..	1,00,000	18,000	82,000
5. Messrs. Somayajulu & Co., Andhra Insurance Buildings, 337, Thambu Chetty Street, Madras, 1. 10,000 Shares of Rs. 10 each ..	1,00,000	18,000	82,000
6. Messrs. G. M. Pyne, 14, India Exchange Place, Calcutta. 10,000 Shares of Rs. 10 each ..	1,00,000	18,000	82,000
TOTAL ..	9,00,000	1,65,000	7,35,000

In the opinion of the Directors the resources of the said Underwriters are sufficient to discharge their underwriting obligations.

BROKERAGE

Brokerage at the rate of 10 nP per Equity Share will be paid on allotments in respect of applications bearing the stamp of a Bank or a Member of a recognised Stock Exchange. Brokerage on the same basis will be payable to the Underwriters, in addition to the underwriting commission, on allotments in respect of applications made or procured by them provided that the relative forms of application bear their respective stamps.

Messrs. P. R. Subramanyam, Bombay, are the Managing Brokers to this issue and will be in addition entitled to a brokerage of 5 nP per Equity Share on 90,000 Equity Shares of Rs. 10 each offered for subscription, i.e., the Managing Brokers' remuneration will be Rs. 4,500.

APPLICATION AND ALLOTMENT

Application for Equity Shares must be made on the form accompanying the Prospectus, copies of which may be obtained from the Registered Office of the Company or from the offices of any of the Company's Brokers or Bankers and Underwriters named herein. It must be completed in accordance with the directions contained therein and delivered before the date of closing of the subscription list together with the remittance of the amount payable on application to:—

(i) The Company's Bankers at any of their branches noted below:—

(a) Bombay, (b) Madras, (c) Bangalore (d) Coimbatore, (e) Delhi, (f) Calcutta, (g) Madurai.

(ii) The Managing Brokers and Underwriters named in the Prospectus.

Where no allotment is made, the deposit will be returned in full and where the number of shares allotted is less than the number applied for, the balance deposit will be appropriated towards the amount remaining payable on the shares allotted and any balance remaining thereafter will be returned. The said refunds will be made within 2 months of the closing of the subscription list. The Directors reserve the right to refuse any application wholly or in part without assigning any reason. Failure to pay any amount due on the shares allotted, when due, will render previous payments and shares liable to forfeiture.

The Shares issued shall be subject to the Memorandum and Articles of Association of the Company.

Dated 10th February, 1961.

REPORT OF THE AUDITORS

We have audited the foregoing Balance Sheet of the Habib Bank Limited, Indian Union Branch, as at 31st December, 1960, and also the above Profit and Loss Account of the Bank for the year ended upon that date.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the proviso to Sub-sections (1) and (2) of Section 211 and Sub-section (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956, they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

(a) We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;

(b) the transactions of the Bank which have come to our notice, have been within the powers of the Bank ;

(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of these books ;

(d) the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns ;

(e) in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for Banking Companies and on such basis the said Balance Sheet gives a true and fair view of the Statement of the affairs of the Bank as at 31st December, 1960, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

DEFINITION OF "WORKER"

DOES IT NEED AMENDMENT?

By S. Krishna Warrier

Secretary, Indian Chamber of Commerce, Cochin

I HAVE gone through your editorial note on definition of "worker" in *Commerce* dated 22nd October 1960, arising from the Supreme Court's decision on the State of Kerala *versus* Gujarat Travancore Agency. In the last paragraph of this note, you have entertained apprehensions that the Supreme Court ruling will encourage employment of workers in factories through independent contractors to escape the obligations involved under the Factories Act. You have also stated that this tendency is likely to prevail in small establishments, and that it is there that non-observance of provisions of the Act is generally found. I have reasons to feel that the apprehensions entertained by you are not justified. Before going into the details of the case, it may interest you to know how "commercial labour" operates in our town.

The merchants in Mattancherri deal in various commodities like pepper, ginger, etc. There also exist in Mattancherri a set of contractors who undertake the work of these merchants and commission agents. Usually, the same contractor undertakes the work of one or more merchants. The same merchant has also sometimes more than one contractor who undertakes different categories of work. As and when work is available, these contractors engage workers to finish the work undertaken by them. The workers change from place to place and from day-to-day. In the course of the same day also, if one contractor has undertaken the work in more than one place, the workers are interchanged by him in the course of the day itself. The merchant has no knowledge as to the identity and number of workers, the work done by each of them, the time for which each worker works, etc. There is no sort of control exercised by the merchants over the workers who are all engaged by the contractors. This is the entire background of the case, and it is in these circumstances that the dispute arose between the factory inspectorate and the Gujarat Travancore Agency regarding the necessity or otherwise to classify their establishment as a "factory." The word "contract labour" is an ill-defined expression which carries no meaning at all. The Supreme Court judgment has thrown much light on the so-called "contract labour." If workers are employed through any agency, this satisfies the definition of "worker" in the Act. So, your apprehension that the Supreme Court ruling may encourage employment of workers through independent contractors in order to escape the obligations under the Act is not correct.

Factories Act

The Factories Act has laid down rigid specifications for any establishment to be classified as a factory. It states that, for any establishment to be classified as a factory, there should be an "occupier," "worker," and "manufacturing process." With respect to "workers," there is a limit on the number in the case of establishments using power, and those not using power. There is no justification, therefore, to classify any establishment which does not satisfy the tests, as a factory. Equally true is the fact that one is at liberty to work an establishment by keeping the number of workers lower than the required minimum as per the Act. In the instance in question, the people who were working in the establishment did not satisfy the definition of "workers," because they were not employed directly or through any agency. They were in no way responsible to the management nor had the management any control over them. These people were their own masters.

It is not necessary in the light of the rigid specifications given in the Act, that every establishment where there is a manufacturing process going on, should be defined as a factory. If, for example, one takes the case of a small ink manufacturer, who employs nine persons in his establishment using power for making ink, it will certainly not be classified as a factory. If this man engages a contractor to make packing cases for him, who in turn engages his own people to make cases in the premises of the ink manufacturer, can it be construed that the ink manufacturer's establishment would be taken as a "factory"? Certainly not, because the workers of the contractor are not employed by the ink manufacturer, neither will they be deemed to be employed through an agency. The ink manufacturer has nothing to do with these people. He is only concerned with his boxes and he has entrusted this work to an independent contractor, who has to supply him boxes and get paid for the number of boxes supplied. The ink manufacturer has also no control over his contractor, nor his workers and, if the contract is violated by the contractor, he has to proceed against him in a Civil Court for breach of contract. This would not have been the case if the ink manufacturer employed the people to make the boxes through the agency of the contractor. The moment the workers come there, the ink manufacturer gives them work and will naturally have a right to control their work and the workers will be answerable to the management and not the contractor.

Contract Labour

The difference between the two types of "contract labour" can be understood in the light of the above examples. In the Factories Act, all kinds of services, involving a contract of service, will come under the purview of Section 2L, whereas those which involve a contract for service will not come within the meaning of the section. The Supreme Court has thrown ample light on these two different types of services, and has discussed as to what constitutes employment. If all types of services, including the contract for service, are deemed to be employment for the purpose of a welfare legislation, it is going to create much confusion. Every management will be deemed to be the employer of a series of professional and other people whose services they may engage for manufacturing or other purposes. A clearing agent who often comes to clear the finished goods from a factory and to supply raw materials will be deemed to be an employee, and he will be entitled to all the rights under the various labour legislations. So also other people whose services have been engaged on a purely contractual obligation. The consequences of such a thing happening need hardly be described.

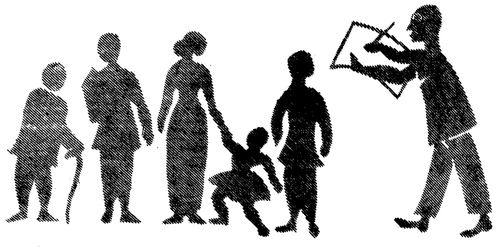
Your other apprehension that people will try to by-pass the provisions of the Factories Act by engaging independent contractors, is also not warranted. How many factories would risk this? The mere fact that there are so many factories which are registered under the Factories Act bear testimony to the baseless character of your fear. No management worth the name would like to engage independent contractors for running their manufacturing process, because, in such a case, they can exercise no control whatever on the nature of the work done and also on the workers. No doubt, in certain avocations it is possible to do this, but there is no harm in it. For example, in cottage industries like *bidi* manufacture, etc., the work is given on these lines and everyone is able to make a living, because it is a piece-rate work. People come and collect tobacco, take it to the respective places and make *bidies* and the finished material is brought after a particular time and given to the management for a definite piece-rate. Such cases do not fall within the Factories Act and there is nothing wrong if it does not apply, because, all said and done, the factory legislation is meant to regulate the conditions of service of industrial labour who are employed in certain types of establishments. It was never the intention of the legislature to stretch the language of the section and pull in all kinds of people under the factory legislation.

Your statement that the tendency to evade the Act prevails in small establishments, and that it is there that non-observance of the provisions of the Act is generally found, is not quite correct. As a matter of fact, your own editorial in a subsequent issue, (*Commerce* dated 5th November 1960), states that the law has been flagrantly violated in the huge establishments run by the public sector. This shows that the position has to be re-examined with respect to evasion of the various labour legislations as a whole.

In any case, it will be clear from what I have stated that there is absolutely no necessity for any change in the present factory legislation with special reference to definition of "worker" in the light of the Supreme Court ruling. The Court's ruling has, in fact, made the position very clear. If at all there had been any ambiguity in the law, it has been clarified so well that there will be no room for confusion in the future.

CENSUS 1961

10 February—5 March



Between these dates every person will be counted in our country, in cities or in the remote villages, in the hills or in forests, at sea or on shore.

The counting will start on 10 February and end at sunrise on 1 March. To make doubly sure that every one has been included in the Census, there will be a revisional count between 1 and 5 March. Make sure that the entire family is counted, from the oldest to the youngest.

The enumerator has a heavy responsibility. Please help him in his task.

All census information will be strictly confidential and fully protected.

YBA 4236 ATLANTIS (EAST) LIMITED Incorporated in England

you have just opened A METAL BOX CONTAINER!

Salted or plain, cashewnuts need to be sealed in a specially designed container in an inert atmosphere. This way they retain their freshness and flavour for long periods. Thanks to the container's protective qualities, India has been able to export large quantities of cashewnuts to distant lands and to earn valuable foreign exchange. The U.S.A. alone buys Rs 11 crores worth every year, making the humble cashewnut India's second largest dollar earner.

In the country's drive to expand the export of consumer goods, Metal Box, leaders in the packaging field, are playing an important role. Already, over Rs 30 crores worth of consumer goods — mostly perishables—are finding their way abroad in Metal Box containers. Scientifically designed for protection and superbly printed for sales appeal, Metal Box containers are showing how correct packaging helps to establish Indian goods in foreign markets.

Metal Box are also taking a direct part in the country's drive to earn foreign exchange by rapidly expanding the export of containers, closures, hardware and publicity media.

Over 1000 manufacturers in India are being supplied by Metal Box with scientifically designed containers and closures that go to pack Rs 100 crores worth of consumer goods every year.

OPEN TOP CANS for processed fruit, vegetables, fish and dairy products
GENERAL LINE CONTAINERS for confectionery, tea, biscuits, baby foods, edible oils, paints, insecticides, powders, etc.

PERSPECTIVE FOR STEEL OUTLINED—II

SCOPE FOR SMALL PLANTS—DEFECTS IN HINDUSTAN STEEL ORGANISATION

By Dr. M. N. Dastur

[The following is the second and final instalment of Dr. M. N. Dastur's Visvesvaraya Lecture at the last annual meeting of the Institution of Engineers (India). The first instalment appeared on pages 246 and 247 of our issue dated 11th February 1961.—ED.]

WHILE, as discussed earlier, the bulk of our future steel must come from large integrated plants, there is ample scope for a great number of smaller plants in widely dispersed locations, away from coking coals. These small plants could meet a part of the regional demands, and, as we have already discussed, open the door to a variety of processing industries, which in turn would further accelerate the steel demand of the region. Such plants could be installed with much less or no dependence on foreign supplies of equipment, and could create the enthusiasm and technical skills for evolution of the small units into larger, more complex plants.

Furnaces with low shafts, which are in effect small blast furnaces, have been used successfully at Calbe in East Germany to produce a quarter million tons of foundry iron per year. The Calbe furnaces (which were studied by me five years ago) use coke made from lignite, which is similar in analysis to the Neyveli lignite in South India. This lignite coke should therefore be tried out at the pilot-scale furnace set up by the National Metallurgical Laboratory in Jamshedpur. Since good lignite deposits are also available in other parts of India, notably Kutch and Bikaner, the trials have a wide national interest.

One of the most useful devices for substantially reducing the requirement of coking coal—at the same time making small-scale ironmaking possible—is the electric smelting furnace. This substitutes electric energy for the purpose of heating and a low grade carbonaceous material as reducing agent. The electric furnace needs only half as much fuel/reductant per ton of iron as a blast furnace. Of this smaller requirement, only a part need be coke and the rest can be low-volatile coal or coke breeze which cannot be used in conventional blast furnaces.

A considerable amount of development work is being done on preheating and pre-reducing the burden in rotary or shaft kilns using the by-product gas from the electric furnace itself, thus reducing the power consumption by almost 50 per cent.

The search for ironmaking processes which can produce small tonnages at low investment costs and at the same time use a wider range of available raw materials, has created widespread interest in direct reduction techniques. A powder or sponge iron is produced for use as metallic charge to blast furnace, cupola, open-hearth or electric furnace. Although some semi-commercial units are now in operation abroad, the economics are yet to be proved for large-scale application. The availability of very high grade iron ore in India, and the limited reserves of blast furnace fuel, are factors favouring the development of direct reduction processes in India.

Human Implications

The crucial role of steel in economic development having been established, and the technological possibilities of achieving, in successive stages, a production level of 110 million tons by the end of the century considered, we now go on to discuss the human requirement of this dynamic programme. Our concern here is with the quality of management and with the development of Indian technical talent on a scale adequate to the size of the task before us. This concern is prompted by the difficulties that have developed over the steel programme during the present Plan period, which forcefully underline the fact that proper management organisation and competent personnel are as vital to success as any other factor. Since it is mainly through the agency of the public sector that future steel development is to be realised, our discussion will relate to State undertakings.

State industrial undertakings were organised as joint-stock companies expressly with the idea of ensuring autonomy in management. This object has, unfortunately, been frustrated by the predominance of Government officials on the Boards of these companies, as a result of which the undertakings operate not as independent units, but as adjuncts of the controlling Ministries. Their management vests largely in men not only innocent of technical knowledge and industrial experience, but also handicapped by a bureaucratic outlook unsuited to running industry. Cumbersome and time-wasting civil service procedures hold sway, which means, as Professor Galbraith has said, "each decision is right at the price of overall failure. While the individual trees are being saved, the forest is destroyed."

Apart from interferences with autonomy, the basic fact is that there is insufficient delegation of authority to the Boards. In Hindustan Steel, the Company responsible for projects costing Rs. 560 crores, the Board's powers for sanctioning capital expenditure are limited to a maximum of Rs. 40 lakhs or less than one-twelfth of one per cent of the total cost. The delay in obtaining sanctions results in considerable idle overheads being added to capital costs, often affecting the economics of the project. This viewpoint finds authoritative endorsement from Mr. Asok Chanda, former Comptroller and Auditor-General of India, and one time Chairman of the Hindustan Machine Tools and Sindri Fertilisers, who say: "The cumulative effect of these arrangements (he is referring to predominance of officials on the Boards and the over-centralisation of authority) has been to make these companies move even slower than Government departments."

The limited autonomy these companies possess is rendered ineffective by the present practice of giving the finance man a veto over the decisions of the Board, since anything he disagrees with has to be referred to the Ministry. Similarly objectionable is the provision in the Articles of Association of Hindustan Steel entitling any dissenting member of the Board to have the matter referred to the Central Government for decision. These provisions cut across the fundamental principle of unitary management and delegated responsibility.

Poor Performance

These organisational defects have contributed to the poor performance of many public sector undertakings, causing some demoralisation within the country and concern abroad among India's important and influential friends. As examples of the latter, I invite your attention to the comments of the World Bank Mission and Prof. Galbraith, widely published in the last few months.

It is clear that the present pattern of administration must change if our hopes of rapid development are to materialise. Real autonomy must be ensured to the undertakings; the Board given more management control and greater finance to prevent time-wasting references for sanctions. The top managers must be picked with an eye to their technical qualifications and aptitude rather than on the grounds of their seniority in the Government service. It is, however, heartening that the seriousness of the problem is now fully realised and the third Plan accords high priority to strengthening and streamlining the administrative apparatus. Once this is effected, there is no reason at all to apprehend that human failures will hold back our ambitious programme of industrial advance.

In the impending reorganisation, it should be our endeavour to give more authority and responsibility to technical personnel at all levels. Our projects have so far suffered from a distressing lack of confidence in Indian engineering talent. We have tended, as a result, to rely unduly on foreign technical know-how. I do not suggest that we can dispense with foreign technical assistance, but I do believe that we should make a discriminating choice and import only such talent as is not available within the country. Wherever foreign experts are engaged, we should invariably provide for Indian understudies, a provision for which existed in the agreements made for Bhilai and Rourkela, but it was, unfortunately, not availed of to any significant extent.

By giving technical people a voice in the planning and execution of the projects, we could avoid the setbacks suffered during the second Plan through lapses in design and planning, incorrect phasing of construction and lack of attention to building related facilities in time. The need, as I see it, is for a continuing technical audit of projects, by competent experts, beginning right from the design stage. By coming in at that stage, Indian engineers could also help to secure standardisation of equipment in our new industries to enable the heavy machine-building industries now coming into existence to cope with a smaller range of demand and cut production costs.

Consideration should also be given to the development of trained construction personnel and equipment, and their utilisation on a continuing basis. It is a great waste to allow men and equipment to disperse from construction sites when further expansion is already decided, as in the case of the three H.S.L. plants, and when new projects like alloy steels plant at Durgapur and the fourth steel plant at Bokaro are definitely scheduled.

Training

If Indian engineers and technicians are to shoulder these wider responsibilities, we should, taking the long-term view, strive to enlarge the supply and improve the quality of new cadres. An important reform needed is better integration of practical training and theoretical study. One way in which this can be done is to run pilot-scale production units as adjuncts to teaching institutions. Working in such plants will give the students an understanding of the dignity of labour and of team spirit, and train them in organising and managing production. In addition, special training programmes need to be instituted to develop specific talents required for individual projects.

Suitably qualified and correctly oriented cadres of engineers and technologists can make all the difference between success and failure in Indian planning, provided, of course, they are given the opportunity to make a full contribution. In other words, engineers would have to broaden their horizons, in order to equip themselves to perform administrative functions in addition to technical tasks. One of the most outstanding examples of engineer-administrator, is, of course, Sir M. Visvesvaraya himself, whose centenary is the occasion for this paper.

(Concluded)

CONVAIR 990 CORONADO

Convair 990 Coronado—the world's fastest airliner—takes off from San Diego's Lindbergh Field during current flight tests of the jet that Scandinavian Airlines System and Swissair will put into service later this year. Powered by new General Electric aft-fan engines, the Coronado will speed at 640 miles (1,030 kilometers) per hour over S.A.S. and Swissair routes to South America and to the Far East *via* southern Asia.

AN AUTHORITATIVE BOOK ON SOCIAL SECURITY IN INDIA

INSURANCE IN INDIA

(A study of Life Insurance and Social Insurance)

by

Dr. A. N. Agarwala

Dean, Faculty of Commerce, Allahabad University

This is the first exhaustive and authoritative book on Social Security in India (including Life Insurance and Social Insurance). It is based on long and painstaking researches of the author and gives an up-to-date and analytical account of life insurance and social insurance in India.

650 pages. Price Rs. 27.50.

PRESENT TRANSPORT SITUATION

NEOGY COMMITTEE'S ANALYSIS OF ROAD-RAIL DATA

THE Neogy Committee on Transport Policy and Co-ordination has presented in its preliminary report the factual findings of its surveys and studies relating to road transport and railways. A noteworthy feature of the report is its comparative analysis of the factual data. It may be noted at the outset that the total tonnage carried by the railways has increased from about 92 million tons in 1950-51 to about 156 million tons (estimate) in 1960-61, that is, by 59 per cent. In terms of ton-miles, the traffic on the railways during the period has increased by 100 per cent. As for road transport, its expansion, too, judged from the growth in the number of motor vehicles in the country, has not only not lagged behind but has, in fact, been more than proportionate to the expansion of railways. Thus, the number of goods vehicles on the road has almost doubled between 1948-49 and 1958-59 from about 73,000 to about 145,000. The number of buses during the same period has increased by about 64 per cent from 27,275 to 44,744. Apart from the increase in the number of vehicles, there has been a substantial increase in the average capacity of the vehicles over the period due to heavier diesel vehicles gradually replacing the petrol vehicles. The Committee, however, has not given the finding here that this growth in road transport has taken place in spite of some inhibiting factors.

That goods transport by road may register still greater growth could be inferred from the relevant information assembled by the Committee. A large number of commercial undertakings in the country, for instance, have resorted to greater use of road transport for movement of their goods, and the share of road transport in the total despatches by these firms has increased appreciably during recent years. The share of rail transport in the goods moved on account of these firms has correspondingly declined. These firms have shown a preference for road transport for long-distance haulage in respect of several types of traffic for various reasons. Available data show that a certain amount of traffic in commodities which have to bear comparatively higher freight rates on the railways is being diverted from railways to road transport.

Railway Finances

On the other hand, the share of comparatively low-rated commodities in the total freight traffic carried by the railways has had a tendency to increase, and is likely to increase in the coming years. This is the result of the industrial programmes of the Five-year Plans under which an increasing emphasis is being laid on the development of basic industries like steel, coal, mineral ores and heavy machinery. On a comparison of the average earnings of the railways from traffic in the more important commodities with the average cost of haulage, it is found that, in respect of a number of commodities like coal, ores, foodgrains and salt, the railways have to incur a loss both on broad-gauge and metre-gauge lines. There are several other commodities like sugar, cement, wood, fresh fruits and vegetables in respect of which the railways lose only on the metre-gauge system. Since the freight rate for coal tapers off sharply with increase in the distance of haulage, the long hauls of coal—and more especially on the metre-gauge—are particularly uneconomical. The Committee has given the finding that, if the share of these low-rated commodities in the total railway freight traffic were to increase in future, it would affect the financial position of the railways adversely.

A review of the recent trends in railway finances shows that the increase in railway earnings during recent years has not been commensurate with the increase in the capital-at-charge of the railways. According to the Committee, while the railways might be expected to meet their short-term financial commitments by suitable increases in fares and freight, in the long run it may be impossible to avoid considering major modifications in the railway rating structure, having regard to the changing pattern of railway traffic. With the growing importance of road transport, some of the existing lines on the railway system may become unremunerative, because the traffic carried on these lines is of a type which is suitable for road transport. The financial performance of railways, as of 1958-59, on different lines—broad-gauge, metre-gauge and narrow-gauge—is brought out in the following table based on the figures in Vol. II of the Railway Board Report for the relevant year:—

		Broad-gauge	Metre-gauge	Narrow-gauge
Mileage		16,392	15,508	3,181
Gross earnings	(Rs. crores)	296.5	90.6	3.7
Working expenses ..	(Rs. crores)	219.6	97.3	6.3
Net earnings..	(Rs. crores)	+76.9	—6.7	—2.7
Average operating cost per ton-mile including terminal charges in nP. ..		8.07	12.17	26.20

It can be calculated from the above figures that the surplus in earnings represents 25.9 per cent of gross earnings on the broad-gauge sections. On the other hand, the deficit in earnings represents 7.4 per cent of gross earnings on the metre-gauge sections and 72.9 per cent on the narrow-gauge sections. These poor results are partly due to the fact that the railways' rating structure is much less based on the "cost of the service" provided by them than on the "value of service" or what is commonly known as the principle of "charging what the traffic will bear." It is pointed out, for instance, that, if coal were charged at the same rate as iron ore and other ores, the railways would earn an additional income of Rs. 23 crores per annum, as against the total earnings from coal of Rs. 40 crores.

Advantages of Road Transport

The Neogy Committee has also brought out that, while the rates charged by the railways for certain items of traffic are substantially lower than the average cost of haulage, they are much higher in the case of other commodities. In the latter set of commodities, the railways are at a competitive disadvantage *vis-a-vis* roads even though the average cost of haulage (12 to 15 nP per ton-mile including terminal charges) by the roads is substantially higher than the average cost of haulage by rail. The inherent advantages of road and railway transport are summed up by the Committee as under:

1. The road transport industry has a much greater adaptability to varying conditions and is also able to adapt equipment and type of services to the particular needs of shippers. The flexibility of road transport is, perhaps, the most important factor in its favour. Motor vehicles can supply services over public highways between any two points in the country, if necessary from door to door, on difficult gradients or on poor roads.

2. Speed and certainty of delivery are other important considerations in favour of road transport. Business firms would find it possible to have a quick turnover of their capital through speedy haulage by road transport.

3. In respect of goods services, the railways are at a disadvantage in regard to speed of delivery, particularly for short and medium-distance traffic, or door-to-door delivery services, or personal attention being paid to consignments of individual customers.

4. The railways, however, are commonly recognised to be particularly suited for carrying long-distance traffic, especially in heavy and bulky items of freight, and also for long haul passenger services.

The preliminary report of the Neogy Committee has referred, in this connection, to the present state of organisation of the road transport industry. This industry in the private sector, particularly that part of it engaged in freight services, is owned at present by a large number of small operators, the majority of whom own just one vehicle each. A comparatively recent development is the growth of so-called booking agencies who are intermediaries in the industry, and do not necessarily in all cases own vehicles of their own but undertake booking of business on behalf of the operators on a commission basis. It is stated that they indulge in bargaining with the individual operators, who, due to various reasons, find themselves at their mercy. There is also reference in the report to prevalence of several alleged malpractices in the industry, such as overloading, evasion of taxes and circumvention of regulatory measures imposed under the law.

The investigations of the Committee have revealed that the licensing procedures pertaining to long-distance haulage by road transport have been considerably liberalised in recent years. In so far as intra-State operations are concerned, several State Governments are following a liberal policy with regard to countersignature of permits from one region to another. Although the primary permits issued on a regional basis may be valid for a distance of 300 miles only, these permits on countersignature can operate in practice over much longer distances. Countersignatures of permits for inter-State operations are granted in several States under reciprocal agreements arrived at between the State Governments concerned. Besides these, a large number of temporary permits are being issued by various Regional/State Transport authorities for long distances, that is, 300 miles and over. These permits are issued ostensibly to meet a particular "temporary need." But the phrase "temporary need" is not defined in the Motor Vehicles Act and it is left to the discretion of the Regional Transport Authority or the State Transport Authority to decide the need for such permits. The Committee has learnt of several instances in which temporary permits were granted without the need for such permits having been clearly stated by the applicants. And it has also learnt of several cases in which vehicles are known to have been using temporary permits over and over again for a few months in succession for the same routes. The issue of temporary permits in large numbers, according to the Committee, is not clearly in the interests of co-ordination within the road transport industry itself or between the railways and road transport, because the existing operators on the routes concerned or the railways do not have the opportunity of filing objections in regard to the issue of such permits.

COMPULSORY WATER CESS

In view of the increase in the value of crops that has resulted from new irrigation, the State Governments have taken or are taking a series of measures for improving the financial results from irrigation projects. A compulsory water cess leviable on the entire area for which irrigation facilities are provided has been imposed in the States of Andhra Pradesh, Gujarat, Kerala, Madras and Maharashtra. The Bihar Government is considering the levy of a small compulsory cess on the assured command area in addition to water rates. In Madhya Pradesh, a Water Rates Committee is studying the question. The Mysore Government will be shortly amending the Irrigation Act for the purpose of levying a betterment surcharge on water rates. In Orissa, legislation has been adopted for a compulsory basic rate for supply of water, and water rates are being refixed in accordance with its provisions. The U.P. Government is likely to introduce a two-part tariff for tube-wells, under which all cultivators in the commanded area of tube-wells will pay a certain levy per acre and those who actually take water will pay an additional amount. The West Bengal Government has drafted a Bill for levying compulsory water rates. At the same time, all the State Governments are also considering a proposal to bring about a greater uniformity in water rates in different regions or irrigation system in their respective territories.

STEEL INDUSTRY IN SINGAPORE?

An iron and steel survey mission of the United Nations has just gone to Singapore to advise the Government on the technical feasibility of establishing an iron and steel industry there. With the high rate of population growth in Singapore, and the need to provide more employment opportunities for all its workers, the Government has placed great emphasis on industrial development, including the possible establishment of an iron and steel plant.

The U.N. mission is to study and review the various short- and long-term proposals, and select any scheme considered feasible. One proposal concerns a large project with an annual capacity of 500,000 tons or more, consisting of blast furnaces producing pig iron for steel mills abroad. There is also the proposal for a short-term project, capable of more immediate implementation, to meet local needs. This would involve the construction of a rolling mill and melting furnace with a capacity of 20,000-30,000 tons per year, based on ship-breaking as a source of plate and scrap steel. A third proposal is for a small integral steel plant, with an annual output of about 60,000 tons, for local and regional trade. This would include a rolling mill for plate and scrap, a rolling mill for remelted lower grade plate, a suitable steel-making furnace for processing pig iron and a pig iron furnace capable of utilising ores and coal from the region.

PUBLIC DEPARTMENT

NEW PRODUCTS AND PROCESSES

Weaving Problem Solved

A PROBLEM in the weaving industry which over the years has never been adequately solved by conventional methods—that of the bowing and skewing of weft—has been completely overcome by a new machine developed by a British firm of engineers, G. Durrant and Sons Ltd., Cheshire. The machine is a development of a skew weft straightener which the firm have marketed successfully in many parts of the world for a number of years. Made to fit at the entering end of the tenter (or stenter)—and in other positions formerly considered impossible, the straightener squares up both skewed and bowed weft at the touch of a button. Manual handling of the cloth is completely eliminated, the operator being able to stand well away from the machine in the best position for viewing. Because the straightener acts only on a short length of cloth at one time the cloth enters the tenter absolutely straight and entirely free from slack edge; clip or pin damage is thus prevented and as the cloth is stretched along the weft threads a uniform width and improved feeding is achieved. Also as a result of this shortness in length of cloth any change of direction in weft distortion in the piece or at the sewing is quickly corrected. Wandering or cross movement of the cloth is eliminated as a result of the movement of the rollers in and out of parallel. The machine incorporates a special safety device which obviates any jamming and thus protects the electrical equipment from damage. The straightener can be used with most makes of tenter and operated with full efficiency on those equipped with automatic cloth guiders and other similar equipment without impairing the working of the equipment.

Magnetised Plastic Strip

Permanent magnet material in the form of plastic strip, which can be used for such purposes as retaining lids on metal boxes or machinery coolants to collect swarf, has been produced by a Sheffield engineering concern, James Neill and Co. The tape, impregnated with magnetic powder, is semi-flexible, soft, and can be cut with a knife or easily drilled. The strip can be used for magnetic workholding on planning boards, as a reservoir for small components or in short lengths as markers on progress charts. Small ferrous components can be conveyed up steep angles by means of the strip or a number of strips can be fitted side by side to produce a magnetic pad of any desired area. The strip's flexibility is an advantage when used as a paint spray masking on motor cars and other ferrous areas. The firm claims that the magnetism is permanent and can only be destroyed by burning the strip. It is flexible enough to bend into a circle of 3-inch diameter at room temperature without breaking. It is more flexible when warmed and will retain when cold a shape into which it is bent when warm. Overheating destroys the plastic binder before it has any permanent effect on the magnetic properties.

New Industrial Tool

A new industrial tool has been developed by Firth Cleveland Tools Ltd., a U.K. firm which manufactures the 'filing-type' Surform hand tools and power tool accessories. Still based on the file type of tool the purpose of the new product is to cut, smooth, shape and trim materials like mild steel, aluminium, copper and brass. It can be used in normal machine-shop practice. Its working surface consists of a perforated 'blue blade' of hardened end tempered Sheffield tool steel set with numerous scientifically-angled teeth. Features of the tool are its balance, its efficiency when used with only a light pressure, and its ability to trim corners of hard materials without chattering or damage to the blade. It is a very fast cutting tool, and the perforations in the blade effectively prevent clogging. Tests on the Herbert file testing machine indicate that it will stand up to long periods of continuous use without impairing its efficiency.

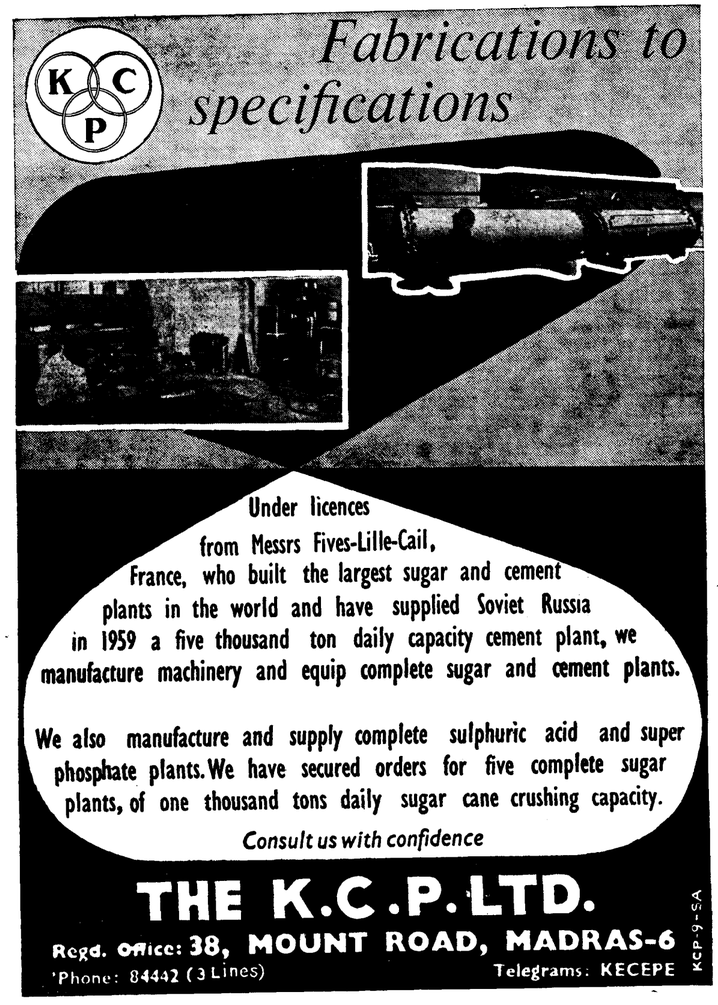
Cloth Press

A Swedish firm has announced a new design of industrial clothes press in which steam can be ejected from the upper "arm" while it is in the raised position. The machine can therefore be used, it is claimed, for both automatic pressing and for hand-forming operations, when the garment is folded and manipulated while steam is being applied to it.

Most clothes presses are fitted with a safety device which prevents hot steam from being ejected into the face of the operator but with the new design the operator can control the steam valve by movement of the hip. In this way the operator has both hands free for manipulation of the garment. The equipment is said to be particularly useful in small factories where trained "hand-formers" are not employed and where such work is carried out by "pressers."

Resilient Ceramic

A slightly resilient ceramic material produced in the United States may find some use in high-temperature gaskets. The material is made from boron nitride and is said to be less brittle than other ceramics and adaptable to slight inequalities of facing surfaces. It may also be possible to use it for high-temperature bearings, since it is composed of flat plate-like flakes which slip over one another with low friction. Stable up to 1,800 degrees F. in air and up to 3,000 degrees in inert gases, the material can be machined with standard cutting tools. It is said to resist most solvents and many corrosive chemicals.



EMPLOYMENT IN INSURANCE BUSINESS

GENERAL SECTION ACCOUNTS FOR LESS THAN ONE-THIRD OF TOTAL

EMPLOYMENT in general insurance is very much in the news nowadays. The closure of some units and the retrenchment of staff in some others have sparked off vociferous demands for nationalisation of general insurance. Two resolutions were tabled in the Lok Sabha last year, one in the first and the other in the last quarter of 1960 (both were moved by Communist members) urging nationalisation of general insurance. Both the resolutions were, of course, rejected by the House.

That the bogey of large-scale retrenchment and unemployment raised in and outside Parliament was mere propaganda by interested parties and that the employment position in general insurance has not been as bad as it is made out to be is borne out by an estimate of employment in insurance business in 1959-60 made by the Central Statistical Organisation. The study, which relates to the year ended 31st March 1960, brings up-to-date a similar estimate for 1958-59 made by the C.S.O. and throws some interesting light on the trend and pattern of employment in insurance. The estimate reveals that employment in insurance (both life and non-life) increased from 51,100 in 1958-59 to 54,300 in 1959-60. The bulk of the increase took place in life insurance, which accounted for 37,600 employees at the end of March 1960, as against 34,900 a year earlier. The number of employees in non-life insurance also rose from 16,200 in 1958-59 to 16,700 in 1959-60.

The Life Insurance Corporation of India had on its pay-roll 37,631 employees on 31st March 1960, as against 34,909 on 31st March 1959, representing an increase of 7.9 per cent. Of the total, male employees numbered 36,704 and females 927. An occupational classification of the employees revealed the following picture.

Category	March 1960		March 1959	
	No.	%	No.	%
Officers (Class I) ..	1,637	4.4	1,442	4.1
Field officers (Class II) ..	5,364	14.2	4,935	14.1
Clerical and supervisory staff	24,536	65.2	22,964	65.8
Attendants, peons, etc..	5,912	15.7	5,441	15.6
Building staff	80	0.2	65	0.2
Others (part-time sweepers, etc.) ..	102	0.3	62	0.2
Total ..	37,631	100.0	34,909	100.0

Distribution of employees by salary range (only basic pay excluding dearness allowance) showed that the largest concentration was in the group Rs. 51 to Rs. 100. A vast majority of the employees, however, draw a basic pay of more than Rs. 100 p.m. Persons drawing more than Rs. 350 p.m. form a little over 6 per cent of the total, 6.2 per cent to be precise, as against 1½ per cent in the Central Government. This percentage has, in fact, increased from 5.9 in 1959 to 6.2 in 1960. The following table gives the pay distribution of the employees of the Life Insurance Corporation.

Monthly basic pay (in rupees)	March 1960		March 1959	
	No.	%	No.	%
Up to Rs. 50	3,419	9.1	3,260	9.3
51—100	13,646	36.2	12,378	35.5
101—150	7,178	19.1	7,218	20.7
151—200	6,531	17.4	5,847	16.7
201—250	2,113	5.6	1,943	5.6
251—300	1,586	4.2	1,498	4.3
301—350	836	2.2	708	2.0
351—500	1,417	3.8	1,296	3.7
501—750	633	1.7	520	1.5
751—1,000	128	0.3	117	0.3
1,001—1,500	111	0.3	95	0.3
1,501—2,000	21	0.1	18	0.1
2,001 and over ..	12	..	11	..
Total ..	37,631	100.0	34,909	100.0

It may be noted that these figures relate only to regular employees. The Corporation had on 31st December 1959 1,48,255 commission agents of which only 94,270 were active.

Figures relating to employment in non-life insurance are not as exhaustive as those concerning life insurance. In the absence of complete data, employment in non-life business had to be estimated on the basis of the figures available from 130 companies employing about 11,500 persons out of a total of 179 companies reported working as at the end of 1959. Total employment in all the companies together as on 31st March 1960 worked out to 16,670, as against 16,200 a year before, indicating that employment in the non-life sector of insurance was less than one-third of the regular employees in the life sector. Details of the occupational distribution of employees were available only in respect of 130 companies, employing eleven to twelve thousand persons out of a total of 179 companies. The occupational distribution of the employees as obtained from these 130 returns is as follows:

Category	March 1960 — 130 companies		June 1958 — 118 companies	
Officers	1,267	11.0	973	9.4
Field staff (salaried) ..	2,109	18.4	1,867	18.1
Professional and technical	187	1.6	106	1.6
Clerical and supervisory.	6,020	52.4	5,694	55.1
Attendants, peons, etc..	1,773	15.4	1,570	15.2
Building staff	42	0.4	47	0.5
Others	94	0.8	74	0.7
Total ..	11,492	100.0	10,331	100.0

It will be seen from the above table that the employment pattern of non-life companies is somewhat different from that of the Life Insurance Corporation. Slightly more than 18 per cent of the employment in the non-life companies comprise salaried field staff, as against 14 per cent in the L.I.C. clerical and supervisory staff, on the other hand, form a smaller percentage in the non-life companies than in the L.I.C.

SOCIAL SECURITY IN NORWAY

With the coming into force of two new laws, namely, the Rehabilitation Assistance Act and the Disability Insurance Act on 1st January 1961, Norway can now boast of having a comprehensive social security system. The only missing thing is a Widow's Insurance.

Most of the social schemes in Norway are administered by autonomous social security boards throughout the country, whose operations are supervised by the National Insurance Institution. Total cost of social security will reach about 2,300 million kroner (£115 million) this year. Almost half of this amount will be paid by members, with employers contributing some 600 million kroner (£30 million). Municipalities and the State will contribute the rest.

The primary objective of the two Acts that came into force on 1st January 1961, is to assist disabled persons to get back to work. First, they receive financial assistance for retraining and a daily allowance while being rehabilitated. If still unable to perform more than one-third of the work in a suitable job, they may claim a pension. Rates are the same as for old age pensions. In addition, the insured may receive a basic benefit to meet extra expenditure caused by his disability, and also a supplementary benefit if special care is required at home. Loans and contributions may also be granted if these will help the disabled person to get fit for work.

Compulsory unemployment insurance, originally introduced in 1939, is now provided under a new law enacted in 1959. In principle, all wage-earners under 70 are thus insured against unemployment. At present, there are some 320,000 members. Exempt from the law are agricultural workers and domestic servants closely related to their employer or his wife, as well as whalers and fishermen, self-employed persons, most public servants, salesmen and agents. Seamen on Norwegian ships sailing in foreign traffic belong to a separate unemployment insurance scheme.

Health insurance, oldest of the numerous social security plans, dates back to 1911. By an Act of 1956, health insurance was made compulsory for all Norwegians, whether employees or employers. At present, about 1,820,000 are covered. The membership is divided into two categories—employees who receive benefits in kind as well as in cash, and non-employees whose insurance covers only benefits in kind. The latter services include medical treatment, with free choice of physician; physiotherapy; speech therapy; midwife assistance; costly medicines; treatment and care in hospital, sanatorium, maternity clinic, and rehabilitation institute. Medical care is extended for unlimited periods. The same applies to hospitalisation. Incapacitated employee-members are entitled to draw cash sickness benefits for up to 104 weeks. The Act contains special provisions for registered fishermen, sealers, whalers, seamen in overseas traffic, civil servants abroad, and military personnel. This scheme is also financed by membership premiums, plus contributions from employers, the State and the various municipalities.

Old age pension payments began in 1937. Under the new law in force since 1st January 1959, the means test is no longer required for getting the basic pension. Any person, 70 years of age, who fulfills certain conditions is eligible, irrespective of capital assets and income. Norwegian subjects and foreign refugees must have resided in Norway or served on Norwegian vessels for five years before putting in claims. The cost of pensions and administration is financed by premiums, paid by every health insurance member, plus contributions from employers, municipalities and the State.

The Norwegian social security system includes eight additional insurance and pension plans. Occupational accident insurance came into force on 1st January 1960. This covers all employees, as well as fishermen, sealers, school children and students. Disability insurance for military personnel introduced in 1953, covers officers and conscripts who are incapacitated in connection with peacetime service. The State pays the whole cost. Pensions are assessed according to income.

Three occupational groups have separate pension plans. About 53,000 seamen, under an Act approved in 1948, belong to an insurance scheme providing for old age pension, widow's pension, and children's pension. A similar insurance, in effect since 1938, provides pensions for Norwegian fishermen, sealers and whalers. There is also a general pension plan for forestry workers.

The children's pension, established in 1946, provides an annual allowance to everyone supporting children under 16, except for the first. There is no means test. The plan covers some 320,000 families with 510,000 children. The State pays seven-eighths and municipalities one-eighth of the cost. Some 26,000 children under the age of 18, who have lost either parent or were born out of wedlock, receive an annual allowance under the 1957 Act on survivor's benefits for children. Finally, Norway has two separate war pension plans for military personnel and civilians.

INSURANCE EMPLOYEES' UNION

The annual report of the General Insurance Employees' Union, Bombay (General Secretary: Mr. K. S. B. Pillai), for the year ended 31st March 1960, contains a synoptical survey of the activities of the Union during the period, including an account of the agreements negotiated or concluded by the Union with the managements of insurance companies in Bombay. The report discloses a welcome trend in the union movement. More and more small unions are merging with the larger and representative unions. For instance, during the year under review, as many as six unions, of insurance employees merged with the General Insurance Employees' Union, Bombay. This is a trend which needs to be encouraged in the interest of healthy and sound trade unionism.

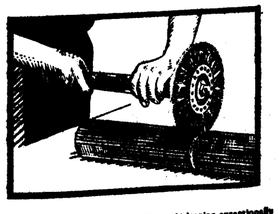
FIRE — MARINE — ACCIDENT

"SCCO"



These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning, and other tough scaling propositions and rough Castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

TITANIUM DIOXIDE MAKES HEADWAY

CASE FOR CONTINUANCE OF PROTECTION

TITANIUM dioxide finds extensive application in a wide range of industries, such as paints, rubber, textiles, soap, plastics, enamelware, ink (printing), linoleum, leather and polish, to mention only a few. Although the industry is of comparatively recent origin in this country, it has made substantial progress, with the result that a considerable part of the pigment requirements of various industries is now being met indigenously. Reliance on imports has thus been reduced. The industry has, however, not been able to meet the domestic demand in full. At present, there is only one unit in the country engaged in the manufacture of titanium dioxide, namely, Travancore Titanium Products Ltd., Trivandrum, Kerala State. The current rated capacity of the unit is 2,947 tonnes per year (as against only 1,829 tonnes in 1957). This is expected to go up to 3,658 tonnes shortly, according to the development plans already undertaken. Further, the Company is contemplating to expand the capacity to 6,604 tonnes within the next two or three years. In the meantime, another unit, we are told, has been licensed in the Maharashtra State, to produce 4,471 tonnes of titanium dioxide per annum. Thus the total annual capacity for titanium dioxide in the country is expected to aggregate 11,075 tonnes by 1963.

The growth of the industry has been stimulated to a great extent by the tariff protection which it has been enjoying for the last seven years. The latest period of protection is due to expire at the end of this year. The Tariff Commission has now taken up the customary investigation into the position of the industry, with a view to examining its case for continuance of protection. Inaugurating the public inquiry in Bombay last week, Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, gave a detailed account of the recent trends in production and consumption of this commodity in this country and outlined the scope for expansion.

History of Protection

It may be recalled that the previous tariff inquiries were held in 1953, 1955 and 1957. Following the first inquiry, protection was granted for the first time in 1953 at the rate of 25.2 per cent *ad valorem* preferential and 35.2 per cent *ad valorem* standard. By the Finance Act of 1954, the protective duty was increased to 25.2 per cent *ad valorem plus* one-fourth of the total duty standard. The second inquiry was held in 1955, and the Government fixed the protective rates of duty at 34 per cent *ad valorem* preferential and 44 per cent *ad valorem* standard exempting this item from the purview of the surcharge. By the Finance Act of 1957, the rates of duty were raised to 35 per cent *ad valorem* preferential and 45 per cent *ad valorem* standard. Following the third inquiry in 1957, the period of protection was extended upto December 1961 at the prevailing rates of duty. On the basis of the Commission's present report, the Government of India will decide whether to maintain protection to it or not beyond this period.

The industry, as is already pointed out, has made good use of the protection afforded to it. There has been a steady increase in the production of titanium dioxide in recent years. During the first eleven months of 1960, output touched 2,503 tonnes, or an annual rate of 2,730 tonnes, which compares quite favourably with 1,872 tonnes in 1959, 1,743 tonnes in 1958 and 1,701 tonnes in 1957. The production of titanium dioxide has mainly been of the anatase variety. For industrial purposes, in fact, another variety, called rutile, is sometimes preferred. Therefore, the Kerala unit proposes to turn out half of its output in the form of rutile. One-third of the total output of the proposed unit in Maharashtra is also expected to be rutile.

The domestic demand for titanium dioxide has gone up sizably, thanks mainly to the increase in the tempo of industrialisation. The improvement in the supply position of anatase would have also prompted the industrialists to substitute it for the imported materials, such as lithopane, zinc oxide and white lead. On the basis of sales and imports, the apparent consumption of titanium dioxide is worked out at as much as 4,500 tonnes (including imports in rutile at 797 tonnes) in 1960, as against 3,279 tonnes (imported rutile 786 tonnes) in the previous year and 2,538 tonnes (imported rutile 360 tonnes). This trend in the growth of demand has been more or less on the lines anticipated by the Tariff Commission in its previous report. For the coming years, the Development Wing has estimated the demand in 1961 to be 5,080 tonnes, 6,096 tonnes in 1962, 8,128 tonnes in 1963 and 9,144 tonnes in 1964, of which about one-third will be rutile. As usual, private estimates of demand vary. Producers have estimated the current demand at 5,588 tonnes and expect it to go up to 8,738 tonnes in 1963. Messrs. T. T. Krishnamachari and Sons, the sole selling agents, have placed the present demand at 6,059 tonnes and that in 1963 at 8,686 tonnes.

Raw Materials

It is reasonable to assume that the demand for this commodity will be higher still, provided the cost of production is brought down. Bringing about a reduction in prices must be a comparatively easy task for this industry, as most of the raw materials are indigenously available. The main raw materials required by the industry are ilmenite sand, sulphuric acid and scrap iron. Besides, a few auxiliary chemicals are also used in small quantities. The Company has set up a sulphuric acid plant in its precincts recently. Since April 1960, its entire requirements of acid are being met from this plant. Previously, it had to purchase it from the F.A.C.T. at Alwaye, incurring additional transport charges. All other basic materials as well as most of the auxiliary chemicals are available in the country. Only a few items like titanium tetrachloride, antimony oxide, and zinc dusts are imported. Mr. Aiyangar, however, drew attention to the apparently high price now charged for the major raw material, namely, ilmenite. To quote Mr. Aiyangar: "It would now appear that the producer is required to pay the same price for ilmenite as Travancore Minerals Ltd. (which owns ilmenite deposits in Kerala) charge for its exports. Even if continuance of the concessional rate at "basic charge" was no longer justified on present price, it remains to be seen whether the potentiality of this developing industry for export are not in any way affected."

As regards import control policy, no licences were issued to established importers since the last enquiry. Only actual users licences were issued on an *ad hoc* basis. From the licensing period April-September 1959 onwards, licences were also granted upto 4 per cent of the f.o.b. value of the exports of grey cloth and yarn. In the case of exports to the U.S., West Germany and Scandinavian countries, licences were granted upto 8 per cent of the f.o.b. value. Against exports of dyed or processed cloth these percentages were to be 6 and 8 per cent, respectively. Imports of titanium dioxide have shown a rising trend, being 552 tonnes (valued at Rs. 14.75 lakhs) in 1957, 810 tonnes (Rs. 19.72 lakhs) in 1958, 1,480 tonnes (Rs. 34.25 lakhs) in 1959 and 1,375 tonnes (Rs. 33.43 lakhs) in the first nine months of 1960.

Imports can be dispensed with only when adequate supply of titanium dioxide of good quality is ensured. Most of the consuming industries seemed to be satisfied with quality of the indigenous product. The Indian Paint Association, however, has observed that there is room for further improvement, because sometimes the domestic product is substandard, particularly in regard to whiteness. Soap and cosmetic manufacturers have also complained that the traces of copper and iron present in the pigment make it unsuitable for them. Considering the need for further improvement in quality, and in view of the ambitious plans for diversification and expansion already undertaken by the industry, there is apparently a strong case for extension of protection to the industry for some more years. The industry, on its part, should strive to reduce the selling price of its product.

FIRST CELLULOSE ACETATE FACTORY IN INDIA

CONSTRUCTION BEGUN AT CALCUTTA

THE first factory to produce cellulose acetate in the country will be commissioned by next autumn at Calcutta. The foundation-stone for the plant was laid the other day by the State's Chief Minister, Dr. B. C. Roy, a brief report of which appeared in *Commerce* last week. The new factory, which belongs to the East Anglia Plastics (India) Ltd., Calcutta, bids fair to open a new chapter in the development of synthetic products in India. Although several synthetic chemicals and artificial silks, such as viscose rayon, nylon and terylene are manufactured in India, they depend on imports for most of the basic raw materials, thereby necessitating the allocation of scarce foreign exchange. In the case of viscose, for instance, the chief raw materials are purified wood-pulp, caustic soda and pure sulphur. The first is not yet produced in the country and the production of the remaining two is not adequate to meet the requirements in full. One of the distinctive features of cellulose acetate is that it can be manufactured out of raw materials available within the country. Molasses (or alcohol) and cotton linters are the chief raw materials for the industry. They are relatively abundant in the country, which is one of the world's leading producers of sugarcane and cotton. It is also claimed that a cellulose acetate factory is one of the most completely integrated industries in the world. Starting from alcohol or acetic acid and raw linters, a whole range of chemicals and textile processes can be built up. Raw linters yield high-alpha cellulose material. The same plant and process can also turn out cellulose for various special types of paper and for munitions (cellulose nitrate) or for the surgical cotton goods trade. Chemical conversion plants can produce acetic acid, acetic anhydride and acetone for sale. Acetate flakes are capable of producing every known grade of cellulose acetate for plastics moulding powders, fibres, yarn, raw film, plastics, etc.

Capacity

To begin with, the East Anglia Plastics (India) Ltd. will manufacture cellulose acetate moulding powder by compounding imported flakes. The annual capacity of the factory in the first phase, working in two shifts, is about 2.91 million lbs. of moulding powders. The uses of cellulose acetate are many and varied. It can be used for making, among others, kitchen utensils, toys, flashlight cases, radio controls, hair ornaments, spectacle frames, telephones, tool handles, tooth-brush handles and combs. In the second stage, expected to be undertaken within a year, a new plant will be erected for the production of its own primary raw materials, cellulose acetate flakes, from molasses and cotton linters. The total cost of this integrated project is estimated at about Rs. 10 crores.

It is said that, in all the industrially advanced countries, acetate is being widely used in a variety of manufacturing processes, particularly rayon. The production of acetate in the U.S., for instance, amounted to 166.8 million lbs., as against 109.2 million lbs. of viscose during the first three quarters of 1958. The corresponding figures for 1957 were 150.7 million lbs., as compared with 126.6 million lbs. Thus, whereas in 1957 acetate led viscose by 19 per cent, in 1958 this proportion was higher at 53 per cent. In 1958, the production of acetate rose by 11 per cent while that of viscose declined by 13½ per cent. In other countries, such as West Germany, the U.K. and Japan, acetate is said to be gaining in importance. The preference for acetate is partly on account of its price advantage and better quality, as compared with other substitutes. It is said that, while the prices of cotton and wool has increased since 1939 by about 150 per cent and that of viscose by 67 per cent, the rise in the price of acetate is relatively less, being only 45 per cent. As compared with other synthetic fibres, acetate is rather cheap. Besides, for weaving and knitting, acetate is considered a highly efficient yarn.

Explaining the reasons why the promoters of the new industry chose to enter into the production line of cellulose acetate, Mr. Ranadeb Chaudhuri, a Director of the Company, observed as follows:

"Of the various plastic materials, cellulose acetate is, perhaps, the oldest. In spite of the fact that plastic industry has, during the last few years, developed immensely and many new synthetic products have found their use for industrial as well as domestic purposes, the acetate moulding powder, having in its favour a number of specific qualities, had played an important role throughout the entire course of development of plastics. Even in the most advanced countries where the plastic industry is highly developed, acetate moulding powders have specific uses in various fields for which it could not be substituted economically by any other plastic material. . . ."

From Mr. Chaudhuri's observations, it is reasonable to assume that the prospects for the industry in the country are bright. The industry is, however, not without its problems. The production of sugar and alcohol in West Bengal is said to be inadequate. The Company has, however, already secured assurances from the State Government for ensuring the regular supply of molasses or alcohol, for the first phase of flake production. Meanwhile, the Company, according to Mr. Chaudhuri, is investigating into the possibility of manufacturing acetic acid from other sources, such as (1) hydrolysis of acetylene to acetyldehyde and then to acetic acid, (2) oxidation of methane to acetylene and then to acetyldehyde and acetic acid, and (3) indirect hydrolisation of ethylene to ethyl alcohol and then as in (1). Ethylene is obtained from coke oven gas.

The Company has secured the collaboration of the East Anglia Plastics Ltd., London, which is an associate of Monsanto Chemical Company of the U.S., and also technical advice from Monsanto Ltd., London. It has entered into agreements with more than one world-famous company for collaboration and for technical know-how for the manufacture of flakes in the second stage. When the Company approached the capital market in the summer of 1960, the response from investors was overwhelming and the issue was heavily oversubscribed. It has as many as 15,000 shareholders, though its total issued capital is no more than Rs. 25 lakhs in shares of Rs. 10 each, of which only Rs. 5 have so far been called up.

ENROLMENT OF EXPORTERS

The Government of India has decided to introduce a scheme for enrolment of exporters as an export promotion measure. The scheme envisages the enforcement of certain minimum standards for the conduct of business on the part of exporters. On the other hand, the enrolled exporters would be afforded certain facilities and would be enabled to take advantage of the special schemes for export promotion introduced from time to time.

The Export Promotion Councils and the Commodity Boards will be the enrolling authorities in respect of commodities in their charge. For other commodities, the Director-General of Commercial Intelligence and Statistics, Calcutta, will be the Enrolling Authority. The enrolled exporters will enjoy certain privileges. Their names will be supplied to the Trade Commissioners and Commercial Secretaries abroad for being introduced to the local importers and will also be included in the *Directory of Exporters* published by the Director-General of Commercial Intelligence. They will be introduced to the visiting overseas buyers. They will enjoy the various facilities accorded by the Government at present to help the export trade.

Exporters who undertake to use standard contract forms for export evolved by the enrolling authority, submit consignments for pre-shipment inspection as may be required by the Enrolling authority, abide by its decision in the case of disputes between themselves and the overseas customers in the matter of export contracts, follow the standards of quality and packing as laid down in this behalf, follow the Code of Conduct when evolved by the enrolling authority for the general guidance of exporters and manufacturers and abide by the provisions of any scheme evolved by the enrolling authority for regulating the utilisation of shipping space for export purposes, would be eligible for registration.

A certificate of enrolment will be issued to all enrolled exporters. The scheme also lays down that all the enrolled exporters should make a plan for export of various products from India to various destinations, so as to co-ordinate with the country's overall plan for export promotion. It also provides for the de-enrolment of exporters, when they cease to fulfil the basic qualifications or fail to fulfil effectively their obligations arising out of the provisions of the scheme.

"INDUSTRIAL BULLETIN"

The Directorate of Industries, the Government of Maharashtra, proposes to bring out a quarterly journal, *Industrial Bulletin*. A special number of the *Bulletin* was released on the eve of the Republic Day at a Press conference at Sachivalaya, presided over by Mr. S. K. Wankhede, Finance Minister. The *Bulletin* seeks to apprise industrialists and potential *entrepreneurs* of "the progress and development of the various industries," apart from imparting "general guidance in establishing new industries and ways and means of getting help from the Government." The special number contains several articles of interest to industrialists in the State. These include "Industrial Development of Maharashtra" by Mr. A. S. Pinge, "Powder Metallurgy" by Mr. N. M. Pai, "Power from Koyna" by Mr. N. G. K. Murti, Chief Engineer of the Koyna Project, and "Fuels for Domestic and Industrial Use" by Mr. P. B. Padaki. There is also a special section containing three articles in Marathi. In addition, there are statistical tables on the various aspects of industry in Maharashtra. While the special number is priced at Rs. 2, regular quarterly issues will cost only Re. 1 each.

Notices

THE RAVALGAON SUGAR FARM LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-eighth Annual General Meeting of the Company will be held at Construction House, Ballard Estate, Fort, Bombay, on Tuesday the 7th March, 1961, at 4-30 p.m. (S.T.), for the purposes of transacting the following business:—

1. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended 30th September, 1960.
2. To declare Dividends on Preference, Ordinary and Deferred Shares.
3. To appoint a Director in place of Shri Ratanchand Hirachand who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company:—

   "Resolved that pursuant to the provisions of Section 261 and other relevant provisions (if any) of the Companies Act, 1956, Shri Ratanchand Hirachand who retires by rotation and who is a Director and Member of Messrs. Walchand & Co. Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."
4. To appoint a Director in place of Shri Valchand Deochand who retires by rotation and who is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution in respect of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company.

   "Resolved that pursuant to the provisions of Section 281 and other relevant provisions (if any) of the Companies Act, 1956, Shri Valchand Deochand, who has attained the age of 67 years and who retires by rotation, be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed by Section 280 of the said Act shall not apply to him."
5. To consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice as required under Sections 257 and 261 of the Companies Act, 1956, has been received by the Company:—

   "Resolved that pursuant to the provisions of Section 261 and other relevant provisions (if any) of the Companies Act, 1956, Shri A. V. Gharpure, an employee of the Indian Hume Pipe Co. Ltd., which is under the same Managing Agents, Messrs. Walchand & Co., Private Ltd., be and is hereby appointed a Director of the Company."
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider and, if thought fit, to pass the following resolution:—

   "In supersession of the resolution passed at the Twenty-fourth Annual General Meeting of the Company held on 26th March, 1957, resolved that the consent of the Company under Section 293(1)(d) of the Companies Act, 1956, be and is hereby granted to the Board of Directors of the Company for borrowing moneys for the purposes of the Company from time to time even though the moneys so borrowed together with the moneys already borrowed by the Company and remaining outstanding or the amounts for the time being and from time to time remaining undischarged of the moneys so borrowed together with the moneys already borrowed may be in excess of the aggregate of the paid-up Capital of the Company and its free Reserves, that is to say, reserves not set apart for any specific purpose, provided that such excess shall not be more than Rs. 3,00,00,000 at any one time and provided further that in computing the amounts of borrowings whether already made or to be made the amounts of temporary loans obtained from the Company's Bankers in the ordinary course of business shall be excluded."
8. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

   "Resolved that approval be and is hereby given to the Company for taking advances and/or loans from Managing Agents Messrs. Walchand & Co. Private Ltd., and to the payment of interest on such advances and/or loans made or to be made from time to time to the Managing Agents at such rate as may from time to time be determined by the Board of Directors."
9. To consider and, if thought fit, to pass the following resolution as a Special Resolution:—

   "Resolved that Article 158 of the Articles of Association of the Company be substituted in the manner following:—

   "158. Walchand & Co. Private Limited and (subject to the provisions of the Companies Act, 1956) their successors in business and assigns shall be the Managing Agents of the Company from the 15th day of August, 1960, for a period of five years upon the terms, provisions and conditions set out in the Agreement dated 23rd August, 1960, approved by the Company in General Meeting and by the Central Government."

The Transfer Books of the Company will remain closed as from Wednesday the 25th January, 1961, to Saturday the 18th February, 1961 (both days inclusive).

By Order of the Board,
S. S. BORKAR,
Acting Secretary.

CONSTRUCTION HOUSE,
BALLARD ESTATE, FORT,
BOMBAY: *24th January*, 1961.

Note:—(1) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a member.

(2) The Dividends, if sanctioned will be paid at Devkaran Nanjee Banking Co. Ltd., Fort, Bombay, on and from Monday the 13th March 1961, to those Members whose names stand on the Company's Register as on Saturday the 18th February 1961.

(3) Explanatory Statement as required by Section 173 of the Companies Act, 1956 has been separately sent to all members of the Company.

NEW CENTRAL JUTE MILLS CO. LIMITED

NOTICE

THE BOARD OF DIRECTORS OF THE Company have decided to issue Right Ordinary shares of Rs. 10 each at a premium of Rs. 3.25 nP per share in the capital of the Company and offer the same to the holders of existing Ordinary Shares in the ratio of one new Ordinary Share for every two Ordinary Shares.

The Share Transfer Books and the register of ordinary members of the Company will remain closed from 21st February to 1st March, 1961, both days inclusive.

FOR NEW CENTRAL JUTE MILLS CO., LTD.,
FOR SAHU JAIN LTD.,
A. K. JAIN,
Managing Director,

HINDUSTHAN SUGAR'S PERFORMANCE EXCELLENT

NET PROFIT MORE THAN DOUBLES

IN consonance with the general trend of working of sugar industry in the 1959-60 season, which witnessed a marked rise in production, the financial statement of the Hindusthan Sugar Mills Ltd. (Managing Agents: Messrs. Bachharaj & Co. Private Ltd., Bombay) for the year ended 30th June 1960 shows excellent results. Thus the quantity of cane crushed increased substantially from 9.54 million maunds (in 1958-59) to 15.87 million maunds and the recovery of sugar also went up from 9.84 per cent to 10.05 per cent. Although the recovery per cent was not the highest on record (which is 10.49 per cent for 1957-58), the crushing, as also the actual sugar produced, was a record high. Like the other sugar mills in U.P., the Hindusthan Sugar has also availed itself of the tax concessions given by the Government of India for increasing production. It will be recalled that, in order to secure larger production of sugar, the Government gave two important incentives: (*a*) a 50 per cent rebate in the basic excise duty leviable on delivery of as much production of sugar as exceeded the average production of 1957-58 and 1958-59 seasons; and (*b*) a concession of 31 nP per maund of cane crushed till 15th November 1959 by factories in U.P. and Bihar. The Company's production of sugar in 1959-60 exceeded the average production of the preceding two years by 583,781 maunds and the Company obtained a concession of Rs. 2.42 lakhs on cane crushed till 15th November 1959. The output of power alcohol from the Company's distillery also recorded a sharp rise from 798,917 gallons to 1,165,439 gallons.

Thanks to the overall improvement in production, the Company's gross profit has advanced from Rs. 43.83 lakhs to Rs. 66.50 lakhs, a new high in the Company's history. The net profit shows a still more impressive rise. In fact, it has more than doubled itself between 1959 and 1960, moving up from Rs. 12.02 lakhs to Rs. 25.49 lakhs. Whereas the gross profit has gone up by 52 per cent, the net profit has shot up by 111 per cent notwithstanding the fact that the Directors have made substantial provisions for taxation, depreciation and Managing Agents' remuneration. The provision for taxation has been stepped up from Rs. 11.85 lakhs to Rs. 20.10 lakhs during the year. The Managing Agents' remuneration is higher by Rs. 2.46 lakhs at Rs. 5.17 lakhs. Only depreciation is a shade lower at Rs. 15.74 lakhs as against Rs. 17.25 lakhs a year before. The dividend to equity shareholders has been nearly doubled from 15 per cent taxable to 29 per cent taxable, as will be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sale proceeds	4,34.16	4,31.40	3,85.58	4,10.58

* Subject to tax.

The Directors have set aside Rs. 2.15 lakhs for the development rebate reserve, as against only Rs. 1.05 lakhs in 1958-59. The transfer to general reserve has also been stepped up from Rs. 4 lakhs to Rs. 6 lakhs. The dividend, as already mentioned, has been increased from 15 per cent (taxable) to 29 per cent (taxable) which means a tax-free return of 20.3 per cent. The proposed dividend at 29 per cent (taxable) is the highest on record in recent years.

Critics of the private sector may say that the Company has frittered away the profits by paying high dividends, instead of ploughing back the major portion of the increase in profits. But they will do well to bear in mind that the Company comes under Section 23A of the Income-tax Act which compels it to distribute a large percentage of the surplus under pain of a high rate of penal tax.

There are two issues of vital importance to the sugar industry to which the Directors' report makes a pertinent reference. The first one relates to the price linking formula. It has been seen above how the concessions granted by the Government of India have stimulated the production of sugar. But, under the formula for fixing sugarcane prices announced by the Government, the cane growers are also entitled to a share in the concession and rebate given by the Government. As the representatives of both the sugar industry and the cane-growers had raised objections to the price-linking formula the entire question has been referred to the Tariff Commission.

It may be noted here that in the profit and loss account of the Company the Directors have shown Rs. 2.42 lakhs as the concession received by the Company for early crushing. The position in regard to rebate on excise duty on the increased production is not clear. The rebate, they say, will be earned in the current year.

The second issue pertains to the aggregate national target of sugar production adopted in the draft third Plan. Emphasising the need to stimulate sugar exports, the Directors observe:

"By achieving record production of more than 24 lakh tons, the industry has justified the policy of incentives adopted by the Union Government. The extra production has enabled the industry to carry over stock of nearly 5.5 lakh tons on 1st November 1960 which is more than three months' sugar requirements of the country, as against only 1.53 lakh tons carried over on the corresponding date last year. The sudden rise in production has however created other problems. Current season's production is estimated at not less than 26 lakh tons, while sugar offtake which was 20.21 lakh tons in 1959-60 may increase to only 21 or 21.5 lakh tons in 1960-61. Thus unless four to four and a half lakh tons sugar is exported, the industry will be faced with a carryover of nearly one million tons sugar at the commencement of the next season, that is, on 1st November 1961, when it is hardly possible for the industry to store and finance. Sugar export market for India is very limited and, in common with the policy adopted by other sugar-producing countries, exports can be made only at a very heavy loss. In view of the acute shortage of foreign exchange and the need to ensure disposal of the standing cane crop, export of sugar under the Sugar Export Promotion Act appears to be the only remedy. If negotiations for export of sugar to U.S. are successful, the loss on exports will be minimised. It is obvious that if we do not succeed in exporting sizable quantities of sugar to U.S.A., the recent increase in the target of sugar production from the figure of three million tons mentioned in the Draft Outline of the third Five-year Plan period to 3.5 million tons during the same Plan period, will have to be revised and may require to be brought down to the original target of 3 million tons."

The prospects for the current year, according to the Directors, are quite promising. During the current year, the area under sugarcane in the reserve zone, where the factory of the Company is situated, has shown a further increase. The condition of the crop is, on the whole, satisfactory. All these factors are expected to contribute to improved performance in 1960-61.

The Company's balance-sheet as on 30th June 1960 shows a satisfactory financial position. The paid-up capital, at Rs. 65 lakhs, is made up of 5,000—5 per cent tax-free preference shares of Rs. 100 each and 60,000 ordinary shares of Rs. 100 each. Out of this amount, the entire preference capital (Rs. 5 lakhs) and Rs. 55 lakhs of ordinary capital represent capitalisation of reserves over a period of years in the past. Even then, the reserve and surplus aggregate Rs. 78.84 lakhs. The current liabilities and provisions (including secured and unsecured loans) at Rs. 246.11 lakhs are adequately covered by current assets amounting to Rs. 279.71 lakhs. During the year, the unsecured loan from the Managing Agents has been sizably reduced from Rs. 6.20 lakhs to Rs. 1.02 lakh, while fixed deposits have gone up from Rs. 7.59 lakhs to Rs. 8.89 lakhs. The gross value of the block account, at Rs. 229.20 lakhs, including the addition of Rs. 8.42 lakhs made during the year, has been written down to Rs. 110.24 lakhs.

The Rs. 100 paid-up ordinary shares of the Company are being quoted at Rs. 341.25 *cum-div.* On an *ex-div.* basis the yield works out to 6.50 per cent tax-free.

NEW SWADESHI SUGAR FARES WELL

DIVIDEND COMFORTABLY MAINTAINED

THE New Swadeshi Sugar Mills Ltd. (Managing Agents: Messrs Cotton Agents (P) Ltd., Bombay) has reported a net profit of Rs. 12.51 lakhs for the year ended 30th June 1960 after providing for depreciation and taxation, amounting to Rs. 1.47 lakhs and Rs. 10.35 lakhs, respectively. As compared with that (Rs. 10.55 lakhs) for the previous year, this shows a substantial improvement. The dividend to ordinary shareholders has been fully maintained. At 29 per cent per annum taxable, it is the same as that for 1958-59 and a shade higher than the 20 per cent per annum, tax-free, for 1957-58 and 1956-57.

The sale proceeds were up by about Rs. 15 lakhs during the year under review and by nearly Rs. 65 lakhs as compared with 1957-58. This was possible, because the Company's factory, which is in Bihar, was able to do a record crushing. Here is another instance of the efficacy of the special incentives given by the Government of India for bringing about an increase in sugar production. The average recovery was, however, slightly lower at 9.66 per cent, as against 9.88 per cent during the previous year. The lower recovery, which was in common with other sugar mills in North Bihar, was mainly due to unfavourable climatic conditions and the longer duration of the crushing season. During the current season, the Company hopes to maintain the crushing operations at the past year's level.

The following figures will show at a glance the general trend of the Company's working in the last four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sales	1,76.88	1,62.24	1,11.99	1,84.81

* For the years 1959 and 1960, the dividends are taxable and for 1957 and 1958 tax-free.

The Company is erecting a distillery at Narkatiaganj which is expected to go into production during the current year. The vegetable and fruit processing factory set up by the Company under the name of Allahabad Canning Company started production from 30th November 1960.

The Company has reduced its borrowings for working finance from the State Bank of India gradually, in view of increased sales and better realisation. It has also invested an amount of Rs. 5.20 lakhs in the capital of its subsidiaries which include the Tims Products Ltd. and Champaran Marketing Company Ltd., at Calcutta. The working of the subsidiaries are satisfactory. The Tims Products Ltd., Calcutta, in which nearly 50 per cent of the ordinary capital is held by the Company, reported a net profit of Rs. 1.03 lakhs for the year ended 31st December 1959, after working unremuneratively in previous years.

The financial position of the Company is sound. As against a paid-up capital of Rs. 13.50 lakhs (all in ordinary shares), reserves and surplus aggregate Rs. 63.94 lakhs. Current liabilities amount to Rs. 67.43 lakhs, which are amply covered by current assets of the order of Rs. 86.10 lakhs, excluding investments in subsidiaries and shares of other companies amounting to Rs. 7.46 lakhs. The gross block of Rs. 77.49 lakhs (inclusive of Rs. 11 lakhs added in 1959-60) has been written down to Rs. 38.46 lakhs.

The term of office of the Managing Agents, Cotton Agents (P) Ltd., which, expired on the 15th August 1960, was renewed by the shareholders for a further period of 10 years, but the Government of India has approved the reappointment for a period of five years only.

The ordinary shares of the Company of Rs. 100 each are currently quoted at Rs. 360. At this rate and on the basis of a net dividend of 20.3 per cent, the yield works out to 5.64 per cent.

RECORD SALES BY PREMIER AUTOMOBILES

NOTABLE IMPROVEMENT IN FINANCES

THE automobile industry in India took a turn for the better in 1954, when the Tariff Commission recognised the importance of the industry in the economic development of the country and recommended that the domestic market be reserved for indigenous manufacturers. It is true that, since then, the industry's path has not been smooth, for, though the Government accepted this recommendation, it placed several other obstacles. But that year was a decisive turning point and the industry has been gradually moving forward, especially in the last two or three years in particular. Its production in 1960 was higher by 46 per cent over 1959 and 65 per cent over 1956. The most heartening sign for its prospects is the rapid growth of ancillary industries. It has a bright future and will contribute its due share to the development and prosperity of the country as it has done all over the world. The development of this industry will yield widespread benefits to the public, as it ensures (1) quick and cheap transport, (2) increase in gainful employment, (3) rise in incomes and (4) comforts of modern life. In fine, the vehicles it turns out are vehicles of progress. Whatever assistance is given to it in the initial stages will be returned manyfold in a few years.

The progress of the Premier Automobiles Ltd. (Chairman: Mr. Lalchand Hirachand, Bombay), the pioneer in the field, has been in keeping with this general trend. Its sales have steadily grown from 1954, except in the year ended June 1958, when the factory remained closed for about two and a half months, due to labour troubles. Sales of cars, trucks and spare parts, etc., reached a record figure of Rs. 20.95 crores in the year ended 30th June 1960, as against Rs. 17.43 crores in the previous year, that is, an increase of over 20 per cent. The closing stocks at Rs. 324.60 lakhs in all the departments are substantially lower than the opening stocks at Rs. 441.10 lakhs. Stocks of raw materials are down by Rs. 47.06 lakhs at Rs. 128.12 lakhs, work-in-progress by Rs. 42.60 lakhs at Rs. 32.58 lakhs and finished goods by Rs. 26.85 lakhs at Rs. 163.89 lakhs. On the expenditure side, stores and spares consumed have been higher at Rs. 484.85 lakhs, as against Rs. 365.81 lakhs. Fuel and power consumed have gone up from Rs. 12.10 lakhs to Rs. 17.82 lakhs, salaries, wages, gratuity, etc., including provident fund, insurance schemes and staff and labour welfare, from Rs. 140.07 lakhs to Rs. 189.15 lakhs. The item purchase of cars, trucks, spare parts, etc., shows a reduction from Rs. 11,83.56 lakhs to Rs. 10,69.01 lakhs, reflecting partly the depletion of stocks brought in and partly the increase in the parts manufactured by the Company. The payment of interest on debentures, to Managing Agents, banks and others, has gone down from Rs. 32.99 lakhs to Rs. 29.60 lakhs. The drop in payment of interest on debentures due to its conversion into ordinary shares is not fully reflected, as there has been a sharp rise in interest paid to banks and others.

As a result of higher sales, the gross profit has increased from Rs. 104.51 lakhs to Rs. 153.88 lakhs. The net profit, too, is higher by about one and a half times at Rs. 64.69 lakhs as against Rs. 40.98 lakhs in the previous year. The net profit has been arrived at after sharply raising the provision for depreciation from Rs. 28.54 lakhs to Rs. 44.23 lakhs, for taxation from Rs. 27.33 lakhs to Rs. 34.00 lakhs and for Managing Agents' remuneration, which is subject to adjustment, from Rs. 7.66 lakhs to Rs. 10.96 lakhs. A good part of the increase in net profit has been conserved. Thus, a sum of Rs. 15.27 lakhs has been transferred to general reserve and Rs. 5 lakhs to dividend equalisation reserve, as against *nil* in the case of both in the previous year. The proposed dividend of 9 per cent subject to deduction of tax, though the same as that for the previous years, will cost the Company Rs. 11.08 lakhs more at Rs. 30.97 lakhs on account of conversion of debentures into ordinary shares. Upto the end of the year under review, 1,52,564 debentures were converted into 'A' ordinary shares, out of Rs. 1,60,000 convertible debentures of Rs. 100 each issued in 1958.

The Company is making steady progress in the implementation of the programme for progressive manufacture of all the parts of cars and trucks, as will be seen from the following extracts from the Directors' Report:

"All the machinery required for the manufacture of Fiat transmission and axles have been received and installed. Satisfactory progress is being made on the production of components for transmission under the guidance of Fiat technicians who have specially come over here to assist the Company in early completion of this project.

"As for the front and rear axles for trucks, all the important components, including the differential gears and pinions, carriers, half shafts, cases, front brake drums, etc., are being produced in the factory. The manufacture of axles is, therefore, making fair progress.

"The heat treatment equipment and generators are in operation now. The quality of gears and other components which require various types of heat treatment has considerably improved as a result of the installation of this equipment. We feel proud to state that we are the first to install this equipment. Following the installation of this equipment, the quality of production has not only improved but wastage in production has also been minimised.

"As for the sheet metal components for Dodge trucks and Fiat cars a complete study has been made in consultation with the Chrysler Corporation and the Fiat Corporation for equipment, dies, presses, structural work, foundation, layout, etc., and the project has received Government approval. An approach has been made to Development Loan Fund for a loan to finance the same as far as foreign exchange requirements are concerned."

Since the publication of the report, the Company has been granted a loan of Rs. 3.43 crores by the U.S. Development Loan Fund for increasing the indigenous content from 60 per cent to 85 per cent.

The comparative figures given in the following table brings out the Company's growth in the last four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1960	1959	1958	1957
Sale proceeds	20,94.88	17,42.80	14,47.32	18,08.67

* Subject to deduction of tax.

The rapid growth in the capacity has found the capital of the Company to be insufficient. During the year under review, the Company made an issue in February of 1,84,600 additional shares of Rs. 100 each. These were issued at par at the rate of one share for every two shares held. Since then, the Company has submitted an application to the Government for the expansion programme. The additional capital expenditure for the purpose is estimated at Rs. 25 crores. The Directors, therefore, propose to increase the authorised capital from Rs. 10 crores to Rs. 25 crores divided into equity shares and such other class of shares may be decided by them later. The resolution effecting these changes in the capital will be proposed at the ensuing annual general meeting of the Company.

For reasons already mentioned, the paid-up capital of the Company has increased from Rs. 227.65 lakhs to Rs. 473.29 lakhs. The balance of share application and allotment moneys account amount to Rs. 17.69 lakhs. Reserves and surplus aggregate Rs. 121.06 lakhs, comprising Rs. 53.50 lakhs development reserve, Rs. 35 lakhs general reserve and Rs. 10 lakhs dividend equalisation reserve. The secured loans have dropped from Rs. 506.77 lakhs to Rs. 390.92 lakhs, thanks to conversion of the major portion of debentures into ordinary shares. As at the end of the year under review, the outstanding amount of 6½ per cent convertible debentures is Rs. 7.43 lakhs only. Under current liabilities and provisions, advances and deposits from dealers, etc., have sharply dropped from Rs. 139.45 lakhs to Rs. 13.22 lakhs. The gross block has increased by Rs. 118.90 lakhs to Rs. 594.80 lakhs and the net block stands at Rs. 330.43 lakhs, depreciation provided so far being Rs. 264.37 lakhs. The current assets total Rs. 989.04 lakhs and exceed the current liabilities at Rs. 707.43 lakhs by a handsome amount.

The current market quotation of the Rs. 100 paid-up ordinary shares is Rs. 164 *cum-dividend*. This gives a return of 3.8 per cent, tax-free, or a net dividend of Rs. 6.30 per share.

OUDH SUGAR ADDS MORE TO RESERVES

PROSPECTS FOR CURRENT YEAR GOOD

THE performance of the Oudh Sugar Mills Ltd. (Managing Agents: The Cotton Agents (Private) Ltd., Bombay) for the year ended 31st July 1960, as disclosed by the accounts of the Company for that year, marks a distinct improvement over that for the previous year. The incentive scheme adopted by the Government of India for stimulating the production of sugar has definitely helped the Company in raising the output of its factory. Under this scheme, the sugar factories were granted a concession in sugarcane cess of 31 nP per maund of cane crushed upto 15th November 1959 and a rebate of 50 per cent. of the basic excise duty on production during 1959-60 in excess of the average production of the preceding two years. The management of the Oudh Sugar Mills took prompt steps to benefit by the tax concessions and consequently the Company secured a rebate of Rs. 1.58 lakhs for the early start of crushing. The Company's excess production amounted to 321,874 maunds. The aggregate quantity of cane crushed has staged a sharp increase from 6.1 million maunds to 10.1 million maunds and the sugar recovery from 9.74 per cent. to 10.13 per cent. Its total sales proceeds also recorded a substantial improvement from Rs. 684.70 lakhs to Rs. 726.02 lakhs. The production of power alcohol and spirit, too, has recorded an impressive rise from 836,000 gallons to 1,122,000 gallons. The Company's oil mill and ice factory worked satisfactorily during the year and the production of both *vanaspati* and ice was nearly maintained at the previous year's levels.

The cumulative effect of all these improvements is reflected in the gross profit of the Company, which has gone up from Rs. 49.28 lakhs to Rs. 53.76 lakhs. The net profit for the year, after providing Rs. 4.54 lakhs for Managing Agents' remuneration, Rs. 7.14 lakhs for depreciation and Rs. 14.90 lakhs for taxation, stands at Rs. 27.18 lakhs, as against Rs. 20.16 lakhs in the previous year. With a view to conserving resources for future years, the Directors have transferred substantial amounts to the Company's reserves. Thus, a sum of Rs. 5.56 lakhs has been set aside as development rebate reserve as against a mere Rs. 80,000 in the previous year. In addition, the amount transferred to general reserve has also been stepped up from Rs. 5.25 lakhs to Rs. 5.85 lakhs. The aggregate amount ploughed in by the Company for future expansion and contingencies has increased by Rs. 5.36 lakhs and represents nearly 42 per cent. of the net profit. The Directors have recommended a handsome dividend of 20 per cent., subject to tax, which would give a tax-free return of 14 per cent. It may be noted that for the preceding year the dividend, on a tax-free basis, was 12.78 and for 1957-58 and 1956-57 it was 12.50 per cent. per annum. The amount required for distribution to equity shareholders is of the order of Rs. 15.69 lakhs, as against Rs. 14.29 lakhs for the previous year. This leaves Rs. 24,000 for carrying forward to next year, as against Rs. 16,000 brought in. It will thus be noted that the Directors have followed a judicious policy in regard to appropriation of the improved profit. They have ploughed back a substantial part of the increase, without at the same time denying the shareholders a share in it.

The following comparative table shows the progress of the Company in recent years:

(In lakhs of rupees)

	For the year ended 31st July			
	1960	1959	1958	1957

(*Continued on page 308*)

SYNOPSES OF COMPANY REPORTS

Waverley Jute Mills Co., Ltd.

THE directors of the above Company (Secretaries and Treasurers: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st May 1960.

The profit for the year after providing for deteriorated stores Rs. 50,000 (Rs. 1,00,000), depreciation Rs. 1,05,254 (Rs. 1,14,484) and taxation Rs. 2,50,000 (Rs. 9,400) amounts to Rs. 2,51,766 (Rs. 2,99,010). To this amount must be added the credit balance brought forward from the previous year of Rs. 1,03,603 (Rs. 11,735) making a total of Rs. 3,55,369 (Rs. 3,10,745). After deducting from this forfeited dividends paid amounting to Rs. 25 (*nil*) there is an available balance of Rs. 3,55,344 (Rs. 3,10,745). This amount the directors recommend should be distributed as follows: To payment of dividend for the year ended 31st May 1960, subject to deduction of tax, on 15,000 preference shares at the rate of 5 (5 per cent grossed up at 30 per cent for the years 1958 and 1959) per cent per annum, absorbing Rs. 37,500 (Rs. 1,07,142), additional 30 per cent of Rs. 37,500 under the provisions of the Preference Shares [Regulation of Dividends) Act, 1960, absorbing Rs. 11,250 (*nil*), on 15,000 preference shares additional at 5 (5) per cent per annum. absorbing Rs. 37.500 (Rs. 37,500) and on 2,50,000 ordinary shares at Re. 0.30 (Re. 0.25) per share, absorbing Rs. 75,000 (Rs. 62,500) leaving a credit balance to be carried forward of Rs. 1,94,094 (Rs. 1,03,603).

As reported previously, the Mills closed down in June 1957. but during the year under review, the loom hours have been sold to other mills within the McLeod Group and this has enabled the Company to show a profit.

The managing agents' agreement with McLeod & Co., Ltd., Calcutta, expired on 15th August 1960, under the provisions of Section 324 of the Companies Act, 1956 and McLeod & Co., Ltd., were then appointed secretaries and treasurers of this Company with the approval of the Central Government for a period of five years.

Accounts in brief are as under:—

Kelvin Jute Co., Ltd.

The directors of the above Company (Managing Agents: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st May 1960.

The profit for the year after providing for depreciation Rs. 4,59,207 (Rs. 4,85,392) and taxation Rs. 5,55,000 (Rs. 5,35,000), amounts to Rs. 7,90,476 (Rs. 6,18,310). To this must be added provision for wealth tax written back Rs. 5,320 (nil) and credit balance brought forward from the previous year of Rs. 1,63,584 (Rs. 1,18,689) making a total of Rs. 9,59,380 (Rs. 7,82,999 including Rs. 46,000 being developmcnt rebate reserve written back). From this amount is deducted West Bengal sales tax due from Government in respect of previous years written off Rs. 9,996 (*nil*), amount transferred to development rebate reserve Rs. 1,46,000 (Rs. 56,000) and amount transferred to general reserve Rs. 1,50,000 (Rs. 1,00,000) leaving an available balance of Rs. 6,53,384 (Rs. 6.25,584). This amount the directors recommend should be distributed as follows: To dividend on 10,000 preference shares at the rate of 7 per cent per annum, subject to deduction of tax, for the year ended 31st May 1960, absorbing Rs. 70,000 (Rs. 70,000), additional 30 per cent of Rs. 70,000 under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, amounting to Rs. 21,000, additional 30 per cent of Rs. 70,000 being preference dividend for the year ended 31st May, 1959, declared on 6th January, 1960 under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, amounting to Rs. 21,000 and dividend on 28,000 ordinary shares at Rs. 15.00 (Rs. 14.00) per share, subject to deduction of tax, for the year ended 31st May, 1960, absorbing Rs. 4.20,000 (Rs. 3,92,000) leaving to be carried forward Rs. 1,21,384 (Rs. 1,63,584).

During the year these mills worked 48 hours per week with the percentage of the looms sealed varying from time to time in accordance with the recommendations of the Indian Jute Mills' Association under the terms of the working time agreement.

Raw jute prices in Pakistan rose to unprecedented levels when it became evident that there would be a shortage in world supply, the prices of raw jute followed the same pattern in India early in October, 1960. Various measures have been taken by the Forward Markets Commission through the East India Jute and Hessian Exchange Ltd. to halt the price rise through impositions of margins on transferable specific delivery contracts both in manufactured goods and raw jute, and these measures have had the effect of checking the rise in price of manufactures but raw jute prices have not been checked to the same extent. At the time of writing, prospects for the current year are not encouraging.

Alliance Jute Mills Co., Ltd.

The directors of the above Company (Secretaries and Treasurers: Messrs. McLeod & Co., Ltd., Calcutta) submit the audited accounts of the Company for the year ended 31st May 1960.

The profit for the year after providing for depreciation Rs. 2,96,727 (Rs. 1,84,379) amounts to Rs. 8,94,083 (Rs. 6,56,095). To this must be added the amount overprovided in liability in respect of previous period written back Rs. 53,872 (Rs. 19,387) making a total of Rs. 9,47,955 (Rs. 9,50,482 including Rs. 2,75,000 transferred from general reserve). After deducting the debit balance brought forward from previous year of Rs. 1.88,265, forfeited dividends paid Rs. 100 (Rs. 857), development rebate reserve Rs. 2,64,750 (Rs. 29,200) and income-tax in respect of the year, 1955-56 Rs. 2,165 leaving a balance of Rs. 4,92,675 (Rs. 9,20,425). Out of this amount the directors have already declared interim dividends for the year ended 31st May 1960, subject to deduction of tax, as follow:—On 15,000 preference shares at the rate of Rs. 3.00 (Rs. 6.00) per share, absorbing Rs. 45,000 (Rs. 2,62,500 for the periods ended 31st May 1957, 31st May 1958 and 31st May 1959) and on 30,000 ordinary shares at the rate of Rs. 6.00 (*nil*) per share, absorbing Rs. 1,80,000 (*nil*) leaving an available balance of Rs. 2,67,675 (a debit balance of Rs. 1,88,265 after deducting the loss of Rs. 8,46,190 brought forward from the previous year). This amount the directors recommend should be distributed as follows:—On preference shares subject to deduction of tax additional 30 per cent of Rs. 2,62,500 being preference dividend declared on 2nd February 1960, for the period from 1st July 1956 to 31st May 1959, under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, absorbing Rs. 78,750, for the year ended 31st May 1960 on 15,000 preference shares at 3 per cent per share, absorbing Rs. 45,000 and additional 30 per cent of Rs. 90,000 being preference dividend [including interim dividend] under the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, absorbing Rs. 27,000 leaving a credit balance to be carried forward of Rs. 1,16,925 (debit of Rs. 1,88,265).

During the year under review, the North Mill remained closed and the South Mill worked on a double shift basis with the percentage of looms sealed varying from time to time in accordance with the recommendations of the Indian Jute Mills' Association under the terms of the working time agreement. On an average 555 looms were worked 96 hours per week on double shift during the year.

Prospects for the current year are not encouraging as the price of manufactured goods has not risen to the same extent as the price of raw material and due to the curtailment of working hours higher costs will result.

For further modernisation of the fine side of the Mill, an application has been submitted to the National Industrial Development Corporation Ltd. for a loan of Rs. 21,49,200. This matter is still under consideration by the National Industrial Development Corporation Ltd. In the meantime, an import licence has been received for certain additional machinery to improve the working of the sacking weft side of the Mill.

The managing agents agreement with McLeod & Co., Ltd., Calcutta, expired on 15th August 1960, under the provisions of Section 330 of the Companies Act, 1956, and McLeod & Co., Ltd., were then appointed secretaries and treasurers of this Company with the approval of the Central Government for a period of five years.

Bharat Sugar Mills Ltd.

The directors of the above Company (Managing Agents: The Cotton Agents Private Ltd. Bombay) present the audited accounts of the Company for the year ended 30th June 1960.

The accounts show a profit of Rs. 8,42,161 (Rs. 6,74,270). Out of this, provision has been made for depreciation amounting to Rs. 1,04,972 (Rs. 1,01,478), development rebate Rs. 3,165 (Rs. 96,000) and for taxation Rs. 4,85,000 (Rs. 2,25,600) leaving a sum of Rs. 2,49,024 (Rs. 2,51,192). With the balance brought forward from the previous year of Rs. 5,149 (Rs. 3,957) there is a total sum available for disposal of Rs. 2,54,173 (Rs. 2.55,149). The directors recommend payment of dividend, subject to deduction of tax under the Income-tax Act, on 5,000 cumulative redeemable preference shares of Rs. 100 each at 5 per cent per annum absorbing Rs. 25,000 (Rs. 25,000) and on 1,50,000 ordinary shares of Rs. 10 each at Re. 1.50 (Re. 1.50) per share, absorbing Rs. 2.25,000 (Rs. 2.25,000) leaving a balance to be carried forward of Rs. 4,173 (Rs. 5,149).

During the year under review the factory worked for 163 days and crushed 24,98.561 maunds of sugar cane against working of 125 days and crushing of 18,74,945 maunds in the previous year. The recovery was, however, lower at 9.93 per cent against 10.15 per cent in the previous year. The lower recovery which was in common with the other sugar mills in Bihar was due to early start of crushing and longer duration of the season. During the current season a crushing of about 27.50 lakh maunds of sugarcane is expected.

The Government of India announced certain incentives to the sugar factories during the year to encourage increased production of sugar. The incentives were in the shape of a concession of 31 nP per maund of cane crushed upto 21st November 1959 if crushing was started on or before 10th November 1959 and a rebate of 50 per cent of the basic excise duty on production during the season 1959-60 in excess of the average production of the seasons 1957-58 and 1958-59. In the case of this factory a rebate of Rs. 55.896 for early start of crushing was granted. The excess production amounted to about 70,605 maunds.

Direct allotments by the Government in respect of sugar released for internal consumption as also control on distribution and price of sugar are continuing.

In October, 1960 the Government of India allotted an export quota of 189.85 tons of sugar from the production of the season 1959-60 to the Company's mills against a quota of 45.72 tons from the production of season 1958-59.

The Company's farms yielded 58,192 maunds of sugar cane as against 47,123 maunds of sugarcane during the previous year. The average yield of sugarcane per acre was better.

The term of office of The Cotton Agents Private Ltd., the managing agents of the Company expired on the 15th August 1960. They were reappointed as managing agents of the Company by the shareholders for a further period of 10 years with effect from 15th August 1960. The Government of India have, however, approved the reappointment for a period of five years only.

Accounts in brief are as under:—

LIABILITIES	Rs.	ASSETS	Rs.
Capital ...	20.00,000	Gross block	23.95,027

N.B.—Figures within brackets relate to the corresponding period of the previous year.

COMPANY AFFAIRS

(*Concluded from page 307*)

mills, as against 1,413 bags from the previous season's production.

During the year 1959-60, the Company redeemed 14,662 cumulative redeemable (4 per cent. tax-free) preference shares of Rs. 25 each. Consequently, the Company's balance-sheet as on 31st July 1960 shows a reduction in paid-up capital from Rs. 81.19 lakhs to Rs. 77.52 lakhs, all in ordinary shares. Reserves and surplus aggregate Rs. 90.02 lakhs. Of these reserves, as much as Rs. 50 lakhs represent capital reserve created out of the revaluation of assets made in the year ended July 1950. The current liabilities and provisions (including loans) at Rs. 198.80 lakhs are more than adequately covered by current assets amounting to Rs. 238.27 lakhs. There has been an addition of Rs. 17.79 lakhs to the gross block during the year under review, bringing it up to Rs. 277.58 lakhs. The depreciation provided so far is Rs. 149.52 lakhs, leaving the net value of the fixed assets at Rs. 128.06 lakhs.

The Company's performance is expected to improve still further during the current year. The sugar plant may crush about 12 million maunds of cane. The distillery, too, is expected to show better results, thanks to the larger supply of molasses from the Company's own sugar mills and the consequent reduction in costs of outside purchases.

The Rs. 100 fully paid-up ordinary shares of the Company are currently being quoted at Rs. 200 *cum-div.* On an *ex-div.* basis, the shares give a yield of 7.78 per cent. per annum, free of income-tax.

NEARING ACHIEVEMENT

India's ambitious Durgapur Steelworks project is well on the way to completion. ISCON, the consortium of famous British engineering and electrical manufacturing companies, has been most successful and the end of the job is in sight.

Rolling mills, melting shop, blast furnaces, coke oven batteries and cooling towers have transformed the skyline. The birth of this new industry has already brought new employment to West Bengal. A steel city has been carved from paddy fields and jungle by people of two different nationalities and background, but working as a team with a single purpose. The result is a triumph for British industry and a better tomorrow for the people of India.

PANYAM CEMENTS AND MINERAL INDUSTRIES LIMITED

PROGRESS MADE SATISFACTORY

CHAIRMAN, MR. T. S. SUNDARAM, WANTS FAIR PRICES FOR CEMENT

A NOTE of optimism on the future of the Panyam Cements and Mineral Industries Ltd. was struck by its Chairman, Mr. T. S. Sundaram, in his speech at the Fifth Annual General Meeting of the Company held at Cement Nagar (in Kurnool District, Andhra Pradesh) on Saturday, 4th February 1961. The Company's factory, Mr. Sundaram declared, was making satisfactory progress and there was every hope of continued improvement in working results in the years to come. He disclosed that the Company had been granted a licence to expand the installed capacity of the factory at an additional capital outlay of about Rs. 120 lakhs and received the official consent for the issue of further share capital amounting to Rs. 46 lakhs. He made a special reference to the question of cement prices now being considered by the Tariff Commission. The Commission, Mr. Sundaram hoped, would bear in mind the real needs of the industry "which is capital-intensive and, therefore, provide for adequate, fair and distributable return on capital, enabling build-up of reserves and distribution of attractive dividends to shareholders."

The following is the full text of the Chairman's speech at the meeting:

"DEAR SHAREHOLDERS,

"I have great pleasure in extending to you a cordial welcome to this the fifth annual general meeting of the Company and place before you for adoption the audited accounts of the Company for the year ended 31st August 1960, which have already been circulated to you and which, with your kind permission, I shall take as read.

"As you would have seen from the balance-sheet and profit and loss account, the statutory obligation for providing development rebate, before making any other allocation of profits, has not allowed us the pleasure of declaring any dividend to the shareholders this year, although the profits for the year, after providing Rs. 9,32,939 as depreciation, came to Rs. 8,08,256. This entire profit has been set off against the development rebate. You will be glad to note that a sum of Rs. 9,98,419.90 has so far been repaid to The Industrial Credit and Investment Corporation of India Ltd., Bombay, towards the principal of the loan.

Clinker Production

"I am glad to inform you that your Company's factory is making satisfactory progress and there is every hope of continued improvement in its working results in the years to come. Clinker production during the accounting period touched almost the rated level, whilst production and despatches of cement exceeded the rated capacity by 20 per cent. Demand for cement produced in your factory has been encouragingly good and progressive. This, with the co-operation of the network of stockists in the marketing zone allotted to our factory, has enabled us to dissolve completely the huge backlog of clinker in the yard brought forward from the previous accounting year. We continue to supply our cement to Sharavathy, Mid-Pennar and Nagarjunsagar projects.

"The production of clinker during the year would have been better, if the kiln did not have to take long and compulsory shutdowns due to shortage of coal. Coal production in the country and the railway facilities for its transport have not kept pace with the rapid industrialisation, commissioning of the three new steel plants and substantial expansion of the existing ones. Consequently, all industries, particularly in the Southern Peninsula, which require coal as a fuel have had to face acute shortage for their day-to-day requirements. The gravity of this problem has, however, received the pointed attention of the concerned Central Ministries of Commerce, Fuel and Railways; and, there are bright prospects of improved conditions in the near future to ensure that at least the minimum requirements of individual units are met.

"We are in the last quarter of the second Plan period. As in the first Plan, great progress has been achieved by the cement industry during this period when the production capacity has nearly doubled from 4.9 million tons to 9.5 million tons. In the Draft Outline of the third Plan, it has been estimated that consumption would touch 13.5 million tons by 1965-66; and to achieve this, it is proposed to raise the installed capacity to 15.00 million tons, which appears to me to be realistic and practical.

Expansion

"I am particularly happy to inform you that the Government of India have been pleased to grant the Company a licence for substantial expansion of its installed capacity by addition of a 400-ton unit, and the management is making steady progress in their efforts to carry out this second stage of the project. The additional capital outlay for this expansion is estimated to be approximately Rs. 120 lakhs. The consent for issue of further share capital of Rs. 46 lakhs has been received from the Controller of Capital Issues. The Industrial Credit and Investment Corporation of India Ltd., Bombay, who helped us in executing the first stage of our project with a sizable loan capital and advice, it is hoped, will render substantial assistance for this expansion scheme also. I am confident that, with the enthusiastic co-operation from you all and the help from The Industrial Credit and Investment Corporation of India Ltd., the Company will be able to secure without difficulty the finances necessary for this purpose. The present policy of Government does not allow for the import of cement-making machinery; and, therefore, negotiations for supply of equipment are in progress with the Indian manufacturers, Messrs. A.C.C. Vickers Babcock Ltd., who have indicated that the delivery of the machinery will be made by the end of 1962.

Price for Cement

"The present retention price for cement was fixed in 1958 and it will be in force only till the end of June this year; and in view of the repeated representations of the industry to revise the retention price to take into account increasing manufacturing costs, the Government of India have referred the revision of the price to the Tariff Commission. The revised price structure is expected to be brought into force from July this year and I hope the Commission, while refixing the prices, will bear in mind the real needs of this industry which is capital-intensive and, therefore, provide for adequate, fair and distributable return on the capital, enabling build-up of reserves and distribution of attractive dividends to shareholders, which alone would allow it to play its rightful part in the national economy *vis-a-vis* the ambitious programmes envisaged for the third Five-year Plan. It is also necessary that a more helpful and automatically applicable formula is devised to answer effectively to the quickly changing trends in the manufacturing costs. The packing charges fixed by the Ministry of Commerce and Industry every quarter are found to be not at all adequate, and there is a very wide difference between the actual charges incurred by the manufacturer and the packing charges sanctioned by the Government. The use of the second-hand gunnies, which has been recently permitted, will not also help substantially to neutralise this difference.

Wage Structure

"As a result of the implementation of the recommendations of the Central Wage Board for Cement Industry, the entire wage structure has undergone spectacular change. In the case of unskilled workers, their wages have almost been trebled, much to the discomfiture of agriculturists around the factory location. The Central Government have conceded an upward revision of our retention price to neutralise the increase in cost of production on this account; and arrangements for implementing these recommendations with retrospective effect from 1st January 1960 have been completed.

"It is my duty to express our gratitude for the praiseworthy services of the State Trading Corporation of India to the industry in rationalising the movement and distribution of cement. It has played its part satisfactorily in handling distributon problems during the years of surplus as well as shortage, and I consider it is desirable in the best interests of the industry that the State Trading Corporation of India should be allowed to continue in the field of cement distribution.

Labour Relations Cordial

"I am glad to record the cordial relationship that is subsisting between the management and the employees of the Company. A labour colony containing 100 single-room and 10 double-room tenements, the construction of which by the Government under the Subsidised Industrial Housing Scheme is nearing completion, will provide housing accommodation to a large number of the Company's permanent employees. The Company has also undertaken the construction of a few double-room tenements for the ministerial staff, which is also nearing completion. Your Directors have also encouraged the recreational activities in the colony by subsidising the Employees' Recreation Club.

"Sri A. V. Subbaramayya, who was with us as a General Manager from the commencement of this project, resigned during the year. He was mainly responsible for conceiving this project in its entirety and executing the same within a record time. I take this opportunity for recording our special appreciation of his valuable services.

"I thank the Managing Agents of the Company for the care and interest evinced by them in the management of its affairs. Our thanks are also due to the officers, the members of the staff and operatives of all categories for the sense of duty and hard work willingly rendered.

"I now have the pleasure to move that the Directors' report and audited accounts for the year ended 31st August 1960 with the Auditors' report thereon be adopted."

Note: *The above statement is not a report of the proceedings of the annual general meeting referred to.*

Notice

SHREE KRISHNA GANODAY SUGAR LIMITED

NOTICE

THE TWENTY-SIXTH ANNUAL GENERAL Meeting of the Shareholders of Shree Krishna Ganoday Sugar Limited will be held at the Registered Office of the Company at Dalmianagar on Friday, the 17th March, 1961, at 11-30 a.m., to transact the following business:

1. To receive and adopt the Directors' Report and the Audited Accounts for the financial year ended 31st July, 1960.
2. To declare additional dividend on Preference Shares for the year ended 31st July, 1959, in compliance with the Preference Dividend Regulation Act, 1960.
3. To declare dividends for the year ended 31st July, 1960.
4. To elect a Director in place of Shri T. R. Jalan, who retires by rotation under Article 106 of the Articles of Association of the Company but, being eligible, offers himself for re-election.
5. To appoint Auditors for the current year and to fix their remuneration. Messrs. Singhi & Co., Chartered Accountants, the retiring Auditors, being eligible, offer themselves for re-appointment.

The Share transfer books of the Company will remain closed from 7th March 1961 to 17th March 1961, both days inclusive.

By Order of the Board,
S. K. JAIN,
Secretary.

CALCUTTA, *4th February* 1961.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

MONEY MARKET TIGHT

(*From Our Own Correspondent*)

BOMBAY, *15th February*

The demand for bank credit from trade and industry continues unabated. Consequently, banks are ready borrowers. The turnover in the inter-bank section is, however, small for want of lenders. The inter-bank call money is quoted at the self-same rate of 5½ per cent. The Reserve Bank is the only source of supply for any sizable amounts. There is no change in the rates of interest for deposits. For purposes of ready reference we quote them below:

House Money: (i) Notice of 3 days upto and including 21 days 2 per cent, (ii) notice of more than 21 days 3 per cent.

Term Money: (a) 31 days and over but upto and inclusive of 60 days: 3½ per cent, (b) 61 days and over but less than 12 months: 3½ per cent and (c) 12 months: 3¾ per cent.

The results of the sale of 91-days' Treasury Bills through weekly tenders are in conformity with the general trend of the market. The total amount offered was Rs. 2 crores as against an invitation for a like amount. The average rate of accepted tenders has moved up fractionally from Rs. 2.585 to Rs. 2.590 per cent per annum. Sales of 91-days' intermediate Treasury Bills fetched Rs. 5 lakhs, same as in the previous week. Banks are not taking any interest in Treasury Bills.

A noteworthy development of the week under review is the announcement made by the Reserve Bank of India, relaxing the provisions of its directive regulating bank credit against foodgrains both as regards margin requirements in respect of all foodgrains and ceiling limits in States other than Andhra Pradesh. Minimum margin requirement in respect of advances against foodgrains has been reduced from 40 per cent to 35 per cent, while the ceiling for advances against paddy and rice in States other than Andhra Pradesh has been increased to 110 per cent of the permitted levels in 1960. These modifications have been made in view of the improvement in the supply and price situation of foodgrains. The price index for rice, for instance, has come down from 115 in August 1960 to 99 in December 1960. Similarly, the index of food articles as a whole has retreated from 124 at the end of September 1960 to 115 at the end of December 1960. The levels of both indices are lower than those a year before. In view of the firmness in the prices of groundnuts and other oilseeds, the present restrictions in respect of advances against these commodities are, however, being continued. The scheduled banks have been strongly advised that there should be no misuse of exemptions accorded to exporters of groundnuts and groundnut oil.

The Reserve Bank of India's statement for the week ended 10th February 1961 shows, as compared with that for the previous week, an expansion of Rs. 19.56 crores in notes in circulation. This brings the total notes in circulation to Rs. 1,948.81 crores. The foreign securities held by the Issue Department are unchanged at Rs. 129 crores. But, as balances held abroad have gone up by Rs. 5.22 crores, the total foreign assets have risen by that amount to Rs. 152.48 crores. The deposits of banks with the Reserve Bank have further contracted by Rs. 1.69 crores on top of a decline of Rs. 6.14 crores in the previous week. They are now of the order of Rs. 70.44 crores. The other loans and advances given by the Reserve Bank which include accommodation to scheduled banks also have risen by Rs. 2.78 crores. Of this rise Rs. 1.91 crores represents advances against usance bills which now aggregate Rs. 24.26 crores; a year ago, they were only Rs. 4.44 crores.

A net decline of Rs. 1.17 crores in total deposits is disclosed by the Scheduled banks' statement for the week ended 3rd February 1961. Inter-bank borrowings of demand variety have fallen by Rs. 1.28 crores, while those of time variety have slightly increased by Rs. 21.70 lakhs. The total borrowings from the Reserve Bank have gone up by Rs. 14.24 crores, while those against usance bills have risen by Rs. 3.54 crores. Borrowings from the State Bank of India of demand and time nature have, however, contracted by Rs. 50.56 lakhs and Rs. 9 lakhs respectively. Advances and bills (bank credit) have expanded by Rs. 13.70 crores on top of a rise of Rs. 11.05 crores in the preceding week, taking their total to Rs. 1,238.82 crores. A year ago, this portfolio stood at Rs. 1,034 crores. Investments have staged a decline of Rs. 4.22 crores. As much as Rs. 3.82 crores of this decline is due to the fall in the investment portfolio of the State Bank during the week.

The recovery noticed in the Gilt-edged market in the previous week continued in the week under review. There is, however, not much activity in Central Government loans, though prices of some of the loans have improved slightly. For example, 2½ per cent 1962, 3 per cent 1963-65, 3 per cent 1966-68 and 3½ per cent 1965 2nd National Plan Bonds, rose by 5 nP each, 3 per cent 1970-75 and 3½ per cent 1964 advanced by 25 nP and 10 nP respectively. In contrast to Central loans, the States loans were in very good demand. Especially the 4 per cent and 4½ per cent. State loans met with considerable support. The 4 per cent loans maturing in 1967 and 1968 gained as much as 40 to 45 nP, and those maturing later improved by 25 nP. In general, all the 4½ per cent issues are now commanding a premium ranging from 25 nP to one rupee; not long ago, most of these were being quoted at a discount.

In the foreign exchange section, the rupee remained steady with no change in the rupee-dollar rate. The banks' selling and buying rates for ready T.T. remained unchanged at Rs. 477.75 and Rs. 474.50 respectively per 100 dollars. In the New York market, the pound sterling continued to be quiet, with the sterling dollar rate further down. The latest available rates are 280.060-280.090 per £ for spot and 279.480-279.510 per £ for three months' forward. As compared with the rates as on the 8th February, the spot rate shows a decline of 0.11 cent.

BULLION PRICES EASE AFTER EARLY RISE

(*From Our Own Correspondent*)

BOMBAY, *15th February*

The bullion market had only three working sessions during the week under review, as it remained closed on Thursday the 9th inst., (as a mark of respect to the death of a member), Monday the 13th (*Maha Shivarathri*) and today (solar eclipse). The market depicted a distinctly firm trend on Friday, thanks to better demand. But the firmness abated thereafter. In fact, the market put on an easy appearance which persisted practically till the close of yesterday. The easiness was due to reports of poor offtake at Calcutta and Delhi, increased arrivals, and rumours that the proposed six-monthly contract in bullion would provide for tendering of delivery at up-country centres. Both gold and silver encountered selling, with the result that values suffered a setback. Over the week, the white metal was lower, while the yellow metal was a shade better.

The average daily offtake of gold and silver was less than in the previous week, being 3,335 tolas and eight bars, respectively, as against 4,000 tolas and nine bars. Arrivals, however, were larger —5,335 tolas of gold and 23 bars of silver, as against 4,650 tolas and 20 bars. The floating stocks of gold are estimated at 45,000 tolas and those of silver are reported to be around 500 bars.

The proved gold ore deposits in Kolar gold mines in Mysore State are adequate enough to prevent any closure of the mines. This was revealed by Mysore's Law and Labour Minister at Ooregaum on Saturday the 11th inst. The Minister claimed that the mines had generally done well and that the working results so far had shown a gradual upward trend after the difficult problems of transition in the post-nationalisation period were brought under control. During 1959-60, the surplus after paying a royalty of Rs. 36.69 lakhs and providing Rs. 15.76 lakhs for depreciation out of the gross profit was Rs. 18.76 lakhs. According to the Minister, the Nundydroog mine had beaten all records of the past 80 years by milling 24,759 ounces in August 1960. Similarly, the Champion Reef mines had established an all-time record of 19,350 ounces in September 1960. The ore realised from mines during the year 1959-60 was nearly 12,000 ounces more than in 1958-59 and the gold yield was also higher by nearly 2,700 ounces.

The reported decision of the Central Government to take over the Kolar gold fields was confirmed by a spokesman of the undertaking in a talk to Press men at Kolar this week. The type of corporation to run the mines, we are told, is now being considered by the Centre. The mines, it will be recalled, were nationalised by the Government of Mysore in November 1956.

In gold, the *Fagun* (1st March) settlement began at Rs. 122.65 on Friday, as against the last week's closing rate of Rs. 121.55, and, after improving to Rs. 122.75, moved down to touch a low of Rs. 121.75 yesterday. The net gain over the week was 20 nP.

Ready gold commanded a premium of 45 nP over the forward on Friday, but was quoted at a discount of 5 nP on the following day. Yesterday, it was on par. The closing rate was Rs. 121.75, as against Rs. 121.55 on Wednesday last week, the highest and the lowest levels touched during the week being Rs. 123.20 and Rs. 121.75, respectively.

The *Fagun* (2nd March) settlement in silver was well supported on the 10th inst., the quotation rallying from Rs. 207.85 to Rs. 209.30. At this level, selling ensued and the settlement drifted lower. At one time yesterday, it stood at Rs. 206.90. The closing was 30 nP higher at Rs. 206.90. The net loss over the week was Re. 1.60.

Ready silver advanced from Rs. 208.10 to Rs. 209.30 and, after receding to Rs. 206.95 yesterday, recovered to finish at Rs. 207.25. The premium of 25 nP over forward commended on Wednesday last week turned into a discount of 40 nP on Friday this week. But on Saturday, spot again commanded a premium of 25 nP which declined to 5 nP yesterday.

The world price of gold in the London bullion market eased further from $35.20 to $35.16½ per fine ounce, same as last week. Ready gold declined further from 251s. 3d. to 251s. Ready silver was unchanged at 79¾d., while the forward picked up ¼d. to 80¼d. Silver in New York continued unaltered at 91.375 cents.

The following table shows the trend of the market during the week:

	14-2-1961 (closing)	High	Low	8-2-1961 (closing)
GOLD				
Ready (.99 fine)	Rs. 121.75	Rs. 123.20	Rs. 121.75	Rs. 121.55
Forward:				
*Fagun**	121.75	122.75	121.75	121.55
Sovereign	94.00	94.00	93.75	93.80
SILVER				
Ready (.999 fine)	207.25	209.30	206.95	208.10
Forward:				
Fagun†	207.20	209.30	206.90	207.85
London—	13-2-1961			7-2-1961
Silver Ready	79¾d.	—	—	79¾d.
Silver Forward	80¼d.	80¼d.	80d.	80d.
Gold	251s.	251s. 4d.	251s.	251s. 3d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 1st March settlement. † 2nd March settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON EXPORT QUOTA DISAPPOINTS TRADE

(*From Our Own Correspondent*)

BOMBAY, *15th February*

The cotton futures market had a short week of only three trading days. The market was closed on the 9th inst., due to the death of a prominent cotton trader and on the 13th owing to *Maha Shivaratri*. The market was officially closed today also on account of the solar eclipse. During this short week, cotton futures showed signs of recovery at the beginning but again eased towards the close. The earlier recovery was induced by renewed support prompted by expectation of a liberal export quota covering Bengal *Deshi* and, perhaps, some short staple varieties and better spot advices. The quota, when actually announced on the 13th inst., disappointed the trade, as it was for only 50,000 bales of Bengal *Deshi* 'fine' and above in grade. Reflecting the disappointment of the trade, the Jarilla April contract declined to a new low of Rs. 554.25 (per three quintals) yesterday, as compared with the closing rate of Rs. 563.25 on Saturday, the previous trading day. A mild recovery was again evident and the contract improved towards the close to Rs. 557.75. The market, as noted above, was closed today. In private, however, the contract was quoted at Rs. 556.

The spot market reported better activity. Mill interest in new crop revived and prices tended to improve. Varieties such as Vijay, Digvijay, Surti, L. 147, Khandesh and Kalyan evoked the attention of spinners. Following the quota announcement, shippers showed interest in Bengal *Deshi*. Enquiries are, however, confined to 'fine' and above. Superfine and choice qualities have already been booked in anticipation of quota. The salient features of the licensing procedure for the quota, notified yesterday, are as under:

Of the 50,000 bales, 2,500 bales would be reserved for co-operative societies, 19,000 bales would be reserved for the shippers who had already exported from the quota under conditions announced in December last and 28,500 bales would be available to other eligible shippers on a "first-come-first-served" basis. Those shippers, who had already participated in the quota under conditions announced in December last, would become eligible for further export to the extent of 40 per cent of the cotton actually delivered by them to indigenous consumers as required under earlier orders. Each shipper coming under this category would be entitled to participate in respect of the total export quota issued so far, at least to the extent of 1,500 bales. Exporters, who had not exported any quantity would be allowed a maximum of 1,500 bales per shipper out of the balance of 28,500 bales.

Interest in foreign cotton was subdued. Small lots of Sudan, Egyptian and East African cotton were taken up by needy mills. Presumably because of the improvement in the overall supply position, the Textile Commissioner has thought it fit to relax the restrictions with regard to lifting of foreign cotton allocated to domestic spinners. A notification issued by the Textile Commissioner in this regard says:

"In case any mill wishes to surrender foreign cotton of 1.1/16" and above, whether taken against the global quota or against the retention quotas, it may express its desire to do so and this office (Textile Commissioner's office) would be prepared to accept such surrender and to allot Indian cotton in lieu thereof. In such a case this office would be prepared to allot in respect of every bale of cotton stapling 1.3/16" and above 1½ bales of Indian cotton and for every bale of cotton stapling 1.1/16" and above but below 1.3/16", 1½ bale of Indian cotton."

It is possible that certain mills may have utilised a portion of their quota. Such mills have also been allowed to surrender the balance of the quota, in case they do not want to import foreign cotton.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 830; Gadag Laxmi 1,040; L. 147 1,000; CO2 1,125-1,150, B.P. (U.N.U.G.) 1,375; Sudan G2L, 1,642; Karnak 151 2,100.

Cotton futures in Karachi continued to follow a downward trend. Both the March and May contracts were quoted lower. Pressure of selling prompted by faster crop movements and lack of export interest persisted. Domestic spinner demand was inadequate to offset the selling. N.T.R.G. March receded from Rs. 69.80 last week to Rs. 68.45. The May contract declined from Rs. 69.95 to Rs. 68.65 during the same period. Conditions in the spot market remained practically unchanged.

Last week's recovery of the Alexandria cotton futures market was short-lived. Selling pressure was again in evidence in the week under review. Both the long-staple Karnak and medium-staple *Ashmouni* contracts shed the gains made last week. The export price discount remained unchanged at six per cent. The following are the latest available quotation—in tallaris per lb.—from Alexandria:

Karnak: March 70.68; May 71.58; July 72.00. *Ashmouni*: February 59.50; April 60.71; June 61.20.

Firm conditions prevailed in the Liverpool cotton futures during the week. Local traders were interested in new crop deliveries of both American and American type contracts which hardened as a consequence. The rise in prices would have been more marked but for the slackness of mill demand which in turn was due to slow offtake in the yarn and piecegoods market. Sudan contracts were quietly steady. The announcement by the Sudan Government that the

export duty on Sudan cotton would remain unchanged at 2.50*d.* per lb. had little effect on the market. The reported possibility of a co-ordination of the cotton marketing policies of Sudan and Egypt too left the market unaffected. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: March 23.65; May 23.95; July 24.25; October 24.05.

American cotton mixed growth contract: March 24.00; May 24.35; July 24.95; October 25.10.

Sudan: March, May and July 34.00.

New York cotton futures market ruled distinctly firm during the week. Speculative buying based on expectation of a higher loan rate led to a rally in futures prices. The strength of the spot markets, where domestic mill demand and export interest were good, was a helpful factor. Traders are anxiously awaiting announcement of the support level for this year's cotton.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	14-2-61	7-2-61	31-1-61
Spot	32.35	32.25	32.25
March	32.40	32.10	32.20
May	32.97	32.60	32.65
July	33.50	33.10	33.16

ART SILK YARN IMPORTS LARGER

(From Our Own Correspondent)

BOMBAY, 15*th February*

The yarn market was in a lethargic mood during the week under review which was a short one, in view of closure on Monday (*Maha Shivaratri*) and today (Solar Eclipse). Traders were not inclined to extend their commitments either way, pending the publication of Railway and Central Government budgets. There were, of course, rumours of a possible upward revision in excise duty on rayon goods, but these did not have any effect. Nor were rumours regarding a further cut in imports of art silk yarn and the S.T.C. taking over the distribution of imported yarn of any avail. Consequently, business put through was very restricted, with values moving in a narrow groove.

Imports of art silk yarn into Bombay port during the month of January 1961 were larger at 1,151,192 kilograms, as against 782,458 kg. in the previous month. Imports of other yarns, however, were lower; they aggregated 76,931 kg. of synthetic yarn, 616 kg. of staple fibre yarn and 8,727 kg. of cotton yarn, as against 105,995 kg., 16,428 kg., and 20,076 kg., respectively. During the same month, 377,194 kg. of cotton yarn and 21,890 kg. of sewing thread were exported from Bombay port, the corresponding figures for December 1960 being 334,812 kg. and 31,315 kg.

Spot Cupressa Bemberg yarn (60 x 1) was quiet at Rs. 2.535 per 100 kgs., as also the April delivery at Rs. 2,520. February delivery encountered selling and dropped Rs. 25 to Rs. 2,490. 120 Japan was dull at Rs. 1,420 per 100 kg. and 150 Japan at Rs. 1,640. 120 Italy receded from Rs. 1,350 to Rs. 1,328.

In sympathy with art silk yarn and following easy advices from consuming centres, staple fibre yarns drifted lower. 40 x 2 February settlement declined by Rs. 8 to Rs. 832 per 90.72 kg. April position shed a rupee to Rs. 835. Spot Kohinoors were neglected at Rs. 9.90 per kg.

Cotton yarns were subdued in the absence of any fresh encouraging development. The latest available quotations per bundle of 10 lbs. for a few counts are: 20 New Great Rs. 22; 30 New Great Rs. 26.50; 40 Modern Rs. 32; 60 Finlay Rs. 66.66; 80 Finlay Rs. 81.81.

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 15*th February*

There were two developments of import to the oilseeds trade during the week under review, one relating to the announcement in regard to imports of soyabean oil from the U.S. and the other pertaining to the modification of the Reserve Bank's directive regulating bank advances against groundnuts and other oilseeds (excluding cottonseeds). In view of the tight supply position of groundnut oil, the Government of India has arranged for the import of about 3,600 tons of U.S. soyabean oil under P.L. 480 for being made available to the *vanaspati* industry. Since, however, the quantity of soyabean oil to be imported is very small, as compared with the industry's requirements of edible oils, the announcement failed to have any effect on groundnuts which ruled firm. The Reserve Bank of India has informed all the scheduled banks that it is necessary to continue the framework of control on advances against groundnuts and other oilseeds, with some minor modifications in the directive now in force. The ceiling limits on advances against groundnuts are based on the levels permitted in the corresponding period in 1960 and will henceforth be for periods each of two calendar months commencing from March 1961 instead of one calendar month, as hitherto. The Bank has also impressed upon the scheduled banks that it was important for effective implementation of the provisions of the directive that exemptions from margins and ceiling limits accorded to exporters of groundnuts and groundnut oil were scrupulously applied so as to avoid their misuse.

The aforesaid measures would appear to have had no impact on the market. In fact, the market displayed distinctly firm conditions during the week under review, in contrast to the subdued trend noted last week. Groundnuts staged a smart rally, mainly on account of good offtake by *vanaspati* manufacturers. There were some arrivals from the South but they were readily absorbed, because the supply position continued to be tight. Groundnut May 1961 contract rose from Rs. 217 to Rs. 218.50. February contract was knocking at the ceiling of Rs. 220. Coromandel spurted by Re. 1.50 to Rs. 50. Khandesh quality moved up from Rs. 48.50 to Rs. 50.50 before closing at Rs. 49.75. Oil ex-mill put on 25 nP to Rs. 20.50.

Despite the continued poor prospects of castor oil exports, castorseeds were cheerful, thanks to speculative buying, as well as stray rumours of enquiries from the U.K. and some communist countries. Values would have gone up still further but for reports suggesting a marked improvement in Brazilian castor crop in the current season. Castorseed May 1961, which had wound up at Rs. 169.12 last week, improved to Rs. 171.75, but moved down to close at Rs. 170.37. Ready Madras rose by 19 nP to Rs. 33.44. Oil commercial put on 15 nP to Rs. 13.65; it had touched Rs. 13.70 earlier.

In sympathy with the other major seeds, linseeds, too, ruled strong. While the export front continued to be dull, linseed oil met with good demand from local buyers for being used as an adulterant with groundnut oil. Linseed May 1961 contract rose by 53 nP to Rs. 34.59. Bold ready firmed up by Re. 1.37 to Rs. 34.62. Linseed oil scored a gain of 40 nP to Rs. 15.10.

Cottonseeds elicited good support. February 1961 contract advanced by Rs. 2.50 to Rs. 90. May contract strengthened by a like amount to Rs. 89.50. Spot Berars hardened by 75 nP to Rs. 18.50. Non-whites rose from Rs. 17.75 to Rs. 18.50. Whites were fully maintained at Rs. 18.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	14-2-1961	8-2-1961	1-2-1961
	Rs.	Rs.	Rs.
Groundnut			
February 1961	220.00	220.00	220.00
May 1961	218.50	217.00	217.00
Nizam bold	48.12	48.25	48.75
Coromandel ready	50.00	48.50	49.00
Khandesh quality	49.75	48.50	49.00
Oil ex-mill ready*	20.50	20.15	20.50
Railway receipts*	20.25	19.85	20.80
Castorseed			
May 1961	170.37	169.12	170.50
Ready Madras	33.44	33.25	33.75
Ready Kanpur	31.87	31.62	32.75
Oil B.S.S.†	14.50	14.50	14.05
Oil commercial†	13.65	13.50	13.80
Linseed			
May, 1961	34.59	34.06	34.41
Bold ready	34.62	33.25	35.50
Oil ready†	15.10	14.70	16.10
Cottonseed			
February 1961	90.00	87.50	87.75
May 1961	89.50	87.00	88.00
Niger seed	38.75	38.50	38.75
Kardi seed	26.25	27.00	27.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

QUALITY TEAS DEARER

(Messrs. Forbes, Ewart and Figgis (Private) Ltd.)

COCHIN, 7*th February*

Offerings amounted to approximately 373,000 kilograms in Sale No. 6 held today. Nilgiri quality generally showed some improvement but it was disappointing for the time of year. Offerings from other districts were often brighter than the last seen. Demand was strong and general. Plain, low-grown and low medium descriptions met active support and generally sold at 10/15 nP above the rates ruling in the previous week. Improved quality mediums and good mediums came to a dearer market but here quality was similar to last, prices were generally firm with fannings tending lower. Highgrowns brokens met useful demand and prices were irregular following quality; similar fannings generally sold at easier rates. Black leaf brokens followed the upward trend of the market but fannings suitable for the Middle East met less competition and were 20-30 nP easier. Whole leaf grades were irregular but generally sold at around last rates. C.T.C. and legg-cut types were quoted steady whilst the small selection of tippy teas available sold well.

	1961 Rs.	1960 Rs.
Low medium	4.80-5.05	4.52-4.85
Medium	5.10-5.35	4.81-5.18
Good Medium	5.40-6.20	5.07-5.62
Quality	6.00-8.00	5.73-9.81

The average price realised in Sale No. 6 was Rs. 5.35 per kilo, as against Rs. 5.16 in the previous week and Rs. 5.34 in the corresponding sale last year.

Dust Sale No. 6: Offerings in Dust Sale No. 6 held on February 9 amounted to 155,000 kilograms. The market opened to a strong general demand which eased towards the end of the sale. Low mediums, mediums and good mediums were irregularly dearer by 5 to 10 nP, at the beginning of the sale but towards the end closed easier by 5 nP. Residual grades met with good competition and sold at dearer rates. Highgrowns sold well although these inclined slightly easier. C.T.C. descriptions met keen competition and were dearer with buyers concentrating more on the best kinds. Legg-cut types also met with useful inquiry and were fully firm.

The average price realised in Dust Sale No. 6 was Rs. 5.18 per kilo as compared with Rs. 5.12 a week ago and Rs. 4.48 in the corresponding sale last year.

Export Quota: There are sellers at ¼ nP per kilo at which rate some business has been done.

Colombo: In Monday's sale just over 5 million lbs. were offered and met with a good demand. Dimbula quality was improved and prices advanced 10-15 cents whilst colourv mediums were 10 to 25 cents dearer. Low mediums descriptions advanced 5 to 10 cents whilst plain sorts were 5 cents dearer.

London.—North Indian and other growths: In Monday's auction there was better demand and prices were fully firm for all descriptions. Plain broken pekoe is quoted at ½d.

Ceylon and South Indians: Tuesday's sale consisted of 26,950 packages of which 7,623 packages came from South India. The market met with rather irregular demand and prices were generally easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No. 7*: 395,000 kilograms. Good demand at lower rates. Plain, low medium and medium 10 to 15 nP easier. Good medium 20 to 30 nP lower. Best liquoring—fair demand at lower rates."

STRONG DEMAND FOR DUST TEA

(From Our Own Correspondent)

CALCUTTA, 14*th February*

Keen interest was displayed by bidders during yesterday's export sales, and prices improved depending on quality. In last week's internal sales also, good demand was in evidence, and prices, although declined generally, were considered satisfactory relative to quality. Tea bookings occupied a good portion of shipping space being offered for prompt loaders for the United Kingdom during the week. Tea shipments for participation in London auctions are rapidly nearing completion and within a week or two, shipments would consist mostly of teas sold in Calcutta auctions only.

The export auctions here would be completed earlier than usual, and present ideas of the stock position of teas still left over indicates that there would be only about three more sales, excluding today's sales. It was believed earlier that export sales might continue up to the end of March but now that the situation has been reviewed and the possibility of an earlier end has been hinted, export sales are attracting more than usual attention. British buyers are very active, but there is no keen competition from any other quarters. The U.S.S.R. is not likely to show any further interest but Egypt has not yet completed its purchases.

The keen interest being shown by internal buyers adds strength to the inference that domestic consumption has increased, and there might be even some difficulty in meeting internal demand in full in the weeks preceding the arrival of the new season's teas in the market. Against this background, the carryover, if there is any, to the next season would be small and as such the new season for both export and domestic sales is expected to start well.

The rains of recent weeks have helped tea gardens but thoughts of a good quality crop to compensate last year's loss following drought have been entertained. However, this expectation would stand good if only it would rain at intervals in April-May so that last year's occurrence of drought may not be repeated.

Reports anticipating heavier arrivals of tea for participating in London auctions a few weeks hence were not looked into, as these would not affect marketing prospects for Indian teas at least earlier in the next season. However, if too good a crop resulted in North-East India, marketing might as well present problems, since it should be noted that 1960's loss in tea production in North-East India was more than compensated by increased production in other countries and also in the South Indian region.

Dusts on offer in the internal sales held last week amounted to 22,988 chests. The general decline in prices was due to the deterioration of quarralding. Demand was strong. Darjeelings received keen attention and realised prices above valuations. Prices of good C.T.Cs followed quality, the best lots of this realising higher prices. Brighter liquoring C.T.Cs were taken at firm to dearer prices, while medium C.T.Cs eased by 10 nP. Orthodox teas met with good demand, but prices gave way by 5 to 10 nP. Earlier in the sales, legg-cut teas were lower by 15 nP, but as the auction proceeded the decline was reduced to 5 to 10 nP. The quotations (in rupees) per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust 6.00 to 6.50, medium Assam C.T.C. dust legg-cut dust 5.15 to 5.40, medium Assam dust 5.00 to 5.30, and plain orthodox dust 4.80 to 4.95.

Green teas in the leaf offerings of 894 chests were a weak feature with the high grades being difficult to sell. The rest of the offerings met with good demand.

Offerings during yesterday's export sales amounted to 73,064 packages. Prices for the quality teas improved, but those of a declining quality registered a downtrend. The strongest feature of the sale was black Dooars brokens, prices of which hardened. However, plain fannings eased by 10 nP. "Teas for price" were keenly sought at and plain brokens were fully firm. Darjeelings were supported at lower rates. Stylish whole leaf grades were firm with the ordinary types receiving greater attention. However, the more ordinary teas of this category met a quiet market. Medium Assam B.O.Ps and O.Fs were steady, with the brighter liquoring teas recording higher price. Medium B.P's were steady, and fannings realised higher prices. The autumnal C.T.Cs hardened but the ordinary teas eased by 15 nP.

Prices of the fibrous and secondary grades eased by 10 nP. The quotations (in rupees) per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings 5.80 to 6.30, best Assam C.T.C. B.P. 5.80 to 6.20 clean black pekoe 5.20 to 5.50, medium fannings 4.90 to 5.10, plain fannings 4.80 to 4.90, medium B.P. 4.70 to 4.90, and plain B.P. 4.60 to 4.70.

JUTES SCALE NEW HEIGHTS

(From Our Own Correspondent)

CALCUTTA, 14*th February*

Jute goods and fibre scaled new heights during the week under review, thus ignoring the announcement of an increase in goods stocks with mills at the end of January. Towards the close of the week, however, a reaction set in and prices closed below the best levels, induced by strong rumours that the Government of India, having found that all its warnings and other measures had proven ineffective and that prices were in fact constantly rising since the last few weeks, proposed to put into effect the drastic measures with which the Essential Commodities Act has empowered the Government.

Measures now proposed are likely to include fixation of maximum prices for both goods and fibre which would be well below the present levels, requisitioning of stocks, and placing a ceiling on holdings of fibre and goods with mills and other stockists. How far such measures would be practical is difficult to say, but, in the event of prohibition of transactions at above maximum prices, stockists who had purchased at the rise would incur losses. Hence it would not be some time before conditions settle down. The interval may well mean interruption in the flow of fibre to mills and goods to the export market. The reluctance of mills to sell jute goods on a forward basis has been a factor in the maintenance of the uptrend, and has naturally caused anxiety to the Government. As for mills, with high prices for fibre, finance has become a problem as a good proportion of liquid funds has to remain blocked up in jute in movement. Another cause for the reluctance of mills to sell forward is the uncertainty in fibre prices as well as in supply. The recent credit restrictions have only aggravated the problem, but the Government is reported to be of the view that bank credit has been misused, that the recent restrictions in credit have not achieved the desired result, and that credit should be further restricted.

The recent rains in this part of the country and the recrudescence of the same even while this is being written have encouraged optimism. These early rains would help cultivators prepare the land for sowing and an early sowing is not altogether an impossibility.

Conditions in the fibre market in Narayanganj were steady during the week. Holders were not keen to sell cuttings even at the high rate of Rs. 270 per bale forward. Export lightings were fully steady at Rs. 400 and export firsts at Rs. 410. Overseas interest at these high rates was limited. The Pakistan Government is working on a scheme for storing and marketing raw jute through co-operative societies in order to rid the cultivators from exploitation and middlemen. The scheme from a small beginning in the next season is expected to deal with the entire crop by 1964-65.

Very little interest was shown by overseas buyers, thus justifying the earlier belief that the recent heavy purchases made on overseas account were after a period of lull and were made for immediate consumption. Prices in the last two to three days rose in a hectic way, and overseas buyers have now withdrawn from the market being disinclined to follow the rise. However, local operators were active in anticipation of further business, but the rumours over the week-end of proposed Government actions to arrest the spiralling uptrend caused prices to move down. Gunny booking in forward space was rare during the week, and what space was booked was meant for immediate shipment.

On Tuesday last, following some covering business in ready and near delivery of goods, prices became steadier. Sellers were not interested in offers. Ready B. twills gained to Rs. 207 from Rs. 206.50, while ready hessian 40" 10 oz. eased fractionally to Rs. 67.75. The announcement that stocks of goods with mills at the end of last month increased by 4,700 tons to 84,900 tons soon followed, and a market having got acclimatised to the continuing uptrend all through ignored this report. So it was no surprise that B. twills on Wednesday spurted to Rs. 213 and hessian 40" 10 oz. to Rs. 68.50. The stocks of hessian actually fell by 600 tons while those of sacking rose by 4,800 tons and of miscellaneous constructions by 500 tons. This was due to greater production of heavy goods following transfer of looms from hessian to heavy goods, an adjustment concomitant to the changing pattern of demand. Also, sacking admits of greater profits than hessian. For good quality fibre for producing hessian is difficult to be obtained and is costing more than the fibre for sacking. However, since these stocks do not take into consideration the recent business with overseas buyers, which is expected to be shipped during this month, stocks at the end of February would show a decline. Another bullish factor was the belief that, if conditions in fibre market continued to be as bad as at present, mills would be forced to reduce working hours further. The Government would not, of course, view any further reduction with favour and was believed to be deeply concerned at the present state of affairs and contemplating measures to restore tranquillity in fibre prices. In the market, Government showered interest in February B. twills, and this was another factor for Wednesday's bullishness. Fibre prices soon followed the rise in goods and in a cyclical turn these pushed up prices of goods on Thursday to see B. twills at Rs. 216.50 and 40" 10 oz. hessian at Rs. 68.75. Prices fluctuated within narrow limits on Friday, but, while hessian 40" 10 oz. closed higher at Rs. 69, B. twills eased to Rs. 215. The rumours over the week-end acted as a much-desired tonic and in the nervous sales that these caused B. twills fell to Rs. 208 and hessian 40" 10 oz. to Rs. 66.25. Prices were slightly better than over the week-end. B. twills closed at Rs. 209 but hessian 40" 10 oz. was quiet at Rs. 66.

Fibre prices rocketed to further high levels during the week. Early rains and possibility of an early crop in the coming season were not sufficient "immediate" grounds to restore sobriety in the fibre markets. On the other hand, fibre arrivals have depleted and what is now arriving is jute of indifferent quality. This combined with the official reluctance to issue a revised estimate of the crop has led to the firm inference that marketing of most of the crop is over, and a shortage in the next two to three months is a foregone phenomenon. However, prices jerked a little over the week-end following rumours that the Government proposed to requisition stocks as well as fix maximum prices which would be far below present prices. The following table illustrates the week's movement in prices of the more popular varieties of fibre against ready delivery:

(Rs. per maund)

	Opened at	Rose to	Closed at	± Net result
Assam bottoms ..	63.00	66.50	64.50	1.50
Northern bottoms ..	62.50	66.00	64.00	1.50
Daisee bottoms ..	65.00	68.50	67.00	2.00

FOODGRAINS RECOVER

(From Our Own Correspondent)

HAPUR, 13*th February*

After an early fall, foodgrains sought higher levels again towards the week-end, as arrivals at the fag end of the season were small. Crop prospects, however, were bright because weather turned sunny. The Union Government was reported to be considering afresh the idea of creating one wheat zone throughout the country in view of comfortable supply position combined with expectations of good crop. The wheat stock at present was about 1.5 million tons and import of American wheat under P.L. 480—over 4 million tons a year—would take place as scheduled and this would help build up larger stocks after meeting current demand.

Wheat at Hapur ruled quietly steady to be quoted in the week-end at Rs. 17 to Rs. 18.50 a maund according to quality. The U.P. State Government also sold wheat to trade which was quoted at Rs. 16.50, while some superior wheat imported from Punjab was being lifted upto Rs. 19 a maund. Daily arrivals from the producing areas were small at about 100 maunds, but supplies were augmented further by the sale of wheat and wheat flour through ration shops.

Rice continued to rule steady. *Sela basmati* was done at Rs. 28 to Rs. 30, *ramajwayan* at Rs. 23.50, *raimunia* at Rs. 24.50, *mainpuri* at Rs. 20.75 and *gainda* at Rs. 20 per maund. The supply position of rice was satisfactory, with local stock put at 8,000 maunds and new rice still reaching the producing markets.

After depicting an easy trend on lower advices from Punjab and other producing areas due to good crop prospects following last rains, gram registered modest gains in the week-end on good demand in face of poor stocks left at end of the season. Barley and *bejhar* were almost stationary and, although stocks left were poor, demand, too, was slack. New coarse grains would begin to reach the market after one month. Better quality maize was still attracting consumer support, as weather was still cold and prices registered modest gains. Local stock ran down to 18,000 maunds. *Bajra* was quiet in the absence of new urges, but *jowar* sought lower levels. The latest prevailing prices were (in rupees per maund): gram 15.75; barley 12.50; *bejhar* 12.62 to 13; maize 13.25 to 14.12; *bajra* 14.62 to 15.25; *jowar* 12.75; *guwar* white 13.25.

In pulses, *peas* and *arhar* were quietly depressed, although stocks left with trade were small at 2 *khatties* and 8 *khatties*, respectively. Poor demand and good crop prospects were the main influencing factors. Other pulses ruled quiet and prevailing prices on Monday (in rupees per maund) were: peas *dara* 13; white *farm* 13.75; *peas dal* 14.25; *arhar* 13.37; *arhar dal* 17.25 to 18.25; *urd* 19.50; *moong* 19 to 20.50; *massor* 15 to 17 a maund.

After two weeks of cloudy weather and rains, the weather has now become sunny. The *rabi* crop is progressing under healthy conditions.

SUGAR QUIETLY STEADY

(From Our Own Correspondent)

HAPUR, 13*th February*

Sugar ruled quietly steady at Rs. 111.75 per bag in wholesale and Re. 1.09 per *seer* in the open market, as against the controlled prices of Rs. 108.50 and Re. 1.01, respectively. Supply position of sugar was reported to be easy, as the fresh release of 200,000 tons of monthly quota was made by the Government. A part of the release of the last two months had not yet been lifted, but early export prospects influenced the market sentiment. The State Government's levy of 19 nP per maund on cane purchased by the factories and 4 nP per maund on other units manufacturing *gur*, *khandsari* or *rab*, too, acted as the influencing factor for keeping prices of these commodities steady.

Sugar also recorded modest gains during the week in the Muzaffarnagar market due partly to export prospects and partly to lack of availability of *desi khandsari*. Prices improved fractionally to Rs. 110 to Rs. 110.50 per bag.

Khandsari attracted good demand from the consuming areas of the South and prices registered further gains. Production which had been hampered following continued cloudy weather and rains for over a fortnight, was reported to have commenced with vigour again. The crushers manufacturing *khandsari* increased cane purchasing price in some centres upto Re. 1.37 a maund. Old quality *khandsari* was now in demand from Agra side. Latest prevailing prices were: Inferior Rs. 26 to Rs. 31; superior Rs. 32 to Rs. 35.50; crystal Rs. 33 to Rs. 37.50; *boora* Rs. 32 to Rs. 36; old *galawat* Rs. 16 to Rs. 20; *khandsari* old Rs. 23 to Rs. 30 a maund.

Gur arrivals were very small during major part of the week but later increased to about 1,500 maunds on Monday. They were expected to mount further, as weather had now become sunny. Demand was slack and, with completed loading restrictions, local *gur* stock increased to 40,000 maunds. *Gur*, however, improved in Kolhapur and Calcutta. Week-end prevailing prices here were: *Pansera* Rs. 13.25 to Rs. 13.50; *balti* Rs. 13.37; *shakker* Rs. 15.25 a maund.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 11*th February*

Arrivals of kips were of the usual volume, and clearance by shippers good. Prices ruled firm. U.K. demand was fair-sized and E.I. tanners were grudgingly following U.K. buyers' ideas. Tanned buffalo hides and cow calf and lower grades cow hides met with steady demand. Owing to U.S. inquiries, buff calf improved steadily.

Tanned goatskins were unchanged, while demand for prime sheep improved and higher prices were established. Raw markets ruled firm as a consequence.

METAL SUPPLIES TIGHT

(From Our Own Correspondent)

CALCUTTA, 14*th February*

Induced by keen demand against the background of tight supply position and rumours of a cut in quotas, fully steady conditions were in evidence in the metal market during the week under review. Higher advices from London, New York and Singapore were also a factor for the bullishness.

On the London Metal Exchange, electrolytic copper opened at £221½ a ton, as against lower level in the previous week, but closed lower at £220. Good demand was reported on London from the Continent, while, in New York, existence of labour troubles in Rhodesia pushed up the price. In the local market, berry quality scrap was quoted firm at Rs. 238 a cwt. and utensil scrap at Rs. 218 a cwt. The significance of the present tight supply position was only mellowed by the existing coal shortage affecting the metal industry.

Tin here firmed up to Rs. 635 a cwt. from Rs. 603.00. Demand was good but supplies were short. In London, the price firmed up to £787 a ton from £786.

Virgin lead was wanting more buyers at Rs. 63 a cwt. In London, the price was firm at £64⅛ a ton against £64¼ earlier.

Electrolytic zinc opened here at Rs. 168.50 and gave way to close at Rs. 167.50. Supplies were difficult to be located, but the tightness would have been more serious but for the coal shortage which put down consumption of zinc in industry. On the London Metal Exchange, the price closed higher at £81⅛ a ton, as against £79½ earlier.

COMMERCIALISE AIR TRANSPORT

(*Concluded from page* 292)

and ten per cent in some places, but in other sectors the air fares have actually gone up. Our own domestic air services are notching up the air fares little by little. This is wrong policy. It means one of two things, either the organisation is excessively costly or the wrong kind of aircraft are being used. It could be a combination of both, and probably is.

If air transport is to come into its own, air fares must come down by 30 per cent. This is well within the practical use of existing aircraft. But it means cutting out what have become to be known as 'frills.'

The majority of flights are comparatively short. The average distance flown by a passenger is slightly over 600 miles. Some flights run to eight or ten hours on international routes. On all short haul flights up to four or even five hours, it is contended that no meals are necessary. On long flights, elaborate meals are pure luxury. A well-stocked 'buffet' with cold foods, sold by the plate, and drinks, on a collect, pay and take away basis would meet the need of the vast majority of the travelling public.

Those willing to pay high fares could be served with every luxury, in very fast flying aircraft that only carry a few passengers and mails and are luxury high speed air services. But for the average man and his wife, the 'buffet' service would be adequate. Fares could be reduced. Air travel could become more universal and what is, perhaps, most important of all, it would cease to be a burden on the tax payer. Air services can make profits and, therefore, there is no excuse for operating them on subsidy or Government grants-in-aid to write off losses.

COMPANY MEETINGS AND DIVIDENDS

STRUCTURAL ENGINEERING WORKS LTD. Annual General Meeting, Bombay, 21st February 1961. Dividend: Rs. 12.00 per ordinary share, subject to deduction of tax, payable on and after 1st March 1961. Transfer books remain closed from 6th to 21st February 1961, both days inclusive.

ANGELO BROS., LTD. Annual General Meeting, Calcutta, 24th February 1961. Dividend: 25 per cent or Rs. 2.50 per share, subject to deduction of tax. Transfer books remain closed from 9th to 24th February 1961, both days inclusive.

NEW INDIA SUGAR MILLS LTD. Annual General Meeting, Calcutta, 27th February 1961. Dividend: Rs. 3.65 per share, subject to deduction of tax. Transfer books will remain closed from 20th to 27th February 1961, both days inclusive.

MUTTRA ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Calcutta, 27th February 1961. Transfer books will remain closed from 21st to 27th February 1961, both days inclusive.

KELVIN JUTE CO., LTD. Annual General Meeting, Calcutta, 28th February 1961. Dividend: Rs. 15.00 per ordinary share, subject to deduction of tax, payable on or after 15th March 1961. Transfer books remain closed from 14th to 28th February 1961, both days inclusive.

WAVERLEY JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 28th February 1961. Dividend: Re. 0.30 per ordinary share, subject to deduction of tax, payable on or after 15th March 1961. Transfer books remain closed from 14th to 28th February 1961, both days inclusive.

BHARAT SUGAR MILLS LTD. Annual General Meeting, Calcutta, 28th February 1961. Dividend: Re. 1.50 per share, subject to deduction of tax, payable on or after 13th March 1961. Transfer books remain closed from 18th to 28th February 1961, both days inclusive.

GODAVARI SUGAR MILLS LTD. Annual General Meeting, Bombay, 28th February 1961. Dividend: Rs. 35.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 14th to 28th February 1961, both days inclusive.

ALLIANCE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 28th February 1961. Dividend: Rs. 6.00 per ordinary share (being the interim dividend already paid), subject to deduction of tax. Transfer books remain closed from 14th to 28th February 1961, both days inclusive.

OUDH SUGAR MILLS LTD. Annual General Meeting, Bombay, 2nd March 1961. Dividend: Rs. 20.00 per share, subject to deduction of tax, payable on or after 10th March 1961. Transfer books will remain closed from 20th February to 2nd March 1961, both days inclusive.

RAVALGAON SUGAR FARM LTD. Annual General Meeting, Bombay, 7th March 1961. Transfer books remain closed from 25th January to 18th February 1961, both days inclusive.

BHOPAL SUGAR INDUSTRIES LTD. Annual General Meeting, Sehore, Madhya Pradesh, 11th March 1961. Dividend: Rs. 2.25 per ordinary share, subject to deduction of tax.

SHREE KRISHNA GYANODAY SUGAR LTD. Annual General Meeting, Dalmianagar, Bihar, 17th March 1961. Dividend: 15 per cent or Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 10th to 17th March 1961, both days inclusive.

T. STANES AND CO., LTD. Annual General Meeting, Coimbatore, 22nd March 1961. Dividend: 22½ per cent or Rs. 2.25 per ordinary share, final (includes centenary bonus of 5 per cent or Re. 0.50 per share), subject to deduction of tax. Transfer books will remain closed from 8th to 22nd March 1961, both days inclusive.

MADURA MILLS CO., LTD. Annual General Meeting, Madurai, 27th March 1961. Dividend: 15 per cent or Rs. 2.25 per share, for the year ended 31st December 1960. Transfer books will remain closed from 28th February to 27th March 1961, both days inclusive.

BALLARPUR PAPER AND STRAW BOARDS LTD. Taxable dividend of 14.30 per cent on the ordinary capital, for the year ended 30th June 1960.

KUMERGODE ESTATES LTD. Taxable dividend of 20 per cent or Re. 0.40 per share, for the year ended 31st October 1960. Transfer books will remain closed from 12th to 25th March 1961, both days inclusive.

BABABUDIN COFFEE AND PRODUCE CO., LTD. Taxable dividend of 8 per cent or Re. 0.40 per ordinary share, for the year ended 30th June 1960. Transfer books will remain closed from 2nd to 15th March 1961, both days inclusive.

K.C.P. LTD. Taxable dividend of 15 per cent or Re. 1.50 per ordinary share, for the year ended 30th June 1960. Transfer books will remain closed from 27th February to 7th March 1961, both days inclusive.

RALLIS INDIA LTD. Taxable dividend of 4 per cent or Rs. 4.00 per ordinary share, for the year ended 31st August 1960. Transfer books will remain closed from 3rd to 23rd March 1961, both days inclusive.

COONOOR TEA ESTATES CO., LTD. Taxable final dividend of 7½ per cent, or Re. 0.75 per ordinary share (making a total of 17½ per cent or Re. 1.75 per share, for the year), for the year ended 30th September 1960.

GUJARAT PAPER MILLS LTD. Taxable dividend of Rs. 15.00 per ordinary share, for the year ended 31st March 1960.

ELECTRIC CONSTRUCTION AND EQUIPMENT CO., LTD. Taxable ordinary dividend of 10 per cent for the year ended 31st October 1960.

SHREE CHANGDEO SUGAR MILLS LTD. Taxable dividend of Rs. 2.50 per share, for the year ended 30th September 1960.

HINDUSTHAN SUGAR MILLS LTD. Taxable dividend of Rs. 29.00 per ordinary share (includes a bonus of Rs. 9 per share), for the year ended 30th June 1960.

Notices

EASTERN INVESTMENTS LIMITED

NOTICE IS HEREBY GIVEN TO THE members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 4.00 p.m. on Monday, the 13th March 1961, for the following purposes:—

As Special Business

To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as an Ordinary Resolution, namely—

1. That the consent of the Company be and is hereby accorded to the re-appointment of Bird & Co. (Private) Ltd., as Secretaries of the Company who shall hold such office upon the terms and subject to the conditions contained in an agreement in writing, a draft of which is submitted to this meeting and which is for the purposes of identification signed by the Chairman of the meeting and the Directors be and are hereby authorised to affix the Common Seal of the Company to such agreement in writing.

As Ordinary Business

2. To consider and approve the Audited Accounts of the Company for the year ended 31st December 1960, and to receive the Directors' and Auditors' Reports thereon.

3. To declare the Dividends recommended by the Directors.

4. To appoint Directors in the place of retiring Directors.

5. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 6th March 1961, to 13th March 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA, *25th January*, 1961.

Notes:—(*a*) A Member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(*b*) The Dividends, if declared, will be paid on or after 27th March 1961, to those Shareholders so entitled whose names appear in the Company's books on the 13th March 1961, or to their mandatees. No application for Dividend Warrants will be necessary.

(*c*) Explanatory Statement as required under Section 173 of the Companies Act has been forwarded to the Shareholders.

THE BHOPAL SUGAR INDUSTRIES LIMITED

NOTICE

THE SEVENTEENTH ANNUAL GENERAL Meeting of the Bhopal Sugar Industries Limited will be held on Saturday the 11th day of March 1961 at 5 p.m. at the Registered Office of the Company, Sehore, to transact the following business:—

1. To receive and adopt the Directors' Report and audited Profit and Loss Account and Balance Sheet for the year ended 30th September 1960.

2. To declare dividends on Preference and Equity shares.

3. To appoint a Director in place of Shri M. H. Hasham Premji who retires under the Articles of Association of the Company but being eligible offers himself for re-election.

4. To appoint a Director in place of Shri K. H. Bhiwandiwalla who retires by rotation but being eligible offers himself for re-appointment, and to consider, and if thought fit, to pass the following resolution as a SPECIAL RESOLUTION in respect of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Shri K. H. Bhiwandiwalla who retires by rotation under the Articles of Association of the Company, and who is also a Director and member of Messrs. A. H. Bhiwandiwalla & Co. (Bombay) Private Ltd., the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association of the Company and the Managing Agency Agreement to appoint two ex-officio Directors to the Board) be and is hereby reappointed as a Director of the Company."

(The reasons which make this Special Resolution necessary are that as the Managing Agents of the Company are authorised by the Articles of Association of the Company and the Managing Agency Agreement to appoint two ex-officio Directors to the Board and as Shri K. H. Bhiwandiwalla is a Director and a Member of the Managing Agents, his re-appointment can only be made by a Special Resolution of which special notice (as stated above) has been received by the Company.)

5. To appoint a Director in the place of Shri Dhirajlal Maganlal Dalal who was appointed as an additional Director of the Company by the Board of Directors pursuant to Article 142 of the Articles of Association of the Company and who ceases to hold office under Section 260 of the Companies Act, 1956, but who is eligible for re-appointment and in respect of whom the Company has received a notice in writing proposing him as a Candidate for the office of a Director.

6. To appoint Auditors for the current year and to fix their remuneration.

Notice is also hereby given that the Transfer Books of the Company will be closed from 23rd January 1961 to 11th February 1961 (both days inclusive).

By Order of the Board of Directors,
V. R. JHAVERI,
Secretary.

BOMBAY,
Dated this 6th day of January 1961.

Note.—A member entitled to attend and vote is entitled to appoint a proxy to attend and to vote instead of himself, and a proxy need not be a Member of the Company.

The relevant Explanatory Statement under Section 173 of the Companies Act 1956 has been posted to all the members individually along with the Notice.

MADURA MILLS COMPANY, LIMITED

Registered Office:
NEW JAIL ROAD, MADURAI

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Company will be held in Pandyan Building, West Veli Street, Madurai, on Monday, the 27th March, 1961, at 4-00 p.m. The Share Transfer Books will be closed from 28th February to 27th March, 1961, both days inclusive. It is recommended that:

1. All persons holding shares on blank transfers should immediately arrange to have the shares registered in their own names, as the Company will pay any dividend declared only to the person (s) in whose name the share stands on the date of declaration of dividend.

2. Shareholders desiring dividends to be paid to Banks or other Mandatees should register the mandates with the Company before 28th February, 1961.

3. Intimation of any change of address should be given to the Company immediately.

A. & F. HARVEY LIMITED,
Managing Agents.

MADURAI, *1st February*, 1961.

MARKET GOSSIP

(Concluded from page 275)

shift to a new system of weight breaks—the heavier the shipment, the lower the rate. Some commentators, however, feel that the apprehensions of air-freight war are being exaggerated. In support of their contention, they observe that even the failure of the Honolulu Conference of 1959, intended to fix North Atlantic and other long-haul passenger fares, was not followed by any indiscriminate passenger-fares war. On the contrary, saner counsels prevailed among the airlines and they settled the issue at a subsequent conference. Such a possibility in regard to freight rates also is not ruled out, especially as there was a wide measure of agreement among the participants of the Paris talks and the negotiations as noticed above, only failed due to differences in methods of reaching a widely shared objective. The airlines realise that the fuller utilisation of the existing carrying capacity can be achieved only if the rates are brought down. The present capacity and utilisation are admittedly unbalanced. In the picturesque words of Sir William Hildred, "the needs of air cargo grow increasingly urgent as the amount of existing load rattles like a handful of peas in the gourd of expanding capacity." The prospects for airlines would become quite promising, if their rates for cargo were reduced. It is said that the price-elasticity of demand for air cargo traffic is quite high. Those operators who have made a special study of the subject observe that, if the present air-cargo rate were cut by 40 per cent, the cargo traffic would rise by 300 per cent. One of the operators of all-cargo service, in fact, places this increase at 500 per cent. Rate reduction would thus open up a vast potential market for air freight.

ROUND THE EXCHANGE

(Concluded from page 276)

decision of the Government of India to increase the cess from 6 nP to 30 nP per lb. with effect from 1st April next which would ultimately raise the resources for paying replanting subsidy. Banks' electricals and miscellaneous industrials were all quiet.

In the textile section, Cannanores suffered a setback of Rs. 4, today's closing rate being Rs. 146. Metturs declined by Rs. 2 to Rs. 367. Lakshmis lost a rupee to Rs. 154. South India Viscoses shed a like amount to Rs. 145. Travancore Rayons eased by 50 nP to Rs. 33.90 and Radhakrishnas by 23 nP to Rs. 29.35. Bangalore Woollens were neglected at Rs. 195.50, as also Coimbatore Cottons at Rs. 169, Coimbatore Pioneers at Rs. 330. Janardanas changed hands at Rs. 58.50, Kotharis at Rs. 12.25 and Premiers at Rs. 225. Vasantas, however, advanced by Rs. 9 to Rs. 245 on special support. Coimbatore Spinnings rose by Rs. 3.50 to Rs. 52.50. Buckinghams improved by a rupee to Rs. 192. Maduras fell initially from Rs. 34.90 to Rs. 34.85, before closing at Rs. 35, with a net gain of 25 nP over the week.

Among teas, Chembras gave way from Rs. 3.85 to Rs. 3.70. Kil Kotagiris lost 8 nP to Rs. 5.07. Neelamalais were lower by 5 nP at Rs. 4.70. Blue Mountains dropped 3 nP to Rs. 3.90. Nonsuchs were unchanged at Rs. 26.40, Parksides at Rs. 28 and Peermades at Rs. 22.30. Devasholas, however, scored a gain of 50 nP to Rs. 31, following the announcement of an interim dividend of 10 per cent, taxable, for the year 1960. Periakaramalais declined from Rs. 3.62 to Rs. 3.56 earlier in the week, but recovered later to Rs. 3.63.

Coffee Lands provided a bright spot in the coffee section, the quotation rising by Re. 1.10 to Rs. 20.60. Consolidated Coffees, which had receded from Rs. 23.30 to Rs. 23.05 earlier, moved up later and closed at Rs. 23.30. Cowcoodys were firm at Rs. 4.90, Anaparais at Rs. 4.70 and Mysore Coffees at Rs. 5.45.

In the rubber section, Midlands hardened by 15 nP to Rs. 11.65. Cochin Malabars gathered 5 nP to Rs. 7.60. Kailasas were fully steady at Rs. 5.01. Malankaras at Rs. 18 and Travancore Rubbers at Rs. 10.40. But Rajagiris eased by 10 nP to Rs. 18.90.

Among sugars, Mysores lost Re. 1.50 to Rs. 58.25. East India Distilleries dropped 25 nP to Rs. 40. Indias decreased by 10 nP to Rs. 12.75 and Travancores by 8 nP to Rs. 10.62. K.C.P's were dull at Rs. 24.53, following the Directors' decision to maintain the dividend for the year ended June 1960 at the previous year's level of 15 per cent, taxable. Jeypores were unchanged at Rs. 17.60, despite the increase in the dividend to 12.5 per cent for the year ended June 1960, which compared favourably with 10 per cent in the previous year. United Breweries, however, evoked renewed buying enquiries and advanced by Rs. 2 to Rs. 112. Cauverys gathered 50 nP to Rs. 138.50. Deccans improved by 21 nP to Rs. 13.95 *ex-div.*

In the banking group, Indians (fully paids) spurted by Re. 1.75 to Rs. 171. Indian Overseas put on 25 nP to Rs. 189. Canara Bankings were fancied at Rs. 80 *cum-div.* The Company has declared a dividend of 15 per cent, taxable, for the year 1960, same as that distributed in the previous year. Indian partly paids were unaltered at Rs. 143.50 as also Pandyans at Rs. 33 and Andhras at Rs. 100. Punjab Nationals, however, sagged by 12 nP to Rs. 20.

Among electricals, Salem Erodes were neglected at Rs. 12.25, Cochins at Rs. 10.20, Vellores at Rs. 13.10 and Tinnevelly-Tuticorins at Rs. 11.80. But Kumbakonams picked up 25 nP to Rs. 9.90. West Coast were higher at Rs. 13.37 by 12 nP and South Madras by 5 nP at Rs. 9.90.

Miscellaneous scrips were generally listless. Among cements, Indias declined by 10 nP to Rs. 6.05. Andhras and Dalmias were quiet at Rs. 10.10 and Rs. 11.25, respectively. Among chemicals, Metturs were dull at Rs. 13.35, F.A.C.Ts at Rs. 10.12, Mysore Fertilisers at Rs. 10.90 and Mysore Chemicals at Rs. 26.10. Travancores were unchanged at Rs. 15, notwithstanding the news of an interim dividend of 7½ per cent for the half-year ended September 1960. Indian Steel Rollings were quiet at Rs. 10.05. The Directors of the Company have announced an interim dividend of 5 per cent, taxable, for the 15 months ended March 1961 (the official year being changed to 31st March). Among others, Textools fell by 50 nP to Rs. 172. Ashok Leylands shed 7 nP to Rs. 8.70. Western India Plywoods, however, strengthened by a rupee to Rs. 240. Aluminium Industries rose by 14 nP to Rs. 22.97.

ASSOCIATED INDUSTRIES (ASSAM) LTD.

A step towards the further industrial development of Assam will shortly be taken with the setting up of a cotton spinning mill and an integrated plant for the manufacture of sulphuric acid, sulphurdioxide, superphosphate and mixed fertilisers. There is at present no cotton spinning mill or chemical and fertiliser factory in the State. The Associated Industries (Assam) Ltd., a company promoted by the Calcutta business house of Jatias, has been formed for undertaking these projects. Licences have been granted for a cotton spinning mill of 25,000 spindles, a sulphuric acid plant of 1,500 tons per month, a liquid sulphurdioxide plant of 300 tons per month, a superphosphate plant of 3,000 tons per month and a mixed fertilisers plant of 6,000 tons per month. The Indian Refineries Ltd. has agreed to take from the Company, its entire production of liquid sulphurdioxide for its Gauhati and Barauni refineries. The handloom industry in Assam has, at present, to obtain its requirements of yarn from outside the State. Messrs. Singmaster & Breyer Inc., a well-known firm of American chemical engineers, have been appointed consultants for the integrated chemicals project and will supply the imported portion of the superphosphate and mixed fertiliser plants. The sulphurdioxide and sulphuric acid plants of Monsanto design will be supplied by Panamerican Consulting Company, the authorised agents for the use of Monsanto designs outside America. About 1,200 acres of land near Gauhati have been purchased and erection work is proceeding. Production in all the plants is expected to commence by the end of this year.

The cost of the entire project is estimated at Rs. 112 lakhs. The Government of Assam has agreed to participate in the preference and equity capital of the company. The Industrial Finance Corporation has under consideration a loan of Rs. 50 lakhs, a part of which will be in dollars. A public issue of equity capital will shortly be made.

CANARA BANKING CORPORATION LTD.

The net profit of the Canara Banking Corporation Ltd. for the year ended 31st December 1960 amounts to Rs. 6,89,198 (including Rs. 14,361 brought in from the previous year's account). Of this, a sum of Rs. 1,35,000 has been placed to statutory reserve fund. The balance of Rs. 5,54,198 is available for distribution and the Directors have recommended the following appropriations:

Provision for taxes—Rs. 2,80,000.

Dividend at Rs. 3.25 and Rs. 2.93 per share on 5 per cent and 4½ per cent first preference shares, respectively, and 15 per cent per annum on equity shares, all dividends payable being subject to deduction of income-tax in terms of Section 18 of the Indian Income-tax Act—Rs. 2,62,948.

Carry-forward to next year's account—Rs. 11,250.

TRAVANCORE RAYONS TO EXPAND

It is reliably learnt that the Central Government has given permission to the Travancore Rayons Limited, Rayonpuram, Kerala State, to increase the rayon yarn production capacity by another five tons per day. Since its inception in 1950, the Company has been continuously serving the industries using rayon yarn. In particular, the handloom industry is assured of regular supplies of good quality yarn at reasonable prices. The Company will be manufacturing rayon grade pulp from indigenous cotton linters by the end of 1961. It has also plans to increase the production of transparent cellulose film from 4,000 tons to 6,000 tons per year. Such an expansion will enable the Company not only to meet the growing internal demands of our consumer goods industries but also to export substantial quantities abroad and earn foreign exchange for the country.

TEXTILES

(Concluded from page 286)

available. According to it, a comparative study should be made of raw and pit systems of mulberry cultivation. For increasing the yield of cocoons, it has suggested provision of facilities for incubation of seed, extension of chawki rearing on large scale, better rearing appliances and application of other improved methods. The references made by the Group to filatures reveal that the filature units are working below installed capacity. Since ultimately it is the filature industry that will give production of superior quality silk-worm fabrics at competitive prices, it is stressed that quality cocoons must be produced at a reasonable cost. The Group wants a sound organisation for purchasing cocoons and grading of cocoons before reeling, continuance of the present pattern of assistance by the Board (50 per cent subsidy and 50 per cent loan) until all the basins are modernised, replacement of old *charkas* by cottage basins and establishment of a full-fledged silk conditioning house in Kashmir for testing silk.

The Working Group has recommended five kinds of co-operatives each for taking care of the different stages of silk production. These are: seed production, credit and service, chawki rearing, cocoon marketing and raw silk marketing. It says: "The various sections of the industry lend themselves admirably well for organisation of co-operatives.

A special reference is made to the export trade in pure silk fabrics. Four further incentives for exports have been recommended. They are: (1) increased concession in the price of imported raw silk under the scheme; (2) drawback of customs duty on imported raw silk to customers; (3) licences for import of dyestuffs; and (4) inclusion of ready-made silk garments under the scheme. It may be noted here that there has been a marked improvement in the exports of both silk fabrics and silk waste in recent years. The actual exports in 1959 were 985,993 square yards of fabrics valued at Rs. 73.84 lakhs and 819,774 lbs. of waste valued at Rs. 27.67 lakhs, as against 85,617 yards (Rs. 9.32 lakhs) and 506,585 lbs. (Rs. 11.07 lakhs), respectively, in 1954. Imports of raw silk into India have declined from 1,214,644 lbs. worth Rs. 260.32 lakhs in 1951 to just 332,891 lbs. worth Rs. 59.83 lakhs in 1959. The decline must be attributed to the protection granted to sericulture industry and the Working Group has advocated the continuance of protection. The rate of protective duty is fairly high, being 35 per cent *ad valorem* plus a specific duty of Rs. 4 per lb. on raw silk and 35 per cent *ad valorem* plus Rs. 5.28 per lb. on yarn spun from silk waste. Considering the wide disparity between the Indian and foreign prices of raw silk, the need for continuing protection is obvious. But since there is a limit upto which the domestic consumer should be asked to nurse the industry by paying high import duties, all those who are in charge of this industry must strive hard to improve the efficiency of Indian silk producers within a reasonable period, so that the quantum of protection may be lowered without detriment to the living wage of workers engaged in this agro-industry.

MILLS *VERSUS* POWERLOOMS

FOR some months past, the claims made about the production performance of handloom industry have been disputed. Officials, Ministers, and the champions of handlooms used to claim that, in the past few years, the handlooms had doubled their production. The *Statistical Bulletin*, published by the Textile Commissioner, gives 1,907 million yards as cloth produced on handlooms in 1959, the corresponding figure for 1955 being 1,480 million yards. The veracity of these statistics was publicly questioned by Lala Bharat Ram, Chairman of the Delhi Cloth Mills, in October last. The Textile Commissioner's Office kept quiet. It issued no contradiction, but quiet'y discontinued the practice of showing separately in its *Monthly Bulletin*, the production figures of handlooms and powerlooms; instead, it started publishing the total production by handlooms and powerlooms under one heading, namely, "decentralised sector." In fact, the words "handlooms" and "powerlooms" do not figure at all in the issues of the *Bulletin* pertaining to September 1960 onwards. The latest issue of this publication, it may be noted in passing, is for November 1960, and this was released only last week. This clearly shows that the Textile Commissioner's Office has admitted the need for reassessing cloth production by handlooms. It also implies that the figures of handloom production published prior to September 1960 are unrealiable and have exaggerated the performance of this much-boosted cottage sector. It is really appalling to find that all these years the whole country has been misled, to use a more polite word than "deceived," by the publication of wrong sets of data on handlooms and powerlooms. All the paraphernalia organised for sustaining handlooms—heavy subsidy, special marketing arrangements, co-operative finance, the Handloom Board, etc.—has been for a sector which has now turned out to be much smaller than was assumed. How did the Textile Commissioner's Office continue to make this mistake for years and years? Was it deliberate or just complacency? We have heard it said by some responsible persons that the production figures of handloom cloth were being "cooked up" in the Textile Commissioner's Office. This allegation is serious enough to warrant an impartial enquiry.

So much for the past. As for the future, a correct picture of the role that is being played by handlooms and powerlooms as suppliers of cloth is necessary, in order to determine their respective place, as well as that of the mill sector, in the third Plan. The targets laid down for them in the Draft Outline of the third Plan are now untenable, as they are based on data for the decentralised sector which have now been proved to be false. The urgency for fresh thinking on this subject is clear beyond doubt. In this context, it is gratifying to find that the Indian Cotton Mills' Federation has already taken the lead by publishing a brochure entitled *Third Plan Targets for Handlooms, Powerlooms and Mills*. An attempt has been made in it to find out the actual production by handlooms and powerlooms and to suggest what, in the industry's opinion, should be the course of action for the future. The Federation's stand on powerlooms is, of course, neither [illegible] nor progressive. But one has to complement it on the initiative it has taken for exposing the false picture that had been painted about handlooms and powerlooms by the Textile Commissioner's Office by conducting its own independent studies based on data published by other official agencies. The Federation's study brings out the startling conclusion that, contrary to the position accepted to be correct so far, it is the powerlooms and not the handlooms that account for the major portion of cloth produced in the decentralised sector. According to it, the cloth production by handlooms in 1959 was no more than 800 million yards, as against 1,907 million yards estimated by the Textile Commissioner's Office, that is, less than 50 per cent of the official estimate. Similarly, the production of cloth on powerlooms is estimated by the Federation at as high a figure as 1,365 million yards, as compared with the official estimate of 351 million yards. The Federation has clearly indicated the basis of its calculation. It is possible that the Textile Commissioner's Office may choose to refute these figures. There is room for contention that the millowners' study has underestimated the performance of handlooms outside the co-operative sector. Notwithstanding all the benefits and inducements offered to weavers by the Co-operative Movement, a large number of them is known to have preferred to remain independent or to work with master weavers as in the past. But a controversy on figures takes the country nowhere. The best thing to do would be to refer the issue to an independent body of experts for an expeditious verdict, so that the truth can be discovered and the dispute ended quickly.

The millowners' study shows that, whereas powerlooms have exceeded their production target of 405 million yards in the second Plan by 960 million yards, the handlooms turned out only 800 million yards as against the target of 2,105 million yards. It further shows that production by handlooms in the co-operative sector, in particular, has declined, despite all the assistance, financial and otherwise, given to them. Even after making allowance for a certain degree of exaggeration in the millowners' estimates, it is now pretty obvious (*a*) that the handlooms cannot be relied upon to fulfil the target of 2,800 million yards reserved for it in the third Plan and (*b*) that, if the *status quo* were allowed to prevail in regard to the Government's policy of reservation of markets and handicaps on the mill sector in favour of the decentralised sector, the powerloom sector would stage another leap forward. The time has, therefore, come to decide upon a revamping of the textile policy for the period of the third Plan and beyond. For this purpose, the Government must first quickly check on the findings of the millowners' study, if it is not prepared to accept them.

The Indian Cotton Mills' Federation is not happy over the outcome of the Government's efforts to protect and strengthen the handlooms. It has expressed its disapproval, in no uncertain terms, of the rapid expansion that has taken place in the powerloom sector, which is described in such epithets as a parasite, interloper and usurper, "gaining at the cost of the handloom sector, the mill sector and the public exchequer." It has its reasons for holding this opinion and they are explained in the brochure mentioned earlier. But not all will agree with it on this issue. The preference for powerlooms in the decentralised sector is a welcome trend and deserves to be encouraged, for the simple reason that the powerloom is a better means of production, capable of giving a higher wage to workers, than the handloom. After stoutly opposing the recommendations of the Kanungo Committee, which considered the ultimate replacement of handlooms by powerlooms as "inescapable," weavers even in Tamil Nad, the stronghold of handloom industry, are now in favour of switching over to powerlooms, because they have seen clear evidence of the latter's superiority as a source of gainful employment. Seeing the writing on the wall, the Madras Government, which was once misguided by the self-appointed leaders of handloom weavers, is itself now advising the weavers to go in for powerlooms. It is easy for millowners to point an accusing finger at the Maharashtra Government for allowing powerlooms to grow like mushrooms in Bhiwandi and Malwan, but can Mr. Kamraj, Chief Minister of Madras, do so? He is realistic enough to advise the weavers in his State to march with the time. Even the Karve Committee, appointed to safeguard the interests of village and small-scale industries, conceded in principle that handlooms could not be subsidised for ever. Not long ago, the same view was expressed by the present Union Minister for Commerce and Industry. Every impartial study of the working of the handloom sector has proved that handlooms cannot provide anything more than a subsistence wage and that they can be kept going only with the help of sustained spoon-feeding. Stated simply, what all this means is that the handloom sector must progressively yield place to the powerloom sector. This evolution is already gathering speed faster than was anticipated by anyone and to the discomfort of millowners. Apparently, a section of the latter feels concerned about the prospect of unfair competition from powerlooms.

This concern is, perhaps, not unwarranted, for everything is not perfect and fair with the way in which the powerloom industry has

grown. There is a large number of unauthorised powerlooms, which, while thriving under the climate of protection created for handlooms, are not sharing the benefits accruing to them with either the consumer or the Government. It is alleged that, in order to evade excise duty and the obligations of the Factories Act, ingenious devices are being adopted by the owners of powerloom factories and that they are "minting money." It is further alleged that a new class of middlemen is emerging who are hiring the services of traditional weavers for operating powerloom factories, with the result that, instead of becoming owners of powerlooms, the handloom weavers are simply sweating as wage earners. These allegations may be well founded, but suitable remedies must be found for overcoming the defects and deficiencies in the organisation and ownership of powerlooms. Unfortunately, the Indian Cotton Mills' Federation has not put forward any constructive suggestions for developing the powerloom sector in a manner which will be useful to the country as a whole. On the contrary, it has taken the stand that there should be only two sectors, the modern mill sector and the old, outmoded, archaic handloom sector, on the ground that powerlooms have neither the superiority of mills as an earner of taxes for the Government and provider of employment at living wages nor the attribute of handlooms which offer self-employment opportunities to a large number of people in rural or semi-urban surroundings. This is a perfect counsel of despair.

It is undoubtedly true that, from every point of view, it is desirable to make cloth in large-sized composite mills, equipped with modern spindles, automatic looms and other up-to-date machinery. It is equally true that the mill sector has a strong case for being allotted a much bigger target in the third Plan than the 5,800 million yards fixed by the Planning Commission. The Government will certainly be taking a risk of exposing the country to a cloth famine and irksome controls if it fails to allow the mill sector to expand at least on the basis originally suggested by the Bombay Millowners' Association. But the real issue here is not mills *versus* powerlooms but handlooms *versus* powerlooms. To be more precise, the issue is how to bring about a transformation of the handlooms into powerlooms on healthy lines. India is neither the U.S. nor China. For a considerable number of years to come, therefore, there is bound to be a sizable decentralised sector in the manufacture of textiles. Accordingly, the aim should be to see that this decentralised sector is able to stand on its own feet, without proving itself to be a heavy burden on the mill sector or the public exchequer as the handloom sector is today. Only powerlooms can play that role. But their growth should be well planned and well regulated, care being taken to see that they do not get concentrated in a few hands or in a few places. Given competent organisation, even small powerlooms owned and operated by individual families should be able to make a significant contribution to the country's economic progress.

A MASTER PLAN FOR CALCUTTA

PRIME Minister Nehru once described Calcutta —that sprawling metropolis with its teeming, turbulent millions—as something of a nightmare to him and probably thought of it as beyond redemption. Mr. Russi Mody, President of the Indian Chamber of Commerce, who convened a conference of leading industrialists last week to consider the development problems of the city, referred to the "explosive build-up of frustration and distress in the city" and warned that any further deterioration in its civic conditions would have serious repercussions on commerce and industry. Between Mr. Nehru's view of the city and Mr. Mody's warning, there seems to be something in common—probably an uneasy feeling that Calcutta might become India's 'Shanghai' of pre-revolutionary China. Such a feeling can be no hallucination, for this city of six million people, groaning under the weight of unsolved civic problems, has all the ingredients of a potentially revolutionary situation. It has its slums and squalor, distress and unemployment, grinding poverty in the midst of cynical opulence, group and social tensions in all their variety and, above all, its agitators and anti-social elements. If a city with such a *milieu* is not to become a hot-bed of revolution, something imaginative would need to be done here and now to bring hope and cheer, if not some immediate relief, to its harassed populace.

Dr. B. C. Roy, that indomitable Chief Minister of West Bengal, has, therefore, done well to turn the spotlight on the problem of Calcutta's development and canvass wide and swift support for his two projects which add up to a master plan for the city. The first project, recommended by a W.H.O. team last year, envisages the creation of a statutory Metropolitan Water and Sewage Board, covering an area of 270 square miles in and around Calcutta on either side of the Hooghly. This Board, when constituted, will virtually supersede the Calcutta Corporation and the 32 suburban municipalities—which are a byword for incompetence in matters financial and administrative—and execute a composite scheme "for providing sufficient supply of drinking water, for efficient drainage of the area, for providing sewers in the area and for effective removal of garbage." The need for this project, which will entail a total cost of about Rs. 200 crores, will be apparent from the fact that the biggest twin problem in Calcutta is water and sewage. According to the W.H.O. team's report, the city's water-supply is contaminated by cholera and other germs found in casual ground water, and the fate even of the filtered water-supply is threatened by increasing salinity of the Hooghly river. Only two-thirds of the city proper is covered by sewers, while Howrah and other suburban towns have no modern sewage system. That this project would have to be taken up on a high-priority basis is obvious.

The other project is for the creation of a satellite town six miles due south of Calcutta on both sides of the Diamond Harbour Road. This town will be designed to cover an area of 55,000 acres and to accommodate a population of 1.4 million, rising in due course to 1.8 million. Since the satellite town will effect the "decongestion" of Calcutta city and thereby clear the ground for an effort to eliminate its slums and to improve its housing, sanitary conditions and civic amenities, this project is in a way related to the first. The scheme envisages the construction of about 240,000 houses, out of which 50,000 are to be reserved for the homeless people of Calcutta. The satellite town will also have its own schools, colleges, industries, hospitals, banks and various other amenities. Although the project will cost Rs. 220 crores in all, it will require only Rs. 75 crores by way of investment at any one time. The idea here is to make the scheme self-financing after its initial stages by selling developed building plots and also buildings. That this project would have to be taken up for execution along with the first is also obvious.

Both the projects, which have the additional merit of being labour-intensive and thus employment-oriented, will, incidentally, relieve the acute problem of unemployment, especially among educated youths, in Calcutta. Although their ultimate total cost will be Rs. 420 crores, they will involve an outlay, as such, of only Rs. 275 crores in all, probably staggered over the next 10 years. It may be that, in view of the time lag involved in initial preparations, surveys and the like, the outlay during the third Plan period will not be more than Rs. 100 crores or so. If the Government of India contributes towards the cost of the Calcutta schemes at least Rs. 25 crores out of the provision of Rs. 50 crores recently approved by the National Development Council for the development of areas like Calcutta in the third Plan period, the West Bengal Government, which has also earmarked Rs. 10 crores for the purpose in its third Plan, will be able to go ahead confidently with its preparations. Even as things stand, the chances of the project having a good start seem to be bright. Dr. B. C. Roy is also hopeful of getting as much as 50 per cent of the funds required for the entire outlay of Rs. 275 crores from foreign sources in different forms. Loan assistance from the International Development Association is considered most likely in this connection. Since the foreign exchange component of the project is stated to be relatively small, it may not be difficult to secure assistance from the Development Loan Fund and technical assistance from the U.N. and its specialised agencies. All in all, the present circumstances are most favourable for the Calcutta development project, what with the interest displayed in it by the World Bank, the specialised agencies of the U.N. and the Ford Foundation. It is also a happy augury for the project that the industrialists and businessmen of Calcutta have come to take a vigorous interest in it. After all, the pressing civic problems of the city have, to some extent, resulted from the development of industries. When the time comes for subscribing to development bonds that may be floated by the proposed Metropolitan Board, it may be expected that industrialists in the city will deem it their duty to contribute a part of their resources to the financing of the project as if it were a humanitarian rather than a purely civic one.

Even when such all-round help is assured for the two projects and they are taken up for execution, they will have solved only a part of the multi-sided problem that is Calcutta. There are, for instance, the problems of port development, silting and salinity of the Hooghly river, traffic congestion on the roads, power supply and city passenger transport, to mention only the more important. By far the most pressing problem is the progressive silting of the Hooghly, which makes access to the Calcutta port difficult for modern ships with draughts of over 26 feet and displacement of 10,000 tons. The extent of deterioration in this respect in recent years may be inferred from the fact that, in 1959, vessels of 26 feet draught and speed of 12 knots were unable to enter the port on 353 days, whereas the corresponding figure in 1952 was 217 days. Even the road and rail approaches to the port are greatly overburdened, and the port itself has reached saturation point in its handling capacity. Still desilting can bring some relief, and, it is, therefore, a welcome development that the Government of India has now decided to recommend this case to the Development Loan Fund for assistance. At the same time, work on developing a satellite port at Haldia so as to relieve the pressure on the Calcutta port is called for as a matter of high priority. It is, again, a welcome development that the Union Government has not only assigned this high priority to the Haldia port project but also agreed to take up the question of establishing a railway link from Haldia to the interior areas.

The other pressing problem is the increasing salinity of the Hooghly which now supplies water to Calcutta but which cannot be depended upon to supply salt-free drinking water even under the Metropolitan Water and Sewage Project, unless, of course, the river itself receives supplies of fresh Ganga water throughout the year instead of only for one or two months as at present. It is said that the salinity of the water in Calcutta is so great that boilers of even locomotives are damaged. With so much salt in tap water, it is impossible for doctors to put their patients on a salt-free diet. Even tube-well water is highly saline and has a very high iron content. The only other source of fresh water supply now available is the D.V.C. canal system which, too, is in a position to put only 3,000 cusecs into the Hooghly. Only the Ganga can come to the rescue of Calcutta and ensure the success of the proposed Metropolitan Project itself. It is, therefore, heartening to know that the Government of India, after some hesitancy on the score of possible political complications with Pakistan, has just decided to include the Farakka barrage scheme in the third Plan. When this project is completed in time, as it may well be, the Hooghly will receive copious supplies of fresh Ganga water and bring relief to the citizens of Calcutta. If, at the same time, new water pumping stations come to be located, as part of the Metropolitan Project, at a point 30 miles up the Hooghly from Calcutta, the water-supply will not also be polluted by the effluvia of the mills on the banks of the river. But, pending the execution of the Farakka scheme, the West Bengal Government would do well to complete the short canal joining the Ganga with the Bhagirathi, if it has not already done so.

As for the problems of traffic congestion on Calcutta's roads and city passenger transport, they are least likely to be solved in the current context of overcrowding in the city. It may be that "decongestion" of Calcutta, in the wake of creation of the proposed satellite town, will provide a partial solution. How the State Government will be able to implement its present proposal to separate the slow-moving from the fast-moving vehicles is by no means clear. Nor is it clear how it can persuade the owners of slow-moving carts to discard them and take to three-wheeler small trucks instead, as it proposes to do. Since the Metropolitan Project will not be concerned with realignment of roads, city transport, and the like, the proposals pertaining to tube railway or mono railway, elimination of carts and further railway electrification will have to be taken up separately. But it is doubtful if these latter projects are as important as the Water and Sewage Project which, whatever be its cost, rightly deserves the first priority from the point of view of the Calcutta citizen's health and well-being. The only sector in which some improvement can be more immediately effected is that of power supply and that, too, without any strain on the resources of the Government. This, of course, implies that the powers-that-be will have the wisdom and the courage to license further expansion of existing private power projects and to permit the construction of new ones in the private sector.

MARKET GOSSIP

A NOTABLE feature of Mr. G. L. Mehta's statement to the shareholders of the Industrial Credit and Investment Corporation of India Ltd., the full text of which is published on pages 340 and 341, is a critical analysis of the recent trends in industrial finance. In the first place, Mr. Mehta has placed the upsurge in the capital market in its proper perspective. The qualifications which must be borne in mind in interpreting the heavy oversubscriptions to a number of new capital issues have been clearly underlined by him. This is important, as exaggerated inferences are being drawn by politicians about profits, savings and distribution of fruits of development planning. The second point made by Mr. Mehta pertains to the tendency among *entrepreneurs* to rely more on loans and bank borrowings and less on equity capital. The factors that encourage this unhealthy trend and the risks involved over a long-term period have been clearly stated by him. Only, Mr. Mehta has made no reference to the encouragement given to this trend by the relatively low rates of interest on debt finance which were prevailing till very recently. His advice to companies in the private sector to avail themselves of the prevailing favourable conditions in the capital market to strengthen their capital structure by replacing their loan capital with equity capital is quite sound. Its implementation will be facilitated if the Government does not insist on issue of new shares at a premium or exempts at least the capitalisation of share premium account from the bonus tax of 30 per cent.

Stock Exchange Trends—A Study

Inasmuch as the stock exchanges are regarded as the barometer of a country's economic prosperity or adversity, the need for ensuring the proper functioning of the exchanges cannot be overstressed. Like the barometer that is very sensitive to weather conditions, the stock exchanges are also sensitive to the psychology of investors which, in turn, is influenced by quite a number of factors, the most important being the official fiscal and monetary policies. But there is one difference: while the rise or fall in the mercury level of a barometer cannot be controlled by changing weather conditions, the trend of the stock exchanges can be altered by excessive manipulation by speculators or by undue interference by the authorities. This factor must be borne in mind in examining the role of stock exchanges in Indian economy or in judging their importance to it. Considering that these exchanges are the channels which facilitate the flow of the community's savings into investment, the creation of public confidence in them is of the utmost importance; this is a task for which both the Government and the boards of stock exchanges are responsible. This aspect has been well brought out in a research study on trends in share prices carried out by the Association of Trade and Industry (Bombay) under the direction of Dr. K. R. Paymaster.

The study is quite interesting, in that it analyses the trends in equity values in the context of economic development in India and abroad. It also presents a co-ordinated picture of the bull cycle in Indian share markets by giving a sensitive index of the daily prices of leading cleared shares listed on the Bombay Stock Exchange, along with two other indicators of stock market activity, that is, contango rates and value of shares delivered. Emerging from a comparison of share prices in India with those abroad against the background of general price levels from the long-term (1939-60) and short-term (1955-60) points of view are two conclusions. One, share prices in India have risen far less than those elsewhere. Two, share prices in India have increased far less than the general price level, while, in other countries, they have advanced more than the general price level. The following are the relevant data relating to index numbers furnished in the study:

Long-term Trends
(Base : 1939=100)

August1960	India	U.K.	U.S.A.	Switzerland	Canada
Share prices ..	174	400	513	329	281
Wholesale prices ..	482	360	233	206	232
Percentage of 1 to 2 ..	36.1	112.7	220.2	159.7	121.1

Short-term Trends
(Base : 1955=100)

Share prices ..	127	173	142	189	400*
Wholesale prices ..	136	110	108	100	106*

*Relate to West Germany

The above table is not of much significance. It is useful only to those who want to know how the prices of shares and commodities have fluctuated since 1939 in the countries of the West. It would be wrong, for instance, to say that, as the rise in share prices in India even when the boom was at its highest was less than that elsewhere in the free world, it was not a matter for serious concern. The circumstances in each country are different. In any case, the stock exchanges in India are isolated from their confreres in other countries.

A closer view of share price trends during the 1958-60 boom is provided by analysing the behaviour of 16 leading scrips listed as "cleared" securities on the Bombay Stock Exchange. This analysis reveals that the first lap of the bull cycle lifted the market by 30 per cent during the period March-September 1958, the combined index of the aforesaid 16 scrips (Base : January-February 1958 =100) touching 130 in September 1958. After receding to 115 three months later, the index gradually moved up to 167 in December 1959. The bull cycle reached its peak at 202 in July 1960. The various credit curbs and the measures adopted by both the monetary and stock exchange authorities to discourage speculation in March 1960 and subsequent months caused a sharp reaction, the index declining to 164 in October 1960. Thereafter, it stabilised, moving in a narrower range between 184 and 168.

A brief reference to the emergence of a new issue market in India is made in the study. This development is attributed to (*a*) the broadening of the class of investors in recent years; (*b*) establishment and growth of large financial institutions such as the L.I.C., the I.C.I.C.I. and industrial) finance corporations, as well as private investment companies; (*c*) favourable industrial policy; and (*d*) the consideration that equities, in view of their growth potential in terms of capital value, act as hedge against depreciation in capital values due to inflation. Stating that the future success of the new issue market is necessary for rapid industrial growth, the study draws attention to the unpopularity among the investing class of certain industries the products of which are subject to price control, such as electric power, coal, steel, cement and certain basic chemicals. If these industries are to fulfil the targets assigned to them in the third Plan period, it is imperative that the price control policies should, as the study pertinently suggests, be reoriented, especially the concepts of fair return on capital as interpreted by the Tariff Commission, the electricity authorities and other price-making bodies.

The Association's study is fully aware of the fact that bullish and bearish trends are liable to be overdone in any share market and admits that precautionary measures aimed at checking speculators' excesses may be desirable from the point of view of avoiding the crashes that invariably follow. But it is defective in one sense, in that it does not offer any specific suggestions for checking excessive speculation. Nor does it express any opinion about the adequacy or inadequacy of the measures that have so far been taken in this country. It, however, emphasises that a bullish trend of the share market is an effective stimulus to investment activity and urges that nothing should be done to reverse the existing primary trend. Indeed, it warns: "It would be fatal to the public, if strong fiscal and monetary measures were adopted to arrest speculative trends." While it can be conceded that fiscal policy of the Government should in no circumstance be made an instrument to check undue speculation on stock exchanges, for the simple reason that it will have an adverse impact on the growth of savings and its flow into productive investments, the same cannot be said of monetary policy. There is plenty of room for judiciously wielding monetary weapons against excessive speculation on stock exchanges without causing any adverse repercussions on the growth of investment activity.

The argument that a boom on stock exchanges is necessary in order to create a climate for brisk investment activity is not a sound one. A boom means artificial stimulation that brings about a sudden spate of buying activity which will soon be followed by a bust, causing disillusionment and disappointment among investors. Further, booms on stock exchanges give a distorted picture of the trend and quantum of savings. Again, in a socialist State such as the one India is having, it will engender adoption of wrong fiscal policies by the Government that will retard the growth of private enterprise. In the Introduction to the Association's study, Mr. Tulsidas Kilachand highlights the tribute paid to Mr. Morarji Desai for having created public confidence by following a stable policy. But Mr. Morarji Desai is not a permanent incumbent of the portfolio of finance in the Centre. He was not there in 1956-57 and his predecessor used the 1955-56 boom on stock exchanges as a pretext to introduce all sorts of soak-the-rich taxes. Who knows his successor will not do the same thing? Even Mr. Morarji Desai would have been forced to take some such measures, had the boom of 1959-60 persisted and the type of response which capital issues like the Synthetic Chemical, Colour-Chem, and Baroda Rayon had were still in evidence. Luckily for taxpayers in this country, these unhealthy trends have receded to the background on the eve of the Budget. And they must be firmly tackled, if they reappear again.

Bank Mergers in U.S.

The First National City Bank of New York (Chairman: Mr. James S. Rockfeller), one of the largest U.S. banks, and the National Bank of Westchester (Chairman: Mr. Ralph T. Tyner Jr.), the second largest bank in that suburban county, have announced their plan to merge. If the plan comes through, it will be the latest of the mergers sparked off by the New York State's new banking law, the Omnibus Banking Act of 1960. To mention only two of the recent amalgamations. The Morgan Guaranty Trust Company formed last month a holding company with six banks outside New York City. The Bankers Trust Company created another holding company with the County Trust Company, another Westchester bank. The new law, which came into effect last summer, relaxed the restrictions that previously confined the operations of New York banks to the City.

Under the terms of the merger agreement between the First National City and the National Bank of Westchester, which is subject to the approval of the shareholders of the respective banks, one share of the First National City Bank will be exchanged for every two of the Westchester Bank. The latter Bank will be converted into the Westchester division of First National City Bank.

The First National City Bank, including its trust affiliate, the First National City Trust Company, had, at the end of 1960, deposits amounting to $7,771 million, capital funds of $790 million and total assets valued at $8,882 million. The number of shares, including the 2 per cent stock dividend (bonus share) approved at the annual meeting held in January last, aggregated 12,484,800 which, after the take-over of the Westchester Bank, will increase by 571,939 to 13,056,739. The National Bank of Westchester is, by comparison, small fry, with deposits of the order of $216 million at the end of 1960, capital funds of $14.72 million and total assets of $237 million. The number of shares is 1,143,878.

An idea of the objects of and the possible advantages that would result from the merger can be had from the statements made by the respective Chairmen of the two Banks. Announcing the plan on behalf of the First National City, Mr. Rockfeller said:

"The rapid growth of National Bank of Westchester in the few years since its organisation is evidence that it has served Westchester County effectively and constructively. With the continuing and prospective growth of the County we both believe that its expanding needs can best be served by association of a leading Westchester bank with a large New York City bank, which can make available larger loan resources and more varied and specialised services of the kind now available to New York City residents. We are gratified that National Bank of Westchester has elected to join with First National City for this purpose, and we are confident that consummation of the plan will benefit the business and people of Westchester County and contribute to its development. We are equally confident that the proposal is in the interest of the shareholders of both banks, since it will promote growth of the combined institutions. It carries forward the orderly evolution of the banking structure to meet growing needs, which was one of the purposes of the modification of the State banking law made by the Legislature in the Omnibus Banking Act of 1960."

Mr. Tyner, Chairman of the Westchester Bank, summed up the benefits which the staff and the banking public will get from the merger in the following words:

"For many years, it has been our goal to create an outstanding country-wide banking organisation to serve Westchester as economically and efficiently as possible. It is indeed gratifying to announce that, through this combination with First National City we are able to bring to Westchester the fulfilment of this goal—a leading national and international banking institution. We cannot overestimate the importance of this consolidation to our County. The financial needs of school districts, municipalities, and urban redevelopment authorities will be greatly aided by the increased resources of our combined institutions. Our staff members, with ambitions and ability, will have presented to them unlimited possibilities for advancement. Our long-term employees approaching retirement will be rewarded with increased security. The benefits to the shareholders of the Bank, whose confidence and support have made all this possible, are obvious.

"In arriving at this decision to join with First National City Bank, many factors were considered. The First National City Bank has long been a leader in the field of personal and consumer loans. One result of the combine will be reduced interest cost to Westchester borrowers. Savings depositors will benefit from the payment of interest from day of deposit to day of withdrawal. A greater volume of savings will mean more money for residential and commercial mortgages. To the many thousands of commuters in Westchester, complete banking will be available to our customers at both ends of the commuting line. Any banking transaction will be able to be carried out in either Westchester or New York offices of the Bank."

It is clear from the statements that the main objects of the merger are more economic working and better and extended service to customers which will be made possible by pooling together the resources of the two banks.

The merger of the aforesaid two banks is in keeping with the recent trend in American banking. In spite of the fact that both Federal and State laws in the U.S. have put a series of fetters to prevent big banks from growing bigger by absorbing smaller ones, the tendency for such mergers has been gathering momentum. In the past decade 1950-59, for instance, as many as 1,500 banks (more than 10 per cent of all banks in the U.S.) have been absorbed by others. Most of the banks thus taken over have been relatively small institutions, but some large banks have also amalgamated with other already large institutions. Even then, the number of commercial banks in that country adds up to an impressive total of 13,470 at present.

There are many reasons for this trend towards bigness in American banking. First, as compared with other sectors of the economy (automobile manufacture, for example), consolidation has been much less in banking business. Second, the introduction of automation has necessitated, in the interest of economy, an expansion in the scale of operations. Thirdly, keen competition between banks has forced some to enter into partnership with their rivals to stay in the race.

Legal obstacles to growth of size has induced U.S. banks to resort to ingenious devices to accomplish in fact what they are prevented from doing in law. One such device is "group banking," a peculiarly American development, under which several banks are brought together in a holding company which owns a controlling interest in the shares of each one. Each individual bank of the group retains the semblance of autonomy, with its own board of directors, while it can draw on the resources and managerial skill of the group.

EQUITIES SURGE FORWARD

ALL-ROUND RISE IN PRICES

(From Our Own Correspondents)

BOMBAY, 23rd *February*

EQUITIES in both cash and forward lists made a strident advance during the week under review, a rather unusual phenomenon on the eve of the Central Government Budget due to be presented to Parliament exactly five days from now. There were no rumours to suggest that the Budget would be a pedestrian one, without any fresh dose of taxation. But the absence of upward revision in passenger fares and freight rates in the Railway Budget, minor tax adjustments in the Bombay Budget, and lack of additional tax proposals in the budgets of Andhra Pradesh, Bihar and West Bengal, despite sizable overall deficits, induced a feeling of optimism among operators about the Central Budget. The general consensus of opinion appeared to be that the Union Finance Minister would not choose a pre-election year budget for increasing direct taxes and that he would content himself with higher revenues collected from direct taxes as a result of the expanding tempo of economic activity. This feeling, coupled with the increase of Rs. 45 per ton in steel retention prices, bolstered up the sentiment of the market leading to an all-round improvement in values. The undertone of the market was distinctly firm.

In the steel section, Tata Steels rallied from Rs. 145.50 to Rs. 150.25 yesterday. After receding to Rs. 149 today, they improved and finished at Rs. 150, a net rise of Rs. 4.50 over the week. Mukand Irons advanced by Rs. 2 to Rs. 26. Indian Irons picked up 54 nP to Rs. 25.10; at one time on Tuesday and Wednesday, they were higher still at Rs. 25.25.

Textiles continued to march forward. Standards forged ahead from Rs. 1,118 to Rs. 1,210. Khataus jumped up by Rs. 33.75 to Rs. 496.25. Morarjis spurted by Rs. 12 to Rs. 355. Centurys scored a gain of Rs. 9, today's closing rate being Rs. 499.50. Svadeshis hardened by Rs. 6.50 to Rs. 250, B. R. Cottons by Rs. 6 to Rs. 32, Swans by Rs. 5 to Rs. 500 and Mysores by Rs. 4.50 to Rs. 63. Kohinoors and Simplex strengthened by Rs. 4 each, the former to Rs. 285.50 and the latter to Rs. 172. Central Indias put on Rs. 3 to Rs. 109. Shree Niwas gathered a like amount to Rs. 250. Finlays, Podars and Tata Mills rose by Rs. 2 each to Rs. 332, Rs. 140 and Rs. 44.50, respectively. Bombay Dyeings increased from Rs. 62.50 to Rs. 64.20 on Tuesday the 21st inst. and, after easing to Rs. 63.20 yesterday, recovered to Rs. 64 today. The net gain over the week was Re.1.50. Indores gathered a rupee to Rs. 140. Apollos were firm at Re. 1.54, as also Elphinstones at Rs. 66 and New Greats at Rs. 193.

Sugar shares also recorded a rise in values on hopes that the Joint Committee of the Maharashtra Legislative Assembly to which the Land Cellings Bill has been referred might recommend the exclusion of cane farms attached to sugar mills. Walchandnagars advanced by Rs. 12 to Rs. 222.50. Belapurs, which had declined from Rs. 275 to Rs. 272 after they were *ex-div.* on Monday the 20th inst., as against the *cum-div.* quotation of Rs. 293, moved up to touch Rs. 280 today. The closing was Rs. 278, the net gain over the week being Rs. 5.50. Phaltans put on Rs. 4.50 to Rs. 140 *ex-div.* Maharashtras hardened by Rs. 3 to Rs. 189. The shares of non-Maharashtra sugar companies, however, ruled quiet. Thus, Changdeos encountered selling and dropped Rs. 3.50 to Rs. 26. Oudhs shed 50 nP to Rs. 197.50. Kesars elicited enquiries from interested parties and climbed up by Rs. 55 to Rs. 230.

Cement company shares attracted good attention. Operators noted the Government's decision to fix the price of unpacked ordinary Portland cement at Rs. 104.60 per tonne (f.o.r. destination railway station), exclusive of packing charges of Rs. 17 per tonne. Associated Cements spurted to Rs. 149.75 from Rs. 143.50 last week. Digvijays hardened by Rs. 3 to Rs. 158. Sone Valleys picked up 40 nP to Rs. 5 and Orissas 12 nP to Rs. 13.56. Ashokas rose from Rs. 8.76 to Rs. 9.

Automobiles met with sustained buying support. Premiers spurted by Rs. 4 to Rs. 168.50. Hindustan Motors strengthened by 68 nP to Rs. 20.92. Among shippings, Scindias gained 64 nP to Rs. 14.96 on expectations of better freight market. Great Easterns were done at Rs. 14.68 *ex-div.*, as against Rs. 14.76 *cum-div.* last week.

Induced by excellent buying orders, engineering shares recorded handsome improvement in values. T. Maneklals forged ahead from Rs. 330 to Rs. 350. New Standards jumped up by Rs. 16.50 to Rs. 186. Telcos spurted by Rs. 15.50 to Rs. 313. Alcock Ashdowns advanced by Rs. 14 to Rs. 278. Premier Constructions and Cooper Engineerings hardened by Rs. 10 each to Rs. 196.50 and Rs. 189, respectively. Khandelwals strengthened by Rs. 5 to Rs. 92. Larsen and Toubros by Re. 1.25 to Rs. 39.25. Mahindras by Re. 1.40 to Rs. 22, Kamanis by 76 nP to Rs. 17.48 and Texmacos by 44 nP to Rs. 23.60.

In the miscellaneous section, dyes and chemicals were bid at higher levels. Colour-Chems shot up by Rs. 56.25 to Rs. 370 on reports of excellent earnings in the current year. Amar Dyes spurted by Rs. 25 to Rs. 385, new shares gaining Rs. 27.50 to Rs. 365. Synthetics and Chemicals advanced by Rs. 22 to Rs. 150, Indian Dyestuffs by Rs. 17.50 to Rs. 467.50. Poly Chems by Rs. 16.25 to Rs. 238.75, Dharamsi new shares by Rs. 11.25 to Rs. 223.75, Alembics by Rs. 8.75 to Rs. 265, Dhrangadhras by Rs. 4.25 to Rs. 126 and Citrics by Rs. 4 to Rs. 60. In the rayon group, Baroda Rayons improved by Rs. 16 to Rs. 140. South Indian Viscose rose by Rs. 9.50 to Rs. 148. National Rayons put on Rs. 7 to Rs. 514. Indian Rayons gathered Rs. 3.50 to Rs. 68.50 and Gwaliors 65 nP to Rs. 44.50. Among other miscellaneous scrips, Anil Hardboards were marked up by Rs. 25 to Rs. 305. Laxmi Starchs increased by Rs. 17 to Rs. 185. Ceat Tyres improved by Rs. 15 to Rs. 241.25 and Premier Tyres by Rs. 8 to Rs. 106. Bombay Burmahs strengthened by Rs. 11 to Rs. 566.50. Voltas appreciated by Rs. 9.25 to Rs. 270.50 on the Chairman's statement about the expansion of the Company's activities. Wimcos gained Rs. 8 to Rs. 273, Indian Hume Pipes Rs. 5.50 to Rs. 175, Greaves Cottons by Rs. 3.50 to 160, Hindustan Levers by Rs. 2.50 to Rs. 46.50. Asian Cables by Rs. 2 to Rs. 111.50, Tata Oils by Re. 1.80 to Rs. 76, Investment Trusts by Re. 1 to Rs. 81 and Philips Carbons by 36 nP to Rs. 18.12.

• • • •

Madras Stock Exchange

MADRAS, 22nd *February*

In distinct contrast to the dull conditions noted last week, the Stock Exchange depicted a firm trend during the week under review, thanks mainly to revival of investment buying on a large scale. The sentiment was aided by encouraging advices from Bombay and Calcutta markets. The absence of fresh imposts in the Railway Budget also imparted some strength. Textiles put on a cheerful appearance on renewed reports of increased cloth offtake as well as *improvement in new cotton supply position*. Tea shares attracted good attention induced by strong demand for tea at auction centres. Coffees and rubbers were well maintained. There were larger enquiries in the sugar section on hopes of sugar export to the U.S. Electricals, banks and miscellaneous shares also met with good demand.

In the textile section, Bangalore Woollens advanced by Re. 1.50 to Rs. 196.50. Maduras moved up from Rs. 35 to Rs. 36.50, before closing at Rs. 36.25. Travancore Rayons rose initially from Rs. 33.90 to Rs. 35.10, after being higher still at Rs. 35.60. Lakshmis spurted by a rupee to Rs. 155. Buckinghams and Coimbatore Cottons both gained a like amount, the former to Rs. 193 and the latter to Rs. 170. Radhakrishnas put on 30 nP to Rs. 29.65 and Kotharis 10 nP to Rs. 12.35. Dhanalakshmis were fully steady at Rs. 216 *cum-div.* The Directors of the Company have maintained the dividend for 1960 at the previous year's level of 17½ per cent taxable. Coimbatore Pioneers were firm at Rs. 330, Metturs at Rs. 367 and Premiers at Rs. 225. Vasantas, however, encountered selling and were marked down by Rs. 3 to Rs. 242. Cannanores lost Rs. 2 to Rs. 144. Coimbatore Spinnings shed Re. 1.50 to Rs. 51.

Among teas, Parksides improved by 37 nP to Rs. 28.37. Nonsuchs improved by 35 nP to Rs. 26.75. Kil Kotagiris rose by 28 nP to Rs. 5.35 and Peermades by 25 nP to Rs. 22.55. United Nilgiris gathered 22 nP to Rs. 24.12, following the announcement of an interim dividend of 10 per cent taxable for the year ended March 1961. Periakaramalais hardened by 7 nP to Rs. 3.70, after declining earlier to Rs. 3.62. Blue Mountains eased from Rs. 3.90 to Rs. 3.86, but finished firm at Rs. 3.90. Devasholas were fully steady at Rs. 31, as also Chembras at Rs. 3.70.

In the coffee group, Consolidated Coffees rallied from Rs. 23.30 to Rs. 24.10. Coffee Lands advanced by 65 nP to Rs. 21.25. Ouchterlonys picked up 3 nP to Rs. 4.60, *despite the announcement of a* lower dividend of 13 per cent, taxable, for the year ended October 1960, which compares unfavourably with 15 per cent taxable last year. Cowcoodys were well fancied at Rs. 4.90, Anaparais at Rs. 4.70 and Amalgamateds at Rs. 13.65.

Among rubbers, Midlands spurted by 35 nP to Rs. 12. Cochin Malabars strengthened by 16 nP to Rs. 7.76; it had touched Rs. 7.86 earlier in the week. Kailas put on 4 nP to Rs. 5.05. Malankaras changed hands at Rs. 18, same as last week. But Travancore Rubbers declined by 53 nP to Rs. 9.87 and Rajagiris by 15 nP to Rs. 18.75.

Sugar shares generally tended to move up. Cauverys scored a gain of Re. 1.80 to Rs. 133.80 *ex-div.* East India Distilleries hardened by a rupee to Rs. 41. Deccans rose by 35 nP to Rs. 14.30. Travancores gathered 13 nP to Rs. 10.75. United Breweries were fully maintained at Rs. 112 and Indias at Rs. 12.75. Mysores were done at Rs. 58.25. The Directors of the Company have declared a dividend of 30 per cent, taxable, for the year ended June 1960, same as in the previous year.

In the electrical section, West Coasts firmed up by 13 nP to Rs. 13.50. South Madras gained 5 nP to Rs. 9.95. Cochins were steady at Rs. 10.25, Salem-Erodes at Rs. 12.25, and Vellores at Rs. 13.10.

Among banks Indias fully paids and partly paids were maintained at Rs. 171 and Rs. 143.50, respectively, as also Canaras at Rs. 85, Canara Bankings at Rs. 80, Punjab Nationals at Rs. 20 and Pandyans at Rs. 33. Indian Overseas, however, declined by 50 nP to Rs. 188.50.

Cements, chemicals and engineerings were partially strong in the miscellaneous section. Among cements, Travancores rose by 20 nP to Rs. 8.80. Indias moved up from Rs. 6.95 to Rs. 6.15, before closing at Rs. 6.10. Dalmias and Orissas were well maintained at Rs. 11.25 and Rs. 13.55, respectively. Among chemicals, Travancores moved up by 72 nP to Rs. 14.97 *ex-div.* F.A.C.Ts improved by 18 nP to Rs. 10.80 and Mysore Fertilisers by 5 nP to Rs. 10.95. Mysore Chemicals, however, came in for some selling and lost 63 nP. Among other industrials, South India Viscose elicited enlarged enquiries on reports of early commencement of production in the Company and climbed up by Rs. 5 to Rs. 150. Textools increased by a rupee to Rs. 173. Ashok Leylands gained 30 nP to Rs. 9. Aluminium Industries rose by 28 nP to Rs. 23.25, following the announcement of an interim dividend of 90 nP (taxable) on old and 30 nP on new shares. The Company has secured the Government sanction for the proposal to issue 45,000—7 per cent T. I. mortgage debentures of Rs. 100 each.

STEEL STRIP PROJECT

A new factory for the manufacture of cold rolled steel strip will be set up in the suburb of Bombay shortly. The project has been sponsored by Messrs. Graham Firth Steel Products (India) Private Ltd., a new company formed by Dr. Pranlal Patel, Mr. N. A. Nanavati and Mr. Dashrath Sinh in collaboration with the Graham Firth Steel Products Ltd. of Walsall in the U.K. The British company, which belongs to the well-known organisation of engineering group, namely, Brightside of Sheffield, will contribute one-third to the capital outlay of the project, the balance representing Indian capital. This was disclosed by Mr. A. R. Lancashire, Assistant Managing Director of the British company, at a Press conference in Bombay on Tuesday this week. In lieu of financial participation, the British company will supply complete plant, machinery, tools and other equipment, besides providing the necessary technical know-how. A notable feature of the collaboration agreement is that it does not involve any payment of royalty. And the Indian Company enjoys the free right to use the parent Company's trade mark, "Firsteel."

The new unit will initially have a capacity to produce 3,600 tons of finished steel strip on single-shift basis. The Company has plans to step up the capacity to 25,000 tons, "as soon as raw materials from Indian sources become available in plenty," particularly from the Rourkela steel plant. The first phase of the project comprises the manufacture of cold rolled steel strip, and after this a further programme to manufacture section rolling for automobile industry, lacquered strip for hardware and light metal industries, etc., will be undertaken. The steel strip to be produced by the Company will cater to the needs of a wide range of industries, such as automobile components, bicycle seat springs, handbag frames and radio components, all of which are at present affected by shortage of supplies as a result of stringent import restrictions. When the plant goes into full production (25,000 tons per annum), it is expected to result in a saving of Rs. 50-Rs. 60 lakhs in foreign exchange.

The factory is expected to commence operation in June-July next with straight line production which will be followed by manufacture of coils in October-November. To begin with, about 150 workers will be employed and the number is expected to increase to 700 later.

STATE BANK OF BIKANER

Steady progress was made by the State Bank of Bikaner during 1960, the first year of its working as a subsidiary of the State Bank of India. As against a loss of Rs. 2.96 lakhs for 1959, due largely to a heavy provision of Rs. 8.50 lakhs towards the staff gratuity fund, the Bank has been able to show a profit of Rs. 2.12 lakhs, the bulk of which, Rs. 1.50 lakhs to be precise, has been utilised to meet the bonus to the staff. Only a small sum of Rs. 50,000 has been used to strengthen the reserve fund. The following figures show the earnings, and expenses and net result, as also the variations in the balance-sheet items for the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Interest and discount earned	59.81	68.61	62.15	53.56
Commission and exchange	17.23	15.73	15.06	16.67
Interest paid	35.77	37.75	38.75	29.50
Expenses	41.47	47.42	34.96	29.98
Depreciation	1.01	1.18	1.03	0.74
Profit	2.12	—2.96	9.02	10.15
Provision for taxation	Nil	..	3.25	3.80
To reserves	0.50	..	2.00	2.50
„ gratuity fund	..	..	..	..
„ bonus to staff	1.50	..	1.33	1.80
Dividend	Nil	..	2.50	2.50
Carry forward	0.12	..	0.02	0.08

	As on 31st December			
	1960	1959	1958	1957
Paid-up capital	50.00	50.00	50.00	50.00
Reserves	12.50	27.00	27.00	27.00
Deposits	13,64.97	13,16.34	12,58.69	13,96.79
Borrowings from banks	0.08	1.46	65.00	Nil
Advances	7,69.52	7,96.06	7,06.47	7,26.76
Investments	5,48.17	6,06.96	5,39.70	5,15.50
Cash	1,83.51	1,70.78	1,89.78	4,50.89
Balance-sheet total	16,46.09	17,34.19	15,69.71	16,25.96
Ratio to deposits—	%	%	%	%
Advances	56.8	60.5	56.2	53.0
Investments	40.0	46.1	48.0	32.5
Cash	13.4	12.9	16.2	32.2

It will be seen that there has been a slight increase in deposits followed by an improvement in the cash position. The variations in advances and investments are only small. The contraction in reserves from Rs. 27 lakhs to Rs. 12.50 lakhs is not explained in the Directors' report. Evidently, it reflects a readjustment of the assets to their realistic value.

During the year under review, the Bank's sphere of activities was steadily expanded. As many as 11 new branches were opened in Rajasthan. Licences for opening branches at six more centres have been granted by the Reserve Bank of India and these will be opened during the current year. The Bank undertook a scheme for the provision of finance to small-scale industries and the total credit limit sanctioned to them aggregated Rs. 38.22 lakhs.

NEWS IN BRIEF

THE question of constructing an atomic power station at Delhi is under the consideration of the Central Government.

The Maharashtra Land Ceilings Bill has been referred to a 21-member joint select committee of the Legislative Assembly. The select committee is expected to submit its report by 16th March next.

The question of revising the wage structure in coal mines will be discussed at the next meeting of the Industrial Committee on Coal Mines to be held at the end of April next.

A sum of Rs. 8.3 crores (£6,206,000) has been paid by India to the World Bank for being credited to the Indus Basin Development Fund, as the first instalment of the total contribution of Rs. 83 crores.

Five applications (two from Poona and one each from Ahmednagar, Nanded and Dhulia districts) for licences to establish new sugar factories are being considered by the Government of Maharashtra.

In view of the "abundant supply of wheat," the Government of India is seriously considering the question of removing zonal restrictions on its movement, according to Mr. S. K. Patil, Union Minister for Food and Agriculture.

An eight-man delegation (leader: Mr. Chinubhai C. Jhaveri), sponsored by the Cotton Textile Export Promotion Council, has left for West African countries to explore the possibilities of expanding exports of textiles to those countries.

The Government of Maharashtra has decided to buy 16 bulldozers from Russia for being supplied to agriculturists in the State. This was disclosed by Mr. P. K. Sawant, Minister for Agriculture, in the State Legislative Assembly last week.

The Scindia Steam Navigation Company has taken delivery of the 12,699-ton m.v. *Jalakirti*, built by the Japanese firm, the Mitsubishi Heavy Industries at its shipyard at Kobe. This is the second vessel acquired by Scindias under the yen credit from Japan. With the new addition, Scindias' fleet has gone up to 56 vessels.

No agreement has yet been reached with the Japanese industry over the price payable for iron ore exported from this country in 1961, according to Mr. Satish Chandra, Union Deputy Minister for Commerce and Industry. Both the parties are, however, coming closer in their approach, following talks held at New Delhi and Tokyo recently.

Soviet Russia has offered to supply aircraft and helicopters to India against rupee payment. Disclosing this in the Lok Sabha, Mr. Ahmed Mohiuddin, Union Deputy Minister for Civil Aviation, observed that the offer had been communicated to all parties interested in the import.

The representatives of Air-India International and the Soviet Aeroflot, who met in Bombay this week, have worked out the basis on which Aeroflot would extend its present Moscow-Delhi services to Rangoon and Djakarta. Under the arrangement, Air-India will obtain the right to extend its service beyond Moscow.

A final decision is expected to be taken soon with regard to the proposal for a free trade zone at Kandla according to Mr. Raj Bahadur, Minister of State in the Ministry of Transport and Communications. The various issues arising from the proposal have been resolved in consultation with the Ministries of Finance and Commerce and Industry.

The cotton textile mills' production in January 1961 is provisionally placed at 153 million lbs. of cotton yarn and 443 million yards of cotton cloth. At the end of January, the composite mills of the cotton textile industry held an estimated stock of 271,000 bales (of 1,500 yards each) of cloth, comprising 177,000 bales of unsold cloth and 194,000 bales of cloth sold but not lifted.

Sixteen selected designs of low-cost houses for middle and low income groups, to suit hot-arid and hot-humid climates, have been printed in a booklet produced by the National Buildings Organisation of the Union Ministry of Works, Housing and Supply. The designs were selected out of 59 entries received for an all-India competition organised by the Organisation some time ago.

The Government of Gujarat has plans to set up coal dumps in industrial centres, such as Ahmedabad, Rajkot, Bhavnagar and Baroda, with a view to relieving shortage of coal. It is said that about 300 units in the State, including textile, ginning and chemical industries, have been affected by the coal shortage. The Madras Government has already decided to set up similar coal dumps at selected sites in the State.

The per capita consumption of fruits in India is estimated at 1.5 ounces. Juicy fruits supply about ten to twelve calories per ounce, fleshy fruits like mango and guava fifteen to twenty calories per ounce and dry fruits like dates about eight calories per ounce. Fruits are generally taken more for their valuable content of vitamins and minerals than for their caloric value.

An agreement was signed between India and the United Arab Republic at New Delhi last week, under which the U.A.R. will supply 50,000 tons of Egyptian rice in exchange for jute, tea and engineering goods, such as sewing machines, diesel engines, motor pumps, dry batteries, and also pharmaceuticals. It may be recalled that, in March 1960, India had signed an agreement with the U.A.R. for the import of 100,000 tons of rice, the rupee proceeds from which were utilised for purchasing Indian goods.

The price of unpacked ordinary Portland cement has been fixed by the Government of India at Rs. 104.60 per tonne f.o.r. (destination railway station) with effect from the 20th inst. The revised price excludes the packing charges of Rs. 17 per tonne of cement in 20 new or serviceable second-hand d.w. heavy cess jute bags. The packing charges, which will be effective only upto 31st March, may be revised by the Government depending on the fluctuations in jute prices.

The Railway Testing and Research Centre has evolved a method to utilise the loco coal-ash as a building material. Coal-ash, it has been found, can be used with advantage as an aggregate in masonry works. For areas where clay bricks are costly and stone is not available, concrete made with coal-ash has been found to be a competitive substitute. Steam locomotives drop more than 1.5 million tons of coal-ash annually on the Indian Railways.

The 4,700-ton suction hopper-dredger, *Churni*, built by the Scottish firm of Simons-Lobnitz Ltd. for the Port of Calcutta, was launched at Glasgow on the 16th inst. The *Churni* is sister ship to the *Bhagirathi*, launched in 1957 from the same shipyard. It will trail a section pipe on the river Hooghly, and can fill the silt into its own hopper or container (which can carry 3,000 tons). It will operate away from port for anything up to three weeks at a time, and has a complement of over 100.

The Central Water and Power Commission has undertaken reconnaissance surveys for locating sites for hydro-electric projects over the river Chenab in Jammu and Kashmir State. These surveys include geological mapping, boring of holes, penetrometer tests and geophysical investigations. Preliminary investigations show that a large hydro-electric power potential is available on the river Chenab. The Indus Waters Treaty places no restriction on the quantum of electric power that India may tap from this river.

The proportion of actual cultivators among depositors at Central warehouses rose from 10 per cent in December 1960 to 21 per cent in January 1961. A study of the custom handled during the month shows that the percentage of producers at Devangere (Mysore) Central Warehouse was as high as 85. The same exceeded 60 at other Central warehouses, such as Amravati, Sangli and Akola (Maharashtra), Warangal and Guntur (Andhra Pradesh), Gadag (Mysore) and Theog (Himachal Pradesh). The Central Warehousing Corporation opened last month warehouses at Trichur (Kerala) and Nadiad (Gujarat). Steps are also being taken to open warehouses at Hyderabad and at Sheorafhulli and Sainthia in West Bengal. After these warehouses are opened, the Central Corporation will have a total of 38 warehouses. At the end of January last, Central Warehouses had a total storage capacity of about 1.6 million maunds. Stocks stored in these warehouses aggregated 1.06 million maunds.

• • • •

From Abroad

A geological survey conducted by Soviet experts at Queen Maud Land in Antarctica has indicated the occurrence of large deposits of gold, diamonds, iron, mica and other minerals.

The total savings of private individuals in West Germany rose from DM 6,986 million in 1959 to DM 7,087 million in 1960. The aggregate value of saving accounts in the country rose by D.M. 8,075 million in 1960, as against an increase of DM 8,166 million recorded in 1959.

The number of unemployed in Canada rose in the middle of January to 693,000—the highest figure in the last 15 years. It was higher by 146,000 over a year ago and by 56,000, as compared with the previous post-war peak of 637,000 touched in March 1958.

The Ford Motor Company in Britain has decided to return to full-time working, following the recent improvement in car sales. The Standard Triumph International and Vauxhall will also put the majority of its labour force back on a five-day week. The British Motor Corporation is planning to introduce an extra shift for a second batch of its employees.

The number of cars owned by workers and employees in West Germany increased from 229,000 in the middle of 1954 to 2.11 million, or an increase of 823 per cent. in July 1960. It accounts now for more than 50 per cent of all cars licensed for circulation in W. Germany. A particularly steep rise took place in the number of automobiles owned by workers, which went up from 52,400 to 691,000.

The Government of Iceland has entered into a stand-by arrangement with the International Monetary Fund for the supply of $1,625,000 for financing the country's continuing programme of economic stabilisation. When this programme was undertaken a year ago, the Government obtained a drawing from the Fund of $2,812,500, and an additional stand-by arrangement for $5,625,000 of which $4 million was subsequently drawn.

The British firm, Messrs. Priestman Bros. Ltd., has secured an order for 167 crawler universal dragline excavators from Poland. Total value of the order—machines and equipment—is about £650,000. The British firm has been making earth-moving machinery for nearly 80 years, and regularly exports its products to India, Burma, Ceylon, Malaya, Pakistan, Thailand, and several countries in Africa and other continents.

PERSONAL

MR. G. P. J. De Clermont, Chairman of Messrs. De Clermont and Donner Ltd., London, and its subsidiary, the South Indian Export Company, Ltd., Madras, is on a tour of this country. He is visiting Madras, Hyderabad, New Delhi and Calcutta in connection with South Indian Export's affairs and, in particular, to discuss with Government officials the possibilities of increasing exports of hides and skins from India.

Mr. Alexi Kosygin, Soviet First Deputy Chairman of the Council of Ministers, has arrived in India to study the prospects for increased Indo-Soviet economic co-operation. He is accompanied by Mr. S. A. Shackov, Chairman of the Soviet State Committee of Economic Relations with Foreign Countries, Mr. G. M. Pushkin, Deputy Minister for Foreign Affairs, Mr. P. C. Ivanov, Deputy Chairman of Gosplan and Mr. K. N. Plotnikov, Director of the Institute of Economics under the Academy of Sciences.

The U.K. accounted for 26.9 per cent of the total industrial output in Western Europe (excluding Iceland, Spain and Switzerland for which figures are not available). West Germany ranked next, its share being 26.7 per cent. France and Italy contributed 16.2 per cent and 10.3 per cent, respectively. The total industrial output in the Common Market accounted for 60.86 per cent and E.F.T.A. for 36.85 per cent.

West Germany and Japan have been quicker than the U.K. in seizing the increasingly wealthy markets of the oil States in the Middle East according to an article published in the British Treasury's *Bulletin for Industry*. The article points out that the U.K. has been losing ground since 1957 and reminds the exporters that, with its prospect of increased foreign exchange earnings, the region constitutes a market "well worth a keen sales effort."

The volume of Sweden's industrial production in 1960 reached a new peak, being higher by 8 per cent, as compared with the previous year. This is the largest increase for any year over the past decade and compares with a rise of 3.7 per cent. in 1959, 1.8 per cent in 1958 and a previous peak of 6 per cent in 1955. The average annual increase over the past ten years is 3.4 per cent. The overall 8 per cent increase in 1960 was composed of a 9 per cent increase for capital goods and a 5 per cent rise for consumer goods.

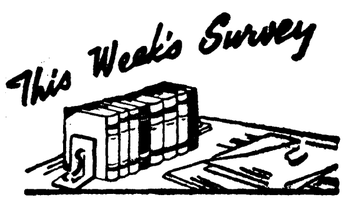
The basic year of the West German cost-of-living index has been changed from 1950 to 1958. The revision is a sequel to the considerable changes which have taken place in consumer habits in the country in the last few years. The general rise in incomes enabled the average consumer not only to buy more goods but also to shift demand to more diversified and higher-quality goods, especially durables. The new cost-of-living index, taking 1958 as 100, stood at 103.1 in December 1960.

The annual rate of fixed investment in the U.K. rose by almost 50 per cent in real terms in 1959, as compared with 1950. The proportions of total fixed investment in public and private sectors varied over the period, with the share of the public sector at its height—55 per cent—in 1953 during the housing drive. The private share of all fixed investments other than housing was 62 per cent in 1950, 52 per cent in 1953 and 56 per cent in 1959. In 1959, the manufacturing industry took 22 per cent of total fixed capital formation, housing 18 per cent and distribution and other services 16 per cent.

The three-day conference of the Seven European Free Trade Area countries, which ended at Geneva on the 18th inst., decided to accelerate the rate of tariff reductions among themselves. It also proposed to admit Finland to their trading bloc, probably by the creation of a new eight-nation Free Trade Area. The conference expressed its readiness to begin negotiations with the Six Common Market countries, whenever the latter wished. It may be noted that, prior to this conference, the Six held a meeting in Paris at which France agreed to hold technical talks with the U.K. on subjects, including the suggestion of a customs union. These talks are scheduled to be held on Monday and Tuesday next week at London.

World production of steel touched an all-time record of 355.6 million net ingot tons in 1960, representing an increase of 35 million tons over the previous year. All the major steel producing countries lifted the output to new peaks, barring the U.S. which accounted for 27.9 per cent of the total (99.3 million tons), which compares unfavourably with 29.1 per cent in 1959. Japan scored the highest rate of increase last year, boosting its production by 33 per cent to 24.4 million tons, ranking fifth behind the U.S., the Soviet Union, with 72 million tons, West Germany with 37.6 million tons and the U.K. with 27.2 million tons. Soviet output rose by 6 million tons, or 9 per cent., from 1959. Italy gained 21 per cent, the U.K. 20 per cent, West Germany 16 per cent and France 14 per cent.

Direct investment by U.K. private companies overseas increased from £145 million in 1958 to £178 million in 1959—a rise of 23 per cent. At the same time, investment in the U.K. by foreign companies rose from £87 million in 1958 to £126 million in 1959, an increase of 45 per cent. About three-quarters of this increase was accounted for by the U.S. Both sets of figures exclude oil and insurance. The excess of earnings of U.K. direct investments abroad over those of overseas interests in Britain shows that the U.K. balance of payments benefited in 1959 on current account to the extent of £92 million, as compared with £102 million in 1958. Earnings of overseas branches, subsidiaries and associates of U.K. companies rose from £196 million in 1958 to £222 million in 1959, an increase of 13 per cent.



ENGINEERING INDUSTRIES IN WESTERN INDIA

WHILE the major part of heavy engineering capacity is concentrated in Eastern India, light engineering industries are located largely in Western India. The entire group of engineering industries in Maharashtra alone, employing about 150,000 workers, is second only to the cotton textile industry with its 280,000 workers. Impressive, too, is the range of items produced by these industries. Diesel engines, power-driven pumps, oil expellers, foundry products, railway wagons, machine tools, automobiles, bicycles, typewriters, sewing machines, bolts and nuts, electric motors and fans, power and distribution transformers, domestic refrigerators, radio receivers, house service meters, textile machinery, sugar mill machinery and machinery for chemical plants are foremost among the engineering goods produced in quantity in this part of the country. There is scope for further development of these and other engineering industries in Maharashtra, thanks to some favourable factors like the increase in the production of pig iron and steel in the country, the availability of substantial power from the Koyna Project, the programme of rural electrification carried out by the State Electricity Board and the recent constitution, by the Maharashtra Government, of the Board of Industrial Development. Much is expected especially from this Board which will be concerned with the creation, in suitable areas of the State, of such basic facilities as roads, drainage, water and power so as to attract industries to them. Above all, there is no dearth of venture capital or entrepreneurial skill, at any rate, in Western India, and this augurs well for the industrial future of the two new States—Maharashtra and Gujarat.

In highlighting these hopeful features of the industrial situation in his presidential address at the fourteenth annual general meeting of the Engineering Association of India, Bombay Region, held early this week, Mr. J. V. Patel did well to bestow equal attention on the not-so-hopeful features. The most pressing problem facing the engineering industries in Western India is the shortage of coke. The rising trend in manufacturing costs due to increases in the cost of raw materials, in wages and, to some extent, in the cost of credit itself, is another. There is also the drawback that Western India does not possess an adequate network of roads, both highways and feeder roads; in fact, this highly industrialised region has only 0.19 mile of road for every sq. mile of area, as against 0.26 mile in the country as a whole. Yet another problem is the tendency on the part of labour unions to terminate all too frequently the awards of industrial tribunals regardless of the fact that these awards have a long-term significance in the sense of being intended to ensure stable conditions in the industry over a long period. And, lastly, the lack of adequate telephone connections is a serious handicap to the industries which have been newly established in the suburbs of Bombay.

Mr. J. V. Patel was not content with merely listing these problems but actually suggested practical solutions for some of them. In the first place, his plea for the revival of a ten-year old proposal of the Government of India to set up large coal and coke dumps in various parts of the country is most appropriate, because the industrially advanced region of Western India is far removed from the sources of supply of these vital raw materials. If this proposal is implemented, it will also ease the pressure on rail transport inasmuch as coal and coke can be moved to regional centres during the slack season between June and October, when the demand for wagons is much less than their availability. It is gratifying to know from the speech of Mr. Y. B. Chavan, Chief Minister of Maharashtra, at the meeting of the Association, that the Coal Controller has recently suggested an identical scheme for the creation of dumps to which block rates of coal and coke could be removed and that this scheme might be enforced from April next. The force of Mr. Patel's suggestion that the State Government should discourage the tendency on the part of labour unions to terminate the awards of industrial tribunals has, on the other hand, not been recognised by the Chief Minister. Nor has Mr. Chavan recognised the need for developing the State's road system on a high-priority basis, as suggested by the Chairman of the Engineering Association.

On one other point, namely, the proposed creation of a joint sector in industry, there is fortunately virtual identity between the approach of the Engineering Association (which, with its membership of 175 large and medium engineering units in Western India, represents almost every branch of engineering) and the Chief Minister. The broad welcome, accorded in Mr. Patel's speech to the proposal, now under the State Government's consideration, for setting up industries with 49 per cent participation of Government and 51 per cent private capital with option to the State to purchase an additional two per cent of private holdings, has no doubt been appreciated by Mr. Chavan. But it is rather surprising that the Chief Minister has not recognised the wisdom of Mr. Patel's remark that the management of the proposed joint undertakings should be entrusted to experienced men drawn from private industry and that, in fairness to private industry, such joint enterprises should be subjected to the rigours of the same laws as govern and regulate private enterprise today. Since management, not so much ownership, is the crux of the matter, any failure on the part of Government to ensure the efficient management of joint enterprises will provide an occasion for the exercise of option by the State to purchase an additional two per cent of private holdings. That will amount to giving the dog a bad name and hanging it. If the Government's aim in thinking of joint projects "is to make the best possible use of available talent, resources and management ability for the benefit of the community," Mr. Patel's patently correct view, namely, that stable management of these enterprises by experienced individuals from the private sector will ensure their profitability, should logically gain acceptance at the higher level.

DEVELOPMENT AID: THE EMERGING PATTERN

The Kennedy Administration in the United States is dedicated to "the construction of a sound, growing economy for the entire non-Communist world." But it is by no means clear that all other advanced nations of the Atlantic Community are equally ardently dedicated to a primary goal of this kind. The present American expectation, which finds succinct expression in President Kennedy's recent message to the Paris meeting of the North Atlantic Council, is that the nations of Western Europe should "commit an equitable proportion of their own growing resources to the common effort of economic development (in Asia, Africa and Latin America), as well as to the tasks of the common defence." It would be an uncharitable approach to attribute this American expectation to balance of payments difficulties alone. Of course, these difficulties are there, but the need to ensure the stability of the dollar is not purely an American need, because the entire free world dedicated to democracy has a stake in such stability. More than balance of payments difficulties, it is the lack of an equitable system for sharing the burden—which alone can sustain a common interest in economic growth for the preservation of freedom in the less developed countries of the world—that has led President Kennedy to propose that the nations of the Atlantic Community should "work together in a new intimacy in the O.E.C.D." and thereby "come firmly to grips with this fundamental problem of aid."

There is no suggestion in all this that the United States wants to reduce its commitments. In fact, President Kennedy himself has clearly stated that "the United States, because of its larger resources, is prepared to bear a heavy share of this burden. This will be undoubtedly so, because the aid requirements of the underdeveloped world in the sixties will be much larger than in the fifties and the American share, in absolute terms, of the burden will also be correspondingly bigger. For instance, the recent Millikan Report on aid to India is reported to have recommended to President Kennedy that the United States should give India aid to the tune of at least $2.5 billion for its third Plan, over and above the generous provision of American agricultural surpluses, as against its total requirements of $5.5 to $6.0 billion estimated in the report. If the U.S. Government also makes commitments, here and now, on the extent of its aid over the first two or three years of India's third Plan, other advanced countries will be more easily persuaded to make similar pledges. The Millikan Report, which has taken this line, is itself illustrative of the point that American aid to underdeveloped countries in the sixties will be much larger than in the fifties.

All this prospective aid will be in the form of foreign exchange. It does not take into account the aid in the form of supply, on long-term credit repayable in local currencies, of American agricultural surpluses like wheat, rice and cotton. This latter aid itself underlines the need for substantial help in terms of foreign exchange, for, as the American Wheat Utilisation Mission (which was appointed by a Food-for-Peace conference in Washington in May 1959, in which several wheat-producing countries participated) has stated, the recipient countries would also require some foreign exchange for essential goods and services so as to make the best use of the wheat supplies received. The recognition that the provision of additional foreign exchange requirements is an essential and complementary act to the provision of wheat on concessional terms is a salutary one. The argument here would have to be understood in the sense that the development projects, financed by counterpart funds, should be the ones which, with their essential foreign exchange component on account of capital goods, machinery, technical know-how, etc., will contribute to self-sustaining growth. In other words, development projects should not be taken up just because the counterpart funds are available to be drawn upon; on the contrary, they should be drawn upon only to finance what would have been planned even otherwise, so that the need for deficit financing would be reduced as far as possible. Otherwise, the spending of counterpart funds would not only nullify the beneficial counter-inflationary effect of the original sale of surplus foodgrains but may even add to the inflationary effect of deficit financing. In short, if counterpart funds are availed of for financing development projects, there should be a corresponding reduction in the quantum of deficit financing.

Surely, in stressing this sensible approach, the Wheat Utilisation Mission has rendered a distinct service to India. The basic aim must be not to inflate the costs of the more crucial industrial projects in both the public and private sectors—projects which alone will bring about, sooner or later, self-sustaining growth. In the present preparatory stage of devising ways and means of pooling development aid on a larger scale in the sixties, the role of American agricultural surpluses is also bound to be brought into proper focus. In this focus, the indirect contribution of the other wheat-exporting countries (whose commercial marketings have declined in the wake of disposal of American surpluses on concessional terms) to the overall development of the normally wheat-importing poorer countries will be recognised. This indirect contribution is by way of a saving in foreign exchange which would otherwise have to be spent on wheat imports at the usual or an increased level from such countries as Canada, Argentina and Australia. In a way, therefore, the American approach to aid for developing countries is calculated to bring a number of other countries—both advanced and not so very advanced—into a wider and broader partnership for sustaining economic growth in the non-Communist world.

A LESSON WORTH LEARNING

The existence of a sellers' market for skilled labour is not a phenomenon confined to underdeveloped countries alone. Most of the advanced countries of the West face the same problem. In a sense, their position is worse, because they are unable to get enough hands even to train them up for skilled avocations. Thus, in these countries, there is an absolute scarcity of labour, while, in underdeveloped countries, the problem is one of relative shortage of skilled workers, because there is no dearth of labour as such.

Reporting the world-wide shortage of skilled workers of all categories, the American news magazine *Time* recently listed the various ingenious devices adopted by employers in developed countries to attract workers. With unfilled vacancies of the order of 524,000 and an unemployment figure of 116,100 out of a total work force of 20.30 million, West German employers, for instance, advertise many side attractions for workers. One Dusseldorf department store advertising for sales girls promised: "If you live out of town, we have pick-up points. You meet interesting people, are offered free lunch and given a 15 per cent discount on every thing in the store." In the Netherlands, a department store tried to attract sales girls by sponsoring dancing, music and foreign-language lessons. Some Australian firms now supply free transport for employees between the factory and key pick-up points. Denmark has such need for labour for essential construction projects that the Government is restricting private building activity.

Many a manufacturer in Western Europe is said to be realising that the only way to get skilled workers is to train them himself. In fact, many firms are already doing it. Europe's biggest aluminium producer, Pechiney, for example, is reported to be taking promising workers off the production line and sending them back to school to get them trained. In Brazil, such foreign automobile firms as Mercedes-Benz, General Motors, Willys-Overland, Ford and Volkswagen have not only set up their own factory training schools but also send technicians and potential executives to schools and technical institutes abroad.

The opposition against immigration, for fear that it will deny the sons of the soil job opportunities, has now turned into welcome in many countries. In fact, West Germany, according to *Time*, has set up recruitment centres in Athens, Madrid, Naples and Verona and had imported 95,000 workers from Italy, Greece and Spain last year. A Rotterdam shipbuilding firm is said to be planning to import even Chinese from Hong Kong to fill up the 1,800 vacancies in its works.

It should not be supposed from all this that shortage of technical personnel means dearth of engineers and technologists. The latter are no doubt in short supply, but the dearth of skilled operatives is even more acute. The situation has become so serious even in Britain, that the British Employers' Confederation has now gone to the extent of blaming employers for hanging on to a class of workers which are no longer available instead of finding out ways of ensuring maximum economy in the use of technical man-power. It is noteworthy that the Federation of British Industries recently observed that, in future, increases in industrial output must depend upon further capital investment designed to save labour.

Engineering companies in the Midlands and South, according to the British Employers' Confederation, are being prevented from increasing output by shortage of almost every class of skilled workers, such as turners, fitters, machine setters and operators, tool makers and precision fitters, draughtsmen, erectors and sheet iron and metal workers. Mr. Selwyn Lloyd, Chancellor of the Exchequer, put the position in a nutshell when he observed a few days ago that "there are four vacancies for every unemployed man in the main skilled engineering trades."

Engineering industries are not the only ones in Britain which find themselves in this difficult plight. Carpenters, joiners, bricklayers, plasters and all types of building and civil engineering trades men required by the respective industries are wanted all over the country. Women workers, too, are in short supply in the London and South Eastern clothing industry. In Scotland, there is persistent difficulty in meeting demands for skilled labour, particularly in engineering, and shortage of these grades of workers is preventing a rise in the demand for unskilled workers, too.

This critical position in the U.K. has encouraged employers to store labour, as it were. This has provoked the Confederation to snub the employers "who are content to hang on to labour they can no longer fully employ in the foreseeable future." It has also blamed trade union leaders, who have a vested interest in keeping labour in their crafts in short supply, and who cry redundancy every time men have to change their jobs, "even though they may only be going across the road for something just as good."

The Confederation has, however, a solution to the problem. It is the same as the one it prescribed early this year, when it started a campaign to persuade unions and employers to co-operate in the task of increasing labour efficiency, namely, "unprecedented economy in the use of manpower." The Confederation holds that the present labour shortage would persist, unless there were to be a recession more serious than anything that Britain has encountered for some years. The most likely cause of a recession, if it were to come about, according to the Confederation, would be Britain's loss of competitive power brought about by high production cost resulting from the failure to make maximum use of the available manpower.

The old adage, only fools learn from their experience, wise men learn from the experience of others, is as much true of nations as of individuals. The aforesaid development in Britain and other Western countries should provide an object lesson for India which is currently engaged in expanding the facilities for technical education in the country. If as much attention as is now bestowed on turning out engineers and technologists is not devoted to training skilled workers, an acute shortage of the latter will be a persistent bottleneck even after the country has progressed much in the field of engineering education.

SOVIET AID FOR THIRD PLAN

The Indo-Soviet Aid agreement signed by representatives of both countries at New Delhi on the 21st inst. is yet another concrete evidence of the keen interest evinced by U.S.S.R. in the success of India's third Five-year Plan. According to this agreement, India will get Soviet credit to the tune of Rs. 60 crores—a figure made known nearly a year ago—for financing as many as six major power and oil development projects. These are: (1) a hydro-electric power station at Bhakra, with a total capacity of 480,000 kw., (2) an oil refinery in Gujarat having a refining capacity of two million tons of crude oil, (3) a coal washery with a capacity of 3 million tons in Bihar, (4) a refractories plant near Bhilai for the production of about 125,000 tons of magnesite and fireclay products per year, (5) exploration, development and production of oil and gas by the Oil and Natural Gas Commission in Cambay, Ankleshwar and in other areas, and (6) preparation of techno-economic report for the production of pumps and compressors.

As was feared when actual estimates of the cost of the projects to be financed by Soviet credit were made, the proposals for the ball and roller bearings and industrial instruments projects have been dropped, presumably because the credit line is insufficient to cover them. It is estimated that the foreign exchange requirements of these two projects would be of the order of Rs. 8 crores and Rs. 5 crores, respectively.

The agreement stipulates that the U.S.S.R. should prepare detailed projects report and drawings, supply equipment, machinery, spare parts and other materials as well as render technical assistance in the setting up of these projects and putting them into operation.

The present credit of Rs. 60 crores brings the total Soviet assistance to India so far to Rs. 384.56 crores, the second largest offered by any foreign country, next only to the U.S., which tops the list of assisting countries, accounting for asmuch as Rs. 1,480.32 crores as at the end of 31st December 1960. It is noteworthy that the entire Soviet assistance (barring a negligible sum of Rs. 1.15 crores in the form of gifts of machinery and equipment) is in the form of medium-term loans for a period of twelve years bearing interest at 2½ per cent. As compared with this, as much as 34 per cent of U.S. assistance to India consists of grants, only the balance being loans.

NEW PAPER MACHINERY FACTORY

Three Scottish firms have formed a Rs. 10-lakh consortium to establish at Calcutta a factory to produce paper-making machinery. Mr. John Kidd, Managing Director of Bertrams Ltd., of Edinburgh, is visiting India shortly to settle arrangements on behalf of the consortium with the Indian Government. The three firms are Bertrams Ltd., Ernest Scott & Co. (a subsidiary of Henry Balfour Ltd., Leven, Fife) and James Bertram and Son Ltd., Edinburgh. Already, negotiations with the Indian Government are "well advanced," according to a spokesman for the firms in Edinburgh. Work on the conversion of a former jute mill at Calcutta into the consortium's plant is nearly complete, and paper-making machinery is expected to be produced there within the next few months. Mr. Kidd told a reporter recently:

"Our three firms have joined forces to start up in India, because that is the satisfactory way of doing business there. Machinery and technical men have already been sent out. When the factory is in full production, it will employ 500 local workers. Initially, a staff of Scottish technicians will be used to train them."

1936-1961

Today We Celebrate

Our Silver Jubilee

From an insignificant beginning at Lahore twenty-five years ago we have gradually grown through the years and carved for ourselves a niche in the business world.

We pride ourselves in being pioneers in the manufacture of coach screws and as the leading importers of Iron, Steel and Hardware materials. We also manufacture Barbed Wire, Staples, Sewing Machines, all types of Band-Saws, special types of Bolts and Nuts and Roofing Screws.

With foreign Technical Collaboration we are installing a most modern plant for the manufacture of Steel Stranded Wires and Wire Ropes of all thicknesses and construction—the second of its kind in India. This plant will go into production in May/June 1961.

Today, we pledge the wealth of our vast experience in our varied fields, in giving our clients the very best for their money.

The Story of Titanium Dioxide

READING through the speech of the Chairman of the Tariff Commission in opening the public inquiry into the question of continuance of protection to the titanium dioxide industry beyond 31st December 1961, I find the following points of interest:

The Travancore Titanium Products Ltd. (T.T.P.) continues to be the only indigenous manufacturers of titanium pigment, although another unit has been licensed in Maharashtra State to produce 4,470 tonnes of the pigment per annum and is expected to commence production in 1963. The apparent market for the pigment in the country during 1960 on the basis of indigenous sales *plus* imports was about 4,500 tonnes. T.T.P's present capacity is about 2,947 tonnes and it is expected to raise it to 3,658 tonnes, when it completes its present expansion programme. T.T.P's production during the eleven months ending November 1960 was 2,503 tonnes, all of the anatase variety. There is indigenous demand for the rutile type of the pigment but no indigenous production, and imports are being allowed to actual users. The indigenous demand for titanium dioxide, both rutile and anatase, is estimated by the Development Wing of the Ministry of Commerce and Industry, at about 5,100 tonnes for 1961, 6,100 tonnes for 1962, 8,100 tonnes for 1963 and 9,100 tonnes for 1964. These are estimates based on present trends, but, as the pigment has not yet been tried out fully in all its possible uses in a wide range of industries and as substitute for other white pigments, the demand might well go up steeply if larger quantities were made available both of anatase and rutile variety.

All these are in the nature of background material for my story which will, however, centre round the fact that T.T.P. has not yet been allowed any concession in the price which it has been asked to pay for the basic raw material, namely, ilmenite.

The beach sand deposits of ilmenite in Travancore have been highly rated both in the U.K. and the U.S. by manufacturers of titanium dioxide. Exports of ilmenite to those countries commenced in 1924, with a few hundred tons, and registered a progressive increase till 1939 (237,834 tons) but the material fetched only Rs. 6 per ton during the years 1935 to 1939. After 1947, the overseas price steadily went up year after year, till it touched about Rs. 50 per ton in 1955 when exports were maintained at round about 211,000 tons per year. The ilmenite sands in the area between Trivandrum and Cochin, particularly round about Quilon, are stated to contain about 60 per cent of TiO_2 (titanium dioxide), while deposits elsewhere in the world, barring Canada (64.50 per cent), contain much less, as for instance, U.S. (50.26 per cent), Malaya (52.85 per cent), Australia (46.28 per cent), and Norway (43.77 per cent). Further, the deposits in Kerala are reported to be inexhaustible, are easily processed at spot and as easily exportable from the nearby Cochin port. These factors weighed with the Government of Travancore State when, in the year 1946, they finalised negotiations with the British Titan Products Ltd. (B.T.P.) to promote and manage a public limited company called the Travancore Titanium Products Ltd. (T.T.P.) to manufacture titanium pigment. The company had seven major shareholders of whom three were important: The Travancore State Government with 51 per cent of shareholding, British Titan Products with 22 per cent, and A. & F. Harvey Ltd., Madurai, with 11.6 per cent. Holdings of members of the public amounted to only 0.47 per cent. The total capital was Rs. 73.10 lakhs, and, I believe, the pattern of holdings and quantum of invested capital remains the same at present. All the material that I have collected regarding this industry is from the three published reports of the Tariff Commission, dated 1953, 1955 and 1957.

With fifty-one per cent of State Government holding, the Company is virtually a public sector undertaking, although its management has all along been in the hands of a subsidiary of the foreign technical collaborators which was administratively controlled by Messrs. A. & F. Harvey Ltd. Yet, the developmental assistance which it has received both from the State Government and the Central Government has been very meagre, especially in relation to its enormous potential for saving and earning foreign exchange. Almost at the start of operations in the year 1952, the Company was faced with a poor indigenous market capable of an uneven annual offtake of under 300 tons, and a stock accumulation much in excess of this figure. Lack of working capital and of sale orders resulted in a shut down for some months. Eventually, the industry was protected in 1953 and a fair chance to develop was afforded by the restriction on imports of lithopone which was the chief competitor as an alternative pigment. It was, however, the advent of a large export order (arising from a world shortage of the pigment) which saved the Company from extinction in 1953-54, and from then on, there was a steady increase in the indigenous demand for titanium dioxide for a variety of industrial uses such as paints, rubber, printing ink, vitreous enamelware, rayon, textiles, linoleum, leather, polish, plastics, soap and paper.

About 2.15 tons of ilmenite are required for producing one ton of titanium dioxide. For a production of 3,000 tons of pigment, T.T.P. would require only about 6,450 tons of processed ilmenite, the usual annual export of which has been of the order of 200,000 tons. The sands containing ilmenite were the property of the State Government till about 1955-56, whereafter they were taken over by the Central Government as they contained strategic material for atomic energy purposes. In 1953, the Tariff Commission recommended that ilmenite should be delivered to T.T.P. at cost price (basic charge), namely, Rs. 18 per ton; the cost would then have worked out to Rs. 29 per ton to the Company after adding Rs. 11 towards transport, delivery and packing charges. The resultant saving to the Company in its cost of manufacture of each ton of titanium pigment would have been Rs. 67.5, because the price then charged to it was Rs. 48.67 per ton to which had to be added other charges of Rs. 11.33, making up a total of Rs. 60 per ton. The f.o.b. Atlantic seaboard price at the time being Rs. 170 per ton, T.T.P. would have also had the corresponding advantage over foreign producers in its cost of production. During 1954 and 1955, the recommendation was implemented by the State Government only to a partial extent by charging the Company a basic price of Rs. 28 as against the suggested Rs. 18.

When the ownership of the sands passed over to the Union Government in 1957, the charge to the Company was raised, and it would now appear that T.T.P. has to pay the same price as is being charged to exports. The very premises on which the industry was established in Trivandrum, namely, to avail itself of the natural advantages relating to procurement of the basic raw material at the lowest cost has thus been negatived. T.T.P. is a predominantly State-owned unit, and its requirement of raw material is only to the extent of about three per cent of what is annually processed, over 97 per cent of which is sold to its foreign competitors. The loss accruing to Government by granting this concession is very small, as compared to the great advantages accruing to the indigenous industry, and to the country. And, it should be borne in mind, in all other factors, this single unit indigenous industry suffers disadvantages as compared with the foreign units in the industry. Its plant is small in capacity, it has to pay more for sundry imported chemicals used by it in processing, and it has to pay heavily for sulphuric acid which is a raw material next in importance to ilmenite. About 4.15 tons of sulphuric acid (100 per cent) are required for the production of each ton of the pigment; the cost of sulphuric acid in India is much higher than in foreign countries as sulphur has to be imported from overseas. Till about the end of March 1960 T.T.P. was procuring the acid from Fertilisers and Chemicals Travancore Ltd. suffering heavy transport charges and bottlenecks. In 1955 the Tariff Commission recommended that the Company should be permitted to erect its own 50-ton sulphuric acid plant for economic working, and reiterated it in 1957. It has taken five years for this small project to materialise.

The need for expanding the plant for increasing production of pigment and reducing overheads was stressed from 1955, but the Company's expansion plans were held up for nearly five years. It is easy to see that both the State Government and the Central Government have failed to take account, in good time, of the need to provide the Company with the advantages which it had a right to claim in the matter of raw materials, nor have they realised the wisdom of permitting the Company to expand its plant to four times or even eight times its original project—schemes fully justifiable in the face of the increased internal demand for the pigment, and for achieving economies in cost of production and overheads. There would have been an exportable surplus, a sure foreign exchange earner. Imports of titanium dioxide to the extent of 1,375 tons during the first nine months of 1960 cost the country Rs. 33.43 lakhs at Rs. 2,430 per ton. If the single unit indigenous industry had been properly looked after, we might have saved this amount and, perhaps, earned an equal amount by exports. According to the Tariff Commission report of 1957, even without a concession in the price of ilmenite, and despite the disadvantage in the cost of sulphuric acid, the domestic fair price of titanium dioxide produced by T.T.P. was in excess of the landed cost of foreign pigment only to the extent of about five per cent. This disadvantage could have been easily got over by positive developmental assistance.

Such is the story of titanium dioxide. The U.S. and the U.K., which have been obtaining their ilmenite in ship loads from this country, were reported to be manufacturing over 300,000 tons and 45,000 tons, respectively, of the pigment in 1953 and the present figures must indeed be much higher. We in this country, with the basic raw material at the door of the factory, have moved only at a snail's pace from an annual output of 1,800 tons to 2,500 tons in a period of eight years! And this is in an enterprise in which capital investment to the extent of fifty-one per cent is owned by the Kerala State Government!

"India, 1960"

This is the name of a book compiled by the Research and Reference Division of the Ministry of Information and Broadcasting, and issued by that Ministry's Publication Division. It is called a "Reference Annual," and, like the curate's egg, is good in parts. Unfortunately, it suffers badly in comparison with two similar foreign publications which I have been browsing through, namely, *Britain, an Official Handbook, 1960* prepared by the Central Office of Information, London, and *Facts about Germany* published by the Press and Information Office of the Federal German Government. The format of both these foreign books is excellent and in regard to substance, arrangement and presentation they are quite praiseworthy. Both have some excellent photographs, topical and illustrative of the historical and social life of the country. *India, 1960* has no photograph which may be an evidence of austerity but not artistry. The format is drab and the binding wobbly. But its worst features are the advertisements, some right in the centre of the book, and a large number at the end. They annoy a sensitive reader and remind one of the mercenary purpose of their inclusion. Among the contents are long lists of names of members of both Houses of Parliament, the State Legislatures, Ministers, officials, etc., which should not have found a place in a publication of this type. The Appendices include "Recommendation of the Official Language Commission," "Recommendations of the Pay Commission," Supreme Court Decisions, Film Awards, Awards of the Sangeet Nataka Akademi, Sahitya Akademi and Lalit Kala Akademi, Postal Rates, Taxation Rates, the Bombay Reorganisation Bill of 1960, all of which seem thoroughly out of place in an Official Year Book, and all constituting a strange assortment of obscure information. If a few hundreds of telephone numbers had been included, it would be the last straw. As it is, the book is like a *vade-mecum* diary, a postal guide, an exhibition souvenir and a civil list, all rolled into one, and could do with a great deal of editing, pruning, rearrangement and revision. In the preface to the book it is stated that "it does not, however, claim to be exhaustive." I shudder to think what it will be like when more material is shoved in. It may become exhaustive, but it will also be very exhausting, browsing through it.

FULL CONVERTIBILITY

BUT CONTROLS ON CAPITAL MOVEMENTS STILL CONTINUE

(From Our Own Correspondent)

LONDON, *17th February*

LONDON LETTER

THE Chancellor of the Exchequer has announced this week that the United Kingdom will accept the "full provisions of Article 8 of the International Monetary Fund." This means not so much that this country has taken a further step towards convertibility but that it has burnt its bridge of retreat back to currency restriction. Britain now joins the United States and Canada in full convertibility for sterling, and similar status is now being acquired by the countries of the Common Market, the Irish Republic, Sweden and Peru.

All these currencies will now be regarded by the I.M.F. as equivalent to gold. It will accept any of them in repayment of debts due to itself. If, therefore, a country draws on the resources of the I.M.F. to bolster up its currency reserves, it may use sterling to repay its debt. To countries other than those of the sterling area, sterling becomes the equivalent of gold and dollars.

Works Only One Way

The famous Article 8 requires member-countries not to impose exchange restrictions without the approval of the Fund; not to engage in discriminatory currency arrangements or multiple currency practices without the approval of the Fund. Up to now, the U.K., along with most other so-called free countries, has operated under the shelter of Article 14 which is a let-out article allowing members of the I.M.F. to adopt discriminatory arrangements and restrictions for balance of payment reasons. It was enough for a country in difficulty on balance of payments grounds to give that as the reason when imposing the restrictions on currency transfers and it would not be held to be acting in defiance of its international obligations. In practice, this clause only works one way, that is, as a country progressively moves towards an abandonment of currency restrictions, it is expected to consult the Fund before reimposing them. Even so, the Fund could not raise real objection so long as the country was operating under Article 14. So what is happening today is that the sterling area—through the U.K. and the other countries mentioned—is, in fact, saying to the Fund and to the world in general: "We accept full responsibility so far as current transactions are concerned for the free exchange of our currency into that of another and for international purposes between central banks into gold. Moreover, we shall not abandon this freedom without full consultation with and the prior approval of the I.M.F."

It is important to note the words "prior approval of"—it is not enough for a country to notify the Fund, and that can only be done by consultation in the council chamber. That is the prior approval of the Fund involves the prior approval of all other countries concerned.

One restriction nevertheless remains on the full convertibility of sterling and that is the maintenance of exchange controls on capital movements, but this restriction is now generally accepted by the I.M.F. and by the United States as a necessary one in the modern world. The U.K. can maintain restriction on capital transfers, it can even add to such restrictions, provided it does not use them as a device to impede current payments.

It would seem, therefore, that the U.K. can still require importers to declare the purpose for which they wish to make an overseas payment, as the easiest loophole for capital transfers is under the guise of current payments.—*All Rights Reserved.*

STATE BANK'S PROGRESS NOTABLE

RISE IN ADVANCES—HIGHER PROFIT—BRANCH EXPANSION PROGRAMME COMPLETED

BOTH the traditional business and the developmental activity of the State Bank of India registered a notable improvement during the calendar year 1960. The total advances (including bills) made by the Bank stood, as at the close of the year, substantially higher at Rs. 232.24 crores, as against Rs. 166.88 crores a year earlier, representing a rise of as much as Rs. 65.36 crores, in distinct contrast to a drop of Rs. 5.18 crores noted in 1959. The industrial sector continued to claim the preponderant share of the Bank's advances, accounting for 67.2 per cent (between October 1959 and October 1960), as compared with 65.8 per cent in the previous year. The progress in the sphere of developmental activities during 1960 covered (*a*) the establishment of 70 new branches bringing the total number of branches to 907, (*b*) increased provision of several special financial facilities to co-operative institutions, (*c*) larger credit limits to small-scale industries, (*d*) grant of medium-term loans to companies for the acquisition of fixed assets for expanding existing units, (*e*) guarantees for advances made by foreign banks to Indian industrialists in respect of plant and machinery imports, (*f*) financing of hire-purchase transactions covering sale of commercial vehicles, and (*g*) good progress in the task of integrating State-owned or State-associated banks.

The progress made in traditional business and developmental activities is reflected, to some extent, in the notable increase of Rs. 30.49 lakhs in the Bank's profit for 1960 which aggregated Rs. 217.59 lakhs, that for 1959 being Rs. 187.10 lakhs. The profit for 1960 is, as in the two previous years, the result of normal operations and does not include any surplus earned on P.L. 480 funds. The notable increase in profit has followed an appreciable rise of Rs. 100.73 lakhs to Rs. 19,53.35 lakhs in the gross income of the Bank. The rise was accounted for largely by commission and exchange earned which amounted to Rs. 428.68 lakhs, as against Rs. 360.59 lakhs. The interest and discount earned was also higher at Rs. 14,86.91 lakhs, as against Rs. 14,52.94 lakhs. The rise in profit would have been more marked but for the continuously rising trend of the Bank's expenditure (including interest payment and depreciation), as is evident from the comparative statement below:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Gross income	19,53.35	18,52.62	15,77.97	11,82.40
Of which:				
Interest and discount earned	14,86.91	14,52.94	12,21.11	8,24.88
Commission and exchange earned	4,28.68	3,60.59	3,53.50	3,54.21
Interest paid	8,05.04	7,87.90	6,24.60	3,39.69
All other expenses	9,08.69	8,57.15	7,46.09	6,38.86
Depreciation and repairs	22.03	20.47	17.14	16.41

Cash	11.9	11.6	12.1	11.13

* Subject to deduction of tax.

The above statement shows that the interest paid by the Bank was higher by Rs. 17.14 lakhs during 1960 as compared with 1959, despite the fact that, over the year, the deposits of the Bank and borrowings from other banks were lower, the former by Rs. 4.85 crores at Rs. 576.32 crores and the latter by Rs. 1.99 crores at Rs. 9.97 crores. The salaries, allowances and provident fund of the staff were also higher at Rs. 7.32 crores, as against nearly Rs. 7.00 crores. Similarly, depreciation on and repairs to the Bank's property absorbed Rs. 1.56 lakhs more at Rs. 22.03 lakhs. Rent, taxes, insurance, lighting, etc., went up by Rs. 5.51 lakhs to Rs. 42.98 lakhs, stationery, printing, advertisement, etc., by Rs. 3.00 lakhs to Rs. 39.63 lakhs, postal charges by Rs 2.93 lakhs to Rs. 31.78 lakhs, and "other" expenditure by Rs. 7.96 lakhs to Rs. 58.98 lakhs. It will thus be seen that there has been an all-round rise in expenditure, reflecting partly the continuous rise in the cost of services in this country and partly the expansion undertaken in the area and nature of activities of the Bank. Besides all these increases, a sum of Rs. 32.95 lakhs had to be debited to the integration and development fund in respect of 1959 in order to meet a part of the losses suffered at a number of new branches.

Thanks to the rise in the Bank's profit during 1960, as noted above, the Directors have recommended an enhanced gross dividend of 22.75 per cent, as against 20 per cent for 1959. Even after this increase, the net dividend at 15.93 per cent is a shade lower than the 16 per cent per annum which the Bank had been paying for several years past up to and including 1958. The appropriations to the reserve fund and other funds are also larger.

The total deposits of the Bank, as already stated, shows a net fall of Rs. 4.85 crores over the year, in contrast to a rise of Rs. 103.31 crores in 1959. Rs. 111.34 crores in 1958 and Rs. 124.40 crores in 1957. This decline is attributed to the non-accrual of the rupee counterpart funds in respect of commodity imports under P.L. 480 from 12th May 1960 and the transfer of the previously accumulated amounts to the Reserve Bank at the rate of Rs. 12.00 crores per month from July 1960. Since the Bank must have transferred Rs. 72 crores of P.L. 480 funds under this arrangement, its other (commercial) deposits must have actually expanded. However, due to the net fall of Rs. 4.85 crores in deposits, accompanied by a significant increase of Rs. 65.36 crores in advances, the credit ratio at the end of 1960 was markedly higher at 40.3 per cent, as against just 28.7 per cent a year before and 36.0 per cent two years before. Following the refund of P.L. 480 funds and good demand for accommodation, the investments declined by Rs. 77.42 crores, as against a rise of Rs. 92.58 crores in 1959, so that the ratio of investment to deposits went down from 64.9 per cent in 1959 to 52.0 per cent in 1960. Even so, the Bank's investments form 45.2 per cent of the total investments of all scheduled banks.

The foreign exchange business handled by the Bank increased appreciably during the year under review. The number of accounts maintained with the Bank by foreign correspondents, as well as that maintained by the Bank with foreign countries, continued to increase, the new foreign accounts opened being in the U.S. dollar, Italian lira and Norwegian kroner. The Bank operated a growing number of non-convertible rupee accounts. Its rupee traveller's cheques continued to be quite popular, the total sale during 1960 being Rs. 83.7 lakhs, as against Rs. 69.7 lakhs in 1959.

With the opening of the 400th new branch at Kairana in Uttar Pradesh on 1st June 1960, the Bank fulfilled its statutory obligation well ahead of the target date. A sub-committee of the Central Board of the Bank, under the chairmanship of Prof. D. G. Karve, Vice-Chairman of the Bank, has been appointed to determine the future policy of the Bank in the field of branch expansion. The Committee is expected to submit its report shortly.

The Bank continued to extend to co-operative institutions several special financial facilities which were availed of in an increasing measure. The remittance facilities granted to co-operative financial institutions under the Remittance Facilities Scheme of the Reserve Bank of India increased substantially from Rs. 68.5 crores during the year ended June 1959 to Rs. 94.0 crores in 1959-60 and the remittance facilities in the reverse direction extended to them by the Bank on its own initiative rose from Rs. 51.9 crores to Rs. 65.9 crores. The credit limits sanctioned by the Bank to co-operative banks stood at Rs. 15.2 crores at the end of September 1960. The Bank's holdings of the debentures of land mortgage banks increased during the year by Rs. 13.5 lakhs to Rs. 93.0 lakhs. Limits of advances granted against such debentures increased to Rs. 40.2 lakhs at the end of September 1960, as against Rs. 34.0 lakhs at the end of September 1959. The number of advances granted to co-operative marketing societies (other than sugar factories) increased from 107 to 166 and the sanctioned limits from Rs. 205.0 lakhs to Rs. 249.0 lakhs during the year ended September 1960. Pledge limits sanctioned by the Bank to co-operative sugar factories stood at Rs. 273.0 lakhs at the end of September 1960, as against Rs. 105.0 lakhs on the corresponding date in the previous year. Further, pending the accumulation of sufficient sugar stocks, two co-operative sugar factories were sanctioned clean limits on State Government guarantee to provide them with their working capital requirements. The Bank has granted advances to a few industrial co-operatives also. The total aggregate limits granted to co-operative institutions including advances against debentures of central land mortgage banks amounted to Rs. 22.8 crores as on 30th September 1960. The Bank continued to play an important role in assisting the warehousing development; the procedure relating to the grant of advances against warehouse receipts was further simplified during the year. Between 30th September 1959 and 30th September 1960, the credit limits sanctioned by the Bank against warehouse receipts rose from Rs. 104.4 lakhs to Rs. 215.7 lakhs, the number of accounts current being 1,769.

The Bank's scheme for the provision of co-ordinated finance to small-scale industries recorded further progress during 1960. The total credit limits sanctioned to these industries increased from Rs. 462.2 lakhs to Rs. 782.0 lakhs and the number of accounts rose from 1,496 to 2,451. The limits sanctioned to about 85.2 per cent of the units financed by the Bank at "Intensive Centres" were for less than Rs. 50,000 each. The scheme sponsored by the Government of India for the Guarantee of Advances granted to small-scale industries came into force on 1st July 1960 and was operating at 68 branches of the Bank, in addition to four local Head Offices.

The process of integrating the State-owned or State-associated banks with the State Bank of India was completed during the year. The task of determining the compensation to be paid to the shareholders of the banks which were taken over as subsidiaries was completed to the satisfaction of the shareholders of all the banks concerned. The State Bank of India entered into an agreement with each of the subsidiary banks during the year, appointing it as its agent for the conduct of Government business and these banks commenced conducting Government business at certain centres from 1st October 1960. The subsidiary banks have also started participating in the various developmental activities undertaken by the State Bank of India, such as extension of banking facilities in rural and semi-urban areas by opening new branches, provision of finance for small-scale industries and co-operative institutions and grant of advances against warehouse receipts. As on 31st December 1960, limits sanctioned by the subsidiary banks to small-scale industries, co-operative institutions and against warehouse receipts aggregated Rs. 266.7 lakhs, Rs. 345.0 lakhs and Rs. 79.3 lakhs, respectively.

STATE BANK OF INDORE

The accounts of the State Bank of Indore, which is operating as a subsidiary of the State Bank of India from 1st January 1960, for the year ended 31st December 1960, disclose that the profit (before providing for taxation) has staged a substantial rise of Rs. 1.86 lakhs to Rs. 7.13 lakhs. Although the deposits of the Bank were slightly lower by Rs. 20.11 lakhs at Rs. 8.84 crores, the Bank was able to utilise its resources more profitably. The improvement in the profit in 1960 was mainly due to the increase in interest and discount earned. Not only was the quantum of advances higher but there was a general increase in the rate of interest on advances by ½ per cent with effect from 1st October 1960. Another factor responsible for the improvement in profit was a decline in the rates of interest paid on deposits.

The following figures will be read with interest in this connection:

(In lakhs of rupees)

	1960	1959	1958
Interest and discount earned	46.67	45.68	44.22
Commission and exchange earned	6.44	5.85	5.65
Interest paid	24.92	26.03	25.30
Expenses	21.54	20.35	19.75
Profit before taxation	7.13	5.27	4.95

The advances of the Bank recorded a rise of Rs. 1.35 crores to Rs. 6.84 crores taking the ratio of advances to deposits higher from 60.8 per cent in 1959 to 77.3 per cent in 1960. Out of the increase of Rs. 1.35 crores in advances, as much as Rs. 1.19 crores is recorded under "loans, cash credits and overdrafts." The bills discounted and purchased account for a rise of merely Rs. 15.59 lakhs. The expansion in advances is primarily due to better utilisation of limits by borrowers during the 1960 cotton season and the sanctioning of fresh advances made at new branches opened during the year under review. The rise in advances in the face of a fall in deposits could be met only by effecting a reduction in the investment portfolio of the Bank from Rs. 3.21 crores to Rs. 3.06 crores as also in cash from Rs. 91.14 lakhs to Rs. 69.31 lakhs, supplemented by borrowings from other banks.

The following comparative table shows the changes in the principal items in the Bank's balance-sheet:

(In lakhs of rupees)

	As on 31st December			
	1960	1959	1958	1957
Paid-up capital	85.00	15.30	15.30	15.30
Reserves	7.61	29.00	29.00	29.00
Deposits	8,84.23	9,04.84	8,41.77	7,08.13
Borrowings from banks	1,18.32	Nil		20.00
Advances	6,84.80	5,49.45	5,48.98	5,87.04
Investments	3,06.70	3,21.04	2,46.42	2,21.00
Cash	69.81	91.14	1,08.93	65.52
Balance-sheet total	11,88.85	10,27.85	9,57.66	9,41.27
Ratio to deposits—	%	%	%	%
Advances	77.8	60.8	65.2	73.7
Investments	21.7*	35.5	19.1	25.2
Cash	7.8	10.0	12.3	8.2

* Based on only unencumbered investments.

It will be seen from the above table that the capital of the Bank has been raised and the reserves brought down. The following extract from the Directors' report will explain this change:

"In terms of Section 7(1) of the State Bank of India (Subsidiary Banks) Act 1959, the State Bank of India, with the approval of the Reserve Bank, as on the 1st January 1960, at Rs. 35 lakhs, divided into fully paid up shares of Rs. 100.

"In terms of Section 8(i) (*a*) of the State Bank of India (Subsidiary Banks) Act 1959, the State Bank of India have with the approval of the Reserve Bank of India, determined Rs. 6,25,000 as the sum which the reserve fund of the Bank shall consist of as on the appointed day, that is, 1st January 1960."

Out of the profit of Rs. 7.13 lakhs, the Bank has set aside Rs. 1.37 lakhs to general reserves and Rs. 1.35 lakhs for taxation. The gratuity fund and the bonus for staff absorb Rs. 40,000 and Rs. 1.27 lakhs respectively. The Directors have not proposed any dividend for the year under review but are carrying forward a large sum of Rs. 2.74 lakhs. This is sufficient to declare a gross dividend of 7.82 per cent per annum.

INDIAN INVESTMENT CENTRE OPENED

NEW FACILITY FOR ATTRACTING FOREIGN PRIVATE CAPITAL

THE importance and role of foreign capital in the development of backward nations is not now seriously questioned by any but the most cynical politician. For it is realised that foreign capital is critically different from indigenous capital, in that it not only supplements domestic savings and foreign exchange resources of the recipients but also brings with it technical expertise and experience which are as much a desideratum in underdeveloped countries as savings. India is one of the few erstwhile subject nations whose post-Independence economic policy reflected, early enough, an appreciation of the importance of foreign capital and which sought to cultivate a climate favourable for the growth of foreign investment. If, in spite of its efforts, the amount of foreign capital which this country has been able to attract to its shores has been meagre, as compared with those obtained by countries of Latin America or Oceania, it is because of two reasons. First, and the more important of the two, the climate was not made sufficiently attractive to meet the growing competition for the limited availability of foreign private capital. There were, and still are, quite a few fiscal, administrative and policy impediments. Second, there is still insufficient understanding abroad of India's attitude towards foreign capital and the limitless scope which a country of continental dimensions and vast population as India offers for foreign investors. In one important respect, India should comment itself to foreign *entrepreneurs*. Its political maturity, economic endeavours and financial rectitude are factors that should guarantee the safety of foreign investments, an important consideration which any investor would take into account, especially in view of the political instability in most of the newly independent nations. The question of attracting foreign capital to India is, therefore, to some extent, a public relations job of acquainting prospective investors with the actual conditions that exist in India and the prospects of growth it offers.

It is this important function which the Indian Investment Centre, with its headquarters in New Delhi, is expected to perform. The Centre was formally inaugurated by Mr. Morarji Desai, Union Finance Minister, on the 16th inst. at New Delhi. It will function under the general attraction of a Governing Body, presided over by Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation of India Limited. The Governing Body consists of distinguished representatives of industrial houses, banks, financial institutions and officials. The primary objective of the Investment Centre is to advise and assist Indian industrialists, including those engaged in medium and small-scale industries, on matters necessary for attracting foreign capital and offer guidance and assistance to foreign businessmen on matters pertaining to investments in India.

Objects

With this end in view, it will promote wider knowledge and understanding in the main capital exporting centres, of conditions, laws, policies and procedures relating to investment in this country. For this purpose, it will maintain services for supplying information to Indian *entrepreneurs* and prospective foreign investors up-to-date data on industrial capacity, production, trade, market, labour conditions, resources and power supply as well as economic and financial policies and laws and regulations relating to foreign investment in India. Among the specific services it will render to Indian and foreign industrialists are: (1) assisting Indian industrialists in collecting basic data for specific investment projects and building them up to a "prospector's stage," so as to meet investment requirements of foreign investors; (2) contacting foreign *entrepreneurs* on behalf of Indian industrialists and conferring with them as a follow up to the submission of reports; (3) helping foreign *entrepreneurs* in various ways such as answering trade inquiries from them on investment conditions in India generally and supply of detailed information on specific projects.

After foreign firms have shown interest in individual schemes, the Investment Centre may arrange contact with individual foreign firms, Indian parties and Government. The Centre will also render such assistance as would help the schemes to materialise and be established as early as possible. The Investment Centre, which has its own organisation consisting of qualified and trained personnel, will also have the benefit of the services of foreign advisers and technicians made available to it on contract, by the T.C.M. Suitable arrangements are being made in important foreign capital exporting centres for expeditiously dealing with inquiries from Indian *entrepreneurs* and those from foreign investors. In addition, the Investment Centre will also act as a clearing house for information on any aspect having a bearing on investment in general and on any specific investment opportunity.

Genesis of the Centre

The proposal for establishing an Investment Centre in India was under consideration for well-nigh three years. It was first suggested by the Ford Foundation, but that suggestion did not fructify for various reasons. In the meantime, two stimulating studies of foreign investment were made, one by Mr. Harry J. Robinson of the Stanford Research Institute, and the other, a monograph on taxation and foreign investment, by the National Council of Applied Economic Research. These studies sparked off considerable interest among foreign investors. The proposal for the Investment Centre was revived when the T.C.M. began to take interest in it and promised financial assistance in the form of foreign currency for bringing out technicians, training of personnel and purchase of necessary equipment. On his return from the U.S. after serving a long term of ambassadorship, Mr. G. L. Mehta also strongly pressed the need for establishing this facility patterned after the Dutch experiment in the U.S. It was only then that the Secretariat at New Delhi began to evince interest in the proposal. After prolonged discussions and considerable hesitation, the Government of India concluded two agreements with the T.C.M. under which $780,000 have been made available for payment of contract services and equipment and Rs. 22 lakhs for local currency costs for two years. The Centre was registered as a society under the Societies Registration Act on 30th November last.

In his introductory remarks at the inaugural function, Mr. G. L. Mehta, Chairman of the Governing Body of the Centre, reviewed the trends in foreign investment, outlined the main features of the Government's policy of encouraging foreign investments, pointed out why the inflow of foreign capital to India had not been as large as it should have been and explained how the Centre would help in speeding up investment of external capital in the country. He said that, although the flow of foreign private capital to developing nations had not been appreciable, there had been a welcome change in the attitude and approach of foreign private investors towards the emergent countries. At the same time, there was an improvement in the general climate for investment in some of the developing countries.

Official Policy

Alluding to India, Mr. Mehta observed that its policy on foreign investment was clearly laid down in the Industrial Policy Statement of April 1948 and amplified in the Prime Minister's statement of 6th April 1949. The main features of this policy are: (*a*) there will be no discrimination in the treatment of domestic and foreign enterprises; (*b*) foreign enterprises would be permitted to earn profits, subject to regulations common to all; (*c*) there will be no restrictions on the remittance of profits or repatriation of capital, except that remittance facilities would naturally depend on foreign exchange considerations; (*d*) if and when foreign enterprises are compulsorily acquired, compensation will be paid on a fair and equitable basis; (*e*) the major interest in, as well as ownership and effective control of, an industrial undertaking should, as a rule, be in Indian hands.

In addition to clearly stating its policy, the Government also took, stated Mr. Mehta, a series of positive steps to promote investment of foreign capital in the country. These included agreement on avoidance of double taxation (such agreements have been concluded with the U.S., Sweden, W. Germany, Norway, Denmark, and Japan), tax concessions by way of increased depreciation allowance, including development rebate and exemption from taxes on profits made by new industrial undertakings for a period of five years. Further, protection had also been given to a number of industries to enable them to stand on their own feet. Import restrictions had also provided a sheltered market for many industries.

As a result of these favourable developments, there has been some improvement in the flow of foreign capital. A sizable number of joint ventures have already been started in which large and small foreign firms have entered into financial and technical collaboration with industrial undertakings in the public and private sectors. Drawing attention to this welcome trend, Mr. Mehta observed that there was a significant increase in the net inflow of private capital. It was, however, true that, as compared with the substantial amounts of borrowings from foreign Governments and international institutions during the past three or four years and foreign private capital flowing into other parts of the world, the quantum of foreign private investment in India, even in these two latter years, was small. Why was it so? The answer to this question, Mr. Mehta said, lay partly in the fact that, while India had a reputation for fair dealing and its potential market was much larger than that of several other countries, the capital exporting countries were still not sufficiently aware of India's rapid industrial advancement and achievement during the last decade. He pointed out that foreign investors heard more about the onerous burdens of taxation and Government control than they did about the large industrial establishments which had been set up in the private and public sectors or about the fact that many plants recently established with foreign participation had plans for expansion. India enjoyed considerable advantage over many other countries in Asia or Latin America. These were facts and they should be made known to investors in foreign countries.

Widening Scope

Mr. Mehta pointed out that, with the extension of development programmes in various sectors of the economy, the demand for manufactured goods was expanding. The process of industrialisation itself was generating demands for machinery and producer goods at high level, thus bringing to the forefront programmes for manufacture of industrial machinery, metals and alloys and basic chemicals. With plans for industrialisation over a wide front, there was considerable scope for extensive collaboration with foreign *entrepreneurs* in regard to technical aid training of personnel and financial participation. The Chairman of the Governing Body disclosed that the establishment of the Investment Centre had been welcomed in the U.S., the U.K., West Germany and other countries. Bankers and investment houses in these countries have already contacted the Centre for information about opportunities for investment in India.

There is one aspect of the working of the Centre which requires the help and co-operation of the Government, if the Investment Centre is to function successfully. This relates to procedures and formalities which, as everyone knows, are a time-consuming process. Foreign trade missions and individual *entrepreneurs* who visit this country with the intention of interesting themselves in industrial ventures have to go round various Ministries to obtain information about various questions bearing on investments. There is, therefore, need for a focal point where such information is readily available. It is encouraging to learn that the Investment Centre will supply such information.

As Mr. Mehta suggested in this connection, it should be possible, through proper co-ordination between the concerned departments of the Government and the Investment Centre, to devise methods whereby projects, which are processed by the Centre, are brought up to such a stage that, subsequent formalities under the Industries and Development Regulations Act, import of capital goods and control of capital issues, etc., may be completed as early as possible. For this purpose, the Centre requires the active support and co-operation of the Government. This help, it is gratifying to find, was pledged by Mr. Morarji Desai who agreed "that it was necessary to devise ways and means by which those who are interested in setting up industries and investing money are not driven from pillar to post and are, on the contrary, enabled to do their work quickly and without any harassment." There is no doubt that, if the Investment Centre were to function as its sponsors have planned, it should prove to be of invaluable help to both Indian and foreign *entrepreneurs* who wish to start new ventures and expand the existing ones.

THIRD PLAN TARGETS FOR TEXTILES

MILL SECTOR THROWS FRESH LIGHT ON POWERLOOMS

THE production target for cotton cloth fixed to be achieved by the end of the third Five-year Plan is 9,300 million yards—5,800 million yards from the mill sector and 3,500 million yards from the decentralised sector. The target allocated to the latter sector is tentatively divided thus: handlooms 2,800 million yards and powerlooms, traditional *khadi* and Ambar *khadi* 700 million yards. These targets are based on official figures relating to the current levels of output. The Indian Cotton Mills' Federation has, however, its doubts about the accuracy of the method employed by official agencies to estimate the production of handlooms and powerlooms. It has accordingly made its own studies in the matter, the results of which are published in the form of a brochure entitled *Third Plan Targets for Handlooms, Powerlooms and Mills.*

The Federation's study seeks to assess the contribution currently being made to the cloth supply position and Plan resources by the different sectors of the cotton textile industry, as well as to examine their potentialities. It is pointed out that the question of allocating targets to the different sectors cannot be considered purely from an economic angle and employment aspects; the consumers' interests and requirements of developmental planning have to be weighed, one against the other, in arriving at decisions which will balance all these considerations. Two points are specially stressed in the brochure under reference. In the first place, it is said, if any difficulties arise in the supply position through failure of other sectors or through defective assignment of targets, the mill industry shou'd not be made a scapegoat for all the difficulties of consumers and subjected to all manner of restrictions with regard to prices, distribution, etc. Secondly, the industry has cautioned against a repetition of the events of the second Plan period when the increased target assigned to handlooms was wrested by the small powerloom factories which do not make any worthwhile contribution to the economy of the country from the economic, social or any other angle.

Raising Cloth Supplies

Drawing attention to the aforesaid aspects, Mr. Krishnaraj M. D. Thackersey, Chairman of the Federation, says in his foreword to the brochure:

"With the rise in population and in *per capita* income expected in the course of the third Five-year Plan, the demand for cloth will go up at a faster pace and, unless very serious attention is given to the matter of increasing production, the country may witness, in the coming years, a deterioration in the cloth supply position to an extent not experienced before. ...

"It is not the object of this memorandum to plead for a bigger target for the cotton mill industry which would be fully satisfied with any target that may ultimately be assigned to it. The mill industry would, however, like to be assured that, so long as its production is in line with its targets, it will be allowed to work in peace and not subjected to irksome controls at every stage. The mill industry submits that it should not be charged with profiteering and made the scapegoat for any shortfall in supplies due to the inability of other sectors to reach such targets as may be assigned to them.

"Finally, the Federation would like to caution against repetition of the events of the second Plan, when the powerlooms industry was allowed to deprive the handloom industry of its share in the production of decentralised sectors, resulting in serious loss both of revenue and of socio-economic objectives!"

Mr. Krishnaraj reiterated the aforesaid remarks at a Press conference on Monday the 20th inst. These remarks, together with the series of arguments put forward in the brochure, make it clear that the mill sector is opposed to the growth of the powerlooms, especial'y the unauthorised powerlooms. That this opposition to powerlooms is not a rational one is discussed in detail in an earlier page of this issue. It is, therefore, proposed to outline here only the points raised by the Federation in its brochure. The chief conclusion of the Federation is this: "The small powerloom factories, which neither give proper wages, working conditions and taxes, as the mill sector does, nor provide large-scale employment as the handloom sector does, should really be looked upon as a parasite on the economy, gaining at the cost of the handloom sector, the mill sector and the public exchequer."

In support of its contention, the Federation quotes the Fact-Finding Committee which said as far back as February 1942: "A more serious rival to the handloom industry than mills has arisen in the small-scale powerloom factories. This rival combines in itself, owing to its medium-scale production, the advantages of both mills and handlooms." Since the Committee's report, the advantages enjoyed by the small powerloom factories, the Federation alleges, have widened in various directions as under:

(a) The disparity in the wage cost as between mills and powerlooms should have gone up by a substantial margin. In 1941, the Bombay mills, for instance, used to pay an average monthly wage, including dearness allowance, of Rs. 36.66. This has now gone up to Rs. 149, to which must be added the cost of social security benefits, such as provident fund, employees' State insurance, and gratuity, totalling Rs. 12 to 13. The wage cost in the powerloom factories cannot have gone up in the same proportion, as they are not subject to any labour legislation.

(b) The factory legislation, as it stands today, represents a great advance over the position as it existed in 1941. The small powerloom factories, which are not governed by the factory legislation would derive greater advantages from this factor now than they did 20 years ago.

(c) Mills are prohibited from producing several types of cloth the production of which has been reserved for the handloom sector. The production of *dhotis* by mills has also been pegged to 60 per cent of what they did in 1951-52. The small powerloom factories, to whom these restrictions do not apply, have proved to be the real beneficiaries of the reservation meant for the handloom sector.

(d) As if all this is not enough, the powerloom sector has now received a further fillip in the shape of concession in excise duty. The unauthorised powerlooms, which constitute the bulk of the powerloom sector, do not pay any excise duty and most of the authorised powerloom establishments are divided up into four looms each so as to secure complete exemption from excise duty.

The Federation also points to the loss of revenue that would result from the development of the powerloom sector *vis-a-vis* the mill industry. According to the Federation, the composite mills paid to the Government in 1958-59 excise duty of Rs. 62.6 crores on 4,098 million yards of cloth delivered for civil consumption and in 1959-60 Rs. 63.5 crores against deliveries of 4,229 million yards, giving an average rate of 15.14 nP per linear yard. If all the 1,365 million yards now produced by powerlooms were to be manufactured by mills, the Government would have secured a yearly revenue of over Rs. 20 crores. The amount of excise revenue derived from the powerloom sector is not known, but is said to be negligible. This means, it is argued, continued production of so much cloth by the powerloom sector over the five years of the third Plan which would mean loss of revenue to the extent of over Rs. 100 crores. But that is not all. If the additional production of 2,000 million yards proposed to be allotted to the handloom sector, is ultimately produced by the powerloom sector, the loss of revenue at 15.14 nP per linear yard will come to Rs. 91 crores. Further, there will, it is stated, be loss of income-tax, corporation tax and various other taxes and levies that will result from cotton textiles being produced in the small powerloom establishments.

Apprehension

The Federation has, however, given some interesting data relating to the production of cotton cloth in the decentralised sector. The handlooms and powerlooms are together believed to have produced last year (1960) 2,165 million yards on the basis of the total yarn consumption of 481 million lbs., each pound giving 4.5 yards of cloth. The share of handlooms is put at no more than 800 million yards—475 million yards by the 1.20 million looms in the co-operative fold and 325 million yards by 1.08 million looms outside the co-operative fold. The balance of 1,365 million yards, it is computed, represents the share of the powerlooms. The

SHIFTING FACE OF COTTON INDUSTRY

MANY UNITS CLOSE DOWN—CHANGE IN WORK STRUCTURE, HOWEVER, NOT GREAT

From Our Special Correspondent

MANCHESTER, *14th February*

MANCHESTER LETTER

OF the various documents drawn up since the redundancy schemes in spinning and weaving were launched in 1959, the latest report on the trade, produced by the Lancashire and Merseyside Industrial Development Association, provides some of the most valuable data. Not only does it contain a district-by-district survey of the new uses to which closed cotton mills have been put, but the local authorities have collaborated by giving the names of the mills concerned, the new owners and the new product or process on which the factories are now being employed.

On this account alone, the information given in the survey must be of intense interest not only to those still connected with cotton trade affairs but to other industrialists who might well be prepared to bring their work to Lancashire. For this reason, the Association has advertised the facilities available and has distributed pamphlets urging employers in other parts of the country to consider the advantages of filling some of the 200 mills which still remain vacant and available for new industry.

Mills Closed Down

Over the region as a whole, covering Lancashire, North Cheshire and Derbyshire, it is estimated that 1,250 mills were in operation in 1951, of which all but 100 were in the county of Lancashire. By the end of last year, only 700 remained, following the closure of more than 300 mills during the reorganisation scheme and some 250 between 1951 and mid-1959. At the beginning of this year, approximately 380 of the 550 closed mills had been reoccupied and it is estimated that some 120,000 people are now working for other industries carried on in former cotton mills. The construction of weaving sheds, on their single-storey basis, made them more suitable for conversion, although the multi-storeyed spinning blocks have frequently been sold for use as factories with different firms operating on separate floors of one building.

In the large towns, the shifting face of industry has not caused any great change in the work structure, but, in smaller isolated areas, the closing of the local mill has often had great significance in the past. One of the features illustrated by this survey is that the spread of take-overs has been very extensive, reaching out to the Lancashire villages, particularly in the weaving belt. New employment opportunities in a much wider range of trades are now available, improving the economic prospects of the locality.

Ending on an optimistic note, the report asserts that the take-over of cotton mills has made a valuable contribution to the diversification of the industrial structure of the region. Although many of the developments have been created by local firms seeking additional floor-space, quite a number of employers new to Lancashire have been attracted by the availability of these premises. According to the survey, there is every reason to believe that the influx of new industries will be maintained in the coming months.

Footing the Bill

More information about the probable cost to public funds of the cotton reorganisation scheme has now been disclosed by the Government. In response to a Parliamentary question, it has been stated that the machinery scrapping programme has so far resulted in £8,900,000 being distributed to firms which agreed to dismantle all or part of their plant. On this basis, the redundancy project has, therefore, involved the trade and the Treasury in a joint bill of around £13,400,000. The arrangements under the plan were that the Government should pay two-thirds of the cost of scrapping and the industry one-third.

The re-equipment scheme is still in its early stages and owners of machinery have rather more than a year in which to undertake definite modernisation commitments. So far applications for grants are expected to cost the Exchequer about £5,500,000. This means that re-equipment projects aggregating at least £22,000,000 have already been put forward. In this case, the industry is committed to pay 75 per cent of the cost of modernisation, while the Government supplies the other 25 per cent.

Shift-work Progress

"Remarkable progress" in switching over to shift-working in the cotton industry at Bolton as part of the big drive to improve efficiency in the Lancashire textile industry was reported by Mr. W. A. M. Hesketh, Chairman of Bolton Master Cotton Spinners' Association, at the annual meeting. Within a period of a few months nearly one-third of the workers employed in Bolton area mills had been transferred to a shift-working system, with the co-operation of the trade unions.

"Notwithstanding the reorganisation scheme, the fears of widespread unemployment amongst textile operatives did not materialise," said Mr. Hesketh. "With increased spindle activity shift-working, together with full employment in other local industries, there has been a shortage of labour." In most Lancashire textile towns the percentage of unemployment was below the national average and of "negligible proportions."

More Cash From Textile Plant

In marked contrast to the experience of producers of Lancashire cotton goods, whose exports in 1960 were at the lowest level for many years back, British textile machinery makers gained more ground last year. The earnings from such shipments were, in fact, the highest ever recorded, being £51,806,319, as against £50,441,914 in 1952, the previous peak. In volume, the tonnage at 67,218 showed a rise of over 11,000 tons on 1959 and presented the best return since 1957. Current shipments, however, are still well below the level recorded from 1948 to 1952 inclusive, when more than 100,000 tons of plant was sent abroad annually.

A good deal of the increase can be attributed to the sharp rise in exports to the Soviet Union which expanded from 63,273 cwt. in 1959 to 161,178 cwt. last year. The only comparable purchaser was India, whose mills took 130,496 cwt., as against 134,129 cwt. in 1959. Other main destinations for British-made textile plant in 1960 were (with 1959 comparisons): Japan 65,553 cwt. (25,831 cwt.), Australia 62,513 cwt. (60,963 cwt.), Pakistan 60,471 cwt. (21,848 cwt.), South Africa 56,411 cwt. (25,222 cwt.), Western Germany 50,752 cwt. (33,659 cwt.) and Italy 50,001 cwt. (47,941 cwt.). Two countries which took substantially smaller supplies from the United Kingdom were Egypt, where shipments fell from 57,649 cwt. to 23,515 cwt., and Iran, whose taking slumped from 83,432 cwt. to only 12,016 cwt.

A Full Schedule

The first reaction when scanning the programme of future courses provided for all sections of the industry by the Cotton Board's productivity centre is to wonder how much comprehensive training schemes can be carried out by an organisation whose resources are relatively limited. The progress made by the Centre during its years of development has, in fact, been remarkable and its current syllabus provides overwhelming justification for the support it has received—and deserved. Running through the list of engagements, from those due to start this month until virtually the end of the year, it seems that there will never be an idle day for the instructors and their students during the months ahead. From the major full-time work study courses lasting for eight weeks to the one-day meetings on specialist topics, the diary appears remarkably full.

Technical instruction is a major aspect of policy, stimulated by the hectic times through which the industry is passing. But to the more general observer, such short courses as those covering the history and organisation of the trade unions, or discussions on the factory and the law, with separate sessions devoted to the three main sections of the industry, appear extremely interesting in themselves.

Labour and Re-equipment

If discussion on a problem and the ventilation of ideas can bring solutions, the series of special half-day meetings organised by the Cotton Board on the current labour situation in the trade should be of considerable value. These conferences for directors and senior management, have already taken place in a number of areas and twelve districts are to be covered by the whole project.

As the latest notes issued by the Productivity Centre point out, management must be confident that the machine potential is adequately supported by an equally adequate labour force. The re-equipment policies pursued by employers are, therefore, tied hand in glove with their labour policies. Special one-day lectures dealing with the general attitude towards re-equipment are also planned, one having already been held in Burnley. Others are scheduled for Preston, Manchester, Oldham and Rochdale during 1961.—*All Rights Reserved.*

COTTON CONSUMPTION PROSPECTS

LAST SEASON'S LEVEL LIKELY TO BE MAINTAINED

IN spite of the prospect of record world cotton crop of about 47.3 million bales, including production in Communist countries (15 million bales) during the current season, which is 300,000 bales more than in 1959-60, aggregate supply is expected to decline during the season, thanks to lower opening stocks. Nevertheless, according to the latest monthly review of the International Cotton Advisory Committee, Washington, the chances are that, for the fifth season in succession, disappearance will exceed production and there would be a further reduction in the end-season carryover, though not as much as in the previous season.

The following table gives a preliminary estimate of free world cotton consumption in 1959-60 as compared with that in the previous two seasons.

(In thousand bales of 478 lbs. each)

Countries	1959-60	1958-59	1957-58
United States	9,024	8,707	7,999
Canada	320	332	326
Mexico	485	480	480
Hong Kong	304	286	270
India	4,450	4,415	4,360
Japan	2,939	2,390	2,453
Pakistan	1,040	1,020	925
Turkey	500	530	520
Belgium	413	377	374
France	1,375	1,171	1,407
W. Germany	1,472	1,355	1,433
Italy	1,023	872	864
Netherlands	356	329	332
Spain	550	475	475
United Kingdom	1,310	1,280	1,459
Argentina	480	550	521
Brazil	1,175	1,150	1,050
U.A.R. (Egypt)	525	516	447
Others	3,268	2,865	2,778
Total ..	31,009	29,096	28,473

The high level of cotton utilisation is due, in large measure, to the high level of consumption which is expected to almost equal last season's record 31 million bales in the free world. Free world countries other than the U.S. and Canada are expected to account for the higher consumption. In the U.S. and Canada consumption is expected to be lower than in the previous season. During the first four months of 1960-61 consumption in the U.S. was running about 235,000 bales under the comparable 1959-60 rate and, with normal seasonal variations, this would indicate a full season's consumption of about 8.25 million bales, as against nine million bales consumed last season. In fact, according to I.C.A.C., there are several indications of a lower rate of textile activity in the U.S. Loom time on cotton goods is now significantly less than it was a few months ago and the seasonally adjusted rate of employment is also down. Spindle hours run on the cotton system declined by about six per cent during the first three months of the season, namely, August to September 1960, as compared with a year earlier. The backlog of unfilled orders has declined in recent months and mill stocks of cotton broad woven goods have tended to rise slightly. Apart from what may be termed cyclical factors, textile activity in the U.S., as in other countries, is influenced by the state of the national economy, which is currently passing through a recession, and this constitutes another reason why the outlook for cotton consumption is less favourable this season.

Man-made Fibres

The downturn in the U.S. is not confined to cotton. Mill consumption of man-made fibres also is declining. In 1960 itself, consumption of these fibres was, according to the latest estimates, around 1,800 million lbs. (10.3 lbs. *per capita*), as compared with 2,000 million lbs. (11 lbs. *per capita*) in the previous year. Consumption of rayon and acetate is said to have been the lowest since 1949. The *per capita* consumption works out to 5.7 lbs. which is the lowest since 1945. Apart from competition from other fibres made at home, the rayon industry in the U.S. is also facing increasing competition from imports and the industry has found it necessary to seek protection from the Tariff Commission. Consumption of non-cellulosic fibres, on the other hand, continues to increase and is running at the rate of 4.6 lbs. *per capita*.

Cotton consumption in Canada has been steadily declining in recent years and last season was no exception. It continues to fall and there appears to be little chance for the reversal of this trend in the foreseeable future. In both the North American countries, the outlook for textiles, generally, is affected by the downturn in the general economy and by competition from foreign imports, though the latter is proportionately much more serious in Canada.

In contrast to North America, the textile industries in Western Europe are now flourishing but even here, according to the Committee, there is some apprehension as to how long this situation will last. The prevailing sentiment is still rather optimistic. The revival in textile production last season was related in part to the general economic prosperity of this area and there is no doubt that this will be a pervading influence during the current season also. No generalisation for such a diverse area as Western Europe is possible. But the fact that the rise in stock markets has been halted and the bank rate has been lowered is evidence that the economy of Western Europe may be near the turn. Industrial production in the U.K. and Germany has remained stationary in the last few months. In the other major textile producing countries on the Continent, particularly in France and Italy, however, the rise continues.

Protectionist Sentiment

Cyclical factors, too, enter into the picture, but it should be borne in mind that the recovery in textile production in W. Europe began much later than in the U.S. At present, the industry is fully engaged. In fact, the problem in some countries is rather one of shortage of labour. But Europe is faced with the same problem as North America, namely, a continuous expansion in textile imports from the so-called low-wage countries and protectionist sentiment among the traders is consequently on the increase. Individual trade associations, as well as international institutions such as G.A.T.T., O.E.E.C. and I.F.C.A.T.I., are preoccupied with the consideration of how to remedy the situation. The growth of foreign imports recently has been mitigated by the buoyant nature of the domestic textile industry in W. Europe, but the Committee feels that the pressure for import restrictions is bound to be intensified when the cycle turns the other way. Adding together the estimates for individual countries, total consumption in Western Europe works out to 7.7 million bales, the same as in the previous season.

Referring to India, the Committee's review says that the problem of textile industry has been inadequate supply of cotton and the sharp increase in cloth prices. It then describes the action taken on both scores, first, by the introduction of control over the distribution of cotton to mills and substantial imports of foreign cotton and, second, by imposition of "recommended ceilings" on textile prices. As regards consumption during the current season, the Committee's expectation is that it might show an increase over last year.

Paramount

In Japan, as a result of the progressive relaxation of yarn production curtailments, cotton consumption in 1959-60 rose to a new post-war peak of 2.9 million bales. The man-made fibre industry, too, has been extremely active, with increases in all sections during the first nine months of 1960 by comparison with a year earlier. Notable, however, is the fact that, whereas cotton surpassed the 1956-57 peak, output of spun rayon remained far below the 1957 peak. Synthetics, which are offering strong competition to cotton and rayon in some end-uses, continue to expand rapidly with output at record levels in every instance. The expansion in the rayon industry is attributed mainly to increased production of high tenacity rayon yarn and acetate filament.

Pure cotton yarn production in Japan during the first nine months of 1960 was about 19 per cent higher than in the comparable 1959 period and the percentage increase in cloth production was almost as much. Yarn production in the final quarter of 1960 is expected to have brought total production for the year to half a million metric tons.

Production Curtailment

Control over cotton yarn production in Japan is being implemented under two schemes: (1) the moth-balling programme under which 15 per cent of the registered spindles of each mill was put into storage for an indefinite period from May 1959, and (2) the sealing programme whereby about 9 per cent of spindles, in addition to those moth-balled are temporarily frozen. At present, however, and for all practical purposes, the second programme is not in operation, as most of the sealed spindleage has been released in connection with work under triangular deals and other special export arrangements.

Japan's cotton textile exports in 1960 increased significantly. Total shipments of cotton goods (yarn, cloth and made-up goods) during the first nine months of 1960 amounted to 152,283 tons, an increase of 16 per cent. over the same period in 1959. The increase in cotton yarn exports during this period was phenomenal, 35,802 tons, as against 9,874 tons, and is explained in part by the marked increase in exports to Indonesia, under a processing agreement under U.S. P.L. 480. In recent months, however, the volume of new business is reported to have shown a downward trend and traders are not optimistic regarding prospects for the near future.

Large exports of cotton yarn and cloth contributed to the rising trend in cotton consumption in Japan but the main impetus to demand was in the domestic market. Most of the "sealed" spindles under the curtailment programme are currently in operation by reason of special textile export arrangements but, with production in excess of demand and stocks on the increase, yarn output may be curtailed again. Liberalisation of cotton imports, scheduled to take effect in April next, might ordinarily be expected to stimulate cotton textile production were it not for the restriction programme. Even so further modest increases are not ruled out.

Outside these major centres, textile production is concentrated in three areas, the Far East, the Middle East and South America and such information as is available suggests further increase in many countries, particularly in the Far East.

Communist Countries

The situation in the Communist countries is summed up by the I.C.A.C. as follows:

Consumption in these countries has expanded significantly in recent years as is evident from the following table:

(In million bales of 478 lbs. each)

Country	1959-60	1958-59	1957-58	1956-57
China	8.8	8.5	6.8	6.2
U.S.S.R.	6.2	6.0	5.8	5.5
Eastern Europe ..	2.2	2.1	1.9	1.8

The outlook for the present season is clouded by the raw cotton supply situation in China and the U.S.S.R. Production is apparently down in both countries and, as far as can be determined, imports will have to increase if consumption is to be maintained at last season's level. It is believed that China now consumes about as much cotton as the United States and consumption in the U.S.S.R. last season amounted to 6.2 million bales. Consumption in Eastern Europe is now about 3.25 million bales annually and is still rising.

Akbarallys DEPARTMENT STORE IN BOMBAY

LIGHTING BY PHILIPS

In a city of bright, modern shops Akbarallys department store in Bombay stands out as a favourite rendezvous of smart shoppers.

And naturally, the lighting at Akbarallys is by Philips.

A scientific combination of Philips fluorescent and incandescent lamps with Philips' exclusive fittings produces lighting that helps to display the merchandise in the most attractive manner possible.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience as well as research and development aimed to meet the ever-growing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.*

LAND CEILINGS BILL AND SUGAR MILLS

MAHARASHTRA GOVERNMENT'S ARGUMENTS FOR INCLUSION OF CANE FARMS UNTENABLE

WHO can help those who refuse to see? And what can be said of those who are so dogged y obst.nate as not to adm.t a wrong move and retrace their step before it is too late? These two posers immediately come to one's mind after a perusal of the 31-page White Paper on the Maharashtra Land Ceilings B.ll and Sugar Industry issued by the State Government. The main objects of issuing the Paper, we are told, are to remove the "misunderstanding" regarding the Government's move as a result of what it calls "a tendentious propaganda carried out on behalf of the affected vested interests," that is, the sugar factories, to set out the correct position with reference to sugar industry in the State, and to elucidate the point of view underlying the relevant provisions of the proposed legislation. But the series of arguments put forward by the Maharashtra Government are either off the mark or are highly untenable, not to speak of the fact that they completely brush aside the fundamentals involved.

After all, what is the criticism that has been levelled against the inclusion of cane farms attached to sugar mills under the purview of the Land Ceilings Bill? It is simple. It is a retrograde step to deny the sugar industry certain advantages, enjoyed by it for a number of years, which have been responsible for a high level of efficiency of sugar manufacture. Take, for instance, the contention of the Government that the sugar factories in the private sector enjoy a special advantage in the shape of profits of agricultural production on their farms as distinct from the industrial part of the undertaking, namely, the sugar factory itself. But what is wrong in enjoying such an advantage? If the same advantage is not enjoyed by other sugar units in Maharashtra and elsewhere, the solution lies not in denying the factories the advantage but in making other factories also enjoy a similar advantage.

Another Incorrect Argument

Another contention of the Government which is not correct is that a ceiling on land holdings is a far-reaching measure of equitable social distribution of an important and physically limited factor of production. The present arrangement itself fully ensures such distribution. It is common knowledge that the twelve joint-stock sugar companies of the State are owned not by a few individuals but by hundreds of shareholders, the actual number being put at more than 21,000. These 21,000 shareholders together have a holding of 100,000 acres, though the area owned is much less at 30,000 acres. The average holding per shareholder thus comes to no more than 4.8 acres. What is more, even if all the land (both owned and leased) held by sugar mills is taken into consideration, it will constitute just 0.002 per cent of the total cultural land area of about 50 million acres. This is certainly a negligible percentage which can easily be exempted from the ceiling legislation. By taking over and distributing this small quantity of land, the Maharashtra Government will not be able to make any impression on the problem of unequal distribution of wealth and income. If, however, the Government still feels that there cannot be an equitable distribution of land so long as the sugar mills earned unduly large profits as a consequence of the ownership of cane farms, it can mop up a portion of the so-called excess profit through the levy of an agricultural income-tax on the agricultural incomes of factories. Apropos this argument, the Government merely says in the White Paper that an agricultural income-tax is only a fiscal measure which cannot be compared to a ceiling on land holdings. This counter-argument makes no sense whatever. How the emphasis laid on social justice by the Maharashtra Government is far-fetched is amply borne out by the following extract of a well-reasoned speech delivered by Prof. C. S. Krishnamurti of Bijapur, under the auspices of the Forum of Free Enterprise, on 24th January 1961:

"It is contended that social justice demands that a ceiling on landed property is the logical corollary. Could the same thing, for instance, be applied to the workers in the factory? Even granting that the tiller of the soil should be the owner of the land, one cannot categorically assert as to who exactly is the tiller and who is not. Even this avowed object is nullified in the Land Ceiling Bills of the States, when they vouchsafe for State farms or co-operative joint-farming societies which are no more than stepping stones to collective-farming. Witness, for instance, the preamble of the Maharashtra Land Ceilings Bill, speaking of 'to provide for the acquisition of land, held in excess of the ceiling, and for the distribution thereof to landless and other persons.' Who are those other persons? Would we be wrong if we were to make bold to state that it has been deliberately kept vague! The irony of land ceiling legislation in India is that it is a mixture of opposites. On the one side, they speak of social justice and, in the same breath, they speak of joint-farming. If increase in production is the objective, which would mean larger holding, then fixing of ceiling on holdings becomes superfluous. If, on the contrary, we desire smaller holdings and a ceiling on holdings implies this, then the question of disrupting the existing farms and co-operativising them does not arise, because the unit of cultivation will then become too unwieldy. Land ceiling legislation in India purports to play the role of both Dr. Jekyll and Mr. Hyde. One cannot hunt with the hound and run with the hare. If you would have a ceiling on agricultural holding, then why not extend it to the urban areas and income also? One need not wait for the answer to this question."

Rents Paid By Mills

The Government of Maharashtra points out that the rents paid by sugar factories to original owners of land are an insignificant fraction of the profits of cultivation. But one would ask: Could not the rents be raised? The Government can issue a directive to sugar mills to pay higher rents. It must be noted here that, only recently, the erstwhile Bombay Government got the rents revised in an upward direction, even though this action meant making a departure from the long-term lease agreements concluded with factories. Another pertinent point to be noted here is that a very large number of persons who have leased out their lands to sugar mills are small-holders and are not entirely depending for their living on the rents received from the mills. For practically all the persons are working either in farms as cultivators or as workers in factories or in both and get wages. The minimum daily wage that a worker in joint-stock sugar mills farms gets is said to be Rs. 2.75, which is much more than what a worker in co-operative factories gets, namely, Re. 1.25-Re. 1.70. Moreover, the workers in joint-stock mills and farms attached to them get provident fund, bonus and gratuity, not to speak of free medical, housing and education facilities. Can the Maharashtra Government guarantee all these benefits after the cane farms are converted into State farms or co-operative farms or joint farming societies? We wonder.

Factory Farms' Advantages

It does not need an expert to say that the factory farms as a whole enjoy certain economics of large-scale benefits of finance and expert agricultural management. The White Paper no doubt admits it, but explains it away by declaring that there should be no difficulty about retaining all these advantages and benefits in State farms and joint farming societies. But can the Government make sure that similar facilities are provided to other farms? This is a pertinent question, because the individual cane-growers have so far not been able to organise and introduce such production facilities. This irrefutable point clearly proves the superiority of farms owned by joint-stock companies in terms of productivity over private ownership. Co-operation has not been much of a success even in fields like credit and marketing, although it has been tried in these fields for well over 50 years, of which over a decade has been under the regime of the Congress Party. It has not been tried at all on a large scale in sugarcane growing. Even the so-called co-operative sugar factories are not drawing their cane from sugarcane co-operative farms but only from individual farms. The chances of success for the co-operative experiment in the field of sugarcane are thus doubtful. In any case, there is no sense in giving up an arrangement which has proved its merit and taking to another of unproved merit.

In this context, it will be relevant to quote another passage from Prof. Krishnamurti's address:

"It is all moonshine and fiddle-stick to think that voluntary co-operative farming would be a success for the asking of it, particularly in a country where the agriculturist is steeped in amazing ignorance and has a filial attitude towards the farm and the home. Nowhere in the world, co-operative farming has been experimented upon a universal scale, and even in those spheres wherein it has been used, without an element of regimentation and compulsion. China and Russia; Yugoslavia and Poland; Hungary and Israel have found voluntaryism in co-operative farming a luxury. In a vast continent like India, where the agriculturist is wedded to his land, it is a well-nigh impossible proposition to make a success of the co-operative farming. The secret of co-operation is its limita-

fair chance for young talent

Some 48,000 children are at school in Jamshedpur, where Tata Steel runs 34 schools—17 of them on two shifts—and assists 122 other schools with recurring or capital grants. Instruction up to matriculation is given in four languages to meet the needs of the cosmopolitan industrial community.

Employees' children are taught free or pay a concessional fee depending on the parents' income. Here, we see Shri Etwari of Mongbyr, an operative in the steel works, and his son, Kameshwar Prasad. Kameshwar passed matriculation in the first division in 1959, qualifying for a university stipend and for a Tata Steel Jubilee scholarship of Rs. 75 per month which will see him through college without any strain on his father's modest resources.

Jubilee scholarships apart, Tata Steel provides assistance in several ways to enable deserving children to take up higher studies. Young talent is thus encouraged and nurtured at Jamshedpur, where industry is not merely a source of livelihood but a way of life.

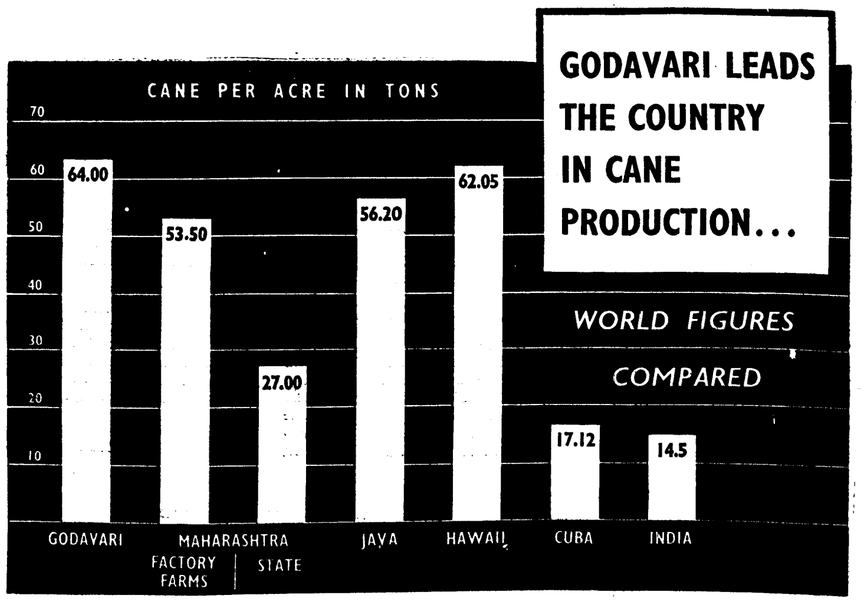
tion. Co-operative movement is not an open-sesame for every symptom of instability of the rural economy of the country."

It will thus be seen that the expectation of the Maharashtra Government that the inclusion of sugar mills' farms in the Ceilings Bill will provide a broader base of ownership of land-holding and thereby create greater incentive for increased production is without foundation. It was only the other day that Mr. Vinoba Bhave said that fixation of ceiling could have been justified if the result had been appreciable. Indeed, he went to the extent of condemning land ceiling as a coercive measure. Surely, Mr. Vinoba Bhave cannot be accused of having championed the cause of vested interests.

A reference is made in the White Paper to the fear expressed by the joint-stock companies to the effect that their financial structure will be disrupted if, as a result of the application of the ceiling, they have to give up their agricultural farms. "It is not quite clear," the Paper says, "what is purported to be conveyed by such a remark." How can it be clear when the authorities examine an issue with preconceived notions? Following the surrender of cane farms by sugar mills, the supplies of cane will have to be met entirely from the State farms or the joint farming societies. This means that the working capital requirements of mills will be larger than what they are today because of the payment of full prices immediately after the cane is supplied. It may be noted here that three mills are wholly self-sufficient in respect of cane supplies and, in the case of other mills, outside cane supplies account for a small portion of the total cane crushed.

The inclusion of cane farms attached to sugar mills in the Land Ceilings Bill also will result in loss of much precious revenue to the State exchequers following the fall in the productivity of land that is now sought to be taken over from the companies. It is computed by some that there would be a loss of 385,000 tons of cane, if the yield of cane—the present average yield is 53.5 tons per acre—were to fall to the level of those obtained in co-operative farms, that is, about 36.0 tons. On this basis, the loss of revenue is estimated at Rs. 19.25 lakhs on cane cess account for the State Government and Rs. 130.25 lakhs in excise revenue to the Centre.

Apart from these losses, the measure entails, as this journal pointed out on an earlier occasion, a heavy drain on the financial resources of the State Government which will have to find funds not only for paying compensation to those from whom land is being taken over but also for providing the working capital that will be required by the existing cane farms and for expanding cane cultivation, for all which money is now being provided by investors in the private sector. Introducing the Maharashtra Agricultural Lands Bill in the State Legislative Assembly on the 8th inst., Mr. Vasantrao P. Naik, Minister for Revenue, indicated that the amount the Government would have to pay as compensation for the excess land (estimated at 1.1 million acres) that would come to it would be about Rs. 33 crores. Of this, the share of sugar mills will be approximately Rs. 3 crores, or about Rs. 300 per acre. The rate of compensation is ludicrously low, especially considering all the effort and money spent by the managements of sugar mills on the cane farms all these years to increase their productivity.



AND MAHARASHTRA'S FACTORY FARMS ARE INDIA'S BEST!

The Sugar Industry in Maharashtra State is an agro-industry working at PEAK EFFICIENCY. The average yield of cane per acre of **Factory Farms** in Maharashtra is twice the average cane yield in the State and nearly four times the average for the whole of India. This efficiency is progressively going up because of:-

- **Progressive management with high initiative and drive.**
- **Unceasing research and experimentation, and scientific cropping schemes.**
- **Adoption of latest techniques and timely operations, with the utmost economy in the use of water and manures.**
- **Huge investment in land development and heavy mechanisation.**
- **Rigid pest and disease control and eradication measures.**
- **Highly qualified and experienced technicians.**
- **Close co-ordination between farm and factory.**

Nowhere else in this country are sugar-cane farms so efficiently organised for high productivity as they are presently in the Factory Farms of Maharashtra. *Facts about cane yields mentioned in the Govt. Statistical Companion and White Paper are misleading as the factories' own farm yields have been mixed up with the cultivators' poor yields to prove lesser averages.*

For further particulars please write for our factual Booklet.

For the sake of agricultural productivity

NEARING ACHIEVEMENT

India's ambitious Durgapur Steelworks project is well on the way to completion. ISCON, the consortium of famous British engineering and electrical manufacturing companies, has been most successful and the end of the job is in sight.

Rolling mills, melting shop, blast furnaces, coke oven batteries and cooling towers have transformed the skyline. The birth of this new industry has already brought new employment to West Bengal. A steel city has been carved from paddy fields and jungle by people of two different nationalities and background, but working as a team with a single purpose. The result is a triumph for British industry and a better tomorrow for the people of India.

RAILWAYS' PERFORMANCE IN THE LAST DECADE

SPECTACULAR GROWTH IN SUBURBAN PASSENGER TRAFFIC

A SPECIAL brochure by the Railway Board, distributed along with the Railway Budget papers, assesses the performance of the Indian Railways in the decade since 1950-51. It examines the operating performance in the background of the prevailing economic conditions and attempts a correlation of expenditure to the relevant units of performance wherever feasible. In this article, it is proposed to refer only to the trends in goods traffic and earnings over the decade. The Ministry's examination indicates how the railways' goods traffic has been influenced by the trends in agricultural and industrial production. A fairly long table is appended in column 2 showing the details of the production and movement by rail of certain selected commodities which account for more than 60 per cent of the total originating traffic on the railways. It will be seen that the increase in production has been reflected in a corresponding increase in the volume of goods traffic handled. For instance, the index of industrial production (Base 1951=100) reached 122.4 in 1955-56 and 151.9 in 1959-60 while the index of ton-miles, with a corresponding base, reached 135.1 in the former year and 186.0 in the latter. The absolute figures, expressed in ton-miles, of the volume of goods traffic handled, are given below:

(In million ton-miles)

Commodity	1950-51	1955-56	1959-60
Revenue-earning traffic :			
Coal for the public and non-Government railways ..	6,891	7,902	12,025
Foodgrains	2,445	3,404	5,842
Oilseeds	567	591	636
Other commodities ..	13,096	18,947	23,726
Non-revenue traffic :			
Railways coal and materials.	3,964	5,590	7,920
Total ..	26,963	36,434	50,149

As far as 1959-60 is concerned, the pattern of rail movement in that year generally followed the same trend as in the previous years and the freight traffic, on the whole, kept pace with the increasing industrial and agricultural production. Whereas the bulk of the output of coal, cement, iron and steel, manganese ore, iron and other ores, paper, tea, and raw jute were transported by rail, the proportion of tonnage transported by rail under jute manufactures, raw cotton, cotton manufactures and sugar continued declining This declining trend indicated some shift in the pattern of distribution of the traffic under these commodities as between the different modes of transport. In spite of this decline, the railways were actually able to handle 144.2 million tons in terms of originating traffic in the year under reference.

The growth of passenger traffic during the last decade has been assessed in the brochure in terms of passengers originating and of passenger miles. The relevant figures are interesting for their break-up under 'suburban' and 'non-suburban' and 'upper' and 'third.' The figures in terms of passengers originating are given below:

(Figures in millions)

	1950-51	1955-56	1959-60
Suburban :			
Upper	14	20	27
Third	324	479	612
Non-suburban :			
Upper	28	15	16
Third	913	761	860
Total ..	1,279	1,275	1,515

It will be seen from the above figures that the number of suburban passengers has nearly doubled over the decade, whereas the number of non-suburban passengers has slightly declined. Industrialisation and consequent urbanisation have led to a tremendous growth in the population of cities. The result is seen in the spectacular growth of suburban passenger traffic. This growth has been even greater when expressed in terms of passenger-miles. The following figures bear this out:

(In million passenger-miles)

	1950-51	1955-56	1959-60
Suburban :			
Upper	116	217	265
Third	2,579	4,857	6,572
Non-suburban :			
Upper	2,400	1,848	2,093
Third	36,064	31,852	37,136
Total ..	41,159	38,774	46,066

The above figures show that suburban passenger traffic, in terms of passenger-miles, has more than doubled over the decade. Non-suburban passenger traffic, however, has remained more or less static. In other words, the increase in general population over the decade has not been reflected in a corresponding increase in the non-suburban (or rural) passenger traffic.

As far as 1959-60 is concerned, 6.5 per cent more passengers (both suburban and non-suburban) travelled on the Indian Railways as compared with the previous year; the rate of increase in terms of passenger-miles was even higher, namely, 9 per cent, thus indicating an increase in the average lead in passenger traffic. The available data for the year 1960-61 indicate a further increase of the order of 6 per cent over the corresponding level of 1959-60 in passenger traffic. The rate of increase in the suburban passenger traffic is much higher than in the non-suburban traffic. It is estimated that, in comparison with 1955-56, the increase in passenger traffic in the current year is of the order of 26 per cent. In other words, passenger traffic during the second Five-year Plan has increased roughly at the rate of 5 per cent per annum against the second Plan forecast of an annual increase of 3 per cent—the bulk of the increase having occurred during the two closing years.

A question that arises in this connection is whether, in view of the increasing suburban traffic, passenger fares could be increased to facilitate the running of more trains. It is seen that, as compared with 1950-51, traffic in terms of passenger-miles in 1959-60 has increased by 12 per cent, while passenger earnings (including the tax on fares) in the latter year has increased by 41 per cent. On the other hand, revenue-earning goods traffic, in terms of ton-miles has increased over the decade by 84 per cent and the goods earnings, too, have increased by about the same percentage, namely, 83. *Prima facie*, it would appear that the case for increasing freight rates (so as to have more internal resources for financing the third Railway Plan) is stronger, because, for all practical purposes, the increase in goods earnings has been due to the increase in the volume of goods traffic and not to the increase in freight rates (in terms of ton-miles) as such. This does not mean that there is no case for increasing passenger fares, both to discourage travel to some extent in the country as a whole and to secure larger earnings out of the inevitably increasing suburban traffic. When a comparison is instituted between 1955-56 and 1959-60, it will be seen that the case for an increase in passenger fares is stronger still, particularly because there has been no change in the basic passenger fare structure during this period except for the imposition of the passenger fare tax. Since comparatively more expenditure is incurred in running additional passenger trains for providing additional seats to ease overcrowding as far as possible, there is no reason why more earnings should not be secured from this source also.

The suburban passengers, in particular, may not grudge paying more on their ordinary or season tickets if the railways could render travelling speedier and less uncomfortable. The Railway Ministry's brochure claims that, in the areas served by the electric multiple unit suburban services, the train mileage in terms of single-unit trains has increased by 33.0 per cent as against an increase of 57 per cent in passenger mileage between 1955-56 and 1959-60. With the substantial increase in train mileage, it should have been possible to reduce overcrowding, if not eliminate it altogether. If this has not been possible, it must have been due to the persistent problem of peak-hour traffic. Surely, more efficient and quicker ways of handling the peak-hour traffic should suggest themselves to the railway authorities. If somehow this problem is solved so as to eliminate overcrowding and delays in suburban trains, the travelling public may cheerfully pay more fares.

Freight Rates

The case for a judicious increase in the freight rates applicable to a whole range of low-grade commodities may be justified on the ground that the railways now either make no profit by transporting them or barely avoid incurring a loss. From 1959-60, the railways have begun maintaining separate ton-miles statistics for 22 broad commodity heads which account for more than 75 per cent of the revenue-earning traffic, and it is now possible to have a broad idea of the financial effect of the low freight rates charged on industrial raw materials, foodgrains, etc. It is seen from the relevant statistics that the average earnings per ton-mile in the case of coal on both the broad and metre-gauges, namely 3.33 nP and 3.33 nP, fall short of the overall average cost of hauling a ton of goods (taking all commodities together) one mile (including interest), which in 1959-60 was 4.44 nP on the broad-gauge and 8.19 nP on the metre-gauge. On the metre gauge, the average earnings per ton-mile of the following commodities, besides coal, fall short of the overall average cost (8.19 nP) per ton-mile:

Supply and Movement
(In '000 tons)

Commodity	1950-51	1955-56	1959-60
Coal :			
Production	32,307	38,226	47,028

Wood, unwrought	7.58
Fruits and vegetables, fresh	7.21
Total revenue-earning traffic ..	7.25

It is admitted by the Railway Ministry that the comparison of the average receipt from each commodity group with the overall average cost is not strictly scientific, inasmuch as the mere overall average cost of moving a ton of goods one mile does not take into account the widely varying transportation characteristics of different commodities. Nevertheless, it is claimed that the overall cost per ton-mile does give broadly an index of evaluation of freight rates in relation to railways' costs.

The Railway Board's brochure is also notable for its treatment of operational efficiency which has registered some improvement in several directions, like engine usage, wagon usage and passenger train performance. For instance, engine-miles per engine-day in respect of passenger engines in use have increased from 155 in 1950-51 to 171 in 1959-60 on broad-gauge sections and from 131 to 133 on metre-gauge sections. Engine-miles per engine-day in respect of goods engines in use have increased from 93 in the former year to 100 in the latter on broad-gauge sections, but decreased from 92 to 86 on metre-gauge sections. Wagon-miles per wagon-

NEW PRODUCTS AND PROCESSES

Water Enamel

A WATER-THINNED gloss enamel, which embodies all the advantages of the popular flat and stain plastic paints and can be used both inside and outside has been developed by an Australian scientist, Mr. Louis Miranda.

The formula for a water-thinned gloss had been eluding world paint manufacturers for years. Now this outstanding development in paint technology has been achieved by the 34-year-old Sydney chemist. The new paint, marketed under the trade name Instant Aquanamel, does away completely with the need for turps, sealers, primers and undercoats. The invention has been acknowledged as a "world first" by paint authorities in Britain and the United States. The U.S. National Paint, Lacquer and Varnish Association and the Society of British Paint Manufacturers have written to Mr. Miranda saying he has been "the first to break through the water-gloss barrier." The tests have proved that Aquanamel is ideal for inside and outside use, is water and steam resistant, and that its gloss and colour properties are long lasting. Pigments in the new paint do not settle and there is not even any need to stir it, saving time and trouble. It spreads farther over porous surfaces than ordinary enamels and in weathering tests was less affected by exposure in comparison with other enamels. Brushes and accessories being used with Aquanamel wash out immediately in water. No sealers are required on masonry surfaces and it is extremely easy to apply. Aquanamel dries in less than half an hour. A well-ventilated room can be recoated immediately after applying the first coat. The paint is lead free and non-inflammable, and there is a complete absence of paint odour.

Wooden Ball Point Pens

A Dutch lead-pencil factory has produced a ball point pen chiefly made of wood, viz., straight-grained non-warping cedar. The penholder is hexagonal in shape like the firm's well-known lead pencils and grey in colour. This wooden holder has several lacquer coatings in a matt finish so that even in moist hands it does not slide or twist. It is not too thin for a man's hand nor too thick or heavy for a girl's hand, thus assuring everyone effortless writing. This ball point pen has no pressing mechanism and is therefore all the more reliable. The wooden holder encloses a copper ink reservoir filled with a sufficient supply of permanent ink for writing a length of about 4.200 m. When not in use the ball point is protected by an airtight plastic cap with a clip; the sealing device at the back is also provided with a plastic cap. Both plastic caps indicate the colour of the ink used, the pens being available for four different ink colours (black, red, blue or green). These ball point pens can also be supplied in an attractive plastic case containing all the four different colours. In this design the ball point pens are supplied without plastic caps.

Plate-bending Rolls

The latest Pinch-Pyramid type plate bending rolls with a pre-bending capacity of 8 ft. x 2 ins. and a rolling capacity of 8 ft. x 2½ ins. in mild steel plate have been announced by a U.K. engineering firm. The rolls are arranged in pyramid form, but instead of the top idle roll being provided with vertical adjustment, the two bottom driven rolls are adjustable and they can be moved vertically, either independently or simultaneously. The machine is powered by a 120 h.p. main drive motor and two 40 h.p. motors are provided for independent adjustment of two bottom rolls. All the motor controls are grouped together in a multi-control desk so that the operator has full control of the machine at his finger tips. For the removal of a completed cylinder, the balancing of the top roll and lowering of the swing down housing are simultaneously controlled by a 7½ h.p. motor operated from the control desk. With this Pinch-Pyramid design, plate cannot only be rolled but both long edges of the plate can be preformed prior to rolling without taking the plate out of the machine.

Thawing Frozen Rubber

A plant which thaws frozen bales of natural rubber in less than an hour—compared with up to five days thawing time by conventional methods—has been shipped to Russia from the U.K. It will be erected at Dnepropetrovsk, where Rustyfa Ltd., a consortium of British firms, whose consultants are Dunlop Advisory Services Ltd., is completely equipping one of the world's largest tyre factories. Rustyfa worked in collaboration with Radyne Ltd., a firm in southern England, for nearly two years to develop successfully a technique using radio frequencies to thaw frozen rubber. After the electronic end of the process had been developed, Baker-Perkins Ltd., an English firm, devised a conveying system in collaboration with Dunlop which passes the bales of frozen rubber under dielectric heaters. A similar thawing plant is at present under construction for another tyre factory in Rumania, which is also being built by Rustyfa.

Advanced Anti-Fouling

The "Toxion" anti-fouling and anti-corrosion system for ships is claimed to be a unique method of obtaining a smooth hull. The system is an ingenious association of poison, a flow of compressed air and normal external hull cathodic protection. There are two small diameter discharge tubes running fore and aft on each side of the vessel, one located two or three feet from the keel and one just above the bilge keel. These are connected through the hull to an installation which supplies a continuous flow of compressed air and poison, the latter being accurately metered into the air stream. The poison is discharged through orifices in the pipes on the hull and forms a micro-thin toxic film over the whole of the submersed area. Its adherence and distribution is aided by polarisation of the hull which is, of course, a normal characteristic of cathodic protection. Since fouling organisms will only settle on a vessel when her speed through the water is less than two knots, the poison need only be discharged when she is in port or at anchor.

Self-Lubricating Metal

Deva metal, now being manufactured in Britain and to be exhibited at the 1961 Engineering, Marine, Welding and Nuclear Energy Exhibition, is a homogeneous and non-porous solid, made by compacting natural or colloidal graphite powder with primary or alloyed metal powders. It is claimed to be the only metal which (due to its uniform composition) is permanently self-lubricating, irrespective of wear, over a wide range of temperatures. It owes this quality to the graphite film that forms on the contacting metal surface under friction, allowing it to withstand higher temperatures and pressure/velocity factors than porous bearing materials impregnated with grease or oil. Deva metal is especially suitable for use on bearings where operating conditions might lead to the breakdown and dispersal of conventional lubricants or where the presence of oil or grease might result in contamination of the product being handled. Various grades of bronze, brass and iron are used as the metallic constituent, to cover operating temperatures between —330°F (—201°C), and 1100°F (592°C).

Benzyl Chloride

Benzyl chloride is an important intermediate for a variety of chemicals, such as phenylacetic acid, amphetamine, benzyl alcohol, cyanide pethidine, benzyl acetate, benzyl benzoate, etc. These chemicals find extensive applications as pharmaceuticals, perfumery materials, textile chemicals and dyes and intermediates. Benzyl chloride is usually obtained by the chlorination of toluene in presence of actinic light, the reaction being carried out to the extent of 30-60 per cent only. The unreacted toluene and benzyl chloride are then isolated by distillation of the crude mixture. It has been generally observed that this method of isolation and redistillation of benzyl chloride leads to decomposition and/or polymerisation, thus affecting the yields of the product. An improved process, developed at Regional Research Laboratory, Hyderabad, eliminates the drawbacks of decomposition and polymerisation. As a result, higher yields of more pure benzyl chloride are obtained, yields up to 90 per cent. of the theoretical have been recorded.

The process has been studied on pilot plant having a production capacity of 15 kg. of benzyl chloride per batch and technical and economic data for the designing of a commercial unit has been collected. The raw materials, toluene and chlorine, are available indigenously. A small quantity of benzyl chloride and commercial hydrochloric acid equal in quantity to benzyl chloride are obtained as by-products.

Total capital outlay for a plant having a capacity of 600 kg. per day is estimated at about Rs. 5.25 lakhs. Most of the equipment is of glass-lined steel. The plant can be located at any place where raw materials and other facilities are easily available. Manufacture can be taken up with advantage by an organisation engaged in the production of organic and perfumery chemicals.

New Device for Handling Premium Notice

An electronic reading machine, which facilitates speedy handling of premium notice of and business letters, has been developed in the U.S. The machine instantly translates what it reads into business language and punches the information on tape. Modified and coupled with a special computer, it would translate foreign language copy into English at the rate of 2½ lines a second. The machine, in commercial production by the Farrington Manufacturing Company of Needham, Massachusetts, U.S.A. was described as the "world's first commercial page reader" at a recent demonstration in Washington. Numerous data processors "read" numerals such as appear on credit cards and bank cheques, but none heretofore read the written word. The Farrington Numero-Alphabet Optical Scanner, as it is called, reads and digests entire pages of copy.

Six large insurance firms have ordered the machine, priced at $123,000 each, to read premium-due notices returned by policyholders with payments. The machine is capable of handling 1.5 million notices in eight days, a task that now takes batteries of clerks and accountants months to perform. An improved model with a capability of 340 characters—letters of the alphabet, numbers and punctuation marks—per second is being built, a company spokesman said. It will record output on magnetic tape rather than on paper tape. The machine, incorporating principles of a television scanning tube, was developed by David H. Shepard, who invented the first workable optical scanner ten years ago.

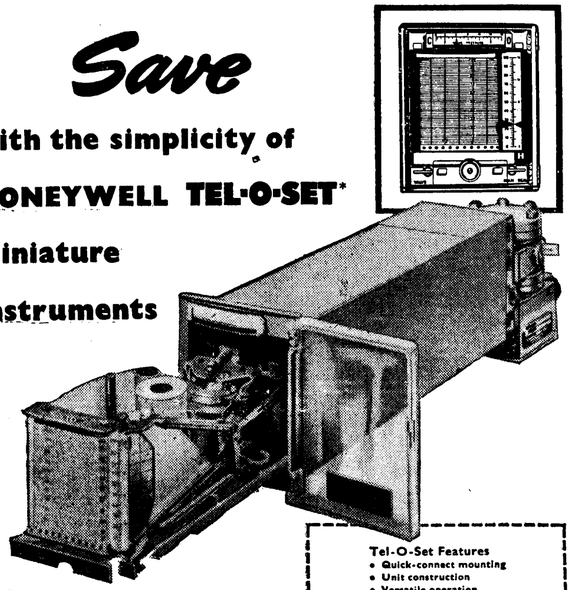
with the simplicity of

HONEYWELL TEL-O-SET*

Miniature

Instruments



Tel-O-Set Features
- Quick-connect mounting
- Unit construction
- Versatile operation
- Wide range of reset rates
- Low air consumption
- High precision
- Exceptional compactness
- Chart re-roll

NEW and improved *Tel-O-Set* miniature pneumatic instruments are low in cost, easily installed, compact and require minimum maintenance. They can handle a broad range of temperature, pressure, flow and liquid level applications...

With all their simplicity, these instruments are highly sensitive and respond instantly to change. They operate on a pneumatic-balance principle which eliminates lost motion and friction.

Honeywell *Tel-O-Set* indicators, recorders and controllers are today's most advanced miniature instruments.

SPENCER AND COMPANY LIMITED

SPEECH OF THE CHAIRMAN, MR. Z. R. IRANI

ADDRESSING the shareholders of Spencer and Company, Ltd., at their Sixty-third Annual General Meeting, which was held on 17th February 1961, at the registered office of the Company, 153, Mount Road, Madras-2, Mr. Z. R. Irani, Chairman of the Company, said:

"GENTLEMEN,

"I take great pleasure at your attendance at this the sixty-third annual general meeting of the Company, as, apart from having the benefit of any advice or suggestions you have to make, it permits me to give you an idea of what developments have taken place, what difficulties we have encountered and what our position is likely to be at the close of the current financial year.

"The accounts, you will observe, have been presented in a more compact form, giving only salient figures with details incorporated in attached schedules. The year shows a slight increase in turnover with a corresponding small increase in net profit and this also, after writing off completely the Karan Mehta transaction, which is now considered impossible of recovery, and, providing for the initial loss in and about the setting up of an up-to-date canning factory at Kanpur to both of which items your attention has already been drawn in the Directors' report. You will also observe that there has been a heavier depreciation provision and, furthermore, a fairly large increase in the development rebate reserve. Allowing for all these, you will see that the results of actual trading have been distinctly better than in the previous year and I am sanguine that this fact will manifest itself in the current year's accounts.

Different Activities

"For comparative purposes, I again give you the percentage contribution of each of our activities towards our trading profits, namely, wholesale and retail trade 23 per cent, drugs and pharmaceuticals 26 per cent, hotels and catering 16 per cent, house furnishing 9 per cent, aerated waters 4 per cent, cigars 2 per cent, tea 7 per cent, refrigeration and airconditioning 12 per cent and sundries 1 per cent.

"I will make a small reference to the preference dividends. Arising from the Finance Act 1959, we continued to pay dividends to preference shareholders in what we considered a fair manner, though, of course, there are varied opinions on the matter. The Preference Shares (Regulation of Dividends) Act 1960 has established the basis of computation and all preference dividends are now being paid in accordance therewith. Some preference shareholders have objected to a reduction in their dividend return, but they must remember that the greater burden, under the Finance Act, falls on the ordinary shareholder.

"Later this month, we shall know what are the budget proposals for starting the third Five-year Plan. Taxation in every conceivable form and to the greatest extent possible will be necessary as one of the forms of finance. I do not think corporate taxation will be increased, but individual taxation very possibly will be, though I am against using the taxing power to weaken the private economy. Various new forms of indirect taxation will undoubtedly be introduced, but political considerations will restrict these to items which will not unduly affect the lower-income groups and we, as distributors of commodities more in demand with groups other than the lower-income ones, will be up against a certain amount of consumer resistance. I daresay, conditions will rectify themselves as the population begins adapting itself, but we must expect some shortfall in business.

Liquor and Grocery

"The foundation and prosperity of the Company were built up, and I need not hesitate in saying it, on liquor and the grocery trade. As from the last licensing half-year, the import quota of liquor was halved to 5 per cent and I am glad to say that sales of the indigenous products of Dyer Meakin Breweries have been developed to fill the gap to a great extent. Your Board has long felt the need for canned fruits and vegetables, etc., and, with this purpose in view, set about the installation of a factory in our Kanpur premises, then lying idle. The manufacture of canned goods is not a simple undertaking as will be manifest from the number of concerns that have started this line of business and later folded up. Two prerequisites are necessary, namely, quality products and an assured distribution medium. We had the latter; therefore, it was a case of setting about the former and we have succeeded in this, as it will be evinced in the considerable consumer demand now being created. We have, therefore, laid a solid foundation, and I am glad to say that production is up to schedule.

"The amendment of Section 372 of the Companies Act hits, to some extent, the Board's policy of promotion of consumer goods industries which, though still requiring foreign collaboration by way of finance and technique, do not involve the large capital that heavy industries do. To collaborate with foreign investment, it would be ridiculous for your Board to refuse to participate because of the limitation imposed by Section 372. Admitted it is within Government's purview to waive that limitation, but I ask which should come first, the negotiations or the application for the waiver—the chicken or the egg! It is good for your Company to associate itself with new industries where the benefit of a sole distributorship is also part of the deal. Experience has taught us that a close and amicable association between principal and distributor is of the utmost importance.

Discipline in Industry

"I must now touch on a matter which is so simple and which I expect has been stated before by others, but which apparently has neither received correct appreciation by Governmental circles or workers' unions. It is this. A worker is employed supposedly to do a job which either he or his predecessor did a decade ago. He receives a wage, commensurate with current living costs, but his output of work bears no comparison to his or his predecessor's output of work a decade ago and why so? Because current labour laws have invested him with rights without demanding from him the obligations arising out of his employment. I support the phrase dignity of labour, but say what one may, such a state of affairs has led to disloyalty and indiscipline and employment becomes time-serving with the employer at the wrong end of the stick. Admitted the law provides for dismissal, but the reasons for such a step by an employer must be grave indeed so that, so long as an employee keeps within certain bounds, he need not worry about the interests of the employer. I am speaking in general terms, because there are quite a number of employees with abounding self-respect who feel that their good lies in doing good to their employer. That is the type one would like to cultivate and to see advance. Indiscipline in industry is only a step from indiscipline in other walks of life, so some curbs in the right direction must be imposed by Government for the good of the nation.

"Finally, we have passed through a hard year and I am glad to say that estimates of the current year's trading are quite heartening. Our thanks are due to all our staff who have combined so energetically to put in much good work."

The balance-sheet as at 30th June 1960 was approved and adopted. A further and final dividen of 12 per cent less tax on the ordinary shares as recommended by the Directors was declared, making in all a total dividend of 18 per cent less tax for the year.

Note: *This does not purport to be a record of the proceedings of the annual general meeting which will be sent separately to shareholders.*

REPORT OF THE AUDITORS TO THE STATE BANK OF INDIA

We have examined the foregoing Balance Sheet of the State Bank of Indore as at 31st December, 1960, and also the foregoing Profit and Loss Account of the Bank for the year ended on that date with the Accounts and Vouchers relating thereto of Head Office and with the unaudited Returns submitted and certified by the Branch Managers, which Returns have been incorporated in the above Balance Sheet and Accounts.

We report that—

(i) In our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and is properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) Where we have called for any explanation or information such explanation and information have been given to us and have been found satisfactory;

(iii) The transactions of the Bank which have come to our notice have been within the competence of the Bank;

(iv) The Returns received from the Branches of the Bank have been found adequate for the purpose of our audit;

(v) The Profit and Loss Account shows a true balance of profit for the year covered by such Account.

INDORE, *1st February*, 1961.

INDUSTRIAL CREDIT & INVESTMENT CORP. OF INDIA LTD.

MR. G. L. MEHTA'S STATEMENT TO SHAREHOLDERS

WORKING RESULTS FOR 1960 BETTER

THE Annual General Meeting of the shareholders of the Industrial Credit and Investment Corporation of India Limited is due to be held at Bombay on 23rd March 1961. A statement by the Chairman, Mr. G. L. Mehta, has just been circulated to the shareholders of the Corporation along with the Directors' report and statement of accounts for the year ended 31st December 1960. This statement, published below, highlights, among other things, the present broadening of the investment market by the expansion of the functions of finance institutions. The I.C.I.C.I.'s own contribution to the growth of a capital market in India has been very substantial, albeit in a qualitative rather than a quantitative sense. Even in a quantitative sense, its contribution, which in 1960 alone amounted to Rs. 13.4 crores (Rs. 5.8 crores by way of rupee assistance and Rs. 7.6 crores by way of foreign exchange assistance) covering 44 companies, has by no means been small. Fuller details regarding the Corporation's operations and working results are to be found in the following statement:

"I have great pleasure in welcoming the shareholders to the new premises of the Corporation, to which the Corporation's registered office was transferred in May, 1960, and in placing before them the sixth annual report of the Board of Directors of the Corporation for the year ended 31st December, 1960.

"In many ways, 1960 marked an important stage in the planned development of India. After the foreign exchange difficulties in 1957 and 1958, the country was able to consolidate its position in this sphere, thanks partly to the aid of friendly countries. Industrial production increased by about 15 per cent over the level reached in 1959 —the result of completion of earlier efforts. Available reports indicate a favourable situation as regards agricultural production. Credit which appeared plentiful at the beginning of 1960, however, became subsequently scarce. Inflationary pressures in the economy have been largely contained. The situation has improved sufficiently to embolden Government to plan on a larger scale for the third Plan period, an effort underpinned by the successful negotiation of a large and long-term agreement for the import of foodgrains and other agricultural commodities from the U.S.A.

Trends in Industrial Finance

"Of more immediate interest to this Corporation were developments in the field of industrial finance. The upsurge in investment to whose beginning I had referred in the last year's statement, assumed much larger proportions during 1960. This upsurge was reflected in the capital market both in the number of new issues floated on the market and in the heavy oversubscription of these issues of capital and the premiums quoted on new shares. A gratifying aspect of this trend was the widening of interest in industrial shares, as evidenced by the large number of applications made for the issues. I would also refer to the fact that the interest apparently was confined to variable dividend securities rather than to fixed interest bearing securities. Considerations of growth appear to have outweighed considerations of yield.

"This phenomenon has, however, to be interpreted with some qualifications. It is likely that a part of the demand for the new issues was based on short-term considerations of quick capital appreciation, as frequently happens in a rising market. Moreover, with investors failing to secure required shares in one issue, it was often the same applicant and perhaps the same money chasing successive issues. Besides, as oversubscription became a common phenomenon, people may have tended to apply, even with borrowed funds, for larger amounts than their investment requirements, in order to ensure at least a part allocation on their application.

"But even after allowing for stagging of new issues, double-counting of many applications and inflation of demand, it is possible to infer that there was a substantial increase in genuine investment demand for industrial securities. The upsurge has proved to be transient as the results of more recent issues indicate; nevertheless, the shift in investment habit, once acquired, is likely to have an enduring impact, although the intensity of its manifestation is bound to vary with market psychology and the general climate.

"There are one or two aspects of this phenomenon which are of importance from the viewpoint of sound industrial development. There seems to be a strong demand for equity participation in industrial enterprises, more so where there is foreign collaboration. In this connection, I should like to welcome the recommendation of the Committee appointed by Government to invite, as an experiment, minority public participation in a few selected public sector companies. The success of this experiment, however, will depend upon the choice of issues, their timing and the care bestowed on details as well as adequate preparation for ensuring satisfactory public response. Unduly high expectations about public subscription to such issues should not be entertained in the initial stages; the benefits of this policy will be realised over a period of years.

Debt Financing

"In the private sector also, it is necessary that the present opportunity be used to improve the bearing of share capital. There are various factors which appear to favour an increasing resort to debt-financing in private industry. A smaller equity base considerably improves the profitability of a company. Very often, the amount of equity capital fixed is based not on the requirements of the project but on the financial resources of the entrepreneur, with the result that where an entrepreneur takes up a very large project and tries to retain controlling interest, he keeps the equity low and seeks to obtain the balance of the cost of the project by means of borrowing. Most finance institutions also cater to supplying loan capital rather than providing assistance in the form of underwriting of or subscribing to share capital. Finally, foreign exchange, because of its shortage, is available mostly by way of loan capital (except to the extent financial participation is forthcoming from foreign collaborators) instead of being purchased with rupees raised on the capital market, as was previously the case.

"I cannot help feeling, however, that excessive reliance on loan obligations in the capital structure, particularly of new companies, has its risks which entrepreneurs are, in their optimism, prone to overlook. Such borrowings lead to an accumulation of interest charges in the early non-productive (construction) years of a new enterprise, which can be avoided by raising equity. Moreover, while in prosperous times it may be apparently easy to service debt obligations, when the winds of competition blow, such enterprises would be hard put to meet their growing commitments. Further, the existence of debt obligations may reduce the capacity of a company to borrow in difficult times when borrowing alone may be possible and becomes unavoidable.

"It would, therefore, be prudent for private industry to raise the required resources by way of share capital when circumstances permit. Times like the present should be used to strengthen the capital structure rather than to seek capital appreciation by keeping equity low. Financial institutions should have the necessary flexibility for providing assistance in this direction.

"I am aware of the fact that there are different views on this subject. Undoubtedly, the capital structure appropriate for a company depends upon several factors such as the nature of its business, the magnitude of its requirements, the stability of its operations over a period of time, and the climate of the capital market. What I have tried to indicate are some of the considerations relevant to sound finance which should not be overlooked when we desire not merely rapid but also healthy industrial development.

Widening of the Financial Market

"The investment market is being broadened by the expansion of the functions of finance institutions. Many commercial banks have started giving medium-term loans; the existence of the Refinance Corporation should further strengthen this development. Commercial banks have also entered the underwriting field. As regards finance for small industries, the benefit of the guarantee scheme operated by the Reserve Bank of India, available to commercial banks, has been extended to State Finance Corporations.

"The widening of the financial market is also indicated by the growing practice of giving guarantees. Guarantees are now being given by one set of financial institutions to another: as, for example, by commercial banks on behalf of Indian borrowers to foreign financing agencies like the Export-Import Bank and the Development Loan Fund as well as to Indian financing agencies; or by finance institutions on behalf of Indian purchasers to foreign suppliers of machinery as by the Industrial Finance Corporation for deferred payments.

"I.C.I.C.I.'s contribution to these developments has to be judged in relation to its resources: it is, therefore, more qualitative than quantitative. I.C.I.C.I. has always kept in view a broader objective, namely, to help foster the growth of a capital market in India. To this end, it has consistently tried to keep in touch with other finance institutions, to exchange information on matters of common interest and to take up joint underwriting and other financing operations. We have done joint financing also in respect of foreign exchange loans thereby augmenting the foreign exchange resources available to the country. We have done so in cases where we could have met all the requirements ourselves and although it was not necessary to invite other institutions to participate. We consider such operations to be also in the interest of I.C.I.C.I. in so far as they help to reduce risk by spreading it.

I.C.I.C.I.'s Operations

"I.C.I.C.I.'s own operations during 1960 reflect some of the trends noted earlier. I.C.I.C.I. benefited from the upsurge in investment activity in the country, as shown by the total volume of assistance, Rs. 13.43 crores, sanctioned by it. A large proportion of this assistance was in the form of foreign exchange loans since, with the acute scarcity of foreign exchange, I.C.I.C.I. became an important source of foreign exchange for industry. At the same time, as a result of its policy of limiting its stake in any one unit (which, in view of foreign exchange shortage, often took the form of foreign exchange loans) and because of the buoyancy of the share market (which reduced the need for underwriting and encouraged other finance institutions to take up such business as became available), I.C.I.C.I.'s own rupee operations, although higher than during 1959, tended to grow less rapidly. With indications of hardening money conditions and a slackening of demand for shares, I.C.I.C.I.'s rupee operations during 1961 may well rise further.

Assistance Sanctioned

"The amount of gross assistance sanctioned by I.C.I.C.I. during 1960, as already mentioned, was Rs. 13.43 crores to 44 companies, consisting of rupee assistance of Rs. 5.81 crores and foreign exchange assistance of Rs. 7.62 crores. Of this, an amount of Rs. 11.21 crores was sanctioned to 39 companies for new projects. A finance institution is a catalyst in the sense that it helps bring into being investment much larger than the amount of its own assistance. For example, the total amount of investment in the new projects of the 39 companies assisted by I.C.I.C.I. in 1960 would be Rs. 55.22 crores (of which Rs. 43.69 crores would be for fixed assets)—almost five times the figure of I.C.I.C.I. assistance. The foreign exchange component of the fixed investment of Rs. 43.69 crores was Rs. 17.84 crores, of which I.C.I.C.I. provided about 40 per cent; the balance of the foreign exchange requirements was met from Government releases of foreign exchange to the companies concerned, participation by foreign collaborators and deferred payment terms given by suppliers. The turnover of these projects when completed is estimated to amount to about Rs. 39 crores.

"The companies financed this total fixed investment of Rs. 43.69 crores by raising ordinary share capital of Rs. 18.75 crores, preference share capital of Rs. 2.15 crores and long-term loans of Rs. 21.22 crores; working capital requirements of Rs. 11.53 crores were more than fully covered by bank credit and internal cash accruals of Rs. 13.10 crores. I would like to add that the larger reliance on long-term loans in these cases was partly due to the fact that a substantial part of the requirements was in foreign exchange which, except in the case of cash licences or foreign participation, can be obtained only by way of loans; besides, old companies can more safely go in for preference shares or loan commitments than new companies.

New Loans to I.C.I.C.I.

"With the increasing tempo of I.C.I.C.I.'s operations, it was found necessary to augment our resources, particularly of foreign exchange. The second loan from the World Bank was fully committed during 1960, much earlier than originally anticipated. I am glad to report that during the last year I.C.I.C.I. obtained a further foreign exchange loan of U.S. $20 million from the World Bank. This is the third and the largest foreign exchange loan obtained by I.C.I.C.I., the first two being of U.S. $10 million each. We are grateful to the World Bank for its increasing confidence in this Corporation. I would take this opportunity to thank the distinguished President and the staff of the World Bank for their understanding and co-operation. We are also obliged to the Government of India for its helpful attitude, and particularly for its guarantee to the World Bank in regard to the third loan.

"I.C.I.C.I. has also successfully negotiated during the year a loan of $5 million from the Development Loan Fund of the United States Government. Some formalities remain to be completed in regard to this loan, and it is hoped the agreement would be signed at an early date. I take this opportunity to thank the officials of the Development Loan Fund for this loan and for the interest they have evinced in the activities of this Corporation.

Working Results

"Reflecting the rising tempo of operations, the Corporation's profits before tax increased from Rs. 50.66 lakhs in 1959 to Rs. 62.60 lakhs in 1960. After providing for tax (Rs. 26.94 lakhs), the balance carried to revenue appropriation account is Rs. 35.66 lakhs in 1960 against Rs. 28.23 lakhs in 1959. As required by clause 163 of the Corporation's Articles of Association, we have set aside Rs. 9 lakhs out of this to the general reserve; we have also transferred the entire amount of realised profit on investment, being a sum of Rs. 24.87 lakhs (net), to capital reserve.

"The Directors recommend a dividend at the rate of 5.75 per cent. After deduction of tax at source, this leaves in the hands of shareholders an amount slightly above 4 per cent. Thus we have been able to restore to the shareholders the cut in dividend necessitated by the change in the system of company taxation. We have represented to the Government that the present tax system bears heavily on finance institutions of which there are about twenty at present, which do not benefit from the various tax incentives like development rebate and tax holiday made available to manufacturing concerns. It would therefore be equitable to extend to these institutions tax concessions as has been done in some countries. In view of the need to encourage the saving and investment habit in the country and in recognition of the catalytic impact of finance institutions on industrial development, I trust the Government will see its way to extending these reliefs to finance institutions.

General

"I should finally like to refer to two matters of general interest to investors, in which I.C.I.C.I. played an important role. A legislative measure of considerable importance to the investor—the Preference Shares (Regulation of Dividends) Act 1960—was enacted during the year under review. While the Bill was under discussion, your Corporation, as a matter of public service, jointly with other institutions, made representations to the Finance Minister as also to the Select Committee. The Government has seen its way to grant some relief to shareholders as a result of these efforts.

"I had referred last year to the proposal to form an investment centre. I am glad to report that the Indian Investment Centre has now been set up in New Delhi. I.C.I.C.I. has played a prominent part in its establishment. The Government has chosen five members of the Governing Body of the Centre from among the Directors of I.C.I.C.I.; I have the honour to be the first Chairman of this body. I have every hope that, as a result of the Centre's activities, the flow of foreign investment to India will increase.

"The staff have carried out their duties loyally and efficiently. I take this opportunity to thank them for their valuable services."

UNDER SECRETARY TO THE GOVT. 27 FEB PUBLIC DEPARTMENT

PLEASE

MAKE YOUR TRUCK TYRES LAST LONGER !

The present maximum output of the Tyre Industry in India is not enough to ensure sufficient truck and bus tyres for the country's needs.

It is not a matter of distribution. Adequate steps have been taken by Tyre Dealers to arrange that such supplies as are available are strictly allocated at our recommended retail prices to those who need them most.

New tyre factories are in the course of construction, and existing units have expansion programs, but it will be some time before supply catches up with demand.

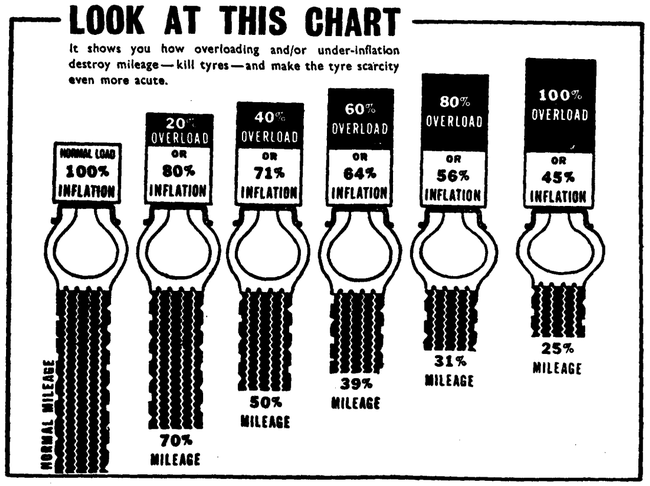
In the meantime, what-?

We believe that this scarcity — which is a source of continuous anxiety to all of us — can be eased to some degree by every truck tyre user taking all possible steps to get the MAXIMUM SERVICE from the tyres he already has. There are many ways that MILEAGE — and, therefore, LIFE of the tyres can be INCREASED. Here is ONE WAY.

MAINTAIN CORRECT INFLATION PRESSURES AND DON'T OVERLOAD YOUR TYRES

LOOK AT THIS CHART

It shows you how overloading and/or under-inflation destroy mileage — kill tyres — and make the tyre scarcity even more acute.



WATCH OUT FOR MORE TYRE SAVING INFORMATION FROM

Firestone

MISCONCEPTIONS ABOUT GENERAL INSURANCE

NATIONALISATION WILL ACHIEVE NOTHING

By "Insurer"

THE demand for nationalisation of general insurance has been made from time to time. The move has come from two different directions. One is, as is only to be expected, from the Labour Unions of general insurance companies and the other is from certain leftist members of Parliament, in the form of a motion both in the Lower and Upper Houses. The Government, however, has been categorical in this matter and the Finance Minister and his Deputies have emphasised that they do not feel that any further move in this direction will be of any advantage to the Government.

The move from Labour Unions arises from the fact that, recently, a number of insurance companies has closed down and quite a few Indian companies are not making any profit, resulting in considerable insecurity of service with most of the smaller units, whether Indian or foreign. The conditions of service are not properly formulated, nor is there any staff relations worth mentioning. The prospects both for the companies and their staff cannot be very rosy at the present rate of growth. This is a situation which offers excellent opportunity for a communist union to raise a hue and cry. All increase in business seems to be going only to the bigger companies.

Mr. Deshmukh's Remark

When Mr. C. D. Deshmukh announced nationalisation of life insurance, he had made it clear that, in view of the intricate association of general insurance with commerce and industry, he regarded the general insurance sector as an essential part of the private sector. The main reason for keeping general insurance out, however, was that general insurance does not accumulate huge funds even over a period of many years on account of its annual policy contracts. Again, the rate of profit and the scope for playing about with reserve funds were extremely limited. The extent of competition in general insurance was high enough to keep any unusual profit down to the minimum. It was expected, therefore, that any further encroachment of Government control might be more as a matter of an election stunt than a matter of design and policy. Since then the Mundhra affair has drawn attention to the possible mismanagement and risks on a big scale in a nationalised unit such as the Life Insurance Corporation.

In the recent debate various points were made by the Opposition spokesmen. It was mentioned, for instance, that general insurance business commands enormous resources and makes huge profits; that the foreign insurance companies were writing a substantial part of the business in India and insurers, being directly or indirectly linked up with foreign shipping interests, would work against indigenous shipping interests. It was also mentioned that amalgamations of insurance units would be to the detriment of the industry, in general, and of the employees in insurance, in particular.

The resources of general insurers have always been exaggerated, as most of the resources are earmarked for outstanding liabilities, unexpired risks and funds for catastrophic hazards. Actually, the financial position of most of the Indian insurance companies is very slender and the Government should do something to force them to accumulate resources not only to safeguard against mistakes in underwriting but also to be able to declare steady dividends as is customary with most banks of good standing. It would also be advisable to collect, in the form of a percentage of the premiums, reserve deposits which might be kept with the Reserve Bank of India for the greater protection of clients and staff of the insurance companies. This will help to do away with the paper reserves which appear on the balance-sheets of many companies but which have no real value. Incidentally, it will also mean that the non-Indian companies will be keeping a larger surplus funds in India.

Profits

As for profits, in 1957, the Indian insurance industry made a profit of Rs. 1.03 crores which gives a yield of about 6 per cent. on the paid-up capital of Rs. 9.3 crores. The foreign insurance companies in India are doing only about one-third of the total business in India. As against this, the Indian insurance companies are doing good business outside India and it is expected that, ultimately, they will do more business abroad than foreign companies do in India and thus help bring about invisible exports of a substantial volume. Any action taken against foreign interests in India is bound to have serious repercussions on Indian business abroad. It is well-known that the Life Insurance Corporation had to close its business in quite a few of the neighbouring countries after nationalisation.

There is probably some truth in the charge of mismanagement of some companies. But the only solution for this is an enquiry by Government auditors, as was recently done in two cases, and appointment of Government directors, if necessary. If the voluntary code of conduct accepted by the insurance companies is not very successful, the only reasonable solution that will not upset the internal management would appear to be to strengthen the investigating machinery of the General Insurance Council on which the insurance interests are duly represented along with the Government nominees.

The Government has already brought in considerable pressure for development of a re-insurance market in India. The establishment of the India Reinsurance Corporation and the Indian Guarantee and General Insurance Company, Ltd., as professional reinsurers, is designed to prevent the drain of foreign exchange by way of reinsurance abroad. It, however, takes years of hard work to develop a sound and sizeable reinsurance market and nothing very much can be achieved overnight. The politicians must, therefore, exercise a little patience and should not jump to unsound conclusions.

Some of the State Governments have already made a small beginning in insurance business by way of control of insurances which are statutory necessities such as third-party liability under motor car insurance. The efficiency and speed with which the various Government departments work in this direction needs to be watched, as any failure on their part will make the solution much worse than the problem.

Now that the Government is actively in the market competing with the private insurance companies in the form of subsidiaries of the Life Insurance Corporation doing general insurance business, it is necessary for the Government to show that its policies can be put into practice. There are legal restrictions in this country on the expenses and commission payments of insurance companies and the Government companies should now set an example to show that the Government's preachings and policies can be duly executed without resort to any of the malpractices in the market.

L.I.C. BUSINESS IN 1960

In a written reply to a question by Mr. Anirudh Sinha, the Minister of Finance, Mr. Morarji Desai said that the total amount of business completed by the Life Insurance Corporation of India during the calendar year 1960 was Rs. 411.42 crores. The zone-wise figures were:

(Rs. in crores)

Northern zone 62.40; Central zone 57.27; Eastern zone 86.86; Southern zone 107.41; and Western zone 97.48.

The total amount of business completed in foreign countries during 1960 amounted to Rs. 7.96 crores.

Mr. Desai added that these figures were provisional. The final figures of completed business during 1960 will be available only by the end of February 1961.

REPORT OF THE AUDITORS

TO THE STATE BANK OF INDIA:

We, the undersigned Auditors of the State Bank of Bikaner, appointed under Section 41 (1) of the State Bank of India (Subsidiary Banks) Act, 1959, do hereby report to State Bank of India upon the Balance Sheet and Accounts of the Bank as at 31st December, 1960.

We have examined the above Balance Sheet of the State Bank of Bikaner as at 31st December, 1960, and the Profit and Loss Account for the year ended upon that date with the Accounts relating thereto of Head Office and with the Branch Returns duly certified by the Managers, which have been incorporated in the above Balance Sheet and Profit and Loss Account, and report:

(i) that, in our opinion the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(ii) that, where we have called for any explanation or information such explanation and information have been given to our satisfaction;

(iii) that, the transactions of the Bank which have come to our notice have been within the competence of the Bank;

(iv) that, the Returns received from the Branches of the Bank have been found adequate for the purpose of our audit; and

(v) that, the Profit and Loss Account shows a true balance of Profit for the year covered by such Account.

M. L. SHARMA & CO.,
Chartered Accountants.

NEW DELHI, 29th *January*, 1961.

GOVERNMENT CORPORATE SECTOR

ITS GROWTH, PLACE AND REGULATION UNDER COMPANIES ACT

By Dr. Raj K. Nigam

FOR the first time in the history of the corporate enterprise in India, the Companies Act, 1956, created a new legal class of Government companies. No doubt, prior to the coming into force of this Act along with other categories of public enterprises, namely, statutory corporations, departmental undertakings, control boards, commissions, statutory authorities, State Banks, etc., which were entirely State-owned bodies set up to serve certain specific 'public' purposes, there were also some joint-stock companies incorporated and registered under the provisions of the Indian Companies Act, 1913, in which the Central and State Governments, separately or together, held a substantial block of share capital, by virtue of which the Governments concerned acquired administrative control over them. These companies, however, were not statutorily labelled as Government companies within the meaning of the provisions of Company law and were regulated under the law just like other companies formed by private *entrepreneurs* and registered under the Companies Act. Among other requirements of the Act, these companies were required to maintain the various books of accounts, prepare the annual accounts, arrange their audit, etc., in the same way as was required of other public or private joint-stock companies. Even now, the basic obligations cast upon the companies and their managements under the present Companies Act are equally applicable to both joint-stock companies set up in the private sector by private *entrepreneurs* and to companies which, under the provisions of Section 617 of the Companies Act, are now called as Government companies. But the provisions of Sections 618 to 620 and Section 639 of the present Act have cast certain additional obligations on the latter class of companies. Generally speaking, these additional obligations, as we shall see later, have been cast principally in recognition of the fact that the investments made out of public exchequers should stand the tests of public accountability squarely and fully. As to how this fundamental objective is secured in law and in practice is discussed briefly in this note.

Present Position

But, before we discuss the legal obligations cast on the Government companies, it would be worthwhile to reflect, in passing, on the growth of the Government corporate sector particularly during the last five years. The total number of joint stock companies in which the Central and State Governments, separately or together, owned shares to the extent of 51 per cent or more of their subscribed capital and which, as a result, became Government companies, was 61 on 1st April 1956 when the present Companies Act came into force. These 61 Government companies then accounted for a total paid-up capital of Rs. 66 crores. In comparison with the number of joint-stock companies in the private sector (29,813 as on 1st April 1956), the number of Government companies was, indeed, infinitesimally small. In terms of paid-up capital, their relative position was slightly better. The paid-up capital of the joint-stock companies under the private sector added up to Rs. 958 crores, while that of the Government companies came to Rs. 66 crores. At the end of 1959-60, the number of Government companies was doubled and their paid-up capital swelled up to nearly seven times the aggregate amount of paid-up capital of Government companies in existence on 1st April 1956. The absolute number of Government companies at the end of 1959-60 was 125 and their paid-up capital totalled approximately Rs. 477 crores, while the overall number of joint-stock companies at work was 26,921 having a total paid-up capital of Rs. 1,593 crores. Thus, in 1959-60, in terms of paid-up capital, the Government corporate sector accounted for about one-third of the total corporate sector. It is, however, important to mention here that, of the total paid-up capital of Rs. 477 crores belonging to the Government corporate sector, Rs. 300 crores related to one single Government company, namely, the Hindustan Steel Limited, which was originally set up in 1954, with an initial authorised capital of Rs. 100 crores, later on stepped up to Rs. 300 crores. The oldest company in the Government corporate sector is reported to have its date of registration as early as in 1913-14, and the latest entrants in this sector were the 23 Government companies formed during the year 1959-60.

Of the 125 Government companies at work at the end of 1959-60, 35 companies exclusively belonged to the Central Government and five jointly to the Central and State Governments, with their administration vested in the Central Government. The share capital of four Central Government companies was jointly owned by the Central Government and the public, whereas that of six companies was jointly owned by the Central Government, with certain State Governments and the public. The total number of Government companies exclusively and jointly owned by the Central Government with State Governments and private interests was 50; the remaining 75 companies exclusively belonged to the State Governments. In the ten Central Government companies which are reported to be having investments from private interests, the latter's participations in the subscribed capital of the companies varied between 2 per cent and 20 per cent. It may, however, be mentioned that some of these Central Government undertakings in which there is private participation are the old-established companies in which Central and State Governments had acquired shares subsequently.

State-wise Distribution

A study of the State-wise distribution of the companies in the Government corporate sector shows that the largest number of companies, namely, 42, has been registered in the State of Orissa and of these, two are Central Government companies and the remaining 40 are the cent per cent State Government companies. The overall size of the State Government companies, however, is very small. Next to the State of Orissa, the largest number of companies are registered in the State of Delhi, namely, 16 companies, followed by the States of Maharashtra (12), Kerala and Mysore (10 each). Five companies are registered in the State of West Bengal and four companies each are registered in the States of Bihar, Gujarat, and U.P. and three each in the State of Andhra Pradesh, Assam, Madhya Pradesh, Madras and Punjab. The States of Rajasthan and Jammu and Kashmir have two companies and one company, respectively.

A study of the size pattern of the Government companies reveals that 26 companies are of giant size having a paid-up capital of Rs. 1 crore or more each. The aggregate paid-up capital of these 26 giant size companies totalled Rs. 465 crores, that is, nearly 97 per cent of the total paid-up capital of all Government companies at work at the end of 1959-60. There are nine big-sized companies, having a paid-up capital between Rs. 50 lakhs and under Rs. 1 crore each and their paid-up capital totalled Rs. 6.6 crores. The numbers of companies in the paid-up capital brackets of Rs. 25 lakhs to Rs. 50 lakhs, Rs. 10 lakhs to Rs. 25 lakhs and Rs. 5 lakhs to Rs. 10 lakhs are 7, 14 and 8, respectively. The number of companies in the lowermost paid-up capital bracket, namely, under Rs. 5 lakhs is 61.

Industrial Pattern

In the last-named paid-up capital group, only eight companies are Central Government companies, whereas 53 are State Government companies. In contrast to this preponderantly large number of the State Government companies in the lowest size group, at the other end of the size ladder, an overwhelming number of the giant-sized companies are Central Government companies. That is, out of the 26 giant-sized companies, 23 are Central Government companies and the other three State Government companies.

The industrial pattern of the Government companies appears to be very diversified. Under broad industrial groups, it is seen that 58 companies with a total paid-up capital of Rs. 443 crores belong to mining and heavy industrial groups, whereas 41 companies belong to light and consumer goods industries. The total paid-up capital of the latter group of companies adds up to Rs. 11 crores. The remaining 26 companies are reported to be carrying on trading, finance or servicing activities and their paid-up capital adds up to Rs. 23 crores. An overwhelming number of the companies in the category of light and consumer goods industries are the Orissa State Government companies formed with a small capital base for diverse manufacturing activities. Among the 41 companies engaged in light and consumer goods industries, two big companies are engaged in the manufacture of paper pulp and paper board and cotton textiles in the States of Madhya Pradesh and Andhra Pradesh, respectively. Under the third category, the notable cases of big companies are the State Trading Corporation of India Ltd., the Ashoka Hotel, the Eastern Shipping Corporation and the Western Shipping Corporation.

Industrial Policy

One way of looking at the industrial pattern of the Government companies is to read their distribution in terms of the Industrial Policy Resolution of 1956 which envisages a threefold classification of industries. One category of industries is the Schedule A industries, comprising those industries in which all new units, save where their establishment in the private sector has already been approved, will be set up only by the State, while the expansion of the existing privately-owned units could also take place alongside. In setting up the new units, the State may, however, secure the co-operation of private enterprises when the national interests so require, but the State will ensure either through majority participation in the capital or otherwise that it has the requisite powers to guide the policy and control the operation of the undertaking. The second category of industries is the Schedule B industries, in which the State will increasingly establish new undertakings and, at the same time, the private enterprises will also have the opportunity to develop in this field either on its own or with State participation. The third category is of those industries not listed in either Schedule A or B and in which the private sector would have free play subject to the control and regulation exercised by the Industries (Development and Regulation) Act and other relevant legislation and to the priorities assigned under the Five-year Plans.

Looked from this angle then, it is seen that, of the 125 Government companies at work as on 31st March 1960, 31 companies belong to the first category of industries listed in Schedule A of the Resolution and 11 companies belong to the second category of industries listed in Schedule B and the remaining 93 companies are in the "free or unreserved" sphere. The total paid-up capital of the Schedule 'A' Government companies adds upto Rs. 396 crores, and that of Schedule 'B' companies (11) to Rs. 61 crores. Ninety-four Government companies, belonging to the third category, account for a total paid-up capital of Rs. 20 crores. It would thus be seen from these figures that, while the number of Government companies in the third category of industries, namely, free or unreserved sphere is large, in terms of paid-up capital, there are, however, neither important nor big units so as to acquire any monopolistic positions in the industries in which they are working. There are only a few exceptional cases like the State Trading Corporation of India and the Ashoka Hotels Ltd. which might acquire special positions of "influence" in due course. In fact, many of these companies in the last-named category have been formed in the backward and economically depressed areas of the country.

Another Classification

Yet another way of classifying Government companies will be to separate them into two broad groups, namely, (a) companies operating in a 'monopoly' sphere and (b) companies functioning under competitive conditions. It is, however, difficult to categorise the Government companies into monopolistic and competitive concerns, without knowing the detailed break-up of their production lines. A company, for instance, may be generally known to be producing electrical goods, but it is as well possible that it might be producing a small range of specialised types of electrical goods which are not being produced by any other company in the private sector for various reasons and there might be remote possibility of competitive units being set up in the private sector to manufacture these items because of heavy capital costs involved, foreign exchange difficulties, lack of technical know-how, etc. On the basis of information ordinarily available in the memorandum of association, annual accounts and other related reports, one might be inclined to categorise this company as one belonging to the competitive sphere, whereas, in fact, it holds a monopolistic position.

However, on making a reasonable assessment of the lines of production in such details as was possible with the help of the available documents, it is seen that 23 Government companies are, broadly speaking, functioning in the monopolistic sphere and 92 operate in the competitive sphere. The 23 companies which are described to be enjoying monopolistic position also include certain units which, by their size, could be reckoned as leaders in their respective industrial groups and, consequently, would affect the market conditions. The remaining 10 Government companies, however, do not fall under either of the abovementioned two categories as they have been formed for promotional and financing purposes.

Five Sections

Returning to the position of Government companies under the Companies Act as stated above, there are five sections of the Act which specifically relate to this class of companies. These are:

Section 617 which defines a Government company as a company "in which not less than 51 per cent of the share capital is held by the Central Government or by any State Government or Governments or partly by the Central Government or partly by one or more State Governments."

Section 618 bans the appointment of managing agents in the new Government companies formed after the commencement of the Act, 1956.

Section 619 lays down that (a) the auditor of a Government company shall be appointed or re-appointed by the Central Government on the advice of the Comptroller and Auditor General of India, (b) the Comptroller and Auditor General will have the power to direct the manner in which the company's accounts shall be audited by the auditor and give such instructions in regard to any matter relating to the performance of his functions, (c) the Comptroller and Auditor General will have the power to conduct a supplementary or test audit on the company's accounts and for this purpose, the company will have to furnish additional information in such form as the Comptroller and Auditor General may, by order, direct them to furnish to the person conducting the test audit, (d) the auditor will submit a copy of his audit report to the Comptroller and Auditor General who will have the right to comment upon or supplement the audit report in such manner as he may think fit, and (e) the Comptroller and Auditor General's comments upon the audit report or supplementary or test audit report will have to be placed together with the audit report before the annual general meeting of the company.

Section 620 gives reserve powers to the Government to make exceptions, modifications and adaptations with regard to the application of the provisions of the Companies Act other than those of Sections 618, 619 and 639, to the Government companies. These exceptions, modifications, etc., will have to be approved by Parliament before they become operative.

Section 639 requires the Central Government to cause an annual report on the working and affairs of each Government company to be placed before both the Houses of Parliament together with a copy of the audit report and any comments thereupon or supplement to the audit report made by the Comptroller and Auditor General and where any State Government is a member of the Government company, the aforesaid annual report, audit report and other related papers will have to be placed by the concerned State Government before its legislature comprising one or two houses as the case may be.

Certain very important consequences or conclusions follow from the aforesaid specific provisions relating to Government companies. Firstly, the Act has expressed a definite opinion with regard to the future of managing agencies in relation to the Government sector. While the Act allows the institution of managing agencies to function in the private sector under certain specified terms and conditions, the Act expressly prohibits the appointment of managing agencies in the case of new Government companies. This ban has not been applied to the existing Government companies, presumably because it was thought advisable not to disturb certain contractual obligations entered into between the old Government companies and their managing agencies for the time being, as, in any case, these contractual arrangements were to come to a close by the 15th August 1960 by which time the terms and tenure of office of the existing managing agencies appointed before the coming into force of the present Act were to be approved afresh by the Government, as required by the provisions of Section 330 of the Act. Under Section 326, Government have a fairly wide discretion to refuse the re-appointment of managing agents if, *inter alia*, they felt that such appointment of managing agents would be against the public interest and that the managing agent was not a "fit and proper person." This discretion could easily be used in the case of appointment of managing agents for Government companies. In fact, none of the old Government companies which had managing agents before the Act came into force have them now.

The consequential effects of Section 619 are indeed very significant for the Government companies. The departure from the normal practice of appointing auditors to audit company accounts as per Section 224 of the Act in the case of Government companies has been made to ensure that only competent and qualified persons duly screened by the Central Government and the Comptroller and Auditor General of India, are appointed as auditors of Government companies. Apart from the question of competence of the auditors, there is a further safeguard provided for in the Act conferring powers on the Comptroller and Auditor General to give instructions to the auditors to audit the company accounts in such details as he may deem fit. The Comptroller and Auditor General has to be satisfied with the audit, as it is his duty to see that the moneys have properly been used out of the consolidated Fund of India and there were no avoidable extravagance and irregular expenditures. In so far as the Comptroller and Auditor General is independent of the executive authority and is responsible to Parliament to whom he submits his reports, the principles of public accountability come into active play when the Government companies have to get their accounts screened by the Comptroller and Auditor General, even though in law they are autonomous bodies and not limbs of the Government.

The obligations cast on the Government under Section 639 of the Act give further effect to the principles of public accountability in so far as annual accounts of the Government companies along with the audit report of the auditors and comments made and supplementary audit carried out by the Comptroller and Auditor General are to be laid in Parliament or in the State legislatures where the State Governments are concerned. The laying of the annual reports of companies in Parliament and in the State legislatures would provide an opportunity to the members of Parliament and State legislatures to raise discussions on the reports through which the public at large could be informed. While the financial and accounting aspects could be looked into by the Comptroller and Auditor General of India, the broader and general issues connected with the working of the companies, namely, as to how far any Government company was fulfilling the purpose for which it was created and served the 'public' interests generally, whether the standard of efficiency was satisfactory, the investments made in the particular undertaking was economical and profitable, etc., could be raised in the discussions in the legislatures. In fact, in a broader sense, these discussions, if they were detailed and informed, would contain some of the ingredients of efficiency or social audit.

The reserve powers given to the Government under Section 620 of the Act are meant

Note: This article is from a paper read at the Seminar on Public Enterprises at Hyderabad on 13th to 15th February, 1961. The views expressed herein are the personal views of the author.

MR. AL FOIL MINDS HIS MANNERS

"Full-flavoured soft and delicious," enthused Mr. Foil biting deeply into an excellent cheese. "But d'you know, my charming hostess, what keeps this cheese in such superb 'taste'...'tis that very attractive foil packaging...aluminium foil, clean crackling and functional—that helps to keep the original goodness within and the dirt without. So here's a tip for your table... buy any brand of cheese or butter that's to your taste but be sure it's foil wrapped—for only foil wrapped products keep their taste to the table.

Fifty seven years' experience as Manufacturers of Aluminium Foils for packaging goods in Cigarette, Pharmaceutical, Confectionary, Tea and many other industries.

Selling Agents: Indian Aluminium Co. Ltd., Calcutta Bombay Madras and New Delhi

to smoothen technical difficulties that the Government companies might come across due to the peculiar setting in which they have to operate. The powers under this section are wide, but there is the check over the free use of these powers, as the Government could not give effect to the decisions without the concurrence of Parliament which could as well disapprove of them where it was not satisfied with the merits of the proposals. This check can hold the balance even between the companies in the private and the public sector. In fact, in actual experience, we find that Government has granted exemptions, modifications and adaptations in regard to only a dozen sections (Sections 13, 17, 18, 19, 121, 166 and 186) which could not be regarded as in any way a special dispensation shown to the Government companies. They merely resolved certain administrative difficulties experienced by the Government companies.

Administration

The administrative responsibility for the Government companies vests in the different Ministries of the Central Government and in the departments of the State Governments. The boards of directors of the Government companies seek their advice and instructions on matters of policy. The position of the board of directors of Government companies is also decided by the administrative Ministry concerned of the Central Government or the appropriate department of the State Government. It is observed that, of the 50 Central Government companies including exclusively and partly-owned, 24 are under the administrative control of the Commerce and Industry Ministry, six under Transport and Communications, seven under Steel, Mines and Fuel, three under Works, Housing and Supply, two each under the Ministries of Defence and Rehabilitation and Department of Atomic Energy and, one each under the Ministry of Information and Broadcasting, Ministry of Finance, Ministry of Scientific Research and Cultural Affairs and Ministry of Railways. The Department of Company Law Administration in the Ministry of Commerce and Industry exercises supervision with regard to compliance of the provisions of the Companies Act, and approves of the appointment of Auditors under Section 619 of the Act. While it does not exercise any administrative control over the Government companies, the Department gives, whenever circumstances so require, advice to the Government companies through the administrative Ministries and the State Governments to observe certain practices and procedures which would improve their operating efficiency.

Advice or direction with regard to the meeting of the requirements of the provisions of the Companies Act is not by itself sufficient. In the present stage of the development of the Government corporate sector, what is required is a more purposive and meaningful direction so as to help the Government companies to attain certain standards of internal management, internal costing and accounting which would lead to efficient functioning of these companies. Purposive direction is also required in regard to preparation of their annual accounts and the presentation of these accounts to Parliament so that the public at large might get in time the necessary papers to evaluate and assess the operating results of the Government companies. The annual company accounts are not to be the chapters of the past history of the companies, but must be like current Bradshaws that might be consulted by all those interested.

Annual Accounts

In regard to the preparation of the annual accounts, the provisions of the Act are that the companies should get their annual accounts audited and lay them before the annual general meeting along with the audit report within nine months of the closing date of the accounting year and, in exceptional cases, the Registrar of Companies could give an extension of six months. (The Amendment Act of 1960 has reduced these time limits to six and three months respectively.) Considering the delays that normally happen in Government companies and the criticisms made in the Estimates Committee's Reports dealing with Government companies and also voiced in Parliament, the Department of Company Law Administration has stressed on all Government companies the need to follow a systematic and scientific time-schedule with regard to preparation and audit of the annual accounts. According to this, the balance-sheets and annual accounts are to be prepared within two months of the expiry of the financial year and auditors are to complete their audit in the following two months. The annual accounts, duly audited by the auditors, are to be remitted to the Comptroller and Auditor General within four months of the expiry of the financial year. Such expeditious transmission of the audited accounts to the Comptroller and Auditor General would enable his office to complete the action on their part well in time to enable the company to place its annual accounts before the annual general meeting and remit them to the Governments concerned for placement in Parliament and State legislatures.

Section 639 of the Act does not prescribe any time limit within which the annual accounts and related papers are to be placed in Parliament or State legislature. In fact, the absence of this time limit in the past resulted in the delayed submissions of reports in Parliament which, in certain cases, was found to be as much as two years. To end this unsatisfactory state of affairs, the Department of Company Law Administration has advised the Union Ministries and the State Governments to lay the annual accounts and reports in Parliament and State legislatures within three months after the holding of the annual general meeting of the Government company. The observance of this timetable would ensure the availability of annual accounts to the Members of Parliament within a reasonable time.

To improve the tone of internal management of the Government companies, the Department of Company Law Administration has impressed upon them the importance of having qualified secretaries with adequate grounding in Company Law and accounting matters. Further, to ensure that the management of the companies was smoothly directed by a competent board of directors which has had sufficient experience of the problems of the particular company, the Department asked the concerned administrative Ministries to avoid too frequent changes of officers nominated on the boards of directors of companies necessitated by their transfers. The situation could improve if, at the time of the selection of officers as directors, their likely tenure in the official positions was also taken note of. A stable board of directors composed of experienced officers was of the greatest importance to the efficient running of the State enterprises.

Another important piece of advice given by the Department to the Government companies was with regard to adoption of proper system of costing by them. Many auditors' reports on Government companies had commented on the lack of efficient accounting organisations in these companies and had also criticised the procedures followed by them in the preparation of accounts. These companies also came in for severe criticism for a marked absence of control and coordination so far as the accounting work was concerned.

In fact, there was absence of appreciation of the importance of commercial and industrial accounting methods. There was also lack of realisation of the need for adopting an accounting system designed to suit not only the present-day needs but also the expansive industrial operations which were to commence shortly. A committee set up to inquire into the working of a Government corporation had commented in great detail on the general lack of cost-consciousness in the Government organisations, inadequate budgetary planning and inadequate and not quite proper use of cost accounting. The Committee had also reported a singular lack of appreciation of potential value of cost accounting arising from the fact that cost definitions had not been followed uniformly. The Department, therefore, has strongly advised Government companies to take steps to build up efficient cost accounting units within the organisations. For this purpose, Government companies have been told to obtain the services of technically qualified and trained personnel in the country. It is only after the internal accounting system has been properly organised that it would be possible to evaluate the cost efficiency of the companies.

Standardisation

As it is, the annual company accounts of Government companies present a baffling picture. The divergent treatment of various accounting heads and their presentation handicaps the work of consolidation of financial information relating to a group of Government companies. It was, therefore, urgently necessary that all companies should follow the standardised and accepted accounting concepts and devote their attention to the preparation of accounts which would not only satisfy the legal requirements of being "true and fair," but also appear meaningful and useful to their users. From a strictly legal point-of view, the companies are not required to split up the profit and loss accounts into manufacturing or trading accounts, profit and loss account, profit and loss appropriation account. Section 211(2) of the Act requires the preparation of an omnibus profit and loss accounts only. There is nothing, however, in the Act which would prevent a company from sub-dividing profit and loss account into sections so as to show the cost of production, gross or trading profit, net profit and its appropriation separately. The Department has impressed upon Government companies to follow up this suggestion, as it was in conformity with the best accounting practices followed by the corporate leaders in other countries. In order to make the company accounts easily understandable and digestible by the lay public, the Department has also impressed upon Government companies to give a simplified version of their accounts in addition to the statutory accounts.

The simplified accounts were to show what the company had earned during the year by selling its products and services and from other sources such as dividend, etc., separately and what is spent on certain broad heads such as salaries and wages to employees, cost of material, transport and other expenses in manufacturing of products, as cost of running the office, as cost of packing, advertising, commission to the agents, as interest on borrowings in the form of debentures, fixed deposits, bank loans, etc., and as provision for debts that cannot be recovered, as provision for making good wear and tear of goods, plant and machinery, in payments of taxation and after making all these deductions what had remained as profit during the year and out of this and the carried forward amount from the profits of last year, what it had paid out as (*a*) dividends to shareholders, (*b*) amounts retained as undistributed profits in the form of reserves, and (*c*) amount carried over to the next year.

Similarly, the simplified balance-sheet was to show total shareholders' investment and how this amount was represented in the shape of various assets. It was to be further indicated by giving split up of what the company owned in the form of assets *minus* what it owned to the others. In addition to the recasting of the profit and loss account and balance-sheet in the heads indicated above, it was considered useful for the company to bring out the highlights of the annual company accounts during the year and depict them in charts, graphs and diagrams. The detailed frame of the simplified accounts is given at the end of the note.

The importance of the presentation of simplified accounts lies in the fact that it can bring about better appreciation of the position of the company and its management among the workers and with this appreciation and understanding, increased output and productivity might also be achieved. As regards adoption of proper system of costing, it might be emphasised here again that, unless this is done, it is not possible to act upon any pricing methods or criteria recommended for any undertaking. Without this system, price fixation would be based on guesses and subjective judgment of the persons responsible for the management of the company.

INTEREST PAYABLE BY PUBLIC AND PRIVATE SECTOR INDUSTRIES

In a written reply, Mr. Morarji Desai, Minister for Finance, said in Parliament the other day that, on the basis of sanctions given, gross payments, including interest charges on account of imports under deferred payment terms, both by public and private sector industries as on 1st October 1960, for which information was available, had been estimated as follows:—

	(*Rs. crores*)
October 1960-March 1961	13.54
1961-62	24.96
1962-63	29.76
1963-64	22.15
1964-65	16.70
1965-66	11.42

Mr. Desai explained that deferred payment contracts were generally in terms of gross liabilities, the interest element in most cases being included in the total cost of the goods to be imported. It was, therefore, not possible to compute the amount of interest charges separately, specially since the rate varies from case to case and also depends on a number of imponderable factors like the dates of shipment and actual arrival of goods in India.

A manufacturing licence to produce in India the diesel tractors of Massey-Ferguson Ltd., of Coventry, England, has been issued to Tractor and Farm Equipment (Private) Ltd., Sembiam, Madras. The Massey-Ferguson has a substantial minority interest in the newly formed company. Initial production will be 3,500 tractors yearly on a single-shift basis. The first model to be produced will be the MF-35, a medium-horsepower tractor, of which there are already some 16,000 operating in India. The Indian company is to build a modern plant near Madras. Plans provide for complete indigenous production after the first two or three years. The programme, in which agricultural implements will progressively be included, is expected to offer employment eventually to about 3,000 people.

STATE BANK OF SAURASHTRA

(Subsidiary of the State Bank of India)

Incorporated in India under special statute. The liability of the Members is limited

BALANCE SHEET AS AT 31st DECEMBER, 1960

CAPITAL AND LIABILITIES	Rs. nP	Rs. nP
1. Capital—		
AUTHORISED CAPITAL—(Pursuant to Section 5 (1) of the State Bank of Saurashtra Act, 1950, as amended by Part V of the Third Schedule to the State Bank of India (Subsidiary Banks) Act, 1959)— 2,00,000 shares of Rs. 100 each	2,00,00,000·00	
ISSUED, SUBSCRIBED AND PAID-UP CAPITAL—(Pursuant to Section 6 (1) of the State Bank of Saurashtra Act, 1950, as amended by Part V of the Third Schedule to the State Bank of India (Subsidiary Banks) Act, 1959)— 1,00,000 shares of Rs. 100 each fully paid		1,00,00,000·00

REPORT OF THE AUDITORS TO THE STATE BANK OF INDIA

We have examined the annexed Balance Sheet of the State Bank of Saurashtra as at 31st December, 1960, and also the Profit and Loss Account of the Bank for the period ended on that date, in which are incorporated the returns of the Bhavnagar Branch audited by us and returns of the other Branches certified by the respective Branch Agents, and report that:

(1) in our opinion, the Balance Sheet is a full and fair one containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank;

(2) where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory;

(3) the transactions of the Bank which have come to our notice have been within the powers of the Bank;

(4) the returns received from the Branches of the Bank have been found adequate for the purpose of our audit; and

(5) the Profit and Loss Account shows a true balance of profit for the period covered by such account.

Chartered Accountants.

BOMBAY, *dated* 25*th January*, 1961.

SCINDIA STEAM NAVIGATION COMPANY LTD.

CHAIRMAN, MR. D. M. KHATAU, ON FREIGHT RATES

THE Forty-first Annual General Meeting of the shareholders of the Scindia Steam Navigation Company, Ltd., was held at Bombay on Wednesday, 22nd February 1961. Mr. Dharamsey M. Khatau, Chairman of the Company, addressed the shareholders. The following is a summary of his speech:

At the outset, Mr. Khatau referred to the performance of the Company during the year ended 30th June 1960 and said that, while the cargo carried was higher by over two lakh tons and the freight earnings were higher by over Rs. 1.75 crore, as compared with the previous year, there was a fall in the net earnings due to the low level of freight rates and increased expenditure directly attributable to the increased calls made at different ports, charter hire and direct expenses by way of stevedoring, marine and canal dues. Excluding the provision for special depreciation amounting to Rs. 101 lakhs and not taking into account the surplus on sale of assets of Rs. 6.74 lakhs, the working of the Company showed a profit of Rs. 74.53 lakhs, which, under the depressed conditions in the shipping industry the world over, could not, Mr. Khatau stated, be regarded as unsatisfactory. The dividend proposed is 60 nP per share, subject to deduction of tax, to be paid out of the general reserve.

Freight War

The low level of freight rates in the overseas trades, the Chairman remarked, was due to severe impact of general depression in shipping, continued low level of tramp rates and the increased competition by tramp and liner vessels which called at Indian ports *en route* while engaged in international trades not directly connected with India. There was also the competition offered by tonnage bringing foodgrains and fertilisers to Indian ports which could offer to carry cargoes on the way back without regard to economic rates of freight. Mr. Khatau, confirming the recent arrangements between different liner companies engaged in the India-U.K.-Continent trades, referred to the discussions between the Scindia Company, India Steamships and the other Conference colleagues and observed that the shipping services had been reappraised in the light of modern developments and measures aimed at co-ordinating the services of the member lines taken to ensure the best utilisation of ships employed and to provide optimum coverage for loading/discharging ports. This, he added, was a scheme of rationalisation no different from what is normally followed in any other well-organised group of industries and was meant to give a more satisfactory and efficient service.

Referring to the criticism levelled against the efforts made by underdeveloped countries in the matter of expanding their national shipping, by the General Council of British Shipping recently, Mr. Khatau said that it was unfair to foist the responsibility for the present-day difficulties experienced by shipping the world over on countries like India. Mr. Khatau stated that the difficulties presently experienced by shipping in the international field had been brought about by over-acquisition and over-building of tonnage year by year by traditional maritime nations which should have had a better appraisal of the situation and should have taken precautions to adjust their tonnage from year to year to the world trade requirements. He instanced an increase in tonnage by some of the countries as under:

(In million g.r.t.)

	As at 1st July				
	1948	1955	1958	1959	1960
World total	80.3	100.6	118.0	124.9	129.8
Of which:					
U.K. and Northern Ireland	18.0	19.3	20.3	20.8	21.1
U.S.A.	26.9	23.9	23.1	22.8	22.3
Countries of Europe other than Scandinavia and U.K.	8.1	14.7	18.5	19.6	20.1
Scandinavian countries.	7.3	11.7	14.7	16.3	17.2
Greece	1.3	1.2	1.6	2.1	4.5
Liberia	..	3.9	10.1	11.9	11.3
Panama	2.7	3.9	4.4	4.6	4.2
Japan	1.0	3.7	5.5	6.3	6.9

Commenting on the future trend, Mr. Khatau referred to the decrease in the world laid-up tonnage from 8.7 million g.r.t. in October 1959 to 3.3 million g.r.t. in January 1961, but observed that the rates of freight had, however, not registered any increase to justify an inference that the imbalance between world tonnage and world trade had been sufficiently adjusted.

Coastal Trade

Dealing with the coastal and adjacent trades, Mr. Khatau referred to the diversion of salt and coal cargoes by rail, delays to coastal shipping both at loading and discharging ports, owing to slow despatch consequent upon the inefficiency of unloading operations and lack of wagons. These factors, coupled with restricted loading due to unsatisfactory drafts in the Hooghly river, meant a considerable wastage of shipping tonnage employed on the coast. These problems, he said, had been placed before the National Shipping Board and also before the Neogy Committee. He urged the need for a proper co-ordination of all modes of transport and an early solution of the difficulties which the coastal shipping had to face.

Referring to the tonnage programme, Mr. Khatau said that efforts had been made to improve the efficiency and competitiveness of the Company's services by adding new and recently built vessels to the fleet.

Mr. Khatau stressed the urgent need for establishment of war risk insurance scheme by the Government of India by which it would be possible to save foreign exchange presently spent abroad. He pleaded for an early adoption of the proposals before the Government. Mr. Khatau referred to the increasing cost of building new tonnage and rise in the cost of operations and pleaded for a suitable policy in the matter of economic rates of freight for shipping either employed in the coastal or international trades. He said that, in making this plea, the shipowners asked for nothing more than what was conceded to every shore industry of importance. Mr. Khatau further emphasised the need to bring about the expansion of Indian tonnage on a planned basis so as to ensure maximum utilisation of the available tonnage and to avoid wasteful and unhealthy competition between Indian lines and, with this end in view, he pleaded that further licensing of vessels should be only for routes either new or not adequately covered by Indian lines presently.

Referring to the operations of the subsidiary companies, Mr. Khatau stated that the B.S.N. (1953) Private Ltd. which operated on the Konkan coast had made a further loss of Rs. 6.95 lakhs, which brought the cumulative loss to Rs. 28.63 lakhs. He hoped that the Government of India would arrive at an early decision on the report recently submitted by the Konkan Shipping Services Committee. The Scindia Workshop (Private) Ltd. showed a small net profit of Rs. 1,673. Mr. Khatau referred to the acquisition of one of the ship repair firms in Bombay by the Government and urged that there should be no change in the usual practice of the Government Shipping Corporations to invite tenders from all the workshops for ship repair work and to entrust to the lowest tenderer as hitherto, thus ensuring that the Corporations enjoyed the benefit of economic repair costs. Operation of the Jalanath Insurance Ltd., he observed, had brought an increase in insurance premium by about Rs. 1.88 lakh and added that, effective from 1st January 1961, the Company had been able to enter into reciprocal treaty arrangements in the U.K.-Continent and Far Eastern countries which would benefit the Company further.

In conclusion, Mr. Khatau thanked Dr. Subbaroyan, Minister for Transport, Mr. Raj Bahadur, Minister of State for Shipping, the Secretary to the Ministry of Transport, and the Director-General of Shipping and his officers for their efforts in furthering the cause of Indian shipping. He further thanked all the Company's patrons, shippers and consignees at home and abroad and looked forward to their increased support to the Company's services.

EFFECTS OF HIGH TAXATION ON SAVINGS AND INCENTIVES

AN APPRAISAL OF N.C.A.E.R'S LATEST STUDY

By A Special Correspondent

THE report, entitled *Taxation and Private Investment**, published by the National Council of Applied Economic Research, is a coldly analytical, strictly objective study of a subject on which this sort of approach is exceedingly rare. It is completely free from ideological bias. The social objectives of reducing economic inequalities and concentration of wealth are taken as given, as also the importance of stimulating private saving and investment in a mixed economy, in which the private sector has a recognised and important role to play.

The conclusion and recommendations that emerge from the study bear no trace of special pleading for vested interests. If, in spite of its strictly scientific approach, the Council feels impelled to make recommendations in favour of reducing the tax burden on the comparatively wealthy, it is because the logic of the analysis, naturally led to such conclusions.

One of the most interesting and important parts of the report is that which deals with the phenomenon of declining disposable income with increasing wealth. If the average rate of return on wealth is 6 per cent, at Rs. 70,000 income and wealth of Rs. 11.67 lakhs, any addition to wealth in the form of earning assets, will increase tax liability by more than the income from those assets. If the individual saves Rs. 1,000 and gets an additional income of Rs. 60, he will be called upon to pay additional tax of Rs. 60.4-Rs. 50.4 by way of income tax at 84 per cent and Rs. 10 by way of wealth tax at 1 per cent. This will be well below the point of zero disposable income, which will be around Rs. 2.50 lakhs of income and Rs. 42 lakhs of wealth. Over this range, the individual can add to his wealth, but will reduce his disposable income by so doing. The disincentive effect on saving is patent.

It may be said that the people who suffer as a result of this anomaly are wealthy and, therefore, deserve no special consideration in a society pledged to the reduction of inequalities. But these are mostly entrepreneur-investors, the promoters of small and medium businesses and as such play a key role in the process of growth.

Stimulating Desire To Save

A theme that runs throughout the report is the importance of inducing a greater rate of saving than hitherto. For the economy as a whole, the rate of saving has been lagging behind the rate of investment. According to the National Council, over the period of the Second Five-year Plan, the rate of saving in the economy has not increased at all. A point that is often overlooked is the dependence of the Government's own programme of investment on private saving, since the saving in the public sector itself is not sufficient to finance public investment. Private savings thus play a key role in the process of economic growth, for investible funds have to come from individuals and private institutions for financing public as well as private investment. The present tax system, which is one of the most highly progressive in the world, tends to undermine the ability as well as the incentive to save. Tax policy, particularly in a developing economy, should be designed so as to increase the pool of investible resources as income increases. There is thus a strong case for a reduction in the degree of progression, so as to stimulate the desire to save. The loss of revenue involved would be more than offset by the higher rate of industrial growth and the consequent widening of the tax base.

In the field of corporate taxation, the report concedes that the basic income and super taxes on Company profits at 45 per cent is reasonable, in spite of the fact, established by the studies of the profits and tax liabilities of Companies by the Associated Chambers of Commerce and the Federation of India Chamber of Commerce and Industry, that the new scheme of Company taxation would result in a somewhat increased collection of taxes from the corporate sector, when the taxable profits and the policies of Companies as regards untaxed profits and dividend distribution remain the same. "In any tax reform of this nature, it cannot be guaranteed that the tax burden will remain exactly the same." Taken in conjunction with the development rebate, the 45 per cent rate is described as "fairly reasonable." The charge that is brought against the Government, however, is not specifically that the 45 per cent rate is unreasonable. It is that an increase in corporate taxation has been effected, not in a straight forward manner, with the specific approval of parliament for such an increase, but in a concealed form, through a change in the system of Company taxation. This is nothing short of a subterfuge.

Section 23A

There will be general approval of the Council's recommendation in favour of a relaxation of the rigidity of Section 23A, relating to private companies and closely held public companies. The Council approves of the purpose of this section of the Income Tax Act, which is to prevent the use of the corporate form by rich persons to avoid upper bracket personal tax rates. But it considers that the withdrawal, in 1957, of the right of companies to appeal for total or partial exemption from the minimum statutory distribution, operated oppressively in the case of small and medium scale undertakings, which make up the majority of companies covered by this section. "Small enterprises must rely upon retained earnings to finance most of their expansion. During a period of inflation, their need for retention of earnings is even greater. The public market for equity capital is generally beyond their reach.... Small enterprises after attaining a certain size, find it useful to change their form of organisation from proprietorship to private company. But, at this stage of their growth, they find the compulsive provision of Section 23A to be an impediment to the building of their reserves for further progress." The restoration of the right to appeal for exemption is recommended on the ground that "small industry has a special role to play in broadening the base of entrepreneurship. It is the Government's declared policy to foster its growth, yet the tax provision of Section 23A is in a way contradictory to that policy."

The plea for abolition of the tax on bonus issues, particularly for the end of the quite irrational extension of the tax to issue out of share premium account, has been made without effect so often that it would be optimistic to expect any response from the Government this time. But there is something to be said for hammering at the point in the hope that good sense will eventually prevail.

This is true also of the plea for a reduction of the tax on inter-corporate dividends, specially with regard to the dividends received by foreign companies from Indian companies. "India's industrial policy prefers minority holdings from abroad, but its tax-policy encourages majority, rather than minority holdings by foreign investors in Indian enterprises. The tax rate on dividends flowing from an Indian subsidiary to a foreign parent company is 33 per cent, as compared with 63 per cent on dividends to foreign minority shareholdings."

Tax Burden on Dividends

Even when both companies are Indian, the tax burden on dividends flowing from one company to another constitutes a deterrent to inter-corporate investments. Dividends from a subsidiary Indian company to its parent company are subject to a super tax of 10 per cent and in the case of a minority shareholding by the receiving company the super tax on inter-corporate dividends is 20 per cent. Section 56A exempts completely from super tax, the dividends that are received from companies engaged in any of the industries specified in the section. For companies not covered by Section 56A, the aggregate burden of taxation on inter-corporate investments is very heavy. If a company uses its funds to create a subsidiary, the aggregate tax burden comes to 61.5 per cent. If the investing company is a minority shareholder, the aggregate tax burden on its earnings will be 67 per cent. From the point of view of the individual shareholder behind the investing company, the net yield at the above rates, will be further subject to the personal taxes on unearned income, which may be as high as 84 per cent.

The two-tier corporate structure was found necessary in the industrialisation of developed countries. "A merit of the corporate form is that the entrepreneurs can gather together resources of many savers, including the earnings of the company itself, and invest them, either in the expansion of the same enterprise or in starting new ventures." The misuse of inter-corporate investment for anti-social purposes can always be checked by the Company Law or the Industries (Development and Regulation) Act.

Under the simplified system of company taxation, even companies favoured by Section 56A have to bear an additional tax burden, as a result of the elimination of tax-credit for income tax paid by companies. The dividends from 56A companies now bear a total tax burden of 56 per cent, as compared with the basic rate of 45 per cent on company profits. Moreover, Section 56A does not cover a number of new fields of private enterprise, particularly light engineering industries.

There is thus a strong case for some reduction in the burden of taxation on inter-corporate dividends.

Taken as a whole, the study proves that, in a number of ways, taxation in India has acted as a drag on investment, domestic as well as foreign. While the Government has shown itself anxious to attract foreign private capital and is prepared to go to considerable lengths for that purpose, there has not been a corresponding solicitude for encouraging domestic investment in the private sector. While the improvement in the climate for private investment is welcomed, the ability to take full advantage of the favourable climate has been reduced by excessive progression in the tax system. It is worth careful consideration whether a more realistic fiscal policy, designed to create further investible resources and direct them into productive channels, would not be the best way to accelerate the tempo of economic growth and also to draw more foreign private capital to this country. For there can be no better way of demonstrating the attractiveness of India as a field for capital investment than by creating conditions favourable for a vigorous growth of domestic investment.

Points of Criticism

The National Council has produced a closely reasoned, well-documented case in support of its thesis that both the ability to save and the incentive to invest can be stimulated substantially, within the broad framework of the present tax structure and without sacrificing the social objectives that have won nation-wide acceptance. A few points of criticism may, nevertheless, be made:

1. The study has virtually ignored all direct taxes, except those on income and wealth. The capital gains tax comes into the picture only in the argument that the relatively favourable treatment of capital gains mitigates somewhat the harshness of the highly progressive taxes on income. There is no reference to the fact that since investment in Indian conditions is undertaken primarily with the object of capital appreciation, the very existence of a tax on capital gains acts as a disincentive to investment and hinders the liquidity of assets.

2. The inequity of a situation where income and wealth taxes together can exceed the entire income of the assessee is accentuated by the existence of the expenditure tax. It is reasonable to expect that the level of expenditure of an assessee in that range of income and wealth would bring him within the reach of the expenditure tax, which goes up to 100 per cent on the highest slab. It is surely adding insult to injury to appropriate the entire income and a part of the capital of an assessee and then, on top of this, to subject him to an expenditure tax of up to 100 per cent on part of his personal expenditure.

3. While Section 56A has received close study, there is no mention of the fact that the 'tax holiday' to new industrial undertakings for five years, up to 6 per cent of the capital employed, is virtually ineffective as an incentive, because not many new enterprises earn enough income in the first five years of their existence, to benefit from this concession and that the concession is withdrawn just when they reach the stage of being able to benefit from it. There is a strong case for the extension under this section being carried forward till the full benefits accrue to the enterprise.

4. The comparisons of income tax rates in India and other countries, advanced and under-

RISE IN VANASPATI PRODUCTION RATHER SLOW

SHORTAGE OF RAW MATERIALS, MAIN HANDICAP

THE vanaspati industry has been the target of much ill-informed tirade by a section of politicians. In their zeal for protecting the producers and consumers of ghee, these people have raised an unnecessary scare about the desirability of using vanaspati as a cooking media. They have also been trying their best to get vanaspati colourised, in the hope that that would enable people to get unadulterated ghee. To some extent, these campaigns must have adversely affected the growth of demand for the hydrogenated oil, which is what vanaspati is. They, however, are not the only handicaps in the way of development of vanaspati. The industry has been confronted with high prices and scarcity of raw materials, particularly vegetable oils, and also coal, tin-plate, etc., not to mention the impact of the various Government imposts. In view of these heavy odds, the industry's progress has been slower than it need be, taking into account the rise in population and purchasing power. The production of vanaspati in 1960 is estimated at 336,600 tonnes, as compared with 320,583 tonnes in 1959. The rate of increase in production has thus been of the order of only 5 per cent, and compares unfavourably with 7 per cent recorded in the previous year. Again, there is still a large unutilised capacity. The present installed capacity is estimated at about 434,000 tonnes, which, as compared with actual production, discloses that about 25 per cent of capacity is idle. It may be recalled, in this connection, that a production target of 400,000 tonnes was set in the second Plan, to be attained by 1960-61. It is now clear that there will be a sizable shortfall from this target. In the third Plan (1960-61 to 1965-66), production is proposed to be stepped up to 500,000 tonnes, the corresponding target for installed capacity being 550,000 tonnes. This means that production will have to be raised by about 160,000 tonnes and capacity by 116,000 tonnes. In terms of percentage, the increases will have to be of the order of 49 and 25, respectively. An improvement on this scale is not beyond the industry's capacity, provided energetic steps are taken to raise the supply of raw materials and tin for packaging purposes.

Industry's Problems

A succinct account of the problems confronting the industry is given in the annual report of the Vanaspati Manufacturers' Association of India for 1960, which has just been published. Explaining the reasons for the decline in the rate of production in 1960, the report observes as follows:

"This decline in the rate of increase in vanaspati output may be largely attributed to the decline in the output of oilseeds in 1959-60 which led to a steep rise in the prices of edible oils. What is more, the vagaries of monsoon and expectations of a liberal export policy for raw groundnut oil maintained the bullish tendency till the end of October. Thus the price of groundnut oil in Bombay exceeded the level of Rs. 2,200 per ton and that too in October 1960, a level not seen since the summer of the oil-famine year of 1953. This created a feeling of uncertainty among the vanaspati manufacturers and dealers who followed a very cautious policy in the production and stocking of vanaspati to avoid losses, should the price level decline. It may be mentioned, in this connection, that the failure of price stabilisation agreements in the North, East and West zones resulted in keener price competition within the industry and increased financial risks through wider fluctuations in prices. Naturally, this had an adverse effect on production by factories as well as on levels of stocks with the trade. A short marriage season and the decline in the national income per head in 1959-60 had also an adverse effect on the rate of growth in vanaspati producton."

The following table shows the trend of production during the last five years region-wise:

(Quantity in tonnes)

Region	1955	1956	1957	1958	1959	1960*
Andhra, Madras, Mysore, Kerala ..	23,387	22,377	28,783	27,729	28,969	29,200
Bombay, M.P., Rajasthan	115,554	103,420	119,844	115,186	121,022	127,300
U.P., Punjab, Delhi	71,245	79,303	96,501	93,733	106,714	112,100
W. Bengal, Bihar, Assam, Orissa ..	52,312	54,127	60,629	61,834	63,878	68,000
Total ..	264,498	259,227	305,757	298,482	320,583	336,600

* Estimated.

An analysis of consumption by regions shows that Northern India, consisting of Uttar Pradesh, the Punjab and Delhi, is the largest consumer of vanaspati, followed by Western India (Bombay, M.P. and Rajasthan), Eastern India (West Bengal, Bihar, Assam and Orissa) and South India (Andhra, Madras, Mysore and Kerala). Thus, of the total production of 336,600 tonnes in 1960, the share of these respective regions was 128,100 tonnes, 98,400 tonnes, 71,500 tonnes and 23,200 tonnes.

Raw Materials

The acuteness of the problem of raw materials will be evident from the fact that while the production of vanaspati, over the last twelve years, has more than doubled, the output of major raw material, namely, groundnuts, has lagged behind. The report points out in this connection that oilseeds, particularly groundnuts, are grown in the areas of uncertain rainfall and have benefited little so far either from the extensive irrigation facilities provided during the two Five-year Plans or from the proved methods of cultivation. This is best illustrated by the table below, which shows comparative figures of yield per acre of both foodgrains and oilseeds since 1950-51.

	Foodgrains (lbs.)	*Oilseeds* (lbs.)
1950-51	466	429
1955-56	539	423
1956-57	559	449
1957-58	520	435
1958-59	586	505
1959-60	578	430

These figures show that the per acre yield in respect of oilseeds has not improved to any appreciable degree, whereas the position of foodgrains is somewhat better. No doubt, the total output of major oilseeds has increased, but this was due to extension of the area under cultivation, and not to any increase in yield. Thus, while the output of groundnuts rose from 3.4 million tonnes in 1950-51 to 4.39 million tonnes in 1959-60 (by 29 per cent), the acreage increased from 11.1 million to 15 million (by 38 per cent). The report adds that, with remunerative prices for groundnuts, the acreage under groundnut has increased, but, with the poor quality of the land and vagaries of the monsoon, the total outturn fluctuates widely. Consequently, the output does not increase in proportion to the area under groundnut. "It is unfortunate," says the report, "that the State Governments which are in charge of executing development plans for increasing oilseed output have so far not appreciated the urgency of the situation."

The supply position of sesame oil, according to the report, is also getting worse year by year. As the vanaspati industry is statutorily required to add 5 per cent sesame oil, its requirements of this oil are increasing with the rise in the output of vanaspati. It is said that the industry is finding it difficult to obtain the requisite quantity even after paying excessively higher prices. This state of affairs has only made the position worse for consumers of sesame oil, confined largely to Tamil Nad, Andhra, Mysore and Saurashtra and to people of these areas settled in other parts of India. At the same time, it has also not conferred any direct benefit on consumers of vanaspati or in any way prevented adulteration of ghee with vanaspati.

Export Policy

In view of the pronounced scarcity of edible oils, the Association is critical of the incentives offered for the export of groundnut oil. It has urged the Government to grant export incentives only to the manufactured products of organised industries. It stresses the fact that, in a country like India, "where speculative forces dominate the trade not only in commodities, but also in finished products of organised industries, the efforts of the Government to export a speculative commodity like groundnut oil which has an active domestic demand invariably lead to exaggerated rise in prices, causing great hardship to consumers." As this journal has pointed out times without number, there is a strong case against granting artificial incentives for export of groundnut oil, particularly when production of groundnuts is lagging behind. Such a measure only tends to shield inefficiency in agricultural production and the Government's failure to deal with it effectively.

In view of the tight supply position of edible oils, the Government of India has sought to augment the availability of vegetable oils by encouraging cottonseed crushing, solvent extraction of oilcakes and rice bran. But the impact of these schemes has been negligible. The progress of cottonseed crushing industry, particularly in the organised sector, has been too slow. Although the price of cottonseed oil has been rising with the increase in prices of other vegetable oils, the sustained rise in the price of cottonseed as well as the unremunerative prices of cottonseed cake have rendered cottonseed crushing unprofitable. Further, the incentive schemes offered for promoting the use of cottonseed oil have not been an easily workable proposition. Commenting on the difficulties involved in operating this scheme, the report observes as follows:

"It will be recalled that members of the Association had decided in 1958 to use cottonseed oil voluntarily at the rate of 2½ per cent in 1958, 5 per cent in 1959, 7½ per cent in 1960 and 10 per cent in 1961. This understanding was reviewed in 1959 by a Liaison Committee appointed under the chairmanship of the V.O.P. Controller for India and it was agreed that the industry should use 5 per cent in 1960 and that Government should give an incentive in the form of a rebate in excise duty on vanaspati. The Central Board of Revenue announced such an incentive scheme effective 1st July 1960. Under the scheme, a manufacturer is entitled to a rebate of excise duty on vanaspati at the rates of 3 per cent and 5 per cent, if he uses in a particular month cottonseed oil in excess of 5 per cent and 10 per cent, respectively. The industry welcomed the incentive scheme, but, unfortunately, the procedure prescribed was so impracticable that the manufacturers could not take full advantage of it. It requires cottonseed oil and groundnut oil to be mixed prior to hydrogenation in the presence of an excise officer. Further, the sample of the mixed oil is required to show a negative Baudouin reaction and a Bellier number within a prescribed range. As oils invariably get contaminated with the traces of sesame oil in the weighing, storing and processing equipments, it is not possible for a manufacturer to ensure that the mixture will not show a positive Baudouin reaction. Furthermore, hydrogenation of cottonseed oil mixed with groundnut oil adversely affects the keeping quality of the product and thus deters the manufacturer from using cottonseed oil in greater proportions. Also, the mixed cottonseed and groundnut oils before hardening have to conform to a particular range of Bellier number to prove that the mixture contains a given percentage of cottonseed oil. But the Bellier test is not sufficiently quantitative for the purpose. The Association has suggested a simpler procedure for granting the rebate and it is hoped that the Central Board of Revenue will accept it. The incentive scheme despite its weaknesses, has encouraged the use of cottonseed oil in vanaspati manufacture and the percentage of its use has improved from 4.2 in the first half to over 6 in the latter half of 1960. The target of 5 per cent for 1960 has been exceeded."

Cottonseed Crushing

The Government of India is said to be considering several new schemes to encourage the growth of cottonseed crushing. One such scheme recently discussed with the representatives of the various industries concerned was that a central agency like the State Trading Corporation or a voluntary body organised by the vanaspati manufacturers and cottonseed crushers should purchase all cottonseed oil at a price that would give the crushers a fair return and distribute it among vanaspati factories *pro rata* to their production. Pointing out the futility of the scheme, the report adds as follows:

"It is unfortunate that, although the disposal of cottonseed oil is not a problem impeding the progress of cottonseed crushing, Government appear to concentrate attention mainly on disposal of the oil. The oil forms only 12½ per cent of the total output of cottonseed crushing. A rise of Rs. 10 in the price of cottonseed will require an increase of Rs. 80 in the price of cottonseed oil per ton to maintain crushing parity, whereas an increase of Rs. 12.5 per ton in the price of undecorticated cake would achieve the same result. Thus, if cottonseed crushing is to be made remunerative, it is largely a question of obtaining a remunerative price for the oilcake."

Apart from the shortage of vegetable oils, the vanaspati industry has had to face inadequate supply of coal owing to the dearth of railway wagons for the purpose. It is, however, said that the V.O.P. Controller of India has agreed to persuade the Government to increase the total allocation of coal to the industry and grant special quotas in the slack railway season to enable factories to build up stocks to meet the scarcity in the busy season when the total movement of coal is generally reduced. There have also been complaints of shortage of tinplate required by the vanaspati factories which have their own tin container fabrication plants.

But for these handicaps, which increase the cost of production and, therefore, the selling price of vanaspati, the industry would have made a sizable contribution to the procurement of foreign exchange earnings. Nevertheless, the performance of the industry on the export front in 1960 was encouraging. The total exports reached 6,500 tonnes in 1960, which compares favourably with no more than 2,792 tonnes in 1959.

Coloration Unnecessary

According to the Association, the proposals to colour vanaspati are irrational, unnecessary and highly undesirable. It makes out a strong case against the coloration of vanaspati in the following words:

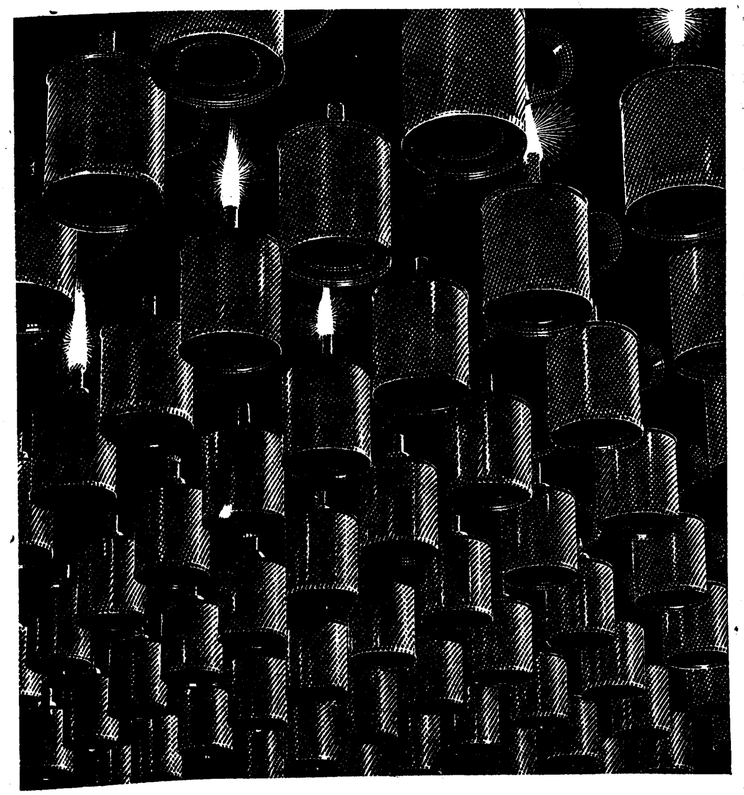
"It is irrational because: (i) in the interests of the health of the consumer, scientists, Indian as well as foreign, recommend that staple foods should not be artificially coloured, (ii) it will not prevent the adulteration of ghee as there are many adulterants like vegetable oils and animal fats available in plenty, and (iii) it will not prevent the use of vanaspati for the adulteration of ghee if a removable colour is added, since adulterators will be able to remove the colour. It is unnecessary because vanaspati already contains a latent colour through the statutory addition of sesame oil to every batch of vanaspati produced in the country. This facilitates the easy detection of the presence of vanaspati in ghee. Finally, the coloration of vanaspati is most undesirable because to ensure that a mixture of vanaspati even with whitish ghee at the 10 per cent level is visible, the colour added to vanaspati will have to be so deep that vanaspati will be repulsive to the legitimate vanaspati consumer. What is more, every dish cooked with vanaspati will have a uniformly unnatural appearance which will certainly be not acceptable to the consumer. Thus coloration is calculated to deprive the consuming public of a cheap source of a nutritious dietary fat and at the same time bring about the ruin of our industry."

It is said that an extract of turmeric is being seriously considered by the authorities for colouring vanaspati. It is futile to imagine that adulteration of ghee will be put a stop to once and for all, if vanaspati is colourised. The remedy for preventing adulteration of ghee lies in bringing about a fall in the price of ghee through an increase in production. An effective implementation of the relevant legislation by awarding strong punishment to adulterators may help to some extent. But this is easier said than done. It may, however, be pertinent to pose the question whether it is at all necessary to prevent ghee being mixed with vanaspati especially as such a mixture does not appear to be harmful to health and gives its consumer the satisfaction of having used ghee at a relatively low price.

FEDERATION ON PRICE REGULATION

A communication to be addressed to the Government of India on the question of price regulation and return on capital was finalised by the Committee of the Federation of Indian Chambers of Commerce and Industry, which held a two-day meeting last week at New Delhi with Mr. A. M. M. Murugappa Chettiar, Federation's President, in the chair. The Federation had already apprised the Ministry of Commerce and Industry that the recommendations of the price-fixing authorities did not always take note of the needs of the industry to provide for a fair return to investors and for rehabilitation and expansion of plant and equipment, after meeting the growing operational expenses.

It was also decided by the Committee to elicit the views of the constituents of the Federation on the question of smuggling and evasion of customs and excise duties which was raised at the last meeting of the Customs and Central Excise Advisory Council which met at Delhi on 27th and 28th January 1961. The Committee had discussions with Government representatives (Messrs. L. K. Jha and D. S. Joshi) on foreign exchange resources of the third Plan, Government's policy and procedure having a bearing on joint ventures, capital issues control and the different aspects of export promotion. The Committee decided to draft five resolutions to be presented at the thirty-fourth annual session of the Federation, which will be inaugurated by the Prime Minister on 25th March 1961. The resolutions are concerned with (1) third Plan, (2) export promotion, (3) streamlining of administrative machinery, (4) transport capacity and movement bottlenecks, and (5) coal production and its movement.



The comforts of life are spreading

Rising standards of living are finding their way into the remotest village and are coming within the reach of people with quite modest means. Consider Kerosine, for instance, which by bringing illumination to the humblest home is playing a part in this welcome development. By the end of the Third Plan, Burmah-Shell estimates that demand for Kerosine will be around 2.9 million tons, or well over 800 million gallons a year. There can be no question that the first priority should be the exploration and production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth and Burmah-Shell believes that

for tomorrow's needs we must act today

ELGIN MILLS RETURN TO DIVIDEND LIST

BAD INVESTMENTS FULLY COVERED

THE report and accounts of the Elgin Mills Limited for the year ended 30th September 1960 reveal that the Company has clearly got out of the muddle into which it was dragged by the activities of Mr. Haridas Mundhra in 1955-56. Messrs. Begg, Suther and & Co. Private Ltd. have ceased to be the Managing Agents of the Company from 16th August 1960, in pursuance of Section 330 of the Companies Act. Since that date, the British India Corporation Ltd. has been appointed Secretaries and Treasurers of the Company. **The total sales of the** Company in 1959-60 reached a record figure of Rs. 399.75 lakhs, an improvement of Rs. 44 lakhs over those for 1958-59 which itself had witnessed an increase of **Rs. 57 lakhs** over the previous year. Thus, in two years' time, the sales have increased **by over a crore of rupees.** There has been a significant increase in other income also from Rs. 6.31 lakhs to Rs. 18.11 lakhs, mostly on account of an increase of Rs. 11.97 lakhs under "export promotion scheme premium." On the expenditure side, the cost of raw materials consumed has moved up by Rs. 50.73 lakhs to Rs. 223.38 lakhs and the manufacturing expenses by Rs. 11.58 lakhs to Rs. 42.25 lakhs. Payments to and provisions for employees have moved up from Rs. 86.31 lakhs to Rs. 97.63 lakhs. The gross profit has gone up by 25 per cent to Rs. 60.01 lakhs and the net profit by Rs. 4.17 lakhs, or about 20 per cent to Rs. 25.59 lakhs.

Out of the aforesaid profit and the carry forward balance of Rs. 9.38 lakhs, which included Rs. 8.42 lakhs for the dividend proposed in the previous year but not declared, the Directors have recommended payment of dividend on all types of shares for two years ended September 1959 and 1960. The audited accounts for the previous year were adopted and passed by the annual general meeting of the Company, subject to the qualification that the Directors re-examine their recommendation with regard to the payment of dividend on preference shares in the light of the representations received and the pronouncement of the Finance Minister on the subject. Now as the Preference Shares (Regulation of Dividend) Bill 1960 has been enacted, the allocation of dividends on preference shares for 1959 and 1960, has been made in conformity with the provisions of the Act. The dividend on the 8 per cent. cumulative preference shares has been recommended at 10.4 per cent, subject to tax, and on 5 per cent cumulative preference shares at 6.5 per cent subject to tax, allowing for the increase of 30 per cent over the rates of dividend, as both the classes of preference shares were tax-free originally. The dividend on ordinary and vendors shares has been recommended at Rs. 1.15 per share, subject to tax, for each year. A good part of the profit for the year under review has been ploughed back. Thus out of a net profit of Rs. 25.59 lakhs, the Directors have earmarked no less than Rs. 19.24 lakhs to reserves.

The following comparative table for the last four years reveals the progress achieved by the Company:

(In lakhs of rupees)

	For the year ended 30th September			
	1960	1959	1958	1957
Sale proceeds	3,99.75	3,55.60	2,98.28	3,61.43

Carry forward	0.89	9.38	0.65	0.75

* Subject to tax—dividends declared for two years ended September 1959 and 1960.

The increase in profits has been due largely to increased productivity and concentration on lines which yield better results. The conditions for cotton textile industry for the year were on the whole favourable, in spite of difficult cotton supply position. It is heartening to note that sales and gross profit for the year are highest in the post-war period. The Directors are hopeful of the results for the current year, in spite of reductions in prices and implementation of recommendations of the Wage Board. The performance of the Company on the export front has also been gratifying, inasmuch as, export earnings have increased from Rs. 73.75 lakhs to Rs. 125 lakhs in spite of a fall of nearly 150 million yards in India's exports of cotton textile during 1960.

In order to keep both the old mill and the new mill No. 2, in an up-to-date condition, the Directors have approved of capital expenditure to the tune of Rs. 73 lakhs. There has been some realignment of the reserves. A sum of Rs. 11 lakhs has been transferred from rehabilitation reserve to capital reserve in respect of the expenditure incurred during the year. Besides, a sum of Rs. 5 lakhs, being the amount of development rebate for 1957, 1958 and 1959 credited to rehabilitation reserve has been transferred to development rebate reserve.

The Company's balance-sheet as at 30th September 1960 reveals a satisfactory financial position, though it is marked by a few tangles. The paid-up capital stands at Rs. 78.20 lakhs, comprising of Rs. 11 lakhs in 8 per cent. cumulative preference shares of Rs. 100 each, Rs. 4.20 lakhs in 5 per cent 'B' cumulative preference shares of Rs. 10 each and Rs. 63 lakhs in ordinary and vendors shares of Rs. 10 each. Out of the total paid-up capital of Rs. 78.20 lakhs, more than 50 per cent. that is, Rs. 39.74 lakhs is held by the Holding Company, the British India Corporation Limited and its subsidiaries. The reserves and surplus stand at an impressive total of Rs. 141.48 lakhs but a part of it is neutralised by investments which are of a doubtful nature, as we shall show presently. During the year, an unsecured loan of Rs. 30 lakhs, being the unpaid amount of purchase consideration of Mill No. 2, was provided by the Secretaries and Treasurers (The British India Corporation Ltd.). Excluding this there are secured bank loans and current liabilities amounting to Rs. 137.84 lakhs, as against which there are large current assets and book debts (excluding investments) aggregating Rs. 243.89 lakhs. The net block of the Company stands at Rs. 57.28 lakhs after providing Rs. 158.72 lakhs for depreciation. During the year under review alone, there has been an increase in fixed assets of the order of Rs. 40.17 lakhs. The investments stand at Rs. 86.34 lakhs, mostly unquoted investments in the subsidiary companies (Shree Madhav Mills Ltd., which has gone into liquidation and Calico Processors Ltd.). The book value of quoted investments is only Rs. 0.58 lakh, the market value of which is Rs. 0.60 lakh. As most of the investments constitute a bad debt, the Directors had made a provision of Rs. 85 lakhs in Investment Reserve Account in the account for the year ended September 1958 by a transfer of Rs. 50 lakhs from capital reserve account and Rs. 35 lakhs from general reserve account.

The auditors in their report have remarked that title deeds of lands and buildings of Mill No. 2 were not shown to them, as the sale deed had not been executed till the time of the audit in December 1960, and that full recovery of the secured loan of Rs. 20 lakhs from Shree Madhav Mills Ltd. (in liquidation) is dependent on realisation of sufficient funds from the sale of the security. The accounts of the wholly owned subsidiary Shree Madhav Mills Ltd. (in liquidation) for the period from 1st April 1958 to 4th August 1959, the date prior to the subsidiary sent into liquidation, are not available and it has not been possible for the Directors of the Company to obtain the co-operation of the previous board of directors of that company for the production thereof. The Company's investments in Shree Madhav Mills Ltd. (in liquidation) are of Rs. 81.16 lakhs, comprising Rs. 10.08 lakhs in preference shares of Rs. 100 each, Rs. 51.08 lakhs in 25,000 ordinary shares of Rs. 100 each and Rs. 20 lakhs in secured loan by mortgage of land, buildings, plants, machinery, fixtures and fittings etc. These investments were made in 1956 at the instance of Mr. Haridas Mundhra, who had acquired the control of the British India Corporation Ltd. Finding that the Company was in possession of surplus funds, he mooted the idea of extension of its activities to Bombay and, in fact, had negotiated the purchase of the above shares. Due to the heavy loss, amounting to Rs. 24.69 lakhs, sustained by the subsidiary for the year ended 31st March 1958, the shortage of working capital became increasingly pronounced. In order to obviate further drain on the Elgin's finances, efforts were made to realise its investments in the subsidiary mill early in 1958 by disposing of the shares. As no acceptable offers were forthcoming, the Directors were left with the only recourse of taking the subsidiary into liquidation. It is estimated that the secured loan *plus* interest due thereon upto the date of payment will be recovered in full. No recovery in respect of the share capital is expected.

The Elgin Mill's No. 2, the unit which was previously known as the Cawnpore Cotton Mills (a branch of the British India Corporation Ltd.), was purchased by the Company in March 1960. This was restarted on 2nd May 1960, after extensive repairs and renovations. All endeavours have been made to put this unit on its feet. The trading results of the unit are expected to show considerable improvement in the current year.

The ruling quotation of the Rs. 10 paid-up ordinary shares of the Company is Rs. 20.87 *cum-div.* (Re. 1.61 net for two years). On an *ex-div.* basis, the yield works out to 4.1 per cent tax-free.

DECCAN SUGAR AND ABKHARI CO., LTD.

A longer working season for both the Samalkot and Pugalur factories was a feature of the working of the Deccan Sugar and Abkhari Company Ltd. for the year ended 31st May 1960. The season in Samalkot factory of 170 days started on 27th November 1959 and finished on 14th May 1960. During this period, 117,689 tons of cane were crushed, as against 95,617 tons in the previous year, yielding 11 179 tons of sugar, as against 9,134 tons. The average recovery dropped by 0.05 per cent to 9.50 per cent. The season in the Pugalur factory was also a long one, comprising 67 days of special season from 30th August 1959 to 4th November 1959 and of 149 days of the main season from 5th November 1959 to 11th April 1960. In the special season, 53 339 tons of cane were crushed, as against 49,705 tons in the previous season and 4,956 tons of sugar were produced, as against 4,497 tons. The recovery was also higher at 9.29 per cent, as compared to 9.05 per cent. In the main season, the production was lower on account of a decrease in the quantity of cane crushed. The total cane crushed amounted to 130,554 tons and 13,473 tons of sugar were produced, as against 143,339 tons and 13,862 tons, respectively in the previous season. The average recovery was higher by 0.65 per cent at 10.32 per cent. The total production of sugar by both the factories reveal an increase of 2,115 tons to 29,608 tons.

The total sales amounted to Rs. 361.23 lakhs, as against Rs. 363.64 lakhs in the previous year. The excise duty paid was lower by Rs. 2.71 lakhs at Rs. 90.79 lakhs and the cost of sales, including all expenses of production, selling and administration was also lower by Rs. 2.91 lakhs to Rs. 243.34 lakhs. Consequently the trading profit is higher by Rs. 3.21 lakhs at Rs. 27.09 lakhs. The net profit after taxation is also higher by Rs 2.89 lakhs at Rs. 16.47 lakhs.

The following comparative table for the last four years provides a synoptical view of the Company's operations:

(In lakhs of rupees)

	For the year ended 31st May			
	1960	1959	1958	1957
Sale proceeds	3,61.23	3,63.64	3,28.19	2,36.25
Other income	2.94	3.96	3.04	1.64
Closing stocks of goods and work-in-progress	83.90	90.66	1,17.46	1,24.55
Excise duty and cess on cane	1,00.36	1,01.70	72.77	37.54
Other expenses	2,23.50	2,20.87	2,19.07	1,65.81
Gross profit	40.26	36.02	39.40	34.54
Managing Agents' commission	3.46	2.98	3.55	3.05
Depreciation	7.18	6.43	5.45	4.94
Taxation	13.15	13.03	17.58	17.05
Net profit	16.47	13.58	12.82	9.50
To reserves	4.95	3.45	4.82	3.30
Dividends—				
7 per cent. preference	0.64*	0.70*	0.49	0.49
Ordinary	10.26	10.26	7.17	5.78
	(25½%)*	(25½%)*	(18%)	(17½%)†
Carry forward	1.29	0.67	1.50	1.10

* Subject to deduction of tax.
† Of this, the final dividend of 12 per cent. is on an increased capital.

The paid-up capital of the Company remains unchanged at Rs. 46.84 lakhs, comprising of 140,000 seven per cent cumulative preference shares of Rs. 5 each and of 796,800 ordinary shares of Rs. 5 each. The reserves and surplus, including the share premium account, amounts to Rs. 58.54 lakhs. The gross block of the Company at Rs. 145.32 lakhs stands depreciated at Rs. 67.09 lakhs. The market value of the quoted investments of Rs. 3.61 lakhs in Cauvery Sugars have risen to Rs. 5.10 lakhs as against Rs. 3.93 lakhs in the previous year. The financial position of the Company has distinctly improved. The current assets of Rs. 133.67 lakhs are Rs. 27.83 lakhs more than the current liabilities and provisions (Rs. 105.84 lakhs) and this surplus is about Rs. 3.29 lakhs higher than that of the year before.

The dividend on ordinary shares has been maintained at Rs 1 29 per share, subject to deduction of tax, while the dividend on preference shares has been raised from 7 per cent to 9.1 per cent subject to deduction of tax, strictly in accordance with the provisions in the Preference Shares (Regulation of Dividends) Act 1960.

The ordinary share of Rs. 5 paid-up at the current market quotation of Rs. 13.95 ex-dividend gives a tax-free yield of 6.4 per cent on a net dividend of Rs. 0.90 per cent.

HABIB BANK'S PROGRESS EXCELLENT

CAPITAL STRENGTHENED FURTHER

THE results of the Habib Bank Ltd. (Chairman: Ahmed Habib, Karachi) for the year ended 31st December 1960, are gratifying. They suggest that the Bank must have made substantial improvements in its business. The balance-sheet total has staged a rise of Rs. 7 crores, reaching a record level of Rs. 128.64 crores. There has been an addition of 15 offices during the year and the deposits have risen by more than Rs. 3 crores, taking them to a peak of Rs. 77.24 crores. This increase in deposits is on top of a rise of Rs. 3.57 crores witnessed in the previous year. Advances have also recorded an improvement of Rs. 1.52 crores to reach the record level of Rs. 31.04 crores. Thanks to the intensive utilisation of the funds of the Bank thus, in a period of acute monetary stringency, the liquidity ratio has dropped from 81.1 per cent to 72.6 per cent.

A bird's-eye view of the Bank's progress in the past four years can be had from the following comparative table:

(In lakhs of Pak. rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Gross income	8,15.83	2,80.35	2,59.51	2,19.87

Cash	13,54.87	11,13.15	20,31.24	15,76.76
Balance sheet total	128,04.14	121,63.62	94,68.94	82,62.78
Ratio to deposits of—	%	%	%	%
Advances	40.2	39.8	24.7	29.9
Investments	55.1	63.1	52.8	52.8
Cash	17.5	15.0	28.8	26.4

N.B.—The figure of interest paid is not shown separately. It is, perhaps, deducted from gross income before showing it in the profit and loss account.

It will be seen from the above table that gross earnings of the Bank (presumably after deducting interest paid) have risen by Rs. 35.48 lakhs to Rs. 315.83 lakhs. The profit (before providing for taxation) has, however, increased by only Rs. 2.50 lakhs to Rs. 174.23 lakhs. This is explained by the fact that the expenses of the Bank have risen sharply from Rs. 106.37 lakhs to Rs. 134.95 lakhs and the Bank has also provided a substantially larger amount for depreciation on its properties at Rs. 6.65 lakhs, as against only Rs. 2.25 lakhs in the previous year. The provision for taxation has been stepped up from Rs. 60 lakhs to as much as Rs. 1 crore.

The Directors have, once again, capitalised a sum of Rs. 1 crore out of the profit. This, of course, is not the first time they have done so. For, on four previous occasions also they had followed this unique policy. Thus, in 1947, they transferred from the profit to the capital account a sum of Rs. 12.50 lakhs, followed by Rs. 17.50 lakhs in 1948, Rs. 20 lakhs in 1949, and Rs. 50 lakhs in 1954. As a result of the capitalisation of Rs. 1 crore this year, the capital of the Bank stands raised to Rs. 3 crores divided into 6,000,000 shares of Rs. 5 each fully paid-up. All this means that, of the total paid-up capital of Rs. 3 crores, two-thirds represent capitalisation of profit. In addition, the Bank has reserves of the order of Rs. 2 crores. This is a record which few banks in Asia can boast of. It is noteworthy that the policy of strengthening the capital structure of the Bank from out of profits has not meant a lower return to shareholders. On the contrary, the latter have received more for the year under review, the amount absorbed by dividend being Rs. 52.50 lakhs, as against Rs. 30 lakhs for 1959.

As noted above, advances and bills have gone up by Rs. 1.52 crores, to Rs. 31.04 crores. Of this, loans, overdrafts and cash credits account for a rise of Rs. 46.55 lakhs at Rs. 25.57 crores and bills purchased and discounted for Rs. 1.05 crore at Rs. 5.46 crores. Investments are shown at cost or market value whichever is lower. Of the total investments amounting to Rs. 42.58 crores, Government securities are of the order of Rs. 40.83 crores (as against Rs. 45.24 crores a year ago), shares in joint-stock companies account for Rs. 31.17 lakhs (as against Rs. 31.12 lakhs in 1959) and bullion for Rs. 1.43 crores (Rs. 1.43 crores in 1959). Another noteworthy feature of the Bank's balance-sheet is an increase in both bills for collection and Bank's liability and acceptance and guarantees, the former from Rs. 4.21 crores to Rs. 4.72 crores and the latter from Rs. 28.26 crores to Rs. 35.49 crores.

(*Concluded from page* 328)

Federation is apprehensive that "the powerloom sector is capable of producing much more than 1,365 million yards and if it has not produced more, it will soon do so!" The fear is based on the ground that the number of powerlooms working with cotton yarn is somewhere between 80,000 and 90,000. It is estimated that to produce 1,365 million yards of cloth, there must at least be 54,000 looms, with 48,000 actually working. The number of powerlooms working one centre, namely, Bhiwandi near Bombay, alone is estimated at 17,000.

In the opinion of the Federation, the powerloom sector (particularly the small establishments) has usurped the handlooms as a result of which the latter have not been able to produce even 50 per cent of what was allotted to it. In this connection, the following figures are cited:

(In million yards)

	Second Plan target	*Performance in 1960*	*Target for third Plan*
Cotton mills	5,00	5,044	5,800
Handlooms	2,125	800	2,800
Powerlooms	405	1,365	500-600

The Federation alludes to the steep decline in the average annual production per loom in the co-operative fold from 951 yards in 1956 to 606 yards in 1959, and observes:

"In the light of this drastic drop in the production of handlooms, it is a matter for consideration as to what effective steps should be taken to help the handloom sector to increase its production from 800 million yards to 2,800 million yards. It is also not known what measures are contemplated by Government not only to step further depredations by the powerloom sector on the field allocated to handlooms, but also to cut down its production from 1,365 million yards to 500 to 600 million yards. The recent indulgence shown to this sector by allowing all unauthorised looms to regularise themselves by payment of a paltry fee of Rs. 100 per loom in easy instalments does not seem to be a pointer in this direction."

The opposition of the Federation to the development of powerlooms and its plea for the continuance of the uneconomic handloom sector are incongruous. Considering the poor productivity of handlooms and the woefully low level of earnings for persons depending on them for their living, the replacement of handlooms by powerlooms is, as the Kanungo Committee rightly declared (September 1954), inescapable. Even the Karve Committee, which forcefully championed the cause of small-scale industries and which the Federation itself quotes, has opposed in clear-cut terms the protection given to existing employment in means of production which have become completely obsolete or relatively very uneconomic.

ENGINEERING

(*Concluded from page* 336)

day have increased from 38.7 in 1950-51 to 47.6 in 1959–60 on broad-gauge sections but decreased from 31.2 to 30.3 on metre-gauge sections. There has come about some improvement in fuel consumption; in 1959-60, this was 145 lbs. per 1,000 gross ton-miles (goods), as against 164 lbs. in 1950-51 on broad-gauge sections and 193 lbs. and 203 lbs. respectively on metre-gauge sections. These are only a few of the indices of operating efficiency which are referred to here by way of illustration. There is also to be found in the brochure a review of expenditure (under the various heads like "repairs and maintenance," "operating staff." "fuel," etc.) in relation to performance. The Railway Board has taken great pains to show that the comparable expenses-earnings ratio has shown some improvement between 1950-51 when it was 67.7 and 1959-60 when it was 66.2. It is to be hoped that the railways will maintain steady improvement in this regard, howsoever modest it may be.

COMPANY MEETINGS AND DIVIDENDS

NEW INDIA SUGAR MILLS LTD. Annual General Meeting, Calcutta, 27th February 1961. Dividend: Rs. 3.65 per ordinary share, subject to deduction of tax, payable on or after 20th March 1961. Transfer books remain closed from 20th to 27th February 1961, both days inclusive.

TIRUMBADI RUBBER CO., LTD. Annual General Meeting, Calicut, Kerala State, 4th March 1961. Dividend: 7 per cent or Re. 0.07 per share, subject to deduction of tax. Transfer books remain closed from 25th February to 4th March 1961, both days inclusive.

RAVALGAON SUGAR FARM LTD. Annual General Meeting, Bombay, 7th March 1961. Transfer books were closed from 25th January to 18th February 1961, both days inclusive.

CALCUTTA STEAM NAVIGATION CO., LTD. Annual General Meeting, Calcutta, 10th March 1961. Dividend: 10 per cent or Re. 1.00 per share, subject to deduction of tax. Transfer books remain closed from 25th February to 10th March 1961, both days inclusive.

ASIAN CABLES CORPORATION LTD. **First Annual** General Meeting, Bombay, 10th March 1961. Dividend: *Nil.* Transfer books remain closed from 24th February to 10th March 1961, **both days** inclusive.

BHOPAL SUGAR INDUSTRIES LTD. Annual General Meeting, Sehore, Madhya Pradesh, 11th March 1961. Dividend: Rs. 2.25 per ordinary share, subject to deduction of tax.

EASTERN INVESTMENTS LTD. Annual General Meeting, Calcutta, 13th March 1961. Dividend: 14 per cent or Rs. 14.00 per ordinary share, subject to deduction of tax, payable on or after 27th March 1961. Transfer books will remain closed from 6th to 13th March 1961, both days inclusive.

BABABUDIN COFFEE AND PRODUCE CO., LTD. Annual General Meeting, Bangalore, 15th March 1961. Dividend: 8 per cent or Re. 0.40 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 2nd to 15th March 1961, both days inclusive.

STANDARD BATTERIES LTD. Annual General Meeting, Bombay, 15th March 1961. Dividend: Rs. 15.00 per share, subject to deduction of tax, payable after 23rd March 1961. Transfer books will remain closed from 8th to 21st March 1961, both days inclusive.

VOLTAS LTD. Annual General Meeting, Bombay, 16th March 1961. Dividend: Rs. 13.00 per share, subject to deduction of tax, payable on and after 22nd March 1961. Transfer books remain closed from 14th February to 6th March 1961, both days inclusive.

LOYAL TEXTILE MILLS LTD. Annual General Meeting, Kovilpatti, 16th March 1961. Dividend: Nil. Transfer books will remain closed from 8th to 16th March, 1961, both days inclusive.

SHREE KRISHNA GYANODAY SUGAR LTD. Annual General Meeting, Dalmianagar, Bihar, 17th March 1961. Dividend: 15 per cent or Re. 1.50 per share, subject to deduction of tax. Transfer books will remain closed from 7th to 17th March 1961, both days inclusive.

T. STANES AND CO., LTD. Annual General Meeting, Coimbatore, 22nd March 1961. Dividend: 22½ per cent or Rs. 2.25 per ordinary share, final (includes centenary bonus of 5 per cent or Re. 0.50 per share), subject to deduction of tax. Transfer books will remain closed from 8th to 22nd March 1961, both days inclusive.

MADURA MILLS CO., LTD. Annual General Meeting, Madurai, 27th March 1961. Dividend: 15 per cent or Rs. 2.25 per share, for the year ended 31st December 1960. Transfer books will remain closed from 28th February to 27th March 1961, both days inclusive.

WEST COAST PAPER MILLS LTD. Annual General Meeting, Bombay, 28th March 1961. Dividend: Rs. 6.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 13th to 28th March 1961, both days inclusive.

BOMBAY POTTERIES AND TILES LTD. Annual General Meeting, Bombay, 3rd April 1961. Dividend: Rs. 12.86 per share, subject to deduction of tax, payable on and from 18th April 1961. Transfer books will remain closed from 13th March to 11th April 1961, both days inclusive.

INDIAN STEEL ROLLING MILLS LTD. Taxable interim dividend of Re. 0.50 per ordinary share, for the period 15 months ending 31st March 1961.

K. C. P. LTD. Taxable dividend of 15 per cent or Re. 1.50 per ordinary share, for the year ended 30th June 1960. Transfer books will remain closed from 27th February to 7th March 1961, both days inclusive.

DEVASHOLA (NILIGIRI) TEA ESTATES CO.. LTD. Taxable interim dividend of 10 per cent or Re. 1.00 per share, for the year ending 31st December 1960. Transfer books will remain closed from 3rd to 11th March 1961, both days inclusive.

RALLIS INDIA LTD. Taxable dividend of 4 per cent or Rs. 4.00 per ordinary share. for the year ended 31st August 1960. Transfer books will remain closed from 3rd to 23rd March 1961, both days inclusive

COONOOR TEA ESTATES CO., LTD. Taxable final dividend of 7½ per cent or Re. 0.75 per ordinary share (making a total of 17½ per cent or Re. 1.75 per share, for the year), for the year ended 30th September 1960.

BALLARPUR PAPER AND STRAW BOARDS LTD. Taxable dividend of 14 30 per cent on the ordinary capital. for the year ended 30th June 1960.

KUMERGODE ESTATES LTD. Taxable dividend of 20 per cent or Re. 0.40 per share, for the year ended 31st October 1960. Transfer books will remain closed from 12th to 25th March 1961, both days inclusive.

SYNOPSES OF COMPANY REPORTS

New India Sugar Mills Ltd.

THE directors of the above Company (Managing Agents: The Cotton Agents Private Ltd., Bombay) present the audited accounts of the Company for the year ended 30th June 1960.

The accounts show a profit of Rs. 12,47,439 (Rs. 13,33,135). Out of this provision has been made for depreciation, amounting to Rs. 2,42,337 (Rs. 2,02,411), development rebate reserve Rs. 1,07,701 (Rs. 68,027), taxation Rs. 4,45,000 (Rs. 4,70,000) and to general reserve Rs. 75,000 (Rs. 2,50,000) leaving a sum of Rs. 3,77,401 (Rs. 3,35,347 after providing Rs. 7,350 for contingencies). To this amount has been added the balance brought forward from the previous year of Rs. 6,246 (Rs. 18,295) making a total sum available for disposal of Rs. 3,83,647 (Rs. 3,53,642). The directors recommend payment of dividends subject to deduction of tax under the Income-tax Act, as under:—On 486 cumulative preference shares of Rs. 100 each at 12.21 (9 per cent tax-free) per cent per annum, absorbing Rs. 5,934 (Rs. 4,374), on 10,000 cumulative redeemable preference shares of Rs. 100 each at 5½ per cent per annum, absorbing Rs. 55,000 (Rs. 55,000) and on 78,910 ordinary shares of Rs. 10 each at Rs. 3.65 (Rs. 3.65) per share, absorbing Rs. 2,88,022 (Rs. 2,88,022) leaving a balance to be carried forward of Rs. 34,691 (Rs. 6,246).

In view of the recent changes brought about by the Finance Acts 1959 and 1960 in the matter of deduction of tax on dividends, the Company declared and paid dividend for the year ended 30th June 1959 on 486 7½ per cent tax-free participating preference shares at a rate which after deduction of tax at 30 per cent amounted to 9 per cent. As regards 10,000 5½ per cent taxable preference shares, the dividend was declared and paid at 5½ per cent without deduction of tax paid by the Company on its profits. Since then, the preference shares (Regulation of Dividend) Act 1960 has been passed. The directors, however, feel and recommend that the rights attached to 486 tax-free participating preference shares should be so modified as to confer on them a right to a dividend at the rate of 10.71 per cent subject to deduction of tax under the Income-tax Act instead of 7½ per cent tax-free and with right to participate for additional dividend upto a limit of 1.5 per cent subject to deduction of tax as aforesaid if the ordinary shareholders are paid dividend in excess of 10.71 per cent. As regards 10,000 preference shares the directors recommend that their rights be modified so as to entitle them to a dividend at 5½ per cent without deduction of tax on Company's account but subject to deduction of tax at rates prescribed under the Income-tax Act.

During the year under review the factory worked for 148 days and crushed 42,70,529 maunds of sugarcane against 112 days and crushing of 32,88,397 maunds in the previous year. The recovery was lower at 9.16 per cent against 9.8 per cent in the previous year. The lower recovery which was in common with the other sugar mills in North Bihar was due to the cane crop having been affected by drought and red rot disease. During the current season a crushing of about 55 lakh maunds of cane is expected.

The Government of India announced certain incentives to the sugar factories during the year to encourage increased production of sugar. The incentives were in the shape of a concession of 31 nP per maund of cane crushed up to 2nd November 1959 if crushing was started on or before 10th November 1959 and a rebate of 50 per cent of the basic excise duty on production during the season 1959-60 in excess of the average production of the seasons 1957-58 and 1958-59. The excess production amounted to about 43,278 maunds.

Direct allotment by the Government in respect of sugar released for internal consumption as also control on distribution and price of sugar are continuing. In October 1960 the Government of India allotted an export quota of 299.49 tons of sugar from the production of the season 1959-60 to the mills against a quota of 77.37 tons from the production of season 1958-59.

The term of office of The Cotton Agents Private Limited, the managing agents of the Company expired on the 15th August 1960. They were reappointed as managing agents of the Company by the shareholders for a further period of 10 years with effect from 15th August 1960. The Government of India have, however, approved the reappointment for a period of five years only. The remuneration payable to the managing agents is to be calculated on the basis of general sliding scale laid down by the Government starting from 10 per cent on the first Rs. 10 lakhs, going down to 4 per cent above Rs. 1 crore.

Bababudin Coffee & Produce Co., Ltd.

The directors of the above Company [Managing Agents: Messrs. A. V. Thomas & Co. (Mysore) Private Ltd., Bangalore] present the audited accounts of the Company for the year ended 30th June 1960.

The acreage of the Estate is as follows:—Coffee in bearing 538.75 acres; coffee new clearing 20.00 acres; cardamoms 11.25 acres; uncultivated lands 698.00 acres and paddy fields 48.00 acres. The paddy fields comprising of 48 acres have been acquired by the Government for the construction of Lakka Valli Dam. The Company has already lodged a claim with the Government for adequate compensation towards these and it is expected a suitable amount will be paid by the Government shortly.

Owing to the poor blossom showers and unsatisfactory weather conditions subsequently, the crop harvested during the season was 2,253 (3,301) cwts. only and the cost of production has been high, being Rs. 137.39 (119.42) per cwt. owing to this poor crop. Besides, the usual cultivation works like manuring, spraying, etc., had to be carried out, in order not to affect the crop prospects for the next season. The whole crop was delivered to the Coffee Pool and dividends received from the Coffee Board to the extent of Rs. 2 per point todate.

After providing for depreciation and minimum managing agency remuneration, the net loss for the season under review is Rs. 47,778 (profit of Rs. 73,398). The directors recommend payment of 6 per cent dividend on preference shares, subject to deduction of income-tax and 8 (12½) per cent dividend on equity shares, also subject to deduction of income-tax. With a view to effect the above payments, the directors propose to transfer from general reserve Rs. 45,000 (*nil*) and from dividend equalisation reserve Rs. 47,000 (*nil*) giving a total of Rs. 92,000 (*nil*). To this is added the balance brought forward from previous season of Rs. 8,216 (Rs. 2,818) making a total of Rs. 1,00,216 (Rs. 76,216). From this amount is deducted the net loss for the season of Rs. 47,778 (*nil*) leaving an available balance of Rs. 52,438 (Rs. 76,216). This amount the directors recommend being appropriated as under:—To payment of 6 per cent dividend on preference shares, subject to deduction of income-tax, absorbing Rs. 18,000 (Rs. 18,000) and to payment of 8 (12½) per cent dividend on equity shares, subject to deduction of income-tax, absorbing Rs. 32,000 (Rs. 50,000) leaving a balance to be carried forward to next season of Rs. 2,438 (Rs. 8,216).

Preference dividend: Increase if any in the dividend on preference shares as per the provision of the Preference Shares (Regulation of Dividend) Act of 1960 will be given effect to and the amount of increased dividend will be paid to the preference dividend shareholders when the relative rules are published. It may however be mentioned that as the Company's income is almost agricultural, the increase in the dividend may be very negligible.

According to the original estimates, the coffee crop for the season 1960-61 was 3,000 cwts. the estimated expenditure being Rs. 144.25 per cwt. The latest reports from the Estate, however, indicate the probability of harvesting about 4,000 cwts. or 200 tons for the season.

Accounts in brief are as under:—

Standard Batteries Ltd.

The directors of the above Company (Managing Agents: The Industrial Enterprises Private Ltd., Bombay) present the audited accounts of the Company for the year ended 30th June 1960.

The profits for the year after providing for depreciation, bonus, provision for gratuity to employees, statutory development rebate reserve, reserve for bad and doubtful debts, all expenses including reserve for plant modernisation and development and general reserve amounted to Rs. 16,82,985 (Rs. 9,89,197). After adding the amount brought forward from last year's accounts [including Rs. 1,697 (*nil*) excess provision for bonus in the previous year] of Rs. 9,920 (Rs. 33,470) there is a total sum available for disposal of Rs. 16,92,905 (Rs. 10,22,667). The directors recommend this amount to be utilised as under:—

To pay a dividend on 37,500 ordinary shares at Rs. 15 (Rs. 14) per share, subject to deduction of tax, absorbing Rs. 5,62,500 (Rs. 4,13,194), to provide for taxation Rs. 9,15,000 (Rs. 5,70,000), to transfer to dividend equalisation fund Rs. 2,00,000 (*nil*) and for underwriting commission written off *nil* (Rs. 31,250) leaving an amount to be carried forward of Rs. 15,405 (Rs. 8,223).

The operations for the year under review were satisfactory and resulted in a gratifying improvement in production, sales and profits in spite of keen competition and lower selling prices. The directors have thought it fit to make the following adjustments in the accounts to create a general reserve of Rs. 4,50,000 (*nil*) as follows: By transfer of excess of provision against reserve for repayment of I.F.C. loan Rs. 2,30,000, by transfer of excess provision for taxation Rs. 1,50,000 and including the amount appropriated this year's profits Rs. 70,000. The directors have further created out of the profits a reserve for plant modernisation and development by appropriating a sum of Rs. 2,00,000 and have also created a dividend equalisation fund out of the profits of this year amounting to Rs. 2,00,000.

During the year under report, the Pg Tube Manufacturing Plant was operating satisfactorily and this has enabled the Company to take up, in addition to the train lighting batteries, other important applications for the Pg Batteries such as the exceptionally heavy duty batteries for *Fort-lift* Trucks, Platform Trucks and for Diesel Locomotives, and for stationary batteries for Signal Switchgear operation and special types for Telephones. With the installation of this Pg Tube Making Plant, the factory is producing today hundred per cent of all its components under control conditions at its Bombay works.

The demand on the products of the factory in the various fields of lead acid battery application is steadily increasing and schemes for augmenting manufacturing facilities both as regards balancing equipment and covered space were undertaken during the year under report. A most modern and well-equipped formation and charging building with all the facilities for proper control and handling of material in this department, is nearing completion and would be fully utilised in the coming months. This facility was one of the important bottleneck in the Company's production all these years.

With the sanction of a higher limit in the consumption of electric power, the sub-station of the factory has been remodelled to accommodate 3-250 kVA and 1-500 kVA transformers and necessary high tension and low tension controlgears have been ordered. On the completion of this within the coming months, the Company will eliminate the possibilities of shut-downs and better the control of distribution. It is hoped that before the end of the current year, the Company shall have all these facilities at the disposal of its works and be prepared to meet not only the increased internal demand for the products of the factory, but also to take care of the possibilities for export. Attempts for the export of "STANDARD" Brand Batteries during the current year has been encouraging and it is hoped that in the very near future the Company will build up a sizable export market.

Accounts in brief are as under:—

Eastern Investments Ltd.

The directors of the above Company [Secretaries: Messrs. Bird & Co. (Private) Ltd., Calcutta] present the audited accounts of the Company for the year ended 31st December 1960.

The profit and loss account after providing for all charges and making provision of Rs. 8,22,872 (Rs. 7,53,196) for taxation, shows a profit of Rs. 10,25,495 (Rs. 9,20,025) to which is added the balance brought forward from the previous year of Rs. 3,52,237 (Rs. 3,25,471) making a total of Rs. 13,77,732 (Rs. 12,45,496). From this amount the directors have transferred to general reserve Rs. 2,00,000 (Rs. 50,000). The interim dividend declared on 27th July 1960, on the taxable cumulative preference shares at 2½ per cent, subject to deduction of tax under Section 18(3D) of the Indian Income Tax Act absorbed, Rs. 62,500 (Rs. 62,500) leaving a balance available of Rs. 11,15,232 (Rs. 11,32,377 after writing off Rs. 619 being loss on sale of investments). The directors propose to dispose of this amount as follows:—

By payment of final dividends subject to deduction of tax under Section 18(3D) of the Indian Income Tax Act at the time of payment—on the taxable cumulative preference shares at 2.50 per cent i.e. at 5 per cent per annum, increased by 11 per cent thereof in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, less income-tax at the Company's rate of 20 per cent [making a total of Rs. 4.44 per cent per annum] absorbing Rs. 48,000 (Rs. 62,500) and on the issued ordinary shares at 14 (14) per cent per annum absorbing Rs. 7,17,640 (Rs. 7,17,640) leaving a balance to be carried forward of Rs. 3,49,092 (Rs. 3,52,237).

Investments.—The Company's portfolio is representative of investments which are quoted on certain shares costing Rs. 78,168 for which no quotations are available. The total of the market value of the investments for which quotations are available together with unquoted investments as valued by the directors, exceeds the book value at 31st December 1960, by Rs. 67,90,171.

Accounts in brief are as under:—

Notices

RAZA BULAND SUGAR COMPANY LIMITED
RAMPUR, U.P.

NOTICE

IS HEREBY GIVEN THAT THE 26TH Annual General Meeting of the Shareholders of the Company will be held at Govan Building, Rampur, U.P., on Wednesday, the 22nd March, 1961, at 10 a.m., to transact the following business:—

1. To receive and consider the report of the Board of Directors and Auditors and the Audited Statements of Accounts of the Company for the financial year ended 31st October, 1960.
2. To declare dividend.
3. To appoint a Director in place of Shri R. P. Nevatia, who retires by rotation at the meeting, and is eligible for re-appointment.
4. To appoint a Director in place of Raizada Jagmohan Lal, who retires by rotation at the meeting, and is eligible for re-appointment.
5. To appoint Auditors for the financial year 1960-61 of the Company and to fix their remuneration. Messrs. V. Sankar Aiyar & Co., Chartered Accountants, the retiring Auditors, are eligible for re-appointment.
6. To consider any other business that can be transacted at the Annual General Meeting with the permission of the Chair.

Special Business.

A. To consider and, if thought fit, to pass the following Resolutions as Ordinary Resolutions:—

7. "RESOLVED that the re-appointment of Beopar Sahayak Private Ltd. for a period of five years with effect from 1st April, 1961 as the Company's Sole Selling Agents for the sale of sugar manufactured by the Company, except the sugar sold for export, on a commission of ¾% on the sugar sold against Government allotments and 1% on the free sales of sugar calculated on the net ex-factory sale proceeds, subject to the provision that it can be terminated earlier by three months' notice on either side be and is hereby approved."
8. "RESOLVED that the consent of the Company be and is hereby given to the Board of Directors of the Company borrowing moneys from time to time, whenever required, for the business of the Company provided that the borrowings so made (apart from the temporary loans obtained from the Company's bankers in the ordinary course of business) shall not at any time exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose, by more than Rs. 3 crores."

B. To consider and, if thought fit, to pass the following Resolutions as Special Resolutions:—

9. "RESOLVED by way of Special Resolution that existing Article 136(*a*) of the Articles of Association of the Company be and is hereby deleted and substituted by the following:—

   136(*a*) (i) The seal on Share Certificates shall be affixed in presence of such persons as are authorised from time to time to sign the share certificates in accordance with the provisions of the Companies (Issue of Share Certificates) Rules, in force from time to time.

   (ii) On instruments other than Share Certificates the seal shall not be affixed except in presence of a Director or any other person or persons authorised in that behalf by the Board, who shall sign every instrument to which the seal shall be affixed."

10. "RESOLVED by way of Special Resolution that approval be and is hereby given to the arrangement with Govan Bros. (Rampur) Private Ltd., Managing Agents of the Company, and The Shevaroy Bauxite Products Co. Private Ltd., an Associate of the Managing Agents, allowing them the use of the services of Shri Bhim Sen, an Officer of the Company, for part of his time for their work on payment to the Company of Rs. 100 and Rs. 150 per month respectively, with effect from 1st May, 1956, and on an increased payment of Rs. 200 and Rs. 250 per month respectively, with effect from 1st January, 1961. Provided further that Govan Bros. (Rampur) Private Ltd., and The Shevaroy Bauxite Products Co. Private Ltd., shall make payments to the Company for each month before the close of the following month."
11. "RESOLVED by way of Special Resolution that approval be and is hereby given to continuance of Shri Laxmi Narain Modi, a relative of a Director of the Company and an associate of the Managing Agents, as the Chief Executive Officer of the Company with effect from 28th December, 1960, on the revised salary of Rs. 2,500 per month, consolidated in the scale of Rs. 2,500-100-3,500 plus free furnished residential accommodation (including electricity and water), free conveyance and medical facilities including special treatment for him and his family, payment of premium for personal accident insurance upto an insured amount of Rs. 1,50,000, payment of clubs/associations subscriptions and bills together with such other facilities and amenities as may be or are given by the Company to other officers in respect of Provident Fund, leave, bonus, gratuity, etc."

Explanatory statement of the Special Business in terms of Section 173 (2) of the Companies Act, 1956, has been forwarded to the members with the notice.

The Share Transfer Books of the Company will remain closed from 1st March, 1961 to 24th March, 1961.

A member entitled to attend and vote at the meeting is entitled to appoint one or more proxies to attend and vote instead of himself, who need not necessarily be a member. Such proxies should reach the Company at least 48 hours before the meeting.

By Order of the Board,
FOR RAZA BULAND SUGAR CO., LTD.,
S. K. KAUL,
Secretary.

NEW DELHI,
Dated 27th January, 1961.

Note: (1) Shareholders are requested to notify change of address, if any, failing which the Dividend Warrants will be posted to their addresses as registered with the Company.

(2) Persons holding shares on blank transfer should submit such shares for transfer complete in every respect before the closure of transfer books in order to be entitled to the dividend on such shares.

(3) Shareholders whose income is not liable to Income-tax and therefore want no tax to be deducted from their dividend amount should arrange an Exemption Certificate to be sent to the Company by 6th March, 1961 by the Income-tax Officer of their respective Circle. In the absence of such certificates Income-tax will be deducted at the rates applicable under the current Income-tax Law.

27 FEB 1961 PUBLIC DEPARTMENT

MONEY STILL TIGHT

(*From Our Own Correspondent*)

BOMBAY, *22nd February*

The short-term money market is still in the grip of seasonal pressure of demand for funds, with no signs of relief in the very near future. Banks continue to increase their borrowings from the Reserve Bank, in order to meet the calls on them from trade and industry. Inter-bank call money is quoted at the same rate as in the previous weeks, namely, 5½ per cent. There is no change in short-term interest rates.

No new features are disclosed by the results of the sale of 91 days' Treasury Bills through weekly tenders. While the total amount offered was unchanged at Rs. 2 crores, as against an invitation for a like amount, the average rate of accepted tenders was up again, albeit slightly, from Rs. 2.590 to Rs. 2.650 per cent per annum. Sales of 91-days' Intermediate Treasury Bills fetched Rs. 5 lakhs, same as in the previous week.

A decline of Rs. 8.15 crores in notes in circulation is disclosed by the Reserve Bank of India's statement for the week ended 17th February 1961. This brings the total notes in circulation to Rs. 1,940.66 crores. There has, however, been a rise of Rs. 8.52 crores in notes held in the Banking Department and, consequently, the total notes issued have risen by Rs. 36.85 lakhs only. The foreign securities held by the Issue Department are still unchanged at Rs. 128 crores. But, balances held abroad have improved, for the second week in succession, by Rs. 5.08 crores, taking up the total foreign assets to Rs. 157.56 crores. The deposits of banks with the Reserve Bank have slightly risen by Rs. 94.94 lakhs; they are now of the order of Rs. 71.39 crores. The other loans and advances given by the Reserve Bank have dropped by Rs. 6.33 crores. Advances to Scheduled banks against usance bills have continued to grow, the exact increase during the week being Rs. 2.64 crores. They now aggregate Rs. 26.90 crores, as against Rs. 5.38 crores a year ago.

The Scheduled Banks' statement for the week ended 10th February 1961 shows a net decline of Rs. 2.75 crores in total deposits. Inter-bank borrowings of demand nature have fallen by Rs. 98.86 lakhs, while those of time variety have increased by Rs. 54.96 lakhs. The total borrowings from the Reserve Bank have risen by Rs. 2.67 crores, of which the share of usance bills is Rs. 1.90 crores. Borrowings from the State Bank of India of demand nature have increased by Rs. 54.36 lakhs, while those of time nature have fallen by Rs. 15 lakhs. Advances and bills (bank credit) have risen sharply by Rs. 16.28 crores, on top of a rise of Rs. 13.70 crores in the preceding week, taking their total to Rs. 1,255.31 crores. A year ago, this portfolio stood at Rs. 1,049 crores. Investments, have staged a fall of Rs. 8.84 crores.

The statement of affairs of the State Bank of India for the week ended 10th February 1961 discloses a rise of Rs. 2 crores in deposits. Advances have increased more sharply by Rs. 9.21 crores. As noted earlier, investments have dropped by Rs. 8.10 crores. Money at call and short notice shows a fractional rise of Rs. 46 lakhs, while total cash has actually declined by Rs. 1.42 crores.

The Gilt-edged market continued to show considerable activity during the week under review. Prices of some of the Central loans have slightly increased. For example, 2½ per cent 1962 and 3 per cent 1963-65 have risen by 10 nP and 5 nP, respectively, while 3 per cent 1966-68 funding loan and 3 per cent 1970-75 first development loan have advanced by 20 nP each. The highest rise—25 nP—is recorded in 3 per cent 1964. State loans also experienced good support and their prices have moved up more sharply than those of Central loans. Some 4 per cent. loans maturing in 1967 and 1968 gained as much as 75 nP to 90 nP, while those maturing later recorded improvements ranging from 10 nP to 50 nP.

In the foreign exchange section, the rupee has weakened slightly. The banks selling rate for ready T.T. has moved up from Rs. 477.25 to Rs. 478.50 per 100 dollars and so also the buying rate from Rs. 474.50 to Rs. 475.00 per 100 dollars. In the New York market, the pound sterling continued to be quiet with the sterling-dollar rate further down. The latest available rates are 279.800-279.840 per £ for spot and 279.080-279.120 per £ for three months' forward. As compared with the corresponding rates as on 15th February, they show a decline of 0.26 cent and 0.40 cent respectively.

TEA DECLINES

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *14th February*

Offerings in Sale No. 7 held today amounted to 395,000 kilograms. Quality in general showed no change compared to last week but there were a few invoices where slight improvement was noticeable. The market met with good demand but prices were generally lower for most of the descriptions. There was useful inquiry for plain, low mediums and mediums which were irregularly easier by up to 15 nP whilst good mediums declined by 20 to 30 nP. Best liquoring teas were in fair demand although these sold at considerably lower rates. There was good demand for C.T.C. and legg-cut types which were firm to dearer. Whole leaf grades were well supported and sold at around last week's rates. Tippy teas sold well.

	1961 Rs.	1960 Rs.
Low medium	4.75-4.95	4.41-4.63
Medium	4.95-5.25	4.63-5.07
Good medium	5.25-5.80	4.96-5.40
Quality	5.60-7.75	5.73-9.15

The average price realised in Sale No. 7 was Rs. 5.22 per kilo as against Rs. 5.35 in the previous week and Rs. 5.45 in the corresponding sale last year.

Dust Sale.—A total quantity of 172,000 kilograms was on offer in Dust Sale No. 7 held on 16th February. Quality was well maintained. There was a good demand at generally lower rates. Colourv mediums met with useful support and were easier by 10 to 15 nP whilst low mediums and residuals declined by up to 20 nP. Highgrown dusts also shared in the downward trend of the market. C.T.Cs and legg-cut types were in good demand and are quoted steady.

The average price realised in Dust Sale No. 7 was Rs. 5.02 per kilo as compared with Rs. 5.18 a week ago.

Export Quota.—The Government has announced a final release of quota of 5 per cent on the best crop basis for the year 1960-61. This makes a total release for the year of 65 per cent. At the time of writing there are large sellers at ¼ nP per kilo with no ready buyers.

London—North Indian and other growths.—In Monday's sale the market met with good demand and prices were firm to dearer for all descriptions.

Ceylon and South Indians.—26,290 packages were offered on Tuesday of which 7,464 packages were from South India which met with good demand and prices were firm to dearer all round.

As we go to press, Messrs. Forbes. Ewart and Figgis (Private) Ltd. wire:—

"*Sale No.* 8.—395,000 kilograms. Good general demand at lower rates. except good mediums which were dearer with quality. Low mediums 10 to 15 nP easier. Mediums upto 10 nP lower. Highgrowns irregular demand at much easier rates. Whole leaf 15 to 20 nP easier."

BULLION PRICES LOWER, DESPITE RECOVERY TODAY

(*From Our Own Correspondent*)

BOMBAY, *22nd February*

The bullion market began the week on a distinctly firm note, but developed a sagging tendency thereafter which persisted till today when the market picked up strength again. The initial firmness was engendered by reports of larger offtake in upcountry centres on account of the marriage season, bullish fervour of other commodity markets and expectation of delay in the Forward Market Commission's decision on six-monthly contracts in bullion following the permission given to commence business in the *Chaitra* (April) settlement with effect from the 16th inst. Both gold and silver, as a consequence, registered a rise. From Friday onwards, the prices drifted downward, thanks to liquidation of stocks by a few parties, heavy arrivals and fears regarding the application of the Forward Contracts (Regulation) Act to Calcutta and Delhi centres. Today, there was a recovery induced by revival of fresh buying and scattered short-covering. Over the week, values were lower, excepting for ready gold which was a shade better.

The average daily arrivals of gold during the week were higher at 5,600 tolas, as against 5,335 tolas in the previous week, while those of silver are lower at 21 bars, as against 23 bars. Offtake of both gold and silver was higher, the daily average being 3,600 tolas and 11 bars; the corresponding figures for last week were 3,335 tolas and 8 bars, respectively. The floating stocks are reported to be around 45,000 tolas of gold and 500 bars of silver.

A feature of trading in the bullion market during the week was that the rate for transferring commitments from the *Fagun* (March) to *Chaitra* (April) settlement continued to be in favour of bulls, though the actual rate declined from 95 nP on Thursday, 16th inst., to 35 nP today. In gold, the rate was in favour of bulls on Thursday to the extent of 10 nP but turned against them on the following day (actual rate was 5 nP). In the subsequent two sessions, the two contracts were quoted on par. The rate was against bulls to the tune of 5 nP yesterday which disappeared today when the contracts were again quoted on par.

Adjustment rates fixed today were Rs. 121.55 per 10 grams (0.85 tola) for gold and Rs. 206.05 per kilogram (85.7 tolas) for silver.

Adjudication proceedings before the customs authorities as well as criminal proceedings have been instituted against two persons involved in smuggling of gold on board the ship *Eastern Moon* at Calcutta on 31st December 1960. The total quantity of gold seized was 128 tolas valued at about Rs. 17,100.

The world price of gold in the London bullion market eased further from $35.16½ to $35.12 per fine ounce. Ready gold, after rising initially from 251s. to 251s. 1d., declined to 250s. 11d. before finishing at 251s. yesterday. Ready silver was unchanged at 79½d., while forward gained a further ½d. to 80½d. Silver in New York continued unchanged at 91.375 cents.

The following table shows the trend of the market during the week:

	22-2-1961 (closing)	High	Low	14-2-1961 (closing)
GOLD				
Ready (.99 fine)	Rs. 121.80	Rs. 122.10	Rs. 121.00	Rs. 121.75
Forward:				
*Fagun**	121.65	122.25	121.05	121.75 †
Chaitra**	121.65	122.15	121.05	121.80§

* 1st March settlement. † 2nd March settlement.
** April settlement. †† April settlement. § Starting rate on 16-2-60.
N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES STEADY

(*From Our Own Correspondent*)

BOMBAY, *22nd February*

The trend of the cotton futures market during the week was in distinct contrast to that obtaining in the previous two weeks. The market seemed to have shaken off its nervousness and regained poise. Prices were remarkably steady with a tendency to edge higher as compared with the all-round easiness witnessed a fortnight ago. This change can be attributed to two immediate reasons. First, emergence of fresh buying prompted by reports of a decline in cloth stocks with mills and rising trend of raw cotton consumption. Second, higher advices from the spot market where there was a general revival of mill interest in almost all popular varieties. The market was already in an oversold position and these influences were sufficient to spark a recovery. The Jarilla April contract, which was quoting around Rs. 557.75 per three quintals last week-end, rose gradually to Rs. 564.75 yesterday before closing at Rs. 562.00. The contract was firm in today's dealings. It is currently priced at Rs. 566, about Rs. 8.25 higher than last week-end quotation. Market observers are of the view that a sharp change in trading sentiment is unlikely until the Budget.

In the spot market as noted above, there was a broadening of mill demand. Most of the popular varieties such as CO2, L.147, Khandesh, Vijay and Digvijay received inquiries although actual business done was limited. Spinners are inclined to await a further fall in prices. Interest in Laxmi and Jaydhar is steadily increasing because these varieties are of good quality this season. In fact, mills are said to be turning more and more to these cottons in preference to Vijay and Digvijay.

In three days after the announcement of the second export quota of 50,000 bales of Bengal *Deshi*, the ceiling fixed for the export of cotton on first-come-first-served basis namely, 28,500 bales, was reached. Although this is an encouraging feature many shippers regret that the practice adopted under the latest quota of apportioning the entitlement between established shippers and others, will lead to the revival of the evil system of trading in export licences.

Interest in foreign cotton was subdued. Stray enquiries were noted for East African and higher grade Sudan cotton.

Representatives of regulated markets dealing in cotton are reported to have decided, at a meeting held at Ahmedabad on the 15th inst., to set up an all-India federation of cotton growers. An *ad hoc* committee to convene an all-India conference at an early date has been constituted. The meeting, which was presided over by Mr. Madhavlal Shah, Chairman of the Regulated Markets' Association, viewed with concern the accumulation of cotton stocks as a result of the reluctance of mills to lift their quotas. It demanded that the Textile Commissioner should allocate 50 per cent of the quotas well before the start of the cotton season and that mills should be asked to lift their quotas within 15 days. It also demanded that the system of surveying cotton should be abolished and that ceiling prices of cotton should be increased. It also urged that export of Kalyan and Wagad varieties should be permitted in view of the good cotton crop this year.

The following are the latest available spot quotations—in rupees per candy of 284 lbs.—from Sewri:

Khamgaon 845; Broach 960; Digvijay 972; Laxmi (Gadag) 1,030; B.P. 52 1,335-1,345; B.P.U.N.U.G. 1,375.

The easy trend witnessed in the Karachi cotton futures market during the past two weeks was halted during the week under review. In fact, the market was already in for a technical reaction. This was sparked off by short covering and fresh buying attracted by the low level of prices. The slowing down of the pace of arrival of new crop also helped the recovery. N.T.R.G. March firmed up from Rs. 68.45 last week-end to Rs. 70.25. The May contract too rose, but by less than proportionately, from Rs. 68.65 to Rs. 69.20. Spot prices were well maintained.

The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 103; Punjab *Deshi* 100; 4F Punjab Roller 85.75; S.G. 89.25; L.S.S. Punjab Roller 89.25; S.G. 93.25; N.T. Roller 90.75; S.G. 95.75; 289F Punjab Roller 93.75; S.G. 98.25.

Last week's fall in cotton futures prices in Alexandria was further extended during the week under review. The continued slackness of foreign demand and the brisk arrival of new crop depressed prices. Both the long-staple Karnak and medium-staple Ashmouni contracts receded on selling pressure. The export price discount remains unchanged at 6 per cent. Many prominent traders are of the view that larger discounts are required to attract foreign demand. In practice, however, discounts higher than 6 per cent are reported to be given by Egypt to some countries under special agreements involving cotton and other goods. There have been complaints too from buyers of discrimination in discounts.

The following are the latest available quotations—in tallaris per lb.—from Alexandria:

Karnak: March 70.35; May 71.25; July 72.30.

Ashmouni: February 59.75; April 60.35; June 60.80.

A divergent trend was witnessed on the Liverpool Cotton Exchange during the week. While the near deliveries of both the American and American type contracts receded on local and American liquidation distant position rallied on commission house support. Trading continued to be limited in view of the uncertainty about the support rate of U.S. cotton. Sudan contracts were

quietly steady. Latest available quotations in pence per lb. from Liverpool are as under:

American cotton one inch staple contract: March 23.40; May 23.85; July 24.35; October 24.50.

American cotton mixed growth contract: March 23.75; May 24.25; July 25.05; October 24.95.

Sudan: March, May, July 34.00.

Uncertainties about the support rate for U.S. cotton continued to restrict business on the New York Cotton Exchange. Values fluctuated narrowly in thin trading, with negligible net changes over the week. Reports from New York indicate that the consensus of opinion among traders is that the loan rate will be as high as 81 or 82 per cent of the mid-January parity price of 38.83 cents per lb. This would be a compromise between the low of 70 per cent of parity and the high of 90 per cent of parity within which limits the Secretary of Agriculture is empowered to fix the loan rate. If the loan rate is fixed at 82 per cent of parity the support for Middling 1" at average location is expected to be 33.10 cents per lb., assuming 126 cent points for converting the parity base of the average of the crop to Middling 1". If these predictions prove true, it is estimated that an export subsidy of 10 cents per pound would be required for U.S. cotton to maintain the present price level in international markets.

Many prominent shippers, however, are not optimistic that the export subsidy will be raised to this extent. Consequently, the prospects would appear to be that U.S. cotton prices will be higher both in the domestic and export markets.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	21-2-61	14-2-61	7-2-61
Spot	32.55	32.35	32.25
March	32.32	32.40	32.10
May	32.83	32.97	32.60
July	33.33	33.50	33.10

ART SILK YARNS RISE

(From Our Own Correspondent)

BOMBAY, 22nd *February*

There was a rise in the prices of art silk yarns during the week under review. The rise followed good buying support induced by the belief that the fears regarding a possible increase in excise duty on art silk yarn and staple fibre yarn in the Central budget for 1961-62 were unfounded. Hopes of better enquiries from consuming centres also imparted strength. Cupressa Bemberg yarns were irregular; forward deliveries encountered selling and drifted lower, while spot yarn was firm. Staple fibre yarns tended to move up on expectations that the handlooms and powerlooms, which were hitherto not inclined to augment stocks, would soon begin to buy. Cotton yarns ruled dull in the absence of any fresh encouraging development.

Among art silk yarns, 120 Italy rallied from Rs. 1.328 to Rs. 1.385. 120 Japan advanced by Rs. 13 to Rs. 1.433. 150 Japan spurted by a like amount to Rs. 1,653. Among indigenous yarns, National Rayons 150 Bt. cones were done at Rs. 12.01 and 120 Bt. cones at Rs. 13.64. Spot Cupressa Bemberg yarn (60 x 1) was quoted at Rs. 2.548, as against Rs. 2.535. February delivery, however, moved down from Rs. 2,490 to Rs. 2,420 and April contract from Rs. 2,528 to Rs. 2,440.

Staple fibre yarn (40 x 2) February delivery put on Rs. 4 to Rs. 836, while April delivery shed Rs. 2 to Rs. 833. Spot Kohinoors improved by 7 nP to Rs. 9.97. Centurys were firm at Rs. 9.86.

Cotton yarns did not show any definite trend. Today's quotations—in rupees per bundle of 10 lbs.—for a few varieties are: 10s Moderns 18.75; 20s New Greats 21.50; 30s Simplex 26.75; and New Greats 26.50; 40s Minaxis 32.12 and Maduras 32.00; 60s Gokaks 50.00 and Finlays 66.66; 80s Modern 60.75, Finlays 81.81 and Mahendras 68.68.

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 22nd *February*

The oilseeds market ruled distinctly firm during the week under review, thanks to sustained bull support. Groundnuts were particularly strong. The groundnut May contract hit the ceiling of Rs. 220 yesterday, and the February contract continued to knock at the ceiling. The firmness of groundnuts was engendered by smaller arrivals, presumably on account of large-scale hoarding by producers and co-operative warehouses. At the same time, there was keen buying by both *vanaspati* manufacturers and crushers. The increase in the rate of sales tax on groundnuts from 1¼ per cent to 2 per cent, proposed by the Finance Minister of Maharashtra in the budget for 1961-62, was noted, but it did not have any effect. On the export front, there were some inquiries for H.P.S. groundnuts early in the week. May 1961 contract rose steadily from Rs. 218.50 to touch the ceiling of Rs. 220. Nizam bold spurted by Rs. 2.88 to Rs. 51. Oil ex-mill hardened by 75 nP to Rs. 21.25.

There was hectic buying in the castorseed section, as a result of the pronounced scarcity of arrivals, particularly from Gujarat. Reports of sizable business in oil with the U.K. and some Communist countries also imparted strength. A section of traders were optimistic about the prospect for oil exports to the U.S. also, despite competition from Brazil. Castorseeds May 1961 contract spurted by Rs. 2.50 to Rs. 172.87. Ready Madras rose from Rs. 33.44 to Rs. 33.75 Oil B.S.S. improved by 65 nP to Rs. 15.15.

Linseed put on a cheerful appearance, following good inquiries from Calcutta and North India. There it was reported that the supply position of rapeseed oil was tight. Linseed May 1961 contract improved by 78 nP to Rs. 35.37. Bold ready advanced by Re. 1.63 to Rs. 36.25. Linseed oil moved up from Rs. 15.10 to Rs. 16.40.

Similarly, the sesame section ruled firm, with a marked recovery in prices. Some arrivals noticed a few days back tapered off, rendering the statistical position tight. Sesame bold forged ahead from Rs. 310 to Rs. 330 (per 250 kgs.). Sesame oil rose by Re. 1.25 to Rs. 25.25.

Cottonseeds also ruled firm, in sympathy with other oilseeds. February 1961 contract rose from Rs. 90 to Rs. 93. Non-whites gathered 50 nP to Rs. 19.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	22-2-1961	14-2-1961	8-2-1961
	Rs.	Rs.	Rs.
Groundnut			
February 1961	—	220.00	220.00
May 1961	220.00	218.50	217.00
Nizam bold	51.00	48.12	48.25
Coromandel ready	51.75	50.00	48.50
Khandesh quality	51.75	49.75	48.50
Oil ex-mill ready*	21.25	20.50	20.15
Railway receipts*	21.00	20.25	19.85
Castorseed			
May 1961	172.87	170.37	169.12
Ready Madras	33.75	33.44	33.25
Ready Kanpur	32.75	31.87	31.62
Oil B.S.S.†	15.15	14.50	14.50
Oil commercial†	14.10	13.65	13.50
Linseed			
May, 1961	35.37	34.59	34.06
Bold ready	36.25	34.62	33.25
Oil ready†	16.40	15.10	14.70
Cottonseed			
February 1961	93.00	90.00	87.50
May 1961	91.25	89.50	87.00
Niger seed	39.00	38.75	38.50
Kardi seed	26.50	26.25	27.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 60 kilograms and oil per 10 kilograms.

COARSE GRAINS HARDEN

(From Our Own Correspondent)

HAPUR, 20th *February*

A mixed trend was in evidence in the food-grains market during the week. Thus wheat and rice were quietly depressed, while coarse grains under the lead given by gram registered a hardening trend. The overall food situation in the country was reported to be quite satisfactory, as the stocks were never so good at any time in the past. The production of rice is estimated at about 2.5 million tons more than last year's production of 29.6 million tons. It was said that the Union Government would soon form only one wheat zone in the country.

Wheat here recorded a fractional fall during the week to be quoted on Monday at Rs. 17 to Rs. 18.50 a maund according to quality. The main influencing factor was the U.P. State Government's sales of wheat in the open market to check the rising trend in prices of wheat which was being resold at Rs. 16.50 and imports from Punjab which were quoted at Rs. 18.75 a maund. Daily arrivals of wheat here were small at an average of 50 maunds. Crop prospects, however, were very bright, thanks to timely winter rains and sunny weather now.

Rice was also quietly depressed on poor consumer demand in the face of comfortable stock position. Prevailing prices were: *sela basmati* Rs. 27 to Rs. 29; *ramajwayan* Rs. 23.50; *raimunia* Rs. 24.50; *mainpuri* Rs. 20.75; *gainda* Rs. 20 per maund.

Gram registered a sharp gain of about 50 nP a maund during the week to be quoted on Monday at Rs. 16.50 a maund for Punjab variety. The stocks left with trade were now small, at about 2,000 maunds here, and advices from Punjab were also bullish. New gram arrivals would take about two months more. Stocks of barley and *bejhar* were nominal and prices were quoted at Rs. 12.75 and Rs. 12.37 to Rs. 13 per maund, respectively. Maize was attracting good consumer demand still and, as stocks were now poor at about 4,000 maunds, prices improved to Rs. 13.75 to Rs. 14.50 a maund. Traders were not interested to bring fresh stocks from outside, as seasonal demand would subside with changing of weather. *Bajra* was almost stationary at Rs. 14.75 to Rs. 15.25 a maund and *guwar* white at Rs. 13.25 to Rs. 13.75 a maund. *Jowar*, however, improved fractionally to Rs. 13.12 to Rs. 13.75 a maund.

Among pulses, peas stocks left with trade were small, but, as demand, too, was slack and crop prospects were bright, peas ruled quiet at Rs. 13 to Rs. 14 a maund according to quality and peas *dal* at Rs. 14.37 a maund. *Arhar* continued to attract some demand from grinders for *dal* and was quoted at Rs. 13.37 a maund, with *arhar dal* standing at Rs. 17.50 to Rs. 18.37 and local stock put at 7 *khatties*. Other pulses recorded a hardening trend, due to good demand in the face of poor stocks, as arrivals from outside the State were poor. The latest prices were: *urd* Rs. 20; *moong* Rs. 20 to Rs. 21; *massor* Rs. 16 to Rs. 18 a maund. Harvesting of early peas would begin by the end of the month.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 20th *February*

Sugar ruled steady at Rs. 111.75 per bag in wholesale and Re. 1.09 per *seer* in the open market. Although the supply position of sugar was easy, hopes of early export to the U.S. imparted strength to the market. The Union Government was said to be making earnest efforts to sell sugar to the U.S. Production was going on vigorously and was expected to touch a new high of 2.7 million tons, leaving a heavy carryover at the end of the season.

Sugar was steady in the Muzaffarnagar market also. Modest gains in prices were recorded on export prospects to the U.S. There was, however, paucity of stocks in the market, though the Government nominees had not been able to clear the stocks allotted to them in the last two quotas. Hopes of decontrol were again revived, following the resolution passed by the Indian Sugar Mills Association. Traders were watching the Centre's reaction to the plea. Transactions in the damaged sugar of 1959-60 season released by the U.P. Government for open sale were reported at a rebate of Re. 1 to Rs. 2. Factories were running in full swing, despite difficulties in coal supplies.

Khandsari eased by Re. 1 to Rs. 2 per maund during the week, thanks to the availability of damaged and moist sugar of 1959-60 season. Demand was also slack from east U.P. and Madhya Pradesh. Old *khandsari*, however, attracted demand from Agra side and week-end prevailing prices were: new *khandsari* Rs. 29 to Rs. 35 according to quality; crystal Rs. 32 to Rs. 37.50; old Rs. 28 to Rs. 30 per maund.

Gur arrivals improved during the week, as a result of sunny weather. Although loading was completely stopped during the major part of the week, Sunday's open booking accounted for an offtake of 45 wagon-loads mostly to Gujerat, M.P. and Rajasthan. Local stock was put at 4,000 maunds. Daily arrivals were now at an average of 2,500 maunds and prevailing prices on Monday: *pansera* Rs. 13.37 to Rs. 13.62; *shakker* Rs. 15.25; *balti* Rs. 13.37 a maund.

Gur prices improved towards the week-end in the Muzaffarnagar market with revival of demand from consuming areas of Gujerat, Punjab and M.P. Rusket *gur* was also in demand from Gujerat, Rajasthan, Bengal and Bihar. Total arrivals in that market were about 852,000 maunds, the corresponding figure last year being 1,079,000 maunds. Week-end prevailing prices were: *Chakku* Rs. 14.50 to Rs. 15.75; *pansera* Rs. 14.25 to Rs. 14.75; *ladoo* Rs. 14.50 to Rs. 15; *rusket* Rs. 8 to Rs. 10; *shakker* Rs. 15 to Rs. 18.50 a maund.

Future *gur* was bearish on active selling by speculators. The latest quotations on Monday were near the lowest of the session, at *fagun* Rs. 13.04 and *Baisakh* Rs. 13.87, as against the week's opening of Rs. 13.37 and Rs. 14.34, respectively.

Large sowing of cane for next season is now being done. It is gathered that cane acreage would further mount next season.

JUTES IMPROVE

(From Our Own Correspondent)

CALCUTTA, 21st *February*

Although genuine business passing in the jute goods market was small during the week under review, prices, after last week's recession induced by unconfirmed reports of Government's intention to take drastic action to arrest the upward trend in fibre prices as well as goods under the Essential Commodities Act, were held firm. As the week progressed, prices hardened further, following good demand by local operators on covering account. Fibre prices, however, continued to decline but subsequently recovered. The aforesaid reports did not materialise, and it would appear that the rumours were only an attempt to impart reality in the market and thus arrest the upward trend. Nervous sales soon followed, but, when it was found that the rumours lacked foundation, the downtrend was stayed.

On Thursday next, the Union Commerce Ministry will hold consultations with the representatives of the jute industry and the subject of discussion would be the possibility of voluntary controls. It is only good that the Government is attempting to impress on the industry the need for voluntary controls, rather than taking drastic steps. Drastic steps may be a good legal palliative, but, if Government machinery is not adequate enough to handle the numerous problems that would be released, the remedy, judging from past experience, would only prove worse than the disease. Shipping space booked for jute goods was meagre, and foreign buyers resisted the high prices. Foreign buyers have become deeply worried at the rising trend of prices at Calcutta and this received a more forceful expression during the week when representatives of buyers from Australia and the United States came here to watch the market trends. The Jute Commissioner has also had talks with representatives of the industry as well as shippers. These may all be portrends of some tangible steps, in cooperation with the industry forthcoming at the proposed conference at New Delhi a couple of days hence.

It is expected that jute goods stocks with mills at the end of the month will reveal a decline, due not to increased export business but to enlarged offtake on account of the Government of India and other internal buyers. In January, production of goods in mills declined to 86,200 tons from 90,700 tons. In the current month, production would decidedly be lower following curtailment of working hours from the beginning of the month. Also, the loss of production on 13th February as a result of the strike by workers in many mills to protest against the curtailment of working hours would be reflected. Foreign buyers have taken a serious view of these factors and apprehend that prices will move up, unless, in the meantime, the proposals for voluntary control bear fruit. The report from Dundee that prices of jute yarns and cloth are very high, that substitutes, also dear, are sometimes difficult to be located, that substitutes, as and when obtained, cannot be put to various uses as gunny bags, and that re-use of substitutes is not always possible, has only highlighted the belief in trade circles here that the bogey of substitutes making inroads into the fortunes of the jute industry has been overdone. In New York, burlap values eased for a time, as news of unconfirmed Calcutta rumours, referred to above, reached there. However, the fact that manufacturers of bags there were working on a hand-to-mouth basis

in an attempt to resist higher prices was taken here as a clue to the possibility that the U.S. buyers might show greater attention in the Calcutta market.

Although quiet conditions were in evidence in the fibre market here, prices hardened at lower levels. Sellers were reserved. After early quietness closely following the Calcutta trend, the fibre market in Narayanganj hardened and prices rose by a few points. Cuttings were offered at Rs. 270 a bale and at Rs. 275 for forward, with export firsts rising from Rs. 420 to Rs. 430 a bale. It was believed that Pakistan mills had not completed their purchases and that balers were disinclined to sell from their stocks. There were some keen inquiries from overseas markets for the Pakistan fibre, but an analysis of fibre purchases by foreign countries from the beginning of this season suggested a possible cut in production in their mills being reluctant to lift fibre at high prices. If, therefore, foreign buyers had purchased less fibre than last year and also if the crop in Pakistan would approach the official estimate, the inference that there are still considerable quantities left over with large-scale cultivators gets logical strength. Since most of the held-back fibre must come to the market before the end of April, prices must decline.

On Tuesday last, the goods market opened steady here, though real business was lacking. Ready B. twills were firm at Rs. 208 and ready hessian 40" 10 oz. at Rs. 66.00. At these levels, local operators evinced interest for covering. However, overseas buyers continued to keep away. B. twills declined to Rs. 207 on Wednesday. Hessian 40" 10 oz. was unchanged at Rs. 66.00. Covering business continued to facilitate recovery in B. twills to Rs. 208 on the following day. Hessian 40" 10 oz. hardened to Rs. 60. Business passing in the next two days was limited, and prices were nominally unchanged. The market was closed yesterday. Prices, however, were firm. B. twills were priced at Rs. 208.50 and hessian 40" 10 oz. at Rs. 67.50.

Early in the week, fibre prices recovered following the release of a quota of 300,000 maunds. Since, however, mills showed no inclination to purchase against this quota, prices receded, though sellers were reserved. At the decline, sellers offered only token quantities. Fresh arrivals were meagre and were of indifferent quality. The increased moisture content has become also a feature of fresh arrivals in the Narayanganj market in Pakistan, and foreign buyers, concerned at this, are reported considering the possibility of inclusion of the moisture content clause in contracts. Price-trends in the principal varieties of fibre in Calcutta are indicated below:

(Rs. per maund—ready delivery)

	Opening	Closing	Gain
	Rs.	Rs.	Rs.
Assam bottoms	63.50	64.50	1.00
Northern bottoms	63.00	63.50	0.50
Daissee bottoms	66.00	66.50	0.50

BRISK CLEARANCE IN KIPS

(From Our Own Correspondent)

MADRAS, 18th *February*

The kip market ruled steady to firm during the week under review, due to brisk clearance of stocks following steady demand from U.K. importers. Stocks of cow calf and buff hides were held firm, as arrivals were small. Buff calf skins were steadier, on account of demand for export to the U.K. and the U.S.

There was no change in the tanned skins market, except that importers felt that Madras prices would become uneconomical to them, if prices were put up further. Export sales, as a consequence, were small.

KEEN DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 21st *February*

Demand at the export sale held yesterday as well as last week's internal sale was good. An indication of the approach of the end of the season was provided inasmuch as demand for shipping space for tea for forward was impressively lower.

The keener demand at the auctions in Mincing Lane was attributed to the smaller quantity of tea on offer. With Calcutta shipments of tea for direct participation in London auctions being almost complete, prices in London are expected to move forward. At last week's sale in London the price of best liquoring teas included in North Indian offerings was reported to have risen by 1d. to 3d. per lb.

New Delhi has now agreed to ship 500,000 lbs. of tea to Pakistan to alleviate the shortage there. This would proportionately reduce the tea available for local consumption in India.

Offerings at the internal sale held here last week aggregated 21,867 packages. Prices eased, depending on quality. A strong feature of the sale was the brighter lots included in medium C.T.Cs. The more fibrous teas in the same category were, however, a weak feature. On keen competition, good C.T.Cs realised higher prices. Orthodox exportable kinds moved down by 10 nP. and legg-cut Dooars by 15 to 20 nP. The brighter kinds were, however, steady. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.10 to Rs. 6.60, medium Assam C.T.C. dust Rs. 5.55 to Rs. 5.80, legg-cut Dooars dust Rs. 5.05 to Rs. 5.40, medium Assam dust Rs. 4.90 to Rs. 5.25, and plain orthodox dust Rs. 4.75 to Rs. 4.90.

An irregular trend was in evidence in leaf offerings amounting to 769 chests.
