It may be recalled here that the Ministry of Labour originally wanted the Committee to assess the capacity of six industries, namely, textiles, engineering, iron and steel, paper, cigarettes and cement, that is, the industries initially covered by the Employees' Provident Fund Act, 1952. The cotton textile millowners opposed the inclusion of the cotton textile industry in the scope of the Committee's investigation on the very valid ground that the question of an equitable wage structure for these industries was considered by the Wage Board for textile industry and that there was, therefore, no justification for an additional impost on them by way of enhanced provident fund contribution. The position was clearly explained by Mr. Krishnaraj M. D. Thackersey, the then-Chairman of the Indian Cotton Mills' Federation, in a letter addressed to Mr. G. L. Nanda, Union Minister for Labour, as under:

"So far as the textile industry is concerned, its condition has been examined by the Central Wage Board which submitted its report on 27th November 1959, which approached the problems referred to it 'in a spirit of calm investigation,' and which reached unanimous decisions as to its recommendations. The composition of the Board was as strong as that of the proposed Expert Committee. It had the Chairman of the Labour Appellate Tribunal, as the Chairman, two independent members one of whom is in-charge of the Department of Economics in the Rajasthan University, and two members representing employers and workers respectively. The facts that such a Board should have unanimously taken the view that, in the present state of the industry, it is not possible, for financial considerations, to go beyond the recommendations contained in the report, and that for a period of five years from 1st January 1960, no claim for further revision of minimum wages should be made by either the employers or the workmen, are very significant. In view of this unanimous and categorical finding, it would be wrong in principle and undesirable in practice to refer substantially the same question to an Expert Committee not very materially different in composition. It would be equally wrong in principle to conduct *ad hoc* enquiries into the financial condition of the industry for limited purposes when an overall investigation has already taken place so recently. Such a course will raise expectations on the part of workers, which it may be difficult to fulfil in the event. This might very well be a disturbing factor in the situation which is difficult enough in all conscience."

The same argument was advanced with equal force for the exclusion of the cement industry also. The Government was obviously impressed by the argument, for it asked the Committee to drop these two industries from the scope of its study.

More Problems Thrown Up

Now that the Committee has examined the capacity of the four industries and submitted its recommendation, the question is whether the Government would make the increased rate of contribution statutorily binding. Does the exclusion of textiles and cement industries means that all those industries, for which wage boards have been constituted, would be similarly exempted or will another Committee be asked to assess their capacity. If they are excluded altogether from the liability to pay the enhanced rate, then it cannot be denied that such a distinction as between one section of workers and another is invidious. The fairness of more and more benefits being given to a small section of working class, when millions and millions are unemployed or underemployed is also open to serious question. It must be remembered that, ultimately, the cost of this additional benefit has to be borne by the mass of consumers, including those who have no jobs or have only unremunerative jobs.

Then there is the question of prices being competitive in the world markets. An increase in the cost of provident fund contribution, as now proposed, would have an adverse effect on the prospects for exports of manufactures of the industries concerned. Indeed, a host of problems has been thrown up by the Government's decision to implement the suggestion for raising the rate of provident fund contribution piecemeal. For instance, if the 8⅓ per cent is deemed to the basic minimum, all the industrial units to which the Act has been made applicable, irrespective of their capacity, should be asked to pay that rate just as the present rate of 6¼ per cent is payable by all units in covered industries. But such a course would only add to the country's wage bill without bringing about a proportionate increase in production. The present is by no means the opportune time for heaping one more burden on the community.

As you need two hands to clap, so the country needs the combined efforts of man and machine to bring about industrial growth and prosperity.

Today, through the Five-Year Plans, the country is striving to create such a unity of effort where all will have enough.

It is our privilege to participate in this historic adventure of building a new India.

CRISIS IN WEST EUROPE'S COAL INDUSTRY

EFFORTS TO ACHIEVE RATIONALISATION

THE pattern of consumption of primary energy (hard coal, brown coal, oil, natural gas and methane, and water power and terrestrial heat) in the European Coal and Steel Community (covering West Germany, Belgium, France, Italy, the Netherlands and Luxembourg) has undergone a striking change in recent years. The transformation has come about by way of a steady decline in the share of coal, at a rate of approximately 2 per cent a year since 1950, in the Community's overall consumption of primary energy. This trend is highlighted in the ninth General Report on the Activity of the Community covering the period 1st February 1960-31st January 1961. Coal consumption, it is stated, has been affected by a certain tendency to use fuel oil as a substitute. Oil consumption, on the other hand, has risen absolutely as well as relatively. The growing demand for liquid fuels is due in part to the change in price relations as between the competing forms of energy to the advantage of oil. These trends are noted in the following table, giving figures of consumption of primary energy by sources:

(In million metric tons hard-coal equivalent)

Energy sources	1950	1955	1960 (provisional)	1961 (estimated)
Hard coal	210.3 (71.7)	253.7 (62.8)	243.7 (52.4)	239.0 (50.0)
Brown coal	24.5 (8.4)	31.7 (7.9)	33.0 (7.1)	33.0 (6.9)
Oil	37.6 (12.8)	83.5 (20.7)	137.2 (29.5)	158.0 (32.0)
Natural gas and methane ..	1.0 (0.3)	5.5 (1.4)	13.0 (2.8)	13.9 (2.9)
Water power and terrestrial heat	19.9 (6.8)	29.2 (7.2)	38.1 (8.2)	39.1 (8.2)
Total ..	293.3 (100.0)	403.7 (100.0)	465.0 (100.0)	478.0 (100.0)

N.B.—Figures within brackets are percentages of the respective totals.

The figures reflect the keen competition that has been in operation for several years now, especially between coal and oil. The Community coal producers have accordingly pursued their endeavours to meet competition by making full use of all the means open to them in the operating conditions of the European coal mining industry. These include mechanisation of operations, in order to offset the rise in costs caused by wage increases; concentration of coal-winning on the most economic collieries and pits, so as to lower production costs, and closure of pits which have no prospect of ever becoming genuinely competitive. Thanks mostly to mechanisation, productivity in the industry has registered a substantial increase since 1954 when the underground output per man shift was 1,438 kg. in the Community as a whole. In 1960, the output per man shift was 1,894 kg.

Nothwithstanding these efforts of the coal mining industry to become more efficient and competitive, there has been a serious crisis for the last three years. All the coal-producing countries of the Community have been hit in varying ways by this crisis, the structural aspects of which have been aggravated and attenuated in turns by cyclical developments. The scale of the crisis may be seen from the figures of pithead stocks. In 1957, these amounted to 1.5 million metric tons of hard coal and 1.1 million tons of coke for the Community as a whole. In 1958, they shot up to a total of 17.3 million tons of hard coal and 5.4 million tons of coke. If, to gain a true picture of the position, the 6 million tons deliberately forfeited by short-time working are added to these figures, the total imbalance is seen to have been over 30 million tons of hard coal equivalent. In 1959, the disproportion between production and sales lessened, but a further 8.7 million tons of hard coal had to be put to stock and 12 million not produced at all as a result of short-time working, making a total of over 21 million tons. In 1960, however, the position underwent some improvement.

Initially, this crisis in the Community's coal industry was rendered even more serious by the fact that many producers had embarked on programmes for stepping up production, in order to keep pace with the steep rise in energy requirements, the share of which to be covered by coal was expected to increase in actual tonnage if not in proportion. During this period, imports of coal from third countries were also at a high rate—31.8 million tons in 1958 and 19.2 million tons in 1959. Though determined efforts have been made to readjust the volume of imports, they have failed to restore the balance and a substantial part of the tonnage purchased has gone not to cover real consumption but to build up unduly large consumer stocks. Although the position in the industry has shown some improvement in the last year, as already stated, the E.C.S.C.'s Report emphasises the fact that the structural factors underlying the crisis still persist.

Accordingly, the main objective of the high authority, the Governments and the heads of the coal mining industry in the Community is, as before, to increase the competitive capacity of coal *vis-a-vis* other sources of energy. To achieve this aim, a thorough and accelerated overhaul of coal production is considered essential. Such a reorganisation is considered absolutely indispensable within the context of the Community's energy policy. The reorganisation measures are the following:

1. The concentration of coal-winning with the object either of reducing the number of pits at a given colliery so as to employ the available men and equipment in the most productive pits, or of working the most economic seams in a particular pit.

2. The modernisation of coal-winning methods and rationalisation of surface installations.

3. The closure of certain pits, namely, the permanent discontinuance of activity at pits which, owing to technical operating difficulties and failure to sell their production, are, or are likely to become, uneconomic.

Although the enterprises have been applying some measures of this kind, there is need to do so at an accelerated pace now. But this may lead to some difficulties in the social field. The E.C.S.C.'s Report, however, is of the view that the elimination of the marginal workings and the process of concentration and rationalisation will strengthen the competitive position of the remaining collieries and pits and that this should, in itself, enable them to offer their personal greater stability of employment. It is, of course, recognised that, at the same time, the closure of the weakest production units and the increase in productivity in the remainder is naturally bound to involve manpower cuts to begin with. The successful completion of the reorganisation programme is, therefore, dependent on measures for the "readaptation" of redundant workers and, in certain cases, for the industrial redevelopment of the areas concerned.

Moreover, according to the Report, if the reorganisation is to be judiciously planned, it is necessary to make an assessment of the demand which the Community's coal mining industry will be called upon to meet in the short, medium and long term. This is stated to be one of the reasons for the precautions which have to be observed prior to any operation involving actual pit closures. Already an expert committee has been set up to assemble data which would enable it to work out more or less what the Community's coal production is likely to be by 1965 on the basis of the investment and rationalisation programmes now in progress or approved. Its views, when available, on production potential, the probable increase in productivity, the size of the labour force required both above and below ground, and the likely effects of the programmes on production costs may be expected to help the Community achieve a long-term energy balance, without unduly drastic corrections in respect of coal. Otherwise, a persistent downward trend in the coal sector, if it is not arrested or slowed down, may bring into play the factor of declining demand due to widespread unemployment. It may be noted, in this connection, that the Community's coal mining industry employs, as of September 1960, a considerably smaller labour force (884,000), as compared with 971,000 in September 1959. Already, thus, the crisis in the industry has led to a substantial reduction in employment. The High Authority of the Community, therefore, seems to be anxious to bring about the coal industry's re organisation, without causing undue unemployment and within the framework of a co-ordinated energy policy.

NEW PRODUCTS AND PROCESSES

Low Cost Hard Tool Steel

A TOOL steel, which will, it is claimed, cut virtually all other known metals or metal alloys, has been developed in Britain. Tests carried out with the new high-speed alloy steel, have shown that it will keep its cutting edge up to ten times as long as previous standard tool steels. The steel contains chromium, vanadium, tungsten, molybdenum, and cobalt, together with a very small percentage of carbon. It is said to enable metal alloys from steels of types which have hitherto been difficult to machine, to be readily processed. It is also said to be relatively inexpensive and not to cost more than conventional high-speed tool steels. As a result, because of its greatly increased working life, it is claimed, it will greatly decrease the cost of production where hard and difficult-to-machine materials are employed. It also enables components to be manufactured which have hitherto not been made because of the high cost and difficulty of their manufacture. Another even harder tool steel is under development in the same laboratory.

Adhesive Paper with Many Uses

An adhesive paper designed for protecting electrical and many other types of industrial equipment has been developed in the U.K. It consists of a specially but lightly impregnated paper of the flatback type to which a rubber-based adhesive is attached. The rubber latex resin of this adhesive is said to give a low but even adhesion to virtually any type of smooth surface. At the same time it is specially designed so that it leaves no stain. Moreover, the nature of the adhesive and the exceptionally good abrasion-resistant properties of the paper surface enable drawing, pressing and other types of forming operations to be carried out while the surface is still fully protected by the paper. One reason for this is the fact that if in, say, a drawing operation, the paper should split, a resilient and cohesive film is left which is said to give the surface full protection, but which can yet be readily removed. The paper can, it is claimed, be readily written on, or for that matter, rubber stamped.

High-speed Machines for Non-ferrous Metals

To demonstrate the progress made in techniques for high-speed machining of non-ferrous metals, a U.K. firm will be showing two machines at the 7th European Machine Tool Exhibition at Brussels in September (3-12). One is a continuous rotary miller (type L.H.R.) and the other an articulated arm router (type L.C. 6). The rotary miller, designed for rapid continuous milling of light alloy components, is being installed in the production lines of the U.K.'s motor industry and in other leading engineering firms where large-scale production on milling operations is required. The head unit has speeds up to 4,000 r.p.m. obtained by means of a 6 h.p. two-speed motor and two-step pulley. The high-speed head is mounted on precision slides incorporating a 12-inch vertical adjustment. The table is arranged for three selective speeds of 1 r.p.m., ½ r.p.m. and ¼ r.p.m. corresponding to peripheral feeds of 150 ins. a minute, 100 ins. a minute and 50 ins. a minute. Alternatively, infinitely variable speeds from 10 to 100 ins. a minute are available.

The articulated arm router is an inexpensive medium capacity machine for high speed milling of light alloy components. It will take a large proportion of the work now being done on heavier duty machines and, being more versatile, the cost of many set-ups is reduced. The articulated arm, pivoting from the column, covers the whole surface of the 24-inch square main table and the 36 ins. × 24 ins. base surface. Incorporating a four speed 5 h.p. motor the routing head normally fitted to the machine has spindle speeds of 18,000; 12,000; 9,000 and 6,000 r.p.m. Alternatively, the machine is available with a four speed heavy duty router head rated at 12, 8, 6, 4 h.p. giving similar speeds.

Electronic Spectrograph

Detailed analysis of steel which at one time occupied four metallurgists for about an hour can now be carried out in four minutes by a new electronic spectrograph—the first of its kind in Britain. The machine was recently installed at Richard Thomas and Baldwins' Redbourn Laboratory. In operation, a small piece of steel is placed in position at one end of the £12,000 machine. The steel is subjected to a spark in an atmosphere of argon gas and the light is transmitted to a prism which breaks it up into different colours, each representing various elements in the steel. The intensity of each colour in measured and transmitted electronically to a typewriter which records it automatically and types out a detailed analysis of the steel under examination. Capable of coping with 1,500 samples a week, it is estimated that the spectrograph will be invaluable with the advent of the new rotor furnace at Redbourn, which is now nearing completion.

Knitted Paper

A new development in the field of paper-making is a twisted, knitted paper that can be boiled, washed, dry cleaned, and reused as many as 30 times. The knitted paper was developed by Roland H. Marks of Dallas, Texas, U.S.A. It is produced by a patented, single mechanical operation that converts paper into yarns narrow enough to be knitted into fabrics for a wide variety of products. Much of the paper is chemically treated for durability by applying a wet strength resin. This keeps the paper strong even when it is soaking wet. Some possible uses for the knitted paper, it is believed, may be; substitutes for burlap, parachutes, decorative wallpapers, hats and bags.

RAMTIRTH (HINDI MONTHLY)

Editor: Yogiraj Shri Umeshchandraji

Published every month by Shri Ramtirth Yogashram — Bombay

MORE THAN 160 PAGES PER ISSUE

THE MAIN IDEA BEHIND THIS MAGAZINE IS TO DEVELOP THE PHYSICAL, MENTAL AND MORAL ASPECT OF THE COMMON MAN

Annual Subscription Rs. 5/- only. Single Copy 65 nP. only.

UMESH YOGA DARSHAN (First Part)

In Four Languages: English, Hindi, Gujarati and Marathi

(Author: Shri Yogiraj Umeshchandraji)

An excellent and highly readable book written by Shri Yogiraj Umeshchandraji is one of the best known treatises on the true meaning of Yoga. A best guide to methods of intestinal exercise and control, the book contains over 108 descriptive photographs of various Asanas explained according to the Age, Season, Country and Time.

It is one of the excellent volumes published so far depicting different aspects of Yoga, and containing different photographs of Asanas and Neti Dhoti Functions. It also contains Yoga Therapy, Diet Therapy, Chromopathy, Psycho Therapy and many other Therapies. It also contains many an important remedy for various diseases. The book is best of its kind and useful for all men and women, healthy and unhealthy, and hence should be preserved in all libraries and homes.

Price: Rs. 15/- Plus Postage Rs. 2/- extra.

YOGASANA CHART

A Chart printed on art-glazed papers and fully illustrated with attractive pictures is also available from here. You can perform Asanas shown therein at your home, which will keep you fit and healthy.

Price: Rs. 3/- including Postage to be sent by M.O. only.

YOGIC CLASSES

are also regularly conducted in the morning and evening at Shri Ramtirth Yogashram. Yogic and natural treatment are given for diseases. Diseases are also remedied.

RAMTIRTH BRAHMI OIL Special No. 1 Registered

An invaluable hair tonic for the prevention of dandruff and falling hair, RAMTIRTH BRAHMI OIL is manufactured scientifically with many precious ingredients, which cool brain, improve system, and let sleep sound. Most ideal for body massage. It is useful to every one in all seasons.

Price: Rs. 4.50 for big bottle and Rs. 2.25 for small. Available everywhere.

CONSERVATION OF FERROUS SCRAP

PLEA FOR FURTHER RESTRICTION ON EXPORTS

A STRONG plea for progressively curtailing export of ferrous scrap has been made by the Steel Furnace Owners' Association, in a memorandum submitted to the official Scrap Committee, which held its first round of enquiries in Bombay last week. The Committee it may be recalled, has been set up by the Government of India to investigate into the supply-and-demand position of ferrous scrap in the country. The last enquiry into the question was made in 1956. Drawing attention to the rapid development that has taken place, since 1956, in the iron and steel industry, which is the major consumer of scraps, the Association has expressed the view that heavy melting scrap, No. 1 sheet cuttings, steel turnings and borings are in short supply in the country at present. The Association has, therefore, urged the Government that its policy should be so designed as to cause a total ban on these categories by the end of the third Plan, in addition to maintaining the existing ban on the export of re-rollable and industrial scraps.

According to furnace owners, the annual supply of scrap in the country is of the order of 1,125,000 tons in 1961 and will go up to 1,725,000 tons per annum by 1965, taking into consideration the scope for increase in processed scrap in view of the development of steel industry, and also the rate of obsolescence of plant and machinery, etc. The principal consumers of melting scrap are the integrated steel plants, both in the public and private sectors, steel melting furnaces, and re-rollers. The Association estimates that the total demand from all these consumers in the country will go up from 745,000 tons in 1961 to 1.42-1.52 million tons by 1965. On this basis, the exportable surplus of ferrous scraps will be 380,000 tons in the current year and will decline to about 205,000-305,000 tons by 1965.

Naturally, the exporters of scrap do not see eye to eye with consumers on the question of the availability of scrap. The Scrap Traders' and Exporters' Association estimates that the annual exportable surplus of ferrous scrap is about 900,000 tons, that is, three to four times the figure worked out by furnace owners. Exporters resent the consumers' plea for abolition of exports. Instead, the Exporters' Association calls upon the Government to liberalise exports, in order to earn more foreign exchange. Actually, the exporters have condemned the restrictive export policy for scrap for the period July-December 1961, which was announced a few days back. Under this policy, strict measures of control are sought to be introduced, including total ban on heavy melting scrap and stainless steel scrap, drastic reduction in the incentives for certain items and new levies on exports. The opposition from scrap exporters is understandable, for restrictions and bans affect their earnings. But they are fighting a losing battle. Conservation of vital raw materials required by the basic industries in this country is necessary. The exporters of scrap will, therefore, do well to switch over their activities to supplying the requirements of domestic steel re-rollers, foundries and other secondary iron and steel units. The latter, too, should try to make use of the services of exporters so that there may be no unemployment among them.

Exports

It is true that ferrous scrap is an important export item, the foreign exchange earnings from which amounted to Rs. 5.80 crores in 1960, as against Rs. 4.70 crores in 1959. But one has to appreciate the full implications of the rapidly changing pattern of industrial structure in India. Steel and steel-based industries have been developing fast, particularly during the last five years, and are bound to expand further during the third Plan period. It is, therefore, essential that all available resources of scrap should be conserved to the maximum extent, in order to feed the domestic industries (and thereby to maintain employment) which themselves, in turn, offer scope for more valuable exports. Precise data on the collection of scrap and the exportable surplus are at any rate difficult to obtain. The work of the Scrap Committee has been made still more difficult by the wide divergencies in the estimates of surplus scrap arrived at by consumers and exporters. It is, however, to be hoped that the Scrap Committee will make an exhaustive investigation into the supply and demand position of each category of ferrous scrap in every region and, on this basis, suggest measures for export control. The Committee must make sure that none of the iron and steel factories that can use scrap is starved of raw material as a result of its recommendations.

There is much substance in the scrap consumers' stand against the abolition of the existing statutory price control. So long as there is control on finished steel, it would, according to them, be necessary to control the price of scrap —which is the basic raw material for the manufacture of steel. Unless it is made sure that there is no shortage of scrap in the country, it would be unwise to remove price control. If the Scrap Committee finds it necessary to revise the statutory prices, the Furnace Owners' Association feels that the Committee should take into consideration its impact on prices of finished steel and also upon steel castings and other manufactured products.

It is, no doubt, necessary to maintain prices at a level attractive enough to encourage scrap collection. But it is equally necessary to recognise the importance of adequate incentives for the rapid expansion of domestic steel-melting capacity. A vital point that must be borne in mind while fixing the prices of scrap is that prices should not be so high as to encourage "manufacture" of scrap at the expense of finished products. It is obvious that a high price for scrap will serve as an incentive to inefficiency and waste in manufacturing establishments where a certain amount of scrap is inevitable.

LIBERALISATION OF IMPORT CURBS

The next round of G.A.T.T. consultations on the question of reducing import restrictions maintained for balance-of-payments reasons will be held in October next. During these consultations, Austria, Burma, Denmark, Finland, Israel, Japan, Norway and New Zealand, have agreed to submit themselves to a "cross-examination" of their restrictions on imports. It may be recalled that, at the Tokyo session of the G.A.T.T., held in November 1959, there was general agreement among Contracting Parties on the question of abolishing quantitative restrictions. At that time, the Contracting Parties reaffirmed their intention to abolish restrictions imposed as soon as their balance-of-payments position permitted. Since then, several countries have taken steps in this direction. According to a Press release of the G.A.T.T., the countries which ceased during the past two years to claim balance-of-payments justification in G.A.T.T. for retaining import restrictions include Australia, France, Ghana, Federation of Malaya, Federation of Rhodesia and Nyasaland, Sweden and the U.K. It has been found that such consultations throw a light on balance-of-payments or other problems which give rise to the restrictions and provide perspective on any difficulties arising from such action encountered by exporting countries. Many countries have simplified their import procedures as a result of suggestions submitted by other Contracting Parties during the balance-of-payments consultations. The most recent example of this is the case of Japan which has reverted from an extensive positive to a reduced negative list of restricted imports, effective from 1st July 1961.

It is a basic principle of the G.A.T.T. that countries maintaining quantitative import restrictions of any description must justify their prolongation under the relevant articles of the G.A.T.T. The Agreement sets out precisely the conditions under which deviations from the general rules can be permitted, and provides the essential machinery for consultations on these matters on a regular basis, mainly under the provisions of Articles XII and XVIII. Besides, countries introducing new restrictions or substantially intensifying import controls are required to consult promptly on such action. Instances in this connection are the consultations with Ceylon held in February 1961 and talks arranged to take place this autumn with New Zealand.

Initially, the removal of restrictions in many countries was confined largely to the industrial sector of trade, yet gradually and with caution a number of countries have advanced towards the position whereby a certain portion of their trade in agricultural products has also been liberalised. One by one, important trading nations such as the U.K., West Germany, France, Japan, Australia, Uruguay, and recently Italy and Norway, have run the gauntlet to remove restrictions on a wide range of raw materials and manufactured products. For example, on 1st July 1961, Denmark liberalised a further list of products when imported from the

DIVERSIFICATION STANDS BIRLA JUTE IN GOOD STEAD

FURTHER EXPANSION PLANNED

COMPANIES which have effected a sufficiently wide diversification of their main line of activity are looked upon, in investment circles, with a special favour, since it is generally believed that such enterprises are equipped to withstand better possible declines in the fortunes derived from their principal interests. True, instances are not wanting where branching out has failed to produce the anticipated results but such cases are, in the main, exceptional and merely reflect errors of judgment in planning. There are companies on the other hand which have gained definite advantages through diversification and have produced in any year better results than other single-purpose companies when beset with a recession in their chief sphere of activity. The Birla Jute Manufacturing Company Ltd. (Managing Agents: Messrs. Birla Brothers Private Ltd., Calcutta), is a progressive unit belonging to the latter group of companies. The gratifying results which it has been able to achieve for the year ended 31st March 1961, notwithstanding the difficulties facing the jute mill industry, are a testimony to the fact that the Company's well-thought-out diversification has indeed stood it in goood stead. Unfortunately, the Directors have found it advisable to present the year's working in a single profit and loss account instead of separately for each unit as was done in previous years with the result that no evidence can be produced in support of our conclusion. Nonetheless, the overall results of the Company, judged against the difficult conditions through which jute industry has been passing through, largely substantiate it.

As the readers are no doubt aware, the jute industry in which the Company's principal interest lies, has been passing through a serious crisis. The unprecedented and disproportionate rise in the price of raw jute, the increase in the number of looms sealed for operation and the reduction in working hours have affected the profit earning capacity of the industry while the high prices of jute goods have acted as a deterrent to a larger world consumption of jute manufactures. Under such conditions, the working results of the majority of jute companies have been adversely affected. This Company itself would not have been an exception to this rule, had it not been for the fact that any large deficit from its jute mills could be more than fully absorbed through the improved and profitable working of its other units. After the teething troubles experienced in the previous year, the Company's cement plant, for example, worked smoothly during the year under review. The total clinker produced amounted to 184,920 tons, as against 145,937 tons during the previous year. The production of cement has also been higher by approximately ten thousand tons at 173,238 tons. Similarly, the staple fibre spinning mills, the capacity of which has been increased to 30,000 spindles, worked entirely satisfactorily. In the like manner, the working of the plant belonging to the calcium carbide factory has been efficient throughout, with the daily output reaching the increased rated capacity of 25 tons.

The following comparative table substantiates, to a large extent, the conclusion we have drawn regarding the Company having generally benefited through diversification:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales proceeds	799.51	589.68	474.73	486.06
Other income	32.06	23.95	18.55	15.92

Carry forward	1.84	0.93	0.29	0.24

* Subject to deduction of tax.

The combined figure of sales of jute goods, staple fibre yarn, calcium carbide and cement has improved substantially by Rs. 209.83 lakhs to Rs. 799 51 lakhs despite difficult trading conditions in jute. Gross profit also shows a rise of as much as Rs. 27.75 lakhs to Rs. 140.08 lakhs, which, in the aforesaid circumstances, is to be considered as satisfactory. Net profit at Rs. 46.81 lakhs has recorded a slight fall of about Rs. 31,000 or so, but this has been due to much larger provisions for depreciation (Rs. 64.86 lakhs as against Rs. 42.28 lakhs in the previous year) and taxation (Rs. 21.30 lakhs as compared with Rs. 16.10 lakhs during 1959-60). Transfer to reserves has been slightly reduced from Rs. 23.16 lakhs to Rs. 22.78 lakhs. Of this Rs. 12.78 lakhs have been credited to the development rebate reserve and Rs. 10 lakhs for the general reserve. Preference dividends which have been calculated on the revised basis recommended by the Preference Shares (Regulation of Dividends) Act, 1960, take up Rs. 9.43 lakhs. Ordinary dividends, which have been maintained at the previous year's level of 15 per cent, subject to deduction of tax, absorbs Rs. 13.69 lakhs, leaving a carry forward of Rs. 1.84 lakh.

There has been no change in the Company's share capital during the year under review. It stands at Rs. 215.94 lakhs, as at 31st March last, made up of Rs. 91.26 lakhs in equity capital and Rs. 123.64 lakhs in preference capital. This is backed by as much as Rs. 310.12 lakhs in reserves and surplus. There has been a further addition to the borrowings from the State Bank and, as a result, the secured loans stand higher by Rs. 14.15 lakhs at Rs. 127.38 lakhs. A slight increase of Rs. 4.23 lakhs to Rs. 45.62 lakhs has also taken place in the unsecured loans. Other current liabilities and provisions aggregate Rs. 106.62 lakhs.

On the assets side, the written value of the fixed assets amounts to Rs. 531.30 lakhs, against a book value of Rs. 817.04 lakhs. New assets worth Rs. 91.08 lakhs have been acquired during the year, the addition being more or less evenly distributed amongst the jute mill, the staple fibre mill and the cement plant. Investments, including those in the two fully-owned subsidiaries have a book value of Rs. 80.58 lakhs while current assets, loans, and advances aggregate Rs. 193.80 lakhs.

Since the close of the financial year 1960-61, the Company has raised the equity capital to Rs. 159.56 lakhs, by (*a*) issuing 456,300 new shares of Rs. 10 each at a premium of Rs. 6 per share in the proportion of one new share for every two shares held and (*b*) capitalising a part of the reserves and issuing 228,150 bonus shares in the proportion of one for four existing shares. This has reduced, to some extent, the great imbalance between the paid-up capital and the net block.

Prospects for the current year must perforce remain unpredictable in view of the Company's diversified activities where favourable factors in one field may be neutralised by unfavourable happenings in others. As regards the Company's main field of activity, namely, jute manufacture, the Directors have reasons to be optimistic and express themselves as follows:

"It is, however, hoped that the situation may improve to some extent, if expectations of a bumper jute crop in the coming season, both in India and Pakistan, materialise. Weather conditions have been excellent and prices during sowings in the months of March and April 1961 were attractive. If these expectations ultimately materialise, then it is hoped that prices of jute goods will soon return to normalcy and the various restrictions imposed on production by the Association will also be gradually removed."

As regards cement, the outlook depends on the Tariff Commission's (and also Government's) verdict on a fair return on the capital employed. Meanwhile, the Company has received the Government's permission to expand the capacity of its cement plant from 750 tons per day to 1,750 tons per day. This expansion programme is expected to be completed by the middle of 1963.

Profits for the current year from the staple fibre spinning mill are expected to be lower, to some extent, owing to introduction of statutory price control.

The calcium carbide factory has been working quite efficiently, with a daily output of 25 tons. Here, again, the future profit-margin will depend very much on the recommendations of the Tariff Commission and Government's action thereon.

The Company proposes to diversify its activities further. It has already received a licence for the manufacture of oxygen and acetylene gas and the whole project is receiving the careful attention of the Directors.

The present market quotation for the Rs. 10 fully paid ordinary shares of this well diversified Company is Rs. 26.62. On this basis, the net return works out to a little over 4 per cent per annum.

CHEMBRA PEAK REPEATS DIVIDEND

RESERVES GET MORE

A SUBSTANTIAL increase in both tea and coffee crop has yielded better financial results for the Chembra Peak Estates Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Calicut, Kerala) during the year ended 31st March 1961. The tea crop for the year is the highest on record at 1.82 million lbs., as against 1.55 million lbs. for the previous year and the previous highest of 1.69 million lbs. in 1958-59. The coffee crop, too, has sharply increased from 61.481 metric tonnes to 225.000 metric tonnes. The higher tea crop and better price realised on tea coupled with a bigger coffee crop, have neutralised the effects of lower prices fetched by coffee. The gross profit of the Company has staged an impressive rise of Rs. 5.32 lakhs to Rs. 13.21 lakhs, raising the ratio of gross profit to sales from 25.3 per cent in the previous year to 36.3 per cent. The provision for depreciation has been increased from Rs. 0.79 lakh to Rs. 1.21 lakh and that for taxation has been doubled from Rs. 3.00 lakhs to Rs. 6.01 lakhs. The net profit at Rs. 5.07 lakhs reveals an increase of Rs. 1.50 lakh over that for the previous year.

The following comparative table shows at a glance the working results of the Company for the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds of tea	36.34	31.07	28.08	26.07
,, ,, ,, coffee	2.88	5.68	3.97	4.32

* On increased capital from Rs. 9.33 lakhs to Rs. 14 lakhs.
† Subject to deduction of tax.

The Directors have transferred Rs. 3.23 lakhs to reserves which is exactly half of the profit available for distribution at Rs. 6.46 lakhs. The dividend on ordinary shares is maintained at 20 per cent, subject to deduction of tax, but on an increased capital, following the bonus issue of one share for two shares during the year under review. A larger amount is, therefore, required to cover this dividend.

The financial position of the Company is sound. Following capitalisation of reserves as stated earlier the paid-up has increased by 50 per cent from Rs. 9.33 lakhs to Rs. 14.00 lakhs, all in ordinary shares of Rs. 2 each fully paid. The reserves and surplus at Rs. 14.86 lakhs are still higher than the paid-up capital. The current assets of Rs. 22 lakhs are nearly double the current liabilities at Rs. 11.36 lakhs. The gross block of the Company at Rs. 27.60 lakhs is written down to Rs. 18.23 lakhs.

The tea crop for the current year is estimated at 7,71,000 kgs. (or 1.7 million lbs.) to be harvested at an all in cost of Rs. 2.96 per kg. The coffee crop to be harvested seems to be a record at 300 metric tonnes, at an all in cost of Rs. 1,240 per tonne.

The current quotation of Rs. 2 paid-up shares of the Company is Rs. 4.03 *cum-dividend*. On an *ex-dividend* basis, the net yield is as high as 7.4 per cent. This is quite a good return, considering the sound financial position of the Company and the able hands in which its management rests.

SIMPLEX MILLS EARN MORE

COMPANY TO ISSUE BONUS SHARES

BY switching over from coarse and grey cloth to higher medium varieties, the Simplex Mills Company Ltd. (Managing Director: Mr. S. R. Damani, M.P., Bombay) has been able to effect a substantial improvement in its sales during the year ended 31st March 1961 to Rs. 378.26 lakhs from Rs. 354.69 lakhs in the previous year and Rs. 285.62 lakhs in 1958-59. The rise would have been higher but for the voluntary reduction in prices of cloth in the latter half of calendar year 1960 in compliance with the Government's wish. Reflecting larger offtake of cloth and yarn, the closing stocks have shown a welcome decline of Rs. 22.59 lakhs to Rs. 40.36 lakhs. A notable feature of the expenses side, is the substantial fall in the value of raw materials, stores, spares, etc., consumed of Rs. 23.37 lakhs to Rs. 170.74 lakhs. Other expenses, however, have risen by Rs. 23.54 lakhs to Rs. 184.79 lakhs, thereby completely neutralising the saving noted in the previous item of cost. Nevertheless, the gross profit has almost trebled itself from Rs. 11.93 lakhs to Rs. 34.81 lakhs. The provision for depreciation has been raised from Rs. 12 lakhs to Rs. 16.21 lakhs. In view of the accumulated losses of the previous year, the Company has not made any provision for taxation. The remuneration to managing agents is just Rs. 3,000, being the minimum payable up to 30th May 1960, on which date the managing agency of Messrs. Forbes, Forbes, Campbell & Co., Ltd. was terminated. The net profit amounts to Rs. 18.57 lakhs, as against an actual loss of Rs. 32,000 suffered by the Company in the preceding year.

After deducting the loss amounting to Rs. 3.50 lakhs brought in from 1959-60 and writing back Rs. 48,000 being excess provisions made in previous years, the amount available for distribution aggregates Rs. 15.55 lakhs. But, in spite of this substantial sum and contrary to expectations, the Directors have decided to skip the dividend for the year under review, on the ground that the Company's rehabilitation and modernisation plan warrants larger resources. Last year, it may be noted, the Company had paid 15 per cent taxable, out of reserves. In their report to shareholders, the Directors state that they are of the opinion that the entire profits of the Company for 1960-61 should be ploughed back to meet at least a part of the demand for additional finance. This sudden dawning of wisdom on the Directors is in refreshing contrast to the depletion of reserves in the previous two years for payment of dividends even though the Company had suffered losses.

The shareholders, however, need have no cause for disappointment, because the Directors have decided to issue, subject to permission from the Government, one bonus share for every five shares held by capitalising Rs. 10.08 lakhs out of the general reserve. The only snag in this decision is that the Company will have to pay the Government a tax on this issue at 12.5 per cent which will deplete the Company's funds by Rs. 1.26 lakh.

The marked progress made by the Company during the year under review is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales (gross)	378.26	354.69	285.62	286.76
Other income	12.08	12.61	9.19	6.82

* Subject to deduction of tax.

As already stated the production pattern of Company's mill has undergone considerable changes. Previously, the Company was producing coarse and grey cloth; the production of these varieties has been replaced by that of higher medium varieties. During the year under review, the Company made important additions to its fixed assets, involving a capital expenditure of Rs. 11.66 lakhs. The additions to machinery included one hopper, one Dronsfield automatic grinding machine, one Whitin combing plant, five roving frames, two Lessona cone winding machines, one Cimmco cone winding machine, one Manton Gaulin Homogeniser, three heat sealing machines and one double plaiting and folding machine.

The financial position of the Company, as disclosed by its balance-sheet as at 31st March 1961, is quite sound. The paid-up capital, which had been raised by the issue of right shares to the tune of Rs. 8.40 lakhs in 1958-59 stands unchanged at Rs. 50.40 lakhs. As the Company has ploughed back the entire profits of the year under review, the reserves and surplus have risen from Rs. 15.54 lakhs to Rs. 34.22 lakhs. The Company's secured loans have increased from Rs. 123.19 lakhs in 1959-60 to Rs. 131.89 lakhs, but the unsecured loans have fallen from Rs. 24.08 lakhs to Rs. 7.96 lakhs. The Company has repaid a clean loan of Rs. 5 lakhs secured from a bank besides reducing its secured loans from another bank. The other current liabilities and provisions aggregate Rs. 33 lakhs. Its total liabilities are in all Rs. 172.85 lakhs, while the total current assets are of the order of Rs. 135.28 lakhs only, of which investments amount to Rs. 1.11 lakh. Thus the total indebtedness is not matched by floating assets. But it must be noted that the secured loans mentioned above include debentures to the tune of Rs. 66.43 lakhs, a long-medium term obligation repayable any time after March 1969 but not later than March 1974. The gross block of the Company at Rs. 239.26 lakhs has been well written down to Rs. 122.19 lakhs, the aggregate depreciation provided being of the order of Rs. 117.07 lakhs. It will be noted that the gap between the paid-up capital and the net block account is wide and that only a fraction of it will be covered by the proposed capitalisation of reserves.

The Rs. 50 paid-up ordinary shares of the Company are currently quoted at Rs. 191.50 on the Bombay Stock Exchange; earlier in the year (on 19th June 1961), they had touched a high of Rs. 216 which compares with a peak of Rs. 187 registered in 1960.

(*Concluded from next column*)

new source of income to large numbers of agriculturists who cultivate jute, and for whom jute sticks hitherto have had virtually no commercial value."

As it is advantageous for the country as a whole to get this new source of raw material for paper industry fully exploited, the Government will do well to concede the Company's request for permission to import the necessary machinery and to extend any further assistance that may be needed for making a success of its project.

The Company's balance-sheet as at 31st March 1961 reflects a strong financial position. The paid-up capital of Rs. 88.20 lakhs is supported by an almost equal amount of Rs. 85.06 lakhs in the reserves and surplus. The Company has no outstanding loans, either secured or unsecured. The current assets at Rs. 100.47 lakhs are well in excess of current liabilities and provisions amounting to Rs. 41.57 lakhs showing a margin of Rs. 58.90, or over 100 per cent. In addition, the Company has investments of Rs. 1.34 lakh in Assam Paper Mills and East India Clinic Limited. A sum of Rs. 3.76 lakhs was spent on fixed assets during the year raising the gross value thereof to Rs. 245.29 lakhs. As the depreciation provided is of the order of Rs. 132.53 lakhs, the net block stands at Rs. 112.76 lakhs. In addition, there is capital expenditure in progress of Rs. 26,000.

The Directors have stated that the difficulties over obtaining import licences for wood pulp are still persisting and may necessitate a further curtailment of production during the year.

The Rs. 10 fully paid shares of the Company, currently priced at about Rs. 18, yield a net return of 5 per cent per annum.

The Government of India has issued an industrial licence to the Mysore Fertiliser Company for the manufacture of endrin, heptachlor and chlordane in collaboration with an American firm, Velsicol Chemical Corporation, Chicago Inc. (U.S.A.), which is the patent holders for the manufacture of these chemicals. The licenced capacity for the manufacture of endrin is 500—600 tons per year when the plant goes into production. At present, a large quantity of endrin is used in pest control programme, especially for the control of insect pests on paddy, sugarcane, cotton, tobacco, etc. The capital outlay on the project is estimated at Rs. 2.5 crores.

INDIA PAPER PULP SUFFERS SETBACK

JUTE STICKS TO SERVE AS RAW MATERIAL?

THE results of working of the India Paper Pulp Company Ltd. (Managing Agents: Messrs. Andrew Yule & Co., Ltd., Calcutta) during the twelve months ended 31st March 1961 are clearly less satisfactory than those for the previous year. They reflect the severe burden placed on the paper industry by the unrealistic price structure introduced by the Government of India on the recommendations of the Tariff Commission. Notwithstanding the fact that the Company sold a higher tonnage of paper during the year under review, its sale proceeds declined by Rs. 21.31 lakhs or 8.4 per cent to Rs. 229.27 lakhs. At the same time, its manufacturing expenses rose by Rs. 7 lakhs or 7.5 per cent in 1959-60 to Rs. 97.90 lakhs. Excise duty paid was a shade lower at Rs. 31.73 lakhs, as against Rs. 32.17 lakhs in the preceding year and other expenses, too, declined, albeit marginally, from Rs. 63.93 lakhs to Rs. 61.43 lakhs. Even so, the Company's profit-margin suffered an appreciable shrinkage. The gross profit has contracted by as much as 39 per cent, from Rs. 63.19 lakhs for 1959-60 to Rs. 44.56 lakhs for the year under review. Net earnings have dwindled even more sharply by 43 per cent to Rs. 15.86 lakhs. Because of lower profit, the provision for taxation has naturally gone down, by as much as Rs. 7.30 lakhs to Rs. 12.10 lakhs. Only a modest cut of about Rs. 2 lakhs has been made in the transfer to depreciation account. It will be interesting to note that, as a result of lower ex-factory paper prices, the Government itself has suffered by way of lower revenue from the Company on account of both excise duty and income-taxation, as will be seen from the following table depicting the Company's progress:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales of paper	2,29.27	2,50.58	1,54.75	1,05.86
Sale of by-products and other income	2.65	1.58	0.89	1.89

Paper produced in metric tonnes	14,406	N.A.	N.A.	N.A.

* Subject to deduction of tax. N.A. = Not available.

The shareholders, too, have been subjected to a cut in the dividend. Inclusive of an interim dividend of 50 nP paid on 20th January 1961, the total dividend for 1960-61 is only Re. 1.30 per share of Rs. 10 each, as compared with Re. 1.50 for 1959-60 both subject to deduction of tax. The amount ploughed back to reserves is also less at Rs. 4.11 lakhs, as against Rs. 9.75 lakhs a year ago.

The Company's production of paper during the year under review reached the level of 14,406 metric tons. It is not possible to indicate the increase in production over the year, as figures for previous years are not available. The Directors say that production would have been higher still but for the shortage of imported wood pulp. The Company is, however, trying hard to secure paper pulp from indigenous sources, as will be evident from the following extract from the Directors' report:

"In last year's report, the members of the Company were advised that, owing to widespread flowering, and consequential death, of the bamboos in the areas leased by Assam Pulp Mills Ltd. it had been necessary to defer the proposed pulp mill until such time as the leased areas had regenerated, or until alternative areas could be obtained. An alternative bamboo forest area in Kachar is now under reservation for Assam Pulp Mills Ltd., and a new site for the Mill has been secured at Monacherra. However, difficulties over the raising of loan capital for this project have not yet been resolved.

"Meanwhile, experiments at our Company's Mill have proved that a good quality of paper can be made by the existing Magnesium Sulphite process from pulp manufactured from jute sticks, but additional pulp making plant will be necessary. The potential use of jute sticks is a favourable development, and it is hoped that Government will grant the licences to install the necessary plant. This will not only reduce the Company's dependence on imported wood pulp, but also provide an entirely

SURAT ELECTRIC REPORTS ENCOURAGING RESULTS

BETTER DEAL FOR SHAREHOLDERS

AS a result of the quickening pace in power development in its area of supply and a spurt in the consumption of electricity, particularly by low tension consumers, the Surat Electricity Company Ltd. (Managing Agents: Messrs. Killick Industries Ltd., Bombay) has been able to report to its shareholders a further improvement of over 8 per cent in the total consumption of power for the year ended 31st March 1961. Although certain restrictive measures to regulate the supplies to consumers were introduced by the Government of Gujarat due to acute shortage of power, such became effective only in the concluding month of the year. The full effect of these measures was not felt during the period under review. Net earnings from sale of energy, therefore, improved by Rs. 10.24 lakhs to Rs. 90.91 lakhs. The consistent rise in full adjustment charges payable for the supplies purchased from the State Electricity Board, which was not passed on to the consumers, continued to eat into the already small profit-margin of the Company, with the result that the gross profit has improved at a much slower pace than sales, that is, by Rs. 3.30 lakhs to Rs. 19.47 lakhs.

The net profit for the year, however shows a slightly better rate of improvement, such having gone up from Rs. 5.60 lakhs to Rs. 8.95 lakhs, after charging Rs. 1.61 lakh (Rs. 1.58 lakh) for the Managing Agents' remuneration, Rs. 5.01 lakhs (Rs. 4.76 lakhs) for depreciation, Rs. 3.90 lakhs (Rs. 4.23 lakhs) for taxes on income and profits, and writing off Rs. 2,540 as part of the expenses in connection with the issue of new share capital. The figures within brackets relate to the corresponding provisions in the past year.

Transfers to the various reserves as required by the statute have been lowered a little from Rs. 3.41 lakhs to Rs. 2.96 lakhs. Of this latter sum, Rs. 2.05 lakhs have been credited to the development reserve, as against Rs. 26,191 during the previous year, while the balance has been apportioned between other reserves. Preference dividends, which have been declared in accordance with the modified method of computation, are expected to absorb Rs. 42,250, subject to the deduction of tax, leaving Rs. 5.62 lakhs for the payment of ordinary dividend. With a larger sum thus available, the rate of ordinary dividend has again been raised by a half per cent to 8 per cent, subject to deduction of tax. This is inclusive of the interim dividend at 2½ per cent paid earlier during the year under review.

The following table presents the steady progress made by the Company during the past four years:

(Value in lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales of energy	90.91	80.67	72.24	67.98
Other income	3.61	3.40	3.27	3.13
Cost of energy purchased	55.96	48.87	39.50	40.49

Carry forward	0.02	0.06	0.06	0.04

* Subject to deduction of tax.

With the full recovery of the calls in arrears, amounting to Rs. 2,525, the issued and subscribed share capital of the Company, as at 31st March 1961, equals its authorised share capital of Rs. 70 lakhs in equity shares and Rs. 5 lakhs in 6½ per cent tax-free cumulative preference shares. This is backed by Rs. 31.28 lakhs in reserves and surplus giving an equity of Rs. 144.40 per share. Borrowings from banks amount to Rs. 20.67 lakhs, in addition to current liabilities and provisions aggregating Rs. 29.47 lakhs.

During the year the Company expended Rs. 20.61 lakhs on additions to fixed assets, the gross value of which stands at Rs. 172.02 lakhs as at the date of the balance-sheet. After deducting from this Rs. 56.35 lakhs being the amount of depreciation provided so far and adding Rs. 2.47 lakhs being the cost of capital work-in-progress, the total net block works out to Rs. 118.14 lakhs. Investment against the contingency reserve stands at Rs. 4.40 lakhs and other current assets at Rs. 33.72 lakhs. Miscellaneous expenditure relating to the issue of new share capital which is yet to be written off is carried at Rs. 16,670.

As mentioned earlier, there has been a further improvement in power development in the Company's area of supply. Its application for extension by the inclusion of four villages has been sanctioned by the Government. 1,457 new consumers were connected to the mains and four new sub-stations were added to the system during 1960-61.

Currently, the Rs. 100 fully paid ordinary shares of the Company are quoted at Rs. 98 *cum*-final dividend of Rs. 5.50 (gross). On an *ex*-dividend basis, the net yield works out to 5.7 per cent per annum.

INDUSTRIAL PAPERS LTD.

A new Company by the name of Industrial Papers Limited is being incorporated at Calcutta for the purpose of manufacturing all kinds of insulating paper, cable paper, condenser paper and transformer paper. These papers are not produced in India and the country's entire requirements are being met from imports. With the increasing production of cables, transformers and condensers, the requirement of insulating paper is expected to increase considerably. The Company has been licensed to manufacture 1,500 tons of insulating paper annually (750 tons of cable paper, 450 tons of transformer paper and 300 tons of condenser paper). The production, it is claimed, will not only meet the country's entire requirement but also effect a foreign exchange saving of about Rs. 1.25 crore annually. The Company is planning to expand production of insulating paper and take up manufacture of tissue paper which is in short supply, as well as toilet paper which is not produced in India. The importance of this paper can be well realised from the fact that the production of condensers, insulating paper alone accounts for 60 per cent of the cost of manufacture.

The scheme of Industrial Papers to manufacture insulating paper will be accomplished in two stages. To start with, the Company will import pulp and make paper from imported pulp. In about three years time, it will manufacture both pulp and paper. The Company has finalised collaboration with the world's leading manufacturer of this paper which will not only be providing the know-how required for its manufacture in India but also invest in this project.

A plant capable of manufacturing 1,500 tons of insulating paper annually will involve a total investment of Rs. 55 lakhs. It is proposed to raise Rs. 20 lakhs in equity shares, out of which the foreign collaborating firm will take Rs. 5 lakhs and Rs. 35 lakhs will be obtained through loans. The Company has already secured the permission of the Controller of Capital Issues for raising the required capital and is expected to come to the market "very shortly." It is learnt that the entire issue will be underwritten.

The Company has already acquired land and building for the purpose and almost finalised the selection of machinery. It is expected that the factory will start production some time during the middle of 1962.

SHREE VALLABH GLASS WORKS

The Directors of Shree Vallabh Glass Works Ltd. have announced the details of the allotment of shares in regard to application received against the issue of 37,255 shares of the total value of equity shares of Rs. 37,25,500. The total numbers of shares applied was about ten times the number of shares offered. In view of the large number of applications received, the Directors, in consultation with the authorities of Stock Exchange, Ahmedabad, have decided to allot shares on the following basis:

No. of shares applied	*Shares to be allotted*
2 to 25	1
26 to 50	2
51 to 75	3
76 to 100	6
101 to 150	10
151 to 300	20
301 to 500	26
501 to 1,000	30
1,001 to 1,500	50
1,501 and above	100

The subscription list of the issue was closed on 8th July 1961. Allotment letters and cheque for refund amount are expected to be despatched within the shortest time.

COMPANY MEETINGS AND DIVIDENDS

SRI KRISHNARAJENDRA MILLS LTD. Annual General Meeting, Bangalore, 30th August 1961. Dividend: 11 per cent or Rs. 5.50 per share, subject to deduction of tax, payable on or after 11th September 1961. Transfer books will remain closed from 23rd to 30th August 1961, both days inclusive.

GROB TEA CO., LTD. Annual General Meeting, Calcutta, 31st August 1961. Dividend: Re. 0.60 per share, subject to deduction of tax. Transfer books will remain closed from 25th to 31st August 1961, both days inclusive.

INDIA CEMENTS LTD. Annual General Meeting, Madras, 4th September 1961. Dividend: 12 per cent or Re. 0.60 per share, subject to deduction of tax. Transfer books remain closed from 11th August to 4th September 1961, both days inclusive.

CENTRAL INDIA COALFIELDS LTD. Annual General Meeting, Calcutta, 5th September 1961. Transfer books will remain closed from 21st August to 5th September 1961, both days inclusive.

RAJAPALAYAM MILLS LTD. Annual General Meeting, Rajapalayam, 6th September 1961. Dividend: 16 per cent or Rs. 16.00 per share, subject to deduction of tax. Transfer books will remain closed from 24th August to 6th September 1961, both days inclusive.

HINDOOSTAN SPINNING AND WEAVING MILLS CO., LTD. Annual General Meeting, Bombay 18th September 1961. Dividend: 50 per cent or Rs. 500 per whole ordinary share (includes interim dividend) and 50 per cent or Rs. 125 per quarter ordinary share (includes interim dividend), both subject to deduction of tax. Transfer books will remain closed from 25th August to 18th September 1961, both days inclusive.

WESTERN INDIA SPG. AND MFG. CO., LTD. Annual General Meeting, Bombay, 19th September 1961. Dividend: 50 per cent or Rs. 500 per ordinary share, subject to deduction of tax (includes interim dividend). Transfer books will remain closed from 25th August to 19th September 1961, both days inclusive.

INDIAN MANUFACTURING CO., LTD. Annual General Meeting, Bombay, 20th September 1961. Dividend: 25 per cent or Rs. 250 per whole ordinary share (includes interim dividend) and 25 per cent or Rs. 125 per half ordinary share (includes interim dividend), both subject to deduction of tax. Transfer books will remain closed from 25th August to 20th September 1961, both days inclusive.

ALUMINIUM INDUSTRIES LTD. Annual General Meeting, Kundara, Kerala State, 30th September 1961. Dividend: 18 per cent or Re. 1.80 per share (includes interim dividend of 9 per cent or Re. 0.90 per share), subject to deduction of tax. The final dividend of 9 per cent (taxable) will be made payable on or after 30th September 1961. Transfer books will remain closed from 26th to 30th September 1961, both days inclusive.

GWALIOR RAYON SILK MFG. (WVG.) CO., LTD. Taxable dividend of Rs. 2.25 per ordinary share, for the year ended 31st March 1961, payable on or after 18th September 1961. Transfer books will remain closed from 21st August to 15th September 1961, both days inclusive.

AUCKLAND JUTE CO., LTD. Taxable final dividend of Rs. 5.00 per ordinary share (making a total dividend of Rs. 12.00 per share, taxable) for the year ended 31st March 1961.

KINNISON JUTE MILLS LTD. Taxable final dividend of Rs. 2.00 per ordinary share (making a total of Rs. 7.00 per share, taxable), for the year ended 31st March 1961.

LAWRENCE JUTE CO., LTD. Taxable final dividend of Rs. 8.00 for ordinary share (making a total of Rs. 15.00 per share, taxable), for the year ended 31st March 1961.

NORTHBROOK JUTE CO., LTD. Taxable final dividend of Rs. 2.25 per ordinary share (making a total of Rs. 3.00 per share, taxable), for the year ended 31st March 1961.

UNION JUTE CO., LTD. Taxable final dividend of Re. 1.00 per ordinary share (making a total of Rs. 6.00 per share, taxable), for the year ended 31st March 1961.

DUFFALGHUR TEA CO., LTD. Taxable final dividend of 15 per cent or Re. 1.50 per ordinary share (making a total of 25 per cent or Rs. 2.50 per share for the year), for the year ended 31st December 1960.

METONI TEA CO., LTD. Taxable dividend of Re. 0.50 per share, for the year ended 31st December 1960.

KALASA TEA AND PRODUCE CO., LTD. Taxable dividend of 25 per cent or Re. 0.50 per ordinary share, for the year ended 31st March 1961.

LINGAPUR ESTATES LTD. Taxable final dividend of 15 per cent or Rs. 0.30 per share (making a total of 25 per cent or Rs. 0.50 per share), for the year ended 31st March 1961.

OSBOOR ESTATES LTD. Taxable final dividend of 10 per cent or Re. 0.20 per ordinary share (making a total of 15 per cent or Re. 0.30 per share), for the year ended 31st March 1961.

SYNOPSES OF COMPANY REPORTS

Belvedere Jute Mills Co., Ltd.

(*Managing Agents*: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—31st July.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	1,49,63	1,30,86
Closing stock	7,68	6,88
Gross profit	3,73	14,84

,, ,, depreciation	1,84	1,85
,, ,, taxation	1,15	5,80
,, ,, development rebate reserve	...	2
Net profit	24	6,11
Adjustments	2,58	35†
Appropriations:		
Total available balance	2,82	6,46
Transfer to reserves	...	1,71
Proposed dividends (taxable) Preference	64*	49
,, ,, Ordinary	1,40	3,78
	(5%)	(13½%)
Carry forward	78	48

N.B.—Adjustments include the balance brought forward from the previous year; excess provision for wealth tax written back; E.P.T. Post-war Refund and the amount drawn from contingencies reserve.

* Dividend is worked at 9.1 per cent in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

† Adjustments under 1959 column are shown providing Rs. 14,700 for supplementary dividend for the year 1959 on preference shares at 2.1 per cent.

Extracts from the Directors' report: Trading conditions were difficult during the year. Prices of raw jute fluctuated widely and during the course of the year increased by nearly 70 per cent. Unfortunately, prices of manufactured goods generally failed to keep in parity with the price of the raw material, and profitable simultaneous business was rarely possible.

The prospects for the current year are poor. The lower level of production ensuing from the restrictions in working has inevitably increased overhead costs; and direct costs have also been raised by the substantial increase in dearness allowance payable to workers which has been recommended by the Wage Board for the Jute Industry. In addition, costs will be further increased by the loss of production on account of the block closures and the lay-off compensation which will be paid to the labour under the terms of the Industrial Disputes Act.

Shareholders were advised by a circular letter dated 27th February, 1961, that the Company's Board and the Board of Delta Jute Mills Co., Ltd., are of the opinion that the profitability of both Companies would be increased by concentrating the working of the two Mills in Delta Mill, and that this should be done under a Scheme of Arrangement whereby this Company would be absorbed by Delta Jute Mills Co., Ltd. Delta Jute Mills Co., Ltd., has received the consent of the Controller of Capital Issues to the issue of shares necessitated by the proposed scheme and the members of Delta Jute Mills Co., Ltd., have approved the scheme and have authorised the Board of that Company, subject to the consent of the Calcutta High Court being received to the scheme, to issue shares in that company to the holders of Belvedere shares. The petition to the Court for its sanction to the scheme of arrangement will be filed shortly and thereafter the Court will convene meetings of the preference and ordinary shareholders at which they will be asked to approve the scheme. Members will be kept advised from time to time of the progress made.

The Central Government have approved the reappointment of Andrew Yule & Co., Ltd., as managing agents of the Company for a period of 5 years from 15th August, 1960, and the formal re-appointment was made by the Company at an Extraordinary General Meeting held on 17th August, 1960.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	35,00,000	Gross block	1,00,52,541
Reserves and surplus	29,25,480	—Depreciation	58,47,041
Other liabilities	27,19,508		
		Net block	42,04,500
		Current assets	48,14,575
		Investments	1,13,959
		Cash	11,824
	Rs. 91,44,988		Rs. 91,44,988

Birpara Tea Co., Ltd.

(*Managing Agents*: Messrs. Duncan Brothers and Co., Ltd., Calcutta.)

Annual General Meeting—11th August.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Gross sales	19,96	22,12
Closing stock (unsold tea)	12,41	11,85

Transfer to Managing Agents' remuneration	61	79
,, ,, depreciation	87	93
,, ,, taxation	2,53	2,91
Net profit	2,45	3,07
Adjustments	97	1,50
Appropriations:		
Total available balance	3,42	4,57
Transfer to reserves	1,30	2,06
Proposed dividends (taxable) 8% Preference	10*	6
,, ,, Ordinary	1,58	2,03
	(17½%)	(22½%)
Carried forward	44	40

N.B.—Adjustments include the balance brought forward from the previous year; amount transferred from contingency reserve; interest earned on deposits, etc.; profit on sale of investments and other credit items.

* Calculated at 8.97 per cent in accordance with the Preference Shares (Regulation of Dividends) Act, 1960. This also includes the additional dividend on preference shares (at 0.97 per cent) for 1959.

Extracts from the Directors' report: Tea crop was 5,43,381 kgs. as compared with 6,03,301 kgs. in 1959. Early season drought and excessively wet and cold conditions in July as well as heavy red spider attack despite spraying and dusting, account for the shortfall in the crop harvested. The average selling price realised was Rs. 5.32 per kg. as against Rs. 4.96 per kg. in the previous year.

Estimates for 1961 provide for a crop of 5,80,000 kilograms at an outlay of Rs. 23,85,230 including inland freight and sale charges.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,00,000	Gross block	29,89,157
Reserves and surplus	19,18,470	—Depreciation	10,94,016
Other liabilities	12,14,427		
		Net block	18,94,241
		Block in progress	44,010
		Current assets	17,05,090
		Investments	3,49,225
		Cash	1,40,313
	Rs. 41,32,897		Rs. 41,32,897

* Paid-up capital consists of 9,000 ordinary shares of Rs. 100 each fully paid up and 1,000—8 per cent cumulative preference shares of Rs. 100 each fully paid up.

Devon Tea and Produce Co., Ltd.

(*Managing Agents*: Young India Agencies Private Ltd., Madras.)

Annual General Meeting—31st July 1961.

Working Results:

	For the year eded 31st March (In thousand rupees)	
	1961	1960

,, ,, Ordinary	1,80	1,66
	(9%)	(8½%)
,, ,, Deferred	50	40
	(25%)	(19.9%)
Carried forward	6	7

N.B.—Adjustments include the balance brought forward from the previous year.

* This includes Rs. 24,566 being excess provision for sales tax made in prior years.

† Preference dividend is calculated at 6.66 per cent in accordance with the provisions of the Preference Shares (Regulation of Dividend) Act, 1960. This also includes provision for additional dividend at 0.66 per cent. in respect of the year 1959.

Extracts from the Directors' report: *Operations*: *Meters Division*: The working of the Meters Division during the year under review has shown marked improvement over previous years. The production for the year was 1,34,500 meters against 1,00,500 meters produced during the previous year. This is the highest figure of production so far attained in the Meters Division. The Company is making further efforts to increase the production of meters.

Besides the production of 'Jaipur' H.S. Electricity Meters on Japanese pattern the Company will commence production of 'Siemens' meters under collaboration with Siemens-Schuckertwerke A.G. of West Germany in the near future.

Metals Division: 2,024 metric tons of material was produced during the year under review as against 2,355 metric tons in the previous year. This decrease is mainly due to the cuts made by the Government in the quota of raw material, owing to stringent position of foreign exchange. The Company is now contemplating to diversify its manufacturing activities so that the available capacity of the plant and machinery may be profitably utilised.

Expansion and Development: The implementation of the scheme for the manufacture of 'Siemens' type of electric meters is now nearing completion. More machinery and equipments have arrived and the construction of new factory sheds to house the same is in progress. The Company has obtained Industrial Licence for the manufacture of magnet which is an important component of the meter.

The Company has redeemed the Debentures of Rs. 10 lakhs during the year under report. A further loan of Rs. 15 lakhs has been obtained from the Industrial Finance Corporation of India for implementation of 'Siemens' type of meter, and in addition, a loan of Rs. 4.75 lakhs in foreign currency is agreed to be given to the Company by the said Corporation. Further equity capital of Rs. 5 lakhs has been issued and fully paid-up.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	30,00,000	Gross block	52,93,710
Reserves and surplus	9,30,925	—Depreciation	23,02 530
Other liabilities	1,03,39,483

* Only Rs. 260. † Only Rs. 600.

‡ Total amount available for disposal after deducting the loss brought forward of Rs. 60,919.

Extracts from the Directors' report: Crop was affected by the drought that occurred in the first part of the year and amounted to 2,151 quintals (5,928 maunds) compared with 2,435 quintals (6.711 maunds) secured in 1959. However, total rainfall for the year was 342 cms. (135 inches) compared with an average of 373 cms. (147 inches) for the previous 10 years. The crop sold satisfactorily at an average price of Rs. 4.91 per kg., an increase of 13 nP on the sale average for the previous year.

Estimates for the current season have been framed for a crop of 2,540 quintals (7,000 maunds) and, if favourable conditions continue during the season, it is hoped that the estimated crop will be secured. The rainfall and crop figures to the end of May this year were: rainfall 61 cms., crop 239 quintals compared with 41 cms. and 161 quintals respectively to the end of May 1960.

Messrs. Andrew Yule & Co., Ltd., ceased to act as managing agents of the Company on 15th August 1960, and at an extraordinary general meeting of the Company held on 16th August 1960, they were appointed secretaries and treasurers of the Company with effect from 15th August 1960.

Accounts in brief as at 31st December 1960 are as under:—

Extracts from the Directors' report: *Estates*: Paalali, Pathanapuram and Kutikul Estates are reported to be in good condition. 10 acres in Pathanapuram estate and 20 acres in Kutikul estate have been replanted during 1960-61 with high yielding rubber, under the subsidy scheme of the Rubber Board. 5 acres in Pathanapuram estate and 20 acres in Kutikul estate will be replanted during 1961-62.

Crop and Prices: The rubber crop secured during the year was 10,17,998 lbs. at an estate cost of 69.98 nP per lb. against an estimate of 9,35,000 lbs. at 76.04 nP per lb. The rubber was sold at an average price of 171 nP per lb. A portion of the Kutikul crop was sold as *Sole crepe*.

The rubber crop estimated for 1961-62 is 9,35,000 lbs. (4,25,000 kg.) at an estate of 76.46 nP per lb. or 167.83 nP per kg.

Accounts in brief as at 28th February 1961 are as under:—

Liabilities	Rs.	Assets	Rs.

Appropriations:		
Transfer to reserves	20	25
,, ,, provision for ex-gratia bonus to employees	11	Nil
Proposed dividend (taxable)	32	19
	(10%)	(6%)
Carried forward	2	†

* Most of the figures for the year 1960 are for a period of 3 months as manufacturing operations were resumed by the Company from 1st January 1960, on the termination of the licence.
† A small sum of Rs. 329 was carried forward.

Extracts from the Directors' report: *Excise Duty*: The Finance Bill for 1961-62 imposed an excise duty of 10 to 15 per cent on the company's production of glass, effective from 28th February 1961, which is being passed on to our clients.

Maintenance and Building Improvement: A programme of major repairs and improvements of the Factory buildings has been taken up and a large portion thereof has been completed by now. With a view to maintain the quality of the company's products and improve it further, the old machinery and plant is being replaced by new machines and equipment. Similarly, the present old *Annealing Chambers* are being replaced by modern type of *Annealing Lehr*, which will result in better annealing of the products and greater recovery of articles produced.

No provision for income-tax has been made for the accounting period since there is a set off against carried forward amount of arrears of loss and depreciation.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	3,19,975	Gross block	5,54,993

,, ,, ,, Ordinary	3,72† (9%)	2,81 (12½%)
Carried forward	17	92

N.B.—Adjustments include only the balance brought forward from the previous year.
* Dividend is calculated at 9 per cent in accordance with the Preference Shares (Regulations of Dividends) Act, 1960.
† Includes dividend on equity shares (new issue) at the rate of 9 per cent *pro rata*.

Extracts from the Directors' report: There has been marked progress in the operations of the Company during the year, which is reflected in increased sales (net) amounting to Rs. 1,19,09,106 as against the previous year's sales of Rs. 92,82,886. The construction work of the Steel Structural Plant at Goregaon has been completed to schedule and it has also gone into production.

During the year under review, two calls of Rs. 25 per share each, were made in September and December 1960 respectively on the newly issued preference as well as equity shares, making them fully paid up. These calls were made in connection with the requirement of funds for completion of the first phase of the Company's expansion and development programme at Goregaon, viz., Steel Structural Plant.

It is proposed to classify the present unissued, unclassified 25,000 shares of Rs. 100 each as 25,000 equity shares of Rs. 100 each. The directors have also recommended that the authorised capital of the Company be increased from Rs. 1,00,00,000 to Rs. 5,00,00,000. The shareholders are also being requested to authorise the Board to borrow moneys upto a total undischarged limit of Rs. 2,00,00,000 as required by Section 293 of the Companies Act, 1956, as amended by the recent Companies (Amendment) Act, 1960.

Goregaon Project: It is gratifying to record that the first phase of the Company's Goregaon project, viz., Steel Structural Plant, for which new capital was recently raised, has been completed according to schedule during the year under review.

While the construction work was being carried out and completed, manufacturing work was also started since October 1960. It will be realised that the working at Goregaon during the year has not been at full capacity, since construction work was under way and machinery was received and installed at various times.

Manufacturing Activities: The first batch of *Pneumatic Power Hammers* of 2 cwt., 3 cwt., and 5 cwt. capacity was made in the Company's Works out of imported components received from the Collaborators, Messrs. B. & S. Massey Ltd., England. The first *Trutzschler-NSE Blow-room line* to be manufactured in the country came out of the Company's Byculla Works and was successfully commissioned at Rani Lakshmi Mills, Coimbatore. The production of other established items of manufacture was maintained.

Foreign Collaboration: A new collaboration agreement was concluded with Messrs. Forni Elettrici A. Tagliaferri, Italy, for the manufacture of their entire range of Electrical Furnaces and Receivers. Another noteworthy development during the year has been the satisfactory conclusion of a supplementary agreement with Messrs. B. & S. Massey Ltd., England, for the manufacture of their extended range of *Pneumatic Power Hammers* as well as *Drop Forges*. It has not been possible for the Company to conclude the final agreement with Messrs. Deprag, West Germany, for the manufacture of their *Air Compressors*, as the terms approved by the Government did not prove acceptable to the Collaborators.

Current Year: The order book of the Company is satisfactory. The production and assembly lines for the two new items of manufacture, viz., *Massey Pneumatic Power Hammers* and *Trutzschler Blow-room line* will be well established during the current year and their production is expected to show further progress. Preparatory work for the manufacture of *Electric furnaces and receivers* is expected to be completed during the current year. The next phase of the Company's Goregaon project, which envisages the establishment of a large modern foundry with an annual capacity of melting 15,000 tons of *grey iron castings* and 3,600 tons of steel castings will also get under way during the current year.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	74,50,750	Gross block	93,30,855
Reserves and surplus	10,07,126	—Depreciation	20,73,762
Other liabilities	67,52,790		
		Net block	72,57,093
		Current assets	78,49,558
		Investments	43,774
		Cash	60,241
	Rs. 1,52,10,666		Rs. 1,52,10,666

* Paid-up capital consists of 50,000 equity shares of Rs. 100 each fully paid up (calls in arrears amount to Rs. 49,125) and 25,000—6·3 per cent tax-free cumulative redeemable preference shares of Rs. 100 each fully paid up (calls in arrears amount to Rs. 125).

Notices

THE METTUR CHEMICAL AND INDUSTRIAL CORPORATION LTD.

Registered Office:

Mettur Dam R.S.

NOTICE

NOTICE IS HEREBY GIVEN THAT THE register of members of the Company will be closed from 25th August 1961 to 9th September 1961, both days inclusive, in connection with the Twenty-fourth Annual General Meeting of the Company convened to be held at the Registered Office of the Company at Mettur Dam R.S. on Saturday the 9th September 1961 at 4 p.m. to transact the ordinary and special businesses set out in full in the notices of the meeting, which have been posted individually to the Members.

The Directors at their meeting held on 6th August 1961 have recommended the payment of the following dividends to the members for the year ended 31st March 1961.

6¼ per cent subject to tax final dividend on equity shares, which with the 6¼ per cent subject to tax interim dividend already paid makes a total dividend of 12½ per cent subject to tax on equity shares.

3 per cent tax-free on the preference shares as per provisions of the Preference Shares (Regulation of Dividends) Act, 1960, final dividend which together with the 3 per cent tax-free interim dividend on preference shares as per provisions of the Preference Shares (Regulation of Dividends) Act, 1960 already paid makes a total dividend of 6 per cent tax-free on preference shares as per provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

The above dividends are subject to the approval of the Industrial Finance Corporation of India.

Members are requested to attend the meeting either in person or by proxy. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board of Directors,

SESHASAYEE BROTHERS (PRIVATE) LTD.

Managing Agents

METTUR DAM R.S.,

7th August, 1961.

Note: The dividends, if sanctioned, subject to the approval of the Industrial Finance Corporation of India, will be payable on or after 20th September, 1961.

ORIENT PAPER MILLS LIMITED

Registered Office:

Brajrajnagar (ORISSA)

NOTICE

THE SHARE REGISTERS AND TRANSFER Books of the Company will be closed from the 29th August to 14th September, 1961, both days inclusive, for the purpose of payment of due course of dividends on Shares in the Company for the year ended 31st March, 1961. The dividends when declared, will be paid to those Shareholders whose names appear on the Company's Register of members on the 14th September, 1961, or to their mandatees.

By Order of the Board,

B. K. VYAS,
Secretary

SHARP DROP IN CALL RATE

(*From Our Own Correspondent*)

BOMBAY, 16*th August*

Following the inflow of notice money from Madras and Calcutta on Saturday the 12th inst. and the tapering off of the demand for inter-bank accommodation, conditions in the short-term money market in Bombay turned distinctly easy in the latter part of the week under review. Accordingly, call money rate which had remained steady at 3½ per cent on the first two days of the week dropped to 2½ per cent on Saturday. It eased further to 2 per cent on Monday, at which level it finished today. Thanks to plentiful supply of funds, borrowers had no difficulty in obtaining their requirements. Term-money rates, however, remained unchanged.

The results of the 91 days' Treasury Bills of the Government of India sold through weekly tenders disclosed that, as against an invitation for Rs. 2 crores, the total amount offered and accounted was the same. The average rate of accepted tenders was also unchanged at 2.400 per cent per annum. 91 days' intermediate Treasury Bills sold from the 9th to 12th inst. aggregated Rs. 69 lakhs, as against Rs. 1.47 crore in the previous week. Their sales are being continued from the 16th inst. upto the 19th inst.

An expansion of Rs. 9.29 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 11th August 1961, as compared with the previous week. As the notes held in the Banking Department have dwindled by Rs. 9.36 crores, the total notes issued have receded by just Rs. 6.35 lakhs. The foreign securities held by the Issue Department are unchanged at Rs. 116.86 crores, but, as balances held abroad have receded by Rs. 3.85 crores, the aggregate foreign assets are lower by that amount at Rs. 148.82 crores.

The statement of the scheduled banks for the week ended 4th August 1961 discloses an expansion of Rs. 23.74 lakhs in demand deposits and a recession of Rs. 47.08 lakhs in time deposits. The deposits of the State Bank of India improved by Rs. 1.82 crore in that week. Borrowings of the scheduled banks from the Reserve Bank of India dwindled slightly by Rs. 20.90 lakhs and such against usance bills by Rs. 16 lakhs. Their borrowings of demand nature from the State Bank, however, went up by Rs. 38.82 lakhs, but borrowings of time nature from the same institution shrunk by Rs. 89 lakhs. Investments of scheduled banks, as a whole, rose by Rs. 13.48 crores but, as those of the State Bank went up by as much as Rs. 14.72 crores, it is clear that investments of scheduled banks other than the State Bank must have actually declined by Rs. 1.24 crore. Advances and bills discounted (Bank credit) expanded by Rs. 2.58 crores to Rs. 1,238.26 crores, but those of the State Bank alone receded by Rs. 2.64 crores.

The major development of the week in the gilt-edged market was the announcement of loans by thirteen States aggregating Rs. 80 crores. All the loans will bear a uniform rate of interest at 4½ per cent and have a maturity of eleven years, being repayable in 1972. Except for the loans of Gujarat and Maharashtra, which are being issued at par, the rest are being offered at a discount. The terms of these loans are more favourable than those of existing comparable loans. All loans will open for subscription on 4th September 1961 and close on 9th September 1961 or earlier without notice as soon as subscriptions approximate to the amount of each issue. All the Governments have reserved the right of retaining subscriptions upto ten per cent in excess of the notified amount. Subscription may be in the form of cash/cheque in respect of all the loans. Securities of 3 per cent Tapti Irrigation Development Loan 1961 and 3½ per cent Cochin loan 1956-61 will be accepted at par for conversion into the new loans of the Governments of Maharashtra and Kerala, respectively. Mysore, Madras and U.P. loans maturing this year are also afforded conversion facilities.

In the foreign exchange section, the rupee declined slightly, largely in sympathy with the pound sterling. Banks' selling and buying rates for ready T.T. on New York were Rs. 477.75 and Rs. 474.50, respectively, as against Rs. 477.25 and Rs. 474 last week. In the New York exchange market, the pound sterling eased slightly in relation to the dollar. The latest available rates are 280.160-280.200 cents per £ for spot and 277.160-277.200 cents per £ for three months' forward. Over the week, the pound sterling shed 0.27 cent in the spot and 0.41 cent in the forward.

METALS STEADY

(*From Our Own Correspondent*)

CALCUTTA, 14*th August*

With greater demand, prices of base metals in Calcutta were steadier during the week under review. On the London Metal Exchange, copper remained steady while tin recorded a further advance. The price for copper opened in London at £230 a ton and after easing to £229½ recovered to close higher at £230½. The changed labour situation for the better in Chilean mines caused the easiness in London. Demand for copper scrap in Calcutta was keen, and prices for berry scrap and utensil scrap gained. The rise in price of tin in London to £926 a ton from £923 followed higher advices from Singapore. The local quotation at Rs. 1,669 per 100 kgs. was a few points higher. At Rs. 336.50 electrolytic zinc gained Rs. 10. This followed greater demand. In London the price of zinc at £76¾ a ton closed fractionally lower. Virgin lead remained unchanged here at Rs. 135.75. The London price for lead after moving up to £64½ a ton receded to £64¼.

BULLION FIRM

(*From Our Own Correspondent*)

BOMBAY, 16*th August*

The bullion market continued to rule firm during the week under review also. Gold met with good support prompted by reports of further seizure of contraband metal in sizable quantity. On Monday the 14th inst., the Anti-corruption and Prohibition Intelligence Bureau seized about 35,730 tolas worth Rs. 50 lakhs in a village near Versova, a suburb in Bombay. The gold, it was stated, had been smuggled from Kuwait. This report, together with fears that the contraband arrivals would dwindle for some time to come, induced some parties which had sold in anticipation of heavy inflow to cover at higher rates. However, at every rise in prices, there was also profit-taking by bulls. Even so, today's closing rates were well above those prevailing a week ago. In sympathy with the yellow metal, silver also ruled firm, though, over the week, no gains were recorded. To some extent, the upward trend in silver was checked by reports suggesting heavy arrivals in certain North Indian centres.

The daily average arrivals of gold were lower than in the previous week (3,500 tolas, as against 3,700 tolas), while those of silver were higher at 37 bars, as against 30 bars. The average offtake of gold and silver was of the order of 3,000 tolas (4,000 tolas last week) and 5 bars (5), respectively. The floating stocks are estimated at 30,000 tolas of gold and 1,000 bars of silver.

Adjustment rates fixed today were Rs. 122.50 per 10 grams of gold and Rs. 202.55 per kilogram of silver. The corresponding rates on Wednesday last week were Rs. 121.20 and Rs. 202.25, respectively.

The *Bhadrapad* (25th September) settlement in gold began the week at Rs. 121.70, as against the previous close of Rs. 121.65, and rallied to touch a high of Rs. 123.30 today. Towards the close, it was a shade lower at Rs. 123.15. The net gain over the week was Re. 1.50.

Ready gold evoked good buying enquiries and moved up from Rs. 121.45 to Rs. 122.90 today before finishing at Rs. 122.75. At this level, the discount under the forward was 40 nP, as against 20 nP last week-end. On Friday the 11th inst., the ready rate was on a par with the forward Rs. 122.15.

In silver, the *Bhadrapad* (26th settlement), which stood at Rs. 203.25 on Wednesday last week, rose to Rs. 203.60 at one time on Thursday. After receding to Rs. 202.45 on the 12th inst., the settlement recovered subsequently and touched Rs. 203.25 today, before finishing at Rs. 203.15.

The discount at which ready silver was quoted under the forward declined in the course of the week from Re. 1 to 60 nP. The metal opened firm at Rs. 202.30 and rose to Rs. 202.70 in the first two sessions. After easing to Rs. 201.15 on Saturday, it moved up again to Rs. 202.65 today, though it closed lower at Rs. 202.55.

The world price of gold in the London bullion market improved from $35.14 to $35.16½ per fine ounce. In sympathy with this rise and owing to the easiness of the pound sterling *vis-a-vis* the dollar, ready gold advanced from 250*s.* 7½*d.* to 251*s.* 1½*d.* Ready and forward silver, however, continued unaltered at 79½*d.* and 80½*d.*, respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of prices during the week under review:

	16-8-1961 (closing)	High	Low	9-8-1961 (closing)
GOLD	Rs.	Rs.	Rs.	Rs.
Ready (.99 fine)	122.75	122.90	121.55	121.45

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

KIPS QUIET

(*From Our Own Correspondent*)

MADRAS, 14*th August*

The tanned kips and calf skin markets generally continued to rule quiet during the week under review with a few selective inquiries. The top and medium class cow hides and also good FAQ marks ruled rather firm, in spite of small business from overseas. Inferiors had fair call locally and business with overseas was not easy.

Tanned cow calf remained unchanged. Inquiries for tanned buffalo were better and prices ruled firmer. Tanned buffalo calf remained more or less unwanted by the U.K., but demand from the U.S. was good, particularly for 2½ lbs. and over. Prices generally were unchanged to firmer.

Superfine tanned goat skins 8/9 lbs. and 11/12 lbs. were in demand from the Continent, but the undertone was definitely weak. The U.S. showed interest in middle class goat 11/12 lbs. and 13/14 lbs. all grades. Goat skins declined to some extent, while raw sheep skins ruled firm to better.

The clearance of market quality tanned sheep skins locally by shippers was rather large last week and prices as a consequence, advanced. Shippers were hesitant to commit themselves.

COTTON FUTURES RALLY

(*From Our Own Correspondent*)

BOMBAY, 16*th August*

After a week of indecision and hesitancy, the cotton futures market staged a smart rally during the week under review. The small volume of tenders on the two tender days during the week, namely the 10th and 14th inst. (100 and 150 bales respectively, bringing the total to date to a mere 700 bales) coupled with bullish crop news imparted strength to the market. Under pressure of persistent buying, the August 1961 contract spurted from Rs. 568 last week-end to Rs. 585 at close today, the highest for the week. The new crop March 1962 contract recorded a sympathetic rise from Rs. 587.50 to Rs. 589.50 today, after having touched a peak of Rs. 591.75 on Saturday. News of wet weather in the Khandesh, Moglai and Vidarbha region and reports that compulsory survey might be abolished with effect from next season beginning on 1st September although the mill quota system would be retained, further aided sentiment. Uncertainty about the crop, however, acted as a restraining influence on trading in the new crop contract. The following table indicated the trend of the market during the week:

(In rupees per three quintals)

		16-8-61	*High*	*Low*	9-8-61
I.C.C.	August 1961	585	585	571	568
I.C.C.	March 1962	589.25	591.75	585.50	587.50

Ready rates, in contrast, tended to recede. Mill interest was generally lacking. As most of mills has covered their immediate requirements, they were inclined to wait and watch the progress of new crop. Short-staples, particularly cottons spinning 28/30 counts, however, received good attention. Staple varieties such as Digvijay, 197/3, Vijay Co2 and L. 147 also found buyers.

Shippers reported better inquiries for Bengal *Deshi* from the Continent and U.S.A. But prices receded, thanks to low offers. Kala and Wagad also evoked some export attention. The cut in export duty on *Deshi* cotton from Rs. 40 to Rs. 25 per bale in Pakistan, thus bring it on a par with that in India, has had no effect on prices here because the cut was anticipated and discounted in advance. Meanwhile, the East India Cotton Association, Bombay, is understood to have sought an extension of the shipping period in respect of Bengal *Deshi* and ¾" cotton, which is due to expire this month, on the ground that the expected demand from the Continent and Japan has not been forthcoming to the desired extent.

Following the news of damage to Egyptian crop, spinners showed much interest in Sudan cotton as a possible substitute. Sizable business passed in choice growths. Sudan G4S was done at Rs. 1,515 per candy and G2L at Rs. 1,830 per candy. Selected E. African varieties attracted attention. B.P.52 f.a.q. changed hand at Rs. 1,325 and Jinja at Rs. 1,190.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end closing:

Bengal *Deshi* 610 (630); Jarilla 930 (940); Kalyan 810 (810); Surti 920 (920); Vijay 930 (930).

The Karachi cotton futures market had a short trading week of only three days during the week. The market was closed on 9th, 11th and 12th instants. During this brief period, futures values drifted downwards on persistent selling prompted by bearish weather news and slackness in overseas demand. The abolition of export duty on Comilla cotton and the reduction in export duty on *Deshi* cotton from Rs. 40 to Rs. 25 per bale, announced on the 14th inst., had little effect on the market because both the measures were expected and discounted in advance. Moreover, there was no change in the duty of staple varieties. The N.T.R.G. January receded from Rs. 73.70 to Rs. 72.90. The March position dropped 70 nP to Rs. 72.25.

Futures trading in Alexandria continued to remain suspended during the week. Prevailing weather is reported to be unfavourable to the crop. The latest news is that the damage to the crop on account of insect pests is about 20 per cent in the case of lower grades and 5 to 7 per cent in respect of higher grades.

Easy conditions prevailed in the Liverpool cotton futures market during the week under review. Lower advices from New York coupled with unencouraging news from the yarn and piecegood markets prompted selling which found buyers reserved. Both the American and American type contracts at Liverpool were marked down. Sudan cotton contracts were, however, quietly steady. Values were unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 24.35; December 24.80; March 25.30; May 25.65.

American cotton mixed growth contract: October 24.80; December 25.20; March 25.65; May 26.05.

Sudan: September, November, January 31.25.

The New York cotton futures market ruled subdued during the week. Inspite of the continued firmness of the spot market and some scattered buying influenced by the expectation that a large quantity of cotton would go into the Government loan programme, the futures values drifted lower, thanks to speculative selling by spot and commission houses.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	15-8-61	8-8-61	31-7-61
New York Spot	35.15	35.05	35.00
New Orleans Spot ...	32.90	32.90	32.90
October	34.50	34.56	34.48
December	35.03	35.08	34.97

OILSEEDS RECOVER

(From Our Own Correspondent)

BOMBAY, 16*th August*

There was a marked revival of activity in the oilseeds market during the week under review. Under the leadership of groundnuts, seeds and oils generally staged a smart recovery from the low levels reached last week. The statement of Mr. S. K. Patil, Union Minister for Food and Agriculture, at the annual meeting of the Central Organisation for Oil and Industry, held at Bombay last week, that people should not expect any fall in food prices and that prices were bound to go up in the years to come was bullishly interpreted by the trade. It was felt that the Government would not consider any immediate measures to curb price increases in oilseeds and oils. The market, however, turned subdued later in the week, on account of profit-taking and absence of follow-up support. Nevertheless, the closing prices were still higher than those a week ago. Groundnuts staged a strident rally on reports of pest attack of the standing crop in some parts of Andhra Pradesh. They, however, drifted down subsequently in the absence of persistent apathy of *vanaspati* manufacturers and crushers. Saurashtra interests were once again sellers on reports of larger sowings in Gujarat in the current season. Castorseeds moved up, thanks to the support extended by some North Indian operators as well as U.K. enquiries for Indian castor oil. Linseeds put on a cheerful appearance, owing mainly to firmness of rape and mustard in North Indian markets induced by reports of crop damage in certain parts of the Punjab. In sympathy, cottonseeds ruled fully steady. Sesame, however, was neglected in the absence of fresh support.

Groundnuts January 1962 contract rallied from Rs. 215.25 to Rs. 217.37 before winding up the week at Rs. 216.62. Both Khandesh quality and Coromandels rose by Re. 1.75 to Rs. 52.25. Nizams hardened by Re. 1.50 to Rs. 52. Oil ex-mill gathered 35 nP to Rs. 21.60. Oil January 1962 contract improved by 10 nP to Rs. 17.90.

Castorseed September contract spurted by Re. 1.75 to Rs. 170.37. March 1962 contract put on 88 nP to Rs. 170.75. Kanpur bold picked up 12 nP to Rs. 33.12. Oil B.S.S. was higher by 5 nP at Rs. 15.50. Commercial, however, shed 5 nP to Rs. 14.05.

Among linseeds, September 1961 contract gathered Re. 1.37 to Rs. 39.56. March 1962 contract put on by 53 nP to Rs. 37.56. Bold ready rose by Re. 1.25 to Rs. 39. Linseed oil gained 70 nP to Rs. 16.90.

Cottonseed September 1961 contract firmed up by a rupee to Rs. 95.50. March 1962 contract, was increased by 75 nP to Rs. 91.75. Both Berars and Non-whites were fully maintained at Rs. 19.20, and Whites at Rs. 20.10.

Sesame ruled easy. Bold variety was marked down by Rs. 10 to Rs. 330 (per 250 kgs.). Sesame oil was quiet at Rs. 24.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	16-8-1961	9-8-1961	2-8-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	216 62	215 25	219 12
Nizam bold	52 00	50 50	53 25
Coromandel ready	52 25	50 50	53 75
Khandesh quality	52 25	50 50	53 75
Oil ex-mill ready*	21 60	21 25	22 25
Railway receipts*	21 40	21.15	21.90
Oil January 1962	17.90	17.80	18.25
Castorseed			
September 1961	170 37	168 62	170 12
March 1962	170 75	169 87	170.75

Kardi seed	25.00	26.00	26.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—*All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.*

BLACK PEPPER WEAK

(Messrs. Parekh and Co.)

BOMBAY, 16*th August*

The last week's weakness in Malabar black pepper was extended during the week, in view of complete absence of overseas demand and under pressure of nervous liquidation by bulls who collected sizable quantity of August contracts in the hope of higher prices resulting from the pre-autumn demand from the U.S.A. Ungarbled pepper at Cochin climbed down to Rs. 385.50 and garbled touched a low of Rs. 400. August was liquidated at as low of Rs. 402. The weakness of the bulls was fully exploited by the bears who successfully tried to bear the market by manipulations. Calicut was comparatively steady at Rs. 390.

There are unconfirmed reports that some Non-Conference Lines are willing to book freight for the U.S.A. ports even at $40, but nothing is definitely known.

Singapore, which was ruling comparatively steady, also became weak in sympathy with India, the latest price for black and white pepper being Str.$147½ and Str.$177½, respectively.

Spot in New York gave way under pressure of sales of stored unsold consignments of Malabar black pepper. It came down to $0.45 to improve to $0.46, as cheaper offers from Singapore were not forthcoming as expected by New York dealers. Indian dealers at times were offering competitive prices to test the market. Neither Singapore nor India was willing to offer big quantities.

The future of the market depends on the size of the new crop of Lampong and Malabar and the buying attitude of East European countries and the U.S.A.

Inventories with both grinders and dealers in the U.S.A. are running down. As such, sooner or later, they shall have to come to replenish their stocks. Dealers in New York are haggling for lower price and the coming two/three weeks will show who wins in this tug-of-war. Stray offers from India even at $0.43½ on the basis of reduced freight from Non-Conference were refused. The deterioration in the political situation on Berlin issue has proved a supporting factor to Malabar black which at the time of writing has improved to Rs. 387½ and Rs. 404 for ungarbled and garbled respectively. October delivery on the ring improved from Rs. 416 to Rs. 422.

Ready pepper in Bombay is nominally quoted at Rs. 216 per 50 kilos.

ADVANCE ALLOCATION OF ART SILK YARN

(From Our Own Correspondent)

BOMBAY, 16*th August*

A distinctly easy trend was in evidence in the yarn market during the week under review. Art silk yarns were quiet as operators felt that the stock position would improve in the coming weeks. This belief stemmed largely from the Press note pertaining to advance allocation of art silk yarn issued early in the week by the Office of the Textile Commissioner. The Press note stated as follows:

"The State Trading Corporation is importing art silk yarn from Italy valued at Rs. 150 lakhs under the C.O.G.I.S. Link Agreement which is to be distributed to all actual users of art silk yarn as an advance allocation for October 1961-March 1962 licensing period. All the consumers of art silk yarn are requested to submit their applications for allocation of this yarn to the Joint Secretary, Distribution Committee for art silk yarn, 78, Veer Nariman Road, Resham Bhavan, Bombay-1, along with a fee of Rs. 5 per application as early as possible in any case to reach that office not later than 10th September 1961."

Thanks to the aforesaid announcement as well as following rumours of the S.T.C. releasing soon Rs. 2 lakhs worth of yarn out of its stocks and expectations *that manufacturer-exporters would be granted* import licences in a couple of weeks, the unofficial premium for import licences for art silk yarn fell from 175-180 per cent to 145-150 per cent. Consequently, rayon yarns were subjected to selling and prices tended to look down generally. No business was reported in forward Cupressa Bemberg yarn (60 x 1), in view of limited stocks.

Staple fibre yarns also encountered selling of reports that the supply position had improved and

4¼ PER CENT

GUJARAT STATE

DEVELOPMENT LOAN 1972

ISSUE PRICE Rs. 100/- PER CENT

OPENS FOR SUBSCRIPTIONS ON 4TH SEPTEMBER 1961

The loan will be closed as soon as a total of approximately Rs. 600 lakhs has been subscribed, and in any case not later than the close of business on 9th September 1961.

THE LOAN WILL BE UTILISED TOWARDS THE DEVELOPMENT PROGRAMME OF THE NEW STATE OF GUJARAT. ALL ARE REQUESTED TO SUBSCRIBE GENEROUSLY TO THE NEW LOAN.

The applications will be received at offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore, and at branches of the State Bank of India and Treasuries and sub-treasuries in the State of Gujarat.

Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its branches within the State and forwarded to the nearest receiving office.

FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE ABOVE OFFICES

was likely to improve further in the next few weeks. There were, besides, reports that "cut" fibre was being used by many spinners who were willing to make available supplies at lower prices. Further, offtake from consuming centres was not encouraging. It was stated that several weavers were gradually switching over to the production of art silk fabrics, in view of the revised export incentive scheme, under which import licences for yarn would be given only against exports of art silk piecegoods. On top of these factors, there were rumours of a possible official intervention to check the persistently high level of prices. A delegation of the Bombay Yarn Merchants' Association and Exchange is expected to meet the Textile Commissioner and discuss the staple fibre yarn supply-demand position and trend of prices. One of the specific suggestions which the Association is understood to put forward relates to the upward revision in the controlled rate of 2/40 yarn from Rs. 771 to Rs. 871 per bale.

Cotton yarns continued to rule dull. Enquiries from consuming centres were poor. Nor was export demand encouraging. Turnover, as a consequence, was small, with prices of most yarns remaining unchanged.

The following table gives the prices of rayon staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	16-8-1961	9-8-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
Spot	2,798.00	2,811.00
40 x 1 J/P		
August	3,103.00	3,090.00
October	3,134.00	3,113.00
120 Japan (per 100 kg.)	2,121.00	2,112.00
150 Japan (per 100 kg.)	2,205.00	2,260.00
120 Italy	1,929.00	—
Nat. Ray. 150 Bt. 1	15.20	15.72
Nat. Ray. 120 Bt. 1	18.15	18.70
Staple fibre yarn (40 x 2)—		
August (per 90.72 kg.)	896.00	912.00
October	872.00	901.00

40s Malura	32.50	32.50
60s Finlay	63.63	63.63
80s Moderns	68.25	68.25

GOOD DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, 14*th August*

Although the general demand at the internal sale held last week strengthened as the sale progressed, prices recorded a mixed pattern. Shipments of tea were again satisfactory, and it would appear that gardens in North-East India producing more tea now than last year would not face the problem of a glut in supplies.

Production in North-East India in this year is expected to reach a record figure. Already production up to July increased by 40 million lbs. Noting Mr. Morarji Desai's statement in Parliament, according to which the Government of India, in the event of U.K.'s entry in the E.C.M., would ask for a substantial liberalisation of the import policies of the E.C.M. countries, the abolition of all quantitative restrictions on Indian exports to the U.K. and suitable transitional arrangements for a gradual ending of the preferences, trade circles said that so far as Indian tea was concerned, the British entry into the E.C.M. would prove to be a blessing in disguise.

Dusts on offer at the internal sales held in the last week aggregated 25,906 packages, which met with good general demand. Plain orthodox teas eased by 10 nP, but bright Assams were steady. Legg-cutt teas recorded an irregular trend, but prices followed quality. In C.T.Cs, the plain teas eased, but all others added gains. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.90 to Rs. 7.30, medium Assam C.T.C. dust Rs. 6.40 to Rs. 6.80, medium Assam dust Rs. 4.90 to Rs. 5.50, legg-cut dust Rs. 4.85 to Rs. 5.50, and plain orthodox dust Rs. 4.35 to Rs. 4.55.

Leaf on offer amounting to 97 chests met with a good general demand.

TEA IRREGULAR

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, 16*th August*

Sale No. 32: 341,000 kilograms were offered in Sale No. 32 held on Tuesday, the 8th August 1961. Quality of Nilgiri teas was irregular but there were some improved quality invoices on offer. The quality from other districts was irregular but generally maintained. There was useful demand for most descriptions. Highgrowns were well supported and those invoices which showed improved quality realised dearer prices. Poorer highgrowns however, came to an easier market. Good mediums and mediums were in fair demand but sold at slightly easier rates. Low mediums and plainer sorts came to an easier market and sometimes sold at rates about 5 to 10 nP below last. Whole leaf grades were in less demand and sold at easier rates. Black leaf teas although in good demand were only about steady. C.T.Cs were in less demand and were easier. C.T.C. types met with strong support and sold at around last rates.

Quotations were:	1961	1960
	Rs.	Rs.
Low mediums	4.45-4.55	3.65-4.00
Mediums	4.50-4.60	4.00-4.15
Good mediums	4.60-5.20	4.10-4.55
Nilgiri B.O.P.	4.65	6.15

The average price realised in sale No. 32 was Rs. 4.63 per kg. [illegible] week ago and Rs. 4.43 in [illegible] year.

Dust Sale No. 32: Approximately 215,000 kilograms were on offer in dust sale No. 32 on Thursday, the 10th of August 1961. There were strong general demand. Highgrowns were in good demand and sold at fully firm rates. Other mediums were steady. Poorer descriptions and residuals were irregular and sometimes lower. C.T.C. and C.T.C. types were fully firm.

The average price realised in dust sale No. 32 was Rs. 4.63 per kilo, as compared with Rs. 4.62 a week ago and Rs. 4.60 in the corresponding sale last year.

Export Quota: The market has been quiet with no business transacted. Sellers reported at 2¼ nP with no buyers.

Colombo: There was lower demand in the main grade sale this week. Western highgrowns were irregularly lower but the few improved. Uvas on offer sold at dearer rates. Low mediums eased 5 to 10 cents. Liquoring fannings were dearer. Lowgrowns eased slightly. Best liquoring off-grades and dusts were slightly dearer and others were irregular and generally lower.

London: There was no auction this week due to the August Bank Holidays.

As we go to press, Messrs. Forbes Ewart and Figgis (Private) Ltd., wire:

"*Sale No.* 33:—460,000 kilograms. Good demand. Plain and low medium brokens 10 to 15 nP easier. Similar fannings also steady. Mediums 10 to 15 nP lower. Highgrowns brokens fully firm to dearer with quality. Similar fannings considerably dearer."

FOODGRAINS FIRM

(From Our Own Correspondent)

HAPUR, 14*th August*

After ruling quiet during the major part of the week, foodgrains firmed up towards the week-end following heavy rains which have damaged standing *kharif* crops—maize, *bejra* and *guwar-juwar*. The overall food situation, however, would not be affected, as stocks with Union and State Governments are reported to be heavy and large imports are to follow under previous commitments. Wheat recorded modest gains to be quoted at Rs. 15 to Rs. 15.12 a maund for *dara* quality and Rs. 15.75 to Rs. 16.25 for better farm produce. Daily arrivals during the week were nominal due to rains, and local stock was almost stationary around 25,000 maunds, as demand, too was slack.

Rice ruled quietly steady, as stocks with trade were small. Large-scale sowings of paddy are being done, thanks to heavy rains. The week-end prices of rice here were:—*mainpuri sela* Rs. 22.75; *gainda kutcha* Rs. 22.25; *ramajawayan sela* Rs. 24; *raimunia sela* Rs. 25; *basmati sela* Rs. 29 to Rs. 31; superior Rs. 35 to Rs. 39 per maund.

Gram also sought higher levels when Punjab quality was quoted at Rs. 14 to Rs. 14.12 and local inferior at Rs. 13.87 a maund. Gram was not reaching here from the Punjab and local stock was put at 40,000 maunds. Barley continued to be quoted at Rs. 11.25, *bejhar* inferior at Rs. 10.75 and *mongia* variety at Rs. 11.75 a maund. Standing *kharif* crops of maize and *bajra* in grains and *juwar* and *guwar* as fodder crops have been very adversely affected, due to continued heavy rains for over a fortnight. *Juwar* was quoted at Rs. 10 to Rs. 11.50 and *guwar* at Rs. 14.25 per maund. Stocks of *juwar* were put at 7,000 maunds. Old maize continued to be quoted at Rs. 11 to Rs. 12 and *bajra* at Rs. 15 per maund. Maize stocks were put at 35,000 maunds. *Methi* continued to attract demand from Rajasthan and Calcutta side at Rs. 27 to Rs. 28 per maund.

In pulses, peas, after an early fall due to slack demand in the face of loading difficulties, improved later in the week in sympathy with grain prices. Local peas stock was put at 7,000 maunds and arrivals were nominal. *Arhar* and dal drifted to lower levels, as demand was almost dormant and local stock of *arhar* was put at 45,000 maunds. Other pulses were almost stagnant in small scale trading and week-end prices (in rupees per maund) were: peas *dara* 11.25 to 11.37; farm 12 to 12.75; peas *dal* 12.50; *arhar* 11.50 to 12.50; *arhar dal* 15.62; gram *dal* 16; *urd* 21 to 21.50; *urd dal* 25; *moong* 20 to 24; *moong dal* 24 to 27; *masoor* 13.25 to 15; *masoor dal* 16.25; moth 20; *dal* 23.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 14*th August*

Sugar was depressed during the week due to easy supply position. The week-end prices were Rs. 105.50 per bag and retail 97 nP per *seer*. Huge stocks with factories following the all-time high record production of 29.8 lakh tons is now a problem and, despite Government's efforts, export performance has not been very satisfactory. Some restrictions on sugar movement are likely to be withdrawn soon in order to help increase local production.

Sugar was easy in the Muzaffarnagar market, following selling pressure from allottees. Prices declined by 25 nP to 50 nP a bag in spot section, while mill delivery prices which had improved earlier reacted at close on reports that bulk allotment was being made for this centre for the current months.

FROM THE TROMBAY PLANT OF UNION CARBIDE INDIA

UNION CARBIDE TRADE MARK

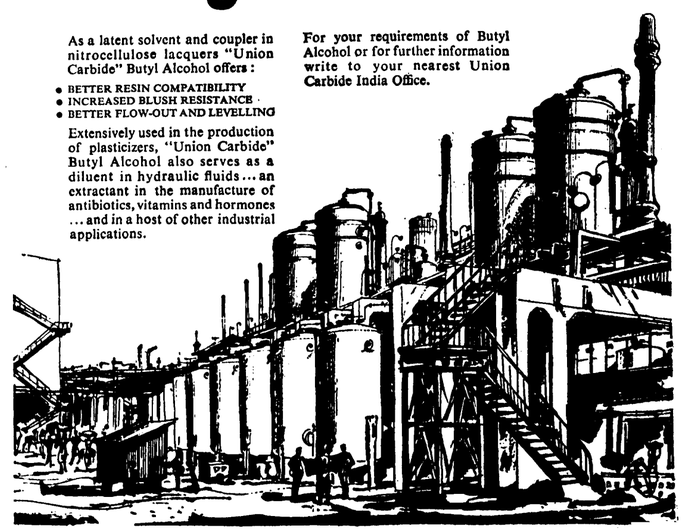
Butyl Alcohol

As a latent solvent and coupler in nitrocellulose lacquers "Union Carbide" Butyl Alcohol offers:

- BETTER RESIN COMPATIBILITY
- INCREASED BLUSH RESISTANCE
- BETTER FLOW-OUT AND LEVELLING

Extensively used in the production of plasticizers, "Union Carbide" Butyl Alcohol also serves as a diluent in hydraulic fluids ... an extractant in the manufacture of antibiotics, vitamins and hormones ... and in a host of other industrial applications.

For your requirements of Butyl Alcohol or for further information write to your nearest Union Carbide India Office.



INDUSTRIAL PRODUCTS SALES DIVISION

UNION CARBIDE UNION CARBIDE INDIA LIMITED

Week-end prices were:—Crystal spot delivery damaged Rs. 95 to Rs. 101; dry Rs. 105.50 to Rs. 107 per bag. Factories holding last year's stocks were now finding buyers even at lower prices.

On persistent reports of early decontrol of sugar and removal of inter-State movement ban, the *khandsari* market showed a declining tendency. The traders were reluctant to make any commitments until the announcement of Government's policy. Week-end prices of *khandsari* were:—*gala-wat* Rs. 27 to Rs. 31; non-crystal Rs. 32.50 to Rs. 37; crystal Rs. 34.50 to Rs. 37.50; old Rs. 29 to Rs. 32 per maund.

Ready *gur* was depressed during the week on slack demand. Cane crop prospects have improved due to heavy rains, by gusty winds with heavy rains have also damaged the cane crop. Local *gur* stock is put at 18,000 maunds. Some despatches were made by road during the week to east U.P. and one wagon to Hyderabad. Week-end prices of *gur* here were:—selected dry Rs. 16.50; *kotha* dry-wet Rs. 15.37; wet Rs. 14.76; *shakker* Rs. 18.25 per maund.

JUTE PRICES DECLINE

(From Our Own Correspondent)

CALCUTTA, 14*th August*

The feature during the week under review in the jute markets was a sizable decline in prices of both raw jute and jute goods. The decline in fibre prices followed a small increase in arrivals. Acceleration of harvesting operations have been made possible as a result of the recent heavy rains improving the water level in tanks and canals for steeping. It is, however, said that the improvement in retting facilities cannot be immediately reflected in increased arrivals or an improvement in quality. That possibly explains the difficulties which the mills are experiencing due to limited fibre stocks in their godowns. During the week, some of the biggest mills sealed 18 per cent of looms, and at least one mill, in addition to sealing of looms, reduced working hours also from 42½ hours to 40 hours a week. Following labour troubles arising from dissatisfaction among workers on reduction of production and in turn their earnings, a mill declared lock-out. It will be remembered that, on the Government's disapproval of the Indian Jute Mills' Association's proposal to seal 18 per cent of looms as on 1st August over the industry as a whole, the I.J.M.A. left to individual mills to solve any difficulty arising from fibre shortage. Following the breakdown of negotiations between the Government and the I.J.M.A., the State Labour Minister, Mr. Abdus Sattar, appealed to mills to work in a spirit of accommodation, adding that new crop arrivals were averaging about 50,000 maunds a day. He also said that these arrivals would soon reach 100,000 maunds a day if only buyers showed a keen interest to purchase the same.

In the course of a statement, the I.J.M.A. says that the daily fibre consumption of mills in West Bengal in July averaged 90,000 maunds. Thus, it can be seen that the present rate of arrivals (about 50,000 maunds)—this figure is accepted by the Labour Minister—is far below the needs of mills, the fibre stocks of which at the end of July were about two weeks' consumption. The Association, in an attempt to remove any misunderstanding, has also explained the reasons why it had been necessary for the industry to curtail production by sealing looms and reducing working hours in the 1960-61 season, and later by closing down completely for a week each in June and July. Trade circles agreed with the I.J.M.A. when it stated that, in a competitive market such as the goods market abroad is, the industry must be assured of raw materials at stable and reasonable prices. Stating that consumption and supply must be equated to enable the industry to carry on in an orderly fashion and to promote as far as possible a balanced market, the Association concludes: "*It is under these conditions that,* as visualised by the Association, mills individually have recently taken further steps to conserve jute consistent with their supply position in each case. In the negotiations that took place with the State Government, it was explained that this method of adjustment would be forced on the mills as the only alternative to concerted action by the industry, to which the Government was opposed." Meanwhile, labour resentment at the action of the units in the industry to reduce production has become grave, and several demonstrations have already taken place. Trade circles noted with interest the analysis of the fibre position in the *Jute Bulletin* of the Indian Central Jute Committee, according to which the fibre supply position is grave.

The question of fixing a minimum price for jute appeared in the forefront again during the week. Some organisations representing cultivators have demanded that the floor price be fixed at Rs. 45 a maund. The State Government thinks that the question is not very urgent now, as the fibre is realising a price as demanded by farmers. Trade circles thought that, considering the prices of goods in foreign markets, the suggested floor price of Rs. 45 was too high. According to some quarters, farmers had, indeed, been more prosperous in the last season; but, on the other hand, the high prices for fibre led to losses for mills. That being the position, these quarters suggest that, even if farmers sacrificed something to place the jute industry on a healthy basis, such a sacrifice would be worth its while.

Trade circles also thought that the talk of floor price was meaningless so long as there was no organisation to purchase if the price moved down the floor price. In the final analysis, the price must be governed by the law of supply and demand. It would be prudent to leave to economic forces to determine the price. There is no law of the land to force mills to produce at a loss. Mills would be prepared to pay such a price as to make their operations economic and profitable. In this connection, trade circles pointed to a report from Dundee to the effect that prices of jute yarn have been reduced by £5 a ton. The fall in medium and common wove yarns will be £2½ a ton. Cloth prices will be correspondingly reduced. It should be realised by all concerned that it is in the reduction of prices of both goods and fibre the prosperity of both the industry and farmers depend. During the week, the Pakistan Government announced its new jute policy. Accordingly, the price of jute will be £100 a ton c.i.f. for export firsts. The Government considered this a fair price for the growers. It also announced that the mills could import capital goods other than looms and spindles to the extent of 50 per cent of the industry's bonus earnings from June.

Trade circles were disappointed at the low fall in the stocks of goods with mills as at the end of July. Considering the lower production in the month as a result of a week's closure, the decline in stocks by 6,400 tons to 71,200 tons did not reflect any increased level of trading interest. Production in July at 64,400 tons represented a fall of 2,900 tons as compared with the previous month and a fall of 23,900 tons as compared with July 1960. Adding the June-end stocks of 77,600 tons to July output of 64,400 tons, the total availability for the month was 142,000 tons. Stocks at the end of July being 71,200 tons, it should be presumed that demand in the month was of the order of 70,800 tons. The stock position, healthier than earlier expected, would only encourage foreign buyers to postpone entering into any large commitments. Reflecting these fears, on Tuesday last, when the figures relating to stocks were released, ready B. twills eased from Rs. 155 to Rs. 151.50 and ready hessian 40" 10 oz. from Rs. 52.25 to Rs. 50.75. In the futures market, the bearish pull was too pronounced. At this abrupt decline in prices, overseas buyers refrained from buying even against meeting day-to-day needs. Fibre prices recorded a four-point decline on Tuesday and Wednesday combined, and, in sympathy, ready B. twills moved down further to Rs. 149.00 on Wednesday and hessian 40" 10 oz. to Rs. 50.75. The futures market came under selling pressure and, despite some support by Australian buyers for corn sacks on Thursday, B. twills eased to Rs. 149. In sympathy, hessian 40" 10 oz. fell to Rs. 49.75. A further decline in prices occurred on Friday, B. twills touching as low a rate as Rs. 131 in the futures market. Some Cuban interest was subsequently reported and ready B. twills closed better at Rs. 147 on Friday and hessian 40" 10 oz. at Rs. 50.00. However, conditions were easy over the week-end, with B. twills sagging to Rs. 145.25 and hessian 40" 10 oz. to Rs. 49.50. Prices were quiet during yesterday also. The market will remain closed tomorrow.

There have been more offers of fibre for forward deliveries. Ready fibre commanded prices above ruling quotations, and the improvement in arrivals failed to alleviate the supply position. More rains were reported during the week and harvesting is being speeded up. It is expected that, by the beginning of next month, the daily arrivals would equal to mills' consumption. The week's movement in prices is depicted in the following table:

(In Rs. per maund, 15 days delivery)

	Opened	*Closed*	*Loss*
Daissee bottoms	48.50	48.00	0.50
Northern bottoms ...	46.00	43.00	3.00
Assam bottoms	46.00	42.00	4.00

4¼ per cent
MAHARASHTRA STATE DEVELOPMENT LOAN, 1972

ISSUE PRICE AT PAR

OPEN ON THE 4th SEPTEMBER 1961

The loan will be closed as soon as total of approximately Rs. 10 crores has been subscribed and in any case not later than the close of business on the 9th September 1961.

The applications for the loan will be received at—

(a) the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore,

(b) the branches of the State Bank of India within the State of Maharashtra, except at Bombay and Nagpur and at places mentioned in (c) below,

(c) the branches and Treasury Pay Offices of the State Bank of Hyderabad within the State of Maharashtra, except at Bombay.

(d) the Government treasuries and sub-treasuries in the State of Maharashtra at places where there is no branch or Treasury Pay Office of the aforesaid Bank.

Full particulars can be obtained at any of the offices mentioned above.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 11th August, 1961

BANKING DEPARTMENT

LIABILITIES	Rs.

* Current Income.

MARKET GOSSIP

(*Concluded from page 343*)

drawn up for this purpose and included in a new schedule to the Bill. Another amendment seeks to make additional super tax payable only on the balance of distributable income after deducting not only dividends actually distributed but also other items of *bona fide* expenditure incurred by a company but are not allowable as expenditure, such as payment of bonus or gratuities, legal charges, remuneration or benefits or amenities paid to directors or persons having interest in a company or expenditures or allowances in respect of any assets of a company used by such persons and any expenditure claimed as a revenue expenditure but not allowed to be deducted as such and not resulting in the creation of an asset or enhancement in the value of an existing asset.

The Committee has also sought to amend Clause 109 in the Bill, which concerns the computance of distributable income. The amendment recommends that losses under the head "capital gains" which are not allowed to be set off against general business income should be allowed in computing the distributable income. The exemption from assessable income of interest on loans advanced for the purchase of raw materials abroad will also benefit businesses. The inclusion of all cesses in computing business expenses is also calculated to reduce the tax burden. Another welcome feature is the relief accorded to income earned abroad but not allowed to be remitted by the foreign country.

On the subject of development rebate, the changes suggested by the Committee should go a long way towards encouraging capital expenditure and building up of productive capacity. The Committee has expressed the view that the benefit of development rebate should be available to a company irrespective of whether it is private or public on its conversion from its status of a firm, if all its shareholders were partners in that firm immediately before succession. The Committee has further suggested that the condition stipulated in the original Bill that all shareholders immediately before the amalgamation should become shareholders of the amalgamated company should be so changed as to bring this provision in conformity with the provision relating to amalgamation in the Companies Act. The Committee has also suggested a liberal loss offset provision. For example, it has advocated that profits assessed after the closure of a firm should be set off against any losses incurred in the year of closure and only the balance should be taxed.

As regards reassessment proceedings, the Committee has proposed that no reassessment proceedings shall be initiated beyond 16 years. The Committee has also disapproved of some of the penal provisions in the Bill which were intended to deter tax evasion and expedite recoveries. The Committee, for example, does not want the powers of enhancement to vest in the Appellate Tribunal because, if such a power were granted to the Tribunal, there would be no opportunity for the appellate to have the order considered by a higher court.

The Committee's proposal about tax holiday benefit is also designed to help industries. It is of the view that, where a minor part, not exceeding 20 per cent of the assets of a new industrial undertaking consisted of secondhand items, the benefit of tax holiday should not be denied *in toto*, but that in computing the capital employed, the value of such assets should be excluded. There is, however, at least one suggestion pertaining to companies which is of a retrograde nature. This suggestion is that directors alone should be held responsible for the tax unrecovered from the Company. In a trenchent dissenting note, Mr. M. R. Masani has attacked this clause as a violent departure from the well-settled principles of Indian jurisprudence. He writes:

"For the first time in the history of Indian Law, Clause 179 seeks to unsettle the well settled law that directors or shareholders of a limited company are not personally liable for the debts of the company. If today such a provision is enacted in Income-Tax Law, it may be enacted tomorrow in the Excise Law, the Customs Law, the Sales Tax Law and the wide variety of other laws. It is basically wrong to cut at the very root of the juristic concept of limited liability merely to get at a few dishonest directors. The only effect of such a provision would be to scare away honest people from the directorship of private companies, for fear of unlimited personal liability."

Mr. Masani is perfectly right in holding this view.

On two other points, however, the Select Committee's suggestions are praiseworthy and would grant well-deserved relief. The first is the provision relating to gratuities. The Committee has rightly recommended that the benefit of exemption from tax at present available in respect of gratuities payable to employees of Government should be extended to persons in private employment also. Accordingly, it is proposed that a sum equal to half a month's salary for each year of completed service, calculated on the basis of average salary for the three immediate years, preceding the year in which the gratuity is paid, subject to a maximum of Rs. 24,000 or 15 months pay, whichever is less, should be exempted. The balance, if any, would be subject to relief under clause 89(1) of the Bill which pertains to lump sum receipts by an employee by way of advance payment of salary or arrears of salary, or a share in the profit of the Company, etc. The other relief recommended is for small charitable trusts. It is proposed that small trusts with an annual income of less than Rs. 10,000 should not be hit by the restrictions relating to accumulation. The Committee is also of the view that so long as a trust spends its income for a genuine charitable purpose, property held under trust for the purpose should also include a business undertaking held under trust. But tax exemptions conferred on new charitable trusts should only be applicable to those trusts which are not for the benefit of any particular race, religious community, or caste.

Bengal Chemicals

Shortages of raw materials and fuels are by no means confined to chemical industries located in places like Bombay and Madras. For even in West Bengal, despite its proximity to coal-bearing regions and its other natural advantages, the chemical industry has not been immune to problems of the kind. One of the major problems facing the industry in that region, according to Dr. B. N. Ghose, Chairman of the Bengal Chemical and Pharmaceutical Works Ltd., Calcutta, is the difficulty in securing adequate and regular supply of good quality coal. Dr. Ghose, in his address at the annual meeting of the Company, the text of which appears elsewhere in this issue, has drawn particular attention to the acute shortage of railway wagons for moving coal to chemical factories in the area. The major portion of the coal requirements of the Company have to be transported from coalfields by lorries at a premium of 20 per cent which amounts to "an unwarranted levy" on the chemical industry. Even the quota of 36 wagons of coal allotted to the Panihati branch of the Company has fallen far short of demand. Besides, the entire quantity of coal now consists of Grade No. II, which has more ash-content than the "B" grade quality which had been available to the Company until two years back. Apart from coal, there is shortage of electricity, which has aggravated the difficulties of the chemical industry. The price of electricity has also gone up, following the increase in coal prices.

The productive operations of the Company, particularly in the Panihati unit, have also been seriously affected by the shortage of some important raw materials. Dr. Ghose has referred, in particular, to the crisis which developed in the Company early last year owing to shortage of bauxite for the production of alum. This was due to the failure of the railways to allot sufficient wagons for moving bauxite from the Ranchi area. Of late, the situation seems to have eased. But, it should not be forgotten that the Company has plans to double the present capacity of the alum plant, which will lead to larger demand for bauxite. So, the Railways will have to plan for a substantial increase in the wagons allotted to the Company for movement of bauxite. Of course, the demand for bauxite itself is bound to go up fast, in view of the increase in the production of aluminium envisaged in the third Plan. It is, incidentally, gratifying to hear that the Company proposes to secure exclusive prospecting licences for bauxite deposits from State Governments.

Coal tar is another raw material which has been in short supply. This has forced the Company to run its tar distillation unit far below installed capacity. It is surprising to hear that the Company has failed to get sufficient crude coal tar from coke oven plant at Durgapur.

Dr. Ghose's regret is that, while the Government was "not in general unhelpful" in granting import licences for raw materials, the import of certain replacement items of machinery has not been permitted. According to him, this has impeded production in some of the Company's plants, particularly the one engaged in the manufacture of surgical dressings and another in that of printing, rotary and offset inks. In view of the prospects for expanding exports of certain products like surgical cotton to some of the neighbouring countries, the Company has a legitimate claim for import licences covering machinery for replacement, without which it cannot face competition in world markets effectively. Already, the Company is facing serious difficulties in some of the foreign markets, partly on account of the difficulties in the way of modernising its plant and machinery and partly on account of the increased incidence of excise duty on chemicals and customs duties on some of their raw materials. The Company's exports to Singapore, for instance, particularly of absorbent cotton wool, have, of late, been priced out of market by Chinese products. If this trend is to be reversed, the Government should consider sympathetically the industry's plea for imports of modern equipment, apart from granting tax concessions in respect of products which have a potential market abroad.

THE CONTEMPORARY CORPORATE SCENE IN INDIA

(*Concluded from page 355*)

year. In this total, the respective shares of the private sector and public sector companies came to Rs. 657 crores and Rs. 498 crores, respectively. The annual average net increase of the paid-up capital in the two sectors worked out as Rs. 51 crores and Rs. 38 crores, respectively. The total net increase of paid-up capital of companies during the period 1900-61 aggregated Rs. 1,690 crores, out of which, as will be seen from the figures given above, 68 per cent accrued during the post-Independence period. During the period 1900-40, a total amount of only Rs. 269 crores was added to the paid-up capital of companies at work, that is to say, there was an annual net increase of Rs. 6.7 crores. Almost an equal quantum of paid-up capital, namely, Rs. 256 crores accrued during 1940-48 and, out of this, Rs. 121 crores belonged to the World War II period.

The annual rate of net increase of paid-up capital of companies during the post-Independence period was the highest during the entire period of corporate enterprise, and the earlier highest annual rate of increase noticed during the quinquennium ended 1924, looked pretty small as compared with the net increase of the post-Independence period. During 1924-34, Rs. 159 crores were added to the paid-up capital base of companies giving an annual rate of increase of Rs. 32 crores which came to one-third of the overall annual net increase of all companies and one-half of the net annual addition recorded by companies in the private sector alone during the post-Independence period. The following Table presents the trends in net increase in the paid-up capital of companies before and after the Independence:

TABLE 11

Net Increase in Paid-up Capital of Companies

(Figures in crores of rupees)

Period	Total net increase	Average annual increase
1900-04	4.1	0.8
1904-09	18.2	3.6
1909-14	19.6	3.9
1914-19	30.0	6.0
1919-24	158.7	31.9
1924-29	14.0	2.8
1929-34	21.5	4.3
1934-39	—10.0	—2.1
1939-44	63.3	12.7
1944-48	215.9	54.0
1948-51	205.8	68.6
1951-56	248.8	49.8
1956-61	700.4	140.1
Government companies	432.4	86.5
Non-Government companies	268.0	53.6

It will be seen from the table that the annual rate of net increase in capital of companies has been further improved during the Second Plan Period over that of the First Plan period. Excluding the paid-up capital raised by the Government companies, it is seen that the private sector companies, on an average, added to their capital resources by Rs. 49.8 crores a year during the First Plan period, whereas, during the Second Plan Period, the average worked out to a higher figure of Rs. 53.6 crores a year. The net increase in the case of the public sector companies during the First Plan Period has been very small, indeed, and this was quite naturally so, as has been said in the Plan Report that the scope and size of the public sector was to be larger and larger in each succeeding Five-year Plan in pursuance of the adoption of the aim of establishing a socialist pattern of society in the country. The bulge in paid-up capital noticed in the case of Government companies during the Second Plan period provides evidence of the implementation of the above policy.—*All Rights Reserved.*

(*To be continued*)

COMMERCE AND INDUSTRY

(*Concluded from page 372*)

E.P.U. or dollar area countries. The list of items freed from restriction includes natural yeast, different kinds of powder and explosives, natural cork, leather footwear, acid-proof tiles and building bricks, and sport and pleasure boats. Under its import policy for the period July-December 1961, the Government of Pakistan placed forty-nine items under Open General Licence. Among the new items on the O.G.L. list are asphalt, various building and engineering materials, drugs and medicines, laboratory glassware, surgical instruments, tractors, motor cycles, tyres and tubes. Recently, the Government of Norway announced that, on 1st January 1962, it would liberalised a number of products including puffed rice, cornflakes, certain soups and broths, household soaps, building board of wood pulp and vegetable fibre and soil pipes of iron and steel.

An important development during 1960 and 1961 has been the removal of the previous substantial element of discrimination against imports from dollar countries. This too was an outgrowth of the Tokyo session when Contracting Parties agreed that the remaining discrimination applied under Article XIV of the General Agreement should be quickly eliminated. No less than eighteen Contracting Parties to the General Agreement took action during 1960-61 to remove discrimination against imports from dollar countries.

New procedures have been introduced by the G.A.T.T. which are designed to eliminate the hard-core of restrictions. During 1961, Contracting Parties agreed to provide lists of their import restrictions which in their judgment are contrary to the provisions of G.A.T.T. and for which no authorisation has been obtained. Once these notifications have been received, a review will be carried out of all residual import restrictions maintained by Contracting Parties to the G.A.T.T. A pattern has been established for further advancement in all directions; thus it is expected that progress made in this field in recent months will gather further momentum so as to provide an answer to remaining problems of hard-core restrictions and discrimination against imports from Asian and less-developed countries.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2629 BOMBAY, 26th AUGUST 1961 PRICE Rs.

MR. MALAVIYA'S LATEST DEALS

MR. K. D. Malaviya, Union Minister for Mines and Oil, seems to have been very active in recent weeks, giving the finishing touches to the deals he has negotiated—one with a French Government undertaking and the other with the Italian State-owned oil combine. Under the first deal, the Oil and Natural Gas Commission and the French Petroleum Institute will form an Indian-French collaboration team for carrying out oil exploration in the Jaisalmer area in Rajasthan for a period of three years. It is envisaged here that the French undertaking will function merely as technical advisers and assistants to the Oil and Natural Gas Commission which will bear the entire risk of exploration. The foreign exchange expenditure involved in this work of exploration, it is stated, will be Rs. 4 crores, and this will be covered by a credit from the French Government. On the very face of it, this deal seems to be unsatisfactory, for the foreign exchange represented by the credit would be patently insufficient for extensive exploration in the particular area. Even that involves unnecessary risk-taking by the Government—the kind of risk-taking which could have been left to a private oil company like the Esso Standard which had originally submitted a proposal for oil exploration in the same Jaisalmer area and that, too, on a reasonable partnership basis with the Government of India. It is also unfavourable for the reason that it probably carries with it the implication that, if the exploration turns out to be successful, the subsequent process of exploitation could be undertaken exclusively in the public sector. But this next phase will be a highly capital-intensive one, involving a heavy foreign exchange commitment for which the country does not possess the necessary resources, nor can command them in the foreseeable future.

Mr. Malaviya's stubborn idea seems to be that exploration and exploitation should go together in the public sector itself, rather than in the private sector. His failure to-date to reach a satisfactory agreement with any big international oil company is due not only to his tenacious clinging to the fifty-fifty formula in respect of exploration but also to his refusal to recognise the wisdom of giving an assurance in regard to exploitation. He is probably calculating that his deals with the French and Italian State-owned undertakings in respect of exploration will bring the big private companies round to agreeing to his terms. This calculation of his may well go awry, for no big international company, which is able to operate effectively precisely because it has integrated the processes of exploration, transport, refining and distribution, would agree to be partly ineffective by undertaking to invest in the process of exploration only without the assurance of participation in exploitation and marketing as well.

The second deal—that with the Italian State-owned E.N.I.—involves a 12-year $120 million credit, carrying 6 per cent interest, from that foreign body for a variety of purposes. One of these is oil exploration in collaboration with the Oil and Natural Gas Commission and for this only $20 million are earmarked. Here, again, it is stated that the E.N.I. will merely provide specialised services on a contract basis for the amount, and the risk of exploration will be entirely borne by the Government of India. This is doubtless an unnecessary risk for the Government to take, but it has the saving merit that it is part of a package deal which will provide foreign credit for other purposes such as the setting up of a refinery, [illegible]ing of two products pipelines—one connecting the public sector refinery at Barauni with Calcutta and the other connecting the refinery with Delhi—and the putting up of a gas separation plant in Assam, a petrochemical project and a lubricating oil unit. Even here, the last-mentioned purpose of putting up the three plants could well have been achieved, without any credit commitment on the part of the Government, by agreeing to the proposals of the relevant oil companies. But the most unfavourable part of the deal is that it will be for a relatively short period of 12 years and will, therefore, queer the pitch for the Finance Ministry's negotiators who have been trying to persuade the Aid-India Consortium members to provide their promised credits on a long-term basis at low rates of interest.

Apart from the undesirable features of the two deals negotiated by Mr. Malaviya, there is the point that deals with "newcomer" companies such as the E.N.I. are not prudent. The financial resources of these "newcomers" do not match those of larger, well-established oil companies. Their need to recover exploration and development expenditures is thus correspondingly greater and they generally have no extensive investments in refining and marketing to protect them against losses. But it is precisely such "newcomer" companies which may offer terms of dubious value to Mr. Malaviya who may be taken in by them. It is here that the present U.S. Ambassador, who is held in high esteem by the Government of India, may be in a position to enable Mr. Malaviya to recognise the realities of oil business and reach satisfactory agreements with the big oil companies which alone will be in a position to do full justice to the immense work of exploration and exploitation.

SURPLUS FOOD UTILISATION

"DEVELOPMENT through Food" is the title of a brief but pregnant report just issued by Mr. B. R. Sen, Director-General of the Food and Agriculture Organisation of the United Nations. Its sub-title—"A strategy for Surplus Utilisation"—carries the happy implication that the days of "surplus food disposal" have ended and that a period of "surplus food utilisation" for economic and social development in the world at large is being ushered in. So indeed it will be, if the Director-General's ideas on some important multilateral activities, which will be in addition to bilateral surplus transactions, are ultimately endorsed by the Economic and Social Council of the United Nations. The recommended multilateral activities include assistance by the F.A.O., where desired, in the preparation of additional bilateral surplus transactions, through contacts with recipient and donor countries concerned. The development of this activity would have the effect of providing a multilateral setting for bilateral transactions in surplus utilisation. This itself would be of great advantage to potential recipient countries, in that such countries can have the assistance and advice of the F.A.O. and other U.N. agencies not only in the programming of surplus food utilisation and its integration with plans for general economic development but also in the establishment and operation of institutions for enlarged programmes of surplus food utilisation. The immediate question that arises here is whether this recommendation will be acceptable to the United States, which, for all practical purposes, is the only country which can make available large quantities of surplus food and which it has been doing so far on a bilateral basis.

This question is relevant for more than one reason. In the first place, the United States which has given food aid to the tune of 27 million metric tons in the three-year period 1957-60 alone mainly under Public Law 480, has been giving non-food aid on a far larger scale. Its International Co-operation Administration, which has its technical co-operation missions in the recipient countries, has been presumably discharging the function of co-ordinating food aid with non-food aid and assisting and advising the recipient countries to integrate their general economic development programmes with surplus food utilisation. The U.S. national agencies concerned should have by now acquired a good deal of experience in the field of "assistance and advice" of the kind which, according to the Director-General of the F.A.O., can be discharged by the F.A.O. and other U.N. agencies on the request of recipient countries. It is doubtful if the United States, giving massive food aid on a bilateral basis, will readily agree to give up its right to advise the recipient countries on the best methods of utilising such aid.

Secondly, it is the United States that is again expected to make available, during the next five years, very large quantities of surplus food for use outside commercial channels. The estimate here is that, in the United States alone, over the five years 1960-65, a total of about $12,500 million worth of surplus food would become available. This estimate envisages uses in underdeveloped countries over the same period, amounting to about the same figure—$8,000 to $8,800 million in economic programmes (including land reform) and $4,000 to $4,500 million in social development (excluding land reform) and welfare distribution. Potential supplies from surplus countries other than the United States have not been estimated in this connection, for it is not known to what extent their stocks may become available for distribution on special terms as aid. The very fact that the United States alone is expected to provide most or all of the surplus food aid on a bilateral basis is more likely to weaken the F.A.O. case for providing a multilateral setting for bilateral transactions in surplus utilisation.

Thirdly, the United States itself seems to have a different conception of multilateralism in the context of surplus food utilisation. It may be recalled that, as recently as in April 1961, Mr. George S. McGovern, Director of the Food for Peace Programme in the Executive Office of the U.S. President, told the Intergovernmental Advisory Committee of the F.A.O. Council that the United States favoured "a multilateral approach for the use of agricultural commodities as a supplement to bilateral arrangements" and that "this should be a truly multilateral programme with the widest possible contribution by member countries." Mr. McGovern then proposed an initial programme, on a multilateral basis, of $[illegible] million in

commodities and cash contributions for use over a three-year period, adding that the United States, for its part, would be prepared to offer $40 million in commodities and, possibly, a supplementary cash contribution. His idea was that the multilateral programme should not be confined to emergency food distribution but should also test approaches in such fields as school-lunch or labour-intensive projects. Presumably this U.S. proposal still stands, for Mr. B. R. Sen himself has expressed the hope that it may "provide a basis for discussion and decision, so that a beginning can be made with a multilateral programme without delay." The U.S. proposal means, in effect, that the multilateral programme of surplus food utilisation will have to operate as a supplement to, and independently of, bilateral arrangements and to test, on its own, different approaches to utilisation in the recipient countries.

In the circumstances, what may be found feasible will be the F.A.O. Director-General's recommendation pertaining to "the holding of pledges of surplus foods committed by surplus-owning countries for utilisation for development through multilateral channels, and the administration to recipient countries of food aid so pledged." Recipient countries preferring this channel, it is envisaged, would also, on request, be provided with multilateral assistance in the formulation of their surplus utilisation programmes. "To the extent that sufficient supplies have been pledged, this would allow all underdeveloped countries, who wished to do so, to participate without discrimination in an expanded programme of surplus food use on a basis of equality, that is, solely on the basis of the technical requirements of their economic development plans and their readiness to use surplus food effectively." As this proposal is substantially the same as the one proposed by the United States, the chances are that it will be endorsed by the Economic and Social Council of the United Nations. But, unfortunately, the multilateral programme will be relatively negligible in size, as compared with the massive bilateral food aid programme of the United States, for the only country which can offer large surpluses has proposed to contribute no more than $40 million in commodities for use over a three-year period. Since there is no likelihood of multilateral food aid overshadowing bilateral food aid in the foreseeable future, neither the question of assigning a bigger role to the F.A.O. in the world food aid programme as a whole nor that of improving co-ordination between the multilateral agencies and national aid-administering agencies has anything more than an academic interest at the present time.

Whatever be the prospects of multilateralism in the matter of world food aid, its advantages, though partly theoretical, need hardly be over-emphasised. Under a possible expanded multilateral programme, it should also be possible for the richer countries to absorb the surpluses, such as those in coffee and cocoa, of some underdeveloped countries. The absorption of such surpluses, if any, by the stronger economies as a transitory measure would also help in creating a healthier situation in the markets, although the price of the commodities for such transfers would be very low. All this, perhaps, is a far cry. It will be something in the right direction if a positive programme, albeit small and experimental, for surplus utilisation is begun under the U.N. auspices at an early date.

T.I.S.CO.'S RESULTS

IT is not surprising that the share markets are disappointed with the Directors' report and statement of accounts of the Tata Iron and Steel Co., Ltd. for the year ended 31st March 1961, supported by a detailed statement by the Chairman, Mr. J. R. D. Tata, which was reviewed in this journal a fortnight ago. Operators had pitched their expectations too high, and that despite the Company's production performance not being a secret, thanks to the prompt publication of monthly returns. The drop in the market value of T.I.S.Co.'s ordinary shares from a peak of about Rs. 167 to a low of Rs. 150, all within a space of a few weeks, is indicative of the extent to which speculators had manipulated the market, even though it was pretty clear even months ago that the Company's results for 1960-61 would not be encouraging.

The adverse reactions of share markets apart, it is very distressing to find that the T.I.S.Co. has not been able to hit the production target of two-million tons of ingot steel, even though this performance was overdue. In 1960-61, the production of steel ingots and finished steel was 1.62 million tons and 1.26 million tons, as against the rated capacity of 2 million tons and 1.5 million tons respectively, the shortfall being 19 per cent in the former and 16 per cent in the latter. Worse still is the prospect. The Chairman has clearly stated that the Company is not yet in sight of the full production of two million tons of ingot (or 1.5 million tons of finished steel) and that one may have to wait for another two years. The result is a loss of income not only to the Company and its shareholders but to the nation as a whole. The major factors responsible for the non-attainment of rated capacity are already well known. It is clear from them that the failings of the public sector are largely responsible for the Company's plight. But there are persistent reports that the Company's project itself has not been free from defects. If this is true, the Tariff Commission, or the Government, if not both, may have something pertinent to say when the decision further to increase the retention price comes to be taken. In any case, it would appear that the public sector cannot be held responsible for the defects in the production and supply of iron ore or lime stone. For that, the Company itself has to take the blame, though it can be argued that, to the extent transport shortages handicapped the movement of these materials, the public sector, too, cannot escape blame in this respect also.

As Mr. J. R. D. Tata has stated, what is exasperating is not so much the failure of the

‡ These ratios are worked out on the basis of net profit indicated in the Directors' report. § Subject to deduction of tax.

Company to attain the full rated capacity in 1960-61, but the very small increase in steel production. As compared with 1959-60, the increase in output during 1960-61 was only 4.3 per cent in steel ingots and 2.1 per cent in finished steel. There was actually a fall of 0.3 per cent in the production of pig iron. In the face of such physical performance in a year of continuously rising costs and inadequate increase in retention prices, it is no wonder that the financial achievements of the Company were far from satisfactory. Because of adjustments in retention prices by the Government with retrospective effect for the five years 1955-56 to 1959-60, the profit figures are a little complicated from the point of view of comparison. After making allowance for them, the profit is, of course, a little higher, but the improvement is small, as will be seen from the accompanying comparative table.

It is gratifying to find that, in the allocation of profits, the Directors of the Company have not allowed themselves to be influenced by the skilful propaganda and pressure tactics resorted to by the operators in share markets who have been agitating for bigger dividends. Being the biggest joint-stock undertaking in the private sector, the T.I.S.Co. has a special responsibility for setting an example to others and the Directors seem to be fully alive to it. No company which has a large ratio of debt to equity capital, as a result of heavy borrowings for financing expansion plans, can afford to be liberal in payment of dividends. It will have to set aside a part of the profits for meeting repayment obligations and provide the maximum amount for depreciation allowed by the Income-tax Act if and when the profit level permits such full provision. This is precisely what the Directors of T.I.S.Co. have done. They have stepped up the provision for depreciation by about Rs. 5.5 crores by utilising (a) the payment received by way of increases in retention prices pertaining to the preceding five years and (b) the increase in gross profit as a result of the operations in 1960-61. If they had not done so, the Company would not have had the full benefit of tax relief to which it is entitled under the Income-tax Act. A part of the modest increase in net profit has been used to strengthen the reserves and another to write off the increase in the rupee cost of loans, taken from the World Bank in German and Dutch currencies, consequent upon the revaluation (by 5 per cent) of D. Mark and D. Guilders. Incidentally, this provision serves to confirm the point of view urged by this journal on the revaluation of these currencies, namely, that this remedy was highly unfavourable to capital goods importing countries like India, though it might have been favourable to the developed countries.

Genuine investors, however, have no cause for grouse, for the Directors have not been unmindful of the interests of shareholders. There has, of course, been no spectacular increase in the rate of dividend, but the amounts distributable by way of dividends has gone up by Rs. 135 lakhs in the past four years, because the new capital of Rs. 8.32 crores, issued in 1959, has ranked for dividend for the full year, as against for only 3 months in 1959-60. It is an irony of the Government's price control policy that, whereas investments in industries of primary importance that produce the basic needs of the people such as steel, cement and power are permitted to earn only a small rate of return, those in industries of secondary importance, as, for instance, rayon, are enabled to make large profit-margins and declare high dividends. This grave defect in the Government's policy is not only leading to an unhealthy boom in share markets but also diverting capital to the less essential industries at the expense of basic industries and services. Further, it has pushed out the equities of these first class industries from their legitimate place and been the cause of much unfavourable criticism and comparison of the industries concerned by the disgruntled investors.

There has been a distinct improvement in the financial strength of the Company over the year. Despite additions of the order of about Rs. 8 crores to the block account, raising the value of gross block to Rs. 185.52 crores, the net block stands some Rs. 6 crores lower at Rs. 117 crores, thanks to the large sum set aside for depreciation. Investments are unchanged at Rs. 8.85 crores, while current assets are only fractionally better at Rs. 38.48 crores, as against Rs. 38.37 crores a year before. The Company's indebtedness to the World Bank has been reduced approximately by Rs. 5 crores to Rs. 45.64 crores. Secured loans from banks in India have also been brought down by Rs. 1.33 crore to Rs. 10.99 crores. Unsecured loans, too, are lower by over a crore of rupees at Rs. 12.42 crores, though current liabilities and provisions are higher by Rs. 1.40 crore at Rs. 28.42 crores. The paid-up capital is unchanged at Rs. 38.97 crores, while reserves and surplus have grown by only Rs. 57 lakhs to Rs. 27.66 crores. The debt-equity ratio which was 50 : 50 a year before has improved to 47 : 53. A shrewd investor will not fail to appreciate that, though the current working of the Company is not upto expectations, its position is steadily gathering strength from the long-term point of view. As years go by, the Company will be able to reduce its borrowings quite sizably and effect a significant saving on interest charges. It should be undue pessimism if one were to assume that the position in regard to transport and raw materials would not improve at all to enable the Company's production to reach its full rated capacity even after an interval of another two years. The Company's case for a realistic upward revision of the retention prices is strong enough to evoke a fair measure of response from the authorities. All told, therefore, there is sufficient ground for taking the view that the difficulties confronting the Company, formidable though they are, constitute only a passing phase and that an investor (at the current market value of Rs. 150.75 cum-dividend, the ordinary shares give a tax-free yield of 8 per cent per annum) with patience will be amply rewarded.

MARKET GOSSIP

THE downward trend in the share market continues. Although profit-taking by bears and some selective buying by bulls cause a rise in prices occasionally, the basic trend is perceptibly weak. The bulls find no new developments which they could exploit to their advantage, while the bears have quite a few. The continued reluctance of bulls is itself a sufficient encouragement to them to try their luck. The Calcutta Stock Exchange authorities have tried to restrain the bears by imposing margins on short-sales in four* leading forward scrips—Indian Iron, Rohtas, Burrakur and Hindustan Motors—but this step has not prevented the market from drifting to lower levels. The authorities of the Bombay Stock Exchange have not thought it fit to emulate the steps taken at Calcutta. Instead, they have removed the handicaps on bulls in some of the scrips in the form of special margins and reduced them further in the case of one of them. It can be argued that the aim of both the stock exchanges has been the same, namely, to check an abrupt fall in values, though one has sought to do this by restraining the bears and the other by taking away the handicaps placed on the bulls. But the authorities of both the exchanges could have acted in unison at least in regard to such scrips as Hindustan Motors and Indian Irons that are listed in both the centres.

In the absence of such simultaneous action, the restraint placed by one market will only divert the business to the other. If an operator, for instance, finds it more expensive to go short in Indian Irons at Calcutta, there is nothing to prevent him from using the equally active market in Bombay for that purpose. Surely, there would be no room for such anomalous positions, if the control on speculation were exercised by the Stock Exchange Directorate of the Government of India, as is being done by the Forward Markets Commission in regard to commodities. This incident clearly shows that the Controller of Stock Exchanges, who has now a deputy at Calcutta, should play a more active role than hitherto. Was he consulted by the governing board of the Calcutta Stock Exchange before it instituted the margin against the bears and, if so, why did he not think that a similar step be taken at least in the Bombay market? Be that as it may, if the authorities of stock exchanges wish to retain the freedom of action they are now enjoying, they should get together, form a federation of stock exchanges and think and act on an all-India basis. Almost every section of commercial interests in this country has an all-India organisation. Why not the stock exchanges? It is not enough if they join hands only to lead occasional deputations to the Finance Minister. There are many things that an all-India body can do, including public relations and service to investors.

The levy of a margin on short-sales in the active scrips in Calcutta signifies a distinct change in the sentiment of share markets. It does not mean that the authors of this measure think that the fall in equity values from their recent peak levels has been overdone. All that it means, in our opinion, is that the time has come for ensuring, as far as possible, that the readjustment of values to more normal levels takes place in an orderly fashion, without encouraging big speculators to exploit the change in sentiment to make huge profits. It is common knowledge that a recession in share prices is more painful than a boom, as its adverse effects are felt by a larger number of operators.

Another Snub To Bulls

Chairmen of two more leading companies, the shares of which are highly popular, have made it clear that it will not be advantageous for their companies and their shareholders to raise the paid-up capital by issue of right shares. The companies concerned are the Calico Mills, Ahmedabad, and the Indian Dyestuff Industries, Bombay. Mr. Gautam Sarabhai, Chairman of the Calico Mills, stated that the Company was in a position to finance its expansion projects from its internal resources and short-term borrowings from banks. Similarly, Mr. Arvind N. Mafatlal, Chairman of the Indian Dyestuff Industries, told the shareholders that he was not in favour of issuing additional capital, as it would affect the return to shareholders. Further, the Controller of Capital Issues might compel the Company to issue the new shares at a heavy premium. He was confident that the funds required for implementing the Company's new schemes could be found from its earnings and from banks, as well as others. Thus, speculators who had played up the possibility of rights issues to suit their ends have received a further snub. It is only new companies, recently formed and had raised capital in the course of the past 24 to 30 months, are coming out with requests for fresh capital, in order to expand their productive capacity. This they have to do, as they are not in the favourable position in which the existing companies find themselves. The latter have vast assets against which they can borrow, besides sufficient current earnings for part self-financing. The new companies, however, have not these advantages. In addition, almost every one of them has already a high proportion of debt-equity ratio.

Jute Industry

The efforts of jute mills to curtail production operations with a view to conserving raw jute supplies have been referred to elsewhere in this issue (vide page 402). Since that article was written, the Indian Jute Mills Association has asked the member-mills to resume as early as possible the normal operations, that is, revert to the level of production in force prior to the 1st instant. Welcoming this decision, Dr. B. C. Roy, Chief Minister of West Bengal, has stated that questions as to whether the jute mills should not work full 48 hours and whether they should not unseal some of the looms should be investigated and decided upon as quickly as possible.

Although the anxiety of Dr. Roy to safeguard the interests of workers and jute growers is understandable, there is no need for him and his colleagues to force a decision on the jute industry. The industry itself will lose heavily, if it continues to restrict production in spite of plentiful supplies of raw jute at reasonable prices. Issuing the directive to member-mills, the I.J.M.A. has clearly observed that the rate of jute arrivals has shown an improvement and that it is uneconomic for the mills to maintain the cuts in production any longer than is strictly necessary. This approach is quite sincere and it is, indeed, unfortunate that the industry was misunderstood by the West Bengal's Labour Minister, Mr. Abdus Sattar, who has been primarily responsible for the unnecessary controversy between the industry and the authorities.

* At the time of going to press comes the report that Dunlop Rubber Co., has been brought under the margin system. A margin of Rs. 4 is payable on every fresh sale of this scrip.

Forward Trading in Commodities

With wide and arbitrary powers for regulation and control of futures market vested in the Forward Markets Commission, which has seldom hesitated to use them, it is no wonder that, during such a year as 1960, when scarcity conditions prevailed in many commodities the total volume of futures transactions, the average net open position and tenders in all regulated commodities had suffered a marked decline. The volume of trading in the regulated commodities in 1960, according to the latest annual report of the Forward Markets Commission, registered a decline of 14 per cent as compared with the previous year, the net open position dropped by 22 per cent, and the volume of tenders receded by 15 per cent.

The data compiled by the Forward Markets Commission on the volume of futures trading make interesting reading. The total turnover in hedge contracts in all the commodities declined from a little over 65 million metric tons in 1959 to 56 million metric tons in 1960. Though this decline was shared by most of the commodities under regulation, it was marked particularly in the case of cotton (71.4 per cent), groundnut kernels (31.5 per cent), ground nut oil (19.3 per cent), cottonseed (48.7 per cent), coconut oil (31.1 per cent,) and pepper (66.6 per cent). On the other hand, there was an increase in the volume of trading in castorseed (8 per cent), linseed (16 per cent), turmeric (179.4 per cent), and *gur* (146.4 per cent). The striking increase in the case of the latter two are due to the suspension of trading in both the commodities for some time in 1959.

The hedge markets in jute and jute goods, which were subject to heavy margins throughout the year and were in fact closed during the last quarter, however, presented a different picture. While the total turnover in raw jute showed a decline of about 20 per cent. from the previous year, the turnover in hessian remained practically unchanged, while in B. Twills it actually increased by 10.5 per cent.

The following table gives the commodity-wise breakdown of the total volume of trading, average net open position and tenders during 1960:

(In thousand metric tons)

Commodities	Volume of transactions	Net open position (average)	Volume of tenders
Cotton	2,429.8	20.8	0.88
Raw jute	1,793.7	4.9	6.34
Hessian	1,526.1	5.3	0.11
B. Twills	9,361.5	12.4	1.59
Groundnut	8,984.9	21.0	4.67
Groundnut oil	3,613.2	7.0	3.58
Castor seed	10,579.1	42.8	5.17
Linseed	729.2	11.9	4.29
Cottonseed	2,700.0	23.2	3.83
Rapeseed/Mustard seed ..	7,194.0	25.2	3.99
Coconut oil	123.6	1.4	2.16
Turmeric	474.9	4.3	0.59
Pepper	28.0	0.6	0.51
Gur	6,375.8	21.2	19.85
Total for 1960..	55,913.8	201.74	57.56
Total for 1959..	65,008.0	259.30	63.31
Total for 1958..	59,300.0	220.80	52.86

Among the different regulated commodities, the volume of trading was by far the highest in castorseed in absolute terms as well as in relation to output. The aggregate turnover in castorseed futures was nearly a fifth of the total turnover in all commodities. B. twills ranked second, the monthly average turnover for the first ten months of 1960 (during which the jute market was open) having been 935,000 tons. The total turnover of 9.36 million metric tons in B. Twills is over 17 times its production during the year. In cotton, the volume of trading declined sharply since 1958, as prices had pierced the ceilings fixed for the respective varieties of cotton; further, the various regulatory measures that were in operation had a restraining influence. The total turnover in cotton was only three and a half times the size of the crop. The volume of trading in groundnut kernels dropped from nearly 170,000 metric tons in 1958 to less than 90,000 metric tons in 1960—a net decrease of 47 per cent. Nevertheless, the total turnover in groundnut during 1960 was, as in the case of cotton, more than three times its output. Among the other commodities, the volume of trading in rapeseed/mustard seed was nearly seven times the crop, in turmeric it was about six times and in hessian more than three and a half times, in groundnut oil over three times and in cottonseed almost twice. In raw jute and linseed, however, the volume of trading was relatively small, having been only 1¾ times their respective outputs. Similarly, it was 1¼ times the production in the case of *gur*, same as output in case of pepper and less than production (only 70 per cent, to be precise) in respect of coconut oil.

Thanks to the decline in the volume of transactions and heavy margins, the averages of the month-end net open positions in different regulated commodities also recorded an appreciable fall. Thus, the combined net open position in the different commodities declined from 259,000 metric tons in 1959 to 201,700 tons in 1960, a net decline of 22 per cent. The actual fall in the annual average net open position for individual commodities ranged between 15 and 49 per cent, depending upon the regulatory measures adopted in the case of different commodities. It was lowest, at 15 per cent, for *gur* and highest, at 49 per cent, for raw jute. The net open position had declined in cotton by more than 47 per cent, in groundnut kernels by 27 per cent, in hessian by 37 per cent, and in pepper by 34 per cent. B. Twills, groundnut oil, cottonseed and coconut oil, all of them recorded decreases of 40 per cent over the year. On the other hand, there was only a slight increase (less than 2 per cent) in the total net open position in rapeseed/mustard seed. Notable increases were, however, recorded for castorseed (18 per cent), linseed (30 per cent) and turmeric (40 per cent).

As in the case volume of trading, the net open position in castorseed was the highest among all the commodities in which forward trading was regulated. At 42,800 metric tons, it represented more than a fifth of the combined total net open position in all the commodities. Rapeseed/mustard seed, cottonseed, *gur*, groundnut kernels and cotton followed in that order, with average net open positions of 25,200, 23,200, 21,000 and 20,800 metric tons, respectively.

As already noted, the volume of tenders issued against futures contracts in all the regulated commodities, too, declined in 1960, as compared with the previous year. At a little over 57,000 metric tons, as against 67,300 metric tons in 1959, total tenders issued during the year formed 0.1 per cent of total transactions during the year. Such a low level of tenders was due to two reasons. First, the shortage of supply of many commodities naturally reduced the volume of tenders. Secondly, stringent margins and other regulations, which kept futures prices of many commodities below their ready rates, also discouraged the tendering of large quantities on the docket.

It is evident from the above analysis that the regulatory measures taken by the Commission had a restrictive effect on transactions in futures markets which, together with short supplies of some commodities, resulted in a decline in the volume of futures trading. In the course of the year, the F.M.C. has had occasions when it found it necessary to resort to such drastic steps as imposition of stringent margins, fixation of limits to daily fluctuations, closure of markets, prohibition of fresh trading and even compulsory termination of contracts in respect of trading in some commodities. While it is arguable whether such controls are the ones calculated to foster self-discipline in the trade, which alone can make for healthy trading, there is no doubt that a shrinkage in the volume of business, by making futures prices sensitive to relatively small transactions, defeat the very object the F.M.C. seeks to achieve, namely, prevention of violent fluctuations in price. The utility of a futures market, which is hedged in with too many restrictions, is also open to question. The net result of these restrictions has been to keep futures prices unduly down. Whatever may be the virtues of a steady market, if futures prices are not allowed to reflect the traders' estimate of the prospect for the commodity traded in and are completely divorced from the prices of the spot material, they can do nobody any good. The curbs on futures prices, instead of acting as a steadying and restraining influence on the spot prices (this is the justification sought to be advanced for futures trading in conditions of short supply), will, in practice, only serve to widen the gap between the spot and futures prices and render the futures market worthless as a hedging medium.

It is not suggested here that the imposition of carefully calculated handicaps on speculators is unnecessary. It is quite possible that, but for these handicaps, there would have been a larger volume of speculation and the upward trend in prices might have been aggravated. But the real question is whether, in a scarcity economy like that of India, there is any need at all for futures markets and that, too, a number of them for a single commodity. Since a hedge contract circumscribed in by all sorts of conditions serves no good purpose, nothing will be lost by abolishing them. A caged hedge contract is better than no contract at all only to those who are dependent upon speculation as a means of living.

Indirect Taxes

It is abundantly clear that, since the limit of direct taxation has already been reached and even exceeded, the bulk of additional tax resources (estimated at Rs. 1,710 crores) for the third Plan must come from increases in indirect taxation. This is a point on which the planners, Government spokesmen and economists, barring a few extreme leftists, seem to be agreed. The final report of the third Plan clearly says: "The third Plan will involve a substantial increase in indirect taxation. The number of assessees paying direct taxes in India is very small. Although collections of direct taxes are expected to improve in the course of the Plan, the total of resources required cannot be raised without taxation of consumption through indirect taxation over a wide range." While greater reliance on indirect taxation is necessary, it has to be pointed out that the dose of such taxation should not be so heavy as to have a serious impact on the price levels and, consequently, the cost of living. This is an important condition, because, even now, the incidence of enhanced indirect taxes is falling heavily, particularly on urban households. The main findings of the Union Finance Ministry's Tax Research Unit presented to the Lok Sabha on Tuesday this week reveal that, over the period 1953-54 to 1958-59, the proportion of indirect taxes in the total consumer expenditure rose from 5.6 to 8.7 per cent on urban households and from 2.8 to 4.1 per cent on rural households, the all-India figure itself having gone up from 3.4 to 5.3 per cent, owing largely to the rise in the incidence of Central excise duties, sales taxes, tax on motor spirits and motor vehicles taxation.

The report of the Tax Research Unit covers all indirect taxes levied and collected by both the Centre and the State Governments with the exception of exoort duties, registration and stamp duties, electricity duties and a few minor taxes. In terms of yield, the coverage accounted for 81 per cent of the total yield of Rs. 433 crores from indirect taxes in 1953-54 and for 88 per cent of the yield of Rs. 748 crores in 1958-59.

Reflecting the steeper incidence of indirect taxes in cities and towns is the increase in the

(Continued on page 428)

FURTHER FALL IN EQUITIES

BANKS AND SUGARS, HOWEVER, FAVOURED

(From Our Own Correspondents)

BOMBAY, 23rd *August*

BARRING banks, sugars and a few other select scrips which elicited some investment enquiries, equities continued to drift downward during the week under review. In spite of encouraging news from some companies and *small badla charges at the last settlement*, the market lacked support. There was tired bull liquidation and scattered bear pressure. There was also selling by Calcutta interests in the Bombay market, as a sequel to the imposition by the Calcutta Stock Exchange authorities of high margins on Indian Irons, Hindustan Motors, Rohtas and Burrakur coals. Buyers were not inclined to enter into fresh commitments on a large-scale, thanks to tense Berlin situation and persistent reports of damage caused by floods in the various parts of the country. Even at lower levels, support was lacking, as some bulls continued to press sales. Following the further fall in values, the Stock Exchange authorities have abolished the system of special making-up prices for Tata Locomatives and National Rayons; the only scrip for which such prices continue to be applied is Centurys. Even in the case of this share, the special deposit which buyers have to keep with the Stock Exchange has been reduced from Rs. 95 to Rs. 65 per share. These steps, however, have not evoked any fresh response from the bulls.

During the week under review, the share market received encouraging reports regarding the working of a few textile companies. The Bradbury Mills' gross earnings for 1960-61 have nearly doubled from Rs. 8.95 lakhs to Rs. 17.32 lakhs. The Directors have stepped up the dividend on Rs. 50 paid-up shares from Rs. 5 to Rs. 12.5 per share, subject to deduction of tax. The turnover of Phoenix has also recorded a substantial rise in 1960-61 and the Company has proposed a dividend of Rs. 20 per share, which is Rs. 5 more than what was distributed in 1959-60. The Bombay Dyeing and Manufacturing Company has announced an interim dividend of Re. 1 per share, subject to deduction of tax, for the year 1961. The Company is expected to maintain the total dividend for the current year at the previous year's level of Rs. 3.50 without drawing on past reserves. The gross profit of Dawn Mills, however, has suffered a slight setback from Rs. 32.56 lakhs for 1959-60 to Rs. 31.29 lakhs for 1960-61. Nevertheless, the Company has decided to maintain the dividend at Rs. 15 per share of Rs. 50, subject to tax. The Chairman of the Colour-Chem Ltd. has struck a note of optimism regarding outlook for the current year. The trend of both production and sales are said to be upward. The Indian Dyestuffs has decided to implement an integrated scheme of expansion at a total cost of Rs. 4.50 crores to Rs. 5 crores. The hopes of any fresh capital issue have been belied by the latest statement of Mr. Arvind Mafatlal, Chairman of the Company.

Steel shares continued to rule easy. Tata Steels opened the week at Rs. 151.75, as against the previous close of Rs. 152, and declined to Rs. 150.75 the same day. After recovering to Rs. 153 yesterday, they declined again thereafter and touched Rs. 150.75 today. The net loss over the week was Re. 1.25. Indian Irons dropped 70 nP to Rs. 25. Mukand Irons fell by 89 nP to Rs. 24.76.

Textile shares encountered selling and suffered a setback in values. In the forward list, Khataus were hammered down from Rs. 547.50 to Rs. 485. Standards slumped by Rs. 36 to Rs. 1.308, Centurys which had rallied from Rs. 673.50 to Rs. 676 yesterday, came in for selling today and moved down to Rs. 664.50. The net loss over the week was Rs. 9. Morarjees dropped Rs. 12 to Rs. 398 and Swans Rs. 10 to Rs. 602.50. Swadeshis eased by Rs. 6.50 to Rs. 245. Kohinoors by Rs. 5.50 to Rs. 281, New Greats by Rs. 3.75 to Rs. 221.25. In the cash list, Mafatlals receded by Rs. 7.50 to Rs. 320.

Sugar shares, as stated at the outset, evinced interest. Belapurs firmed up by Rs. 5 to Rs. 257; they were higher still at Rs. 259 at one time today. Maharashtra Sugars jumped up by Rs. 24 to Rs. 190, following the news of the grant of official consent to the Company for the issue of bonus shares of the total value of Rs. 27 lakhs to existing shareholders in the ratio of two shares for every five held. Ravalgaons advanced by Re. 1.30 to Rs. 64.30. Phaltans were firm at Rs. 130. Walchandnagar were well maintained at Rs. 163.50, despite the report that the Company had obtained permission to issue third debentures of the total value of Rs. 60 lakhs carrying interest not exceeding 7 per cent and repayable after 15 years for cash at par.

In the engineering section, T.E.L.Cos. were marked down by Rs. 7 to Rs. 334.50 on top of a decline of Rs. 28.50 last week. Maneklals slumped by Rs. 32.50 to Rs. 472.50. Asian Cables declined by Rs. 2.50 to Rs. 109. Premier Constructions shed Re. 1.50 to Rs. 181.50. Texmacos eased by 52 nP to Rs. 17.68. Coopers lost 24 nP to Rs. 177. Kamanis fell by 64 nP to Rs. 14.76. Mahindras were dull at Rs. 19, Kirloskar Brothers at Rs. 45 and Khandelwals at Rs. 72. Alcock Ashdowns, on the other hand, picked up Re. 2 to Rs. 275. Kirloskar Oils put on 25 nP to Rs. 28.75.

With the exception of Colour-Chems and Dhrangadhras, chemical shares were subjected to selling pressure and suffered setback in values. Indian Dyestuffs receded by Rs. 16.25 to Rs. 435, reflecting disappointment of operators over the decision of the Company not to issue fresh capital. Amar Dyes fell by Rs. 26.25 to Rs. 300. Polychems eased by Re. 1.25 to Rs. 203.75. Alembics lost 75 nP to Rs. 228. But Colour-Chems induced by the brighter outlook for the year, held out by the Chairman, put on Rs. 15 to Rs. 342.50.

Among shippings, Scindias encountered selling on rumours that the Company might skip over dividend for the past year and declined by Re. 1.08 to Rs. 12.16. Great Easterns were subdued at Rs. 13.48. In the automobiles section, Premier Automobiles declined by Rs. 2 to Rs. 194.50. The agreement covering the grant of D.L.F. loan of Rs. 3.4 crores ($7.2 million) was signed at New Delhi on Monday this week. Hindustan Motors shed 56 nP to Rs. 19.16 ex-div.

Rayon shares also suffered losses. National Rayons eased by Rs. 7 to Rs. 525. Baroda Rayons shed Re. 1.50 to Rs. 138. Indian Rayons lost a like amount to Rs. 72.50. Gwaliors dropped 50 nP to Rs. 48. South India Viscoses were dull at Rs. 181.

In the miscellaneous section, Bombay Burmahs declined by Rs. 7.50 to Rs. 580.50. Voltas lost Rs. 4 to Rs. 280. Wimcos eased by Rs. 1.50 to Rs. 71. Killicks receded by a like amount to Rs. 97. B. Oxygens softened by Re. 1.50 to Rs. 57. Tata Oils shed Re. 1.68 to Rs. 68.50 ex-div. Premier Tyres finished a rupee lower at Rs. 122.50. Wimcos softened by Re. 1.50 to Rs. 271. A few other miscellaneous industrials, however, elicited special buying support and tended to move up. Anil Hardboards provided a bright spot, the quotation jumping up by Rs. 21.25 to Rs. 256.25, following rumours of an increase in dividend from Rs. 6 to Rs. 9 free of tax for the past year.

* * * *

Madras Stock Exchange

MADRAS, 22nd August

Fluctuations in equity values were confined to a narrow range during the week under review, with undertone remaining easy. Professional interest in most of the shares was at a low ebb, as advices from Bombay and Calcutta were not encouraging. The imposition of margins on bears sales in four counters at Calcutta failed to have any perceptible effect. Sugars ruled listless, in view of the continued uncertainty regarding exports. Teas were generally quiet, due to lack of inspiring reports from auction centres. Coffees were neglected. Rubbers, however, came in for some buying. Indeed, a few shares made handsome gains. Textiles were depressed, barring a few popular shares which elicited investment support. There was stale liquidation in engineering, chemical and a few other miscellaneous industrials.

In the sugar group, United Breweries fell by Rs. 2 to Rs. 101.50. Cauverys declined by Re. 1.50 to Rs. 120.50. Deccans eased from Rs. 13.15 to Rs. 13. East India Distilleries were dull at Rs. 38.75 and Mysores at Rs. 57.75.

Among teas, Chembras encountered selling and dropped 18 nP to Rs. 3.87. Haileyburias receded by 10 nP to Rs. 13.65. Blue Mountains closed lower at Rs. 3.10, as against Rs. 3.14. Kil Kotagiris shed 3 nP to Rs. 4.65. Periakaramalais lacked support and lost 2 nP to Rs. 3.86.

Among coffees, Coffee Lands lost 10 nP to Rs. 17.65. Consolidated Coffees were subdued at Rs. 21.25, Ouchterlony Valleys at Rs. 3.70, Cowcoodys at Rs. 4.45, Rajendras at Rs. 12.12 and Anaparais at Rs. 3.95. Badras were unchanged at Rs. 3.60 and Kadurs at Rs. 2.85. The Boards of Directors of these two coffee estates have agreed to a scheme of amalgamation. Alageshwars put on 10 nP to Rs. 3.15, following the announcement of a higher dividend of 15 per cent (taxable) for the year ended March 1961, as compared with only 7½ per cent distributed in the previous year.

Rubbers, as already pointed, ruled steady. Vaikundams hardened by 25 nP to Rs. 32.75. T.R. and Ts. rose by 12 nP to Rs. 9.80. Midlands improved by 5 nP to Rs. 11.65. Malankaras were fully maintained at Rs. 18. The Directors of both Malankaras and Midlands have maintained the dividends for the year ended March 1961 at the previous year's level of 12.50 per cent (taxable) each.

In the textiles group, South India Viscoses fell by Rs. 2 to Rs. 182. Dhanalakshmis lost a rupee to Rs. 240. Travancore Rayons gave way from Rs. 38.90 to Rs. 38.45. Coimbatore Spinnings declined by 25 nP to Rs. 56.25 and Madurais by 20 nP to Rs. 36.90. Kotharis shed 15 nP to Rs. 12.45 and Radhakrishnas 12 nP to Rs. 32.25. Lakshmis changed hands at Rs. 168. Coimbatore Cottons were subdued at Rs. 188. Coimbatore Pioneers at Rs. 270, Janardanas at Rs. 69.35, Metturs at Rs. 382 and Premiers at Rs. 289.

Among miscellaneous industrials, Western India Plywoods fell by Rs. 4 to Rs. 214. Textools suffered a setback of Rs. 3 to Rs. 178. In the chemicals group, Travancores softened by 25 nP to Rs. 19.75. Metturs shed 15 nP to Rs. 14.45. F.A.C.Ts were neglected at Rs. 9.75, Mysore Chemicals at Rs. 23.85 and Mysore Fertilisers at Rs. 11.60. Among cements, Dalmias shed 10 nP to Rs. 11. Indias shed 3 nP to Rs. 6.54. Travancores were dull at Rs. 7.50. But Orissa strengthened by 35 nP to Rs. 14.90 and Andhras by 12 nP to Rs. 9.72. Among others, Indian Steel Rollings lost 15 nP to Rs. 10.65, despite the announcement of a final dividend of 7.50 per cent (taxable) making a total of 12.50 per cent for the fifteen months ended March 1961. In 1959, the Company had distributed a dividend of 7 per cent.

4¼ PER CENT

ANDHRA PRADESH STATE DEVELOPMENT LOAN, 1972

Issue Price Rs. 99.75 per cent

Open on the 4th SEPTEMBER, 1961

The Loan will be closed without notice as soon as the subscriptions amount to Rs. 10 Crores approximately, and in any case not later than the close of the business on the 9th SEPTEMBER, 1961.

The applications will be received at the Offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras and Bangalore; at the Branches of the State Bank of India and the Branches and Treasury Pay Offices of the State Bank of Hyderabad within the State of Andhra Pradesh, and the Government Treasuries and Sub-Treasuries in the State of Andhra Pradesh at places where there is no Branch of the State Bank of India or Branch or Treasury Pay Office of the State Bank of Hyderabad.

FULL PARTICULARS CAN BE OBTAINED

at any of the Offices or Branches mentioned above or at any Treasury or Sub-Treasury in the State of Andhra Pradesh.

ROLE OF MR. MANUBHAI SHAH IN INDUSTRIALISATION

A MINISTER WHO DRIVES BUSINESSMEN TO ACTION

By An Observer

TO no single person India owes its industrial development in the last eight years as much as it does to Mr. Manubhai Shah, the Union Minister for Industry, in whose portfolio a change was recently proposed but has not materialised so far. This is, therefore, an opportunity to recognise publicly his contribution to the country's industrialisation. Both in regard to the content of the Plans and in regard to their effective implementation, the dynamic role which Mr. Manubhai Shah has played is significant. He has virtually personified in himself planning of industrial development in the public and the private sector alike. It must, of course, be said that Mr. T. T. Krishnamachari, to whom goes the credit for "discovering" Mr. Manubhai Shah, had done considerable spade work and laid the foundations. But Mr. Manubhai has assiduously followed the lead given by T.T.K.

The magnitude of India's problem of industrialisation and its complexities have baffled the tallest among us, but they have provided a field of operation for Mr. Manubhai's outstanding abilities. It is difficult to think of any other person in the Government, who has his vision and close understanding of the many complex and baffling problems involved in a massive programme of industrialisation. His knowledge of technology, his industrial experience and his quick grasp have all been of great advantage both to the Government and the people.

From the production of consumer goods, the country is now rapidly advancing to provide capital goods in all their diversities. The comprehensiveness of planning needed for this purpose and its integrated character are by no means an easy matter. Mr. Manubhai has not only understood the problem but has worked hard to solve it with the fervour of a missionary. Without the imprint of his forceful personality, the remarkable success achieved and planned for would hardly have been possible.

The stupendous progress of the chemical industry in India in its varied manifestations such as dyes, petro-chemicals, pharmaceuticals, etc., and the rapid strides which the heavy engineering and electrical industries are making are in no small degree the result of Mr. Manubhai's drive, energy and unbounded enthusiasm. "Build machines, build India" is a slogan which he has not only given to the people but one to which he is dedicating his life.

Man of Foresight

It is usual for businessmen to claim for themselves the spirit of enterprise. It is also customary for them to feel that Government and bureaucracy are the restraining influence on their spirit of adventure and risk-taking. But in Mr. Manubhai the country has found a Minister who "drives" businessmen to action, who pushes them forward to conquer new heights of industrialisation almost in a whirlwind fashion. His energies are directed to enabling officials and businessmen alike to reach newer industrial frontiers as old ones are crossed. So great has been the influence of his passion for development on the thinking and action of entrepreneurs, small and large, that it has become customary for them to give the impression that they have gone in for certain schemes, because Mr. Manubhai wanted them to do so rather than because they thought that they were profitable propositions. This is a compliment to Mr. Manubhai, who not only feels intensely about industrialising the country rapidly but makes that possible by inspiring entrepreneurs to take bold action.

It is said that the difference between a politician and a statesman is that, while the former thinks of the next election, the latter thinks of the next generation. Mr. Manubhai obviously belongs to the latter category. He cannot escape being a politician, but he is concerned most about the building of the country's industrial edifice on an enduring and broad-based foundation. If the "take-off" stage of the country's industrial development is no longer a distant goal, considerable credit for it should go to Mr. Manubhai.

Mr. Manubhai's impatience in forcing the pace of industrial growth is well-known. He is in such hurry to march forward that he regards as of lesser importance how this should be achieved. He is not a doctrinaire person. His approach is pragmatic. Since he is anxious above all to race against time, he is willing to utilise the services of small as well as big entrepreneurs for carrying out schemes of development. Businessmen have the necessary background and experience, however imperfect that may be, and he is rightly of the view that they should be encouraged to maximise their efforts by impelling them to take up new industries. His efforts in this direction should not be misunderstood as an attempt to entrench capitalists and capitalism. He is inclined to apply a utilitarian test as to who can deliver the goods and do so the quickest. In many fields of enterprise, particularly medium-sized enterprises, businessmen have an advantage over Government, in that they can put in concentrated effort to achieve a goal, while Government has too much on hand already and the responsibility for taking a decision is dispersed over a large number of authorities.

Friend of Enterprise

Mr. Manubhai's reliance on businessmen should not be regarded as a matter of blind faith. He is too shrewd not to know the many failings of businessmen, but he also knows only too well how governmental machinery moves. It is no easy choice to make between private and public enterprise and Mr. Manubhai's choice is dictated largely by his sense of urgency in achieving the goals. For him the essence of planning lies in accomplishment. Where private enterprise can do a project, let it be allowed to handle that job. If, however, a project is too large for private enterprise or if there are special considerations to be borne in mind, then let the State take up the new enterprise. This is his attitude. The classic case is that of automobile industry, where, in the face of opposition from the whole automobile industry, he is endeavouring to establish a new unit in the public sector for manufacturing a cheap small car. In this controversial issue, he may or may not be right, but this does indicate that Mr. Manubhai's primary concern is to expand production to take care of our growing needs and also to warn the private manufacturers that they cannot hope for a sheltered market which they can exploit at will. He is a friend of enterprise first and then only of private enterprise. Even when a change in his portfolio was proposed a few weeks ago, it was made clear that the new public sector enterprises now under construction would continue to be under his care.

Mr. Manubhai's restlessness or impatience is his strength, but that is also his weakness. It is doubtful whether he can be popular with his colleagues in the administration, either ministers or secretaries. He is unlikely to have any truck with ideological or partisan approach of other Ministers or the red-tape of the bureaucrats. He wants to take quick decisions on his own responsibility which would probably involve treading on the corns of other dignitaries in Government. He is no respecter of persons, whoever they may be. Although the declared policy of the Government is to attract foreign capital into India, Mr. Manubhai is known at times to have offended foreign entrepreneurs by his seeming indifference or lack of interest when he sees them. Such an attitude is hardly helpful to the cause he holds dear and creates an unfavourable impression in certain circles. It may well arise out of Mr. Manubhai's instinctive reaction to some proposal of collaboration and know-how. This may also be due to his aversion for the businessman's cautious attitude in considering schemes involving heavy risks.

To pay one's tribute to a distinguished public servant who has dedicated himself to the cause of industrialisation is to recognise how rare such gifted talents are in our land. From the national angle, Mr. Manubhai's personal failings, whatever they be, are of little consequence, while the contribution he is making will be of inestimable value to posterity. Among the builders of modern India, his name will be in the forefront for a long time to come.

4¼ per cent

ORISSA GOVERNMENT LOAN, 1972

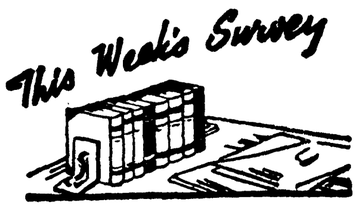
ISSUE PRICE Rs. 99·50 PER CENT

Opens on the 4th September, 1961

The loan will be closed as soon as a total of approximately Rs. 500 lakhs has been subscribed and in any case not later than the close of business on the 9th September, 1961.

The applications will be received at the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras and Bangalore, at the branches of the State Bank of India in Orissa and at the Treasuries and Sub-Treasuries in the State of Orissa at places where there is no branch of the State Bank of India.

Full particulars can be obtained at any of the offices of the Reserve Bank of India or branches of the State Bank of India or at any treasury or sub-treasury in the State of Orissa.



IRON AND STEEL INDUSTRY

THE annual statements made by Mr. Biren Mookerjee in his capacity as Chairman of the Indian Iron and Steel Co., Ltd., it is well known, are usually characterised by a vigorous practical approach to the problems of the iron and steel industry. This approach finds ample expression in his latest statement (the full text of which is published elsewhere in this issue), for the practical difficulties encountered by his company, as, indeed, by other integrated steelworks in varying degree, cry out for practical remedies. By far the most pressing difficulty, about which Mr. Biren Mookerjee had much to say in his last year's statement too, is the extremely high and varying ash content in currently available metallurgical coal, coupled with its erratic supplies. How the ridiculously high ash content, which sometimes is as high as 27 per cent, and its variation from day to day in the supplies of coal affect production, are better explained in Mr. Biren Mookerjee's own words:

"A high ash content in the coke means increased consumption of coke to attain the blast furnace operating temperature and, in consequence, a larger volume of slag produced. Since the cubic capacity of a blast furnace is constant, a larger volume of slag means in turn a reduced volume of iron produced. . . .

"The plea of our operational executives is that, if the quality of raw materials must be bad, then at least let it be regularly bad, for, in that case, whatever the difficulties, some measure of consistency of operation could be achieved. This, however, the erratic transport position effectively precludes and, with the daily fluctuations, it becomes impossible to produce a standard grade of iron, a position which is still further prejudiced by the present severe deterioration in the quality of limestone supplies, the percentage of free lime varying between 42 per cent and 24 per cent."

No wonder, then, that foundries and engineering industries have been complaining, of late, about the varying and generally poor quality of pig iron supplied to them. But the engineering industries may have to console themselves with the thought that the steel industry itself has to suffer most from this situation. Here, again, Mr. Biren Mookerjee's description of the consequential difficulties to the steel melting shops in the integrated steelworks may be quoted in extenso:

"The tale then moves to the Melting Shop where consistency of quality of steelmaking iron is an essential for efficient working. With this consistency lacking, with some inevitable carry-over of slag from the blast furnaces and with excessive impurities, in particular sulphur, in the hot metal, production difficulties become acute. Furnace time per melt is increased with consequent loss of production and operational temperature has to be increased, leading to burning out of refractories and a consequent increase in the time the furnaces are out of commission for re-bricking. The excessive sulphur content of the hot metal is a source of serious difficulty in the Melting Shop practice."

No wonder, again, that the quantity and quality of steel production have lately belied expectations and the I.I.S.Co. in particular, with its output of 9.14 lakh metric tons of steel ingots in the year ended 31st March 1961, has still not found it possible to attain the full production potential of 10 lakh tons of ingot steel envisaged under its expansion programme. It has been the same story in the case of the T.I.S.Co. and the public sector steel plants, with the result that the second Plan has ended with a shortfall of 2.1 million tons in the targeted finished steel production of 4.3 million tons from all the plants. This position of actual production falling short of the potential created is likely to continue for some years to come, for the raw materials position, accentuated by the transport bottleneck, is not expected to improve overnight. Apart from the delay in executing the coal washeries programme, under which alone can the steelworks hope to get adequate quantities of washed coal with its lower ash content, there is bound to be delay in producing more wagons of the type required for the steel industry. Such wagons are 4-wheeler open wagons for bringing coal and BOBS wagons for bringing iron ore, and they alone can be quickly handled by mechanical equipment at the steelworks. The overall transport problem itself is stupendous in the case of iron and steel industry which, for producing six million tons of steel ingots and one million tons of foundry iron, will require 35 million tons of raw materials. Mr. Biren Mookerjee himself is rather pessimistic about the immediate prospects of the industry in the context of the continuing shortage of coking coal and transport.

The case he has so cogently presented for winning an export market for steel products like 'light bars' and 'structurals' in neighbouring countries would, therefore, seem to be premature. If Mr. Mookerjee thinks that there will be a surplus in bars and structurals, the planners expect a deficit in flat products. The proposal made by the planners, in this connection, is that the margin between the demand and the indigenous supply of steel products in short supply should be narrowed down by free inter-change of steel ingots between the public sector plants so as to achieve the most intensive use of the rolling mill facilities for flat products. If this proposal were carried out, there would be correspondingly less of steel ingots for making light bars and structurals, and that would mean that a sizable surplus in these categories may not emerge for export purposes.

S.T.C.'S EXPORT PERFORMANCE

The State Trading Corporation's fourth annual report, circulated this week by the Press Information Bureau of the Government of India, covers only the nine-month period from 1st July 1959 to 31st March 1960, whereas the financial year for its previous reports used to be from July to June. The present change in coverage has been necessitated by the decision of the Government of India that a common financial year from April to March be adopted by all public sector undertakings. Whatever be the reason for the change, the more relevant point to be noted here is that the latest report's figures pertaining to the Corporation's trading performance and financial results are not strictly comparable with those, for instance, of the third annual report which covered the twelve-month period from 1st July 1958 to 30th June 1959. Notwithstanding this limitation in respect of comparability, it could be broadly inferred from the figures of trading performance that the S.T.C. has increased its business by more than 50 per cent, as compared with 1958-59. The relevant figures of total turnover of direct trade in goods (exports and imports together) are Rs. 43 crores for the 9-month period ended 31st March 1960 and Rs. 36 crores for the 12-month period ended 30th June 1959.

But nowhere in the report is to be found a break-up of these figures into exports and imports. In the absence of such a break-up, it is difficult to say how much better the Corporation's export performance has been in the period under review, as compared with the period covered by the third annual report. Of course, the quantity figures given in the report in respect of individual commodities figuring in the Corporation's export trade throw some light on the question. These figures pertaining to the more significant commodities on the export side are given below:

Exports	Unit	Quantity exported in 9-month period ended 31st March, 1960	Quantity exported in 12-month period ended 30th June, 1959
Iron ore	Lakh tons	23.36	25.76
Manganese ore ..	"	3.94	3.82
Mica	Lakh lbs.	1.03	0.29
Chrome ore ..	Lakh tons	0.41	0.23
Tobacco	Million lbs.	5.13	16.46
Shoes	Lakh pairs	3.72	4.14
Raw jute	Lakh bales	0.93	0.12
Gunny bags ..	Million Nos.	4.62	4.35
Woollen fabrics ..	Lakh yards	2.65	5.20

It will be seen from the figures pertaining to mineral exports (iron, manganese and chrome ores and mica) that the S.T.C.'s performance in the period ended 31st March 1960 showed a substantial increase proportionate to the period, as compared with the previous year. As mineral ores have always constituted the larger part of the Corporation's export business, the very fact of improvement in their exports brings some credit to that trading body. In particular, the improvement, howsoever slight, in the export of manganese ore, in the unfavourable conditions of world trade in that ore, has come about because the S.T.C. was able to negotiate several deals under which exports of manganese ore were made possible in exchange for imports of steel products in particular. That the cumulative total of manganese ore sold (upto 31st March 1960) against imports of steel products was Rs. 11.7 crores in value terms, is something of which the S.T.C. seems to be proud. But it may be said, as the Economist Intelligence Unit's report on the S.T.C.'s export performance has done, that such 'canalised' barter deals are detrimental to India's interests, in that the price of the Indian goods is reduced or the price of the foreign goods raised above the normal level so as to enable the foreign partner to the transaction to make his legitimate profit. There may be some truth in this criticism, for the S.T.C.'s report itself has admitted that a major cause of the decline in gross profits—from Rs. 3.3 crores in the total turnover of Rs. 36.0 crores in 1958-59 to Rs. 3.1 crores in the total turnover of Rs. 42.8 crores in the 9-month period of 1959-60—was the loss in the sale of manganese ore. On the whole, however, a harsh judgment on the S.T.C.'s performance is not possible, for the conditions in world trade pertaining to manganese ore have been beyond its control. What is important is that some markets for manganese ore should somehow be sustained in the difficult conditions of world trade.

PETROLEUM PRODUCTS PRICES

The Government's policy in regard to prices of petroleum products leaves much to be desired from the point of view of both the oil marketing companies and the consumers of petroleum products. While the oil companies have been compelled to effect reductions in their basic prices from time to time, on the basis of an *ad hoc* formula, the consumers continue to be denied the benefit of such reductions, as the Government has mopped up the amounts by levying *ad hoc* additional duties on all petroleum products (motor spirit, refined diesel oils and vaporising oil, diesel oil, and furnace oil). Since the first reduction was announced in May 1958, the Government has collected several crores of rupees in this manner. The actual collection is estimated at Rs. 5.4 crores for 1958, Rs. 15.1 crores for 1959, Rs. 23.6 crores for 1960 and Rs. 30.0 crores for 1961, or a total of over Rs. 74 crores for the period May 1958 to December 1961. This is on top of the usual excise duties and sales taxes on petroleum products which fetched a sum of Rs. 150 crores to the Central and State Governments in 1960 alone.

The reductions in prices offered by the oil companies and their absorption by the levy of *ad hoc* additional duties, it will be recalled, are in accordance with the terms of the *ad hoc* agreement in force since April 1959 between the oil companies and the Government. When the agreement was signed, the Government had stated that the agreement would terminate immediately after the Government completed its enquiry into the pricing structure of petroleum products. The agreement is due to expire by the end of this month, but the Government is reported to have written to the oil companies suggesting the extension of the period by some months more. This move is somewhat surprising, considering that the Damle Committee on Oil Prices, which itself took a much longer time than was expected, has already submitted its report (in the middle of July 1961). Surely, the period of more than one month should be sufficient for the Government to study the report and take a decision. Why has the Government still not taken a decision on the Damle Committee's report. Perhaps the Government is not pleased by the findings of the Committee. In fact, it is reported that the Committee has recommended reductions in the prevailing prices of petroleum products for the consumers.

The Government, as already stated, has collected by way of *ad hoc* additional duties several crores of rupees in the last three years and more, a sufficiently long period for an *ad hoc* arrangement to continue. Is not the consumer of petroleum products justified in asking for at least a part of the benefit accruing from the reductions in prices effected by oil companies? In the past, the Government used to say that the saving obtained from the oil companies was not large enough to be passed on to any significant extent to the millions of consumers of oil products. But this argument cannot hold water now, as a sizable reduction can be effected. It is, for instance, calculated by competent persons that the sum of Rs. 30 crores expected to be collected in 1961 will be sufficient to lower the consumer prices of certain products to the extent of 23 nP per gallon on motor spirit, 12 nP on kerosene, 15 nP on high speed diesel oil and 20 nP on furnace oil. Alternatively, the price of kerosene can be cut by 47 nP per gallon or that of motor spirit reduced by Re. 1.11 per gallon. It is thus clear that the responsibility for the present high prices of petroleum products rests entirely with the Government and not, as is mistakenly believed in some quarters, with the oil companies.

CURB ON U.K.'S CAPITAL OUTFLOW

Britain has, of late, been resorting to a wide range of monetary and fiscal devices to tide over its balance-of-payments difficulties. The sharp increase in the Bank rate from 5 to 7 per cent, announced last month, is only an instance in point. Presumably because these measures have been deemed insufficient for the object in view, the Government has now decided to apply direct restrictions on the flow of private capital to non-sterling area countries. Accordingly, British companies, which want to embark upon major expansion plans, will not get permission for them from Government. If, however, the projects can be shown to benefit the U.K. balance of payments within a year or so, such applications will be exempted from this restriction. This will mean that overseas investment on such projects as new sales organisations, which would yield an immediate return, will be permitted. Exemption from this new control is also given to small investments upto a maximum of £25,000.

It may be noted here that the aforesaid restrictions will not be applicable to the flow of private capital to the Sterling Area, of which India is a member. Certain British observers, therefore, have pointed out that the new control is more likely to divert than stop the export of capital. But, of course, there is no reason to believe that this will *ipso facto* encourage a steady flow of British capital to Sterling Area countries. For this will depend mainly on the expected rate of returns on investment, and not just on the availability of resources alone. Therefore, any hope of a large increase in the flow of British capital to such underdeveloped countries of the Sterling Area as India is to be discounted. Private capital has, of course, moved from Britain to certain non-Sterling Area countries in the recent past, particularly to Common Market countries, but certainly with due regard to the profitability of the enterprises. The new measure, incidentally, will put a stop to ambitious schemes now planned by several British companies to gain an entry into Western Europe. There is thus an element of contradiction in the British Government's policy *vis-a-vis* Western Europe, in that, while it is making determined, though cautious, efforts to join the Common Market itself, which will lead to integration of the economies of the C.M. countries eventually, it has now introduced a measure which will virtually prevent any British company from investing in the E.E.C. Already, a major British company, which was planning, in conjunction with an American Company, to invest around £1 million in Italy, has been refused permission for doing so. The future of the largest programme, conceived by the Imperial Chemical Industries, involving an investment of £100 million at Rotterdam (in the Netherlands), is also uncertain. Several other investment plans are also to be shelved.

There is no doubt that an influential section of British industrialists is not happy over the present restriction in so far as it affects investment in Western Europe. The London *Financial Times* is of the opinion that the measure is unjustifiable on "rational grounds." Editorially commenting on this measure, it observes as follows:

"So far as Western Europe is concerned, the next year or so will be a vital period, a period in which British industry has to get itself into shape to meet the challenge, and exploit the opportunities, of membership of the Common Market. Ground which is lost now may conceivably never be made up. The Treasury's action is hardly calculated to help industry hold its own against the Six, or to speed up the sluggish rate of expansion.

"Nor can it legitimately be argued that British membership of the Common Market (and this cannot incidentally be taken for granted as yet) will make investment on the Continent unnecessary. Many industrialists who are putting in new capacity in Europe have taken their decisions in the belief that Britain will join the Common Market; in fact, most industrialists foresaw the necessity of our applying for membership long before the Government did. All of them, it is safe to say, took the possibility into account in their calculations.

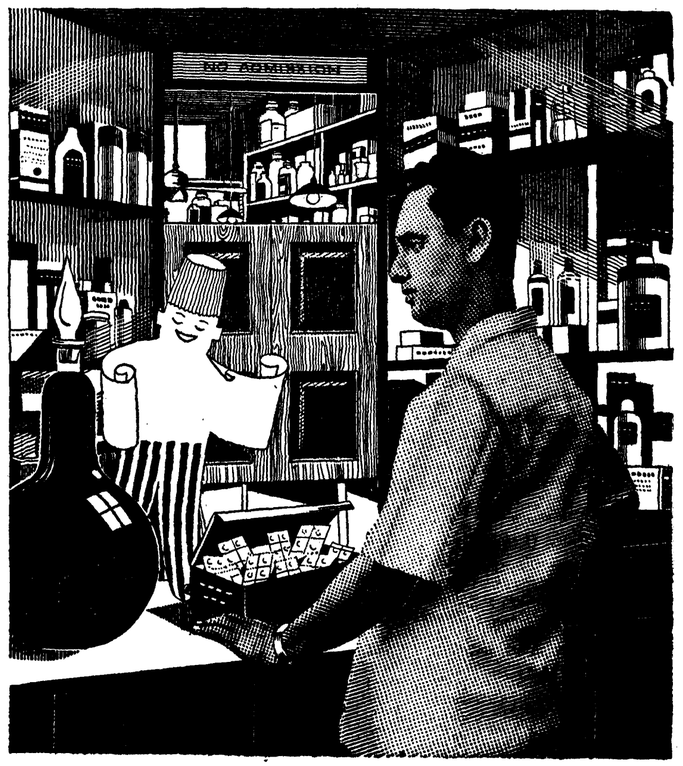
"The fact is that the rush to invest in Europe did not spring primarily from the desire to get inside the tariff wall. It has been based much more on such factors as the availability of labour, access to raw materials and markets, different production costs, and so on. A policy which forces industrialists to put their new plant in Scotland and Northern Ireland and forbids them to put it in Germany or Italy may have certain social merits, but it is hardly the best way to get costs down and make industry competitive in the Common Market."

The British Government has also started implementing its proposal that companies operating abroad should bring home a larger portion of their profits than hitherto. This move is based on the belief that the U.K.'s receipts by way of interest and dividends on investments abroad have not been commensurate with the large amounts of British private capital invested in the fifties. The U.K. Government has already directed certain selected British companies abroad to send home more of their profits. The Bank of England is also reported to be considering a proposal to scrutinise the account books of such companies and determine the scope for remitting a larger proportion of their profit to the U.K. This action, if applicable to sterling area also, will have the effect of restricting re-investments out of profits in countries such as India where the U.K. companies have large investments.

MARKET DEVELOPMENT INSURANCE

In a bid to encourage the exploration of new export markets, the Export Risks Insurance Corporation has decided to underwrite the risks involved in market research and publicity campaigns undertaken by Indian exporters in other countries. The decision reflects a welcome, though rather belated, recognition by the Government of the crucial importance of organised sales drive in boosting exports. It may be recalled here that the suggestion was made as early as in 1956 by the Export Credit Guarantee Committee, which was presided over by Mr. T. C. Kapur, now Managing Director of the Corporation. The Export Promotion Committee (1957), in fact, gave its blessings to the Corporation's proposed plan for overseas market development and expressed the hope that it would go a long way towards helping exporters to find new markets and in developing them. The scheme, however, had been kept in cold storage for the last five years. It is possible that, since the Corporation has been trying to consolidate its position in respect of its main activities, namely, credit guarantee against commercial and political risks, it has not found it advisable to take up new lines of business of a special nature till now.

Under the present scheme, the Corporation will issue three new types of policies to cover non-recoupment expenses incurred on market surveys, stockholdings and other measures for promotion of exports, with the Corporation functioning as agents of Government. The new fields of business are: (1) market survey, (2) advertisement and/or sales promotion, and (3) stocks. The market survey policy provides that, if expenses incurred on getting the market survey done by an export agency approved by the Corporation are not recouped by the sale of a pre-determined volume of goods, the insured will be paid 50 per cent of the expenses



MEDICINE MAN MR. AL FOIL F.G.S.P.P. . . .

". . . Fellow of the Grand Society for the Protection of Pills" said Mr. Foil, greatly impressing the awed Chemist who had never heard of the degree before. "That is just one of many honours conferred on me", continued Mr. Foil modestly, "by Pharmacists for having rendered valuable packaging service to the medicine manufacturing industry. Whatever the pharmaceutical product, be it pills or potions, aluminium foil wrapping safely seals in the prophylactic and curative properties for long periods and effectively protects them from contamination, moisture and dirt . . . And that," finished Mr. Foil, "is just what the doctor ordered."

Long and extensive experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionery, Tea and many other industries

not so recouped. In the case of the other two types of policies, too, the Corporation guarantees to compensate for 50 per cent of the possible loss, if any, the rest being borne by the party concerned. In the second type of policy, the Corporation will share the loss, if expenses incurred on advertisements or other sales promotion, in accordance with a plan approved by the Corporation, are not recouped by sales as anticipated. The third policy relates to unexpected loss arising from maintaining stocks in foreign countries in the interests of export promotion. If the expenses involved in exporting the goods, as well as the incidental and the consequential outgo, are not recouped by the volume of expected sale, then the Corporation will indemnify the exporter to the extent of half of the expenses not so recouped. Sales of goods under these policies mean either goods sold from stocks abroad or sales of goods to agents and buyers in the foreign market and sale of goods to parties in India for exports to that market.

Since the provision of these covers constitutes an entirely new venture, the Corporation is justified in making them applicable only to selected goods and selected markets, to begin with. These policies will be issued only for those goods which have patents, licences, trade marks or trade names and for which the manufacturer has exclusive rights, and for those markets which are not developed, or are underdeveloped. The details of the nature of commodities and markets will be decided on the basis of recommendations of the Export Promotion Councils and the Commodity Boards concerned and after securing the approval of the Government of India. In respect of those products for which no such collective body has been constituted so far, the manufacturer can approach the Corporation directly.

In view of the compelling urgency to step up India's exports, these new insurance policies assume much significance. In several overseas markets, Indian exporters have to start from the scratch, whereas their competitors have already gained a strong foothold. Market surveys and other sales promotion work, as was pointed out several times in these columns ere now, are, perhaps, the most effective instruments to ensure a breakthrough in such markets. These measures deserve the widest support, as they are designed to grapple with the root of the export promotion problem, unlike such artificial incentives as subsidies which are only short-term remedies. It is to be hoped that the commitment of the Corporation to share the element of any loss upto 50 per cent will serve as a stimulus to manufacturers and exporters in organising effective sales campaigns abroad. These efforts will, however, bear fruit only if Indian producers strive at the same time their utmost to improve their competitive capacity in terms of price and quality in general, and provide facilities for after-sales service, particularly in the case of a large number of new engineering goods entering the export trade.

FUEL UTILISATION

A suggestion for the establishment of a Fuel Efficiency Service, modelled on the National Industrial Fuel Efficiency Service of Britain, has been made by Mr. C. A. J. Plummer and Mr. B. R. Addicot, two British fuel experts, currently in India at the invitation of the Government to study the pattern of fuel utilisation in the country. They were asked to advise selected industries regarding the efficiency of fuel utilisation and report to the Government the steps that might be taken for careful husbandry in the use of all forms of fuel. In their preliminary report, the experts have expressed the view that, as a result of development and expansion of industries during the first and second Plans, a situation has emerged wherein efficiency in fuel utilisation was a "must" for future industrial development in the country.

The experts, after a study of the pattern of fuel utilisation in this country, have found considerable scope for fuel saving. It is not generally realised in the country, according to them, that fuel is really a tool for industry and that its correct use serves the twin objectives of saving fuel (coal, oil, etc.) and reducing pressure on its transport. A judicious use of fuel resources also helps in securing higher productivity, better quality for the product and lower cost of production. The experts have suggested that Indian industries should be provided with better instruments, better maintenance of machinery and mechanisation of certain fuel burning processes either by imports or, preferably, by indigenous manufacture.

As the present coal shortage and the difficulties in transporting coal form part of the larger problem of adequate supply of fuel, these aspects naturally attracted the attention of the experts. They have suggested certain measures to improve the general pattern of coal supplies to industries. One suggestion is that each industry should be dealt with on the basis of complete technical organisation of its fuel requirements both in terms of quality and size. The present technical resources of the Coal Controller of the Government of India, in the opinion of the experts, are "totally inadequate." The establishment of a Fuel Efficiency Service will, in their opinion, supplement and strengthen the measures aimed at improving the conditions of fuel utilisation in the industries on a country-wide basis. Besides, it will also be able to supply massive technical information regarding specific requirements of different types of plant in terms of "coal type." Such an organisation, the experts feel, should march alongside the developments planned within the coal industry itself. The experts have also underlined the fact that efficient organisation of fuel utilisation in the existing plant will reduce the necessity for incurring expenditure on new items of capital equipment. Efficient utilisation of steam, in their opinion, will save over a third of the total fuel and eliminate the need for installation of additional boiler capacity.

Fuller and economical utilisation of the available fuel resources will be a continuing problem in this country as industrial expansion gathers further momentum. The difficulties arising from scarcity of coal clearly underline the need for ensuring optimum utilisation of fuel supplies. It is to be hoped that serious attention will be given to the experts' suggestions. There is a lot that India can learn in this respect from Britain which has devoted an enormous amount of labour and money on this important problem.

TRADE WITH S.E. ASIA

The report of the British trade delegation that visited eight countries in the South East Asian region (Burma, Indonesia, Malaya, North Borneo, the Philippines, Sarawak, Singapore and Thailand) in April last is quite an interesting one as much from the point of view of India as that of Britain. For the report is said to have not only assessed the varying conditions and prospects for trade in these countries but also offered several suggestions which are of relevance to both the U.K. and India. The details of the suggestions are not available, but, from the brief review of the report as made by a British commentator, Mr. Charles Willard, it would appear that the implementation of the suggestions will go a long way towards augmenting Britain's trade and improving commercial relations with the countries concerned. It may be noted here that the eight countries referred to above together account for a population of over

What was once a dream...

Over four years ago, when the Prime Minister of India visited Bhilai, the groundwork for the foundation of the steelworks was being made. "What was once a dream," he wrote in the Visitors' Book, "begins to take shape and come true—a symbol and a portent of the India of the future."

On his second visit to Bhilai in October last year to inaugurate the Rail and Structural Mill, he saw the dream come true. The one-million-ton steelworks is virtually complete and what was a blueprint only a few years ago is now an impressive network of towering structures on a waste-land of yesterday.

Bhilai has been the largest supplier of pig iron to the nation's foundries for quite sometime and one of the largest suppliers of billets to the re-rolling mills. And now, the products of the Rail and Structural Mill are feeding another vital section of our country's economy—the railways and engineering industries. On an average, two train loads of iron and steel have been leaving Bhilai every day and a part of its products has even been exported.

SOME ASPECTS OF TAX LAW IMPROVED

SELECT COMMITTEE HAS DONE GOOD WORK

From Our Special Correspondent

NEW DELHI, 21st *August*

THE debate on the Income Tax Bill as now amended by the Select Committee is still unfinished. The good work done by the Committee in improving many aspects of this measure for consolidation of the existing law proves, however, that the scope for liberalisation is never exhausted. Some more specific issues may arise when the Lok Sabha starts clause-by-clause consideration of the Bill; if the Finance Minister shows the same resilience as he has obviously done in the Committee, it may still be possible to get through a few more changes for the better. The Select Committee has laid the entire evidence before the House and among the 117 memoranda received and processed by it there will still be some which may be worthy of consideration if members have the time to sift them. But the Select Committee has done excellent work in record time and received a well deserved tribute from Mr. Morarji Desai for its "promptness and thoroughness". The work of the Law Commission in providing the basic structure of the revised income-tax law, by regrouping its provisions and simplifying its drafting, has proved to be enduring, despite some of the departures later necessitated by the recommendations of the Direct Taxes Administration Enquiry Committee. The main threat to the comparative tidiness of the present Income Tax Bill will arise from future Finance Bills, if they seek to amend it through cumbrously drafted clauses; one must hope that such disfiguration will be avoided.

DELHI LETTER

Not Ordinarily Resident

One of the changes made by the Select Committee which indicates an open-minded approach to some of the issues is the restoration of the category of assessees described as "not ordinarily resident." This was deleted in the Bill, following the concurring recommendations of the Income-tax Investigation Commission, Taxation Enquiry Commission and the Law Commission, favouring such omission on the ground that this category of assessee derived a double advantage under the law. His foreign income was not taxed, unless derived from a business or profession in India or unless his foreign profits were brought to India; the rate of tax applicable to him on his Indian income was determined on the basis of that income, whereas for both residents and non-residents their world income formed the basis. Indian settlers abroad and foreign technicians in India mostly fell within this category and, in view of representations from them, the Select Committee has restored the category of not ordinarily resident and defined their liability to be that of a non-resident. The Select Committee has not only retained the old rule against inclusion of foreign income, unless it is derived from a business or profession in India, but also provided a further important safeguard to the effect that it cannot be deemed to have so accrued or arisen on the basis that it is received or deemed to be received in India.

The tests relating to residence in India have also been liberalised to eliminate the possibility of persons visiting India for only brief periods being regarded as residents. At present, any one maintaining a house in India for six months and visiting the country for any period in a year is regarded as "resident"; the Select Committee has specified the minimum duration of a visit for such purpose to be 30 days; in respect of persons who have been in India for 365 days in the preceding four years, the minimum stay needed in the assessment year has been increased from 30 days to 60 days.

Charitable Trusts

The Select Committee has also wisely reconsidered the provisions relating to charitable trusts and effected some changes to remove possible harshness resulting from the acceptance of the Tyagi Committee's report. By permitting accumulation of funds by Trusts with an annual income below Rs. 10,000 and also in the case of those which intimate in advance the specific object of such accumulation (provided the funds are spent within a period not exceeding 10 years), it has provided flexibility; the Committee has also added the condition that such funds should be invested in Government or approved securities. In view of these safeguards, the Committee has felt that there will be no danger of abuse if a trust were to derive its income from a business undertaking held under the trust, though it may not be its primary object.

The controversial part of the Committee's amendment lies in the introduction of a new provision that these exemptions will apply to charitable trusts created in future only if they are not for the benefit of any particular race, religious community or caste. Such a rule may be in keeping with the current mood of resentment against factors which affect unity and emotional integration; but, in India, many charitable acts also cover and are often connected with religious purposes and this has been well recognised in the Income Tax law hitherto. For example, provision of facilities to pilgrims of one sort or another is not a strictly religious purpose like building a temple, mosque or church, but they are necessarily restricted in their benefits to one community or another and there is much wisdom in Mr. Masani's view that it is better that the law should encourage some charity to be given even if it is not wholly secular than not at all. The Committee has introduced some safeguard against abuse by defining "charitable purpose" so as to exclude all activity for profit even if it results in public benefits.

The substance of Mr. Morarji Desai's arguments in favour of the new restriction regarding future trusts was that removing an exemption or privilege was not the same as imposing a disadvantage on such charities and that the law was entitled to discriminate against any behaviour which is harmful because of its sectarian character. But the real point is that any law which recognises the validity of religious trusts cannot question discrimination in favour of an entire religious community even under charitable trusts (though it may prohibit racial or caste discrimination), in a vast country with several religions. For example, the Select Committee was not wrong in making the provision in clause 88 of the Bill that only donations to institutions or funds not expressed to be for the benefit of a particular race, religious community or caste should be allowed exemption. There are many who will be pleased if this clause could also explicitly provide that donations for the benefit of any political party will not secure exemption since such donations are also considered to be pernicious by a section of the public.

Section 23A Companies

The major changes relating to company taxation have been already reported in the columns of this journal last week. One of the disabilities that will be felt under the new law when it comes into force is that it will no longer be possible to speak of Section 23-A Companies—that eloquent convenient abbreviation which aptly described private companies which were not foreign companies or subsidiaries of public companies. The super-tax payable by such companies on the balance of "distributable income" is to be levied not only after deducting dividends actually distributed, but also after deducting *bona fide* expenditure incurred by the Company on bonus or gratuity to employees, legal charges, losses under the head "capital gains" which are not set off against business income and income arising outside India the remittance of which is prohibited. Mr. Masani's dissenting note pleads for a revival of the old provision for exemption from super-tax if non-declaration of dividend was due to the business requirements of the Company, though this was abolished in 1957 as an extraordinary discretion conferred on an income-tax officer which may defeat the main object of this method of taxation. The Tyagi Committee was opposed to its revival; in the case of private industrial companies there is already a concession in the shape of a lower percentage (45 instead of 60) of profits required to be distributed. There are some, like Kaldor, who would like a still lower percentage to enable capital accumulation at this stage of industrial development even if it results in being held in a few hands; but the present time, when there is much anxiety about concentration of wealth, is hardly propitious for a favourable consideration of this view.

Even so, the Select Committee has been generous enough to consider relaxations, where it felt them to be justified as in the carry-forward of losses where a substantial change in shareholding has occurred. The Tyagi Committee considered this a loophole which facilitated avoidance of tax through the practice of buying up concerns which had incurred losses; but the Select Committee has exempted cases where there is a genuine change-over of business control through inheritance or succession on the death of a shareholder—where there is obviously no intention of reducing tax liability.

Private Limited Companies' Tax Liability

While different views prevail with regard to the liability of the Directors of a private company for unrecovered tax, the Select Committee seems to have felt that Directors are responsible for mismanagement to the extent of making taxes irrecoverable. Mr. Masani's protest that this introduces a new principle has been countered by Mr. Morarji Desai. His argument, was that, under Section 542 of the Company Law, limited liability did not exclude personal liability of any one who carried on the business of a company with a view to defrauding creditors. It must also be remembered, he pointed out, that this applies only to cases where private companies earn taxable income but go into liquidation before paying the tax due.

That the Select Committee has throughout maintained a fairly liberal approach is proved by the enlargement of the scope of development rebate to include more types of amalgamations and conversions and the inclusion of new industries for purposes of exemption from super tax on dividends received by companies (Clause 99) if they are started during the third Plan period. A limit of 16 years has been prescribed for re-opening past assessments; the powers of the Appellate Tribunal have been circumscribed in regard to imposition of penalties and enhancement of tax and the power to punish abetment of tax offences has been taken away from tax authorities and professional associations and given to magistrates.

Human Aspects

Though it appears that business interests have received much attention, the Select Committee has not ignored certain human aspects. It has recommended a special provision by way of higher rebate on insurance premia paid by authors, playwrights, artists, musicians or actors as they have a short working life and has also suggested further liberalisation of the rules for treating lump sum receipts like royalties and copyright fees of authors and artists. One of the surviving injustices of the tax law will end with the exemption now proposed of gratuities paid to persons in private employment within certain limits. Capital gains arising from the transfer of house property used by an assessee or his parent for purposes of residence will be reduced by the amount of the money spent on purchasing or building a new residence.

One of the improvements made by the Committee relates to the omission of the term "necessarily" in regard to (1) whether an expenditure has been "wholly, necessarily and exclusively" expended for a business or profession; (2) for expenditure incurred in transfer of assets resulting in capital gains and (3) for deductions in respect of "income from other sources." This omission will remove a fruitful source of controversy and litigation between the tax authorities and assessees, because it is not always been possible to determine whether an expenditure was necessary. It will be sufficient if it is expended wholly and exclusively for the particular purpose in order to become eligible for exemption. Lord Evershed, Master of the Rolls, observed in a very recent British case that the anomalies were shocking and made income-tax "a sort of a game, a battle of ingenuity unrelated to any principle or commensense or ethical considerations and it is extremely bad respect for the law." The question there was whether a Bank Manager had necessarily to be a member of a club for the performance of his duties to claim exemption for his subscription; in future, Indian courts will have only to decide whether such expenditure is incurred exclusively for business or professional purposes. This may not be easy, but will perhaps be less difficult than at present.

PERILS OF THE PAUSE

EXPORT DRIVE MAY SUFFER

From Our Own Correspondent

LONDON, 19*th August*

THE production figures for the month of June struck new high levels at about 5 per cent above their level of a year ago. The adjusted index shows a rise of nearly 3 per cent since the beginning of this year. Manufacturing industry shows even higher increases. On the overseas trade side, the gap between imports and exports diminished in July and, if allowance is made for freight costs on imports, there was actually an export surplus; the figures are, on a f.o.b. basis, exports and re-exports £323 millions and imports £315 millions. These figures are after making certain seasonal adjustments but then that is the only way in which true comparisons with earlier periods can be made. On the crude unadjusted figures, exports reached £323 millions and imports £311 millions, so that the favourable balance is even greater.

LONDON LETTER

Yet it is in this context that a wage freeze is being applied to all industries over which the Government has any control, it is being applied to a wide range of industries for which wage councils exist to make recommendations to the Minister of Labour, and it will obviously be adopted by every manufacturer's association as far as the latter find it expedient. This process has already begun and there are not unnatural fears that these measures, combined with the credit squeeze, will set back production.

The reason for the Chancellor's pause is of course his worry about the balance of payments. In the first quarter of this year, on a f.o.b. basis and making seasonal adjustments, exports were running at £321 millions per month and imports at £343 millions per month, giving a gap of £22 millions per month. But, in the second quarter, exports dropped to £319 millions and imports to £322 millions, narrowing the gap to a mere £3 millions per month. The trend is, therefore, right all the way. Furthermore, there is every reason to suppose that the upsurge in imports which began in the latter part of 1959 and continued through all last year is now finished, as stock building has been completed. The trouble with the push and pull of financial policy on industry is that it is bound to create repercussions on imports; as soon as credit restrictions are relaxed, imports are bound to move up—this is why after a short interval there is again a request for more credit restrictions. If the surmise is right that the import decline will continue, then a favourable balance of payments on visible account will begin to emerge, and nowadays this is the only balance on which it seems possible to place reliance—invisible items seem to have adopted the habit of cancelling each other out.

But the emergence of a favourable balance is partly based on the expectation that, with a rise in production, exports will also rise. The Chancellor is listening to the advice of those who say that, if the Home Market is limited, then more goods will be sold abroad. But that is not the kind of advice that many industrial leaders will give in the context of restrictions on production. The industry whose product is steadily expanding will be pushing for export outlets, while the industry which is obliged to start living on its stocks as a result of credit restriction and beginning to run into labour troubles is not going to divert its energies on finding export markets. Thus, the Chancellor's pause may lead to exports stubbornly refusing to rise, and possibly beginning even to decline.

In this context a new export drive is being envisaged. There was certainly never greater need for one, but is not the Chancellor making it as difficult for himself as possible?

WAGE "PAUSE" IN BRITAIN

"A drastic remedy for a desperate situation." Only thus can one describe the suggestion of Mr. Selwyn Lloyd, the British Chancellor of the Exchequer, that nearly all wages and salaries in Britain should be completely freezed for at least the next seven months. The Chancellor prescribed this remedy for the critical position in which Britain finds itself now, in the course of his discussion with representatives of the Staff Side of the National Whitley Council, the representative body for negotiation and joint consultation on the conditions of service affecting the civil servants. The Government, on its part, will set an example for private industry by not allowing any pay rises to its employees during the period of the wage "pause." Existing negotiating machinery in the civil service and for workers in Government industrial establishments will continue to function. But, while the pause lasts, no settlement for higher wages will be implemented. Any such settlement would be put into effect only when circumstances permit and even then the benefits will not be with retrospective effect. The Government will also withhold the power of arbitration bodies concerned with the employees of the State to fix the operative date of their awards.

It is the Chancellor's intention that this "object lesson" should be noted and acted upon not only by the nationalised industries but also by employers in the private sector. The Government has no objection to wage increases being negotiated by employers and unions or awarded by arbitrators, provided they are not put into the wage packets during the pause. It, however, does want the actual payment of any settlement to be held over until national productivity has risen sufficiently to absorb them. The position will be reviewed early next year and a decision to continue or discontinue the pause taken.

The exigencies of Britain's current economic position have made the wage freeze inevitable, according to the Chancellor. Increases in personal income in Britain, in the Chancellor's opinion, have generally outstripped the increase in national production, so that a breathing space is necessary to allow production to catch up and to provide an interval during which a more satisfactory system could be devided for ensuring that, in future, increases in income are more appropriately related to increases in national productivity than is the case now. The result of the increase in personal incomes far in advance of national productivity has been rising prices and increasing pressure upon the balance of payments. Britain, the Chancellor maintains, must face the fact that the next six months will be critical for British competitiveness and for the development of its economy. The dangers are very great and it is in the national interest and in the long-term personal interest of all wage and salary earners that there should be a pause in increases in personal incomes.

Reactions to this decision of the Government have been as sharp as they have been prompt. Much more than the principle of the wage freeze, it is the Government's decision not to implement any negotiated settlements during the next seven months and to retain control of the "timing" of arbitration awards for its own employees that has evoked the bitterest attack. Trade union leaders are unanimous in their view that the Government's decision, if implemented, would mean virtually the end of confidence on the part of employees in the present negotiating machinery. Even the sedate *Financial Times*, London, comments:

"The reason for choosing this device is plainly to try to reconcile the maintenance of independent arbitration—the basis on which civil service salaries have been negotiated for the last 35 years—with the requirements of a positive wage policy. As an attempt to square the circle, it is hardly convincing. . . . The Government has, in fact, jettisoned the principle of arbitration and this is a step which may have incalculable consequences in the future. That it should be driven to such a drastic move, despite the obvious, long-term dangers and disadvantages (not the least of which is the precedent set for other people), is a measure of the seriousness with which it views the short-term situation."

Will private industry follow the lead given by the Government and resist the pressure from union for more wages? Will the Government itself take a strong line and enforce its decision? If not what alternative measures it will adopt to deal with the threat to Britain's competitive capacity? The next few months will provide the answer to these questions. Meanwhile, we admire the courage of convinction displayed by the Chancellor of the Exchequer. This show of firmness is in refreshing contrast to the weaknesses displayed by the Government of India in regard to holding the price line.

* * * *

Reports received from London since the above lines were written indicate that, with the commencement of negotiations this week on the demand of railwaymen for a substantial increase in wages, the Chancellor's plan to impose a wage pause has entered a new and critical stage. Preliminaries for a conflict between the Government and workers, in the nationalised undertakings could be deemed to have begun. Railwaymen are not the only ones to be entering the ring. No doubt they did enter first but others such as workers of electricity supply undertakings, London busmen and miners are expected to follow suit shortly. The crucial question is whether the Government and union leaders will risk a clash. There are too many imponderables in the situation to warrant a definite answer to the question at this stage.

Meanwhile, the Government has made explicit its intention to extend the wage pause to 3.5 million workers in the private industry whose minimum wages are fixed by statutory Wage Councils appointed by the Minister of Labour. In a letter to Wage Councils, Mr. John Hare, the Labour Minister, has asked them to take full account of the Chancellor's statement while considering submission of proposals for higher pay. The Minister, it may be noted, has the power under the Wages Council Act, 1959, to withhold approval for higher pay and ask the Councils to reconsider their proposals.

RESERVE BANK ON ECONOMIC TRENDS

GROWTH IN MONEY SUPPLY NOT EXCESSIVE

AS an authoritative reference work, the Reserve Bank of India's *Report on Currency and Finance* has always been a very useful annual publication. The latest report, covering the financial year 1960-61 (Price: Rs. 5.50 or $1.50; publication date: 21st August 1961) is more informative than any of its predecessors, containing as it does a mass of data, on the trends and developments in the Indian economy during 1960-61. The Report presents, apart from a brief survey of the world economic situation, a tremendous amount of statistical material in the form of 107 statements and 15 graphs setting out in a compact form economic and financial data pertaining to the second Plan period.

The year 1960-61 witnessed, according to the Report, an impressive rise in industrial and agricultural production and a marked improvement in aggregate investment in India. Thus, industrial production went up by as much as 12.1 per cent during 1960-61, as against a rise of 8.7 per cent in 1959-60. It is noteworthy that capital goods and intermediate products industries made a significant contribution to the rise in industrial output; the consumer goods industries, however, showed rises of smaller dimensions. The increase in industrial output was considerably facilitated, the Report states, by the high priority accorded by the Government for the import of essential raw materials, which enabled fuller utilisation of existing capacity in a number of units. The Report notes that the main problem faced by the industry continued to be one of rising raw material costs and labour charges. Since the commencement of 1961, production in some of the industries, including steel, has been affected by coal and power shortages mainly on account of transport bottlenecks. As regards agricultural production in 1960-61 crop year, the Report points out that, despite floods and heavy rains in parts of Assam, Orissa, the Punjab and U.P. and drought conditions in Andhra Pradesh and Mysore, the production of foodgrains is expected to be appreciably higher than even the record production of 75.5 million tons in 1958-59, reflecting the cumulative effect of the various measures taken by the Government during the last few years. Among commercial crops, production of groundnuts, cotton, and sugarcane is estimated to have increased in 1960-61.

The tempo of development activity, the Report records, was further stepped up in the final year of the second Plan both in the public and private sectors. The total Plan outlay in the public sector is estimated to have risen from Rs. 1,006 crores in 1959-60 to Rs. 1,160 crores in 1960-61. From the available figures of capital issues and imports of capital goods, investment in the private sector, too, appears to have been at a high level. Private investment activity, which had shown a distinct revival in 1959-60, continued with great vigour during the major part of 1960-61. The new issue market was very active, as judged by the spate of new flotations.

Price Situation

Discussing the price situation, the Report states that there was a further deterioration during the year under review. The general index of wholesale prices (1952-53=100) registered a net rise of 7.2 per cent during 1960-61 on top of an increase of 5.8 per cent in 1959-60 and of 6.6 per cent in 1958-59. The main groups which contributed most to the rise in prices during 1960-61 were "industrial raw materials" and "manufactures" which recorded even larger increases than in the preceding year. The group "food articles" continued to be relatively stable, due mainly to larger imports and expectations of a record foodgrains crop in 1960-61. The deterioration in the price situation during the year under review, the report explains, was partly on account of the shortfalls in the output of certain raw materials, particularly cotton, raw jute and oilseeds during 1959-60. Partly it reflected the fact that total production in the economy was inadequate in relation to the pressure of monetary demand. The year 1960-61, therefore, witnessed a further reinforcement of the official policy to hold the price line through appropriate measures both in the monetary and non-monetary spheres. The Report records that the general and selective credit controls were intensified where necessary. Endeavour was also made to secure larger imports of foodgrains and the raw materials in short supply. At the same time, action was also taken to keep the price rise within limits through efforts directed towards the control of speculative tendencies in the various commodity markets.

The high level of monetary demand, consequent on the higher tempo of developmental activity, caused a distinct deterioration in external payments position of the country. The country's foreign exchange reserves receded by Rs. 59 crores during 1960-61 on top of a decline of Rs. 16 crores in the preceding year. Since the close of the year, there has been a further depletion of the reserves which touched a new low of Rs. 282 crores (including gold holdings) on 30th June 1961. This is primarily the result of a sharp rise in imports particularly of food and capital goods, coupled with a sluggish expansion in exports due partly to a fall in the output of some commodities like raw cotton, raw jute and tea and partly to growing foreign competition.

Money Supply

In the monetary sphere, both bank credit and money supply showed a further marked expansion, reflecting the continuing excess liquidity in the economy resulting from growing levels of spending in the public and private sectors. During 1960-61, money supply with the public recorded an expansion of Rs. 201 crores to Rs. 2,902 crores, bringing the total expansion in money supply during the second Plan period to Rs. 722 crores or 33.1 per cent as compared with Rs. 199 crores, or 10.1 per cent, in the first Plan period. Over the two plan periods, money supply expanded by Rs. 921 crores or by 46.6 per cent. It may be noted here that the national income at constant prices rose by about 41.6 per cent during the same period. Thus, making allowance for the increasing needs of monetisation of the economy, the expansion in the money supply of 46.6 per cent cannot be considered as excessive.

The major portion of the expansion in money supply during 1960-61 was accounted for by the rise in currency with the public amounting to Rs. 167 crores. The rise in deposit money was smaller at Rs. 34 crores. The share of currency in total money supply, therefore, increased further from 68.9 per cent at the end of 1959-60 to 69.6 per cent in 1960-61. In the latter year, bank credit to the private sector, adjusted for excess of inter-bank assets over inter-bank liabilities, showed a record expansion of Rs. 246 crores, as against Rs. 138 crores in 1959-60 and Rs. 47 crores in 1958-59. The extension of bank credit to Government, adjusted for P.L. 480 counterpart funds, amounted to Rs. 109 crores. A comparison of similar figures for the preceding years shows that the extension of bank credit to Government progressively declined, since 1957-58, from Rs. 405 crores in that year to Rs. 246 crores in 1958-59 and Rs. 174 crores in 1959-60. In 1960-61, the balance of payments deficit exerted a contractionist influence on money supply. The deficit, as measured by the decline in net foreign assets of the Reserve Bank and other banks, amounted to Rs. 64 crores in 1960-61, as against an actual small surplus of Rs. 3 crores in 1959-60. The year 1960-61 witnessed a record expansion in credit extended by the scheduled banks, a small decline in their deposits and a sharp fall in their investment and cash reserves. The trends in deposits and investments were, however, obscured by the changes in the arrangement for the holding of P.L. 480 funds. Making allowance for this factor, it is seen that, over the year, the aggregate deposits (exclusive of the P.L. 480 funds) actually showed a rise; only, there was a considerable slowing down in the rate of growth. An important reason for the slower growth of deposits (exclusive of P.L. 480 funds) in 1960-61, says the Report, appeared to be the small order of deficit financing (as measured by the extension of bank credit to Government) in 1960-61 than in 1959-60. It was also partly due to the fact that there were net sales of sterling during 1960-61 in contrast to the net purchases in the previous year. Other reasons given for the sluggish growth of deposits are the closure of two scheduled banks and the diversion of deposits to industrial companies which offered higher rate of interest. In contrast to the slow pace of the deposit growth, the schedule bank credit, however, showed a record increase of Rs. 208 crores or 18 per cent to Rs. 1,336 crores, reflecting the enlarged investment activity both in the public and private sectors, the need for financing larger stocks of goods with industry and trade, and rising prices, especially of industrial raw materials and manufactures.

Credit Policy

It was against this background of increasing pressure of demand for credit in the face of limited resources available with banks that the Reserve Bank had to reorient its credit policy with a view to restraining excessive credit expansion while making available credit for essential purposes. The report records that for correcting the generally tight position of the banking system, the Reserve Bank took a series of general credit control measures. These included (i) a further increase in additional reserve requirements, (ii) fixing of a limit on the borrowings from the Reserve Bank by scheduled banks at the Bank rate, any borrowings above these limits being allowed only at a higher slab rates of interest, and (iii) a directive to banks requiring them to raise the average lending rate by at least one half of one per cent with a minimum of 5 per cent. The Report notes that, apart from these regulatory measures, the Bank continued to give close attention to its developmental and promotional functions through measures designed further to strengthen the institutional machinery for credit to agriculture and industry as well as to consolidate and strengthen the banking system.

COTTON TEXTILES IN THIRD PLAN

PRODUCTION TARGET FOR CLOTH INADEQUATE

THE final report of the third Five-year Plan has confirmed the production targets fixed for cotton textiles in the Draft Outline, namely, 9,300 million yards of cloth and 2,250 million lbs. of yarn. The target for cloth is based on the estimated requirements of 8,450 million yards for domestic consumption and 850 million yards for export. The figure for domestic consumption provides for an increase of about 20 per cent over the estimated level of demand in 1960-61; in other words, it allows for an annual rise of 2 per cent in population and 2 per cent in *per capita* consumption. For the purpose of this calculation, the demand in 1960-61 has been assumed to be about 7,000 million yards, though the actual availability of cloth for domestic consumption in that year was of the order of 6,750 million yards only. The Planning Commission's explanation for this lacuna is that the relatively low figure of 6,750 million yards was due mainly to a shortage of raw cotton consequent on a poor cotton crop in 1959-60 and that it cannot be taken to reflect the actual level of demand in 1960-61. This view, it is said, is also supported by the high prices "which have had a restrictive effect on the offtake."

Whatever be the basis on which the cloth production target has been fixed, it would appear that the estimate of annual domestic demand for 1965-66, namely, 8,450 million yards errs on the low side. Taking the projected population of 492 million, the *per capita* availability of cloth will work out to just 17.20 yards which is well below what many competent observers, including this journal, consider necessary, namely, 21 yards. It is, therefore, to be feared that, unless the target is revised upward and effective steps taken to reach it, the actual available supply of cloth by the end of the third Plan will be much lower than the actual requirements, estimated at 11,182 million yards (inclusive of 850 million yards for export), resulting in an acute shortage, if not famine, of cotton piecegoods.

Gravity of Situation

It would be worthwhile to recall here the observations of Mr. Krishnaraj M. D. Thackersey, a leading millowner of India, on the subject. In the course of his speech at the third annual general meeting of the Indian Cotton Mills Federation held at Bombay some time ago, he said:

"The availability of cotton textiles, which was 15¾ yards pre-war, has, after 21 years and two Plans, remained static at the same level, the actual figure for 1960 being 15¾ yards, taking the population of that year at 430 million. In this context, one might consider the minimum clothing supply that should be aimed at, consistent with a reasonable standard of living. If only one pair of shirts and one pair of *dhotis* can, with continuous use, be made to last eight months, a man will require 14 yards in eight months, that is 21 yards in a year. If a pair of *saris* and a pair of blouses can similarly be made to last eight months, a woman will also need 21 yards per year. There can be many regional variations in the clothing requirement, depending upon climatic conditions, the custom and usage, the type of clothing used by various strata of society, etc. But providing for other items like underwear, bedsheets, chaddars, headwear, towels, etc., the minimum requirement for a reasonably modest standard of living may, by and large, be put down at 21 yards *per capita*.

"It is easy to imagine the gravity of a situation in which, against a requirement of 21 yards, the availability, and perhaps also the purchasing capacity, is limited to only 15¾ yards. It is small wonder, therefore, that the problem of supplies and prices of cotton textiles does not remain within the confines of economics, but attracts attention and interest on a very wide scale. The situation has been made more complicated by the existence of such widely varying means of production, ranging from the most modern mills at one end of the scale, to *ambar charkha* and *khadi* at the other—where the humanitarian aspect transcends all canons of normal economic principles."

Apart from the conservative nature of the production target, there is good reason to doubt the capacity of the decentralised sector (handloom, powerloom and *khadi*) to fulfil the target of 3,630 million yards assigned to it, as against the target of 5 800 million yards allocated to the mill sector. The 3,500-million-yard target represents a rise of 1,150 million yards as compared with the output of 2,360 million yards in 1960-61. The major portion of the additional production is expected to come from the handloom industry, but no precise allocation of it between the different sections has yet been made. The position, we are told, will be reviewed from time to time in the light of the progress made in each sector. It is significant that the authors of the third Plan have now softpedalled on the issue of handlooms *versus* powerlooms. By not separately indicating the targets for these two sections of decentralised sector, the Planning Commission has impliedly conceded the doubts raised by the millowners about the actual performance of the handlooms. Another implication is that the Commission is not opposed to the growth of powerlooms section. By not reducing the target meant for the decentralised sector even when the capacity of handlooms to deliver the goods is not beyond doubt, the Planning Commission has disagreed with the stand of the Federation of cotton millowners, namely, that the powerlooms section should not be allowed to expand and that the Government's assistance to the decentralised sector should be confined only to the handlooms.

Mills' Capacity Underrated

The production target allocated to the mill sector, as already noted, is 5,800 million yards, as against the current level of output and estimated effective capacity of about 5,000 million yards. One wonders whether the mill sector is not capable of achieving a much higher target than this. Actually, in 1957, it will be recalled, as much as 5,317 million yards of cloth had been produced. A larger production of cloth in the mill sector as compared with the decentralised sector will also mean enhanced revenues to the exchequer in the form of excise duty, income-tax, corporation tax and various other taxes and levies. Besides, it will also tend to keep the prices of cloth at relatively lower levels and thereby check the upward trend in cost of living.

Be that as it may, in order to achieve the additional production of 800 million yards in the mill sector, it is envisaged that about 25,000 automatic looms will have to be installed during the third Plan period. The basis on which these looms will be allotted has still not been decided. The final report of the Plan merely says that "a substantial proportion of the additional loomage shall be export-oriented."

On the basis of a cloth production target of 9,300 million yards and taking into account also the yarn required for purposes other than weaving cloth, as, for example, hosiery and newar, the yarn production target has been fixed at 2,250 million lbs. This represents an increase of 500 million lbs. as compared with the actual output of 1,750 million lbs. in 1960-61. For securing this additional quantity, it is considered necessary to expand the "active" spindleage of mills from 12.7 million at the end of the second Plan (1960-61) to 16.5 million by 1965-66. The third Plan report says:

"The addition that may be secured through the activisation of idle spindles as a result of modernisation programmes will ultimately determine the number of spindles required to be installed through new units and expansions. The implications of the general observations made in para 21 regarding investment on replacements have to be further examined and the contributions towards additional effective spindleage, which may be obtained through modernisation programmes and through the establishment of new mills, assessed on realistic basis. The estimated gross investment will, however, remain substantially the same whether the bulk of the additions to spindleage comes from modernisation or from new units."

The para 21 referred to above is as follows:

"The estimate of investment on replacement (Rs. 150 crores) ... falls short of the minimum requirements of the cotton textile, jute textile and woollen textile industries in regard to which special studies have been made recently. The backlog of replacement in these three industries alone has been estimated at about Rs. 169 crores. The estimate that investment on replacement account in the third Plan will be of the order of Rs. 150 crores is more or less a projection of the actual performance during the second Plan. Even so, it is on the optimistic side, in view of (a) the pressure on the available resources of private enterprise and institutional agencies for new investment, (b) the fact that mills with large backlogs of replacement are in no position to provide resources for renovation commensurate with needs, and (c) the small allocation made in the Plan to enable the N.I.D.C. to assist these programmes financially."

Four Million More Spindles

The number of additional spindles that will be installed during the third Plan period is thus nearly four million. An idea of the basis on which licences will be given for the installation of these spindles was given by Mr. K. C. Reddy, Union Minister for Commerce and Industry, when he addressed the Informal Consultative Committee of his Ministry at New Delhi last week. According to Mr. Reddy, two million spindles will be licensed on a regional basis. Another one million spindles are reserved for giving to those mills that require to be raised to units of economic size and/or to mills which need their spinning capacity to be balanced with weaving capacity. The remaining one million spindles are to be kept in reserve to meet any readjustment that may be necessary at a later date. In determining the allocation for each State, careful consideration, Mr. Reddy said, would be given to relevant factors such as current production of yarn and cloth, existing distribution of spindleage, concentration of handlooms, and the overall needs of the decentralised sector. Wherever licences previously granted had been revoked, steps would be taken to re-allot such revoked capacity in the same State. The Minister is also reported to have disclosed that the Government proposed, in accordance with the suggestion put forward by the Working Group, to license five model mills, with modern machinery and having a capacity of 500 looms and 25,000 spindles each, the entire production of which would be earmarked for export. Incidentally, the Minister gave the following particulars regarding mill closures:

Of the 17 mills closed, six have been found on technical appraisal of their machinery to be fit for being scrapped. Three mills are expected to reopen shortly as a result of the financial assistance extended by the National Industrial Development Corporation. Six more mills will start functioning before long with the financial assistance either from the N.I.D.C. or from other sources. The remaining two mills are in the hands of the courts and, as such, the Government cannot interfere in the matter. The Government has decided to set up a small representative committee to keep under constant review the causes of closures and to recommend timely steps to be taken to enable marginal units to tide over their temporary difficulties.

The Minister's statement that it is proposed to license new capacity to the extent of two million spindles in the various parts of India has caused surprise among mill interests who have all along been urging that, in the matter of allocating new spindles, preference must be given to the existing mills to expand their capacity, instead of allowing the establishment of new units. This view is based on two considerations. In the first place, both the capital outlay and the recurring average expenditure per spindle will be lower. Secondly, the installation of additional spindles in existing mills will be speedier than in the setting up of new units. The mill interests do not, of course, object to the preference being given to deficit areas such as Andhra Pradesh and Rajasthan, as also to the economically backward regions like Assam and Kashmir, provided this could be done consistent with economic considerations, that is, if locational disadvantages could be neutralised by other factors such as ready availability of markets and employment potentialities. As for Mr. Reddy's emphasis on the need for increased utilisation of the existing capacity by working three shifts, the mill interests point out that such imperative utilisation of capacity over a long period of time would quicken the wear and tear of machinery and aggravate the problem of replacement at a time when the country's capacity to provide the required plant and machinery may not be adequate.

"Model" Mills for Export

The decision of the Government to license the establishment of five model mills to produce cloth for export is believed to have been prompted by "the urgency of meeting the challenge from Japan and China as well as to giving a fillip to textile exports." It is not known whether these five mills will be in the private or the public sector, though the Working Group had suggested that they should be left to the private sector, provided the entrepreneurs concerned were willing to abide by the conditions specified by it (*vide* page 628 of *Commerce* dated 8th April 1961). One would, however, ask: Where is the need for spending an enormous amount of money on the setting up of five new so-called model mills when the same objective can be achieved better by encouraging and assisting the existing mills to embark upon modernisation, rationalisation and expansion programmes? What will these five mills do with their production, when, for some reason or other, they are unable to export the bulk of it? Will they be in a position different from the existing mills? Again, of the 400 and odd mills which India has, are there no units that are fit enough to be regarded as a model for others? Did the Government do everything it could and that in good time to gear this country's textile industry, or at least those units that were anxious to gear themselves, to face the growing competition in world markets? Having committed many blunders in the past, the Government now thinks of solutions that would cost the country more sums of money than need be. It is needless to add that the industry as a whole must be allowed to bring its productive equipment to the same high pitch of efficiency as that of its counterparts in countries like the U.S., Japan, Hong Kong and China. It is only then that the industry can be expected to improve quality and lower the cost of production, thereby competing successfully in the markets abroad and giving satisfaction to the consumer at home.

The Government of India has decided to grant an *ad hoc* rebate of excise duty on woollen yarn, cotton yarn and dyes derived from coal tar used in the manufacture of woollen carpets. The rate of rebate has been fixed at 20 nP per kilogram of carpet exported. The manufacturers of woollen carpets desirous of exporting them under claim of the *ad hoc* rebate are required to contact the Collector of General Excise in whose jurisdiction their factory is situated, for detailed information.

4¼ PER CENT

GUJARAT STATE

DEVELOPMENT LOAN 1972

ISSUE PRICE Rs. 100/- PER CENT

OPENS FOR SUBSCRIPTIONS ON 4TH SEPTEMBER 1961

The loan will be closed as soon as a total of approximately Rs. 600 lakhs has been subscribed, and in any case not later than the close of business on 9th September 1961.

THE LOAN WILL BE UTILISED TOWARDS THE DEVELOPMENT PROGRAMME OF THE NEW STATE OF GUJARAT. ALL ARE REQUESTED TO SUBSCRIBE GENEROUSLY TO THE NEW LOAN.

The applications will be received at offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore, and at branches of the State Bank of India and Treasuries and sub-treasuries in the State of Gujarat.

Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its branches within the State and forwarded to the nearest receiving office.

FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE ABOVE OFFICES

GOVERNMENT OF UTTAR PRADESH

FINANCE DEPARTMENT

Dated Lucknow, August 14, 1961

PRESS NOTE

4¼ per cent Uttar Pradesh State Development Loan, 1972

THE Government of Uttar Pradesh are floating a loan of Rs. 6 crores in order to finance development schemes particularly those relating to electricity, irrigation and industries. The loan will open for subscriptions on September 4, 1961 and will close on September 9, 1961 unless closed earlier. The main terms of the loan are that the issue price will be Rs. 99.75 for every Rs. 100 of the loan applied for; the loan will have a currency of 11 years from September 4, 1961 and will be repaid at par on September 4, 1972; the loan will carry interest at the rate of 4¼ per cent per annum from September 4, 1961, payable half-yearly on March 4 and September 4, the payments being subject to tax under the Indian Income Tax Act, 1922. Subscriptions for the loan can be made in the form of cash or cheque or securities of 2¾ per cent U. P. Loan, 1961 and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department notification No. B-7879/X—88-1961, dated August 14, 1961, copies of which, along with the application form are obtainable at the receiving offices mentioned above.

2. Financial position of the Government of Uttar Pradesh—

Revenue position—The revenue receipts and expenditure and the surpluses for the last ten years are as follows:

(Figures are in lakhs of rupees)

	Revenue receipts	Revenue expenditure	Surplus (+)
1951-52	5,556	5,550	+6
1952-53	6,483	6,483	..
1953-54	7,564	7,281	+283
1954-55	7,819	7,713	+106
1955-56	8,553	8,423	+130
1956-57	8,996	8,984	+12
1957-58	10,493	9,942	+551
1958-59	11,723	11,614	+109
1959-60	12,955	12,816	+139
1960-61	14,794	14,437	+357

The major portion of the revenue surpluses was put into various reserve funds. During 1952-53, revenue expenditure exceeded revenue receipts because of large expenditure on Development Schemes and the gap in that year was covered by withdrawal from the Revenue Reserve Fund.

Balances in the Reserve Funds.—The balances at the credit of the various reserve funds at the end of 1960-61 were 380 lakhs in the U.P. Road Fund, 7 lakhs in the Hospital Fund, 21 lakhs in the Famine Relief Fund, 1,428 lakhs in the Revenue Reserve Fund, 2,237 lakhs in Zamindari Abolition Fund, 198 lakhs in the Depreciation Reserve Fund—Irrigation, 339 lakhs in the Depreciation Reserve Fund—Government Bus Services, 431 lakhs in the Depreciation Reserve Fund—Electricity, 21 lakhs in the Contingency Reserve Fund—Electricity and 187 lakhs in the Depreciation Reserve Fund—Cement Factory. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 5,249 lakhs.

Debt Position.—On March 31, 1961, the debt of the Uttar Pradesh Government amounted to 27,374 lakhs consisting of 925 lakhs representing the consolidated debt due to the Central Government, 19,598 lakhs taken from that Government for development purposes and 373 lakhs for Relief and Rehabilitation Schemes plus 5,895 lakhs representing the amount of public loans floated by this Government from time to time, 142 lakhs as Uttar Pradesh Encumbered Estates Act Bonds, 206 lakhs from the Reserve Bank of India, 109 lakhs from the Life Insurance Corporation of India, 43 lakhs from the National Co-operative Development and Warehousing Board for expansion of Co-operative Institutions and Marketing Societies and 83 lakhs from the Khadi and Village Industries Commission. Apart from this, the State Government have also issued Zamindari Abolition Compensation Bonds and Rehabilitation Grant Bonds, the outstanding balance of which on March 31, 1961 amounted to 8,195 lakhs. Sinking Funds have been constituted for all the public loans and the balances at the credit of these funds which amounted to 2,133 lakhs on March 31, 1961 are mostly invested in Government of India Securities. Besides this a sum of 1,958 lakhs is also available in the Sinking Fund built up for the amortization of loans obtained from Government of India, which are repayable in lump sums.

Assets of the Government.—Against the outstanding debt of 27,374 lakhs there are assets in form of the Ganga, Yamuna and Sarda Canals, various other small canals, and the State Tubewells, Cement Factory, Government Bus Services and Electricity Schemes, in which about 22,100 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to 13,161 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

FOOTNOTE.—The accounts for 1960-61 have not yet been closed finally. The figures for 1960-61 mentioned in the Press Note are based on the March (Supplementary) 1961 Accounts.

U.K.–HONG KONG TEXTILE PACT

OFFICIAL TALKS ON EXTENSION OF PERIOD

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 15*th August*

MORE day-to-day cables from Hong Kong have stepped up the temperature surrounding the talks which are taking place between the official delegation from the Colony and Government representatives in London. After the apparently firm determination to reject the earlier proposal that the pact should be maintained until the end of 1962, it now seems that the textile interests in the Colony have been persuaded to agree to the extension, although the actual terms of the arrangement may be open to some discussion. The British Government has made it clear that negotiations are unlikely, despite the pressure from Hong Kong for a return to the proportion of Britain's import market enjoyed by the Colony prior to the self-imposed voluntary curb on shipments. Putting the clock back in this way would raise the ceiling from its current level of 164 million yards annually to around 230 million yards, as against the Government's proposal of 185 million yards.

Lancashire traders, meanwhile, are keeping quiet on the subject, which they contend is now a matter for the Government to settle. In particular, they feel that any argument over how the available business should be apportioned between the varying interests in Hong Kong is entirely a question for local arrangements and has no bearing on Lancashire's attitude to the import situation as a whole.

Cotton Pay Talks Adjourned

Representatives of 180,000 cotton spinning and weaving workers in the Lancashire cotton industry have put forward a claim for a 10 per cent wage advance at a joint meeting with the employers in Manchester. Talks lasted for little more than half-an-hour after which discussions were adjourned and a further meeting will be held within a month.

Sir Alfred Roberts, Secretary of the Card-room Workers' Amalgamation said that the claim was based on four grounds. The trade unions contended that the cost of living had increased since the last advance of 7½ per cent was conceded 16 months ago. In the meantime, there had been a further increase in the differential between the wages of cotton workers and those employed in other manufacturing industries. The profitability of the industry, he added, was such that the employers could offer a wage rise, while the need to attract new entrants was of paramount importance and this could only be done if wage levels were brought into line with other trades.

Common Market Warning

Fears that the British home market might become "a receptacle" for excessive quantities of duty-free low-cost imports of textile goods against which the rest of the Common Market would be largely insulated if the United Kingdom is to join the European Common Market have been expressed by the United Textile Manufacturers' Association, in Manchester. "It would clearly create an unfair and intolerable position if the other European countries also gained free entry into the United Kingdom," the statement declared. "Such a situation in which the British industry would find itself faced with the worst of the two worlds must, of course, not be allowed to arise in the course of the forthcoming negotiations."

The Association said that such a development would be entirely contrary to the intentions of the proposals for a more equitable regulation of low-cost cotton textile imports amongst all Western countries as put forward by President Kennedy and recently endorsed at the conference in Geneva in which the United Kingdom Government played a full part. The British cotton and man-made fibre manufacturing industry, it was added, has no illusions about the strength and vigour of the competition to be faced at home and in Europe from other industries if the United Kingdom joined the Common Market. It would be prepared to accept the challenge provided competition was on a genuinely fair and equal basis and that the declared intention about "harmonisation of taxation, social charges and working conditions" became a reality.

How Much to Come ?

Now that the full statement issued after the recent Geneva textile talks has been published, the salient points of which had been outlined in earlier messages, statisticians are busily engaged in trying to establish the volume of shipments which can pass between the participating countries on the basis of the standstill agreement covering the 12 months to the end of June. In Britain's case, this would seem to set a figure of nearly 800 million yards for imports—a phenomenal total by any reckoning.

Such a settlement as that reached in Geneva must cover so many eventualities that it is difficult to assess its true importance. The short-term arrangement for the year beginning in October provides that any country participating in the talks can request any other so involved to restrain its imports at a level not lower than that prevailing in the year to the end of June 1961. This action, however, can only be taken if unrestricted imports are causing, or threatening to cause, disruption of its domestic market. Failing agreement within 30 days, further imports beyond the maximum level can be rejected.

Urgent action of this nature can even be taken while the request is under discussion "in critical circumstances." Who is to decide what constitutes a critical situation is not explained. As a final variation to this paragraph in the agreement, the statement adds: "Nothing in this arrangement shall prevent the negotiation of mutually acceptable bilateral arrangements on other terms." This procedure, it is emphasised, will only be used sparingly and to avoid disruption of a domestic industry arising from an abnormal increase in imports. Again, there would undoubtedly be arguments between participating countries as to what constitutes "an abnormal increase."

Lancashire would certainly have just cause for contending that arrivals of cotton cloth into British ports during the past few years have risen to very abnormal heigths. Unfortunately, it seems that the level of the last year or two is to be taken as a basic rate of imports, setting the pattern for the future. In such circumstances, our negotiators must be working from a position of weakness rather than strength.

Production : Back to 1959

Comparisons can now be drawn between the rate of output in the Lancashire spinning and weaving trades during the first half of the current year and earlier periods. These show that production was somewhat lower than in the first six months of 1960, but that the existing level is on very similar lines to that ruling in the first half of 1959. Twelve months ago, the position was, of course, affected by the very heavy demand then being encountered and the additional impetus given to output during the final stages of the redundancy programme when even those mills whose owners had decided to shut down were working flat out to cope with the almost unprecedented activity.

Although this pressure slackened in the second quarter of 1960, its mark was made of the half-year's totals. These startled some outside observers who had automatically assumed that the wholesale destruction of machinery under the scrapping programme would lead to a sharp decline in the quantity of goods produced. The following table shows the situation, by sections, covering the first half of the last three years:

	January-June		
	1961	1960	1959
Cloth (in million yds.)—			
Cotton	659.53	674.61	680.33
Man-made	273.35	272.93	253.85
Mixtures	41.98	45.78	42.35
Total ..	974.86	993.32	976.53
Yarn (in million lbs.)—			
Cotton	241.61	252.32	253.63
Spun rayon	50.25	58.52	51.92
Mixtures	20.01	16.64	18.32
Waste	51.52	58.07	53.94
Total ..	363.39	385.55	377.81

From the above figures, it can again be seen that the output of cloth produced from man-made fibres has at least held its ground, although some reduction is apparent in the cotton sector. Considering the recent state of the market, however, the fall in the aggregagte is relatively small and, given a sudden surge in activity later in the year, could well be recovered. In the spinning branch, the returns collated by the Cotton Board have been slightly adjusted this year.

Due to the incidence of holidays in the mill towns, the June statistics show some irregularity. Yarn output was distinctly lower than a year ago, but cloth production exceeded the 1960 figure by 1,500,000 yards weekly. These variations will be straightened out during subsequent periods and accurate comparisons can only be secured over a longer time of reckoning.

CHARL A.9./24

CRISIS IN JUTE INDUSTRY PERSISTS

PROPOSALS FOR FIBRE BUFFERSTOCK AND FLOOR PRICE

THERE is a lot of confusion about the conditions obtaining in the jute industry at present. The Indian Jute Mills Association says that the raw jute supply position continues to be very critical and that several mills have individually taken steps to conserve jute consistent with their supply position in each case. Some of the biggest mills have sealed an additional 18 per cent of their looms, bringing the total sealing to 30 per cent. A few units have also reduced working hours from 42½ hours to 40 hours a week. One mill has even declared a lock-out, following labour troubles arising from dissatisfaction among workers on reduction of production and, in turn, their earnings. The spokesmen of the West Bengal Government, however, have reiterated that the new season's jute crop has already started arriving in the markets in large quantities, but the industry is not lifting the supply, as it wants the prices to decline markedly. The Chief Minister of West Bengal, Dr. B. C. Roy, is reported to have stated recently: "Jute is gradually flowing into the market. In view of the non-lifting of jute by mills, prices are going down and may drift further, unless immediate action is taken to check the trend." It is understood that Dr. Roy has addressed a communication to the Union Labour Minister, urging him to intervene. He has commended for acceptance two suggestions: (1) creation of a bufferstock to be managed and controlled by a joint body representing the State Government and the I.J.M.A., and (2) fixation of a floor price for raw jute. On its part, the labour has made an earnest plea for the promulgation of an Ordinance by the State Government to resolve the stalemate. The I.J.M.A., it is pointed out, is not only hampering the country's foreign trade but also robbing the farmers of their means of subsistence.

All this confusion would disappear if one were to think calmly of an answer to a simple question: Will any jute mill or mills want to suffer a cut in earnings by curtailment of production if it is assured of adequate raw material supplies? In the course of a statement issued to the Press recently, the I.J.M.A. said that the present rate of jute arrivals in Calcutta is far below the rate of consumption. What is worse, it adds, the quality-wise distribution of arrivals is very uneven with a fairly high proportion of top quality jute and a lack of the lower grades which are essential for blending purposes. "It is not," to quote the I.J.M.A., "in the national interests to suggest that mills should try to maintain production at a level which raw jute supplies from the point of view of quality or quantity manifestly do not warrant. Demand and supply must be equated to enable the industry to function in an orderly way and to promote a balanced market."

Scarcity of Raw Jute Supplies

The statement of the I.J.M.A. seems to be quite convincing. The Indian Central Jute Committee has also admitted that the fibre supply position is grave. Viewed thus, it is rather surprising that the West Bengal's Labour Minister, Mr. Abdus Sattar, has criticised the I.J.M.A.'s stand. And he is not justified in saying: "It is the responsibility of the jute millowners to see that both the mill workers and the cultivators are encouraged to contribute to the prosperity of the jute industry; this task can only be achieved by abandoning the practice of loom sealing at this juncture."

How can one expect the jute industry to shoulder such a responsibility especially when it is passing through a period of great crisis. The working results of many jute companies for the past year are disappointing and, in a number of cases, dividends have been pruned. The disappointing results are due to a drastic cut in the production of jute goods, thanks to the decline in raw jute output from 4.61 million bales (of 400 lbs. each) in 1959-60 to 4.03 million bales in 1960-61. The shortage of raw jute was more acutely felt in the second half of the season, that is, January-June 1961. The quantity of jute goods actually produced in this period was no more than 4.75 million tons (equal to jute consumption of 2.71 million bales), as against 5.36 million tons (3.14 million bales) in January-June 1960. The decline was accounted for by both hessian and sacking, the output of the former receding from 2.22 million tons to 1.66 million tons and that of the latter from 2.61 million tons to 2.44 million tons. The production of other jute goods, however, rose from 531,000 tons to 649,000 tons. The table below gives the month-by-month output of jute goods during the first half of 1961 and 1960, as well as in the whole of the calendar years 1960 and 1959:

(In thousand tons)

	Hessian	Sacking	Others	Total	Equivalent of jute consumption (000 bales)
1961—					
January	30.9	46.9	8.4	86.2	503
February	25.2	41.7	10.5	77.4	456
March	29.4	46.2	11.9	87.5	500
April	27.5	40.4	11.3	79.2	468
May	28.5	38.2	11.6	78.3	440
June	24.3	30.7	11.2	66.2	355
Total Jan.-June 1961	165.8	244.1	64.9	474.8	2,712
1960—					
January	36.7	42.9	7.1	86.7	506
February	36.2	41.6	8.2	86.0	512
March	37.0	45.0	9.1	91.1	543
April	37.0	44.4	9.6	91.0	538
May	37.7	44.5	9.5	91.7	535
June	37.4	42.1	9.6	89.1	508
Total Jan.-June 1960.	222.0	260.5	53.1	535.6	3,142
Whole of 1960 ..	422.2	540.7	104.2	1,067.1	6,236
Whole of 1959 ..	458.0	503.7	89.8	1,051.5	6,127

Despatches

Consequent on the (*a*) decline in production, (*b*) increase in prices following the sharp rise in raw jute prices, (c) keener competition from Pakistan, and (*d*) greater use of alternative packaging materials and bulk handling in foreign countries, despatches of jute goods for export purposes have suffered a setback. The total despatches in the first half of 1961 amounted to 3.30 million tons, as against 3.70 million tons in the same period last year, while those for internal consumption were slightly higher, as will be seen from the table below:

(In thousand tons)

	January-June		Whole of	
	1961	1960	1960	1959
Total despatches	476.2	509.5	1,038.0	1,096.4
For export purpose :				
Hessian	150.0	198.0	383.1	427.6
Sacking	194.4	140.7	317.1	379.0
Others	45.1	37.7	71.3	57.7
Total ..	329.5	370.4	771.5	864.3
For internal consumption :				
Hessian	17.7	17.0	32.7	25.1
Sacking	114.2	110.5	208.5	180.5
Others	14.8	11.6	25.3	26.5
Total ..	146.7	139.1	266.5	232.1
Grand total of despatches ..	476.2	509.5	1,038.0	1,096.4

An idea of the destination-wise shipments of jute goods can be had from the following statement:

(In thousand metric tons)

	January-March		Whole of	
	1961	1960	1960	1959
U.K.	8.0	11.4	50.0	50.3
Europe	17.2	20.3	65.6	57.6
Near East	1.0	1.6	9.7	11.6
Far East	13.4	26.2	96.5	130.6
Africa	18.0	14.4	82.8	82.0
U.S.A.	57.2	47.8	190.0	213.0
Canada	9.0	9.5	39.8	39.6
Argentina	0.9	12.5	37.8	53.5
Rest of America	17.5	6.5	63.0	59.8
Australia	13.7	11.4	74.0	72.0
New Zealand	1.3	1.9	17.0	15.0
Others	4.4	3.2	13.4	17.3
Total of hessian and sacking ..	163.5	165.8	739.6	802.8
Total of all jute manufactures. .	179.4	177.3	810.4	860.2

The downward trend in jute goods output and despatches noted during the first half of 1961 persisted in the month of July, as a result of the block closure of mills for the second week (the first week closure was in June). The actual output was 64,400 tons, as against 66,200 tons in the previous month and 86,800 tons in the corresponding month of 1960, and despatches aggregated 70,800 tons, as against 81,700 tons and

With pride we remember
Acharya
Prafulla Chandra Ray

born a hundred years ago

He belongs to that select group of rare, enterprising pioneers, who, by the sheer originality of their vision, add an independent chapter to the chronicles of a nation.

Not only was he an eminent researcher in chemistry and author of several world-acclaimed treatises, but the rare foresight that he showed by initiating, in those early days, such basic activities as the establishment of the Indian School of Chemistry, a number of pioneering industries and the founding of the Indian Chemical Manufacturers' Association, singles him out as the one who gave a revolutionary fillip to the birth of a Chemical and Pharmacutical Industry in India.

Yet, with all these crowning achievements, Acharya Ray was a man of nationalistic fervour, simple and austere in his habits.

We at AMAR-DYE join the nation in paying homage to his memory and dedicate ourselves to the cause he championed —the advancement of India through basic scientific research and industrialisation.

HEALTH AND MEDICAL CARE OF PLANTATION WORKERS

U.P.A.S.I. STUDY REVEALS COMMENDABLE ACHIEVEMENTS

THE planters are not only the pioneers of one of India's major export industry but also one of the earliest employers to recognise the need for what has now come to be known as the promotion of occupational health and preventive medicine. Environmental factors, coupled with the realisation that a healthy worker was as much an asset to the employer as to the country, induced them to organise an adequate system of medical aid in plantations, which is not only far superior to those available elsewhere in the plantation areas but also compares favourably with the best in the country. A fairly clear idea of what the planters in South India are doing about workers' health and medical aid in plantations can be had from an attractive brochure published by the United Planters' Association of Southern India (U.P.A.S.I.), Coonoor. The brochure traces the early history of medical aid in South Indian plantations, briefly outlines the various phases it passed through, and describe the present position with the help of charts and tables and compares it with the standards of medical care available in the country in general. It should, as Lt.-Col. V. Srinivasan, Director-General of Health Services, Government of India, points out in a brief foreword, serve to dispel the wrong notions current in some quarters about the attitude of planters towards the health and welfare of their workers.

The brochure is based on information collected from questionnaires issued to 115 public limited companies, 31 partnerships and 91 proprietory estates (all are members of the Association) with a total planted area of 279,480 acres. The returns represented 52.6 per cent of the total area sought to be covered by the survey and 130,056 workers out of a total labour population (workers and their families) of 239,463. There were 31 group hospitals, 61 estate hospitals and 124 dispensaries in the estates covered by the survey which reveals that there is a close relationship between the size of the estate and the distribution of hospital facilities: the larger the estate the more numerous, larger and better equipped the medical establishments in them. If the total number of medical establishments is related to the total working population of the units covered, the plantation industry is found to have a density of medical establishments unmatched by any other industry of its size anywhere in the country.

Comparison Favourable

Both in respect of the number of medical establishments and number of medical staff per thousand of population, plantations compare very favourably with the rest of the country. The total number of medical establishments, including the smallest of dispensaries in the country, is only 9,958 or one for every 40,000 of the population, whereas there are one medical unit for every 1,157 of the population in the plantations covered by the survey. Relative to the working population on the reporting estates, as of 1958, there was one doctor to every 1,831 persons, one compounder to every 752 persons, one nurse to every 1,102 persons and one midwife to every 1,355 of the working population. These figures compare well with those for the country as a whole and the standards laid down by Dr. Lloyd Jones, a former Deputy Director-General of Public Health, Government of India, in his report on plantation medical service published in 1947. The following table bears out this claim:

	Medical staff in plantations, 1958		
	Lloyd Jones standards	Actual for reporting estates	Actual for India*
Doctors	1/2,500	1/1,831	1/5,714
Midwives	1/2,500	1/1,355	1/12,045
Nurses	1/1,000	1/1,102	1/14,260

* The ratio has been calculated on an estimated Indian population of 400 million at the end of 1958.

The question of labour welfare could be approached from several angles, one of them being the trend of incidence of illness among workers necessitating their attendance at hospitals and dispensaries. The frequency of attendance at hospitals or dispensaries as in-patients or out-patients provides a reliable indication of the state of health of workers. The U.P.A.S.I. survey shows that the average number of times any one of the labour population appeared for treatment as an out-patient was only five in a year, or once in 73 days. The average of in-patients treated was as few as and less than one person in four once a year. The occupancy rate of the available bed facilities in plantations was an average of less than 60 per bed per annum or a utilisation rate of only once in five days.

A good percentage of plantation labour consists of women (30 per cent in the case of estates covered by the survey). Hence maternity benefits form a major component of the medical aid in plantations. In the case of reporting estates, nearly two out of every eleven women workers were recipients of maternity benefits. The average amount per maternity case paid by way of cash benefit was Rs. 58.88. This excluded the cost of medicine or confinement and care in hospital.

Preventive Measures

Apart from the arrangement for the care of the sick, the estates' medical organisation is also keenly interested in preventive measures. Terrain, altitude, practicability and acceptance or otherwise, etc., determine the nature of preventive medicine practised in each area or estate. On most estates, the medical department is responsible for environmental hygiene and it undertakes eradication measures against flies, mosquitos, bugs and fleas.

A comparison of the cost of medical care for head of population on the estates and in the states in which they are situated shows that plantations spend much more per head of population than the State Governments do. Thus, the annual recurring expenditure per head of worker on the reporting estates amounted to as much as Rs. 26.12 in 1958, as against Rs. 18.36 in 1953 and Rs. 11.94 in 1949. In other words, in ten years, this expenditure had more than doubled. As compared with this performance of planters, the per capita outlay on medical and public health by the Governments was a mere Re. 1.48 for all the States in 1958; the relevant figures for the major plantation States of the South (as of 1958-59) being Kerala Rs. 2.13, Mysore Re. 1.55 and Madras Re. 1.59.

Medical care is, no doubt only a part, albeit an important one, of plantation labour welfare. Apart from provisions made obligatory by statute, plantation managements, especially the smaller ones, says the brochure, are making a determined effort to improve and better organise medical aid for their workers. One recent example is the finalisation of plans for a district-wide medical system to which managements represented by the Shevaroys Planters Association have agreed. They have decided to subscribe Rs. 25 per acre towards the capital cost of establishing four estate hospitals and a recurring contribution of Rs. 8 per acre for medical service.

The aforesaid facts and figures indeed give a very encouraging picture of the state of health and medical aid in plantations in Southern India. It is true that no amount of staffing or construction of hospitals or fitting them with medical equipment or facilities would, by themselves, provide a safe and reliable indication of the standard, quality and effectiveness of medical care. They are, surely, far above those available outside the plantations. But they do indicate that, even in hard physical terms, the plantation industry provides to its workers medical staff and facilities far above the standards available in the country as a whole or in the States in which the plantations are situated.

GOOD ENOUGH IS JUST NOT GOOD ENOUGH!

The work of standardization and certification is precise and exacting. Goods produced to standards qualify for carrying the ISI certification mark of the Indian Standards Institution.

Before, and even after, a licence for affixing the ISI mark on any product is granted, exacting tests and inspections are carried out at various stages of its manufacture. Certified goods are picked up from the manufacturers' works and sent to independent laboratories for testing. ISI inspectors constantly check whether the manufacturer is complying with required standards. Certified goods are also collected at random, from the distributor and the retailer, and tested for quality. Legal sanctions are available against abuse or unauthorised use of the ISI mark.

Nothing, therefore, is left to chance. With ISI "good enough" is just not good enough. For, the interest of the consumer as well as the good name of Indian industry have to be protected.

Now Ready—An indispensable book.

GUIDE TO
COMPANIES ACT
As Amended by Act LXV of 1960
SECOND EDITION
(Revised and Enlarged)
BY A. RAMAIYA (*Advocate*)

Though the book is called a Guide it is really a comprehensive book dealing fully with all the sections of the Companies Act giving the relevant case-law and useful and practical notes to the various sections. A detailed study of the changes introduced by the Companies Act I of 1956 and the Amendment Act LXV of 1960 is made in the Introduction. Useful Appendices and all prescribed Rules and Forms as amended up-to-date are included.

So many changes have been made affecting even the day-to-day administration that a thorough knowledge of the various provisions is necessary for every person connected with the administration of companies.

Order for a copy immediately.

Printed on foreign printing paper and attractively got up.

Price Rs. 20. Postage extra.

Pre-publication offer of Rs. 17.50.

Open till the end of August, 1961 only.

INADEQUATE POWER TARGET

CONSUMPTION REQUIREMENTS EXPECTED TO BE HIGHER

THE experience of planning thus far in the power sector has been that development has fallen short of targets. The first Plan, it may be recalled, had targeted for an additional generating capacity of 1.40 million kw. so as to raise the aggregate installed capacity in the country to 3.70 million kw. Actually, however, the aggregate capacity at the end of that Plan fell short of the target by 0.28 million kw. The second Plan had targeted for an additional capacity of 3.48 million kw. so as to raise the aggregate capacity to 6.90 million kw. But actually the aggregate capacity at the end of that Plan fell short of the target by 1.20 million kw. No wonder, therefore, that the position was generally one of power shortage in the country, especially in the last year of the second Plan. As this shortage is continuing, the planners have accorded priority to the execution, in the early years of the third Plan, of the continuing power schemes of the second Plan numbering 94 and of the continuing power schemes of the first Plan numbering 14. If most of the 184 new schemes included in the third Plan were also executed on a high-priority basis, the aggregate installed capacity in the country would be of the order to 13.40 million kw. in 1965-66. But, according to the final report of the third Plan, the aggregate capacity that is expected to be in commercial operation by the end of the Plan will be only 12.69 million kw.—that is, the figure laid down as the target for 1965-66. It is stated that even here there is a number of uncertain elements. Still, the Planning Commission has suggested the likely phasing of benefits during the third Plan on the following lines:

(In million kw.)

Year	Additions to generating capacity during the year	Aggregate generating capacity by the end of the year
1961-62	0.60	6.80
1962-63	0.78	7.08
1963-64	1.05	8.08
1964-65	2.07	10.15
1965-66	2.54	12.69

The target of 12.69 million kw. by way of aggregate generating capacity is made up of 9.82 million kw. (as against 3.32 million kw. in 1960-61) in State-owned public utilities, 1.45 million kw. (as against 1.36 million kw. in 1960-61) in company-owned public utilities, and 1.42 million kw. (as against 1.02 million kw. in 1960-61) in self-generating industrial establishments. This target will correspond to 45,000 million kw.h. in terms of energy generated, according to the final report of the third Plan. That this amount of energy expected to be generated will fall short of consumption requirements may be seen from the following zone-wise estimates of energy requirements recently made by the Central Water and Power Commission:

Zone	Energy requirements in million kw.h. 1960-61	1965-66
Northern (Delhi, Punjab, Rajasthan, Himachal Pradesh, Jammu and Kashmir) ..	2,990	6,900
Western (Gujarat, Maharashtra, Mysore)..	5,890	14,100
Southern (Pondicherry, Kerala, Madras, Andhra)	4,740	11,000
Eastern (Assam, Andamans and Nicobar, Manipur, Tripura, Bihar, Orissa, West Bengal)	6,250	14,700
Central (Uttar Pradesh, Madhya Pradesh)..	2,430	7,400
Total ..	21,600	54,100

It would appear from the above estimates of energy requirements in 1965-66 that the target (12.7 million kw.) of generating capacity may have to be increased to about 15.2 million kw. so as to correspond to 54,100 kw.h. of aggregate energy requirement. Such an upward revision, incidentally, would nearly correspond to the estimate made by the Associated Chamber of Commerce at the end of last year. If this is not done, there will be a continuing power shortage even by the end of the third Plan. It is well known that the installed generating capacity in India has not been keeping pace with the increase in the power demands arising from rapid industrialisation, particularly of basic and heavy industries. And it is equally well known that the initial availability of power in an area acts as the best stimulus for industrial development and that, once the process starts, power demand rises very fast. The following projection of energy consumption contained in the final report of the third Plan would have to be taken as very much of an under-estimation, as compared with the broadly identical estimates of the Central Water and Power Commission and the Associated Chamber of Commerce:

Category	Anticipated energy consumption in 1965-66 (Mill. kw.h.)	Per cent of total generation in 1965-66
Domestic light and small power	3,400	7.6
Commercial light and small power ..	1,900	4.2
Industrial power	28,400	63.1
Traction	1,800	4.0
Public lighting	400	0.9
Irrigation	1,900	4.2
Public waterworks and sewage pumping ..	900	2.0
Transmission losses, consumption in auxiliaries, etc.	6,300	14.0
Total ..	45,000	100.00

In the above estimate, industrial power consumption in 1965-66 represents an increase of 16,100 million kw.h. over 1960-61. As this increase will not obviously meet the entire power requirements of industry, it should be the responsibility of the private sector not only to plead for a higher target for aggregate generating capacity but also to canvass proposals for a bigger role for company-owned public utilities in power generation. If the public sector outlay of Rs. 1,039 crores (composed of Rs. 661 crores for hydro and thermal schemes, Rs. 51 crores for atomic power, Rs. 222 crores for transmission and distribution schemes and Rs. 105 crores for rural electrification) for power in the third Plan cannot be increased, the only alternative would be to get the private sector to invest substantially more than the outlay of Rs. 50 crores allotted to it. There is no reason why the private sector should not be called upon at least to double its generating capacity which, as of 1960-61, is only 1.36 million kw. What is required as a pre-condition is that the provisions of the Electricity (Supply) Act under which the licensees' finances are rigorously controlled would have to be liberalised. It should not be difficult for the State Governments concerned to permit the expansion of the company-owned public utilities as, for instance, in the case of the Trombay plant of the Tata system. This latest instance of prompt permission by the Maharashtra Government for the expansion of the Trombay plant is in refreshing contrast to the stand of the former Bombay Government which was initially reluctant to license the construction of the Trombay project itself. The following paragraphs from the Chairman's statement (7th August 1961) contained in the 45th annual report of the Andhra Valley Power Supply Co., Ltd. (belonging to the group of Tata Electric Companies) will be read with interest in this context:

"After a review of the projected capacity of the Tata-Koyna Railway grid *vis-a-vis* demand and energy forecasts right up to 1975, a report was sent to the State Government in October last, in which it was apprehended that an energy shortage was likely to occur in 1965, followed by a capacity shortage a few years later. We then told Government that the Tata system would be prepared to do what it could towards meeting the shortage, provided difficulties mainly relating to finance could be overcome. From a purely technical standpoint, the installation of a fourth unit at Trombay seemed the simplest to plan and quickest to execute; compatible with the facilities which exist at the site, it was considered that the new unit should be of 125 m.w. rated capacity.

"As a result of certain meetings held at the highest level with the State Government, the Companies have been informed that Government would like them to proceed with the project for expansion at Trombay. A preliminary estimate indicates that the cost will be about Rs. 12 crores, of which roughly 70 per cent would be required in foreign currencies. The financial difficulties in undertaking the expansion are well-known to our shareholders as the Companies are limited by law to a return on the capital base of 6 per cent (Reserve Bank rate plus 2 per cent). A further relevant point in securing long-term borrowings concerns the 'assured life' of the Tata Electric Companies, whose licences are valid only upto 1975. In discussions with the State Government, we were informed that, in order to meet our difficulty, it might be possible for Government to consider a short extension of our licences.

"Following these talks, we explored the possibility of obtaining a loan from the U.S. Development Loan Fund for the foreign exchange component of our estimate for the Trombay fourth unit project. We believe that such a loan will be made available to us on satisfactory terms. We are, therefore, forwarding our application for it, and are requesting the Government of India to sponsor it. Simultaneously, we are proceeding with the technical examination of the project and the preparation of specifications. Our aim is to bring the fourth unit at Trombay into operation, before the end of 1964.

"We are not without hope, too, that an amendment of the Electricity (Supply) Act will come about, improving the return to utilities such as ours. I appreciate, till such amendments are finally passed, there cannot be any support from shareholders for raising additional equity capital. Electricity share prices, for reasons well known to all of us, continue to stagnate in the otherwise buoyant conditions that prevail on the Stock Exchange."

If other State Governments, particularly that of West Bengal, adopt the kind of imaginative and far-sighted approach that has characterised the Maharashtra Government's policy towards the electricity industry, it will be certainly possible to think in terms of a higher aggregate generating capacity than the target of 12.7 million kw. proposed under the third Plan. At the same time, the return to electricity undertakings would need to be improved by amending the Electricity (Supply) Act. Thanks to the increasing indigenous production of machinery and equipment for power projects, the foreign exchange component will be relatively much less than in the second Plan. Already the foreign exchange component of Rs. 320 crores works out to less than a third of the entire cost (Rs. 1,089 crores) of the third Plan's power programme as now proposed. If the size of the power programme is increased by a fifth, it will add only about Rs. 60 crores to the foreign exchange component. As more rupee finances can conceivably be made available from the sale proceeds of P.L. 480 foodgrains, it should also be possible to allot some more foreign exchange to power projects by reducing the foreign exchange commitments of some less essential projects.

NATIONAL BUILDINGS ORGANISATION

The main function of the National Buildings Organisation, according to a written reply to a question in the Lok Sabha, is to ensure a rational approach to the problem of housing and to achieve reduction in building costs through promotion and co-ordination of research in building materials, techniques and designs. The Organisation has prepared type designs of rural houses suitable for the States of Assam, Uttar Pradesh, Madhya Pradesh, Andhra, West Bengal and Rajasthan and is now constructing one experimental house in each of these States for observation and demonstration purposes.

The Organisation has conducted a number of studies in respect of certain building materials, both traditional and non-traditional. The more important of these studies pertain to heavy clay products (including hollow bricks and tiles) and their mechanised production. Light weight aggregates from blast furnace slag (a waste product of the steel plants) and from fly-ash (a waste product of modern thermal power plants using powdered coal as fuel); lightweight partitions etc. from low grade gypsum; cement roofing tiles; asphaltic corrugated roofing sheets; wire bound reed-boards and hollow cinder concrete blocks (utilising furnace cinder).

D.L.F. LOANS FOR POWER PROJECTS

Agreements, covering three D.L.F. loans totalling $62.9 million (Rs. 30 crores), were signed between the Government of India and the U.S. Government on 16th August 1961. These loans, repayable in rupees like other D.L.F. credits previously given to India, are intended to meet the foreign costs of three major power projects, namely, the second stage of the Sharavati Hydro-Electric Project (Mysore), a thermal station at Talcher (Orissa) and a thermal station at Amlai (Madhya Pradesh). The rupee costs, totalling Rs. 32.3 crores, of these projects will be financed by loans from the sale proceeds of agricultural commodities supplied to India under P.L. 480.

The Sharavati Project-II Stage, now under construction, will generate 445,000 kilowatts. U.S. loans it may be recalled, had partly financed the cost of the first stage of this Project for the generation of 180,000 k.w. The Talcher thermal station will generate 250,000 kilowatts. The Amlai thermal station will have a generating capacity of 60,000 kilowatts; its power will be supplied to cement, pulp and paper, coal mining and aluminium enterprises.

NEOPRENE-COVERED WIRE AND CABLE

Neoprene synthetic rubber is known to be tough, flexible, lightweight and long-lasting. This versatile man-made rubber has been particularly successful in the wire and cable field, thanks to a combination of properties which give it outstanding resistance to all forms of cable deterioration. Apart from its ability to defy cracking, abrasion, ozone, soil acids and alkalis, this Du Pont elastomer has an exceptional resistance to oil. Where ships in particular are concerned, its resistance to flame, and high temperature is an important factor. This quality, more than anything else, seems to have influenced the choice of neoprene for the numerous uses of wire and cable for lighting and power on the new 45,000-ton P. & O. passenger liner "Canberra," now on her maiden voyage to Sydney. The liner carries nearly one million metres of neoprene-covered wire and cable.

NEW PRODUCTS AND PROCESSES

New Type of Bleaching Agent

A NEW solid bleaching agent is now available in the U.K. marketed by the Pfizer Group, Sandwich, Kent. Like other bleaching agents it is chemically a hypochlorite, but the metal part is lithium. The special points about this lithium hypochlorite are that, being a solid in granular form, it is more readily transportable, especially in small packages, than liquid bleach, and having lithium as the metal (as distinct from the calcium in the well-known "chlor.de of lime") it causes no precipitation in hard water or detergents. Further[illegible] is not as deliquescent as [illegible]. The oxygen equivalent [illegible] that does the bleaching—or in other [illegible] of the industry, the chlorine figure—is very high, being 35 per cent in the marketed product, which has solid diluents in it, and 121 per cent in the undiluted salt. Unlike some newer organic liquid bleaches, lithium hypochlorite does not release chlorine or other harmful gases in very alkaline solution, such as that of soap. Lithium hypochlorite bleach is more expensive than other hypochlorites and so the market is more likely to be the domestic one than industrial, though the laundering industry may well be interested.

Fire-resistant Paint

A unique paint with fire-retardant qualities of Class I in the British Standard 476 is now introduced by the Timber Fire-proofing Company, 13a, Old Burlington Street, London, W. 1. The result of research spread over 2½ years, it is called Oxylene P.V.A. Intumescent Fire-Retardant Paint. The research was led by Mr. J. H. Dyer, technical manager of the Oxylene Boram Divis on of the company and an acknowledged authority on fire-proofing problems. The uniqueness of this paint lies in the fact that it is a true paint, is ready for use in one tin, can be produced in the 100 or so colours of B.S. 2660, and, above all, is *intumescent*. That is to say, it swells on application and so produces a thick cellular blanket over the surface painted on, whether timber, plywood, acoustic tile or anything else. This insulating film prevents oxygen getting to the wood surface and so holds up combustion. The paint is a copolymer of polyvinol acetate (P.V.A.) resins and is similar in general structure to emulsion paints, though modified to produce the fire-retardant properties. It is decorative and durable and can be applied by brush, roller or spray. It can be washed and is resistant to abrasion.

"Pro-Set" For Wood Working

A new device which creates a major change in wood working tool room practice by eliminating trial and error in cutter profile developing and grinding, has been produced by a U.K. firm, Thomas Robinson and Son Ltd. The accurate profile development, grinding and eventual setting of moulding cutters on their parent machines, is one of the problems in many planning and moulding mills and while development and grinding need not interfere with a machine's running time, in the majority of cases a machine is idle while the cutters are being set on its blocks. After investigating the problem, the firm has produced a device, named the Pro-Set. It cuts machine "down-time" to a minimum by guaranteeing first time accuracy in cutter setting on the parent machine. The Pro-Set provides an ingenious method of mechanically developing the true shape of cutter required for any normal size of straight-cut block using a drawing or sample section of the original. The shape is developed onto a template which, after being used when grinding the cutters, can also be used as a guide when setting them on the cutter block. The device can be quickly adjusted to suit any size of cutter block and, being small and completely portable one Pro-Set can serve several machines.

Electricity—Conducting Glass

A process for making electricity conducting glass has been developed in Russia. In the process the glass is heated almost to its melting point and then treated with tin chloride. This process, it is claimed, causes the glass to become a permanent conductor of electricity. Glass treated in this way loses some of its transparency and a slight irridescence becomes noticeable. Tests show that it may be used for the production of the windscreen of motor cars and aeroplanes enabling the glass to be heated by a small electric current thereby preventing the formation of ice. The glass may also be used for heating of rooms and offices. Tests have shown that the application of heat has very little effect on the conductivity of the glass and as a result the glass can be used effectively as a resistance material in electronic equipment. It may also be used in advertising and instrument panels. The process is said to be cheaper and in many ways simpler than that used so far for the production of electrically conductive films on the surface of glasses. The electrical conductivity is caused by formation of a thin film of tin oxide anchoring itself to the silica network on the surface of the glass.

Pocket Tape-recorder

A tape-recorder of Swiss make (the Fi-cord 101) will go into the pocket. It is completely transistorised, has a printed circuit and is powered by two small dry batteries that give up to 20 hours of working. The machine measures 6⅛ inches by 3¼ inches by 1⅛ inches. The tape speed is 1⅞ inches per second, and each tape gives 30 minutes of recording time by the use of the reverse side. Re-recording automatically erases previous signals so that the tape can be used indefinitely. The spool used fits all standard tape-recorders. The controls are simple press buttons and an extra is a lapel microphone, which enables the machine to act as a sort of pocket notebook of speeches and conversations. Other accessories available are a desk transcriber, a stethophone, a foot pedal control and a desk stand.

Electronic Spectrograph

Detailed analysis of steel which at one time occupied four metallurgists for about an hour can now be carried out in four minutes by a new electronic spectrograph—the first of its kind in Britain. The machine was recently installed at Richard Thomas and Baldwin's Redbourn Laboratory. In operation, a small piece of steel is placed in position at one [illegible] the £12,000 machine. The steel is subjected [illegible]rk in an atmosphere of argon gas and the [illegible]s transmitted to a prism which breaks it up into different colours, each representing various elements in the steel. The intensity of each colour is measured and transmitted electronically to a typewriter which records it automatically and types out a detailed analysis of the steel under examination.

Fire-proof Furniture

Two French organisations have developed a technique claimed to enable exceptionally good fire-resistant properties to be given to furniture, plywood and insulation panels. The wood is immersed in a chemical solution but the secret of success is said to lie mainly in treating the wood when it has the right (but very slight) degree of dampness and the fibres are suitably dilated. It is stated that treated wood remains as water-repellent as before and there is no risk that nails or screws driven into it will become corroded.

New Device to Warn Brake Failure

A welcome safety device in this age of fast motorised transport is being manufactured by a South Australian firm, Hanson Brake Safety Cylinder Company, of Adelaide, Australia, invented by an Australian, Mr. W. Amos, it warns of hydraulic brake trouble on motor vehicles through loss of oil. A feature of the device is that when the warning is given—by means of a flashing red light on the vehicle's dashboard—the master cylinder of the brake system is still full of oil. This means that the brakes are still intact when the warning light comes on. The Hanson Brake Safety Cylinder Company has patented the invention which comprises a safety reservoir fitted with a copper float and an electrical circuit coupled with the vehicle's battery. The safety reservoir, which has a capacity of about six fluid ounces, is fitted to the vehicle's scuttle and is connected to the master brake cylinder, either directly or with a *plastic hose*. Thus, the driver has ample warning that there is an oil leak in the brake system and is given time to check the source of the trouble before the brakes fail. The device, which can be fitted to about 90 per cent of all cars and trucks, also has a sludge trap at the bottom of the safety reservoir which stops all foreign matter from entering the hydraulic circuit.

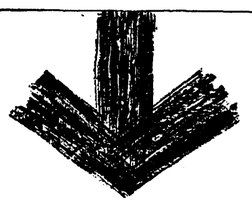
Moth-proofing Jute

An insecticidal formulation and a process for impregnating the gunny bags used for storage of foodgrains have also been developed at the Central Food Technological Research Institute, Mysore. The formulation contains lindane plus D.D.T., Dutrex (a petrolium by-product) and groundnut oil in the oil-in-water type emulsion. The fixed oils in the formulation increase the persistence of lindane on treated bag surface. The process may be used with efficacy for large-scale insect-proofing of gunny bags and fabrics.

Flying Automobile

The first step towards the manufacture of a flying automobile named the Aerocar has been taken in the United States, and production may begin this year. Ling-Temco Electronics, Inc., of Dallas, Texas, has signed a contract to begin manufacturing the unusual vehicle if there are enough orders to justify quantity production. The Aerocar is a two-place, pusher type plane when in flight. Disassembled for road travel, the wings and tail are folded and towed behind the automobile section. The vehicle can be converted from airplane to automobile, or *vice versa*, in five to 10 minutes with the aid of a single hand crank.

As an automobile, the Aerocar has a practical road speed of 60 miles per hour. As an aircraft, it cruises at 100 miles per hour, and has a range of 300 miles.



How to get the most out of your Bank

Do not regard your bank merely as a convenience for depositing and withdrawing money. There are extra services available to you.

When you have a *current account* with State Bank, you can ask that commercial bills and pay or pension bills be collected and credited to your account; you can also instruct the Bank to pay periodically on your behalf house rent, school fees, club subscriptions, insurance premia, etc., and thus save yourself a lot of bother.

A *savings bank account* enables you to earn interest. It permits the facility of withdrawal once a week; the system of withdrawal by cheque is in force at all our branches.

For full particulars of these and many other facilities State Bank provides, please consult or write to the nearest office.

The State Bank with its background of years of sound banking traditions is waiting to solve your problems. Why not have them solved for you?

THE CONTEMPORARY CORPORATE SCENE IN INDIA—III

TRENDS DURING TWO PLAN PERIODS

By Dr. Raj K. Nigam, Ph.D. (Econ.) (London)

THE economic and industrial progress made by the country under the first and second Plan periods is as distinctly seen in the corporate sector as in other fields of socio-economic activities in the country. The two Plan periods saw not only the formation of a large number of corporate enterprises in the country but also witnessed the strengthening of the capital base of the existing companies in the country in a pretty big way. During this period, not only big companies, with massive capital structures, came into being, but also an overwhelmingly large number of small companies came into existence, showing that the small entrepreneurs and business elements were getting a reasonable opportunity for coming up alongside the big and experienced entrepreneurs in the country. The formation of the big and small companies simultaneously also proved that the two Plan periods were an epoch of ample opportunities for all those who wanted to set up small or big business in the country in the old as well as in the new industrial and commercial fields. The two Plan periods also saw the demarcation of a new sub-sector in the corporate sector, namely, Government sub-sector which received statutory recognition in 1956 under the Companies Act 1956. This sub-sector developed in a mighty way during the momentous years of the second Plan period during which the number of Government companies was doubled and the paid-up capital base widened by nearly 8 times. During the ten years under review, particularly after 1956, the management pattern of the companies also underwent big changes resulting in the shrinkage of the area of influence of the managing agencies and the filling up of the vacuum created by them by other alternative forms of management. The latter phase of the second Plan period also saw the entry of foreign entrepreneurs in the corporate field in the country in large numbers, having been persuaded by the Indian entrepreneurs to join hands with them in establishing new companies in the new and diverse industrial directions in the country. This large-scale foreign collaboration with Indian business was also greatly facilitated by the change in the attitude of the Government. The foreign collaboration was realised as an important solvent of the foreign exchange difficulties increasingly faced during the second Plan period. The need for obtaining foreign exchange from foreign business sources became urgent, as the foreign exchange reserves of the country touched the bottom and as the normal foreign exchange earnings through export did not show any improvement due to the stickiness of exports and the swelling tide of the imports, despite the controls imposed on the non-essential items of imports. It became, therefore, a dire need to make dour attempt to get increasing volume of foreign exchange for sustaining and further accelerating the progress of industrial development of the country.

Apart from the question of foreign collaboration in the corporate sector, other trends, relating to the structure, management and finances of joint-stock companies in the country, during the second Plan period in particular, have to be read in the context of the new Companies Act 1956, which brought in a more purposive control and direction of the corporate activities in the country on the lines of sound business practices and in consonance with the current socio-economic thinking of the State slanted towards establishing a socialist pattern of society in the country. To a certain extent, some of the important provisions of the new Act attempted to break up the control of economic power in the hands of the managing agents and company managements, and to restrict the quantum of the managerial remuneration and other pecuniary gains, apart from cleansing the corporate activities of the various unsavoury practices which led to a lot of distrust against company management in the country. Above all, the new Act has been enacted to reduce the cost of promotion and management of companies also. How far success has been achieved in this direction would require, indeed, a detailed survey at a later date when full impact of the Act has been felt by the corporate sector. But some indications of the achievement in this direction are available in the annual reports on the working of the administration of the Companies Act presented by the Department of Company Law Administration to Parliament from 1957 onwards. It may be mentioned here that the provisions of the Companies Act are still far away from placing corporate enterprises in a social framework, and, perhaps, in future it may be in the interest of the society, as well as of the corporate enterprises, if, instead of prescribing mere prohibitory provisions in the Act, more positive directions are given to the corporate enterprises to realise the socio-economic objectives of the State policy. As at present, the ambit of the Companies Act is not so wide as to bring the corporate enterprises under the full focus of State policies for establishing a socialistic State in the country. In its new form, with its restrictive provisions and over-charged with governmental powers, the Companies Act, soon after its passage in Parliament, came to be regarded in industrial circle as an instrument of oppression which, instead of inducing the private entrepreneurs to set up new corporate businesses in the country, might shy them off even from expanding the old established businesses, much less to talk of setting up new companies. Had these fears been realised, it would have, indeed, condemned the new Companies Act as an ill-conceived piece of legislation introduced at a time, when the industrial development of the country needed strong stimulating legislation administered with foresight and vision. The period of 1956-61 cannot be said to be one of disenchantment for the private sector, as the operation of the Act has not, in any manner, slowed down corporate activities in the country. On the contrary, it is, to a certain extent, creditable for the Act and the administration in-charge of it that the corporate sector has gained in strength since the Act came into force.

The administrative action to remove non-working companies in the corporate sector, which for years had given a bloated impression of the corporate sector to all of us, was started by the Department of Company Law Administration soon after its inception in 1955. Since then up to the end of 1960-61, the administration has removed nearly 9,000 inactive companies, which account for nearly 17 per cent of the total number of new registrations of approximately 58,800 during the period 1900-61.

At the Beginning of the First Plan

At the commencement of the first Plan period, the corporate sector in our country comprised 28,532 companies with a total paid-up capital of Rs. 775.4 crores. This total was made up of 12,568 public companies with a total paid-up capital of Rs. 566.5 crores and 15,964 private companies with a total paid-up capital of Rs. 208.9 crores. That is to say, 44 per cent of the total number of companies at work were public companies, accounting for 73 per cent of the total paid-up capital of all the companies at work at the beginning of the first Five-year Plan period. The remaining 56 per cent and 27 per cent represented the share of the private limited companies in the total number and paid-up capital of companies at work, respectively. In other words, the public companies were the far more important constituent of the corporate sector in the country, in so far as the bulk of the total paid-up capital of the corporate sector was accounted for by them. The paid-up capital of these companies was 1½ times that of the private companies, though, in number, the latter exceeded the public companies by nearly one-fourth.

During the ten-year period ended 1960-61, the corporate sector underwent a very significant change in its overall size as represented by the number and size of paid-up capital of the companies at work and their composition. At the end of 1960-61, that is to say, at the end of the second Plan period, the total number of companies at work was reduced to 26,108, recording a net decrease of 2,424 companies over the number of companies at work at the commencement of the first Plan period. Notwithstanding this fall, during the same period, the paid-up capital of companies increased by Rs. 949.2 crores to Rs. 1,724.6 crores. Thus, it will be seen that, while in terms of number, the overall size of the corporate sector was reduced by nearly 9 per cent, the paid-up capital resources recorded a very impressive increase, the actual net increase being of the order of 122 per cent. The two constituents of the corporate sector, namely, the public and private limited companies at the end of 1960-61 had 6,745 companies and 19,363 companies, respectively. The total paid-up capital of these two classes of companies came to approximately Rs. 876.1 crores and Rs. 848.5 crores, respectively. Thus, it will be seen that, as against the position existing before the commencement of the first Plan period, when private companies exceeded the public companies by nearly one-fourth in number, at the end of the second Plan period, the private companies were nearly 3 times the number of the public companies. The paid-up capitals of the two classes of companies also underwent a similar radical change and the relative importance of the public companies was nearly gone. The paid-up capital of the private companies, which was about one-third that of the public companies at the beginning of the first Plan period came at par with that of the public companies at the end of 1960-61.

The following table 1 sets out the statistical position of companies at work at the beginning and end of the first and second Plan periods:

TABLE 1

Overall Position of Companies in 1950-51, 1955-56 and 1960-61

(Paid-up capital in crores of rupees)

Year	Total No. of companies at work	Paid-up capital	Public companies at work		Private companies at work	
			No.	Paid-up capital	No.	Paid-up capital
1950-51 ..	28,532	775.4	12,568	566.5	15,964	208.9
1955-56 ..	29,874	1,024.2	9,575	690.4	20,299	333.8
1960-61 ..	26,108	1,724.6	6,745	876.1	19,363	848.5

Trend of New Registrations

During the first and second Plan periods together, a total number of 13,082 new companies were registered in the country, with a combined authorised capital base of Rs. 1,832 crores. Of these, 7,043 companies, with a total authorised capital of Rs. 787 crores were floated during the first Plan period and 6,039 companies with a total authorised capital of Rs. 1,045 crores during the second Plan period. Of the 7,043 companies formed during the first Plan period, 1,456 were public companies with a total authorised capital of Rs. 354 crores and 5,587 were private companies with a total aggregate authorised capital of Rs. 433 crores. The corresponding figures of the number of public and private companies for the second Plan period are 447 companies and 5,592 companies, respectively, and the total authorised capital for these two classes of companies are Rs. 390 crores and Rs. 655 crores, respectively.

The first Plan registrations are to be studied in the context of the high tide of new registrations during the post-World War II period 1946-1951. The lifting up of the various controls after the World War II and the impetus given to the indigenous industries and businesses following the installation of the National Government and the attainment of Independence by the country sparked off a period of strong nationalistic industrial revivalism in the country. Reference to this phenomenon has been made in an earlier section dealing with the new registrations during the post-Independence period in the country. The mushrooming of corporate bodies came to an end during the first year of the first Plan and, thereafter, the formation of new companies took a more realistic trend; the new registrations thereafter numbered 1,200 to 1,300 a year, except during the last year of the first Plan period when there was once again an unusual bulge caused by certain prognostications of the entrepreneurs regarding the new Companies Act which was to come into force on the 1st April, 1956 with certain stringent clauses. The new Act, no doubt, depressed the level of new registrations during the first year of the second Five-year Plan. But, as the air of uncertainty and hesitancy disappeared from the minds of the promoters and as the forces behind the high levels of investment contemplated to be made during the second Plan period came into play, the new company registrations once again started their upward journey from 1957-58 onwards. Finally, at the end of the second Plan period, the level of new registrations was nearly double that of the first year of the second Plan period and considerably higher than the annual registrations of the first Plan period excepting the first year of the first Plan which was marked by the tapering end of the inflated level of registrations of the post-World War II period. Thus, while the trend of the first Plan period was downwards, it was distinctly upward during the second Plan period. The annual trend in the new company registrations during the first and second Plan periods is shown in table 2 given below:

TABLE 2

New Registrations During the First and Second Plan Periods

(Authorised capital in crores of rupees)

Period	Public companies		Private companies		Total	
	No.	Authorised capital	No.	Authorised capital	No.	Authorised capital
		Rs.		Rs.		Rs.
1951-52	568	72.10	1,298	80.20	1,866	152.30
1952-53	287	21.10	1,046	75.30	1,333	96.40
1953-54	204	22.90	989	132.50	1,193	155.40
1954-55	211	160.50	992	50.50	1,203	226.00
1955-56	186	67.90	1,202	89.00	1,448	156.90
1st Plan Total ..	1,456	353.50	5,587	433.50	7,043	787.00
1956-57	84	54.10	764	156.50	848	210.60
1957-58	65	52.70	896	50.00	961	102.70
1958-59	58	58.70	1,037	225.70	1,095	284.40
1959-60	87	67.10	1,365	93.40	1,452	160.50
1960-61	163	157.20	1,530	129.50	1,693	286.70
2nd Plan Total ..	447	389.80	5,592	655.10	6,039	1,044.90
1st and 2nd Plan Total ..	1,903	743.30	11,179	1,088.60	13,082	1,831.90

Note:—Figures of authorised capital of newly registered companies in this table and elsewhere in these articles relate to the tune of registration of companies and do not cover subsequent increases.

Quantum of Capital Raised by New Companies

Unlike the World War II and post-war floatations, the new companies set up during the two Plan periods set about raising the requisite capital for their business in right earnest. Detailed statistical information on this point is available for the second Plan companies. During the second Plan period, as said above, there has been a maximum increase in the paid-up capital of all companies at work to the tune of Rs. 700 crores, of which Rs. 268 crores were raised by the private sector companies and Rs. 432 crores by the Government companies. Of the total increase of Rs. 700 crores, Rs. 161 crores have been raised by the companies formed during the second Plan period, that is to say, a little over one-fifth of the total increase in the paid-up capital was raised by the new floatations and four-fifths by the companies established earlier to the second Plan period. Out of this total amount of capital raised by the second Plan period companies, Rs. 85.3 crores were effected by the private sector companies and Rs. 75.7 crores by the Government companies. Thus, in the total capital raised by the second Plan period companies, the shares of the private sector companies and the Government companies work out to 53 per cent and 47 per cent, respectively; and in the total overall increase in capital effected by the private sector companies and the Government companies at work at the end of 1960-61, the shares of the second Plan period companies belonging to the two categories work out at 32 per cent and 18 per cent, respectively.

Giant Floatations

Out of 13,082 newly formed companies during the first and second Plan periods, 304 were giant incorporations formed with an authorised capital of Rs. 1 crore or more, each. The total authorised capital of these giant floatations aggregated Rs. 1,278 crores accounting for nearly 70 per cent of the total authorised capital of all companies floated during the two Plan periods. The number of giant floatations during the first Plan period totalled 106, whereas in the second Plan period their number was 198. The respective authorised capital of these giant floatations totalled Rs. 510 crores and Rs. 768 crores, respectively. Of the 304 giant floatations, 205 were public floatations, of which 78 were incorporated during the first Plan period and 127 during the second Plan. The total number of private companies of such size during the 10-year period was 99, of which 28 were incorporated during the first Plan period and 71 during the second Plan. The largest number of giant public floatations was registered during the last year of the second Plan period, namely, 1960-61, when they numbered as many as 67. Likewise, the number of private floatations of such size was also highest in the same year, the number being 22. Giant-sized public and private companies together totalled 89 during the year 1960-61 which was double the number of the earlier highest total of such floatations during the planning decade. The following tables 3 and 4 summarise the statistical position of giant floatations during the first and second Plan periods:

TABLE 3

Giant Floatations During First Plan

(Authorised capital in crores of rupees)

Period	Number of companies and authorised capital					
	Public		Private		Total	
	No.	Authorised capital	No.	Authorised capital	No.	Authorised capital
		Rs.		Rs.		Rs.
1951-52	16	41.2	5	34.0	21	75.2

TABLE 4

Giant Floatations During the Second Plan

(Authorised capital in crores of rupees)

Period	Number of companies and authorised capital					
	Public		Private		Total	
	No.	Authorised capital	No.	Authorised capital	No.	Authorised capital
		Rs.		Rs.		Rs.
1956-57	16	44.0	12	124.5	28	168.5
1957-58	17	48.0	11	18.0	28	66.0
1958-59	9	59.0	13	187.2	22	246.2
1959-60	18	63.0	13	34.5	31	97.5
1960-61	67	187.0	22	58.8	89	195.8
Total ..	127	345.0	71	423.0	198	768.0
Total for 2 Plan periods ..	205	603.3	99	675.0	304	1,278.3

Of the 304 giant-sized companies floated during the first and second Plan periods, 43 were Government companies incorporated with a total authorised capital of Rs. 689.0 crores which accounted for 54 per cent of the total authorised capital of all the giant-sized floatations during the two Plan periods and for 38 per cent of the total authorised capital of all the newly formed companies of the period. Of the 43 giant-sized Government companies, 14 companies were set up during the first Plan period and their total authorised capital aggregated Rs. 405.50 crores out of the total authorised capital of Rs. 510.3 crores for all the giant-sized companies of the first Plan period. Twenty-nine giant-sized Government companies were formed during the second Plan period and their combined authorised capital came to Rs. 283.5 crores out of Rs. 768.0 crores for all the giant-sized companies formed during the second Plan period. It will thus be seen from these figures that the attempts of the Government to enlarge the size of the public sector became quite conspicuous during the second Plan period. It may be pointed out here that the "Government colossus" of the corporate sector, namely, the Hindustan Steel Private Limited was formed during the first Plan period initially with an authorised capital base of Rs. 100 crores which was subsequently raised to Rs. 300 crores. Apart from the Hindustan Steel Private Limited, the other important new giant-sized companies in the first Five-year Plan period were Nangal Fertilisers and Chemicals, the Sindri Fertilisers and Chemicals, the Durgapur Iron and Steel Works, Burmah-Shell Refineries, Industrial Credit and Investment Corporation of India. Of these, the first two were promoted and set up by the Government, while the other three by the private sector. The first two companies have recently merged into one single company. It may be mentioned that, in the formation of the last one, Central Government took a very active interest. Durgapur Iron and Steel Works was later put into liquidation. Each of these five companies had an authorised capital of Rs. 25 crores and more.

The most conspicuous instances of giant floatations in the second Plan period are Heavy Engineering Corporation, National Coal Development Corporation, Heavy Electricals, Neyveli Lignite Corporation, Refinance Corporation for Industry and Oil India Company. Each of the above companies has been registered with an authorised capital of Rs. 25 crores or more. Excepting one company, namely, the Oil India Company in which the Government's share was limited to one-third (now raised to 50 per cent under the recent agreements signed with the Burmah Oil Company) and the Refinance Corporation for Industry, all other companies mentioned above were set up by Government. Thus, it is clear that the biggest among the giant floatations during the two Plan periods were State creations and the size of the biggest in the private corporate sector was considerably smaller than that of the Government companies. During the second Plan period, the big private promotions are India Re-Insurance Corporation, India Rayon Corporation, South Indian Viscose, Baroda Rayon Corporation Ltd., Hindustan Aluminium Corporation, A.C.C.-Vickers-Babcock, Greater Mysore Rayon Grade Pulp and Paper Mills, Synthetics and Chemicals Ltd., Seshasayee Paper and Boards, Madras Aluminium Company, Cibatul and Chemicals and Fibres of India.

THE INDIAN IRON & STEEL COMPANY LIMITED

RECORD OUTPUT, BUT NO POSSIBILITY OF ACHIEVING PLAN TARGET

RAW MATERIAL SHORTAGE—SIR BIREN MOOKERJEE'S SUGGESTIONS FOR DEVELOPING EXPORT MARKET

The following statement by Sir Biren Mookerjee, Chairman of the Indian Iron and Steel Company Ltd., dealing with the Company's working for the year ended 31st March 1961, has been issued to shareholders. The Annual General Meeting of the Company will be held on Tuesday, the 5th September 1961, at 3 p.m., at the Royal Exchange Hall of the Bengal Chamber of Commerce and Industry, 6, Netaji Subhas Road, Calcutta-1.

"PRODUCTION of iron for the year at 1,160,576 tonnes and of steel ingots at 914,159 tonnes showed an improvement over the previous year and constituted a fresh record for the Company. As will be seen from the report of your Directors, there are however no grounds for complacency for with the serious deterioration in the quality of raw materials, there can, under existing conditions, be no possibility of achieving the output envisaged at the time the expansion of our plant was planned, and in fact serious difficulties are foreseen even in maintaining production at the 1960-61 level.

Accounts

"In a consideration of the financial accounts for the year under review it should be borne in mind that the results disclosed are based on provisional steel sales realisation figures which are subject to revision according to the decision of Government on the pending enquiry by the Tariff Commission as to the steel retention prices to apply from the 1st April, 1960. To obviate hardship while the matter is under reference, Government have granted a provisional price increase as from the 1st April, 1960, but the true results for the year can naturally not be known until the final revised steel retention prices have been determined.

"Nor can too much be built on any comparison of the provisional profit for the year with the profit of the previous year for previous sales figures, and in consequence previous profits, were distorted by the method adopted under the five-year price fixation that expired at the 31st March, 1960 of compensating the limited items of cost increases for which the Company, under its agreement with Government, could claim adjustment. Under this method, with the exception of the increase of the steel excise duty, compensation for an increase of cost was effected not by increasing correspondingly the retention prices from the date of such increase, but by averaging the incidence of the increase over the whole five-year period with retrospective effect. The result was accordingly that, while in total full compensation was effected, a part of the compensation was in fact assigned to a period before the increase in cost took place with corresponding reduction of the benefit to the subsequent period. The tendency was therefore to increase the profits of the earlier years and decrease those of the later years, the effect being of course most marked in the last year of the price fixation period, namely, the year 1959-60.

Retention Prices

"It will also be appreciated that, while giving a correct result in total, the effect of averaging the price increases over the five years was that the adjusted retention prices current from time to time during the period did not reflect the full amount of the cost increases, the shortfall gradually increasing over the period to a maximum in 1959-60. The new retention prices to be fixed from the 1st April 1960 must naturally include the full amount of the cost increases and from that date there must therefore on this account alone be a considerable apparent increase in the retention prices which in fact represents no additional benefit to the Company. Viewed against this background it will be seen that, so far as the Company is concerned, the provisional price increase granted by Government pending enquiry by the Tariff Commission represents an effective increase falling far short of the amount by which the retention prices have actually been raised. In the opinion of your Directors, a larger increase is warranted by the circumstances of the case and the matter will be fully represented to the Tariff Commission in the course of its enquiry.

Production Difficulties

"In view of my opening remarks regarding the present impossibility of achieving the iron and steel output envisaged under our expansion programmes and the difficulties of maintaining production even at the 1960-61 level, I should perhaps explain, in as simple terms as possible, what in fact are these difficulties with which we have to contend.

"The main difficulty is the extremely high and varying ash content in presently available metallurgical coal coupled with erratic supplies and the fact that, owing to the transport position, our stock of coal is diminishing so severely that, unless the position rapidly improves, we shall be forced to curtail the production of iron. Even given adequate quantity of coal in total, regularity of supply and transport from the no less than twenty-three different collieries over which our requirements have now been compulsorily spread is a further essential without which we are unable to blend the coal to effect some measure of consistency in working conditions. The consequence is that not only is the ash content of our coke ridiculously high but that this ash content varies widely from day to day with inevitable prejudicial effect on production. Under normal circumstances, we would select our coal supplies to give the lowest ash consistent with the desired volatile content to suit the designed operation of our coke ovens. Conditions are such, however, that we have been forced in large measure to disregard volatile content and to concentrate on ash content, having regard to blast furnace practice. This position is most unsatisfactory as regards the operation of our coke ovens and is necessarily a cause of considerable concern on this account.

"A high ash content in the coke means increased consumption of coke to attain the blast furnace operating temperature and in consequence a larger volume of slag produced. Since the cubic capacity of a blast furnace is constant, a larger volume of slag means in turn a reduced volume of iron produced. This high ash content makes additionally for very difficult operational conditions, and I think I may claim that in the history of blast furnace operation we have the doubtful honour of being pioneers for never before, to my knowledge, has such high and fluctuating ash coke been charged to blast furnaces as is at present the case at Burnpur.

Quality of Raw Materials Not Uniform

"The plea of our operational executives is that, if the quality of raw materials must be bad, then at least let it be regularly bad, for in that case, whatever the difficulties, some measure of consistency of operation could be achieved. This, however, the erratic transport position effectively precludes and, with the daily fluctuations, it becomes impossible to produce a standard grade of iron, a position which is still further prejudiced by the present severe deterioration in the quality of limestone supplies, the percentage of free lime varying between 42 per cent and 24 per cent.

"The tale then moves to the Melting Shop where consistency of quality of steelmaking iron is an essential for efficient working. With this consistency lacking, with some inevitable carry over of slag from the blast furnaces and with excessive impurities, in particular sulphur, in the hot metal, production difficulties become acute. Furnace time per melt is increased with consequent loss of production and operational temperature has to be increased leading to burning out of refractories and a consequent increase in the time the furnaces are out of commission for re-bricking. The excessive sulphur content of the hot metal is a source of serious difficulty in the Melting Shop practice. This perhaps could, at a price, be overcome by adoption of the expensive soda ash refining process but the position is that adequate supplies of soda ash are not locally available.

"Until therefore the raw materials position improves, which, I fear, cannot be for some years to come, operation must perforce be carried on under extremely difficult and restrictive conditions. In fact, it would seem that, before improvement takes place, the position must yet further deteriorate, for there remain still three more blast furnaces to be brought into operation in the public sector plants. I view with the greatest disquiet the consequences of this impending further demand in relation to the existing shortage of coal and transport.

"I would make it clear that we have abundantly proved that, given working conditions in any way approaching those assumed at the time the extensions were planned, our plant, as now expanded, possesses the full designed output potential. This has been conclusively demonstrated on those unfortunately rare occasions when a combination of fortuitous circumstances has enabled us to operate temporarily under reasonably normal conditions.

Export of Steel

"India, at present, stands on the threshhold of a golden opportunity to secure a place for herself in the world market for steel. It is now for the Government advantageously to utilise this position and thereby tap a vast source for earning the foreign exchange which is so vital to the progress of the country. I shall therefore attempt briefly to describe the difficulties to be surmounted in marketing Indian steel even in the nearest neighbouring countries, for unless adequate measures are taken immediately there is, in my opinion, grave danger of allowing this opportunity to escape.

"In most of the underdeveloped or developing countries there is almost a greater hunger for iron and steel, judging by the policy of their leaders, than for food and many other necessities of life. East of Suez and in most parts of Africa, there is a vast and growing demand for iron and steel at present. India is in an enviable position to meet these requirements, being basically one of the cheapest producers of iron and steel in the world, having been abundantly endowed by nature with practically all the essential raw materials and the manpower. This position is, however, obscured by the inflation of production costs by the large contributions which directly or indirectly are levied on the industry for the benefit of Governmental revenues.

"Our iron ore resources are said to be not only practically inexhaustible but also of the highest quality. Yet, for the reason I have mentioned, we find ourselves in the unfortunate position of being outpriced in so far as our competitive position is concerned *vis-a-vis* the other exporting countries of the world except, perhaps, the U.S.A. I will illustrate my remarks with facts for your information so that it may be judged how we stand in regard to export. Taking two of the common categories, which India can immediately afford to export, namely, 'Light Bars' and 'Structurals,' the build-up of the approximate landed cost of these materials at Karachi, Colombo or Singapore from various sources is as follows:

TABLE No. 1

Comparison of Indian Steel Prices with Domestic Prices Abroad

(Rs. per metric tonne)

	U.K.	Germany	Belgium	U.S.A.	Japan	India
	1	2	3	4	5	6
Light bars ..	520	507	513	709	470	636
Structurals ..	502	515	521	686	518	645

Prices 1 to 4 are based on the (U.K.) Iron and Steel Board's Annual Report, 1960, published on 30th June 1961. Japan's price is based on Metal Bulletin, March 30, 1961.

TABLE No. 2

Approximate Average Freight rate to Karachi, Singapore or Colombo from the following exporting countries

1. U.K., Germany, Belgium ..	£4.5	= Rs. 60/-	per tonne
2. U.S.A.	$20	= Rs. 90/-	"
3. Japan		= Rs. 70/-	"
4. India		= Rs. 50/-	"

TABLE No. 3

Indian Steel Prices effective from April 1960

(Rs. per metric ton for tested quality)

	Light bars Rs. (M. ton)	Structurals Rs. (M. ton)
1. Selling price to consumers at all railheads in India	636	645
2. Government surcharge including freight equalisation amount	100	126
3. Retention price allowed to main producers (1—2)	536	519
4. Freight including adjustment for the equalisation fund, from works to docks ..	40	40
5. Incidental charges	5	5
6. Approximate freight from Calcutta to Colombo, Singapore, Karachi	60	60
*7. Landed cost at Karachi, Colombo or Singapore	641	624
8. Rebate of excise duty allowed to main producers in prices for export	53	53
9. Landed cost less rebate allowed at present.	588	571

* Shipping and hoisting charges, river dues and other Port Commissioners' charges are not included.

TABLE No. 4

Approximate C. & F. prices of Steel from various countries to Colombo, Singapore or Karachi

(Rs. per metric ton)

	U.K.	Germany	Belgium	U.S.A.	Japan	India
1. Light bars ..	580	567	573	805	540	641 (unrebated) 588 (rebated)
2. Structurals ..	562	575	581	782	588	624 (unrebated) 571 (rebated)

"In this comparison, retention prices have been used for Indian steel as these prices are realisable and reflect the minimum prices at which producers can afford to export. Additionally, remuneration has to be allowed for agents and/or producers' representatives or branch offices to cover the expenses, if they are to handle the business. Furthermore, the retention prices quoted in the above comparisons are current provisional prices only which must be increased, on finalisation, due to increased cost of production and overheads. It will thus be seen that, even after deducting the rebate of excise duty of Rs. 53 per metric ton allowed to the exporters in India, they are not at all happily placed in comparison with the U.K., Germany, Japan and Belgium. It is therefore very important that the gravity of the situation should be realised and that suitable steps should be taken by Government to stabilise conditions to create and increase competitive power so that it will be possible and practicable for the producers of steel in India to export. We must aim to enter the export market before our competitors have time to monopolise it and it may be that the country should, if necessary, starve itself temporarily and export rather than wait for the not-far-distant-time when surplus production is available. Opportunity may not knock at our door again in future.

Incentive for Export

"The Government at present allows an export rebate of approximately Rs. 53 per metric ton of finished steel equivalent to the excise duty levied on the steel ingot. From the figures quoted above, it will be seen that, even after taking advantage of the rebate so allowed by Government, the Indian producer cannot compete with the prominent steel exporting countries, namely the U.K., Japan, Belgium and Germany. To strengthen the position of the Indian producer, I feel that Government should give serious consideration to the adoption of measures which will enable the producers to reduce their production cost as much as is possible under present working conditions. These measures would include improvement of transport facilities, establishing of coal washeries, stabilisation of labour costs and regularisation of supply of raw materials and fluxes—matters which I will refer to in more detail at a later stage. Further incentives might be offered by way of rebate in the railway freight, remission of certain levies and taxes imposed by the State and Central Governments and reduction in the Port Commissioners' charges. The Government Inspectorate (D.G.S. & D.) might also be required to inspect the materials for export expeditiously and at nominal cost. The exporters should be allowed to retain any additional money they are able to realise over and above the incentives offered by the Government by virtue of their business acumen. This would enable the producers to establish and maintain their offices abroad or to appoint agents. It must be borne in mind that for every ton of steel that is exported, foreign exchange, which is needed so badly, would be earned to the extent of £40 to £45. It is not with any motive for profit that I am suggesting increase in the incentives. The effective incentives will provide a cushion against the possibility of intensified competition by our foreign rivals. I would add that since regularity of supply would be a pre-requisite to the building up of an export market there should be no limitation to the export of certain categories of steel for which India has established adequate and probably surplus capacity, namely structurals and bars.

Labour

"I referred last year to the persistent rise in our works cost despite the increase in our production. Much of this increased cost is due to the severe Governmental revenue imposts inflicted on industry in the shape of excise duties, increased customs duties, cesses, sales tax and the like, which, either directly as in the case of the steel excise duty, or indirectly by their effect on the delivered cost of goods, enter into our cost of production. Outside these items, however, perhaps the most serious single factor is the persistent and inflationary rise in labour costs which again reflects directly or indirectly on our cost of production.

"Labour in the Indian steel industry is better off, by and large, than similar labour employed in other industries in the private sector and in all industries in the public sector. As I pointed out in my statement last year, we in India suffer from a malignant disease which thwarts our efforts even for the stabilisation, much less the reduction of labour costs, namely, the system of automatic annual increments, as opposed to an assigned pay for each job, and of enforced increases in the rates of wages, allowances and incentive bonus. It must be remembered that any increase in basic wages is not confined to the amount of such increase, for the effect snowballs by reason of consequential increase in overtime, incentive bonus, provident fund, bonus, retiring gratuity, State insurance contributions etc. If the Government fails to stabilise labour costs at this juncture, it will perhaps be impossible for the country even to be in a position to export any sizable quantity of steel.

"Coupled with and directly bearing on the pay to be assigned to a job is the question of manning. In our own case, we are at present compelled to employ at least twice as many men as are necessary having regard to the almost complete mechanisation of our plant, and to keep them in employment irrespective of our needs or of our costs.

Ceiling on Labour Cost

"I would make it clear that I do not for one moment suggest the imposition of a ceiling on the income of any workman. What I do suggest however is in effect a ceiling on the labour cost per ton of output, which is a vastly different matter. If Industry is to continue to suffer from over-manning and low productive effort, then wages cannot be increased without inflation and loss of competitive power in world markets. Given the opportunity the Indian workman can hold his own with the workman of any other country and with reasonable manning and a link of wages with production, there is scope for very great improvement in individual earning power. Without this link, however, chaos only can result and yet it would appear that this essential has up to now been overlooked and that industrial labour, which forms only a fractional part of the population of the country, has been singled out for the conferrment on it of benefit after benefit irrespective of productive effort or economic manning.

Transport

"The present shortage of transport is one of the most serious causes standing in the way of achievement of the planned targets for industry, impairing productive efficiency and raising all production costs. It is the primary duty of Government to develop as expeditiously as possible the availability of transport. Heavy industries, particularly the iron and steel industry, have to follow a continuous process of manufacture. Any shortage, interruption, irregularity or disorder in the transportation and delivery to the works of the necessary materials in proper sequence leads to heavy loss of production. It is our bitter experience that raw materials are not received at the Works to our scheduled programme because of the shortage of railway rolling stock. Deficit of wagon placements builds up and is corrected by a sudden inflow congesting the internal traffic arrangements of the Works and taxing our unloading facilities to the utmost. The position is at all times aggravated by the number of wagons of unsuitable type that are allotted. Although our mechanised coal handling plant was, with the concurrence of the Railway Board, laid down on the understanding that at least 90 per cent of our coal supplies would be in open 4-wheeler wagons, we now receive approximately 60 per cent only in open wagons and the balance in covered wagons, with the result that our mechanised equipment stands partly idle and we have to revert to the outdated method of handling coal by manual labour. By giving us more covered wagons than we can handle each day, the Railways create periodic congestion in the Exchange Yard and advantage is at times taken of this congestion as an excuse to apply a cut on further allotments. It is clear that there is a very grave shortage of open wagons in the transport system.

"Similarly, when iron ore should be brought in BOBS wagons we are forced to accept BOX wagons which disrupts the internal handling and transport arrangements in our Works and increases our cost of handling. BOBS wagons were designed for bringing iron ore to our Works and our mechanical handling equipment in turn was, again with the approval of the Railway Board, designed to handle these wagons only. There are instances when only 60 per cent of our requirements of BOBS wagons have been met in a month and we have had manually to unload and load to and from stock extremely heavy quantities of iron ore, putting a tremendous strain on our labour resources. It is essential that immediate steps be taken by the Railways to increase the number of BOBS wagons in service.

Wagon Shortage

"The railway staff have a very difficult task to perform and I willingly acknowledge that they have been doing their best to endeavour that supplies to the steel works do not suffer. But what can they do when the wagons are physically not there? Pressure on carrying capacity is so great that it appears that, in an endeavour to meet requirements, large numbers of condemned wagons are being retained in service for we ourselves receive many with mechanical defects and in a bad general state of repair, with the result that either we are unable to utilise these wagons for outward traffic or can only so utilise them after effecting emergency repairs ourselves.

"It is for Government to take suitable and immediate measures to make good the shortage of wagons in general and in particular of wagons of the right type for the steel industry. In this connection I understand that some of the wagon manufacturing concerns are working only to 40 per cent of their capacity due to shortage of matching steel and some bought out steel castings such as axle boxes. This is a position which in the national interest should obviously be corrected so that the indigenous wagon building capacity may be utilised to the fullest extent to meet the emergency.

"The magnitude of the transport problem can be easily visualised in so far as the iron and steel industry is concerned, if it is kept in mind that under present day conditions the total quantity of raw materials to be transported to each works in order to produce one ton of ingot steel is in the neighbourhood of five tons Taking six million tons of ingots as the estimated present installed annual production capacity of the main producers, this means that 30 million tons of raw materials are to be transported annually to their works. To this must be added the transport requirement for the production of one million tons of foundry iron, say an additional five million tons of raw materials per annum. In addition, there will be about 4.5 million tons of semis and finished steel together with one million tons of pig iron to distribute all over the country. I have not taken into account the transport required for movement of foodgrains and other consumable items and stores, bricks, cement and sand which are all essential for those persons dwelling in the surroundings of the steel works, who constitute a large and fast growing population.

Coal

"So many complaints have been made by the consumers of coal and so many unfulfilled promises have been made by the Government to meet such complaints that it is not necessary for me now to repeat them in this statement. All I say is that, before launching on such a vast scale development of the iron and steel industry and the inclusion of some State collieries, steps should have been taken to see that sufficient coking coal would be available to meet the requirements of these plants.

"Simultaneously with the shortage of the quantity of coal there has also been a continuous deterioration in its quality, the ash content sometimes reaching as high as 27 per cent. This has, on the one hand, considerably increased the cost of iron by larger consumption of the consequently inferior coke per ton of iron, and, on the other,

has retarded the productivity of the Blast Furnaces and thereby reduced the available productive capacity of iron and steel in this country.

"I gratefully acknowledge the assistance that has at all times been afforded by the Coal Controller who has been doing his utmost to help the industry in the face of a series of adverse circumstances over which he has but little control. The inadequate supply of wagons to the collieries by the railways, the collieries not supplying the proper grade of coal they are expected to, the inadequacy of sufficient washed coal to meet the requirements of the steel works, are some of the problems which confront the industry. A further review by Government of these problems and also of the overall development of the coal resources of the country is essential if the steel works both now and under the third Five-year Plan are to have normal facilities to enable them to achieve their planned production capacities.

Coal Washeries

"In this connection, I have to emphasise that there has been a lamentable delay in the provision of coal washeries so necessary for reducing the quantity of ash and otherwise improving the quality of coking coal. We ourselves are particularly adversely placed in regard to supply of washed coal as the washed coal received by us at present constitutes only 7 per cent of our total requirements of coking coal, whereas, it is understood, the programmed figures for other producers are as follows:

(Percentage of total requirement of coking coal)

T.I.S.Co.	...	...	...	55
Durgapur	...	...	...	37
Rourkela	...	...	...	37
Bhilai	...	...	...	34

The programmed quantity in our case is only 10 per cent compared to the other steel works. By and large, even the unwashed coal received by the other steel works is by fortuitous circumstances of a better quality than that which we receive despite the co-operative assistance of the Coal Controller. The importance of establishing additional washeries of adequate capacity cannot, therefore, be over-emphasised.

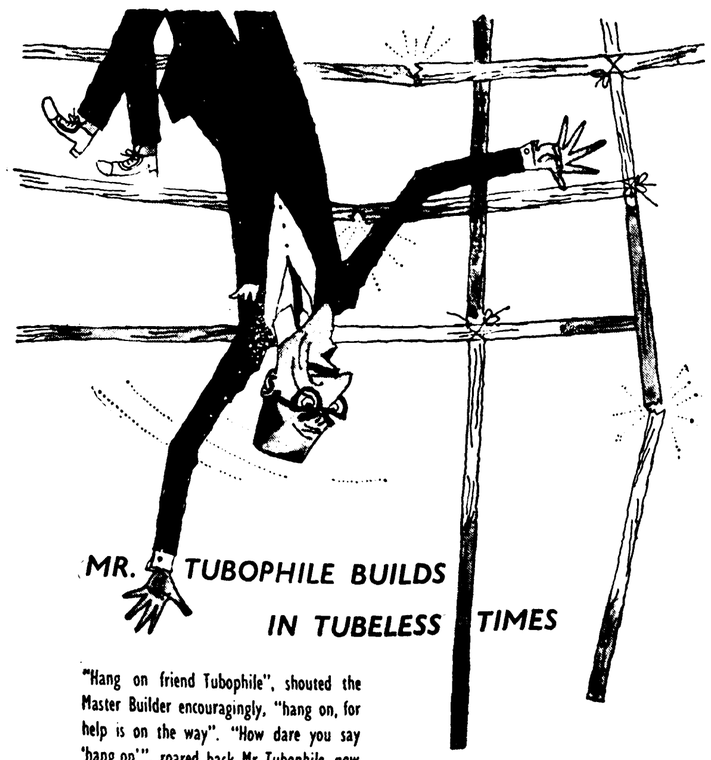
Fluxing Materials

"It is regrettable that competition has recently developed for supplies of limestone for fluxing purposes brought about by the lack of planning on the part of the public sector steel plants which has created a position of scarcity for this material. Due to these circumstances, even inferior grade material, with a high percentage of insolubles, which normally would not have been acceptable by the steel works, has perforce had to be consumed. Difficulties are intensified partly due to the railways not providing adequate transport to the regular suppliers and partly because of the indifferent attitude of the suppliers to meet their commitments. There are ample reserves of good quality fluxing materials in India though away from present railheads and if steps had been taken by the Government to develop these sources and install the necessary transport facilities the position would not have deteriorated to the present extent. Recently, there was a case in which the public sector entered into competition with the private sector for the purchase of limestone and agreed to pay a price much higher than that being paid by the private sector. This naturally resulted in the producers of limestone asking the latter for a corresponding increase. Unthoughtful actions of this nature on the part of the public sector can lead only to a spiralling of prices of raw materials and intensification of inflationary trends.

Acknowledgments

"In conclusion I would express, on behalf of your Directors, our appreciation of the services rendered by the General Manager, Mr. J. McCracken, and his executive staff throughout the year. The production achieved in the face of the constant operational difficulties I have outlined is itself testimony to these services, and while it is perhaps invidious to make distinction where so much depends on team-work, I feel I should make special mention of the Blast Furnace and Steel Melting Shop supervisory staff who have so ably faced up to the problems with which they have been, and continue to be, confronted in the maintenance of production under existing conditions."

The above statement is not a document purporting to be a report of the proceedings of the annual general meeting.



"Hang on friend Tubophile", shouted the Master Builder encouragingly, "hang on, for help is on the way". "How dare you say 'hang on'", roared back Mr Tubophile, now beginning to purple, "that's precisely what I am doing—hanging on—and that for dear life, from your rotten scaffoldings. By the sacred crocodiles of the Nile, never again will I undertake a building job in tubeless times. No future in it, except a chance to break your neck. Call yourself a Master Builder! The cheek of it when you haven't the wit to use safe and sound tubular steel scaffolding. Could have done the job in half the time and no risks attached. Lucky for you Master Builder, there are no Workers' Unions in your tubeless Egyptian times. Or you would have been for the high jump too. As for me, no more building without tubular steel scaffolding. Now get me down from here."

EMPLOYMENT AND LABOUR POLICIES IN THIRD PLAN

FULL EMPLOYMENT STILL A FAR OFF GOAL

EMPLOYMENT and labour policies, as enumerated in the final version of the third Plan, broadly conform to the general pattern sketched in the Draft Outline. Barring a minor revision in the employment target necessitated by the latest census and some shift of emphasis in certain matters of detail rather than of principle, there is no major modification in the policies and programmes embodied in the Plan. Hence, the employment position at the end of the Plan envisaged by its authors is no more encouraging than that visualised in the Draft Outline. In fact, should there be a shortfall in the employment target, as was the case with the second Plan, the Plan should end up with a backlog of unemployment very much larger than the 12 million envisaged therein, as against 9 million remaining unemployed at the end of the second Plan, not to speak of 15-18 million persons remaining underemployed.

It was estimated in the Draft Outline that new entrants to the labour force during the third Plan period would be of the order of 15 million and it was pointed out therein that, if deterioration in the employment situation were to be avoided, additional employment opportunities of this order would have to be found during the Plan period. The latest census proved this calculation to have been an underestimate. Based on such data as were available to them, the authors of the Plan have now estimated that the addition to the labour force during the Plan period might be of the order of 17 million. The backlog of unemployment at the end of the second Plan is reckoned at 9 million comprising 5.3 million remaining unemployed at the beginning of the Plan, 1.7 million being the larger increase in labour force during the second Plan period than had been anticipated earlier and the estimated shortfall in the employment target originally proposed for the second Plan of 2 million. Additional employment needed during the Plan period to wipe out the backlog of unemployment and to absorb the new entrants to the labour force, therefore, works out to 26 million. Creation of employment opportunities of such a magnitude is next to impossible and the authors of Plan do not profess to set that as the objective. Their aim is more modest, to prevent the unemployment situation from deteriorating further. Even this is not an easy task. It calls for the creation of employment opportunities sufficient to absorb the 17 million persons entering the work force during the plan period. It is estimated that, as a consequence of the Plan programmes, employment opportunities of order of 14 million (3.5 million in agriculture and 10.5 million outside agriculture) will be created. Additional employment for 3 million persons will still have to be found during the Plan period to absorb the new entrants to the labour force completely, leaving aside the backlog of unemployment at the end of the second Plan. This is considered to be an essential objective in the third Plan.

Three Approaches

The problem is proposed to be approached along three main directions. First, within the framework of the Plan, efforts would be made to ensure that the employment efforts are spread out more widely and evenly than in the past. Secondly, a fairly large programme of rural industrialisation would be undertaken, with special emphasis on programmes of rural electrification, development of rural industrial estates, promotion of village industries and effective re-deployment of manpower. Thirdly, in addition to other measures for increasing employment through small industries, rural work programmes, which will provide work for an average of, say, 100 days in the year for about 2.5 million persons or more, will be organised. These programmes, especially the proposal for rural works, will assist the general mass of the population and will also provide increased job opportunities for the educated unemployed. Even if it were possible to provide part-time jobs for three million people in the ways mentioned above, it is needless to add, the backlog of unemployment at the end of Plan period would still be 9 million persons, assuming—this is a big assumption—that the employment objectives of the Plan were fully realised.

Provision of employment opportunities to all those who are able and willing to work is only a part of the problem of optimum utilisation of the resources of the country. Unless peaceful conditions of work are also created, the Plan objective of increasing output and improving the standard of living would not be achieved. It is for this purpose that a rational labour policy needs to be pursued. In order to create conditions for the peaceful functioning of industries, the Government has, over a decade, taken upon itself the responsibility of providing facilities for amicable settlement of industrial disputes and has assumed powers of intervention for the purpose of maintaining industrial peace. Provision has been made for conciliation of disputes and for enabling the State to refer unresolved differences to tribunals set up for the purpose. Stoppages of work after a reference and any contravention of awards and agreements have also been made illegal. This system has helped to check the growth of industrial unrest and has brought for the working class a measure of material advancement and a sense of security. At the same time, the spirit of litigation has grown and delays attendant on legal processes have given rise to widespread dissatisfaction. In the course of the second Plan, a new approach was introduced to counteract this unhealthy trend and give a more positive orientation to industrial relations based on moral rather than legal sanctions.

Code of Discipline

A Code of Discipline in Industry, voluntarily accepted by all the central organisations of workers and employers, has been in operation since 1958. The Code lays down specific obligations for the management and workers with the object of promoting constructive co-operation between their representatives at all levels, avoiding stoppages as well as litigation, securing settlement of disputes and grievances by mutual negotiation, conciliation and voluntary arbitration facilitating the free growth of trade unions and eliminating all forms of coercion and violence in industrial relations. The stress now is on prevention of unrest by timely action at the appropriate stages and giving adequate attention to root causes.

Two lines of advance made during the second Plan period deserve special mention. They are: (1) the scheme of labour participation in management to give workers a sense of belonging and to stimulate their interest in higher productivity; and (2) the programme of workers' education, comprising training of teacher-administrators and worker-teachers.

The development of industrial relations during the third Plan, the authors of the Plan point out, rests on the foundations created by the working of the Code of Discipline which has stood the test of time during the last three years. In spite of the fact that the Code has been fairly successful in creating some awareness among the employers and workers of their obligations towards each other, a full awareness of the obligations under the Code has to extend to all the constituents of the central organisations of employers and workers and it has yet to become more and more a living force in the day-to-day conduct of industrial relations. In order to make the Code more effective, sanctions on which it is based will have to be reinforced with the consent of the parties. The Plan envisages the following measures for promoting better industrial relations during the Plan period.

Proposed Measures

1. Ways should be found for increasing the application of the principle of voluntary arbitration for resolving differences between workers and employers. Steps will be taken to remove hindrances in the way to a fuller recourse to voluntary arbitration. The same protection would be extended to proceedings in this case as is now applicable to compulsory adjudication. Government would take the initiative in drawing up panels of arbitrators on a regional and industry-wise basis.

2. The scheme of workers' participation should be extended to all establishments in the public as well as private sector in which conditions favourable to the success of the scheme exist. A primary test of eligibility is presence of goodwill on both sides. Wherever a representative union exists, a Joint Council should come into being as a matter of course. An intensive programme of workers' education should be undertaken in all the establishments when such Councils are set up.

3. Works Committees should be strengthened and made an active agency for the democratic administration of labour matters.

4. The programme of workers' education should be expanded on a large-scale.

The authors of the Plan have stressed the need for considerable readaptation in the outlook, functions and practices of trade unions to suit the conditions which have arisen and are emerging. Trade union leadership, it is pointed out, has to grow progressively out of the ranks of workers and this progress will be greatly accelerated as the programme of workers' education gathers momentum.

Productivity

There has been a welcome recognition of the value of higher productivity in the Plan as the following words clearly indicate:

"Neither the exercise of their organised strength in industrial conflicts, nor laws and the intervention of the State can help the workers much in realising their aspirations. Their gains can arise only out of the strength and dynamism of the economy, the only enduring basis of which is a rising level of productivity. No increase in profits, which does not come out of improvements in productivity but has its origin in current scarcity and the stresses of development, can be regarded as a sign of prosperity. Productivity has many facets and it suffers because of the one-sided and rigid approach which is frequently adopted in dealing with it both by the employers and the workers. Rationalisation of effort in every direction is the true basis of productivity. The term has often been wrongly associated with increase in workloads and added strain on workers in order to swell the volume of private gains. Large gains in productivity and an appreciable reduction in unit costs can be secured in many cases without causing any detriment to the health of the workers and without incurring any large outlays. . . ."

". . . For the workers no real advance in their standard of living is possible without a steady increase in productivity, because any increase in wages generally beyond certain narrow limits would otherwise be nullified by a rise in prices. Workers have, therefore, to insist on and not resist the progress of rationalisation in their own interest and in the larger interest of the country."

The pace of development as well as the volume of employment, the authors of the Plan go on to add "rests, to a considerable extent, on the capacity to export in the face of increasing competition. This can be achieved primarily through higher productivity and a measure of sacrifice by the employer, the worker and the rest of the community."

Agricultural Labour

In contrast to the comparative neglect of agricultural labour in the Draft Outline, an entire chapter is devoted in the final version of the Plan to agricultural labour. No spectacular programmes are, however, proposed, nor is the hope of the immediate solution of unemployment among agricultural labour held out. In fact, the planners do seem to have an acute awareness that there is no quick or ready made solution to the problem of agricultural labour. This is evident from their observation that, ultimately, it is by achieving rapid and intensive development in the rural areas as part of the process of development for the country as a whole that the landless section of the population can be substantially benefited. It was found during the first and second Plans that, while special schemes in the interest of agricultural labourers are useful, they could touch only the fringe of the problem. The Plan makes a provision of Rs. 92 crores for *khadi, ambar charka* and village and small-scale industries. All towns and villages, with a population exceeding 5,000 and nearly 50 per cent of villages with a population range of 2,000 to 5,000 are expected to be electrified. The village and small industry programme as a whole is estimated to provide part-time or fuller employment for eight million persons and whole-time employment for about 900,000 persons. Agricultural labourers are expected to benefit from these.

In some ways the most significant development proposed in the third Plan, the benefits of which will go largely to agricultural labour, is the programme for undertaking works projects in rural areas. Under this programme, it is hoped to provide additional wage-employment in rural areas for about 100 days in the year for about 2.5 million persons by the last year of the programme. In a real sense, conclude the authors of the Plan, the problems of agricultural labour are to be traced to be long period of stagnation in the rural economy and the persistence of a rigid social structure largely based on caste. These basic deficiencies, it is claimed, are being removed and the processes of social and technological change are being hastened. A close watch on the progress of agricultural labour would be maintained through special studies and review by the Central Advisory Committee on Agricultural Labour and similar bodies are proposed to be set up in the States also.

THIRD PLAN'S INDUSTRIAL PROGRAMMES

OBJECTIVES AND PRIORITIES ANALYSED

THE third Plan marks the beginning of a new momentous phase in the industrialisation of the Indian economy. It seeks to build up a resilient industrial superstructure on the foundations already laid during the last decade of planning. In the first Plan, it may be recalled, the development programme for industries was mainly directed towards ensuring fuller utilisation of capacities in the already existing industries. Following the successful outcome of the first Plan, a distinctly larger role was assigned to the development of industries in the second Plan. Judged from the progress so far achieved by the metallurgical, mechanical and electrical engineerings as well as chemicals in augmenting industrial potential, and also from the development of heavy machine-building industries under way, it must be conceded that some of the basic conditions required for accelerated growth towards the goal of a self-reliant economy have been established, notwithstanding shortfalls, as compared with the second Plan targets, in several industries like iron and steel, cement, fertilisers, etc. The emphasis in the third Plan, appropriately enough, will be on the development of those industries which will help make the economy self-sustaining, such as steel, machine-building and the manufacture of other producer goods, and reduce as early as possible the need for external assistance to purchase these goods and also ensure a broadening of the export base. The output of consumer goods will also be expanded substantially, mainly in the private sector.

Foreign Exchange

Certain important considerations have weighed with the Planning Commission in assigning priorities both for development of new industries and expansion of existing ones. As regards development of new industries, emphasis has been laid on projects which, by contributing to exports, will earn or, by replacing imports, will save foreign exchange. In the sphere of expansion, priorities are decided on the basis of two factors. In the first place, where there are wide gaps between capacity and production, or where by multi-purpose shift operation or the addition of balancing equipment, it is possible to secure greater output at diminishing cost, fuller utilisation of existing capacity must take precedence over expansion or the setting up of new units. Secondly, expansion of existing units will be given preference over establishment of new units since the creation of additional capacity in this manner will not only be quicker, but will also assist in bringing down the investment cost per unit of output. It is said, for instance, that expansion of the Bhilai, Rourkela and Durgapur steel plants will lower the investment from about Rs. 2,000 to Rs. 1,500 per ton of finished steel which will have a "beneficial effect on the level of retention prices."

Subject to these general considerations, the emphasis on industries will be given on the basis of following priorities:

1. Completion of projects envisaged under the second Plan which are under implementation or were deferred during 1957-58 owing to foreign exchange difficulties.

2. Expansion and diversification of capacity of the heavy engineering and machine-building industries, castings and forgings, alloy tool and special steels, iron and steel and ferro-alloys and step-up of output of fertilisers and petroleum products.

3. Increased production of major basic raw materials and producer goods like aluminium, mineral oils, dissolving pulp, basic organic and inorganic chemicals and intermediates inclusive of products of petrochemical origin.

4. Increased production from domestic industries of commodities required to meet essential needs like essential drugs paper, cloth, sugar, vegetable oils and housing materials.

Public and Private Sectors

The relative roles of the public and private sectors in industrial development will continue to be governed by the Industrial Policy Resolution of April, 1956. There are, however, certain marginal relaxations in industrial policy in favour of the private sector. For example, in the case of nitrogenous fertilisers, where the public sector has already assumed a dominant role, it is envisaged that, during the third Plan, the private sector will be permitted to enter the field in a bigger way than in the past and thus supplement the efforts of the public sector. In the case of pig iron, the policy has been relaxed to allow the establishment of plants in the private sector with a maximum capacity of 100,000 tons per year, as compared with only 15,000 tons permitted so far. Besides, programmes for the manufacture of dyestuffs, plastics and drugs in the private sector are expected to be largely complementary to the programme for the manufacture of primary aromatic compounds as by-products at the steel works and of organic intermediates to be undertaken in the public sector. Similarly, while the manufacture of bulk drugs will be taken up in the public sector, the further processing of such drugs will be undertaken by the private sector.

In pursuance of the declared objective of Government to establish a "socialist pattern of society," in encouraging and approving industrial programmes for the private sector, due attention is sought to be given to guard against excessive concentration in a few hands, leading to complete or partial monopolies. Steps taken to counter the tendency towards concentration of economic power are, first, extension of the public sector into fields requiring the establishment of large-scale units and heavy investments, secondly, widening opportunities for new entrants and for medium and small units and industries organised on co-operative lines, and, thirdly, effective exercise of Government's powers of control and regulation and use of appropriate fiscal measures.

Investment

The development programmes for industries and minerals in the third Plan is expected to entail in all about Rs. 2,993 crores of investment in both the sectors together, including the foreign exchange component of Rs. 1,338 crores. Of this total investment, industries alone will account for Rs. 2,455 crores, involving Rs. 1,110 crores in foreign exchange. Investment on industries by the public sector will be Rs. 1,330 crores and by the private sector Rs. 1,125 crores. The following table shows the investment targets set for industries and minerals in the third Plan, along with their foreign exchange cost, both in the public and private sectors.

(Rs. crores)

	New investment		Replacement
	Industries	Minerals	
Public sector—			
Total	1,330	478	..
Foreign exchange	660	200	..
Private sector—			
Total	1,125	60	150
Foreign exchange	450	28	50
Public and private sectors—			
Total	2,455	538	150
Foreign exchange	1,110	228	50

An important point to be noted here is the relatively meagre amount of Rs. 150 crores set apart for investment on replacement. It is conceded by the Planning Commission itself that this amount falls short of the minimum requirements of the cotton, jute and woollen textiles. The backlog of replacements in these three industries alone is estimated at Rs. 169 crores. But the provision of Rs. 150 crores in the third Plan is itself considered to be beyond the capacity of the industries concerned, in view of (1) the pressure on the available resources of private enterprise and institutional agencies for new investment, (2) lack of sufficient resources with factories for the purposes and (3) the small allocation made available to the N.I.D.C. which is meant for assisting these industries.

LANTERNS INDUSTRY

In spite of the increasing tempo of electrification, both in urban and rural areas, the demand for hurricane lanterns does not seem to have been adversely affected. The total number of hurricane lanterns produced in the country is more or less maintained at the rate of about 5 million annually, valued at about a crore of rupees, although the number of units manfacturing them has declined from twelve to seven in the last few years. Despite the shortage and high cost of raw materials, the industry is currently in a position to meet the entire demand of the country leaving a fair quantity of surplus for exports. There is no room for pessimism in regard to the prospects of the industry considering the rapid growth of population and the absence of pukka houses in rural areas suitable for electrification. Moreover, these lanterns have been found useful for various outdoor jobs in the night and also as a stand-by in case of electricity breakdowns. To some extent, this explains why the lantern industry continues to make headway in such advanced countries as the U.K. and West Germany.

The following table shows the trend of production of hurricane lanterns during the last six years:

	Output (million tons)
1960	5.15
1959	4.96
1958	3.38
1957	4.35
1956	5.18
1955	5.49

Although production has recovered from the low level of 1958, the industry has not attained the target set in the second Plan. The Planning Commission expected that the output of hurricane lanterns would touch 6 million units by 1960-61. The actual production in the calendar year 1960 fell short of the target by 15 per cent. Mr. M. Hruska, in his presidential speech at the sixth annual meeting of the Lantern Manufacturers Association held at Calcutta on the 17th inst., attributed this shortfall in production to the shortage of raw materials. The principal raw materials required by the industry are tin-plates black sheets and steelwire. The industry's demand for tin-plates is said to be about 6,000 tons annually. The industry seems to be finding it difficult to procure tin-plate of suitable quality, sizes and gauges.

As the domestic manufacturers of tin-plates are not in a position to meet the complete requirements of the industry, some imports are permitted. But the licences are issued for the import of tin-plate "waste" only from countries with which India has rupee payment agreements. According to Mr. Hruska, these countries are not in a position to supply tin-plate waste. Soviet Russia, however, has prime tin-plate for export. But owing to the prohibitive price of prime tin-plate, lantern manufacturers have not been able to utilise these licences, which have been returned to the Development Wing. Mr. Hruska urged the Government of India to grant dollar area licences for importing waste in adequate quantities. This claim is undoubtedly reasonable in view of the fact that the lantern industry is exempted from the schedule of industries for which the Iron and Steel Controller secures bulk procurements from the U.S. against the D.L.F. loan.

Galvanised wire is another raw material which is in short supply. Mr. Hruska complained that although lantern manufacturers were getting their quota certificates for galvanised wire, the producers namely, the Indian Steel and Wire Products Ltd., Tatanagar, had not been able to meet the industry's requirements. Two new units have, however, now started production of galvanised wire, which, it may be hoped, will solve this problem.

It is quite disheartening to hear from Mr. Hruska that the quality of lanterns "has not improved and is far from satisfactory." He attributed the poor quality to the non-availability of (1) soft quality tin-plate of good tensile, (2) soft quality wire of regular coating and (3) good quality globes cut to proper size. Perhaps the poor quality of the products has led to the decline in India's exports of these products to such countries as East Africa, Malaya, Ceylon, Burma and Persian Gulf countries. Exports of lanterns fell gradually from Rs. 2.35 lakhs in 1956 to Rs. 10,275 in 1960. If, however, cheap and good quality raw materials are made available to the industry and if workmanship pertaining to the burner is also improved, there is a fair chance that it can meet the competition from such countries as Japan, Hong Kong, the U.K. and West Germany in the world lantern markets.

VANASPATI AND HEART DISEASE

There is at present "no definite evidence" to show that consumption of high amounts of hydrogenated vegetable fats alone can produce coronary heart disease. This is the conclusion reached by studies conducted at nutrition research laboratories on the effect on monkeys of consumption of hydrogenated vegetable oils and fats, according to a statement by Mr. D. P. Karmarkar, Union Minister for Health, in the Lok Sabha on 11th August 1961. He added that "all that could be said was that a high intake might produce one of the factors known to be associated with coronary heart disease." The main conclusions of the study are:

1. The intake of hydrogenated vegetable fats at moderate or low levels (10 to 15 per cent of total calories in the diet) was associated with no significant increase in serum cholesterol levels.

2. If consumed in high amounts (that is, supplying nearly 40 per cent of the total calories in the diet), hydrogenated vegetable fats tended to increase serum cholesterol concentrations significantly.

3. If, however, 20 to 30 per cent of the total hydrogenated fat intake was replaced by unhydrogenated vegetable oils which were rich in polyunsaturated fatty acids, the increase in serum cholesterol brought about was considerably less.

4. Distribution of hydrogenated vegetable fat equally in all the meals of the day results in considerably less increase in serum cholesterol than consuming the same amount all at one sitting.

LEIPZIG AUTUMN FAIR

India will be represented by over thirty firms in the East German Leipzig Autumn Fair which will be held from 3rd to 10th September 1961. In the Autumn Fair, which is devoted to the exhibition of consumer goods industry India will hold a collective display of a wide range of its traditional export products, such as tea, coffee, jute, coir products, chemicals and hides and skins. Indian handicrafts will be included in a special handicrafts pavilion, known as *Grassi Museum*, set up in the fairgrounds. An Indian delegation, consisting of about

CONTENTS

1. EMPLOYER-EMPLOYEE RELATIONS illustrated with 33 cartoons
   * What are your responsibilities to management?
   * What are your responsibilities to the worker?
   * How can you maintain discipline?
   * How can you develop team work?
   * How can you make sure your workers get a square deal?
   * What can you do to build morale among your workers?
   * How would you break in a new worker?
2. Salient Features of:
   * Factories Act, 1948
   * Payment of Wages Act, 1936
   * Industrial Disputes Act, 1947
   * Employees State Insurance Act, 1948
   * Employees Provident Funds Act, 1952
   * Industrial Employment (Standing Orders) Act, 1946
   * Workmen's Compensation Act, 1923
   * Bombay Shops & Establishments Act, 1948
   * Indian Companies Act, 1956 with Penalties made thereunder.
3. List of Factories in Greater Bombay and Thana District with names, factory addresses and telephone numbers (in alphabetical order);
4. List of Public and Private Limited Companies in Greater Bombay with names, office addresses and telephone numbers (in alphabetical order);
5. Revised Procedure for Industrial Licencing in India.

A MESSAGE

As Industry expands, and becomes more complicated both by reason of its size and by reason of the introduction of technology, the role of Management Personnel becomes more onerous. While machines can be kept under control once the technique of handling them has been mastered, the men and women who labour in factories do not lend themselves so easily to management by rules. The handling of human beings calls for much tact, skill and above all, sympathy—sympathy not so much with them as individuals but with their needs and requirements as dictated by the circumstances in which they function.

It is therefore imperative that the persons who are chosen to manage and get the best out of workers should themselves first be trained in the art and science—for it is both—of management. I, therefore, welcome the efforts of the Bombay Labour Bureau. On Management Executives devolves the delicate and difficult task of extracting the maximum out of industrial units without at the same time straining them too much—without, in a word, killing the goose that lays the golden eggs.

Hon'ble Shri Y. B. CHAVAN,
(Chief Minister, Maharashtra).

INDIAN IRON'S RESULTS ENCOURAGING

BOTH PROFIT AND DIVIDEND BETTER

AFTER going through the Directors' report and statement of accounts of the Indian Iron and Steel Co., Ltd., and the Chairman's statement, we get the impression that the Company did pretty well in the year ended 31st March 1961, despite a number of handicaps that stood in the Company's way to raise its production to the capacity created under the 1953 and 1955 plans for expansion. Under these plans, the Company's production of finished steel should have reached 809,000 metric tons per annum by the end of the second Plan period. All major items of plants under the expansion programmes were completed by June 1960. In their latest annual report, the Directors actually say that "the 1953 and 1955 expansion programme may accordingly now be regarded as completed, although considerable capital expenditure still remains to be incurred on those of the plant improvements that are included in these programmes." In the three months ended March 1961, the Company's production of finished steel was 223,296 metric tons or an annual rate of 893,000 metric tons. The Company had thus actually hit the target. Even if the whole of 1960-61 is taken into account, it is seen that the Company's performance on the production front was not unsatisfactory, as the output of finished steel was 722,034 in tons, as compared with 672,707 metric tons in 1959-60 and 508,000 metric tons in 1958-59. Not only did the upward trend in production continue but also that in sales, profit and dividend. Only, the growth was not as large as had been expected and that for reasons beyond the control of the management. In the first place, the strike by Government employees in July 1960 resulted in loss of output as it led to curtailment of rail transport. Secondly, the Company was compelled to carry out blast furnace operations under difficult conditions due to the extremely high and varying ash content of the coke consequent upon the poor quality and erratic supplies of metallurgical coal. And, thirdly, the quality of limestone supplies and steel-making iron also suffered marked deterioration, affecting both the quality and quantity of iron produced.

Coming to the financial side, the accounts for the year under review show that sale proceeds went up by Rs. 6.10 crores to Rs. 61.78 crores, a rise about 11 per cent over the previous year. As the value of raw materials, stores and spares consumed increased less sharply by Rs. 173.89 lakhs to Rs. 21.27 crores, or by 8.9 per cent, and other manufacturing expenses by Rs. 255.49 lakhs to Rs. 30.45 crores or by 9.1 per cent, the gross profit has registered a handsome rise of Rs. 1.29 crores, or 14.3 per cent, to Rs. 10.27 crores. Accordingly, the profit margin (the ratio of gross profit to sales) has improved, albeit slightly, from 16.1 per cent in 1959-60 to 16.6 per cent. It is, however, much below the profit-margin of 26.3 per cent that was witnessed in 1955-56.

Appropriations

The provision for taxation has been stepped up substantially from Rs. 64.28 lakhs to Rs. 166 lakhs. The depreciation which is calculated on the "straight line" basis provided under Section 205(2) (b) of the Companies Act amounts to Rs. 296.47 lakhs, as compared with Rs. 300 lakhs last year. The commission to managing agents is also lower at Rs. 30.95 lakhs, as against Rs. 37.22 lakhs. After these provisions, the net profit works out to Rs. 533.81 lakhs, as against Rs. 497.16 lakhs for the preceding year. This is supplemented by (a) Rs. 15 lakhs being the amount transferred from taxation contingency reserves, (b) Rs. 66.59 lakhs being the amount written back from general development reserve and (c) Rs. 11.50 lakhs, being the unallocated surplus of the previous year brought forward, making available for distribution a sum of Rs. 626.90 lakhs. The reason for withdrawing an amount of Rs. 66.59 lakhs from the general development reserve, is explained by the Directors in their report to the shareholders as follows:

"In order to qualify for tax remission in respect of development rebate claimable on new plant installed, a sum of Rs. 1,66,57,251 has been set aside in development rebate reserve (Statutory) representing 75 per cent of the amount of development rebate allowable. The actual tax remission amounts to Rs. 99,98,302 and the balance of Rs. 66,58,949 compulsorily included in the allocation to the reserve which would otherwise fall as a dead charge against available profits has accordingly been compensated by the write back to the credit of profit and loss account of a similar amount from general development reserve, the effective and logical result thereby being a net setting aside to the development reserves of the actual saving in taxation."

Out of the amount available for distribution and appropriations, Rs. 51.15 lakhs had been credited to the reserve for plant rehabilitation as required by the Government under the Tariff Commission Scheme. In addition, a sum of Rs. 175 lakhs has been transferred to the general reserve, in view of the necessity to conserve the Company's resources to meet repayment of the heavy borrowings from the World Bank, Government, etc. for financing the expenditure on extension account and on capital works. Further, the Directors have made a provision of Rs. 166.57 lakhs for development rebate reserve. Of the balance, a sum of Rs. 18.71 lakhs is absorbed by the preference dividend. In view of the heavy transfer to reserve accounts, it is not surprising that the Directors have been able to raise the dividend to ordinary shareholders only by a fraction from 15 per cent to 16 per cent, taxable, representing a tax-free dividend of 11.2 per cent only. This dividend is only a shade higher than the tax-free dividend of 10 per cent distributed for 1957-58 and 1958-59 and 10.5 per cent for the previous year.

Results Compared

The following comparative table shows at a glance the progress of the Company in the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	61,78.21	55,67.85	45,02.31	35,04.53

* Subject to deduction of tax.
Note:—One long ton = 1.016 metric tonne.

In comparing the figures of sales and gross earnings for the year 1960-61 with the preceding years, it should be borne in mind that the results disclosed in the profit and loss account for the year under review are based on provisional steel sales realisation figures which are subject to revision according to the decision of the Government on the Tariff Commission's recommendations on the steel retention prices which will be with retrospective effect from 1st April 1960. True results will naturally not be known until the final revised steel retention prices have been determined. The Chairman of the Company, Mr. Biren Mookerjee, has, in the meantime, expressed the view that the provisional price increase granted by the Government is far short of the rise in production costs. If this reasoning is conceded by the Government, the financial results for 1960-61 would appear to be much better retrospectively.

All the major items of plant under the Company's expansion programme were completed with the commissioning of the New Bar and Rod Mill on 10th June 1960. The Company is now concentrating its efforts on the provision of the many items of subsidiary services designed to improve the efficiency of the expanded plant. Work has already commenced on the modernisation of 34" mill stands by the provision of new manipulators and roller tables and is being carried out mainly during the week-end shut down of the mills. The Directors expect to complete this work by October or November 1961.

Balance Sheet

The Company's balance sheet as at 31st March 1961 does not show any diminution in its dependence on borrowed funds. Thus, over the year, its total outstandings of secured and unsecured loans have gone up by Rs. 1.65 crore to Rs. 36.52 crores and are almost equal to the total of paid-up capital at Rs. 15.14 crores and reserves and surplus at Rs. 24.43 crores. But current liabilities and provisions have come down by Rs. 2.45 crores to Rs. 19.39 crores so that the total indebtedness has shrunk a little to Rs. 55.91 crores. The gross value of the block account has increased by Rs. 9.88 crores to Rs. 81.17 crores. The net block stands at Rs. 63.82 crores, the depreciation provided so far being of the magnitude of Rs. 17.35 crores. In addition, there are capital works-in-progress aggregating Rs. 104.68 lakhs. The current assets stand at Rs. 30.07 crores and are just adequate to cover short-term (unsecured) loans and current liabilities and provisions amounting to Rs. 29.57 crores.

Short-range Prospects Not Promising

Ever since the publication of the Directors' report and the Chairman's statement, the share market has taken a bearish view of the near-range outlook for the Company. The Company's production of steel in the first four months of its current fiscal year was only about 210,000 metric tons or annual rate of 630,000 metric tons. The Chairman's statement, published elsewhere in this issue, clearly shows that there is little prospect of the Company being able to achieve the planned target production for some time to come.

The Rs. 10 paid-up ordinary shares of the Company are currently quoted on the Bombay Stock Exchange at Rs. 25.15 *cum-div.* On an *ex-div.* basis, the net yield on them works out to 4.66 per cent, per annum. It may be noted that, not long ago, these shares had touched a high of Rs. 28.70, as compared with a low of Rs. 23 earlier in the year.

ASIAN CABLES CORPORATION

All the plant and machinery ordered out by the Asian Cables Corporation Ltd. have already arrived and been practically erected. The work of installing the various services such as water, steam and electricity is in the finishing stage. A very competent project engineer from the Company's collaborators, Messrs. Enfield Cables Limited, U.K., is already here and work is being carried out under his able supervision. Trial runs are expected to commence within three or four weeks and full-scale production from October next. The annual production target of the Company in its first stage is about 40 million core yards of rubber insulated cables, covering not only ordinary building and industrial wiring cables but also special cables such as arc welding cables, inter-vehicular coupling cables and trailing cables for mines. Selling arrangements have already been made and orders booked in advance. The Company has obtained an industrial licence to manufacture 800 miles of H.T. power cables. Details are being worked out to implement the scheme at the earliest with foreign collaboration.

POWER CABLES (PRIVATE) LTD.

The plant for the manufacture of insulated wires and cables for voltages upto 1,000V with an installed capacity of 21 million yards of finished wires having aluminium as its core, in technical collaboration with a Canadian Company, installed at Vithalwadi in Bombay by the Power Cables (Private) Ltd., has now gone into commercial production. Both PVC and polyethylene insulated wires and cables are being manufactured. Polyethylene insulated cables with aluminium conductors manufactured by the firm have already been tested at the Government Test House, Alipore, and the results are satisfactory. The firm has received several enquiries from various Electricity Boards for the supply of such cables. Several export enquiries have also been received. The Company has already supplied over 40,000 miles of ACSR and AAC conductors to Electricity Boards all over India.

FOREIGN COLLABORATION IN INDUSTRIES

The broad principles followed by the Government in regard to majority foreign capital participation in new enterprises in the country were stated in the Rajya Sabha on the 18th inst. by the Minister of Industry, Mr. Manubhai Shah. He was replying to a question by Mr. Babubhai Chinai. According to the statement, when foreign collaborators seek majority foreign capital participation in new enterprises, it is considered only when three conditions are satisfied. First, the project has a high priority for the fulfilment of Plan targets. Secondly, the main contribution of the project is in a field of technology where little progress has so far been made and a great deal of additional development is essential. Lastly, where the amount of foreign exchange needed for the project is such that, unless the foreigners are allowed to have a majority, the Government will itself have to find a substantial amount of foreign exchange from its resources and when no alternative method of long-term finance is found practicable.

Mr. Shah emphasised that, as a rule, the Government preferred that major interest in ownership and effective control should be in Indian hands. And he added that, in 1960, majority capital participation by foreign collaborators was allowed in 26 cases. During the first half of 1961, the number of such cases approved was 11.

INDIA CEMENT PRODUCES AND SELLS MORE

BUT PROFITABILITY DECLINES

IT is sufficiently well-known in market circles that higher sales by the cement industry have not brought any prosperity to individual units due to increase in cost of labour charges, packing material and fuel charges, and unremunerative retention prices. The Tariff Commission has taken up the question of revising the retention prices of cement and it is to be hoped that the Commission will take into account the various factors leading to increase in cost. The rapid increase in production made by the industry in the last ten years can be accelerated only if a reasonable rate of return is ensured for the industry.

The sales of cement by the India Cements Limited (Managing Agents: Messrs. Essen Private Ltd., Madras) for the year ended 31st March 1961 increased by 31.2 per cent from Rs. 270.87 lakhs to Rs. 355.59 lakhs. The pace of expansion in sales has been rapidly rising in the last few years and have actually doubled in two years. The increase in sales has, however, been offset by the sharp rise in manufacturing and other expenses. The increase in the year under review alone is of the order of 48.2 per cent. It would appear that this is much more than the growth in production, as is evident from the fall in the ratio of gross profit to sales from 27.0 per cent to 21.3 per cent. The absolute figure of gross profit has, however, risen by Rs. 2.46 lakhs, that is, from Rs. 73.32 lakhs to Rs. 75.78 lakhs. But the net profit is sharply lower by Rs. 14.73 lakhs, from Rs. 48.00 lakhs to Rs. 33.27 lakhs, due to the higher provision for depreciation and taxaton. Nevertheless, the dividend to shareholders has been stepped up by just 1 per cent to 12 per cent subject to deduction of tax. Even this fractional increase has meant an increase of Rs. 4.08 lakhs or about 25 per cent in the amount required to pay the proposed dividend because the final dividend of 6 per cent is payable proportionately on the new capital also. Of course, the dividend is comfortably covered by the net profit. Only, the share of profit retained in business has gone down from Rs. 23.87 lakhs to Rs. 8.74 lakhs, as will be seen from the progress table given below:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Cement sales	355.59	270.87	176.90	143.24

‡ On increased capital.

The factory worked almost to its rated capacity during the year under review. The factory had to curtail production from August 1960 onwards as the procurement of coal was very difficult even by the sea-*cum*-rail route. In order, however, to maintain production, the Company had to resort to oil firing in one of their kilns at prohibitive cost. This is reflected, to some extent, in the sharp increase in power and fuel consumption from Rs. 69.01 lakhs to Rs. 99.39 lakhs. The arrangement for the sale of Company's cement with the Cement Marketing Company of India Limited is said to be working satisfactorily.

The Company was the first cement unit to implement in full the recommendations of the Central Wage Board for the Cement Industry with effect from 1st January 1960. The retention price allowed to the Company was correspondingly enhanced by the Government from the date of implementation of the recommendations of the Wage Board.

Of the Company's paid-up capital of Rs. 258.14 lakhs, preference shares account for Rs. 33.35 lakhs, the balance of Rs. 224.79 lakhs being in equity shares of Rs. 5 each. The equity capital was raised during the year by a right issue of one share for every two shares held at par. The reserves and surplus have increased from Rs. 60.78 lakhs to Rs. 68.72 lakhs. The balance of Rs. 24 lakhs standing in the Mortgage Loan Redemption Reserve has been transferred to the Profit and Loss appropriation account in view of the repayment of the entire loans outstanding of the Industrial Finance Corporation of India. The repayment of this loan was made possible by an arrangement from a bank of a loan of Rs. one crore secured by a charge on certain movable and immovable properties of the Company. In addition, there is a secured loan of Rs. 65.60 lakhs, as well as a liability of Rs. 71.42 lakhs is due to machinery suppliers under deferred payments agreement. The total indebtedness of the Company is thus Rs. 286.76 lakhs. The gross block of Rs. 466.64 lakhs stands written down at Rs. 333.29 lakhs, following the provision of Rs. 133.35 lakhs by way of depreciation. The total of trade and other investments of Rs. 9.90 lakhs comprises of Rs. 7.94 lakhs in quoted investments, the market value of which is Rs. one lakh lower at Rs. 6.94 lakhs. Over the year the total of current assets have grown from Rs. 170.49 lakhs to Rs. 269.47 lakhs.

As regards the Company's scheme for establishing a cement factory at Vizag, the Government of Andhra Pradesh has agreed to grant the mining lease. The detailed survey of the area by engineers and geologists is in progress. The application for the establishment of cement factory in Salem district, Madras State, is still pending before the Government of India.

The benefit derived by the shareholders by way of exemption from income-tax under Section 15C is negligible. It has been found that the profit earned on the expansion unit after setting off the unabsorbed depreciation pertaining to that plant in the previous year is very small and no income-tax is due on that portion of the profit.

The current market quotation of the Rs. 5 paid-up equity shares of the Company is Rs. 6.56. At this rate, the net yield works out to 6.4 per cent, taking the net dividend at 48 nP.

(*Concluded from next column*)

down to normal working of the whole plant, having overcome the teething troubles.

At the Mysore Mills, a winding and warping unit of Barber Colman equipment imported from the U.S. has been installed at a cost of Rs. 6.24 lakhs and put into service during the year. With the addition of 48 automatic looms during the year, the total automatic looms working now is 96. The Textool and Toyoda spinning departments and the entire automatic weaving shed have been humidified by the installation of three units of humidification plants. It has been decided to install humidification plants for the old weaving shed also. Under the scheme for the progressive replacement of the old spindles, it is proposed to replace 12,180 spindles and also to install new Simplex and high-speed drawing frames. This replacement programme is expected to be completed by the end of July 1962 at an estimated cost of Rs. 15.34 lakhs. In addition, a printing plant of the value of Rs. 4,78,000 has been ordered and this is expected to go into production within a period of six months. It is also proposed to place orders for a continuous peroxide bleaching plant at a total cost of about Rs. 5 lakhs. The construction of a building for housing the printing plant and the bleaching plant, estimated to cost Rs. 1,66,000, is progressing according to schedule.

The Rs. 50 paid-up ordinary shares of the Company are currently quoted at Rs. 80 *cum-dividend*. On an *ex-dividend* basis, the net yield works out to a little over 5 per cent per annum on a net dividend of Rs. 3.85 per share. It will be noted from the aforesaid account of the expansion plans that the Company has a bright future and that the results for the current year will reflect the production of the new mill at Chitradurga as well as of the larger capacity of automatic looms. Another point worthy of note is that the Company is rather undercapitalised, the block account being some Rs. 31 lakhs above the paid-up capital.

SRI KRISHNARAJENDRA MILLS

ALL-ROUND IMPROVEMENT IN RESULTS

THE results of Sri Krishnarajendra Mills Ltd. (Managing Director: Mr. H. N. Pallegar, Mysore) for the year ended 31st March 1961 are quite satisfactory, in that they show an all-round improvement. Sales are higher and so also gross and net profits. Dividend has been comfortably maintained at 11 per cent taxable and a substantial amount has been ploughed back into the Company's business. This satisfactory performance by the Company is very creditable for its management in view of the fact that the year under review was a difficult one for the textile industry. The prices of cotton, stores, spare parts and chemicals all rose steeply and labour cost increased. On the other hand, there was an appreciable reduction in the prices of finished products in the latter half of the year, as per the directive of the Government of India. All these should have reduced the profit margin of the Company, but the actual working reveals the contrary, partly because of the great economy exercised in other expenses and partly because of increased production.

The sale proceeds improved only slightly from Rs. 131.94 lakhs to Rs. 137.40 lakhs. But the production must have been larger, because the closing stocks are as high as Rs. 38.41 lakhs, as against Rs. 29.64 lakhs in the previous year. The gross profit has increased from Rs. 9.89 lakhs, to Rs. 14.92 lakhs, that is by 51 per cent, and the ratio of profit to sales has advanced from 7.4 per cent to 10.8 per cent. The net profit has jumped up from Rs. 3.17 lakhs to Rs. 8.94 lakhs, after providing for depreciation Rs. 4.53 lakhs (as against Rs. 5.35 lakhs last year) and for taxation Rs. 1.45 lakh (as against Rs. 1.37 lakh). The dividend to ordinary shareholders is, however, maintained unchanged at 11 per cent, subject to deduction of tax, because the Directors have chosen to conserve a good part of the net profit. This is undoubtedly the right thing to do, especially as the Company has resorted to large borrowings for modernising and expanding the mills.

The following comparative table shows at a glance the main features of the results of the Company for the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	137.40	131.94	134.21	108.43

* Provided out of excess provision of Rs. 7.50 lakhs made during 1952-53.

† Subject to deduction of tax.

The entire paid-up capital of the Company at Rs. 36.70 lakhs is in ordinary shares of Rs. 50 each. The reserves and surplus have increased by Rs. 5.58 lakhs to Rs. 28.89 lakhs. The secured loans have increased from Rs. 17.98 lakhs to Rs. 39.70 lakhs and so also current liabilities and provisions from Rs. 24.27 lakhs to Rs. 42.54 lakhs. Thus, the total liabilities amount to Rs. 82.84 lakhs and are higher than the current assets of Rs. 72.76 lakhs by Rs. 10.08 lakhs. Besides the Company has investments of Rs. 7.47 lakhs, of which Rs. 7.21 lakhs are in quoted investments, the market value thereof being Rs. 7.17 lakhs. The major change on the assets side is provided by the big growth in the value of fixed assets from Rs. 35.31 lakhs to Rs. 67.60 lakhs. This expansion in the value of net block mainly reflects the cost of the Company's new spinning mill at Chitradurga planned some four years ago. This new mill has a total complement of 12,180 spindles at a cost of Rs. 36.50 lakhs including the building. Of these, 10,080 spindles went into production in March 1961. The Company has now settled

(*Continued in previous column*)

HOWRAH JUTE'S PROFIT LOWER

DIVIDEND PRUNED—NEAR OUTLOOK DIM

THE note of caution struck by the Directors of Howrah Jute Mills Company Ltd. (Managing Agents: Messrs. Jardine Henderson Ltd., Calcutta) about the near-term outlook for the Company in their report for the year 1959-60 has been fully borne out by the working of the Company during the year ended 31st March 1961. Scarcity of raw jute, which persisted throughout the year and caused a sharp rise in prices, particularly in May and October last year, in disproportion to the price of jute manufactures compelled the Company to refrain from purchasing the raw material between 8th and 28th October in accordance with the request of the Indian Jute Mills Association, which was endorsed by the Jute Commissioner. Prices, however, continued to rule high and, ultimately, the Company re-entered the market and obtained the supply at very high and uneconomic prices to avert the threatened closure due to lack of jute. Later sales of manufactured goods against the secured supply of jute showed a satisfactory profit but for which the Company would have really been in the red. Again, because of the very high October prices, deliveries of earlier market purchases were not forthcoming, with the result that contracts for raw jute were either cancelled or extended with the payment of prices differences by sellers. The Company, however, had to meet the manufacturing requirements and sale commitments, and this it could do only by securing supplies of the raw material at greatly increased prices.

Sales turnover during the year under review increased substantially to Rs. 4.60 crores from Rs. 3.40 crores in the previous year, but failed to push up the gross profit which is almost maintained at Rs. 29.09 lakhs, against Rs. 27.50 lakhs in the previous year. This was primarily due to difficult trading conditions resulting in higher manufacturing costs at Rs. 435.09 lakhs, as compared with Rs. 319.91 lakhs in the previous year. The net profit has actually contracted from Rs. 14.06 lakhs to Rs. 12.43 lakhs. Consequently, the Directors have pruned the gross taxable dividend on ordinary shares to 10 per cent from 12.5 per cent, subject to deduction of tax, for the previous year, giving a net dividend of 7 per cent per share, against 8.75 per cent previously. The allocation to reserves has also been reduced from Rs. 3.87 lakhs in the previous year to Rs. 2.67 lakhs during the year under review. Provision for taxation is substantially higher at Rs. 5.05 lakhs, as compared with only Rs. 62,527 in the previous year, while that for depreciation is lower by a lakh at Rs. 9.82 lakhs. The heavier allocation to taxation has been chiefly responsible for the setback in the net profit.

The following comparative table discloses the progress of the Company in the four years ended 31st March 1961:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	460.07	339.89	376.75	408.12

* Subject to deduction of tax.

The gross block of the value of Rs. 225.18 lakhs has been adequately written down to Rs. 80 lakhs: land and buildings from Rs. 67.94 lakhs to Rs. 20.43 lakhs and plant, machinery and equipment from Rs. 157.24 lakhs to Rs. 59.57 lakhs. During the year under review, no change was made in the share capital of the Company which stands at Rs. 91.87 lakhs, comprising Rs. 65.62 lakhs in ordinary and Rs. 26.25 lakhs in cumulative preference shares. The reserves and surplus stand at Rs. 43.60 lakhs. Current assets, including book debts, have gone up to Rs. 177.51 lakhs from Rs. 102.36 lakhs, largely as a result of a substantially larger stock-in-trade and work-in-progress at Rs. 111.63 lakhs, as compared with Rs. 57.03 lakhs in the previous year. These far exceed the current liabilities and provisions amounting to Rs. 139.19 lakhs. It will be noted from this summary of the balance-sheet as at 31st March 1961 that the Company's financial position is satisfactory.

While the results achieved during the year under review are disappointing, the Directors state that they were actually better than at one time seemed likely. The prospects for the immediate future are, however, "far from encouraging". The working of the Company during the first three months of the current financial year has resulted in a large loss and the prospects for the second quarter are that a "further substantial loss" will be incurred. Much would depend on the new crop arrivals. Notwithstanding the present difficulties in regard to supplies and prices, the prospect of an adequate jute crop this season would bring the market back to normal later in the year; but it is too early to predict, say the Directors, whether the profits which it is hoped may be earned in the second half of the year, namely October 1961 to March 1962, can offset the losses which will undoubtedly be incurred in the first half, that is, upto 30th September 1961. If prices revert to the levels which buyers consider more reasonable, there will be a certain backlog in demand to be satisfied and, provided raw jute is available in adequate quantity, there should be some prospect of an increase in working hours later in the year and of resultant lower costs of the mills.

The Rs. 10 fully paid-up ordinary shares are being currently quoted at Rs. 20, at which rate the net yield on them works out to 3.5 per cent per annum, free of tax.

COMPANY REGISTRATION IN SOUTHERN REGION

During the quarter ended 30th June 1961, 92 companies with an authorised capital of Rs. 2,732.47 lakhs, have been registered in the Southern Region comprising the four States of Andhra Pradesh, Kerala, Madras and Mysore. Out of them, 12 are public companies, with an authorised capital of Rs. 472.20 lakhs. 78 are private companies with an authorised capital of Rs. 2,260.27 lakhs and 2 are Associations not for profit.

Transport companies continue to form the bulk of the newly-registered companies in the State of Madras. The total investment by way of increase in paid-up capital of the companies was of the order of Rs. 1,271.85 lakhs. Of these, there are six giant companies with an authorised capital of more than Rs. 50 lakhs. The companies are: (1) Bimetal Bearings Private Limited, for the manufacture of automobile bearings; (2) Metal Powder Company Limited for the manufacture of basic industrial chemicals such as metal powder, etc., (3) Zenith Lamps and Electricals Limited for the manufacture of electric lamps etc., (4) Sakthi Sugars Limited for the manufacture of sugar, (5) Thanjavur Textiles Limited for the manufacture of cotton textiles, and (6) Trichy Steel Rolling Mills Private Limited for the erection of steel rolling mills. One giant company, by name, Mysore Iron and Steel Limited, for taking over the iron and steel works at Bhadravathi was floated in the State of Mysore with an authorised capital of Rs. 20 crores. This is a Government concern owned by the State of Mysore. Two giant companies by name Lakshmi Lines Limited and Glovelola-Binny Private Limited for doing the business of carriers and common carriers by land, water and air etc. and for carrying on the business of manufacturers of pen-stocks and other allied products for the generation of hydro-electric power etc., were started in the State of Kerala with an authorised capital of Rs. 1 crore and 50 lakhs, respectively.

During the quarter under report, 29 companies were struck off the register of companies as defunct, the total paid-up capital of which is Rs. 4.30 lakhs and 17 companies went into liquidation, the total paid-up capital of which is Rs. 7.40 lakhs. 92 prosecutions were launched during the period under report in the region against certain companies and their officers, mostly for not holding the annual general meeting and for non-filing of the annual returns and the balance-sheets as required by law. 61 cases were disposed of resulting in conviction of the accused in 74 cases, in the acquittal in 7 cases. One foreign company, namely, Domington Parswhit Ltd., incorporated in U.S.A. and having its principal place of business in Madras, was registered in the State of Madras. The total amount of fines imposed accounted to Rs. 7,945 during the quarter under report.

UNITED WIRE ROPES

The Directors of the United Wire Ropes Limited have finalised details of the allotment of equity and preference shares in regard to applications received against the Company's recent offer of 22,500 equity shares and 5,000 preference shares of the total value of Rs. 22.50 lakhs and Rs. 5.00 lakhs, respectively. In view of the large number of applications received for equity shares, the Directors, in consultation with the authorities of Stock Exchange, Bombay, have decided to allot them on the following basis (number of shares applied and number allotted):

5—5; 10—10; 15—15; 20—15; 25—20; 30—25; 40—30; 45—30; 50—35; 55—40; 60—45; 75—60; 80—60; 100—60; 105—60; 110—65; 150—75; 200—100; 305—125; 400—160; 500—180; and 1,000 and above not less than 180.

In the case of preference shares, all applicants will get amount of shares applied for.

WESTERN INDIA PLYWOODS

DIVIDEND STEPPED UP

THE Western India Plywood Limited (Managing Director: A. K. Kaderkutty) is the largest manufacturer of plywood and also the biggest supplier of plywoods to Indian Railways. The standard of quality and production of plywood has been well maintained. In addition to manufacturing plywood, the Company recently erected a hardboard factory at a considerable cost of Rs. 62 lakhs, which commenced production from early 1960. Thus, the full effects of the working of the hardboard factory were felt in the results for the year ended 31st March 1961.

The sale proceeds of finished goods and raw materials in 1960-61 were higher at Rs. 63.19 lakhs and Rs. 4.68 lakhs, respectively, as compared with Rs. 55.26 lakhs and Rs. 2.74 lakhs in the previous year. The total sale proceeds have thus gone up by 16.9 per cent. But the production during the year seems to have moved up even more, as is evident from higher closing stocks of finished goods and work-in-progress amounting in all to Rs. 12.75 lakhs as against only Rs. 2.92 lakhs a year earlier. The gross profit has perceptibly improved by 23.7 per cent, from Rs. 16.09 lakhs to Rs. 19.91 lakhs. It is heartening to note that the ratio of gross profit to sale proceeds has steadily improved to 29.3 per cent from 27.7 per cent in the preceding year and 26.2 per cent during 1958-59. The better performance has prompted the Directors to step up the dividend from 10 per cent, taxable, to 12 per cent, taxable.

The following comparative table reveals at a glance the working results of the Company for the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds of finished goods and raw materials	67.87	58.01	59.22	56.64
Closing stocks of work-in-progress and finished goods	12.75	2.92	1.66	2.82
Cost of raw material	30.40	22.35	27.68	26.29
Other expenses	28.05	21.08	17.34	16.59
Gross profit	19.91	16.09	15.54	15.70
Provision for—				
Depreciation	10.05	2.02	1.46	2.41
Taxation	3.75	..	7.48	7.00
Net profit	6.11	14.07	6.60	6.29
Transfer to reserves	1.85	11.00	3.26	3.78
Dividends—				
Preference	0.48*	0.37*	0.37	0.24
Ordinary	3.77*	2.81*	2.70	2.26
	(12%)*	(10%)*	(10%)	(10%)
Carry forward	0.07	0.05	0.16	0.20

* Subject to deduction of tax.

As will be seen from the above table, a substantial increase has been effected in the provision for depreciation, from Rs. 2.02 lakhs to Rs. 10.05 lakhs. The amount set aside for taxation is Rs. 3.75 lakhs, as against nil in the previous year. The transfer to reserve, however, has gone down markedly.

The paid-up capital of the Company which was last increased in November 1959 by a right equity issue of one share for six shares at Rs. 25 premium now stands at Rs. 37.64 lakhs, consisting of Rs. 31.46 lakhs in ordinary shares of Rs. 100 each and Rs. 6.18 lakhs in 6 per cent tax-free preference shares of Rs. 100 each. The reserves and surplus have steadily increased to Rs. 28.52 lakhs. The loan from the Industrial Finance Corporation, taken presumably for financing the hardboard factory, now stands at Rs. 27.50 lakhs against Rs. 30 lakhs in the previous year. As against the total of current liabilities of Rs. 52.08 lakhs (including the I.F.C. loan), the current assets stand at Rs. 51.02 lakhs. The gross block of the Company, which was standing at Rs. 32.27 lakhs only on 31st March 1958, has been multiplied by more than three times to Rs. 102.79 lakhs in a period of three years. After depreciation amounting to Rs. 35.59 lakhs, the net block account stands at Rs. 67.20 lakhs.

The current quotation of Rs. 100 paid-up shares is Rs. 217.50 cum-dividend. At this rate, the net yield works out to 3.8 per cent on a net dividend of Rs. 8.40 per share.

NEWS IN BRIEF

THE first full cargo bulk shipment of sugar from Calcutta to the U.S. was made on Wednesday, the 23rd inst.

India's first oil refinery in the public sector at Nunmati in Assam will go into production by the end of this year.

The World Bank loan of $21 million to the Commissioners of the Port of Calcutta, which had been approved last month, has now been signed.

India has agreed to meet the cost of a multi-storeyed building in New Delhi to serve as the regional offices of the numerous U.N. Organisations.

The total value of sewing machines exported from India rose from Rs. 15 lakhs in 1958 and Rs. 24 lakhs in 1959 to as much as Rs. 53 lakhs in 1960.

A High-Power Committee has been appointed by the Government of India to select a site for the proposed atomic power station in the Punjab-Delhi-Rajasthan-U.P. region.

The Government of India has decided not to proceed with the Planning Commission's proposal for public participation in the capital of State-owned industries at this stage.

The first thermal unit in Neyveli in the Madras State will be commissioned by the end of 1961 as originally scheduled. The entire power station will be completed by the middle of 1963.

The Government of India has no intention of putting any restriction on the remittance of profits abroad, according to Mrs. Tarakeshwari Sinha, Union Deputy Minister for Finance.

The Geological Survey of India proposes to undertake shortly detailed studies on the possibility of exploiting gold from the Wynaad "gold belt," extending both in Madras and Kerala States.

A proposal to set up two inter-university nuclear centres, one in North India and the other in South India, during the third Plan period is under the consideration of the Government of India.

The proposal of the Hindustan Steel Ltd. to recruit upto 225 West German technicians for the operation and maintenance of the Rourkela steel plant for a period of about three years has been approved of by the Central Government.

Two uranium deposits in Rajasthan, one at Umra and the other at Udaisagar in Udaipur District, have been found. Detailed investigations have already been taken in hand, and drilling and mining work on these two deposits is in progress.

The recommendation of the Central Silk Board seeking the abolition of the excise duty on power-loom silk fabrics has been rejected by the Government of India. The rejection is on the score that all fabrics made of cotton, art silk, staple fibre and wool produced on powerlooms are now subject to excise duty.

The Central Government proposes to set up a Rs. 2-crore fund for assisting those workers who become unemployed on the closure of industrial undertakings in all States. A Committee, consisting of the Labour Ministers of Maharashtra, Madhya Pradesh and Rajasthan, has already been constituted to draw up details of the scheme.

In pursuance of the recommendation made by the Thacker Committee, the Government of India has decided to set up an institute for machine tool technology and design as an autonomous organisation at Bangalore. The Government of Czechoslovakia has agreed to bear the costs of the capital equipment estimated at Rs. 40 lakhs, as well as to make available services of experts.

The terms of foreign collaboration for the expansion of the titanium factory at Trivandrum, Kerala State, are still under negotiations, according to Mr. Manubhai Shah. The factory was given a licence in April last for expanding its capacity of titanium dioxide from 6,500 tons per annum to 24,500 tons. The expansion is envisaged for the rutile grade of titanium dioxide only.

The American Bureau of Shipping has been recognised by the Government of India as a load-line assigning authority to Indian ships. A committee, consisting of Mr. K. Parthasarathy, Deputy Chief Surveyor, Government of India and Mr. Sydney G. Schaefter, Exclusive Surveyor to the American Bureau of Shipping, will advise the Bureau and Government on matters concerning the survey and assignment.

The number of assessees assessed till 31st March 1961 on individual wealth of Rs. 50 lakhs and above is 102. The total number of assessees declined from 7,022 at the end of 1958-59 to 6,771 at the end of 1959-60 in Calcutta, from 10,420 to 10,412 in Bombay, from 1,056 to 980 in Madras, from 1,773 to 1,554 in Ahmedabad and from 1,452 to 1,278 in Delhi. Only in Kanpur there was an increase from 285 to 318.

Under an agreement signed between India and Japan at Tokyo last week, India will receive a yen credit of the value of over Rs. 38 crores, for the first two years of the third Plan. The credit, which carries an interest of 6 per cent per annum, is to be repaid in twenty equal instalments, beginning with February 1967. The yen credit will be extended by the Japanese Export-Import Bank, along with private banks.

The Government of India is not likely to agree to the expansion of the refining capacity of existing oil companies in India unless the present terms of agreement are radically changed. This was disclosed in the Lok Sabha by Mr. K. D. Malaviya, Union Minister for Mines and Oil. He added that the Government had received proposals from certain Western countries agreeing to majority partnership by the Government.

The National Instruments Ltd., Calcutta, has entered into a technical collaboration agreement with the Japanese firm, the Nippon Kogapu, for the manufacture of medium-priced cameras and other instruments. The collaboration agreement, which will be for a period of ten years, provided for payment to the Japanese firm of a technical fee of £12,000 (in four instalments) and a royalty of 2 per cent on the ex-factory price of the camera (exclusive of Indian taxes).

A new scheme for the training of both civil and military engineers in Defence establishments was inaugurated by Mr. V. K. Krishna Menon, Union Defence Minister, at New Delhi last week. Under the scheme, part-time courses consisting of lectures and tutorial classes will be given in various subjects for the sections A and B examinations of the Institution of Engineers (India), which is recognised by the U.P.S.C. as equivalent to an engineering degree. Students who have passed Intermediate Science examination will be eligible to join the course, which is of a duration of three-and-a half years.

Production of oil commenced at Ankleshwar in Gujarat on the 15th inst. This is the first time that oil is produced in an oilfield discovered by the Oil and Natural Gas Commission. From next month onwards, the Commission will send about 200 tons of crude oil everyday from Ankleshwar to the Burmah-Shell refinery in Bombay. The daily rate of output is expected to be raised to 1,500 tons by the end of this year when the Burmah-Shell will refine 900 tons and the Stanvac 600 tons. This arrangement will continue until the two-million ton State-owned refinery is set up at Baroda with the help of the Soviet Union.

An agreement has been entered into between the National Mineral Development Corporation and the Western Machinery Company of the U.S. for consultancy services for the Khetri Copper project in Rajasthan, which is expected to produce about 10,000 tons of electrolytic copper annually. The U.S. consultancy company will assess the ore reserves, prepare project report for mining, smelting and refining of copper and recovery of by-products, etc., apart from constructing the plant and helping in the initial operation of the plant. Out of the total installed cost of the Khetri project amounting to $14.4 million, the consultants will receive $864,000.

The College of Engineering and Technology, Delhi, was formally opened in New Delhi on the 17th inst. This is one of the major Indian training establishments being assisted by British aid under the Technical Co-operation Scheme of the Colombo Plan. The U.K. Government will provide ten or more professors and two workshop supervisors for a period of five years for the institute. Equipment is being provided to the extent of £250,000, supply being organised by co-operation between the Federation of British Industries and four professional institutions in the U.K. (the Institutions, respectively, of Civil, Mechanical, Electrical and Chemical Engineers). The Government of India is providing the bulk of the teaching staff, items of equipment locally available and the funds for the building of the college.

From Abroad

West Germany has offered a credit of DM 200 million to Persia for completing some of the important projects of the seven-year plan due to end in September 1962.

Ghana has signed a formal contract with an Italian consortium to build a £16-million dam, with its attached power house, which constitutes the initial phase of the Volta River Scheme.

The British Government has given direct grants amounting to over £28 million to Commonwealth countries and £86 million to dependent Commonwealth territories since April 1958.

Exports of Russian cotton to non-communist countries during 1960 amounted to 109,000 tons. West Germany was the largest buyer, accounting for 29,300 tons, followed by Italy (12,000 tons) and France and the U.K. (10,000 tons each).

The Kaiser Steel Corporation of California in the U.S. has signed a ten-year contract for the sale of 10 million long tons of iron ore to the Mitsubishi Shoji Kaisha Ltd. of Japan. The ore will be produced at the Kaiser Steel's Eagle Mountain mine located in Riverside County in Southern California, and shipments will begin by the end of 1962 at the rate of 1 million tons per year. The iron ore will be shipped to Japan in 50,000-ton ore vessels which will be constructed in Japan.

President Kennedy's "alliance for progress" plan for the economic development of Latin America has been officially launched. The official representation of the U.S. and nineteen Latin American countries affixed their signatures to the Charter of Punta Del Este (Uruguay) on the 17th inst. The plan envisages foreign aid amounting to $2,000 million a year for the next decade in order mainly to enable the Latin American countries to have 45 million more children in schools and to give each child a minimum of six years' free compulsory education.

Britain's adverse trade balance narrowed in July, when it was reduced to £27.8 million, as compared with £41.0 million in June. Exports in July amounted to £308.6 million, imports £350.8 million and re-exports £14.4 million. Comparable figures for June were: exports £316.3 million, imports £371.1 million and re-exports £13.8 million. On a seasonally adjusted basis, British exports in May, June and July were ¼ per cent more than in the previous three months; the rate of exports in the first seven months of the year was 4 per cent more than the average for 1960.

The World Bank has announced the grant of a loan equivalent to $23.5 million to the Territory of Trinidad and Tobago. The loan will help finance the construction of a 100,000-kilowatt thermal power plant at the capital, Port-of-Spain, the construction of a 41-mile natural gas pipeline to supply fuel for the plant, and the expansion of transmission and distribution facilities. Thirteen private financial institutions are participating in the loan, without the World Bank's guarantee, for a total amount of $14.81 million. The loan is for a term of 20 years and bears interest at the rate of 5¾ per cent annually, including the 1 per cent commission which is allocated to the Bank's Special Reserve. Amortisation will begin on 15th January 1966. The loan is guaranteed by the U.K.

The Government of Ceylon has signed an agreement with China for the setting up of a cotton spinning and weaving mill in Ceylon. The mill is expected to produce annually ten million yards of popular varieties of cotton fabrics, like poplins and printed fabrics, working on two shifts, and also supply one million lbs. of yarn to cottage industry workers and other private consumers. Meanwhile, the Government has decided to restrict all future cotton textile development to the public sector and the handloom industry, and permit private enterprise in synthetic fibre manufacture only. Plans are afoot to set up a new Rs. 55-lakh textile weaving and finishing mill to produce nylon, rayon and terylene. In another contract, the Government is understood to have accepted a tender from a firm in Czechoslovakia to erect a second leather factory for the State-owned Leather Corporation. The offer includes supply of machinery and equipment. The factory is designed to produce 170,000 pairs of shoes annually.

The representatives of a consortium of nine American universities and institutes of technology will assemble at Cambridge, Massachusetts (the U.S.), on 5th September to discuss plans for collaboration with the Indian Institute of Technology, Kanpur, to enable it to become one of the best of its kind in Asia. The Massachusetts Institute of Technology, the Princeton University, the Carneigie Institute of Technology, the Case Institute of Technology, the Purdue University, the Ohio State University, the University of Michigan, the California Institute of Technology and the University of California (Berkeley) are the members of this consortium. The consortium will make available to the Kanpur Institute ten American professors to teach and guide research projects. It will also enable Indian faculty members to receive advanced training in the U.S. Besides, considerable quantity of laboratory equipment and machines and devices for research will be provided. The U.S. Technical Co-operation Mission has so far given to the Kanpur Institute grants amounting to Rs. 1.5 crores, both in foreign exchange and in rupees.

PERSONAL

MR. B. K. Nehru, India's Ambassador-Designate to the U.S., has left for Washington.

Mr. Donald T. Shea has assumed charge as Director of U.S. Information Service in Bombay with effect from the 16th inst. vice Mr. Daniel P. Oleksiw.

Dr. Sudhir Sen, Director, Programme Division of the U.N. Technical Assistance Board, has been appointed Resident Representative of the Board at Accra, Ghana.

Mr. Per Jacobsson, Managing Director of the International Monetary Fund has been granted an extension of appointment till 5th February 1964. He has already served in this capacity for about five years, beginning from 21st November 1956. As Managing Director of the Fund, Mr. Jacobsson acts as Chairman of its Executive Board.

Mr. G. L. Mehta, Chairman, Industrial Credit and Investment Corporation of India, left for the U.K. to attend a conference of "Tensions in Development" at Oxford. Mr. Mehta will later proceed to the U.S. to attend the International Industrial Conference to be held at San Francisco next month and also to organise a branch office of the Indian Investment Centre at New York.

Mr. P. U. Patel, Managing Director of the Universal Fire and General, has been elected Chairman of the Indian Insurance Companies' Association, Bombay, for the year 1961. The other members of the Committee are: Mr. M. S. Dastur (The British India), Mr. D. N. Desai (The Union Co-operative), Mr. K. C. Desai (The Vulcan), Mr. H. V. Gandhi (The Devakaran Nanjee), Mr. G. V. Jannah (The Oriental), Mr. M. G. Mody (The New Great), Mr. P. M. Shroff (The Ruby), Mr. C. M. Telivala (The Indian Mercantile), Mr. T. M. Telang (The Indian Trade) and Mr. P. A. Advani (The New India).

SYNOPSES OF COMPANY REPORTS

Andhra Valley Power Supply Co., Ltd.

(*Managing Agents*: Tata Hydro-Electric Agencies Ltd., Bombay.)

Annual General Meeting—12th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Revenue from power supply	2,32,51	1,97,87
Other income	4,24	3,39
Gross profit	71,72	71,45
Transfer to Managing Agents' remuneration	1,57*	4,02
" " depreciation	22,82	21,32
" " taxation	Nil	36
Net profit	47,34	45,75
Adjustments	22	33

" " other reserves	10,55	5,21
" " consumers' benefit account	2,24	40
" " arrears of depreciation	1,21	1,24
To amounts written off (intangible assets and other expenditure)	56	54
To Managing Agents' remuneration (adjustment for previous year)	2	Nil
To licence commission payable (adjustment for previous year)	4	Nil
To dividends (taxable) 7% Preference	3,45	3,45
" " " Ordinary	24,22†	25,74‡
	(D. 7½% +B. 1½%)	(D. 7½% +B. 1½%)
Carried forward	30	22

N.B.—Adjustments include the balance brought forward from the previous year and other credit items written back.
B.=Bonus. D.=Dividend.
* Subject to adjustment.
† This includes interim dividend of Re. 30; final dividend of Rs. 45 and bonus of Rs. 5.
‡ This includes interim dividend of Re. 30; final dividend of Rs. 45 and bonus of Rs. 10.

Extracts from the Directors' report: *Operation*: Over 2,372 million units of energy were generated during the year to meet the energy requirements of the system, reflecting an increase of approximately 11 per cent over that of 1959-60. Purchase of energy from Chola was 65 million units compared to 57 million units in the previous year. At Trombay the third 62.5 MW unit was placed in commercial operation in June 1960 and the total generation from the thermal station rose to 1,028 million units compared to 720 million units in the previous year. Hydro generation was limited to 1,344 million units compared to 1,418 million units in the previous year, due to insufficient rainfall during the 1959-60 monsoon. The total energy sales for the three Tata Hydro Companies amounted to 2,161 million units compared to 1,939 million units or 11.5 per cent above last year's sale. This increased rate of sale compared to the 11 per cent increase in the rate of generation reflects the improvement in transmission efficiency, brought about partly by raising the system voltage by about 7 per cent and partly by increased generation at Trombay which is nearer to the load centre.

Revenues and Expenses: As compared to last year, both revenues and expenses for the year have gone up. While the increase in revenues is mainly due to sale of more units of energy and higher collection of fuel adjustment charge this year, the increase in expenses was principally on items like salaries and wages, fuel consumed, interest etc. which is partly offset by decreases in cost of thermal power purchased, retiring gratuities, repairs and maintenance, managing agents' remuneration etc.

The excess of clear profit of the Company over the reasonable return has been appropriated in the manner specified in the Electricity (Supply) Act.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	8,88,13,000	Gross block	11,78,06,745
Debentures (issued for cash)	96,28,000	—Depreciation	2,80,17,570
Reserves and surplus	1,02,95,794	Net block	8,92,89,175

Coorla Spinning and Weaving Co., Ltd.

(*Managing Agents*: Messrs. Cowasjee Jehangir & Co. Private Ltd., Bombay.)

Annual General Meeting—11th September.

(Spindles=31,460; Looms=680)

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales of cloth, yarn and waste (gross)	1,84,33	1,63,33
Closing stock—cloth, yarn and waste	9,57	10,93
Gross profit	20,52	11,50
Transfer to Managing Agents' commission	1,45	54
" " depreciation	5,92	5,55
" " development rebate reserve	2,57	10
" " taxation	4,75	2,40
Net profit	5,83	2,91
Adjustments	1,12	1,86
Appropriations:		
Total available balance	6,95	4,37
To expenses (salaries, wages, bonus, tax, etc., relating to previous years)	33	65
Transfer to general reserve	1,65	Nil
" dividend reserve	1,76	Nil
Proposed dividend (taxable)	2,66	2,86
	(11½%)	(11½%)
Carried forward	55	76

N.B.—Adjustments include the balance brought forward from the previous year and credit items relating to previous years written back.

Extracts from the Directors' report: During the year further progress was made in the reorganisation and modernisation of the Company's Mill and it will be observed that a sum of Rs. 14,01,060 has been spent on new machinery and other fixed assets during the year. Under the U.S. Exim. Bank Loan, the Company imported during the year one set of *Within's Combing Equipment* comprising of one *drawing frame*, one *super-lap machine* and eight *combers* and *Barber-Colman Winding* and *Warping Machinery* which were all installed about the end of the year and are now working satisfactorily.

Accounts in brief as at 31st March 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	26,00,000	Gross block	1,26,00,429
Reserves and surplus	55,47,767	—Depreciation	84,16,840

	(D. 7½% +B. 1½%)	(D. 7½% +B. 1½%)
Carry forward	53	54

N.B.—Adjustments include the balance brought forward from the previous year: refund of income-tax and corporation tax in respect of previous years and other credit items written back.
* Subject to adjustment.
† This amount includes the interim dividend of Re. 30 per share; final dividend of Rs. 45 per share and a bonus of Re. 5 per share.
‡ This amount includes the interim dividend of Re. 30 per share; final dividend of Rs. 45 per share and a bonus of Re. 10 per share.

Extracts from the Directors' report: *Operation*: Over 2,372 million units of energy were generated during the year to meet the energy requirements of the system, reflecting an increase of approximately 11 per cent over that of 1959-60. Purchase of energy from Chola was 65 million units compared to 57 million units in the previous year. At Trombay the third 62.5 MW unit was placed in commercial operation in June 1960 and the total generation from the thermal station rose to 1,028 million units compared to 720 million units in the previous year. Hydro generation was limited to 1,344 million units compared to 1,418 million units in the previous year, due to insufficient rainfall during the 1959-60 monsoon.

Revenues and Expenses: As compared to last year, both revenues and expenses for the year have gone up. While the increase in revenues is mainly due to sale of more units of energy and higher collection of fuel adjustment charge this year, the increase in expenses was principally on items like salaries and wages, fuel consumed, interest etc. which is partly offset by decreases in cost of thermal power purchased, retiring gratuities, managing agents' remuneration and provision for taxes.

The excess of clear profit of the Company over the reasonable return has been appropriated in the manner specified in the Electricity (Supply) Act.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	6,02,33,000	Gross block	20,78,53,061

" " " Ordinary	66	74
	(5%)	(5%)
Carried forward	4	5

N.B.—Adjustments include the balance brought forward from the previous year and excess provision for dividend written back if any.
* Calculated at 9.10 per cent in accordance with the Preference Shares (Regulation of Dividends) Act, 1960. This amount also includes supplemental dividend worked at 2.10 per cent in respect of the year 1959.

Extracts from the Directors' report: *Operation and Development*: The working of the Company during the year under review has been satisfactory. The production and the sales of the Company's products recorded a further increase.

During the year, the Company's issued 1,00,000 equity shares of Rs. 10 each which were subscribed in full by the members to whom the new shares were offered for subscription. In order to provide funds to finance the purchase of the balance of the fixed assets for the motor cycle scheme, a further loan of Rs. 9,00,000 was obtained from The Industrial Finance Corporation of India. Most of the remaining plant and machinery for the scheme was received and put into operation. As a result, a further increase in the indigenous content of the motor cycles was achieved and by the middle of 1961, the phased programme as originally given to the Government has been for all practical purposes fulfilled. The Company is, therefore, in a position hereafter to concentrate in accelerating the output of vehicles.

Increased productivity and efficiency in the manufacturing operations were achieved as a result of work-study and the incentive scheme to which a reference was made in the last year's report and these have contributed to a great extent in offsetting the increase in the cost of raw materials and the larger amount provided for depreciation. Necessary steps were and are being taken to expedite the Company's expansion programme for the manufacture of scooters.

At the extraordinary general meeting in February 1961, the authorised capital of the Company was increased from Rs. 50,00,000 consisting of 10,000 7 per cent tax-free redeemable cumulative preference shares of Rs. 100 each and 4,00,000 equity shares of Rs. 10 each to Rs. 1,00,00,000 by the creation of 5,00,000 equity shares of Rs. 10 each. The present authorised capital of the Company stands as stated hereunder: 10,000 7 per cent tax-free redeemable cumulative preference shares of Rs. 100 each Rs. 10,00,000 and 9,00,000 equity shares of Rs. 10 each Rs. 90,00,000.

In April 1961 the Company issued 2,33,300 equity shares of Rs. 10 each of the face value of Rs. 23.33 lakhs. Out of the above said shares, 33,300 equity shares of Rs. 10 each of the face value of Rs. 3.33 lakhs are reserved for allotment to the Villiers Engineering Co., Ltd., Wolverhampton, U.K., against supply of plant and machinery and the balance of 2,00,000 equity shares of the face value of Rs. 20,00,000 was offered for subscription to the existing members holding equity shares. The above 2,00,000 equity shares were fully taken up by the members of the Company.

A technical collaboration agreement has been concluded subject to the approval of the Government, with the Villiers Engineering Co., Ltd., U.K., for the manufacture of their engines for industrial and agricultural applications. The Company has submitted an application to the Government for a licence under the Industries (Development and Regulation) Act for undertaking this project by a subsidiary of the Company to be formed.

Accounts in brief as at 31st December 1960 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	34,98,776	Gross block	59,44,050
Reserves and surplus	4,91,364	—Depreciation	12,33,911

		Block in progress	34,970
		Current assets	56,09,013
		Investments	250
		Cash	1,60,542
	Rs. 1,05,14,914		Rs. 1,05,14,914

* Paid-up capital consists of 2,50,000 ordinary shares of Rs. 10 each, fully paid up (allotment money in arrears Rs. 1,224) and 10,000—7 per cent tax-free redeemable cumulative preference shares of Rs. 100 each, fully paid up.

Central India Coalfields Ltd.

(*Managing Agents*: Hindusthan Investment Corporation Ltd., Calcutta.)

Annual General Meeting—5th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (gross)	92,60	77,19
Closing stock	1,34	1,35
Gross profit	21,27	17,50
Transfer to Managing Agents' remuneration	1,43	1,36
" depreciation	5,85	5,04
" taxation	6,40	4,91
Net profit	7,54	5,19
Adjustments	28	9
Appropriations:		
Total available balance	7,82	6,28
Transfer to development rebate reserve	1,45	1,25
" contingencies	25	75
Proposed dividend (taxable) Equity	5,00 (10%)	4,00 (8%)
Carried forward	1,12	28

N.B.—Adjustments include the balance brought forward from the previous year and excess provision for wealth tax if any.

Extracts from the Directors' report:

Raisings and Workings:

	1959-60 Tonnes	1960-61 Tonnes
Raisings	3,80,734	4,38,804
Despatches	3,79,866	4,25,572
Colliery consumption	7,860	8,168

As will be seen from the above figures, the working of the Company showed a satisfactory improvement during the year. At the Orient Colliery, construction of the railway siding was completed and the siding put in operation during the year under report. The working at the Pure Chirimiri Colliery continued to be difficult due to bad roof conditions. There was a fire in one section of its working and the section had to be sealed off; there is no danger to the rest of the mine. The reserves of coal at this colliery are fast depleting and according to estimates, the colliery is expected to work only upto the end of this year, after which it shall have to be closed down. The directors have under active consideration proposals to replace the output of this colliery, by gradually increasing the output at its other collieries. The working of Badjna seam at the Khas Badjna colliery was also difficult due to several intrusions in the seam and bad roof conditions. A quarry has been opened at that colliery in the Brindabanpur seam and the coal has been graded as IIIB.

The Company has submitted plans for increase of production during the third Five-year Plan at its mines and these have received the general approval of the Government.

Working at the collieries after the end of the year, continues to be as before. The inadequacy of wagon supplies is causing a setback at the Orient colliery, due to accumulation of stock.

Accounts in brief as at 31st March 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	49,97,750	Gross block	82,38,293
Reserves and surplus	7,44,849	—Depreciation	31,00,614

		Current assets	34,76,642
		Investments	2,84,311
		Cash	1,39,068
	Rs. 90,37,700		Rs. 90,37,700

* Paid-up capital consists of 4,99,700 equity shares of Rs. 10 each, fully paid up.

Rajapalayam Mills Ltd.

(*Managing Agents*: Ramco Agencies Co., Rajapalayam.)

Twenty-fifth Annual General Meeting—6th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (finished goods)	1,17,84	98,57
" (dyes and chemicals)	18	Nil
" (waste, cotton seeds, etc.)	1,75	2,25
Closing stock	19,07	22,18
Gross profit	20,05	14,98
Transfer to Managing Agents' remuneration	1,01	1,15
" " depreciation	4,52	4,68
" " development rebate reserve	27	4,85
" " provision for taxation	5,76	1,90
Net profit	9,09	2,77
Appropriations:—		
To donations	25	16
" wealth tax and income-tax paid	Nil	16
" bonus paid for the year 1960	2,99	Nil
Transfer to reserves	5,07	1,00
Proposed dividend (taxable)	2,68 (16%)	1,45 (9%)
Carried forward	Nil	Nil

Extracts from the Directors' report: In respect of the loans from The Madras Industrial Investment Corporation Limited, the Company had to repay during the year under report only Rs. 1,66,667 being the first instalment of the second loan. But the Company has paid Rs. 3,99,375.

Trade Conditions: Fortunately, there was no power cut. Both the old and new Mills worked for 304 days on double shift basis. The Company's relationship with workers were cordial throughout the year and the Mill had a smooth running with their co-operation. By the implementation of Wage Board recommendations, the wage bill this year has gone up by about Rs. 1,50,000.

Both foreign and Indian cotton were purchased within the quota limits fixed by the Textile Commissioner. The Company could not therefore freely purchase the local cotton according to market conditions. For the import of foreign cotton the Company had to pay heavy premium for the release of import licence.

The old unit engaged in spinning of counts upto 40s earned good profits, but the earnings of the New Unit using mostly imported cotton and spinning fine counts were not so satisfactory on account of payment of heavy premiums for imported cotton and generally weak market conditions for fine counts.

Though the earnings of the year would have permitted to recommend a higher dividend, it has been restricted to 16 per cent with a view to plough back good portions of the profits for the rehabilitation of the old Mill and to invest on machines to produce doubling and cone yarns etc. Further, the directors propose to equip the Mills with an up-to-date quality control laboratory with modern instruments. By these measures they reasonably expect that the Mills will be assured of steady income under various trade conditions.

Accounts in brief as at 31st March 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	16,14,300	Gross block	66,06,845
Reserves	22,11,000	—Depreciation	32,18,566
Other liabilities	37,39,965	Net block	33,88,279
		Current assets	37,13,083
		Investments	30,600
		Cash	4,33,303
	Rs. 75,65,265		Rs. 75,65,265

* Paid-up capital consists of 16,143 equity shares of Rs. 100 each, fully paid up. Of this 10,762 shares are allotted as fully paid up by way of bonus shares issued by capitalisation of reserves.

Mysore Electrical Industries Ltd.

(*Chairman*: Mr. R. D. Char, Bangalore.)

Sixteenth Annual General Meeting—31st August. Dividends payable on or after 11th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales (gross)	79,43	75,88
Closing stock	4,00	1,79
Gross profit	11,29	10,21
Transfer to depreciation	1,13	1,13
" " development reserve	66	71
" " provision for taxation	4,91	4,40
Net profit	4,59	3,97
Adjustments	4	4
Appropriations:		
Total available balance	4,63	4,01
Transfer to loan redemption fund	80	70
" " rehabilitation fund	65	50
Proposed dividend (taxable) Ordinary	3,15* (20%)	2,77 (24%)
Carried forward	3	4

N.B.—Adjustments include only the balance brought forward from the previous year.
* This includes dividend on 14,050 old ordinary shares at the rate of Rs. 20 per share and dividend on 3,450 new ordinary shares at the rate of Rs. 10 per share.

Extracts from the Directors' report: During the year under report, the demand for all the types of the Company's products had shown a marked upward trend and during the current year this trend has further accelerated. Electrical Engineers all over the country have recognised the reliability of all the types of equipment produced by this Company. Every effort is being made to keep up with the demand in spite of difficulties in obtaining some of the essential raw materials and delay in receipt of component parts from sub-contractors.

With the increasing manufacturing activities in the country of products similar to those produced in the Company's factory, the directors have taken active steps to improve the facilities in the manufacturing process and also diversify by taking up other allied lines of products. Negotiations have been finalised for the production of heavy duty type contractors, *Automatic Motor Controlgears*, *Air Break Circuit Brakers*, *Low Voltage Capacitors* and various types of relays with technical collaboration from well known manufacturers in France and West Germany. For some of them, Government approval has already been obtained and for others approval is being awaited.

The new No. II Factory building at Rajajinagar Industrial Suburb is nearing completion and is expected to be occupied in October this year. The administrative, drawing and design buildings will be ready in December this year. With this increased manufacturing facilities, it is hoped to take care of the heavy demand for the Company's products which are very popular and also add the new lines of manufacture mentioned above.

In view of the expansion and diversification programme the Company has undertaken, the directors have thought it prudent to conserve the resources of the Company and have therefore recommended a dividend of Rs. 20 per share subject to tax as against Rs. 24 in the previous year, inspite of the fact that the net profits during the year has been higher than that of the previous year.

The Company has received import licence to the extent of about Rs. 2½ lakhs for machinery and equipment to be supplied by its Technical Collaborators Messrs. SAPAG, Switzerland, against issue of equity shares and orders have been placed on them.

With the issue of Rs. 2½ lakhs worth of shares to the Company's technical collaborators Messrs. SAPAG, the present authorised capital of Rs. 20 lakhs would be fully issued. The directors therefore recommend that the authorised capital of the Company be increased from Rs. 20 lakhs to Rs. 50 lakhs to take care of any eventual further issue as and when it becomes necessary.

The loan of Rs. 6½ lakhs from the Refinance Corporation for Industry through the Company's Bankers reported in the directors' last year's report was availed of during the year under review. Machine tools to the extent of Rs. 73,917 were added during the year.

Accounts in brief as at 31st March 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital	17,50,000	Gross block	16,14,284
Reserves and surplus	7,92,943	—Depreciation	7,39,760
Other liabilities	30,18,905	Net block	8,74,524
		Current assets	46,38,917
		Cash	48,407
	Rs. 55,61,848		Rs. 55,61,848

Rameshwara Jute Mills Ltd.

(*Managing Agents*: Hindusthan Investment Corporation Ltd., Calcutta.)

Annual General Meeting—16th August.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales	1,26,01	1,00,75

Appropriations:		
Total available balance	(—) 9,71	(+) 3,51
Transfer to dividends (taxable) Preference	Nil	3,30†
" " Ordinary	Nil	Nil
Carried forward	(—) 9,71	(+) 21

N.B.—Adjustments include only the credit balance brought forward from the previous year.
* This represents loss after providing Rs. 36,000 for Managing Agents' remuneration but includes provisions for depreciation and development rebate reserve.
† This represents preference dividends for the period from 1st October 1950 to 31st March 1956 (i.e., for 5½ years); subject to deduction of tax.

Extracts from the Directors' report: There remains a net loss of Rs. 9,71,483 which is carried forward to the next account. In addition to the above deficit, there remains a further sum of Rs. 9,37,302 as unabsorbed depreciation upto the end of the year under report which has got to be provided in future years. There also remains a contingent liability of Rs. 2,99,950 in respect of arrears of dividend on the cumulative preference shares upto 31st March 1961.

The working results for the year have not been satisfactory and, therefore, they have been unable to recommend payment of dividend even on the preference shares. The loss during the year has been due to the extremely difficult trading conditions in the jute industry throughout the year under review. After the disappointing jute crop in the previous season, it was hoped by the directors, as mentioned in their report last year, that the 1960-61 crop would be satisfactory; but unfortunately, on account of the drought in the jute growing areas in India and Pakistan during the months of April and May last year, sowings were adversely affected, resulting in very small crops in both the countries. Consequently, two successive seasons of bad crops created conditions of scarcity and the price of raw jute rose sharply, resulting in a wide disparity between the prices of raw jute and jute manufactures, which in turn adversely affected the profitability of the entire industry.

The Company's production is confined mainly to the manufacture of cement bags, which are sold to the cement industry under an open price annual contract. For this reason the Company was comparatively more adversely affected by the steadily rising trend of raw jute prices. Coal supply to the Mills was also restricted due to shortage of wagons.

The directors referred in their last report to the question of modernising the Company's mill machinery upto the Spinning Department. Satisfactory progress has been made in this direction and it is expected that the modernisation programme will be completed by April next year. This should result in considerable improvement in production efficiency and also in economy in labour. In view of the Company's forward sales under the open price contracts for supply of bags to the cement industry, the decline in raw jute prices this year should partly compensate for the loss, which the Company suffered last year.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	27,00,000	Gross block	36,55,345

JUTE

(*Concluded from page 402*)

80,300 tons, respectively. Total stocks of jute goods lying with mills as of 31st July 1961 are of the order of 70,100 tons (23,100 tons of hessian, 37,500 tons of sacking cloth and 9,500 tons of others), as compared with 88,100 tons (31,700 tons of hessian, 46,500 tons of sacking and 9,900 tons of others) a year before.

Despite the fall in stocks, prices of jute goods have suffered a sharp decline. Ready hessian (40" 10 oz.) is now quoted at Rs. 47.00 per 100 yards and sacking (B. twill) at Rs. 133.75 per 100 bags, as against as high as Rs. 69.75 and Rs. 216.00, respectively, touched sometime in February 1961. Similarly, raw jute prices have tended to fall, the latest available quotation for Assam bottom being Rs. 37 per maund, as against the highest level of Rs. 66.50 reached in February. These falls reflect the belief that the current jute crop will be a bumper one. But even the present prices are pretty high by normal standards. Meanwhile, the declining tendency in raw jute prices has prompted the West Bengal Government to urge the Centre to fix a floor price for raw jute. There may be need for such a price, but it has to be stressed, once again, that, in fixing a minimum price, due consideration must be given to the likely effect on the jute industry. As this journal emphasised only two weeks ago, the jute industry, which is predominantly export-based, has to sell in world markets in highly competitive conditions.

COMMERCE AND INDUSTRY

(*Concluded from page 414*)

twenty businessmen, will be at Leipzig for trade negotiations and for concluding contracts with the participants from East Germany and other countries.

Taking part in the Leipzig Autumn Fair are firms and trade organisations from 43 foreign countries, including the U.S., Japan and West Germany, and several others from Africa and Latin America. From the Communist bloc Soviet Russia, Czechoslovakia, Poland, Hungary, Rumania, Bulgaria, China and Yugoslavia will take part in the Fair and display "a convincing picture of the intensification of their consumer goods production."

The next Leipzig Spring Fair will be held in March 1962. India is expected to participate in this fair on a much larger scale.

PAKISTAN'S IMPORT POLICY

The Pakistan Government has informed the G.A.T.T. Secretariat that the import policy for the period July-December 1961 seeks to liberalise further the import of industrial raw materials and spare parts and essential consumer goods according to a well-defined scheme of priorities.

Under the import policy for period July-December 1961, forty-nine items have been placed on Open General Licence, leaving fourteen items under automatic licensing. Among the items added to the Open General Licence list are the following: asphalt, pitch and tar, building and engineering material of all sorts (with specified exceptions), drugs and medicine (allopathic), coal-tar dyes, dyeing and tanning substances, laboratory glassware, vacuum flasks, electric insulating material, needles, scientific instruments and apparatus, surgical instruments, ball bearings, tractors and spare parts, cinematographic and X-ray films, sago, tyres and tubes, crepe rubber sheets, motor cycles and motor scooters, duplicating stencils and vegetable and flower seeds. With this addition, imports of industrial raw materials and spare parts for 173 industries will now be licensed on the basis of the amounts asked for by them.

During the second half of 1960, it may be recalled, the Government extended automatic licensing to twenty-seven items. In the first half of 1961, ing of sixty-two items on automatic licensing, followed by the introduction of a regulated Open General Licence for eleven important items.

PRIVATE CAPITAL FOR DEVELOPING COUNTRIES

The Economic Committee of the U.N. Economic and Social Council, which concluded its thirty-second session at Geneva on the 2nd inst., adopted a resolution on the promotion of the flow of private capital to developing countries. The resolution calls upon the U.N. Secretary-General to make exhaustive studies on the economic, legal and administrative, means which may help the less-developed countries to secure private capital "for promoting their economic development and their advance towards self-sustaining growth, bearing particularly in mind the special problems of those countries with currently inadequate economic and social infrastructure." It urges the Secretary-General to submit the report on the question during the next session of the Committee, covering, among others, the progress made in relation to concrete proposals for encouraging the flow of private capital. The Committee noted with appreciation the Secretary-General's interim reports on the promotion of international flow of private capital.

MONEY EASY

(From Our Own Correspondent)

BOMBAY, 23rd *August*

No new developments have occurred in the short-term money market during the week under review. The demand for funds was on a moderate scale as in the previous week, but, the supply position remained comfortable throughout. Borrowers were able to obtain their requirements without difficulty. In fact, there was a surplus of funds left over. It is believed in market circles that the inter-bank call money rate, which has been steady at 2 per cent, may even decline to 1½ per cent in the coming week, but that it may harden again to 3 and 4 per cent when the lists for State loans open on 4th September. Bankers are, of course, keeping funds ready for meeting the calls for support to these loans but the demand may turn out to the larger than their build up of cash resources. The term money rates remain unchanged at the rates quoted below:

	Per cent
Notice Money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3½
(v) 12 months	4

The results of the 91 days' Treasury Bills of the Government of India sold through weekly tenders showed no new features. As against an invitation for Rs. 2 crores, the amount offered, as well as accepted, was the same. Similarly, the average rate of accepted tenders remained unchanged at 2.400 per cent per annum. 91 days' Intermediates Treasury Bills sold from the 16th to 19th inst. amounted to a fairly sizable amount of Rs. 2 55 crores, as against just Rs. 69 lakhs in the previous week. Their sales are being continued from the 23rd inst. to the 26th inst. both days inclusive.

A fall of Rs. 13.41 crores in notes in circulation is disclosed by the Statement of affairs of the Reserve Bank of India for the week ended 18th August 1961, as compared with that for previous week. As the notes held in the Banking Department have gone up by Rs. 4.71 crores, the total notes issued have fallen by Rs. 8.70 crores only. The foreign securities held by the Issue Department are unchanged at Rs. 116.86 crores, but, as the balances held abroad have fallen by Rs. 2.44 crores, the total foreign assets are lower by that amount at Rs. 146.38 crores.

A decline of Rs. 3.34 crores in demand deposits and an expansion of Rs. 4.26 crores in time deposits are disclosed by the statement of the scheduled banks for the week ended 11th August 1961. The deposits of the State Bank of India have shrunk by Rs. 4.80 crores. Borrowings of the scheduled banks from the Reserve Bank of India went up by Rs. 1.27 crore and such against usance bills also rose by Rs. 1.05 crore. Their borrowings of time nature from the State Bank of India, too, recorded an expansion of Rs. 2.59 crores, but those of demand nature from the same source, receded by Rs. 1.14 crore. Investments of the Scheduled banks as a whole, dwindled by as much as Rs. 8.79 crores. But as investments of the State Bank alone declined by Rs. 10 31 crores only, it is clear that investments of other scheduled banks must have actually risen by Rs. 1.52 crore. Advanced and Bills discounted (Bank Credit) by the scheduled banks shrank by about Rs. 2 crores to Rs. 1.236.27 crores. The advances of the State Bank, however, increased by Rs. 93 lakhs.

The gilt-edged market ruled dull with turnover severely restricted. The conversion loan gained 20 nP to Rs. 72 60. But 3½ per cent 1964 National Plan Loan and 3½ per cent 1965 Loans eared by 10 nP each to Rs. 99 95 and Rs. 99 90, respectively. 3 per cent 1963-65, 3½ per cent 1967, 1968 and 4 per cent 1980 each lost 5 nP to Rs. 98.80, Rs. 99 05. Rs. 98.70 and Rs. 99.20, respectively. In the State Loan section, the downward adjustment in the prices of the existing 4½ per cent State issue to the yields available in the new issues now on offer to the public has already started. Accordingly, 4½ per cent 1969, 1970, 1971, loans of Maharashtra, 4½ per cent 1970 loans of West Bengal, Madras Andhra and Uttar Pradesh have suffered losses ranging between 20 nP to 70 nP. In the foreign exchange section, the rupee improved slightly, following the rise in the external value of the pound sterling. Banks' selling and buying rates for ready T.T on New York were Rs. 477 25 and Rs. 474, respectively, as against Rs. 477.75 and Rs. 474 50 last week. In the New York Exchange, the pound sterling was marked up *vis-a-vis* the U.S dollar. The latest available rates are 280 430-280.470 cents per £ for spot and 277.660-277 700 cents per £ for three months' forward. Over the week, the pound sterling gained 0.27 cent in the spot and 0.50 cent in the forward.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, 21*st August*

There is virtually no change in the linseed market and firm prices have been maintained. Arrivals from upcountry are still scarce. Turnover is rather limited. Crushers are in the market daily for seeds, but sellers are very reserved.

The oil market is keeping steady but business is only on a small scale for ready deliveries. Sellers are not interested for forward business, owing to shortage of seeds supply.

August-Sept. delivery is quoted at Rs. 30 per maund.

BULLION FIRM AGAIN

(From Our Own Correspondent)

BOMBAY, 23*rd August*

The bullion market depicted a firm trend during the week under review too. The renewed firmness was engendered by reports of enlarged offtake in North Indian centres, reduced arrivals of contraband metals and fears regarding world-wide shortage of silver. There was good buying by spot houses. The daily average offtake amounted to 3,500 tolas of gold and 7 bars of silver, as against 3,000 tolas and 5 bars, respectively, in the previous week. Arrivals of silver were markedly lower at 17 bars, as against 37 bars, while those of gold were higher at 4.750 tolas, as against 3,500 tolas. The floating stocks are reported to be around 25.000 tolas of gold and 1,000 bars of silver.

Adjustment rates fixed today were Rs. 122.40 per 10 grams of gold and Rs. 203.35 per kilogram of silver. The corresponding rates on Wednesday last week were Rs. 122.50 and Rs. 202.55, respectively.

In gold, the *Bhadrapad* (25th September) settlement, which had declined from Rs. 123.15 to Rs. 122.75 on Friday the 18th inst., recovered subsequently and touched Rs. 123.35 yesterday. After easing to Rs. 122.90 on profit-taking, the settlement moved up again to Rs. 123.15 today before finishing at Rs. 122.80.

Ready gold began at Rs. 122.75, same as last week, and rallied to Rs. 123.10 yesterday. After receding to Rs. 122.65, it recovered to Rs. 123.00 today. The closing was a shade lower at Rs. 122.65. The discount under the forward declined from 40 nP last week-end to 20 nP today.

The *Bhadrapad* (26th September) settlement in gold was well supported, the quotation advancing from Rs. 203.15 to Rs. 204.35 yesterday. At this level, there was liquidation by some tired bulls and the settlement drifted down to Rs. 204. Today, it improved again to Rs. 204.20 but closed lower at Rs. 203.55.

Ready silver continued to be quoted at a discount under the forward, though the actual discount receded from 40 nP last week-end to 20 nP today. The closing rate for the metal was Rs. 203.35, as against Rs. 202.55 on Wednesday last, the highest and lowest levels touched being Rs. 204.35 (yesterday) and Rs. 202.30 (Friday 18th), respectively.

The world price of gold in the London bullion market softened from $35.16¼ to $35.16 per fine ounce. Ready gold also receded from 251s. 1½d. to 250s. 9½d., owing to the firmness of the pound sterling *vis-a-vis* the dollar. Ready and forward silver, however, were unchanged, the former at 79½d. and the latter at 80⅛d. Silver in New York was unaltered at 91.375 cents.

The following table shows the trend of prices during the week under review:

	23-8-1961 (closing)	High	Low	16-8-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	122 65	123 10	122 35	122.75
Forward: Bhadrapad* ..	122.80	123 35	122 75	123.15
Sovereign	94.25	94.25	94.00	94.00
SILVER				
Ready (.996 fine) ..	203.35	204.35	202.30	202.55
Forward: Bhadrapad† ..	203.55	204.55	203.90	203.15
London—				
Silver Ready	79½d.	—	—	79½d.
Silver Forward	80⅛d.	—	—	80⅛d.
Gold	250s. 9½d.	251s. 1½d.	250s. 9½d.	251s.1½d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 22*nd August*

Sugar ruled depressed during the week, thanks to easy supply position. The factories were reported to be anxious sellers following accumulations of heavy stocks. According to latest reports, sugar will not be decontrolled nor would there be any reduction in the price of cane, but in order to increase internal consumption in the country, there would be only removal of inter-State movement and relaxation in the distribution system of sugar. Although exports to the extent of 100 000 tons have been arranged to Malaya, Ceylon, Burma and other West Asian countries at a loss of about Rs. 3 crores, it was further contemplated to export 187,000 tons of sugar to the U.S. and about 30,000 tons to other countries. Week-end prices of sugar here were:—Rs. 105.50 per bag of 2 maunds and 30 *seers* and retail 97 nP per *seer*.

Owing to inclement weather, trading in *khandsari* was at a standstill and enquiries from consuming centres were absent. Some business was done for destination in the Punjab. Stocks in Muzaffarnagar market were small at about 15.000 maunds, the corresponding figure last year being 50.000 maunds. *Galawat* and *dana minja* were being manufactures and week-end prices were:—non-crystal Rs. 32.50 to Rs. 37; crystal Rs. 34.50 to Rs. 37.25; *galawat* Rs. 27 to Rs. 31.50; *dara minja* Rs. 17 to Rs. 20.50 a maund.

In the futures section *gur fagun* moved both ways in heavy speculative turnover. It opened at Rs. 13.39 last Monday and touched the highest and lowest of the week in mid-session at Rs. 13.48 and Rs. 13.33. It was quoted today at Rs. 13.42.

JARILLA AUGUST EXPIRES

(From Our Own Correspondent)

BOMBAY, 23rd *August*

The last hedge contract of the 1960-61 season, namely, I.C.C. August 1961, closed down today at Rs. 645, the room rate fixed for the settlement of outstanding contracts. In fact, there was no transaction in the contract today. The rate fixed for the previous contract was higher at Rs. 678. The lower room rate for the August contract perhaps reflects the current levels of spot prices which are below those prevailing three months ago. The lower spot prices also account for the larger volume of tenders against the contract. Total tenders, including the 500 bales issued today, the last tender day, aggregated 1,750 bales, as against 1,050 bales issued against the April 1961 contract.

Trading in the new crop contract, I.C.C. March 1962, was unaffected by these developments. Although it is true that, with the expiry of the August contract, the March position has become the centre of attractions, business in it was guided almost solely by weather report and crop news. Early in the week, news of damage to the quality and quantity of new crop in some areas touched off a wave of speculative buying which resulted in a spurt in the quotation for the contract from the last week-end rate of Rs. 589.25 to Rs. 594.75 on Thursday the 17th inst. The estimated damage to the crop proved to have been exaggerated and the market tended to ease in subsequent sessions. Rumours of the possibility of some quantity of Pakistan cotton being imported in the near future also imparted weakness to the market. The contract consequently receded steadily from the peak of Rs. 594.75 to Rs. 592.25 today. The finish was, however, a shade higher at Rs. 593.75. Over the week, the contract showed a net rise of Rs. 4.50.

In the spot market prices ruled barely steady. Spinner demand was evident in staple styles such as CO2, Surti, L 147, Laxmi, Vijay, Digvijay and 197/3. Some prominent Bombay mills showed interest in new crop for November-December delivery.

With the completion of the ceiling (shippers' share) in respect of the latest Bengal *Deshi quota*, export interest naturally shifted to ¾" cotton. Kala, Wagad, and Kalyan cotton attracted shippers' attention. Following the reported recommendation of the East India Cotton Associations, Bombay, that a further export quota should be issued for Bengal *Deshi*, renewed inquiries were evident. But actual business put through was negligible.

Demand for foreign cotton was subdued. Stray deals in ready lots of U.S. cottons at Rs. 1,100 per candy were reported. East African and Sudanese growths too attracted attention. Busoga (U.N U.G.) was done at Rs. 1,285; B.P. 52 (F.A.Q.) changed hands at Rs. 1,305.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week's closing prices: Bengal *Deshi*: 600 (610); Jarilla 930 (930); Surti 920 (920); Kalyan 810 (810); Vijay 925 (930).

Cotton futures in the Karachi cotton market scored handsome gains during the week under review. Revival of foreign inquiries for Pakistan cotton following the reduction in export duty and renewed interest showed by domestic spinners set off a general buying movement which found offerings limited. Future values consequently hardened. N.T.R.G. January firmed up from Rs. 72.90 to Rs. 73.95. The March position hardened by 75 nP to Rs. 73.

Weather and crop conditions continued to be satisfactory throughout last month. Sind and Punjab areas experienced fairly heavy and widespread rains which proved to be very timely. Rains in Tharparkar were, however, too heavy. Clear and sunny weather was required. Middle Sind and Punjab had moderate rainfall.

In the Alexandria cotton future market, future trading continued to be suspended. The Government is reported to be taking all possible steps to check the spread of the leaf-worm attack that threatens to destory the crop. Menoufi crop is said to be the worst affected.

Quiet conditions prevailed in the Liverpool cotton future market during the week. Values tended to recede in their trading characterised mainly by inter-month switching and some hedge selling. Fresh support was lacking, thanks to sluggishness in the yarn and piecegoods market. Over the week, both the American and American type contracts recorded small losses. Sudan cotton futures contracts were quietly steady.

The following are the latest available quotations—in pence per lb. from Liverpool:

American cotton one inch staple contract: October 24.30; December 24.75; March 25.20; May 25.60.

American cotton one inch staple contract: October 24.75; December 25.15; March 25.55; May 26.00.

Sudan: September, November, January 31.25.

Firm conditions prevailed on the New York Cotton Exchange during the week. Good trade and Commission House demand prompted by the strength of the spot market and the prospects for large quantities of cotton moving into the Government loan programme resulted in a mild rally in prices. Exports during the 1960-61 season are estimated at 6 635.771 bales, of 500 lbs. as compared with 7.182,191 bales in the previous season. Total C.C.C. controlled stocks on 31st July 1961 aggregated 1.508.918 bales comprising 8.918 of 1961 loan and 1 500,000 bales of 1960 and earlier crop.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.

	22-8-61	15-8-61	8-8-61
New York Spot ...	35 15	35.15	35 05
New Orleans Spot ...	33 00	32 90	32 90
October	34 65	34 50	34.56
December	35.17	35.03	35.08

STAPLE FIBRE YARN DECLINES

(From Our Own Correspondent)

BOMBAY, 23*rd August*

Traders in yarn are awaiting the outcome of the discussions on staple fibre yarn prices now being held between the Bombay Yarn Merchants Association and the Textile Commissioner. On Friday the 18th inst., two representatives of the Association met the Textile Commissioner in response to the latter's letter and sought to explain as to why the currently ruling prices of staple fibre yarn were higher than the stamped prices. They are understood to have stated that the main cause for the rise in prices lay in the incentives granted under the Export Promotion Scheme. They are also believed to have put forward a plea for changing the present system of incentives, which is based on export value or on weight, to either invoice value or local purchase value. No decisions were arrived at at the meeting and it is said that the Association's spokesmen will shortly meet the Textile Commissioner again.

Although there was nothing in the above report to suggest official intervention in the market, traders seemed to be apprehending that the Textile Commissioner might ask the Association to take some stern measures to check speculation in staple fibre yarn. Thanks to these apprehensions and to rumours that several powerlooms in Surat, Salem, Bangalore, etc., were contemplating to reduce consumption of staple fibre yarn in view of competition from cotton cloth, some bulls were anxious to liquidate as large a part of their holdings as possible. Consequently, prices suffered a setback. 40 x 2 August contract climbed down from Rs. 896 to Rs. 851. October position fell by Rs. 41 to Rs. 831. Spot Hinds receded by 53 nP to Rs. 9.77. Citys declined by 29 nP to Rs. 10.16. Kohinoors shed 16 nP to Rs. 10.71.

Art silk yarns ruled firm, notwithstanding the announcement that the Rayon Mills Corporation, which is appointed the S.T.C.'s authorised distributors of art silk yarn, had begun distribution to actual users of viscose and nylon yarns valued at Rs. 60 lakhs. There was good support from a group of bull operators and enlarged enquiries from South Indian centres. 120 Italy spurted by Rs. 55 to Rs. 1,984. 120 Japan picked up Rs. 15 to Rs. 2,136. 150 Japan was fully maintained at Rs. 2,205, as also spot Cupressa Bemberg yarn (60 x 1) at Rs. 2,798. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade gathered 7 nP to Rs. 15.27. JP yarn (40 x 1) August delivery hardened by Rs. 7 to Rs. 3,110. October contract strengthened by Rs. 9 to Rs. 3,143.

Cotton yarns continued to rule dull. Twenty counts Gokaks were neglected at Rs. 23, as also thirty counts Simplex at Rs. 27. Forty counts Minaxis dropped 25 nP to Rs. 33. Sixty counts Finlays were quiet at Rs. 63.63. Eighty counts Moderns lost 25 nP to Rs. 68. Ten counts Podars, however, attracted special support and rose by 12 nP to Rs. 17.37.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	23-8-1961	16-8-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
Spot	2,798.00	2,798.00
40 × 1 J P		
August	3,110.00	3,103.00
October	3,143.00	3,134.00
120 Japan (per 100 kg.)	2,136.00	2,121.00
150 Japan (per 100 kg.)	2,205.00	2,205.00
120 Italy	1,984.00	1,929.00
Nat. Ray. 150 Bt. I	15.27	15.20
Nat. Ray. 120 Bt. I	17.47	18.15
Staple fibre yarn (40 × 2)—		
August (per 90.72 kg.)	851.00	896.00
October	831.00	872.00

60s Finlay	63.63	63.63
80s Modern	68.00	68.25

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 23*rd August*

Distinctly buoyant conditions prevailed in the oilseeds market during the week under review, thanks to enlarged speculative support, though there was a slight setback towards the close as a result mainly of profit-taking. Groundnuts staged a smart rally on reports that some damage had been done to the standing crop by weevils in Saurashtra and in the South. Operators were also expecting a new incentive scheme for exports of groundnut oil, as well as a new export quota for H.P.S. groundnuts. Linseeds ruled firm. The supply position was tight and consistent support was lent even at higher levels. Cottonseeds attracted good attention. Castorseeds and castor oil, too, edged upward following persistent cornering by a powerful operator. But towards the closing session of the week, stale liquidation brought down futures prices. There were rumours suggesting that Brazil offered a sizable quantity of groundnut oil to the U.S. at competitive prices.

The Bombay Oilseeds and Oils Exchange has adopted by-laws regarding ready and delivery contracts for oilcakes. This will enable the Exchange to commence trading in delivery and hedge contracts for oilcakes.

Replying to a question in Lok Sabha on the increase in prices of edible oils, Mr. M. V. Krishnappa, Union Deputy Minister for Food, attributed the rise in prices of edible oils in the recent past mainly to decline in production of groundnut oil during the year 1959-60 and 1960-61, increasing demand for edible oils due to rise in population as well as incomes, and speculative activities. After detailing the short-term measures taken to meet the shortages, Mr. Krishnappa stated that the production of oilseeds, including both edible and minor oilseeds, was proposed to be stepped up at accelerated pace during the third Plan.

Groundnut January 1962 contract rose from Rs. 216.62 to Rs. 219.25 before closing at Rs. 218.50. Nizam bold spurted by 50 nP to Rs. 52.50. Both Khandesh quality and Coromandels put on 25 nP to Rs. 52.50. Oil railway receipts scored a gain of 20 nP to Rs. 21.60. Oil ex-mill improved by 15 nP to Rs. 21.75. Oil January 1962 contract hardened by 20 nP to Rs. 18.10.

Linseed September 1961 contract moved up from Rs. 39.56 to Rs. 40.75 but finished lower at Rs. 40.12. The net gain over the week was 56 nP. March 1962 contract strengthened by 13 nP to Rs. 37.69. Bold ready advanced by a rupee to Rs. 40. Linseed oil picked up 15 nP to Rs. 17.05.

Castorseed March 1962 contract declined from Rs. 170.75 to Rs. 169.87; it had, of course, touched a high of Rs. 172.12 early in the week. September 1961 contract rose from Rs. 170.37 to Rs. 172.12 on Monday, but eased later and finished at Rs. 170.12. The spot section was, however, active. Ready Madras gathered 50 nP to Rs. 34.50 and Kanpurs 25 nP to Rs. 33.37. Oil B.S.S. put on 10 nP to Rs. 15.60. Commercial was unchanged at Rs. 14.05.

Cottonseed March 1962 contract strengthened by 75 nP to Rs. 92.50. September 1961 contract, however, closed lower by Rs. 2 to Rs. 93.50, after fluctuating between Rs. 97 and Rs. 94. Both Berars and Non-whites gathered 20 nP to Rs. 19.40.

In contrast, Sesame bold was marked down by Rs. 5 to Rs. 325. Sesame oil shed 25 nP to Rs. 24.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	23-8-1961	16-8-1961	9-8-1961
Groundnut	Rs.	Rs.	Rs.
January 1962	218.50	216.62	215.25
Nizam bold	52.50	52.00	50.50
Coromandel ready	52.50	52.25	50.50
Khandesh quality	52.50	52.25	50.50

Niger seed	40.75	41.00	41.00
Kardi seed	25.00	25.00	26.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER QUIET

(Messrs. Parekh & Co.)

BOMBAY, 22*nd August*

Malabar black pepper moved irregularly with quiet tendency and uncertain undertone during the week. Continued lack of foreign demand often brought forth tired long sellings which depressed both ready and forward rates. Ungarbled at Cochin was quoted at Rs. 383.50 and garbled at Rs. 398.50. October delivery, after touching the highest at Rs. 428, came down to Rs. 412 for lack of fresh support. December was quoted at Rs. 396, the highest being Rs. 415. Bulls in the ring are reported to be sufficiently long in October delivery. As such, unless new development, they are chary to commit afresh. Consequently, even a small selling either by bears or by stale bulls is enough to bring down the prices.

New York dealers are reported to have bought a small quantity of Malabar pepper at $0.43½. Small business at reduced price by India made New York dealers all the more suspicious regarding the holding capacity of the Indian dealers. They reduced their buying limit. They are now bidding at not more than $0.42½. The present apathy of New York buyers is a paradox to bazar analysts who were all expecting sizable demand from New York, in view of the limited stocks in the hands of both dealers and grinders. New York dealers are reported to be trying to put one against the other in the hope of getting price reduction either from Singapore or from India.

Singapore is quiet with foreign demand lacking. Black was nominally quoted at Str.$145 and white at Str.$175. A prominent holder is sticking to his guns, despite manœuvring by New York buyers who want to knock out a bargain once Lampong holder showed signs of nervousness.

Spot in New York is steady but quiet, as demand from grinders is discouraging, since they are living upon their own inventories until some new development forces them to come out as aggressive buyers. Berlin news seems to have been discounted though it acts as a deterrent for any short selling by bears at these lower prices.

The future of the market appears to be uncertain and will remain so until inland demand which the trade is expecting after a week or so or the renewal of foreign buying which is already overdue, in view of the approaching autumn season in the consuming countries.

Ready pepper in Bombay is nominally quoted at Rs. 215 per 50 kilos, with demand discouraging.

TEA EASY

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 22*nd August*

A total of 461,000 kilograms was on offer in Sale No. 33 held on Monday, the 14th August, 1961. Quality from the Nilgiris was generally well maintained and a few invoices showed some improvement. From other districts a slight decline was noticeable. There was good general demand. Highgrown brokens were well supported but prices were generally slightly easier although improved quality lines were quoted firm. Fannings from this district were a strong feature and sold at irregularly dearer rates. Good mediums and mediums met fair enquiry although prices were easier by up to 10 nP. Low mediums and the plainer kinds were taken up at lower levels with the more stalky descriptions being discounted by 10 to 15 nP per kilo. Nilgiri whole leaf grades sold well but others followed the lower trend of the market. Black leaf teas were again a strong feature although prices were only barely steady. Tippy teas were lower. C.T.C. descriptions met restricted enquiry and were again easier. C.T.C. types and legg-cut kinds sold well at last levels and sometimes at dearer rates.

Quotations were:

	1961	1960
	Rs.	Rs.
Low mediums	4.40/4.50	3.65/4.00
Mediums	4.45/4.60	4.00/4.15
Good mediums	4.60/5.10	4.10/4.55
Nilgiri B.O.P.	4.70	6.30

The average price realised in Sale No. 33 was Rs. 4.75 per kilo, as against Rs. 4.82 a week ago and Rs. 4.40 in the corresponding sale last year.

Dust Sale No. 33: A total of 235.000 kilograms was offered in Sale No. 33 held on Thursday, 17th August 1961. There was strong and active demand. Highgrowns were well supported but prices were generally only barely steady at last levels. Good colourey mediums came to a strong market and tended dearer whilst other mediums were fully firm at last rates. Poorer descriptions and residuals were irregular although little change in price was noticeable. C.T.C's and C.T.C. types sold at firm rates.

The average price realised in Dust Sale No. 33 was Rs. 4.71 per kilo, as compared with Rs. 4.63 a week ago and Rs. 3.98 in the corresponding sale last year.

Export Quota: There are sellers in Calcutta at 1½ nP but buyers are scarce and the quotation remains nominal.

Colombo: Approximately 6½ million lbs. were offered in this week's export sale. There was quieter demand except for the best Dimbulas, which were firm and improved Uvas which sold at dearer rates with quality. Lesser highgrowns and mediums were 5/15 cents lower whilst lowgrowns followed the easier trend of the market.

London: North Indian and other growths: There was good general demand for all useful liquoring teas and the best sold well. The Room was, however, considerably quiet for all other descriptions, and low medium and plain teas were again easier.

Ceylon and South Indians: 27,387 packages were on offer in Tuesday's sale of which 11,916 packages originated from South India. There was good demand for all teas with prices ruling about fully firm.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No. 34*: 480.000 kilograms. Fair demand. Plain and low mediums brokens 10 to 15 nP easier. Similar fannings about 5 nP lower. Better mediums steady. Fannings 10 to 15 nP easier. Highgrowns irregular, with best dearer."

TEA SLIGHTLY LOWER

(From Our Own Correspondent)

CALCUTTA, 21*st August*

This week's fall in export demand leading to easier prices as well as irregular conditions at the internal sale were not altogether unexpected, as, in view of the impressively higher trend of production in North-East Indian gardens, buyers anticipated increased arrivals. It was believed that there would be no problem of poor supply as in the last season and that, therefore, buyers need be in no hurry to make advance commitments for subsequent requirements of the year. That explains for the number of withdrawals that took place at the last two export auctions.

During the week, tea shipments to the U.K. showed a further increase, with shipments to various other destinations being fair. U.K. tea stocks increased to 123.26 million lbs. in the week ended 11th August from 122.54 million lbs. in the previous week.

Tea circles in Pakistan expect that this year's output in that country would touch 60 million lbs. and, together with the carryover of about 8 million lbs., the availability this year is placed around 65 to 68 million lbs. They apprehend that the present rates of export as well as excise duties (As. 6 and As. 10 per lb., respectively) are too high, and that, unless these are revised, Pakistan may be unable to export all the surplus in excess of that country's internal consumption, which is placed at about 40 million lbs. In view of lower output, last year's export quota was reduced to 5 million lbs. So far, Pakistan has not announced any increase in the export quota, but it is likely to do so in the near future. Average

prices realised in the recent Pakistan auctions for internal sale has been Rs. 2.02 a lb., as against Rs. 2.35 which was the average price for the whole of last year.

Weather conditions in North-East India continue to be excellent, and the increasing output trend is likely to be maintained in the coming months. Trade circles feel that prices are likely to fall further. However, overseas demand will be maintained and no problem of a glut in supplies is anticipated. Fortunately, for India, Iran has intensified its purchases of Indian tea, since the trade agreement between Ceylon and Iran has already expired, and Ceylon has not so far been able to conclude a fresh agreement. Iran usually purchases a considerable portion of its tea requirements from Ceylon, but it has this year turned to India for the reason already stated.

In the internal sale held in last week, dusts on offer aggregated 23,586 packages. Prices were irregular, though there was a good and general demand. C.T.Cs met with keen attention, but, prices following the general trend, were irregular. However, the bright liquoring teas were fully steady and added a small gain. Orthodox teas were irregular, with the bright lines being often dearer. Keen competition was offered to legg-cut teas, and prices were fully firm. Selected lots were fully absorbed. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.90 to Rs. 7.30; medium Assam C.T.C. dust Rs. 6.40 to Rs. 6.80; legg-cut dust Rs. 4.90 to Rs. 5.60; medium Assam dust Rs. 4.90 to Rs. 5.50; and plain orthodox dust Rs. 4.35 to Rs. 4.55.

Leaf on offer amounting to 97 packages met with good demand.

A fall in quality was one of the reasons leading to easier conditions during last week's export auctions, when offerings amounted to 65,723 packages. Darjeelings were a weak feature, as were tippy teas. Medium and poorer Darjeelings were liberally withdrawn. Medium and better orthodox teas eased. Plain orthodox teas gave way by 20 nP. and similar fannings by 10 nP. Medium and better C.T.Cs recorded a decline of 30 to 60 nP and those of poorer kinds up to 30 nP. Legg-cut teas, clean plain pekoes and stylish leaf grades all recorded a liberal decline in prices. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 6.70 to Rs. 7.20; best Assam C.T.C. B.P. Rs. 6.50 to Rs. 7.00; medium Assam C.T.C. fannings Rs. 5.60 to Rs. 5.80; medium Assam C.T.C. B.P. Rs. 5.50 to Rs. 5.70; clean plain pekoe Rs. 4.85 to Rs. 5.00; plain B.P. Rs. 4.60 to Rs. 4.70; and plain fannings Rs. 4.45 to Rs. 4.55.

RAINS DAMAGE "KHARIF" CROPS

(From Our Own Correspondent)

HAPUR, 21*st August*

Steadier conditions were witnessed in the foodgrains market during the week. It was reported that continued heavy rains in the past three weeks had damaged the *kharif* crops of maize, *bajra* in foodgrains and *juwar* and *guwar* as fodder crops. Arrivals in the markets were poor and trading was virtually at a standstill. Paddy crops, however, were very bright, as sowings had been on a large-scale and standing crop conditions were excellent following heavy rains. Wheat here recorded modest gains to be quoted on Monday at Rs. 15.37 a maund for average quality and upto Rs. 16.62 for better farm produce. Arrivals in the markets were poor and, as demand was also absent, local wheat stock was stationary at 25,000 maunds. Heavy rains have not only damaged *kharif* crops but have also hampered the preparation of land for *rabi* sowings.

Rice ruled quiet. Although local stock was poor, demand was also slack and week-end prices were:—rice *mainpuri sela* Rs. 22.75; *gadda kutcha* Rs. 22.12; *ramajwayan sela* Rs. 24; *raimunia sela* Rs. 25; *basmati sela* Rs. 29 to Rs. 31; superior Rs. 35 to Rs. 39 per maund.

After mid-session gains on firm Punjab advices influenced by reports of losses to *kharif* crops, gram eased slightly towards the week-end on poor demand and selling pressure by stockists as local stock was heavy at 40,000 maunds. *Bejhar* and barley were quiet during the week. Although the local stocks of these coarse grains were poor, demand was slack. *Methi* continued to attract demand at unchanged price levels, while *juwar* and *guwar* were depressed, due to selling pressure in the face of poor demand. Old maize improved during the week, and week-end prices (in rupees per maund) were:—gram Punjab 13.87 to 14, local inferior 13.50; barley 11.25; *bejhar* 11; superior *moongia* variety 11.50; *methi* 27 to 28; *juwar* 11.50; *guwar* 14.35; maize 12; *bajra* 15.

TIN JUMPS UP

(From Our Own Correspondent)

CALCUTTA, 21*st August*

The impressive rise in the price of tin was the feature of trading in the metal market during the week under review. Encouraging overseas advices and seasonal increase in demand were the factors that led to the hardening trend. The price of tin at Rs. 1,687 per 100 kgs. recorded a thirty-point rise. In London, tin jumped to as high a rate as £942 a ton, closing firm at £938. The Singapore price also continued to rise. It was felt that, unless producers were encouraged by assuring them, a reasonable buffer-stock price having regard to higher cost of production in working abandoned mines, production was unlikely to increase.

In London, electrolytic copper receded to £229½ a ton, after being higher at £230¾. In Calcutta, copper scrap was difficult to be located and berry scrap and utensil scrap were firm.

Electrolytic zinc opened here at Rs. 334.75 per 100 kgs. and after easing to Rs. 326.75 recovered to close at Rs. 330.75. The quotation in London opened at £76⅛ a ton and, after being higher at £76⅜, [illegible] to £76⅛.

SHARP FALL IN JUTE PRICES

(From Our Own Correspondent)

CALCUTTA, 21st August

There was a sharp fall in the prices of raw jute and jute goods during the week under review. New crop was available in larger quantities, and the quality showed a remarkable improvement. The decline in goods prices was far greater than that in raw jute. Mills displayed little interest in buying for some time, and it was stated on their behalf that fibre prices must decline further to make production of goods economic. While fibre prices recovered after the fall, no recovery in the case of goods was in evidence, but the falling trend took deeper roots. What the mills needed at present, it was said, was not good quality jute but fibre suitable for batching. It was on account of this factor that support to new crop by mills was niggardly. Along with the fall in fibre prices, prices of goods also drastically declined. Despite this, buyers of goods were in no mood to enter into large commitments against replenishment of stocks. Noting this feature, trade circles stated that overseas buyers were not expected to show any interest unless prices touched rock-bottom levels. At lower levels, prices of goods must get stabilised, and there should be no wide fluctuations. These are the conditons which according to trade circles, would encourage overseas buyers to respond to offers. In recent months, in view of high prices, U.S. consumers were believed to have taken to more and more of bulk handling, and it was apprehended that, unless normalcy prevailed in the prices of jute goods spread over a period, bulk handling methods might not be abandoned.

No information is available in Calcutta as to what the State Government will consider a fair ceiling price for the fibre. Dr. B. C. Roy, the Chief Minister, told a deputation of workers that fixation of floor price would mean the creation of a bufferstock, to which all fibre offering at the floor price should be bought. He felt that the bufferstock should be managed by a joint body, representatives of the State Government and the I.J.M.A. However, he did not indicate the agency which would finance the purchases. Trade circles seem to agree with the official view that new crop arrivals had now risen to about 70,000 maunds a day from 50,000 maunds a week ago. The State Labour Minister, Mr. Abdus Sattar, said that there were few buyers and that not even the allotted quotas were being lifted by the mills. A conference with a view to considering the State Government's demand to fix a minimum price is scheduled to be held at New Delhi in the next few days.

With sparse interest shown by buyers, dull conditions were in evidence in the goods market. On Wednesday last, ready B. twills declined from Rs. 146.00 to Rs. 141.75 and ready hessian 40" 10 oz. from Rs. 50.00 to Rs. 48.50. The news of satisfactory burlap consumption in the U.S. during the month of July was encouragingly noted, but for this the fall in price would have been greater. There was, indeed, only a little measure of support, as overseas buyers anticipated that the declining trend would continue in view of the rapid fall in fibre prices. Prices in the futures market fluctuated widely, with December Assam bottoms at Rs. 30.96, November B. twills at Rs. 124.10 and November 40" 10 oz. hessian at Rs. 43.84, as against the week's lowest levels of Rs. 31.90, Rs. 128.70 and Rs. 45.14, respectively. This was on Thursday last, when, in the ready goods market, B. twills fell to Rs. 140.50 while, on moderate buying interest, ready hessian 40" 10 oz. recovered to Rs. 48.75. On Friday, these levels were maintained for ready goods, and a small recovery was also in evidence in the futures market. Prices dropped heavily on Saturday. Selling pressure added gravity to the current of the easing trend. B. twills touched as low as Rs. 136.00. Hessian 40" 10 oz. dropped to Rs. 47.75. During the week, there were only poor bookings of gunnies in export liners. The week was highlighted by the announcement by the Calcutta U.S. Conference that the rates of freight on jute goods, temporarily reduced as at present, would be increased as from 11th January 1962.

Fibre prices fell more rapidly than goods prices. Offers increased impressively, and, although earlier in the week mills showed little interest and sellers were anxious for business, subsequently mills turned active and purchased moderate quantities. Prices also recovered. Harvesting operations are now in full swing, and arrivals are daily on the increase. Quality has decidedly improved. Prices in Pakistan markets fell more markedly than in Calcutta. Arrivals in the Narayanganj market are stated to have increased to 35,000 maunds a day; however, there are complaints about a deterioration in quality. Prices of *pucca* bales for export in Pakistan markets fell by £10 a ton. Cuttings were wanting buyers at as low a rate as Rs. 135 a bale. Firsts were depressed at Rs. 265 a bale, hearts at Rs. 160 and lightnings at Rs. 210. The Pakistan mills as well as overseas buyers were only buying sparingly, in order to allow the prices to fall further. A shortage of baling facilities was reported in the northern areas of East Pakistan, and the Government has called upon the jute trade to set up more baling presses. According to current indications, the freight war in respect of exports of Pakistan raw jute is again being forced to appear. It would be remembered that the Bank Line which until recently was carrying all shipments of Pakistan raw jute to African ports was ousted by the Japanese firm of Nissen Line. The Bank Line, it was reported during the week, has now offered to carry raw jute to East, South and West African ports at 80s and 90s, as against the current Japanese rate of 102s. The Bank Line was previously charging 152s. when the Nissen Line cut the rate to 102s and entered into an agreement with the Pakistan Jute Association. Meanwhile, the recent decision by the Conference Lines to increase freight from the U.K. and Continental ports to India and Pakistan is causing concern. Price movement in Calcutta are noted below:

(In Rs. per maund ready delivery, new crop)

	Opened at	Declined to	Closed at
Daisee bottoms ...	42.00	40.00	43.50
Northern bottoms	39.00	37.00	39.00
Assam bottoms ...	38.50	36.00	37.50

SURVEY

(Concluded from page 392)

170 million, inhabiting an area of about 1.28 million square miles. During the financial year 1960-61, India exported goods worth Rs. 6.52 crores to Burma, Rs. 3.09 crores to Indonesia, Rs. 5.66 crores to Malaya, Rs. 7.12 crores to Singapore, Rs. 3.24 crores to Thailand, Rs. 82 lakhs to the Philippines, Rs. 10 lakhs to Sarawak and Rs. one lakh to North Borneo.

The British trade delegation has impressively highlighted the fact that South East Asia is a region with new demands, requiring new methods of approach. It has also warned that lax or old-fashioned business methods cannot meet what it calls "the stimulating and exciting challenge." The delegation has stressed that new markets must be studied and underlined the importance of personal contacts. British business men, it is pointed out, should seek to establish the closest possible co-operation with the people of the countries with which they wish to do business, for "only with their help can commercial enterprises succeed." The delegation has also emphasised the need for foreign investment and technical knowledge which will help greatly the South East Asian countries successfully to implement their plans for economic development. These countries, as readers are aware, are faced with the most pressing problems of finding the requisite resources as well as technical knowledge to bring about a rapid rise in the woefully low living standards of the masses.

Commending the delegation's report, Mr. Charles Willard says that, since trade is a two-way business, the most successful commercial arrangements are always those in which both partners benefit. Britain, according to him, has much to gain by trading with the countries of South East Asia, just as those countries have much to gain from trading with Britain. In his opinion, the report of the delegation stresses the determination that "Britain shall approach these markets with vigour and efficiency."

The U.K. is not the only country which is anxious to expand trade with the aforesaid countries in South East Asia; a number of other countries are also equally anxious. In fact, some of them, especially those in the Communist bloc, have already launched upon a vigorous export drive. If, therefore, India is to secure for its goods a reasonable portion of the markets in South East Asia, it is imperative that energetic steps should be taken without delay to enhance the competitive capacity of the exporting industries. Further, the exporters must scrupulously adhere to sound business practices and make every effort to establish the closest possible contacts with their counterparts in foreign markets.

MARKET GOSSIP

(Concluded from page 387)

ratio of urban to rural incidence which, in 1958-59 was 2.12 : 1, as against 2 : 1 in 1953-54. The increase indicates that a slightly larger share of the extra burden of indirect taxes imposed during the five years ended 1958-59 was borne by urban households, thanks mainly to sales taxes. It may be noted here that the total revenue from sales taxes doubled from Rs. 63.6 crores in 1953-54 to Rs. 127.3 crores in 1958-59. The incidence of this increase fell, by and large, on the urban households.

Some of the indirect taxes do affect the poorer classes, but a great many of them fall on those who have comparatively high incomes. In other words, there is an element of progression even in indirect taxes. This conclusion of the Planning Commission has been borne out by the study under reference which gives the following data:

(Percentage of total monthly expenditure)

Monthly expenditure group (Rs.)	Urban household 1958-59	Urban household 1953-54	Rural household 1958-59	Rural household 1953-54
1— 50 ...	5.4	3.5	2.4	2.1
51—100 ...	6.7	4.3	3.4	2.3
101—150 ...	7.6	4.9	3.9	2.5
151—300 ...	8.4	4.9	4.6	2.7
Above 300 ...	13.0	7.8	6.5	3.9

It will be seen from the aforesaid figures that the burden of indirect taxes on middle income urban households has gone up steeply. Some of the economists in this country who have been arguing that the incidence of indirect taxation on the middle classes is not high enough will do well to bear this point in mind.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2630 BOMBAY, 2nd SEPTEMBER 1961 PRICE Rs. 2

PARLIAMENTARY CONTROL OVER PUBLIC CORPORATIONS

THE task of the public administrator in India's planned economy is increasingly becoming an unenviable one. For, more than in any other country (communist or non-communist), it is in India that the scope of the public administration has been and is being extended, as the U.S. Ambassador, Prof. John Kenneth Galbraith, put it in his address at the Indian Institute of Public Administration at New Delhi the other day, "to embrace the production and distribution of economic goods, while, at the same time, retaining the full substance of parliamentary democracy." This, in his view, is a difficult and taxing experiment, for the problems of public administration take on new form and new dimension in the field of economic production. In analysing these problems and suggesting their solutions, Prof. Galbraith has rendered a timely service to this country. It is a timely service, because the Government's recent "decisions" pertaining to the administration of public corporations (*vide* leading article entitled "Speed in Plan Implementation" in *Commerce* dated 19th August, 1961) are not going to be implemented overnight. Nor will the reported decision to constitute a separate parliamentary committee for exercising control over public undertakings be implemented before the next General Elections. How much democratic control can be blended with freedom for the public corporation can, therefore, continue to be debated with some profit.

There are two powerful voices in this debate—the voice of the planners and that of Prof. Galbraith. The final report on the third Plan has the following to say on the question of public accountability:

"Democratic control of publicly owned industries is very important. At the same time, it is generally agreed that a public enterprise, if it is to be run successfully, must possess a sufficient degree of autonomy from Government and Parliament. When day-to-day decisions of a public enterprise become the subject of parliamentary interpellations and discussions, the Ministers will find it necessary to ask for advance knowledge and approval of all decisions. Moreover, exposed to constant public scrutiny, the management will be afraid of making the day-to-day decisions necessary in commercial undertakings, and an ostensibly autonomous enterprise will be virtually stifled by red tape and bureaucracy. The need has, therefore, been felt for a Committee of Parliament which would enable informed parliamentary criticism to be brought to bear on public enterprises."

Whether such a committee, which, in terms of the Government's latest decision, may be constituted after the next General Elections, will be able to blend control with freedom in the right proportion is arguable. To this question we shall revert in the latter part of this article. But, before doing that, we would refer to Prof. Galbraith's arguments relating to the question of public accountability. His analysis of the problem is as follows:

"The public enterprise in the parliamentary democracy is publicly owned for a purpose. The obvious purpose is the exercise of a measure of democratic control over the enterprise. This control insures that the firm's procedures and decisions will be in the public interest.... If there is no effort to exercise this control, there is no purpose in public ownership.

"So it will be said and so it is said. But plausible and innocent though this sounds, especially when we interject the magic word 'democratic' into the discussion, we have here a serious and unsuspected contradiction. If individuals within the corporate organisation are servants of a force outside the organisation, they will no longer think automatically of the goals of the organisation. They have, at best, a dual obligation: one part runs to the firm and the other to the external authority.... The multitude of decisions will not automatically be attuned to the needs of the Corporation....

"The external authority has an even more damaging effect on the time-dimension of decision-making. I have stressed the importance of timeliness as compared with precision in industrial decisions.... Moreover, parliaments are ordinarily concerned not with late decision but with wrong decision. ...

"The problem, I repeat, is not of wisely-motivated or of ill-motivated intervention. Rather, it is of anything that interferes with or distorts and destroys the firm or corporate personality."

Prof. Galbraith's arguments have a compelling logic of their own, based as they are on his insight into the corporate personality which, like the individual, will be effective only if it has the liberty to pursue specified goals. It would be more appropriate for Parliament to specify firmly these goals for the corporations than to interfere with their decision-making process. Prof. Galbraith's suggestion, in this connection, is that the prime goal of the public sector firm should be its own expansion, in the given or related field and within the framework of Plan. The most successful firm, according to him, would be the one which, by its efficiency and drive, finds the earnings that allow it the greatest growth. If the outside authority clearly lays down such a measure for performance for the publicly-owned corporation in the developing country, it should not grudge the nearly absolute autonomy in every-day decision-making which the corporate personality, derived from the subtle relationships of different types of skilled personnel, requires for getting results. That autonomy, Prof. Galbraith explains, extends to the right to make mistakes, for error will often be the price, and a small one, for expedition; it is required by the very nature of the corporation in all systems. Even Soviet factory managers, it is said, stress the importance of such autonomy for the effective discharge of their responsibilities. In a final clarification, Prof. Galbraith has this to say:

"Autonomy does not mean less public accountability. If anything, it means more—but it is accountability not for method, procedure or individual action but for the result."

There is, of course, an implied recognition of the need for such autonomy in the Government's recent (10th August 1961) statement of objectives relating to administrative reform. For instance, it has been laid down that "individuals and organisations should be judged strictly by the test of results" and that, "for this purpose, they should be given a clear statement of tasks, means, obligations, time sequence of operations and the assumptions on which they are based" and "the necessary measure of support and trust." But this objective is not quite in evidence in the latest decision which the Government is reported to have taken in pursuance of the Planning Commission's recommendation that a separate parliamentary committee be constituted for the purpose of examining the working of public enterprises. According to the Government's decision, this committee, which will take over the functions now exercised by the Estimates Committee and the Public Accounts Committee in relation to public enterprises, will have jurisdiction over such statutory undertakings as Indian Airlines, Air-India International, Damodar Valley Corporation, Life Insurance Corporation, Central Warehousing Corporation, Industrial Finance Corporation and Oil and Natural Gas Commission; all State undertakings which are Government companies under the Companies Act; and other projects (such as Bharat Electronics or Hindustan Aircraft) to be decided upon in consultation with the various Ministries concerned. Although it is stated that this committee will not investigate matters of day-to-day administration, the objective of autonomy will be largely nullified when it exercises the specified functions.

One of the functions to be discharged by the committee will be to examine whether the affairs of the undertakings are being managed in accordance with sound business principles and prudent commercial practices. The financial outcome of operations, devolution of authority within, managerial efficiency, recruitment and training of technical and managerial staff, relations with the public as also other undertakings of a similar nature in the private sector and with the Minister and the Government Department, economies, and improvements in organisation will all be examined by the proposed committee. When these functions are discharged by the committee, it will certainly amount to interference with the day-to-day decision-making process of public enterprises. There is, therefore, no point in saying that the committee will not investigate "matters of day-to-day administration." Things will be pretty difficult for the managements of public enterprises when the committee sends for persons, papers and documents and issues long detailed questionnaires to be answered [illegible] one eye on the organisation and the [illegible] on Parliament and its "vigilant" [illegible] the chief executive of the public enterprise [illegible] be inevitably led to centralising authority and delay decisions. Since he must answer [illegible]

parliamentary committee or brief a minister, he will always reserve to himself, as Prof. Galbraith rightly says, the right to review the decisions that he must later defend. In his perpetual anxiety to avoid a "wrong" decision, he will fail to take a "timely" decision. How supremely important this "timeliness" in industrial decisions is may be seen from this lucid passage in Prof. Galbraith's address: "In the industrial firm, a bad decision made on time will not usually be as costly as a good decision made too late. The bad decision can often be reversed at low cost. The time lost in waiting for the good decision can never be retrieved." It may even be that a chief executive, whose mind is constantly distracted by outside interference or by its prospect, will fail to make a good decision even if it be late.

A standing committee of Parliament does not, therefore, seem to be necessary. On the other hand, the specific goals of a public enterprise can be laid down within the framework of the Plan. Arrangements for internal auditing can be introduced in such an enterprise. Its annual report and balance-sheet can also be drawn up in greater detail, audited in time and submitted promptly to Parliament. Where the enterprise is a company with a competent board of directors, it can be subjected, if necessary, to more effective control and auditing under the Companies Act. Where the enterprise is a statutory corporation, its external auditing by the Comptroller and Auditor General of India can be expedited. If all this is done, there can be both effective autonomy for the enterprise and judicious control over its working. And there can be parliamentary control, too, if it is laid down that, whenever Parliament is not satisfied with the results as revealed in the annual report and statement of accounts of a Corporation or with the explanation given by the Minister concerned, it can recommend the appointment of a purely technical enquiry committee to examine the working of the enterprise concerned and suggest remedial measures. With the best will in the world, parliamentary members of a standing committee like the Estimates Committee cannot hope "to master complex facts" pertaining to modern industrial enterprises, as the Planning Commission wants them to do. This committee is bound to need, at every turn, technical advice and briefing to understand "complex facts" and take "a specialised interest in these matters." A possible need of the kind is itself a clinching argument in favour of a purely technical enquiry committee as and when necessary. Parliamentary scrutiny, supervision and guidance through a standing committee will inevitably have the effect of circumscribing the autonomy of public enterprises and prejudicially affecting their performance sooner or later. In any case, the proposed committee is not likely to have any greater success in improving the performance of public enterprises than the Estimates Committee and the Public Accounts Committee have had. It will be no exaggeration to say that, although these committees have been scrutinising the affairs of public sector corporations for several years now, they have not been able to improve the working of such enterprises in any spectacular manner. They have, however, produced some excellent reports, as, for instance, the one on the L.I.C., which have been useful to the Press for focussing public attention on the achievements and shortcomings of the Corporations.

L.I.C.'S RECORD

THE Chairman of the Life Insurance Corporation of India, Mr. P. A. Gopalkrishnan, I.C.S., has given an encouraging picture of the working of the Corporation in his annual statement, published on pages 444 and 445 of this issue. New business done during 1960 rose by Rs. 69 crores to Rs. 498 crores, bringing the total business in force at the end of 1960 to Rs. 2,285 crores, as against Rs. 1,958 crores at the end of the previous year. Premium income increased by Rs. 13 crores to Rs. 97 crores. Claims paid to policyholders by way of maturity and death benefits amounted to Rs. 31 crores, as against Rs. 28 crores in 1959. Life fund increased from Rs. 495 crores to Rs. 560 crores and total assets of the Corporation swelled from Rs. 554 crores to Rs. 622 crores. In spite of the general rise in costs, the overall expense ratio of the Corporation declined, though only fractionally, from 28.7 per cent in 1959 to 28.4 per cent in 1960 and the renewal expense ratio remained practically constant at 12.9, the same as in the previous year. An improvement in the efficiency of the administrative and field staff is noticeable, as witness the decline in the number of complaints received and the increase in the average output per head of new business. There were, however, some disquieting developments, too, such as the increase in lapse ratio from 6 per cent to 6.6 per cent, the spurt in loans granted to policyholders and the rise in outstanding premiums by as much as two and a half times. All these features apparently reflect the increasing difficulty experienced by policyholders to save enough and keep their policies alive. But the Chairman seems to suggest that these unfavourable trends are offset by the favourable developments listed earlier, so that the overall picture is a bright one. This, however, is a matter of opinion. On a closer scrutiny, one may be inclined to feel that the total picture is considerably less encouraging.

Take, for instance, new business done. Despite the increase of Rs. 69 crores in such business, the total, at Rs. 498 crores, is still Rs. 27 crores below the Corporation's own five-year plan target for the year of Rs. 525 crores and less than half the target of Rs. 1,000 crores fixed for achievement by 1963. Will the Corporation be able to hit the target in the remaining three years?

A disturbing development is the upward trend of lapse ratio. Those who might have thought that the reversal of the downward trend (the ratio increased from 5.1 per cent in 1958 to 6 per cent in 1959) witnessed in 1959 was a temporary phenomenon and that downward trend would soon be resumed have been proved wrong. While the rise in cost of living might have been an important cause for the increase in lapse ratio, a possible deterioration in the quality of business done, following the drive for securing record new business, and slackness in the efforts to get at the defaulting policyholders and persuade them to pay the premia in arrears might have also been equally important causes. In any case one finds it difficult to share the satisfaction expressed by the Chairman that even the latest lapse ratio is well below the lapse ratio of 7.6 per cent in the last year of life insurance in the private sector. For the latter figure represented the combined ratio for all companies, good, bad and indifferent. The best among the Indian and foreign companies had lapse ratios very much below that of the Corporation. For instance, among foreign companies operating in India, Sun Life of Canada had a lapse ratio of only 0.4 per cent in 1955. Norwich Union's ratio was 2 per cent and Prudential's 4.3 per cent. The combined ratio for the aforesaid foreign insurers was only 2 per cent. It is true that Indian companies generally had a higher lapse ratio. Even so, the lapse ratio of Oriental was 5.4 in 1954 and that of Bombay Mutual 4.4 in 1955.

The position in respect of expense ratio is also not satisfactory, though one cannot blame the management for it. The Chairman listed the various factors that go to inflate expenses and pointed out that, by effecting economies, wherever possible, and keeping a strict control on the recruitment of staff, the Corporation was able to keep down expenses. The overall expense ratio thus declined from 28.7 per cent in 1959 to 28.4 per cent in 1960. But what is more significant is the trend of the renewal expense ratio, which is the real index of economy in management; this ratio remained unchanged at 12.9 per cent, indicating that the effects of the economy measures were nullified by the general rise in expenses or that they were far too inadequate to make themselves felt. The fact that the renewal expense ratio of 12.9 per cent is well below the statutory limit of 15 per cent is no proof of efficiency of management, for, on Mr. C. D. Deshmukh's own admission, the statutory limit is on the high side. Moreover, some of the best-managed Indian companies had a much lower renewal expense ratio. For instance, the ratio was only 9.1 per cent in the case of New India for the year 1954. It is pertinent to recall here that the representative of the Finance Ministry had told the Estimates Committee of the Lok Sabha that the Ministry wanted the Corporation to bring down the expense ratio to 8 or 9 per cent. The Committee, too, had thought that there was scope for lowering the limit.

The fractional improvement in the gross yield on investments (from 4.54 per cent in 1959 to 4.58 per cent in 1960) and the excess of only Rs. one crore in the market value of the Corporation's investments in securities and shares over the book value of Rs. 471 crores cannot be attributed to any exceptional skill in the handling of investments for the simple reason that the improvement in yield and the capital gains are neither striking nor spectacular, considering the dearer money conditions and the buoyancy of equities. It must, however, be borne in mind, in this connection, that nearly 80 per cent of the Corporation's Stock Exchange investments are in Government securities, the value of which had fallen during the year by about one per cent. Further, there was a fall of about one per cent in the value of debentures and a marked drop of 7.4 per cent in the value of preference shares due to the abolition of grossing and the consequent changes. If allowance were made for these facts, the capital gain (only in the books of the Corporation, of course) on equity investments must have been much more than Rs. one crore. Another point to be borne in mind is that the extent of increase in the index number of equity values over the year 1960 was only 3.2 per cent. There is thus no reason to feel dissatisfied with the management of the Corporation's investments.

The Chairman referred to the phenomenal growth of life insurance in the country and pointed out that the life business in force had almost trebled during the ten years 1950-60. Since nationalisation, life business in force, expressed as a percentage of national income, has increased from 11 per cent (in 1955) to 17 per cent (in 1960). This is surely a good record of which the present management can really be proud. But where does this country stand in the insurance map of the world? The ratio of life insurance to national income is as high as 157 per cent in Canada, 135 per cent in the U.S.A., 94 per cent in New Zealand and 63 per cent in the U.K. (all as of 1958). The ratio must surely have risen further since then. If this ratio is taken as an index of insurance protection provided, it will give one an idea of the enormous leeway which yet remains to be made up to achieve the objective of nationalisation.

In the copy of the Chairman's statement which we received, the following observation of the Chairman has been played up: "In a world of ever increasing commodity prices, life insurance policies in India cost less today than at any time during the last 15 years or so." The prominence given to this statement tempted us to reflect a little on it. This statement, we feel, is rather misleading, in that it gives the impression that, when the price of every other commodity and services has gone up, that of life insurance alone has remained static. It is true that the premium rates have not been increased even though costs have gone up all round. It is also very likely that, if life insurance had remained in the private sector, the cost inflation might have been used as an excuse for pushing up the premium rates. But there are other factors which have nullified the effect of the rise in costs and enabled the Corporation to continue to charge the same premiums. It is well known that the basic elements that enter into the computation of premium rates are the rate of mortality, return on investment and expenses. Only in respect of expenses has the Corporation's experience been a little adverse. On the other hand, the return on investments has been higher and the mortality rate highly favourable. In fact, the L.I.C.'s premium rates are lower by only one rupee per thousand sum assured as compared with the rates of the Oriental, which were computed from the mortality table based on actuarial investigations during the period 1925-35. It is common knowledge that mortality rate has markedly improved since then and a corresponding adjustment has not been made in the premium rates. Further, there is the immense advantage of having a streamlined, vast, single corporation with no competition from other insurers. Hence, the L.I.C. premium rates are by no means as low as they are made out to be, though it is slightly lower than those charged by private insurers on the eve of nationalisation. Indeed, they could be lower still.

MARKET GOSSIP

Why Blame The Jute Industry?

IT may be a trite to say that industrialists are the much maligned people in this country, but, for that reason, it is not untrue. No year passes without some section of millowners being blamed for some reason or other for which they themselves are not responsible. One year, it may be sugar millowners; another year, it may be cotton millowners and the third year, it may be jute millowners. Last year, the cotton millowners were very much in the picture, for shortage of cloth and the consequent higher prices were held against them. Nowadays, the jute millowners are being accused of many sins of omission and commission. Last week (on 25th August), a Member of Parliament went so far as to say that the Indian Jute Mills' Association was "the devil incarnate," surely, the most unkind cut of all for an organisation which has been doing its best for the country by earning a substantial amount of foreign exchange despite heavy odds. The attack on them has come from those who claim to represent the interests of labour and growers of raw jute. As the jute industry is dependent upon export markets for the major portion of its production, domestic consumers of jute goods are rarely the cause of campaign against jute industry.

There has been a marked fall in the production of raw jute in the 1960-61 season; this is the second successive setback. Unlike in the case of raw cotton, a shortfall in which could be made good by imports from elsewhere with the help of borrowed funds, there was nothing that could be done to overcome the shortage of raw jute. The only other source of raw jute, namely, Pakistan, had also dried up, for the drought was common to both the countries. There was, therefore, no escape from cutting down production of jute goods to suit the availability of raw jute. It is here that the I.J.M.A. has performed a valuable service. By taking concerted steps and planning the quantum of production in advance, it has avoided the chaotic conditions which would have prevailed had the law of supply and demand been allowed to prevail in the raw jute market. Its action protected the relatively less strong units of the industry and their workers. It is gratifying to find that Mr. Nityanand Kanungo strongly refuted the unmerited charge against the I.J.M.A. He said that neither the Association was the devil incarnate nor was the Government of India a tool in the hands of the devil. He recognised the good work that is being done by the Association when he added that he would welcome the I.J.M.A. to be a strong and influential organisation. This remark by the Union Commerce Minister should be some consolation to jute millowners, in that it shows that the Central Government at least is not unappreciative of the hardships that had been their lot in the past twelve months and of their efforts to tide over the raw material crisis in an orderly manner.

A surprising feature of the controversy, which fortunately is coming to an end now, is the understanding and support that were all along being given to jute industry by both labour and the State Government (Bengal) melted away in the last two months, yielding place to suspicion and wild allegations. All this because the industry wished to continue the stringent restrictions on production for a few days more, with a view to ensuring adequate supply of new jute crop which had just started moving. Of course, the theory of last straw on the camel's back is there. But the ministers and labour leaders are not camels. The facts were there for all to see and they could have easily verified them. Apparently, political exigencies got the better of them and it suited them to make the jute millowners the scapegoat.

Sir John Brown's Able Defence

An able defence of the steps taken by the jute industry to tide over the emergency caused by shortage of raw jute and a well-reasoned refutation of the allegations against the industry have been provided by Sir John Brown, Chairman of the Howrah Mills Co., Ltd., in a statement made at the annual general meeting of the Company held at Calcutta last week. The full text of this statement appears on pages 456 and 457 of this issue. We commend it to the attention of all those who are interested in the economic well-being of this country. Contrary to popular notion, the jute industry is not a mere processing industry. It is a key industry for this country, in general, and for Bengal, in particular. In 1960, it accounted for over Rs. 140 crores of foreign exchange out of a total of Rs. 635 crores earned through exports. Any serious setback to this vital export industry will have repercussions on the entire economy of India. It behoves the authorities at the Centre and in the States, and the leaders of workers and millowners to see that this industry does not become a victim of either sectional interests or of political opportunism.

The impression that millowners are exploiters of labour and agriculturists which is sought to be fostered from time to time is not well founded. The jute millowners are not so shortsighted as not to realise the importance of ensuring adequate supply of raw jute or well contented labour force. The very fact that the I.J.M.A. itself has expressed its readiness to work a bufferstock arrangement for raw jute is sufficient proof of their good intentions towards farmers, if any proof were needed. There is also further evidence of it in the statement of Sir John Brown, an acknowledged leader of the industry. As for workers, the statement of Sir John that "a reduction in labour wages is unthinkable" will, we are sure, be unreservedly endorsed by all his colleagues in the industry. There is really no justification for condemning the jute industry as the villain.

All the hardships which jute growers, jute millworkers and jute millowners have undergone this year will have been in vain again, if no lessons are learned and steps taken to prevent, as far as is humanly possible, a recurrence of jute famine and its aftermath. There is enough food for thought and action on this issue in Sir John's statement referred to above. In brief, the farmer should be assured of a fair minimum price, bearing in mind the fundamental point that jute manufactures do not enjoy a protected domestic market but have to face keen competition from substitute packaging materials as well as from other countries, especially Pakistan which is more favourably placed than India. A minimum price on paper is no good. It has to be enforced when the market tends to dip to the bottom. In other words, when the jute crop is plentiful, the excess supply should be absorbed into the bufferstock. Thus, a buffer stock scheme is an inevitable part of minimum price. When there is a shortage of raw jute and prices tend to go up to uneconomic heights, the bufferstock can have a restraining influence and impart a steadiness to markets. The right party to operate such a scheme is the Government and not the millowners and/or the traders, as suggested by the Bengal Chief Minister, Dr. B. C. Roy. Since the Government fixes the minimum price, it is only but fair that the Government should hold and nurse the baby. It is only then that the Government will realise that it must be reasonable and responsible when fixing the minimum price. Otherwise, the sad story of sugar industry, where the minimum price for sugarcane has turned out to be more than a maximum price, will be repeated here also. A bufferstock scheme on the U.S. lines is the best for this country in the present circumstances. The industry would be well advised to keep aloof from the bufferstock business, conserving its resources, talent and time to improve its efficiency and marketing of jute goods. This does not mean that it should not give its views on the subject and try to see that the minimum prices are determined in a realistic manner.

Just as one swallow does not make a summer, an excellent jute crop in one season does not mean that the problem of adequate jute supply has been overcome for all times. The per acre yield of jute has to be raised by intensive culture and painstaking husbandry. That is the best and healthy way of making the farmer to earn more, without rendering jute goods uneconomic in world markets. It is needless to add that the problem here is not merely one of raising the yield per acre; it also includes provision of facilities for retting, storage and movement to markets. All this is the job of Dr. B. C. Roy and his Cabinet colleagues. Have they done this job well so far? If not, why not? They must see that no room is left for such questions at least before the third Plan period is over.

If the jute mill worker is to be well paid, as, indeed, he must be, and if at the same time the industry is to pay a good price for raw jute, it must improve its efficiency further by keeping pace with the technological improvements in the machinery employed by its competitors. This requires additional capital expenditure and the powers that be owe an obligation to the industry in this respect. Their fiscal, labour and agricultural policies should be so framed and executed as to ensure that jute mills are left with a margin of profit adequate to take care of this important requirement, besides meeting the need for remunerating the investors at a rate that will be consistant with trends in the capital market.

Raw Cotton Policy

The raw cotton policy for the new season 1961-62 commencing on 1st September is yet to be announced at the time of writing, that is, on Thursday, 31st August 1961. Cotton growers, traders and mills are eagerly awaiting the announcement which is expected at any moment. Nobody, however, expects any surprises in the new policy, but certain modifications of the existing cotton control regulations are considered likely. The consensus of opinion among traders is that, barring minor adjustments, there will be no major revision in the ceiling prices for cotton. Nevertheless, some are inclined to think that such a change is not altogether unlikely, in view of the agitation by growers, especially in Gujarat, for higher basic minimum and maximum prices for cotton. But in the opinion of the majority, this is wishful thinking, as it ignores the need for arresting the inflationary trends in the economy. It is anticipated in some quarters that, instead of a general upward revision of the basic minimum and maximum prices, the floor and ceiling prices of only those varieties the prices of which have become unrealistic might be revised. It may be noted, in this connection, that a deputation consisting of representatives of cotton interests in Gujarat recently met Mr. K. C. Reddy, Union Minister for Commerce and Industry and presented the growers' point of view. They were said to have argued that, while all organised sections of the community benefited by the rise in price and profits, the farmers, being unorganised, did not gain by it, although they had to share equally the burden of the higher cost of living. The current ceiling and floor prices, they further pointed out, were fixed in 1951-52 taking into account the conditions and cost of production at that time. They had remained practically unchanged since then and had consequently become thoroughly unrealistic now when prices and costs had gone up all round. They, therefore, wanted the Government to raise the floor and ceilings by at least 15 per cent, so that the resultant rise in the price of cotton would enable the grower to cover his increased cost of operations and leave a small margin of profit. Unless this was done, the representatives pointed out, the farmers might switch over to some other more profitable crop and the third Plan target of 7.2 million bales for cotton would not be achieved.

There is a basic flaw in the above argument and that is the equation of actual price with the ceiling price. When the current floors and ceilings were fixed in 1951-52, neither of them was meant to be the ruling prices. They were the limits within which the actual prices were to be determined by the interplay of supply and demand. The floor was to protect the farmer from a slump in prices and the ceiling to safeguard mills against a sharp spurt in the price of raw material. The actual price was expected to find a level mid-way between the two which, while ensuring a fair return to the farmers, enabled mills to get cotton at an economic price. The actual price could be as low as the floor or as high as the ceiling. Is it suggested that even the ceiling prices are so slow as not to cover the cost of production or that the costs of cultivation have gone up so much as to make the ceiling prices themselves unremunerative? In view of the insistent demand by the self-styled representatives of growers for an upward revision of ceiling, it is desirable to investigate the costs of cultivation. If the contention is that the ceiling prices of certain varieties of cotton, due perhaps to improvement in the quality and staple length, have become unrealistic, it is an entirely different matter. The remedy for it is not a general increase in the floor and ceiling prices of all varieties but selective revision.

New Delhi's reaction to the representation made by growers is not known. It will be reflected in the new cotton policy. Indications are that the Government does not favour a general upward revision of ceiling and floor prices. The Government is also reported to be in favour of abolishing the system of compulsory survey enforced last season under which all Indian cotton has to be surveyed at the ginning and/or pressing stage. Although the trade wants the quota system also to be abolished, it looks as though the Government doubts the wisdom of dispensing with it at this stage when the statistical position of cotton is still in favour of sellers.

I.M.F. To Be Expanded Further?

The forthcoming annual meeting of the International Monetary Fund (I.M.F.), scheduled to commence at Vienna in Austria on the 15th inst., will certainly be as momentous as the one held at New Delhi three years ago, when the decision to raise the capital of the Fund by 50 per cent was taken. For the deliberations of this meeting and the decisions taken thereat may lead to a further strengthening of the Fund's capacity to assist its member-countries in tackling their balance of payments problem. Hopes are expressed to the effect that agreement on principles will be reached at the meeting on the issue of "overhauling" the Fund's functions so as "to promote its ability to ease the international liquidity shortage."

It is now clear that the "reform" of the I.M.F. will be on the lines suggested in what is familiarly known as the Bernstein Plan subject to certain modifications as proposed by Mr. Per Jacobsson, the Managing Director of the I.M.F. In brief, the Bernstein Plan seeks to bring into the Fund the currencies of countries with large external reserves, so that they may be lent to countries losing reserves. This is proposed to be done by asking each of a select number of member-nations to accept, in addition to its present paid-up quota, a standby commitment to give to the Fund, when requested, medium-term credit up to an agreed limit. Mr. Jacobsson has endorsed the Plan, though he has suggested two notable amendments. One, the drawing rights of members should not be made automatic. Two, no separate agency need be formed to handle the Fund's new borrowing arrangements, as they can well be covered within the existing framework of the Fund, in accordance with Article VII.

The above Plan seems to have found favour with most countries. Even some of the countries in Western Europe, including France, which had criticised the move to increase international credit facilities, are now said to be inclined to lend support to the Plan. It is reported that the I.M.F. Administration has drawn up a draft plan for consideration at the Vienna meeting. After it obtains the approval of the Governors, the draft plan will need the ratification of the legislatures of the countries concerned, as was the procedure in the case of the 50 per cent increase in member-quotas three years ago. Assuming that the plan will not undergo any major changes, it may be said that the implementation of the Plan will enable the I.M.F. to expand its lending operations considerably. It is estimated that the total amount involved in the new credit lines will be at least $6.000 million. Of this amount, $2,000 million will be contributed by the U.S. and $1,000 million each by Britain and West Germany, the balance of $2,000 million being shared jointly by France, Italy, Belgium, Netherlands, Luxemburg, Canada, Japan, Sweden and Austria.

The need for strengthening the resources of the Fund is urgent, since the Fund's total stock of currencies suitable for inclusion in lending operations are well below the levels at which it is accustomed to keep them. The I.M.F. has recalled, recently granted credit facilities amounting to as much as $2,000 million to the U.K. and

EQUITIES RECOVER AT CLOSE

SMART RISE IN CENTURY

(From Our Own Correspondents)

BOMBAY, *31st August*

THE share market had only three working sessions during the week under review, as it remained closed on Friday (*Coconut Day*), yesterday and today (on account of *Parsi New Year*). In the first two sessions, the market displayed a weak tone and several active counters suffered a setback in values. The revival of modest speculative buying and bear-covering noted on the Calcutta Stock Exchange following the tightening of the already high margins on short sales in five leading scrips (Indian Iron, Hindustan Motor, Rohtas, Burrakur Coal and Dunlop Rubber) failed to have any perceptible impact on the local market. Even at lower levels, there was lack of support. Genuine investment buying, *too*, was restricted. The sentiment of operators, however, changed a little for the better on Tuesday, 29th August, on hopes that the Investment Committee of the Life Insurance Corporation would provide some selective support to the market. There was also short-covering by cautious bears. Consequently, equities staged a recovery. The recovery gathered further momentum in kerb trading yesterday, especially in the textile and steel sections. In particular, Centurys jumped up from Rs. 658 to Rs. 684 following the announcement of a higher interim dividend of Rs. 12 per share, as against Rs. 10 last year.

Steel shares evinced interest and made modest gains. Tata Steels began at Rs. 150.50, as against the previous close of Rs. 150.75, and fluctuated in a narrow groove to close at Rs. 151 on Tuesday, 29th August. In kerb trading yesterday, they touched a high of Rs. 152. Indian Irons firmed up from Rs. 24.96 on Saturday to Rs. 25.10 before finishing at Rs. 25. Mukand Irons received good support on the news of a three-year expansion programme for its foundry at the Kurla Works and advanced from Rs. 24.76 to Rs. 25.50.

Textiles were generally depressed, with the exception of a few select scrips—Century, Kohinoor, Svadeshi, Tata and India United. Thanks to bull liquidation and scattered bear offerings, Standards slumped by Rs. 163 to Rs. 1,145. Morarjees fell by Rs. 18 to Rs. 380. Khataus receded by Rs. 15 to Rs. 470. Swans lost Rs. 12.50 to Rs. 590. In the cash list, Mafatlals shed a like amount to Rs. 307.50. Gold Mohurs were marked down by Rs. 9.50 to Rs. 248. Finlays and Ahmedabad Advances dropped Rs. 6 each to Rs. 311 and Rs. 182.50, respectively. Elphinstones and Phœnix eased by Rs. 2.50 each, the former to Rs. 82 and the latter to Rs. 165.50. Indores were quiet at Rs. 158, Apollos at Re. 1.82, B.R. Cottons at Rs. 45 and Simplex at Rs. 191. But Svadeshis hardened by Rs. 2 to Rs. 247. Kohinoors picked up Re. 1.50 to Rs. 282.50. In the cash section, Indian Manufacturings spurted by Rs. 55 to Rs. 2,660. Laxmis advanced by Rs. 2.50 to Rs. 602.50.

Sugar shares continued to be well supported during this week. After easing from Rs. 257 to Rs. 255 on Saturday, 26th August, Belapurs were in keen demand on rumours of bonus issue and jumped up to Rs. 272 on Tuesday. The net rise over the week was Rs. 15. Kesar Sugars also received good support and advanced by Rs. 4.50 to Rs. 222. Phaltans rose by Rs. 2 to Rs. 132. Walchandnagars put on 50 nP to Rs. 164. Maharashtra Sugars which had gained Rs. 24 last week were fully maintained at Rs. 190. But Ravalgaons shed Re. 1.30 to Rs. 63.

Chemicals remained depressed. Indian Dyestuffs encountered heavy selling and slumped by Rs. 19.25 to Rs. 411.25 *ex-div.* Colour-Chems dropped Rs. 8.75 to Rs. 333.75. Polychems eased by Rs. 7.50 to Rs. 196.25. Synthetics and Chemicals receded from Rs. 183 to Rs. 177, Citrics shed Re. 1.50 to Rs. 71.50. Adarshas lost a like amount to Rs. 93. Amar Dyes declined by Re. 1.25 to Rs. 298.75. Ultramarines shed a rupee to Rs. 107. In the forward section, Tata Chemicals eased by 75 nP to Rs. 16.40 on fears of lower dividend for the past year. Alembics lost 50 nP to Rs. 227.50. Chemo Pharmas were dull at Rs. 26.25.

In the Engineering section, Telcos began at Rs. 332, as against the previous close of Rs. 334.50 and receded to touch a low of Rs. 325.50 on Tuesday. They, however, recovered to Rs. 330.50 on the same day. In kerb trading on Wednesday, they hardened further to Rs. 335. T. Manekials fell by Rs. 7.50 to Rs. 465. New Standard Engineerings lost Rs. 6.50 to Rs. 180. Asian Cables shed Rs. 2 to Rs. 107. Jost Engineerings dropped a rupee to Rs. 98.50. Kirloskar Oils eased by a like amount to Rs. 27.75. Larsen and Toubros decreased by 75 nP to Rs. 34.75. Texmacos declined by Re. 1.16 to Rs. 16.52 and Mahindras by 40 nP to Rs. 18.60. But Brady Engineerings were neglected at Rs. 83, as also Greaves Cottons at Rs. 185.50. Alcocks Ashdowns, however, received good support and jumped up by Rs. 12 to Rs. 287. Cooper Engineerings gained 50 nP to Rs. 177.50.

With the exception of Gwalior Rayons, which rose by a rupee to Rs. 49 on hopes of encouraging prospects, the rayon section continued to remain weak. National Rayons fell by Rs. 11 to Rs. 614. Straits India Viscoses dropped Rs. 7 to Rs. 174. Baroda Rayons lost Rs. 2.50 to Rs. 135.50. Indian Rayons shed a like amount to Rs. 70.

In the miscellaneous section, Bombay Burmahs began at Rs. 578, as against the previous close of Rs. 580.50, and hardened to Rs. 580 on the following day. After receding to Rs. 571 on Tuesday they finished higher at Rs. 579. Voltas eased by Rs. 4 to Rs. 276. Ceat Tyres fell by Rs. 12.50 to Rs. 200 and Premier Tyres by Rs. 2.75 to Rs. 119.75. Anil Hardboards dropped Rs. 6.25 to Rs. 250. Jayant Papers lost Rs. 2.50 to Rs. 83.50. Tata Oils eased by 50 nP to Rs. 68. Permanent Magnets lost Rs. 2 to Rs. 84. Bombay Oxygens shed a rupee to Rs. 56. Killicks eased by a similar amount to Rs. 96. Hindustan Levers declined by 50 nP to Rs. 47.50. But Wimcos gained a rupee to Rs. 272 and Escorts 24 nP to Rs. 23.36.

* * * *

Madras Stock Exchange

MADRAS, *29th August*

Equities ruled easy during the week under review, barring some rubber shares which elicited special support. The easiness was due to lack of buying by both investors and professional operators. Advices from Bombay and Calcutta were also not encouraging. Several textile shares drifted lower on account of larger offerings. Teas were subdued on reports of lower prices at the auction centres. Coffees were dull, as operators preferred to await details of reports suggesting that the Government was considering the question of joining the International Coffee Agreement. Sugars continued to display weakness since traders were apprehensive of the problem of disposing of surplus sugar stocks, notwithstanding the recent shipment to the U.S. from the Madras port. There was a perceptible decline in the values of miscellaneous industrials, particularly cements and engineerings.

Among textiles, South India Viscoses suffered a loss of Rs. 6, today's closing rate being Rs. 176. Cananores fell by Rs. 3.50 to Rs. 157, Janardanas by Rs. 3.35 to Rs. 66 and Lakshmis by Rs. 2 to Rs. 156. Coimbatore Spinnings shed Re. 1.75 to Rs. 54.50. Travancore Rayons gave way from Rs. 38.45 to Rs. 36.05. Maduras softened by 20 nP to Rs. 36.70. Buckinghams were quiet at Rs. 249, despite the announcement of an interim dividend of 8 per cent taxable, for 1961. Coimbatore Cottons were dull at Rs. 188.

In the tea group, Haileyburias declined by 25 nP to Rs. 13.40. Nonsuchs were lower by 10 nP to Rs. 28.60. Nilgiris shed a like amount to Rs. 8.80, despite higher dividend. The Directors of the Company have declared a dividend of 10 per cent, taxable, for the year ended March 1961, as compared with only 8 per cent paid in the previous year. Neelamalais lost 3 nP to Rs. 4.30. Blue Mountains shed 2 nP to Rs. 3.08; they were lower still at Rs. 3.05 earlier in the week. Chembras shed 2 nP to Rs. 3.85 and Waterfalls 1 nP to Rs. 2.95. Highlands were neglected at Rs. 14, as also Kil Kotagiris at Rs. 4.65. Parksides at Rs. 29.62 and Peermades at Rs. 23.25. Cconoors were unchanged at Rs. 28.12. The Company has announced an interim dividend of 7.50 per cent for the year ending October 1961. Cottanads were quiet at Rs. 10.65. The Directors of the Company have maintained the dividend for the year ended March 1961 at the previous year's level of 10 per cent, taxable. Talayars, however, put on 2 nP to Re. 1.90, following the news that the Company had stepped up its dividend from 8 per cent (taxable) for the year ended March 1960 to 10 per cent (taxable) for 1960-61.

Among coffees, Consolidated Coffees fell by 20 nP to Rs. 21.05. Rajendras were subdued at Rs. 12.12. The Company has announced a dividend of 25 per cent for the year ended March 1961, same as that distributed in the previous year. The Mysore Coffees has also maintained the dividend for the year ended March 1961 at the previous year's level of 15 per cent, taxable. The quotation was unchanged at Rs. 5.50.

A further drop of Rs. 2.50 to Rs. 117 in the quotation for Cauverys was a feature in the sugar section. East India Distilleries lost 50 nP to Rs. 38.25. Indias shed 20 nP to Rs. 12. Deccans eased by 5 nP to Rs. 13. United Breweries were neglected at Rs. 101.50.

Among miscellaneous industrials, Textools came in for selling and dropped Rs. 3 to Rs. 175. Tube Investments fell by Rs. 2 to Rs. 258. Among cements, Orissas softened by 15 nP to Rs. 14.75, Andhras by 12 nP to Rs. 9.50, Dalmias by 10 nP to Rs. 10.90 and Indias by 7 nP to Rs. 6.47. In the chemicals group, F.A.C.Ts decreased by 25 nP to Rs. 9.50. Mysore Chemical Manufacturings were unchanged at Rs. 23.85. The Company has repeated the dividend for the year ended March 1961, namely, 20 per cent taxable. Metturs were unaltered at Rs. 14.45 and Mysore Fertilisers at Rs. 11.60. Among others, Aluminium Industries eased by 30 nP to Rs. 22.70 and Ashok Leylands by 25 nP to Rs. 8.42. Indian Steel Rollings dropped 10 nP to Rs. 10.55. Binnys, however, advanced by Rs. 5 to Rs. 230, following the announcement of an interim dividend of 8 per cent (taxable) for the year 1961.

JUTE INDUSTRY—A CORRECTION

In the article entitled "Crisis in Jute Industry Persists," appearing in our last issue (*vide page 402*), the production and despatches of jute goods were expressed by mistake, in million tons, whereas they are actually in lakh tons, as correctly shown in the table on that page. The output of other jute goods should be read as 53,100 tons in January-June 1960 and 64,900 tons in January-June 1961 and not as 551,000 tons and 649,000 tons, respectively.

MARKET GOSSIP

(Concluded from previous page)

$250 million to India. It has also been giving a large number of standby credits to Asian, Latin American and African countries. The total of these commitments is quite sizable. The need for reinforcing the holdings of scarcer currencies (such as French Franc, D.Mark, Italian Lira and Japanese Yen) has become paramount, because the Fund cannot lean heavily on the U.K. and the U.S. which are themselves in payment difficulties.

An increase in the resources of the I.M.F., however, is only a palliative at best. It is no solution to the disequilibrium in the economies of major developed countries. On the contrary, it will only postpone the evil day which will reassert itself with greater force than is threatened now, if appropriate steps are not taken in good time by the big countries to correct the disequilibrium, which is mainly the result of heavy expenditure on armaments and excessively high standards of living.

In the context of the proposed reforms of the I.M.F., the publication of the report of the U.S. Congressional Economic Sub-Committee on International Exchange and Payments is significant. Its findings and recommendations may greatly influence the attitude of the U.S. Governor and Executive Directors of the Fund. From the brief Press summary of the report, one finds three important recommendations. These are:

1. The I.M.F., which now gives only temporary and short-term credit, should extend credit on a five-year basis. The Committee has clearly warned that the free world economic objectives are in jeopardy because of the Fund's current procedure. It has also recommended that the U.S., Japan, Canada and the leading European nations must negotiate a supplementary credit system for the Fund.

2. There should be no devaluation or revaluation of the principal currencies. It has urged the repealing of the present U.S. 25 per cent gold reserve requirement on federal reserve notes.

3. The question of establishing a free world common market to replace regional groups, such as the European Economic Community, which divide the free world should be considered.

On the whole, these three suggestions appear to be quite sensible. The problem of establishing a multilateral system of trade and payments, free from restrictions on current payments, multiple exchange rates and other discriminatory currency practices, can be tackled more speedily and effectively only on a world-wide basis and not through regional economic groups. Further, stability of exchange rates is important and is the corner stone of the Fund's objectives. Any change in the exchange value of principal currencies will be detrimental to the growth of world trade and will only perpetuate the disparities between the developed and developing countries. It would, indeed, be a good thing if the I.M.F. meeting at Vienna were to endorse the suggestions of the U.S. Congressional Committee.

Baroda Electric Meters

The Baroda Electric Meters Limited, a newly registered public limited company, has just entered the capital market to raise Rs. 22.50 lakhs by public subscription for putting up and commissioning an electric meter manufacturing plant, capable of producing 60,000 pieces of single-phase electric meters per year and 24,000 pieces of polyphase meters per year. The list opens on Wednesday 6th September 1961 and closes on 19th September or earlier but not before 9th September 1961. The issued capital of the Company amounts to Rs. 40 lakhs all in equity shares of Rs. 100 each. Of these, the Directors and their friends have agreed to take up 12,500 shares of the value of Rs. 12.50 lakhs. The Life Insurance Corporation has underwritten, with firm allotment, 5,000 equity shares of the value of Rs. 5 lakhs. Accordingly, only the balance of 22,500 equity shares of the value of Rs. 22.50 lakhs are available for public subscription.

The amount payable in respect of the issue is Rs. 25 per share with application and Rs. 25 per share on allotment. The balance of Rs. 50 per share is payable in two equal instalments, the first of which shall not be earlier than three months from the date of allotment and the second not earlier than three months from the first call.

The prospects for the Company are promising. With the extensive programme of electrification envisaged in the third Plan, the demand for electric meters is bound to rise continually. Even now production of single-phase meters within the country hardly aggregates 500,000 units. It was only 480,000 units during the year ended 30th June 1961, whereas the present annual demand for single-phase meters is estimated at over one million. It is expected to go up to 2.1 million pieces by the end of third Plan. The gap is only partially filled by imports which amounts to 489,000 annually. In addition to single-phase meters, the Company proposes to manufacture poly-phase meters (24,000 per year) also, the annual demand for which is currently estimated at 250,000 pieces. The Company has secured the technical collaboration of a world-famous W. German electrical manufacturing firm Messrs. Deutsche Zahler-Gesellschaft, Hamburg, which has agreed to train Indian engineers in West Germany. The firm has offered 25 years' guarantee for the meters produced with its help. This compares with the guarantee of five to 12½ years offered by others.

The Company has a Board of Directors, comprising well-known business men and industrialists, with Mr. Jehangir P. Patel, as the Chairman of the Board.

NEWS IN BRIEF

INDIA will give Nepal financial aid amounting to Rs. 18 crores during the third Plan period. The total aid granted in the last nine years is Rs. 11 crores.

The State Trading Corporation exported goods worth Rs. 36.53 crores in 1960-61, as against Rs. 24.47 crores in 1959-60, Rs. 23.37 crores in 1958-59 and Rs. 20.99 crores in 1957-58.

The next general election in India will be held between 22nd and 28th February 1962 and results will be announced by 4th March, according to Mr. K. V. K. Sundaram, Chief Election Commissioner.

A watch factory with a capacity to produce 12,000 watches annually will be set up in the private sector in Himachal Pradesh shortly. The proposed plant, which will cost about Rs. 3 lakhs, is expected to go into production next year.

The view that there are good prospects of exporting railway coaches to Pakistan, Ceylon and Argentina has been expressed by the delegations of Railways and the State Trading Corporations which visited these countries recently.

A proposal to provide training facilities to Ceylonese technicians in the steel plants is being considered by the Government of India. Meanwhile, two Indian experts have already been sent to Ceylon to examine the proposal for establishing a steel mill there.

A sum of Rs. 16.7 crores has been realised through the sale of Prize Bonds up to the end of July 1961, according to the Union Minister for Finance. The question of any profits accruing to the Government does not arise, as the principal of the bonds is to be repaid in full on or after 1st April 1965 and as the interest is distributed by way of prizes.

The award of the Wage Board for textile industry has been implemented by 406 mills out of the 439 mills in the country. Less than 3 per cent of the 900,000 textile workers have still not received the benefits of the award. The Government of India has started an investigation to find out as to why the remaining 33 mills have not accepted the recommendations.

The Government of India is considering the question of determining the nature of autonomy that should be given to public sector undertakings regarding recruitment, particularly in respect of highly-paid jobs. It is also considering the desirability of associating a member of the Union Public Service Commission with the selection of candidates to public sector units.

The cotton textile mills' production in July 1961 is provisionally placed at 72 million Kgs. of cotton yarn and 410 million metres of cotton cloth. The total production in the first seven months of this year was 487 million Kgs. of cotton yarn and 2,745 million metres of cotton cloth. At the end of July 1961, the composite mills of the cotton textile industry held an estimated stock of 142,000 metric bales of cloth as unsold and 1,69,000 metric bales of cloth as sold but not lifted.

Four firms have been granted licences to manufacture tractors with a total capacity of 11,000 tractors a year. One unit has already gone into production and two more units are expected to commence operation shortly. Another scheme envisaging an annual production of 3,000 tractors has been approved of by the Government. The current annual requirements of agricultural tractors are estimated at 8,000, and are likely to go upto 10,000 by the end of the third Plan.

An Indian firm has entered into an agreement with the Yamason Machinery and Tools of Japan to establish a tool factory at Calcutta. The Japanese firm will have 49 per cent of the capital outlay of 80 million yen. The proposed plant is expected to produce 40,000 monkey wrenches and spanners valued at 15 million yen a month, to start with. Semi-finished tools are expected to be brought from Japan and finished at Calcutta. The services of two Japanese experts will be made available to the Company for technical consultations.

The National Mineral Development Corporation has prepared two project reports for the exploitation of diamond deposits in the Majhawan and Ramkherya areas of Panna district in Madhya Pradesh. The reports reveal that the Majhawan area is expected to yield an annual diamond output of 30,000 ratties and the Ramkherya area 12,000 ratties. The estimated cost of the former project is Rs. 90 lakhs (including Rs. 29 lakhs in foreign exchange) and the latter Rs. 46 lakhs (Rs. 27.9 lakhs).

A licence has been granted to a private party for the establishment of an aluminium factory in the Koyna area in Maharashtra State. Negotiations to secure foreign collaboration for the project have been practically completed. Besides the Koyna factory, there are three other proposals under consideration of the Government for the development and expansion of the aluminium industry during the third Plan period, in addition to the public sector project for the manufacture of 25,000 tons of aluminium. The three parties that have applied for licence are: (1) Mr. Morarji Vaidya (Bombay) for a 30,000 tons aluminium smelter in Mysore with the technical collaboration of the Reynolds of the U.S., (2) Messrs. J. K. Industries Ltd., Calcutta, for a 20,000 tons aluminium smelter in Madhya Pradesh with Swiss collaboration, and (3) the Hindustan Aluminium Corporation Ltd., Bombay, for expanding its smelter capacity at Rihand from 20,000 tons to 50,000 tons per year.

A more positive approach to the problem of improving workers' health was recommended at the twentieth meeting of the Employees' State Insurance Corporation held at New Delhi recently. For this purpose, it was felt that a health education programme should be carried out on a pilot basis at three or four centres. To begin with, the scope of the programme is to be confined to the domestic environment, as against the working environment. It is also decided to grant extended sickness and medical benefits to insured persons in case of fracture of lower extremity. The meeting expressed general satisfaction at the progress of programme of construction of hospitals all over the country. The meeting also recommended that certain provisions of the Employees' State Insurance Act might be amended so as to make the administration of the scheme simpler and eliminating, as far as possible, lengthy and complicated formalities for drawal of benefits under the Act.

A contract has been signed between the Hindustan Steel Ltd. and the West German firm, the Koppers Export GmbH of Essen, for the supply and construction by the latter of an iron ore sintering plant for the Rourkela steel works in Orissa. Koppers, Essen, will erect the plant in collaboration with Koppers Company Inc., Pittsburgh, the U.S. The plant will have a daily capacity of 4,000 tons of blast furnace sinter. The value of the contract is estimated at Rs. 4.0 crores. The new sintering plant, to be completed within two years, will constitute a further addition to the existing modern installations in the Rourkela steel works. The Koppers installations will make it possible to use fine-grained ores in the Rourkela blast furnaces which otherwise would go to waste. Thus, mine output at Barsua nearby and blast furnace processes at Rourkela will be rationalised considerably. A great part of the structures and installations needed for the Rourkela sintering plant will be manufactured in India and Indian firms will be entrusted with civil engineering and construction work.

The Government of India has reconstituted the Import Advisory Council and the Export Promotion Advisory Council for a period of two years. The Minister for Commerce and Industry will continue as Chairman of both the bodies and the Minister for Commerce as Vice-Chairman. The Presidents of the Federation of Indian Chambers of Commerce and Industry and of the Associated Chambers of Commerce of India will be ex-officio members of both the Councils, with option to send a nominee each, if they so choose. The Secretary-General of the Federation of Indian Chambers of Commerce and Industry will also be a member of both the Councils. In addition, there will be 21 non-official members nominated by the Government of India on the Import Advisory Council and 32 on the Export Promotion Advisory Council. The first meeting of the reconstituted Import Advisory Council will be held on the 11th inst. and that of the Export Promotion Advisory Council on the 12th inst. at New Delhi.

The all-India final estimate of gram for 1960-61 shows that, in spite of a decrease in acreage, the production of the crop has increased as compared with 1959-60, thus showing a higher yield per acre. The area and production of gram for 1960-61 are estimated at 23,483,000 acres and 6,207,000 tons, respectively. As compared with the partially revised estimate of 25,372,000 acres and 5,502,000 tons for 1959-60, the estimates for 1960-61 showed a decrease of 1,889,000 acres or 7.4 per cent in area but an increase of 705,000 tons or 12.8 per cent in production. The average yield per acre of gram for the country as a whole works out at 592 lbs., as compared with 486 lbs. for 1959-60. The increase in production during 1960-61 is accounted for mainly by Punjab, Uttar Pradesh and Rajasthan and is attributed to favourable weather conditions during the growing period of the crop. Madhya Pradesh has, however, registered a slight decrease in production due to shrinkage in the area sown to the crop.

* * * *

From Abroad

The United Air Lines of the U.S. has bought six more British Vickers Viscount turboprop airliners bringing its total fleet of Viscounts to 47.

Cyprus will launch a £62—million five-year development Plan from 1962. About £25 million will be spent on development of agriculture, £11 million on harbour improvement, £10.5 million on electrification and £5.5 million on expansion of roads.

West German exports rose by 3.4 per cent to DM 29,300 million during the first seven months of 1961, as compared with the corresponding period last year. Imports went up by 3.4 per cent to DM 26,200 million. Trade surplus increased by DM 1,400 million to DM 4,100 million.

A trade delegation from Communist China will visit Canada this month to examine the scope for expanding trade between the two countries. The mission will be concerned mainly with grain purchases from Canada, though it is expected to ask Canada to buy more of Chinese goods to finance grain sales.

PERSONAL

PRIME Minister Nehru left for Belgrade on Wednesday this week.

Mr. P. N. Sharma, Manager of the Bomas Ltd., Bombay, has been appointed the first Indian Director of the Company.

Mr. Bharat Ram, Chairman of the Delhi Cloth and General Mills Ltd., has been elected Chairman of the Indian Society of Advertisers for 1961-62.

Mr. J. O. De M. Hopper, overseas representative of the Expandite Ltd., London, is expected to visit India this month as part of his business tour of the countries of South Asia and the Far East.

Mr. E. J. Fielden, Managing Director, Messrs. J. Walter Thompson Company (Private) Ltd., Bombay, has been awarded the I.S.A.—Khatau Gold Medal of the Indian Society of Advertisers for the current year.

Dr. K. S. Basu, Director, Hindustan Lever Ltd. and President of the Bombay Management Association, has been elected Fellow of the International Academy of Management of the International Association of National Movements for Scientific Management.

Mr. Morarji R. Desai, Union Finance Minister, will lead the Indian delegation to the forthcoming conference of Commonwealth Finance Ministers at Accra (Ghana) and the annual meetings of the Boards of Governors of the World Bank and the I.M.F. at Vienna (Austria).

Mr. P. A. Gopalkrishnan, Chairman of the Life Insurance Corporation, will be the Chairman of the re-constituted Investment Committee of the L.I.C. The other members of the Committee are, Mr. N. R. Mody, Mr. Amolakh Chand, M.P., Mr. A. N. Shah, Mr. C. Ramasubban, Mr. K. C. Maitra and Mr. B. K. Dutt.

Major-General Geoffrey Cheetham of Britain will arrive in India shortly to act as chairman of a committee to be set up by the Indian Government to review the work done by the Survey of India and National Atlas Organisation. The services of General Cheetham, who was Director-General of Britain's Ordnance Survey from 1943 to 1949, have been made available to India under the Technical Co-operation Scheme of the Colombo Plan for a period of six months.

The United Arab Republic and the Sudan have reached a preliminary agreement for the formation of a joint company to market surplus U.A.R. petroleum products in the Sudan and also to undertake prospecting there. The Company will have a capital of at least £ El million, of which the Sudan will hold 51 per cent.

The Hong Kong Cotton Advisory Board has agreed to accept the U.K.'s new proposal for the eleven-month extension of the Hong Kong-Lancashire ceiling pact. Under the proposal, the quota will be raised by ten million sq. yards to 174 million sq. yards for the current year upto the end of January 1962, and another 11 million sq. yards for the remaining eleven months of 1962.

The Air Ceylon has decided to suspend its international air services to Europe and the Far East, from 1st November 1961. The main reason for this move is that the Ceylon's two airports cannot accommodate the long-range pure jet aircraft that the K.L.M. Dutch airlines, with which Ceylon has been participating for running its international services, proposes to put into operation replacing Electras. It is learned that the Air Ceylon is negotiating with the Air-India International and the B.O.A.C. for re-entering international services.

The total U.S. private assets and investments abroad rose by $5,000 million to $50,000 million during 1960, as compared with the previous year. Of this rise, the Common Market countries accounted for $430 million, including $280 million provided by U.S. sources and $150 million from invested earnings. Two-thirds of the increase in Common Market countries represented investment in manufacturing enterprises. American capital flow to the U.K. was also at an extraordinarily high level of $600 million in 1960. The projected rise in plant and equipment expenditures of the U.S. companies in 1961 and 1962 indicates a continuation of the large capital outflows to Western Europe.

The International Finance Corporation has decided to invest $1.5 million in Fabrica Argentina de Engranajes S.A.I.C., an Argentine subsidiary of Oerlikon Machine Tool Works Buehrle and Co., Switzerland. Its investment will help finance the establishment of a plant for the manufacture of fully assembled transmission units and gears for tractors. The Company has also plans to manufacture transmissions and gears for trucks and automobiles. It will be the first company to specialise in the manufacture of these products in Argentina. The Fabrica Argentina de Engranajes S.A.I.C. will initially be wholly owned by the Oerlikon-Buehrle concern, which manufactures a wide range of machine tools, business machines, air-brake equipment for railways, textile machines and welding electrodes. The total cost of the project is estimated at $4.3 million. The International Finance Corporation's investment will be represented by unsecured dollar notes, half of which will be convertible. The notes, bear 7 per cent interest, are payable in dollars, and mature between 1968 and 1973.

PATENTS AND DESIGNS

RECENT trends in the development of industrial inventions in India leave much to be desired. The number of applications for both patents and designs of Indian origin was smaller in 1960 than in 1959, despite the stimulus offered by the growing tempo of overall industrial expansion. The latest annual report of the Patents Office, Government of India, reveals that the total number of applications for patents submitted by Indian inventors declined from 671 in 1959 to 663 in 1960. In fairness to Indian inventors, it must be admitted that the decline was only marginal, which can be made up, if not improved upon, easily in the course of a year or so. Besides, it should not be forgotten in this context that, a decade ago, the demand for patent rights from Indians was as low as 350. Judged thus over a longer period, it becomes clear that the secular trend in the development of Indian patents has been upwards, albeit with occasional setbacks. The large majority of the applications (over 85 per cent) for patents, however, continues to originate from foreign sources. The number of applications received by the Patents Office from abroad in 1960 was 4,503, as against 3,965 in 1959 and only 1,851 in 1950. There were, in addition, 58 applications from non-Indians residing in India, the corresponding figures for 1959 and 1950 being 55 and 47, respectively. Thanks exclusively to the larger demand for patent protection from foreign sources, the total number of patent applications was higher in 1960 at 4,503, as compared with only 3,965 in 1959 and 1,851 in 1950.

State-wise, Maharashtra accounted for the largest number of patents in 1960, with its contribution of 204 applications, or about 28 per cent of the total applications of Indian origin. West Bengal, Delhi, Madras, Mysore, Uttar Pradesh, Andhra, the Punjab, Bihar, Gujarat and Kerala contributed 159, 86, 45, 23, 21, 19, 18, 17, 14 and 12 applications, respectively; the remaining applications originated in the other States of India. The former State of Bombay had contributed 89 applications during the period 1st January 1960 to 30th April 1960, before its bifurcation. Among foreign applications, there was an appreciable increase in the number of those originating from the U.S., West Germany, Switzerland, the Netherlands, Italy, Sweden and Japan. The number of applications originating from the U.K., Canada, France, Czechoslovakia, Poland, Finland and certain other European and Latin American countries also recorded a slight increase.

It is unfortunate that the Patent Office should have kept pending for examination as many as 4,668 applications at the end of the year, or well over the total number received in the whole year 1960. Of course, in the beginning of 1960, the carry-over of applications from the previous year had aggregated 3,262 applications. The office "accepted" 2,953 applications as in order. Of these, as many as 2,854 applications were from among those made in 1958 and 1959. In due deference to the demands of the country's industrial development, the Patent Office would be well advised to ensure expeditious processing of patent applications.

The majority of the applications for patents, industry-wise, related to chemicals as in the previous years. There were several applications for patents in the manufacture of dyestuffs, particularly water-insoluble and disperse azo-dyes and phthalocyanine dyes. Inventions originating in India were concerned with the production of cu-phthalocyanine, indrathrone dyestuffs, iso-estrosterone, benzene sulphonyl urean, lactic acid (from molasses), certain synthetic resins, etc. In the sphere of metallurgical industries, there were several inventions belonging to the U.K. and West Germany relating to improved processing of steel, production of nodular cast iron, smelting of titaniferrous iron ore and uranium-bearing steel. There were two inventions of Indian origin which related to production of iron and steel by direct method. Among engineering items, the majority of inventions was from abroad. There were, of course, some Indian contributions, particularly in the manufacture of door shutters, window frames, pre-stressed and re-inforced concrete constructions, devices for preventing derailing of railway vehicles, lifting pumps, internal combusion engines and typewriters in Indian languages. The other important Indian inventions related to telephone apparatus for preventing railway collision, telephone cradles and railway traffic semaphore signals. In the field of textile technology, Indian inventions included those for mechanical wrap stop motions in looms, pickers and wrap shedding carding engine, blow-room machinery, ring spinning frame, *charkha*, and fibre and yarn testing machines. Indian inventors showed considerable interest in a variety of domestic appliances, such as pressure stoves and kerosene wick stoves, tiffin carriers, cookers, coffee percolators, vacuum flasks and its accessories, rice bowls, cooking pots, cooking cabinets, domestic water heaters, and also in the manufacture of confectionary, treatment of sugar, preparation of white pepper from black pepper as well as extraction-refining of oils and fats.

Unlike in the case of patents, Indians provided the largest number of design applications, including those from a few ladies. The total number of design applications fell from 5,175 (of which 5,145 originated in India) in 1959 to 4,789 (4,713 of Indian origin) in 1960. About 78 per cent of design applications fell in the category of textiles, most of them from Maharashtra and Gujerat. In passing, it may be mentioned that the total income of the Patent Office from the fee on patents and designs in 1960 amounted to Rs. 12.22 lakhs and total expenditure Rs. 6.65 lakhs, as against Rs. 10.97 lakhs and Rs. 5.81 lakhs, respectively, in 1959. It may be added in conclusion that, in view of the vital contribution of patents towards development of industries and trade, much more incentives than what has been done so far needs to be given for Indian inventors. Unless such encouragement is given to Indian inventors, the domination of foreign patents will continue, with the result that much precious foreign exchange will be lost to India by way of royalty given for the use of foreign patents. Besides, several valuable recommendations for the reorientation of patent and design systems have been recommended by Mr. Justice N. Rajagopala Ayyangar, in his report on the question submitted to the Government of India a year ago. The earlier these recommendations are enacted and implemented, the better.

U.S. FOREIGN AID BILL

The Kennedy Administration, which has all along recognised and emphasised the need for making long-term aid commitments without having to apply to Congress each year for funds for development loans, has thus far failed to pursuade the Congress to accord its approval to the relevant Foreign Aid Bill. This Bill, in its original form, was designed to grant authority to the President, for a period of five years, to draw directly on the Treasury, without further reference to the Congress during that period, for giving long-term, low-interest loans aggregating $8.8 billion to underdeveloped countries. In recent weeks, the Bill has been debated in both the Houses. The Senate has amended the Bill in such a way as to meet the Administration half-way. Its amendment, based on a compromise formula to which the Administration had reluctantly agreed, requires all loans of more than $5 million to be submitted to the foreign aid and appropriations committees of both Houses for approval within 30 days; this is accompanied by a cut of $800 million from the original $8.8 billion plan. But the House of Representatives, which has always been less enthusiastic about foreign aid and more particular about exercising its power over the purse than the Senate, has passed a surprise motion denying, for the present, the authority sought by the President to draw directly on the Treasury for giving long-term loans. Even the Administration's compromise offer to have the period (during which the President could have the authority to draw directly on the Treasury) reduced to three years has failed to influence the House in its vote on the motion. Nor its promise to "tie" 80 per cent of the long-term loans to purchases of American goods has been of any avail.

But there seems to be still some hope that the relevant House motion might be reversed in the final vote on the Bill as a whole. President Kennedy and Secretary of State Rusk have both appealed to the House to reconsider the question and demonstrate that the U.S. is still united in its determination to meet its responsibilities. It may be that a compromise with the House will still be possible and the Administration will secure the approval for its revised $5 billion three-year aid programme. But no one can be sure, for the ways of the U.S. Congress are unpredictable. Even if the final outcome turns out to be a hundred per cent disappointment to the Kennedy Administration in so far as the three-year authority to draw directly on the Treasury is concerned, it will not be anything like a tragedy, for there is no reason to believe that the U.S. Congress, which has generally accorded its approval to the annual aid programmes after some cuts here and there, does not share the Administration's anxiety to make available long-term loans to developing countries in Asia, Africa and Latin America. As far as India is concerned, there is not much uncertainty, for the U.S. Government, as the leading member of the Aid-India Consortium, has already committed itself to providing $1,045 million for the first two years of the third Plan. Of course, this is subject to authorisation by the U.S. Congress. Even if there is an element of uncertainty here, it will not be more than what may be expected under a possible arrangement of the kind suggested by the Senate amendment to the Foreign Aid Bill—the amendment which is to the effect that all loans of more than $5 million be submitted to the foreign aid and appropriations committees of both Houses for approval within 30 days. By and large, the quantum of U.S. economic aid, which has been steadily increasing year by year during the last decade, is more likely to increase than to decrease during the sixties even under conditions of annual authorisations by the Congress. There is, therefore, no need to take an unduly pessimistic view of aid possibilities.

NATIONAL INCOME IN 1960-61

The Central Statistical Organisation released last week its preliminary estimate of national income in 1960-61 at 1948-49 prices. According to this estimate, real national income in the end-year of the second Plan was of the order of Rs. 12,530 crores, as compared with Rs. 8,850 crores in 1950-51, that is, the year immediately preceding the inauguration of the first Plan. The increase in national income over the decade was thus 42 per cent. The final report of the third Plan, too, it may be recalled, has given the same figure of percentage increase in real national income. But there is one big (!) difference between the C.S.O's national income series at 1948-49 prices and the third Plan report's national income series at 1960-61 prices. For lack of a better word, this may be called a psychological difference. A real national income of Rs. 14,500 crores or a *per capita* real income of Rs. 330 in 1960-61, as given in the final report of the third Plan, creates the psychological illusion of superiority, as compared with a national income of Rs. 12,530 crores at 1948-49 prices or a corresponding *per capita* real income of Rs. 280 in 1960-61. If the planners think that the national income series at 1948-49 prices are not psychologically satisfying either to them or to the public at large, they should instruct the C.S.O. to discard the 1948-49 series and construct and maintain the 1960-61 series in the interests of uniform comparability of figures. Otherwise, when the planners say that *per capita* real income in 1960-61 was Rs. 330 and the C.S.O. says that it was Rs. 289, the unwary lay public is apt to be confused and bewildered by the apparent, not real, difference between the two figures.

To avoid this kind of confusion, we would rather relegate the C.S.O. series to a table at the end. But the absolute figures, as worked out by us from the C.S.O. statistics given in percentages, of sectoral contributions to national income (at 1948-49 prices) in 1959-60 and 1960-61 are given immediately below:

(In crores of rupees)

Sector	1959-60	1960-61
Agriculture	4,563	4,878
Mining and factory establishments	1,035	1,158
Communications	47	50
Railways	306	327
Organised banking and insurance	106	118
Commercial and transport ..	1,799	1,939
Other sectors	3,904	4,060
All sectors ..	11,760	12,530

In percentage terms, real national income in 1960-61 had increased by 6.5 per cent, as compared with 1959-60. Of this increase, agriculture was responsible for nearly two-fifths. The final estimates of foodgrains production in 1960-61, with which another note on page 431 deals, broadly confirm the improved performance in the sector of agriculture. But, relatively speaking, the performance in the industrial sector during the year was even more impressive, for the percentage increase in that sector was 11.9 as compared with 1959-60, while the increase in the agricultural sector was 6.9 per cent.

Year	National income at 1948-49 prices (Rs. crores)	*Per capita* income at 1948-49 prices (In Rs.)
1950-51	8,850	247.5
1955-56	10,480	267.8
1956-57	11,000	275.6
1957-58	10,890	267.4
1958-59	11,650	280.2
1959-60	11,760	276.9
1960-61 (Preliminary) ..	12,530	288.8

URBAN CO-OPERATIVE BANKS

Although the Reserve Bank's report on the survey of urban co-operative banks for 1957-58 just published relates to a period more than three years old, its findings nevertheless are of considerable value. For the report not merely assesses the place of these banks in the banking system and reviews the progress achieved in recent years but also focusses attention on a number of disquieting features of their working and suggests remedies for their removal. The urban co-operative banks, if efficiently managed, honestly run and developed in a spirit of service, will doubtless prove to be one of the most effective institutional arrangements for promoting thrift and savings among the members of the public, for catering to the increasing credit needs of people, and for channelling finance to small-scale industries. The qualifications made by us, it must be emphasised, are vital, for two reasons. One, as will be presently shown, the urban co-operative banks are found wanting in quality. And, two, since commercial banks, which are relatively more efficient than the co-operatives, are rapidly expanding their coverage in urban areas, the co-operative banks will not be able to attract the attention of the economically solvent people into their fold, unless they can offer better service. Indeed, there is good ground for being sceptical about the outlook for co-operative banks in urban areas, because of growing competition and the difficulty in finding the right type of co-operators.

The aforesaid survey was conducted by the Reserve Bank in 1958. It covered a representative sample of 93 urban banks in ten States and one Union Territory, as well as a sample of both industrialist and non-industrialist members of each of these banks. The general picture emerging from the survey is described as "one of a fairly widespread, financially sound, expanding and useful framework of banking institutions that have their own place of importance in the banking structure of a large part of the country." This is surely an exaggeration, though it is understandable coming as it does from persons whose task is to spread Co-operation. The average working capital of the banks works out to no more than Rs. 5.55 lakhs, owned funds accounting for 21.8 per cent, deposits for 71.4 per cent and borrowings (from co-operative financing agencies and other sources) for 6.8 per cent. The total number of urban banks in 1955-56 was 1,585; this is not too many for a country of the size of India. The following table, compiled from the survey under reference, shows at a glance the quantitative growth of urban banks:

(Amount in crores of rupees)

	1955-56	1950-51	1948-49
No. of banks	1,585	894	815
Membership (in thousands)..	1,139	644	535
Owned funds	8.71	5.29	4.48
Deposits	32.39	19.69	16.66
Working capital	43.95	27.54	22.26
Advances	31.57	23.78	19.08
Outstandings	22.54	14.72	11.66
Overdues	3.45	1.63	1.09

Note :—The above data are said to be subject to various limitations and provide only a rough basis for comparison.

The Reserve Bank's survey further reveals that the development of urban banks is uneven and that they have not made much headway outside the States of Maharashtra, Gujarat, Andhra Pradesh and Mysore. In certain large regions, including an important State such as Uttar Pradesh, their position is practically insignificant. Even where urban banks exist, their membership constitutes only a small proportion of the total population of the towns served.

Apart from the uneven development, there are, the report candidly admits, quite a number of defects in the organisation and working of urban banks. Mention, for instance, may be made of the common complaint that, in several cases, a small and influential group try to keep the management of the banks in their own hands by excluding many persons from full membership. Consequently, the banks are deprived of the opportunity to collect and retain, on a continuing basis, the additional capital which would otherwise have been derived from these members. In fact, the managements of most co-operative banks have developed their own vested interests and it is not easy to dislodge those who are corrupt, for, by being soft to borrowers, they can always manoeuvre sufficient votes in their favour. Several urban banks do not provide facilities for withdrawal of savings deposits by means of cheques. In some of the banks, there are no special schemes for mobilising savings. Loans for industrial purposes account for only a very small proportion of the total, except in West Bengal where they account for 46 per cent. Overdues are heavy and effective steps do not seem to have been taken to reduce them. The average of overdues per bank at the end of 1957-58 was over Rs. 54,000. This is a serious defect, especially as persons in urban areas have a more regular income than those in rural areas.

Most of the urban banks studied during the survey had no buildings of their own, with the result that the arrangements for keeping cash were found to be not quite satisfactory. While the arrangements for audit of banks are adequate in most of the States, those for supervision are neither adequate nor uniform. There are no uniform or systematic arrangements for regular inspection, too. Instances of defects in quality of administration found by the Reserve Bank's investigators are: heavy overdues, misappropriation of funds, *benami* loans, improper spending of money, inadequate or improper

Indian Banks In Foreign Countries

THE news that restrictions are to be placed on the business undertaken by foreign banks operating in Ceylon has naturally caused a good deal of concern in this country. That such a move was possible and could have been anticipated is not mere hindsight; the chauvinistic utterances of those in authority and the steadily increasing animus towards Indian settlers in the Island were portents that could not have escaped notice. In the wake of the news that restrictions are to be placed on the activities of foreign banks has come the announcement of the proposal to nationalise foreign banks operating in Ceylon. Full details are lacking, but my first reaction is one of immense relief. Provided the compenstion is equitable, this would be the best solution of what was threatening to be an increasingly difficult situation in which Indian banks, shorn of opportunities for competitive business, were likely to live in a state of suspended animation. Even under the best of conditions, banking operations in Ceylon were tricky enough, what with the disabilities of a legal system that does not afford optimum protection to the creditor. In this context, the fiat of nationalisation would force a decision which many banks would have been tardy in arriving at.

The news from Ceylon may be the precursor of similar news from neighbouring countries as well, Malaya being an obvious example. It may not be long before Indian banks operating in that country find themselves in a difficult situation. It would be evidence of wise foresight if Indian banks were to review the position and decide to bale out of Malaya before being told "Must you stay, won't you go?"

To ruminate further in this posture, it occurs to me that, instead of Indian banks establishing branches overseas, they have, by and large, only the local Indian business to look to for their sustenance—it would be a good idea if they were to examine the feasibility of stationing representatives in countries where our foreign trade can prosper. This would be less costly than the full panoply of a branch, working, perhaps, under difficult competitive conditions, and with bare survival as its major aim. These representatives could liaise with our local consular and trade authorities and, eventually, help foster Indian export trade with the countries in which they are stationed. Many of the bigger Indian banks have correspondents overseas and our representatives could maintain cordial relationships with these correspondents in the interest of mutual benefit, besides acting as purveyors of authoritative information concerning Indian export trade. This is certainly a matter worth investigating at this time, when there is so much palaver about our export performance.

Is The L.I.C. Fund Static Or Dynamic?

The Estimates Committee of Parliament has recommended that Government should take over the entire life fund of the Life Insurance Corporation and administer it effectively consistent with the original objectives of nationalisation. The question was referred to the L.I.C. for its comments, and, although full details are not available, it would seem that the Chairman has indicated that he would welcome the take over, for it would "rid the L.I.C. of a lot of bother." A very sensible observation, I should say, considering the enormous controversy which its investment policy has generated in the past, and the fact that the last word on the subject has not yet been said. In fact, the L.I.C. does not seem to have been doing anything very spectacular in the matter of investments during the past few years, for it is reported to have been only buying but never selling. Its Investment Committee appears to have interpreted its functions very literally, confining its activities only to investing, and not turning its attention to selling scrip at peak prices and making profits for insurers. Admittedly, it has been securing a return of only a measly 3.5 per cent on its funds (exclusive of tax), and, considering the wide range of its operations, it could have made heaps more if it had operated on the stock market with a measure of alacrity and circumspection. It sounds strange that the Finance Ministry's representative contended, as is reported, that, if the Estimates Committee's recommendation was accepted, it would tend to make the operations of the L.I.C. static and keep down the bonuses. What else is it, if they are not static already, with its single track utilisation of surplus funds, and resultant masterly inactivity?

Having considered all the relevant factors —to use a phrase very much used in Government resolutions—it would be a sound idea to ask the L.I.C., with its expert body of actuaries, to confine its activities to selling insurance, and rendering prompt service to policyholders, and turn over the funds to Government which, in turn, may earmark a portion of it for assistance to the private sector through a high-powered committee which will administer the funds in accordance with Plan priorities—Government may let the L.I.C. have a six per cent return on the funds, leaving it exactly where it now is, but without all the "bother."

There is another recommendation of the Estimates Committee which suggests that the L.I.C. should maintain its banking accounts only with the State Bank. This is impracticable. The collection accounts which the L.I.C. maintains with various other banks were opened for facilitating the collection of premia, and although the residual funds at any given time might aggregate to sizable amounts, it is not as though they confer undue benefit to the banks concerned without corresponding benefit to the Corporation or the policyholders. Underlying this suggestion is the usual fallacy that a collection account with an average balance of a few thousands can be equated with a deposit account of similar quantum, which is not the case if the number of transactions are numerous (as they are bound to be) and the balances are remitted weekly to the Corporation's main account.

A Major Innovation In Recruitment And Training

Colin McDonald, the Australian opening batsman, veteran of 47 test matches for Australia and a first class test cricketeer, fears the end of his brilliant career when he is barely 33 years old, because of an injury to his left wrist which he sustained while working the gear lever of a new motor car. And we have the sad case of the young Nawab of Pataudi who has suffered grievous injury to his eye and it may be a whole year before specialists can say definitely whether he will be able to continue his cricket career. Such are the imponderables in the careers of sportsmen all over the world, and, as the tendency keeps on increasing to accelerate the tempo of games, the risks of being permanently incapacitated by physical injury are also greater. And yet, among the major innovations of the past ten or fifteen years is the development of systematic and organised methods of recruiting sportsmen to all grades of the staff of modern business corporations, banks and commercial enterprises, whose economic and social roles are considered to be so complex and of such magnitude that they can be successfully dealt with only by men with "big" minds and a liberal outlook. In developing the concept, two assumptions have been accepted, namely, that those that are good at games have large and liberal minds and that, if they are not already equipped with academic competence, they could be trained to assimilate them through a liberal education which can be covered by a series of refresher courses, programmes, lectures, discussions and seminars dovetailed with lunches, teas, cocktails, dinners and suppers.

I have used the word 'innovation' because, till about thirty years ago, banks and corporations recruited men mainly on the basis of their family respectability and academic achievement. It was believed to be rare that a man could combine in himself a high order of merit both in studies and in sports, hence the accent on the latter was negligible. Further, excellence in sports was generally equated with mis-spent youth, and sportsmen were considered unsuitable for jobs which called for hard work and sustained application. Something of this prejudice still lingers in some quarters, especially in regard to games like golf, billiards and cricket. But, during the last ten or fifteen years, great changes have taken place, establishing the conviction that sporting activities develop areas of training "which enlarge the understanding and deepen the insights of men with regard to men themselves and men in their social relationships, and which, at their highest levels, assist them to develop the capacity successfully to deal with these abstract ideas that illuminate and allow them more wisely to control the world in which they live." This quotation is from a highly sophisticated book on modern business training; it is quite pompous, as you will notice, but has to be so for selling such a silly idea on so wide a scale!

The result has been that many of our banks and corporations maintain, encourage and subsidise A, B and C teams for cricket, hockey and football, continuously look after the players, give them soft jobs, if necessary, and boost them in every possible way. It almost looks as though, in the years to come, the several sporting activities may have to be included in the Memorandum and Articles of Association of the institutions concerned as they already add up to a sizable business activity.

Directors and senior executives practise the aristocratic and expansive accomplishments of golf (outdoor) and billiards (indoor). Tennis is still the game for the middle tier of executives, the club-wallahs, the busy chaps who combine social engagements with physical activity, play flood-light tennis, relax in swimming pools, dine at the club, and play bridge or rummy till the early hours of the morning. With all these hectic activities from sunset to, perhaps, 2 a.m., most of these chaps are bound to feel groggy during the day, and yet, sophisticated assessment would aver that these men are the bright heroes of the future, the contact men, public relations men, pep-talk men, and what-not-men, who constitute the colourful collection of personalities which each institution claims as its hall-mark of individual distinction.

The major innovation to which I have referred is most visible, in the weightage accorded to competence in playing hockey, cricket and football. In recruiting clerical and subordinate staff, especially peons, a youngster who is good at any of these games gets condonation of many deficiencies if he can be a useful member of an A team. I believe such recruits do make good in kicking and hitting (balls), but I do not believe they show any proficiency in work, nor do they team up with their colleagues in day-to-day relationship. They develop a superiority complex towards their compeers and an aggressive attitude to their superiors, except, of course, the top boss. But, when demonstrations and union activities are on, they do not spare anyone, and shout more lustily than others slogans of damnation and perdition to the very heads of the institutions who displayed the greatest of solicitude in their recruitment. And so it seems to me that the expected display of sportsmanship is all becoming mythical, and it is only the aggressiveness, which is one feature of modern team games, that is being seen uppermost.

There is, of course, no doubt that these sporting teams in banks, corporations and business establishments, do constitute good showpieces for the top managements, providing them with periodical occasions for inviting V.I.Ps to distribute cups and medals and entertain them at tea parties; occasionally, the wife of the head of the institution gets a chance to preside graciously and be garlanded. A social purpose can be discovered in almost any extravagance or indiscretion!

REPORT OF THE
SPECIAL COMMITTEE FOR
COMMERCE EDUCATION
July 1961

This is the report of the committee set up by the All-India Council for Technical Education under the chairmanship of Dr. V. K. R. V. Rao, Director, Institute of Economic Growth, Delhi to enquire into the position of COMMERCE EDUCATION in India.

PRICE Rs. 3, payable in advance by M.O. or Postal Order only. Contact PUBLICATIONS UNIT, MINISTRY OF SCIENTIFIC RESEARCH AND CULTURAL AFFAIRS, 'A' BARRACKS, CURZON ROAD, NEW DELHI.

PATTERN OF INDIAN BANKING

By "Kuber"

IN his address to the Institute of Bankers, the Reserve Bank Governor said quite a great deal about the present pattern of banking in India. According to him, although non-scheduled banks, numbering 251 at the end of August, 1960, dominated the Indian banking scene, numerically speaking, they held only 2.5 per cent of the total deposits as against 97.5 per cent held by scheduled banks. As between licensed and unlicensed banks, the former had 94.7 per cent of the total deposits and the latter, that is, the non-licensed banks, only 5.3 per cent. By implication, therefore, the non-scheduled banks and unlicensed banks do not matter very much, except that they are often the cause of a storm and public criticism. Further, they made the picture of Indian banking very confusing, as, to quote him, "the difference between a scheduled and a non-scheduled bank was not clear to the public then, and is certainly not clear today. To add to the confusion in the public mind, some scheduled banks were licensed and some not, and that was also the case with non-scheduled banks, although the vast majority of the non-scheduled banks were unlicensed. We had thus a strange conglomeration of scheduled licensed banks, scheduled banks without a licence, non-scheduled licensed banks and non-scheduled banks without licence." The Reserve Bank's prescription, as has always been the case in the last decade, is to ask for further powers which it has succeeded in getting by a further amendment to the law in September 1960. Under this amended law, it will be possible for the Reserve Bank to take steps in the case of an erring bank for declaring a moratorium or amalgamation. In this manner, the Reserve Bank Governor has, once again, promised us that there will be "in a relatively short time, say, a couple of years or thereabout, one single type of bank in our country, both big and small, having a licence." The Reserve Bank hopes to reorganise the banking structure by a combination of "firmness and understanding."

Reasons for Confusion

The Reserve Bank attributes the confusion to "historical circumstances" and leaves it at that, whatever the term may signify. If, however, we look into this problem a little more closely, we find that, historically speaking, there were only two cases of banks, scheduled and non-scheduled and things were quite simple. The scheduled banks were and are even now those which have a paid-up capital and reserves of over Rs. 5 lakhs and which were, therefore, included in the Second Schedule to the Reserve Bank of India Act and which could get certain advantages in regard to borrowings, remittances, etc., from the Reserve Bank. The non-scheduled banks, on the other hand, were those who fell short of the requirement in regard to capital structure. That was all there to it. Then, the Reserve Bank found that many worthless banks had got into the schedule. Although their balance sheet showed that their capital and reserves were more than Rs. 5 lakhs, in actual fact that was not so, as their good assets were hardly sufficient, if at all, to meet their outside liabilities of deposits and in such cases, really speaking, the banks had no capital and reserves worth the name. To remedy this situation (although the Reserve Bank at first was not at all keen about it), it asked for powers of inspection which it succeeded in getting through an amendment to Section 42 of the Reserve Bank of India Act and Section 35 of the Banking Companies Act in 1950. The Reserve Bank has thus been having long innings for over 10 years at this game of inspection of both scheduled and non-scheduled banks. As we all know, nothing much has happened in the last 10 years, except that we were told periodically in the Bank's Annual Reports and other publications that, basically, there was nothing wrong with the banking system.

As the scheduled banks control 97.5 per cent of total deposits, let me deal with the problem of scheduled banks first. According to Section 42(6) of the Reserve Bank of India Act, the Bank shall direct the inclusion in the Second Schedule of any bank which (1) satisfies the Bank that its affairs are not being conducted in a manner detrimental to the interests of its depositors and (2) has paid-up capital and reserves of an aggregate value of not less than Rs. 5 lakhs. The expression "value" means the real or exchangeable value and not the nominal value which may be shown in the books of the banks concerned. Conversely, the Bank *shall* (italics mine) direct the exclusion of any scheduled banks, if a bank does not fulfil these two conditions and the Bank comes to that conclusion, after making inspection under Section 35 of the Banking Companies Act or otherwise. However, the Bank may, on application by the scheduled bank concerned and subject to such conditions, if any, as it may impose, defer its decision for excluding the bank for such period as the Bank considers reasonable, to give the scheduled bank an opportunity of increasing the aggregate value of its paid-up capital and reserves to not less than Rs. 5 lakhs or, as the case may be, of removing the defects in the conduct of its affairs.

Any one can see that the powers conferred on the Reserve Bank, under the above section are unambiguous and clear cut, except that it gives a discretion to the Reserve Bank, to give *reasonable time* (italics mine) to the scheduled banks to mend their ways before they are excluded. In simple terms, therefore, so long as a bank continues to be a scheduled bank, it is presumed by the public that the Reserve Bank is satisfied that the bank is conducting its affairs in the interests of the depositors and the real value of its paid-up capital and reserves is over Rs. 5 lakhs and that means, if it means anything at all, that its good assets exceed its liabilities by Rs. 5 lakhs. The problem of the bank being able to meet its liabilities at all times, considered as an important condition of soundness of a bank for the purpose of licensing (to which I shall refer later on), does not arise here in the case of a scheduled bank, for the simple reason that, if its good assets, as scrutinised by the Reserve Bank, do exceed its outside liabilities by Rs. 5 lakhs and the affairs of the bank are not being conducted in a manner detrimental to the interest of the depositors, then the bank is presumed to be always in a position to pay its depositors in full.

Licensed Banks

Now let us see what is meant by licensed banks. According to Section 22 of the Banking Companies Act, before granting any licence, the Reserve Bank has to be satisfied, by an inspection of the books of the bank or otherwise, (1) that the affairs of the bank are not being or are not likely to be conducted in a manner detrimental to the interest of its present or future depositors, (2) that the bank is, or will be, in a position to pay its present or future depositors in full as their claims accrue. Conversely, of course, it means that, if a bank is already licensed and does not at any time fulfil these conditions later on, then its licence can be cancelled. The reader will thus see that the first condition is the same as in the case of scheduled banks and the second condition, as I have already argued, does not arise. The reason is simple. If the real value of the paid-up capital and reserves is more than Rs. 5 lakhs which, in other words, means that it has good assets exceeding its deposit liabilities by Rs. 5 lakhs, then, obviously, it is in a position to pay its depositors in full. The simple conclusion, therefore, which any student of banking will reach—and he will not be blamed for it—is that, so long as a bank continues to be a scheduled bank, it should be automatically licensed. In short, there can be no unlicensed scheduled banks. The second conclusion which can easily be drawn—and, again, no one can be blamed for it—is that, if a scheduled bank is unlicensed, then the Reserve Bank has not been doing its job in terms of Section 42. I will go further and say that there is a conflict between these two sections. A scheduled bank is something more than a licensed bank and, therefore, it includes licensing. A proper reading of the relevant sections can leave no room for any doubts about it. So long as a bank continues to be scheduled and the Reserve Bank has taken no steps, within a reasonable time to exclude it, the public would be entitled to conclude that the provisions of the above sections have been and are being fulfilled by scheduled banks.

That is exactly what is generally believed by the investing public and rightly so. And that is also why the word "scheduled bank" has acquired a hall mark of solvency among the public and that is also, if I may say so, the impression conveyed by the banks to the public by advertising all over the country of the fact that they are scheduled; the Reserve Bank is also fully aware of the implications of this fact or is presumed to be so, as every advertisement by a bank includes the word "scheduled" in bold letters. The people naturally put in their money in the scheduled banks on the above assumptions, believing that their money is absolutely safe. From the common sense point of view also, everything is in their favour. The bank is being regularly inspected by the Reserve Bank and the fact that it has not been descheduled implies that everything is all right with that bank. When, therefore, a scheduled bank fails, without being descheduled in the first instance, the people are taken aghast and no wonder.

A Curious View

The Reserve Bank's view, though not expressed in so many words, is very curious. The Bank does not guarantee the soundness or even the solvency of scheduled banks. The Bank might even say that, in a particular case, a bank, though scheduled, was not licensed and so on and so forth. In my opinion, the Reserve Bank cannot justify its stand on either legal or moral grounds. It is not playing the ball. What was the object of getting all these vast powers, including those for inspection of these banks, if the Reserve Bank guarantees nothing? On the contrary, the Reserve Bank is misleading people. What is the justification for the Reserve Bank going in for legislation every now and then, if it cannot guarantee even these elementary basic standards of banking? The Bank, on the contrary, is giving a chance to the banks to mislead the public. People would not have lost money in the case of Lakshmi Bank and Palai Central Bank, if the Reserve Bank had followed the spirit, if not the letter, of the law. The Reserve Bank had clearly bungled on this issue, in the case of the above two banks and also in the case of New Citizen Bank, though, in the latter case, the Bank of Baroda has been good enough to oblige the Reserve Bank by taking over the Bank. All the three banks were known to have no capital at all for several years and, what is more important, the Reserve Bank was aware of it. The Reserve Bank simply refused to act and people have lost crores. It is no use for the Bank to maintain that, had it taken "firm" action, it might have precipitated matters, as that sort of eventuality is bound to arise whenever the Bank takes any action at all. What is not generally realised is that sort of action was implied when the Bank undertook the responsibility of inspecting banks to find out their true state of affairs. Indeed, that is the reason why the Act made it obligatory for the Bank to exclude a bank from the scheduled list, if it did not satisfy the required conditions.

Non-Scheduled Banks

The same sort of argument applies to non-scheduled banks and their inspection under Section 35 of the Banking Companies Act. In the case of every bank which is granted a licence, it is presumed that its affairs are being conducted in the interests of depositors. Similarly, so long as a bank continues to function as a bank for any length of period, it is also presumed that its affairs are not being conducted in a manner detrimental to the interest of depositors. It is curious that, although over 100 non-scheduled banks have been carrying on, what the Reserve Bank calls, "in a limping fashion", and although they have been known to be worthless either from the point of view of their capital structure or from that of their management, nothing has been done so far. The Reserve Bank, it may be noted, has vast powers under Sections 35 and 36 of the Banking Companies Act. It can dictate changes in management, appoint observers, and prescribe such conditions as it may deem fit, to compel the erring banks to mend their ways, even assuming that the Bank did not want to go the whole hog of winding them up. It was only after the failure of the Palai Central Bank, which raised a storm of criticism against the Reserve Bank, that the Reserve Bank woke up to the realisation of its responsibilities in the matter and the first thing it did was to ask for further powers. Had it been alive to its responsibilities in the last decade, the Bank's reputation would not have suffered so badly, as it did last year. I would go further and say that the Reserve Bank wakes up to its responsibilities only when a bank fails. It was the failure of the Travancore National and Quilon Bank which was responsible for the Banking Companies Act and the Reserve Bank was really shaken up to do something tangible to control the banking situation. About two decades later, it was the failure of the Palai Central Bank which, once again, roused the Reserve Bank to its responsibilities.

It will thus be seen who is responsible for creating the type of confusion the Reserve Bank Governor complained of the other day. The Reserve Bank itself appears to have been lazy about its responsibilities. Or perhaps in

DEBATE ON THIRD PLAN DISAPPOINTING

SWATANTRA PARTY'S APPROACH OUT OF DATE

From Our Special Correspondent

NEW DELHI, 29*th August*

DELHI LETTER

THE debate in Parliament on the third Plan has been a disappointing one. There was hardly any sign of the interest shown when the Draft Outline was discussed at about this time last year nor of the keenness over details displayed in the proceedings of the five Committees of Parliament set up later to consider various aspects of the Plan. This lack of enthusiasm was due not only to the thin attendance in the House during most of the speeches; except for a brief intervention by the Minister for Steel, Mines and Power in the Lok Sabha, Mr. Nehru and Mr. Nanda expounded and defended the Plan each in his own characteristic way while none of the principal Ministers who are to implement the Plan—in respect of say, raising resources or increasing exports—came forward to reassure doubters or reveal their strategy, if they had any. There was thus a seeming lack of interest all round in justifying the contents of the third Plan.

An unfortunate aspect of the debate on planning was the Swatantra attack which sidetracked the issues and enabled Ministers to feel heroic by dismissing that party's criticisms as old-fashioned, even though they had no real answers to the more important objections to the structure or phasing of the Plan. Mr. Masani provided enough of such distracting arguments to Mr. Nanda, even though it is now too late to question the general approach to planning, especially when Mr. Selwyn Lloyd's current discussions with employers and trade unions regarding the setting up of a planning machinery in the U.K. show that this country may have some very useful precedents to offer to others about the appropriate type of organisation necessary for the objectives in view. In the Rajya Sabha, Mr. Bhupesh Gupta has been more than usually vehement in his condemnation of the Plan, though the Communist Party has generally been less opposed than the Swatantra to the plans.

Pre-requisites for Joint Effort

It was, however, clear that, though the Prime Minister put forward the Plan as a joint effort and pleaded for a non-party approach to a national Plan, there was not much chance of a favourable response. If that plea should be heeded, some changes will be necessary. The Planning Commission consists predominantly of persons belonging to one party and each Five-year Plan comes conveniently on the eve of General elections for Congress Party members to claim credit for all its intentions; State plans are usually inflated to accommodate various local interests with an eye on political advantage rather than according to available resources or technical feasibility. There are no indications that this coincidence of five-year planning periods with elections will be avoided in future; nor is it likely that the Planning Commission will become much more of an expert body (which it was at an earlier stage) or the National Development Council more representative of other shades of opinion in the country. In view of such drawbacks in the planning process, it was natural that the Prime Minister's appeal should appear somewhat naive.

A less partisan and a more broadbased Plan is all the more necessary if planning is to be extended to the preparation of a detailed perspective plan for the next 15 years, which can be accepted as the basic framework of policy even if there are political changes in the country. So far, there seems to be some divergence of opinion within the Planning Commission itself (at the secretariat level, between those whose business is to define the perspective and others who are more concerned with immediate problems; the curiosity of the Press has resulted in exposing some of the differences. The 15-year plan may now give the perspective planners an edge over the rest, though, ultimately, it cannot prevent the realities of economic development from asserting themselves.

Mr. Nehru, for example, quoted the figures of investment in each plan beginning from the first. Mr. Ashok Mehta's question whether they were expressed in constant prices did not elicit a satisfactory answer. Mr. Nehru agreed that there would be no point in giving figures if they were not based on some stability in price. But he should have known, however, that the outlay now proposed in the third Plan is not, in real terms, the same as that indicated in the perspective plan prepared in 1956, because of the subsequent rise in prices. The same holds good for the proposed rupee outlay in future Plans. Perspective planning may be meaningful in terms of certain physical targets to be aimed at in future years, but, so long as price stability is uncertain, investment and financial targets will not have much importance.

Mr. Nanda's Reply

Mr. Nanda was confident that prices will be held during the third Plan, as he was quite certain that the mistake (or was it absolute necessity?) of heavy deficit financing will not recur. This answer passed unquestioned, though press reports had appeared by then of the Reserve Bank Governor having pointed out to the Government that subscriptions to the recent loans of the Central Government were made almost wholly by the Reserve Bank because of inadequate public response. Though the Budget for this year has kept down deficit financing, the result of such Central Bank financing of Government borrowing is to increase deficit financing indirectly: The third Plan admits that "whatever support the Reserve Bank may have to give to the loan programme has of course to figure under deficit financing." During the second Plan period, the net absorption of market loans by the public was about Rs. 300 crores and, as against this, the estimate of Rs. 800 crores for the third Plan is very much on the high side. The latter is based on the hope that investment by the L.I.C. and provident funds will increase but the most optimistic estimates on this account cannot exceed Rs. 400 crores. It is clear that Mr. Nanda's assurance on deficit financing had little value, being actually contrary to what was happening outside. There was, however, no one to point this out.

Nor was more light thrown on the most important change in the Plan (after the Draft Outline was published) regarding the progressive increase in exports to about Rs. 1,400 crores at the end of ten years. It should have been interesting to hear from Mr. Nanda about the details of his programme for keeping down costs in industry, especially after Mr. S. K. Patil had dashed to the ground whatever hopes existed about tackling the problem of reduction of sugar prices for export.

The most noticeable gap in the debate was the non-appearance of Mr. Morarji Desai; in view of many earlier rumours about the differences between the Finance Minister and the State Governments on the question of resources, this was, indeed, significant. Also, it is known that he has been actively resisting attempts to include many new schemes in the Plan for which no provision has been made, partly because it will not be proper to do so after a certain picture had been presented for purposes of foreign aid. Nor can he be enthusiastic about raising further resources to fulfil the physical plan of Rs. 8,300 crores in the public sector, though both Mr. Nehru and Mr. Nanda are hopeful: Mr. Desai must be acutely conscious of the performance of State Governments hitherto in respect of additional taxation and of the very doubtful assumptions behind the estimates of profits from public sector enterprises.

Mr. Nehru emphasised the importance of social objectives and Mr. Nanda also waxed eloquent about avoiding concentration of wealth and power about which there has been a great deal of controversy for over a year. So far, the Committee specially appointed to throw light on the trends in the distribution of income, has been unable to present any coherent data on the subject, though if it had concentrated its attention on the strictly relevant aspects of distribution, it should not have been difficult to indicate the broad trends which have a bearing on this problem. A practical question which went unasked was how this objective will be reconciled with the need for effecting economy in investment through expansion of existing undertakings and reduction of costs through large-scale production for building up exports.

The contents of the Plan and the manner of their integration have thus received little attention. If the Swatantra Party had been more restrained, it could have confined its attack to the problem of misdirected investment which both slows down progress and causes inflation. By questioning the fundamentals of planning, the party's spokesmen not only invite derisive comment on their attitude but also allow official spokesmen to get away with cheap retorts, without facing the really difficult issues of implementation.

• • • •

The Union Finance Minister is preparing himself for his tour abroad during which he will participate in two major conferences. At the Commonwealth Finance Minister's meeting in Accra, it is expected that the problem of Britain's entry into the Common Market will be discussed again, though no new points have emerged. Negotiations will not start in Brussels until late in September and Britain will not be in a position to give more specific assurances to the Commonwealth than those indicated earlier.

There should be greater interest in the annual meeting of the Fund-Bank at Vienna in the middle of the month, where the world monetary situation may be discussed, with a view to improving the I.M.F. and providing a more active role for it in dealing with current payments problems. The continuance of Mr. Per Jacobsson in his present office for another three years indicates, perhaps, that no revolutionary proposals will be adopted but the discussions should be interesting. It is not known whether India has any opinions at all on these issues now being actively and openly discussed in the world's monetary centres. Apparently there are none in New Delhi (or for that matter in Bombay).

PATTERN OF INDIAN BANKING

(*Concluded from previous page*)

the question of licensing for which there was hardly any justification and which, again, was of its own making, the Bank has created unnecessary complications for itself, which it did not know how to solve or handle. Historically speaking, Indian banking was divided into scheduled banks and non-scheduled banks in a very simple and straightforward manner and there was sufficient legislation to enable the Reserve Bank to control banking, good and proper.

Had the Reserve Bank taken steps during the last decade to insist on the non-scheduled banks increasing their capital structure to the extent of fall in the value of money, all of them would have had the minimum real paid-up capital of Rs. 5 lakhs by now and we would really have had only one class of banks. Moreover, if during the last decade, had the Reserve Bank carried out its policy of "firmness and understanding" as it intends to do now, we would have been spared of the failures of the Palai Central and other banks. In fine, all this talk of reorganising the banking structure within a couple of years and promising us "one single type of banking in our country, both big and small," is not very convincing when viewed against the background of the past. People know that they have been let down, in spite of the vast powers enjoyed by the Reserve Bank. Let us, however, wait and see the "end of the story" this time.

ITALIAN CREDIT FOR OIL INDUSTRY IN INDIA

An agreement providing for Indo-Italian cooperation in the establishment of petroleum industries in India was signed at New Delhi on 29th August 1961. Mr. K. K. Sahni, Joint Secretary, Department of Mines and Fuel, signed on behalf of the Government of India and Dr. Giuseppe Ratti on behalf of the E.N.I.—Italian Government undertaking. Under the agreement, the E.N.I. will make available to the Government of India a credit upto 60 billion Italian lire (equivalent to nearly Rs. 46 crores) for the supply of plants, equipment and technical services for the public sector petroleum projects in two categories. The first category includes projects for which the general provision has already been made in the third Plan, such as transport pipeline for petroleum products from Barauni to Delhi and Barauni to Calcutta, gas fractionation plant, liquid petroleum gas bottling plant and distribution facilities, lubricating oil plant, supply of crude oil production equipments and also distribution equipments. The list of projects also includes contract drilling for any areas specified by the O. and N.G.C. In the second category will come additional projects like petro-chemicals and some others which will be considered by the Government. In due course, the Government of India will consult E.N.I. for the finalisation of the projects.

The agreement will now be followed by separate agreements in regard to the projects in the first category between E.N.I. companies and the concerned Government undertakings in India after the finalisation of the project reports. E.N.I. experts will be arriving in the country shortly to undertake the preparation of the project reports.

4 SEP 1961 PUBLIC DEPARTMENT

AMERICAN LETTER

THREAT OF WAR TAKEN SERIOUSLY

COST OF CIVIL DEFENCE HUGE—BOOM IN STEEL EXPECTED

From Our Special Correspondent

NEW YORK, 25*th August*

THE American people are taking the threat of war quite seriously. This is evidenced by an incipient civil defence boom. I had occasion recently to interview civic officials who are charged with the responsibility of defence precautions for the population.

Defence centres in the cities are swamped with inquiries from people in all walks of life, wanting to know as to how they can provide shelter for their families. At this point, no central authority in this field exists. There are no laws, for example, which can compel a landlord to provide a basement shelter for his tenants. People who own their own homes have to foot the bill of building a shelter themselves, although they may apply for insured loans of the Federal Housing Administration.

On the Federal Government level, Congress has appropriated several hundred million dollars to make surveys and build shelters for employees. In the ensuing years, annual expenditures by Washington for this purpose alone are now projected to run between $1,000 to $2,000 million yearly.

Similarly, the State Governments have appropriated civil defence funds which presently are used mainly for surveys. New York State, for example, has given New York City $300,000 for this purpose and the city Government provides engineers and other facilities to survey the local situation.

The Magnitude

The magnitude of the civil defence project, nationally, may be gleaned from President Kennedy's appeal that shelter be provided for about 45 million people—eventually. This is a big order and amounts to a colossal housing programme and all that goes with it.

Its fulfilment will require millions of man-hour of work, large amounts of steel, lead as a protective material, untold quantities of cement, furnishings, clothing, ventilators, radios, radiation detecting equipment, canned food supply for two weeks, drugs and other equipment, as well as chemical toilet facilities, to mention just the bare necessities. Obviously, all this cannot be done overnight but the boom potential is somewhat staggering.

In addition to the civilian preparedness picture, there are military defence needs. Under the impact of the Berlin crisis, requirements in this area are being stepped up constantly. Expansion of Government spending has eradicated the setbacks of the mild recession of 1960 and early 1961 in most sectors of the American economy, just as prepardness spending in the late 1930's pulled the United States out of the depression.

Business Conditions

Indeed, business conditions have been improving rapidly since the early months of the year. Industrial output and non-agricultural employment have recouped all of their previous losses. Higher incomes have led to greater personal spending, particularly for durable goods. Residential building activity is improving and the liquidation of inventories has terminated.

Private outlays for plant and equipment has begun to turn up moderately in response to anticipated higher demand for goods. There is much psychology involved in anticipation of things to come. Of the gain of about $15,000 million in the rate of national output from the first to the second quarter of this year, Government spending accounted for only $2,000 million. Yet, the climate under which business decisions are being made these days is highly favourable in view of things to come.

To illustrate of what I meant about "climate," it may be interesting to note what the magazine *Iron Age*, which is the bible of the steel industry, has to say: "pressures for an explosion of the steel market are building up. The mounting potential will lengthen steel delivery promises in the early fall and threatens to create a short-term steel shortage."

Three reasons for the pressure are cited—inventories are low and must be rebuilt and too many large users have been relying on fast delivery; Berlin and other international problems are creating pressures, both real and psychological and, finally, the general economy is rising at a faster rate than expected.

Steel Prices Up

Steel prices in the "grey" markets have been rising and there is much ado now over the prospect that the industry, as a whole, will establish higher base factory prices in the near future. The latter issue has become a political football in Congress. The deadline for higher factory steel costs is 1st October and much hedging of contracts is taking place.

At present, orders are coming into steel mills at a rate to sustain operations at nearly 70 per cent of capacity, but the automobile industry is expected to step up its orders in September.

The ultimate dimensions of the coming expansion are difficult to gauge. There is hesitancy in both Governmental and private quarters to go "all out" in this respect. In a number of industries, considerable margins of idle capacity still exist. Profit margins in some of these sectors make it difficult to justify new investments.

This is offset, to a degree, by the pressures to modernise which, in trade parlance, is known as "the tooling out of high labour and material costs" *via* mechanisation and automation. Record investment in research and development are eloquent proof of this pressure which, in turn, is apt to generate an increasing volume of investment opportunities.

In a few days, the U.S. will again celebrate "Labour Day," the first Monday in September. It is what "May Day" is to workers in other lands. The first Labour Day was celebrated in New York on 5th September 1882. Today, it is a national holiday marked by parades, family picnics, relaxation and rest. After that, schools reopen and the autumn season begins, even though, by calendar, there are three more weeks of summer. The beginning of September usually is a signal of greater economic activity.

This year, Labour Day is of special significance. Under 1961 amendments to the Fair Labour Standards Act, national minimum wages will be raised in progressive steps to $1.25 an hour. In addition, the protection of the Act will be extended to 3.6 million workers in the retail and service trades, who will receive their first pay boosts on the payday following the national holiday.

United Nations News

A special session of the General Assembly of the United Nations wrestled with the problem of Bizerta, Tunisia. Perhaps, the most significant result of the proceedings was that the U.S. and Great Britain neither condemned nor condoned the position of France. Both countries may have alienated sentiment in the now powerful Afro-Asian bloc of delegates.

Yet, with their apparent timidity, they did score a victory over Soviet demands for annihilation of capitalist imperialism by pointing out that the enslavement of peoples behind the Iron Curtain was the worst kind of imperialism in existence with the division of Berlin as a topical example. Outside of that, nothing much was accomplished, but the verbal "letting off steam" procedure has one element in its favour—the boiler does not explode and the economic and political muddling-through process can continue "in peace," while progress is made in lethal weapons and shelters are being built.

I.F.C. INVESTMENT IN COLOMBIA

The International Finance Corporation has announced a commitment to invest U.S. $500,000 in Electromanufacturas, S.A. (E.M.S.A.), of Bogota, Colombia, to help finance the expansion of electrical equipment manufacturing. Since 1958, the E.M.S.A. has been producing welding electrodes under license from the Westinghouse Electric International Company. The I.F.C. investment of $500,000 will be repayable partly in U.S. dollars and partly in Colombian pesos. It will be represented by unsecured notes yielding 8 per cent interest. The dollar notes will mature between 1965 and 1968; the peso notes, between 1968 and 1970. The I.F.C. will also receive an option to purchase shares in the parent company.

TOWARDS CONSERVATIVE PLANNING

From Our Own Correspondent

LONDON, 24*th August*

LONDON LETTER

IN his economic distress, Mr. Selwyn Lloyd, Chancellor of the Exchequer, has decided to steal the Labour Party clothes. Having carefully dismantled their opponents' machinery for economic control, the Conservatives have now decided to begin to re-erect it. There is already in existence a joint Advisory Economic Council to bring together both sides of industry to advise the Government. There is also a National Production Advisory Council. Both these bodies meet every three months and provide the Chancellor with an opportunity to make a speech or deliver an exhortation, but not perhaps much more. Then there are also the "three wise men" who issue unpopular reports every three months. But the Chancellor has decided that none of this is what he needs. He is not, admittedly, quite sure what he does need, but clearly somebody has been prodding him to get national planning away from the dead hand of Treasury control. The Chancellor has argued that he cannot be responsible for the nation's finances, if somebody else is going to spend the money.

The suggested solution seems to be to appoint another Council, consisting of employers and the Trade Unions but with his own staff competent to prepare reports on the state of the nation. The Chancellor would then have much more precise advice from this body than he can possibly have at present. He will undoubtedly have to argue the advice of his new Council against that of his Treasury staff. But, if this planning body turns out to be worth its salt, it would really provide that kind of impartial and yet practical advice which the Chancellor must surely need. However, everybody concerned has gone away to think about these long-term proposals and we are not likely to hear more until the autumn.

The rest of the Chancellor's exchanges with the Trade Unions this week have not been very productive. The Unions were not at all impressed with the Chancellor's accounts of the state of the nation; they said they knew it already. They were very doubtful about the possibility of having a wage pause and said that the T.U.C. had already warned that there would be industrial unrest. The trouble is that the Unions are out of sympathy with the Chancellor, as a result of his earlier budget policy. They resent more than anything the Chancellor's destruction of wage arbitration machinery: he has done this by telling the arbitration bodies, in short, that they are not to look at the justice of individual claims but to shelve everything for six months.

But the T.U.C. told Mr. Lloyd that, although he had made co-operation as difficult as possible, magnanimously they would do their best to work with him. This means that they will prepare a report for their General Council to discuss. The holidays will pass quietly away, but, when people turn back seriously to work in October, it will be seen whether the Trade Unions can really do more than suggest wage restraint until the following spring; provided—and this is where they will part company with the Chancellor—that the wage earners concerned do not have a special claim to consideration. And, of course, long before any such action can become effective, the Trade Unions will have had their own Annual Conference and so will the Labour Party. All this is going to make very rough water over which the Chancellor must sail his belated ship of economic planning.

BRITAIN PROBES SEA BED FOR COAL

Coal from under the sea bed off the north-east England coast is helping the British steel industry produce more steel while using less coke. According to the chairman of the National Coal Board, Lord Robens, the steel industry is now producing, in its blast furnaces, one ton of steel with 11 cwt. of metallurgical coke where 25 cwt. were used before.

Lord Robens was speaking after returning from a visit to the boring-tower which stands two-and-a-half miles off the mouth of the River Tyne in north-east England. The crew of 16 in the tower is probing strata below the sea bed to find the extent of coal seams which can be worked from coastal collieries. The operations, said Lord Robens, had proved that there were reserves of at least 300,000,000 tons of high-class coking coal—some of the finest in the world.

PROFIT MARGIN OF BANKS BETTER

TAXATION ABSORBS THE MAJOR SHARE

A RECORD expansion in bank credit by Rs. 202.18 crores to Rs. 1,248.49 crores, a slackening in the rate of growth of deposits and a perceptible improvement in the profit-margin of banks, scheduled and non-scheduled alike, are the main features of the working of banking system in India during the year 1960, as revealed by the latest issue of the *Statistical Tables Relating to Banks in India* published by the Reserve Bank of India on 26th August 1961. The *Statistical Tables* (Price: Rs. 8) constitute a valuable supplement to the report on the *Trend and Progress of Banking in India* issued earlier. The publication under review is more comprehensive than its predecessors, providing, as it does, detailed information pertaining to earnings, expenses, profits, allocations, assets, liabilities and disposal of funds for each sector of the banking system, separately.

The total bank credit made available by all the banks in India went up from Rs. 1,046.31 crores to Rs. 1,248.49 crores. With the exception of non-scheduled banks, all categories of banks shared in this expansion. The loans and advances and bills discounted by the State Bank of India rose by Rs. 65.36 crores to Rs. 232.24 crores. The bank credit provided by the other Indian scheduled banks increased by Rs. 97.84 crores to Rs. 774.05 crores and that provided by foreign scheduled banks went up by Rs. 40.08 crores to Rs. 211.17 crores. Only the advanced and bills discounted by the non-scheduled banks suffered a setback, albeit slightly, from Rs. 32.13 crores in 1959 to Rs. 31.03 crores in 1960.

Deposits

The deposits of all banks witnessed only a modest expansion of Rs. 20.29 crores to Rs. 2,001.85 crores. The deposits of the State Bank of India actually dropped by Rs. 4.76 crores to Rs. 577.35 crores, and those of non-scheduled banks by Rs. 2.76 crores to Rs. 48.46 crores. The deposits of other Indian and foreign scheduled banks, however, went up during the year under review. The former by Rs. 15.07 crores to Rs. 1,137.09 crores and the latter by Rs. 12.74 crores to Rs. 238.95 crores. It would have been useful if the authors of the publication had separated the influence of P.L. 480 funds on the deposit figures of the State Bank of India and those of the banks as a whole. To the extent separate figures are given for the other Indian scheduled banks and foreign scheduled banks, it is, however, possible to show clearly the extent of fall or rise in the pace of deposit growth and this we have done below:

(In crores of rupees)

	Other Indian Scheduled Banks	Foreign Scheduled Banks
1957	+131.79	+ 16.60
1958	+122.39	— 8.38
1959	+142.51	+ 30.45
1960	+ 15.07	+ 12.74

It will be seen from the foregoing figures that the fall in the growth rate of deposits of Indian scheduled banks other than the State Bank of India was drastic. As compared with this decline, the foreign scheduled banks had fared relatively better.

Effect of P.L. Funds

It is common knowledge that, since July 1960, the State Bank has been transferring to the Reserve Bank P.L. 480 funds at the rate of Rs. 12 crores by reducing its investments in Government securities.. As a result its deposits must have fallen in 1960 by Rs. 72 crores. But, actually, they reveal as already noted, a fall of only about Rs. 5 crores. This implies that the commercial deposits of the State Bank must have gone up by some Rs. 67 crores—a commendable performance indeed.

As the data pertaining to the State Bank of India are fouled by the variations in the P.L. 480 funds held by the State Bank, the total for the banks as a whole are also equally affected. Little purpose will be served by referring to the credit and investment ratios to deposits for the system as a whole, especially as they have already been dealt with in an early issue of this journal, *vide* page 1172 *Commerce* dated 24th June, 1961. It would be more useful to our readers if we confine ourselves to other Indian scheduled banks and foreign banks. Again, we present these key data in a tabular form:

(Amount in crores of rupees)

	Deposits Bank credit			Investments	
	Amount	Amount	Ratio*	Amount	Ratio*
Other Indian Scheduled Banks—					
1956	725.32	478.39	66.04	270.43	37.28
1957	867.13	530.34	61.41	279.49	32.51
1958	979.51	568.92	58.08	351.64	35.90
1959	1,122.03	676.51	60.37	483.00	38.81
1960	1,137.09	774.05	68.07	276.30	33.14
Foreign Scheduled Banks—					
1956	167.84	201.88	107.04	48.14	28.67
1957	224.14	194.23	86.17	48.30	21.21
1958	185.78	139.09	81.78	47.39	24.10
1959	226.21	171.09	75.63	45.36	20.06
1960	238.95	211.17	88.37	46.37	17.06

* Ratio to deposits in percentage.

It will be seen that the credit ratio (to deposits) of Indian scheduled banks other than the State Bank of India, after going down from 65.94 per cent in 1956 to 58.08 per cent in 1958. was as high as 68.07 per cent in 1960. Conversely, their investment ratio after rising from 37.28 per cent to 38.96 per cent dropped to 33.14 per cent. They were, however, still better than in 1957 when they stood as low as 32.61 per cent.

Banks' Profit-margin

A notable feature of the *Statistical Tables is* the considerable light they throw on the profitability of operations of different categories of banks. The profits of Indian scheduled banks as a whole (including the State Bank) rose by Rs. 3.77 crores to Rs. 17.44 crores. *Indian non-scheduled* banks, with a paid-up capital and reserves of more than Rs. 5 lakhs, also improved their profits, albeit modestly, from Rs. 17 lakhs in 1959 to Rs. 20 lakhs. The foreign scheduled banks also found 1960 more profitable, their profits having advanced by Rs. 1.15 crores to Rs. 3.79 crores. The improvement in the profit-margin of banks during the year under review is clearly the result of a larger volume of advances at higher interest rates and a reduction in interest rates paid on savings and fixed deposits. The data on interest rates given in the publication under review show that the average annual interest charged on loans and advances by all scheduled banks increased from 5.705 per cent during the half-year ended December 1959 to 5.992 per cent during the corresponding half-year of 1960. During the same period, the average rates on inland bills, too, was stepped up by banks from 6.572 per cent to 6.615 per cent and on foreign bills from 9.235 per cent to 10.072 per cent. This increase *synchronised* with the reduction in interest rates on different types of deposits. Thus, the average interest paid by all scheduled banks on saving deposits declined from 1.944 per cent to 1.901 per cent and on fixed deposits from 3.252 per cent to 2.860 per cent. Only the average interest paid on current deposits rose fractionally from 0.124 per cent during the six months ended 31st December 1959 to 0.126 per cent in the corresponding half-year of 1960.

Thanks to the aforesaid factors, the current operating earnings of Indian scheduled banks rose substantially by Rs. 9.24 crores to Rs. 92.41 crores, on top of an expansion of Rs. 11.37 crores last year. The earnings of foreign scheduled banks, too, went up by Rs. 2.48 crores to Rs. 18 crores, in contrast to a decline of Rs. 66 lakhs to Rs. 15.52 crores in the preceding year. The current operating expenses of Indian scheduled banks rose less sharply in 1960, by Rs. 4.95 crores to Rs. 74.18 crores, as compared with the marked increase of the order of Rs. 8.10 crores in 1959. The operating expenses of foreign scheduled banks, too, went up by Rs. 1.20 crores to Rs. 14.07 crores.

Composition of Earnings

Reflecting the higher ratio of bank credit to deposits and the decline in the securities portfolio, the composition of earnings of banks witnessed a *significant* change in 1960. The earnings of Indian scheduled banks from loans and advances went up sizably by Rs. 5.96 crores to Rs. 45.90 crores, as compared with a rise of Rs. 3 crores in the previous year. On the other hand, earnings from investments from Government and other securities dropped by Rs. 23 lakhs to Rs. 22.32 crores. In 1959 the earnings from this source had actually gone up by Rs. 6.70 crores to Rs. 22.09 crores. It is needless to add that these variations in the income from investments mainly reflect the State Bank's transfer of securities brought with P.L. 480 funds.

As a result of the reduction in interest paid to depositors (and also as a result of loss of P.L. *480 deposits by the State Bank) the expenses side* shows that the outgoing on this account increased only modestly by just Rs. 67 lakhs to Rs. 34.79 crores, as against a rise of Rs. 7.09 crores in 1957, Rs. 9.17 crores in 1958 and Rs. 3.64 crores in 1959. The outgo by way of interest paid on borrowings from other banks has gone up further by Rs. 96 lakhs to Rs. 2 crores, on top of a rise of Rs. 60 lakhs in the preceding year. *This is clearly the* result of the increased reliance of banks on outside funds. The establishment expenses continued to increase during the year under review, the actual rise in 1960 being of the order of Rs. 2.41 crores. *Other working expenses also went up by* Rs. 1.05 crore to Rs. 8.18 crores.

A percentage-wise analysis of earnings discloses that the share of earnings from bank credit in the *current operating earnings rose from 58.9* per cent in 1959 to 58.6 per cent in 1960, thus reversing the trend in the past two years, when such proportion had actually fallen. The ratio of earnings by way of interest on securities declined from 24.1 per cent to 21.5 per cent over the same period. In this case, too, the trend has been changed. The share of earnings of Indian scheduled banks from other sources went up from 15.6 per cent to 16.3 per cent.

On the expenses side, the ratio of establishment expenses of Indian scheduled banks to their *current operating earnings fell only fractionally* from 30.9 per cent to 30.4 per cent. The outgo by way of interest paid on deposits as a proportion of total earnings in the case of the Indian scheduled banks dropped further from 41 per cent to 37.6 per cent. This is due, in part, to the *reduction in the average interest paid on fixed* and saving deposits. Even so, the ratio of interest on deposits to total operating earnings is still *higher than the ratio of establishment expenses* to total earnings.

Appropriations

Out of the Indian scheduled banks' gross profit of Rs. 18.40 crores, for the year under review, Rs. 7.31 crores, or 41.9 per cent, have been absorbed by the provision for taxes, as compared with Rs. 3.96 crores or 29 per cent last year. This sharp increase in the provision for taxation may be due to the fact that actual profits in 1960 were larger than published profits which suggests that banks must have set aside some part of the profits for building up their inner reserves. It is also possible that the declared profit for 1959 had been exaggerated a little by some banks. The transfer to general re*serve has, in any case, been increased from Rs. 1.48* crore in 1959 to Rs. 2.67 crores, raising their share of profits from 10.8 per cent to 15.3 per cent. This *strengthening of the banks' reserves* was at the cost of distribution to shareholders. While the total amount distributed to them by way of dividend, bonus, etc., went up by Rs. 48 lakhs to Rs. 4.38 crores, the proportion of such distribution to total sum available for appropriations actually dropped from 28.5 per cent in 1959 to 25.1 per cent in the year under review.

Trend of Earnings and Expenses of Scheduled Banks

Notice

THE MYSORE CHEMICAL MANUFACTURES, LIMITED

Chikbanavar P.O. (Bangalore Dist.)

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-third Annual General Meeting of the Shareholders of THE MYSORE CHEMICAL MANUFACTURES LTD., will be held at the Registered Office of the Company at Chikbanavar P.O., Bangalore District, on *Friday*, the 29th September 1961, at 10 a.m., to transact the following business:—

1. To receive and adopt the Directors' Report, the Audited Balance-sheet and Profit and Loss Account for the year ended 31st March 1961 and the Auditor's Report thereon.
2. (a) To sanction payment of an additional Dividend of 18 nP per Share on 20,000 6 per cent Preference Shares for the year ended 31st March 1960 in terms of Preference Shares (Regulation of Dividends) Act 1960.
   (b) To declare Dividend on Preference Shares.
   (c) To declare Dividend on Ordinary Shares.
3. To elect Directors in place of:—
   (i) Sri S. Mani, B.A., B.L., who retires by rotation and being eligible offers himself for re-election;
   (ii) Sri V. S. Ramakrishnan, B.A., B.L., who retires by rotation and being eligible offers himself for re-election.
4. To appoint Auditor/s for the year 1961-62 and to fix his/their remuneration.

The Share Transfer Books of the Company will be closed from 16th to 29th September 1961, both days inclusive.

By Order of the Board,
S. RAMANATHAN,
Managing Director.

BANGALORE,
26th August 1961.

The Board of Directors have recommended payment of a Dividend of 7.80 per cent on Preference Shares and 20 per cent on Ordinary Shares for the year, both subject to deduction of tax. The Dividends, when declared, will be made payable at the State Bank of Mysore, Bangalore, Mysore, Bombay and Madras, on and after 15th October 1961. The Dividend Warrants will be posted to those Shareholders whose names stand on the Register as on 16th September 1961.

Shareholders, whose income is not taxable, are requested to obtain a Certificate from the Income-tax Officer of their respective Circle and to send the same to the Company before 20th September 1961, otherwise the applicable Income-tax will be deducted.

Shareholders are requested to notify the Company of any change in their address.

Note.—A Member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Applications are invited on the basis of the Prospectus, copies whereof are available from the Company's Bankers, Underwriters and Brokers mentioned herein.
A copy of the Prospectus together with the documents required to be attached thereto has been duly filed with the Registrar of Companies, Bombay for registration. Consent of the Central Government has been obtained to this issue. An Industrial Licence has been obtained from the Central Government for the establishment of this new industrial undertaking. An application will be made to the Bombay Stock Exchange for permission to deal in and for quotations of the Shares of the Company.
The Subscription List will open at the commencement of Banking hours on the 4th September 1961 and will close on the 12th September 1961 or earlier at the discretion of the Directors but not before the close of Banking hours on 7th September 1961.

(3) The balance of Rs. 50 per Share in such call or calls as may be determined by the Directors, provided that no call shall exceed Rs. 25 and that there shall be an interval of at least 3 months between any two calls.

OBJECTS OF THE COMPANY

The Company was incorporated on 29th March 1961 at Bombay to establish a factory for the manufacture of Synthetic Camphor with an annual capacity of 900 tons.

SCOPE AND PROSPECTS

The proposed factory of the Company will be the first of its kind in India to manufacture Synthetic Camphor. The Directors are, of the opinion that on the basis of the existing prices and market conditions and in the absence of any unforeseen circumstances, the Company should be in a position to make sufficient profits so as to pay reasonable dividends on the invested capital.

IMPORT LICENCE AND RAW MATERIALS

The Company has received the Import Licence for the import of machinery and equipment of the value of Rs. 32.1 lakhs.

The main raw material required for the manufacture of Synthetic Camphor is Turpentine. The U.P. State Government Turpentine and Rosin Factory will supply the Turpentine produced by the said Factory. Most of the other raw materials will be readily available in India.

TECHNICAL COLLABORATION

The Company is obtaining the technical know-how and process designs for the plant from the world renowned "DU PONT" (Messrs. E. I. Du Pont de Nemours and Company), Wilmington, Delaware, U.S.A. Messrs. Du Pont are one of the leading manufacturers in the world in the field of chemicals. Messrs. Du Pont will be deputing one of their experienced engineers to supervise the commissioning of the plant. It has also been arranged to get the Company's technicians trained by Messrs. Du Pont in U.S.A. The terms of payment to Messrs. Du Pont have been approved by the Central Government and the Reserve Bank of India.

One of the seniormost Chemists with Messrs. E. I. DU PONT DE NEMOURS & CO., Dr. Gastao Etzel, who is considered as one of the world's leading experts in the production of Camphor, is to retire in the year 1962 and the Company has secured his services for a period of two years. The services of Dr. Gastao Etzel are expected to start during the engineering and construction phases of the Plant, so that his expert advice will be available to the Company during planning as well as the operation of the plant.

SITE OF THE FACTORY

The Factory will be located at Clutterbuckganj, near Bareilly in Uttar Pradesh. The location selected adjoins the Government controlled Turpentine & Rosin Factory at Clutterbuckganj near Bareilly. Negotiations for acquisition of approximately 30 acres of land from the authorities concerned are at a very advanced stage. The area of the land will meet not only the immediate requirements of the factory proposed to be erected, but also the needs of the future expansion.

COMMENCEMENT OF BUSINESS

The factory is expected to go into production by the end of 1962.

LOANS FROM I.C.I.C.I. & I.F.C.

The Company has been sanctioned, in principle, a loan of Rs. 24 lakhs payable in foreign currency and a loan of Rs. 6 lakhs in Indian currency (total Rs. 30 lakhs) by Industrial Credit & Investment Corporation of India Ltd.

The Company has also been sanctioned, in principle, a loan of Rs. 18 lakhs for meeting the payment for indigenous equipments from Industrial Finance Corporation of India.

INSPECTION OF DOCUMENTS

Copies of Prospectus and the necessary documents mentioned therein are open for inspection at the registered office of the Company during business hours, until the subscription list is closed.

APPLICATION FOR SHARES

Application forms properly completed must be lodged together with the amount payable on application before the closing date of the subscription list with the Bankers to the Issue or with their existing main Branches at Bombay, Calcutta, Delhi, Madras, Ahmedabad, Poona, Kanpur, Lucknow, Nagpur, Bangalore, Hyderabad, Baroda, Surat, Rajkot, Bhavnagar and Patna.

STRONG BUDGET MOVES TO CONTROL BRITISH ECONOMY

THEIR POTENCY UNDERESTIMATED

By W. T. C. King

EDITOR OF "THE BANKER", LONDON

THE United Kingdom Government's "little budget" of emergency measures, which I foreshadowed, made its appearance in the final week of July. It had, as expected, awaited the passing of the Finance Act, with its new powers to the Government to impose between-budgets changes in indirect taxes.

In the week since the Chancellor's prescription became known it has had its intended first effect in the foreign exchange markets. It has stopped the run on Sterling and produced a welcome rebound of exchange rates, evidently enabling the authorities to repurchase some modest fraction of the quantities of foreign exchange they have found it necessary to sell in the six months or so since the tide of short money movements began to ebb strongly from Britain's shores.

The first clear indication of the extent of this pressure has been given as I write. The Sterling area's central reserves of gold and convertible currencies dropped during July by a net £114,000,000, carrying them to £876,000,000, their lowest since early in 1958, and bringing the drop since the end of February, on the eve of the D-mark revalution, up to £265,000,000. This latest movement is not, however, comparable with those shown in recent months, since it is known that it reflects some net repayments of credits previously granted to the Bank of England under the so-called Basle agreement between the European central banks, whereas the earlier drain on the reserves was being understated to the extent of net drawings on such credits. The total disclosed loss up to date is, however, a formidable one; and, given the earlier understatement, it is well that the Government's measures had had time to impress themselves upon the owners of internationally mobile funds before this figure became known.

Disinflationary Prescription

Although the measures had this salutary effect on the exchange markets, in London generally and in the Press they have had a rather mixed reception and in some quarters a hostile one. In my own view, however, comments that dismiss the prescription as the "mixture as before" do it less than justice. Admittedly, most of the ingredients used have figured in the medicines administered on former Post-World War II crisis occasions; but they have never all been prescribed simultaneously and certainly not in such strong doses. There are also some new lines of treatment, but these, it has to be admitted, are more in the nature of hints of future intentions and aims than of clearly discernible processes.*

The immediately visible prescription is a strongly disinflationary one. The Chancellor has used to the maximum extent his new power to raise, by statutory order, all "revenue" customs and excise duties and purchase tax by ten per cent (that is, a 50 per cent duty becomes 55 per cent and a five per cent one five-and-a-half per cent)—a change that falls with particular weight on tobacco, beer, wines and spirits, petrol, motor vehicles, consumer durables and certain luxury consumer goods, and is also spread over a wide segment of other forms of consumption.

This impost is estimated to bring in an additional £130,000,000 of revenue to the Exchequer in this current fiscal year and, if the surcharge is maintained beyond that (new powers are needed to sustain it beyond August 1962), it would provide £210,000,000 in a full year. This is the biggest dose of new taxation that has been imposed in any single batch of measures (including, of course, the annual budgets) for many years, and is much the largest ever imposed by a Conservative Chancellor.

At the same time, the authorities have taken monetary action that matches in intensity the shock tactics of 1957. The re-discount rate of the Bank of England has been raised, just as it was then, in one leap from five per cent to the penal level of seven per cent. One measure of the severity of this action is the fact that this is only the fourth peacetime occasion this century that Britain's Bank rate has stood so high—before 1957 there had been no such rate for 36 years. The psychological shock produced by the move has naturally been decidedly less this time, however, than it was four years ago. Though its effect on bank lending rates have been much the same, on bill rates and on gilt-edged yields the impact was diminished by the fact that these were already at higher levels than had obtained before the crisis of 1957.

Bank overdraft rates for private borrowers now range from seven-and-a-half per cent to nine per cent, the three months' Treasury bill rate is around 6-11/16 per cent, and yields on long Gilt-edged stocks range up to 6-13/16 per cent.

This increase in Bank rate was officially stated to have been decided upon partly in view of the unsettled international situation—by which was apparently meant not only the underlying strains on Britain's balance of payments but also the political uncertainties surrounding Berlin—and partly because of the need to restrain credit internally. For this second purpose, however, the authorities have not been content to rely on the increase in interest rates alone.

Somewhat to the surprise of many City circles, the Bank of England made further recourse to the new instrument of direct control over bank liquidity, and has called from the clearing banks additional Special Deposits (which rank as non-liquid assets, being immobilised on special interest-bearing accounts at the Bank of England) equivalent to one per cent of their own gross deposits. This new call, which will bring the total Special Deposits up to three per cent, has to be transferred in two instalments by the August and September make-up dates.

Stiffer Lending Standards

The Chancellor has said that he intends the impact of this pressure on bank liquidity to fall on bank advances. This presumably means that the authorities would feel entitled to protest if there was evidence that any bank was running down its Gilt-edged portfolio with the specific objective of enabling it to meet the Special Deposit call while continuing to expand its advances; though it is debatable whether it also means that they would be reluctant to afford market support if the banks do attempt further sales.

There is no doubt, however, that, in most instances, its immediate effect will be to cause the banks to stiffen up their lending standards. And though they may regret the return to the policy of Chancellor's "requests" to them in the matter of their lending, there is equally no doubt that they will do their best to meet the requirement that they should be "particularly severe" on loan proposals related to personal consumption, including hire purchase finance, as well as finance for speculative building, property development, or other speculative purposes.

It has also been emphasised that the aim of restraint at these points is to leave room for finance for exports and productive industry—with the implication that advances for these purposes may rise but that any such rise ought to be more or less offset, in the short run at least, by contraction in other spheres. A major characteristic of this whole batch of measures, by contrast with most other post-war drives for disinflation, is, indeed, that no direct restraint—apart from that which may result from the rise in interest rates—is being put on productive investment.

As part of the parallel effort to limit expenditures in the public sector, it is recognised, however, that a number of "desirable", if not productive, capital schemes of the local authorities may have to be abandoned or postponed. It is hoped to ensure that the total of capital outlays of these authorities in 1962-63 will not significantly exceed the total for the current fiscal year. Similarly, a new drive for economy in the "Supply" expenditures of the Central Government has, as its target, the limiting of the "natural" growth in the total of such requirements to two-and-a-half per cent per annum in real terms, or the equivalent of an increase of about £125,000,000 in 1962-63 as compared with the estimates for 1961-62.

Given the extent of the gap in Britain's balance of external payments, the search for means of reducing Governmental outgoings has had to be particularly rigorous in the field of governmental expenditure overseas. These expenditures—embracing defence costs overseas, aid for underdeveloped countries, and expenditure on administrative and diplomatic services—have been rising extremely fast. They are running this year at about £450,000,000 and next year threaten to rise to £480,000,000 or even £500,000,000, compared with £330,000,000 in 1958-59. The aim now is to keep next year's bill down to £400,000,000.

Economy is not, however, to be sought at the expense of existing grant or loan aid programmes. The cost of these is likely to rise this year to the large total of about £180,000,000, compared with £150,000,000 last year and £80,000,000 four years back. The present aim is broadly to stabilise these outgoings at around their current high level. It is, therefore, in the spheres of overseas defence costs and administration that any outright savings have to be sought.

Calling Earnings Home

As for private outlays overseas, it has been decided that new investment involving remittances to countries outside the Sterling area must pass more stringent tests before sanction by the Exchange control: applicants will have to show that the outlays projected will produce "clear and commensurate benefits to U.K. export earnings and to the balance of payments". In addition, British companies operating overseas are being asked to review their financial policies to ensure that a due proportion of their overseas earnings is remitted home; and companies operating outside the Sterling area will have to face a "selective" examination of their accounts to ensure that due remittances do take place.

Such are the main lines of the specific measures of disinflation. Together, they add up to a formidable programme. The critics have protested, however, that measures of monetary disinflation and Government retrenchment have been prescribed before without producing any lasting solution to the problem of inflation, and that the dose of extra (indirect) taxation this time, strong though it looks, is "merely" calculated to raise prices and thus may in the end give a new impetus to the wage-price spiral of cost-inflation. Only time can show how far such criticisms are justified on this occasion.

My own view is that many of those who have argued on these lines have tended to underestimate the probable potency of these measures in the short run. But they also rightly draw attention to the critical fact that, in the slightly longer run, everything depends on whether the restraint exerted by the rise in indirect taxation is overtaken and offset by any undue rise in personal incomes and especially in wages, as has happened on some former occasions.

"Pause" in Wages

The Chancellor himself has laid great stress on the need for restraint in this sphere and has called for a "pause" in increases in wages and salaries (and also in dividends) until a rise in productivity has caught up with them. In the past, mere exhortations to wage restraint have had little effect—except for such period as a clear disinflationary atmosphere has pervaded the economy; but this time the Government has said that it will itself operate this "pause", wherever it has direct responsibility for wage settlement.

If this attitude is, indeed, firmly adopted over the whole range within which the Government could "directly" assert itself, it could give to this potentially strong disinflationary effort a toughness and an enduring influence such as has not been seen from any such effort in the past.

The great question, which only time can answer, is whether the Government, in the face of the opposition that is certain to be offered by labour, will indeed stand firm on this crucial issue this time. Not until that question has been answered will it be possible to assess the likely worth of the longer-term plans that are now being put forward for the future regulation of demand and for keeping personal incomes in better step with productivity.

In the meantime, the position of Sterling for the short run is being further buttressed by a massive drawing of foreign exchange from the International Monetary Fund for the purpose of strengthening reserves.

*Since this article was written, the Chancellor has invited representatives of both sides of industry to preliminary discussions aimed at a joint examination of the economic prospects of the country stretching over a period of five or more years.

SHORT-TIME WORKING BEGINS

TEXTILE STOCKS INCREASING

From Our Special Correspondent

MANCHESTER, 22nd August

MANCHESTER LETTER

FOR the first time since the scrapping of nearly half the productive capacity of the Lancashire cotton industry in the 1959 Reorganisation Scheme, short-time working on an extended scale has begun. At present, as estimated, 1,500 workers from the spinning section of the industry are affected by short-time working in Bolton—between one-sixth and one-seventh of the spinning labour force. Several spinning firms have posted warning notices of possible extended holidays in September. So far, the weaving section of the industry has not been affected.

The Secretary of the Bolton and District Cardroom Workers' Association, Mr. W. Prescott, said: "Security of employment is essential to the cotton industry, particularly when there are so many opportunities available in other industries. I had hoped that, with the reorganisation of the industry, employment in textiles would have been made more stable than in the past." At present, the short-time stoppages are mainly confined to branches of three big spinning combines in the area. The volume of imports and Government financial measures are among the reasons given for the recession. The increased costs of bank overdrafts is said to be discouraging firms from keeping large stocks of yarn if they can avoid it.

Cycle Examined

Reference was made to the three-yearly cotton trade cycle at the annual meeting of Taylor and Hartley (Textiles) Ltd., last week when Mr. W. T. Shackleton, the Managing Director, pointed out how, since the war, the accumulation of supplies had brought a dearth of demand, first in 1952, then in 1955 and 1958 and now in 1961. The curve of the graph, however, varies somewhat, in that, during the current year, the mills have been very busy on their existing orders, although replenishment buying has been virtually at a standstill. The fear in the minds of most traders is that these conditions will persist into 1962.

The build-up of stocks is not necessarily the only factor involved when the trade is moving from prosperity into reverse. In 1958, for instance, the hesitation so widespread among buyers was occasioned by doubts over the outcome of the investigation into the system of price regulation in spinning and doubling as well as the uncertainty surrounding the introduction of inter-industry trade pacts with Lancashire's Eastern rivals which had then begun to ship large quantities of cloth into the United Kingdom.

So many varying aspects of the situation can be produced to substantiate any particular argument that traders can easily become bemused by the background of facts and figures. Mr. Shackleton, for example, drew a comparison between the scale of importation of cotton cloth into the United States and the United Kingdom.

Dealing with the Geneva trade talks and the arrangement to base future arrivals on the quantities involved in the year to the end of June 1961, he pointed out that, in this period, Britain had accepted nearly 800 million yards of foreign cloth—its highest ever—while the United States, the instigator of the conference, had imported less than half this volume—into a market far greater in size than Britain's domestic trade.

No Reciprocation

Mr. W. T. Sutcliffe, the Chairman of the group, was particularly vehement in his condemnation of India's attitude to the import-export situation. The Indian Government, he observed, refused to permit shipments of cloth from Lancashire, while rationing their own countrymen to something like 17 yards each per annum. At the same time, they claimed the right under Commonwealth comradeship to export very large quantities to the United Kingdom and aimed under their successive Five-year Plans to encourage overseas trade, with its valuable currency earnings.

"We are the dumping ground of the world," Mr. Sutcliffe exclaimed dramatically. "It does not matter what modern machinery we use, we cannot compete with these developing countries." On re-equipment—now a major topic of controversy, as more firms state publicly their unwillingness to modernise "without strings"—he said: "If we go in, we want to see daylight. We have to be extremely cautious in planning our future programme because the outlook remains so obscure."

On the Slippery Path

However much the theoretical approach to business may be condemned from time to time, the apparent inevitability of the trade cycle in the cotton and allied industries cannot be escaped. Barely six months ago, the balance of supplies situation was creating fears that a danger point was at hand. In the intervening period, the position, as is well known, has deteriorated still further and the build-up of available stocks has continued without respite.

Purely on an arithmetical basis, the virtual maintenance of domestic production, coupled with ever-increasing imports and the steady fall in shipments abroad, can only result in more goods being offered for sale at a time when buyers are doing their best to make themselves inconspicuous. The accumulation of supplies in the pipe-line and beyond has followed a similar and regular pattern without interruption since post-war trading was resumed.

The following table provides a comparison between the situation in recent years, from which it is all too easy to assess when booms and slumps can be predicted. The availability of supplies of cotton and rayon cloth is shown below:

(In million yards)

Year	Output	Imports	Total	Exports	Balance for home trade
1937	4,122	75	4,197	2,001	2,196
1949	2,592	400	2,992	1,078	1,914
1950	2,840	342	3,182	1,017	2,165
1951	2,960	476	3,436	1,105	2,331
1952	2,192	210	2,402	871	1,531
1953	2,632	143	2,775	895	1,880
1954	2,775	335	3,110	812	2,298
1955	2,479	365	2,844	688	2,156
1956	2,314	380	2,694	595	2,099
1957	2,257	490	2,777	567	2,210
1958	2,030	434	2,464	468	1,996
1959	1,927	675	2,502	411	2,091
1960	1,911	786	2,697	388	2,314
First 6 months—					
1955	1,350	200	1,550	351	1,199
1956	1,215	201	1,416	301	1,115
1957	1,212	250	1,462	295	1,167
1958	1,105	229	1,334	257	1,077
1959	977	257	1,234	201	1,033
1960	993	382	1,375	201	1,174
1961	975	455	1,430	180	1,250

Even a glance at these statistics is sufficient to determine the reason why so many traders in this part of the world are increasingly apprehensive about the import situation. Yet Lancashire producers have been accused of having an anxiety neurosis about this topic and their constant pleas for protection have angered the free traders in our midst. It is small wonder that the vulnerable nations of the West wish to guard themselves against such inroads on their domestic markets when they can see the example laid so clearly before them. The international talks at Geneva can scarcely be anything but long and tortuous, but, if the traditional suppliers of cotton goods are to retain any business worth mentioning, some degree of regulation of imports is regarded as essential.

Supplies at a Peak

At the end of the first half of this year, available supplies of cotton and rayon goods for the home trade were at their highest level since the war, a situation caused by the prolonged absence of buyers from the market. For not far short of a year, spinners and weavers have been turning out goods from machines running at over 90 per cent of capacity and, although deliveries have been well taken up, the eventual disposal of supplies has not been on the scale achieved during the past two summers.

The Wholesale Textile Association has reported that total stocks at the end of June were 14.4 per cent higher than 12 months previously. It must be made clear, however, that these figures cover all types of textiles, including woollen goods, millinery, gloves and even floor coverings.

From exhaustive inquiries made in various distributive centres, it appears that stocks held at wholesale and retail level are distinctly higher than during the past year or two, but they can scarcely be described as overwhelmingly large. The mills themselves are carrying somewhat bigger quantities of goods in process, but instances of contracts being cancelled have been rare.

The trade a a whole has not yet reached the stage of making substantial supplies for stock, but, unless there is a marked change in the mood of the customers in the next few weeks, many producers will face the unhappy alternative of deliberately slowing output or completing goods without a waiting customer.

FIRE — MARINE — ACCIDENT

PROGRESS OF LIFE INSURANCE CORPORATION

NEW BUSINESS DONE TOUCHES FRESH PEAK

HIGHER LAPSE RATIO REFLECTS INFLATIONARY PRESSURES—EXPENSE RATIO, HOWEVER, CONSTANT

CHAIRMAN, MR. P. A. GOPALKRISHNAN'S REVIEW

IN his statement at the Fifth Annual Meeting of the Life Insurance Corporation of India, the Chairman, Mr. P. A. Gopalkrishnan, I.C.S., highlighted the outstanding features of the working of the Corporation during the year ended 31st December 1960. Despite the rise in the general price level, which hit hard the middle classes with fixed incomes who till now formed the bulk of the policyholders and notwithstanding the ravages of floods, drought and other calamities that adversely affected business in several States, the Corporation, the Chairman pointed out, wrote a record new business of Rs. 498 crores in 1960, that is, Rs. 69 crores more than in the previous year. Referring to costs, he said that, while the price of every other commodity had been rising, life insurance policies cost less today than at any time during the past fifteen years.

The following is the full text of the Chairman's statement:

"GENTLEMEN,

"I have great pleasure in welcoming you all to this fifth anniversary meeting of the Corporation. We have assembled here today to consider the draft of the annual report and audited accounts of the Corporation to be submitted to Government under Section 27 of the Life Insurance Corporation Act. These have already been circulated to all the Members.

New Business

"The Corporation is now five years old. During this period, the second Five-year Plan of the country has come to a close and considerable progress has been made in all fields of economic activity. The national income at current prices has risen from Rs. 9,980 crores in 1955-56 to Rs. 12,840 crores in 1959-60. On the other hand, the general price level has also increased, hitting middle-classes with fixed incomes. These classes form the bulk of our policyholders and we have been finding it extremely hard to get business from them. To add to our difficulty, there were, in 1960, widespread floods in Punjab, Uttar Pradesh, Bihar and Orissa, drought in Mysore and Andhra Pradesh and linguistic disturbances in Assam. Our business in these areas was adversely affected by these factors. We had also to contend with rival demands made by the various forms of savings propagated by banks and the Government.

"In spite of all the above factors, our new business last year was Rs. 498 crores, covering 1.26 million policies, as compared with Rs. 429 crores in 1959, covering 1.15 million policies. The premium income increased from Rs. 84 crores in 1959 to Rs. 97 crores in 1960 and the total income, exclusive of refund of tax, from Rs. 105 crores to Rs. 122 crores. In 1955, the year immediately preceding nationalisation of life insurance, the premium income of all the companies was only Rs. 58 crores and the total income Rs. 74 crores.

Rural Development

"We have been able to achieve these results and hope to improve upon them during the current year owing to our policy of systematically expanding business in the rural area. Field Officers have been allotted exclusive rural territories in which they are building up a network of agency force. In some States, we have been utilising the agency of *panchayats* and co-operative societies for securing rural business. Rural publicity has been intensified and life insurance literature is now distributed through Community Development Blocks and village *panchayats*, in addition to our normal channel of distribution through our own branch and sub-offices. Jeeps have been supplied to all divisions and a mobile publicity van equipped with projector and films has been provided to each zone as an experimental measure. These vans visited over 3,400 centres in 1960 and secured spot business of about Rs. 37 lakhs. Approximately, 26 lakhs of people attended the meetings convened by the officers-in-charge of these vans. Seeing the future prospects for rural business revealed by this mobile van publicity, we have supplied an additional van to each Zone during the current year. The spot business secured by these vans during the first half of 1961 is as much as Rs. 61 lakhs. In the Southern Zone, we have gone a step further by converting the mobile publicity van into a mobile insurance office. This Office underwrites business and issues policies on the spot. The experiment has been recently extended to the Northern Zone also and will be extended to other areas if it proves a success.

Non-medical Business

"Another significant step that we have taken in the current year is to extend non-medical business, i.e., insurance without medical examination, to all those within certain age groups whose total insurance does not exceed Rs. 2,000. This will help us to secure more and more business from the rural areas. Non-medical business to special categories of persons in civil employment has been increased upto a limit of Rs. 5,000 and to category 'A-I' of the Commissioned Officers in the Armed Forces upto a limit of Rs. 10,000.

Foreign Business

"In the foreign countries, where we operate, conditions were not quite favourable for life insurance business in 1960. Political uncertainty in East Africa led to a flight of capital and fall in the business secured from the Indian community. In 1960, however, we started insuring African lives and we got a certain amount of business from this source. There was considerable damage in Mauritius by a cyclone and in Fiji Islands by a prolonged strike of cane growers. Nevertheless, we completed in all Rs. 9.7 crores of new business during the year, as against Rs. 9.47 crores in the previous year.

Foreign Exchange Earnings

"Although our foreign business is very small compared to the business that we are doing in India, it is very important from the point of view of foreign exchange. Our net earnings of foreign exchange per year amount approximately to Rs. 2.5 crores.

Business In Force

"The total business in force at the end of 1960 was Rs. 2,285 crores covering 7.7 million policies, as compared with Rs. 1,958 crores, covering 6.9 million policies at the end of 1959. These figures include the business outside India which increased from Rs. 103 crores in December 1959 to Rs. 109 crores at the end of 1960. In this connection, I would like to refer to the phenomenal growth of life insurance in India during the last ten years and, particularly, after nationalisation of the industry five years ago. The life business in force in India has almost trebled during this period. To this remarkable increase, the contribution made by the private sector companies during 1950-55 was Rs. 380 crores. During the following five years, the increase has been as much as Rs. 1,048 crores. Expressed as a percentage of the national income, life business in force has increased in the country from about 11 per cent in 1955 to 17 per cent at the end of 1960. As these figures do not include the comparatively small amounts of business on the books of the Postal Department and a few State Governments, the percentage of business in force at the end of 1960 should be more than 17.

Yield From Investments

"The income from interest, dividends and rents before deduction of income-tax rose to Rs. 23.96 crores from Rs. 20.98 crores in 1959. During the five years from 1955 to 1960, the income from this source has more than doubled. The gross interest yield on the Life Fund was 4.58 per cent as compared with 4.54 per cent in 1959 and 4.52 per cent in 1958. This steady increase in the yield on our investments has been brought about mainly by the judicious manner in which we are making investments from year to year.

"The Corporation's Life Fund has registered a significant increase from Rs. 495 crores in 1959 to Rs. 560 crores in 1960. The total assets have similarly increased from Rs. 554 crores in 1959 to Rs. 622 crores in 1960. Net investments of all kinds made in 1960 amounted to Rs. 63.62 crores, as compared with Rs. 35.04 crores in the previous year. The total Stock Exchange investments, as on 31st December 1960, had a book value of Rs. 471 crores. Their market value on the same date was higher by nearly a crore of rupees. There is, moreover, a reserve of Rs. 13.41 crores to offset any future fall in the market value of these investments and it is proposed to keep this reserve in tact for the present.

Housing

"Owing to the acute housing shortage in the country, the Corporation decided to build its own staff and officers' quarters at different places and step up housing loans to State Governments, Co-operative Housing Finance Societies and other institutions. Besides, in granting mortgage loans against the security of buildings, the Corporation shows special consideration to applicants wanting loans for constructing or completing residential buildings for their own use. From the commencement of these schemes within the last two years up to March of this year, the total housing loans sanctioned by the Corporation amount to Rs. 23.05 crores. These loans have not yet been fully utilised by the agencies which received them. According to information available with us, the State Governments have so far sanctioned loans for the construction of 3,859 middle class houses and 4,238 State employees' houses. The Co-operative Housing Finance Societies and other institutions have disbursed loans for the construction of 2,795 houses and the Corporation itself has constructed 264 quarters in India besides sanctioning loans to its employees' co-operatives for building 116 houses. The number of houses, for whose construction or completion mortgage loans have been sanctioned is, 95. Thus, the total number of houses constructed or under construction in the country with the aid of L.I.C. funds is 11,367. The Corporation has also indirectly helped the relief of housing shortage by putting up or completing office buildings worth Rs. 3.91 crores during the last five years.

Expenses of Management

"Turning to expenses of management, 1960 was a difficult year. The cost of administration has been going up owing to various reasons such as increase in the prices of stationary and printing and of conveyances and their maintenance. Higher rates of conveyance and travelling allowances had to be sanctioned for certain categories of touring officers. The penetration of the rural area and organisation of publicity in the villages are costing more than the procuration of business in the cities and towns. Above all, we had to sanction from 1st April 1960 an *ad hoc* increase of Rs. 15 in the dearness allowance paid to all our officers and staff drawing upto a salary of Rs. 500 per month. This alone increased our expenditure in 1960 by Rs. 46.44 lakhs. However, by effecting economies, wherever possible, and keeping a strict control on recruitment of staff, it has been possible for us to keep down our expenses of management. The overall expense ratio of the Corporation fell from 28.7 per cent in 1959 to 28.4 per cent in 1960 but the renewal expense ratio, which is the real indicator of economy of management, remained practically constant at 12.9 per cent. Had it not been for the factors mentioned above, the renewal expense ratio might have been nearer 12 per cent than 13 per cent.

Claims Paid

"Maturity benefits to owners of policies amounted during the year to Rs. 23 crores and death benefits to Rs. 8 crores. The total claims during the year thus amounted to Rs. 31 crores as compared with Rs. 28 crores during 1959. During the four years and four months ended with December 1960, the total benefits to our policyholders and their beneficiaries by way of claims amounted to Rs. 113 crores.

Premium Rates

"There has been a suggestion in certain quarters that since competition has been eliminated after nationalisation of life insurance and overheads have been reduced, the Corporation should examine the possibility of reduction in premium rates. I would like to point out in this connection that the premium rates charged by us are much lower than those charged in the past by Indian companies. For example, the rates charged by the Oriental Government Security Life Assurance Co., Ltd. from 1947 to 1953 under main insurance plans were 5 per cent to 35 per cent higher than the Corporation's rates. In 1954, there was a drastic reduction in premium rates by all the Indian companies, including 'Oriental,' and these reduced rates continued upto the date of nationalisation. In spite of this drastic reduction, the 'Oriental' reduced rates were higher than the Corporation's rates by one Rupee per thousand sum assured or anything from one per cent to 5 per cent under various plans. Thus, while the price of every other commodity has been increasing, life insurance policies cost less today than at any time during the last fifteen years or more. It is true that our mortality experience has been showing steady improvement and death claims have been going down, as compared with the volume of business in force. While these factors should enable premium rates to be reduced, inflation and the resultant increase in the cost of administration and the higher cost involved in the expansion of rural business work in the opposite direction. All these problems are constantly under study in our Actuarial Department and if and when we find it possible, we shall certainly consider further reduction of premium rates.

Lapse Ratio

"During the second Plan period, the general price level is estimated to have increased by 30 per cent and the working class cost of living index by 24 per cent. Inflationary pressures thus generated have begun to be reflected in the net lapse ratio of the Corporation. The lapse ratio, which was 9.1 per cent in 1956, came down to 6.4 per cent in 1957 and to 5.1 per cent in 1958. In 1959, it rose to 6.0 per cent and in 1960 to 6.6 per cent. The abnormal drop in the ratio of 1958 is partly accounted for by a necessary alteration in our system of treating policies as lapsed. Even so, it is clear that the net lapse ratio, which gradually fell after nationalisation, has begun to rise again. There are also certain other disquieting signs which show that some policyholders with fixed incomes and increasing commitments are finding it difficult to save enough and keep their policies alive. Loans to policyholders, which used to increase by roughly Rs. 1 crore per year till 1959, increased by Rs. 3 crores in 1960. Outstanding premiums, which similarly used to increase by Rs. 1 crore per year, have increased in 1960 by Rs. 2.5 crores. If inflationary pressures increase during the period of the third Five-year Plan, it is bound to accentuate these tendencies and make it extremely difficult for the Corporation to keep down its lapse ratio. The only gratifying fact is that the 1960 lapse ratio of 6.6 per cent is still well below the lapse ratio of 7.6 per cent in the last year of life insurance management by the private sector companies.

Administrative Efficiency

"The efficiency of our administrative offices has been steadily improving as a result of our training programmes and better supervision and control by the officers-in-charge. Practically, every Divisional Office has one or more instructors to train newly-recruited assistants and also existing assistants who need training. Our Officers' Training College at Nagpur has already trained 536 officers and supervisory personnel. As more and more of our administrative staff are trained at these institutions, further improvement of the efficiency of our offices may be expected to take place. The improvement that has already resulted is evident from the big drop in the number of complaints received and also from the increase in the average output of our offices. In 1959, the monthly average of the number of complaints received in our various Divisional Offices and major I.H.O. Units was 3,274. In 1960, the number fell to 2,171, representing a fall of 33.7 per cent, despite the increase in the number of policies. Similarly, the increased output of our offices will be evident from the fact that, while between 1957 and 1960, the number of new policies increased by 55 per cent and the total number of policies on our books increased by 36 per cent, the total staff of the Corporation increased only by 30 per cent. Further steps are being taken to improve our systems and procedures for more expeditious despatch of business and also to assess the minimum staff requirements of each office on a more scientific basis than hitherto. These steps are bound to bear fruit in future years.

Field Efficiency

"The Development Training Centres, which we have started in all the Zones, have been systematically training our field officers and agents. The number of persons trained so far is 5,214 field officers and 4,844 agents. This training as well as the experience gained by the field officers during the last five years have enabled them to increase their average output of new business from year to year. The average output in 1957 was Rs. 4.9 lakhs and it has increased by 60 per cent to Rs. 7.8 lakhs in 1960. The average output of an active agent has increased by 55 per cent from about Rs. 31,000 in 1957 to about Rs. 47,900 in 1960. This improvement in average output is only partly accounted for by a 14 per cent increase in the average size of a policy issued between 1957 and 1960.

Income-Tax

"The Corporation pays tax to Government just as the life insurance companies in the private sector used to pay in the past. Assessments upto the end of 1958 have been completed and the tax assessed amount to Rs. 4.36 crores. During 1959 and 1960, tax deducted at source amounted to Rs. 10.19 crores which will be adjusted against future tax assessments.

Dividend to Government

"The capital invested by Government in the Corporation is Rs. 5 crores and, under Section 28 of the Life Insurance Corporation Act, upto 5 per cent of the surplus that emerges at each valuation may be utilised for such purposes and in such manner as the Government may determine. The Government have indicated that in respect of 1957 and 1959 Valuations the entire 5 per cent should be credited to them. At the 1957 Valuation, the share of Government was Rs. 1.45 crore. Deducting from this figure an amount of Rs. 71.5 lakhs, which Government have agreed to contribute in respect of the policies of deficit companies taken over by the Corporation, the return to Government amounts to 11 per cent per annum on their capital. In respect of the 1959 Valuation it is estimated that the Government's share of the surplus would give them a dividend of 13 per cent for each of the years 1958 and 1959.

Bonus Announcement

"Our policyholders have been making anxious enquiries about the bonuses that would attach to their policies as a result of the 1957 and 1959 Valuations. Our field officers and agents have also been experiencing difficulty in securing with-profit proposals since bonuses have not yet been declared by the Corporation. I had hoped that it would have been possible for us to declare bonuses on the different groups of policies on our books by the middle of this year. The work involved took a slightly longer time, but everything was finalised sometime back and the regulations framed in this respect were submitted to Government for their approval. As soon as the approval is received, it will be possible for the Corporation to make its bonus announcement.

"Five years is too short a period in the life of a new institution but we can be justifiably proud of what we have achieved during this period. We are aware of our deficiencies and are constantly trying to overcome them. If we persist in our endeavour in a spirit of dedication, a day will soon come, much sooner than we expect, when we will be able to announce that we are much nearer the goals promised at the time of nationalisation than we are today. All that I can say is that we must hope and strive.

"Before I close this statement, I sincerely thank all the Members of the Board and of the Investment Committee for their unstinting co-operation during the last three years and more that I have been Chairman of this organisation. My thanks are also due as Chief Executive of the Corporation to all the senior officers who have loyally co-operated with me and performed their duties. Above all, I am indebted to the thousands and thousands of our field officers and agents, without whose unrelenting efforts, the Corporation would not have been able to show such remarkable results during the last five years. Last but not the least, I am grateful to all those steady workers in the Corporation's offices who have not only kept up but improved upon the efficiency of the Corporation."

Notice

THE SINGARENI COLLIERIES COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fortieth Annual General Meeting of the Shareholders of the Singareni Collieries Company Limited will be held on Saturday the 30th September 1961, at 12 noon at the Registered Office of the Company, "Meher Manzil," Khairatabad, Hyderabad-(A.P.), to transact the following business:—

1. To confirm the minutes of the Thirty-ninth Annual General Meeting of the Shareholders of the Company held on 26th September 1960.
2. To receive and adopt the Directors' Report and the Audited Statement of Accounts for the year ended the 31st December 1960.
3. To sanction the declaration of a Dividend.
4. To note the Charities and Donations paid by your Directors.
5. (*a*) To appoint Director in place of Shri P. M. Nayak who retires in accordance with Section 256(1) and (2) of the Companies Act, 1956 and Article 93 of the Articles of Association of the Company. He is eligible for re-election.
   (*b*) To appoint Directors in place of Shriyuts M. A. Abbasi and Balwant Singh who retire under Article 98 of the Articles of Association of the Company and are eligible for re-election.
6. To note that the sanction of the Central Government, under Section 619(2) of the Companies Act, 1956, has been received for the re-appointment of Messrs. S. B. Billimoria & Co., as Statutory Auditors of the Company for the year 1961, on a remuneration of Rs. 7,000 plus Travelling and other expenses as may be approved by the Board of Directors.
7. To pass the following as an Ordinary Resolution:—
   "RESOLVED that the appointment of Shri N. K. Guruswamy, I.A.S. as Managing Director of the Company, for a period of three years with effect from 3rd April 1961, on the following terms for which approval of the Government of India is being obtained, be confirmed:—
   (1) The term of appointment is for a period of three years but the Government of Andhra Pradesh will be at liberty to recall him with due notice at any time.
   (2) While on deputation as Managing Director, Shri Guruswamy will be paid by the Company, a starting salary of Rs. 1,800 p.m. in the scale of Rs. 1,600-100-2,000.
   (3) He will be allowed to use the Company's car for the purposes of the work relating to the Company only.
   (4) He will be entitled to Medical facilities from the Company not inferior to those admissible to him as a Member of the Indian Administrative Service under the All-India Services (Medical Attendance) Rules, 1954.
   (5) Leave and Pensionary contributions will be recovered from the Company at the usual rates.
8. To transact any other business that may be brought forward by the Chairman.

Notes:—1. The Transfer Books of the Company will remain closed for the purpose of Dividend from 16th September 1961 to 30th September 1961 (both days inclusive).

2. Subject to the Director's recommendation being accepted, Dividend Warrants will be posted by 30th October 1961.

3. Shareholders are requested to give immediate notice to the Company of any change of address.

4. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote, instead of himself and that such proxy need not be a member.

By Order of the Board,

R. DWARKA PERSHAD,
Secretary.

"MEHER MANZIL,"
KHAIRATABAD, P.O.,
HYDERABAD (A.P.),
Dated, 30th July 1961.

Explanatory statements to the above Resolutions as required by Section 173 of the Companies Act, 1956 will be sent to all Shareholders separately.

FIRST BULK SHIPMENT OF SUGAR TO U.S.

MR. S. K. PATIL CONFIDENT OF INDIA GETTING BIGGER QUOTA

THE Kidderpore Docks at Calcutta put on a festive appearance on Wednesday last week when a ceremony was held to mark the despatch of the first full-cargo bulk shipment of 11,000 tons of sugar to the U.S. under the arrangement for supplying 225,000 tons during the calendar year 1961. The function was inaugurated by Mr. S. K. Patil, Union Minister for Food and Agriculture, and presided over by Dr. B. C. Roy, Chief Minister of West Bengal. Although the quantity involved in the bulk shipment is small, the function was not only symbolic as was remarked by Mr. S. S. Kanoria, Chairman of the Indian Sugar Mills Association's Export Agency Division, of the spirit of progress that inspires the organisation of sugar exports but also marked, as Prof. J. K. Galbraith, U.S. Ambassador to India, said in his message sent on the occasion, "the beginning of increased exports of other Indian products to outside markets."

Speaking at the function, Mr. Patil described the first bulk shipment of sugar as symbolic of India's entry into export market where "we will stay for times to come" and said: "For the first time, the U.S. imports sugar from India. By selling this first U.S. quota, India earns $25 million. Now we are on the map of sugar exporting countries where we will stay and sell sugar which the United States will like and buy more." Indeed, he declared that there should be no scepticism about American buying which could be expected to rise to 400,000 tons next time. Mr. Patil was also confident that, under the International Sugar Agreement, India would have a quota of at least half a million tons. India's aim at selling 500,000 tons of sugar to the U.S., according to him, would be realised, if the I.S.M.A. Export Division could keep to its contract, to maintain quality and to deliver in time.

Importance of Sugar Exports

The quota allotted by the U.S. to Indian sugar for 1961 is 225,000 short tons (of 2,204 lbs. each). Of this quota, about 143,000 tons have already been sold. By the 15th of this month, about 100,000 tons will have actually been shipped and the balance is expected to be shipped by 31st October next. Considering that India will deliver its quota fully and in time, the claim for a bigger and permanent U.S. quota will, as Mr. Kanoria said, be strengthened. Stressing the importance of sugar exports, Mr. Kanoria observed:

"Already this year, with production at about 30 lakh tons and consumption of about 21 lakh tons and an estimated carry-over of 12 lakh tons, there is a large exportable surplus. It is against this background that I would consider it imperative that we should plan to achieve in a few years an export target of 10 lakh tons, which would bring about Rs. 50 crores to Rs. 60 crores foreign exchange a year. While it may not be possible to export more than 5 lakh tons next year, I would commend the target of 10 lakh tons for sugar export to our dynamic Food Minister to be reached in a few years. For this we will need a quota of five lakh long tons from the United States and the balance wil have to be exported to other countries. If we fail to achieve this, curtailment of productive capacity will become impossible to avoid."

It is true that large-scale exports of sugar will provide the country with much needed foreign exchange, besides relieving the industry of a portion of heavy stocks. But the question is whether such large-scale exports are, in fact, possible, what with a number of uncertainties in the air. Will India, for instance, really succeed in securing as large a quota as 500,000 tons in the U.S. market? It will be recalled that, when the issue of alloting a quota to India was discussed some weeks ago, there were many countries, particularly some of the U.S. neighbours in Central and South America, as well as the representatives of the U.S. domestic sugar beet and sugarcane industries who presented strong arguments for increasing the size of their quota in the U.S. market. Drawing attention to this aspect, Prof. Galbraith said in his message that "it was not an easy question for our (U.S.) officials in Washington to resolve." Again, will the International Sugar Council concede India's plea for an export quota of 500,000 tons? After all, the Council will have to give first preference to countries which have been in the export field for decades and where the sugar industry forms the mainstay of their economy.

Granting that the answers to the aforesaid two posers are in the affirmative, there arises the problem of meeting the sizable losses on sugar exports, even after the full remission of excise duty and cane cess. Alluding to this aspect, Mr. Kanoria commended for acceptance the following suggestions:

1. Export of sugar should be linked to the import of certain industrial raw materials. These linked or commodity exchange deals are already in existence and are relied upon for the export of some items. In fact, there have been enquiries from abroad regarding the feasibility of such deals for sugar and, if official permission were granted, a substantial volume of sugar export at the current Indian price could definitely be effected.

2. There is a clear case for lower railway rates on sugar exported. The ocean freight on sugar carried over some 10,000 miles is about Re. 1.25 per maund. The railway freight from the factories about 1,000 miles away to Calcutta comes to Rs. 3 a maund.

3. If cane growers can be persuaded to accept, on the proportion of their crop that corresponds to exported sugar, a price equivalent to that realised from *gur* and if some sacrifice were made by every other section, including the manufacturers, the cost could be brought down substantially.

Permanent Solution

The above suggestions are at best only palliatives and do not provide a permanent solution to the problem of building up a solid and secure export market for Indian sugar. The permanent solution lies in producing sugar at least at the special price which the U.S. is prepared to pay. We have advisedly pitched this qualification at the lower key, for it must be conceded that the so-called free market price for sugar in the world is a depressed one, in that it invariably represents the cut price at which surpluses left over with producing countries, after meeting the firm commitments with large importing countries under special arrangements, are sought to be disposed of. That price is, therefore, not a fair price, besides being subject to wide fluctuations depending upon a number of factors, but primarily on the domestic supply position of the principal importing countries. It may be noted that less than 10 per cent of world production passes through this market. Accordingly, it would not be quite fair to measure the competitive capacity of Indian sugar in terms of the world free market price. Nor can it be contended that export of sugar in normal periods will be possible without a certain amount of subsidy. The real questions to be decided are, therefore, the quantum of subsidy and who should bear the cost of it and in what proportion.

There is no justification in asking the domestic consumer to bear the cost of any export subsidy on sugar. The Government cannot expect to collect any tax on sugar exported in the form of excise duties and cane cess, which is really an excise on sugarcane paid by the consumer. The only other way is through a reduction in the cost of sugar production and such a reduction will be possible only if the incidence of cane cost, which accounts for as much as 70 per cent of the total cost, is lowered. It is this factor that invests the need for a rational approach to the question of fixing the price of sugarcane with urgency. The problem of getting more sugar per acre cannot be tackled so long as the present defective system of minimum cane prices continues.

Raising Domestic Consumption

Be that as it may, Mr. Kanoria did well to highlight the importance of raising the domestic sugar consumption. He put forward two pertinent suggestions designed to ensure the achievement of this goal. One, the present irksome restrictions on distribution of sugar at the State level and on inter-State movements, which are stifling consumption, increasing stocks and resulting in a higher price than is necessary, should be removed without further delay. Secondly, the rates of excise duty and of cess on cane must be lowered. Such a reduction need not involve any big loss of revenue, because the increase in consumption will broaden the base of these taxes, so that lower rates may well result in more revenue. The Union Food and Agriculture Minister has himself realised the need for abolition of distribution controls on sugar and reduction in the tax burden. But he has not been able so far to give effect to his ideas. It is, however, gratifying to learn from Mr. Patil that restrictions on the retail sale of sugar have been removed in most of the States. Thus, the wholesalers in Uttar Pradesh and Bihar have been allowed to sell in the free market such sugar as is not lifted by authorised retailers within a specified period. The West Bengal and Orissa Governments have permitted wholesalers to sell sugar that is in surplus or is not required for distribution through controlled channels. Besides, the Rajasthan Government has withdrawn restrictions on sales at the wholesale stage.

The piecemeal relaxation of restrictions on sugar distribution and movement is not sufficient. What is wanted is the complete abolition of controls on an all-India basis. Mr. Kanoria certainly put the finger on the nub of the problem when he declared: "The sugar problem has assumed such formidable proportions and the policies and actions of the various Ministries of the Central Government as well as the State Governments are so divergent that I think the time has come for this matter to receive attention at the highest level at a national conference attended amongst others by the Prime Minister and the Chief Ministers of important sugar producing States." It is only at a conference of this nature that a clear cut definite line of action can be chalked out for tackling the high cost of sugar.

COMPULSORY APPRENTICESHIP SCHEME

EMPLOYERS' APPREHENSIONS ILL-FOUNDED

EMPLOYERS need not throw up their hands in despair at the Apprentices Bill introduced in the Lok Sabha last week. For it only seeks to accomplish, in their own interest as also in the interest of the country in general, what voluntary, unplanned effort and Governmental persuasion had failed to achieve. The Bill seeks to regulate the terms and conditions of apprenticeship training and to compel employers to train a certain number of apprentices every year, the actual number to be fixed by the Government in accordance with a predetermined ratio for each trade or industry. It is the latter aspect which has been opposed by employers. Their views were embodied in a memorandum submitted by the Employers' Federation of India to the Director-General of Resettlement and Employment of the Ministry of Labour. The Federation stated therein that, while it was not opposed to legislation for regulation of apprenticeship training with a view to raising standards of training and for the protection of both the apprentice and the employer (in fact it welcomed such regulation), it was firmly of the view that any kind of compulsion was not only unwarranted and undesirable but against the interest of the country. The Federation did not agree with two major premises on which the proposal for legislation was apparently based, namely, (1) that voluntary methods had failed, and (2) that the future requirements of skilled personnel in the various trades during the third Five-year Plan period would be so heavy that compulsion was the only answer to the problem. According to it, voluntary methods had not failed and that, where employers had been properly approached by the Government, they had not failed to respond. It was wrong, the Federation maintained, to suppose that compulsion could succeed where voluntary effort, had, if at all it did, failed.

Best Judge

As regards the requirements of the third Plan, the Federation maintained that these had been estimated on the high side. Even during the second Plan period, it added, when the output of trained tradesmen was said to have been much below the requirements of the industry, there was the strange spectacle of thousands of men listed on the live registers of employment exchanges unable to get suitable jobs. An analysis of the figures in the Bombay State alone in 1959 showed that, of the 1,376 ex-technical trainees registered in the employment exchanges, only 158 (or 11.5 per cent) could be found employment. The quarterly employment survey published by the Director-General of Resettlement and Employment showed that, of the unemployed craftsmen who were registered at employment exchanges, 50 per cent had received training at training institutes and 10 per cent had Certificates of Apprenticeship. Apart from these factors, the industry itself was, according to the Federation, the best judge of the number of skilled men it required or was likely to require. The Federation, therefore, genuinely apprehended that, if a large number of apprentices were drafted for training merely on the basis of the "so-called requirements" of the third Plan, it might lead to considerable frustration among those trained when they found that there were not enough jobs to go round.

Compulsion and Standards

Another objection of the Federation was that compulsion was bound to lower standards and perhaps encouraged the abuse of apprenticeship system. The Federation also listed the following further reasons why compulsion was not considered desirable.

(i) Any kind of compulsion (even when the number is fixed in accordance with a pre-determined ratio, for each trade) is bound to lead to the induction of a larger number of trainees on industrial establishments than they can afford to train. This would entail serious loss in production, as a large number of machines will have to be set apart for training.

(ii) There are many industries which are not appropriate for training apprentices of the type contemplated, e.g., the cigarette industry and the petroleum refining industry. In certain establishments (e.g., electrical supply undertakings), the training which can be given to apprentices has to be limited to repair and maintenance of their own plant: and no other training can be given.

(iii) There are other industries (e.g., the mining industry) which have already centralised training schemes of their own which provide all the trained personnel they require. Such industries are not suitable for integration in a general apprenticeship training scheme.

(iv) Again, there are industries (e.g., cotton textile industry) where no great expansion is likely in the foreseeable future. It would be undesirable to increase the number already receiving training in such industries under the existing schemes.

Divergent Estimates

These arguments of the Federation have obviously not carried conviction to the Government which has decided to go ahead with the Bill. While the Government is not prepared to concede that legislation is unnecessary, it has accepted many of the suggestions made by the Federation in regard to the principles of the legislation and they have been incorporated in the Bill. The employers have, therefore, no cause for complaint that they were not consulted or that their suggestions were not given adequate consideration. It is true that, on the basic question, namely, whether legislation was necessary or not, the Government has not been able to see eye-to-eye with the employers. This is, perhaps, because the Government wished to go by the estimates of the Planning Commission as to the demand for skilled personnel during the third Plan period. The Federation considers this estimate on the high side. We are not sure whether the Federation has made its own estimate of the requirements of technical personnel during the third Plan period to be able to say that the estimate of the Planning Commission is an overestimate. It merely seems to have arrived at its conclusion on the basis of figures collected from the employment exchanges. But it must be pointed out that this conclusion is not very firmly based. For the figure refers to only one State and to one year and cannot be taken as indicative of the present and prospective demand for trained personnel. Further, it is quite possible that those who remained unemployed were those who had received training in trades in which the supply of technical personnel was plentiful. Such surpluses could be avoided if training is properly planned in keeping with the needs of the country. According to the third Plan, about 1.3 million craftsmen or skilled workers would be required during the third Plan period of which about 810,000 would be required in the engineering trades and the balance in non-engineering trades. The Bill seeks to provide training facilities for 200,000 apprentices yearly, bringing the total available to one million for the whole Plan period.

The employers are right in their contention that compulsion is best avoided. But if the choice is between getting things done by an element of coercion, legal or otherwise, and letting things to drift, we for one would prefer the former. Proper training of industrial personnel has been neglected for too long in this country. Employers, barring a few, would appear to have regarded it as the responsibility of the Government. The latter has no doubt been doing what it can to increase the facilities available for technical training of skilled workers and operatives. As a result, the capacity has increased from 10,500 at the end of the first Plan to 42,000 at the end of the second Plan. This is expected to go up to 100,000 at the end of the third Plan. But measured in relation to the needs these facilities are far short of the requirements.

If employers are opposed in principle, as they are, to making apprenticeship compulsory, it is up to them, as we had suggested in one of our previous issues *vide Commerce* dated 15th October 1960), to present an alternative scheme for training, on a voluntary basis, an agreed number of apprentices by a specified date.

The argument that the advanced countries of the West have not resorted to compulsion for the purpose of training is not valid to this country. The situation in those countries is entirely different. There a combination of circumstances, including shortage of manpower, has led to a situation, in which almost every employer worth the name trains young men well in advance. Further, in this country, the pace of economic development is being forced up under the five-year Plan. It is necessary to make sure that progress in this direction is not retarded by want of trained technicians of all sorts. The Government is, therefore, justified in calculating the needs of both the public and private sectors in advance, and drawing up a plan for fulfilling them. It is, of course, assumed here that the Government will use the power of compulsion diligently and see to it that apprentices are not trained for lines in which there is a surplus or which does not need any expansion in the supply of skilled workers in the foreseeable future.

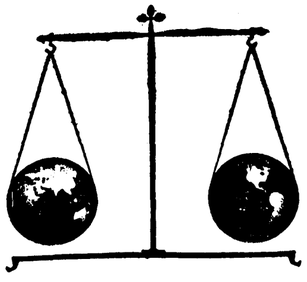
Argument Unconvincing

The argument that, in the present state of acute unemployment, a craftsman will be generally reluctant to train "outsiders" (that is, those who are not in a particular family or common group) is silly. If the craftsman is made to understand that the training of the apprentice put under his charge is part of his job and that the employers take the scheme seriously, there is no reason to suppose that the workman will cold shoulder it. If he does, it should at his cost. Apprenticeship scheme or no apprenticeship scheme, let the employers not encourage "closed shop" practices.

The contention that there are special difficulties in training apprentices such as shortage of machine tools and other appliances for training in the more highly skilled engineering trades, shortage of raw materials and lack of suitable personnel to supervise the trainees, etc., is far more valid. But the question is whether training should be neglected because of these difficulties. If it is neglected, by the time raw materials, appliances, etc., become available in plenty, there would not be sufficient number of skilled workers to put them to productive use. The aim should be to give such training as is possible within the limitations imposed by the prevailing shortage of raw materials, tools, etc., if these handicaps cannot be overcome. In any case, the Government can be trusted to help employers to get over these difficulties. Other apprehensions, such, for instance, as the fear that individual units may be asked to train more persons than they have the facility and that discrimination will be practised against larger firms, could be removed, if both the Government and employers co-operate with each other in evolving a system which will entail no particular difficulties to any one. After the trades are classified and the training programmes settled, a survey could be made of the available and potential facilities and the number of apprentices to be trained by a unit could be determined, making due allowance for the number of apprentices, if any, already being trained by it. All these are matters of detail which can satisfactorily thrashed out, given the will, by discussion between the employers, trade unions and the Government.

I.L.O. CONVENTION ON SOCIAL SECURITY

The Government of India has informed the International Labour Office that it is not in a position to ratify the Social Security (Minimum Standards) Convention of 1952 for the present. This is not because of any lack of desire, but on account of some of the conditions laid down which are difficult to fulfil.



In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

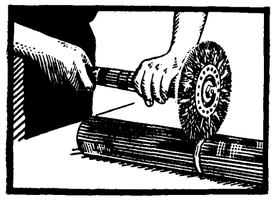
"SCCO"



These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning, and other tough scaling propositions and rough Castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

NO NEED FOR ROAD-RAIL CONTROVERSY

DR. L. P. MISRA'S PLEA FOR A BIGGER OUTLAY ON TRANSPORT

IT has been estimated that, by the end of the third Plan, the country's transportation system will have to haul about 320 million tons per annum in terms of originating goods traffic. Of this, the railways are expected to lift 245 million tons. The balance of 75 million tons will have to be lifted by other forms of transport. Coastal shipping, inland navigation and civil air transport may, together, account for a minimum of 5 million tons, or a maximum of 10 million tons at the most optimistic estimate. The share of road transport, then, will be 65-70 million tons, as compared with the 15-20 million tons it handles at present. In other words, road transport will be called upon to move nearly three times more traffic than it does now, whereas the railways will be handling just 60 per cent more traffic, as compared with the 154 million tons actually hauled by them in 1960-61. The crux of the problem, therefore, is, as Dr. L. P. Misra, Chairman of the Calcutta Branch of the Indian Roads and Transport Development Association, said, in his address at the annual general meeting of the Branch held on 26th August 1961, "how to make the roads take over the additional lift of about 50 million tons, thrown on them after all other modes of transport have been saturated with the traffic offering and have carried all that they can." Dr. Misra's suggestions are:

1. Increasing the mileage of roads, so as to open up new and neglected tracts now developing under the impetus of the Plans.

2. Improving the capacity of the existing roads by better surfacing, bridging the gaps which are preventing their full utilisation.

3. Strengthening the weak bridges which are now reducing the loads to be carried per vehicle.

4. Increasing the use of trailers.

5. Quicker disposal of applications for registrations of new commercial vehicles.

6. Increasing the outturn of the existing automobile factories to what is needed to meet the country's requirements.

The first three suggestions pertain to road development. According to the Central and State Chief Engineers, who had drawn up a 20-year plan of road development, the normal needs of the country would require an outlay of about Rs. 600 crores on roads in the five-year period of the third Plan. But, according to the final report of the third Plan, the cost of road development programmes included in the Plan will be about Rs. 270 crores, as compared with the actual outlay of Rs. 224 crores in the second Plan period. This outlay, it is thought, will be insufficient for the purpose of developing roads to the point of enabling the transport industry to handle about 50 million tons of additional traffic per annum by the end of the third Plan. Dr. Misra's suggestion, therefore, is that the third Plan outlay on roads should be Rs. 600 crores. The additional outlay (Rs. 600 crores minus Rs. 270 crores), in his view, can be made available from the proceeds of motor vehicles taxation. It is recalled, in this connection, that motor vehicles of all kinds on the road contributed in 1960-61 Rs. 142 crores to the Exchequer. This works out to an average contribution of Rs. 2,600 per vehicle. In fact, however, the average contribution of a commercial vehicle comes to between Rs. 5,400 and Rs. 6,000 a year. Since the contribution of a vehicle tends to grow more and more as its use increases and the number of motor vehicles on road will be increased by 3 to 3.5 lakhs over the next five years, it should be possible to finance the additional outlay required for roads.

Room for Expansion

Even on the basis of the existing capacity of roads, there is room for further expansion of automobile transport. The position by the end of the third Plan will also leave room for still further expansion of road transport. The mileage of surfaced roads, for instance, will be 164,000 in 1965-66, as compared with 144,000 in 1960-61. The third Plan outlay on automobile transport will be Rs. 25 crores in the public sector and about Rs. 225 crores in the private sector. With this outlay, the cars per mile of surfaced roads in the country will be 2.22 and the commercial vehicles per mile of such roads 2.39 in the last year of the third Plan, as compared with 1.67 cars per mile and 1.36 commercial vehicles per mile, respectively, in 1955-56, and as compared with 28 cars and 9 commercial vehicles per mile of surfaced roads in Great Britain in the latter year. According to Mr. B. V. Vagh, Executive Vice-President of the I.R.T.D.A., who has calculated these figures, even the existing capacity of surfaced roads is not fully utilised. His argument runs as follows:

"Taking the traffic capacity of our roads at half that in Great Britain on account of the known deficiencies in our road system, it would appear that on the basis of traffic in Great Britain there was room on our roads in that year for over eight times the number of cars (14.0 ÷ 1.67) and over three times the number of commercial vehicles (4.5 ÷ 1.36) on our roads. Against this, the estimated number per mile on our surfaced roads in 1965-66 will be about 1.33 times the 1956 number of our cars (2.22 ÷ 1.67) and about 1.75 times the 1956 number of our commercial vehicles (2.39 ÷ 1.36) against over eight and three times respectively on the basis of half the traffic in Great Britain. This shows the extent to which we have still to make headway."

According to Mr. Vagh, there will be a deficiency of 30,000 cars and jeeps and 40,000 commercial vehicles by the end of the third Plan. This deficiency in production will be found to be greater still, if vehicles supplied to the Defence Services are excluded. If his analysis is accepted, it would mean that there is need for additional investment in the automobile manufacturing industry so as to increase the production of vehicles to the required level and for additional investment in the automobile transport industry. The last three suggestions made by Dr. Misra would also involve precisely this. But all this additional investment will have to take place in the private sector. An all-round reduction of 50 per cent in vehicle taxation, according to one view, may provide the incentive to the transport industry to expand to the point of carrying three times more traffic by the end of the third Plan. When that much traffic is handled by the road transport industry, the Central and State Governments will have 50 per cent more income from motor vehicles taxation even after the 50 per cent reduction in the rate of such taxation. At the same time, if the severe restrictions on payload are removed and truck-trailer combinations are permitted, the road transport industry will have an additional incentive to expand.

Answer to Controversy

Unfortunately, however, official thinking is still unable to rise above the road-rail controversy in the sense of competition between the two modes of transport. For instance, while the final report of the third Plan recognises that there is a general shortage of transport in the country today and that this shortage is likely to continue for some time, it says, at the same time, that "this will not necessarily preclude competition between rail and road transport over certain routes and in respect of certain commodities." The best answer to this controversy is contained in the following paragraph of Dr. Misra's address:

"To sum up, the present position is that during the third Plan, each form of transport will have more traffic to carry than what it can take over. There is no justification for the apprehension that the railways and roads will compete with each other, for competition starts only when the supply is more than the demand. But when the demand is more than the supply, there should be no apprehension about competition. Some idea of the developments which must occur on our railways will be gained from the fact that they are loading 22,000 wagons a day, while in one division of approximately 1,000 miles, in West Germany, the railways are loading 42,000 wagons a day. This gives some idea of how much traffic has to come on railways with the development of industries, commerce and agriculture. There is also no cause for any apprehension of reduction of railway revenues as they have been increasing steadily from year to year. It is hardly desirable, in these circumstances, to waste any time over the merits or demerits of each form of transport. ... The interest of the country demands that each form of transport should be developed to the maximum capacity for carrying the traffic brought to it. Safeguarding one form of transport against the other would be justified only when the supply exceeds the demand. As far as India is concerned, we are fortunately living in a generation in which there is no need for such controversies for at least ten years to come."

The question has been posed by the Neogy Committee whether there should not be integration of rail and road services on the long-distance routes. This question has been posed because the railways seem to be insisting on a monopoly of such routes. That the country will benefit by freer scope for long-distance road transport in the conditions of continuing transport shortage should be recognised. The above passage in Dr. Misra's address lends support to this approach.

STANVAC'S OPERATIONS IN INDIA

The Standard-Vacuum Oil Company recently brought out an illustrated review of the Company's operations (refining, marketing and exploration) in India. The review for 1960 shows that the Company suffered a net loss of Rs. 13 lakhs last year, though the gross operating income from sales of products and services was Rs. 87.8 crores. This loss worked out to 0.2 nP per imperial gallon or 0.29 per cent of the total capital (Rs. 44.8 crores) employed. The publication, which is more notable for the decade review it contains, brings out that, in the period 1951-60 as a whole, Stanvac's net income (profit) had averaged 5.67 per cent of the total capital employed. The decade review highlights the fact that Stanvac investments during the period include all the Company's net income in India, all the funds accumulated as depreciation reserves and other charges against income and nearly Rs. 5 crores of additional capital supplied in foreign exchange. The relevant figures for the 10-year period are given below:

	(Rs. crores)
Net income (after taxes and depreciation)	17.85
Depreciation reserves	10.57
Other reserves	9.15
Foreign exchange from Stanvac overseas	4.94

Reference is also made in the ten-year review to the illfated Indo-Stanvac (Exploration) Project in West Bengal. This Project, which involved a total investment of Rs. 7.2 crores, was abandoned last year. With the exception of the proceeds from the sale of the drilling rig, the entire investment was totally lost. Stanvac's share (including all the foreign exchange supplied by it) in this loss was 75 per cent and the Government of India's 25 per cent. It is noteworthy that, notwithstanding the losses suffered, the Standard-Vacuum has applied for licence for doing prospecting in Rajasthan and continues to express its desire to participate further in the search for oil in India.

STEEL IMPORTS AND EXPORTS

The supply position of such steel products as bars, rods, light and medium structurals has improved in recent months, according to the testimony contained in the presidential address of Mr. P. L. Master at the fourth annual general meeting of the Steel Importers Association, held at Calcutta on 24th August, 1961. But the shortages of several other categories, particularly plates and sheets of thinner gauge, continue to be acute, resulting in great inconvenience to the engineering and processing industries. There is also the continuing shortage of tool, alloy and special steels, bright drawn free-cutting steel, class IV and other quality steels for forgings. The exports of some steel products to the tune of 50,000 metric tons in 1959-60 and 115,000 tons in 1960-61, according to Mr. Master, were made possible only by the fortuitous delay in the starting of the finishing mills of the public sector steel plants and should not be taken to be a regular feature of the economy.

BRITISH FURNACE MODELS FOR DELHI FAIR

It is learnt that the Incandescent Heat Co., Ltd., of Smethwick, Birmingham, one of Britain's leading industrial furnace builders, will be exhibiting three furnace models at the Indian Industries Fair, to be held at New Delhi this winter. One of these will be a large oil-fired bogie hearth furnace for the normalising, stress-relieving and annealing of mill rolls, forgings and fabricated structures. Another model will show a furnace for sheet mills, which heats 10 tons of bars each hour for feeding into a breakdown mill. The third model is of a metal electric direct-arc melting-plant and shows the furnace, control room and transformer house; this type of furnace can melt up to 100 tons of steel at a time, using electricity. Scale models and photographs of other types of plant used in heavy industries will also be in display at the British Pavilion to which more than 1,500 British firms interested in the Indian market have been invited by the U.K. Board of Trade.

NEW PRODUCTS AND PROCESSES

Collapsible Tanks

LIGHTWEIGHT tanks made of synthetic rubber and nylon which can be filled and dismantled in a few minutes are solving the water supply problems for companies operating in the Sahara desert. Easy to transport and designed to preserve drinking or industrial water over long periods, they enable water to be stored at supply points in the desert or moved rapidly over long distances. The tank walls are made of a neoprene/nylon sandwich in five layers with a coating of aluminium-pigmented synthetic rubber sprayed on the surface. This prevents the accumulation of static electricity and guards against heat penetration. Filling and draining the tanks is done very rapidly by means of two valves with firehose-type connections. Dimensions of the containers, which range in capacity from 500 to 30,000 litres, are designed to make them easy to set up on the platform of a truck. When emptied, they can be rolled up into a small pack and easily stored away. Although principally supplied for carrying water the tanks can also be used for the storage of petrol, fuel oils and various chemical liquids.

Automatic Fuel Oil Register

Lockheed Electronics Company is appointing franchised distributors for a new addition to its product line—the fuel oil industry's first fully automatic computing register. The new Lockheed Register automatically prints a customer invoice at the point of delivery by itemising the number of gallons delivered, price per gallon, sales tax, and the total amount of the transaction. The computation and printing operation is accomplished in one second by a turn of the Register's handle after the delivery is made. The new Register is the most thoroughly designed and tested commercial product we have ever introduced, according to Mr. D. F. Sanders, Lockheed Electronics Company President. The Company is now in production after a two-year development programme. A major innovation in the Register is its ability to compute tenths of a gallon which allows dealers to charge for every drop of oil delivered. Previously, dealers lost tenths below a half gallon in the customer's favour, particularly on fixed-gallonage deliveries. The Lockheed Register also incorporates a preset counter. Another unique feature is offered by a totaliser that displays accumulated gallons delivered, total sales tax, and the total value of all deliveries. This feature makes it easy for supervisors and drivers to tally daily deliveries. The new unit, weighing less than 15 pounds and measuring 10 inches high by 9 inches square, is interchangeable with all previous registers or can be adapted to all existing fuel oil meters used for consumer deliveries. Adapters will be furnished for all non-standard installation. The changeover from old to new register can be accomplished with a wrench and screw-driver in 15 minutes, including adjustment of the gear ratio where required.

Welding Transformer

A Vienna enterprise specialising in welding equipment, whose production programme includes welding transformers, rectifiers, other transformers and spot welders, is turning out a small, light and highly efficient welding transformer for work on the site and in the workshop. It is particularly suitable as additional piece of equipment with low current consumption. In spite of its extremely low connected load and operational costs, the transformer is remarkable for its noiseless operation and constant ignition tension at all steps. Owing to the dimensioning of the coils, no heating occurs, even in case of continuous operation. Transformers provided with a thin-sheet step are remarkable for their high ignitability. A second type manufactured by the firm differs from the aforementioned one because it may be operated on the lighting main as well as on a 380V power line. A selector switch makes it possible to switch from one current to the other without touching the terminals of the cable. The transformer has a thin-sheet step for the welding of thin-sheets of a maximum of 0.8 mm. As it is more powerful when operated on a 380V current than on the lighting current and has a maximum welding amperage of 150 Amp., it suffices even for medium-sheathed electrodes of 4 mm. The enterprise is manufacturing many other bigger and more powerful welding apparatus, as well as hand-operated spot-welding tongs with automatic control.

Safety Poultry

A system using special mirrors and infra-red beams has been developed in the U.K. for use in protecting poultry and other farmyard animals against thieves. It might also be adapted for use in giving warning against attack by foxes. The operation of the system depends on the use of an infra-red beam source. Mirrors are then placed round the chicken house in such a fashion that the infra-red beam is reflected so as to cover every possible means of ingress. When the beam is broken, this is detected by a special photo-electric system and an alarm is sounded. Photo-electric relays and a series of electronic timers, coupled with a modulated light source, switch light on and off to give additional warning and also possibly to scare the invader. The alarm can be sounded at virtually any reasonable distance from the chicken houses and can be readily sited in the farmer's bedroom, or in whatever other part of the house may be convenient. The switching on and off of the light also serves to identify immediately the particular chicken house which is being attacked. The system is expected to be especially useful in large chicken farms where the houses are spread over a large area, or where they are placed at a considerable distance from the farmhouse.

New Plastic Putty

A plastic putty has been developed in the U.K. which, it is claimed, can readily be shaped in any desired form and yet will set hard enough to be machined, drilled or tapped. Tests are said to have shown that the material has an ultimate compressive strength of 11,200 lbs. per square inch and a tensile strength of 700 lbs. per square inch. At the same time, it has a relatively low water absorption of 2.7 per cent and is said to have excellent dielectric, or electrical insulation properties. The material is also said to have excellent adhesion to other surfaces and will cure at room temperature in from 1½ to 18 hours, depending on the temperature existing at the time of curing. Rapid curing may be obtained by the use of heat at temperatures of up to 100 degrees Centigrade. When such heat is applied, the curing time is reduced to several minutes. The putty consists of an epoxy-based resin and a special hardening material. These two compounds are coloured black and blue respectively. Before use they should be mixed together until an even colour is obtained throughout the putty. During its soft stage the putty is said to handle much like plasticine. It is expected to find widespread applications not only in industry, but also in do-it-yourself operations at home.

Casting Nylon

A process for casting nylon plastics in massive parts has been developed by an American company. The purpose is to encourage the use of plastics instead of metal in machine construction. The chief novelty in the process is that the nylon is cast as a monomer, a rather thin liquid, and then converted by chemical action into the polymer, the long, linked chemical chain which gives the plastic its characteristics. This method is claimed to eliminate the need for pressure-filling the mould as in injection casting. The company also says that direct conversion of the raw materials in the moulds reduces the costs by half. It claims that the expense of nylon castings is now lower than similar brass or stainless-steel castings.

Low-cost Road-marking Machine

The Department of Main Roads in Queensland, Australia, has overcome the problem of economically and efficiently painting small stretches of white dividing lines on roads with low density traffic. The marking is done by a small, three-wheeled motorised machine operated by one man. It is powered by a 2-cylinder petrol-driven air-cooled engine, developing 8 horse-power and capable of 20 m.p.h., cruising at 4 m.p.h. while marking. The engine also drives an air-compressor to supply 100-lb. pressure to two spray guns. The compressor is mounted at the rear of the machine together with 10-gallon paint container fitted with a built-in mixer. The economy of the three-wheeled marker can be gauged by the fact that large line markers, commonly used on roads where heavy traffic density demands continuous marking, has as its prime mover a 3-ton truck.

New Building Material

A new building material made of asbestos and cement coated with plastic is now being marketed by the Johns-Manville Company in the United States. It is expected that it will be chiefly used as an exterior house trim. Called Permatone Flexboard, the new material looks and wears like stone, but handles and is worked like wood. It can be nailed, sawed, and mitered. Unlike painted wood, however, it is non-combustible and termite-proof and will not rot, crack or peel.

4¼ Per Cent

Maharashtra State Development Loan 1972

ISSUE PRICE AT PAR

OPEN ON THE 4th SEPTEMBER, 1961

The loan will be closed as soon as a total of approximately Rs. 10 crores has been subscribed and in any case not later than the close of business on the 9th September, 1961.

The applications for the loan will be received at—

(a) the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore.

(b) the branches of the State Bank of India within the State of Maharashtra, except at Bombay and Nagpur and at places mentioned in (c) below.

(c) the branches and Treasury Pay Offices of the State Bank of Hyderabad within the State of Maharashtra, except at Bombay.

(d) the Government treasuries and sub-treasuries in the State of Maharashtra at places where there is no branch or Treasury Pay Office of the aforesaid Bank.

FULL PARTICULARS CAN BE OBTAINED AT ANY OF THE OFFICES MENTIONED ABOVE

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent, the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed in regard to them.

Industrial Licence No. L/15(1)/N-6/60 dated 12th August, 1960 for Single-phase and Licence No. L/15(1)-8/EEI/60 dated 15th December, 1960 for Polyphase for establishing a Single-phase and Polyphase Electric Meter plant have been obtained from the Central Government, the Copies of which are open for public inspection at the Registered Office of the Company.

A copy of the prospectus together with the documents specified therein has been delivered for Registration to the Registrar of Companies, Gujarat State, as required by Section 60 of the Companies Act, 1956.

An application will be made in due course to the Stock Exchanges of Bombay and Ahmedabad respectively for a permission to deal in and for official quotation of the shares of the company.

The Subscription List will open at the commencement of banking hours on the 6th September 1961 and will close at the close of banking hours on the 19th September 1961, or earlier at the discretion of the Board of Directors, but not before the banking hours on the 9th September, 1961.

BARODA ELECTRIC METERS LIMITED

(Incorporated under the Companies Act, 1956 on 23rd March, 1961)

SHARE CAPITAL—AUTHORISED CAPITAL—

75,000 Equity Shares of Rs. 100 each	Rs.	75,00,000
25,000 Un-classified Shares of Rs. 100 each	Rs.	25,00,000
	Rs.	1,00,00,000

ISSUED CAPITAL—

40,000 Equity Shares of Rs. 100 each	Rs.	40,00,000

CAPITAL AGREED TO BE TAKEN UP—

(a) By Directors and their friends—12,500 Equity Shares of Rs. 100 each	Rs.	12,50,000
(b) By Life Insurance Corporation of India—5,000 Equity Shares of Rs. 100 each	Rs.	5,00,000

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION—

22,500 Equity Shares of Rs. 100 each .. .. .. Rs. 22,50,000

The amount payable in respect of shares comprising the present offer is as follows :—

(a) **With application** .. .. Rs. 25 per share

(b) **On allotment** .. .. Rs. 25 per share

(c) **The balance of Rs. 50 per share shall be payable in two equal calls of Rs. 25 each, the first of which shall not be earlier than three months from the date of allotment and the second not earlier than three months from the first call.**

No shares are issued for consideration other than cash.

APPLICATION FOR SHARES

Application for shares should be made on the printed application form accompanying Prospectus and delivered before the close of the subscription list at any office of the Bankers set out on the application accompanied by the full amount payable on application. Applications must be for a minimum of five shares or multiple thereof.

The consent of the above-named Bankers, Brokers, Solicitors and Auditors to act in their respective capacities have been obtained and filed with the Registrar of Companies, Gujarat State along with the prospectus as required by Section 60 (3) of the Companies Act, 1956 and the same have not been withdrawn.

BROKERAGE

Brokerage at the rate of 1 per cent on the nominal value of each equity share will be paid to the recognised Brokers or Banks on allotment being made in respect of applications bearing the stamp of such Brokers or the Banks. Further Brokerage on the same basis will be paid by the Company to the underwriters in addition to the underwriting commission on allotment in respect of applications made or procured by them provided that the relative forms of applications bear their stamps.

OBJECTS OF THE COMPANY

The Company was incorporated on the 23rd March 1961 with the objects or purposes mentioned in the Memorandum of Association and in particular to manufacture electric house service and polyphase meters.

COMMENCEMENT OF BUSINESS

The Commencement of Business Certificate dated 17th April, 1961 has been obtained by the Company from the Registrar of Companies, Gujarat State, Ahmedabad.

PROSPECTS AND ESTIMATE OF PROFITS

At present the annual demand for the electric meters is as follows:

Single-phase meters about 1,000,000 pcs. per year; and Polyphase meters about 250,000 pcs. per year.

Owing to extensive electrification in the country, the demand for Electric Meters will increase considerably and as mentioned in the Journal of Industry and Trade issued by the Central Government, the demand according to the third Five-year Plan will be about 2,100,000 in 1965.

Till recently Polyphase meters were not manufactured in India, but now the Government of India have requested all the existing units and the new units to manufacture Polyphase meters also.

Production of Single-phase meters as mentioned in the Journal of Industry and Trade, Ministry of Commerce and Industry, is as follows:

Year ended 30th June	*Production of Single-phase Meters per year Nos.*
1956	230,304
1957	230,540
1958	348,240
1959	370,428
1960	449,960
1961	480,000

Import against actual users' licences about 489,000.

It is proposed to put up the plant with the following capacity:—

Single-phase Meters A.C.	60,000 pcs. per year
Polyphase Meters A.C.	24,000 pcs. per year

The Industrial Licences for both types of meters issued by the Ministry of Commerce and Industry are held by the Company and they can be inspected at the Registered Office. In view of the existing demand and the expected rise, there will be good scope for the sale of these meters with reasonable profits. The Company hopes to complete construction of its factory by the end of 1962 and will go into production by the same time.

TECHNICAL-KNOW-HOW

The Company has made the Technical-know-how arrangement and the collaboration with Messrs. Deutsche Zahler-Gesellschaft, Hamburg, one of the oldest manufacturing concerns in West Germany and known for the quality of meters throughout the world. Messrs. Deutsche Zahler-Gesellschaft under the said collaboration arrangement have agreed to loan their experience and research for a period of 10 years. Further, Messrs. D.Z.G. will help the Company to establish the factory in the manufacture of Single-phase as well as Polyphase Meters as per their latest design and also according to I.S.I Specification. They have also agreed to give their advice in the matters of construction and planning by supplying a complete set of designs, drawings of all components, specification for the raw materials, quality and quantity of every part of meters. They have also agreed to prepare a floor plan and lay-out of the works and train some engineers and technicians in their works in Germany, at the same time, sending their personnel to set up the plant and bring it to proper working condition.

FOREIGN EXCHANGE

The Government of India have sanctioned the foreign exchange against Import Licence No. 997646 dated 24th February 1961 from West Germany for Rs. 6,57,050 and Licence No. 997647 dated 24th February 1961 for Rs. 3,98,564 from Eastern European Countries.

A credit loan of Rs. 5 lakhs in foreign exchange currencies equivalent to $105,000 has also been granted by The Industrial Credit and Investment Corporation of India Ltd., Bombay.

SITE

Negotiations are going on for the purchase of land at Vallabh Vidyanagar near Anand.

WATER SUPPLY AND ELECTRIC POWER

Water required by the Company will be provided by Company's own tube-well or wells at site.

The Gujarat State Electricity Board have guaranteed Electric Power of 150 K.V.A. from May 1962, *vide* their letter No. P3N-416/25187 dated 2nd August 1961.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The minimum amount which in the opinion of the Directors must be raised by the present issue of shares upon which the Directors will proceed to allot shares offered by this prospectus is 7,500 Equity Shares of the nominal value of Rs. 7,50,000; the subscription of this amount is assured by reason of the Underwriting referred to herein.

Capital required to start production of —

(i) Single-phase Meters	60,000 pcs. per year
(ii) Polyphase Meters	24,000 pcs. per year
Land, Factory buildings and Staff Colony	Rs. 5,60,000
Plant, Machinery and Installation ..	Rs. 20,00,000
Technical-know-how fees to Collaborators	Rs. 1,33,000
Miscellaneous Charges	Rs. 85,000,
Preliminary expenses, promotional expenses	Rs. 1,20,000
Issue expenses such as brokerage and underwriting commission	Rs. 96,250
Training of Indian Engineers in Germany and remuneration to personnel of collaborators and other expenses ..	Rs. 93,750
Contingencies	Rs. 25,000
Working Funds	Rs. 13,87,000
	Rs. 45,00,000

The above amount will be provided out of Rs. 12½ lakhs Equity Shares already subscribed and Rs. 27½ lakhs of the present issue offered to the public and loan in foreign currencies granted by I.C.I.C.I. equivalent to Rs. 5 lakhs.

PRELIMINARY EXPENSES

Preliminary expenses (other than expenses of this issue such as underwriter's commission and brokerage) including expenses for Technical and Commercial investigations abroad in connection with arranging foreign collaboration and Technical-know-how terms, legal expenses, registration charges, printing, advertisement, etc., expenses incurred for travel in India are estimated at Rs. 120,000 (One lakh and twenty thousand only).

The expenses of this issue, being the brokerage and underwriters' commission, will be about Rs. 96,250 (Ninty-six thousand two hundred and fifty only).

DIRECTORS AND THEIR INTERESTS

Shri Maganbhai Shankerbhai Patel is interested in the reimbursement of all preliminary and other expenses incurred by him. He is not charging any remuneration for services rendered in the promotion of the Company.

The said Maganbhai Shankerbhai Patel is a Director of the Company and is as such interested in the proposed agreement whereby he is to be appointed the Managing Director to the extent of the remuneration to be received by him thereunder.

Shri Bhogindra Thakordas Munim is a member of Messrs. Bachubhai Munim and Co. who are legal advisers of the Company and as such is interested in any fees to be paid by the Company to the said firm.

The Directors are interested as such in the sitting fees and to the extent of the share holding and any other remuneration or allowance payable to them in terms of the Article.

INSPECTION OF DOCUMENTS

Copies of Prospectus and Documents mentioned therein can be inspected at the Registered Office of the Company during the hours from 11.00 a.m. to 5 p.m. on any working day for the period and subscription list remains open.

4¼ Per Cent

ANDHRA PRADESH STATE DEVELOPMENT LOAN, 1972

Issue Price Rs. 99·75 per cent

Open on the 4th September, 1961

The Loan will be closed without notice as soon as the subscriptions amount to Rs. 10 Crores approximately, and in any case not later than the close of the business on the 9th September, 1961.

The applications will be received at the offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras and Bangalore; at the branches of the State Bank of India and the branches and Treasury Pay Offices of the State Bank of Hyderabad within the State of Andhra Pradesh, and the Government Treasuries and Sub-Treasuries in the State of Andhra Pradesh at places where there is no branch of the State Bank of India or branch or Treasury Pay Office of the State Bank of Hyderabad.

Full particulars can be obtained at any of the Offices or Branches mentioned above or at any Treasury or Sub-Treasury in the State of Andhra Pradesh.

THE ANDHRA BANK LTD.

(*Head Office:* MASULIPATNAM)

have pleasure to offer

ATTRACTIVE RATES OF INTEREST ON ALL TYPES OF DEPOSITS

SAVINGS DEPOSITS:	3% on Monthly Minimum balances.
FIXED DEPOSITS:	For periods ranging from 3 days to 5 years: Interest from 3½% to 5% allowed.
3 AND 5 YEARS CASH CERTIFICATES:	For each Certificate of Rs. 100/- Paid-up values are Rs. 88/- and Rs. 80/- respectively.
RECURRING DEPOSITS:	Rs. 10/- per month yields Rs. 250/-, Rs. 520/- and Rs. 820/- in 24, 48 and 72 months respectively.

ALL TYPES OF BANKING BUSINESS INCLUDING FOREIGN EXCHANGE TRANSACTED.

THE CONTEMPORARY CORPORATE SCENE IN INDIA—IV

MORE ABOUT TRENDS DURING TWO PLAN PERIODS

By Dr. Raj K. Nigam, Ph.D. (Econ.) (London)

AS said earlier, companies with a majority shareholding by the Central and State Governments were formally recognised as a separate class and formally called as Government companies under the present Companies Act of 1956. These companies are governed by a special set of Sections, namely, 617 to 620, which impose certain distinct obligations and restrictions upon such companies. The creation of Government companies, in the legal sense, was the outcome of prolonged discussions within the Government on the various alternative forms and structures of State enterprises, which took place at the time of the drafting the Companies Bill in 1954-55. Taking note of Government's policy to enlarge the horizon of the public sector in the country in various diversified directions in the industrial and commercial spheres, the Company form of management was preferred for the State industrial ventures. By the passing of the Companies Act, 55 companies in which either the Central or State Governments had a majority shareholding (51 per cent) became Government companies as on 1st April 1956, in pursuance of Section 617 of the Companies Act. Of these 55 companies, 34 companies had been formed before the first Plan period and 21 companies during the first Plan period. During the course of the second Plan period, 87 Government companies were incorporated and set up by the Central and the State Governments with and without private participation. Thus, 108 Government companies were formed during the first and second Plan periods and the total authorised and paid-up capitals of these Plan period companies aggregated Rs. 696 crores and Rs. 446 crores, accounting for 90 per cent to 95 per cent of the total authorised and paid-up capitals of all the Government companies at work at the end of 1960-61.

Of the 108 Government companies set up during the planning decade ended 1960-61, 71 have been set up by the State Governments and, out of this, 5 were set up during the first Plan period and 66 during the second Plan period. The remaining 37 Government companies were brought into existence by Central Government during the second Plan period and, out of these, 16 were formed during the first Plan period and 21 during the second Plan period. Table 1 below gives the amounts of total capital raised by these companies as against the total authorised capitals of these companies:

TABLE 1

New Government Companies

(Authorised and paid-up capital in crores of rupees)

	No. of companies	Authorised capital	Paid-up capital
First Plan—			
1951-52	4	41.5	23.4
1952-53	4	16.8	7.0
1953-54	4	306.0	303.5
1954-55	3	11.5	5.5
1955-56	6	31.8	17.0
Total : 1st Plan ..	21	407.6	356.4
Second Plan—			
1956-57	13	119.9	64.4
1957-58	18	8.6	1.6
1958-59	16	98.3	4.6
1959-60	23	30.1	0.4
1960-61	17	31.4	N.A.
Total : 2nd Plan ..	87	288.3	71.0
Total : I and II Plans ..	108	695.9	427.4

Note :—Paid-up capital as on 31st March 1960.

A further detailed study of the Government companies formed during the second Plan period reveals that the largest number of these companies has been formed in the State of Orissa, the actual number being 44. All of them were set up during the second Plan period; and, excepting one, whose authorised capital exceeded Rs. 50 lakhs, all others were incorporated with small authorised capital bases. Next to Orissa, the largest number of Government companies have been registered in the State of Delhi, the number being 15 out of which 8 were formed in the first Plan period and 7 in the second Plan period. In the State of Bombay, 12 new Government companies were registered, of which 5 were found in the first Plan period and 7 in the second Plan period. Among the other States, Andhra Pradesh registered 3 companies, Assam 2 companies, Bihar 4 companies (of which 2 were in the first Plan period), Kerala 4 companies (of which 1 was in the first Plan period), Madhya Pradesh 1 company, Madras 4 companies, Mysore 5 companies (of which 2 belonged to the first Plan period), Punjab 2 companies (both formed during the first Plan period), U.P. 2 companies and West Bengal 5 companies (of which 1 was formed in the first Plan period).

Important Government floatations of the first Plan period are: Asoka Hotel, Bharat Electronics, Hindustan Antibiotics, Hindustan Cables, Nangal Fertilizers, Sindri Fertilizers and Chemicals, Hindustan Machine Tools, Hindusthan Shipyard, Hindustan Steel, Hindustan Insecticides, National Industrial Development Corporation, National Small-scale Industries Corporation, and its subsidiaries and Travancore Fertilizers and Chemicals. The important State incorporations of the second Plan period are the S.T.C., Western Shipping Corporation, Heavy Electricals, National Coal Development Corporation, Neyveli Lignite Corporation, Export Risk Insurance Corporation, National Instruments, Heavy Engineering Corporation, Indian Refineries, National Mineral Development Corporation, Hindustan Organic Chemicals, National Buildings Construction Corporation, and Hindustan Teleprinters.

Geographical Distribution

The joint-stock companies in our country have a long tradition of forming heavy concentrations in the States of West Bengal (formerly Province of Bengal) and Bombay (which, after the States Reorganisation Commission's recommendation, became an enlarged bi-lingual State and later on was reorganised and renamed as the State of Maharashtra). In comparison with these two States, the new registrations in the other States of the country have been indeed very, very small. The concentration trends continued all along the first Plan period when these two States accounted for over 55 per cent of the total registrations all over the country of that period, the individual share of the States of West Bengal and Bombay being 38 per cent and 17 per cent, respectively. During the second Plan period, there was an easing of the concentration tendencies and the two States together accounted for 50 per cent of the total registrations all over the country. The number of new company registrations in the State of Bombay remained almost at the level of the first Plan period, the total number of new companies set up during 1956-61 being 1,225 (plus 75 for the State of Gujerat) as against 1,222 during the first Plan period. There was, however, a drop of 821 companies in the State of West Bengal during the second Plan period when only 1,854 companies were incorporated in that State as against 2,675 companies during the first Plan period. Among the other States trailing behind the States of West Bengal and Bombay, though by a wide margin, are the States of Madras and Delhi. In the case of Delhi, the new registrations marginally edged up by 50 companies during the second Plan period over the first Plan period, the actual number of new registrations during the latter period being 697, as against 647 during the earlier period. In the case of Madras, the new registrations jumped up to double the figure during the second Plan period over the first Plan period. As against 854 new companies of the first Plan period (including 57 companies formed in the State of Andhra Pradesh created in 1957), 1,867 companies were registered during the second Plan period. This shows that the State of Madras was in the grip of an industrial revolution during the second Plan period.

The disparity in new company registrations tended to narrow down not only in the four principal States of the country but also among the four regions of the country. The Eastern Region comprising the States of Bihar, West Bengal, Assam, Orissa, Manipur and Tripura had 2,813 companies during the first Plan period, while the Western Region comprising the States of Bombay (bi-lingual State) and M.P. had 1,505 companies, the Northern Region comprising Punjab, Delhi, Rajasthan and U.P. 1,408 companies and Southern Region comprising the States of Andhra Pradesh, Mysore, Madras and Kerala 1,317 new companies during the same period. The corresponding figures of new registrations for the four regions for the second Plan period are 2,114, 1,376, 1,159 and 1,390. This levelling up process, as between the four regions and particularly the shift in favour of the Southern Regions was specially visible during the second Plan period, when the total number of new registrations in the Southern Region jumped up from 147 in the first year of the second Plan to 452 during the last year of the second Plan. The rise has been continuous year by year. The numbers of registrations for the five years are: 147, 152, 206, 433 and 452. The new registrations in the other regions during the second Plan as compared with that of the first Plan are depicted in table 2 given below:

TABLE 2

Regional Distribution of New Companies

	Eastern Region	Western Region	Northern Region	Southern Region	Total
Total 1st Plan Period	2,813	1,505	1,408	1,317	7,043
1956-57	334	175	192	147	848
1957-58	420	198	191	152	961
1958-59	424	254	211	206	1,095
1959-60	459	318	242	433	1,452
1960-61	477	431	323	452	1,683
Total 2nd Plan Period	2,114	1,376	1,159	1,390	6,039

The following small table 3 depicts the level of new company registrations in the four States of Bombay, West Bengal, Madras and Delhi during the first year of the first Plan and last year of the second Plan and the numbers of registrations in the four States in the Southern Region, viz., Madras, Andhra Pradesh, Mysore and Kerala during each of the five years of the second Plan period. The table shows how steady and continuous improvement in the new company registrations has taken place in the Southern States, except in Kerala, during the period 1956-61. A possible reason for the slowing down of new registrations in the State of Kerala during the second Plan period could be the formation of a non-Congress Government which presumably led the private business interests to think that the policies of that Government might change the complexion of the economy of the State.

TABLE 3

New Registration in certain Principal States and Southern States

	Bombay	West Bengal	Madras	Delhi
1951-52 ..	324	621	219	146
1960-61 ..	410	431	343	197

	Madras	Andhra Pradesh	Mysore	Kerala
1956-57 ..	91	9	5	42
1957-58 ..	80	18	15	29
1958-59 ..	188	19	27	67
1959-60 ..	345	28	28	32
1960-61 ..	343	32	31	46

Size-pattern of New Companies

The following table 4 which gives the size-pattern of new companies discloses rather vividly how opportunities were available to small entrepreneurs in forming companies as they were to the big industrialists. It is seen that, out of 13,082 new companies set up during the two Plan periods, as many as 11,296 small-sized companies, with an authorised capital base of less than Rs. 10 lakhs each, were set up. Out of these 11,296 companies, 3,101 have been incorporated with an authorised capital of less than Rs. 1 lakh, 5,134 with authorised capital between Rs. 1 lakh and Rs. 5 lakhs and 3,061 between Rs. 5 lakhs and Rs. 10 lakhs. All the 3 categories of companies account for 86 per cent of the total number of companies formed during the two Plan periods. The number of big-sized and giant-sized companies totalled 518 accounting for less than 4 per cent of the total incorporations during the two Plan periods. In terms of authorised capital, however, 304 giant-sized incorporations, having an authorised capital of Rs. 1 crore or more each, accounted for nearly 70 per cent of the total authorised capital of all the new companies for the same period. The number of super-giant-sized new registrations with an authorised capital of Rs. 5 crores or more each came to 69 companies. Thus, the bulk of the investments raised in the capital markets of the country would be cornered by the big incorporations. But this would not very seriously scare off the small companies, as the latter largely do not go to the capital markets for funds, and, instead, depend on the private capital pools of a small group of people. It is, indeed, a significant fact to notice that the big businesses have so far not shut these small promoters out of business; and, by and large, the country's economy could be said to be a free competitive economy. A break-up of the first and second Plan companies according to the size-groups is as follows:

TABLE 4

Size-pattern of New Companies

	1st Plan			2nd Plan			Two Plans		
	Public	Private	Total	Public	Private	Total	Public	Private	Total
Below Rs. 1 lakh	155	1,576	1,731	18	1,352	1,370	173	2,928	3,101
Between Rs. 1–5 lakhs	503	2,393	2,896	65	2,173	2,238	568	4,566	5,134
,, Rs. 5–10 lakhs	436	1,177	1,613	79	1,369	1,448	515	2,546	3,061
,, Rs. 10–25 lakhs	162	275	437	60	438	498	222	713	935
,, Rs. 25–50 lakhs	79	97	176	44	113	157	123	210	333
,, Rs. 50 lakhs–Rs. 1 crore ..	42	42	84	55	75	130	97	117	214
Rs. 1 crore and above	79	27	106	126	72	198	205	99	304
Total ..	1,456	5,587	7,043	477	5,592	6,039	1,903	11,179	13,082

Management Pattern

There was a lot of discussion on the role played by business managements, particularly the managing agency system, during the period 1948-1955. The managing agency system came under a very close study of the Company Law Committee and, subsequently, of Parliament at the time the Companies Bill was discussed in 1953-55. As a result of new provisions written in the Companies Act, 1956, relating to company managements, new trends in company managements became discernible during the second Plan period. Various restrictions and obligations imposed on the managing agents under the new Act made this form of management relatively unattractive. Of the 6,039 newly set-up companies during the second Plan period, it was noticed that only 71 companies proposed to appoint managing agents and as many as 4,166 decided to be run directly by Board of Directors and 1,779 by Boards of Directors with Managing Directors at the top. The new Companies Act provided two other alternative forms of management also, namely, secretaries and treasurers, and managers, who were to fill the void likely to be created by the withdrawal of the managing agents from the corporate scene. Contrary to the expectations of the Government that, in the years to come, the secretaries and treasurers and managers would play an increasingly important role in the corporate sector, these two new forms somehow did not find much favour with the company promoters. It was seen that only 13 and 10 companies out of 6,039 new companies formed during the second Plan period proposed to have secretaries and treasurers, and managers, respectively. Even after taking into account the other companies switched over from managing agency to secretaries and treasurers, the position of secretaries and treasurers yet remains quite far from satisfactory. These trends, however, deserve further close study. A study of the new incorporations which were to have managing agency form of management discloses that a very small number of old managing agents have made available their services to the new companies.

Industrial Pattern of Companies

A comparison of the industrial distribution of new companies is rendered somewhat difficult because of the change in the industrial classifications. Data for the second Plan are tabulated on the basis of the new standard industrial classification designed on the lines of the International Standard Industrial Classification Scheme whereas those for the earlier years are based upon the industrial classification scheme which had been in vogue since 1922-23. Because of the diversity in the industrial groups, data for the first Plan period cannot be compared with those for the second Plan period. For instance, under the old industrial classification scheme, industrial group for cement industry included clay, stone and lime manufactures also. Like this, there were many other omnibus classifications which create difficulties for studying industrial trends.

Apart from this difficulty, another point which has to be borne in mind while studying the industrial pattern of new companies, is that, in so far as the companies mentioned a large number of objects in their Memoranda of Associations, it is not possible to place very correctly a company under any particular industrial group, unless, of course, an attempt is made to get the classification direct by informal enquiries from the promoters of the company at the time of the registration. The various publications in the Department of Company Law Administration have referred to this difficulty and the Department has now asked its field offices to get the information relating to the principal business of the company informally from the representatives of the company. Notwithstanding this, however, we have made an attempt to collate and present the data relating to new companies for a few important industrial groups.

Table 5 below sets out the industrial pattern of the new companies under 10 broad Industrial groups for the second Plan period. It will be seen that about 44 per cent of the new companies were formed for 'processing and manufacturing' purposes, the actual number of companies being 2,690 out of a total of 6,039. Trading and financial companies represented 27 per cent of the total incorporations, the actual number of such companies being 1,666. Thus, the trading, financial and manufacturing companies together represented 71 per cent of the total new registrations. These figures show the intensification of the industrial activities in the country as also the passing of the distributive business into the hands of corporate bodies. Similarly, for transport, communications and storage business, as also for commercial and business services, etc., corporate form of management was preferable to proprietory and partnership management, as never before has such a large number of companies as 800 for transport, communicating and storage and 447 for commercial business and miscellaneous services have been registered in the country.

Coming to greater details, we find (*vide* Table 6) that, during the first and second Plan periods, 140 companies had been formed for carrying on plantation activities, 79 for coal mining, 58 for manufacturing sugar, 145 for cotton manufactures, 20 for jute manufacture, 69 for setting up paper mills, 15 for match industry, 808 for chemicals and allied trades, 1,458 for iron and steel and engineering businesses and 149 for manufacturing cement, etc. Thus, it will be seen that there has been a marked thrust towards the widening of engineering and chemical manufacturing activities in the country. In the chemical group, there is a very broad-based development ranging from heavy chemicals to pharmaceutical goods. There has also been a very marked rise in the formation of transport and transit companies whose number rose to such a high level as 1,249 companies during the second Plan period.

(*Concluded*)

TABLE 5

Broad Industrial Pattern of New Companies

Industries classification	1956-57	1957-58	1958-59	1959-60	1960-61	Total

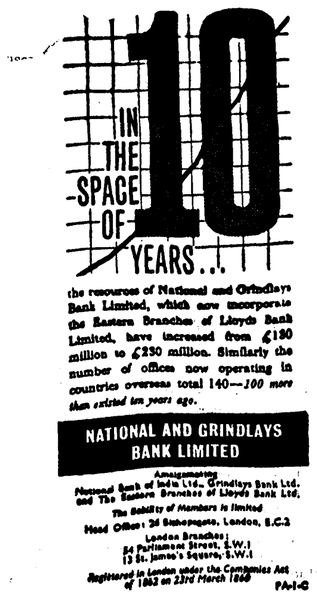
Note :—Industrial classifications are based on the principal objects stated in the Memoranda of not determined on the actual lines of business.

Note: This is the fourth and final part of a series of four articles on the subject; the first three parts appeared in *Commerce* of 12th, 19th and 26th August 1961, respectively. These are essentially factual articles which the author has written with a view to disseminating facts and figures relating to corporate sector in a proper context to wider circles in the country. Any views and opinions expressed in these articles are the personal views of the author and not of the organisation he belongs to.



HOWRAH MILLS COMPANY LIMITED

ALLEGATIONS AGAINST JUTE MILLOWNERS BASELESS

RETURN ON INVESTED CAPITAL IN JUTE INDUSTRY LOW

SIR JOHN BROWN ON REQUIREMENTS FOR EXPORTING MORE

AN able defence of the jute millowners against the charge of attempting to oppress labour and depress jute prices by refraining to purchase the fibre from the cultivators was made by Sir John Brown, Chairman of the Howrah Mills Company Ltd. in his address to shareholders at the Hundred and Thirty-sixth Annual General Meeting of the Company held at Calcutta on Wednesday, 23rd August. Dismissing the charge as baseless and entirely unwarranted, Sir John declared that millowners were not so short-sighted as to see any advantage in bringing ruin to cultivators and thereby jeopardising future supplies of raw jute, leading inevitably to further increase in prices. Sir John also defined out what he considered to be two outstanding requirements for boosting exports.

The following is the full text of Sir John's statement:

"GENTLEMEN,

"Before I move the first resolution, I feel it is appropriate in the circumstances facing the Mills today that I should supplement the information regarding the Company's working contained in the report of the Directors dated the 7th July, which has been in your hands for some time.

Restricted Production

"From the report you will have seen that from May 1960, there have been successive reductions either in working hours or in the number of looms being worked. In view of statements which have been made from many quarters and which have recently received a wide currency in the daily press, I should make it clear that every cut in production means an increased cost of production to mill owners on account of increased overheads per ton and therefore either a smaller profit or a larger loss. It is difficult, in the circumstances, to understand the criticism which is directed at mill owners as it must be obvious that no one will willingly increase his cost of production of an article which, to a very great extent, has to be disposed of in the world's markets in competition not only with the jute industries of other countries but also with substitute packaging materials. What then is the reason which has forced the member mills of the Indian Jute Mills Association to restrict production? For two successive years the jute crop both in India and Pakistan has been a short one with the result that supplies of raw material reaching the mills in Calcutta have dwindled and naturally have increased in price in accordance with the ordinary laws of supply and demand. As a matter of fact, the total stocks of raw jute with mills at the 30th June in each of the last five years were as follows:

	(lakh bales)
1957	10.96
1958	10.95
1959	16.70
1960	12.46
1961	4.48

"Supplies at 30th June 1961, represented barely four weeks' consumption on the basis of working then in force. Our own stocks were the equivalent of three and a half weeks' consumption and, when I tell you that we normally regard eight weeks' stock actually in the mill as a safe working minimum, you will get some idea of the extent of the deficiency and the practical difficulties facing the staff and our operatives. Since the end of June, the new season's crop has started to reach up-country markets and also Calcutta but as yet supplies are restricted and, even now, they do not match consumption. This situation was foreseen by the Committee of the Indian Jute Mills Association and, in agreement with the Central and State Government authorities, arrangements were made for a block closure of the mills for one week in each of the months of June and July. While there is no doubt that this action was instrumental in avoiding a scramble for material which was in hopelessly short supply, and resulted in spreading the burden of the loss involved over the workers as a whole and the mill companies, it is unfortunate that more recently an acute controversy has developed in regard to the necessity or otherwise for a further cut in production between the beginning of August and the time when the mills can reasonably expect to start to replenish short stocks from arrivals.

Critics Answered

"Criticism of the mills is mainly on two counts; namely, that they are using coercive measures to inflict loss and suffering on the workers engaged in the industry with a view to influencing the decisions of the Wage Board which is now considering the wage structure of the industry, and secondly, that they are attempting, by refraining from purchasing jute, to depress its price and thereby inflict loss on the cultivators. The mills are also accused of a failure to have regard to what is described as the national interest in this matter.

"Let me say rightaway that, speaking for the Board and management of your Company and I am sure for the managements of all the other mills in the membership of the Indian Jute Mills Association, the first criticism, namely, that we are trying to harass and cause loss to our workers, is totally unfounded. The losses suffered by our operatives are much to be deplored, but they are only a small part of the loss suffered by the industry as a whole in recent months. I read recently a criticism that the wages in this industry were low. It is true that they are by no means the highest wages paid in this State, but any criticism on this score should take account of the fact that ours is an industry which has to dispose of its output largely in foreign markets and we have to accept the price which the foreign buyer is prepared to pay; and he is not obliged to buy our goods unless it suits his convenience.

Exports—Two Requirements

"We read a great deal these days, both in the daily press and in the financial journals, of India's need to increase her exports in order to meet the country's mounting foreign exchange liabilities and the increasing demands of her expanding industry. We in this trade and industry have a long experience of the economics of export and we are, therefore, I believe, in a position to express a responsible opinion on this subject. The export trade requires a very considerable attention to detail on the part of those engaged in it; but its two outstanding requirements are, firstly, to produce an article which the overseas buyer wants and secondly, to produce it at a price which he is prepared to pay. Looking at the Indian scene today, I think there are many who would agree with me that we are more likely to succeed in the first of these objectives than in the second. The price at which a manufacturer can afford to sell his goods is determined by his costs and the need to service his capital. In the jute mill industry, the two largest single items of cost are raw material and labour and I have seen it suggested in some of the many press reports on meetings concerning the present situation in the industry that mill owners, instead of allegedly adopting oppressive tactics against their labour and the cultivators, should reduce the expenses of management. In industry the battle to reduce costs is a constant one and I can assure you that, so far as this Company is concerned, it is not confined to reducing labour costs and the price at which we buy jute, which is, in any case, determined by supply and demand in the market. Those responsible for the comment to which I have just referred are almost certainly not aware of the fact that, for many mills engaged in the production of standard constructions of cloth and bags, in the past three months, losses would have been incurred even if management and overhead expenses, including depreciation, had been eliminated altogether; in other words, the cost of the raw material plus the labour cost alone exceeded the price at which the goods produced could be sold. It will be appreciated that this is a state of affairs which clearly cannot last for long if the industry is to survive at all and continue to contribute any significant part of India's foreign exchange earnings.

"The suggestion that mill owners are attempting to oppress the cultivator by withholding purchases and thereby artificially depressing the price of raw jute is equally unwarranted. Such figures as are available indicate that arrivals of raw jute in Calcutta at the present time do not match consumption even on the basis of present restricted working. It would be a simple matter, no doubt, for one or two of the bigger groups to enter the market and buy up all the jute that was offering and thereby leave all other groups without any source of raw material. I cannot see, however, how that would in any way improve the situation from the point of view of the production of the industry as a whole and therefore of its workers. What the mills have done is to attempt to regulate their working to the amount of the raw material of the qualities required which is in hand or in sight in the immediate future and to avoid, as far as possible, the total closure of individual units which, I suggest, would entail far greater hardship to the workers involved. In the case of this Company, we have had to seal temporarily a further 322 looms, representing 15 per cent of our registered complement. It is indeed unfortunate that notwithstanding the efforts of managements certain mills were forced to close completely last week due to a shortage of raw material. I do not think that it can be seriously suggested that mill owners are so short-sighted as to see any advantage in bringing ruin to cultivators, as some of the more exaggerated press reports suggest is their object, and thereby jeopardising their future supplies of raw jute, leading in turn inevitably to further price increases.

Stability of Prices

"Jute goods are not a luxury but an essential packaging or process material used in many other industries and, from the buyer's point of view, while naturally he would wish to get his goods as cheaply as possible, most buyers whom I have met and with whom I have discussed this matter agree that stability of price is very nearly just as important as the actual price level. The question then is: at what level is stability to be determined? I have seen it suggested recently that the Central or the State Government should somehow or other lay down a minimum price of Rs. 50 per maund for jute. This may sound fantastic to you, as it was to me to read it; but it does serve to indicate how far away from reality are some of the present critics of our industry.

"I have already referred to the necessity for us to compete with the jute mill industries of other countries and, in today's terms, that means particularly Pakistan. On the day on which I drafted this statement the difference between the price of raw jute in the Calcutta market and the price in the Narayanganj market was as much as Rs. 10 per maund; in other words, the Pakistan mills were getting their raw material at a price which was 24 per cent less than the Indian mills had to pay for a fibre of what is generally admitted to be inferior quality. From the mill owner's point of view, it is indeed immaterial what price he pays for his raw material as long as he can sell his goods at a price which covers his costs and leaves him some margin of profit to put back into his business after paying a modest dividend to the shareholders. Other things being equal, it is in his interest to see that the grower is well rewarded for his efforts as this will ensure an adequate supply of raw material for the future. We inevitably get back, however, to the question of how much the buyer abroad is prepared to pay, since we do not live in a protected internal market where demand exceeds supply. Therefore, the question of a minimum price for jute has to be considered in relation to the price at which our production can be sold. Although it is admittedly not easy, I am sure that it is not beyond the wit of all the interests involved to devise a system of minimum price fixation which takes all these considerations into account and ensures that the positions of the mills on the one hand and the cultivator on the other are equitably regarded. Such a system might well be linked with a scheme for the setting up of a buffer stock of raw jute in the mutual interests of mills and growers. This is a matter which I understand is currently engaging the attention of the Indian Jute Mills Association and the Central and State Governments and I am sure we must all hope that a speedy solution acceptable to both the cultivators and the mills will be found.

Exporting at a Loss

"Among the many exhortations to industry generally these days is an appeal to be prepared to export, even at a loss. This is exactly what the jute mill industry has been doing for some time: and it is not just a loss incurred in respect of simply a small portion of its production which can be absorbed in the higher profits which are obtainable in many other industries on the internal market. Nevertheless, if we are to survive and keep our mills running, we have to be prepared to incur such losses, as indeed we have not infrequently had to do, from time to time in the past. I would, however, suggest that it would be not unreasonable to expect that, in these circumstances, we should be entitled to at least some sympathy instead of being pilloried by sectional interests in the raw jute trade as well as by labour leaders generally. It appears to have been overlooked in recent controversies that, as far back as December last year, the mills agreed to reduce working hours rather than to seal more looms in order to lessen the impact of the situation on the workers and this has resulted in additional losses to the mills during the intervening months, thus aggravating the already difficult position arising from the disparity between raw jute and manufactured goods prices, the only reason for which is the high price of jute caused by a physical shortage of fibre.

"I have already referred to criticism of mills and their managements for an alleged failure to consider the national interest in this matter of adjustment of production in line with available supplies of raw material. Such criticism, I feel, is greatly to be deplored. The term 'national interest' may be interpreted in a variety of ways but to me a factor which must always find a place in any consideration of its meaning is the contribution which the particular policy which is advocated is going to make to the future of this country, the building up of its industry and an increase in the standard of living of its people. Who is it who is looking to the national interest in considering the solution of the present difficulties of our industry? Is it those who are clamouring for a jute price of Rs. 45 per maund or even Rs. 50 per maund when our competitors in foreign markets can buy their raw material at Rs. 32 per maund at present with a prospect of a substantial further fall? Is it those who claim to be representing our workers and who demand higher wages without any change in work loads and without any reduction in the numbers presently employed? Or is it those who look ahead five or ten years and who on the basis of the history of the past thirty or forty years realise that, while the world's consumption of packaging materials has gone up enormously, consumption of jute goods has not risen proportionately and, furthermore, that a major jute industry is being built up right on our doorstep so that international competition can only be intensified, leading to keener and keener prices and demanding reduced costs with ever increasing efficiency at all levels if the future of the Indian cultivator, the mill worker and the shareholder are to be safeguarded? It is no use blaming the foreign buyer and complaining that he should pay more for his goods. The remedy is to be found much nearer home. It is in the hands of all those who have an interest in this industry, whether as growers of the raw material, as workers in the mills, as managements or as shareholders, not forgetting the Central and State Governments whose overall interest is to see that a broad equity is maintained as between all those engaged in the industry while, particularly so far as the Central Government is concerned, ensuring that the industry's capacity to earn foreign exchange for the country is not impaired in the long-term by sectional interests.

Return on Capital Low

"Criticism of the mills, particularly by raw jute and labour interests, seems to overlook the fact that, as a class, shareholders in jute mill companies have not only not as yet benefited in terms of income from the heavy capital expenditure which has already been incurred on modernisation but, practically alone among equity holders, have also seen a substantial decline in the value of their investment, not only since the partition of the country in 1947 but even since 1952-53, on which year the Reserve Bank of India's indices are based. This is indeed a poor reward to those who have provided the financial sinews of what was last year once again the country's leading export industry in terms of foreign exchange earnings.

Prospects Not So Grim

"If this industry is to continue to occupy the place in the country's economy which it has made for itself, and if it is to expand its production to anywhere near the limit of the present installed capacity, it is absolutely essential that all of those who are concerned in it, whether they represent capital, management, labour or the Central or State Governments, should examine closely the probable trend of events over the next ten years or so. I am one who believes that the outlook is not nearly so grim as it is sometimes painted; but my belief is subject to one important reservation and that is that our costs of production are reduced, and reduced very substantially. Nothing will be gained, I am sure, from evading this issue. The cultivator will have to get his reward from an increased outturn per acre; in other words, with the aid of fertilisers and improved seeds he will have to produce more jute without having to himself employ more labour, either his own or his neighbour's.

"It is unthinkable that labour wages can be reduced and, therefore, if a solution satisfactory in the long-term is to be found to this question of wage rates, it must be by the employment of improved mechanical methods as a result of which higher wages can be paid to a reduced number of workers. From the point of view of the mills, the majority of them are still endeavouring to amortise the heavy capital expenditure incurred in recent years in modernising the preparing and spinning departments. Technological advances indicate that a stage will shortly be reached when, in order to compete in the world's markets, the mills will have to face further heavy capital expenditure on the modernisation of their weaving departments. While some companies are relatively well-found financially, I fear that the financial burden involved in this further expenditure may be beyond the capacity of the majority of companies, at least immediately. I suggest, however, that the true national interest demands that means be found to enable mills to shoulder the further liabilities to which I have referred. This can only be done if the cost structure of the industry is such that it can operate efficiently at such a profit as will enable it to amortise not only existing debt but also the fresh debt which it will have to incur. In the case of your own Company, since the date of the Directors' report, the Board has sanctioned further capital expenditure in the factory and it will be our policy to continue to do so as far as we can within the resources at our disposal. I cannot, however, conclude this statement without making it clear that the Company has suffered very severe losses since the month of May and this setback will undoubtedly result in a slowing down of the modernisation process. I and my colleagues, however, feel that this is not a time to stand still and with faith in our ultimate future we intend to equip ourselves to be as competitive as we can in the years ahead."

Note: *This does not purport to be a record of the proceedings of the annual general meeting referred to.*

MATHEMATICS MADE EASIER

The Associated Electrical Industries (Manchester) Limited has produced an illustrated full-colour 44-page booklet on visual aids which have been designed to give an understanding of simple arithmetical, algebraical and geometrical relationships. These aids will be helpful in the teaching of mathematics in secondary schools and technical colleges, and to young craft apprentices. The information upon which this booklet is based was most generously given by the Siemens and Halske Works School in Berlin, which provided facilities for two staff members of the A.E.I. Manchester Works School to study a comprehensive range of visual aids. Copies of the booklet can be obtained on application to the Education Manager, Group Personnel Services, Associated Electrical Industries (Manchester) Limited, Trafford Park, Manchester 17.

HOW MANY GRAMS IS A SEER?

Metric Weights have come into use. Prices are expressed in terms of Metric units. And yet, transactions involve irksome calculations.

WHY?

Because the Metric concept is not followed. Commodities are asked for either according to old weight or its equivalent:

930 grams for one seer
454 grams for one pound.

The right way is to ask for

1 Kilogram (1,000 grams)
500 grams

This way transactions will be simpler and calculations much easier.

Ask for your requirements in

ROUND METRIC UNITS | *it helps you and the trader*

ISSUED BY GOVERNMENT OF INDIA DA 61/360

INDUSTRIAL AND MINERAL PROJECTS IN PUBLIC SECTOR

EMPHASIS ON EXPANSION OF CAPITAL GOODS

ORGANISED industries and minerals constitute the largest item of outlay in the public sector programmes in the third Plan, accounting, as they do, for Rs. 1,520 crores out of the total outlay of Rs. 7,500 crores. It may be recalled that, in the second Plan, they came (with Rs. 900 crores) second only to transport and communications (Rs. 1,300 crores), for which the third Plan outlay is Rs. 1,486 crores. Of the third Plan outlay of Rs. 7,500 crores in the public sector, investment will be of the order of Rs. 6,300, the balance of Rs. 1,200 crores being current outlay representing expenditure on staff, subsidies, etc. As compared with this investment total, the share of organised industries and minerals is, therefore, higher. As compared with the second Plan in terms of percentage, however, it is not appreciably higher; the exact figures are 24.1 per cent in the third Plan and 23.8 in the second Plan. It may be noted here that the total cost of industrial and mineral projects included in the Plan is estimated at Rs. 1,881 crores (exclusive of Rs. 20 crores expected from non-Government sources for two projects), though the financial provision made is only Rs. 1,520 crores (Rs. 1,450 crores at the Centre and Rs. 70 crores in States) for the present. The share of the public sector in the net output of organised industries is expected to increase from less than one-tenth in 1960-61 to about one-fourth in 1965-66. In order to enable readers to get a full picture of the public sector projects, the relevant tables from the Plan are reproduced on the opposite page.

Table I shows the total investment and the foreign exchange component of industrial projects of the Central Government in the third Plan, along with their location and the capacity target. Table II relates to industrial projects of States. Tables III and IV give details of the mineral development programmes of the Centre and States, respectively. It will be seen from the table that industrial projects have been grouped in three categories, namely, (1) projects under execution and carried over from the second Plan, (2) new projects for which external credits are already assured wholly or partly, and (3) new projects for which external credits have yet to be arranged. Most of the industries falling in the first two categories, it may be hoped, will be completed during the third Plan period. The Planning Commission itself confesses, however, that even in these groups, "some of the projects may spill-over to some extent into the fourth Plan." It is in regard to the third category that "the largest element of uncertainty," to quote the Commission, prevails. Falling in this group are several major projects, including the Bokaro steel plant, alloy and tool steels plant at Durgapur the second shipyard at Cochin, expansion of Hindustan Shipyard at Visakhapatnam and the expansion of Bhopal heavy electrical plant.

Producer Goods Industries

The emphasis in the public sector programmes is on the development of those industries which will help to make the economy self-sustaining, such as steel, machine-building and the manufacture of producer goods. The ambition underlined by this emphasis on capital goods is to "reduce as rapidly as possible the need for external assistance to purchase these goods and also permit a broadening of the export base." Reflecting this purpose, the major industrial projects in the public sector included in the third Plan are in the fields of metallurgy, industrial machinery, machine tools, fertilisers, basic chemicals and intermediates, essential drugs and petroleum refining.

The capacity target under the iron and steel industry is placed at 10.2 millions of steel ingots and 1.5 million tons of pig iron. These targets are proposed to be attained by the expansion of Bhilai, Durgapur and Rourkela steel plants, as well as Mysore Iron and Steel Works, and also by the establishment of a new steel plant at Bokaro. In addition, a project for a pig iron plant based on low shaft blast furnace techniques and the use of coke from the Neiveli lignite, is proposed to be established in the southern region. It will have a capacity of about 500,000 tons. The expansion programme of the Mysore Iron and Steel Works comprises mainly the spill-over of expenditure on the ferro-silicon plant and provision for steel-making by the L. D. process and for a light structural mill. The layout of the steel plant at Bokaro is being planned for a capacity of two million tons of steel ingots, but, in the first phase, it is proposed to install facilities for the production of one million tons only. This plant is expected to specialise in the production of different types of flat products. The overall investment required for the public sector steel development programmes is Rs. 525 crores.

Special Steels

Another important project proposed in the public sector is the establishment of an alloy, tool and special steels plant at Durgapur, with an annual capacity of 48,000 tons, with built-in capacity in certain primary units, so that it could be rapidly expanded to 100,000 tons. The projected Durgapur plant will incorporate some of the latest equipment and processes. Thus, it is proposed to install electric soaking pits in preference to gas fired pits. The desirability of using sponge iron, instead of scrap as the starting raw material and of introducing continuous casting facilities, is expected to be kept in view in connection with the further expansion of this plant. The outlay on the project is estimated at Rs. 50 crores, of which Rs. 20 crores will be the foreign exchange element. The ordnance factories of the Union Ministry of Defence are expected to function as a second source of supply of alloy steels in the public sector. The combined output of the Ishapur and Kanpur ordnance factories, mainly in the category of constructional steels but including some output of spring steels as well, is estimated at 50,000 tons.

In view of the expansion envisaged in the development of pig iron and steel, it will be possible to undertake large-scale development of engineering industries. The public sector will mainly concentrate on projects for the production of heavy machinery and heavy machine building. The facilities being planned in this connection are as follows: capacity for 45,000 tons of steel castings, 38,000 tons of grey iron castings and about 70,000 tons of steel forgings will be created in the foundry-forge which is being set up at Ranchi. Further capacity will become available from foundries attached to the steel plants at Durgapur, Bhilai and Rourkela, to the Heavy Electricals at Bhopal, to the Mining Machinery Project at Durgapur and to the Hindustan Machine Tools at Bangalore. A steel foundry is under construction at the Chittaranjan Locomotive Works. The projects are designed to attain by the end of the third Plan an annual capacity of 139,000 tons of grey iron castings, 76,000 tons of steel castings and 76,700 tons of steel forgings.

Industrial Machines

The development of industrial machines assumes considerable importance in the public sector programmes. The principal projects in this field are the Heavy Machinery Plant near Ranchi, the Mining Machinery Project, Durgapur, the Heavy Electrical Equipment Plant, Bhopal, and two other heavy electrical projects, for which locations are currently under study by an expert committee. The heavy machinery plant, which is being set up near Ranchi, on its expansion to 80,000 tons output per year, will be able to supply the bulk of the equipment required for adding to steel making capacity at the rate of about one million tons annually. The expanded mining machinery project at Durgapur is being designed for an annual output of 45,000 tons of equipment. The three heavy electrical equipment projects are designed to ensure from indigenous sources a wide range of electrical equipment sufficient to enable power generation to be increased at an annual rate of two million kW. per year from 1971 onwards. They will also produce heavy motors, rectifiers and control equipment. Manufacture of high pressure boilers for thermal power plants with an annual capacity of about 28,000 tons (2,500 tons of steam per hour) is another heavy engineering project tied with assistance from Czechoslovakia. Though it was originally visualised as a part of a composite heavy electrical equipment project, it is now proposed to develop it as an independent plant specialising in manufacture of high pressure boilers.

In the sphere of machine tools industry, a new heavy machine tools plant will be set up near Ranchi. Another machine tool works of the same type and size as the Hindustan Machine Tools will be located in the Punjab. In addition, expansion plans are at hand for the H.M.T. and the Praga Tools. It is estimated that the value of the combined output of these machine tool works in the public sector, inclusive of the contribution expected from the proto-type factory of the Union Defence Ministry at Ambernath, will go upto about Rs. 15 crores annually.

Railways and Shipping

In the field of railway rolling stock, the most important development in the public sector will be the diversification of the Chittaranjan Locomotive Works so as to include the production of electric locomotives. The traction motors for these electric locomotives are proposed to be manufactured at the Heavy Electricals Ltd., Bhopal. The project for the manufacture of diesel electric and diesel hydraulic locomotives included in the Railway Plan will make a major contribution towards the achievement of self-sufficiency in respect of railway equipment. The Rs. 12-crore diesel loco project will have an annual capacity of 140 units with a turnover value of Rs. 10.0 crores. The diesel hydraulic engines would also make use of the Suri transmission, an improved design developed recently by an engineer of the Indian Railways which has been licensed for exploitation in West Germany.

The programmes under this head include the expansion of Hindustan Shipyard Ltd. and the construction of a drydock at Vishakhapatnam. With the completion of these developments, the Vishakhapatnam Shipyard will be capable of producing ships of a total tonnage of 50,000-60,000 D.W.T. per year. A second shipyard at Cochin and a scheme for the manufacture of marine diesel engines also form part of the public sector programme. The former is estimated to cost Rs. 20 crores and the latter Rs. 5 crores.

Among the other important engineering industries, mention may be made of a scheme costing Rs. 10 crores, seeking to establish a heavy structural works (with an annual capacity of 10,000 tons) and a plate and vessel works (18,000-20,000 tons per year on single-shift basis) in the Nagpur-Wardha area.

With the exception of the following projects in the public sector, the expansion of capacity under other engineering industries is expected to be secured through the efforts of private enterprise: (a) Precision Instruments Project; (b) expansion of Precision Instruments Factory, Lucknow; (c) expansion of Hindustan Cables, Rupnarainpur; (d) expansion of the Government Electric Factory, Bangalore; (e) heavy Compressors and Pumps Project; (f) ball and Roller Bearings project; (g) surgical instruments project, Guindy. Manufacture of control instruments and equipment with an ultimate annual turnover of about Rs. 20 crores is envisaged under the Precision Instruments Project. The surgical instruments plant near Guindy has been planned for the manufacture of 25 groups of instruments valued at about Rs. 2.7 crores per year. The expansion of the Hindustan Cables is, like the Diesel Loco Project, linked with the growing demands of Government in the field of communications.

Fertilisers

The role of public sector is, of course, not confined to large-scale engineering goods alone. In the sphere of fertilisers, for instance, the public sector is expected to have a capacity of about 730,000 tons of N by the end of the third Plan. Another major public sector project is the Basic Chemicals and Intermediates Plant proposed to be set up near Panvel, Maharashtra.

An important scheme in the field of petroleum refining is the one for the establishment of a Rs. 30-crore oil refinery in Gujarat, with an annual capacity of about two million tons of crude oil. In the pharmaceuticals group, the public sector will have three projects, namely, antibiotics plant near Rishikesh, Uttar Pradesh (Rs. 26 crores), synthetic drugs project at Sanatnagar in Andhra (Rs. 6.4 crores), and the phytochemicals plant in Kerala (Rs. 0.77 crores). The Rs. 8-crore plant for the manufacture of raw films, X-ray films and sensitised papers proposed to be set up at Ootacamund (Madras) with French collaboration is another major public sector project.

The Tables III and IV show the financial allocations made for the development of minerals to be undertaken by the Centre and States. The Central Government's outlay amounts to Rs. 467 crores and States' Outlay Rs. 11 crores. The development programmes for coal in the public sector will claim Rs. 149 crores. The target for additional production of coal in the public sector is laid at 20 million tons. Of this, three million tons will be obtained by the expansion of the Singareni Collieries in Andhra, and the balance of 17 million tons will be raised by the National Coal Development Corporation. Oil exploration in the Plan is expected to cost Rs. 115 crores. The third Plan also includes a project, with an estimated outlay of Rs. 12.5 crores for the mining and concentration of the copper at Khetri and Daribo (Rajasthan) and for smelting the concentrates at a smelter to be established at Khetri. It may be noted here that, apart from the direct outlay on industries and minerals, the Central Government will give assistance to institutional agencies, etc., to the tune of Rs. 74.6 crores. Besides, a sum of Rs. 25.6 crores is expected to be spent by the States by way of participation in private industries and other measures of assistance.

TABLE I—Industrial Projects of Central Government

	Location	Total investment (Rs. crores)	Foreign exchange component (Rs. crores)	Capacity in 1965-66 (final capacity in the case of expansion)
*A. Projects carried over from the second Plan**				
Completion of the 3 steel plants	Rourkela Bhilai Durgapur	50.0	20.0	3 million tons of steel ingots and 700,000 tons of pig iron for sale.
Fertiliser factory	Rourkela			120,000 tons of N.
Heavy machinery plant	Ranchi			45,000 tons finished machinery.
Foundry forge shop	Ranchi	80.0	55.0	94,000 tons castings and forgings.
Mining machinery plant	Durgapur			30,000 tons machinery.
Heavy electrical plant	Bhopal	16.0	7.0	Equipment worth Rs. 12.5 crores.
Drug projects:				
(a) Antibiotics plant	Rishikesh (U.P.)			Rs. 25.8 crores worth of products.
(b) Synthetic drugs plant	Sanatnagar (Andhra)	30.0	15.0	Rs. 6.4 crores worth of products.
(c) Surgical instruments plant	Guindy (Madras)			Rs. 2.8 crores worth of products.
(d) Phyto-chemicals plant	Munnar (Kerala)			Rs. 77 lakhs worth of products.
Organic Intermediates plant	Panvel (Maharashtra)	11.0	6.0	25,000 tons.
Expansion of Hindustan Antibiotics.	Pimpri	0.5	..	45,000 kgs. of streptomycin and 1.5 tons of tetracyclines.
Trombay fertiliser factory	Trombay	25.0	13.0	90,000 tons of N.
Nahorkatiya fertiliser factory	Assam	12.0	7.0	32,500 tons of N.
Neiveli fertiliser factory	Neiveli (Madras)	15.7	11.6	70,000 tons of N.
Briquetting and Carbonisation plant		18.8	8.6	380,000 tons briquettes.
Thermal power plant		9.7	5.9	250 M.W.
Nunmati oil refinery	Assam	2.5	4.9	0.75 million tons crude oil.
Barauni oil refinery	Bihar	23.0	7.5	2 million tons crude oil.
Total	....	295.2	161.4	....
B. New projects for which external credits are already assured, wholly or partly				
Expansion of heavy machinery plant.	Ranchi	14.0	11.0	30,000 tons of finished machinery.
Expansion of foundry forge	Ranchi	10.0	5.5	153,000 tons castings and forgings.
Expansion of mining machinery plant.	Durgapur	15.0	10.0	45,000 tons machinery.
Second and third heavy electrical projects.	Not finalised	69.0	45.0	Scope yet to be decided of the third project.
Heavy machine tool project	Ranchi	11.0	9.0	Rs. 3-4 crores worth tools.
Precision instruments project	Not finalised	8.0	6.0	Rs. 20 crores worth instruments.
Ophthalmic glass project	Durgapur	2.8	2.0	300 tons of glass.
Raw film project	Ootacamund	8.0	5.0	6.3 million sq. meters of raw films, photo paper, etc.
Watch factory	Bangalore	2.5	1.5	360,000 watches.
Expansion of Bhilai steel plant	Bhilai	138.0	56.0	2.5 million tons of steel ingots and 300,000 tons pig iron for sale.
Expansion of Durgapur steel plant.	Durgapur	56.0	27.0	1.6 million tons of steel ingots and 300,000 tons pig iron for sale.
Expansion of Rourkela plant	Rourkela	90.0	50.0	1.8 million tons of steel ingots.
Expansion of Hindustan Machine Tools.	Bangalore	3.0	2.0	Rs. 7 crores worth of tools.
Basic refractories project	Bhilai	3.0	1.5	Scope yet to be decided.
New machine tool works	Punjab	5.0	3.0	1,000 tools (Rs. 3.5 crores).
Gujarat oil refinery	Gujarat	30.0	15.0	2 million tons crude oil.
Expansion of Praga Tools	Secunderabad (Andhra)	1.0	0.5	10,000 tons of heavy structurals (single-shift).
Heavy structural works	Not finalised	6.0†	4.0	10,000 tons structurals (single-shift).
Heavy plate and vessel works				18,000-20,000 chemicals plant machinery (single-shift).
Gorakhpur fertiliser factory	Gorakhpur	18.0	8.0	80,000 tons of N.
Security Paper mill	Hoshangabad (M.P.)	5.5	4.0	1,500 tons of security paper.
Expansion of Hindustan Cables	Rupnarainpur (W. Bengal)	8.5	1.2	2,000 miles of dry core cables and 500 miles of plastic insulated city cables on double-shift.
Total	....	499.1	267.2	....
*C. Other Projects***				
Bokaro steel plant	Bokaro	200.0	100.0	1 million tons of steel ingots and 350,000 tons of pig iron for sale.
Alloy and tool steels plant	Durgapur	50.0	20.0	48,000 tons.
Expansion of Bhopal heavy electricals plant.	Bhopal	19.0	8.0	Rs. 25 crores worth of electrical equipment.
Hindustan Shipyard expansion and subsidy.	Visakhapatnam	10.0	1.5	
Dry dock project of H.S.	Visakhapatnam	2.0	0.5	50,000–60,000 D.W.T.
Second shipyard	Cochin	20.0	5.0	
Expansion of F.A.C.T.	Alwaye	8.0	5.6	60,000 tons of N.
Expansion of Nepa Mills	M. P.	4.0	3.0	60,000 tons of newsprint.
Salt development	....	3.0	0.8	....
Heavy compressors and pumps project.	Not finalised	15.0	10.0	Scope yet to be decided.
Ball and roller bearing project	Not finalised	8.0	6.0	2 million bearings.
Additional capacity for machine tools.				
Second heavy structural works	Not finalised	15.0	10.0	Scope yet to be decided.
Second plate and vessel works				
Marine diesel engine factory	Not finalised	3.0	1.5	....
Expansion of the alkaloid factory.	*Ghazipur (U.P.)*	0.4	..	....
Lubricating oil plant	....	12.0	6.0	100,000 tons of H.V.I. lubricants
Low temperature carbonisation plant.	....	22.0	15.0	2.2 million tons of coal.
Neiveli lignite high temperature carbonisation plant and other facilities for pig iron production.	Neiveli	25.0	13.0	One million tons of lignite.
Township	At project sites	50.0	..	....
Total	....	466.4	205.9	....
Grand Total	....	1,260.7	634.5	....

* Figures of total cost and foreign exchange are the amounts expected to spill over into the third Plan.

** Figures of cost and foreign exchange represent estimated outlays for the execution of the schemes. In the case of some of the listed projects, part of the expenditure would spill over into the fourth Plan having regard to the gap between the provision for industries and minerals and outlay requirements.

† According to latest estimates, these two projects will cost Rs. 10.1 crores and will need foreign exchange expenditure of Rs. 6.4 crores.

TABLE II—Industrial Projects of State Governments

	Location	Investment (Rs. crores)	Foreign exchange component (Rs. crores)	Annual capacity in 1965-66 (final capacity in the case of expansion
Schemes with a total outlay of Rs. 50 lakhs or more				
A. Projects spilling over from the second Plan				
Expansion of Andhra Paper Mills.	Rajamundry (Andhra)	4.00	2.49	18,000 tons of paper.
Expansion of Iron and Steel Works—	Bhadravati (Mysore)			
(a) Steel expansion programme.		..	..	100,000 tons of steel ingots.
(b) Expansion of ferrosilicon plant.		0.95	0.87	20,000 tons of ferrosilicon.
Expansion of Government electric factory.	Bangalore	0.90	0.48	Electric transformers 200,000 K.V.A., electric motors 60,000 h.p., switch gear and switch boards worth Rs. 40 lakhs.
Durgapur coke ovens—	Durgapur			
(a) Gas grid		2.25	..	7.5 million c. ft. of gas daily.
(b) Tar distillation plant		0.50	0.17	100 tons of tar daily, coke 650,000 tons, benzene 0.725 million gallons.
(c) Doubling coke ovens and by-products plant.		4.20	..	Toluene 0.235 million gallons naphthalene 1,200 tons, and road tar.
B. New Projects in third Plan				
Natural gas distribution	(Assam)	1.65	0.80	....
Gas fractionation and transmission scheme.	(Assam)	1.50	0.50	....
Expansion of Bihar superphosphate factory.	Sindhri (Bihar)	0.50	0.15	45,000 tons of superphosphate.
Expansion of high tension insulated factory.	Ranchi	0.58	0.17	4,800 tons of insulators.
Fertiliser project	....	20.00	10.00	80,000 tons of N.
Cotton spinning mill	Samba (Kashmir)	0.50	0.25	12,000 spindles.
Pilot iron and steel plant	(Madras)	0.75	..	
Steel rolling mill	(Madras)	1.00	..	20,000 tons of rolled products.
Distribution of gas	(Bombay)	0.50	..	20 million c.ft. of gas daily.
Reorganisation of Workshop at Nangal.		0.50	..	....
Refractories plant	Churk (U.P.)	0.85	0.30	24,000 tons of refractories.
Expansion of Precision instruments factory.	Lucknow	0.69	0.22	....
Organic Chemicals Scheme	*Durgapur*	*4.00*	*2.00*	*Caustic soda (6,600 tons)*, phenol (6,600 tons), chlorine (5,800 tons), phthalmic anhydride (6,600 tons), formaldehyde (5,000 tons), petrochlorophenol (1,000 tons).
Cotton spinning mill	(W. Bengal)	0.65	0.08	25,000 spindles.
Miscellaneous schemes costing less than Rs. 50 lakhs each.	....	15.61	4.00	....
Grand Total	....	64.98	24.98	....

TABLE III—Mineral Projects of Central Government (Rs. crores)

	Total outlay	Foreign exchange component
A. Projects under execution and carried over from second Plan		
Coal—		
Coal programme of N.C.D.C.	8.00	..
Washeries at Bhojudih, Patherdih and Dugda	7.50	4.00
	15.50	4.00
Oil—		
Oil India—		
Crude pipeline	8.00	..
Share capital in Oil India	1.48	..
	9.48	..
Lignite—		
Neiveli lignite project—		
Mining scheme	3.29	1.80
Housing	3.00	..
	6.29	1.80
Iron ore—		
Kiriburu	6.00	3.93
Total	37.21	9.23
B. New projects for which external credits are already assured, wholly or partly		
Coal—		
Additional coal (17 million tons) from the N.C.D.C.	57.00	28.00
Singareni expansion (three million tons)	20.00	5.00
Maintenance of production	16.00	10.00
Central workshop	8.00	2.70
Drills for prospecting	2.00	1.40
Advance action for the fourth Plan	10.00	7.00
Central ropeways	16.00	8.00
Additional washing capacity for coking coal	20.00	11.90
	149.00	74.40
Oil—		
Oil exploration	215.00	68.58
Iron ore—		
Bailadila iron ore project	17.00	8.55
Copper projects—		
Khetri copper project	10.00	6.96
Daribo copper project	2.50	
Grand Total	393.50	142.84
C. Other Projects		
Coal—		
Non-coking coal washeries	12.00	7.00
Neiveli lignite project—		
Expansion of mine output	3.80	1.45
Oil—		
Oil distribution programme	10.00	..
Oil India	8.00	..
Crude oil pipelines	4.00	..
Oil products pipelines	67.00	10.00
Other minerals—		
Sikkim copper project	2.50	1.80
Panna diamond project	1.50	0.60
Manganese ore beneficiation plants	5.00	1.00
Project for sulphur from pyrites	5.00	3.50
Kolar gold mines	1.50	0.84
Hutti gold mines	0.50	0.30
Expansion of Kirburi	6.00	3.00
Uranium mining, fabrication and plutonium extraction plants	34.00	8.17
	46.00	17.61
Surveys—		
G.S.I. expansion	10.00	3.19
I.B.M. expansion	5.00	1.89
	15.00	5.08
Grand Total	456.51	198.21

TABLE IV—Mineral Projects (States)

	Total outlay
New schemes with a total outlay of Rs. 50 lakhs or more	
Kalakot coal mining project (Kashmir)	
Rajasthan Mining Corporation (exploitation [illegible] and flourspar at Dungarpur)	
Board of Mineral Development of Mysore [illegible] iron and manganese ores in the State)	
Miscellaneous schemes costing less than Rs. [illegible]	

"INDIAN SUGAR" ANNUAL NUMBER

The 1961 Annual Number of *Indian Sugar* (Editor: Mr. J. S. Mehta), published by the Indian Sugar Mills Association, India Exchange, Calcutta 1, contains several interesting articles on the different aspects of sugar industry written by persons who can speak with authority on their respective subjects. The aspects covered include a review of the expanding sugar industry, problems of technology, sugarcane and its problems, sugar confectionery, and by-products of sugar—the position in foreign countries. The statistical section gives, as usual, detailed figures relating to sugar production, consumption, prices, acreage under and outputs of cane, etc. Special mention must be made of the four tables pertaining to (a) retail prices of sugar in selected countries as at 1st January 1959 and 1960, (b) recent trends in sugar production in the different countries, (c) *per capita* consumption (1959) and (d) world net exports and imports of sugar during the years 1957, 1959 and 1960.

GWALIOR RAYON FORGES AHEAD

DIVIDEND RAISED—PULP PROJECT TAKEN UP

THE shareholders of the Gwalior Rayon Silk Manufacturing (Weaving) Company Ltd. (*Managing Agents: Birla Gwalior Private Ltd.*, Gwalior) have every reason to feel gratified at the results of the Company for the year ended 31st March 1961. For the progress during the year was quite impressive. Thus, the production of staple fibre rose from 4.61 million lbs. to 4.87 million lbs. on top of an expansion of 1.08 million in 1959-60. Reflecting the growing popularity of "Gwalior Rayon," sales have recorded a substantial improvement of Rs. 117.81 lakhs to Rs. 10.89 crores, representing an increase of more than 12 per cent over the previous year. The gross and net earnings are also higher at Rs. 379.38 lakhs and Rs. 318.62 lakhs respectively, as against Rs. 350.49 lakhs and Rs. 277.45 lakhs last year. The Directors are, therefore, fully justified in raising the dividend on ordinary shares from 20 per cent taxable for 1959-60 to 22.5 per cent taxable for the year under review, giving a tax-free dividend of 15.75 per cent.

The gross profit at Rs. 379.38 lakhs, represents an increase of Rs. 28.89 lakhs over that for the previous year. The profit margin (the ratio of gross profit to sales turnover) has, however, declined, albeit slightly, from 36.1 per cent to 34.8 per cent. This is mainly the result of the sharp rise in other manufacturing expenses from Rs. 195.63 lakhs in 1959-60 to Rs. 252.59 lakhs. It may be noted that, in the previous year, the other manufacturing expenses had actually witnessed a decline of Rs. 24.68 lakhs from Rs. 220.31 lakhs in 1958-59. Of the rise in other manufacturing expenses aggregating Rs. 56.96 lakhs in 1960-61, the share of payments to and provisions for employees is of the order of Rs. 7.13 lakhs. The expenses under the head 'power, fuel, stores, spares and repairs' have also risen sharply by Rs. 29.33 lakhs to Rs. 116.31 lakhs.

The Commission to managing agents is lower at Rs. 19.42 lakhs, as compared with Rs. 29.34 lakhs for 1959-60, because the latter included Rs. 6.33 lakhs in respect of 1957-58 and 1958-59. The provision for depreciation is slightly lower at Rs. 41.34 lakhs, as against Rs. 43.70 lakhs last year. During the year under review, too, the Directors have not made any provision for taxation. As stated in the Directors' report for 1959-60, the Madhya Pradesh High Court has accepted the Company's claim for exemption from income-tax and super tax for a period of 12 years under the agreement executed by the Gwalior Government. The Government of India has, however, appealed against the decision of the High Court and the matter is pending before the Supreme Court. The Company's tax liability on this score upto 31st March 1961 is of the order of Rs. 280 lakhs which is adequately covered by appropriations to general reserve both this year and last year. Incidentally, it may be noted that the 12-year period of tax concession expires at the end of March 1965.

As stated earlier, the net profit works out to Rs. 318.62 lakhs, as against Rs. 277.45 lakhs for 1959-60. The Directors have transferred Rs. 205 lakhs to general reserves, in addition to Rs. 15 lakhs to preference shares capital redemption account and Rs. 7.33 lakhs to the development rebate reserve. The dividend on ordinary shares absorbs Rs. 56.25 lakhs and on preference shares Rs. 12.92 lakhs, leaving Rs. 42.93 lakhs to be carried forward.

The progress of the Company in the past four years is fully reflected in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales (gross)	10,88.54	9,70.73	8,36.63	3,70.86
Other income	19.67	12.99	6.72	3.96
Closing stocks	56.76	55.76	41.40	99.74
Raw materials consumed	4,76.53	4,37.13	3,71.48	2,34.68
Other expenses	2,52.59	1,95.63	2,20.31	72.18
Gross profits	3,79.38	3,50.49	2,51.55	68.02
Managing Agents' remuneration	19.42	29.35	11.95	0.71
Provision for—				
Depreciation	41.34	43.70	2,04.44	32.50
Taxation			14.75	
Net profit	3,18.62	2,77.45	†20.41	†34.81
To reserves	2,20.00	1,65.00		2.75

Dividends—				
6 per cent preference	12.92	53.14*	28.67	..
Ordinary	56.25	50.00	25.00	..
	(22.5%)†	(20%)†	(10%)†	..
Carry forward	42.93	20.81	12.68	1,00.49

* For the period 1-1-1955 to 31-3-1960.
† Subject to deduction of tax.

The Weaving Division of the Company at Gwalior is working satisfactorily. The Company has applied for permission to install additional looms. Suitings and other products made by the Company are being well patronised by the customers and many new fabrics were introduced during 1960-61. The Company is also making efforts to develop export markets. Several varieties of the Company's fabrics have already become popular with foreign consumers. In order to develop export markets more intensively, the officials of the Company visited Middle East and Far East countries and made valuable contacts.

The research work in connection with staple fibre of higher dry and wet strength, entrusted to the Birla College at Pilani, has been continued and the results are stated to be satisfactory. Further equipment required for the research project has already been installed and trials are expected to take place during the latter part of 1961-62. Meanwhile, good progress has already been made in improving fibre tenacity. It is estimated that the improvement in 1960-61 was nearly 120 per cent, an increase of one-fifth over the past six years.

The Company is going ahead with its project for making rayon grade pulp in the country. The licence for the wood pulp plant has been amended by the Government raising the production capacity from 100 tons to 150 tons per day. The construction work at the site at Mavoor near Calicut in the Kerala State is in full swing and some of the machinery have already reached the plant site. The plant is expected to commence production in the latter half of 1962.

The Company has decided to take to the manufacture of rayon machinery also. It has secured a licence for setting up a plant having an annual capacity to manufacture the complete staple fibre plant of 15 to 18 tons per day capacity or one complete filament rayon plant of 7½ tons per day capacity. A senior official of the Company recently visited foreign countries for securing technical collaboration. It is stated that the negotiations have resulted in a draft agreement which has been forwarded to the Government for approval. The Company has also applied for licence to import necessary machinery and equipment.

The financial position of the Company as disclosed by the balance-sheet as on 31st March 1961 is quite strong. The total paid-up capital of Rs. 400.76 lakhs, comprising Rs. 250 lakhs in ordinary shares of 2,500,000 of Rs. 10 and Rs. 150.76 lakhs in 8.57 per cent 150,765 redeemable cumulative preference shares of Rs. 100, is well supported by free reserves of Rs. 229.73 lakhs. In addition, there are reserves of Rs. 280 lakhs for meeting the contingency regarding the tax liability referred to above. The secured loans are small, being no more than Rs. 7 lakhs, as against Rs. 3.73 lakhs last year. Current liabilities and provisions have declined by Rs. 42.16 lakhs to Rs. 177.51 lakhs, as against which the cash balances alone aggregate Rs. 586.18 lakhs, out of the total current assets amounting to Rs. 824.46 lakhs. Besides there are investments of the value of Rs. 10.43 lakhs. The gross block has increased from Rs. 650.02 lakhs in 1959-60 to Rs. 713.29 lakhs. As the depreciation written off upto 31st March 1961 amounts to Rs. 453.18 lakhs, the book value of fixed assets is only Rs. 260.11 lakhs. It will thus be noted that the Company has sufficient resources of its own to take care of the pulp project.

The Rs. 10 fully paid-up ordinary shares of the Company are highly fancied by investors and touched a high of Rs. 57.50 in the first week of July 1961. They are currently quoted on the Bombay Stock Exchange at Rs. 48 c.d. and offer a net yield of 3.38 per cent per annum on ex-div. basis and at the proposed rate of dividend.

(Concluded from next column)

1952, has been made to the Central Government and the licence is awaited.

Currently, the Rs. 100 fully paid ordinary shares of the Company are being quoted at Rs. 128 cum-div. On an ex-div. basis and taking the dividend only at 12 per cent per annum, the net yield works out to 7 per cent per annum. The conditions in cotton textile industry so far during the current year have been satisfactory and it should be possible for the Company to repeat the highly encouraging performance in the year under review.

DAVANGERE COTTON'S RESULTS QUITE ENCOURAGING

FINANCIAL POSITION IMPROVES

THE Davangere Cotton Mills Ltd. (Managing Agents: Messrs. R. Hanumanthappa & Son, Davangere) has recorded further substantial improvement in turnover and profits for the year ended 31st March 1961, although cotton prices generally ruled high and price reductions in manufactured goods were effected in deference to the Government's request. However, "there was no material change in the cloth prices by such reductions," the Directors state in their report to the shareholders, "as the Company always took care to maintain the rates at fair levels." The value of sales reached a new record figure of Rs. 1.68 crore, being 19 per cent higher than during the previous year, the actual increase being Rs. 26.46 lakhs. The gross profit shows a much sharper rise of Rs. 15.77 lakhs, or 59 per cent to Rs. 36.94 lakhs. With higher profits, provisions for the managing agents' remuneration and taxation have perforce been higher, the former having been stepped up from Rs. 1.56 lakh to Rs. 2.91 lakhs and the latter from Rs. 4.60 lakhs to Rs. 12.50 lakhs. The provision for depreciation has also been raised by Rs. 3.51 lakhs to Rs. 10.78 lakhs. A substantial portion of this increase, amounting to no less than Rs. 3.28 lakhs, represents the additional amount that is required to be set aside to bring the written down value of fixed assets in the Company's books to the level under the Income-tax Act. After making these essential provisions, the net profit stands improved by Rs. 3.01 lakhs or nearly 40 per cent to Rs. 10.75 lakhs. Transfer to the development rebate reserve has been reduced by Rs. 70,000 to Rs. 95,000, while that to the reserve for repayment of mortgage loan has been maintained at Rs. 2.50 lakhs. The general reserve has been credited with Rs. 2.15 lakhs, as against a mere Rs. 9,664 last year. The ordinary dividend has been maintained at 12 per cent per annum, subject to deduction of tax. This will absorb Rs. 3.58 lakhs. In addition, a special bonus of 5 per cent per annum (requiring Rs. 1.50 lakh from the profits of the year under review) has been recommended in commemoration of the Silver Jubilee of the Company. The total amount distributable to the shareholders this year thus works out to Rs. 5.08 lakhs, as compared to Rs. 3.56 lakhs a year ago.

The following comparative table present the progress made by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	1,67 86	1,41 39	1,35 39	97 45

* Subject to deduction of tax.

The financial position of the Company, as disclosed by its balance-sheet as at 31st March 1961, is fairly strong. The share capital of Rs. 29.99 lakhs, all in 30,000 equity shares of Rs. 100 each is backed by Rs. 34.43 lakhs in reserves. Secured and unsecured loans have been sharply reduced from Rs. 63.03 lakhs to Rs. 30.82 lakhs. Current liabilities and provisions at Rs. 36.20 lakhs are no doubt higher by Rs. 17.31 lakhs, but the total indebtedness is down by Rs. 15.22 lakhs at Rs. 67.02 lakhs which are nearly balanced by current assets of the order of Rs. 66.89 lakhs. Additions to fixed assets during the year amounted Rs. 11.77 lakhs bringing the book value of such assets to Rs. 132.03 lakhs which has been written down to Rs. 64.55 lakhs.

During the course of the year, the Company purchased in court auction the erstwhile Narayandas Chunilal Mills, Gadag, costing in all Rs. 7 lakhs. It comprises of 12,000 spindles and 218 looms. Necessary application under the Industries (Development and Regulation) Act,

DICKINSON BROTHERS LIMITED

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

METTUR CHEMICAL PLANS EXPANSION

ANOTHER RIGHT ISSUE IN THE OFFING

SHAREHOLDERS of the Mettur Chemical and Industrial Corporation Ltd. (Managing Agents: Messrs. Seshasayee Brothers Private Ltd., Mettur Dam R. S.) have every reason to be satisfied with the Company's performance during the year ended 31st March 1961. Production of the main chemicals was maintained at satisfactory levels, as will be evident from the following figures, those in brackets referring to the previous year:

Caustic soda 5,760 tons (5,066 tons),

Bleaching powder 5,535 tons (4,489 tons),

Liquid chlorine 1,207 tons (1,142 tons).

Consequent on this improvement in output and the sustained demand particularly for bleaching powder, the sale proceeds have risen by Rs. 16.57 lakhs to Rs. 133.89 lakhs, thus completely making good the small setback suffered during the previous year. With the continuance of Governmental control on the prices of the Company's main chemicals, however, the working of the bleaching powder plant during the major part of the year under review was at an uneconomic level. But, owing to the commencement of working of the potassium chlorate plant and satisfactory returns from lime and vegetable oil products, the Company was able to make up for the shortfall in the working of its main lines of manufacture. The gross profit, accordingly, shows a modest increase of Rs. 3.27 lakhs to Rs. 28.36 lakhs, the highest on record so far. Provision for managing agents' remuneration which had absorbed Rs. 2.05 lakhs for 1959-60 has, for the year in review, taken a lower amount, namely, Rs. 1.58 lakh. With a bigger depreciable block, provision for depreciation has had to be increased by Rs. 2.51 lakhs to Rs. 9.47 lakhs while that for taxation has also gone up to Rs. 6.60 lakhs from Rs. 4.75 lakhs a year ago.

With the small improvement in gross profit thus more than fully compensated by substantial increases in essential provisions, the net profit has actually gone down from Rs. 11.33 lakhs to Rs. 10.71 lakhs. Transfer to reserves has, nevertheless, been maintained at Rs. 3.50 lakhs, with Rs. 2.50 lakhs going to the development rebate reserve and Rs. 1.00 lakh to the general reserve. With a view to maintaining dividends at the same rates as those for the previous year's, it has been found necessary to draw back Rs. 2.80 lakhs from the reserves. Out of the sum available, preference dividends have been declared as per the provisions of the Act governing such dividends at the rate of 6 per cent per annum, subject to deduction of tax, and absorb Rs. 1.56 lakh. Ordinary dividend proposed at 12½ per cent, subject to the deduction of tax, claims Rs. 8.41 lakhs, leaving a small sum of Rs. 16,000 as carry forward to the next accounting period. Although the rate of ordinary dividends has remained unchanged, such is, however, payable on increased capital, following the issue of new shares.

Results of operations of the Company during the past four years are set forth in the comparative table below:

(Value in lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	133.89	117.32	121.37	117.03

Carry forward	0.16	0.13	0.19	0.30

* Subject to deduction of tax.

Against an authorised share capital of Rs. 3.00 crores, the Company has an issued and subscribed share capital of Rs. 1.00 crore consisting of Rs. 20.00 lakhs in 6 per cent tax-free cumulative preference shares and Rs. 80.00 lakhs in equity shares of Rs. 10 each. A year before, the equity capital was Rs. 60 lakhs. The paid-up capital is supplemented by Rs. 26.54 lakhs in various reserves. Loans, secured as well as unsecured, aggregate Rs. 58.01 lakhs in addition to current liabilities and provisions of Rs. 25.11 lakhs. With the addition of Rs. 14.52 lakhs during the year, the gross block has a book value of Rs. 156.18 lakhs which has been well written down to Rs. 74.61 lakhs. To this sum is to be added Rs. 27.26 lakhs being the cost of machinery pending erection to get a net block of Rs. 101.87 lakhs. Current assets, inclusive of investments and loans and advances, total Rs. 107.79 lakhs and are sufficient to cover fully all liabilities with the exception of share capital and reserves.

As regards the Company's plans for expansion and development, it is well to reproduce here what the Directors themselves say in their report to the shareholders:

"Our expansion scheme to step up production of caustic soda from 20 to 40 tons per day has been making good progress and we expect to complete the erection of the plant and start higher rated production by October this year.

"With a view to keeping abreast of development elsewhere, the Directors have decided to step up production of caustic soda in a big way to 100 tons per day and to commence manufacture of organic chemicals based on chlorine. The additional production of caustic soda (60 tons per day) will be of rayon grade quality.

"With the increasing requirements of caustic soda in the third Plan period and the target of 3,50,000 tons per year which has been set in the third Plan, most of the existing caustic soda factories are effecting substantial expansion. In line with such expansion and in pursuance of our programme, we applied for and have secured a licence to expand our capacity of caustic soda from 40 to 100 tons per day, and for manufacture of other chemicals mentioned above. This expansion of caustic soda production and the manufacture of new lines of organic chemicals will entail a further capital expenditure of Rs. 2.5 crores. It is absolutely necessary to seek foreign collaboration in the production know-how of these organic chlorine chemicals and, if possible, also obtain capital participation. It will, therefore, be necessary to find, in the near future a part of this capital by the issue of shares, equity and/or preference, besides loan capitals. The shareholders will be approached regarding such an issue at the appropriate time as soon as we are able to estimate exactly our capital requirements and ascertain how much we would raise as loan capital."

It will thus be noted that a right issue is pending.

The present market quotation for the Company's Rs. 10 fully paid ordinary share is Rs. 14.55 *cum-div.* The yield works out to 6.4 per cent per annum net, on an *ex-div.* basis.

CAMPHOR AND ALLIED PRODUCTS LTD.

The Camphor and Allied Products Ltd. (Chairman: Mr. C. C. Desai), floated recently to undertake manufacture of camphor for the first time in India, has announced that it will enter the market for raising capital in the first week of next month: the subscription list is due to open on 4th September. The Company has been promoted by Messrs. Jayant Dalal, Damu Babubhai Jhaveri and Chinubhai C. Dalal. It will put up at Clutterbuckganj, near Bareilly in U.P., a factory with a capacity to produce 900 tons of synthetic camphor and about 60 tons of thymol per annum. It has secured the technical collaboration of that well-known U.S. chemical firm, the Du Pont. The terms of collaboration include an initial payment of $25,000 and a royalty for a period of eight years at the rate of 1.4 cent per lb. of camphor produced. Another American firm, the American Hydrotherm Corporation of New York, will supply and erect the plant and machinery, the total cost of which is estimated at Rs. 62 lakhs, including a foreign exchange component of Rs. 25 lakhs.

The overall capital outlay on the project is placed at Rs. 130 lakhs, of which Rs. 60 lakhs, made up of 50,000 equity shares of Rs. 100 each and 10,000 cumulative redeemable preference shares (9.23 per cent) of Rs. 100 each, will be met in the form of paid-up capital. The promoters, directors and their friends have agreed to subscribe Rs. 19.52 lakhs to equity capital and the American Hydrotherm Corporation Rs. 1.92 lakh. The Life Insurance Corporation has agreed to undertake equity shares and preference shares of the value of Rs. 5 lakhs each on firm allotment basis. The balance of Rs. 23.56 lakhs represents the equity shares that will be offered to the public, besides the preference shares worth Rs. 5 lakhs. Of the remaining portion of the outlay, that is, Rs. 70 lakhs, a sum of Rs. 48 lakhs will be found by way of long-term loans and Rs. 22 lakhs in the form of deposits and customary bank loans on raw materials.

The Company has secured sanction for a long-term loan of Rs. 18 lakhs from the Industrial Finance Corporation and another loan of Rs. 30 lakhs (Rs. 24 lakhs in foreign exchange and Rs. 6 lakhs by way of rupee loan) from the Industrial Credit and Investment Corporation of India.

The factory is expected to go into production by the end of next year. The total value of production is estimated at about Rs. 1 crore annually. The factory is assured of complete road and rail facilities, as well as power and water supply. The major portion of the main raw material, namely, turpentine, will be supplied by the leading manufacturing firm, the Indian Turpentine and Rosin Co., Ltd., Bareilly.

COMPANY MEETINGS AND DIVIDEND

GAIRKHATA TEA CO., LTD. Annual General Meeting, Calcutta, 13th September 1961. Dividend: per cent or Rs. 25.00 per share, subject to deduction of tax, payable on or after 29th September 1961. Transfer books will remain closed from 4th to 14th September 1961, both days inclusive.

Carried forward (+) or (—)	(—) 8,27*	(+) 8

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

* This is the final debit balance carried forward after taking into account adjustments and after making provisions for depreciation; development rebate reserve; payment of gratuities and adjustments relating to previous years. It will be noted that this debit balance has been adjusted against reserves as shown in balance sheet.

† After providing for Managing Agents' commission.

Extracts from the Directors' report: The results are extremely disappointing but it was reported by the directors at the last annual general meeting that measures being taken to overcome the restricted imports due to foreign exchange difficulties would not be effective in the accounting year 1959-60 and this has come to pass.

The directors would also like to bring to the shareholders' notice that in this time of transition the managing agents decided that new ideas and new thinking with a stricter measure of control were necessary, and during this period senior changes in Executive control have been made. Naturally with the various obligations entered into a period of time must elapse before an improvement in results is shown.

It is obvious that the future of this Company is dependent upon a development in its sales attachment to indigenous products and the year under review has been one of steady advancement in this regard, but of necessity this is also a long term issue.

Accounts in brief as at 30th June 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,50,000	Gross block	19,41,679
Reserves†	10,86,338	—Depreciation	15,38,707
Other liabilities	1,46,80,125	Net block	4,02,872
		Current assets	1,59,60,737
		Investments	1,06,613
		Cash	3,66,239
	Rs. 1,68,16,461		Rs. 1,68,16,461

* Paid-up capital consists of 5,25,000 ordinary shares of Rs. 2 each, fully paid up.

† Reserves are shown after deducting the debit balance of Rs. 8,20,589 in the profit and loss account.

Benares Electric Light and Power Co., Ltd.

(*Managing Agents*: Messrs. Martin Burn Ltd., Calcutta.)

Annual General Meeting—7th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960

" " National tax relief reserve	Nil	7
" " rebate to consumers	Nil	28
" " tariffs and dividends control reserve	Nil	28
Net profit	2,47	4,80
Adjustments	3,09	1,17
Appropriation:		
Total available balance	5,56	5,97
Transfer to bonus (in respect of previous year)	1,22	1,42
" " taxation (in respect of previous year)	Nil	10
" " reserve for redemption of debentures	Nil	88
" " general reserve	1,00	1,25
Proposed dividend (taxable) Ordinary	1,87 (11½%)	1,87 (11½%)
Carried forward	47	45

N.B.—Adjustments include the balance brought forward from the previous year; amount transferred from deferred taxation reserve and amount transferred from tariffs and dividends control reserve if any.

Extracts from the Directors' report: At present the power supply position at Benares is very unsatisfactory, as the steam plant at the Company's power station is loaded to capacity and the diesel plant hired from the State Government is insufficient to cater for all the demands for the supply of energy in the area. Control of electric supply has been enforced under the U.P. Electricity (Temporary Powers of Control) Act, 1947, and as the existing plant is operating at full capacity due to restrictions and the staggering of loads, saturation point in respect of supply has almost been reached.

The State Electricity Board has undertaken to augment the availability of electrical energy by affording the Company a supply to the extent of 4,000 kw. from the Rihand System as from early 1962 and arrangements to take the supply are already in hand.

Operating expenses have increased principally on account of the hire of the diesel plant, the high cost of diesel generation and the increased cost of steam generation due to the insistence of the Government of India that power stations should utilise larger quantities of inferior grades of coal. In view of the present limited plant capacity, it has not been possible to offset these additional operating costs by increased production. As a result, the Company has not earned the full amount of reasonable return permitted under the provisions of the Electricity (Supply) Act, 1948. To meet these additional expenses and to enable the Company to earn the prescribed return, it has been found necessary to raise the rates for supply to consumers as from the 3rd October 1961. The requisite notices have already been sent to the State Government and the State Electricity Board.

Owing to Income-tax depreciation allowances the Company has no liability on account of taxation on the profits for the year in question, and no provision has accordingly been made in the accounts in respect thereof.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	17,00,000	Gross block	1,78,08,355
Debentures	12,15,690	—Depreciation	51,62,951
Reserves and surplus	49,23,313		
Other liabilities	94,64,805	Net block	1,26,45,404
		Current assets	26,12,434
		Investments	6,67,441
		Cash	13,45,332
		Miscellaneous expenditure	33,197
	Rs. 1,73,03,808		Rs. 1,73,03,808

* Paid-up capital consists of 1,70,000 ordinary shares of Rs. 10 each, fully paid up.

Cellulose Products of India Ltd.

(*Managing Director*: Mr. Laxmikant Bhaghubhai.)

Registered Office: Kathwada (Dist. Ahmedabad.)

Second Annual General Meeting—18th September.

Extracts from the Directors' report: The accounts for the year ended 31st March 1961 shows a debit balance of Rs. 8,591 after adjusting expenses of Rs. 2,42,557 which are capitalised. Expenses of Rs. 59,522 for the year 1959-60 have also been capitalised during the year and net debit balance of Rs. 30,861 shown and carried forward in income and expenditure during construction account last year, is converted into a profit of Rs. 28,661 to which the loss of Rs. 8,591 for the year 1960-61 has been adjusted, leaving a net credit balance of Rs. 20,070 carried forward.

Operations: The directors have pleasure in reporting that the first production programme of the factory envisaged in the prospectus has been attained. Company's Cellulose Pulp Plant started on 18th March 1961 and thereafter the trial operations of C.M.C. Plant was commissioned on 15th June, 1961. After due consideration it has been decided to accelerate the manufacturing programme, in order to reach as early as possible the rated capacity. The directors, therefore, hope that by about October 1961, the Company will be in a position to bring out quality products for all various grades of technical C.M.C. It must, however, be cautioned that in the initial stages teething troubles may come in the way but the modern plant and machinery which has been set up should enable the Company to achieve the normal production in the not too distant future.

Simultaneously the directors are actively thinking of going ahead with the construction and erection of machineries concerning purified C.M.C. project. Orders for all required machineries—indigenous as well as foreign—have been ordered out and no endeavour will be spared to accelerate the setting up of the plant. The Government of India have granted the Company further imports of machinery worth Sw. Krs. 2,00,000 (about Rs. 1,85,200) for this, on Loan Account basis from Messrs. Skandinaviska Banken, Stockholm, Sweden.

Expansion: The Company is in the possession of an Industrial Licence to manufacture *Rayon Grade Dissolving Pulp* at the rate of 20 tons/day. The said licence was received in the month of May, 1960. Since the issue of this licence, it has collected all required statistics, data and information. The indigenous supply of raw material of the required quality is in very scarce supply and a series of similar licences have also been issued by the Government of India. After carefully considering all relevant details, the directors feel that it would be unwise to proceed further with this project.

Calls: Since last annual general meeting, two further calls of Rs. 35 and Rs. 30 each were made on the preference shares of the Company and the preference shares have now become fully paid-up.

Accounts in brief as at 31st March 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	34,67,420	Gross block	21,31,871
Reserves and surplus	20,070	—Depreciation	26,595
Other liabilities	8,90,726	Net block	21,05,276
		Block in progress	5,95,178
		Current assets	6,62,156
		Cash	6,10,221
		Miscellaneous expenditure	4,05,383
	Rs. 43,78,216		Rs. 43,78,216

* Paid-up capital consists of 20,000 equity shares of Rs. 100 each (calls in arrears amount to Rs. 4,750) and 15,000—6½ per cent tax-free cumulative redeemable preference shares of Rs. 100 each (calls in arrears amount to Rs. 27,880).

Pullangode Rubber and Produce Co., Ltd.

(*Managing Agents*: Messrs. Aspinwal & Co., Ltd., Fort Cochin, Kerala State.)

Annual General Meeting—28th August.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales	10,84	9,04
Gross profit	3,64	2,21
Transfer to Managing Agents' remuneration	29	18
" " depreciation	41	41
" " provision for rubber rehabilitation	52	26
" " taxation	1,50	76
Net profit	92	60
Adjustments	17	72
Appropriations:		
Total available balance	1,09	1,32
Transfer to additional provision for rubber rehabilitation	Nil	17
To sales tax paid (in respect of previous year).	Nil	3
To dividends (taxable) 8% T.F.C. Preference.	9	18
" " Ordinary	99 (6%)	82 (5%)
Carried forward	1	17

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: The crop harvested during the year amounted to 313,433 kgs. as against the estimate of 281,227 kgs. or an increase of 32,206 kgs. 1960-61 has established a record in crop since the formation of the Company. During the year a new system of tapping was introduced and this coupled with Stimulex application accounted for the major portion of increase in crop.

Expenditure and average sale prices are compared below:—

Year	Crop (Kgs.)	All-in cost (nP. per kg.)	Average sale price (nP. per kg.)
1957-58	2,65,805	328.87	341.86
1958-59	2,94,041	313.90	339.71
1959-60	2,61,978	336.08	345.11
1960-61	3,13,433	334.09	344.77

It is conservatively estimated that a crop of 294,835 kgs. of rubber will be collected during 1961-62 at an Estate expenditure of 252.04 nP per kg.

Replanting: All the work connected with replanting the 75 acres as mentioned in the last year's report has been completed and the growth of plants is satisfactory. The slaughter-tapping of the 100 acres is completed and the area will be replanted during the current year. In addition to the further 150 acres mentioned in the last report, the directors have decided to progressively replant low yielding and old rubber areas, and a further 200 acres are now being slaughter-tapped with a view to replanting 50 acres in 1963 and 150 acres in 1964. During 1962 an additional 128.60 acres will be slaughter-tapped for replanting in 1965.

During the year under review, 75 acres of the immature budded area of 100.58 acres 1952-53 planting were brought into tapping. During the coming year a further 125 acres will be tapped, namely the 42 acres planted in 1953-54, and part of the 183.32 acres planted in 1954-55.

New Planting: The directors have decided to clear 102.80 acres from the uncultivated reserve land and undertake new planting of rubber during 1962.

Pepper Clearing: With intensive manuring the pepper area has been kept well and a useful crop can be expected in future years.

The controlled price of rubber remained unchanged. Although costs of production has risen, it is regrettable that the Tariff Board who enquired into the price structure did not recommend any increase in rubber price. However the Government have substantially increased the rehabilitation subsidy for replanting, which will assist in the replanting programme referred to above.

Accounts in brief as at 31st March 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	18,00,000	Gross block	23,57,018
Reserves and surplus	2,30,112	—Depreciation	7,87,890
Other liabilities	4,11,729	Net block	15,69,128
		Current assets	2,94,477
		Investments	2,00,791
		Cash	4,17,445
	Rs. 24,41,841		Rs. 24,41,841

* Paid-up capital consists of 8,35,000 ordinary shares of Rs. 2 each, fully paid up and 15,000—6 per cent tax-free cumulative preference shares of Rs. 10 each, fully paid up.

BANGALORE,
26th August 1961.

Notices

GREAVES COTTON AND COMPANY LIMITED

NOTICE TO SHAREHOLDERS

NOTICE IS HEREBY GIVEN THAT THE Forty-first Annual General Meeting of the Shareholders of GREAVES COTTON AND COMPANY LIMITED, will be held on Wednesday the 27th September 1961 at 4-30 p.m. (I.S.T.) at the Registered Office of the Company, 1, Forbes Street, Bombay, to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Balance-sheet and Profit and Loss Account for the year ended 31st March 1961.
2. To declare dividends on Preference and Equity shares.
3. To elect a Director in place of Mr. J. H. Langdon who retires by rotation and, being eligible for re-election under Article 148 of the Articles of Association, offers himself for re-election.
4. To elect a Director in place of Mr. H. D. Varma who retires by rotation and, being eligible for re-election under Article 148 of the Articles of Association, offers himself for re-election.
5. To consider and, if thought fit, to pass with or without modifications the undernoted Resolution as an Ordinary Resolution:

"RESOLVED that pursuant to subsection (1) of Section 293 of the Companies Act 1956, and Article 173 of the Articles of Association of the Company and all other enabling provisions (if any), consent be and is hereby accorded to the Board of Directors of the Company to borrow any sum or sums of money, from time to time, from any one or more of the Company's Bankers or from any one or more other persons, firms, bodies corporate or financial institutions, by way of cash credit, advances or other loans whether unsecured or secured by mortgage, charge, hypothecation or pledge of the Company's assets and properties whether movable or immovable or stock-in-trade (including raw materials, stores, parts and components in stock or in transit) and work-in-progress, notwithstanding that the sum or sums so borrowed, together with the moneys, if any, already borrowed by the Company (apart from the temporary loans obtained from the Company's Bankers in the ordinary course of business), may exceed the aggregate of the paid-up capital of the Company and its free reserves which have not been set apart for any specific purpose, but that the total amount up to which the money may be so borrowed by the Board of Directors shall not at any time exceed Rupees Three Crores Fifty Lacs."

6. To consider and, if thought fit, to pass with or without modifications the undernoted Resolution as an Ordinary Resolution:

"RESOLVED that pursuant to the Notice No. Com. IV(1)/13-g/61-62 dated 2nd August 1961 served on the Company by the Income-tax Officer, Companies Circle IV(1), Bombay, under Section 23A of the Indian Income-tax Act, 1922, for the assessment year 1952-53, a dividend of Rs. 60,345 at the rate of 90 nP per share subject to deduction of tax be and is hereby declared payable, out of the profits of the year ended 31st March 1952 to the holders of 67,050 ordinary shares whose names stood on the Company's Register on 20th November 1952 and that the said dividend of Rs. 60,345 be paid by transferring an equivalent amount from the General Reserve."

7. To appoint Auditors to hold office for the period from the conclusion of the meeting until the conclusion of the next Annual General Meeting of the Company and to fix their remuneration.

Notes:—(a) The relative Explanatory Statement as required by Section 173 of the Companies Act, 1956, in regard to the special business under items 5 and 6 set out above has been forwarded to the members of the Company.

(b) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER OF THE COMPANY.

According to Article 118 of the Articles of Association, the instrument appointing a proxy and the power-of-attorney or other authority (if any), under which it is signed or a notarially certified copy of that power or authority, shall be deposited at the Registered Office of the Company not later than forty-eight hours before the time for holding the meeting; in default the instrument of proxy shall not be treated as valid.

(c) The Share Transfer Books of the Company will be closed from the 11th day of the September 1961 to the 25th day of September 1961 both days inclusive.

(d) The dividend under item 2 when sanctioned at the Annual General Meeting will be payable at National and Grindlays Bank Ltd., Lloyds Branch, Bombay, to those members whose names have been registered on the Company's Registers on 11th September 1961 and Dividend Warrants will be despatched to them on and after 23rd October 1961.

The dividend under item 6 when sanctioned as aforesaid will be similarly payable to those persons whose names stood on the Company's Register on 20th November 1952.

By Order of the Board of Directors,
N. M. WAGLE,
Managing Director.

1, FORBES STREET,
BOMBAY 1, *28th August*, 1961.

JARDINE HENDERSON, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Thursday 28th September 1961 at 11 a.m., for the following purposes:

1. To receive and consider the Audited Accounts for the year ended 31st March, 1961, the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors thereon.
2. To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares of the Company.
3. To appoint a Director in place of one retiring and in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required by Section 281 of the Companies Act, 1956 has been received by the Company, viz. :—

"That pursuant to the provisions of Section 281 of the Companies Act, 1956, Sir Asoka Kumar Roy, who has attained the age of 75 years and who retires from the Board by rotation, be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed by Section 280 of the said Act shall not apply to him and that he be remunerated by way of a fee of Rs. 600 for each meeting of the Board attended subject to a maximum in the aggregate of Rs. 6,000 per annum."

4. To appoint Auditors and to fix their remuneration.
5. (*As a special resolution*): To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution, viz. :—

"That approval be accorded to the execution of an agreement between the Company and Mr. John Valentine Jardine Paterson, one of the Managing Directors of the Company, such agreement being supplemental to the agreement dated the 24th day of September 1959, a copy of which draft supplemental agreement has been submitted to this meeting and which for the purposes of identification has been signed by the Chairman thereof, the effect of such supplemental agreement being to increase the maximum limit of commission payable to Mr. J. V. Jardine Paterson, for the year 1st April 1961 to 31st March 1962 from the existing maximum limit of Rs. 16,000 to Rs. 25,000, the terms and conditions of the agreement dated the 24th day of September 1959 remaining unaltered in all other respects."

Notice is also given that the Transfer Books of the Ordinary Shares of the Company will be closed from the 14th September to the 28th September 1961, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, CLIVE ROW,
CALCUTTA-1, *11th August* 1961.

Note:—An Explanatory Statement is annexed to the Convening Notice issued to Members of the Company.

THE INDIAN CABLE COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-second Annual General Meeting of the Shareholders of The Indian Cable Company Limited will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Wednesday, 27th September 1961 at 11 O'clock in the forenoon for the following purposes:

(1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March 1961.
(2) To declare Dividends.
(3) To re-appoint a Director who retires by rotation.
(4) To re-appoint the firm of Messrs. Lovelock & Lewis of 4, Lyons Range, Calcutta, Auditors of the Company for the current year and to fix their remuneration.

AS SPECIAL BUSINESS

(5) To consider resolutions in relation to the following matters and things:
  (a) In pursuance of Section 228(1) of the Companies Act, 1956 to appoint the firm of Messrs. A. F. Ferguson & Co. of Bombay for the purpose of auditing the accounts of the Factory at Tatanagar and the Branch Offices of the Company at Bombay, Ahmedabad, Jamshedpur, Kanpur, Nagpur, New Delhi and Secunderabad, and to fix their remuneration.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

THE INDIAN CABLE COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT A General Meeting of the Members of the Company will be held at the Registered Office of the Company, 9, Hare Street, Calcutta, on Wednesday, the 27th day of September, 1961, at 10.45 a.m. to consider and, if thought fit, to pass, with or without modification, the following resolution which will be proposed as a special resolution:—

"RESOLVED that subject to the sanction of the Central Government under the provisions of the Companies Act, 1956, being received, the Articles of Association of the Company be altered in the manner following:—

(1) The word 'seven' in Article 88 be substituted by the word 'nine'.

(2) After Article 90 the following Article numbered 90A be inserted:

'90A. So long as any moneys borrowed by the Company from the Industrial Credit and Investment Corporation of India Limited shall remain outstanding, the Industrial Credit and Investment Corporation of India Limited shall be entitled to appoint one director acceptable to the Company to the Board of Directors of the Company and to remove any director so appointed and appoint another in his place or in the place of a director so appointed who resigns or otherwise vacates his office. Such director shall be an ex-officio director within the meaning of these Articles and shall not be required to hold any qualification shares.'

(3) The following proviso be added to the first paragraph of Article 95:

'Provided that the director appointed by the Industrial Credit and Investment Corporation of India Limited shall not be entitled to participate in any commission hereinbefore mentioned.'"

By Order of the Board,
P. S. SHAVAKSHA,
Managing Director.

Registered Office:
9, HARE STREET,
CALCUTTA, *18th August*, 1961.

N.B.—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

NOTICE OF MEETING

SPECIAL BUSINESS

5. To consider, and if thought fit, to pass the following resolution as SPECIAL RESOLUTION with or without modifications.

RESOLVED that Article No. 109 of the Articles of Association of the Company be and is hereby amended so as to read as follows:—

"AT THE FIRST ORDINARY GENERAL MEETING OF THE COMPANY AND AT EVERY GENERAL MEETING IN EVERY SUBSEQUENT YEAR ONE-THIRD OF THE DIRECTORS FOR THE TIME BEING AS ARE LIABLE TO RETIRE SHALL RETIRE FROM OFFICE BY ROTATION."

Under Article 29 of the Articles of Association of the Company the Share Transfer Books of the Company will be closed from 8th September 1961 to 22nd September 1961, both days inclusive.

Note:—Every member entitled to attend and vote is entitled to appoint a Proxy or Proxies to attend and vote instead of himself and a proxy need not be a member.

4 SEP 1961

By Order of the Board,
(Sd.) A. GANESH,
Secretary.

1129, VANIVILASA ROAD,
MYSORE, 5th August, 1961.

The relative Explanatory Statement in respect of the special business is being posted to all the Shareholders.

Note:—The dividend when sanctioned will be made payable at the Indian Bank, Ltd., Bangalore city and branches on and after 20th October 1961. The dividend warrants will be posted to those shareholders whose names appear on the Register of the Company on 8th September 1961.

The Directors have recommended payment of 10% dividend or Re. one subject to deduction of tax, on every share of Rs. 10, for the year.

ORIENT PAPER MILLS LIMITED

Registered Office:
BRAJRAJNAGAR (ORISSA)

NOTICE IS HEREBY GIVEN THAT THE Forty-third Annual General Meeting of the ORIENT PAPER MILLS LIMITED will be held at the registered office of the Company at Brajrajnagar in the district of Sambalpur (Orissa) on Friday, the 29th September, 1961 at 3 p.m. for the following purposes:—

(a) To receive and consider the report of the directors and to adopt the audited accounts of the Company for the year ended 31st March, 1961.
(b) To declare dividends on Preference and Ordinary Shares.
(c) To elect Directors in place of Shri Shavax A. Lal who retires by rotation and in place of Shri R. K. Somany who retires by rotation as well as under Section 261 of the Companies Act, 1956.

Shri R. K. Somany is an associate of the Managing Agents and has been on the Board of Directors since almost the inception of the Company. It is considered desirable to avail of his valuable advice by retaining him as a director of the Company. The Company has received the requisite special notice from a shareholder and accordingly the special notice is hereby given to the shareholders for passing the following special resolution for re-appointment of Shri R. K. Somany, as a director of the Company.

"RESOLVED that Shri R. K. Somany, an associate of the Managing Agents, be and is hereby re-elected as a director of the Company."

(d) To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
B. K. VYAS,
Secretary.

8, INDIA EXCHANGE PLACE,
CALCUTTA, *the 21st August*, 1961.

N.B.—(i) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The Share Registers and Transfer Books of the Company, will remain closed from the 29th August to 14th September, 1961, both days inclusive.

(iii) The dividends, when declared, will be payable to registered shareholders as on the 14th September, 1961 on or after the 25th October, 1961.

GANNON DUNKERLEY AND COMPANY LIMITED

NOTICE

THE THIRTY-EIGHTH ANNUAL GENERAL Meeting of the Company will be held at its Registered Office, Chartered Bank Building, Fort, Bombay, on Thursday, the 28th September, 1961 at 4.00 p.m. to transact the following business:—

1. To receive and adopt the Directors' Report for the year ended 31st March, 1961 together with the audited statement of accounts for the period.
2. To declare a dividend.
3. To elect a Director in place of Shri J. Steffens who retires by rotation but being eligible offers himself for re-election.
4. To appoint a Director in place of Shri Niranjan Narottam Lalbhai who was appointed a Director by the Board of Directors of the Company from 17th August, 1961 and who holds this office only upto the date of the Annual General Meeting but is eligible for election. And to consider and if thought fit to pass the following resolution as an ordinary resolution of which notice as required by Section 257 of the Companies Act, 1956 has been received by the Company:

   "RESOLVED that Shri Niranjan Narottam Lalbhai be and is hereby appointed a Director of the Company."
5. To appoint Auditors for the financial year ending 31st March, 1962.
6. To consider and if thought fit to pass, with or without modifications, if any, as may be agreed upon at the meeting, the following resolution:

   The conditions of the Company's Memorandum of Association read with the Bombay High Court minute dated 29th March, 1954 filed with the Registrar of Companies be and are hereby altered as follows:

   (a) The 1,00,000 Deferred shares of the Company of Re. 1 each which, at the date of the passing of this resolution, have not been taken up or agreed to be taken up by any person stand cancelled and the amount of the authorised share capital of the Company diminished by Rs. 1,00,000.

   (b) Simultaneously the capital of the Company be increased to Rs. 1,00,00,000 by the creation of further 50,000 Ordinary Shares of Rs. 100 each.

   (c) Accordingly the first sentence of Clause V of the Memorandum of Association of the Company and of the said minute be deleted and be substituted by the following:

   "The capital of the Company is Rs. 1,00,00,000 divided into 1,00,000 Ordinary Shares of Rs. 100 each."
7. To consider and if thought fit to pass the following as special resolutions, with or without modifications, if any, as may be agreed upon at the meeting:

   (a) "Article 3 of the Articles of Association of the Company be and is hereby altered by deleting the same and substituting therefor the following: 'The present capital of the Company is Rs. 1,00,00,000 divided into 1,00,000 Ordinary Shares of Rs. 100 each numbered 1 to 1,00,000.'

   (b) "The amendment to Article 99 made by the special resolution passed at the Extraordinary General Meeting of the Company held on 4th May 1950 be and is hereby rescinded and this Article restored as existing prior to the said amendment."
8. To consider and if thought fit to pass the following as a special resolution, with or without modifications, if any, as may be agreed upon at the meeting:

   "The subscribed capital of the Company be increased by Rs. 64,00,000 by the allotment of 64,000 Ordinary Shares of Rs. 100 each numbered 11001 to 22000, 26593 to 29592 and 50001 to 100000 and the Directors do offer these shares for subscription at par to the public (whether or not these include the persons who at the date of the offer are the holders of the Ordinary Shares of the Company) by means of an appropriate prospectus and the Directors are hereby authorised to decide and settle in any manner they think expedient such difficulties as may arise pertaining to these offers to be made in regard to fractions and to determine the appropriate date for making the offer, the other terms of payment for the shares taken up, the date from which the right to dividend on these respective shares will accrue and the disposal of the shares, if any, that remain unsubscribed."

By Order of the Board,
R. MORARKA,
Governing Director.

BOMBAY, 23rd *August* 1961.

N.B.—(i) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(ii) The Transfer Books of the Company will be closed from 21st September, 1961 to 5th October, 1961 both days inclusive.

Annexure to the Notice dated 23rd August, 1961

EXPLANATORY STATEMENT

Item 4: With the proposed expansion schemes of the Company and the consequent increase of the capital, it is desirable that the Company's Directorate is also enlarged and the Company has the advantages and benefits of the experience of Shri Niranjan Narottam Lalbhai.

Item 6: In the light of the subsequent items referred to hereinbelow it is obviously necessary for the Company to exercise the powers conferred by Sections 94 and 103(5) of the Companies Act, 1956 read with Article 54 of the Articles of Association of the Company. It may be mentioned that the Deferred Shares of the Company have never been issued and allotted and it is thus a mere matter of formality to cancel these shares and thereby diminish the authorised capital which is to be simultaneously increased to Rs. 1,00,00,000. Both the Memorandum of Association and the Court minute are alterable in the manner proposed and the Board recommends that this be done.

Item 7: This relates to amendments to the Articles of Association of the Company consequent upon the proposed changes in the capital of the Company. For the convenience of members Article 99 as it stands at present * and as it stood before the 1950 amendment ** are reproduced below:

* Article 99 as amended by special Resolution passed at the Extraordinary General Meeting held on 4th May 1950.

In Article 99 after the words "Rs. 5,000" the words "or deferred shares in the Company of the nominal value of Rs. 500" shall be inserted and the Article so amended shall be read as Article 99.

** The qualification of a Director (other than an Ex-officio, Debenture or Alternate Director) shall be the holding of ordinary shares in the Company, of the nominal value of Rupees five thousand. A Director may act before acquiring his qualification but must acquire the same within two months after his appointment or election.

Item 8: The Directors recommend that the subscribed share capital of the Company be increased from Rs. 36,00,000 to Rs. 1,00,00,000. This recommendation is necessitated by the business requirements of the Company. The present funds and resources of the Company are not commensurate with its many sided activities, future commitments and plans and their efficient operations. The Company has its offices at Bombay, New Delhi, Calcutta, Madras, Ahmedabad, Kanpur and Coimbatore and construction activities throughout India. The Company is also the agent for many foreign and Indian manufacturers and maintains a large specialised staff for their business. The Company has in recent years undertaken various expansion projects such as the Cylinder Factory and the Engineering Workshop at Mahul near Trombay. The Company has further floated (i) a wholly owned subsidiary called Gannon Dunkerley (Orissa) Ltd., which has established a structural engineering workshop at Cuttack Industrial Estate; (ii) a subsidiary called Gannon Electrolytics Ltd., which has a plant at Mahul for the manufacture of Electrolytic Capacitors and other radio and electronic components and (iii) a subsidiary called Gannon Norton Metal and Diamond Dies Ltd., for the manufacture of diamond and tungsten carbide and other metal dies particularly for the Wire Drawing Industry with a factory also at Mahul. All these factories are either already in production or are about to go into production. The Company also has further plans to expand and undertake other manufacturing activities. Moreover, the additional capital is not only required for these expansions and projects but also as working capital for all the many sided departments of the Company, since the Company has been working with limited financial resources. It may be mentioned that a considerable amount of financial liquidity is necessary since the Company is a leading contractor and its investments have to be lodged with Government against execution of contracts.

Directors propose that the increase of issued capital be by Rs. 64,00,000 made up of 64,000 Ordinary Shares of Rs. 100 each. The Directors further propose that the 64,000 Ordinary Shares of Rs. 100 each should be offered for public subscription (whether or not the subscribers under this public offer include the persons who at the date of the offer are the holders of the Equity Shares of the Company). But all these are matters entirely for the shareholders to determine and hence this item 8 of the Notice.

The attention of the shareholders may be drawn to Section 81 of the Companies Act, 1956 which provides that where it is proposed to increase the subscribed capital of the Company by the allotment of further shares then such further shares must first be offered to the persons who at the date of the offer are the holders of the Equity Shares of the Company. But this section itself provides that such further shares may be offered to any persons (whether or not those persons include such aforesaid holders of the Equity Shares of the Company) and in any manner whatsoever if a Special Resolution to that effect is passed by the Company in General Meeting.

The Directors of the Company are obviously interested in the items Nos. 6 to 8 of their Notice as directors and shareholders of the Company.

ALUMINIUM CORPORATION OF INDIA LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Twenty-third Annual General Meeting of the members of THE ALUMINIUM CORPORATION OF INDIA LIMITED, will be held at the Registered Office of the Company at 7, Council House Street, Calcutta, on Thursday, the 28th September, 1961, at 4.30 p.m., for the following purposes:

Shareholders are requested to notify immediately any change in their address for incorporation in the Books of the Company.

Shareholders in possession of Income-tax Exemption Certificates should lodge the same immediately with the Company.

CALL RATE UNCHANGED

(From Our Own Correspondent)

BOMBAY, 30*th August*

Thanks to plentiful supply of money with banks, and moderate demand for loanable funds, conditions in the short-term money market were distinctly comfortable throughout the week under review. Borrowers had no difficulty in obtaining their requirements. In fact, there was a surplus of funds left over. The inter-bank call money rate both among Indian and Exchange banks ruled at 2 per cent throughout the week. The other rates remained unchanged. For purposes of record, they are given below:

		Per cent
Notice Money:		
3 days or more	... ...	3
Term deposits:		
(i)	3 to 30 days (inclusive)	3
(ii)	31 to 60 days	3¼
(iii)	61 to 90 days	3½
(iv)	91 days and more but less than 12 months	3¾
(v)	12 months	4

The results of the 91 days' Treasury bills of the Government of India sold through weekly tenders showed that, as against an invitation for Rs. 2 crores, the amount offered and accepted was the same. The average rate of accepted tenders stood at 2.400 per cent, same as last week. 91 days' intermediate Treasury bills sold from 23rd August to 26th August were of the order of Rs. 1.29 crore. Their sales are being continued from 30th August to 9th September, both days inclusive.

The statement of affairs of the Reserve Bank of India for the week ended 25th August 1961 discloses a sharp fall of Rs. 22.47 crores in notes in circulation, as compared with that for the previous week. As the notes held in the Banking Department have gone up by Rs. 4.33 crores, the total notes issued have receded by Rs. 18.14 crores. The foreign securities held by the Issue Department have not undergone any change, but, as the balances held abroad have dropped by Rs. 2.91 crores, the total foreign assets have shrunk by that amount to Rs. 143.47 crores. On the liabilities side of the Banking Department, deposits of Central Government have declined by Rs. 18.44 crores, the deposits of other Governments have, however, improved by Rs. 6.76 crores. Deposits of banks show a sharp rise of Rs. 15.02 crores to Rs. 102.96 crores. On the assets side, other loans and advances which include loans to scheduled banks against usance bills have shrunk by Rs. 1.15 crore.

An expansion of Rs. 7.25 crores in demand deposits and of Rs. 20.95 lakhs in time deposits is disclosed by the statement of Scheduled banks for the week ended 18th August 1961. The deposits of the State Bank of India went up by Rs. 48 lakhs to Rs. 524.99 crores. Borrowings of the scheduled banks from the Reserve Bank of India shrank by Rs. 1.92 crore of which those against usance bills accounted for Rs. 1.29 crore. Their borrowings from the State Bank of India of demand and time varieties, however, went up by Rs. 1.68 crore and Rs. 28.50 lakhs, respectively. Investments of the scheduled banks, as a whole, improved by Rs. 3.33 crores and those of the State Bank by Rs. 13 lakhs. Advances and bills discounted (bank credit) declined further by Rs. 4.78 crores to Rs. 1,231.49 crores, on top of a contraction of Rs. 2 crores in the preceding week. Of the fall of Rs. 4.78 crores in the advances of all scheduled banks, the share of the State Bank was as high as Rs. 4 crores.

The gilt-edged market remained depressed, with small sellers predominating in most of the issues. In the Central loans' section, only the Conversion Loan gained 10 nP to Rs. 72.70. 2¾ per cent 1962, 3 per cent 1963-65, 3 per cent 1970-75 first development loan, 3½ per cent 1963, 3½ per cent 1969 and 4 per cent 1979 each shed 5 nP to Rs. 83.50, Rs. 98.75 Rs. 90.90, Rs. 100, Rs. 98.40 and Rs. 99.20, respectively. 3 per cent 1966-68 funding loan eased by 10 nP to Rs. 96.30 and 3½ per cent 1974 dropped a like amount to Rs. 99.55. In the State loans' section, the downward adjustments in the values of existing loans, consequent on the announcement of better terms of the new State issues, continued. Accordingly, 4 per cent 1968, 1969 and 1971 Madras loans, 4 per cent 1967, 1968 and 1969 Andhra loans, and 4 per cent 1968, 1969 and 1971 U.P. loans suffered a further setback in values, ranging from 15 nP to 35 nP.

In the foreign exchange market, rupee recorded only a modest improvement. Bank's selling and buying rates for ready T.T. on New York were Rs. 477.25 and Rs. 473.75, respectively, as against Rs. 477.25 and Rs. 474 last week. In the New York Exchange, the pound sterling hardened in relation to the U.S. dollar. The latest available rates are 280.540-280.570 cents per £ for spot and 277.980-278.010 cents per £ for three months' forward. As compared with the last week's rates, the pound sterling put on 0.11 cent in the spot and 0.32 cent in the forward.

KIPS BUOYANT

(From Our Own Correspondent)

MADRAS, 28*th August*

Arrivals of tanned kips and calf skins were as usual during the week under review. Market conditions, however, were buoyant due mainly to the reported advance in the prices for raw hides in Argentine to the extent of 15 to 20 per cent. Tanners' quotations were unworkable and often fantastic. U.K. inquiries continued to be selective and centred around lower ends. Prices advanced by a penny. Buffs were firmer with limited arrivals, so also buff calf. Cow calf remained unchanged. Raw hides and calf skins registered a further rise in prices.

Inferior fifths kips were in very good demand locally and U.K. prices were unworkable.

Tanned goat superfine lights were in good call and prices advanced by 3d. per lb. 8/9 lbs. were quoted at 19s. 6d. to 20s. 6d. and 11/12 lbs. 18s. 6d. to 19s. Middle classes had limited inquiries.

Tanned sheep skins were steady and superfine classes were quoted at 38s. 6d. to 39s. Middle classes continued firm but the wide difference in price between the marks rendered overseas business difficult.

BULLION PRICES RISE FURTHER

(From Our Own Correspondent)

BOMBAY, 30*th August*

Both gold and silver scored further handsome gains during the week under review. The gains followed renewed buying support induced by the Berlin crisis, reports of "gold rush" at London and enlarged offtake in upcountry centres. Advices from Calcutta were also quite encouraging. There was, of course, frequent profit-taking at higher levels. Nevertheless, today's closing rates were well above those prevailing a week ago. The undertone of the market was distinctly firm.

Arrivals of gold during the week were smaller than in the previous week, the daily average being 3,750 tolas, as against 4,750 tolas. The offtake, too, was slightly lower at 3,000 tolas, as against 3,500 tolas. In the case of silver, the daily average arrivals were higher at 21 bars (17 bars last week), whereas offtake was less at 5 bars (7 bars). The floating stocks are estimated at 25,000 tolas of gold and 900 bars of silver.

Adjustment rates fixed today were Rs. 124.50 per 10 grams of gold and Rs. 204.30 per kilogram of silver. The corresponding rates on Wednesday last week were Rs. 122.40 and Rs. 203.35, respectively.

Replying to a question in the Lok Sabha on 22nd August, Mr. Morarji Desai, Union Finance Minister, disclosed that a sum of Rs. 7.52 crores was paid as a grant-in-aid to the Government of Mysore on the purchase of gold from Kolar and Hutti mines during the three years 1958-59, 1959-60 and 1960-61. The entire gold produced by these mines since July 1958, he said, had been acquired by the Centre. The Government acquired 5.28 million grammes in 1959-60 and 4.95 million grammes in 1960-61.

The *Bhadrapad* (25th September) settlement in gold began the week at Rs. 122.80, same as last week, and swiftly advanced to Rs. 124.30 on Saturday the 26th inst. After declining to Rs. 123.75 on Monday, the settlement moved up again and touched a high of Rs. 124.55 today before finishing at Rs. 124.50. The net gain over the week was Re. 1.70.

Ready gold, which was quoted at a discount under the forward to the extent of 15 nP on Thursday and 5 nP on Saturday, commanded a premium in the subsequent sessions. The actual premium today was 25 nP, when the spot rate stood at Rs. 124.75, as against Rs. 122.65 on Wednesday last week. The rate was higher still at Rs. 124.80 at one time today.

In silver, the *Bhadrapad* (26th September) settlement met with good support and rallied from Rs. 203.55 to Rs. 205.45 yesterday. At his level, profit-taking set in and the settlement softened to Rs. 204.80. It, however, recovered to Rs. 205.20 today, though it closed a shade easy at Rs. 204.90.

Ready silver continued to be quoted at a discount under the forward, the actual discount increasing in the course of the week from 20 nP to 60 nP. The ready metal began at Rs. 203.55, as against the previous close of Rs. 203.35, and moved up to Rs. 204.70 before finishing at Rs. 204.30 today.

The world price of gold in the London bullion market advanced from $35.16 to $35.18¾ per fine ounce, the highest level touched since early this year. The price is much higher than the U.S. official parity price of $35.08¾. The rise in price is attributed to good buying influenced by Berlin and other international political uncertainties. Some, however, attribute the rise to demand arising from nervousness about currencies rather than world tension. In sympathy with world gold and owing to the weakness of the pound sterling *vis-a-vis* the dollar, ready gold improved from 250*s.* 9¼*d.* to 251*s.* ¼*d.* early in the week, though it moved down later and touched 250*s.* 11*d.* today. Ready and forward silver were unchanged at 79¼*d.* and 80⅛*d.*, respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of prices during the week under review:

	30-8-1961 (closing)	High	Low	23-8-1961 (closing)
	Rs.	Rs.	Rs.	Rs.

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES LOOK UP

(From Our Own Correspondent)

BOMBAY, 30*th August*

The cotton futures market had a short week of only four trading days. The market was closed on 24th and 25th inst. on account of *Id-Milad* and *Coconut Day*, respectively. A firm trend was in evidence when the market reopened after the holidays on Saturday. Large-scale buying prompted by reports of adverse weather (excessive rains in some areas and lack of rain in some others) and strong rumours that the Government will release a fresh export quota for Bengal *Deshi* as recommended by the East India Cotton Association, Bombay, resulted in a mild rally in prices. The March contract rose from the last week-end rate of Rs. 593.75 to Rs. 595.25. The expectations that the ceiling prices for cotton would be revised upwards, following the representations made by growers, also aided sentiment. But this level could not be maintained for long. Failure of the export quota to materialise and subsequent report that a change in ceiling prices was unlikely induced tired bull liquidation and profit-taking. The contract receded to Rs. 591.25 on Monday. The market turned bullish again yesterday, thanks to renewed reports of adverse weather. The upward trend gained further momentum today. The contract rose to Rs. 595, as against last week-end quotation of Rs. 593.75. The next few weeks are the most crucial period for the new crop.

Mill demand for ready cotton was slack due to the intervening holidays. Needy mills, however, showed interest in such popular styles as Co2, Surti, L. 147, Vijay, Digvijay, Kalyan, 197/3 and Kalyan. The Union Minister for Commerce and Industry is reported to have told a deputation of Gujarat cotton interest that the system of compulsory surveys would be done away with, as from the next season. The quota system would, however, be retained and that mills will be allocated 50 per cent of their quota of domestic cotton at the beginning of the season itself and the balance according to their needs.

Moderate interest continued to be shown by shippers in Bengal *Deshi*. Some business passed on a subject-to-license basis, in anticipation of a quota. ⅞" cotton was practically neglected due mainly to the difference between the price quoted by shippers and those offered by foreign buyers. In response to the request from the trade, the shipping period in respect of the last Bengal *Deshi* quotas has been extended from 31st August 1961 to 15th September 1961 and that in respect of ⅞" cotton till 30th September.

There was good demand for foreign cotton from Ahmedabad mills. East African cotton, current and new crop, was booked for December delivery. B.P. 52, Busoga (U.N.U.G.) and Jinja were well favoured. Higher and lower grade Sudans also attracted the attention of spinners. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewrl:

Bengal *Deshi* 600; Jarilla 925; Surti 925; Kalyan 820; Vijay 935; Busoga (U.N.U.G.) 1,290; Sudan XG2L 1,500.

Firm conditions prevailed in the Karachi cotton futures market during the week. Better foreign demand and good domestic mill buying pushed futures values up. The N.T.R.G January spurted from Rs. 73.95 to Rs. 74.95. The March position firmed up by 90 nP to Rs. 73.90. Spot rates too hardened.

Business in the Alexandria cotton futures market continued to be suspended during the week. The Egyptian Government has made it clear that it would participate in the share capital of cotton export firms in Egypt to the extent of 50 per cent and not 35 per cent as originally contemplated. The Egyptian Cotton Commission has decided temporarily to suspend all new contracts for the Giza 47 cotton. The reason given is the uncertainty concerning the present position of this variety of new crop. Exports of Egyptian cotton from 1st September 1960 to 2nd August 1961 aggregated 949,166 lbs. of 720 lbs. each. The quality-wise breakdown is as follows:

	Bales
Menufi	398,934
Karnak & G.45	141.399
Giza 47	53,457
Dandar, Giza 31	137,089
Ashmouni	151 564
Others	4.694
Total ...	949,166

Cotton futures in Liverpool ruled firm during the week under review. Fresh support in the wake of scarcity of offering and buying attributed to American interest led to a hardening of values. Both the American and American type contracts were marked up. Sudan contracts too firmed up in sympathy. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 24.45; December 24.90; March 25.35; May 25.75.

American cotton mixed grouth contract: October 24.90; December 25.30; March 25.70; May 26.15.

Sudan: September, November, January 31.50.

Cotton futures on the New York Stock Exchange tended to recede during the week as a natural reaction to the firmness noted last week. Selling prompted by an improvement in the crop situation led to a recession in values. Many prominent trade sources now predict that the September crop estimate will be higher than the August estimate of 13.92 million bales and might exceed 14 million bales.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	29-8-61	22-8-61	15-8-61
New York Spot	35.20	35.15	35.15
New Orleans Spot ...	33.00	33.00	32.90
October	34.48	34.65	34.50
December	35.02	35.17	35.03

YARNS DULL

(From Our Own Correspondent)

BOMBAY, 30*th August*

Dull conditions prevailed in the yarn market during the week under review. Business put through was considerably restricted and values moved narrowly, the general tendency being downward. Art silk yarn ruled easy, thanks to reduced offtake by mills which recently secured supplies of viscose and nylon yarns from the Rayon Mills Commercial Corporation, the authorised distributors of the State Trading Corporation. Apprehensions of a further setback to demand from the Punjab side in case unrest developed in that State on the issue of *Punjabi Suba* also acted as a damper. Staple fibre yarn encountered selling on renewed fears of official intervention. Cotton yarn continued to rule quiet.

J. P. yarn (40 x 1) August delivery receded by Rs. 30 to Rs. 3,080. Spot Cupressa Bemberg yarn (60 x 1) was dull at Rs. 2,798. 150 Japan changed hands at Rs. 2,205, same as last week. 120 Japan, however, met with special support and improved by Rs. 14 to Rs. 2,150. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade fell by 35 nP to Rs. 14.92, while 120 Bt. cones 1st grade hardened by 20 nP to Rs. 17.67.

Staple fibre yarn (40 x 1) August settlement came in for selling and declined by Rs. 23 to Rs. 828. October position eased by Rs. 7 to Rs. 824. Spot Citys lost 4 nP to Rs. 10.12. Hinds were neglected at Rs. 9.77. But Kohinoors strengthened by 29 nP to Rs. 11.

In the cotton yarn section, ten counts Podars were dull at Rs. 17.37, as also Prahlads at Rs. 16.75. Twenty counts Gokaks were unchanged at Rs. 23. New Greats were on offer at Rs. 21.25. Thirty counts New Greats softened by 25 nP to Rs. 26.75. Forty counts Maduras and Minaxis were quiet at Rs. 32.50 and Rs. 33, respectively. Sixty counts Finlays moved down from Rs. 63.63 to Rs. 62.87. Moderns were done at Rs. 59. Eighty counts Finlays were unaltered at Rs. 81.62, while Moderns gathered 25 nP to Rs. 68.25.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	30-8-1961	23-8-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
Spot	2,798.00	2,798.00

60s Finlay	62.87	63.62
80s Modern	68.25	68.00

NEW GROUNDNUT EXPORT QUOTA

(From Our Own Correspondent)

BOMBAY, 30*th August*

An important event of the week in so far as the oilseeds market is concerned was the release of a fresh H.P.S. groundnut kernels export quota amounting to 10,000 tons for the period ending 30th June 1962. Shipments will be allowed to all permissible destinations, except South Africa, South West Africa and Portuguese possessions in India. The exports by all shippers, including established shippers and co-operative societies, will, however, be only against registration of contracts in the form of cable offer or acceptance on first-come-first-served basis. The exporters will have to furnish a bank guarantee to the extent of 10 per cent of the f.o.b. value of contracts as an earnest deposit for completing shipments.

The release of new quota was welcomed by the trade, although the immediate prospects for exports were not considered to be bright, in view of the current Indian prices being out of parity with world prices. In fact, groundnuts suffered a distinct setback, following to heavy bull liquidation, on reports of favourable weather conditions in producing areas which brightened the outlook for the next crop. Saurashtra figured as a prominent seller. There was, however, a modest improvement towards the close on rumours that the Government of India would introduce some incentive schemes for the export of groundnut oil. The other oilseeds and oils, too, were depressed as a result of better crop forecasts and absence of any export enquiries. Castorseeds ruled easy. There was no support from shippers. Linseeds and cottonseeds were subdued in sympathy.

The Groundnut January 1962 contract fell by Rs. 3.88 to Rs. 214.16. The August contract went off the board today. The due date rate is fixed at Rs. 210 per kg., with a penalty of Rs. 5 per day payable by persons who fail to give delivery. Nizam bold moved down from Rs. 52.50 to Rs. 49. Both Coromandels and Khandesh quality dropped Rs. 3.25 to Rs. 49.25. Oil railway receipts eased by Re. 1.10 to Rs. 20.50. Ex-mill lost a rupee to Rs. 20.75. Oil January 1962 contract declined by 48 nP to Rs 17.62.

In the castorseed section, the March 1962 contract receded by Rs. 2 to Rs. 167.87. The September 1961 contract softened by a rupee to Rs. 169.12. Ready Madras shed 13 nP to Rs. 34.37 and Ready Kanpur 12 nP to Rs. 33.25. Oil Commercial closed lower at Rs. 13.75, as against Rs. 14.05. B.S.S. decreased by 20 nP to Rs. 15.40.

The Linseed September 1961 contract declined by 81 nP to Rs. 39.31. The March 1962 contract eased by 32 nP to Rs. 37.37. Bold ready lost Re. 1.50 to Rs. 38.50 and oil 60 nP to Rs. 16.45.

Among cottonseeds, the March 1962 contract fell by a rupee to Rs. 91.50. The September 1961 contract was lower by 25 nP at Rs. 92.25. Both Berars and Non-whites shed 20 nP to Rs. 19.20.

Sesame bold fell from Rs. 325 to Rs. 310 (per 250 kgs). Sesame oil eased by Re. 1.50 to Rs. 23.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	30-8-1961	23-8-1961	16-8-1961
Groundnut	Rs.	Rs.	Rs.
January 1962	214.62	218.50	216.62
Nizam bold	49.00	52.50	52.00
Coromandel ready	49.25	52.50	52.25
Khandesh quality	49.25	52.50	52.25
Oil ex-mill ready*	20.75	21.75	21.60
Railway receipts*	20.50	21.60	21.40
Oil January 1962	17.62	18.10	17.90
Castorseed			
September 1961	169.12	170.12	170.37
March 1962	167.87	169.87	170.75
Ready Madras	34.37	34.50	34.00
Ready Kanpur	33.25	33.37	33.12
Oil B.S.S.†	15.40	15.60	15.50
Oil commercial†	13.75	14.05	14.05
Linseed			
September 1961	39.31	40.12	39.56
March 1962	37.37	37.69	37.56
Bold ready	38.50	40.00	39.00
Oil ready†	16.45	17.05	16.90
Cottonseed			
September 1961	92.25	92.50	95.50
January 1962	91.50	92.50	92.00
Niger seed	40.50	40.75	41.00
Kardi seed	25.00	25.00	25.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

BLACK PEPPER QUIET

(Messrs. Parekh and Co.)

BOMBAY, 29*th August*

Malabar black pepper ruled quiet but steady with fluctuations narrow during the week, as the major part of the selling by growers who wanted cash for their *Onam* celebrations were well absorbed by exporters who were reported to have sold about 200 tons to East Germany at about Rs. 220 per cwt. f.o.b. Ungarbled moved between Rs. 383.50 and Rs. 389.50 and garbled from Rs. 399 to Rs. 403. October delivery on the ring fluctuated between Rs. 414 and Rs. 420 and December between Rs. 393 and Rs. 398. Calicut moved between Rs. 380 and Rs. 390. There appears a good resistance at around Rs. 1,200 from growers.

The internal unsettled condition of Brazil and the political situation in Berlin are supporting factors. But the recent agitation by the Sikhs for a separate State and the recent floods in U.P. and Bihar are said to be responsible for the present poorer offtake from the Punjab, U.P. and Bihar.

Singapore remained unchanged, as export inquiries proved disappointing.

New York is quietly steady at $0.45. There is some patchy but selective buying during the week, but it failed to stimulate either the exporters or the dealers at the origins to action.

The future of the market is uncertain, in view of the poor demand from both overseas and inland and also due to the harvesting season in Sumatra and the proximity of new season in India.

Ready pepper in Bombay is nominally quoted at Rs. 215 per 50 kilos with demand poor.

FAIR DEMAND FOR TEAS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 22*nd August*

A total of 487,000 kilograms was on offer in Sale No. 34 held on Tuesday, the 22nd inst. Quality of Nilgiri teas was irregular, but some invoices showed improvement. Quality from other districts was about maintained, though a little irregular. There was a fair demand for most teas. Highgrown brokens met with good support. Prices were irregular and sometimes easier but best sorts were dearer. B.O.P.F. from this district were generally lower. Good mediums and mediums evoked fair demand at rates about 10 to 15 nP below last. Plain and low medium brokens, although meeting fair enquiry, were 5 to 10 nP easier. Similar B.O.P.F. were better supported than their equivalent brokens. Whole leaf grades were a little irregular. Best sorts were fully firm to sometimes dearer with lower kinds about steady. Black leaf teas met good support at slightly easier rates. Tippy teas came to an irregular market. F.O.B.Ps. being a little easier, but flowery fannings being dearer. C.T.C. descriptions elicited restricted enquiry and were generally easier except for bright liquoring sorts. C.T.C. types were barely steady. The quotations (per kg.) were:

	1961	1960
	Rs.	Rs.
Low mediums	4.40-4.50	3.85-4.15
Mediums	4.40-4.55	4.25-4.40
Good mediums	4.55-5.10	4.50-4.90
Nilgiri B.O.P.	Rs. 4.70-6.50	

A total of 175,000 kilograms was offered in Sale No. 34 held on Friday, the 25th inst. There was strong and active demand. Highgrowns met with good support with prices about steady on last rates. Low mediums attracted strong and active demand at rates about 15 nP above last. Good mediums were also well supported and were fully firm to dearer. Poorer descriptions and residuals met more demand at dearer rates. C.T.C. and C.T.C. types were irregular but sold at firm rates.

Export Quota: There are sellers at 1½ nP per kilo with no buyers.

Forthcoming Auctions: Export Sale No. 35—Tuesday, 29th August —351,000 kgs.; Dust Sale No. 35—Thursday, 31st August—111,000 kgs.; Export Sale No. 36—Tuesday, 5th September—362,000 kgs.; Dust Sale No. 36—Wednesday, 6th September—117,000 kgs.

Colombo: Approximately seven million lbs. were on offer in this week's export sale. There was more enquiry and improved demand. Highgrowns, except for poorest sorts, came to an active market and were dearer. The improved Uvas on offer were in good demand and were much dearer. Mediums met more demand and gained about 10 to 15 cents but lowgrowns and price-teas were lower.

London: *North Indian and other growths*: There was a good demand for most teas. Best liquoring Assams were in more demand and were generally dearer. All other sorts, although meeting fair support, came to an easier market.

Ceylon and South Indians: Of the total of 31,769 packages on offer in Tuesday's sale 11,081 packages originated from South India. All teas came to a weaker market with prices easier especially towards the close.

As we go to Press, Messrs. Forbes, Ewart and Figgis Ltd., wire as follows:

"In Sale No. 35 held on Tuesday the 29th inst., 350,000 kilograms were offered. Demand was fair. Plain and low medium brokens were easier by 15 to 20 nP, similar fannings and good mediums by 5 to 10 nP, and lower fannings by 10 to 20 nP. But highgrowns were active and dearer. C.T.C. and C.T.C. types were neglected."

TIN TOUCHES A NEW HIGH

(From Our Own Correspondent)

CALCUTTA, 29*th August*

The metal market ruled steadier during the week under review. Advices from overseas countries continued to be encouraging and, on the London Metal Exchange, the feature was that tin reached a new high at £966 a ton, as against the week's opening of £943. For a time, it looked as though the London price was going to give way when it was announced that the proposed meeting of the International Tin Council had been postponed to take place towards the end of September instead of end of August. As stated earlier, the meeting would consider the question of fixing a new floor level, and it would appear that the Council had not yet received full production cost details from the different producing countries to enable it to come to a decision on the question of a ceiling price. However, there is little doubt that the new floor price would be higher than the present ceiling, since, unless it is so, production is not expected to increase. In Calcutta, tin quoted firm at Rs. 1,696.75 per 100 kgs.

Recently, the Union Industry Minister, Mr. Manubhai Shah, stated in Parliament that the difficult foreign exchange situation would not permit the Government to issue licences for the import of non-ferrous metals on an annual basis. Trade circles said that the price trend of non-ferrous metals in world markets is subject to wide fluctuations from time to time and that, if it were only possible for the trade and industry to enter into commitments when the situation was favourable, much saving in the foreign exchange could be effected.

There was greater demand for copper scrap during the week, and the prices of copper scrap were steadier. On the London Metal Exchange, electrolytic copper closed at £231½ a ton, after declining to £228½ from £232. In London, electrolytic zinc eased to £74¼ a ton from £76; the price in Calcutta also recorded a small easing tendency due to a seasonal fall in demand. Virgin lead was quiet.

FOODGRAINS RECEDE

(From Our Own Correspondent)

HABUR, 28*th August*

Quietly depressed conditions prevailed in the foodgrains market during the week under review, thanks to the beginning of the harvesting of new *kharif* crop and heavy stocks of imported grains. Foodgrain production in India during 1960-61 has reached an all-time record of 79.3 million tons, representing an increase of 4.6 million tons or 6.1 per cent over the partially revised estimate of 74.7 million tons for 1959-60. It also exceeds the previous record of 75.5 million tons touched in 1958-59 by 3.8 million tons.

Superior wheat here eased by about 50 nP per maund during the week to Rs. 15.75 to Rs. 16 per maund, following arrivals of about 2,000 maunds from the Punjab. Average quality, however, was stationary around Rs. 15.25. Demand was quiet and local wheat stock was put at 25,000 maunds. Wheat average quality was quoted at Rs. 17 per maund on the corresponding date last year.

Rs. 19.50 in 1959. Consequent on the losses to *kharif* crops due to very heavy rains and consequent floods and waterlogging over wide area, *rabi* sowing preparatory operations were also delayed. But increased acreage in *rabi* sowings was expected, as land vacated from *kharif* crops would be available for such sowings.

Rice ruled quiet. The condition of paddy crop was reported to be satisfactory, thanks to heavy rains. The week-end prices of rice (in rupees per maund) were:—rice *mainpuri* 22.75; *gadda kutcha* 22.12; *ramajwayan sela* 23.50; *raimunia sela* 25; *basmati sela* 29 to 31; superior 35 to 38.

Gram eased fractionally on selling pressure by stockists, as local stocks around 40,000 maunds were heavy. Advices from the Punjab also were weak. Barley and *bejhar* were stagnant, while new maize, which was reaching the markets in small quantities, was being lifted at higher prices. The quality offered being damp and poor. *Juwar* and *guwar* were not in demand and prices eased by Re. 1 per maund on poor buying support at higher price levels. Week-end prices (in rupees per maund): gram Punjab 13.75 to 13.87; barley 11; *bejhar* 10.50 to 11.50; *juwar* 11.50; *guwar* 14.25; *methi* 26; maize 12; new 13; *bajra* 15.

Among pulses, peas ruled easy in the face of heavy stocks now put at 75,000 maunds. Week's offtake was poor at two wagon-loads, as loading facilities were not available. *Arhar* also sought lower levels, as demand was almost dormant and local stocks heavy around 45,000 maunds. *Moong* eased on good crop reports from South and *urd* was depressed in sympathy. Week-end prices (in rupees per maund): peas *dara* 11; farm 12; peas *dal* 12.50; *arhar* 11 to 11.50; *arhar dal* 15.75; *gram dal* 16; *urd* 21; *urd dal* 24; *moong* 17 to 21; *moong dal* 23 to 24; *massoor* 13.25 to 15.50; *massoor dal* 16.

SUGAR STEADY

(From Our Own Correspondent)

HAPUR, 28*th August*

Sugar ruled steady during the week, thanks to better demand on account of the festive season. The supply position, however, continued to be satisfactory and sugar quota allottees were anxious sellers, as sugar prices were quoted lower than controlled rates in open market. Week-end prevailing prices here were:—Rs. 106 per bag of 2 maunds 30 *seers* and 97 nP per *seer*.

Better demand from east U.P. and good festival support accounted for steady conditions in sugar prices in Muzaffarnagar market during the week under review. Spot and mill delivery prices hardened by 50 nP and 12 nP per bag, respectively. Damaged sugar also registered a gain of about Rs. 2 per bag on keen demand from *khandsari* manufacturers. Week-end prices were:—Dry C-29 at Rs. 107.50, E-29 at Rs. 106 a bag, while mill delivery quotations for these qualities were Rs. 106.25 and Rs. 104.69 per bag. Damaged sugar was quoted at Rs. 100 to Rs. 101 per bag.

Khandsari was easy during the week, due to slack demand from the Punjab. The other consuming centres also did not show any interest. Prices suffered a fall of 25 nP a maund. Production of *dana minja* and *galawat* was still continuing by centrifugal units and week-end prices were: non-crystal Rs. 32.50 to Rs. 36.75; crystal Rs. 34.50 to Rs. 37; *galawat* Rs. 27 to Rs. 31; and *dana minja* Rs. 17 to Rs. 20 per maund.

Trading in *gur* was almost at a standstill here during the week, as demand was slack, following continued loading restrictions. Local stock was around 22,000 maunds. Wet quality, however, eased by 25 nP per maund, as stockists were now anxious sellers at the fag-end of the season. Cane crop prospects, however, were bright and fairly heavy crop can be predicted. Week-end prices here were:—dry selected Rs. 16.37; dry-wet Rs. 15.50; wet Rs. 14.75; *shakker* Rs. 18.12 per maund.

Owing to heavy rains, little activity was witnessed in the *gur* market at Muzaffarnagar during the week. Prices declined by 19 nP to 50 nP per maund according to quality. Chaku dry was now quoted at Rs. 18.50 to Rs. 19 and *ruskat* Rs. 5 to Rs. 6.75 a maund. *Shakker* eased by 25 nP per maund to Rs. 18 to Rs. 21 according to quality. *Gur* stocks at Muzaffarnagar were about 84,000 maunds.

Gur futures ruled both ways during the week. After an early rise, prices drifted lower towards the week-end. *Fagun* opened at Rs. 13.42 last Monday, touched the highest and lowest at Rs. 13.63 and Rs. 13.40, and was quoted today at Rs. 13.47.

TEAS RECEDE DESPITE GOOD ENQUIRIES

(From Our Own Corespondent)

CALCUTTA, 29*th August*

Good demand was in evidence at both the export sale held yesterday and the internal auction that took place last week. The fall in prices should be attributed to increased arrivals following larger production. Increased output means lower cost of production per unit, and it is only meet and proper that such a benefit is also passed on to consumers. However, trade circles only feel that prices should not fall to uneconomic levels.

During the week, tea bookings to the U.K. were impressively higher, indicative of increased arrivals. Tea production in N-rth-East India up to July this year amounted to 214 million lbs., representing an increase of 40 million lbs. over the corresponding period of 1960. Output in 1960 was affected by drought and hence comparison with the 1959 figure would be more representative. As compared with 1959, production this year represents an increase of 12.5 million lbs. Weather conditions continues to be good, and the higher trend of production will in all probability be maintained in the coming months. Preliminary figures for August from gardens indicate the maintenance of the higher trend September is also expected to register a record figure.

That explains for the easier trend in prices. Bidders are adopting a hesitant tendency, and th downward trend in pr.ces is likely to be maintained until a few weeks when the climax of production would have been reached. However, it should be noted that what has increased is the quantity of common cheaper teas fit for internal consumption, and the percentage of good teas has been low. Trade circles are inclined to feel that, unless internal consumption increases, the problem of a glut in supplies will arise. Viewed thus, the outlook for tea gardens producing common teas is by no means assured. Other producing countries have also recorded increased output, as will be evident from the report according to which world production so far has amounted to 656.6 million lbs. or higher by 57.4 million lbs. as compared with the corresponding previous figure. Apart from increased production in other countries, especially Pakistan, Ceylon and Africa, production in the U.S.S.R. and China is also believed to have increased.

Noting the proposed plan of the Assam Government to develop an auction centre in Pandu in Assam where all Assam teas would be sold instead of as at present in Calcutta, trade circles say that the Calcutta centre has been fully developed and to create one in Assam with all facilities as in Calcutta appears to be a waste of funds. The proposal was disclosed by the Assam's Finance Minister, Mr. Fakruddin Ali Ahmed, who said that the State Government would soon appoint a committee to go into the question and find ways for development of an internal market for the industry in Assam. Auctions are at present held in Calcutta and Cochin, and it would be against national interests to start auction centres at each tea growing State. Mr. Ahmed was on firmer ground when he said that, if an auction centre was developed in Assam, Assam teas would be freed from the Calcutta entry tax as well as Assam's carriage tax. Although trade circles do not suggest that these points should not be construed as denoting the Assam Government's eagerness to provide tax concessions to the industry, it may be noted that the same will very well serve as political planks. For, surely, if Assam teas are freed from both these taxes, the State finding the loss as being too much for it, can lay greater claims on the tea industry and, what is more, swallow the Calcutta tax also by some other levy.

During last week's internal sales, dusts on offer aggregated 25,748 packages. Prices eased. Good demand was in evidence for the plain orthodox teas, but prices of these declined by 10 nP. Leafy Assam teas also eased, but the small bright teas were firm. Among C.T.Cs, the few bright lines were in good demand, but all other varieties in this category eased. An irregularly easier trend was recorded in legg-cut teas, while the bright teas were about firm. The quotations per 1 kg. inclusive of excise duty were: medium Assam C.T.C. dust Rs. 6.10 to Rs. 6.40, good Assam C.T.C. dust Rs. 6.60 to Rs. 7.00, legg-cut dust Rs. 4.75 to Rs. 5.45, medium Assam dust Rs. 4.80 to Rs. 5.40, and plain orthodox dust Rs. 4.30 to Rs. 4.55.

Leaf on offer amounted to 131 packages, which met with a good demand.

Conditions during yesterday's export sale were easier. Offerings amounted to 77,950 packages. A fall in quality was reflected in prices receding. Legg-cut teas eased by 20 nP. Darjeelings were taken at lower rates. Support to tippy teas was limited to selected lots, and, as a result, prices of all varieties in this grade fell. Support to C.T.C. teas was meagre, and this was reflected in a number of withdrawals towards the close. Prices eased up to 70 nP. Plain orthodox brokens declined by 10 to 15 nP, and similar fannings by 15 to 25 nP. B.O.Ps lost as much as a rupee. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 5.40 to Rs. 6.00; best C.T.C. B.P. Rs. 5.40 to Rs. 5.70; medium Assam C.T.C. fannings Rs. 5.00 to Rs. 5.40; medium Assam C.T.C. B.P. Rs. 5.00 to Rs. 5.30; clean plain pekoe Rs. 4.50 to Rs. 4.70; plain B.P. Rs. 4.35 to Rs. 4.50; and plain fannings Rs. 4.15 to Rs. 4.25.

JUTES DECLINE AGAIN

(From Our Own Correspondent)

CALCUTTA, 29*th August*

A further decline in the prices of fibre and goods was the feature in the jute markets during the week under review. However, despite the fall in prices, business that took place in both was meagre. It is but natural that only unavoidable commitments of an immediate nature are entered into in a declining market. Foreign buyers of goods thought that prices would continue to decline. Meanwhile, the decline in fibre prices has alarmed the State Government, and the Government of India has been pressed to fix a minimum floor price at which cultivators would be able to tender their produce to a bufferstock agency which should be created. The Indian Jute Mills Association, which is also eager to fix a ceiling price so that growers can be ensured a fair return and transfer of land from jute to other cash crops does not take place in the next season, has also represented its own point of view to the Government of India, which is shortly expected to announce a mechanism for fixation of minimum prices. In a subject of this type, which bristles with difficulties—it is not possible to find a unanimous agreement among growers, mills and the State Government—the Government of India has necessarily to proceed with as much consent as possible among all concerned. A desirable step would be to find a floor level having understood thoroughly the problems facing the industry. Mills alone have the storage capacity for fibre at present. Any agency that would be set up for the bufferstock would have to depend on the mills for storage.

On Tuesday last, there was selling pressure in the futures market, as a result of which ready B. twills fell from Rs. 132.00 to Rs. 130.00 and ready hessian 40" 10 oz. from Rs. 46.75 to Rs. 46.00. Overseas buying was reported, but the quantities were only small and they failed to arrest the declining trend. Prices on Wednesday were further affected, as bearish activity in the futures market continued. Ready B. twills dropped to as low a rate as Rs. 125.00. At Rs. 45.00, the drop in hessian 40" 10 oz. was less marked. Small purchases of hessian were made by the U.S. At this stage, there was a good measure of covering business in ready goods, as a result of which B. twills recovered to Rs. 128.75 and hessian 40" 10 oz. to Rs. 45.50 on Thursday. Buying interest in hessian was signified by the U.S. and Argentina and, on Friday, this led to good covering business in ready goods. B. twills recovered to Rs. 129 and hessian 40" 10 oz. to Rs. 45.65. Over the week-end, B. twills eased to Rs. 127, while hessian 40" 10 oz. was firm at Rs. 45.75. On rumours that Argentina would soon enter the market for hessian, the ready 40" 10 oz. ruled firmer yesterday at Rs. 45.85. This was some short covering. However, ready B. twills were quiet at Rs. 126.25.

Support to the fibre market was nominal. Signifying the increased nature of fibre arrivals, it has been decided by the I.J.M.A. to abolish the quota system and as such mills would be at liberty to purchase as much as they would like. The Jute Commissioner would check purchases by the mills. However, it is emphasised that the mills cannot be expected to buy in a big way until simultaneous business in fibre and goods becomes profitable and attractive. This week's recession in prices of goods, as in the last week, has been disproportionate to that of fibre prices, i.e. to the disadvantage of mills. It was reported during the week that arrivals of fibre in the Narayanganj (Pakistan) market received a setback and prices rose by Rs. 2 to Rs. 3 a maund, following interested propaganda among farmers to hold on to their produce until price rose. The week's price movements in Calcutta is indicated in the following table:

(In Rs. per maund delivery within 10 days)

	Opening	*Closing*	*Loss*
Daissee bottoms ...	39.50	35.50	4.00
Northern bottoms ...	34.50	32.00	2.50
Assam bottoms ...	34.00	32.00	2.00

SURVEY

(Concluded from page 435)

maintenance of records, and infrequent meetings of boards.

All these defects should be removed at the earliest, if the potentialities of urban banks are to be fully utilised for the benefit of the community as a whole. But the crucial question is: How are these defects to be removed? Co-operation being a State subject, it is the State Governments which have to be alert and ruthlessly eliminate dishonesty in co-operative banking. Experience so far, however, does not warrant the conclusion that State Governments will effectively supervise and regulate the co-operatives. The authors of the Reserve Bank's report under review have put forward the following suggestions for improving the quality and utility of urban co-operative banks.

1. An assessment may be made of the scope for the establishment of urban banks in new centres.

2. Active efforts may be made by the management of urban banks to expand their membership, diversify their activities, and offer a wider range of facilities to their members (as, for example, introduction of cheque system, adoption of new types of savings scheme (including recurring deposits and chit funds), provision of specialised services to members in regard to payment of insurance premia, taxes, etc., and increased offer of loan facilities to small-scale industries.

3. In their loan policy, the urban banks should adopt a sufficiently wide and diversified system of lending to suit the needs of the different categories of members.

4. The working of urban banks must be placed on sound and efficient lines by reducing emphasis on trading activities, by the toning up of accounting and operational efficiency and by reduction and avoidance of overdues.

5. There should be a continuous building up of member-relations.

6. The banks must be better housed in order to enhance their popularity and promote public confidence in them.

7. State Governments should ensure adequate arrangements for audit, inspection and supervision of the banks and, where necessary, extend special facilities and aids to them, such as those recommended by the Sub-Committee set up by the Small-scale Industries Board in 1956 and by the Seminar held at Hyderabad in 1959.

All these are certainly constructive suggestions which, if implemented in right earnest, will ensure the development and working of urban banks on sound and satisfactory lines. In conclusion the Reserve Bank's report piously observes:

"The development of urban banks cannot take place either entirely or mainly on the initiative of the State Governments. The banks themselves should adopt a progressive attitude and make arrangements to examine their own problems, pool their experience and help each other in various ways."

This is a platitude, though quite a sound one.

MISCELLANEOUS STATISTICAL INFORMATION

Reserve Bank of India

Statement of Affairs for the week ended 25th August, 1961

INSURANCE OF BANK DEPOSITS

AT long last, insurance of bank deposits has reached the stage of being an accomplished fact in the near future. The first step in the final stage was taken on 31st August 1961, when the Deposit Insurance Corporation Bill was introduced in the Lok Sabha by the Finance Minister, Mr. Morarji Desai. The Bill seeks to provide for the establishment of a statutory institution for insuring deposits in commercial banks. The scheme envisaged in the Bill is more modest than was advocated by this journal, though it is a little better than that contemplated by the Reserve Bank early this year. It is nevertheless welcome, for something is better than nothing and one can now hope that, after some experience is gained and the funds of the proposed Corporation expand, the amount of each deposit account to be covered by insurance will be raised to a respectable size. Much valuable time has already been lost. Eleven years ago, insurance of bank deposits was advocated and was conceded as desirable by the Rural Banking Enquiry Committee (Chairman: the late Mr. Purshotamdas Thakurdas), though the Committee had stated that the time was not opportune. Three years later, the Shroff Committee gave conditional support to the idea, though one of its members, Mr. B. K. Dutt, Managing Director of the United Bank of India, had entered a powerful plea for its implementation forthwith, a plea which this journal fully endorsed. Commercial banking in this country would have been in a much better shape than it is today had the Reserve Bank and the powers-that-be the foresight to appreciate the merit of this plea. Instead, they put the suggestion in cold storage and they were encouraged to do so by the big banks, including the foreign banks, which were so short-sighted as to allow the incidence of cost to weigh against the proposal. These banks did their best to sidetrack the issue by putting forward the argument that they could not be expected to pay for the mismanagement and inefficiency of others and that the elimination of weak banks should precede the introduction of deposit insurance. It required the crash of a fair-sized scheduled bank and a heavy run on one of the old well-established big banks, with country-wide ramifications, to open their eyes. The Palai Bank, as readers will recall, failed on 9th August 1960 and the consequent suffering of the public could have been minimised, if deposit insurance had been in force then.

Much of the opposition to deposit insurance was the result of the failure of big banks to appreciate its value as a stabilising factor. This failure was, in turn, the result of following British methods and thoughts, which are good for a country like Britain but not sufficient for a vast country like India, with a large number of banks of varying quality and strength. The primary idea of this insurance is, of course, to provide a certain amount of security to depositors. But it helps banks also. However strong and good a bank may be, it cannot be completely free from the disturbing effects of the failure of another bank or a run on another, both of which affect the confidence of depositors and tend to drive deposits to other channels. This became clear beyond doubt in the past twelve months. Loss of deposits tells on the profit-earning capacity of banks, besides making them to depend on the Central banking institution to a greater extent than would be necessary. The price they have to pay by way of a small premium to the Deposit Insurance Corporation will be negligible as compared with the benefits of stability in the confidence of depositors. It is not suggested here that insurance of deposits can, by itself, prevent bank failures, but it can, if ably conducted and administered, reduce the number of failures, as the insurer will keep an eye on the working of banks. Further, such failures as may still happen are unlikely to cause any rude disturbance to peace in the banking world as a whole. There is ample evidence in the U.S. experience to support this conclusion.

It is particularly gratifying to find from the Bill now before the Lok Sabha that the State Bank of India and its subsidiaries also have been brought within the scope of the scheme. It will be recalled that, some time ago, a Government spokesman said that the scheme would not be applied to these banks in the public sector. Later, the Chairman of the State Bank observed that his banks would participate in it voluntarily as a gesture of their interest in the well-being of banking in the private sector. This attitude resembled that of a person who was willing to give charity to a worthwhile cause and was certainly not an agreeable one. The explanation of the State Bank Chairman was that, as the solvency of State Bank and its associates was guaranteed by the Government of India, buying insurance cover for their depositors was meaningless; it would only tantamount to Government guaranteeing its own guarantee, in that the Deposit Insurance Corporation would be nothing but a Government organisation. The logic of this argument cannot be denied. But logic is not everything in life. To leave out the State Bank and its subsidiaries would be an act of discrimination against the other banks and, perhaps, also *ultra vires* the Constitution. To bring them into the scheme as voluntary participants smacks of patronage. Surely, some of the foreign banks, as well as most of the big Indian banks, also could have argued that their reputation and financial strength were by no means inferior to that of the State Bank and definitely far superior to that of any of its associates, and that, therefore, they, too, should be given the privilege of being only the patrons of the Deposit Insurance Corporation. The Government, therefore, deserves to be complimented on its decision to drop its earlier approach and to bring the State Bank and its associates straight into the scheme. The exemption given to the deposits belonging to the Central, State and foreign Governments, as well as to those of insured banks (inter-bank deposits for instance) is also a sensible action. Equally sensible is the exclusion of the State Financial Corporations and their like from the scheme.

Although it was stated at the outset of this article that something was better than nothing, we feel that it is not too late to raise the amount of deposit of an account covered by insurance from Rs. 1,500 mentioned in the Bill to at least Rs. 2,500, if not Rs. 5,000, as the sum of Rs. 1,500 is too small in the present day conditions of inflated value of money. The ultimate aim should be to cover up to Rs. 10,000 in a few years. It has been calculated by competent persons that the average deposit per account of the larger Indian banks is no less than Rs. 4,700. So long as the amount covered per account is low, a person who deserves to take full advantage of the scheme will try to spread his funds over a number of banks, there

Further, in the event of liquidation, the liquidator will be required to pay to the Corporation, instead of to the depositors concerned, any sums which may become due for disbursements to such depositors individually after the Corporation has discharged its liability to them. There is little in these details with which one can quarrel. On the whole, they seem to be well conceived.

Nor can much objection be raised to the wide powers of inspection sought to be given to the Corporation. The object of deposit insurance is to infuse confidence among depositors in the ability of banks to honour their obligations. The Corporation is, therefore, in duty bound to work as the sentinel of depositors. Only, it has to exercise these powers diligently and in strictest secrecy, without causing inconvenience to the day-to-day work of the banks insured and infringing on their legitimate and *bona fide* activities. Since the Reserve Bank has already enormous powers of inspection and accumulated considerable experience in using them, the Corporation and the Bank can and, indeed, must work in close collaboration with each other, if only to avoid unnecessary duplication.

THE CONTINUING COAL CRISIS

THE coal distribution crisis, which set in some eight months ago, shows no signs of abating. The dimensions of the crisis are such that the Union Ministry of Steel, Mines and Fuel has decided to convene a conference, to be held at New Delhi on the 13th instant, of representatives of the State Governments, Planning Commission and major consumer interests. At this conference are to be discussed the various measures, already instituted or currently proposed, for moving coal in 'adequate' quantities to different parts of the country. The official approach to the forthcoming discussions is provided by the Ministry's stand that "the demand for coal has very much outstripped the transport planned for and, therefore, the need to plan for distribution of coal in an appropriate manner has arisen." Implicit in the Ministry's stand is the expectation of a continuing overall shortage in transport facilities. Given this transport shortage, it is difficult to see how any plan of distribution will be able "to ensure (both) adequate and regular supplies of coal to various industries and other consumers in different parts of the country." It will, indeed, be a big achievement if an agreed plan of distribution, emphasising 'regularity' more than 'adequacy,' emerges from the deliberations of the New Delhi conference. The criterion of 'regularity' is any day more important than the criterion of 'adequacy,' because irregular and uncertain supplies may cause shut-down of production in the industrial units concerned, whereas inadequate (but still regular) supplies will only mean some under-utilisation of the production capacities of such units. So long as the bulk of coal supplies has to come from the Bihar-Bengal area which is in one corner of the country, industries in other parts cannot hope to have both 'adequate and regular' supplies in the given conditions of transport shortage. But this does not mean that there is not much scope for a better and more rational plan of coal distribution even within the limitations of the current transport bottleneck.

Already the Government has taken in the last few months, or proposed to take, some measures to ease the situation. These are listed below:

1. The rail transport capacity for coal movement above Moghulsarai from the Bengal-Bihar fields has been increased by 200 wagons per day since July last.

2. Movement of a million tons of coal (in addition to the usual million tons) per annum to southern and western parts of the country has been planned by the rail-cum-sea route *via* Calcutta Port; the additional cost on freight on account of this coal moved by coastal shipping is to be subsidised to the consumer from the proceeds of an additional excise duty of 80 nP which has recently been imposed on all coal leaving the collieries.

3. In urgent cases, special and preferential allotments of coal are given.

4. Movement in block rakes to selected stations is being arranged so as to cater to industries having low priorities such as brick-burning and small-scale industries.

5. Coal dumps are being set up at suitable consuming centres by the various State Governments.

6. Coalfields in Central India (Madhya Pradesh) are being developed so that nearby States may get their supplies from these fields and the long haulage from the Bengal-Bihar fields may be avoided.

7. Diversion to road t[illegible]ng by rail from nearby coal[illegible] consumers in West Bengal [illegible] stopped except in the [illegible]

These measures do add up to a plan of distribution. But the plan seems to be coming up against difficulties because either some of the measures are not working satisfactorily or they are being strenuously opposed by industrial consumers and coal merchants. The working of each individual measure would need to be examined here. Firstly, the actual increase in the number of coal wagons in the above-Moghulsarai direction in July last, according to the Railway Minister's claim, was 250 wagons per day, as compared with the 200 wagons originally proposed. But the movement in this direction is still short of the target (2,600 wagons a day) by 450-500 wagons. As there is no immediate prospect of a further increase in the number of coal wagons in the above-Moghulsarai direction, any improvement here can be expected only from a possible uniform adoption of Sunday loading at all collieries, whether in the public or in the private sector.

The measure pertaining to movement of coal by coastal shipping, necessitated by the inability of the Railways to make good the shortfall of 400 wagons in the required aggregate number of wagons in the Bombay and Madras directions, does not also seem to be working very well. The Coal Controller, Mr. A. Zaman, has admitted that, because of the dearth of ships, the movement of coal by sea has not yet come up to expectation. The Government is, therefore, actively pursuing the question of either chartering some foreign ships or acquiring second-hand ships for the purpose. When the coastal fleet is so augmented, it may be expected that coal supplies by sea to western and southern parts of the country will become more regular, if not adequate. Industrial consumers in these areas will also derive satisfaction from the subsidy arrangement, under which the costs of coal delivery by sea will remain more or less the same as the costs of coal delivery by rail. The latter costs, incidentally, are: Rs. 28 per ton from collieries to Madras; Rs. 34 to Cochin; and Rs. 28 to Bombay.

The scheme for movement of coal in block rakes and half rakes for the use of brick-burning and small-scale industries, brought into operation since 1st September 1961, has been criticised by coal merchants. Such rakes will be mostly consigned to District Magistrates with the ultimate objective of channelling the distribution of coal through dumps from a few selected stations. The coal merchants had originally accepted the scheme on the strength of the official assurance that they would not be displaced from the coal trade. But they seem to be disillusioned now, for, according to them, the scheme of distribution through dumps owned by a small number of State-nominated dealers would mean that numerous big and small units of the coal trade will be deprived of most of their normal business which used to account for about 50 per cent of the total raisings of coal. There is probably some exaggeration in the angry representations made on behalf of the coal merchants. The Coal Controller's view is that some of the middlemen have been taking undue advantage of the difficult transport situation and dictating their own terms to supplying collieries which are compelled to make distress sales presumably because of accumulating pithead stocks. His disclosure that coal merchants have rejected his advice that they should either form a co-operative society of their own for coal distribution purposes or have their Association as the agent of the State Governments, is significant. It signifies that the normal channels of coal trade dislike the prospect of regulation of any kind. So long as coal scarcity caused by transport scarcity continues, the all-too-natural tendency for profiteering that may manifest itself in some sections of the trade would have to be kept in check.

If the forthcoming conference at New Delhi revises the scheme of distribution in a manner that will subserve the interests of consumers and producers even while employing the normal trade channels in a regulated manner, it will be a happy end to the controversy between the coal merchants and the Coal Controller. Neither the view that middlemen should be totally eliminated from the sphere of coal distribution through a system of coal dumps, State nominees and central marketing nor the view that the normal channels of coal trade should be left totally free and unregulated in the prevailing conditions of scarcity seems to be fair or reasonable. The stand of the Federation of Indian Chambers of Commerce and Industry in this connection is that the assistance of normal trade channels should be available to collieries as well as to industrial consumers. It should be possible to modify the scheme of distribution in such a way as to ensure the continued assistance of coal merchants, if the authorities discard their bias against 'middlemen.' If the normal trade channels are retained, major industrial consumers, who can get their coal moved in block rakes, need not depend on the zonal coal dumps. In that case, the dumps, too, can be much smaller and thus less unwieldy.

Another question, which the New Delhi conference may have to consider in the light of a representation just made by the Bengal Chamber of Commerce and Industry, pertains to the requirement that consumers of coal (other than priority consumers like thermal stations, waterworks and steel plants) in West Bengal and Bihar should get their coal supplies by road. It is stated that industrial users like jute mills, engineering works and paper mills in the Calcutta area are being forced to take almost all their coal requirements by road. These factories are situated at distances of 100 miles and more from the nearest coalfields, and the cost of road transport works out to an average of Rs. 28 per ton to Calcutta, as compared with the cost of about Rs. 9 per ton to that city through rail transport and with about Rs. 28 per ton by rail or by the subsidised sea route to Madras and Bombay. The locational advantage, represented by a lower cost of coal transport, will cease to operate in the case of industries in Eastern India, as compared with the industries in western, northern and southern India. To equalise the coal freight incidence as between the various regions in this manner is rather unfair to the eastern industries which have all along taken the lower cost of coal transport for granted and based their structure of production on it. The higher cost of coal transport by road will make them less competitive in world markets and increase the prices of their goods to domestic consumers. None gains by this aggravation of cost inflation and it is irrelevant to argue that it will serve to balance the handicaps suffered by industries in other parts of India. What is relevant is that the *status quo* is being disturbed. Any such disturbance should entail some compensation. In this case, partial compensation by way of a subsidy towards the freight cost by road could be given from the proceeds of the additional excise duty of 80 nP per ton of coal produced—proceeds which are not going to be entirely used up in subsidising the freight cost by sea. This is an issue worthy of consideration, at the New Delhi conference next week, purely as an emergency measure. The real remedy lies, it is needless to add, in taking steps to increase the capacity of railways to carry more coal and in practising fuel efficiency, a much neglected aspect of coal consumption in this country.

COTTON TEXTILE EXPORTS

WHAT are the causes for the persistently disquieting performance on India's cotton textile export front? And how should they be removed? These are questions which have been discussed in detail time and again on platform and in the Press, not to speak of the reports of several delegations and enquiry committees. But still the textile policy of the Government continues to be faulty and halting. The result is that the potentialities of cotton textiles as an earner of valuable foreign exchange are being greatly undermined. Indeed, the trends in the textile export trade are disturbing to a degree and, unless energetic action is taken right now, Indian textiles are bound to be priced out of world markets in the years to come. By saying this, we are, of course, not crying "wolf!" For the object is to reiterate the urgency of the whole problem. This aspect will be widely appreciated by the powers-that-be if only they care to peruse the brief but pointed speech that Mr. Neville N. Wadia, Chairman of the Cotton Textiles Export Promotion Council, delivered at the seventh annual general meeting of the Council held at Bombay on Wednesday, the 6th inst. Mr. Wadia's observations, which are based on his deep understanding of the problems of both industry and trade, merit the most serious consideration, because he is, perhaps, one of the few millowners in India who have been rendering signal service in the cause of textile export promotion against heavy odds.

That the world markets are offering stiff resistance to India's cotton textile export prices is clearly reflected in the disturbingly low level of shipments. The aggregate exports of piece-goods in the current calendar year are expected to be much below the previous year's figure of 695 million yards which itself was lower by as much as 14.7 per cent as compared with the 815 million yards shipped in 1959. The estimated shipment of 695 million yards falls considerably short of the second Plan target of 1,000 million yards and the peak level of exports amounting to 1,120 million yards touched in 19[illegible]. Even this performance has been due in a large measure to the Export Incentive Scheme of the Government. Things might have been worse had such a scheme not been introduced at all. But this is not a satisfactory solution to the problem. Export incentives are at best only palliatives, particularly helpful in sudden upsets, or abnormal trends either in the domestic economy, as was the case last year owing to an acute shortage of cotton and the consequent high prices for the raw material, or in world trade, as, for instance, the unfair competition offered by Communist China a couple of years ago. Mr. Neville Wadia was, therefore, certainly right when he declared that, while incentives must always be considered a remedy for difficult periods, it was essential that the cotton mill industry should be placed on a sound footing for the future. It was in this context that he described the conditions presently obtaining in the industry. Here is what he said:

"I regret to say that, looking at the developments which are taking place in other countries, we are lagging miles behind. When compared to our competitors abroad, it can truly be said that our industry is tied hand and foot with curbs on production and expansion, resistance to rationalisation and modern machinery and numerous other impositions of excise duties on finished products, as well as on a large number of the items used in the course of manufacture. The restriction on increase in capacity of industry, on the one hand, and voluntary price control, on the other, has brought progress to a standstill. The industry cannot earn money with which to renovate its equipment or expand the production to meet the ever-increasing demand at home and abroad. It is, indeed, sad that a country blessed with its own supply of raw cotton should be outstripped by the industries in countries not so fortunately placed. It is due to the fact that they are unfettered that they have been able to achieve such remarkable results."

These are hard facts which cannot be disputed by any one. It must, however, be admitted that the blame for the discouraging trends in cotton textile export trade does not lie entirely with the Government. For the industry and trade also have to share the blame to some extent. Mr. Wadia, who is both a manufacturer and an exporter, was quite candid when he observed:

"The analysis of our performance glaringly brings out the fact that our undue reliance on grey goods to muster our performance has its serious limitations. Many underdeveloped countries of Africa and Asia are strengthening their infant textile industries, whereby the door for our bread and butter lines is slowly being shut. As against this, the door to printed goods is wide open and progress in this field is disheartening, running at a meagre 4 per cent of our annual exports. Our industry has shown little enterprise in developing exports of finished goods."

Gone are the days when Indian textiles enjoyed the unique advantages of low-priced cotton and low wages *vis-a-vis* the other textile producing countries. This point is driven home by the following extract from Mr. Wadia's speech:

"The emergence of new supplier countries like Spain, Portugal, East European countries, Turkey and Egypt, which are making all-out bid to carve markets for themselves, has affected us severely. This has in no small measure disturbed the equilibrium of international trade. With the stabilisation of the European Common Market, France and Germany have expanded their exports of cotton textiles. . . .

"Many new factors are coming into play in the international trade of cotton textiles and these will require constant vigilance by all concerned. While the extension of the agreement between Lancashire and Hong Kong till the end of 1962 will increase our quota for that calendar year for goods to be retained in the U.K., the application of Her Majesty's Government to join the Common Market causes particular anxiety for the export of cotton textiles from India. While the effects of her joining may be gradually felt by us, nevertheless, they are likely to be of a permanent nature when the final stages of economic union is reached. As England is our largest market taking one-third of our exports, it is not difficult to see how seriously we can be affected. . . . "

The foregoing account gives an idea of the magnitude of the task involved in stepping up exports of cotton textiles. Unless the Government, industry, labour and trade play their part properly, fully conscious of the difficulties ahead, no worthwhile results can be achieved. The key to export promotion lies partly in reducing the cost of production and partly in supplying the types of goods that suit the tastes of overseas customers. In this context, the reported decision of the Cabinet Committee on Export Promotion to allocate sufficient foreign exchange to enable mills to undertake rationalisation and modernisation programmes is a step in the right direction. Simultaneously, the Government must also abolish curbs on production and export and reduce the burden of taxation. On its part, the industry must adopt (*a*) measures to ensure production of acceptable quality fabrics at an economic cost, (*b*) undertake market study for assessing the demand potential and the types of goods required, and (*c*) conduct design research with a view to promoting originality and fashion.

MARKET GOSSIP

THE share markets are, once again, having jitters. War scare and renewed threat of restrictions on speculation are the fresh factors of the week which have induced the bulls to make a hasty retreat and the bears to indulge in another bout of selling. The withdrawal of margins against bears on the Calcutta Stock Exchange gave new strength to bears in that market. It is not known why the authorities of the Calcutta market so quickly reversed their earlier decision, and that, too, when there were unmistakable signs that the downward trend was not over. But we do not blame them, for the step taken by them was not followed by their confreres in Bombay and a considerable amount of business must have been diverted from the Lyons Range to Dalal Street.

Check on Speculation

The impression that the Government of India has shelved its proposals for restraining speculation on Stock Exchanges has been belied. It is now common knowledge that there is going to be a high level conference this week-end between the heads of Stock Exchanges and the Finance Minister. The conference will also be attended by one of the Deputy Governors of the Reserve Bank, the Chairmen of the State Bank of India and the L.I.C., and the concerned officials of the Union Finance Ministry. It is presumed that the subject of discussion will be the proposals put forward by the Stock Exchange Directorate for regulating speculation. According to knowledgeable circles, some of the leading and influential industrialists have lent their support to the contention that there has been no unhealthy speculation in the stock markets and that a buoyant share market is necessary for helping new companies and expansion schemes of existing companies to get capital from investors. To cut a long story short, the Presidents of Stock Exchanges have received the active support of industrial leaders for their view that they have already been taking such measures as are necessary for checking unhealthy speculation, that they should be allowed to enjoy the freedom of action they have so far had and that they could be relied upon to take further measures if and when they thought them to be necessary. It remains to be seen whether Mr. Morarji Desai will merely give a lecture to the Stock Exchange Presidents on the evils of speculation and the necessity to keep the bulls and bears within reasonable bounds, or tell them firmly that, as they have not done enough to prevent violent fluctuations in equities due to excessive speculation, the Government has decided to enforce certain measures. At the time of writing, there are many who are inclined to believe that the former is very likely. This perhaps accounts for the smart spurt in some of the speculative scrips today from the lowest levels touched earlier.

While we have no desire to anticipate the outcome of the meeting, we have no hesitation in saying that the following are the lines—and they are the minimum—on which healthier stock exchanges could be ensured:

1. The establishment of a permanent Stock Exchange Security Commission on the lines obtaining in the U.S. The need for such a watch dog of the type was conceded in principle by Mr. C. D. Deshmukh, when he was the Finance Minister, while piloting the comprehensive Company Law reform. The present one-man Stock Exchange Directorate has been inadequate and will be unequal to the heavy tasks ahead. In saying this, we cast no reflections on the ability of the officer concerned.

2. Determination and enforcement of minimum brokerage, coupled with heavier deposits from brokers, are quite desirable. Both in Calcutta and Bombay there are too many stock brokers of slender means and intellectual equipment. A certain amount of pruning of membership will be conducive to toning up quality.

3. A permanent system of margins on both purchases and short-sales should be applied, without any exemption limits. These margins should be of varying type which will automatically move up or down with the trend of values. They should not be on the net outstanding position of a broker, but on the daily outstandings of each of his clients. Adequate precautions must be taken to make sure that speculation is not carried on under the guise of spot transactions.

4. If any particular scrip in the cash list enjoys a consistently large volume of turnover, it should be transferred to the forward list, so that transactions in it may be subjected to margins and other controls.

5. Periodical surprise inspection of the books of brokers should be carried out by the Government's controlling authority and those who are found to be guilty of not observing the rules and regulations should be severely dealt with.

Jute Bufferstock

The decision in regard to the creation of a raw jute bufferstock, arrived at the meeting of the representatives of the Central and West Bengal Governments and the Indian Jute Mills' Association spokesmen held at Calcutta on Sunday this week is surprising. By entrusting the work of establishing and operating the bufferstock to the jute industry, the Government of India has only shirked its responsibility. Just last week, we urged in these columns that the right party to operate such a scheme is the Government and not the millowners and/or the traders. The decision is all the more surprising because the industry itself has volunteered to undertake the task, instead of concentrating attention on the more important and pressing problems of production and marketing of jute goods.

The details of the proposed bufferstock, such as those pertaining to the structure of the agency, methods of financing, storage, turnover and re-sale of stock, as well as the price at which raw jute will be bought, are yet to be finalised. All that is now known is that the bufferstock agency will be either an independent company incorporated under the Indian Companies Act or a society registered in accordance with the Registration of Societies Act. It is stated that the agency will work under the supervision of the Union Government. It is further stated that at least 75 per cent of the finances required for the authority's price support operations will be available through the banking system, but the authority is not expected to buy all the jute in the market. To quote a spokesman of the West Bengal Government: "It will operate as a price support scheme, greater stress being laid to match the arrivals by regular purchases by the jute mills."

Contrary to expectations, the Calcutta meeting did not take any decision on the question of a statutory floor price for raw jute. It is believed that the representatives of West Bengal Government pleaded for statutory fixation of a floor price at Rs. 35 per maund, but the plea would appear to have not found favour with the Central Government which feels that the minimum price of Rs. 30 is quite reasonable and it will take steps to see that the price does not go below this level.

Meanwhile, it is heartening to learn that conditions in the jute industry are improving gradually and, if the pace of improvement were to persist, the industry would be out of the crisis again in the not-too-distant future. Arrivals of raw jute have increased lately and they will rise further following the abolition of the import duty on raw jute with effect from the 1st inst. The prices of raw jute are to be maintained at reasonable levels and the bank credit restrictions on jute mills have been withdrawn. One report has it that the industry is contemplating to revert to the normal 48-hour week, in the place of the present 42½-hour week, besides unsealing as many looms as possible.

British Banks to Help Small Exporters

It is, perhaps, indicative of the recognition of the importance of small and medium producers in the export trade of Britain that new and better facilities are now being offered to enable them to export more. The British Export Credit Guarantee Department (E.C.G.D.) gave the lead by announcing, in April last, new covers and more liberal credit terms for small and medium-sized firms as an inducement to them to enter the export field. Many private financing institutions followed suit by offering liberal credit terms for the small and medium exporter. The latest is an export credit scheme jointly formulated by Messrs. S. Japhet and Co., London Merchant Bankers, the Hongkong and Shanghai Banking Corporation, and the National and Grindlays Bank. A new company, called Exports Refinance Corporation, has been formed by them for the purpose. It has an issued capital of £750,000, held equally by the three partners.

The scheme is operative from the 1st inst. It is, as noted above, meant primarily for providing short-term credit for small and medium exporters. The maximum lending period will be five years, to start with. The scheme will be worked in close co-operation with the E.C.G.D. Loans will be given only to exporters who have E.C.G.D. cover. The sponsors of the scheme expect that there will be sufficient demand, even at a comparatively high rate of interest, for credit from small exporters to make the scheme a success.

The idea behind the scheme is that it is not the business of the manufacturers to finance their customers, even if they are abroad. The growing demand for credit from overseas buyers of the products of even the small exporter is also probably one of the reasons why the banks found that there is scope for this kind of business.

Freight Rates and Export Trade

Dr. A. Ramaswami Mudaliar, Chairman of the India Steamship Company Ltd., has circulated a statement to shareholders, along with the Directors' report and accounts, in advance of the Annual General Meeting of the Company scheduled to be held at Calcutta on the 26th inst. In this statement, he has dealt at length with the dilemma facing the shipping companies, especially those operating on the India-U.K.-Continent line. The present freight rates on this line, he points out, are uneconomic; they have remained practically unchanged since 1957, notwithstanding the fact that costs in every direction, including wages of staff, have gone up. A corresponding increase in freight rates would have been the obvious solution, but for the fact that a freight increase could not be readily equated to the increased costs. This is because of its probable adverse effect on exports and the balance of payments position of the countries whose exports they carry. Most of the countries, whose trade formed the bulk of the business of the shipping lines operating the India-U.K.-Continent line, are anxious to promote exports of commodities and manufactured goods in a desperate attempt to earn foreign exchange and to keep their payments position in balance. Conflicting considerations such as these have, to a large extent, prevented an upward revision of freight rates to meet the increased costs.

There [illegible] and even more serious, factor [illegible] which Mr. Ramaswami Mudaliar has again [illegible] the unhealthy, and in-

UNCERTAIN TREND IN EQUITIES

SMALL RECOVERY AT CLOSE

(From Our Own Correspondents)

BOMBAY, *7th September*

AFTER showing some signs of recovery in the initial days of the week, the share markets have shown signs of weakness again. Although here and there some scrips have managed to record some gains due to bargain hunting, the general trend is downward. Confidence of bulls is shaky, while the bears are still in an aggressive mood.

Sentiment on the Stock Exchange was quite cheerful on Friday the 1st inst. and several counters registered handsome gains. The main stimulant was provided by reports suggesting institutional investment in Tata Locomotives, Voltas, Svadeshis, Sirpur Paper and a few other scrips. Turnover improved significantly in some select counters. The upward trend of prices gathered further momentum on Monday, when, following short-covering and fresh support, a number of shares touched the peak levels of the week. At high levels on the same day, profit-taking set in and equities developed a sagging tendency which persisted yesterday, too, thanks to persistent fears of possible restrictions on speculation. It is reported that the Union Finance Minister would meet the Stock Exchange Presidents at Bombay on Saturday the 9th inst. to discuss the steps to be taken for curbing speculation. There was also absence of institutional support with the opening of the subscription lists for State loans. Besides, enquiries from individual investors were at a low ebb, in view of the proximity of end-of-account period (8th September). Even the statement of the Finance Minister at the informal consultative committee of Parliament that there was no possibility of raising the Bank rate in the near future failed to have any effect. The downward trend continued today, though, later in the day, lower levels attracted some support and a small recovery was in evidence.

The shareholders of the Ahmedabad Electricity Company Ltd. have some encouraging news. The working results of the Company for the year ended March 1961 show that the sales of electricity have gone up by 8.2 per cent to 755.5 million units and the gross profit from Rs. 134.89 lakhs to Rs. 140.17 lakhs. The Directors have decided to maintain the dividend for the year ended 31st March 1961 at the previous year's level of 7 per cent gross. The investors in the shares of Machinery Manufacturers Corporation will be happy to know that the Company has made a net profit of Rs. 21.93 lakhs for the year ended 31st March 1961, as against the loss of Rs. 4.97 lakhs incurred in the preceding year. In order to finance its programme of expansion, the Gannon Dunkerley proposes to raise its capital from Rs. 30 lakhs to Rs. 1 crore by offering 64,000 shares of Rs. 100 each to the public. The Guest, Keen and Williams is likely to receive official sanction to expand the capacity of its screw making plant from 1.56 million gross to 2.25 million gross. The Shivrajpur Syndicate proposes to issue bonus shares in the ratio of one for one by capitalising Rs. 10.50 lakhs out of the general reserves. The new issues market would appear to be still buoyant. The recent issue of the Chemicoat Limited has been oversubscribed by nearly 25 times.

In the steel section, Tata Steels began at Rs. 151 and firmed up to Rs. 152.25 on the following day. The general depressed mood of the market brought down the quotation to Rs. 148.50 on Wednesday and further to Rs. 148 today. Indian Irons, after improving from Rs. 25 to Rs. 25.45 on Monday, declined subsequently and touched Rs. 24.52 today before finishing at Rs. 24.84. Mukand Irons which opened at Rs. 25.75 on Friday, received sustained support and rose to Rs. 26.65 on the 4th inst. Thereafter, they drifted lower and reached Rs. 25.75 today.

Among textiles, Centurys met with good support and jumped up from Rs. 684 in Kerb trading on Wednesday to Rs. 690 on the first day. At this level, profit-taking set in and the share moved down to Rs. 665 yesterday but recovered again to Rs. 681 today. Khataus spurted by Rs. 7.50 to Rs. 477.50. Morarjees gained Rs. 6 to Rs. 386. Shree Niwas gathered a like amount to Rs. 264. Finlays and Phoenix rose by Rs. 4 each to Rs. 315 and Rs. 169.50 respectively. Sassoons put on Rs. 2.50 to Rs. 62.50. Elphinstones were bid Rs. 2 higher at Rs. 84. Tata Mills picked up Re. 1.30 to Rs. 63. Simplex opened at Rs. 190, as against the previous close of Rs. 191, and moved up to Rs. 193 on Monday. In the subsequent session, they declined on account of stray bull liquidation and finished at Rs. 191 today. Gokaks were quiet at Rs. 185, as also Indores at Rs. 158 and India Uniteds at Re. 1.88. In the cash section, Mafatlals fell by Rs. 17.50 to Rs. 790. Kohinoors eased by Rs. 3.50 to Rs. 279. Standards dropped Rs. 3 to Rs. 1,142. Bombay Dyeings were well supported in the earlier sessions, the quotation rising from Rs. 65.40 to Rs. 66 on Monday the 4th inst. Thereafter, they gradually receded and touched a low of Rs. 64.90 today.

Thanks to encouraging results of some companies, the cement section displayed a firm trend. Associated Cements evoked speculative investment support and advanced from Rs. 167 to Rs. 160 on Monday, but, in the subsequent sessions, owing to profit-taking they declined and finished at Rs. 158.50. Over the week, the scrip gained Re. 1.50. Digvijays moved up from Rs. 163.50 to Rs. 165.50. Orissa Cements gathered 36 nP to Rs. 15.16. Jaipur Udyogs put on 48 nP to Rs. 11.36. Dalmia Cements changed hands at Rs. 10.96, showing a gain of 20 nP over the week.

In the shipping section, Scindias opened lower at Rs. 12.28 as against the previous close of Rs. 12.32, and rose to Rs. 12.44 on Monday. Later, however, they were neglected and closed lower at Rs. 12.20 today. Great Easterns received some support and hardened by 12 nP to Rs. 13.12. Automobile shares were depressed. Hindustan Motors lost 80 nP to Rs. 18.20. Premier Automobiles shed 25 nP to Rs. 153.25.

Chemicals ruled irregular. Amar Dyes were hammered down by Rs. 18.75 to Rs. 280. Dhrangadhras (new) lost Re. 1.50 to Rs. 105, Kemps eased by 50 nP to Rs. 297.50. Citric shed a like amount to Rs. 71. A few other shares, however, attracted keen attention. Indian Dyestuffs jumped up by Rs. 18.75 to Rs. 430. Poly-Chems advanced by Re. 1.25 to Rs. 197.50. Colour-Chems rose by an equal amount to Rs. 335. Ultra Marines rose by a rupee to Rs. 108. Tata Chemicals gained 52 nP to Rs. 16.92.

With the solitary exception of Maharashtra Sugars, which eased by Re. 1 to Rs. 189, the sugar section presented a firm trend. Belapurs opened higher at Rs. 275, as against the previous close of Rs. 272, and spurted to Rs. 285 on Monday. At this stage, profit-taking ensued and the scrip fell to Rs. 271 today but finished higher at Rs. 274. Phaltans advanced by Rs. 4 to Rs. 136. Ravalgaons and Walchandnagars were firm at Rs. 63 and Rs. 164, respectively.

The engineering section ruled generally firm during the week, though the gains recorded were modest. Tata Locomotives were well supported in the first two sessions and advanced from Rs. 332 to Rs. 341 on Monday. Thereafter, they receded and touched Rs. 328.25 today before recovering to Rs. 334 at the close. Over the week, the gain was Rs. 3.50. Larsen and Toubros rose by Rs. 2 to Rs. 36.75. Cooper Engineerings gained a rupee to Rs. 178.50. T. Maneklal Olds jumped up by Rs. 25 to Rs. 490, while the new shares slumped by Rs. 115 to Rs. 475. But Alcock Ashdowns lost a rupee to Rs. 286. Khandelwals shed an equal amount to Rs. 70. New Standard Engineerings dropped Rs. 8 to Rs. 177.

In the rayon section, the trend was mixed. National Rayons opened at Rs. 516, as against the previous close of Rs. 514, and rose to Rs. 526 on Monday. On the following days, bull liquidation brought down the value to Rs. 508 today. Towards the close, the scrip was firm at Rs. 514.50. Baroda Rayons were keenly bid and advanced by Rs. 2.75 to Rs. 138.25. Indian Rayons firmed up by Rs. 2 to Rs. 72. South India Viscoses gathered a rupee to Rs. 175. But Gwalior Rayons eased by a rupee to Rs. 48.

In the miscellaneous section, Bombay Burmahs evoked good enquiries early in the week and advanced from Rs. 580 to Rs. 586. Subsequently, however, there was persistent profit-taking which took the value down to Rs. 573. The closing was a shade better at Rs. 576. But Voltas maintained a steady front at Rs. 276. Following the announcement of bonus issue, Shivrajpurs improved by Rs. 3.50 to Rs. 92.50. Wimcos gained Rs. 2 to Rs. 274. Killick Industries put on a rupee to Rs. 97.

Madras Stock Exchange

MADRAS, *6th September*

Mixed trends prevailed on the Stock Exchange during the week under review. Thus, while sugars, coffees and rubbers ruled listless, textiles, teas and miscellaneous industrials were somewhat favoured. The business actually transacted was limited, as fresh buying support was lacking, in the absence of any new incentives. Operators were awaiting Government's final decision on the question of restricting speculation in shares. They welcomed the Central Licensing Committee's approval of the Enfield's expansion programme (in Madras), and other industrial schemes in the South, but this did not have any perceptible effect on the market trend. Textiles ruled steady on account of some upcountry support. Teas were well maintained, despite reports that tea exports from Cochin were running at a lower level. The easiness of sugars was due to the persistent uncertainty regarding export prospects. Coffees were neglected, notwithstanding the news that a coffee export promotion delegation, led by the Chairman of the Coffee Board would leave shortly for the U.K. and other European countries to explore the ways and means of promoting India's shipments of coffee. There was some activity in selected miscellaneous shares, particularly cements and engineerings.

In the textile section, Coimbatore Cottons rose by Rs. 3 to Rs. 191. South India Viscose and Vasantas advanced by a like amount to Rs. 179 and Rs. 270, respectively. Metturs strengthened by Rs. 2 to Rs. 384. Loyals put on a rupee to Rs. 45.50. Travancore Rayons improved from Rs. 38.05 to Rs. 38.65 before closing at Rs. 38.45, the net increase being 40 nP. Madurais hardened by 5 nP to Rs. 36.75; the quotation had touched Rs. 37 earlier in the week. Lakshmis, which had declined from Rs. 156 to Rs. 154 in the earlier sessions, recovered to the opening level of Rs. 156 towards the close. Bangalore Woollens were fully steady at Rs. 216. The Company has announced an interim dividend of 6 per cent, taxable, for 1961.

Among teas, Nonsuchs gathered 10 nP to Rs. 28.70. Kil Kotagiris picked up a like amount to Rs. 4.75. Waterfalls were higher by 5 nP at Rs. 3.00. But Haileyburias were maintained at Rs. 13.40, Highlands at Rs. 16 and Parksides at Rs. 29.62. Kurchermalas were firm at Rs. 5, following the news that the Directors had recommended a dividend of 4 per cent, taxable, for the year ended March 1961. The Company, it may be recalled, had passed over the dividend in the previous year.

Coffees ruled easy. Coffee Lands declined by 15 nP to Rs. 17.50. Consolidated Coffees eased by 10 nP to Rs. 20.95. Anaparais lost a like amount to Rs. 3.85. Cowcoodys were dull at Rs. 4.45, Rajendras at Rs. 12.12 and Balanoors at Rs. 15.35. Mysore Amalgamateds were quiet at Rs. 5.90, reflecting disappointment of operators over the maintenance of the dividend for the year ended March 1961 at the previous year's level of 10 per cent (taxable).

Among rubbers, Midlands fell by 20 nP to Rs. 11.60. T. R. and Ts dropped 5 nP to Rs. 9.85. Malankaras were subdued at Rs. 18 and Travancore Rubbers at Rs. 11.87. Teekoys were dull at Rs. 5.20, despite the announcement of a dividend of 4 per cent (taxable) for the year ended March 1961; no dividend had been paid in the previous year.

Among sugars, Cauverys suffered a setback of Rs. 6 to Rs. 111. Indias lost 25 nP to Rs. 11.75. Deccans shed 5 nP to Rs. 12.95. Mysores were quiet at Rs. 57.75. United Breweries, however, moved up by Rs. 5 to Rs. 106.50 on good dividend news. The Directors of the Company have recommended a final dividend of 35 per cent, making a total of 60 per cent (taxable) for the year ended March 1961, same as that distributed in 1959-60. In addition, an interim dividend of 25 per cent has been declared for the year. The Company also proposes to issue 50,000 equity shares of Rs. 10 each at par on *pro rata* basis to shareholders as on 30th December 1961.

In the miscellaneous section, Orissas and Dalmia Cements rose by 10 nP each, the former to Rs. 14.85 and the latter to Rs. 11. Indias were fully maintained at Rs. 6.47 and Travancores at Rs. 7.50. Andhras, however, shed 10 nP to Rs. 9.40. Aluminium Industries hardened by 25 nP to Rs. 22.95. India Steel Rollings strengthened by 10 nP to Rs. 10.65. Ashok Leylands picked up 3 nP to Rs. 8.45. Textools were firm at Rs. 175, as also Tube Investments at Rs. 258.

MARKET GOSSIP

(Concluded from previous page)

fair means by which some of the shipping companies or their agents try to obtain cargo by undercutting freight rates through larger rates of rebate to shippers than are permissible under Conference rules. The effect of these and other practices, such as the manner in which some of the forwarding agents, particularly on the Continent of Europe, try to corner cargoes have had disastrous effects on the profits of shipping companies. A solution for this state of affairs is the allocation of freight earnings of the Conference in certain proportion, over a term of years, providing, at the same time, for the growth and development of the fleets of underdeveloped countries through a defined and reasonable escalation of the rate of allocation during the period. After protracted discussions and negotiations, an agreement was arrived at in November last, defining the percentages of earnings which the lines under different flags would be allocated every year. This arrangement is considered as beneficial by all the Lines concerned, especially because it removes unhealthy competition, various kinds of malpractices and ensures the better working of the Conference system. At the same time, according to Dr. Ramaswami Mudaliar, shippers would not be inconvenienced to the slightest extent. In fact, the cargo movement to and from the Continental ports will be better facilitated.

This, of course, is only a partial solution. The question of revision of freight, Dr. Mudaliar observes, is being studied objectively and scientifically and an effort is being made to see whether freight may be increased on commodities which can bear the increase and still maintain their competitive position in world markets. In fact, a blanket increase of 10 per cent in freight, with effect from 1st October 1961, has already been proposed by the India-U.K.-Continent Shipping Conference. The proposal has been opposed by the Government of India, because it is sure to hit India's export trade. It is pointed out, in support of this contention, that, since the Government's policy of export promotion is bound to increase the volume of cargo available for shipment from India, it is short-sighted and unbusinesslike to increase the burden on such cargo. Representatives of the Conference contend that operation on the aforesaid routes is uneconomic, owing to the delays in ports, increase in wages and other costs and an increase in freights is, therefore, imperative. They are expected to have a fresh round of talks with the representatives of the Union Ministry of Transport shortly when they are likely to suggest freight increases commodity-wise so that those commodities, which can bear an enhanced freight, may be charged more and those that cannot be exempted are probably charged a lower freight. It may be recalled here that a reduction in the freight rate of some commodities has already been agreed to by the Conference.

The crux of the problem is to strike a balance between the need for keeping the freight rates at a reasonably low level in the interest of exports and fixing them at level which will prove economic to the shipping companies. Beneficiaries of higher freight will be not only the foreign companies operating on the India-U.K.-Continent line but also the Indian shipping companies, both State-owned and private, that participate in this trade. It is to be hoped that the talks will prove fruitful and a fair adjustment of freight rates would be possible.

NEWS IN BRIEF

THE Tariff Commission has taken up for investigation the question of fixing fair ex-mill prices of cotton yarn and cloth.

As many as 16,737 smuggled watches, valued at about Rs. 12.65 lakhs, were seized by customs authorities during the six months ended June 1961.

The Central Advisory Council of Industries will meet at New Delhi on 28th October, 1961, under the chairmanship of Mr. K. C. Reddi, Minister for Commerce and Industry.

After taking into account the supply position of raw jute and in order to promote exports of jute manufactures, the Union Government has removed the existing import duty of 35 per cent on raw jute with effect from the 1st inst.

In response to the global tenders invited for the construction of an atomic power station of 300 MW. capacity near Tarapur, sixty miles north of Bombay, seven tenders have been received from four countries, namely, Canada, France, the U.K. and the U.S.

The question of setting up a central machinery to clarify points of doubt in regard to implementation of the recommendations of the Sugar Wage Board is being considered by the Government of India.

Necessary formalities for the merger of the State-owned Eastern and Western Shipping Corporations into one company, under the name Shipping Corporation of India Ltd., are nearing completion. The new Corporation will come into being on the 2nd of next month.

Out of the 88 jute mills, 83 have implemented the interim award of the Jute Wage Board. The two Kanpur mills, which have not accepted the award, have gone to Court. Meanwhile, the Central Government has asked the U.P. Government to persuade the two mills to withdraw cases and implement the award.

A separate unit in charge of the development of backward areas is proposed to be set up in the Planning Commission. The unit, it is said, will not merely function as a study group, but will also pursue the implementation of various development schemes in the backward areas.

India's adverse balance of trade declined to Rs. 18.23 crores in July 1961, from Rs. 37 crores in the previous month. Exports (including re-exports) rose from Rs. 49.88 crores in June to Rs. 50.74 crores in July, while imports declined from Rs. 87.34 crores to Rs. 69 crores.

A heavy pilot plant for upgrading low-grade manganese ore is being established at the National Metallurgical Laboratory, Jamshedpur. This plant, claimed to be one of the biggest of its kind, will provide valuable economic and design data for the establishment of the commercial upgrading plants.

An Indo-Swiss training centre for precision mechanics will be established at Chandigarh. The Governing Council of the U.N. Special Fund has granted a sum of $9,35,500 to the Central Scientific Instruments Organisation for the project. Equipment for the proposed Centre will be provided by the Swiss Foundation.

A second telephone producing plant will be set up in the country shortly, but no decision has yet been taken on its location. This was disclosed by Dr. P. Subbaroyan, Union Minister for Transport and Communications, while inaugurating the Rs. 125-lakh 8,000-mile new central automatic exchange at Madras on the 2nd inst.

The Government of India has acceded to the International Convention to facilitate imports of commercial samples and advertising materials. The samples of goods, which are exempt from import duties under the International Convention, drawn up at Geneva on 7th November 1952, will now be allowed clearance free of duty and without import restrictions.

The foundation-stone for a new calcium carbide plant, with a capacity of 30 tons per day, was laid by Mr. V. V. Giri, Governor of Kerala, at Chingavanam in Kottayam. The plant is being set up by the Electro-Chemical Industries, and is expected to go into production next year. The machinery for the project is being supplied by the S.I.A. Invest Export of Berlin in West Germany.

An official Bill, seeking to enforce quality control on export goods, is expected to be introduced during the ensuing Parliament session. The move follows a recommendation to this effect made by an expert committee (Chairman: Mr. Lal C. Verman, Director of the Indian Standards Institution). The Government is understood to have accepted another suggestion of the Committee to constitute a statutory body for enforcing quality control.

A factory for the manufacture of cable is proposed to be set up shortly at Digha in West Patna at a cost of about Rs. 2 crores, by a private firm in collaboration with the Government of Bihar and an East German firm. The factory is expected to produce enough cable to meet the requirements of the State Electricity Board and also for export. The Bihar Industrial Development Corporation has decided to purchase shares worth Rs. 5 lakhs in the new company.

India has secured orders for another 110,000 pairs of shoes from Russia and for 28,000 pairs from East Germany, according to Mr. Manubhai Shah, Union Minister for Industry. At Agra alone, the total production is about 4 to 5 million pairs annually. The National Small Industries Corporation has established a procurement centre at Agra to assist shoe fabricators with export orders.

With effect from 29th August, the Reserve Bank of India has withdrawn margin restrictions on advances by scheduled banks against raw jute and ceiling limits on advances against jute goods following the improved supply position of raw jute. Meanwhile, some jute mills in the Calcutta area have started gradually unsealing looms additionally sealed at the beginning of last month.

The Government of India has accepted and been acting on the major recommendations of Mr. H. A. Longden, Director-General (Production) of the U.K. National Coal Board, who visited the National Coal Development Corporation's collieries a year ago. As a result of his suggestions, the N.C.D.C's organisation has been decentralised in order to put chief mining engineers or joint mining engineers directly in local charge of various mining areas. Two senior posts, namely, directors of production and planning, have also been created to strengthen planning and ensure co-ordination.

The total cost of printing currency notes during the year 1960-61 was Rs. 238.41 lakhs, as against Rs. 185.88 lakhs in 1959-60. The cost of printing notes worth Rs. one crore face value works out to Rs. 81,000 for one-rupee notes, Rs. 45,000 for two-rupee notes, Rs. 25,200 for five-rupee notes, Rs. 15,530 for ten-rupee notes and Rs. 2,543 for hundred-rupee notes. The production cost of minting one million pieces of decimal coins at the Alipore Mint is estimated at Rs. 74,190 for 25 nP coins, Rs. 47,880 for 10 nP coins, Rs. 42,890 for 5 nP coins, Rs. 34,360 for 2 nP coins and Rs. 19,990 for 1 nP coins.

The Government of India has decided that there should be no modification in regard to application of the Employees' Provident Fund Act to hotels and restaurants. The Act was made applicable to these establishments from 30th June 1961. The All-India Hotels' Federations, Bombay, and the Federation of Hotels and Restaurants of India, Delhi, had made representations to the Union Labour Minister that either the extension of the Act to hotels and restaurants should be withdrawn or the application of its provision be restricted to establishments employing 50 or more employees' instead of 20 as at present. The Employees' Provident Fund Act, 1952, now covers 59 industries comprising 2,133 establishments and benefits about three million workers.

Exports of cotton textiles to the U.K. from 1st December 1961 onwards will be licensed from India. Quota certificates will be issued by the Cotton Textiles Export Promotion Council, Bombay, on the strength of which export licences will be issued by the Joint Chief Controller of Imports and Exports, Bombay. The quotas issued will be (1) for retention of cloth in U.K., and (2) for re-export. The quotas for the purpose of retention of cloth in the U.K. will be subject to a quantitative limitation. Such quotas to exporters will be given on the basis of the annual average of actual shipments effected by them to the U.K., in such proportion as shall be determined during any of the two combined calendar years, namely, 1957-58, 1958-59 and 1959-60. Exporters intending to apply for quotas should enrol themselves under the Enrolment Scheme immediately.

Important recommendations concerning soil survey, soil conservation, soil fertility and fertiliser projects have been made at the eighth annual meeting of agricultural chemists, soil conservation officers, agronomists, statisticians and regional fertiliser officers just concluded in New Delhi. The soil survey session of the conference reviewed the progress of soil survey in the country. It was decided that there should be uniformity in the methods of soil survey in the various States and greater co-ordination right from the planning to the implementation stage. The need was felt for increasing the tempo of survey work in the country. The soil conservation session of the conference recommended extensive trials of different types of bunds with different specifications. It was recommended by the Fertiliser section of the conference that composite fertiliser demonstrations, including the use of fertilisers and other improved agricultural practices should be started in every State to obtain a maximum production.

From Abroad

In 1959, there were 280 millionaires in the U.S. Their taxable income amounted to $425 million, of which they paid $268 million to the Treasury.

The International Monetary Fund has agreed to a proposal by Costa Rica to devalue its currency from 5.50 to 6.25 colones to the U.S. dollar.

Australia's exports of wheat in 1960-61 touched a record of 183.5 million bushels valued at £96.9 million, as compared with about 116 million bushels valued at about £62 million in 1959-60. China was the largest buyer.

Malaya will soon have its first oil refinery with a capacity of 20,000 barrels a day. It will be put up by the Standard-Vacuum Oil Company of the U.S. at Port Dickson, near Kuala Lumpur, at a cost of about $17 million.

The British Leyland Motors has secured from the Argentine Government a £3.75-million contract for buses. The contract includes 390 complete buses and 100 bus chassis which will join a fleet of over 1,000 Leyland buses now operating in Buenos Aires.

The Swedes spent about Kr. 870 million (£61 million) on horse race stakes, football betting and lotteries in 1960, according to a survey in the Swedish periodical, *Liv*. This sum represents Kr. 115 (£8) per head of the country's 7.5 million population.

Production of tea in East Pakistan during 1961 is estimated at 57 million lbs., or about 15 million more than what was produced last year. Following the improvement in the supply position, the Pakistan Government has introduced its programme of export auctions. An allocation of five million lbs. has also been announced for export for 1961-62.

Hungary has fixed higher tariffs against imports from member-countries of the Common Market and the E.F.T.A. in order to put pressure on them which pursue a discriminatory tariff and trade policy towards Hungary. Hungary is the first Communist country to introduce tariff restrictions against the West European trade blocs. The other Communist countries, it is said, may follow suit.

A British team, located near Leicester, England, has started work on compiling a register of world production-engineering research to help production engineers all over the world to keep fully informed about investigations carried out in research organisations, industrial firms, universities and colleges. The work is being done by the British Production Engineering Research Association. This is the first time that such a survey is being undertaken.

Norway, Denmark, Finland, Iceland and Sweden are jointly working on projects to co-ordinate their technical assistance to developing countries. Special emphasis is being placed on aid in the educational field. Plans for the establishing of a joint Nordic educational centre in an African country are now being considered—either a school for general education or for vocational training. The final proposal for such a project will be submitted to the next meeting of the Nordic Council in February next year.

Austria had a record foreign trade deficit of Sch.3,970 million, during the first half of 1961, an increase of 11 per cent over the corresponding period of 1960. Imports rose by 9 per cent to Sch. 19,110 million and exports increased by 8 per cent to Sch. 15,140 million. Despite the slight upward trend, the E.F.T.A.'s share of Austrian exports was only 13 per cent, as compared with 49 per cent for the Common Market. The E.F.T.A. accounted for 13 per cent of Austrian imports, as against the Common Market's share of 49 per cent. The total trade deficit, however, was more than offset by the growing [illegible] invisible earnings, mainly from tourism.

PERSONAL

MR. G. R. Chandrasekariya and Mr. P. R. Arunachalam have been elected President and Vice-President, respectively, of the Madras Stock Exchange for 1961-62.

Mr. K. P. S. Menon has returned from Moscow after the expiry of his term of office as India's Ambassador to Soviet Russia.

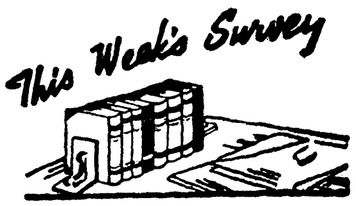
Mr. M. S. Muthanna, a former Director of Posts and Telegraphs, Assam Circle, Shillong, assumed charge as the General Manager of Bombay Telephones on Monday this week.

Mr. Harry Curran, Resident Representative of the World Bank in India, has been transferred to France. He is due to leave for Paris shortly. For the time being, Dr. Stokes Talbot will officiate till a successor is appointed.

Mr. B. K. Kaul, Joint Secretary, Union Ministry of Finance, is reported to have been appointed Chairman of the Life Insurance Corporation *vice* Mr. P. A. Gopalkrishnan. He is expected to take up the new assignment on 1st March 1962.

Mr. P. C. Bhattacharya, Chairman of the State Bank of India, has been appointed Governor of the Reserve Bank of India, with effect from 1st March 1962 on the expiry of the term of appointment of Mr. H. V. R. Iengar. Mr. S. Ranganathan, at present Secretary in the Union Ministry of Commerce and Industry, will succeed Mr. Bhattacharya as the Chairman of the State Bank.

Mr. A. D. Pandit, formerly Chief Commissioner of Delhi, has been appointed an officer on special duty in the Planning Commission. He will be in charge of the rural works programme, which seeks to provide partial employment to the unemployed in the rural sector.



COTTON MILLS' EXPANSION

THE Press note pertaining to the licensing of additional capacity in the cotton mill sector, issued by the Union Ministry of Commerce and Industry a few days ago, is not only incomplete but also vague. It merely says that the Government has decided to license three million additional spindles immediately towards achieving the targets of cotton textiles production envisaged in the third Plan, but does not mention anything about the balance of one million spindles out of the total four million spindles which the Government is reported to have decided to permit. Nor does the Press note give the breakdown of allocations among the different States. There is also no information as to the number of additional looms, if any, that will be permitted and the basis on which they will be allotted. Even in the case of the three million spindles for 'immediate' allotment, the official notification is silent on the basis of licensing. All that the notification says is this:

"Out of this (three million spindles), a *portion* (Italics ours) will be reserved for grant of additional spindles to the existing units on grounds of balancing the spinning capacity with reference to the weaving capacity or increasing the spindleage, so as to make the spinning unit an economic one. The rest will be allocated among the States on a regional basis for the establishment of new spinning mills. In making the regional allocation, the Government of India have taken all relevant facts into consideration such as the population of the States, current production of yarn and cloth in the States, the existing distribution of spindleage, the concentration of handlooms, and the overall needs of the decentralised sector. Government have also decided that a *few* (Italics ours) model mills should be set up to cater exclusively for the export market. These mills will have a capacity of 25,000 spindles and 500 looms each, and will be equipped with the latest machinery, including automatic looms. The State Governments have been informed of the additional spindleage allocated to them."

One wonders whether the Commerce and Industry Ministry could not have been specific and given the exact details regarding the measures to fulfil the third Plan production target fixed for the mill sector (2,250 million lbs. of yarn and 5,800 million yards of cloth). This is another instance of vascillation in the Government's textile policy. If the targets set in the Plan, which are rather conservative, are to be achieved successfully, the Government must clearly spell out its textile policy and take the steps required now alone. The delay in the announcement of policy is all the more regrettable because more than two months have elapsed since the Indian Cotton Mills Federation had made detailed recommendations bearing on the allocation of spindles and looms during the third Plan period.

The priorities for the allotment of spindles suggested by the Federation appear to be well conceived. According to it, preference must first be given to mills the spindleage of which is less than the economic size, followed by unbalanced mills, units which have been allotted additional automatic looms under the Export Incentive Scheme, new units, and expansion of existing mills. The Federation has also examined the question of priority in regard to the execution of orders for spindles by machinery manufacturers. Its suggestion is that the orders so far firmly booked with the machinery manufacturers should be left undisturbed and any scheme of reservation of spinning frames for expansion as well as for replacement should apply only to future orders. As for looms, the Federation has rightly urged an early announcement of policy for the replacement of ordinary looms and the grant of additional automatic looms for the years 1962 onwards. It may be noted here that 9,000 automatic looms have already been allotted for 1959, 1960 and 1961 for replacement of ordinary looms, besides the 3,000 looms sanctioned for export purposes on certain conditions. The Federation is of the view that the progress allowed in the three years 1959, 1960 and 1961 has been on a very conservative basis and a bolder programme for the installation of automatic looms should be drawn up, so that the industry should not fall in decay but retain its vitality to meet the challenge of supplying better and cheaper cotton textiles to the domestic and export markets.

An important point made by the Federation is that, as between new and existing cotton mills, at least 50 per cent of additional spindles must be reserved for the expansion of existing mills "in the interests of securing speedy increase in production at a lower cost." The merit of this plea lies in the fact that many of the existing mills will not require additional buildings—an important point in these days of shortages of cement, steel and bricks—nor will they have to undergo the delays inevitable in the setting up of a new unit. The same holds good in the case of looms also.

U.S. AID BILL IN FINAL FORM

Since we last commented on the U.S. Foreign Aid Bill (*vide* page 434 of *Commerce* dated 2nd September, 1961), there has come about a significant turn in its fortunes. The turn is by way of a compromise on the Bill in the Senate House Conference Committee. Under the Compromise Bill which has just been passed by the two Houses without further debate or serious amendment, the five-year programme of long-term foreign aid will be for $7.2 billion, instead of the $8.8 billion which the Kennedy Administration had originally asked for; but the President will not have the authority to draw directly on the Treasury for making long-term loans. In effect, therefore, the Compromise Bill will allow the President to make commitments for long-term development programmes, though these will be subject to annual appropriations by the Congress. While the rejection of the principle of Treasury borrowing, that is, authority for the President to draw on the Treasury for the five-year period without having to obtain the permission of the Congress every year, pleases the opponents of the Administration, it may not prejudicially affect the President's ability to make long-term commitments. That the Kennedy Administration will be able to go ahead with such commitments in the certain hope that they would be honoured by the Congress, could be inferred from the following provision in the Compromise Bill.

"Whenever the President determines that it is important to the advance of U.S. interests and necessary in order to further the purposes of this title, and in recognition of the need for reasonable advance assurances in the interests of the orderly and effective execution of long-term plans and programmes of development assistance, he is authorised to enter into agreements committing, under the terms and conditions of this title, funds authorised to be apropriated under this title, subject only to the appropriation of such funds."

It will be seen from the wording of this new provision that the annual appropriation of what has been authorised may not cause undue headache to the Administration, for it carries the implication that the Congress intends, as of today, to honour Presidential commitments by actually supplying the money. As the Administration itself has expressed satisfaction over this compromise, it may be recognised that President Kennedy's personal efforts at lobbying have not gone wholly unrewarded. As one who has had long legislative experience and known the strength of the coalition of Southern Democrats and Conservative Republicans in the Congress, he seems to have accepted the compromise as something not too bad in the circumstances. In one respect, the compromise represents an improvement over the earlier offer of the Administration to reduce the duration of the aid programme from five to three years, now that the five-year period has been agreed to. In another respect, however, it is unfortunately less satisfying, in that the quantum of aid has been reduced by $1.6 billion. It may be noted, in this context, that President Kennedy has still to persuade Congress to provide $1.1 billion a year in long-term loans to Latin America under the "Alliance for Progress." If even in respect of long-term assistance to Latin America—a neighbouring region in which the United States has bigger stakes—it is not all smooth sailing for the Kennedy Administration, it is not difficult to see that the compromise on Foreign Aid Bill is the best that can be had from the Congress.

Now that the Bill has been passed, not only India, Pakistan and other developing non-communist countries in Asia but many of the newly independent countries in Africa will have a reasonably fair assurance of long-term aid. Particularly in Africa, where aid from the Communist world to the newly independent nations is stated to have touched the $300-million mark, American aid under the five-year programme of the Compromise Bill may well play the kind of decisive role that it has played in some other areas by holding Communism at bay. The very fact that Communist credits are generally repayable in full in seven to ten years will render the long-term credits from the U.S. more attractive and psychologically significant. That the Kennedy Administration is determined to do its utmost for economic development in Africa as in Latin America, is well known.

AGRICULTURAL RESEARCH

Even before Independence, agricultural research, with particular emphasis on plant breeding, had reached a high standard in India. In the period covered by the first two Plans, it registered further remarkable progress under the ægis of the Indian Council of Agricultural Research. In recent years, the Council has commanded an annual budget of about Rs. 2 crores (as compared with its annual budget of Rs. 5 lakhs thirty years ago) for its research schemes covering evolution and development of new varieties of seeds and plants, experiments in the use of fertilisers, introduction of scientific cultivation practices and implements and sound development of cattle breeding. In 1960-61 alone, for instance, the I.C.A.R. had some notable achievements to its credit. The development of new wheat strains (N.P. 710, N.P. 718, C. 281 and C. 591) resistant to rust diseases in the field is one of them; the possible wide propagation of these rust-resistant seeds alone would arrest the annual loss, ranging from 5 to 10 per cent, in wheat production. Another achievement is the evolution of mechano-chemical methods for increasing the output of jute fibre by anything upto 60 per cent. Thirdly, four new maize hybrids, which can give yield increases ranging from 20 to 40 per cent have been successfully evolved; 7,000 pounds of seeds of these hybrids have already been distributed for multiplication. The release of three new cotton strains (giving better yields) for cultivation in Uttar Pradesh, Madhya Pradesh, Andhra Pradesh and Mysore is yet another achievement. The record of 1960-61, like that of every year over the last decade, is thus one of discoveries and evolutions which *can* increase output. The I.C.A.R. can rightly look back on their achievements with a sense of satisfaction.

But the record of research is one thing, the transmission of research results to the field quite another. The Council is not unaware of the vast field of unfulfilled missions and the promising openings lying ahead of it. It will now be for the research workers and agricultural graduates to fulfil that promise and place at the disposal of the cultivator in the field still greater openings for progress through practical application of the results of research. One encouraging trend in this context is the spread of agricultural education. The increase in the number of agricultural colleges during the second Plan period from 30 (with an intake capacity of about 2,000 students) to 53 (with an intake capacity of 5,600) represents a very significant advance. The recent establishment of an Agricultural University in Uttar Pradesh may also be recalled here.

The I.C.A.R. has clearly reached a stage at which the practical application of the results of research should receive greater attention at its hands. It is, therefore, good to know that the Council's Governing Body has just allotted Rs. 25 lakhs to pilot projects for testing the results of researches on a commercial scale. Another noteworthy decision of the Governing Body is that the I.C.A.R. should make the preliminary arrangements in respect of an Improved Seeds Corporation which the Government of India has decided to set up for producing, in the first instance, seeds of hybrid maize and hybrid *jowar*. Programmes for breeding paddy varieties resistant to drought and certain insects have also been approved for 1960-61. Another important decision, announced by Mr. S. K. Patil at the meeting of the Governing Body, is to set up a Cashewnut and Spices Commodity Committee which can devote adequate attention to the production, processing, marketing and export of these crops which earn for the country substantial amounts of foreign exchange. The I.C.A.R.'s approach to fertiliser use will also become more scientific, when the *ad hoc* committee set up for correlating manurial recommendations with soil types, soil tests and crop needs begins to function actively. All these developments show that the I.C.A.R. is bringing agricultural research to the threshold of future progress on systematic and practical lines.

EXPORT PROMOTION

There is every indication that the Government of India is getting impatient, for understandable reasons, with the insufficient rate of growth of exports. The Planning Commission has set an export target of about Rs. 3,700-Rs. 3,800 crores during the five years of the third Plan, or an annual rate of about Rs. 740-Rs. 760 crores. This is going to be an uphill task, considering the fact that the annual average of exports during the second Plan period was no more than Rs. 614 crores, or just Rs. 5 crores more than the average level of exports during the first Plan period. The British proposal to join the Common Market has rendered the prospects for any sizable increase in India's exports uncertain. There are no two opinions on the vital need to take sufficient measures to safeguard Indian exports. But the major question is: What are the steps to be taken to attain the objective?

While winding up the debate on the third Plan in the Rajya Sabha last week, Mr. Gulzarilal Nanda, Minister for Planning, sounded the possibility of enforcing compulsory exports in the case of certain commodities. It would appear that the Government is examining the question of introducing legislation to set physical limits to the quantum of internal sales allowed to individual manufacturing units, so that the rest of their output will be available for exports. The introduction of compulsory exports is, however, likely to do more harm than good to the cause of India's export promotion. All and sundry cannot be relied upon to compete in world markets. Even in industrially advanced countries, only a few selected industrialists, who have sufficient financial resources and whose products are of competitive quality, take an active part in export business. If all manufacturers are compelled to export a part of their goods, it is quite likely that sub-standard goods will enter the export markets, thereby spoiling the long-term prospects for India's exports.

Apart from this, it is doubtful whether it will be practicable at all to introduce a scheme for compulsory exports now. For there is no adequate administrative machinery yet to execute such a scheme. Besides, the scheme of compulsory exports will have some chance of success only if production is running at such a high level as to leave a surplus for exports. But Indian conditions do not conform to this criterion, except in the case of a few commodities. Another important defect in compulsory exports, against the background of distinctly higher domestic prices, is that the domestic consumer will ultimately have to share the burden of exports to a still greater extent than at present. What is needed at the moment is the creation of such conditions in the economy as will step up production, reduce costs and improve the quality of domestic products. Measures like compulsory exports will only defeat the very purpose for which they are designed.

Proposals for tax remissions, Mr. Nanda disclosed, are also being considered by the Government. Even if tax remissions are allowed, within limits set by the provisions of the G.A.T.T., such measures will only be short-term remedies, and they will not serve to remove the basic defects in India's industrial structure. Before entering into prolonged consideration of overall tax remissions, the powers-that-be would do well, in the meantime, to remove export duties on such traditional items as tea, which have to face severe competition from other suppliers. Any delay in this respect will mean avoidable loss of precious foreign exchange.

Some of the other proposed steps, according to Mr. Nanda, are that, in allocating foreign exchange, priority will be given to industries producing for export or producing substantial surplus for exports, and that an undertaking to export an agreed quantity will be required for being permitted to import vital components and raw materials. These measures are generally acceptable. But, unless they are made flexible, the development of several industries will be adversely affected.

AN INFRUCTUOUS CONFERENCE

It is not surprising that the tripartite conference on plantations held at Trivandrum on 30th August failed to arrive at an agreement regarding wages covering the entire plantation industry in South. For, with a Central Wage Board for Plantation Industry having already commenced its work on the question of wages in plantations on an all-India basis and the presence in the estates of a multiplicity of unions owing allegiance to different political parties, the very concept of a negotiated wage settlement was bound to prove controversial. And so it did. Consequently, the hope expressed by Mr. V. V. Giri, Governor of Kerala, in his inaugural address, that the deliberations at the conference would prove fruitful was belied.

The Conference was unique, in that it was attended by Labour Ministers of three southern States, namely, Madras, Mysore and Kerala and representatives of plantation workers and management from the three States. Its principal objective was to explore the possibilities of finding an agreed or negotiated long-term settlement of wages of plantation labour, both staff and workers, if possible, outside the Wage Board to cover the southern States.

There was naturally no unanimity of opinion among the participants on the desirability of a negotiated wage settlement. While the representatives of some unions were anxious for a rough and ready settlement, others were not. Thus, the Estate Staff Union of South India wholeheartedly welcomed a settlement. The representatives of I.N.T.U.C. were in favour of a negotiated settlement, if it were fair and reasonable and provided wages were linked to the cost of living index. The representatives of A.I.T.U.C. were against a settlement, unless it be for a period of two or three years till the Wage Board award was published, on the ground that the A.I.T.U.C. itself had asked for the Wage Board and was, hence, committed to it.

The planters' representatives expressed the view that, since the employers also had accepted the Wage Board, it was better to await the Board's award. They were opposed to an interim agreement. They further felt that, unless there was the assurance that a negotiated settlement would be accepted by the Union Labour Ministry and the Wage Board, the effort put in by all in arriving at a settlement would be wasted. It was specially stressed by them that any agreement, interim or long-term, should link wages to work and that all unions should agree to abide by it.

It is obvious from what has been said above that there was no general recognition by the representatives of workers and the management that a negotiated settlement could be a feasible proposition, pending the Wage Board's findings. The Conference itself seems to have been called not because the Labour Ministers or the parties wanted a voluntary settlement, but because some unions and workers pressed for some immediate benefit. Evidently, with the General Election only round the corner, the demand could not be turned down easily.

Under orders of the Central Government, Tezpur Industrial Bank Ltd., Tezpur, and the Cuttack Bank Ltd., Cuttack, have been merged with the United Bank of India Ltd., on Monday, announces the Secretary of the United Bank. In the case of the first bank, the transferee bank has accepted in full the liabilities with regard to deposits, in the case of the other deposit liabilities for amounts up to Rs. 250 or below have been taken over in full; of the balance, up to 76 per cent is being taken over by the transferee bank immediately.

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

IBCON PRIVATE LIMITED

HEAD OFFICE: ADELPHI, 119, QUEEN'S ROAD, BOMBAY 1.

2, FAIRLIE PLACE, CALCUTTA 1. • BRADY'S BLDG., MAHATMA GANDHI RD.,
GEORGE OAKES BLDG., SRI NARASIMHARAJA SQUARE, BANGALORE 2. • 85 WARD PLACE, COLOMBO 7, CEYLON

ALSO IN:
U.K., PAKISTAN, BURMA, IRAQ, CHILE, ARGENTINA, BRAZIL, MEXICO, AUSTRALIA, HONGKONG.

ON THE ARENA

By "Archer"

Optimism About Exports

OUR Planning Minister has stated that Government intends to undertake legislation to fix limits for internal sales of certain commodities, in order to squeeze an exportable surplus out of a seller's market at home, as, for instance, coffee, tea, vegetable oil, raw cotton, cashew kernel and sugar. Additional incentives will be given to step up production, such as concessions in railway freight charges, reduction in the prices of raw materials needed for the production of export commodities, facilities for modernisation of machinery, and acquisition of more ships to carry Indian goods. The Minister realises that a "weak spot" in the economy is the price structure, but that, if the assumptions of the third Plan with regard to targets, production and stepping up of the rate of savings are realised, there was no reason to fear a wide fluctuation in prices. Strategic controls will be enforced to hold the price line, and if they were not effective, "other methods will have to be devised." He pleaded for a reduction in the cost structure and for improvement in labour productivity, and asked the private sector to effect economies in overheads, and labour to produce more for which better tools had to be supplied. (The plea sounds somewhat pathetic and involved!) I am reminded of a passage from H.D. Thoreau in *A week on the Concord and Merrimack rivers* which quotes a speaker shouting "There's a good time coming, boys," and turning to one of the audience, asks in good faith "Can you fix the date? I would also recall, in this context, a saying that "optimism is the state of mind which believes that matrimony will be cheaper than engagement." I daresay that, in some extreme cases, the saying can be too true.

Our major difficulty is our ability to attain production objectives at a cost which does not keep us out of the export markets. This difficulty is particularly noticeable in the case of durable consumer articles and light engineering goods where we have attained a noticeable degree of good quality, but not significant volume of production to be able to reduce costs, especially overheads. Most of our manufacturers suffer from an unchecked desire for achieving a high degree of sophistication in the appearance of articles, in imitation of high priced foreign—especially American—designs. They thus keep prices high, much higher than their utility and purpose would warrant. As an illustration, I would mention my search for an electric toaster in the shops in Bombay last week, one that will toast bread to a healthy brown in a matter of a few seconds. I had the choice of two toasters, one with an open grill, simple in design and solid in appearance through which one could see the bread, and the other with a lot of metal casing, very rotund and buxom in appearance, and therefore, arresting to the eye. The former was priced at Rs. 21, the latter at Rs. 36. The heating elements in both were of identical quality. The shopkeeper, who extolled the virtues of the latter, drew my attention to the "shape," and I was glad he did not refer to its "contours," or I would have thought him to be vulgar. Someday, I believe, the man who manufactured the simple design would sell more and more of his product, and embark on improving the appearance without increasing the price by the simple technique of "slowly, slowly catchee monkey." Unfortunately, however, very few of our manufacturers realise the wisdom of doing things in stages: quality, first; establishing reputation in the market, second; increasing sales, third; improving design and appearance, fourth; and keeping prices steady, all the time. This lack of wisdom is particularly noticeable in the manufacture of articles like electric heaters, hot plates, stoves, kettles, water boilers, fans and the like, for which there is a continuously increasing internal demand, but at moderate prices, and a potential export demand, if prices can be lowered.

There is a growing tendency among industrialists and manufacturers to establish the theory that every little increase in cost of manufacture should be reflected by a corresponding increase in the sale price to the consumer. This should not be necessary in a growing economy where demand is steadily on the increase. Increase in costs can be mopped up by increase in volume, and it should be the endeavour of all entrepreneurs to keep on increasing output and sales, with a view to absorbing higher costs arising out of all factors including improvement in design and quality. Before taking positive steps to promote exports, industry should be tutored and encouraged to lower costs by increasing output and sales; sales promotion inside the country will eventually generate an exportable surplus and indicate a sure way to prosperity through competition.

In this context, although not strictly relevant to export promotion, I would refer to a statement made by the Chairman of Premier Automobiles Ltd. in Hyderabad that he had offered to reduce the price of Fiat Cars by Rs. 1,000 per car, provided the Company was given facilities to increase production from 7,000 cars to 25,000 cars per year. Apparently, the offer was not accepted, as it involved release of foreign exchange to the extent of Rs. ten crores. However, it indicates how the economics of the automobile industry, or of any industry for that matter, works. I have no doubt that the Chairman of Premier Automobiles was on firm footing when he made the offer, although I should think that even a greater reduction may perhaps be possible with a 250 per cent increase in output. What is possible in automobiles is possible in almost all classes of manufacture.

The Paradox Of Soaring Cloth Prices

Cloth dealers in Ahmedabad are reported to be joining forces to formulate suggestions to the Tariff Commission in regard to the fixation of fair ex-mill prices of cloth and cotton yarn. At present, they are collecting samples of new varieties of cloth introduced by textile mills since August 1960 as well as those of comparable old varieties. The allegation is that mills have succeeded in securing higher stamped prices over comparable old varieties by slight manipulation in varieties, that they have discontinued supplying "popular" varieties of cloth and have been introducing new varieties with minor changes in old ones in order to secure a price-rise. It would seem that the loop-hole in the price stamping system has resulted in a price-rise of about six to eight per cent over those of comparable old varieties.

If these allegations are substantiated before the Tariff Commission, the Commission will find a strange and familiar similarity between the alleged operations of textile manufacturers during the last one year and the methods adopted by paper manufacturers in 1958-59. In paragraph 8.1 of the Tariff Commission's Report on the fair ex-works and fair selling prices of Paper and Paper Boards (1959), it is stated:

> "Further, there was in evidence a tendency among some mills to increase the prices of such types, often at frequent intervals, under the guise of improvement in quality, with new names fastened to them for claiming distinction. In many cases, according to the evidence received by us, the claims to superior quality or distinctiveness are reported to have been without substance. Signs are now visible of the tendency spreading out to such an extent that superior nomenclatures are fastened even to certain common varieties of paper for demanding higher prices."

The problem of fixing prices for a commodity, in which several types are manufactured with variations both in design and quality, is an extremely complicated one; indeed, it is so complicated that any scheme of price fixation, however carefully evolved, may be defeated at every stage by clever manipulation. If the scheme involves an attempt at simplification by restriction of the types to a few, there is bound to be a hue and cry that quality has deteriorated and that the superior types are not available. Again, if the scheme involves stoppage of further diversification, attempts will continue to be made to realise higher prices by resorting to the blatant subterfuge of upgrading the common varieties, just by giving them the superior nomenclatures. As stated by the Tariff Commission in its Paper Report, quality may well be a casualty in any scheme of price fixation wherein a price structure is evolved for several types of a product none of which can be marketed or purchased on the basis of precise and recognisable standard specifications. The force of competition alone can remedy such a situation and price fixation will never achieve what increased production and competition can.

The Reserve Bank Of India In London

There are many questions for which I manage to find an answer—not perhaps a convincing or satisfactory one, but good enough to cease getting intrigued about—by delving into the historical past, asking questions of knowledgeable persons, and sorting out things generally. But one question for which I have no satisfactory answer is why should the Reserve Bank of India continue to maintain a branch in London. As far as I know, it is the only central banking institution in the world which has a branch functioning outside its country, and engaging itself predominantly in commercial banking activities. This office was opened initially for taking over the management of India's sterling loans from the former Imperial Bank of India. These loans were repaid after India obtained independence, and yet the Reserve Bank of India has stayed on in London. Its present functions are, I am informed, confined to handling the transactions of the Indian High Commission and the India Stores Department in London, but these are primarily of the type that could be well, and perhaps better, handled by the State Bank of India or even by other commercial banks having branches in London. These banks have wide experience of commercial banking and of foreign exchange transactions and have the requisite facilities for obtaining competitive rates for the purchase and sale of foreign currencies. I am not sure that the small office of the Reserve Bank of India in London has adequate machinery to undertake such business and it is quite conceivable that it is missing quite a few opportunities to earn sizable profits on exchange transactions, which, for instance, a comparatively more versatile institution like the State Bank of India will not. Again, I doubt if the Reserve Bank of India invests the funds of the High Commission and the Stores Department in Discount Houses in London, which a commercial bank could, with profit. I believe a central banking institution is not in a position to do this kind of business. Circumscribed as it is by limitations of this type and unable to embark on commercial banking in a purposeful manner, the Reserve Bank of India in London is perpetuating duplication of an avoidable type by continuing to stay on in London by the side of the State Bank of India. The expenditure on its staff and maintenance adds to our foreign exchange expenditure at a time when every little counts, and our scarce resources should not be spent on maintaining redundant offices outside the country. District Treasuries and Taluk Treasuries are abolished when the State Bank of India opens its branches, but the Reserve Bank of India stays on in London. Why? Is it because it is in England?

Refreshing And Forthright

Mr. P. V. G. Raju, the Health Minister of Andhra, was born a Rajah; his great grandfather held the personal title of Maharajah. One might expect (I say *might*, not should) a person of his type to hold a few feudal ideas on the subject of affording opportunities to people solely on the basis of merit. It is very refreshing to see that he does not suffer from cramping inhibitions. Presiding over the college day celebrations of the Nursing College in Hyderabad, Mr. Raju is reported to have said that there should be no restrictions or limitations in the field of education, that everybody should be admitted to the pre-professional course in medicine and candidates should, later, be selected in examination by merit. It was his view that there should be no caste barriers, that the right of education should not be denied to any class or community, and that, while everybody should be given equal opportunity, it was a great crime to identify intellectuals with a particular caste. To quote his words as reported: "It was a false notion that, in certain classes, there were intellectuals and that in certain others there were not." If I understand him correctly, I presume that what he intended to convey was that the current practice (adopted in some States) of elbowing out even deserving candidates with merit because they belong to a particular class or community already pre-judged to be predominantly intellectual, and choosing less deserving candidates with lower order of academic performance in order to uplift them in a synthetic way, is not proper, and not for the good of the country. I am afraid Mr. Raju is going to be very unpopular for his utterances, especially among the powers that be in the neighbouring States of Mysore and Madras, where synthetic emancipation is very much in vogue. But he will do a lot of good for Andhra, if he can carry his colleagues with him all along the line.

THE HUMAN FACTOR IN ECONOMIC DEVELOPMENT—I

EMERGENCE OF A NEW SOCIAL STRUCTURE

By Professor C. N. Vakil

[Various aspects of human factor in the economic development of India and the importance of taking timely, appropriate measures for raising the efficiency of leadership in the country were examined by Professor C. N. Vakil, who needs no introduction to our readers, in the Seventh Annual Lecture delivered by him under the auspices of Harold Laski Institute of Political Science, Ahmedabad on 26th August 1961. We have divided this lecture into two parts; while the first part appears on this page, the second will be published in our next issue.—Ed.]

IN the third Plan, we find chapters devoted to Human Resources. Similar chapters were embodied in the first two Plans. The expenditure on Social Services was 18 per cent during the second Plan and is expected to be 17 per cent during the third Plan. We may assume that the item Social Services would cover the various steps taken under the Plan by the Government to develop human resources directly or indirectly. The broad items which are included in this heading are (1) general education, (2) technical education, (3) health, (4) housing, (5) welfare programmes, (6) training programmes, and (7) scientific and technological research. Here, I am concerned mainly with arrangements for education, training and research. The expenditure on education, training and research is 9 per cent of the total under the third Plan. The relative position of this provision can be seen from the following table:

Third Plan—Percentage Distribution of Proposed Expenditure.

Agriculture and Community Development	14
Major and Medium Irrigation	9
Power	13
Village and Small Industries	4
Organised Industry and Minerals	20
Transport and Communications	20
Social Services and Miscellaneous (including Education, Training and Research)	17
Inventories	3
	100

This shows the awareness of the Planning Commission and the Government about the importance of utilising the human factor in an appropriate manner in connection with the development programme. The question, however, is whether the steps taken under the Plans in this connection are adequate and whether the results are satisfactory. One of the main objectives of the third Plan is that we should strive to have a self-generating economy as soon as possible. Whereas progress in the production of different types of goods, and increase in the capacity to save and invest will be important in connection with the effort to achieve a self-generating economy, it is, perhaps, not fully realised that the major share in such process would be that of the human factor. Some of the defects of Planning during the last decade can be ascribed to our deficiencies in the quality of the human factor; with more ambitious planning ahead of us, we can no longer tolerate such deficiencies. It is the way in which the people put forth their efforts intelligently and systematically that will determine the effective utilisation of the material resources which the Plan proposes to undertake. We may have large amounts of resources raised both internally and externally but, if we are not able to make an effective use of these resources because of weakness in the human factor, the success of the Plan will be limited.

Training Facilities

Competent observers have emphasised the need for an efficient system of administration and the need for training institutions, where appropriate training suited to our requirements can be given as pre-requisites or important adjuncts to the development process. No country can succeed in having a self-generating economy, if it has to depend continuously not only on foreign aid but also on foreign experts. Whereas it is refreshing for a young man from a country to go abroad for study in foreign universities to have a wider vision and better understanding, such a process should be in both directions. This means that it should be possible for us to attract foreign students to our Universities and to send out, at the same time, our own students to foreign countries. If, on the other hand, the tendency is that we have continuously to send our students in large numbers for training abroad, because we do not have adequate training facilities in the country, we are presented with a situation in which the quality of our educational institutions will continue to be of an inferior character. This is obviously not consistent with the objectives of a self-generating economy.

We have a large population which is increasing rapidly. It is considered a serious handicap in the development process, inasmuch as the increased production has to be shared between increasing numbers, thus making it difficult for the *per capita* income to rise. Whereas the solution is found in schemes of family planning and so on, the question is whether adequate attention is paid to utilise more effectively, the vast human resources that we have in the country for the purposes of development. It is known that we have not been able to solve the grave problem of unemployment during the last decade and that the third Plan is not likely to improve upon this situation. As against this quantitative deficiency, we have not asked the question whether the quality of the work of those who are employed is of the right character, and whether substantial improvement in the same is not possible.

Efficiency

We have bodies like the National Productivity Council and its agents in different parts of the country. They do some work regarding the training of persons in different industries, partly by conducting some courses, occasionally by holding some seminars and also by sending teams of suitable persons on tours to other countries, so that they may observe the work of institutions in which they are interested and profit thereby. It is possible that this effort may have resulted in some advantages. But the question is whether there is awareness in the country regarding the urgent need to raise the general level of efficiency of the average person in the country. It is possible, for example, for us to say that, in any walk of life, we are likely to have Indians at the top, who can stand comparison with corresponding persons in other parts of the world. Whereas we may be proud of the fact that we have persons like a Nehru in Politics, a Raman in Science and a Radhakrishnan in the Humanities, we must admit the fact that the efficiency of the average citizen of the country is much below the corresponding average in other countries. It is not possible to have statistical measurements of the qualities of the people and thereby come to the conclusion regarding the contribution that they would be able to make towards progress by improving the quality, in terms of figures. The fact, however, remains that even some limited improvement in the efficiency of the average citizen in the country would add tremendously to the national progress. In other words, if substantial steps are taken for an all-round development of the human factor in the country, the effort to achieve a self-generating economy would be within sight, which otherwise may be rather remote.

Before making suggestions in this connection, we shall consider briefly the nature of the emerging social structure under Independence, which has close connection with the problem of improvement of the human factor, with particular reference to equality of opportunity. In making the following observations, I would like to say that they are made from the point of view of a Social Scientist and in the larger interests of the country. There is no intention to criticise any individual or group, though an effort is made to view contemporary events in a detached way, anticipating, to some extent, the task of the future social historian of the country.

The Privileged Classes: The Politician and the Administrator

We have rightly blamed the caste system and our traditional social arrangements as obstacles to economic progress. We are taking steps to remove the same and, though the old order is gradually disappearing, we do not have a clear idea of the new order which we are establishing. The question is whether the human factor has the fullest opportunities to develop under the new order which is emerging in the country. The Constitution provides for equality of opportunity to all. But whether the new order is conducive to such an equality is a question which may well be asked. In order to find some answer to this question, we may, in the first instance, make an attempt to examine the nature of the New Indian Society which is emerging. There is a new class consciousness coming into existence. This is taking the form of a social hierarchy. If this crystalises, we may have a new class structure as against the old caste system. At the top of this hierarchy, we have the politician. Though we have a parliamentary democracy, we do not have an effective two party system or an effective opposition. In consequence, members of the ruling party form as it were a class by themselves, with certain rights and privileges, with certain assumptions of knowledge and wisdom, and with certain consciousness of superiority over the rest. Next in order is the administrator, particularly the officer class. With the increasing tasks of Government under a Welfare State, the planning system and a growing public sector, the functions and powers of Government go on rapidly increasing. There are many more spheres of life in which we feel the impact of Government machinery than we did before. The politician or the administrator feels that he is able to control and regulate the lives and actions of many persons. Under a long period of British rule, we were taught to respect authority. The representative of the British authority, whether an Englishman or an Indian even in remote villages, was held in high esteem and awe. In spite of the advent of representative democracy, we have transferred such respect and such a sense of awe now in an increasing degree to the politician and the administrator. So much importance is given to this class that there is not a function, however trivial, where a Minister does not participate and there is not an occasion, however small, where the administrator is not flattered. In consequence, the fact that the politician or the administrator is a servant of the people, whose object should be to respect and help the people and not dominate or boss over them, is being forgotten.

No one would object to give respect to a person whose inherent qualities are such that he is bound to command such respect. For example, no one would grudge the universal respect which persons like the Prime Minister are able to command. It is, however, unfortunately true to say that, barring a few persons of eminence at the top of the political ladder, the average politician and administrator in the country must be classed as mediocre*. He is, however, able to command more respect and more authority than he deserves because of the class to which he somehow belongs.

Absence of a True Leader

The Father of the Nation had the wisdom to see the inherent danger of this type in the continuation of the Congress Organisation after the achievement of Independence. He had realised that the heroes of the political revolution, whom he created by his inimitable technique of fighting the power of the British, should not take over the responsibility of ruling and administering the country after Independence. He, therefore, suggested the dissolution of the Congress after Independence, even as there is demobilisation of the Army at the end of a War. But events took a different turn. The conversion of the Congress organisation into the dominant political party of the country after Independence has made the emergence of other well-balanced political parties based on well-defined economic and social policies which act as correctives to each other, difficult. The non-violent military [illegible] of the Congress worked

*Mr. Sri Prakasa, Governor of Maharashtra, in his speech at the University of Nagpur on 12th August, 1961, made some important observations. The following extracts from the report of the speech as given in the *Times of India* of 13th August 1961, are instructive: "Making an implied reference to the oft-repeated question, 'After Nehru, who?' Mr. Sri Prakasa said that it was unfortunate that even after 13 years of freedom a 'second line' of leadership had not been developed in the country. It was because of the absence of a 'second line' that such a question was being posed. In no other democracy were people faced with such a question, he pointed out. In a democracy, Mr. Sri Prakasa said, the people were always in a position to choose from the 'second line' the successor to the leader. The system of 'Shadow Cabinet' evolved in the U.K. helped develop such second line of leadership. In India, the Governor said, when any member of the Union Cabinet resigned, the Prime Minister had to hold his portfolio until a suitable person was found to replace him."

ANOTHER RESOLUTION ON PROHIBITION

MR. MORARJI DESAI READY TO SACRIFICE Rs. 150 CRORES

From Our Special Correspondent

NEW DELHI, 5*th September*

DELHI LETTER

A COMBINATION of circumstances has helped to focus attention this week on the Government of India's policy on prohibition which has found a cosy niche towards the end of the third Plan document among many welfare programmes listed there. Though there have been many declarations on the subject from time to time, since a special committee of the Planning Commission reported on the programme to be carried out under the second Plan, the progress of prohibition so far has not been enough to satisfy its ardent supporters. It is estimated that about 36 per cent of the country's area and 28 per cent of the population have been covered by prohibition, total and partial. Critics might argue that evasion, through illicit distillation and smuggling, makes even these figures suspect. Evasion, however, has not seriously deterred the enthusiasts who more often prefer moral victory for the State than its virtual defeat at the hands of law-breakers. What annoys them most is the apparent lack of enthusiasm of several State Governments which have refused to copy the example of the pioneers in this field, Madras and Bombay. Time has helped us to forget that, in the wake of the formation of Andhra Pradesh, a proposal was put forward by the Ramamurthy Committee and then seriously considered by the State Government for the repeal of prohibition. Other State Governments who were not deeply committed to prohibition, except to the extent of formal conformity to the Congress Party's creed, have been warily treading a different path; they have shown no anxiety to make their problems worse by sacrificing revenue and have wisely felt that, so long as they can implement schemes of development and welfare, the electorate, if, indeed, it was prohibition-minded, will readily overlook the omission.

A rude reminder of this generally lukewarm approach of States to the policy of prohibition came last week, when a member drew the attention of the Lok Sabha to the mention in the Orissa Governor's address to the State Assembly of a proposal for the State Government to supply liquor to Government-owned shops. This practical evidence of a State Government's anxiety to reap profits through State trading might be consistent with the Plan objective of raising resources through such profits. But the question whether it was Government's policy to supply liquor was highly embarrassing and the situation was temporarily retrieved by protests from official benches against the question on the ground that it was "insinuating." The occasion brought forth the clarification from the Home Ministry that "there will be no more committees to draw up an all-India programme of complete prohibition." Union Ministers have since then utilised the opportunity provided by the All-India Convention on Prohibition and the meeting of the Central Prohibition Committee, both held at New Delhi in the last few days, to make declarations of their unswerving devotion to the cause and to suggest some ways and means of achieving prohibition which have occurred to them.

Mr. Morarji Desai, appropriately enough, inaugurated the Convention and expressed the view that the phase of propaganda is over and that liquor shops should be closed first. Though the Union Finance Minister is reported to be taking up a somewhat stiff attitude to the States on some of their demands in connection with plan schemes and their inability to raise enough resources of their own, he has been quite generous on prohibition. The Centre has offered to make up revenue losses of States caused by prohibition to the extent of 50 per cent; this is expected to cost the Centre Rs. 75 crores, which means that the total revenue loss is about double that figure. But the States have not been swept off their feet by this show of generosity; shrewdly sensing the scope for driving a bargain on this [illegible] (U.P., Mysore and Bih[illegible] reported to have asked for a full subsidy equal to the loss. When the State Ministers, constituting the Central Prohibition Committee, go back to their States, the moral pressure brought on them at the recent meeting in New Delhi may not remain strong and, in any case, the coming elections will claim more of their attention than prohibition, unless the latter is also a vote-catching device—which obviously it is not.

There is thus a practical problem of implementing an objective which has been accepted as a Directive Principle of the Constitution and supported by a resolution of the Lok Sabha passed as early as March 1956. It was only at the end of last year that the Home Ministry constituted the Central Prohibition Committee; the Third Plan, with its characteristic equivocation on difficult issues, observes that "financial considerations, although of great practical importance, are not to be treated as decisive in character." It dilates on this theme in the following manner:

"The possible loss of resources on account of prohibition may itself be a temporary rather than a permanent effect and on balance may turn out to be smaller than is sometimes reckoned. If the movement for prohibition proceeds on the right lines—and this is the assumption on which proposals for prohibition should rest—it should make for a healthier life for the individual and the community, should help make the individual worker and his family more productive, and should augment national savings. Nevertheless, in the initial stages, it may be that, as a result of measures introduced in pursuance of prohibition, the revenue from excise may fall below the estimates which States have taken into consideration while formulating their plans. This aspect should be considered further by the Central and State Governments. Obviously, financial reasons alone could not lead to a fundamental break in carrying out a social programme which is considered necessary in the interest of the mass of the people throughout the country."

Following this passage, the Planning Commission shows much circumspection in stating that States were *not* expected to fix target dates for introducing complete prohibition, as such targets are in practice difficult to work out or adhere to. So it recommends implementation of the earlier limited and "practical" nine-point programme (drawn up for the second Plan period) during the next two or three years, and suggests a periodical evaluation of progress before considering further measures. Two important conditions specified in this context are: (1) respect for the customs and traditions of the tribal people; and (2) attention to the convenience and requirements of foreign missions, visitors and tourists.

The Ministers who spoke at the meeting of the Central Prohibition Committee had either not read all these carefully enough or were not in agreement with it. The former is more probable. Mr. Shriman Narayan, a Member of the Planning Commission, pleaded for nation-wide prohibition by the end of the third Plan (i.e. March 1966), but Mr. Datar, Minister in the Ministry of Home Affairs (which has to implement any such declaration of a deadline) was even more enthusiastic and called for total prohibition by 1964, though he hastened to add that it was only his personal view. How his personal views were relevant when the Committee was considering an all-India policy is not clear, but the capacity for mischief of such overzealous reformers was evident when he followed it up with the suggestion that the Government servants' conduct rules can be amended to compel officials to give up drinking, so as eventually to extend the rule to Armed Forces. He also added that the Union Government was considering some restriction on the supply of liquor to foreign embassies "without affecting their liberty." Amidst this confusion about the prohibition programme, Mr. Shriman Narayan had to explain to the all-India Prohibition Convention that the Prime Minister was not against prohibition but that he wanted social workers, not the police, to undertake the work. This may give a clue to current official thinking; the same idea has been clearly stated in the Plan which says that the main reliance should be on the creation of a growing public opinion, work by voluntary organisations emphasis on prohibition in development programmes and creation of other facilities for community activity and availability of cheap food and beverages. Government assistance is envisaged for all such schemes. In spite of this obviously wise and practical approach, it is a pity that the whole issue was confounded by a good deal of nonsense.

Even the legitimate case which can be made out for prohibition has been ignored in this excess of enthusiasm. Mr. Shriman Narayan deplored the bargaining attitude of the State Governments in the matter of their revenue loss but he showed no recognition of the fact that, while the States lost revenue from excise, the main beneficiary was the Centre which gained from its excises on other commodities, when the reformed addict spent his money on tea, coffee, cloth, sugar, soap, tobacco or matches. It is only when the saving on drink is spent on food items, handloom cloth or cinemas that there is no gain to the Centre, though even then State Governments may often get more by way of entertainments tax. Whether the money is fully saved or spent in other less harmful ways, there is thus a gain to the State: the only danger lies in evasion, which involves both loss of revenue and principle; in this respect, no real advance has been made in devising improved enforcement techniques.

The common assumption that there is a dead loss of revenue from prohibition has not been corrected. Business men, who were at first opposed to prohibition because it meant more taxes to compensate revenue loss, have been quick to see the advantage of a steadily expanding market for consumer goods as a result of prohibition. Some of the satisfaction and smugness of the State Governments of Madras, Gujarat and Maharashtra is due to such indirect gains but others who cannot enforce the law even with that degree of efficiency may have reason to feel that the gain in revenue or well-being may be less pronounced because of smuggling activity. On the other hand, it is also true that smugglers are the most enthusiastic supporters of prohibition because of the large gains they can secure; reports say they even have a political lobby and can offer help in elections.

For the large majority of people who are not hopeless addicts and will not evade the law wilfully to indulge in consumption of alcohol, economic well-being can be a substantial gain. It is in respect of these, however, that the moral problem also arises, whether State-enforced abstinence is desirable. The Indian Press has generally been consistent in putting forward this view even after business men have given up their objections after seeing their advantage in terms of widening markets. The individual's right to indulge in his moderate doses—without the politician coming forward to preach his ethics and interfere with it—is hardly likely to be appreciated by obtuse and obstinate reformers in positions of authority. Their readiness to enforce their ideas in regard to civil servants before prohibition is extended to the rest of the population is an example of improper use of authority in respect of their employees. There are already rules to deal with civil servants who take liquor in a manner likely to affect their duties, but what Mr. Datar had in mind was enforcement of virtuous conduct as he saw it. And Mr. Desai excelled himself when he argued at the Convention that banning drinking was no more a curtailment of rights than sending people to jail for theft or murder; to him, it was a plain and simple case of preventing people from doing wrong.

RECORD FOODGRAINS OUTPUT

Production of foodgrains in India touched an all-time record of 79.3 million tons in 1960-61, according to the summary of final estimates just released by the Directorate of Economics and Statistics of the Union Ministry of Food and Agriculture. It exceeds the previous record of 75.5 million tons in 1958-59 by 3.8 million tons. This means that the shortfall in foodgrains production in the second Plan, as compared with its revised target of 80.5 million tons, is not as much as has been expected by the Planning Commission which, in its final report on the third Plan has given an estimate of 76 million tons for 1960-61. It may also be noted here that, although official final estimates are generally announced only after the season is well over, the subsequent partially revised estimates show substantial deviation from the final estimates. The partially revised estimate for 1959-60, now released, for instance, shows that food production in that year was 74.7 million tons, as against the relevant final estimate of only 71.8 million tons. If it is assumed that for 1960-61, too, the partially revised estimate will exceed the final estimate by an identical margin, the planners may well claim that foodgrains production in 1960-61 had exceeded the second Plan target of 80.5 million tons.

The increase in output in 1960-61 was shared by all the important cereals and pulses, except *bajra* and *ragi*. As compared with the partially

UPS AND DOWNS IN THE MARKETS

From Our Own Correspondent

LONDON, 2*nd September*

LONDON LETTER

WE are now at the very bottom of the holiday season, when the whole financial world appears comatose. The Stock markets with very little doing are bumping along what may be the bottom with a *Financial Times* index figure of 309 for Industrial shares (against the May peak of 366), only one point down over the fortnightly account but seven points up on the lowest previously touched in mid-July. Even the advent of trustee buyers—now allowed to invest in equities—has caused no more than a few days' stir.

There is no selling pressure, but in spite of bargain prices there is no buying demand either —with investors either away on holiday or too worried about Berlin. Though it is not only about Berlin, the present dominant factor, that they need to worry. If that were all, they could reflect that if Berlin is quickly resolved, or quietly drags on indefinitely, the markets will recover; while if there is war over Berlin, no stockholding is likely to be of much use anyway.

Wages

But behind Berlin is the Chancellor of the Exchequer. All the company news is of increased output and sales, but if the Chancellor's measures are successful these are bound to suffer, while rising wages will further squeeze profit margins. Of course wages may be held down by the "pause," but in that case industrial disputes are likely to cut production and profits just as effectively.

And beyond the Chancellor of the Exchequer is the shadow of the Common Market with its promises of fiercer competition looking rather larger than the prospect of increased sales possibilities.

Yet in taking a view of the Stock Markets there must be a sense of proportion. It is in the nature of these markets that they are looked at as day-to-day affairs by persons seeking capital gains: but when we look at them as economic indices a longer view is necessary and it is encouraging to realise that the present low prices are relative only to the Spring boom. The current bottom is not as low as the prices touched in both the Spring and Winter of 1960.

Effects of Credit Squeeze

On the domestic money market the credit squeeze has had curious results: banks have been cutting down credit, local authorities have been temporarily inconvenienced, but now the short-term market outside the banks is full of funds between 7¼ and 7½ per cent. Investors who got out of the falling stock markets, stockbrokers, returned foreign depositors and anyone else with loose money have found this sort of rate most attractive. These new sources of funds for the money market are described as "hot," because they are not normal and are likely to disappear and pour into equities once that market revives. Yet by then the Bank squeeze may be over and so all be for the best. Though it may perhaps sadden the Chancellor of the Exchequer to find that the Money Market is rather like a pillow too large to sit on all at once—and if you sit on one end the other end puffs up.

On the external front the £ sterling is continuing at a premium against the dollar and the gold outflow of hot money appears to have come to an end. As we are reaching the time of year when sterling weakens on commodity account the tide has turned just in time. And "tide" is an apt word—for what is this ebb and flow of hot money so disturbing to Treasuries but a tide? Just as the tide of the sea cannot recede indefinitely, so hot money cannot flow out indefinitely.

It is estimated that the gross outflow of gold (that is the total amount withdrawn without taking account of what was poured in from the European Central Banks and latterly from the I.M.F.) was £600. Of course, on another occasion more may come in and then more will have to go out. But international provision for meeting such international flows should not be impossible. This last exercise has already demonstrated that.

Cadbury-Fry in India

Finest quality walnuts in Cadbury's rich milk chocolate.

A delightful blend of selected raisins, nuts and Cadbury's milk chocolate.

An essential food for young and old. Tastes so delicious.

Delicious Roasted Hazels or Almonds in rich Milk Chocolate...each variety in attractive ½ lb. boxes.

TRANSFORMING THE FUND

INDIA MUST TAKE THE LEAD

By D. Krishnaswami Rao, M.A.

THE recurrent balance of payments difficulties of the United Kingdom, last October's dramatic flight from the U.S. dollar into gold, and our own chronic impecunious foreign exchange position give force to a line of thought that should have prevailed ere now but for the illusory effect of the much-publicised increase in International Monetary Fund quotas agreed upon at the New Delhi meeting of the Fund three years ago.

The Board of Governors of the World Bank, which met at the same time in New Delhi, also resolved to double the authorised capital of the Bank: but, in regard to this decision, it was admitted even then that it would involve no actual additional subscription by members as what was contemplated was to increase their "reserve" or "uncalled" liability which would serve as backing for increased borrowing by the Bank in the world's capital markets. What is less well known, on the other hand, is that the general fifty per cent increase in Fund quotas authorised at New Delhi in October 1958 —and since implemented—would merely bring into the hands of the Fund additional stocks of some three score and ten currencies most of which the Fund had never needed for lending to any member and might not need in the foreseeable future.

For, in the first twelve years of its operation—that is, till the time of the New Delhi meeting—the Fund had lent only six currencies: U.S. dollars, German marks, Canadian dollars, Belgian francs, Dutch guilders and pounds sterling. Of these, again, only the first three had been lent on a net basis: the largest total among them being, of course, loans of U.S. dollars. It would be no exaggeration to say that, if the Fund had to give up its holdings of all currencies except one, it could have unhesitatingly given up all other than its U.S. dollar holdings without noticeable inconvenience to any member.

No Meaningful Contribution

To give the Fund command over additional subscriptions of unusable currencies—currencies, for instance, of the underdeveloped countries of Latin America, Asia, and of the lesser countries of Western Europe—was, therefore, no meaningful contribution to the free world's problem of a shortage of international means of payment. The grand total of quotas of the Fund has risen from $9.2 billions to some $14.9 billions, but the effective lending power of the Fund, in the sense of its holdings of gold and U.S. dollars, has risen only from about $3.75 billions to about $5.6 billions. It would give us a correct idea of the comparative magnitudes involved if one were to mention that, in the year 1960, the U.S. surplus of exports of goods and services over imports amounted to $5.8 billions.

The recent increases in Fund quotas, therefore, do not possess the potentialities that they have come to be associated with in the lay mind. In fact, they provide no more than a breathing-space during which members of the Fund must think out and carry through a real transformation of the capital structure and functions of the Fund.

The transformation that would seem best fitted to meet the needs of the situation is not on lines hitherto not conceived of, but amounts rather to a switch-back to the type of organisation that the late John Maynard Keynes had envisaged for the Fund and which was presented in the proposals of the British Government to the Bretton-Woods International Monetary Conference.

Keynes had suggested the setting up of an International Clearing Union with its own unit of account called Bancor which all members had to accept, in lieu of payment in gold and without any limit whatsoever, in full settlement of balances due to them from other members. The I.C.U. would thus possess unlimited powers of lending: this feature of the scheme made it unacceptable, because it gave ground for the fear that the proposed Clearing Union might lend on a scale that would unleash inflation on the world.

The basic feature of Keynes's Plan, namely, the "internationalisation" of national monetary reserves, has, however, been resuscitated in a scheme which has been pressed in the last two years for the attention of Governments and Central Bankers by Professor Robert Triffin of Yale University, an economist with an international reputation in the monetary field and the one who pioneered the idea of the European Payments Union.

Triffin points to the obvious weaknesses of an international payments system in which the world's monetary gold reserves do not grow apace with the normal growth of world trade and manufacturing activity and in which, therefore, so many countries have to hold foreign exchange—primarily U.S. dollars and pounds sterling—for the greater part as their monetary reserves. Not only is the value of reserves thus held dependent on the pursuit of sound monetary policies by the countries whose currencies are held as reserves; but the "key currency" countries themselves are exposed to the danger of sudden shifts of confidence in the future of their currencies on the part of the holders of the reserves. Planet and satellite (using the latter word in no derogatory sense) alike are, therefore, in a position of great vulnerability.

A New System Suggested

In place of such an inherently unstable system, Triffin suggests that all countries should give up the holding of other countries' currencies as monetary reserves, but hold instead balances with the I.M.F. along with gold as their reserves. The balances thus held at the Fund would be fully usable for international settlements, any member being able to acquire the currency of any other by payment through its deposit at the Fund—more or less as the commercial banks in a country settle their clearing balances with each other by payment through their deposits at the Central Bank of the country. The Fund would thus become a true international Central Bank, a Central Bank for Central Banks, accepting deposits from its members, effecting transfers of balances between them, and granting advances to members falling short of the means of international payment. Such advances are to be governed by the same criteria as determine present Fund sales of currencies to members and are intended to secure that Fund lending does not tend to be excessive and does not relieve the borrowing member of responsibility for the pursuit of sound internal financial and economic policies. As a further safeguard against possible excessive credit creation by the Fund, Triffin would limit its net lending in any consecutive twelve months to an amount which, taken together with current increases in the world's reserves of monetary gold, would not increase the level of international liquidity by, say, more than 3 to 5 per cent a year—that is, a rate not higher than the annual rate of growth of world production and trade.

Other Proposals

There have been other proposals, besides Triffin's for the enlargement of the Fund's range of useful functioning and to meet the problem of world liquidity, notable among them being the suggestions put forward by Mr. Edward M. Bernstein, a former Research Director of the I.M.F. and by the Hon. Maxwell Stamp, a former British Director of the Fund. But these are less far-reaching than Triffin's plan which, while it has the disadvantage of appearing to be "too much and too soon" (to quote his own words), and hence harder to put through against the known conservatism of the heads of the world of finance, yet is a better basis for a reform of present international monetary arrangements than *ad hoc* remedies which are necessarily less comprehensive.

There are indications that the wind of change has already begun to blow. The Radcliffe Committee, which reported two years ago on the working of the monetary system in the United Kingdom, saw "great merit as a long-term objective" in the proposal "for a transformation of the International Monetary Fund, along the lines originally proposed by the United Kingdom, into an international central bank." President Kennedy, in his special message to the U.S. Congress last February, promised "to consider ways in which international monetary institutions—especially the International Monetary Fund—can be strengthened and more effectively utilised." Mr. Per Jacobsson, the Managing Director of the I.M.F., in his annual address last May to the Economic and Social Council of the United Nations, referred to proposals to enable the Fund to borrow from the main industrial countries if it were to fall in need of additional supplies of certain currencies.

The time is opportune, therefore, for India to move at the coming annual meeting of the I.M.F. for a reform of the organisation that would enable herself and other developing countries to be more sure of foreign exchange support in the imbalances that a big developmental effort implies than the present rigid system of quotas, "tranches" and drawing rights would permit. After all, for some quinquennia to come, India will have to face deficits on current as well as capital account in her balance of payments. Let her then take the lead in a change that will improve the position for debtor and creditor countries alike. It would not be the first time in history were she to succeed, that the importunity of the debtor prevailed against the conservatism of the banker and the financier.

Notice

THE ALEXANDRA JUTE MILLS LIMITED

ANNUAL GENERAL MEETING

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the Company will be closed from 15th September, 1961 to 28th September, 1961, both days inclusive.

By Order of the Board,
McLEOD & Co. LTD.,
W. URE,
Director,
Managing Agents.

3, NETAJI SUBHAS ROAD,
CALCUTTA 1,
31st August, 1961.

AMENDMENT TO I.F.C. CHARTER

The President of the International Finance Corporation (I.F.C.), Mr. Robert L. Garner, has announced that the required votes have been received from the Board of Governors for adoption of a resolution amending the charter of the Corporation. The amendment will enable the I.F.C. to make equity investments. This will not change the Corporation's established policy of exercising no control over, and not participating in, the management of any enterprise in which it invests. With the right to invest in equity as well as make loans, the I.F.C. expects to be able to provide increasing flexibility of financing to meet the varying needs of private enterprise in the developing countries and to a greater degree attract private investors to participate in its investments. It will also permit the I.F.C. to assist directly in the growth of capital markets in these countries by underwriting share issues pending their sale to the public. Thus the ability to do equity financing, where appropriate, will substantially assist in increasing the scale of the I.F.C.'s operations, and thus increase its contribution to economic development.

ANNUAL MEETINGS OF I.M.F., WORLD BANK, I.F.C. AND I.D.A.

The 1961 Annual Meetings of the World Bank, International Monetary Fund, International Development Association and International Finance Corporation will be held at the Hofburg Palace in Vienna (Austria) from the 18th to 22nd inst. Mr. Sunthorn Hongladarom, Minister of Finance of Thailand, is Chairman of the Boards of Governors of the four organisations, and he will preside over the meetings.

The Boards of Governors will assemble at the Hofburg Palace for the opening ceremonies on Monday the 18th inst. The President of Austria, Dr. Adolf Schærf, will speak. Mr. Hongladarom will address the Boards at the opening session. Following this, Mr. Per Jacobsson, Managing Director of the International Monetary Fund, will make his annual address and present the Fund's Annual Report to the Fund's Board of Governors. Discussion by the Fund Governors will take place on Wednesday, the 20th inst. On Tuesday, the 19th inst., Mr. Eugene R. Black, President of the World Bank and the International Development Association (I.D.A.) will address the Boards of Governors of the Bank and the I.D.A. and present the Annual Reports of the two institutions. Discussion of the activities of the Bank and the I.D.A. will follow immediately. On Thursday, the 21st inst., Mr. Robert L. Garner, President of the International Finance Corporation, will make his annual address and present the Corporation's Annual Report to the Board of Governors. The discussion of the I.F.C's activities will follow immediately. The Boards of Governors will convene for the closing session on Friday, the 22nd inst.

TRENDS IN WORLD COTTON TEXTILES

I.C.A.C. ANALYSES POSSIBLE EFFECTS OF G.A.T.T. SHORT-TERM ARRANGEMENT

THE short-term arrangement for staggering competition in international trade in cotton textiles as a result of increasing exports by the so-called low wage countries, drawn up at the G.A.T.T. World Textile Conference held at Geneva from 17th to 21st July 1961, will come into effect on 1st October next. The details of the arrangement were given in these columns five weeks ago (*vide* page 260 of *Commerce* dated 5th August). What will be the effects of the new arrangement? It is somewhat difficult to give a definite answer to this question. Even a broad assessment of the position is not easy. But the Secretariat of the International Cotton Advisory Committee (I.C.A.C.), Washington, has sought to explain, in broad general terms, the significance of the new arrangement in its latest monthly review of *Cotton*. The Committee feels that, for the cotton textile exporting countries with large manpower, the arrangement assures an export market in the U.S., Canada and Western Europe at least as large as that in 1960-61, with the possibility of some increase. It, therefore, concludes that the agreement should have a positive effect on prospects for cotton consumption in the low-wage exporting countries. This view is based on two assumptions—one, barriers to import into some of these countries will be lowered and, two, bilateral agreements do not dictate otherwise.

As for the textile industries in the U.S., Canada, the U.K. and some of the Continental European countries, the Committee is quite confident that the new agreement should mean greater certainty in the short-term future which should act positively on prospects for cotton mill consumption. It, however, warns against over-optimism. For it says: "... Imports will continue at least at the level of 1960-61, unless restricted by bilateral arrangements, and it remains to be seen if the long-term arrangement allows some increase in the future. For some of the countries in Western Europe, it may mean greater competition from imports depending on how much of an increase in imports is agreed upon."

More Mills Being Started

The I.C.A.C. has reviewed the recent trends in the world cotton textile economy. The review shows that the percentage of cotton textiles produced in the traditional manufacturing areas, as, for instance, India, Japan, the U.S. and West European nations, continues to decline slowly, though these areas still account for 80 per cent of the world output (excluding Eastern Europe, U.S.S.R. and China). More and more cotton mills, however, are being built in other countries, where this industry is widely known as one of the most attractive industries. The countries usually have an abundance of labour and many of the jobs in textile manufacturing do not require a high level of skill. They also usually possess rapidly increasing populations with low standards of living in so far as textiles are concerned but with some increase in per capita incomes slowly taking place. In this connection, the I.C.A.C. makes the following observations:

"If a newly industrialising country produces cotton, it can take advantage of the domestic supply of raw material and, in fact, it may wish, by converting the raw cotton into textiles, to capture somewhat more of the ultimate consumers outlay. If the country is seeking to earn more foreign exchange, and what country isn't, cotton textiles seem to be a relatively easily manufactured product for which there is a large international demand. It also can be debated that the well-developed countries can put their resources and manpower to better use than in cotton textiles."

All the above arguments, the I.C.A.C., however, points out, are not in favour of starting new cotton mills where none existed before. For, according to it, the establishment of a new domestic textile industry is accompanied by raising barriers against imports which may force domestic consumers to finance the new industry via inordinately high prices. Indeed, the Committee doubts whether a country, which does not have a large market and a large textile industry, can get the "long runs" on a particular construction so necessary to obtain maximum efficiency. Further, the Committee says that, sometimes, the cotton producing countries, in their desire to use their own cotton in their own mills, may use cotton the quality of which is too high or too low for the kind of textiles produced with a consequent economic loss. To quote it: "In a world where there is already a surplus of spindles and looms, adding new ones may simply aggravate the knock-down drag-out type of international competition already characteristic of one of the world's most highly competitive industries. And it is conceivable that, with the development of more automatic equipment, the advantage of low-wage countries in producing cotton textiles could lessen in the future."

A common item of news in recent years has been the construction of new textile mills in the Middle East, Africa, Latin America and the Far East. Recently, a survey was undertaken by the All Japan Cotton Spinners' Association of the extent of the expansion now going on in some of the Far Eastern countries and its findings are indicated in the following table:

(In thousands)

Country	Spindles installed		Spindles in course of erection or projected over 1960
	1955	1960	
Ceylon	26.0	26.0	..
Burma	N.A.	40.8	20.0
Malaya	..	..	10.0
Singapore	..	16.0*	4.0
Thailand	38.0	65.0*	208.0
Cambodia	..	11.8	..
South Vietnam ..	10.0	44.8	91.6
Hong Kong	232.0	494.0	55.9
Indonesia	N.A.	127.0*	232.0
Philippines	38.0	381.0	..
Taiwan	207.0†	298.0*	220.0
Korea	364.0	477.0	..
Total ..	915.0	1,987.4	841.5

* 1959. † 1956.

The I.C.A.C. has drawn attention to the contraction in the aggregate number of spindles and looms elsewhere following the expansion in the newly developing countries. The statistical data furnished at the bottom of this page show that, in the U.K., there has been a marked reduction in spindles, mostly mule spindles whose days of efficiency had long been over. The number of spindles has also gone down in Italy, France, Switzerland, the U.S. and Canada. As regards looms, there has been a substantial contraction in the U.K., the U.S., France, West Germany and Canada.

Record Output of Textiles

The world production of cotton textiles during the calendar year 1960 was at the all-time record level of 5,915,500 metric tons, as against 5,765,700 tons in 1959 and 5,404,600 tons in 1958. The improvement was accounted by both the free world and the Communist bloc as is evident from the figures given at the bottom. The upward trend in output would appear to have been generally maintained in the current year.

The world trade in cotton yarn has registered a notable expansion. The aggregate exports are said to have nearly doubled from 1958 to 1960. The increase has been mainly from Japan, Pakistan, France, Portugal and Spain. Japanese exports rose from 11,000 metric tons in 1959 to 39,100 tons in 1960, the quantity shipped to Indonesia alone rising from 2,984 tons to 27,786 tons. Imports of cotton yarn into W. Germany and the U.K. nearly doubled, the former increasing from 10,400 tons in 1959 to 19,400 tons in 1960 and the latter from 9,700 tons to 17,500 tons. Much of the increase in imports into the U.K. was from Spain and that into W. Germany came from Egypt, Belgium, Switzerland and Italy.

Cloth Exports

In keeping with the high level of production, the world exports of cotton cloth recovered in 1959 from the recession of 1958 and touched a new high of 728,700 metric tons in 1960. The rise was shared by all countries excepting India, China, the U.K. and the U.S. Spain's exports tripled, Pakistan's doubled and Portugal's increased by 50 per cent. Exports from Hong Kong continued their uninterrupted rise, as did Egypt's and those from Japan, which continues to be by far the largest textile exporter, surpassed the 1957 peak. Cotton cloth shipments from China declined somewhat during 1960, because of a cut of one-third in shipments to the U.S.S.R., while exports to non-Communist destinations were well maintained.

The biggest importers of cotton piecegoods during the year 1960 were, as usual, the U.K., the U.S., W. European countries and African nations. The quantity, in thousand metric tons, actually imported into these countries is given below, the figures in brackets relating to the imports in 1959 and 1958:

U.K. 80.9 (59.7 and 43.0); U.S. 51.7 (25.8 and 14.2); W. Europe (excluding U.K.) 121.1 (99.3 and 88.0); Africa 170.0 (155.0 and 153.4); Canada 27.0 (27.0 and 25.6); U.S.S.R. 17.4 (23.1 and 2.9); Australia 38.0 (33.3 and 33.3); Hong Kong 35.7 (31.2 and 28.6); Malaya 18.2 (17.0 and 16.7).

The I.C.A.C.'s survey has highlighted the fact that cotton textile exports to underdeveloped countries are still important, but more and more of these countries are developing textile industries of their own and, in the last few years, a

HONG KONG ACCEPTS U.K.'S PROPOSALS

REACTIONS OF LANCASHIRE MILLOWNERS

From Our Special Correspondent

MANCHESTER, 29th August

HONG KONG'S decision to accept Britain's proposals for an 11-month extension of the voluntary agreement which limits the Colony's textile shipments to Lancashire was welcomed by Lancashire mill leaders. The Cotton Board said that it would encourage the industry to press on with future plans and would give a breathing-space in which to discuss arrangements on import levels over a longer term.

MANCHESTER LETTER

Full details of the extended agreement, and how it will work, are, however, still awaited.

Meanwhile, the Cotton Board, in an official statement, described the extension of the Hong Kong undertaking up to the end of 1962 as "a positive step which should give some encouragement to the industry in formulating its further plans." As well as bringing the period for which the agreement will run into line with the pacts with India and Pakistan, the Board observed that it would provide a period for discussion and preparation of further long-term arrangements to come into effect in 1963. Discussions of this kind, said the statement, would seem to be increasingly important in the light of the G.A.T.T. talks at Geneva on international trade in cotton textiles, and the U.K.'s decision to explore the possibility of entering the Common Market. The Board recalled that the Government had already indicated that, although the extension of the Hong Kong agreement only covered the period up to the end of 1962, it was the Government's view that restraint on imports of duty-free Commonwealth cloth into the U.K. would undoubtedly be needed for the whole period of the re-equipment and reorganisation of the Lancashire cotton industry.

Some Modifications Necessary

Some modifications of the agreements with India and Pakistan will now be necessary. These will be announced in due course. Reactions elsewhere in the Lancashire cotton industry were guarded. On Manchester Royal Exchange, an executive said: "We are still waiting for details of the new agreement and want to know how it will work."

It is generally believed that the new pact includes a novel feature—the level of Hong Kong's shipments to Britain in 1962 will be governed by the volume of orders on the books of Lancashire mills. If the mills have 15 or fewer weeks work in hand, Hong Kong will be kept down to a basic 185 million yards of cloth shipments to Britain, which represents an increase of about 20 million yards on the current period. But if Lancashire order books lengthen Hong Kong will be able to ship more on the basis of a sliding scale.

Big Lancashire Cotton Mill to Close

A big Lancashire cotton spinning mill—the Lumb Mill at Ashton-under-Lyne, owned by Fine Spinners and Doublers—is to close down and between 300 and 350 workers are to lose their jobs. Leaders of 180,000 cotton workers decided in Manchester to call a meeting as soon as possible of all the unions in the spinning and weaving industry to consider the present trade situation in the industry and to demand compensation for workers who lose their jobs. Mr. James Milhench of Oldham, Secretary of the United Textile Factory Workers Association, said: "We feel this might be the forerunner of more mill closure."

The Lumb Mill was one of those which Fine Spinners decided not to scrap under the cotton reorganisation scheme but to continue as a unit in the streamlined and modernised cotton industry. Mr. William Winterbottom, the group Chairman, said in Manchester that every effort would be made to find alternative work for the workers at Lumb Mill.

There are two basic reasons for the closure. The only way mills could survive in Lancashire today was by working double-shifts, but, at the Lumb Mill, it had been impossible to attract a balanced labour force to facilitate this. The second reason was the flow of imported cotton goods into Britain. Mr. Winterbottom averred that the position had been left so long without any build-up in confidence that the mills could not carry on any longer. Referring to the last week's decision by the Hong Kong cotton industry to curb its shipments to Britain for a further period, he said: "The extension has come too late. It has taken so long and the position has deteriorated all the time." There would be widespread short-time working in mills in the Bolton area next week and it could be anticipated that the same thing would happen at Oldham the following week, he forecast.

Alderman Harold Chorlton of Rochdale, President of the United Textile Factory Workers' Association, pointed out that the unions wanted a definite compensation scheme for workers who lost their jobs. This was established under the Government's streamline plan for the industry and must be continued. Referring to the new Hong Kong pact, he stated that the unions were "cheered" by it. "I think that trade will pick up a little bit now that we are more certain about the position."

Overseas Trade Lower

The second half of 1961 gives no promise of providing any more encouraging export returns in the first six months of the year. Shipments of cotton yarns and manufactures up to the end of July had earned £35,296,390, while imports on the same basis had cost £45,815,951. Shipments of cotton cloth in July, at 23,433,000 square yards, were a little below the average for the year and the same could be said of comparable imports. These aggregated 55,950,000 square yards, bringing the seven months arrivals to 476,826,000 square yards, as against 409,957,000 square yards in the same period last year.

Exports of yarn failed to reach the 1,000,000-lb. mark for the first time since the months immediately following the end of the war. A marked reduction has occurred in shipments in the past few months and the total at the end of July was only 9,827,191 lbs., as against 13,073,492-lb. in the same period last year.

Prolonged Uncertainty?

Opinion in Lancashire textile circles regarding the acceptance of terms covering an extension of the import pact with Hong Kong regards the fresh arrangement as only an interim measure. But it will probably establish a principle on which subsequent "understandings" are established with the leading Commonwealth suppliers. The whole problem is inextricably bound up with any international settlements evolved by the participating countries concerned in the talks at Geneva, which may well last for nearly six months.

It is clear that the existing uncertainty about the future volume of imports cannot be swept away this year or next year. Long before the end of 1962, there will have to be further negotiations with India, Pakistan and Hong Kong, irrespective of the attitude of other countries.

Under the short-term programme drawn up by importers and exporters of cotton goods, arrivals can be curtailed at a level not exceeding the quantity supplied in the 12 months to the end of June, provided disruption of the home market is established. On this basis, India's shipments to the United Kingdom could be fixed at not more than 214 million yards, Pakistan's at 28 million yards and Hong Kong's at 140 million yards. The agreement provides for bilateral arrangements and the pact with Hong Kong clearly comes within this category.

One of the major talking points in the course of the negotiations with Commonwealth countries must be the progress made by other suppliers to the British market in recent years, notably Spain. In the basic 12-month period, nearly 69 million yards of Spanish cloth were shipped to this country, while the total volume of goods absorbed from all quarters was 794 million yards, of which 640 million yards were grey cloth.

Reactions On Geneva

Although the reaction of Hong Kong to the latest proposals by the British Government on the importation issue remains the focal point so far as Lancashire traders are concerned, the whole question of foreign cloth arrivals into the traditional manufacturing areas is now getting a thorough airing following the Geneva conference. Reports from a number of centres have indicated varying, and sometimes conflicting, viewpoints, but all the comments recognise the vital nature of the problem and the need for some form of solution to be found—and found quickly.

The American Cotton Manufacturers' Institute has described the agreement as falling far short of meeting the views of the United States industry, but emphasised the significance of the proposed pact in recognising the need for limitations of exports to the United States. "Its effectiveness will depend upon how well it is administered by the Government," the Institute stated.

Out of Touch?

This year's Cotton Board conference at Harrogate does not appear, on the face of the programme, to present any vital, up-to-the-minute approach to the industry's immediate problems. Omitted for the first time for several years is the Saturday afternoon "question-and-answer" session, which at least provided the delegates with a safety valve for letting off steam by putting the spokesmen of the various sections in the witness box.

The experience gained by Mr. A. G. B. Burney as Director of Reorganisation at the Cotton Board gives him more than sufficient authority to discuss the structure of the industry and its effect on distribution. Mr. D. R. B. Mynors, a Director of Courtaulds, has the task of describing the modern link-up between the natural and man-made fibres in relation to the finished article, while representatives of the Federation of British Industries are to give papers on sales and promotional problems at home and overseas. At the Sunday morning session, Sir Roy Harrod follows a distinguished line of speakers; his theories on the economic outlook must command considerable respect. How much the immediate prospects for the cotton trade itself are debated depends to a large extent on what facts are provided by Lord Rochdale in his opening address.—*All Rights Reserved.*

RAW COTTON POLICY FOR 1961-62 SEASON

FLOOR PRICES RAISED—CEILING UNCHANGED

AS was anticipated, the raw cotton policy for the 1961-62 season, announced on 31st August 1961, contains no surprises. It has been generally welcomed by traders and mills, as realistic in the prevailing raw cotton situation. Although those who had expected a general upward revision in the ceiling prices may be disappointed, they could derive comfort from the upward adjustment made in respect of the basic ceiling prices of Westerns and Kalyan. The raising of the floor prices of all varieties in line with the increase in the floor price of Jarilla Fine 25/32" from Rs. 139 per quintal (Rs. 495 per candy) to Rs. 168.57 per quintal (Rs. 600 per candy) announced in June last was a foregone conclusion. The abolition of the system of compulsory survey was also expected. The other salient features of the policy are as follows:

1. Appropriate changes have been made in the grouping of certain varieties and in the differentials.

2. A uniform premium of Rs. 14 per quintal (Rs. 50 per candy, approximately) has been allowed for certain cottons which are certified to have been grown in areas reserved by the Agricultural Department for the purpose of procuring pure seed, provided the crop has been duly rogued by removing off-type plants.

3. Provision has been made for an increase in the prices of Bengal *Deshi* by Rs. 9 per quintal, if it is saw-ginned.

4. Since it was observed during the last season that some cottons were deliberately watered or mixed at the ginning stage, it has been provided that the minimum and maximum prices in such cases shall be reduced by an appropriate amount to be determined by the Textile Commissioner's *Ad Hoc* Committee.

5. The exportable varieties, which had no minimum prices hitherto, have been allowed to enjoy that distinction.

6. The quota system of allocation of cotton to mills will be continued.

Explaining the reasons for the abolition of the compulsory survey, the Press note issued by the Textile Commissioner avers that, in view of the comfortable supply position that is likely to obtain in the current season (1961-62), there is no need for this regulation. With a good crop estimated at over 5.25 million bales during the last (1960-61) season and imports of large quantities of cotton stapling 1" and below under P.L. 480 programme the carryover stocks of Indian and short-staple foreign cotton, as at the end of August 1961, are estimated at 1.8 million to 1.9 million bales. Weather conditions during July and August 1961 were generally satisfactory over the major parts of the cotton-growing areas in the country. Hence, prospects for the 1961-62 Indian cotton crop are considered to be bright. In view of this position, adds the Textile Commissioner's Press note, the Government has decided to cancel the system of compulsory survey of cotton introduced during the previous season.

Wise Decision

Detailed schedule of the floor and ceiling prices for the different varieties of cotton have been published. The upward adjustment of the ceiling price of Kalyan and Westerns has been made in response to representations made by representatives of agriculturists, traders, mills and State Governments that, in view of the improvement in the quality of these varieties, they deserve a higher price. The Government has obviously not favoured the plea for a general upward revision of the ceiling probably on the ground that it will add to the inflationary pressure, by putting up the cost and therefore the price of cloth (higher price will surely hit cloth exports) without bringing any corresponding advantage to cultivators. The raising of the floor prices is a step in the right direction. It will not only not involve an immediate rise in the prices of cotton paid by the buyer but will be of immense help to farmers in times of a bumper crop and the consequent possibility of a slump. A higher minimum price is the best and, perhaps the only, guarantee that a Government could and ought to give to cultivators. As we pointed out in an earlier issue (*vide* page 422 of *Commerce* dated 11th March 1961), the plea made in some quarters for higher ceiling prices ignores the basic fact that a higher return can be assured to the cultivator (and that is the only justification for higher ceiling) by enabling him to raise the yield per acre and quality of the crop. The advantage of the latter course is that the cultivator benefits from a higher net return per acre of cultivated land while the consumers of cloth (who include the cotton growers also) benefit from the lower price of cotton and cloth that flows from it.

COTTON YEARBOOK

The Twenty-eighth International Yearbook, 1960-61, published by the *Cotton Trade Journal* of Memphis, U.S.A., presents a world-wide survey of cotton—its culture, trade and manufacture. It has been aptly named this year "Changing World Number" in recognition of the changes—social, political and economic—taking place throughout the world. The Yearbook carries articles from acknowledged authorities covering every country which grows, trades or processes cotton. Of particular interest to Indian readers are four articles about Indian conditions entitled "Food and Fibres First" (by Shantilal H. Shah, Maharashtra's Minister for Law and Labour), "Production Stalls Cotton Industry" (by Mr. J. V. Saraiya), "Cotton Remains King of Fibres" (By Mr. G. R. Shah) and "Government Help Sought to Keep Mills Running" (by Mr. K. V. Warrier).

HIGHER COTTON YIELD

The yield of cotton per acre has risen to 111 lbs. in the last season, as against 77 lbs. in the preceding season, an increase of 44.2 per cent, according to the all-India final estimate of cotton for 1960-61 season, just ended, issued by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture. As compared with the partially revised estimates of 18.80 million acres and 3.67 million bales for 1959-60, the estimates for 1960-61 at 18.97 million acres and 5.39 million bales show an increase of 167,000 acres or 0.9 per cent in area and 1,716,000 bales or 46.7 per cent in production.

Increase in production of cotton during the season as compared with the previous, is shared mainly by Maharashtra, Gujarat and Madhya Pradesh. This is attributed partly to increase in acreage and partly to favourable climatic conditions during the period of growth of the crop.

As compared with the average of preceding five years' estimates, there is an increase of 1,032,000 bales or 23.7 per cent in production despite a decrease of 734,000 acres or 3.7 per cent in area during 1960-61.

MR. TUBOPHILE GOES WATER DIVINING IN TUBELESS TIMES

"It's here, it's here", screamed the Water Diviner, all excitement, "oceans of fresh water underground... enough to cultivate this land for ever and a day. In fact," continued the Water Diviner, when he had got his breath back, "there's water, water everywhere"... "All right, all right, but meanwhile there's not a drop to drink, and I am dying of thirst in the middle of this tubeless land," retorted Mr. Tubophile, really irritated. "Look here, chum, I've had enough of your tubeless mumbo jumbo. I ask for running 'hot and cold' and you take me to a dirty water hole! Then I ask for a drink of water and you suggest I burrow underground like a rodent. The truth, Sir, is simple. No tubes, no water! In fact, life without tubes is apt to be life without water and that's no life at all."

SUGAR AND "GUR" CONSUMPTION IN RURAL HOUSEHOLDS

EFFECTS OF CHANGE IN INCOME LEVELS

AN attempt to project the requirements of sugar for domestic consumption and exports in the next few years was made in these columns three weeks ago (*vide* page 358 of the issue dated 19th August 1961). It was stated then that, on the basis of estimated population, nutritional requirements, rise in income levels, shift in consumer preference from brown sugar (*gur* and *khandsari*) to white sugar as a result of the improvement in the living standards of the masses, scope for increased industrial consumption of sugar, and the necessity for exporting some sugar in order to earn foreign exchange, the production target of 3.5 million tons to be reached in 1965-66 (end of the third Plan) could not be considered to be as unduly large. That the present low levels of sugar (and *gur*) consumption suggest vast potentialities for expansion, especially in rural areas is brought out in a special study of the income levels and consumption of sugar (and *gur*) in some South Indian villages prepared by the Agricultural Economic Research Centre, University of Madras, Madras. Although the findings are based on a survey conducted by the Centre during the period August 1956-June 1958, they nevertheless indicate a broad pattern which is of great value.

The survey was confined to three villages in Madras State (Madigai, Sengipatti and Rajagambiram), two in Andhra Pradesh (Pathikonda and Chembedu), two in Kerala (Pallipuram and Keezchery) and one in Mysore (Deshwara). The villages were not just randomly selected, but they represented case studies of economies with varying levels of development. The results of the study, therefore, broadly indicate the range of consumption in South India. The major object of the study was to know the effect of changes in income on the quantum of sugar and *gur* consumption in villages with diverse economic characteristics and dietary habits and among households within the same village. The study was also intended to throw light on the possible level of expansion in consumption.

Use of Sugar

The details relating to consumption of sugar and *gur* and *per capita* income level in four villages are given in the following table:

	Madigai (Madras)	Pathikonda (Andhra)	Pallipuram (Kerala)	Deshwara (Mysore)
Sugar consumption reporting households (%)	25	14	73	..
Gur consumption reporting households (%)	44	55	4	11
Per capita consumption per month (oz.)—				
Sugar	5.0	15.2	8.1	..
Gur	8.1	55.5	10.7	7.9
Per capita income (Rs.)	257	166	147	185
Annual income per household (Rs.)	1,122	1,029	909	990
Annual expenditure on sugar and gur (Rs.)	9.58	26.21	11.66	1.26
Ratio of expenditure to income	0.97	2.74	1.50	0.18

From the above table, it will be evident that the variations in the spread of use of sugar cannot be explained by the levels of income alone and that the villages show differing consumption habits. It can, however, be inferred that, though there is a positive and significant correlation between income and *per capita* consumption of sugar and *gur*, there are other factors besides, such as caste, occupation and dietary habits, which influence the consumption of these commodities. With this limitation of low correlation between the variables, three broad conclusions have been arrived at in the study under reference. One, sugar is a luxury for a minority of rural households in South Indian villages. Two, there is no consistent relationship between *per capita* income of the village and the percentage of households reporting sugar consumption. Three, Kerala shows a better record of sugar consumption.

The findings of the survey reveal that consumption of sugar varies between 15.2 ounces in Pathikonda in Andhra and 5.0 ounces in Rajagambiram in Madras. But, in Pathikonda, the percentage of sugar consumers is the lowest. If we exclude this village for purposes of analysis, the range gets narrower, varying between six ounces and nine ounces per month. With regard to *gur* consumption, the figure for Pathikonda is again exceptionally high. Pallipuram reports a relatively high consumption of *gur*. The range of *gur* consumption in the rest of the villages is between six ounces and eight ounces approximately. The combined consumption of both sugar and *gur* even among the reporting families is between a quarter and one-third of the standard requirements.

Influence of Income

Income, it is pointed out, has more decisive influence in sharing the pattern of consumption within a village than between villages, for the impact of extraneous factors such as urban influences on individual households can be expected to be less varying than between households. The table below indicates the percentage of households consuming sugar and *gur* as well as *per capita* consumption per month, in each income bracket (reporting and non-reporting) in the Madigai village in Madras State:

Annual income bracket (Rs.)	Percentage of households		*Per capita* consumption per month (oz.)	
	Sugar	*Gur*	Sugar	*Gur*
Below 250	21	14	5.0	3.0
251—500	6	25	0.8	2.5
501—750	18	35	1.2	3.2
751—1,000	24	59	2.5	5.0
1,001—2,500	42	63	3.0	4.7
2,501—5,000	86	79	8.7	7.3
Above 5,000	83	83	6.1	3.7

In the case of all villages, there is a general tendency for the sugar and *gur* consumption to rise with the increase in incomes. According to the report, in Madigai, the percentage of sugar consumers is higher in the group below Rs. 250 per annum than in the succeeding two groups. But the total number of families in the group is low and, among them, only three use sugar. In all income brackets, the percentage of sugar consumers is high in Kerala villages than in other villages. This is due to the absence of *gur* consumption in these villages and strong tea drinking habits. More than 50 per cent of the households in the villages have income between Rs. 250 and Rs. 1,000. It is these income brackets that are crucial for the analysis. The quick rise in the percentage of consumers as we move up from one bracket to another within the range is noticeable except in Kerala villages, even at lower levels of income, we see a fairly high percentage of sugar users and, in Pathikonda, the most interior of the villages under study, the spread effect of income is low. The percentage of *gur* users also increases with the level of income, but the rate of increase is not as fast as in sugar, for, even at the lower income levels, there are many more *gur* users.

High Food Value

By way of a general observation, the report says that sugar and *gur* are commodities with high food value. The standard requirement of these sweetening agents for balanced diet per adult is two ounces per day. But for many in rural India, the two commodities are only "occasional delights" and South India shows a much poorer record of consumption than many other parts of India. The National Sample Survey 1950-51 and the subsequent surveys reveal that, both in terms of absolute values and as a percentage of total expenditure, South India ranks low in sugar consumption. But the low levels of current consumption of sugar and *gur* are known to be most responsible to changes in incomes. Rise in incomes brings about changes in the quantum of consumption in two ways. Consumption will spread to families whose incomes hitherto did not permit the purchase of these commodities—the spread effect of income. Or, a rise in incomes will enable a family to make greater provision for sugar and *gur* in the budget—the intensity effect of income. An increase in income may also operate on the quantum of consumption through both these effects.

Applying the aforesaid yardstick, the report concludes that the intensity effect of income on sugar and *gur* consumption is negligible in South Indian villages, since the reporting families do not show much response to income. The spread effect is, however, great. In other words, the much talked about high income elasticity of demand for the two commodities operates through the spread effect. But, once the spread effect gets exhausted, income elasticity of demand will, perhaps, be low.

I.S.M.A. ON SUGAR TARGET

Apropos our article entitled "Expansion of Sugar Industry" appearing on page 358 of *Commerce* dated 19th August 1961, Mr. M. N. Pittie, Vice-President of the Indian Sugar Mills Association, Calcutta, observes as follows:

"The article published in your esteemed journal is, indeed, very interesting and I venture to offer a few comments. My own view on this subject is that the installed capacity should be such so as to meet the likely sugar demand, which in turn should be analysed on the basis of (a) export possibilities and (b) internal consumption.

"As far as exports are concerned, India has today an export quota of about 1,35,000 long tons (refined value) under the International Sugar Agreement and has been authorised to supply about 1,87,000 tons to the United States. Thus the total exports of India are today limited to 3,22,000 tons. How much could this be increased is very difficult to predict, but we should keep in mind that our exports to the United States are almost a windfall and that countries that export sugar have been curtailing their production. Our entry into the export markets would obviously meet with the strongest opposition. Taking an overall view, it is difficult to visualise if India would be permitted to export more than 5,00,000 tons. This should be a fair estimate of our export possibilities.

"There are several bases on which the internal consumption of sugar could be estimated. I would confine myself to a realistic basis as far as possible, related to actuals rather than based on several factors that are very difficult to be determined exactly. It is true that the population is increasing, the standards of living are rising and there is shift in consumer preference from *gur* to *khandsari*, but all these are not new factors and they were very much in existence during the last quinquennium as well. On the basis of realities, it would be observed that the sugar consumption during 1955-56 was 19,40,000 tons and is estimated to be 20.50 lakh tons during 1960-61. I would concede that perhaps had there been no controls the consumption would have been about 21.75 lakh tons during 1960-61, instead of the expected 20.50 lakh tons. Thus the total increase during the last five years works out at 2,35,000 tons. Taking this as the basis and projecting the same, I would estimate the likely consumption by 1965-66 around 24,50,000 tons.

"Thus the total demand for sugar for internal consumption and possible exports would be 29,50,000 tons.

"The installed capacity should not be very much higher than the likely demand for sugar. Moreover, the installed capacity in the case of the sugar industry is very elastic—depending on the number of days the factories work. So far the capacity is being calculated on the assumed figure of 120 days, whereas the actual working days have been much higher than that. This year alone though the installed capacity was supposed to be only 22.8 lakh tons, the actual production was nearly 30 lakh tons and is estimated to be still higher during 1961-62. Under the circumstances it is hardly desirable to divert the scant resources of the country for unduly increasing the installed capacity of the sugar industry which is today facing acute problem of surplus. I would suggest that no further increase should be permitted and the situation watched closely as we go along, during the third Five-year Plan. It may well be that the capacity already licensed would meet our requirements."

HIT THE BULL'S EYE

There is a surer way of getting your rightful share of the rich export market. If you exercise strict quality control in the manufacture of your goods, maintain regular supplies, produce according to the buyer's specifications, arrange for after sales service facilities, a tidy sum in foreign exchange is yours. In the Export markets you are competing face to face with the highly industrialised countries of the west. For the buyer to select your goods in preference to those of other countries you have to compete on quality.

FOREIGN INVESTMENTS IN INDIA

U.S. COMMERCE DEPARTMENT'S SURVEY OF CONDITIONS AND PROSPECTS

THE U.S. Department of Commerce surely deserves to be congratulated on its continuing efforts to promote a better understanding of India among American businessmen and to stimulate two-way trade and investment. Indicative of these efforts is the revised handbook, entitled *Investment in India** brought out by the Department. The handbook, which supersedes the earlier edition published in 1953, brings together basic economic and commercial information on India which investors, exporters and importers will find helpful. Even a cursory glance through the fifteen chapters in the publication will give one a clear idea of (1) the overall trends in Indian economy; (2) the outlook and climate for private trade and foreign investment; (3) the extent of present foreign investment; (4) basic marketing and trade data with emphasis on U.S. interests; (5) significant economic activities which provide a guide to opportunities for new or expanded productive enterprises; and (6) industrial, labour, financial and taxation policies and legislation of importance to business. The information furnished is, of course, not intended to eliminate altogether the need for the detailed legal, financial and business investigations which have to be carried out before definite action is taken by businessmen. But, as a reference book, the publication will, as Mr. Rowland Burnstan, Assistant Secretary for International Affairs, U.S. Department of Commerce, says in his foreword, be helpful in these investigations.

The handbook impressively highlights the considerable scope that exists in India for fresh overseas investments on a large-scale. India today, it says, is a country that demands the attention of American businessmen who are interested in world markets. The quickening tempo of economic activities, according to it, has opened up numerous fields for the potential investor and trader. India's Five-year Plans point to great opportunities for them to get in on the ground floor of a young but vigorous industrial development. The Government of India has repeatedly conceded India's great need for foreign capital and indicates its desire for foreign collaboration. It has gone further and taken steps to make it easier for foreign investors to conclude arrangements. The large potential of the Indian market, the country's adaptability as a manufacturing base, and the need to safeguard traditional trade connections are some of the "compelling reasons" for the growing interest of a number of businessmen to investigate investment opportunities in India.

Climate Favourable

Drawing attention to the inflow of new private foreign capital into India at a steadily increasing rate during the last few years, the handbook observes:

"Much of the increased interest in India as a place to invest is attributable to a generally favourable and improving investment climate which stems from continued economic progress and a more receptive attitude by the Government of India towards private investment—domestic and foreign. This improvement has manifested in broadened fields for private industrial activities, tax incentives, agreements assuring investors of profit remittance and capital repatriation, as well as compensation in the event of nationalisation, plans to establish investment centres in India and the United States to assist potential investors, and general encouragement. It is also reflected in a generally bullish attitude on the part of Indian businessmen."

The handbook has listed the series of tax incentives offered to new investors, in general, and foreign investors, in particular. The following are the most important of the incentives:

Five-year tax holiday from income-tax and super-tax on taxable income up to 6 per cent of the capital employed in industrial undertakings established before 1st April 1966.

Dividends paid to parent companies from these tax-exempt profits are also tax exempt. Dividends received from any Indian company in 20 specified industries established after 31st March 1952, are exempt from the super-tax on dividends. These industries are of the producer-goods type, including iron and steel, heavy chemicals, and dyestuffs. If dividends paid to a parent company do not qualify for the foregoing exemptions, they are subject to super-tax at a concessional rate of 10 per cent.

Tax free development rebate. A company may take a tax deduction of 25 per cent of the cost of new plant and machinery in the year of installation, thus permitting depreciation at 125 per cent of the cost of the new investment. Other depreciation allowances may permit the new enterprise to write off its investment in a few years. The development rebate may be carried forward as long as 8 years, if profits are not large enough to take full advantage of the rebate.

Business expenditures on scientific, statistical, or social research may be deducted for tax purposes or amortised over a five-year period.

Technical service fees are usually tax free, if they pertain to services rendered outside India, but experience in this matter is varied and prospective investors have been asked to explore this point carefully.

Tax exemption for interest payable on a foreign loan or a purchase on credit of capital plant and equipment abroad by an industrial undertaking in India with approval by the Government.

Exemption of income-tax for foreign technicians. A foreign technician whose contract of service is approved by the Government of India is exempt from tax during the financial year of his arrival in India and the two succeeding years. If not approved, his exemption extends for one year only.

Numerous Deterrents

In contrast to the aforesaid favourable aspects of the Indian tax system, there are still numerous deterrents to which the handbook has drawn pointed attention. The most obvious deterrent is said to be the high income-tax rate on personal company income. Further, it is stated that the tax on royalties and certain technical assistance fees are high. The concept of what constitutes a business connection in India (and the tax liability under such a relationship), it is said, also tends to restrict certain trading activities that may actually enhance or facilitate buying or selling operations in India. The handbook no doubt admits that there may be cogent reasons for the present levels of taxation in India, but remarks that they, in effect, tend to discourage to some extent the basic ingredients for a developing economy, namely, capital and technical know-how. Besides the tax deterrents, the handbook alludes to certain other disquieting features which are affecting the inflow of private foreign investments. These include the following:

1. The tedious screening procedure has been a source of annoyance for many potential foreign investors. The processing of investment proposals has been time-consuming and, along with the need to negotiate with the Government on the various aspects of investment, has hindered consummation of the proposal.

2. The growing participation of the Government in the business life of India has been a source of concern to many prospective investors.

3. There is a tremendous shortage of highly skilled workers.

4. Labour absenteeism is higher and productivity lower than in many other parts of the world. Consequently, the total labour cost to the firm may prove to differ only slightly from costs even in such a high-wage country like the U.S.

Apropos fears of increased Government activity in industry, the handbook has sought to impress upon the American businessmen the fact that there is ample opportunity for private industry to participate in India's development. To quote it:

"What escapes the casual observer is that India is essentially a private-enterprise economy. ... Nationalisation *per se* is not a Government policy. ... Permission is generally granted to remit without difficulty profits and other income earned from operations in India. There has been no restriction on the amount of profits transferred. As a matter of fact, most companies in India have preferred to reinvest a good portion of their profits in the company, instead of remitting abroad. ... An attraction for the American investor is the investment guarantee agreement between the United States and India, designed to encourage new investments by private American capital in business enterprises in India. ... Ordinarily, assurances are given that the required import licences will be issued for an approved project. ... Labour unions, many of them communist dominated, may present problems, but often not any more formidable than those with which firms may be faced at home. It pays to employ a good man to handle labour relations. There is legal machinery for settlement of labour disputes, but it may prove time consuming and costly."

Personal Element

The handbook has rightly emphasised that, in a very real sense, the personal element is a most important factor affecting investment in India. In its considered opinion, patience and tact are qualifications absolutely necessary for doing business successfully in India or other parts of the Far East. Americans, particularly must learn to adjust to a slower concept of time whether it be in negotiating a business deal or in actual daily working or social contacts. What may seem the wrong way of doing things stemming from experience in the United States may be right in India. Innovations must be presented in a prudent manner and should be preceded by some familiarity with the country itself. A willingness to understand and appreciate India's rich cultural heritage and great hopes for the future cannot but have favourable consequences.

The data furnished in the handbook reveal that about 100 American companies have branch or subsidiary offices in India engaged principally in manufacturing and trading enterprises. The U.S. total direct investment as at the end of 1959 amounts to $136 million. Unofficial estimates, however, place investments in India by U.S. companies at approximately $300 million as of 1960. About 70 per cent of U.S. investments is in the petroleum exploration, refining and marketing fields. The remainder is in a wide variety of products, including pharmaceuticals, office equipment, flashlight cases and batteries, aircraft parts, jute products, tyres and tubes, chemicals, and food and beverages items. In addition, many American firms have licensing, royalty or technical assistance agreements with Indian firms without involving any capital investment.

INDIAN TAX LAWS AND FOREIGN INVESTMENTS: A HANDY PUBLICATION

The provisions of Indian tax laws that affect foreigners having investments in India or business connections in or with India are dealt with in a brochure published by the Oxford Book and Stationery Co., Calcutta (Chairman of the Editorial Board: G. Basu). The brochure explains, within 40 pages, the impact of tax laws on a foreigner. It also provides an account of company rates of tax for 1961-62 as proposed in the Finance Bill of 1961 and rates for deduction of tax in appropriate cases. Included, too, are the draft agreements on avoidance of double taxation of income entered into by India with West Germany and the U.S. as well as the text of the exchange of notes between the Indian and U.S. Governments amending the investment guaranty agreement for convertibility to include guarantees against expropriation. This is a handy and neatly printed compact publication (price not stated) quite useful not only to foreigners who are interested in investing in India but also to all those who wish to have an idea of the fiscal facilities provided by India to foreign investors and foreign technicians.

BELGIAN BANK RATE REDUCED

The Belgian National Bank has reduced its discount rate from 5 to 4½ per cent, with effect from 24th August 1961. Consequent on this reduction, the rate for approved export paper with a bank acceptance has been lowered from 4 to 3½ per cent. The reduction is a sequel to need for checking the downward trend in the rediscounts of commercial bills which have fallen from B. Frs. 4,128 million at the turn of the half-year to as low as B. Frs. 1,738 million as on 21st August.

NEW STANDARD ENGINEERING CO. LTD.

CHAIRMAN, MR. R. G. SARAIYA'S SPEECH

COMPANY'S EXPANSION PROGRAMMES IN FULL SWING

ADDRESSING the shareholders of the New Standard Engineering Company, Ltd., at the the Annual General Meeting held in Bombay on Wednesday, 30th August 1961, Mr. R. G. Saraiya, Chairman of the Company, informed the shareholders that the Company had successfully completed the first phase of expansion of its steel structural plant and that the plant was currently in full operation. The Company's sales had gone up substantially by Rs. 26.26 lakhs to Rs. 119.09 lakhs, resulting in a gross profit of Rs. 18.05 lakhs. Mr. Saraiya, however, complained that the scarcity of some raw materials like coke and pig iron had affected the working of the Company during 1960-61. Especially, the shortage of matching sections of steel had caused bottlenecks and loss of valuable production capacity. As regards the working of the Company in future years, Mr. Saraiya stated that a new modern foundry was expected to be commissioned in the first quarter of 1962. He welcomed the development programmes contained in the third Five-year Plan, but warned the planners that, unless supplies of power, coal, cement and transport facilities were adequately ensured, industrial development of the country would be held up.

The following are extracts from Mr. Saraiya's speech:

"GENTLEMEN,

"It is my happy privilege to welcome you to this meeting. This meeting provides me an opportunity to give more details of the progress of the Company during the last year and perhaps an indication of the 1962 outlook.

"The Statement of Accounts was adopted by the Board of Directors on 3rd June 1961, soon after which your Managing Director, Mr. J. V. Patel, on invitation, led the National Productivity Team on Machine Building to the U.S.S.R. and Czechoslovakia. We consider this an honour to the Company and its Managing Director and believe that this visit will contribute significantly to the increase of productivity in the machine building industry of the country.

Solid Accomplishment

"Measured against the prevailing conditions and the history of growth of the Company in the past, 1961 was a year of solid accomplishment for the Company. The total sales of the Company during the year increased by Rs. 26,26,220 to Rs. 1,19,09,106 resulting in a gross profit of Rs. 18,04,704, an increase of 54.68 per cent over the last year. The percentage of gross profit to sales works out to 15.15 per cent, as against 12.56 per cent for the previous year. Provisions of Rs. 5,92,481 and Rs. 4,50,000 have been made out of the gross profits for depreciation and development rebate reserve, respectively, and a provision of Rs. 3,10,000 has also been made for taxation.

"The Board has recommended a dividend of 9 per cent on ordinary shares, subject to deduction of tax, as against 12 per cent, subject to taxation declared last year. You will appreciate that the dividends declared are on a larger capital than during the previous years and the total proposed distribution of the dividends this year amounts to Rs. 5,26,716, as against Rs. 2,90,560 in the previous year. Your Directors consider that for the rate of growth the Company has achieved during the last year, as indicated in the rise of sales with the increase of fixed assets by Rs. 46,08,865, the cut in the dividend may be looked upon as a fair and reasonable price. The Directors have proposed a resolution to change the rate of preference shares dividends from 6.3 per cent tax-free to 9 per cent, subject to deduction of tax per annum. This has been necessary due to the amendment in the Finance Act, 1960, in regard to Section 18 of the Income-tax Act and your Directors have thought it equitable that the preference shareholders should receive a net dividend of 6.3 per cent.

Development and Expansion

"This year witnessed intense activity in the field of development and expansion, and this tempo is expected to continue during the next three years. The first phase of the expansion project, namely, Steel Structural Plant has been completed according to schedule and is in full operation now. It is also worthy to mention that the capital expenditure of the project was within the budgets estimated at the time of issue of new capital. This year also witnessed successful commissioning of the first Trutzschler-NSE Blow Room line to be manufactured in the country. The manufacturing activity of this line is now well set-up for line production after the initial teething troubles that are common to new projects of such complexity and magnitude.

"In the year under review, the availability of important raw materials continued to be unpredictable. Coke and pig iron have been in short supply and deliveries have been irregular affecting output of the foundry. The shortage of matching sections of steel has often caused certain bottlenecks and loss of valuable production capacity. For this reason, it is necessary to keep larger stocks and lock up extra finance and storage space. Your Directors are at the same time aware of the need to control inventory.

Labour

"During the year under review, a four-year labour agreement was reached with the workers. One of the high-lights of the agreement is a clause which provides the setting of norms of production with scientific methods and its acceptance by the workers. As a result of this agreement, which also settles the important issues of wage-scales, dearness allowance, etc., and the earlier three-year agreement on bonus, we expect to have industrial peace and stability during the crucial period of the Company's expansion and development programmes. Some minor issues have been referred to adjudication by mutual consent.

"The year under review witnessed the successful conclusion of the collaboration agreement with Forni Elettrici A. Tagliaferri of Milan, Italy, for the manufacture of low frequency furnaces. Two of our trained engineers would commence advanced training in Italy from 1st September 1961.

Modern Foundry

"NSE Engineers have now completed, in consultation with several foreign technical experts, the design of a modern foundry, which is expected, to be one of the largest of its kind in India. Designs of the structural shed is now under progress and it is hoped that the Foundry will be commissioned in the first quarter of the calendar year 1962. I would like to mention, however, that the continued shortage of cement is causing us some anxiety due to the uncertainty, even at present as to its availability.

"The Company is fully aware that for an industry, engineering 'know-how' and skills are vital and indeed, form the backbone of financial success which are reflected in the balance-sheets. The training facilities at NSE have been intensified and at present 60 apprentices are receiving basic practical training and within a period of three to six months they are expected to be available.

Higher Targets for 1962

"In line with the increased production during the last year and the previous years, we have set for ourselves even higher targets for the year 1962. In order to achieve these higher targets the Company has emphasised time, method and motion studies in all important production departments. The Company's progress in this direction will be greatly assisted by the transfer of more and more of our manufacturing activities to Goregaon where under a centralised command, NSE will be able to forge ahead at a rapid rate of growth. The various projects under planning and execution would also require additional finances and your Directors are constantly reviewing the various means of meeting financial requirements. The Directors have recommended classification of Rs. 25,00,000 of unissued capital as 25,000 equity shares of Rs. 100 each and also increase of authorised capital from Rs. 1 crore to Rs. 5 crores. The decision to issue new capital will be taken at an appropriate time.

Third Plan

"The third Five-year Plan has now been published, and has by and large been welcomed by the country. The basic challenge of the Plan to the people of India is to raise the standard of living of a population of 438 million by 1966. It will necessitate not only hard work and sacrifice all round, but also proper co-ordination at all levels. The third Five-year Plan will impose a severe strain on our economy unless there is proper effective and detailed co-ordination between the various elements composing it. There is a general complaint of power shortages already; unless supplies of powers are planned well ahead of the actual demand arising for it, industrial development is likely to be held up. Shortage of transport is already hampering production and movement of, for example, coal and cement. All forms of transport—rail, road and water—will have to be developed adequately so as to ensure the proper movement of increased agricultural production, raw materials and finished products.

"In the third Five-year Plan the total cost of completing all programmes in the public sector exceeds Rs. 8,000 crores, and is estimated at Rs. 4,300 crores in the private sector including Rs. 200 crores transferred from the public sector. Out of these amounts, the total requirements of capital for modernisation and replacement in industry and mining come to Rs. 1,350-1,400 crores. According to the planners themselves, 'the resources available would appear to be somewhat short relatively to the needs.' The question to be seriously examined is whether the diversion of resources to the Public sector by taxation and other methods will leave enough available for industrial development in the private sector. The development visualised in the third Five-year Plan will require larger credit facilities for industry. This requirement does not seem to have been appreciated adequate with the result that we might well be faced with a situation where the installed capacity may have to remain idle or partially utilised for want of necessary financial resources at reasonable rates.

"Lastly, I should like to thank the Managing Director, Mr. J. V. Patel and all the staff and workers for executing our development programmes and the satisfactory working of the Company during the year."

Note: This does not purport to be a record of the proceedings of the annual general meeting.

SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LIMITED

DIVERSIFICATION OF ACTIVITIES—ENTRY INTO MANUFACTURING LINE

CHAIRMAN, MR. K. A. P. VISVANATHAM'S SPEECH AT ANNUAL GENERAL MEETING

ADDRESSING the Twenty-first Annual General Meeting of the South Madras Electric Supply Corporation Ltd., held at Tiruchirapalli on 30th August, 1961, Mr. K. A. P. Visvanatham, Chairman of the Corporation, disclosed that, in course of time, the Company would diversify its activities by manufacturing switch gear and domestic electrical appliances. Efforts were being made to secure foreign collaboration for the purpose. From the long-range point of view, the Chairman said, this was the right thing to do. The following is the full text of Mr. Visvanatham's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in welcoming you to this twenty-first annual general meeting of the Company.

"I believe you have studied the Directors' report and the balance-sheet and accounts which have been in your hand for some time. I shall take these documents as read with your leave. I shall invite your comments on them later.

Satisfactory Progress

"The capital expenditure during this year on rural and urban extensions amounted to Rs. 17.46 lakhs, as against an expenditure of Rs. 10.35 lakhs incurred in the previous year. You will find the progress is satisfactory in spite of the difficulties of getting materials like posts, hardware and cement for the extensions.

"The Government of Madras had sanctioned a loan of Rs. 12 lakhs for rural electrification schemes of which we were able to draw a sum of Rs. 9,97,860 only due to certain procedural difficulties connected with capital issues. The balance of Rs. 2,02,140 is expected to be received this year. We have also applied to the Government of Madras for a loan to cover schemes estimated to cost over Rs. 45 lakhs. We are hoping to get about Rs. 20 lakhs to take up schemes specified by the Government as it is understood that a larger allocation is proposed to be made this year for financial assistance to licensees. The demand for electric power supply is ever increasing and there is therefore no dearth for work. We have drawn up a programme to take up works amounting to Rs. 20 to Rs. 25 lakhs a year having regard to availability of materials and power supply from the Electricity Board's power generating plants and I believe this will be realistic.

Flood Havoc

"The great flood havoc, which seriously affected the agricultural and domestic economy of the Tiruchirapalli and Tanjore districts, fortunately left us with light damages. The villages Ayyampalayam, Amur, Gunaseelam, Peramur, Evur, Kodunthurai and Thinnakonam in the Tiruchirapalli district were without supply for about a week and the villages of Palamaneri, Tirukkattupalli, Budalur, and Sengipatti in Tanjore district were affected for a day. Supply was promptly restored by the ceaseless and indefatigable energy of the staff, with the least possible delay.

"Mr. H. K. Ramaswami, Director of the Managing Agency House, and Ex-officio Director of this Company, had been abroad between April and July and, among other things, he has been examining the possibility of securing reputed foreign collaboration for switch gear and domestic electrical equipment manufacture. Though no concrete proposals have been secured, it is likely that, in course of time, the Company may be in a position to suggest to you a diversification of its activities, by entering into manufacture, as the Directors believe that as a long range policy it would be the right thing to do.

"I would like to draw your special attention to the reserve of Rs. 1,26,000 created on the basis of the notional difference in income-tax levels prevailing now and previously. The Federation of Electricity Undertakings is striving to get this money available to us either for dividends or for augmenting our capital sources. It may take some time to have this settled and I hope the Government's decision will be favourable to you. I may also add that the Federation has been actively trying to secure modification to the Sixth Schedule to the Electricity Supply Act so as to enable undertakings to pay more attractive dividends and thus attract capital to this industry which is necessary if the power development plans envisaged in the third Plan are to succeed.

Power Supply

"Power supply position was satisfactory except for a short period of restriction due to low water conditions. A 50 per cent cut in consumption of all H.T. and L.T. industrial consumers, excepting rice mills and cement factories and essential services, was ordered to be enforced by the Government with effect from 16th May, 1961 and new connections for industrial or agricultural purposes were also ordered to be stopped with effect from that date. But due to improved conditions the cut was reduced from 50 to 25 per cent from 27th May, 1961 and it was completely relaxed with effect from 1st June, 1961 owing to the onset of the monsoon. Also, restrictions on temporary supplies, etc. and on connecting up of new services was lifted from that date. Though this had no effect on our revenue for that month it had caused some inconvenience to our consumers which is beyond our control.

"The revenue earnings this year has nearly touched a crore and we have been able to maintain the usual 9 per cent dividend on equity shares, subject to tax. As regards dividend on preference shares an extra 30 per cent over and above the stipulated dividend will be paid as required under law. The gross dividend works out to 7.15 per cent in terms of the Preference Shares Regulation Act, 1960.

"The staff relations continued to be very cordial.

"I am glad to inform you that the Central Government have decided to establish a Regional Engineering College in Tiruchi with a strength of 250 students to start with. The college is expected to function from the next academic year. In view of this, the proposal to start a private college in Tiruchi, as indicated in my last year's speech, is dropped. However, the Seshasayee Institute of Technology, is being carefully nursed to grow in its stature and to keep its pride of place among polytechnics in the State—a distinction it has achieved. The Government have sanctioned a larger intake of students, thus providing for 180 students, as against 120 hitherto admitted. A junior polytechnic to train middle school boys as skilled craftsmen is also sanctioned and this is now under implementation.

Two New Projects

"I have also pleasure in informing you that the Central Government have decided to locate one of the heavy electrical industries in Tiruchirapalli, near Tiruverumbur and there is also a move to establish a Steel Rolling Mill near Ariamangalam.

"It is thus gratifying to note that the industrial development of this district is growing rapidly and we hope to play our part in this achievement.

"I now move that the Directors' Report and Audited Balance Sheet as on 31st March 1961 and the Profit and Loss Account for the year ended 31st March 1961 be approved and adopted."

N.B.—*The above does not purport to be the report of the proceedings of the 21st annual general meeting of the company held on 30th August* 1961.

THE INDIA UNITED MILLS LIMITED

RENOVATION PROGRAMME TO BE IMPLEMENTED WITH CONFIDENCE

CHAIRMAN, MR. M. D. BHAT'S SPEECH AT ANNUAL MEETING

A NOTE of optimism that the India United Mills Limited had turned the corner and could look forward to a period of steady progress was struck by its Chairman, Mr. M. D. Bhat, when he addressed the Forty-first Annual General Meeting of shareholders of the Company held at Bombay on Wednesday, 30th August 1961. Mr. Bhat stated that the Mills had been working to the full capacity and that, if the rest of 1961 continued to be as encouraging as it had been so far, the Company would be able to build up its reserve position substantially and go ahead with confidence with its programme of renovation. The Board, however, realised, he added, that it would not be sufficient to be merely complacent and that it was essential to adopt a dynamic policy, to revitalise the management, to effect economy wherever possible and to increase the tempo of production.

The following is the full text of the Chairman's speech:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the Forty-first Annual General Meeting of the Company. The Directors' report and the audited balance-sheet and profit and loss account for the year ended 31st December 1960 have been in your hands for some time and, with your permission, I propose to take them as read.

"The working results for the year show a profit of Rs. 112 lakhs. This is subject to depreciation. I invite your attention to the appropriations under different heads in the Directors' report. After wiping out the previous losses and after providing for arrears of depreciation and bonus amounts, etc., there has been a surplus of Rs. 32.32 lakhs and I am glad that it has been possible for your Directors to recommend dividends at the rate of 80 nP per share subject to deduction of tax on ordinary shares and 13.25 nP per share subject to deduction of tax on deferred shares. The Indu Mills are thus back in the dividend list and, if the cloth market remains favourable, I feel hopeful that we will be able to maintain the ground we have recovered and continue to make steady progress.

Unavoidable Compromise

"Owing to failure of the cotton crop, there was acute shortage of Indian cotton. It was evident in the beginning of the year that adequate quantities of suitable cotton would have to be imported, but it appears that timely supplies could not be planned in advance and it was feared that the Mills would not be able to maintain their production in the last few months of the cotton year. This led to a brisk movement of cloth stocks and sudden but temporary rise in cloth prices. The Central Government stepped in, and negotiations took place between them and the Federation of Indian Cotton Mills. Ultimately the Mills agreed to adopt a certain formula to calculate the prices and the stamping of prices on cloth according to this formula was introduced in September 1960. This formula had no scientific basis or relation to facts of individual units. The *ad hoc* price cuts and margins were, if I may say so, a sort of unavoidable compromise.

"So far as Indu Mills are concerned, I regret to say that this price structure has had an inequitable effect. The basic period of the formula was a period of distressed sales for Indu Mills. The prices of Indu cloths had not risen during the controversial period of price fixation to the levels stated to have been generally reached by the coarse and medium counts mills. Indu Mills had, however, to fall in line with others and they have since been trying to do their best in the difficult situation in which they have been placed.

Outlook Reasonably Promising

"There is, however, cause to take a reasonably promising view of the future. Your Mills have now been working to the full capacity. The entire spinning section is working in three shifts and all the looms are working two shifts. Mill No. 5 is working its looms in the third shift as well. The dye house production, especially the prints and khaki varieties, has substantially increased and there is good demand from the powerloom sector for Indu yarns. Every effort is being made to improve the quality and, if the year 1961 continues to be as encouraging as it has been so far, we will be able to build up steady reserves and go ahead with confidence with our programme of renovation.

"Your Mills require annually over one lakh of bales of Indian and foreign cotton. The production during the year was over 14 crores of yards of cloth and the total number of employees more than 16,300. The wages and salaries bill was Rs. 3.92 crores and the excise duty paid was Rs. 1.4 crore. These figures will give you some idea about the volume and scope of the activities of your Mills and will also indicate the important position which these Mills hold in the industrial and economic life of the State of Maharashtra.

Machinery and Equipment

"In his speech last year, my predecessor had referred to the unsatisfactory condition of the machinery and the chronic trouble the Company had of inadequate finance. The plant and machinery of which the original value was Rs. 340 lakhs was written down as on 31st December 1960 to Rs. 44 lakhs, that is to nearly one-eighth of the original cost. Replacement of the old plant and machinery and renovation are urgently needed and in the dye works especially an almost complete overhaul is overdue. The Directors are alive to this problem, as can be seen from the balance-sheet which shows that, during 1960, nearly Rs. 17.80 lakhs were spent on additions to the machines.

"Three hundred and forty-one looms and one set of American combers were received and put into operation during 1960. One modern stenter, two drying ranges, one cropping machine, one yarn merceriser, and certain other machines have been recently received. Two cropping machines and one more modern stenter have been ordered some time back and orders for one hundred ring frames have been placed with the manufacturers only a few days ago. Negotiations are in progress for four blow room lines, one cheese dyeing plant and J-box equipment and, subject to getting an import licences, orders for these will be placed in the near future.

"With a favourable climate due to the increased tempo of the third Five-year Plan, it is expected that the financial position of your Company would steadily improve, enabling the management to pay reasonable dividends and also to execute a phased programme of rehabilitation which is being planned. The machinery manufacturers are heavily booked and deliveries against new orders are distant. This factor and the limited internal resources of your Company affect the speed of rehabilitation, but, in view of the improvement in our financial resources, it is proposed to incur a capital expenditure of approximately Rs. 1 crore per year for purchasing new machines and to complete the renovation of certain sections of spinning and dye works in the next three years. Major repairs and overhaul of machines which are not to be replaced for the present are receiving close attention of the Board and a substantial amount is being spent on such work every year.

"As mentioned in the Chairman's speech last year, the differences between the partners of the Managing Agents firm precluded any application being made for reappointment of the same Managing Agents, or appointment of new Managing Agents after 15th August 1960 and, under the provisions of the Companies Act, the office of the Managing Agents terminated on that date. The affairs of the Company have been conducted since then by the Board of Directors who have been assisted very ably in their arduous task by the Chief Executive Authority.

"In the latter half of the year 1960, the differences between the partners of the Managing Agents culminated in the filing of suits in different Courts in Uttar Pradesh and at Bombay, and the Company was made a party to some of these suits. The validity of the election or the co-option of some of the Directors was challenged and injunctions issued by some of the Courts prevented the Directors concerned from functioning in that capacity. In consequence, the administration of your Company's affairs was carried on by a smaller Board.

Harmonious Working of Board

"An application was also made to the Government of India under Section 18A of the Industries Development and Regulation Act, 1953 and also under Section 408 of the Companies Act. Upon this application, an order dated 15th November 1960 was passed by the Central Government under Section 408 of the Companies Act directing the Company (1) to amend its Articles in the manner provided in Section 265 of the Companies Act, and (2) to make fresh appointment of Directors in pursuance of the Article so amended within 90 days from the date of the Order. On the same day, another order was passed by the Central Government appointing Shri S. G. Nevatia and Shri N. K. Petigara as additional Directors of the Company until new Directors were appointed in pursuance of the Article so amended. I do not wish to bother you with further details which have been outlined in the notice for an extraordinary general meeting and its annexure. I am making a passing reference to these developments in order that you may appreciate the necessity for harmonious working of the Board.

"As mentioned in the Chairman's speech last year, the matter relating to the remuneration of Shri S. A. Kher, Chief Executive Authority, is still under correspondence and discussion with the Company Law Department and the Department has been intimated that should it become necessary to make any adjustment, the same will be made in compliance with the Government's decision in due course. Since his appointment as Chief Executive Authority three years ago, Shri S. A. Kher has been striving hard to raise the output and to increase the efficiency of working of your Mills and to improve the quality of their products. He has also been devoting his attention to the problem of rehabilitation of the plant and machinery and of strengthening of the sales organisation. The result of his ceaseless efforts can be seen in increased production, better earnings and reduced stocks. I should like to express my warm appreciation of the magnificent work that he has been doing for the benefit of your Mills.

"I can imagine what tremendous task it must have been for Shri D. M. Khatau to shoulder the responsibilities as Chairman during the preceding two years. As Chairman of the Board and of the Committee of Management, he has rendered most valuable services to the Company and all were hoping that he would continue to guide the affairs of the Company. It is unfortunate, however, that he should have found himself unable to do so. The services rendered by the independent Directors Shri N. K. Petigara, Shri S. G. Nevatia and Shri Gajadhar Somani have also been equally valuable and our thanks are due to Shri D. M. Khatau, Shri N. K. Petigara, Shri S. G. Nevatia and Shri Gajadhar Somani for giving so much of their precious time and attention to the affairs and management of this Company during the tenure of their office. It was largely due to the efforts of these four gentlemen that the Company was able to overcome the difficulties which had beset it three years ago.

"Shri N. K. Petigara and Shri S. G. Nevatia were appointed as Directors by the Central Government in November 1960. I am glad that they are back amongst us and have given their consent to be on the Board if elected. Shri Ramkumar Poddar being ex-officio Director ceased to be Director of the Company from 15th August 1960. Shri R. P. Bagla who like Shri Ramkumar Poddar was associated with the Company since 1943 and the other Directors are retiring today to enable election by the method of proportional representation as directed by the Central Government to be held. Some of them have offered themselves for reappointment. To all of them I express my sincere gratitude for the unstinted co-operation and assistance which they have always given to the Company and to me.

Taxation

"May I invite your attention to the paragraph in the Directors' report dealing with taxation matters? I am glad that the Income-tax Tribunal has decided the Company's appeal for the assessment year 1949-50 in its favour and ordered the refund of Rs. 34,43,843 in taxes for that year. Refund of this amount has already been obtained. The Income-tax Department, however, has made a reference application for permission to proceed further. That application has been heard by the Tribunal and its decision is awaited. Pending disposal of the Department's application and the probable reference, the Board has set aside this amount provisionally as contingency reserve.

"The Company's tax appeals for the years 1950 and 1951 have been decided by the Appellate Assistant Commissioner substantially in favour of the Company and I am glad that the Company has recently received a refund of Rs. 13,42,478 in respect of these appeals. As mentioned in the Directors' report, the provisions made for taxes are believed to be adequate to cover the tax liabilities.

"The above income-tax appeals involved very important issues. The tax amounts ran into lakhs. Our Counsel and Solicitors had to handle a very complicated case and the thanks of the Company are due to them for all that they have done for the Company. For the preparation of the Company's case, they required facts and figures from various past records and it is indeed creditable to the staff of our Accounts Department that they were able to supply at this distance of time the material required by the Solicitors.

"The Punjab National Bank has been very helpful to us in the past. It readily helped us to tide over the difficulties which faced the Company three years ago. The position has now changed, and I feel sure that the Bank will extend its full support to us in our future programme also.

Labour Relations

"Our relations with the Trade Unions have been very cordial and, although there are occasions when we differ, we are able to appreciate these differences and we endeavour to arrive at an amicable settlement of our disputes.

"Our merchant friends deserve a special mention. In the days of uncertainty of prices and of depressed markets, difficult problems arise from time to time. We are, however, able to settle these in a spirit of mutual accommodation. Fair deal and fair play have been the policy of management and, like my predecessor, I feel confident that this must evoke full response from all quarters.

"We are conscious of our responsibilities. Not only the shareholders of the Company but the Central and State Governments would all keenly desire that this group of Mills should continue to work smoothly. Higher production and increased employment are the objectives set before the industry, for its own benefit as well as the benefit of the country. The following figures will indicate what your Mills have done in various directions:

	1958	1959	1960	1961 Jan-June
Spindles worked (in lakhs) ..	1,649.88	1,566.75	1,889.85	1,045.00
Looms worked (in lakhs) ..	87.67	85.96	86.88	18.92
Cotton consumed (in lakhs lbs.).	880.39	889.20	887.79	208.38
Average workers employed ..	16,400	15,808	16,815	17,488
Yarn produced (in lakhs lbs.) ..	336.50	320.75	333.93	183.94
Cloth produced (in lakhs yards).	1,425.38	1,386.76	1,458.51	747.93
Market yarn (in lakhs lbs.) ..	14.02	18.01	21.47	15.82
Cloth exports (in lakhs yards)..	81.06	199.43	194.91	111.30
Excise duty (in lakhs Rs.) ..	240.97	198.00	140.67	108.56

"These figures are illuminating. They signify that the Company has turned the corner and can look forward to a period of steady progress. The Board realises, however, that it would not be sufficient to be merely complacent and that it is essential to adopt a dynamic policy, to revitalise the management, to effect economy wherever possible and to increase the tempo of production.

Election of Directors

"Since only eleven nominations have been received, it appears likely that all these eleven gentlemen will be elected. The Company is, therefore, entitled to expect that the Board of Directors who will take office presently will function as a homogeneous team and that, during their tenure of office, the financial resources will be consolidated and progress will be achieved in every field of activity.

"In our task, we have received valuable support from Shri Nityanand Kanungo, Minister of Commerce of the Central Government, and we are grateful to him for it. We have been always getting necessary guidance and assistance from the Ministry of Commerce and Industry and the Textile Commissioner and his organisation and we are also thankful to them for the help which they have been readily giving.

"Shri Shantilal H. Shah, Minister for Labour of the Government of Maharashtra, takes a keen interest in the working of your Mills. His advice whenever we have approached him in our difficulties has been of immense value to us. We are deeply indebted to him for all the advice and guidance we have received.

"I also take this opportunity to recognise the loyal co-operation that has been extended to your Directors by the officers, staff and workers and the hard work that they have put in throughout. I should like to convey our thanks to all of them.

"It remains for me to thank you all for coming here and listening to me. If there are any questions in respect of any matter where I can properly give information, I shall be happy to answer them."

N.B.—*This does not purport to be the record of the proceedings of the meeting.*

Notice

ROHTAS INDUSTRIES LIMITED

Registered Office:
Dalmianagar (BIHAR)

THE DIRECTORS OF ROHTAS INDUSTRIES Ltd. in today's Board Meeting have recommended to the forthcoming Annual General Meeting of the Company following dividends on Preference and Ordinary Shares (subject to statutory deduction of tax) in respect of the financial year ended 31st March 1961.

'A' Preference Shares Rs. 11.10 per share.

'B' Preference Shares Rs. 5.52 per share.

Ordinary Shares Re. 1 per share.

The Share Transfer Books and Members Register will remain closed from 26th September, 1961 to 30th September, 1961, both days inclusive.

By Order of the Board,
For ROHTAS INDUSTRIES LTD.,
J. P. SAXENA,
Secretary.

CALCUTTA, *30th August*, 1961.

As you need two hands to clap, so the country needs
the combined efforts of man and machine
to bring about industrial growth and prosperity.

Today, through the Five-Year Plans, the country is
striving to create such a unity of effort
where all will have enough.

It is our privilege to participate in this
historic adventure of building a new India.

MAHINDRA & MAHINDRA LTD.
BOMBAY · CALCUTTA · DELHI · MADRAS

GENERAL ASSURANCE SOCIETY LTD.

CHAIRMAN, MR. B. L. JALAN'S SPEECH AT ANNUAL GENERAL MEETING

NON-DIVERSION AGREEMENT A WELCOME MOVE

TO the chorus of welcome received by the Non-Diversion Agreement signed by some leading general insurance companies in the country has been added the weighty voice of Mr. B. L. Jalan, Chairman of the General Assurance Society Ltd. Addressing the shareholders of the Company at the Annual General Meeting held at Calcutta on 28th August 1961, Mr. Jalan said that the agreement represented a welcome move on the part of insurers to put the industry on a sound footing and that, if implemented in the right spirit, would usher in an era of prosperity to general insurance business. He, however, felt that it needed certain modifications and suggested the lines along which they should be made.

The following are extracts from Mr. Jalan's speech:

"The proposed entry of the U.K. into the European Common Market, when seen in the background of the economic power enjoyed by Great Britain during the eighteenth and nineteenth centuries, seems to be a rather curious, amazing, development. We may recall that, only last year, the U.S. gold-drain had assumed an alarming proportion and the dollar had become so weak that its devaluation was considered imminent. In the course of the last few months, the things have changed a lot. The U.S. economy has staged a recovery and the sterling has become weaker than ever before. The situation has been temporarily saved by the I.M.F. loan of the order of 2,000 million dollars to the U.K.

"Nevertheless, these events are not isolated problems and the repercussions which they produce on the economies of other countries have also to be reckoned with. Thus, while it has, perhaps, become necessary for the U.K. to join the European Common Market, it will have very adverse effects on the Commonwealth trade, and, in particular, on our exports of tea, cotton textiles, and others. The U.K. continues to be by far the largest single supplier of our imports and consumer of our exports. The withdrawal of the preferential treatment, if not properly phased and counterbalanced, will be a setback to our exports, foreign exchange earnings and eventually development programmes. This may be viewed in the light of the very encouraging foreign assistance exceeding $2 billion promised by the Aid-India consortium led by the U.S.A. Foreign exchange was perhaps the most important impediment in our scheme of resources for the third Plan. The promised aid has largely solved the problem in one sweep so that the bold, although essential, goals set by the planners for the next five years, appear to be within reach. Any deterrent, which might jeopardise this position, has to be avoided.

Epoch-making Experiment

"As you are aware, we have, in March last, completed ten years of our planned growth. Meanwhile, the third Plan has commenced functioning. The rates of progress achieved during the last ten years and the pointers of the future show that India has been successful in launching a new epoch-making experiment in economic growth. An accelerated rate of growth has been achieved under democrate framework.

"During the first two Plans, the national income of the country increased by 42 per cent. The rate of growth in the United States, in real terms, was also of the same order during the same period. While it should be realised that the rate of growth in the U.S.A. is bound to be slow as she has already attained a high degree of maturity and the progress is measured from a very high level of economic advancement, the low standards of living, consumption and savings prevailing in India have also to be reckoned with. This does not, however, overlook the fact that other countries like Germany, Japan, France, Turkey, secured a higher rate of growth during the last decade.

"It is not merely a question of quantitative increases in productivity and gross or net product. Revolutionary transformation has been brought about in the institutional framework while adhering, as far as possible, to democratic methods. The regulated economic operations have left some indelible marks on the basic structure of our economy. While the economy is still vulnerable to severe operational jolts, it is well geared to an accelerated growth rate.

"These results have brought the country to the threshold of a new era of self-sustaining economy which we should be able to achieve by the end of the fourth Plan. It might take another decade to achieve a fair degree of maturity. We might say, in other words, that over a perspective of 30 years, we will have passed through three stages of economic growth—laying the foundation for a growth economy, organisation of a self-sustaining economy, and attainment of a degree of maturity. In the context of our population growth at a rate of 2 per cent per annum, this would be an accomplishment of which the country and its leaders could be well proud. The projection, no doubt, of the past into the next two decades, is dependent on an assumption that the country will continue to be committed to hard work and austerity.

Financial Resources

"The paramount problem is of finding enough capital resources. The problem, again, is not one of the availability of total quantum as that of the means to be employed to raise such resources. The capital market, having manifested a few new bullish features during the last two years or so led to a misleading impression about its vitality and intrinsic strength. What is ignored is that it witnessed equally alarming periods, as at present, of bearish tendencies. There is no doubt about an increasing interest being taken by the foreign investors, specially from the U.S.A., in new industrial ventures in India. It is left to us either to make the best use of the opportunity or to frighten them away once again. Many new features of our Indian Companies Act and the remodelled Indian Income-tax Bill need modification when seen from this perspective. In our zeal for orderly growth, the objective of rapid industrialisation should not be sacrificed. If we need regulation devices it is in respect of price movements such as those witnessed by the jute industry and in foodgrains. The prices in jute industry can be very well regulated by operating buffer stocks through the mills by encouraging buying of raw jute by means of reduction in bank margins.

"There have also been some other disquieting features affecting the new confidence which has been built up. Recently, the Reserve Bank, following certain bank failures, has been considering measures by which the capital base of banks is sought to be raised and advance-deposit ratio reduced appreciably. Considering the rate at which deposits are growing and, therefore, also the requirements of industries, this will further restrict bank credit and facilities available to industry. The measures may not be necessary in view of the deposit insurance being very rightly sponsored by the Reserve Bank and the Government.

"The history of industrially advanced economies has a lesson for us. We might even look at the spectacular advances made by countries like Western Germany after the War. What is desired is a policy of 'incentives-based regulated growth.' It is possible, perhaps, to work out mathematically by means of forecasting and projections that a given amount of incentives such as relief in taxation, subsidisation of exports, and similar other measures would be more than offset by a higher rate of national product and thus not only not reduce the total revenues to the national exchequer but in fact raise it. Planning does not simply mean a diversion of resources to more economic uses: may be from consumption—by means of indirect taxation—to productive channels on the basis of a catalogue of programmes and projects. It is something more. This additional function of planning is to contemplate and provide for conditions of more rapid and more balanced economic development. A lot has been achieved by means of diversion of resources—say from the private to the State sector. A lot also has been achieved by instituting a system of regulated development by a scientific cataloguing of plans and projects. But, we are constrained to believe, a lot remains to be achieved by deliberate and purposive creation of incentives consistent with and leading to a higher rate of national productivity and prosperity at the least cost possible.

"Assuming the public sector investment as 100 units, the investment in the private sector in first Plan was 111 units, in the second 85 units and will be only 65 units in the third. What is more important is the fact that the change is more spectacular in the industrial sector with the result that, while the Government is taking a larger and larger share in programmes which could well be taken care of by private industry, development of basic sinews of progress, in the form of economic overheads, does not receive the attention it deserves. I believe there is a unanimity of opinion that our progress would have been faster and smoother if transport bottlenecks were avoided, supply of cheap power was more adequate and the Governmental machinery for regulation of economic activities was more efficient and speedier.

"Another objective to be gained by means of planning is a kind of stable, steady, system of economic operations. One serious aspect, which is generally ignored about the rise in prices, is the fact that as and when such rises outstrip the international price movements, the international value of rupee is undermined, which in turn affects export and foreign exchange earnings. Exports, in fact, have not kept pace with the growth in the economy. Thus, while the national income increased by 42 per cent and industrial production by 94 per cent, exports remained constant. Many industrial proposals had to be or are being abandoned since the same could not satisfy certain assumed foreign exchange criteria. You are aware that, not long ago, it was necessary to justify import of capital equipment to obtain some kind of deferred credit arrangements. Later on five years credit arrangements were insisted on. This period was gradually lengthened. Today, not deferred credits, but direct capital participation by foreign parties is considered imperative. Foreign exchange regulations and requirements of our industrial policy have thus become one of the principal impediments to our industrial expansion.

"It is necessary, I would believe, to have now an independent Commission to review the progress, assess the achievements and suggest ways and means to rectify and regulate unbridled trends in our economic operations. While this has to be independent of both the Planning Commission and the Government, this would function in close collaboration with both. This Commission will become the watch-dog of our planned progress.

General Insurance

"Coming to our own general insurance industry, in my address to you in September last, I had made a plea for the appointment of a high-powered Commission of Inquiry to assess the results of the Code of Conduct and to suggest new ways and means to curb the internecine competition. I reiterate that the need of such a Commission is greater today than ever before. In elaborating the suggestion I had also pointed out the need for doing away with the irksome controls and to initiate effective ways for mutual co-operation and understanding. I am glad to say that the industry in Bombay has initiated such a move in the form of an agreement for non-diversion of business. I believe that this is a welcome move which the industry needed for a long time. If the move is implemented in the right spirit, it will usher in an era of prosperity for the industry.

"However, it is necessary that all companies operating in India, whether Indian or foreign, should be made to join the consortium. The agreement perhaps needs certain revisions and modifications. Thus the provision for surrendering all business in excess of 20 per cent of the previous year's business to a common pool will be harsh for those companies which have not caught up a self-sustaining level of business from the point of view of cost. So long as such companies do not attain an economic level of business, they should not be required to cede business secured by them even in excess of 20 per cent of the previous year's businss. I hope that amendments like these will be made and all companies will join the agreement and will demonstrate that the industry, left to its own, could, by means of self-government, introduce means of healthy regulation and growth. The one big malady which has afflicted the industry is cut-throat competition."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

SIMPLEX MILLS COMPANY, LIMITED

FINANCE A STUMBLING BLOCK IN THE WAY OF MODERNISATION OF MILLS

CHAIRMAN, MR. S. R. DAMANI, ON PROBLEMS OF COTTON TEXTILE INDUSTRY

"MODERNISATION is a real problem for the textile industry. It is not merely a problem of installation of latest machinery, but a problem of finance, which constitutes a stumbling block." In these words, Mr. S. R. Damani, M.P., Chairman of the Simplex Mills Ltd., described the number one problem of the cotton mill industry in his speech at the Forty-ninth Annual General Meeting of the Company *held at Bombay on Wednesday, 30th August* 1961. He said that the long time taken by the National Industrial Development Corporation, the principal agency for financing modernisation and rehabilitation, in considering applications caused much hardships to mills. During the next five years, more and more units would be approaching the Corporation for help and, unless procedural delays were avoided, Mr. Damani added, the delay would adversely affect the pace of modernisation.

The following is the full text of Mr. Damani's speech:

"Gentlemen,

"I have great pleasure in welcoming you today to the Forty-ninth Annual General Meeting of the Company. I would like to state at the very outset that the object of holding this meeting here is to give you an opportunity to have a look at the Mills and see for yourselves the new plant and machinery that have been erected and are in operation, and the extent to which improvements have ben effected in various departments.

"The Directors' report and audited accounts for the period 1st April 1960 to 15th May 1960 as well as for the year ended 31st March 1961 have been with you for some time and, with your permission, I shall take them as read.

Working Results

"You may have observed that the working results shows a substantial improvement over last year, so much so that the gross profit has trebled and has been practically the highest since the post-war period. The net profit for the year, after providing for depreciation of Rs. 16,20,608, development rebate reserve of Rs. 2,80,000, gratuity of Rs. 35,970 and, after making adjustment for bonus for 1956 and carried forward loss, comes to Rs. 12,39,044. The net profit has been arrived at after adjusting the loss of Rs. 1,24,433 incurred by the Company for the period 1st April 1960 to 15th May 1960. Consumption of cotton and stores has been reduced by Rs. 18.96 lakhs and Rs. 4.41 lakhs respectively. A sizable saving under the head salaries and wages would have been effected but for the various additional payments made on account of retirement gratuity and retrenchment compensation amounting to Rs. 2.63 lakhs, Mills Manager's termination expenses of Rs. .24 lakhs, additional wages, during the period of closure from November 1951 to July 1952 due to power shortage of Rs. 1.60 lakhs, bonus for 1958 of Rs. 1.34 lakhs and reimbursement of expenses to the ex-Managing Agents of Rs. .81 lakhs—aggregating to Rs. 6.62 lakhs.

"It is significant that the closing stocks of finished goods are substantially lower at Rs. 40.18 lakhs, a virtual reduction of 36 per cent over the previous year.

Production

"Every effort was made by the management to streamline the production as pointed out by me last year and I am happy to state that a good measure of success was achieved in this direction. Total production during the year comprised of 36 per cent wearable qualities, 41 per cent industrial qualities and 23 per cent yarn.

Capital

"During the year, further Debentures of the face value of Rs. 6.46 lakhs were taken up by the shareholders and by the public.

"With a view to conserve the profits of the Company, your Directors have decided not to recommend dividend for the year. However, they have recommended issue of bonus shares in the ratio of one share for every five shares held, thus reducing the existing imbalance between the equity share capital and the net block. I am glad to inform you that the Central Government has since accorded its consent to our *application for the issue of bonus shares.*

Modernisation

"Modernisation has assumed a real problem for the textile industry. It is not merely a problem of installation of latest machinery, but a problem of finance, which constitutes a stumbling block in the way of modernisation. The National Industrial Development Corporation, which is the principal agency for financing modernisation and rehabilitation, takes a long time, which naturally causes great and untold hardships. During the next five years, more and more units will be approaching The National Industrial Development Corporation and other financing agencies to obtain an amount aggregating to Rs. 100 crores out of the total of Rs. 180 crores envisaged by the Working group for the textile industry. Unless procedural delays are avoided it would affect the textile industry to a great extent.

"Your Company is continuously replacing its outmoded plant and machinery with modern equipment, for attaining improved and economic working.

"The following new machinery costing about Rs. 22,00,000 is expected to be commissioned during this year:

(1) 5—Master Cleaners.

(2) 45—Units of Augusta Broken-end collectors.

(3) 12—Texmaco Ring Frames totalling 6,720 Spindles.

(4) 2—Units of overhead cleaners.

(5) 1—Lessona Roto Cone Winding Machine.

(6) 4—Warping Machines.

(7) 1—Cocker High Speed Sizing Machine.

(8) 48—Sakamoto Automatic Looms.

(9) 6—Benninger Maneklal Automatic Jiggers.

(10) 1—Famatex Hot Air Stenter.

Labour Relations

"The relationship between management and workers remained most cordial. I am confident that these relations will further improve, which will enable both to devote the time and energies much needed for improved productivity and efficient working.

Rising Cost

"Since recent past there has been a sharp increase in the cost of production. Although the cotton crop was much higher than last year at 52 lakh bales (against 37.50 lakhs), yet the industry was forced to buy foreign cotton at a much higher price. Increased payment made to the workers pursuant to the recommendation of the Wage Board added the burden to the industry, which would be further increased by Rs. 2 crores from 1st January 1962.

"At the end of 1960 Government referred the question of cost structure of the cotton mill industry to the Tariff Commission, which is to submit its recommendations for ascertaining fair ex-mill prices for various types of cloth and yarn. The task to be handled by the Commissions is by no standard simple. Though it has commenced its work on the problem, it would take adequate time if the question is to be tackled satisfactorily. I hope it would take into consideration the question of marginal and uneconomic units and the need for modernisation.

Export

"A new situation may confront textile exporters on Britain's joining the European Common Market. The efforts to promote exports to achieve the targets assigned to the industry may be hampered unless the incentive scheme is suitably modified. One condition laid down under the Export Incentive Scheme compels individual mills to increase export over its past performance to be entitled to the maximum benefits. This has seriously affected our exports which has declined to 6.17 per cent against 15.66 per cent in the previous year.

Industry and Third Plan

"The mill industry has been assigned a target of 5,800 million yards output during the third Five-year Plan. This is only 800 million yards more than the target of the second Five-year Plan and it would easily be achieved. The existing units should be allowed to increase their capacity in preference to new units, so as to enable them to achieve higher production and improved quality at lower cost and with the least capital investment. I am still of the opinion that the targets assigned to the decentralised sector of powerloom and handloom may not be accomplished and there may arise a need to revise the target of the mill sector to clothe the country's ever-growing population.

Prospects

"I am happy to inform you that the working results for the few months of the current year is encouraging and much higher than the average of last year. Your Company may be required to pay a little tax on the income of the current year after providing for the arrears and the current year's depreciation and development rebate reserve, aggregating to approximately Rs. 50 lakhs.

"I heartily thank the members of the staff of the Mills and the Selling Agents who deserve all praise and appreciation for their hard and efficient work."

OIL INDUSTRY IN CANADA AND INDIA

REVEALING CONTRAST IN GROWTH

THE rapid growth of Canada's oil industry in less than ten years following the Leduc discovery in 1947 provides a striking contrast to the slow and halting progress of India's oil industry over the same period. Production of crude oil in Canada mushroomed from a comparatively insignificant 20,000 barrels per day to over 500,000 barrels per day in 1957. The value of production in the latter year was in excess of $450 million. By the end of that year, proven reserves of oil and gas liquids had risen to 3.3 billion barrels; an impressive network of pipelines had been laid across the country and into certain nearby areas of the United States; Canadian refinery capacity had virtually tripled; and a notable beginning had been made in the establishment of a petrochemical industry. In the years since 1957 growth has continued in many directions—in extension of oil reserves, of refinery capacity, and of petrochemical facilities. In addition, the spectacular development in natural gas in this period has brought many benefits, as well as new competition, to the oil industry. It may be interesting to note that the discovery and development (including marketing) of Canadian oil have involved, as of 1959, an aggregate investment of about 5.6 billion dollars. This, incidentally, gives an idea of the magnitude of capital that will be required by a country like India which can, at best, hope to be a relatively small producer of petroleum products in the world.

In highlighting the facts bearing on the growth of Canada's oil industry since 1947, the *Monthly Review of the Bank of Nova Scotia*, in its issue of June 1961, has drawn pointed attention to the less vigorous pace of exploration and production in the period 1958-60, as compared with the pace in the period 1947-57. The Federal Government of Canada has, therefore, formulated a national oil policy designed to stimulate more rapid growth of production. Under this policy, a production target of 800,000 barrels per day of crude oil and natural gas liquids has been laid down for 1963, as compared with the 1960 average of some 543,000 barrels per day. The programme will be on a voluntary basis, though all companies are required to make monthly returns regarding their imports of crude oil and petroleum products to the National Energy Board, which is periodically to report on the progress made. If this progress suggests that voluntary efforts are not producing the results anticipated, the Government will then take, it has been announced, whatever steps the circumstances may require to ensure the success of its policy, including regulation of imports and exports of oil.

Areas of Expansion

According to the *Monthly Review* of the Bank of Nova Scotia, there are three main areas where the expected expansion can be achieved —firstly, the normal growth of demand in present domestic markets; secondly, displacement in the Ontario market of most of the oil products now supplied from Montreal refineries using foreign crude; and, thirdly, increased exports to the United States. To reach the 1963 target, these areas should be absorbing an added 250,000 barrels per day. Growth of domestic demand, now generally estimated at 3 to 4 per cent a year, could account for around 50,000 barrels per day, and displacement of foreign oil in Ontario for about 70,000 barrels per day. On such assumptions, it is stated that achievement of the target level in 1963 will greatly depend on expansion of exports, perhaps of the order of 130,000 barrels per day over and above the average of 113,000 barrels per day last year.

It is stated that response from Canada's oil industry to the Government initiative by way of a national oil policy has been encouraging and that there are signs of an appreciable quickening of growth in the industry. But the fact that Canada's proven oil reserves are geographically land-locked in the heart of the continent effectively limits that country's participation in the international oil trade. At the same time, the Canadian oil industry is relatively vulnerable to shifts in world supply and demand—a condition which has become particularly apparent with the development of surplus world supplies over the past few years. As of today, however, the prospects for continued progress are encouraging, for the mid-1961 target level of oil production (625,000 barrels per day) has been well achieved. This recent increase in production is strong evidence testifying to the usefulness of the kind of persuasive direction embodied in the national oil policy—a policy which, as the Government argues, has been designed "to achieve national objectives with the least possible disruption of normal trade patterns."

If that is the picture of Canada's growing oil industry, it is quite different in India where the growth of a public sector in oil, especially since 1956, has disrupted normal trade patterns in all the stages of oil business—exploration, refining and marketing. Indigenous production of crude oil in India is hardly 10,000 barrels per day at present. With the reserves already established in Assam and Gujarat, production of crude may reach a level of 60,000 barrels per day in the next few years. But the estimated crude oil requirement of about 300,000 barrels per day by 1965 to sustain the then domestic demand for petroleum products underlines the urgent need for energetic exploration. Already much valuable time has been lost because of the failure of the Union Oil Ministry to reach agreements with the oil companies. The Government's Oil and Natural Gas Commission—a relatively small organisation—is virtually alone in the vast sedimentary area of 400,000 sq. miles. Much might have been achieved in the last five or six years, if opportunity and incentives had been given to get ten international oil companies to look for oil and gas. It is, of course, recognised in official circles that, in spite of the Rs. 115-crore oil exploration programme in the public sector during the third Plan period, there will be a gap between what can be achieved through the public sector and what the country may need in terms of crude oil production. The following passage from a recent authoritative article by Mr. K. K. Sahni, Joint Secretary, to the Department of Mines and Fuel, Government of India, to *Capital's* midyear supplement, may be read with interest in this context:

"It is, therefore, the Government's avowed policy to seek the collaboration of international oil explorers. This is not a new policy nor does it constitute a shift from the earlier policy. The Industrial Policy Resolution of 1956 contemplates association of private capital in oil ventures if national interests so warrant. It was after 1956 that negotiations with the Burmah Oil Company resulted in the signing of an agreement which promoted the incorporation of a joint company in partnership with the Government. It must, however, be understood that any collaboration with private companies has to be related to the national objectives and policies. This brings one to the consideration of a vital issue which needs to be resolved in any scheme of collaboration—namely, participation. The international companies had for long been accustomed in working in isolation, because more often than not, the only interest of the producing countries was merely to collect revenues from the operating companies. Times have changed and the producing countries are becoming more and more convinced of the need for their own participation in oil ventures. How else are these countries going to develop their skills, learn to manage oil affairs and also to be convinced that the operations are really compatible with the national objectives and policies? Some of the producing countries have even had the unfortunate experience of mortgage licences, which enabled the private companies to keep substantial acreage with them, but in an undeveloped state, for strictly commercial reasons, which were surely incompatible with national objectives. During the past few years, there have been witnessed some arrangements which contemplate sharing of control and responsibility by the operating company with the Government of the producing country. These arrangements have worked to the satisfaction of both parties, and there is no reason why more and more such arrangements should not be arrived at. These arrangements will generate goodwill and both parties will benefit from this."

In refining, the barriers against private capital are firmly up. The state is already building two refinery plants (Barauni and Gauhati) and will be building a third one in Gujarat. But the existing foreign refineries are not to be allowed to expand. State-owned refining capacity will total nearly 5 million tons in a few years. If the present total capacity of the three privately owned refineries (6.3 million tons) is not increased, refinery capacity in 1966 will total about 11.5 million tons, as against the then consumption requirement of 14.14 million tons a year. There will thus be a gap which must be filled by imports if the refineries in either sector are not to be further expanded. If the Government thinks it can expand the public sector refineries, it will mean further investment in "*Do-it-Yourself*" ventures in a highly capital-consuming industry.

In the field of oil distribution, too, the Government will be locking up an enormous amount of capital on account of the state-owned marketing company, namely, the Indian Oil Company Ltd., formed in 1959 to market Russian oil products of the order of 1.5 million to 2.0 million over four years, as well as the products of the public sector refineries now being built. And this in spite of the circumstance that the country is already adequately served, on the distribution side, by Burmah-Shell, Stanvac, Caltex and Burmah Oil.

Thus, in all the three fields—exploration, refining and marketing—the emphasis in India's oil policy is on the "Do-it-Yourself" approach. Such an approach in a vast sphere like the oil industry is, to say the least, short-sighted, for it will divert scarce capital from social projects which only the State can carry out. Even the maximum amount of capital that the State can divert to the field of oil business in its three stages of exploration, refining and marketing would not meet the requirements of the country. Unless a larger measure of co-operation with private capital is achieved, it may turn out that India's oil industry will not have registered, over the 1956-66 period, even a third of the growth achieved by Canada's oil industry (which is exclusively in the private sector) in the 1947-57 period.

STANVAC'S GEOLOGICAL DATA ON BENGAL BASIN

Mr. R. G. Prough, the head of Stanvac's Exploration Operations in India, recently handed over to Mr. K. D. Malaviya, Union Minister for Mines and Oil, an exhaustive study of the geology of the entire Bengal basin. The vast volume of information collected by Standard-Vacuum for oil exploration purposes in West Bengal has been correlated with the data available in the past and interpreted in a new and overall perspective in this study. The exhaustive nature of the study can be seen from the fact that the text, maps and illustrations cover three massive volumes. The interpretation and integration of the data compiled over a period of ten years has been done by the internationally known Indian palaeontologist, Mr. Buddhadeb Biswas.

Another very important facet of petroleum exploration is covered in a second report which has been submitted to the Minister. This is a manual for well-site geologists, setting forth in one comprehensive volume the system and techniques employed by the Indo-Stanvac Petroleum Project for the rapid and complete evaluation of oil and gas productive possibilities encountered in the drilling of wildcat (or test) wells. This compendium will make it possible for the geologists of the Oil and Natural Gas Commission to employ any of the techniques described therein in performing their own jobs on the Commission's exploratory wells.

CRUDE OIL FROM ANKLESHWAR

September 1, 1961, is a landmark in the progress of India's oil industry. On that day, the first consignment of one hundred tons of crude oil from the public sector oilfield at Ankleshwar in Gujarat was despatched to the Burmah-Shell refinery, Bombay. It may be remembered that oil was struck at Ankleshwar in the first well in May 1960 and that trial production started in August this year. Out of 16 wells drilled so far in the area, 14 are oil producing wells.

The supply from this oilfield can be increased to 1,500 tons a day by the end of December, 1961. But it is stated that the rate of production will depend upon the intake capacities and demand from the Bombay refineries. Already the Burmah-Shell refinery is constructing the necessary facilities for handling 900 tons of Ankleshwar oil a day. This is the quantity which the Oil and Natural Gas Commission is trying to sell to the Burmah-Shell refinery alone.

BRIGHT ANNEALING OF STAINLESS STEELS

The A.E.I.-Birlec Ltd. has developed the prototype of a new furnace for bright annealing stainless strip and tube. It needs no muffle and will not, therefore, have the severe limitation of recurrent muffle repair or replacement costs. This new Birlec furnace, it is claimed, offers important advantages to producers of stainless alloys in the elimination of pickling and mechanical cleaning plant. Bright annealed material can have the mirror finish which is essential to many of the common uses in which their decorative aspect is important. The possibility of achieving this result on material of almost any type and section with the help of the new furnace—the present furnaces with muffles give acceptable results only in certain cases like wire and narrow, thin strip—may contribute significantly to the wider use of stainless materials in all fields.

A.E.I. GUIDE TO ARC WELDING

The Associated Electrical Industries, Ltd., Britain, has issued a new publication—"The A.E.I. Arc Welding Guide"—which replaces previous "Metrovick Electrode Guides". In addition to the latest data on the wide range of A.E.I. Welding Electrodes, this enlarged booklet contains a considerable amount of technical information on welding, providing a comprehensive guide for the welding fabricator. Included in the new sections are a complete list of British Standard Specifications relating to the welding processes and applications. Copies of this publication, No. 1891-71, may be obtained free on request from the Associated Electrical Industries, Ltd., Heating and Welding Department, Trafford Park, Manchester 17.

NEW PRODUCTS AND PROCESSES

Wire Galvanising Process

A VALUABLE new process for galvanising steel wire has been introduced in the United Kingdom by Aei-Birlec Limited, the furnace manufacturing organisation of Associated Electrical Industries Limited. Originally developed in France, the new process, offers both economic and technical advantages over the conventional sequence of annealing, pickling, fluxing and dipping. Essentially, the Birlec process eliminates the pickling and gluxing stages, both of which are costly and highly undesirable procedures. Instead, the wire is annealed in such a way as to permit its direct entry to the zinc bath at a correct temperature, thus greatly reducing the heat input needed to keep the bath hot. Besides the cost savings implicit in this simplification of the process, the running speed of the wire can be much higher than with the older method. This gives greater production from a given floor space and provides a much improved zinc coating on the wire with virtually no intermediate layer of zinc-iron alloy. Wire galvanising by the Birlec process will withstand re-drawing or other severe forms of working which would cause flaking of a conventionally produced coating. The quality of the product is not only high but consistent and both the thickness of coating and the hardness of the wire can be controlled to suit a range of specifications. The first Birlec plant to operate this process is at present under construction: it will handle approximately 1½ tons of wire per hour. Two similar installations have already been ordered for an overseas plant and it is expected that a large section of the wire industry can benefit from the new process.

Lagging Material

Polyzote expanded plastics, a lagging material suitable for domestic heating systems, claimed to be low in cost, light in weight, and to have high thermal insulation properties, is now available in the form of rigid pipe section. Excellent mechanical strength and ease of installation are two further advantages claimed for Polyzote in this form; and it is moisture resistant. In the system designed by Expanded Plastics Ltd. in Britain, the two half sections with ¾ in. wall thickness are held together either by white cotton scrim or japanned clip-on bands. The sections do not need to be adhered to the pipes, which thus reduces maintenance problems to an absolute minimum and allows the sections to be removed as quickly as they are fitted. After fixing, the sections may be finished with plastics emulsion paint, oil-bound distempers or paints which are free from ketone, ester or aromatic hydrocarbon solvents. The sections are stocked in nominal 3 ft. lengths for the following copper and iron pipe bore sizes: ½ in., ¾ in., 1 in. and 1¼ in. Other sizes can be supplied to order. In the system, bends are lagged by either of two methods, both extremely simple. The Polyzote may be cut and mitred to fit the specific requirement; or the bend may be covered using segments of Polyzote cut or broken to size, and bound in position with cotton scrim, or with any material to hand.

Contour Grinding Machine

An electronically-controlled contour grinding machine, which works to an extremely high degree of accuracy, has been installed at the Royal Aircraft Establishment, Farnborough. It is for producing templates used in the manufacture of aerofoil sections for aircraft models. These models, which are employed in high-speed flight simulation tests in wind tunnels, are scaled-down copies of proposed aircraft which are still on the drawing board, so the models must be made to very fine accuracies in order to retain the same proportional accuracy as the aircraft. This ensures that the models will behave in the same way in the wind tunnel as the aircraft would under flight conditions. The grinding machine is tape-controlled and the system is designed for an accuracy of +0.0005 in. on a template which may be up to 30 inches long. Previously, tape-controlled machines were equipped with a safety system which stopped the machine immediately an error had been made. The big advantage of the system employed on the grinder is that the machine is stopped before any programme fault has affected the workpiece. Immediately the irregularity has been investigated and if necessary corrected, cutting can continue.

Cement-bonded Asbestos

Cement-bonded asbestos board is widely used as a non-inflammable, heat resistant electrical insulating material. In many applications, however, its high rate of water absorption with consequent loss of insulating properties is a serious limitation. This disability can be overcome by impregnation of the board with a suitable *silicone resin*. Midland Silicones Ltd. of the U.K. has recently developed a new resin especially for impregnating asbestos board. This is DP 2728, supplied as a low-viscosity solution in toluene. Asbestos cement board impregnated with DP 2728 will retain good electrical insulating properties for very long periods even in conditions of 100 per cent relative humidity, whereas under similar conditions untreated board will soon show a serious loss of insulation resistance. Silicone-impregnated asbestos board is widely used for arc chutes in air-break switchgear or as spacing insulation on electrical apparatus where Class C (over 180°C—BS 2757 and IEC Publication No. 85) performance is required. It is particularly useful in the construction of dry-type transformers, in domestic appliances and as a substitute for paper/phenolic boards where heat or flame resistance is needed.

Plastic Grey Jointing Compound

A chemical products factory at Holland manufactures a lasting plastic grey jointing compound largely consisting of butyl rubber and intended for filling and sealing joints in concrete, steel, aluminium, glass, etc. The butyl compound is highly resistant to ageing, airtight and contains no oil, thus preventing hardening or staining. The product is also proof against wide temperature fluctuations; at 75°C the filling is still unable to flow from a vertical joint. It does not harden at low temperatures. About an hour after being applied to the joint the compound forms a film in the surface as a result of which a large loss in volume is prevented. The film protects the underlying layer from outside influences and is non-sticky, so that no dust adheres to it. The butyl compound is ready for instant use. For good results a clean, dry surface is required. For applying the compound with a manual or pneumatic gun it is supplied in approx. 600-gram plastic bags fitting into the nozzle. For applying the compound with a spatula it is supplied in tins of 2.2 lbs. upward.

Rotary Creasing Machines

Two new H.B. rotary machines for the high speed creasing of folders, catalogue covers, company reports and such others are now being produced by Hampson, Bettridge & Co. Ltd., Belmont Works, Belmont Street, London, N.W.1. They accommodate sheets up to 24 ins. in width. One model has a single beam and the other, which is particularly designed for creasing narrow centres, has a double beam. A special application for the latter is the creasing of paper-back books. Both models incorporate a precision carrier assembly to hold the sheets or cards absolutely square and ensure perfect accuracy of the job when folded on the crease. The creasing assembly employs solid steel instead of rubber inserts to produce lasting depression and consistency of product. Both the assemblies can be adjusted for different sizes of sheet.

Cushioning Material for Packaging

After extensive research A. Latter & Co. Ltd., of 43, South End, Croydon, Surrey, have developed "Lignatex," a new cushioning material consisting of selected strands of seasoned timber bonded with a special formulation to give a new packaging material which is claimed to be more resilient and flexible than wood wool moulds and pads. It will be shown for the first time at the International Exhibition, London, 5th to 15th September. Also on show will be fabrications made of cane fibre-board and marketed under the trade name "Latcocel." The board is manufactured in five standard thicknesses ranging from 5/16" to 1". It combines rigidity with good cushioning qualities which make it an effective packaging material for a wide variety of articles from paint tins and accumulators to watches and cosmetics.

New Method of Preserving Foods

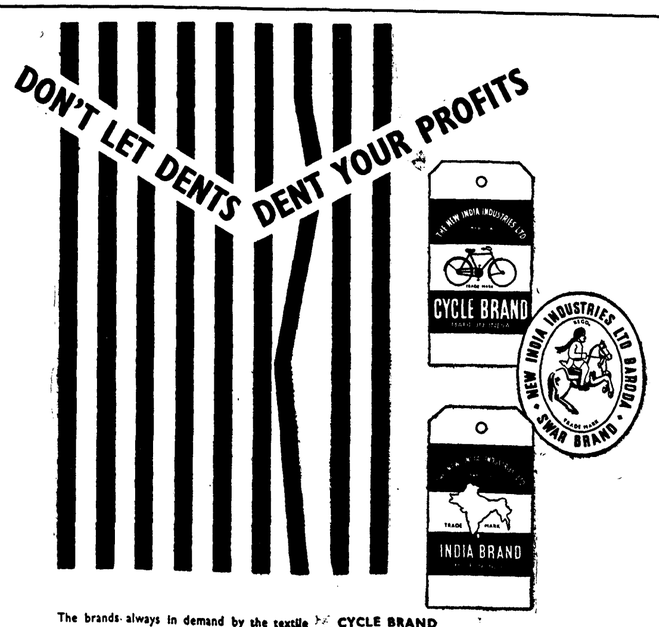
A new method of preserving foods by freezing them at extremely low temperatures has been patented in the United States. Frozen foods packed by this method have already been shipped from New York to such far-distant lands as Japan and Ceylon, and have arrived in perfect frigid condition as much as six weeks after the time they were frozen. The process employed, which is relatively simple, uses liquid nitrogen, which boils at the extremely low temperature of 320 degrees below zero Fahrenheit. Filtering through the wrapping material, the nitrogen evaporates when it touches the relatively warm surfaces of the food. The resulting nitrogen gas drives all the air from the food's airtight container, and the frozen food is then sealed.

Plastic Shoe Lasts

Plastic shoe lasts, said to be the first to be made available on a commercial scale, have been introduced in the United States by the Sterling Last Corporation, Long Island City, New York. The lasts are said by the manufacturer to supply improvements not possible with the conventional wooden lasts that have been used in making footwear for more than 2,000 years. The last is of great importance in making shoes, since it is the form, shaped like a foot, over which the shoe is made. It plays a major role in determining the fit, shape, style and performance of the shoe. The plastic lasts should make possible greater precision, the manufacturer says, since wood shrinks and swells under the influence of moisture and temperature changes, whereas plastic does not.

Building Blocks from Fuel Ash

Pulverized fuel ash—the waste product left over after burning fuel in power stations—is being used as building material in two 14-storey blocks of flats nearing completion in London. It is believed that this is the first time this hitherto almost useless by-product has been used on buildings of this size. The fuel ash has been made into hollow blocks to make wall panels against which supporting reinforced structure was cast. The blocks are fireproof, are lighter, and claimed to have better thermal insulation than the ordinary brick. The exterior cladding has been made of a "skin" of normal brickwork placed in front of pulverized fuel ash walls as the latter should not be exposed to weather.



The brands always in demand by the textile industry are:

INDIA BRAND
COTTON HEALDS: Best Egyptian Cotton Healds and Heald Piecing Yarn
REEDS: Best Polished Reed Wire Steel Reeds and Brass Reeds also Striking Combs and Dobby Harness (with and without rubber)

CYCLE BRAND
HEALDS: Wire Healds
REEDS: All Metal Reeds, Jute Cambs And Jute Reeds

SWAR BRAND
YARNS: Egyptian Combed Cotton Yarn and Staple Fibre Yarn

NEW INDIA INDUSTRIES LTD., BARODA.

Distributors:

MASS POLICIES TO BOOST LIFE BUSINESS

L.I.C. CHAIRMAN'S NOVEL SUGGESTION

SPEAKING on "Layman's Statistical Approach to Life Insurance Administration," under the auspices of the Bombay Insurance Institute, Mr. P. A. Gopalkrishnan, I.C.S., Chairman of the Life Insurance Corporation, suggested the introduction of mass policies to boost life insurance business. Instead of individual policies with different rates of premia depending on the age of the proposer and duration of the policy, mass policies, he said, could be issued to commercial and industrial establishments, Army personnel and Government employees at a uniformly lower rate of premium. For such a policy, he went on to say, there would be no medical examination; no proof of age would be required, nor even the mention of the policyholders' names, but only the mention of the number of workers in the establishment, the policy amount to be paid on the death or retirement of each worker and the premium to be paid by the establishment. If a claim arose, the establishment had only to certify the death or retirement of the worker and the policy amount would then be paid to it. There would be no payment of first year's or renewal commission, no administrative work dealing with field officers and no payment of medical fees. This would, the L.I.C. Chairman observed, revolutionise the present methods of life insurance administration and reduce considerably the expense ratio. The premium rates would also be reduced to "astonishingly low levels."

Revolution in Actuarial Technique!

The Chairman observed that introduction of mass policies should be matched by a revolution in actuarial techniques. The present actuarial technique of using averages based essentially on individualistic approach had to be transformed into a mass approach in order to secure mass business. The Life Insurance Corporation of India had a special responsibility in working out this method which alone, he felt, would enable it to increase its business. The present rate of expansion of new business, based on an individualistic approach, though satisfactory, would not enable the Corporation to take a big leap. A mass revolution in the business of life insurance could, Mr. Gopalkrishnan averred, be brought about only by a similar revolution in actuarial technique.

The Chairman's suggestion is as novel as it is revolutionary. On the face of it, it sounds attractive. Whether it is actuarially sound or not or practically feasible we do not presume to know. It is possible that the Chairman might have consulted his actuaries before putting forward the suggestion. While congratulating him on making an unconventional suggestion, which would at least stimulate thinking on new ways of popularising life insurance, we would suggest that, before resorting to new and revolutionary techniques of underwriting, the scope for conventional underwriting should be fully exploited.

Failed Experiments

Experience in respect of the some of the new forms of insurance pioneered by the Corporation has not been so encouraging as to warrant yet another novel experiment. For instance, the *Janata Scheme*, which was ushered in with much fanfare and publicity, has not proved a success and the scheme itself, on the Chairman's own admission, would have to be dropped ultimately, except in a few places where it is said to be working satisfactorily. Again, the practice of issuing joint-life policies, covering the lives of husband and wife, had also to be discontinued, because they lent themselves to speculative insurance by unscrupulous persons. The easiest way of making life insurance cheaper would be to abolish the system of endowment policies and issue only whole-life policies. That way, the real purpose of life insurance could be eminently served and more families enabled to enjoy the benefit of cover against the premature death of their bread-winners. In these days of perpetual inflation and falling purchasing power of money, life insurance as a means of saving is unsuitable and Government could think of other ways and means of helping people to save. But, having tasted the advantages of endowment policy, which thrives only because most individuals lack the will to set aside periodically a part of their savings and to resist the temptation to spend them away, the Government is unlikely to heed this advice. Consequently, it is better that improvement of the existing systems and methods as far as possible is effected.

There are many aspects of the Corporation's working, including better service to policyholders, which call for vigilance and vigorous action. The adverse turn in the trend of lapse ratio, which began in 1959 and gathered further momentum last year, it is not something which can be lightly brushed aside. As pointed out in our last issue, the ratio, which was 5.1 per cent in 1958, rose to 6 per cent in 1959 and 6.6 per cent in 1960. If this is indicative of a definite trend, as it seems to be, it calls for immediate corrective action. The position in respect of lapses must surely be more serious than that conveyed by the lapse ratio, because the figure of lapse ratio published represents the gross lapse ratio and is, therefore, highly deceptive. For it does not indicate the trend of lapses of new business. Lapses are heaviest at the early duration of policies. Lapse ratios, calculated without taking into account the distribution of business according to duration do not provide a reliable index of the trend of lapses from year to year. The best method of studying lapses is to take the new business done during a particular year and follow it up during the next few years and see how much of it lapsed during the current year and how much in the next and so on. This was the method followed by the Controller of Insurance in presenting the statistics of lapses of private insurance companies. It is to be hoped that such an analysis would form a permanent feature of the annual report of the Corporation. It is also desirable, as suggested by the Estimates Committee, that lapses from the business written in the last quarter of every year should be worked out separately for each month and published in the annual reports of the Corporation.

Rush Business

The purpose of this suggestion is to give an insight into the quality of the rush business done in the last quarter of the year. In fact, the rush business during the closing months of the year should be eliminated, not only from the point of view of quality of business but also from that of the strain on administration. An idea of the heavy concentration of business in the last quarter, especially in the month of December, can be had from the fact that, in 1959, as much as 44.4 per cent of the new business done by the Corporation in that year was brought to the books in December, whereas only 0.4 per cent was done in the month of January. As compared with this, in the U.S., only 11.3 per cent of new business transacted during the year was done in December, the rest having been more or less equally distributed over the other eleven months. The Estimates Committee, it will be recalled, had suggested the fixation of new business targets for each quarter, instead of annual targets, as a remedy for the uneven distribution of business.

In the ultimate analysis, higher lapse ratio is a reflection of the higher costs of living and a deterioration of the quality of business. The latter is due partly to the undue emphasis laid by the Corporation on quantity rather than on quality of business. As agents and field officers are required to show a specified volume of business at the end of every year, they are forced to bring, in the closing months of the year, business of poor quality. If the fact that the quality of business is as important as the quantity is impressed upon the field staff and sufficient inducements are given only to those bringing in first class proposals, the business of the Corporation is sure to show a perceptible improvement in quality and the lapse ratio a corresponding decline.

A close watch also needs to be kept on the trend of premium as well as the total business in force to ensure that these rise in proportion to the new business. For it is not difficult for ingenious agents to show spectacular increases in new business by inducing the insuring public to make their earlier policies paid up and take new ones. This practice, which is said to be growing, and the poor quality of business are partly attributable to the overemphasis laid on securing new business. This is also responsible for the appointment of part-time agents who, being interested only in their commission, do not render proper service to policyholders. The evil of rebating also stems from the existence of part-time agents. The quality of new business and service to policyholders could be considerably improved if, as in the U.S., only those who are prepared to work full-time are selected and appointed as agents. They could be given intensive training in the basic principles of underwriting and servicing at the Corporation's own expense.

Group Insurance

Speaking of mass insurance policy, one is reminded of a similar scheme introduced by the Corporation, namely, group insurance, which is very popular in western countries. This scheme enables employers to provide insurance protection and retirement benefits for their employees at a low cost. In spite of the many attractions of the scheme, it has made little headway. In fact, business under the group insurance was only 0.5 per cent of the total business of the Corporation in 1959, as compared with 33 per cent in the U.S. in 1958. Group insurance, like mass policies suggested by the Chairman, rules out lapses and makes for lower expenses. It is worth investigating why the scheme has not been a success so far. Before launching on new and untried programmes and experimenting with new-fangled ideas, the Corporation should make sure that it has fully exploited all the conventional fields.

TEXTILES

(*Concluded from page 494*)

number of countries, including Spain and Portugal in Europe, Hong Kong, Pakistan and China in Asia and the United Arab Republic, have become competitors in the textile markets of the world. At the same time, these countries, with lower wage rates and sometimes an advantage in the price of cotton, are, it is stated, "finding themselves increasingly able to compete with the old established industries even in their own domestic markets." It is this factor which, according to the I.C.A.C., has given rise to pleas by the textile industries in industrialised countries for measures to protect themselves from the vigours of international competition. Since this issue has been adequately dealt with by us on more than one occasion in recent weeks, it is unnecessary to go into it again. Suffice it to say that any move on the part of the developed countries to restrict imports of cotton textiles (and other traditional commodities) from the developing countries is beset with three disquieting consequences. One, it will reduce the markets for goods produced in the Western countries and check the outflow of private capital (as well as technical know-how) to the developing countries where it is badly needed. Two, it will deny the developing countries the kind of help that is needed to overcome what is described as the "special infant industry disadvantages" attaching to industrial export production. And, three, the move may force the underdeveloped countries to trade more and more with countries which are willing to enter into bilateral arrangements.

11 SEP 1961
PUBLIC DEPARTMENT

TARIFF INQUIRY INTO SODA ASH

PROGRESS OF THE INDUSTRY DURING 1950-60 STRIKING

A CALL for reducing prices of soda ash to the maximum extent possible was made by Mr. K. R. P. Aiyangar, Chairman of the Tariff Commission, in his opening speech at the public enquiry into the continuance of protection to the industry held at Bombay on 29th August 1961. He added that this, however, could not be achieved at the cost of other commercialised services. What was necessary, therefore, was that the industry should take concerted efforts to ensure better utilisation of installed capacity, increase its efficiency and reduce its cost of manufacture. Drawing attention to another aspect of the industry, namely, the need for diversification of production, Mr. Aiyangar urged the industry to undertake the manufacture of heavy soda ash as expeditiously as possible so as to reduce dependence on imports and, thereby, help solving India's foreign exchange difficulties. The demand for both light and heavy soda ash is steadily going up, and will grow faster in the years to come, in view of the substantial expansion of soda-ash-consuming industries in the third Plan. The soda ash industry, therefore, has to consolidate its position and expand its capacity. Prospects for the industry are admittedly bright, considering the sizable progress it has already accomplished during the last decade. Some units have made substantial expansion and improved the quality of their products. Nevertheless, the industry wants continuance of protection for another three to four years and also restriction on imports. It feels that at least another four years are needed for establishing itself on a sound footing. Besides continuance of protection, the industry has asked for other measures of assistance also, such as higher selling prices for soda ash and reduction in railway freight on raw materials.

History of Protection

The industry has been enjoying protection for over the past 10 years, that is from April 1950, by means of a duty-cum-subsidy scheme. The tariff duty was first fixed at 40 per cent *ad valorem* preferential and 50 per cent *ad valorem* standard, which was reduced, in 1951, to 30 per cent and 40 per cent, respectively. The subsidy was Re. 1 per cwt., which was discontinued in 1951. The next tariff enquiry was held in 1955, as a result of which protection was continued till 31st December 1958. In order to obviate the need for adjustments necessary whenever *ad valorem* duty rates were applied to changed tariff values, the duty in 1955 was fixed at specific rate of Rs. 4.19 per cwt. preferential and Rs. 5.62 per cwt. standard. By the Finance No. (2) Act, 1957, these rates of duty were revised, respectively, to Rs. 4.25 and Rs. 5.75 per cwt. The last enquiry into the industry was held in 1956, and, consequently, protection was continued at the same rates of duty upto December 1961. By the Finance Act 1961, a countervailing duty to the extent of the excise duty of Rs. 2 per quintal (100 kgs.) imposed on soda ash was levied on imported soda ash.

Under the stimulus of protection, the industry has recorded steady progress. As against only two units in 1950, there are now four units, namely, the Tata Chemicals Ltd., Mithapur, the Dhrangadhra Chemical Works Ltd., Dhrangadhra, Saurashtra Chemicals Ltd., Porbander, and Messrs. Sahu Chemicals and Fertilisers, Varanasi. A fifth unit, namely, Messrs. Khan Bahadur H. M. D. H. Bhiwandiwalla and Co., Bombay, licensed in 1957 to undertake manufacture of soda ash, has not gone into production, but expects to complete its collaboration terms soon and start production by October 1963. The annual installed capacity is now 268,000 tonnes, as against only 46,800 tonnes ten years ago. The four established units have schemes for substantial expansion on hand.

Production

The total production of soda ash rose from 30,759 tonnes in 1950 to 96,288 tonnes in 1959 and 145,012 tonnes in 1960. In the first six months of 1961, output was 90,386 tonnes, representing an annual average of 180,772 tonnes. It will be seen that, towards the close of the second Plan, production rose to more than four-and-a-half times the pre-production level. It is, however, very much below the installed capacity. No explanation is found in Mr. Aiyangar's speech for this wide gap. The output at present is exclusively of light soda ash. Only one of the units commenced manufacture of heavy ash from April 1961, but production so far has been very small. Two producers have now installed capacity of 67,000 tonnes for heavy soda ash. The other units, too, are contemplating to embark upon the production of heavy soda ash.

Sizable expansion of soda ash industry is expected to take place in the third Plan. The Plan envisages a capacity target of 530,000 tonnes by 1965-66. Of this, 160,000 tonnes will be heavy soda ash. The total production is expected to be stepped upto 450,000 tonnes by 1965.

Domestic Demand

The apparent consumption of soda ash in 1960, according to the Tariff Commission, was 242,000 tonnes. The Commission had expected, in 1958, that demand in 1960 would be about 239,000 tonnes. In connection with the present enquiry, the Commission has received varying estimates of the country's total requirements (present and future) from the Development Wing, producers and other interests. The estimates range from 226,000 to 260,000 tonnes for the current year.

The Development Wing expects the annual demand to rise from 260,000 tonnes in 1961 to 450,000 tonnes by 1965. It expects that the demand for soda ash from the glass industry will go up from 75,000 tonnes in 1961 to 140,000 tonnes by 1965, for washing purposes from 97,000 tonnes to 120,000 tonnes, from the silicate industry from 25,000 tonnes to 45,000 tonnes, and from textiles from 11,000 tonnes to 16,000 tonnes. Besides, the demand from caustic soda is expected to rise from 15,000 tonnes to 50,000 tonnes, from paper from 8,000 tonnes to 20,000 tonnes, bichromates from 5,000 to 12,000 tonnes, bicarbonate of soda from 9,000 tonnes to 20,000 tonnes and miscellaneous purposes from 14,000 tonnes to 27,000 tonnes. The demand estimates of consuming industries and producers vary.

Raw Materials

The basic raw materials required for the manufacture of soda ash are salt, limestone and coke. Salt of requisite quality is available in adequate quantities, but the industry has pleaded for facilities in regard to open wagon movement and at concessional freight rates. Availability of limestone is also satisfactory, but the manufacturers of soda ash have contended that they have hardly any control over its quality and price. They have also complained about the enhanced freight rate on limestone consequent upon the recommendation of the Railway Freight Structure Inquiry Committee. In regard to coke, the industry is not experiencing any difficulty in regard to its procurement. In accordance with the recommendation made by the Commission in its 1958 Report, superior high grade coke is being produced by the coke ovens attached to the Durgapur Industries Board in West Bengal and the Works of Hindustan Steel. But, according to producers, the coke supplied contains a high percentage of ash and is not of graded size and that they would be willing to pay a slightly higher price if better grade coke is made available. Besides, the cess and the excise duty on coke have been raised. Among the important process chemicals needed by the industry, ammonium sulphate is partly obtained by imports and partly from indigenous sources. Sulphur is also imported. The industry has expressed concern over the quality, prices and availability of coal, which is the main fuel and in some cases the source of power.

Mr. Aiyangar revealed that consumers and their associations have, by and large, expressed satisfaction with the quality of the indigenous soda ash. According to the manufacturers, their products conform to standard specifications laid down by the Indian Standards Institution. There have, however, been some complaints of dull colour and low sodium carbonate content.

Imports

Since the domestic demand is much higher than the domestic output, imports of soda ash are allowed. In 1960, imports of soda ash amounted to 108,880 tonnes (valued at Rs. 195.50 lakhs), which compare with 128,584 tonnes (Rs. 237.10 lakhs) in 1959 and 51,670 tonnes (Rs. 106.97 lakhs) in 1958. Since the licensing period, October 1958-March 1959, imports of light soda ash as well as those of natural synthetic heavy soda ash (of a purity not less than 98 per cent Na_2Co_3 are made through the State Trading Corporation of India. Since April-September 1959, licences are also being granted to cotton textile mills, registered cloth processors and exporters to import, among other items, soda ash against the exports of cotton textiles and yarn. But imports against such licences are effected through the S.T.C. As regards the actual quantities to be imported, the S.T.C. operates in consultation with the Development Wing which, together with the Development Council for Alkalies and Allied Industries, reviews the position every half year.

Although soda ash is not subjected to any statutory price control, a ceiling has been imposed on its selling prices. In 1958 report, the Commission worked out the fair selling price on the basis of then existing factories, namely, Tatas and Dhrangadhra. The Government of India fixed ceiling prices at Rs. 18.50 per cwt. ex-works and Rs. 19.00 per cwt. ex-ports, with effect from 16th February 1959. With the imposition of excise duty in March last, the selling price was increased by Rs. 20 per tonne. The ceiling prices were further raised by Rs. 10 per tonne, following representation by soda ash manufacturers.

According to the present distribution arrangements, the State Trading Corporation undertakes the distribution of imported light soda ash through four selling agents, namely, (1) The Imperial Chemical Industries (India) Ltd., Calcutta, (2) the Tata Oil Mills Co., Ltd., Bombay, (3) the India United Chemical Distributors Private Ltd., Calcutta, and (4) the Chemical and Alkali Distributors, Bombay. Heavy soda ash is distributed to actual users by the Imperial Chemical Industries and the Chemical and Alkali Distributors as per instructions from the S.T.C. As regards indigenous soda ash, the manufacturers have their own distribution system and selling arrangements.

"INDUSTRIAL INDIA" ANNUAL 1961

There are as many as seventy-six interesting feature articles on a wide range of economic problems in the 1961 Annual of *Industrial India* (Editor: Mr. S. T. Chary. Published by Messrs. A. MacRae and Co. (Private) Ltd., United India Building, Sir Phirozeshah Mehta Road, Bombay 1. Price: Rs. 7.50. Pages: 310). The articles are classified under five broad sections, namely, general, technical and review, atomic energy, Indo-foreign economic collaboration, and Japanese section. The well-known contributors of articles to the Annual include, among others, Mr. Robert L. Garner (President of the International Finance Corporation) who has written on "Finance for Development," Mr. Michael Linsay Hoffman (Director of the World Bank's Economic Development Institute) on "Interest Rates and Development Policies," Prof. Jan Tinberjen (Professor of Development Planning, Netherlands School of Economics, Rotterdam) on "The Appraisal of Investment Projects," and Mr. U. Nyun (E.C.A.F.E.'s Executive Secretary) on "Regional Co-operation in Industrial Development." There are, besides, three editorials: (1) Theories of Development—A New Look; (2) International Economic Co-operation; and (3) Regional Disparities and National Progress. The miscellaneous section gives an idea of the tentative programme of rotational displays of Indian goods in the showrooms-trade centres abroad during the year 1961-62, details of external assistance received by India up to 9th September 1960, and a list of industrial projects involving foreign collaboration approved during the calendar year 1960.

"CAPITAL"—A SURVEY OF INDUSTRIES 1961

The latest mid-year Survey of Industries brought out by our Calcutta contemporary, *Capital* (Price: Rs. 5), contains, as usual, a number of interesting articles. Special mention may be made of two articles, one by Sir Percival Griffiths, C.I.E., I.C.S. (Retd.), and the other by Mr. K. K. Sahni, Joint-Secretary, Department of Mines and Fuel, Union Ministry of Steel, Mines and Fuel. Sir Percival Griffiths has sought to assess the foreign investment prospects in Indian industry. He has highlighted certain discouraging factors not in a spirit of what he calls "captious criticism" but in the belief that their removal would help the economic progress of India. These factors, he concludes, "do not alter the fact that India's achievements since independence are remarkable and that the political and economic foundations are such as to make India worthwhile from the point of view of a foreign company in search of fields for investment." Mr. K. K. Sahni has examined the rationale of State participation in Indian oil industry. The other articles in the survey cover fertilisers, rubber, small-scale industries, industrial gases, automobiles, iron ore, sewing machines, lamp, watches, steel furniture, refrigerators, heavy chemicals, food canning, diesel engines and foodwear.

SMART RISE IN KIRLOSKAR ENGINES' SALES

RESERVES STRENGTHENED—DIVIDEND RAISED

A MUCH higher level of demand, following the increasing popularity of its products both within the country and abroad, and ability to meet this demand have been responsible for the excellent results of the Kirloskar Oil Engines Ltd. (Managing Agents: Messrs. Kirloskar & Sons Ltd., Kirloskarwadi, Sangli) for the year ended 31st March 1961. The Company's sales have jumped up by Rs. 160 lakhs to Rs. 338.60 lakhs, representing an expansion of more than 89 per cent over the previous year, when they amounted to Rs. 178.60 lakhs. The gross profit has risen almost five-fold from Rs. 17.50 lakhs to Rs. 86.23 lakhs. Consequently, the profit-margin (the ratio of gross profit to sales) has increased from 9.8 per cent in 1959-60 to 25.5 per cent. It is much higher than the profit-margin for 1958-59 at 10.1 per cent and for 1957-58 at 15.6 per cent. Such a marked improvement in the profit-margin in the year under review is due to expansion in turnover and the modest expansion in the costs of production. Thus, as against the expansion of about 90 per cent in sale proceeds, the value of raw materials consumed, for example, went up by only Rs. 50.11 lakhs or 51 per cent to Rs. 148.36 lakhs and other manufacturing expenses, which include salaries and wages to the staff, by Rs. 45.57 lakhs or about 66 per cent to Rs. 114.37 lakhs.

A large part of the gross profit has, however, been absorbed by the provision for taxation which amounts to Rs. 32 lakhs, as against just Rs. 3.50 lakhs last year. In keeping with larger profits, the remuneration to managing agents is higher at Rs. 6.09 lakhs, as against Rs. 1.20 lakh in 1959-60. Depreciation takes up Rs. 8.88 lakhs, as compared with Rs. 5.45 lakhs in the previous year. After deducting these essential provisions, the net profit amounts to Rs. 39.26 lakhs, representing an increase of Rs. 31.91 lakhs over the preceding year. In spite of the spectacular rise in net profit, the Directors have decided to step up the equity dividend only in a modest manner, from 14.3 per cent (taxable) for 1959-60 to 16 per cent (taxable), giving a net dividend of 11.2 per cent. The amount required for this dividend is Rs. 5.94 lakhs, equal to only 15 per cent of the net profit. The major portion of the profit has been utilised by the Directors to strengthen the Company's financial position. Thus, the amount transferred to reserve fund is as much as Rs. 28.60 lakhs, as compared with a mere Rs. 1.25 lakh provided last year. In addition, the development rebate reserve is credited with Rs. 4.40 lakhs, an increase of Rs. 1.60 lakh over last year.

The progress of the Company during the last four years is depicted in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	338.60	178.60	103.84	133.87
Closing stocks	28.44	22.17	18.05	16.45
Raw materials consumed	148.36	98.25	99.59	60.98
Other expenses	114.37	68.86	76.58	59.72
Gross profit	86.23	17.50	19.76	20.99
Remuneration to Managing Agents	6.09	1.20	1.62	1.85
Provision for—				
Depreciation	8.88	5.45	3.48	2.37
Taxation	32.00	3.50	8.00	8.62

Ordinary dividend	5.94 (16%)†	4.90 (14.3%)†	2.65 (10%)	2.42 (10%)
Carry forward	0.38	0.16	0.64	0.17

* Excess provision of previous year. † Subject to deduction of tax.

The Directors' report does not throw any light on the expansion in the Company's output, beyond the bare statement that the Company produced more and sold more. It would have been better if the report had given some figures of the number of oil engines produced, etc. The Company's export performance during the year under review is claimed to have been highly gratifying; the number of Kirloskar engines exported being said to be twice that for 1959-60.

The Company's arrangement with the International Finance Corporation for a loan of $850,000 concluded in 1959 was not availed of. Instead, the Company issued in February 1961 250,000 cumulative participating redeemable preference shares of Rs. 10 each to finance its expansion plans. These are repayable on three months' notice after 31st March 1975 and not later than 31st March 1980. A second issue of these preference shares, which are entitled to a dividend varying between a minimum of 8 per cent taxable and a maximum of 10 per cent taxable depending upon the level of equity dividend, was made this week for a sum of Rs. 15 lakhs.

As at 31st March, 1961, the Company's paid-up capital consisted of only equity capital of Rs. 37.50 lakhs in 375,000 shares of Rs. 10 each. The preference issue of February was still in the process of being called up, a sum of Rs. 14.38 lakhs having been received as application money. The Company's reserves and surplus are strong, being as much as Rs. 50.06 lakhs. The secured and unsecured loans amount to Rs. 61.11 lakhs, as against Rs. 77.04 lakhs a year before and current liabilities and provisions are of the order of Rs. 82.89 lakhs. As against the total indebtedness of Rs. 144 lakhs, the current assets stand at Rs. 164.18 lakhs, showing a clear margin of Rs. 20.18 lakhs over the liabilities. The gross block has risen from Rs. 100.74 lakhs in 1959-60 to Rs. 114.27 lakhs, which has been well written down to Rs. 76.11 lakhs.

The outlook for the Company is bright. Formed in June 1946, for manufacturing on a large scale small diesel engines essential for agricultural and industrial development of the country in collaboration with the largest diesel engines manufacturing company in Britain (now called the Hawker Siddeley Brush International, Ltd.), the Company has been making notable progress in the last few years.

"It has developed, to quote from the latest prospectus issued in connection with the second offer of preference shares, a 3 BHP engine of its own design, which is greatly in demand in this country. This engine will be put on the market on a larger scale shortly. This will satisfy the long-felt need of this country for a small and economical engine. The Company has also developed thin-walled bi-metal bearings and bushes. In the beginning these were manufactured to meet the Company's own requirements in the manufacture of oil engines. Later, however, emboldened by its success in this line of manufacture, the Company took up their manufacture for automotive and industrial stationary type engines. Visualising the prospects which this new line of manufacture held out, the Company decided to develop it so as to meet a large portion of the demand in this country. With this end in view, the Company concluded an agreement with Glacier Metal Co., Ltd. of England, the largest manufacturer of bearings and bushes in Europe. The manufacture of Glacier type bearings and bushes, which are in great demand in the Indian market and enjoy wide popularity, is now well established in the Company's factory at Kirkee. This part of the expansion scheme of the Company promises considerable addition to the prosperity of the Company.

"The demand for engines is fast growing and unless the Company steps up its present production of engines it will not be able to meet the demand. The Company has, therefore, planned to double its present production in stages. This will require more men, more machines and more material. Moreover, the manufacture of 3 BHP engines on a commercial scale for the market is also underway.

"The Company has also entered into an agreement with Maschinenfabrik Augsburg-Nurnberg AG of Augsburg, West Germany, for technical collaboration in the manufacture of M.A.N. type diesel engines in the range of 80 to 440 B.H.P. in the Company's factory at Kirkee. The demand for these engines in India is substantial. The engines are suitable for diesel locomotion as well as marine vessels and the Company is well assured of a ready market. . . .

"These expansion schemes have been sanctioned by the Government of India under the Industries (Development and Regulation) Act 1951, and steps in furtherance of these expansion schemes are already being taken. . . . Judging by the orders on hand, and the prevailing market conditions and trends, the expansion schemes underway are well-timed and are expected to be to the best advantage of the Company in every respect."

The only fly in the ointment is shortage and irregular supply of coal and coke. The Directors of the Company feel that, unless the Government takes suitable measures in time to assure the foundries of continuous and adequate supplies of coal and coke, the Company will be hard hit and will not be in a position to maintain its target of production.

After remaining neglected for a long time in the neighbourhood of Rs. 20, the Company's ordinary shares came into sudden performance in the last week of July, when they leaped forward to touch a high of Rs. 30.52. Since then, they have receded a little to Rs. 28.50 *cum-div.* at the time of writing. The net yield at this rate works out to 4 per cent per annum.

KUMARDHUBI ENGINEERING

PROFIT LOWER, BUT OUTLOOK BETTER

THE Kumardhubi Engineering Works Ltd. [Managing Agents: Bird & Co. (Private) Limited, Calcutta] is an important unit engaged in the manufacture of steel and alloyed castings and fabrication of steel structures, ropeways, bridges and heavy constructional work for the Government, Railways and private industrial consumers. The Works include two five-ton open hearth steel furnaces, one 1.6 ton electric furnace, together with comprehensive foundry and machine shop facilities and a large structural fabrication shop with a capacity for all types of light and heavy steel fabrications.

The statement of accounts of the Company for the year ended 30th November 1960 was adopted at the annual meeting held on 31st August 1961. The results for 1959-60 are satisfactory from the production point of view but not from that of profit. Sales and profits were clearly lower than in the previous year. The net profit was barely sufficient to maintain the equity dividend at 10 per cent, taxable, after meeting the liability on preference dividend. The reason: "Severe competition early in the year," to quote the Directors' explanation. The following table provides a synoptical view of the Company's results for the past four years:

(In lakhs of rupees)

	For the year ended 30th November			
	1960	1959	1958	1957
Sales	1,58.80	1,61.70	1,33.18	1,38.16
Work in progress	68.72	59.02	63.16	51.69
Consumption of raw materials, stores and spares	64.19	61.11	48.93	48.85
Other expenses	48.60	33.10	32.13	27.58
Gross profit	11.53	14.39	14.15	18.23
Managing Agents' commission	1.07	1.03	1.13	1.56
Provision for—				
Depreciation	5.10	4.48	3.05	3.86
Taxation	2.54	3.23	4.33	5.14
Net profit	3.12	5.61	5.14	5.67
Transfer to reserves	2.62	5.24	1.95	3.48
Excess provisions written back	3.12	0.57	0.02	0.10
Dividends—				
Preference	0.78†	0.86†	0.60	0.60
Ordinary	2.76† (10%)†	2.76†* (10%)†	1.84 (10%)	2.76 (15%)
Carry forward	0.87	0.51	1.09	0.33

† Subject to deduction of tax.
* On increased capital from Rs. 18.43 lakhs to Rs. 27.65 lakhs.

The working conditions experienced by the Company and its production performance are adequately described by the Directors and one can do no better than quote them:

"The Company faced severe competition early in the year and as a result of a vigorous sales drive a fairly large volume of sales were made. The benefits of the expansion undertaken in earlier years were seen last year, as the output in the Foundry showed a substantial increase. This resulted in a full recovery of overheads, despite the fact that a substantial tonnage of castings had to be sold at or below cost to keep the Foundry fully loaded throughout the season. The output showed an increase of 20.45 per cent over the previous year.

"In structural steelwork production increased by 51.34 per cent but difficulties continued to be experienced throughout the year regarding the availability of matching steel. Supplies of steel, however, showed some improvement towards the end of the year."

Financially, the Company's position is strong. As at the end of November last, the paid-up capital of the Company at Rs. 39.65 lakhs consists of Rs. 12 lakhs in 5 per cent cumulative preference shares of Rs. 100 each and Rs. 27.65 lakhs in ordinary shares of Rs. 3 each. The reserves and surplus stand at the impressive figure of Rs. 48.92 lakhs, of which Rs. 6.26 lakhs are in share premium account raised on right shares issued in 1955. The secured loans standing at Rs. 65.10 lakhs include Rs. 10 lakhs of 4 per cent First Mortgage Debentures, unsecured loans are shown at Rs. 1.02 lakh and current liabilities and provisions at Rs. 68.76 lakhs, giving a total indebtedness of Rs. 134.87 lakhs which are well covered by current assets, inclusive of investments standing at Rs. 165.34 lakhs. The fixed assets stand at a net figure of Rs. 58.11 lakhs, after deduction of Rs. 38.25 lakhs being depreciation provided so far. From what the directors say in their report, the Company's prospects for the current year are fairly good. "Due to the general impetus given by the third Plan, the demand for the Company's products," they observe, "has shown a marked increase in 1961 and sales in both castings and structural steel work have so far been good."

At the current market quotation of Rs. 5.81 and on a net dividend of 21 nP per share, the Company's equity gives a net yield of 3.68 per cent. This relatively low yield reflects the confidence of investors that the Company would be able to fare much better in the coming years and pay higher dividends.

N.I.C.CO.'S PERFORMANCE BRIGHT

RESERVES STRENGTHENED FURTHER

THE implementation of the well conceived, imaginative policy of expansion in new lines and modernisation, during the past two years has been yielding a rich reward to the National Insulated Cable Company Limited [Managing Agents: Associated Industrial Development Company (Private) Ltd., Calcutta], as is evident from the Company's performance during the year ended 31st March 1961, when production, sales and profits established new records. Coming in succession to a year of all-round substantial progress, the results are particularly welcome as they go to vindicate the management's progressive policy.

During the year under review, sale proceeds increased from Rs. 349.14 lakhs to Rs. 467.52 lakhs; gross profit has improved from Rs. 82.88 lakhs to Rs. 96.41 lakhs and net profit from Rs. 41.72 lakhs to Rs. 46.44 lakhs. Rise in production is reflected in larger consumption of raw materials, stores and spares at Rs. 307.91 lakhs, as compared with Rs. 217.92 lakhs in the previous year, as also in the higher closing stocks at Rs. 55.18 lakhs, as against Rs. 36.07 lakhs a year before. The Directors have ploughed back Rs. 24.30 lakhs to reserves against Rs. 18.31 lakhs last year and have wisely created an initial reserve of Rs. 6 lakhs for expansion and modernisation. Dividend on equity capital is maintained at the handsome rate of 25 per cent, subject to deduction of tax, resulting in a net return of 17.5 per cent.

The comparative table below gives an idea of the progress made by the Company:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	467.52	349.14	192.50	284.96

Carry forward	0.51	0.86	0.46	0.60

* Subject to deduction of tax.

The Company's non-ferrous hot rod rolling mill was put into successful continuous production of black copper rods. Following the Government's policy to substitute aluminium for copper wherever technically feasible, the Company started a first stage of conversion from 1st January 1962, comprising the bigger sizes of V.I.R. and P.V.C. cables of 19/.004 and above, and also tried the new mill on rolling of aluminium with satisfactory results. According to the Directors, the Company is in an advantageous position to import copper or aluminium in primary forms as wirebars and undertake all further processing. As the Company's requirements will not engage the mill for even a single shift, there is abundant spare capacity left for rolling copper or aluminium for other cable manufacturing units.

Due to this substitution of copper by aluminium as also because of the slackness of demand, production of hard drawn bare copper conductor went down, but the Company's troll-rod machine was engaged in meeting the entire requirement of the railway electrification projects for grooved copper conductors for traction. The rubber and plastic insulated cable sections marked an increase in output and the products remained in good demand. There was a spurt in demand for A.C.S.R. and all-aluminium conductors during the year, but full capacity for A.C.S.R. could not be engaged owing to inadequate supplies of materials like aluminium and high tensile galvanised steel wires.

The policy of expansion and modernisation finds a further extension, as the Company has ordered the necessary plant for the manufacture of armoured cables which are in large demand for railway signalling and other special purposes. Plants for drawing aluminium wires for [illegible] sizes and the latest P.V.C. extrusion lines are also on order. These items are expected to go into production this year. The management has confidently turned its attention to exploring the potential export market for the Company's products and its representative may visit the Middle East to make an on the spot study of the markets there.

While all this underlines a bright outlook for the Company in the near future, the Directors caution that the earlier situation of demand exceeding production has changed. The years to follow would see severe competition from some new units already in production and some more to come into the market shortly. Inadequate supplies of materials leading to unused capacity for A.C.S.R. should be a cause for concern, particularly as the demand for A.C.S.R. and all-aluminium conductors will increase, as a result of additional power generating capacity in the third Five-year Plan. Moreover, the change over from copper to aluminium might affect production.

Financially, the Company is in a sound position. The paid-up capital of Rs. 90 lakhs is nearly twice covered by reserves and surplus aggregating to Rs. 160.60 lakhs. Bank borrowings have declined from Rs. 104.81 lakhs to Rs. 71.93 lakhs and are secured by hypothecation of the stock of raw materials, finished products and stores. Loans from the Managing Agents are, however, shown at Rs. 3 lakhs against *nil* in the previous year. Current liabilities and provisions are higher at Rs. 166.69 against Rs. 135.06 lakhs a year before. They are, however, quite adequately balanced by current assets, loans and advances of Rs. 420.72 lakhs (against Rs. 398.65 lakhs previously). Cash and bank balances are lower at Rs. 7.01 lakhs as compared with Rs. 11.36 lakhs in the previous year. Investments are unchanged at Rs. 8,490; those quoted being Rs. 1,998. The gross block has been further increased from Rs. 131.19 lakhs to Rs. 139.45 lakhs and is adequately written down to Rs. 81.71 lakhs.

At the current market value of Rs. 37.19 *ex-div.*, the yield on the Company's Rs. 10 fully-paid ordinary shares works out to 4.7 per cent per annum, free of tax.

(*Concluded from next column*)

has raised the paid-up capital by 50 per cent to Rs. 18.75 lakhs. The Rs. 100 fully paid shares touched a high of Rs. 235 *cum*-right on 18th July 1961, an increase of Rs. 79 from the lowest level for the year touched in January last. They are currently quoted at Rs. 170 *ex*-right cum-dividend on the Bombay Stock Exchange. This is Rs. 20 less than *ex*-right equivalent of the peak touched earlier, namely, Rs. 190. At the proposed rate of dividend and on *ex-div.* basis, the shares offer a net yield of 6.11 per cent per annum. In view of the increasing demand for starches and the export potentialities of its products, the shares are likely to be well favoured again by investors. Even the level of profit made in 1960-61 is sufficient to enable the Company to repeat the dividend of 13 per cent gross on the increased capital. It is needless to add that the dividend cover will broaden when the new project goes into production.

LAXMI STARCH FARES WELL

SAME DIVIDEND—GOOD PROSPECTS

THE financial results of the Laxmi Starch Factory Limited (Secretary: Mr. A. N. Pandya, Kundara, Kerala), one of the important manufacturers of starches, dextrines, British gum and such other derivatives, for the year ended 31st March 1961, are quite encouraging. Its sales show a handsome rise of Rs. 14.22 lakhs to Rs. 65.55 lakhs, representing an increase of more than 27 per cent over the previous year's level. The gross profit has also jumped up from Rs. 5.29 lakhs to Rs. 7.11 lakhs. In keeping with the larger output, the value of raw materials consumed has increased sharply from Rs. 32.27 lakhs to Rs. 41.49 lakhs. Other manufacturing expenses, which include salary, wages and bonus for the staff, have risen by Rs. 2.97 lakhs to Rs. 17.12 lakhs.

The net profit works out to Rs. 3.34 lakhs, as against Rs. 2.36 lakhs for 1959-60, after providing Rs. 1.07 lakh for depreciation (Rs. 95,000 in 1959-60) and Rs. 2.70 lakhs for taxation (Rs. 1.98 lakh last year). In spite of the higher amount available for distribution at Rs. 4.19 lakhs, inclusive of Rs. 85,000 being the unappropriated surplus brought forward from the previous year, the Directors have followed the cautious policy of maintaining the dividend on the ordinary shares at the previous year's level of 13 per cent, subject to deduction of taxation. This would give a tax-free dividend of 9.8 per cent. A slightly larger amount has been ploughed back. Thus, the Directors have appropriated Rs. 1.25 lakh for general reserve and Rs. 21,000 for development rebate reserve, as compared with Rs. one lakh and Rs. 12,000, respectively, last year. The amount carried forward is also larger than the amount brought in, as will be seen from the following comparative table which sums up the Company's progress in the three years ended 31st March 1961:

(In lakhs of rupees)

	For the year ended 31st March		
	1961	1960	1959
Total sales	65.55	51.33	65.98
Closing stocks	5.20	3.05	3.09

Carry forward	1.10	0.84	0.41

* Subject to tax deduction at 20 per cent.

The Company secured good export business in manioc meal, following the announcement of the import policy for the period October 1960-March 1961, under which imports of betelnuts, cloves, mace, cassia and other spices were linked with the exports of manioc meal.

The Company's plans for expansion of its productive capacity are going apace. In this connection, it has obtained an industrial licence to set up another unit for the manufacture of 25 tons per day of starch, glucose, dextrose and other starch products, involving a capital outlay of Rs. 55 lakhs. The application for import licence for the necessary plant and machinery has already been made. It is noteworthy that the Company has given an undertaking to the Government to the effect that it will make its own arrangements for the foreign exchange required for the project.

The balance-sheet as at 31st March 1961 discloses a satisfactory financial position considering that it is a relatively young undertaking, still in its teens. The paid-up capital of Rs. 12.50 lakhs, all in 12,503 equity shares of Rs. 100 each, is supplemented by reserves and surplus of Rs. 4.71 lakhs. The outstanding amount of secured and unsecured loans is Rs. 7.63 lakhs; besides, there are current liabilities and provisions of the order of Rs. 5.24 lakhs. As against this total indebtedness of Rs. 12.87 lakhs, the current assets, inclusive of loans and advances, amount to Rs. 22.33 lakhs, and more than adequately cover current liabilities—the margin being as much as Rs. 9.46 lakhs. The gross value of the block account increased during the year from Rs. 19.93 lakhs in 1959-60 to Rs. 22.28 lakhs and has been well written down to Rs. 6.21 lakhs, the amount provided by way of depreciation being of the order of Rs. 16.07 lakhs.

Since the close of 1960-61, in July last to be precise, the Company issued right shares at par in the ratio 1:2 for financing its capital expenditure on the new project referred to above. This

(Continued in previous column)

ORISSA CEMENT REPORTS BETTER RESULTS

DIVIDEND CUT RESTORED

THE financial results disclosed by the annual report of Orissa Cement Ltd. (Managing Agents: Messrs. Dalmia Agencies Private Ltd., New Delhi) for the year ended 31st December 1960, are in refreshing contrast with those for the previous year. Production and despatches of both cement and refractories have registered a handsome improvement, the sale of the former having risen by Rs. 84.43 lakhs to Rs. 257.67 lakhs and that of the latter by as much as Rs. 74.35 lakhs to Rs. 163.73 lakhs. The production of fireclay brisks, on the other hand, had to be regulated, depending upon the inflow of orders which was not encouraging, so that the sale of cement products has declined by Rs. 1.93 lakh to Rs. 5.54 lakhs. Overall increase in sales is thus of the order of Rs. 160.14 lakhs to Rs. 434.23 lakhs inclusive of the rise in the departmental consumption of cement, cement products and refractories. It is particularly noteworthy that this satisfactory results has been achieved notwithstanding the fact that the production in the cement department could not be matched to the rated annual capacity of the plant.

A substantial portion of the improvement in sales has been neutralised by a disproportionate rise in the cost of raw materials and services and the heavy incidence of related expenses. The gross profit as a result stands improved by only Rs. 36.32 lakhs to Rs. 116.47 lakhs. Essential provisions have also been raised, that for Managing Agent's commission by Rs. 1.86 lakhs to Rs. 6.93 lakhs, that for depreciation marginally by Rs. 0.96 lakh to Rs. 38.65 lakhs and that for taxation by as much as Rs. 18.65 lakhs to Rs. 28.50 lakhs. The net profit shows a rise of Rs. 14.85 lakhs to Rs. 42.39 lakhs. Transfer to the statutory development reserve has been slashed by Rs. 7.00 lakhs to Rs. 3.42 lakhs, but, the general reserve has been credited with Rs. 10.00 lakhs against nothing in the previous year. Preference dividends for the year under review actually claim Rs. 2.34 lakhs, but an additional amount of Rs. 54,000 stands payable for the previous year in terms of the requirements of the Preference Shares (Regulation of Dividends) Act, 1960. The total distribution to preference shareholders for the year thus amounts to Rs. 2.88 lakhs. With a comfortable profit position, the rate of ordinary dividends has again been restored to 15 per cent from 11 per cent a year ago, both subject to deduction of tax. At this rate, the ordinary dividend absorbs Rs. 33.75 lakhs, leaving Rs. 52,158 to be carried forward.

The following comparative table presents the progress made by the Company during the past four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds (including internal consumption)	4,84.23	2,74.09	2,81.50	2,02.82
Other income	7.91	7.75	2.41	1.96

* Subject to deduction of tax.

According to the balance sheet as at 31st December 1960, the financial position of the Company is sound. The share capital, comprising of Rs. 40.00 lakhs in preference shares and Rs. 225.00 lakhs in ordinary shares, is supplemented by Rs. 79.85 lakhs in reserves and surpluses. Loans, both secured and unsecured total Rs. 131.60 lakhs in addition to current liabilities and provisions amounting to Rs. 181.90 lakhs. Additions to the gross block during the year amounted to Rs. 28.26 lakhs where upon the book value of the gross block stands at Rs. 563.66 lakhs. This has been well written down to Rs. 339.58 lakhs. To this sum is to be added Rs. 25.81 lakhs being expenses on construction in progress and machinery in transit, so that the net depreciated block on the date of balance sheet is worth Rs. 365.39 lakhs. Current assets, investments, loans and advances, aggregate Rs. 292.95 lakhs.

The Company has been granted a licence for expansion of the refractory plant by increasing the capacity for manufacture of burnt basic refractories from 19,000 to 38,000 tons per annum. Besides, it has been licensed to manufacture 10,000 tons of chemically bonded refractories per annum. The expansion programme is estimated to cost Rs. 80.00 lakhs and the Directors propose to finance it from internal resources of the Company and borrowings. No fresh capital is proposed to be raised for this purpose. Their expanded basic refractory section is expected to be ready by the middle of 1962.

The present market quotation for the Company's Rs. 10.00 fully paid ordinary share is R. 15.18 *cum-div.* The net return on an *ex-div.* basis works out to a little over seven per cent per annum.

A.C.C.-VICKERS-BABCOCK LTD.

In the article on the Durgapur plant of the A.C.C.-Vickers-Babcock Ltd., appearing in our issue dated 19th August 1961 (*vide* page 347), the average value per ton of machinery to be manufactured by the factory was shown as Rs. 2,500 on the basis of enquiries made in reliable circles. The Company, however, has written to us saying that the average value will be approximately between Rs. 5,000 and Rs. 6,000 per ton, depending on the type of machinery. Incidentally, the Company has furnished the following information regarding its expansion programme:

"We have now applied, under the Industries (Development and Regulation) Act, 1951, for an increase in the licensed capital of our Works. This increase will be achieved by further utilisation of plant and machinery and the addition of a few machine tools and by working three shifts. We now propose to manufacture yearly 12,000 tons of boiler plant and pressure vessels, exclusive of 4,000 tons of bought-out components, in addition to 2,230 tons of cement and general machinery, exclusive of imported specialised items. Our application is under consideraton and we hope to receive Government's reply shortly."

(Concluded from next column)

of the year's business was accounted for by portable diesel driven compressors, of which over six hundred are operating at various altitudes in different parts of the country. A sizable number of these machines, mounted on a baseplate and driven by an electric motor, was also put in the market successfully during the year. The Company has also commenced building small reciprocating stationary compressors and a modest number of these has already been sold.

Towards the end of the year under review, the Government of India granted a licence to the Company for substantial expansion of the undertaking, with a view to increasing the production of air compressors and rock drills and to manufacture pneumatic tools and sump pumps. The Company is already engaged in developing a wide range of reciprocating stationary compressors, ranging from 100 c.f.m. to 600 c.f.m. capacity, and a portable rotary diesel driven machine of 325 c.f.m. output and these should be in the market during the second half of the current year.

The Company has received a licence for manufacture of refrigeration compressors and further a licence for manufacture of air conditioning units. Negotiations for licence and technical assistance agreements with two eminent foreign manufacturers are already at an advanced stage and the proposed agreements may be expected to be concluded in the next few months.

On the declaration of the maiden ordinary dividend, the market price of the Company's Rs. 100 fully paid share spurted to Rs. 255 from Rs. 150 a year ago. The present quotation is unchanged at Rs. 255 *cum-div.* On an *ex-div.* basis, the net return works out to 3.5 per cent per annum.

The Vishnu Cotton Mills Limited, Bombay, has been granted a consent to the issue of further capital of Rs. 73,60,000 divided into 57,600 equity shares of Rs. 100 each and 6,400 first cumulative preference shares of Rs. 250 each, carrying a dividend of 5½ per cent (subject to deduction of taxes at the prescribed rates). The shares will be issued for consideration other than cash in terms of the scheme of amalgamation of the Lakshmi Cotton Manufacturing Company Limited with the Vishnu Cotton Mills Limited.

KIRLOSKAR PNEUMATIC

MAIDEN DIVIDEND PROPOSED

A STRIDENT advance from Rs. 22.57 lakhs t Rs. 120.81 lakhs in sales and an equally im pressive rise of Rs. 18.71 lakhs to Rs. 21.81 lakh in gross profit make the annual report o Kirloskar Pneumatic Company Ltd. (Managin Agents: Messrs. Kirloskar Industries, Poona for the year ended 31st March 1961, happy reading. Whereas the improvement in turnove has been due to the year under review being the first year of full production and sales, th increase in gross profit can be attributed to fuller utilisation of installed capacities, th spreading over of related fixed expenditure o a larger output and consequently declining uni costs. The percentage of gross profit to sale has accordingly risen to 18 per cent from 14 pe cent just a year ago. In view of the difficultie experienced in procuring the right quality o raw materials and the teething troubles in evitable in a developing industry, the above re sults are no doubt highly satisfactory.

With the improvement in the Company' profit position, the provision for Managin Agency commission has ben stepped up t Rs. 1.77 lakh from Rs. 12,000 for the previou year. Provision for depreciation has been raise by Rs. 2.05 lakhs to Rs. 4.19 lakhs, while a pro vision of Rs. 7.01 lakhs for taxation has bee found necessary in view of the Company's pro fits becoming liable for taxation for the firs time. Despite these heavier provisions and th writing off of preliminary and formation ex penses amounting to Rs. 27,911, the net profi shows a tenfold increase from Rs. 83,953 t Rs. 8.84 lakhs. From this amount stands deduct ible Rs. 2.50 lakhs being the net loss brough forward from the previous accounting period Transfer to reserves has been raised from Rs. 59,191 to Rs. 2.37 lakhs of which Rs. 51,90 have been credited to the statutory developmen rebate reserve, Rs. 75,000 to development re serve, Rs. 50,000 to general reserve and Rs. 60,000 to the machinery replacement re serve. With a bigger distributable profit, the Directors have declared and paid the arrears o preference dividends upto the year ended 31s March 1960 amounting to Rs. 1.37 lakh. Pre ference dividends for the year under review have been proposed at Rs. 8.88 per share, subject to deduction of tax and inclusive of the enhance ment in terms of the Preference Shares (Regu lation of Dividends) Act, 1960; they absorb Rs. 88,800. A maiden ordinary dividend has been declared at 12.5 per cent, subject to deduc tion of tax, and claims Rs. 1.65 lakh, leaving a carry forward of Rs. 5,583.

The above salient features of operations of the Company during the year ended 31st March 1961, are compared in the table below with corresponding figures for the previous year:

(In lakhs of rupees)

	For the year ended 31st March	
	1961	1960
Sales	1,20.81	22.57
Other income	1.10	1.52
Closing stocks of finished goods	0.11	...
Raw materials and stores consumed	78.23	15.78
Salaries, wages and bonus	7.55	2.82
Other expenses	14.43	4.99
Gross profit	21.81	3.10
Managing Agents' remuneration	1.77	0.12

Ordinary	1.64	...
	(12½%)†	
Carry forward	0.06	—2.50

* Rs. 1,37,557 for the period upto 31st March 1960. Preference dividends for 1960-61 are subject to deduction of tax.
† Subject to deduction of tax.

With the writing off of the preliminary expenses and the recoupment of previous losses, the balance sheet as at 31st March 1961, has been shorn off of all intangibles and presents a clean picture. The share capital of Rs. 24.99 lakhs consists of Rs. 10.00 lakhs in preference shares and Rs. 14.99 lakhs in equity shares and is modestly backed by Rs. 4.60 lakhs in reserves. Secured loans amount to Rs. 9.50 lakhs, in addition to current liabilities and provisions at Rs. 35.16 lakhs. The gross block is valued at Rs. 25.19 lakhs and yields, on deduction of Rs. 6.78 lakhs as accumulated depreciation, a net block worth Rs. 18.41 lakhs. Current assets, loans, and advances aggregate Rs. 55.83 lakhs and are more than sufficient fully to cover all liabilities to outsiders.

The Company, it will be recalled, manufactures air compressors and other pneumatic equipment in technical collaboration with Messrs. Broomwade of England. A large

(Continued in previous column)

MYSORE CHEMICALS AND FERTILISERS

SALES BETTER, BUT PROFIT LOWER

LARGER sales but lower profit has been the tale of the Mysore Chemicals and Fertilisers Limited (Chairman: Sri T. Shamanna, I.A.S.) for the year ended 31st March 1961. For the third year in succession, the sales increased, the amount realised in 1960-61 being Rs. 50.52 lakhs, as against Rs. 47.55 lakhs in the previous year, and Rs. 31.73 lakhs in 1958-59. The higher sales have not resulted in an increase in profit due to several handicaps and the profitability has fallen to 17.1 per cent from 23.8 per cent in the previous year and 27.5 per cent in 1958-59. The gross profit was as much as Rs. 8.67 lakhs, as against Rs. 10.85 lakhs for 1959-60, though it is Rs. 4 lakhs more than that for 1957-58.

A number of factors has contributed to a fall in profit. The selling rate of superphosphate fixed by the Government of India was reduced. The Company had to pay heavy clearing charges at Madras and Cochin ports on account of non-availability of sufficient wagons for the movement of raw materials. There was a steep rise in the prices of certain chemicals. The cost of electricity payable by the Company on the energy consumed by it was high and unworkable. The Directors, however, say that they have managed to reduce the effect of all these adverse factors to the minimum possible extent by prudent efforts. But this is not the end of the story, for the Government of Mysore has enhanced the tax to be paid on electricity from 0.7 nP to 1.5 nP per unit with effect from 1st April 1961. This extra levy will aggravate the already difficult position. The Directors have made representations for securing a reduction in the power charges, but the chances of success, according to their own admission, appear to be remote. This is a very disquieting thought, indeed, as the cost of power is a major element in the expenses account of a fertiliser factory.

The main features of the working of the Company during the last four years are shown at a glance in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	50.52	47.55	31.73	26.17
Closing stock of finished goods	3.95	4.53	5.73	4.07
Raw materials consumed	17.91	14.37	10.05	11.15
Other expenses	24.14	21.56	14.39	13.05
Gross profit	8.67	10.85	8.74	4.62
Provision for—				
Depreciation	2.81	3.02	3.04	1.32
Taxation	2.64	3.61	2.17	1.98
Net profit	3.22	3.62	3.53	1.42
To reserves	0.77	1.14	2.47	0.18
Provisions no longer required written back	0.03	...	0.11	...
Dividend	2.48*	2.48*	1.24	1.24
	(10%)*	(10%)*	(5%)	(5%)
Carry forward	0.08	0.11	0.11	0.17

* Subject to deduction of tax.

It will be seen from the table that, thanks to slightly lower provisions for depreciation and taxation, the net profit has suffered only a modest fall and is adequate to maintain the dividend at 10 per cent, subject to deduction of tax.

The paid-up capital of the Company has remained stationary at Rs. 24.81 lakhs all in equity shares of Rs. 10 each. The authorised capital was, however, raised last year from Rs. 25 lakhs to Rs. 50 lakhs consequent on the decision to expand the activities of the Company in several directions such as increasing the output of sulphuric acid and other allied chemicals and fertilisers for which there is a ready demand. The reserves and surplus stand at Rs. 10.56 lakhs. As against the current liabilities and provision totalling Rs. 25.14 lakhs, the current assets amount to Rs. 47.82 lakhs. The gross block of the Company at Rs. 56.23 lakhs has been written down to Rs. 12.70 lakhs.

The Company has, as part of its expansion plans, placed an order for a 50-ton per day capacity plant for producing sulphuric acid, the delivery of which will be completed by the end of December 1961. The plant is expected to be commissioned by the end of March 1962. The Government of India has granted an industrial licence to the Company for putting up a fully mechanised superphosphate plant which will increase the production of this type of fertiliser to 33,000 tons per annum.

In view of the increase in the authorised capital and the expansion programme on hand, the prospects of a right issue in the near future are reasonably bright. The current market quotation for the Rs. 10 paid-up ordinary share is Rs. 11.60. At this rate the net yield works out to 6.0 per cent, taking the net dividend at 70 nP per share.

COMPANY MEETINGS AND DIVIDENDS

NEW COMMERCIAL MILLS CO., LTD. Annual General Meeting, Ahmedabad, 18th September 1961. Dividend: Rs. 50 per ordinary share, subject to deduction of tax, payable from 25th September 1961. Transfer books remain closed from 4th to 23rd September 1961, both days inclusive.

BADRA COFFEE ESTATES LTD. Annual General Meeting, Bangalore, 18th September 1961. Dividend: 15 per cent or Re. 0.30 per ordinary share, subject to deduction of tax, payable on 20th September 1961.

MUKAND IRON & STEEL WORKS LTD. Annual General Meeting, Bombay, 22nd September 1961. Dividend: Re. 1.20 per old ordinary share; Re. 0.60 per new ordinary share and Rs. 21.78 (approx.) per deferred share, all subject to deduction of tax, payable on or after 23rd September 1961.

MYSORE CHEMICALS & FERTILISERS LTD. Annual General Meeting, Mysore, 22nd September 1961. Dividend: 10 per cent or Re. 1.00 per share, subject to deduction of tax, payable on or after 20th October 1961. Transfer books remain closed from 8th to 22nd September 1961, both days inclusive.

BIRLA COTTON SPG. & WVG. MILLS LTD. Annual General Meeting, Subzimandi, Delhi, 23rd September 1961. Dividend: Rs. 2.00 per share, subject to deduction of tax. Transfer books will remain closed from 10th to 23rd September 1961, both days inclusive.

INDIA STEAMSHIP CO., LTD. Annual General Meeting, Calcutta, 26th September 1961. Dividend: *Nil.* Transfer books will remain closed from 11th to 26th September 1961, both days inclusive.

AMLUCKIE TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1961. Dividend: *Nil.* Transfer books will remain closed from 20th to 27th September 1961, both days inclusive.

BARAREE COKE CO., LTD. Annual General Meeting, Calcutta, 25th September 1961. Dividend: *Nil.* Transfer books will remain closed from 19th to 25th September 1961, both days inclusive.

HIND CYCLES LTD. Annual General Meeting, Bombay, 27th September 1961. Dividend: *Nil.* Transfer books will remain closed from 18th September to 3rd October 1961, both days inclusive.

TELIAPARA TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1961. Dividend: 22½ per cent or Rs. 22.50 per share, subject to deduction of tax (payable when funds are available in *India). Transfer books will remain closed from* 17th to 27th September 1961, both days inclusive.

DEJOO VALLEY TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1961. Dividend: 15 per cent or Re. 1.50 per ordinary share, subject to deduction of tax, payable on or after 10th October 1961. Transfer books remain closed from 20th to 27th September 1961, both days inclusive.

MARGARET'S HOPE TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1961. Dividend: 15 per cent or Re. 1.50 per share, subject to deduction of tax, payable on or after 10th October 1961. Transfer books will remain closed from 20th to 27th September 1961, both days inclusive.

RANICHERRA TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1961. Dividend: 15 per cent or Re. 1.50 per share, subject to deduction of tax, payable on or after 10th October 1961. Transfer books will remain closed from 20th to 27th September 1961, both days inclusive.

SUNGMA TEA CO., LTD. Annual General Meeting, Calcutta, 27th September 1961. Dividend: 15 per cent or Re. 1.50 per ordinary share, subject to deduction of tax, payable on or after 10th October 1961. Transfer books will remain closed from 20th to 27th September 1961, both days inclusive.

JOST'S ENGINEERING LTD. Annual General Meeting, Bombay, 28th September 1961. Dividend: 10 per cent or Rs. 5.00 per share, subject to deduction of tax, payable on and after 29th September 1961. Transfer books remain closed from 7th to 28th September 1961, both days inclusive.

AMALGAMATED ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 28th September 1961. Dividend: Re. 0.90 per ordinary share, subject to deduction of tax, payable on or after 5th October 1961. Transfer books will remain closed from 15th September to 4th October 1961, both days inclusive.

MYSORE CHEMICAL MANUFACTURES LTD. Annual General Meeting, Chikbanavar P.O., Bangalore District, 29th September 1961. Dividend: 20 per cent or Rs. 2.00 per ordinary share, subject to deduction of tax, payable on and after 15th October 1961. Transfer books will remain closed from 16th to 29th September 1961, both days inclusive.

MADRAS SAFE DEPOSIT CO., LTD. Annual General Meeting, Madras, 29th September 1961. Dividend: 5 per cent subject to deduction of tax. Transfer books will remain closed from 22nd to 29th September 1961, both days inclusive.

DIBRUGARH CO., LTD. Annual General Meeting, Calcutta, 29th September 1961. Dividend: 40 per cent or Rs. 4.00 per share, subject to deduction of tax, payable on or after 12th October 1961. Transfer books will remain closed from 20th to 29th September 1961, both days inclusive.

TYROON TEA CO., LTD. Annual General Meeting, Calcutta, 29th September 1961. Dividend: 10 per cent or Re. 1.00 per share, subject to deduction of tax, payable on or after 12th October 1961. Transfer books will remain closed from 20th to 29th September 1961, both days inclusive.

RAJENDRA COFFEES LTD. Annual General Meeting, Balehonnur, Mysore, 30th September 1961. Dividend: 25 per cent or Re. 1.25 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 23rd to 30th September 1961, both days inclusive.

Notices

THE CALCUTTA TRAMWAYS COMPANY, LIMITED

(Incorporated in England)

THE DIRECTORS OF THE CALCUTTA TRAMWAYS COMPANY LIMITED announce that subject to final audit, the result of the working for the year ended 31st December, 1960 was as follows:—

The Revenue for the year after transferring £100,000 to Renewals and Replacements Account was	..	£146,289
Against this has been debited Provision for Income Tax and Wealth Tax	£73,569	
Debenture Interest	20,820	
	£94,389	
Less—Income Tax deducted from Debenture Interest, less Tax deducted from Investment Income	8,019	
		86,370
Leaving a balance for the year of		£59,919
In accordance with the Agreement dated 30th August, 1951, between the Governor of the State of West Bengal and the Company, the above balance has been credited to Shareholders' Account		£59,919
Out of which is payable:—		
1st Debenture Stock Redemption	£3,983	
2nd Debenture Stock Redemption	8,048	
Preference Dividend, less Tax	7,656	
Proposed Ordinary Dividend of 5% f.o.t.	35,000	
		54,687
Leaving to be added to the amount carried forward on Shareholders' Account		£5,232

The Annual General Meeting will be held in London at twelve o'clock noon on Wednesday, the 11th October, 1961, on which day warrants for the Ordinary Dividend, if sanctioned, will be posted.

The Ordinary Share Transfer Books will be closed from the 28th September to 11th October, 1961, inclusive.

By Order of the Board,
R. W. TURNBULL,
Agent.

P-4 MISSION ROW EXTENSION,
CALCUTTA, *29th August*, 1961.

McLEOD AND COMPANY, LIMITED

ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of this Company will be closed from 16th to 29th September, 1961, both days inclusive and that the Annual General Meeting will be held on the latter date.

By Order of the Board,
S. K. CHATTERJEE,
Acting Secretary.

,, ,, ,, Ordinary	1,22	1,20
	(11.50%)	(11.50%)
Carried forward	Nil	16

N.B.—Adjustments include only the balance brought forward from the previous year.

* Preference dividend is worked out at 6.66 per cent in accordance with the provisions of Preference Shares (Regulation of Dividends) Act, 1960.

Extracts from the Directors' report: The first call of Rs. 2.50 was made on the second equity shares. The directors have decided to pay proportionate dividend on the called up amount received on or before 28th February 1961.

Despite shortage of power, the output of the Rolling Mills showed an improvement. However, from the commencement of the current financial year the billet supply position has deteriorated sharply. The directors hope that the Government of India will take steps to meet the critical situation before long.

Production in machine tool department has also risen. The directors have decided to still further expand the machine tool manufacturing capacity. The Company's expansion programme has been approved by the Government of India, and the directors have entered into technical collaboration with Messrs. Gatti & Co. and Officina Meccanico Favreto, Torino, Italy.

The Company has placed orders for some of the machinery. Orders for the remainder will be placed as soon as import licences have been received. The plan for the modernisation of the Rolling Mills is being implemented and it expected to complete the work by the middle of 1962. The Company's Foundry is being expanded and plans have ben drawn up with this in view. The new assembly shop and laboratory buildings have been completed.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	15,24,041	Gross block	18,19,061
Reserves and surplus	3,59,750	—Depreciation	7,96,676

	(4%)	(4%)
Carried forward	1	2

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Working Results*: The working results of the Company have been better during the year under review due to higher production resulting in reduction of production costs and better sale realisation from the rectified spirit. But for the irregular movement of coal due to which the Distillery lost nearly 95 days of production, the results would have been still better.

Production: During the year under review the Distillery had a run of 228 (214) days and processed 4,64,643 (3,26,406) maunds of *molasses* producing a total quantity of 8,79,990 (6,20,889) bulk gallons of *rectified spirit*. The average daily production improved to 3,851 bulk gallons from 2,895 in the last year. It has not been possible as yet to achieve the rated capacity of 5,000 gallons per day due to certain defects in the newly installed unit, but a settlement has been reached with the supplier for effecting certain modification in this unit and it is expected that with the improvements the target of 5,000 gallons per day should be achieved.

Power Alcohol: Industry's case for a suitable increase in the price of *Power Alcohol* had been pleading with the Government of India for the last few years. Instead of raising the price of *Power Alcohol* as demanded by the Industry, Ethyl Alcohol (Price Control) Order, 1960 issued 3rd May, 1961 has been promulgated by the Government of India, fixing sale prices of *Absolute Alcohol*, *Rectified Spirit* and *Denatured Spirit*, which are a little higher than the price of *Power Alcohol*. All India Distillers' Association has strongly represented to the Government to also revise the price of *Power Alcohol* in accordance with the *Ethyl Alcohol* (Price Control) Order, 1961 and the matter is receiving consideration of the Government.

Indian Made Foreign Liquors: The supplies of *Rum* to the Defence Services through the Ministry of Food and Agriculture, Government of India have improved while supplies to Canteen Stores Department (India) were adversely affected due to change in their purchase policy.

Country Spirit: The Company has retained the contract for the supply of country spirit till 31st March 1962 to the Warehouses serviced by it in the past in Uttar Pradesh, i.e., Rampur, Bijnoor, Dhampur, Pauri Garhwal, Mathura and Haldwani.

In response to the Company's application for an industrial licence to increase the production capacity of the plant to three million gallons a year, the Government of India has sanctioned a production capacity of two million gallons per year. The matter has been represented for reconsideration.

With the coming up of the synthetic Rubber Factory at Bareilly, sizable production of the Distillery is expected to be utilised by them. Pending completion of this factory it was considered necessary to have sound selling arrangements for the disposal of the Company's production in the market particularly in view of surplus production in the country. The sale arrangements as approved by the directors are being placed separately before you for your approval.

Accounts in brief as at 31st March 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	20,00,000	Gross block	26,21,410
Reserves and surplus	3,65,870	—Depreciation	15,54,476
Other liabilities	4,69,570		
		Net block	10,66,932
		Block in progress	15,177
		Current assets	11,90,910
		Investments	5,31,999
		Cash	30,422
Rs.	28,35,440	Rs.	28,35,440

* Paid-up capital consists of 2,00,000 ordinary shares of Rs. 10 each, fully paid up.

Machinery Manufacturers Corporation Ltd.

(*Managing Agents*: Messrs. Mahindra and Mahindra Ltd., Bombay.)

Fifteenth Annual General Meeting—27th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960

Appropriations:		
Total available balance	(+)23,32	(—)24,39
Transfer to depreciation (for previous years)	15,78	Nil
Transfer to depreciation	7,32	Nil
To adjustment of loss brought forward	22	(—)24,39†
Carried forward		

N.B.—Adjustments include only the debit balance brought forward if any.

* This represents only the amount transferred from capital reserve account, being depreciation applicable to revaluation of plant and machinery.

† From this final debit balance as at 31st March 1960 the following adjustments are made: (i) An amount of Rs. 22,11,450 has been written off on reduction of capital confirmed by order of the Court dated 22nd June 1960. (ii) An amount of Rs. 5,04,960 out of this debit balance has been transferred to compromise or arrangement account. (iii) The remaining debit balance of Rs. 7,82,685 has been adjusted against 1961 profits as shown in the table above.

Extracts from the Directors' report: In last year's report mention was made of the capital reorganisation and the scheme of compromise or arrangement, which were approved by the shareholders and sanctioned by the High Court of Bombay. The balance sheet for the year under review shows the reduction in capital and necessary provision has been made to implement the scheme of compromise or arrangement as soon as certain formalities are completed. Discussions are proceeding with the Controller of Capital Issues in this matter and it is hoped that a decision will soon be forthcoming.

Unlike in the previous years, it has been possible to provide for the current as well as for arrears of depreciation. Owing to insufficiency of profits during the last two years, no reserve for development rebate as required by the Indian Income Tax Act could be provided in the accounts. The Income-tax authorities have allowed development rebate applicable to these two years to be carried forward. Provision has been made in the current accounts for covering the statutory reserve for these two years. Development rebate reserve applicable to the current year will be carried forward. After making these adjustments and writing off the instalments of preliminary expenses and underwriting commission there is a small surplus of Rs. 21,749 which is carried forward.

Operation: Throughout the year under review the Company's Factory at Sonai Works suffered no interruption. Total sales for the year amounted to over Rs. 112 lakhs. Production and despatch of *Cards* during the year were the highest so far achieved by the Company. Production of *Cards* increased to 777 as against the previous highest figure of 648 in 1957-58. Similarly, 789 *Cards* were despatched during the year as compared to the previous highest figure of 613 in 1957-58. The order book position was encouraging; new orders for 928 *Cards* were secured during the year.

The Company's earnings for the current year include substantial amount of commission on sale of *Whitin's equipment*. This has been particularly welcome as it was earned during the last two difficult years and helped the Company to tide over the crisis of finance. Sales of American machinery are entirely dependent upon the allocation of D.L.F. funds and grants received by the Government of India from U.S.A.

Diversification: The prototype Speed Frame for which the Company holds manufacturing licence was exhibited at the Ahmedabad Textile Exhibition held in March 1961. Owing to the delay in obtaining import licences for additional machine tools, batch production of *Speed Frames* is not expected to commence till next year. Manufacture of diesel engine components will begin from the third quarter of 1961.

For the first 3 months of the current year, the average level of production and despatch in 1960-61 has been maintained. A total of 203 *Cards* have been booked in the first quarter. There has, however, been a substantial fall in these months in the sales for *Whitin's machinery*, because of delay in finalisation of D.L.F. arrangements by the Government of India.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	58,66,875	Gross block	1,45,11,797
Compromise or arrangement account	5,04,960	—Depreciation	65,88,948
Reserves and surplus	2,88,925	Net block	81,28,855
Other liabilities	1,10,95,145	Current assets	94,47,013
		Investments	30,800
		Cash	1,10,675
		Miscellaneous expenditure	48,562
Rs.	1,77,55,405	Rs.	1,77,55,405

* Paid-up capital consists of: (a) 1,90,720 equity shares of Rs. 10 each as reduced and reconstructed from 38,144 equity shares of Rs. 100 each and confirmed by order of the Court dated the 22nd June 1960. (b) 25,000—4½ per cent tax-free special cumulative preference shares of Rs. 100 each, fully called up, issued to the Government of India. (c) 13,955—4 per cent tax-free cumulative preference shares of Rs. 100 each, fully called up. (d) The amount of Rs. 63,675 on account of shares forfeited is also included in the capital.

Soom Tea Co., Ltd.

(*Managing Agents*: Messrs. Williamson Magor & Co., Ltd., Calcutta.)

Annual General Meeting—Held on 7th September.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1961	1960
Sales (gross proceeds of tea)	10,42	7,98
Closing stock	1,16	2,19
Gross profit	3,34	5,48
Transfer to depreciation	15	14
,, ,, Secretaries' and Managing Agents' commission	22	24
,, ,, provision for taxation	1,35	97
Net profit	1,65	1,13
Adjustments	1,79	2,02
Appropriations:		
Total available balance	3,44	3,15
Transfer to reserves	50	50
To payment of dividends (taxable)	1,50	90
	(50%)	(30%)
Carried forward	1,44	1,75

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: The following are comparative statistics for the past three years—

	Kg.	Average price per kg.
1958	141,702	Rs. 7.69
1959	141,687	Rs. 6.99
1960	168,998	Rs. 7.44

The estimate for 1961 provides for a crop of 139,400 kg. of tea at a cost of Rs. 5.86 per kg.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	3,00,000	Gross block	7,73,247
Reserves and surplus	6,15,151	—Depreciation	2,65,047
Other liabilities	6,21,151		
		Net block	4,08,200
		Current assets	5,44,382
		Investments	2,00,547

Rs.	15,40,302	Rs.	15,40,302

* Paid-up capital consists of 30,000 ordinary shares of Rs. 10 each, fully paid up.

Sangameshwar Coffee Estates Ltd.

(*Secretaries and Treasurers*: Patco Agencies, Madras.)

Annual General Meeting—25th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
By coffee crop	10,66	7,86
Gross profit	2,55	2,64
Transfer to Secretaries' and Treasurers' remuneration	11	12
,, ,, depreciation	49	41
,, ,, taxation	55	64
Net profit	1,40	1,47
Adjustments	11	16
Appropriations:		
Total available balance	1,51	1,63
Transfer to development reserve	Nil	50
,, ,, debenture redemption reserve	50	Nil
Proposed dividend (taxable) 7% Preference	25	30
,, ,, ,, Ordinary	73	73
	(6%)	(6%)
Carried forward	3	11

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Crop and costs*: A total of 403,012 metric tonnes was harvested during the year 1960-61 and delivered to the Coffee Board. This has been valued at Rs. 1.99 per point. It is believed that the actual realisation will be slightly higher at nearer Rs. 2 per point. The comparative statement of production and costs for the last four years is as under:

Year	Coffee crop in tonnes	Estate expenditure per metric tonne	No. of cards per acre
1957-58	432,142	1 889	2.62
1958-59	271,470	2,170	1.64
1959-60	177,858	2,632	1.07
1960-61	403,012	1,911	2.43

Final payment on 1958-59 Season crop has been received making the total for the year Rs. 2.45 per point. Since the said crop was valued at Rs. 2.40 per point in 1959-60 accounts, the difference on account of 5 nP per point has been included in the receipts for the year 1960-61. 1959-60 season coffee was valued at Rs. 2.25 per point; the figure so far disbursed by the Coffee Board, however, being Rs. 2.15 per point only, valuation has been accordingly revised and the loss on that account charged to the account for the year under report.

1961-62 *Season Crop*: The estimate for the current year is placed at 200 tonnes as follows:—Arabica 135 tonnes and Robusta 65 tonnes. Apart from the normal reduction in the crop to be expected after a year of larger harvest, inadequate blossom showers causing poor set have contributed to this much smaller crop estimated.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	5,00,000	Gross block	19,78,850
7% debentures	5,04,000	—Depreciation	1,58,066
Reserves and surplus	2,39,075		
Other liabilities	4,90,483	Net block	18,20,784
		Block in progress	2,500
		Current assets	8,80,600
		Cash	79,674
Rs.	27,83,558	Rs.	27,83,558

* Paid-up capital consists of 6,00,000 ordinary shares of Rs. 2 each, fully paid up and 35,000—7 per cent cumulative preference shares of Rs. 10 each, fully paid up.

Wartyhully Estates Ltd.

(*Secretaries*: Messrs. Peirce, Leslie and Co., Ltd., Mangalore.)

Sixth Annual General Meeting—18th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
By coffee crop	9,37	5,75
Gross profit	3,89	3,19
Transfer to Secretaries' remuneration	10	10
,, ,, depreciation	32	31
,, ,, taxation	1,20	89
Net profit	2,27	1,89
Adjustments	1,15	1,56
Appropriations:		
Total available balance	3,42	3,45
Transfer to general reserve	50	50
To payment of dividend (taxable)	1,80	1,80
	(15%)	(15%)
Carried forward	1,12	1,15

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Crop and Costs*.—A total crop of 321.525 metric tonnes was harvested during the year and delivered to the Coffee Board. This has been valued at Re. 1.90 per point or Rs. 2,821 per metric tonne. A comparative statement of production and costs for the past 3 years is given below:

Year	Crop (metric tonnes)	Estate expenditure (per metric tonne)	All-in-cost (per metric tonne)
1958-59	314.500	Rs. 1,875	Rs. 2,095
1959-60	171.045	,, 2,914	,, 3,260
1960-61	321.525	,, 1,825	,, 1,977

A further payment of 5 nP has been received on 1958-59 crop making the total for the year Rs. 2.45 per point and this is equivalent to Rs. 3,582 per metric tonne. The 1959-60 season's crop has been revalued at Rs. 2.22 per point which is approximately what can be expected. There has been however no loss on account of this reduction in value as the total points finally awarded by the Board exceeded the estimates made in last year's Accounts. The 1961-62 crop has been estimated at 250 metric tonnes and the all-in-cost of production at Rs. 2,267 per metric tonne.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,00,000	Gross block	16,15,277
Reserves and surplus	13,52,994	—Depreciation	1,52,156
Other liabilities	7,00,401		
		Net block	14,63,121
		Current assets	7,32,289
		Investments	7,56,825
		Cash	3,01,160
Rs.	32,53,395	Rs.	32,53,395

* Paid-up capital consists of 6,00,000 ordinary shares of Rs. 2 each, fully paid up.

Vellore Electric Corporation Ltd.

[*Managing Agents*: Messrs. Chandrie and Co. (Private) Ltd., Madras.]

Annual General Meeting—25th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
By sale of energy	21,47	15,76
Gross profit	6,01	4,19
Transfer to Managing Agents' remuneration	41	22
,, ,, depreciation	1,73	1,57

To additional dividend on preference shares	1	Nil
To reserve for rebate to consumers	Nil	15
Proposed dividends (taxable) 6% T. C. Preference	8*	8
,, ,, ,, Ordinary	1,14	60
	(14.29%)†	(15%)†
Carried forward	3,34	2,88

N.B.—Adjustments include the amount brought forward from the previous year; excess provision for taxation for previous year and the amount transferred from tariff and dividend control reserve.

* Calculated at 6.66 per cent in accordance with the provisions of Preference Shares (Regulation of Dividends) Act, 1960.

† On the increased ordinary capital of Rs. 8 lakhs.

‡ On a paid-up ordinary capital of Rs. 4 lakhs.

Extracts from the Directors' report: *Progress*: As indicated in the last report the directors have allotted Rs. 4 lakhs equity share capital and the directors have embarked on major rural electrification programme. The Government have also sanctioned Rs. 2 lakhs. The Company has been able to extend electricity to the following villages during the current year:—Kandipedu, Serkadu, Eranthangal, Brahmapuram, Gudinallur, Mangadu-Old and Mangadu-New.

During the year the Company has erected 9.58 miles of H.T. lines, 38.09 miles of L.T. lines and 9 sub-stations and this has enabled us to connect up 1,146 L.T. consumers and 2 H.T. consumers, thus bringing the total number of consumers to 13,800.

The following comparative statement will show the progress made during the year.

	1959-60	1960-61
Total units purchased in kw.h.	1,86,63,432	1,94,64,638
Total units sold in kw.h.	1,64,46,194	1,69,15,388
Cost of units purchased in rupees	7,61,503	9,83,757
Gross revenue in rupees	17,62,565	22,58,506
No. of villages electrified	58	65
No. of towns electrified	5	5
No. of L.T. consumers connected	12,648	13,794
No. of H.T. consumers connected	4	6
Maximum demand in kw.—		
Vellore	2,140	2,880
Ranipet	1,530	2,150

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	9,25,000	Gross block	46,63,814
Reserves and surplus	14,75,487	—Depreciation	13,15,572
Other liabilities	26,06,939		
		Net block	33,48,242
		Current assets	7,50,322
		Investments	1,11,195
		Cash	7,95,139
		Miscellaneous expenditure	2,528
Rs.	50,07,426	Rs.	50,07,426

* Paid-up capital consists of 12,500—6 per cent taxable cumulative preference shares of Rs. 10 each fully paid up and 80,000 ordinary shares of Rs. 10 each fully paid up. The paid-up ordinary capital at the end of March 1960 was only Rs. 4,00,000 made up of 40,000 shares of Rs. 10 each.

Ossoor Estates Ltd.

(*Secretaries*: Messrs. Peirce, Leslie & Co., Ltd., Mangalore.)

Annual General Meeting—18th September.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
By coffee crop	4,09	3,86
Gross profit	1,58	2,23
Transfer to Secretaries' remuneration	5	5
,, ,, depreciation	16	14
,, ,, taxation	35	61
Net profit	1,02	1,42
Adjustments	42	4
Appropriations:		
Total available balance	1,44	1,46
Transfer to general reserve	Nil	5
Proposed dividend (taxable)	98	98
	(15%)	(15%)
Carried forward	46	42

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: *Crop and Costs*: A total crop of 145.996 metric tonnes was harvested during the year and delivered to the Coffee Board. This has been valued at Re. 1.90 per point or Rs. 2,680 per metric tonne. A comparative statement of production and costs for the previous 3 years is given below:

Year	Crop (metric tonnes)	Estate expenditure (per metric tonne)	All-in-cost (per metric tonne)
1958-59	110.471	Rs. 2,552	Rs. 2,914
1959-60	135.230	,, 1,970	,, 2,225
1960-61	145.996	,, 1,821	,, 1,990

A further payment at 5 nP per point has been received on 1958-59 crop making the total for the year Rs. 2.45 per point and this is equivalent to Rs. 3,329 per metric tonne.

The 1959-60 season's crop has been revalued at Rs. 2.22 per point which is approximately what can be expected. There has been however no financial loss on account of this reduction in value as the total points finally awarded by the Board exceeded the estimate made in last year's accounts.

The 1961-62 crop has been now estimated at 155 metric tonnes and the all-in-cost of production at Rs. 1,806 per metric tonne.

Proposed Purchase of Sulgodu Shares:—The Central Government whose approval was sought under Section 372 have now accorded their approval for the purchase at Rs. 7 per share and the sellers have agreed to this price. It may be recalled that the shareholders agreed to the purchase at Rs. 7.50 per share. Although it is not clear whether it is essential as the price agreed by Government is less than that approved by shareholders, the directors have thought it proper to obtain the formal approval of shareholders to the lower price and the necessary resolution is accordingly being placed before shareholders.

Accounts in brief as at 31st March 1961 are as under:

Liabilities	Rs.	Assets	Rs.
Capital*	6,50,000	Gross block	7,97,732
Reserves and surplus	5,18,178	—Depreciation	88,078

4. To elect a Director in place of Mr. Radhakrishna Ramnarain Ruia who retires by rotation but who offers himself for re-election, and to consider and, if thought fit, to pass the following resolution as a Special Resolution of which special notice as required by Section 261 of the Companies Act 1956 has been received by the Company.

"Resolved that Mr. Radhakrishna Ramnarain Ruia who retires by rotation from his office as Director and who is a Director and member of Messrs. Ramnarain Sons Private Ltd., the Managing Agents of the Company, be and he is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of Directors by rotation."

To consider and, if thought fit, to pass either with or without modifications, the following Resolutions as Special Resolutions.

"Resolved that the contracts respectively entered into between the Company and Messrs. Vinaya Trading Co. Private Ltd. Dawn Mills Co. Ltd., and Phœnix Mills Ltd., who are associates of Ramnarain Sons Private Ltd., The Managing Agents of the Company, during the year 1960-61 pursuant to approval of the Company granted by the Special Resolutions passed at the Extraordinary General Meeting of the Company held on 5th December, 1958 and particulars whereof are entered in the Register of Contracts maintained under the provisions of Section 360 of the Companies Act 1956 be and they are hereby ratified and confirmed."

6. "Resolved that the Company hereby approves of contracts being entered into with Indokem Ltd. an associate of Ramnarain Sons Private Ltd. the Managing Agents of the Company for the period from the date of this meeting upto the date of the Annual General Meeting of the Company to be held in the year 1966, for the purchase and/or supply of dyes, colours and chemicals on terms of ready or forward delivery and either for cash or on credit in such quantity or quantities as may from time to time be required for the business of the Company at prevailing market rates, such purchase and supply not to exceed in any one financial year of the Company Rs. 1,00,000."
7. "Resolved that the Company hereby approves of contracts being entered into with Vinaya Trading Co. Private Ltd. an associate of Ramnarain Sons Private Ltd, the Managing Agents of the Company for the period from the date of this meeting upto the date of the Annual General Meeting of the Company to be held in the year 1966, for the purchase and/or supply of Indian or foreign cotton and Staple Fibre on terms of ready or forward delivery and either for cash or on credit in such quantity or quantities, as may from time to time be required for the business of the Company at prevailing market rates and/or for the supply of or rendering of service by them as cotton brokers and/or as insurance agents, such purchase and supply together with charges for supply or rendering of services not to exceed in any one financial year of the Company Rs. 30,00,000 and the Company hereby authorises the said Vinaya Trading Co. Private Ltd. to retain any commission or other remuneration earned or to be earned by them from the aforesaid business of supply of Indian or Foreign cotton and Staple Fibre or the aforesaid business of cotton brokers and/or insurance agents."
8. "Resolved that the Company hereby approves of contracts being entered into with Phœnix Mills Ltd. an associate of Ramnarain Sons Private Ltd. the Managing Agents of the Company for the period from the date of this meeting upto the date of the Annual General Meeting of the Company to be held in the year 1966, for the sale, purchase or supply of any goods on terms of ready or forward delivery and either for cash or on credit in such quantity or quantities as may from time to time be required for the business of the Company at prevailing market rates or for the supply of or rendering of service as dyers, and/or processors, such purchase and supply together with the charges for supply or rendering of services not to exceed in any one financial year of the Company Rs. 20,00,000 and on the terms that in respect of any goods supplied or sold or any service supplied or rendered by the Company to the said associate Company, the associate Company shall make payment to the Company within one month from the date of the supply or sale of the goods or for the supply or rendering of service as the case may be."
9. "Resolved that the Company hereby approves of contracts being entered into with Dawn Mills Co. Ltd. an associate of Ramnarain Sons Private Ltd. the Managing Agents of the Company for the period from the date of this meeting upto the date of the Annual General Meeting of the Company to be held in the year 1966, for the sale, purchase or supply of any goods on terms of ready or forward delivery and either for cash or on credit in such quantity or quantities as may from time to time be required for the business of the Company at prevailing market rates, or for the supply or rendering of service as dyers and/or of processors, such purchase and supply together with the charges for supply or rendering of services not to exceed in any one financial year of the Company Rs. 10,00,000 and on the terms that in respect of any goods supplied or sold or any service supplied or rendered by the Company to the said associate Company, the associate Company shall make payment to the Company within one month from the date of the supply or sale of the goods or for the supply or rendering of service as the case may be."
10. "Resolved that the consent of the Company be and is hereby accorded under the provisions of Sections 293(1)(d) of the Companies Act, 1956, [as amended by the Companies (Amendment) Act, 1960] to the Board of Directors of the Company borrowing from time to time all such sums of money as they may deem requisite or proper for the purpose of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say reserves not set apart for any specific purpose; Provided that the total amount upto which moneys may be borrowed by the Board of Directors shall not exceed the sum of Rs. 1,00,00,000 at any one time."
11. To appoint Auditors for the current year and to fix their remuneration.

The relative explanatory statement concerning the above special business as required by Section 173 of the Companies Act, 1956 is annexed hereto and forwarded to the members of the Company.

The Share Transfer Books of the Company will be closed from Monday the 21st August 1961 to Saturday the 16th September 1961, both days inclusive.

By Order of the Board,
For RAMNARAIN SONS PRIVATE LTD.,
RAMNIWAS RAMNARAIN,
Director,
Agents.

BOMBAY, *Dated 18th August*, 1961.

2. The Register of contracts referred to in special resolution No. 4 above is open for inspection of the shareholders at the Registered Office of the Company during office hours.

3. Dividend, if sanctioned, will be payable at the Bank of India Ltd., Bombay, on and from Tuesday, the 3rd October 1961 to those shareholders whose names stand on the Register on 21st August 1961. Intimation of any change of address should be given to the Company immediately.

GOOD RESPONSE TO STATE LOANS

(From Our Own Correspondent)

BOMBAY, 6*th September*

Following the opening of the lists for the 4½ per cent 1972 State Loans on Monday the 4th inst., conditions in the short-term money market, which had remained comfortable for the past few weeks, turned distinctly stringent. The inter-bank call money rate among both Indian and Exchange banks went up sharply by 1½ per cent to 3½ per cent on Monday the 4th inst. Today, the borrowing banks had difficulty in obtaining funds even at 3½ per cent and transactions were done at 3¾ per cent at the close of the market. The call rate is expected to harden further in the coming days. The term rates, however, remained unchanged as under:

		Per cent
Notice Money:		
3 days or more	... ...	3
Term deposits:		
(i)	3 to 30 days (inclusive)	3
(ii)	31 to 60 days	3½
(iii)	61 to 90 days	3½
(iv)	91 days and more but less than 12 months	3¾
(v)	12 months	4

In order probably to facilitate subscriptions to the State loans, there were no sales of 91 days' Treasury Bills of the Government of India under the tender system during the week under review. 91 days' intermediate Treasury Bills sold from the 30th August to the 2nd inst. amounted to Rs. 71 lakhs as against Rs. 129 lakhs in the previous week.

A further contraction of Rs. 4.78 crores in notes in circulation is disclosed by the statement of affairs of the Reserve Bank of India for the week ended 1st September 1961, as compared with the previous week, during which the notes in circulation had declined by as much as Rs. 22.47 crores. As the notes held in the Banking Department have gone up by Rs. 5.24 crores, the total notes issued have advanced by Rs. 46.36 lakhs. The foreign securities held by the Issue Department are unchanged at Rs. 116.86 crores, but, as the balances held abroad have fallen by Rs. 7.02 crores, the aggregate foreign assets have shrunk by that amount to Rs. 136.45 crores. On the liabilities side, the deposits of the Central Government have declined sharply by Rs. 12.09 crores. Deposits of banks dropped by Rs. 1.71 crore only. The assets side shows that other loans and advances, which include loans to scheduled banks against usance bills, went up by Rs. 1.06 crore.

The statement of affairs of the scheduled banks for the week ended 25th August 1961 shows an expansion of Rs. 4.56 crores in demand deposits and of Rs. 9.85 crores in time deposits. The deposits of the State Bank of India rose by just Rs. 19 lakhs. Borrowings from the Reserve Bank dropped by Rs. 27.35 lakhs, and such against usance bills by Rs. 40 lakhs. The borrowings from the State Bank of India of time nature were also down by Rs. 85 lakhs, while those of demand nature from the same institution went up by Rs. 1.11 crore. On the assets side, investments improved by Rs. 12.45 crores, of which the rise on account of the State Bank of India was as much as Rs. 11 crores. Advances and bills discounted (bank credit) contracted further by Rs. 7.63 crores to Rs. 1,223.86 crores, in addition to the fall of Rs. 4.78 crores witnessed in this portfolio previous week. Advances of the State Bank of India declined by as much as Rs. 6.54 crores, which suggest that the contraction in bank credit of the private scheduled banks was only of the order of Rs. 1.09 crore.

The major development in the Government securities market during the week under review was the opening of the subscription lists for 4½ per cent State loans maturing in 1972. The response to the new loans was, indeed, excellent. The lists for five loans, namely, of Orissa, U.P., Bihar, Maharashtra and West Bengal were closed on Monday the 4th inst., itself. The Gujarat Loan was closed yesterday on having been fully subscribed. The loans of the remaining seven States were closed today on having been fully subscribed. Of the thirteen States that entered the market, the issues of Orissa and Uttar Pradesh alone are stated by the Reserve Bank as having been "oversubscribed." while those of the remaining 11 States are said to have been "fully subscribed." The downward adjustment in respect of 4½ per cent 1970 State issues witnessed in the past two weeks persisted during the week under review. 4½ per cent Madras, Andhra, U.P., Madhya Pradesh, Orissa, Mysore loans suffered losses ranging from 25 nP to 50 nP.

The Central loans section was on the whole quiet. The Conversion Loan put on 10 nP to Rs. 72.80. But 3½ per cent 1967 3rd National Plan Bonds shed 5 nP to Rs. 99. All other Central loans were unchanged.

In the foreign exchange section, the rupee appreciated further in relation to the U.S. dollar. Banks' selling and buying rates for ready T.T. on New York were Rs. 476.50 and Rs. 473.25 respectively, as against Rs. 477.25 and Rs. 473.75. In the New York Exchange, the pound sterling gained further *vis-a-vis* the dollar. The latest available rates are 281.000-281.040 cents per £ for spot and 278.320-278.360 cents per £ for three months' forward. As compared with the last week's rates, the pound sterling has gathered strength by 0.46 cent in the spot and by 0.34 cent in the forward.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, 6*th September*

This was a short week of only four working sessions for the bullion market which remained closed on Saturday (*Gokul Astami*) and yesterday (*Khordad Sal*). During this brief period, as well as in the kerb, the market ruled distinctly easy. The easiness was due to heavy arrivals, while offtake was relatively less. The daily average arrivals amounted to 6,335 tolas of gold and 27 bars of silver, as against 3,750 tolas and 21 bars, respectively, in the previous week. The average rate of offtake was of the order of only 3,665 tolas and 9 bars, though the figures are higher than those for the previous week (3,000 tolas and 5 bars).

When the market opened on Monday the 4th inst. silver was subjected to nervous liquidation by bulls following the reported sale of 120 bars of silver by the Reserve Bank a few days before. Subsequently, a recovery was, of course, in evidence, on the news that the silver sold was only the balance of refined silver (or *bhusa*) that was with the Bank and that the Bank had rejected the low price offered by some buyers. But the recovery was not marked enough to make up for earlier loss. Today, the market presented a dull appearance in the absence of fresh support. Business put through was restricted and values moved narrowly, the general tendency being downward. The closing rates for both gold and silver were lower than those prevailing a week ago.

Adjustment rates fixed today were Rs. 122.85 per 10 grams of gold and Rs. 202.55 per kilogram of silver. The corresponding rates on Wednesday last week were Rs. 124.50 and Rs. 204.30, respectively.

In gold, the *Bhadrapad* (25th September) settlement encountered selling and moved down from Rs. 124.50 to Rs. 123.40 today, before finishing at Rs. 123.45.

Ready also declined in the course of the week from Rs. 124.75 to Rs. 123.10. At this rate, the discount under the forward was 35 nP, as against 25 nP last week-end. Actually, ready gold commanded a premium of 10 nP on Friday the 1st inst., but it proved short-lived.

The *Bhadrapad* (26th September) settlement in silver began the week at Rs. 204.85, as against the previous close of Rs. 204.90, and touched a low of Rs. 202.60 on Monday. After recovering to Rs. 203.30 the same day, the settlement eased again to Rs. 202.85 today, though it closed better at Rs. 203.20.

Ready silver continued to be quoted at a discount under the forward throughout the week. The actual discount today was 65 nP, as against 60 nP on Wednesday last week. The ready metal fell from Rs. 204.30 to Rs. 202 on the 4th inst. At this level, there was some support and the rate improved to Rs. 202.70, but declined again today to Rs. 202.20 before finishing at Rs. 202.55.

The world price of gold in the London bullion market improved by one-eighth cent to touch $35.19 per fine ounce. The persistent firmness of gold was engendered by international political tension and reported buying by some European central banks. The sterling price of gold, however, declined from 250s. 11d. to 250s. 6¼d., owing to the strength of the pound sterling *vis-a-vis* the dollar. Ready and forward silver were unchanged at 79¾d. and 80⅜d., respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of prices during the week under review:

	6-9-1961 (closing)	High	Low	30-8-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	123.10	124.75	123.05	124.75
Forward : Bhadrapad* ..	123.45	124.60	123.40	124.50
Sovereign	95.25	95.25	95.00	95.00
SILVER				
Ready (.996 fine)	202.55	204.25	202.00	204.30
Forward : Bhadrapad† ..	203.20	204.95	202.60	204.90
London—				
Silver Ready	79¾d.	—	—	79¾d.
Silver Forward	80⅜d.	—	—	80⅜d.
Gold	250s. 6¼d.	250s. 11¼d.	250s. 6¼d.	250s. 11d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

KIPS FIRM

(From Our Own Correspondent)

MADRAS, 2*nd September*

Arrivals of kips during the week were moderate. Contrary to expectations, U.K. inquiries were limited and very selective. Consequently, more reasonable offers were available. The response from the U.K., however, was poor. The local markets continued to rule firm, particularly inferior fifths all weights.

Raw markets were reported to be still uneconomical. Tanned buff calf and cow calf remained unchanged and inquiries were not many. Tanned buffs continued to be firm with limited stocks. Tanned goat all tannages and marks had only limited inquiries with buyers rather particular about reduction in price. The Continent and the U.S.A. were inquiring for lower selections and some business resulted at previous prices.

Tanned sheep skins superfine classes had only limited inquiries at previous prices, but middle classes had good call from the U.K. and the Continent. Fair business resulted. Clearances by shippers from local market were moderate. Local prices were firm and uneconomical compared to c.i.f. rates.

COTTON FUTURES STEADY

(From Our Own Correspondent)

BOMBAY, 6*th September*

For the second week in succession, the cotton futures market had a short session. There were only three trading days during the week. During this short period the market ruled steady. The steadiness, in the context of higher carryover stocks of cotton and the prospect of a good crop, is attributed to the bullish interpretation of some of the changes made in the cotton policy for the new season. No doubt, the upward adjustment in the ceiling prices of Kalyan and Westerns was a bullish factor. The alterations made in the groupings of certain varieties and in the differentials were also regarded as such as to make the realisation of higher price possible. The abolition of compulsory survey and the hope that 50 per cent of the quota for Indian cotton would be released to the mills in the first instance (this hope materialised as is indicated below) also imparted strength to the market. Though the crop was expected to be a good one, the fact that the present is a critical period, which can make or mar the harvest, acted as a restricting influence. The continued delay in giving permission for trading in delivery contracts was also a damper. Under the influence of pulls from either side, futures values ruled steady. The Jarilla March contract is currently quoting at Rs. 596, the same as the last week-end rate.

Demand for ready cotton was subdued early in the week. Most of the mills were expecting the announcement of their first quota for Indian cotton which came off only yesterday. As was anticipated, mills have been permitted to purchase new or old crop up to 50 per cent of their total consumption of Indian and foreign 'B' cotton (that is, foreign cotton of 1" and below staple) during the season ended 31st August last. The quota, however, will not be available to those mills which have not fulfilled their obligations to import American 'B' cotton allotted to them during the 1960-61 season. Such mills are advised to approach the Textile Commissioner through the Indian Cotton Mills' Federation for necessary permission to buy Indian cotton against the above quota.

Following the announcement of the quota, spinners showed keen interest in popular styles. Prices tended to rise.

Demand for exportable styles continued to be slow. Shippers are anxiously awaiting the first export quota announcement for the new season. Meanwhile, they are reported to have submitted proposals for a more helpful and realistic export policy in respect of cotton for the consideration of the Export Advisory Council scheduled to meet in New Delhi next week. Release of a sufficiently large quantity of Bengal *Deshi* early in the season without any grade stipulation or other restrictions and a uniform policy in respect of issue of licences (the trade favours the-first-come-first-served basis of licensing) are said to be two of the main suggestions made by trade quarters.

Interest in foreign cotton was confined mainly to Sudan, Egyptian and East African growths. Ready lots of U.S. growths too evoked attention. Jinga was done at Rs. 1,150 per candy. Busoga (*U.N.U.G.*) was traded at Rs. 1,245 for January-February shipment. B.P. 52 was quoted at Rs. 1,245 for February-March shipment. Sudan P.L. found buyers at Rs. 1,509 per candy for prompt shipment.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 600; Jarilla 925; Surti 930; Laxmi 935; Digvijay 920.

Easy conditions prevailed in the Karachi cotton futures market during the week. In a market predominated by sellers, the report that Hong Kong had purchased Brazilian cotton in preference to Pakistan cotton induced a fresh wave of selling. The continued poor demand from abroad, and the news that earlier fears of damage to the crop was exaggerated aided the bearish sentiment. The N.T.R.G. January contract receded from Rs. 74.95 last week-end to Rs. 73.65. The March contract too declined from Rs. 73.90 to Rs. 72.90.

The first official estimate of cotton for the 1961-62 places the area under the crop at 3.27 million areas, an increase of 2.3 per cent over last year.

Futures trading in Alexandria continued to be suspended during the week under review also. Russia was by far the largest buyer of Egyptian cotton during the 1960-61 season, followed by the U.S. Yugoslavia, Poland, India, Rumania, Japan, People's China and East Germany, in that order, according to official figures just released. The most favoured cotton variety was Menufi, 3,053,501 kantars of which were exported during the season, as against 3,852,447 kantars in the previous season. Other varieties in demand in order of popularity were Karnak, Ashmouni, Giza 30, Giza 47 and Giza 45.

Precise figures of carryover stocks as on 1st September 1961 are not available at present. Stocks are, however, not expected to exceed those on the corresponding day of the previous season.

Cotton futures in Liverpool suffered a setback during the week. Values tended to recede in thin trading characterised by light hedge selling and scattered Commission House liquidation. Both the American and American type contracts declined. The Sudan cotton contract at Liverpool were, however, unchanged, thanks to steady Khartoum advices.

The following are the latest available quotations—in pence—per lb. from Liverpool:

American cotton one inch staple contract: October 24.30; December 24.75; March 25.20; May 25.60.

American cotton one inch staple contract: October 24.75; December 25.15; March 25.55; May 26.66.

Sudan: September, November, January 31.50.

New York cotton futures market ruled quiet during the week. Uncertainty about the crop and farm policies curbed large-scale activity. Values moved in a narrow groove in routine dealings. Prices showed little change over the week.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	5-9-61	29-8-61	22-8-61
New York Spot	35.25	35.20	35.15
New Orleans Spot ...	33.00	33.00	33.00
October	34.00	34.48	34.65
December	35.00	35.02	35.17

YARNS STEADY

(From Our Own Correspondent)

BOMBAY, *6th September*

The yarn market depicted a fully steady trend during the week under review. Although the volume of transactions put through was not large, prices were well maintained. This was due to hopes of enlarged demand from consuming centres in the next few weeks, as is usual after the monsoon. Even reports that the State Trading Corporation might offer for sale a further quality of yarn failed to have any effect. Nor were rumours of selling by some weavers in upcountry centres of any avail.

JP (40 x 1) October contract in the art silk yarn section met with good support and advanced by Rs. 62 to Rs. 3.196. December contract was firm at Rs. 3,168. Spot Cupressa (60 x 1) were done at Rs. 2.798, same as last week. No forward business was done in this yarn, in view of shortage of supplies. National Rayons 150 Bt. cones A grade spurted by 20 nP to Rs. 15.11. Among imported yarns, 150 Japan rallied from Rs. 2,205 to Rs. 2,231. But 120 Japan came in for selling and fell by Rs. 29 to Rs. 2,121.

Staple fibre yarn (40 x 1) October settlement picked up Rs. 5 to Rs. 829. December contract was fully maintained at Rs. 829. Spot Hinds hardened by 13 nP to Rs. 9.90. Citys gathered 4 nP to Rs. 10.16. Kohinoors were firm at Rs. 11.

In the cotton yarn section, ten counts Podars were unchanged at Rs. 17.37, as also Pralads at Rs. 16.75. Twenty counts New Greats strengthened by 25 nP to Rs. 21.50. Gokaks were steady at Rs. 23. Thirty counts New Greats, however, dropped 25 nP to Rs. 26.50. Forty counts Maduras put on 12 nP to Rs. 32.62, while Minaxis eased by 50 nP to Rs. 32.50. Sixty counts Finlays were unaltered at Rs. 62.87. Eighty counts Finlays were done at Rs. 81.62, same as last week. Moderns rose by 25 nP to Rs. 68.50.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	6-9-1961	30-8-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
Spot	2,798.00	2,798.00
40 x 1 JP		
October	3,196.00	3,134.00
120 Japan (per 100 kg.)	2,121.00	2,150.00
150 Japan (per 100 kg.)	2,231.00	2,205.00
Nat. Ray. 150 Bt. I	15.11	14.92
Staple fibre yarn (40 x 2)—		
October (per 90.72 kg.)	829.00	824.00
City (per kg.)	10.16	10.12
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.37	17.37
20s Gokak	23.00	23.00
30s New Great	26.50	26.75
40s Madura	32.62	32.50
60s Finlay	62.87	62.87

OILSEEDS DEPRESSED

(From Our Own Correspondent)

BOMBAY, *6th September*

There was a landslide in prices of oilseeds and oils during the week under review, thanks to heavy long liquidation. Groundnuts were particularly depressed. Saurashtra and Nizam interests were prominent sellers. Further crop reports from the major producing centres indicated possibility of a bumper crop in the 1961-62 season. Crushers and *vanaspati* manufacturers were reluctant to enter into any large fresh commitments in expectation of a further drop in prices. Another bearish factor was the decline in world prices of groundnut oil, following comfortable supply position in Nigeria and Argentina, large stocks held by both the U.K. and the Netherlands, and fears that Brazil would release a further quantity of groundnut oil for exports. There were, besides, rumours of a possible devaluation of Brazilian currency. Latest estimates of world groundnut crop (excluding China) for the 1960-61 season places the aggregate output at the record level of 10.3 million tons, representing an increase of 1.1 million tons over the previous season. Castorseed lost ground in the absence of fresh support. Shippers were not hopeful of any immediate revival of overseas buying of Indian castor oil. Apprehensions regarding heavy tenders against the maturing contracts, too, depressed the sentiment. Linseeds and cottonseeds were also subjected to heavy selling. Sesame suffered a sizable setback, the price touching a new low for the season.

Groundnut January 1962 contract was marked down by Rs. 6.87 to Rs. 207.75. Both Coromandels and Khandesh quality lost Re. 1.25 to Rs. 48. Nizam bold dropped a rupee to Rs. 48. Oil Railway receipts shed 15 nP to Rs. 20.35. Oil January 1962 contract receded by 72 nP to Rs. 16.90.

Castorseeds September 1961 contract fell by Rs. 4 to Rs. 165.12. March 1962 contract gave way from Rs. 167.87 to Rs. 164.12. Ready Madras declined by 37 nP to Rs 34. Oil B.S.S. closed lower at Rs. 15, as against Rs. 15.40 a week ago. Oil commercial softened by 25 nP to Rs. 13.50.

Linseed March 1962 contract decreased by Re. 1.12 to Rs. 36.25. September contract retreated from Rs. 39.31 to Rs. 38.25. Bold ready lost 38 nP to Rs. 38.12. Linseed oil shed 10 nP to Rs. 16.35.

Cottonseed September 1961 contract suffered a loss of Rs. 3 over the week, today's closing rate being Rs. 90.25. January 1962 contract receded by Re. 1.50 to Rs. 90. Whites decreased by 75 nP to Rs. 19.25. Both Berars and non-Whites declined from Rs. 19.20 to Rs. 18.75.

Sesame *bold* were hammered down from Rs. 310 to Rs. 270 (per 250 kgs.). Sesame oil lost a rupee to Rs. 22.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	6-9-1961	30-8-1961	23-8-1961
	Rs.	Rs.	Rs.
Groundnut *			
January 1962	207.75	214.62	218.50
Nizam bold	48.00	49.00	52.50
Coromandel ready	48.00	49.25	52.50

Kardi seed	24.50	25.00	25.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PEPPER MOVES NARROWLY

(Messrs. Parekh and Co.)

BOMBAY, *6th September*

Malabar black pepper ruled quiet but steady during the week, with prices fluctuating within a narrow groove, despite sizable purchases by New York. The week was short on account of intervening holidays in both India and the U.S. New York dealers preferred to take up all offers of Malabar for afloat to be shipped by the Non-Conference at prices ranging from $0.44 to $0.44½ before the long week-end holidays, as they wanted to remain covered against the political uncertainty on the Berlin issue.

Garbled at Cochin moved between Rs. 405 and Rs. 410 and ungarbled between Rs. 390 and Rs. 394. October delivery fluctuated within a narrow range of Rs. 4 per 100 kilos, the highest and the lowest being Rs. 421 and Rs. 417, respectively. December was quoted lower by Rs. 20 than October. Calicut was done at Rs. 385.

Though the market is fairly steady, it lacks any noticeable bull fervour, as the speculators who have already gone long do not want to commit further unless a new development takes place. New York is buying hand to mouth, despite deterioration in political situation on the Continent, as most of the dealers there do not expect any major development on the Berlin issue.

Spot in New York was steady at $0.46. After the labour holidays, generally considered to mark the beginning of demand from grinders, the dealers in New York expect good buying order from grinders who are not fully covered for their autumn requirements. But they do not want to excite the sellers. As such, they buy only after a higgle-haggle and at their prices.

Singapore is reported to be fairly steady with sellers reserved, as they expect some new development in Indonesia. There is neither short sales nor strong speculative long position anywhere in either the supplying or the consuming centres of the world. It, therefore, seems that the improvement in the prices of pepper will be very slow unless the political situation deteriorates further. Most of the bull speculators having suffered losses during the last year, they do not want to take a plunge unless they are sure of shortage of pepper in the world's production or that there is some bushfire before the end of the present cold war psychosis.

Ready pepper in Bombay is nominally quoted at Rs. 215 per 50 kilos.

TEA IRREGULAR

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *29th August*

Offering totalled 351,000 kilograms in Sale No. 35 held on Tuesday, 29th August, 1961. Quality from the Nilgiris was irregular although a useful selection was on offer. From other districts, the standard was about maintained. There was fair general demand. Highgrowns came in for keen competition at generally dearer rates and some attractive prices were realised for some of the brighter lines. Mediums and good mediums, although well supported, were irregular and generally lower upto 10 nP. Enquiry for low mediums and plainest sorts was more restricted and prices declined by 10 to 15 nP. Whole leaf grades came to a lower market. Legg-cut and C.T.C. types were neglected and there were withdrawals in the latter category.

The quotations (per kg.) were:

	1961	1960
	Rs.	Rs.
Low mediums	4.35/4.45	3.85/4.15
Mediums	4.45/4.55	4.25/4.40
Good mediums	4.50/5.50	4.50/4.90
Nilgiri	5.00	7.00

The average price realised in Sale No. 35 was Rs. 4.79 per kilo as against Rs. 4.75 in the previous week and Rs. 4.58 in the corresponding sale last year.

Dust Sale No. 35: Just over 100,000 kilograms were offered in Dust Sale No. 35 held on Thursday 31st August 1961. Demand was good but less general. Highgrowns were irregular but generally about steady. Low mediums met fair support but were easier by 10 and sometimes 15 nP per kilo whilst good mediums were up to 10 nP lower. Poorer descriptions and residuals were a weak feature registering a decline of 15 to 20 nP. C.T.C. and C.T.C. types sold well but followed the lower trend of the market.

The average price realised in Dust sale No. 35 was Rs. 4.78 per kilo as compared with Rs. 4.77 a week ago and Rs. 4.21 in the corresponding sale last year.

Export Quota: Some business has been transacted at 1½ nP per kilo.

Colombo: The market opened to strong demand with Uva teas selling at dearer rates following quality. Dimbulas declined by 10 to 20 cents per lb whilst mediums and lowgrowns were also somewhat easier.

London: North Indian and other growths: In Monday's North Indians sale demand was selective. Best C.T.C's were firm and tippy teas often dearer. The remainder, however, were irregular with the poorer types following a lower trend.

Ceylon and South Indian: In Tuesday's sale when 31,859 packages were on offer, 13,014 came from South India. Although receiving fair demand and market was generally easier for all types with many withdrawals.

As we go to Press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale 36*: 360,000 kilograms. Less general demand. Plain and low mediums declined irregularly about 10 nP. Mediums 15 to 20 nP easier. Highgrown brokens easier. Fannings fully firm. Prices eased further towards close."

FOODGRAINS QUIET

(From Our Own Correspondent)

HAPUR, *4th September*

Quietly depressed conditions prevailed in the foodgrains market during the week. Trading was poor due to inclement weather. Despite losses to *kharif* crops following heavy rains for more than a month, the overall food situation in the country was reported to be satisfactory, as there were heavy stocks with both the Centre and the State Governments, and heavy imports were expected to follow under previous commitments. Wheat at Hapur ruled quiet at Rs. 15 per maund for average quality, while wheat imported from Punjab was being sold lower at Rs. 14.25 per maund. Farm quality, however, was steady upto Rs. 16.25 per maund. Daily arrivals were poor at an average of 75 maunds, and stocks with the trade were put at 25,000 maunds.

Rice was depressed, as crop prospects were again reported to be bright and last year's rice crop was a bumper one. Demand was also slack, and week-end prices were: *Mainpuri sela* Rs. 22.37; *Ramajwayan sela* Rs. 23.50; *Raimunia sela* Rs. 25.00; *Basmati sela* Rs. 29.00 to Rs. 31.00; superior Rs. 35.00 to Rs. 38.00 per maund.

Gram drifted lower on easy Punjab advices and selling pressure from stockists, as local stocks were reported to be heavy at about 40,000 maunds. Barley and *bejhar* were stagnant in the absence of demand and some imports were reported from Punjab. New maize also eased by Re. 1 per maund, as quality reaching the market was still poor due to inclement weather. *Jowar* and *guwar* lay flat. Demand for them was negligible. *Methi* also drifted lower due to poor demand at higher price levels. Week-end prices were: Gram Punjab Rs. 13.50 to Rs. 13.75; inferior Rs. 13.37; barley Rs. 10.75 to Rs. 11.00; *bejhar* Rs. 10.25 to Rs. 11.25; *jowar* Rs. 11.50; *guwar* Rs. 14.25; maize Rs. 11.00 to Rs. 12.00; *bajra* Rs. 15.00; oats Rs. 12.00 and *methi* Rs. 26.00 per maund.

In the pulses section, peas was quiet. Despite heavy local stocks with trade at 74,000 maunds, stockists were reluctant sellers at prevailing prices. Week's offtake was only two wagonloads in the form of *dal*. *Arhar* was also stagnant, as demand was slack, and local stocks were put at 45,000 maunds. *Moong*, however, sought lower levels on good crop reports from producing areas of the South and *urd* was also depressed in sympathy. Week-end prices were (in rupees per maund) peas *dara* 11.00; *khatti* 11.25; farm 12.00; *khatti* 12.25; pens *dal* 12.75; *arhar dal* 15.50, gram *dal* 15.75; *urd* 21.00; *urd dal* 24.00; *moong* 20.00 to 21.00; *moong dal* 23.00 to 24.00; *masoor* 13.00 to 16.00; *dal* 16.00.

Fairly heavy rains for over a month and the consequent floods and water logging over wide area have not only damaged the *kharif* crop immensely but the preparation of land for *rabi* sowings has also been delayed.

THE HUMAN FACTOR IN ECONOMIC DEVELOPMENT—I

(Concluded from page 489)

with military discipline under the leadership of Mahatma Gandhi in the fight for freedom. The same habit continues under different conditions, inasmuch as it is the leadership of Pandit Jawaharlal Nehru, combined with the hero-worship for, as well as faith in his integrity and capacity by the people at large, that enables the Congress organisation to work as a unit, in spite of the diverse forces working in the opposite direction. The absence of a leader who can inspire such universal respect after him is already felt, with possibilities which cannot be easily foreseen.

During the interval, other anomalous situations are growing. For example, while we seem to be anxious to remove caste and other distinctions in the country, we have the paradox of having created new privileged classes, such as those of the politician and the administrator. The paradox is all the greater, when we notice that, whereas efforts are made to eliminate concentration of economic power in the hands of the capitalist, we have the spectacle of concentration of both political and economic power in the hands of this new privileged class.

The Capitalist

Among these privileged classes must also be included the capitalist. The policy of the Government has led to some increase in the number of capitalists, though it has not reduced their power or status. Consistently with the goal of a Socialistic Pattern of Society and the decentralisation of industries, more opportunities have been afforded to those few who are able to take advantage of the same. This was natural, because the limited number of capitalists that we had could not possibly cope with the new tasks of industrial development only by themselves. The privileged class of ruling princes and big landlords has disappeared; this has, however, been partly responsible for the addition to the number of the capitalist class. Though the capitalist group has thus increased in number to some extent, it has not been adversely affected by the policy of the Government to eliminate concentration of economic power. Legal, as well as administrative, measures have been taken to some extent in this direction. But the capitalist class has shown, in spite of loud complaints, remarkable capacity of adjustment to the changing political and economic climate in the country. The detached observer may find plenty of food for thought in the game between the politician and the capitalist for power and profit, which is a feature of the political and economic arena of the country.

The Neglected Elite

As against these privileged classes, we have the unfortunate group of the neglected elite of the population. The intelligentsia constitute the group of persons who are capable of doing better, but who are denied the opportunity to do so under the present state of affairs. In any well-ordered society, leadership is usually drawn from the intelligentsia of the population. The fact that we generally complain of the non-availability of suitable leadership in different walks of life shows that the intelligentsia is in a bad way, not able to penetrate the walls of the privileged classes. In this group may be included members of the teaching profession, the managerial and technical personnel in the growing industrial activity and such other persons. Research workers in different fields of knowledge or experts would also belong to this category. The national loss involved in the relatively lower status given to the elite of the population, particularly to the teachers, may be a good subject for statistical calculations.

The Under-privileged Classes: The Agriculturist —"the Favoured Hopeful"

Besides these two classes, we have the large mass of the people who may be broadly described as under-privileged. Among the under-privileged class, however, certain groups are discernible who seem to receive special treatment. For example, we have the large number of people who can be included under the category of the agriculturist. For various reasons, partly economic and partly political, the agriculturist may be described as "the favoured hopeful" of the present regime, who has, however, been so-far unable to utilise fully the new opportunities created for him. Perhaps, his numbers are too large to be affected in a short time by the new effort. Perhaps, his capacity to seize the opportunity is too low. He has begun to feel the change in the atmosphere; the extent to which he has benefited by the same is not known. He has not yet fully realised that he has to contribute his own efforts in order to reap the benefits of the new environment.

The Industrial Worker—"the Pampered Boy"

Another important group is that of the organised industrial worker whose numbers are on the increase under a system of rapid industrialisation. Though the industrial worker has received substantial benefits in recent times, the complaint is that he has not made adequate efforts to deserve the additional benefits. In other words, it is believed that his efficiency has not increased in proportion. The employer feels that it is possible to give increased advantages to the industrial worker, even greater than now, provided the worker is able to show greater efficiency in his work. Apart from other weaknesses in the situation, the desired improvement may not be possible so long as the industrial worker is "the pampered boy" of all political parties. The industrial worker is conscious that all political parties are anxious to woo him and are competing to shower benefits on him irrespective of his performance. In consequence, he is willing to bargain with the party which offers to help him most, irrespective of his efficiency.

The Frustrated Lower Middle Class

The third large group in the category of under-privileged class is what we may broadly describe as the lower middle class, mostly with fixed incomes such as the clerical population. Whereas in other countries, it is possible for a person who starts at the bottom in any field of work to rise to the top, if he shows capacity and merit, ordinarily it is not possible to do so under our conditions. The opportunities for members of this class to get recognition for their merit are so few that they have very little incentive to do better. At the same time, they are deprived of the ordinary cheers of life by rising prices, which make it necessary for them to have a hand to mouth existence with their limited income. The growing class of educated unemployed belongs to this category. The frustration experienced by the members of this class inevitably leads to discontent, which takes a variety of forms and in some cases which may lead to serious trouble.

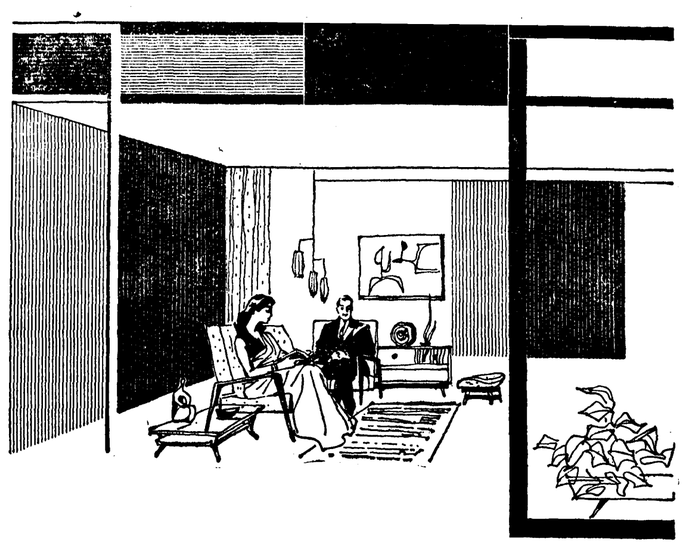
There is no intention to suggest that the new Indian Society can be divided into such clear cut divisions. Nor is there an intention to suggest that the general description given above with reference to each category is of universal application. What is suggested, however, is that a new social structure is coming into existence, which can be better understood by such a broad classification, each category having certain broad characteristics, distinguishable from those of others. There are bound to be grades in each category; besides, some persons may be difficult to place. In other words, it may be possible to improve upon this classification as well as the description of each category. Any effort in this direction by competent social scientists will help at a better understanding of the social change in the country.

(To be continued)

COMPUTER TO KEEP PENSION RECORDS

Britain's largest electronic computer system is to be used to keep the records of the Government's graduated pension scheme which came into operation earlier this year. It will be able to read information from magnetic tape at the rate of 20,000 letters or figures a second, record contributions, and produce an annual statement for every contributor, says the report for 1960 of the Ministry of Pensions and National Insurance.

Every year, the Ministry's central office at Newcastle receives some 30,000,000 pay-as-you-earn deduction cards giving details of graduated contributions paid. The cards will be microfilmed and the information transferred to punched cards and then to magnetised tape. This information will be sorted and credited to the account of each contributor by the computer.



Glass makes a distinct difference

Any home can be modernised—with glass. And not in appearance alone. Glass seals out moisture, noise and irritating dust and, fitted cleverly, filters through healthy, natural light. Glass is easily cleaned, too!

Versatile—glass has numerous other uses in the office, factory, school, hospital and store.

The finest and most durable in India, HPG sheet glass is tested for unvarying quality at every stage of manufacture.

Available in a wide variety of sizes and thicknesses.

GLASS—FOR MODERN LIVING

HINDUSTHAN-PILKINGTON GLASS WORKS LIMITED

IMPLEMENTING BRITAIN'S NEW ECONOMIC MEASURES

DETAILED PLANNING IS NOT BEING THOUGHT OF

By W. T. C. King
EDITOR OF "THE BANKER", LONDON

EVENTS of far-reaching significance in the economic sphere have followed thick and fast in Britain in recent weeks—normally a period of holiday, quiet alike for Ministers and civil servants and leaders of finance and industry.

Britain has taken the momentous decision that it will join the European Economic Community—the Common Market—if this can be done on acceptable terms. She has already lodged a formal application for admission in accordance with the Treaty of Rome, as the means of discovering, as rapidly as possible, what those terms may be, and whether they are consistent with Britain's obligations to the Commonwealth, to the European Free Trade Association ("the Seven"), and to domestic agriculture.

The International Monetary Fund (I.M.F.) has mounted its biggest-ever operation on Britain's behalf, and has thereby given international monetary experts throughout the Western world additional grounds for urgently studying the problem of extending the world's resources of international liquidity—a problem due to play a central part in the important discussions associated with the annual meeting of the Fund at Vienna this month.

On Britain's home front, action has been urgently proceeding in many sectors simultaneously to implement the measures and proposals announced by the Government at the end of July—and outlined in my last letter—to correct the disequilibrium in the balance of payments and in the domestic economy, and to try to maintain a better balance in the longer run. And just before the parliamentary recess, there was passed into law the long-awaited Act that gives to trusts a degree of freedom to invest beyond the range of Gilt-edged fixed-interest securities (to which trustees not specifically granted wider powers by the terms of their appointing trust deeds were otherwise confined)—an event that has produced some considerable movement of funds from Gilt-edged into equities, and then an even more interesting movement in the reverse direction, when investors decided that the short-run effects of the new freedom had probably been overdiscounted.

Massive Buttressing of Reserves

To put Britain's immediate ability to defend the pound beyond all possible doubt—given the drain of short-term funds that London has sustained this year on top of the strains on the current balance of payments—the request to I.M.F. was for a buttressing of the reserves to the extent of no less than $2,000 million. Of this, $1,500 million were granted by way of immediate drawing, rights in the prescribed currencies and $500 million in the form of a standby credit.

The extraordinary size of this operation emphasised the massive extent of the resources now available for the defence of sterling; the actual drawing, as distinct from the standby credit, will bring the central reserves of gold and convertible currencies of the Sterling Area from the end-July level of £876,000,000 to £1,411 million—a record amount.

The operation also drew attention, however, to the extent of the preceding strain, since the British authorities disclosed simultaneously that some £200,000,000 of these resources would be used within the ensuing month or two to repay short-term credits granted by European central banks under the so-called Basle agreement, reached after the disruption of the international exchange markets by the D-Mark revaluation last March. It has been generally understood in banking circles that this would leave some of the Basle credits still outstanding; and, as there had been some net repayment before the I.M.F. drawing was arranged, it became evident that the whole scale of support under these arrangements had been a good deal larger than had been previously supposed.

No other indication has been given officially, but the assumption in market circles now is that, after allowing for certain other special support for the reserves this year (e.g., in consequence of Australia's drawing on I.M.F.), the total strain on Britain's reserves position must have been more than twice as large as the decline shown in actual holdings over the six months since the movement started last February. This is a striking indication of the huge pressures to which an international reserve currency can be subjected; but, paradoxically, it is also, in some measure, an indication of the strength of the present technical position.

A considerable part of this movement reflected either the outflow of highly mobile funds (so that sterling is, to that extent, less vulnerable), or the running down of working balances, or the creation of "short positions" otherwise—operations that are now in the course of being reversed.

New Sense of Urgency

While sterling has been thus underpinned for the short-term, it is very clear that the period during which the resources from the I.M.F. are available (they have to be repaid within an outside limit of three to five years) must be used to stop, and then reverse, the underlying drain represented by the excess of Britain's net export of long-term capital in the form of Government grants and loans and private investment over net current earnings (which in the past two years have been negative).

Fortunately, the shock of the strains of recent months has brought a new sense of urgency in tackling the whole range of problems involved—first, in devising and implementing immediate correctives; secondly, in seeking new methods to stop the recurrence of these spasms of inflationary disequilibrium. The consequential actions witnessed in this past month, following the "little Budget" of end-July, have all of them tended to emphasise this urgency and the firmness with which unpalatable action is being taken.

This does not guarantee, of course, that the measures will succeed, or even that they will all be implemented according to plan, for some of them have aroused strong opposition, and some depend, in any case, on co-operation with the Government from both sides of industry, and on the sanction of due support from public opinion. The requisite political and psychological conditions cannot be taken for granted, but the response at some points has not been unpromising and the Government, for its part, has made a good start.

Inevitably, the main opposition has been aroused by the Government's plan to support its fiscal and monetary restraints upon rising demand by a "pause" in increases in personal income ("until productivity catches up") and by its actions to implement this policy in the public sector.

It has indicated to civil servants that, except for certain settlements already in train, no increase in salaries or wages will take effect until the Government ends the "pause"—not before a review of the economy expected to take place in February or March next year. It has also brought this policy officially to the notice of all wage-fixing bodies (notably including some concerned with the private sector) with which it has a formal relationship—for example, those whose recommendations for settlement are subject to the approval of a Minister.

For both these lines of action it has aroused the indignation of organised labour—not merely on the grounds that wage increases are to be restrained, but also, and perhaps especially, because of its interference with the accustomed machinery and procedures for wages settlement.

Salutary Jolt

The very fact that the Government has been prepared to risk this odium is, of course, a measure of its sense of the gravity of the situation and of its determination to administer a salutary jolt, partly as a means of getting short-term restraint of demand and consumption, and partly to drive home its case for a new approach to the longer-run problems.

The first broad indications of what the Government has in mind for this latter purpose have recently been given by the Chancellor of the Exchequer in separate meetings he has had with representatives of the principal employers' organisations on the one hand, and of the trade unions on the other. He hopes that both sides of industry will join with the Government in an effort to establish new and permanent machinery for forward planning, over periods of five or more years ahead, of what may be possible in growth of output considered in terms of all the principal interrelated quantities—investment, exports, Government spending, consumption, and so on—by relating the broad programme of the principal industries in the private sector to the programmes of the public sector.

It is emphasised that the aim will not be to formulate any rigid or overdetailed master plan, still less one that the Government would seek to impose by controls, but rather to give a clearer idea over a wide range of the economy of what may or may not be attainable when hopes or intentions are brought together and related to the resources likely to be available. Such a continuing exercise, it is suggested, would show up inconsistencies, provide the possibility of co-ordinated decisions, and probably ensure that many changes indicated as necessary would be made by voluntary agreement. Much more will, obviously, be heard of these ideas in the next few months, for the Government is anxious to get early agreement on the shape of this machinery and then to press on with its establishment.

Lending Standards Tightened

Meanwhile, the new measures are already beginning to bite in the financial sector. Some bankers claim that the squeeze on their liquidity for some time past, combined with the heavy sales of investments they have been obliged to make and the rise in the ratio of their advances to their deposits to nearly 50 per cent—the highest ratio for 30 years—would, in any case, have compelled them to have followed increasingly discriminating and conservative lending policies, even without the new call to make "special deposits" at the Bank of England and the new official "request" for such policies.

However that may be, lending standards have been tightened since end-July, especially towards applications for property development (which are likely to be rejected except in special circumstances) and from consumers. Credit lines from the banks to hire-purchase finance companies are to be cut by not less than one-fifth by end-January, and the companies have been asked not to try to support further expansion of their operations by seeking additional deposits from the public. Owing to the strains facing them as a result of their over-rapid expansion during the lending boom, those companies had already decided upon a tightening-up in their credit terms, notably by raising the minimum down payment on cars, and they have since also raised their maximum interest charges.

A significant contraction of business therefore seems likely. The "outside" and overseas banks in London and the accepting houses and insurance companies have been asked to follow principles in their lending similar to those requested from the clearing and Scottish banks.

DELHI LETTER

(Concluded from page 490)

revised estimate of 1959-60, production of rice rose by 2.7 million tons, wheat by 0.6 million tons, *jowar* 1.1 million tons, gram 0.7 million tons and *tur* 0.4 million tons. *Bajra*, however, fell by 0.4 million tons and *ragi* by 0.3 million tons. Of these, rice, wheat, *jowar* and *tur* touched record levels of output. Surprisingly enough, details of figures relating to total production of each individual food crop have, however, not been made available yet for both 1959-60 (partially revised) and 1960-61 crop years. Among the States which have contributed to the increase in foodgrains production are West Bengal, U.P., Bihar, the Punjab, Maharashtra and Madras.

The output of cash crops too, was generally higher than the previous anticipations for the 1960-61 season. Production of cotton is placed at 5.39 million bales, or an increase of 46.7 per cent over the partially revised estimate of 1959-60. This, of course, compares unfavourably with the second Plan target of 6.5 million bales. Sugarcane output touched a new high of 8.69 million tons (in terms of *gur*), which represents an increase of 13.3 per cent over the previous year, and compares well with the second Plan target of 7.8 million tons. The production of the five major oilseeds amounted to 6.53 million tons, an increase of 11 per cent over 1959-60. This, however, is still below the second Plan target of 7.6 million tons. While production of groundnut rose by 10.5 per cent and rape and mustard by 31.8 per cent, as compared with 1959-60, there was a decline in the output of sesamum, castorseed and linseed. A depressing feature was the decline in raw jute production by 12.5 per cent in 1960-61. This was mainly the result of unfavourable weather during the season. As the absolute figure of jute production either in the final estimate for 1960-61 or in the partially revised estimate for 1959-60 is not available, it is not possible to figure out the extent of actual shortfall as compared with the second Plan target for this fibre crop. The overall conclusion, however, is that, while commercial crops like cotton, jute and oilseeds had failed to reach their second Plan targets of production, foodgrain crops have generally come up to expectations.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent
Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2632 BOMBAY, 16th SEPTEMBER 1961 PRICE Rs. 2

IMPORT AND EXPORT POLICIES

A CERTAIN sombre background to the proceedings, at New Delhi this week, of the Import Advisory Council and the Export Promotion Advisory Council was provided as usual by the big gap between merchandise imports and exports. The gap, of course, was less big this time, for, with imports at Rs. 566 crores and exports at Rs. 376 crores in the first seven months (January to July) of 1961, the adverse balance of trade was only of the order of Rs. 190 crores, as compared with a deficit of Rs. 248 crores in the corresponding period of 1960 when imports stood at Rs. 595 crores and exports at Rs. 347 crores. The net improvement in the balance of trade picture was thus brought about by a fall in imports and a rise in exports, the relevant figure in either case being Rs. 29 crores. Figures available for the first eight months of 1961 showed a still greater increase (about Rs. 40 crores) in export earnings, as compared with the corresponding period of 1960. While the improvement indicated by the provisional figures of imports and exports may or may not be reflected in the final figures for the whole year, it was certainly suggestive, within limits, of a welcome uptrend in the field of exports. But, as against this improvement, there was the disquieting fact that the foreign assets held by the Reserve Bank of India, even after the latest borrowing from the International Monetary Fund, were now round Rs. 135 crores only. This fact, by itself, was quite sufficient to impart a sense of vigour and urgency to some of the ideas and suggestions canvassed at the meetings of the two Councils. Neither at the official nor at the non-official level was to be found any sense of complacency, for the import bill was still stupendous on account of the high level of demand for industrial raw materials and components, and capital equipment, not to speak of the Defence needs.

Mr. K. C. Reddy, Union Minister for Commerce and Industry, while inaugurating the Import Advisory Council's meeting, was, therefore, forthright on some points. He did not mince words when he pointed out that India would have to depend *mainly* on current export earnings for financing maintenance imports (that is, imports of industrial raw materials, spares and components for maintaining current production), inasmuch as a *substantial* portion of the promised foreign aid would be tied to specific projects. Since larger 'untied' credits—substantially larger than what the United States and some other countries have proposed to provide—are not possible partly because of the anxiety of the aid-giving countries to be identified with new development projects and partly because of our own Government's anxiety to have assured foreign finances for completing such projects to schedule, Mr. Reddy did well to drive home the twin point that Indian industries should display greater initiative and enterprise in exploring fresh fields for export and that they should patronise, to a greater extent, domestic sources for the supply of industrial raw materials, components and equipment. This general advice was unexceptionable for its basic importance, for it presupposed a psychological change on the part of Indian business men in two ways. First, they should restrain their own tendency to think in terms of catering to a seller's market within the country as an easier and more profitable alternative to the patient process of exploring fresh foreign markets and establishing a network of agencies abroad. Secondly, they should discard some of their 'bias' in favour of imported goods (whether industrial raw materials or equipment and machinery) on the ground of their real or supposed better quality. Since under conditions of protection—which is rarely conducive to high quality of production in the early stages of industrialisation—most industries are certainly not producing goods of the same high quality as in other advanced countries, some of them requiring manufactured products would not be justified in refusing to patronise some others on the ground that the latter are not producing high quality goods. For, then, it would be a case of pot calling the kettle black.

While it is true that materials substitution has come about in several industries in recent years and the Development Wing can claim some credit for it, it is also obvious that, in the context of diversified industrialisation, there should be greater scope for such substitution. Unless replacement of imported contents by indigenous raw materials or substitutes takes place on a far larger scale over the third Plan period, an increase of as much as Rs. 200 crores in the present annual bill (about Rs. 600 crores) on account of maintenance imports would be inevitable if existing industrial capacity is to be more fully utilised. If the Ramaswami Mudaliar Committee on import and export policy is able to suggest practical ways and means of meeting the additional requirements of industrial raw materials and components partly through additional export earnings and partly through materials substitution, it will be a significant contribution to the evolution of an integrated trade policy. Of course, 'untied' credits, howsoever small, may also be expected to ease the situation to some extent. But it would be too much to expect any relief from cutting down 'development' imports like capital goods and machinery. The debate at the meeting of the Council pertaining to development imports *versus* maintenance imports seems to have overlooked the point that imports of capital goods are already at a bare minimum level (Rs. 153 crores as of 1960-61) and imports of industrial goods at a far higher level (Rs. 669 crores, again as of 1960-61). The scope for reducing development imports further so as to increase maintenance imports correspondingly would appear to be extremely limited.

In the immediate future, that is, in the coming licensing period (October 1961 to March 1962) the situation will, therefore, continue to be tight. While as many as 70 suggestions have been made to the Import Advisory Council for liberalisation of import policy in respect of a wide range of industrial raw materials, components and intermediate products (such as steel pipes and tubes, bolts and nuts, machine screws, non-ferrous metals, ball bearings, spare parts of diesel engines, component parts of textile machinery and printing machines, printing and packing papers, piston assembly and rings, motor vehicle parts, garage tools, hosiery needles and water meters), it is difficult to believe that some of these products cannot be obtained locally. In any case, since the Minister has held out no immediate hope of import liberalisation all along the line, some of the industries requiring particular maintenance imports might have to make a more diligent search for indigenous materials and substitutes. The suggestions made to the Council for restricting or banning the imports of some industrial raw materials and intermediates show, on the other hand, that the scope for materials substitution is steadily increasing. As hundreds of different products in different specifications are involved, there will, of course, be continuing need to import many of them.

It is here that the powers-that-be can be more helpful even within the limits set by foreign exchange availability for maintenance imports. They can, for instance, extend the validity of actual user licences to one year from the present six months. There are some practical reasons that would justify this procedural change. When the validity of licences is only six months, the manufacturers have to import the raw materials and accessories required by them in bulk, with the result that not only a considerable amount of their capital is locked up but the country also suffers, as release of foreign exchange, which can easily be postponed, has to be made earlier. The limited period of validity, it is further stated, makes it difficult for the manufacturers to obtain their raw materials and accessories at a reasonable price from the foreign suppliers. Again, in the case of some of the machinery spares, the foreign suppliers start manufacturing them only after a firm order has been placed for the same, and it is not possible for them to supply the goods within the period of six months. Above all, there is need for the timely issue of actual user licences. The suggestion made in this connection is that the essentiality certificates should be issued to the manufacturers within two months of the expiry of the last date for submission of applications to the sponsoring authority and the licences should be issued to them by the licensing authority within one month of the receipt of the essentiality certificates from the sponsoring authority. These procedural changes in respect of actual user licences seem to be necessary, because such licences have been much bigger in terms of aggregate value than those of established importers. The more recent figures, for instance,

WEEK'S STOCK EXCHANGE TREND	576

show that, for the licensing period October 1960–March 1961, the actual user licences issued by the C.C.I. & E. Organisation had an aggregate value of about Rs. 139 crores, as compared with the aggregate of Rs. 22 crores in the case of licences to established importers. It is to be hoped that the suggested procedural changes will be introduced for the coming licensing period in the interests of maintaining industrial production for domestic consumption as well as for export in a number of lines.

But more exports cannot be taken for granted even in a situation of greater domestic production or of restraint on domestic consumption, for export promotion calls for sustained energetic measures. Since such measures, involving incentives, tax concessions and the like, would have to be initiated by the Government, it is a very promising development that official policies have just taken on a more vigorous and urgent aspect in the context of the generally expected setback to India's exports to Western Europe in the event of Britain's entry into the Common Market. Mr. K. C. Reddy's address to the Export Promotion Advisory Council was thus notable for the note of determination in the Government's proposals for export promotion. The measures he outlined were quite impressive. First, a Committee of Cabinet Committee on Exports had recently been set up and this Committee would deal with all problems in the field of exports quickly and take decisions promptly. Secondly, the Government would help non-official organisations in the matter of developing an organisation for after-sales service. Thirdly, the Government had decided to implement the recommendations of the *ad hoc* committee (Chairman: Dr. Lal C. Verman) pertaining to quality control and pre-shipment inspection of export goods. The imposition of compulsory quality control on specific export goods would go a long way in sustaining and even enhancing the reputation of Indian goods in foreign markets. Fourthly, the Government was also actively considering the recommendations of the Kapoor Committee pertaining to the provision of credit facilities to exporters. This Committee, it may be recalled, had suggested the extension of long-term credit for capital goods and some engineering goods, the granting of advances against export bills, and modification of the working of the Finance Corporations so as to enable them to grant export credits for medium-term exports. Fifthly, the Government had made strong representations in regard to the recent announcement by the Conference Lines of their intention to increase the freight from India to other countries by 10 per cent. Sixthly, there was the likelihood of a scheme being launched for the grant of long-term loans to tea estates for replanting old and worn-out areas. Seventhly, the Government had decided to invite competitive tenders for the export of groundnut oil with a view to ensuring that larger quantities of it were exported.

The Government has, however, not taken any definite decision on the proposal to compel industries to export a certain percentage of their production. The scheme of compulsory exports, according to the Minister, would be introduced only with the consent of industries. Whether the scheme could safely cover all industries was not clarified by the Minister. A rather controversial proposal of this kind would certainly run up against practical difficulties. Mr. S. P. Jain's suggestion that the scheme should be introduced in a few selected industries in the first instance represented a compromise which might ultimately find favour with the Government. The feasibility of giving income-tax rebate for export earnings has also been under the consideration of an official committee under the chairmanship of a Joint Secretary of the Ministry of Finance. Obviously, the Government will be slow to take decisions on the question of tax concessions, for they will mean some loss of revenue. Perhaps, it will not mind losing some revenue, if industries also are willing to bear some loss on account of exports to highly competitive markets. Whether a higher development rebate and a longer tax holiday are possible in the case of export industries may well be considered in this connection. Whatever tax concessions are finally decided upon, they would have to be sufficiently generous to export industries. But, at the same time, they should not be so excessively generous as to breed inefficiency in the utilisation of productive resources. A balanced approach to tax concessions is, therefore, called for. Above all, the efficiency of Indian ports is called for, in order to enable Indian shipping to quote competitive rates. If the steel plants and fertiliser factories could be worked to their full capacity at an early date, the shortage of foreign exchange can be considerably reduced.

DEFEATISM AMONG TEA PLANTERS

APPROPRIATELY enough, Mr. H. C. Kothari, the retiring President of the United Planters' Association of Southern India, gave great prominence, in his address at the sixty-eighth annual meeting of the Association held at Coonoor on the 11th inst., to the production and export targets for tea in the third Plan. Tea is the biggest of all the plantation products of India and the main problem confronting it today pertains to the ways and means of reaching the goals laid down in the Plan. But, unfortunately, Mr. Kothari's approach was uninspiring. Indeed, it will be no exaggeration to say that it was characterised by defeatism and contradiction. By devoting a good part of his speech to prove the contention of the planters that the targets were too high to be feasible, Mr. Kothari missed the opportunity of impressing upon the Government the urgent need for creating the appropriate climate and conditions for hitting the targets. On the contrary, he gave an opportunity to the Union Minister who graced the occasion, namely, Mr. S. K. Patil, to defend the targets, an action of no avail to planters.

Targets in the case of an agricultural crop like tea reflect the Government's desires and intentions and are more flexible than industrial targets, as actual performance is governed to a considerable extent by the behaviour of Dame Nature. The fixation of targets at levels which the planters consider as too high reflects the great significance the Government attaches to tea as a foreign exchange earner and a refreshing beverage within the reach of common man. This attitude, which is in refreshing contrast to the one displayed in the first and second Plans, should have been welcomed by the planters. Instead of trying to prove, even after the finalisation of third Plan, that the targets were too high on imaginary fears of overproduction in the world and of heavy competition from other countries, the proper thing to do would be to think of ways and means of raising production to levels that would avoid unpleasant restrictions on domestic consumption and enable the country to earn as much foreign exchange as possible. The fact that the country has now reached a stage where the Government has come to feel that it is necessary to restrain domestic consumption of tea in order to secure sufficient quantities for export does not redound to the credit of tea planters. It shows that they were not far-sighted enough; and this is not surprising, because, in the past 10 years, they were always haunted by fear of surpluses and slumps. Virtually, not a year passed without some leader or other of the planters wanting to renew the International Tea Agreement for regulating tea production. As a result of this defeatist mentality, it is only India's competitors in tea that have benefited. It is obvious that any restriction or restraint which India imposes on itself in regard to tea provides a direct encouragement to its competitors to produce more and sell more tea. In the last 10 years, the world trade in tea has gone up, but India's share in it has declined. This trend will continue, so long as India does not follow aggressive production and export policies.

In the Draft Outline of the third Plan, the targets for production and export of tea had been fixed at 850 million lbs. and 550 million lbs., evidently on the basis of the recommendations of the Working Group appointed by the Planning Commission. The Ministry of Commerce and Industry strongly felt that these were on the low side in relation to the swift pace of increase in domestic demand and the need for exporting more tea in order to earn foreign exchange. Apparently, its views must have prevailed with the Planning Commission when the Plan was finalised, for the production target has been raised to 900 million lbs. and so also the export target to 610 million lbs. The grounds on which Mr. Kothari considers these targets as being unduly high are as follows:

1. The production target of 900 million lbs. means an average increase of about 40 million lbs. a year over the next five years. This rate of increase compares with an annual average of only 12 million lbs. since 1954. Considering the relatively small increase in planted acreages in recent years, new planting offers little prospect of adding greatly to production.

2. India has several powerful competitors in world markets. It is a matter for serious concern that, in spite of our best efforts, we have been yielding ground to our rivals. There is no real advantage in planning for a high production when the country is losing in world market at current production levels.

3. The Food and Agricultural Organisation of the United Nations has, in its report on "World Tea Trends and Prospects," envisaged a surplus of 100 to 110 million lbs. by 1965.

The first reason is rather misleading. One does not know why Mr. Kothari took 1954 as the base for comparison. Between 1953 and 1954 India's production increased by very nearly 100 million lbs. to 715 million lbs., a figure which is only 195 million short of the target of 900 million lbs. Since 1958, the area under tea has gone up to some extent and more area of replanted tea must be reaching production stage. In other words, the average rate of increase in production in the past was higher than that suggested by Mr. Kothari, while the leeway to be made up, under ideal weather conditions, is less than 200 million lbs. The issue whether India can raise its production to 900 million lbs. per annum by 1965 was examined in great detail in these columns as early as on 12th March 1960. A reference to that article will show that there is plenty of scope for raising the yield per acre of the medium-sized gardens of, say, 300 to 500 acres each, let alone gardens of smaller size. An interesting point to be noted is that even now yields of individual estates vary from below 500 lbs. to over 1,500 lbs. per acre of matured tea. Any substantial progress in the yield levels of estates above 300 acres to those already achieved by the most efficiently run among them would itself easily yield an additional production of 100 million lbs. An analysis of new plantings and replantings since 1950-51 reveals that about 18,300 acres of new planting, some 66,300 acres of replanting and about 8,000 acres of replacements would reach varying stages of maturity during the third Plan period. All these new plantings, replantings, etc., have been done with new selections capable of yielding more tea per acre. Calculations made by an expert show that a minimum increase through stimulation of old stands, coupled with crops from the new bushes planted during the past eight years, will easily yield a crop of not less than 900 million lbs. per annum in the next five years. Thus, given confidence and earnest attempts by planters to raise the yield per acre, the production target of 900 million lbs. is not unattainable. The Government must, of course, play its part. It has to assist the industry by providing financial assistance in the form of low interest-bearing loans, replanting subsidies and other appropriate fiscal reliefs, and by enabling it to secure sufficient fertilisers, as well as plant and machinery to expand the capacity of tea factories.

The grave doubts about India's ability to attain the export target of 610 million lbs. and the consequent fear of a huge surplus pressing on domestic markets, which are reflected in the second and third reasons mentioned above, are more imaginary than real. The domestic consumption of tea has been expanding at the average rate of 14 to 15 million lbs. per annum in the past three years. In 1960-61, it was of the order of 250 million lbs. Even at the present rate of growth—in actual fact, it may turn out to be more—the domestic demand will easily be of the order of 310 to 325 million lbs. five years hence, leaving a surplus of 575 to 590 million lbs. for export, assuming that the production target is reached. It should not be difficult for tea industry, which had exported 508 million lbs. in 1958, to ship this entire surplus in 1965-66. If the Government and the industry were to put their heads together and work in close partnership and if labour were to extend a helping hand for improving the quality of tea and the production per worker, it should surely be possible for raising the competitive capacity of Indian tea. It is not correct to say, as Mr. Kothari did, that everything has been done by this country to promote exports of tea. The export duty on tea, for instance, is still sizable and can be reduced with advantage. If more tea per acre is produced, as, indeed, it could be in many of the estates, the cost of production per lb. will also go down. There is a lot of room for improvement in export promotion drives and, if they are to be a success, they must be backed by plentiful supplies at home. The F.A.O.'s forecast approvingly quoted by Mr. Kothari and other planters, may well turn out to be as defective as the predictions of some of the planters did in the past. It is quite conceivable that consumption of tea in Asia (including China) and Africa, not to mention Russia and the East European countries, may expand at a much faster pace than was assumed by the F.A.O. The consumption growth in recent years in some of these countries, including India, fully supports this statement. It is high time Indian planters gave up their age-old habit of looking at only the dark side of the picture, ignoring or understressing the bright side. Such an outlook is not conducive to success in the battle for more exports.

MARKET GOSSIP

A SLIGHT improvement in the sentiment of share markets is discernible. Credit for this must be given to the Union Finance Minister, who has ended the uncertainty about imposition of fresh restraints on speculation. He has left the whole matter to the good sense of the presidents of stock exchanges. Speculators have been quick in realising that none of the so-called stern measures talked about for the last four months will be introduced, at any rate not for some months to come. The bears have, therefore, hurried to book their profits and the bulls feel that they can re-enter the market without the fear of being called upon to pay burdensome margins. Since the exemption limits to whatever modest margins that are already in force will continue, they can, whenever the climate turns out to be in their favour, play in the ring to their hearts' content by operating through a large number of brokers who are ready to oblige them; some of the brokers are prepared to do business for them even on a consolidated fee, as though they are their paid servants. As margins are payable only on net positions and there is nothing to prevent their evasion through collusion, any member of the stock exchange who does not want to pay a margin at all, even when his real position warrants it, can easily manage to do so. Thus, the flood gates continue to remain open and there is no hindrance to the tidal wave sweeping through the markets again.

So far, of course, there are no signs of re-emergence of a strong bull market of the type witnessed in the summer months and whatever improvement there has been during the past one week is chiefly due to bear-covering and bargain hunting by investors. There are, however, some exceptions so far as individual scrips are concerned, as, for instance, Hindustan Motors, Sirpur Paper, Dunlop Rubber* and Indian Cable. There are reports of inspired buying in these scrips on expectations of something quick happening. The general feeling in market circles is that, if the bull momentum does not gather strength in the next few days, the trend will again be quiet.

Committee On Stock Exchanges

The outcome of the Union Finance Minister's meeting with the presidents of seven stock exchanges in India—Bombay, Calcutta, Madras, Ahmedabad, Delhi, Indore, Hyderabad—is more or less on lines anticipated in these columns last week. Mr. Morarji Desai gave a short speech to the gathering, which included, besides the stock exchange presidents, the Reserve Bank Governor-designate Mr. P. C. Bhattacharyya, Reserve Bank Deputy Governor Mr. M. V. Rangachari, L.I.C. Chairman Mr. P. A. Gopalkrishnan, Mr. A. Bakshi, Joint Secretary, Ministry of Finance, and Mr. P. S. Nadkarni, Director of Stock Exchanges, Ministry of Finance. The following is the official summary of the Finance Minister's speech:

"He (Mr. Morarji Desai) said the share market in India was an important link in the economic structure of the country and had a useful role to play. But there were certain forces which led to unhealthy speculation in the market resulting in wide fluctuations in share prices. He also spoke of the difficulties caused by kerb trading and asked the members present to see how this could be stopped. The Finance Minister said that the interests of real investors should not suffer. The Government wanted more and more people to invest both in old and new shares and this was possible only in a healthy climate.

"The Finance Minister called for the utmost co-ordination on the part of the various stock exchanges in the country and said that their procedure should be such that they did not work in water-tight compartments. Government would be glad to advise the Stock Exchanges whenever its help was sought. Government had no intention of interfering with the day-to-day working of the Exchanges, for they were autonomous bodies. There would be no legislation, he said, unless it became necessary. If any action by Government became necessary, he would like to have prior consultations with them."

What happened after the Minister's speech is described in the Press Note thus:

"At his (the Minister's) suggestion, the presidents of the seven stock exchanges formed themselves into a committee which will meet periodically to consider problems relating to unhealthy speculation in the share markets and evolve solutions for the development of sound share market operations. The Committee will particularly go into the question of kerb trading, the need for adequate margins and evolving a procedure which could guide the activities of all the stock exchanges and thus ensure greater co-operation among them. At the suggestion of the Presidents who have formed the committee, Mr. P. S. Nadkarni, Deputy Secretary, Ministry of Finance, in charge of Stock Exchange Division in Bombay, will be the convenor of the Committee."

The first meeting of the Committee—it will be noted that no name has yet been given to it—is expected to be held in Bombay early next month. The immediate tangible outcome of last week-end meeting will be more revenue for either the Indian Airlines Corporation or the railways or both, an increase in the consumption of petrol by a few gallons and a quicker wear and tear of some half a dozen cars. It remains to be seen whether the utilisation of all these scarce resources will be worthwhile.

It is now clear that (a) the Government does not want to get involved in the control of stock exchanges; (b) despite the heavy speculation in the past months and the failure of stock exchange authorities to check it, the Government has sufficient reason to respect the autonomy of stock exchanges and allow the stock exchange presidents themselves to evolve measures for restraining speculation; (c) the Government itself believes in the theory that a boom in stock exchanges is necessary for enabling new companies and old companies to raise capital; and (d), for the present at any rate, the Government has no intention of establishing a powerful machinery for keeping a close watch over the capital markets and taking timely steps to prevent manipulations by interested parties both within and outside the stock exchanges. In fine, this is a policy of drift and drift.

At the same time, the Finance Minister's short speech implies that the presidents of stock exchanges have so far not done all that they should have to minimise unhealthy speculation and that they must take additional measures to safeguard the interests of investors. Here is one more chance for the stock exchange authorities to set their house in order and to safeguard their autonomy. Let us wait and see what they do. Will they merely whitewash and add a few more frills or effect some fundamental reforms, such as, introduction of minimum brokerage, enforcement of automatic margins, abolition of free limits, and prompt publication of vital statistical information on trading in stock exchanges?

Gwalior Rayon—Hind Cycles

The reported decision of Birla Brothers to merge the Hind Cycles, a losing concern, with the Gwalior Rayon, a prosperous concern, both of which are under their management with complete controlling interest in their hands, has come as an unpleasant shock to market circles. If Birlas have a good case for taking this unusual step, they have spoiled it by leaking the news to the Press. No official press note has been issued, nor a press conference held, so that the full story is not known. From what has appeared so far in the daily Press, investors in Gwalior Rayon are unable to see the advantages they will get by the take-over of Hind Cycles. The explanation that the factory of Hind Cycles will be useful for making rayon machinery for which a licence has been secured by the management is not convincing. In fact, one shareholder of Gwalior Rayon went so far as to say that the management could have easily got the licence for manufacturing rayon machinery transferred to Hind Cycles instead of foisting on him the lame duck. He said: "If Birlas want to help the shareholders of Hind Cycles, I have no objection to their handing over the benefits of rayon machinery project to Hind Cycles. But I do object to their move to give 2.5 shares of Gwalior Rayon, valued at Rs. 125 at the current market price, for every share of Hind Cycles (face value: Rs. 100) which was standing at a discount of 10 per cent before the news had trickled to the market." He went on to express the hope that the Department of Company Law Administration will promptly look into this move and refuse its consent before it is too late. He recalled, in this connection, that the proposal of Birlas to merge Sirsilk with Sirpur Paper did not ultimately go through, presumably because the Department of Company Law objected to it.

It would appear that not all the shareholders of Hind Cycles also are happy over the proposed move. They are intrigued to find that, whereas the other two big producers of bicycles have been able to work satisfactorily, their own company—a pioneer in the field—should have been losing money during the last five years and unable to pay even a small dividend. They feel that, if Birlas are unable to put their company on the feet again, they could hand it over to more competent hands by inviting tenders. That way, they think, they can get a better deal than the 2.5 shares of Gwalior Rayon now proposed. Apparently, their assumption is that the real break-up value of their shares is much higher than Rs. 125.

In view of the acute sense of dissatisfaction that prevails among the shareholders of at least Gwalior Rayon, if not both the companies, and the doubts that are raised in share market circles, Birlas will do well to issue a statement, showing how their decision to merge the two companies will be to the benefit of their shareholders.

State Loans

The borrowing programmes of all the thirteen States, which entered the capital market last week, have been successfully completed. As against the total issue of Rs. 80 crores, the actual amount offered aggregated Rs. 91.84 crores, of which Rs. 86.89 crores represented cash and Rs. 4.95 crores conversions. The loans of Orissa, Bihar, U.P. and Andhra were oversubscribed and those of the remaining States fully subscribed. Wherever subscriptions were large enough to permit the exercising of option to retain excess subscription to the tune of 10 per cent of the amount invited, the States did so—an indication of their hunger for capital. Consequently, the total amount accepted was higher than the amount invited by Rs. 5 crores. The net borrowings, after deducting Rs. 12.96 crores on account of the repayment of maturing loans of the States of Kerala, Maharashtra, Madras, U.P. and Mysore, are of the order of Rs. 73.93 crores.

TABLE I—*State Loans*

(Amount in crores of rupees)

Year	No. of States	Amount of issues	Amount subscribed	Amount accepted	
				Cash	Conversion
1956 ..	15	64.00	74.23	65.53	2.18
1957 ..	2	9.00	12.52	8.58	1.93
1958 ..	11	50.00	65.34	49.18	5.24
1959 ..	13	61.50	100.35	60.85	0.57
1960 ..	12	75.00	85.33	73.26	6.44
1961 ..	13	80.00	91.84	80.05	4.95

TABLE II—*Subscription to State Loans*

(In crores of rupees)

Name of State	Amount invited	Amount offered	Amount accepted		Net borrowing
			In cash	In conversion	
Andhra	10.00	12.13	11.00	..	11.00
Bihar	3.00	4.09	3.30	..	3.30
Gujarat	6.00	6.07	6.07	..	6.07
Kerala	4.00	4.04	3.98	0.06	3.74
Madhya Pradesh ..	5.00	5.04	5.04	..	5.04
Madras	10.00	10.36	8.42	1.94	6.54
Maharashtra ..	10.00	10.77	10.75	0.02	10.09
Mysore	7.00	7.48	5.82	1.66	1.48
Orissa	5.00	7.80	5.50	..	5.50
Punjab	3.00	3.13	3.13	..	3.13
Rajasthan	4.00	4.45	4.40	..	4.40
Uttar Pradesh ..	6.00	9.18	5.33	1.27	4.44
West Bengal ..	7.00	7.31	7.31	..	7.31
Total ..	80.00	91.85	80.05	4.95	72.04

The States of Kerala, Madras, Maharashtra, Mysore and U.P. have repaid Rs. 80 lakhs, Rs. 3.82 crores, Rs. 68 lakhs, Rs. 6 crores [illegible] during the current year.

The above achievement compares quite favourably with the success of the borrowing programmes of States during the past five years covering the second Plan period, as will be seen from Table I on this page, showing the composite picture. The details of response to this year's offer of individual States are indicated in Table II. It will be seen from Table I that, in only one year—1959-60—were the States able to borrow more than they have done this year.

Considering that the target for net borrowing by States in the third Plan period is Rs. 320 crores, the States have fared well in the first year of that Plan. At Rs. 72.04 crores, the net borrowings this year are well above the average of Rs. 65 crores per annum. This augurs well for the fulfilment of the targets laid down in the States section of the third Plan. Only, it is to be hoped that the success of the borrowing programme will not lead to a slackening of the efforts of State Governments to raise additional resources through taxation. It must be remembered that the States have to raise a much larger amount by way of taxation than they did in the second Plan period.

The success of State loans this year must be attributed to (a) appropriate timing—conditions in the money market were quite favourable when the lists opened—(b) more favourable terms to the lender, (c) energetic steps to publicise the terms of loans throughout the country, and (d) intensive canvassing, an art in the practice of which most State Governments have now acquired considerable proficiency.

Prof. Clark On Taxing Agriculture

Prof. Colin Clark, the well-known British economist, suggested at New Delhi this week that land tax in India should be raised as much as was politically feasible to induce farmers to produce more. A high rate of tax on agricultural land, according to him, would make the farmer produce more. The only tax that had no adverse effect was, in his opinion, the tax on land and mines. Hence his advice to all other countries of Asia was the same, namely, tax agricultural land as much as possible.

The learned professor cited example of Japan to prove that tax on agricultural land had no disincentive effect. He pointed out that land tax in Japan was very high. Still the yield per acre was four times that in India. This indicated that higher tax on land did not result in a fall in production. On the other hand, as more tax had to be paid on the same land, the farmers were forced to exploit their lands in full, with the use of better manures and improved agricultural practices, so that sufficient profit-margin was left after paying the taxes, to support them and their family.

The suggestion is bound to prove controversial. However sound in theory, raising of land tax to the maximum extent is certain to be politically unpopular. And in a democratic country like India, where agriculture is the major occupation and the largest source of employment, the political implication of high land taxes are too inconvenient to be overlooked by any political party which aspires to get itself elected to rule the country. Even where there is a clear case for bringing down prices of agricultural commodities, which had sky-rocketed in the last season on the strength of scarcity, the present Government is very reluctant to act. But there is no doubt that Prof. Clark's argument will strengthen the hands of those who feel that there is much scope for raising the tax on land cultivated by individuals, a tax which has remained practically unchanged all these years, despite the sharp rise in prices of commercial and food crops.

Britain's First Export Centre

No visitor to London will fail to notice a neon sign up above the Piccadilly Circus which warns ominously: "Either exports go up, or Britain goes down." This sign, which instantly calls to one's mind the slogan 'export or perish" coined in this country, underlines the crucial need of British economy today. In fact, in one respect at least Britain and India face the same predicament: both desperately need to export more. It is well known that concern for export is a powerful factor in Britain's growing desire for direct partnership with the European Economic Community, even at the risk of loosening its ties with the Commonwealth countries to a considerable extent.

A nation of shrewd, pragmatists, Britain's anxiety for export does not stop with coining slogans and displaying them prominently. It is backed by a vigorous, dynamic drive for translating the slogan into concrete reality. To export more is regarded as a national need and a common challenge. Managements and labour and the general public are as much concerned with it as is the Government.

As part of the employers' contribution to the export effort, the Sundridge Park Management Centre (near Kent) has established an Export Centre, the first of its kind in the U.K., to help the country's export drive by providing comprehensive training facilities for managing directors, export directors and senior sales executives concerned with export business. The Centre, which is being run on a no-profit basis, was officially opened on the 7th inst. Speaking at the inauguration of the Centre, Sir Richard Powell, Permanent Secretary of the Board of Trade, said that the British export potential was very great, provided the cost of production was brought down and the design and technique of British products were bettered. The knowledge imparted by the training at the Centre would, according to him, be valuable in achieving these objectives. The training course of the Centre covers selection of markets, market surveys, control of overseas sales force, advertising, etc. Special attention will be paid to Common Market trading and selling to Communist countries.

Although the obstacles in the way of exporting more is far more formidable in the case of India than in Britain, this country too can take a leaf from the experience of Britain. Export promotion in India calls for more vigorous and imaginative sales effort than has hitherto been made. Could not some such training be offered to senior executives in export business in this country too?

*At the time of going to press comes the report that the Directors of the Company have decided to issue, subject to Government's sanction, one bonus share for every two shares.

SMART RALLY IN EQUITIES

TEXTILES AND STEELS WELL FAVOURED

(From Our Own Correspondents)

BOMBAY, *13th September*

EQUITIES staged a smart rally during the week under review. The statement clarifying the Government's policy regarding stock market regulations which the Union Finance Minister, Mr. Morarji Desai made at a meeting of the Government representatives and the presidents of the Stock Exchanges held at Bombay on Saturday the 9th inst, removed the fears of official intervention to curb speculation. Mr. Desai stated that the Government of India did not intend to interfere with the day-to-day working of the stock exchanges. A Committee of the presidents of the Exchanges was constituted at the meeting to frame regulations for checking unhealthy speculation and violent fluctuations in prices. Reflecting the satisfaction of operators over Mr. Desai's remarks, equities showed a distinctly hardening tendency in kerb trading on Monday and this gathered further momentum yesterday and today. Further, the *badla* charges at the last settlement were in line with market expectations, the bulls having to pay only normal charges. The note of pessimism with regard to immediate prospects for steel industry struck by Mr. J. R. D. Tata at the annual meeting of the T.I.S.Co. on Thursday last week and the removal of margins (payable by bears) on Indian Iron, Hindustan Motors, Rohtas, Burrakur Coal and Dunlop Rubber at Calcutta failed to have any significant effect on the local market.

In the steel section, Tata Steels began higher at Rs. 148.75 on Friday, as against the previous close of Rs. 148, and advanced to Rs. 149.50 on the same day following short-covering. On Tuesday, they were quoted at Rs. 144 *ex-div.* After moving narrowly, they finished at Rs. 143.50. Making allowance for the change due to ex-div rate, the net gain over the week amounted to Rs. 2.75. Indian Irons spurted from Rs. 24.84 to Rs. 25.15 *cum-div.* on Friday the 8th inst. and closed at Rs. 24.20 ex-div. today, showing a net gain of 48 nP. Mukand Irons advanced by Re. 1.60 to *Rs. 27.35; at one time today, they were higher* still at Rs. 27.75.

Among textiles, Centurys moved up from *Rs. 681 last week-end to Rs. 692 on* Friday. Yesterday, the shares were quoted at Rs. 571 *ex-right.* As fresh buying support was lacking, the scrip receded to Rs. 564.50 today. The special making-up price for Centurys continued to be in force throughout the week, though *the deposit amount payable* by bulls was reduced from Rs. 65 to Rs. 60 per share, following the increase in the normal making-up price from Rs. 600 to Rs. 630. In Khataus and Standards, however, the Stock Exchange authorities fixed special *hawala* rates against bears with effect from Friday the 9th inst., the sellers being obliged to keep a deposit of Rs. 35 and Rs. 140, respectively. *Despite this move, Khataus were* subjected to renewed selling and dropped Rs. 6.25 to *Rs. 471.25, whereas Standards met with good* buying support and jumped up from Rs. 1,180 to Rs. 1,202. Simplex advanced from Rs. 191 to Rs. 198 on Friday. In the subsequent sessions, they were quoted at Rs. 165 *ex-right.* Today's closing quotation was Rs. *166. Swadeshi recorded* a handsome gain of *Rs. 10 to Rs. 257.50.* Swans hardened by Rs. 7.50 to Rs. 612.50 and Central Indias by *Rs. 6.50 to Rs. 125.* Kohinoors advanced by *Rs. 6 to* Rs. 285. Gokak put on a like amount to Rs. 191. Finlays and Podars *gained Rs. 4* each, to Rs. 319 and Rs. 139, respectively. In the cash list, Mafatlals received good investments-*cum*-speculative support and shot up from Rs. 773 to Rs. 813. Models rose by Rs. 25 to Rs. 95. Phœnix gathered Rs. 6.50 to Rs. 176.

In the cement section, Associated Cements opened at *Rs. 160,* against the last week's closing of Rs. 158.50. After touching a high of Rs. 161, they declined on account of profit-taking to Rs. 159.50 on *Friday. In the subsequent sessions,* however, renewed support was extended to the scrip which moved up to Rs. *162* today before closing at Rs. 161.50. Over the week, the net gain was *Rs. 3.* Digvijays spurted by Rs. 7 to Rs. 172.50. Orissa *Cements put on 16 nP to Rs. 15.32. Dalmia* Cements gained 24 nP to Rs. 11.20.

Sugar shares were firm. Belapurs evoked good *demand and gathered Rs. 2 to Rs. 276. Phaltans* hardened by Rs. 2.50 to Rs. 138.50. In the cash section, Kesars jumped up by Rs. 5 to Rs. 230. Maharashtras increased by Re. 1.50 to Rs. 190.50. But Walchandnagars dropped a rupee to Rs. 163. The shipping section did not display any new features. After opening higher at Rs. 12.24, as against the *previous close of Rs. 12.20, Scindias spurted* to *Rs. 12.48 today* before finishing at Rs. 12.32. Great Easterns were neglected at *Rs. 13.12 same* as last week. Among automobiles, *Premier Automobiles met with good buying support* and improved by Rs. 3 to Rs. *156.25. Hindustan* Motors picked up Re. 1.20 to Rs. 19.48.

In the rayon section, National Rayons were keenly bid and advanced by Rs. 18.50 to Rs. 532.50. South India Viscose gained Rs. 7 to Rs. 182. After going up from Rs. 48 to Rs. 50, Gwalior Rayons declined to Rs. 49 on reports that the Company intended to take over Hind Cycles. Baroda Rayons put on 75 nP to Rs. 139 and Indian Rayon 50 nP to Rs. 72.50.

Chemical shares were generally firm. Indian Dyestuff climbed up from Rs. 430 to Rs. 450, Colour Chems by Rs. 8.75 to Rs. 343.75. Synthetics spurted by Rs. 6.50 to Rs. 183.50. Alembics gained Rs. 5 to Rs. 232.50. Polychems rose by an equal amount to Rs. 202.50. Amar Dyes strengthened by Rs. *2.50* to *Rs. 282.50* and Dhrangadhras by *Re. 1.50* to Rs. 106.50. But Kemps remained depressed at Rs. 290, as against Rs. *297.50* last week. Ultramarines also *eased by Rs. 2 to Rs. 106 and Zandus* by Re. 1.50 to Rs. 109.50.

In the engineering section, *Telcos opened* distinctly higher at Rs. 339 (as against the previous close of Rs. 334), thanks to the statement of Mr. J. R. D. Tata that the turnover of the Company would exceed that of Tisco, in a few years. Continuous support by operators raised the value further to Rs. 346. On Tuesday the 12th inst. they closed at Rs. 344.50 *ex-div.* Profit-taking, however, brought down the *value to Rs. 342.50* today. Over the week, the share has gained as much as Rs. 19.82. *Alcock Ashdowns* were keenly bid Rs. 8 higher at Rs. 294. *Cooper* Engineerings gained Rs. 4 to Rs. 182.50. *In* the cash section T. Maneklals old *rose* by Rs. 20 to Rs. 510. *New Standard Engineering* hardened by Rs. 8 to Rs. 185. Fit Tights put on Rs. 2 to Rs. 54, Greaves a rupee to Rs. 186. Kamanis gathered a like amount to Rs. 15.76.

Among miscellaneous industrials Bombay Burmah rose by Rs. 12 to Rs. 588. Voltas received good support and advanced by Rs. 8 to Rs. 284. Permanent Magnets gained Rs. 3.50 to Rs. 86. Indian Hume Pipes strengthened by a rupee to Rs. 178. Ceat Tyres were marked up by Rs. 3.75 to Rs. 206.25. Wimcos put on Rs. 3 to Rs. 277, Tata Oils Rs. 2 to Rs. 70 and Hindustan Levers 25 nP to Rs. 47.75.

Calcutta Stock Exchange

CALCUTTA, *12th September*

Although business on the Stock Exchange was limited during the week under review, a modest recovery generated by the abatement of selling pressure was the outstanding feature of *trading. Following* signs of recovery the Exchange authorities removed the margins on selling of Indian Irons, Burrakurs, Rohtas Industries, Hindustan Motors and Dunlop Rubbers. These margins, it will be remembered, had been imposed in an attempt to reduce selling pressure. The earlier report that the Finance Minister would discuss Stock Exchange reform proposals with all those concerned, *including the* Presidents of the Stock Exchanges, introduced caution during mid-week, but the *week-end report* that at the meeting Mr. Morarjee Desai had left the initiative for reform to the stock exchanges themselves pleased market circles.

Interest in coals was of a selective nature, with Bengals recovering from Rs. 359 to Rs. 362.

Burrakurs hovered around Rs. 18.19, as against Rs. 18.06 previously. On interested buying, Seebpores scored Rs. 5 at Rs. 44, Raneegunges being firm at Rs. 15.37. Western Bengals were steady at Rs. 9.37, as were New Manbhooms at Rs. 13.69. On the other hand, Amalgamated fractionally sagged to Rs. 22.50, and Central Indias to Rs. 11.68. New Beerbhooms were unchanged at Rs. 23.37.

A small recovery was in evidence in jutes. On active dealings, Baranagores gained from the previous rate of Rs. 116 to Rs. 127. Bally made thirteen points at Rs. 210. Agarparas picked a fractional gain at Rs. 9.37, as did Indias at Rs. 14.62. Anglo-Indias were better at Rs. 173. Cheviots, on the other hand, lost one point at Rs. 14.50, Ganges being quiet at Rs. 11.25. Naihattis were Rs. 2 weaker at Rs. 64. Lawrences were forced down by Re. 1.50 to Rs. 158 and Unions by Rs. 18 to Rs. 160.

Engineerings were steadier at lower levels. Thus, Guest Keen Williams encountered support to push the rate up from Rs. 38.06 to Rs. 38.62. Jessop and Cos. gained half a point at Rs. 19.50. Indian Irons opened at Rs. 24.82 and closed substantially higher on balance at Rs. 25.24. Texmacos were also better at Rs. 16.80. Braithwaite & Cos. were firm at Rs. 37.44. Indian Standard Wagons recovered from Rs. 90 to Rs. 91.

A good recovery on investment support was in evidence in miscellaneous industrials. The very impressive recovery from Rs. 47.62 to Rs. 50.90 in Dunlop Rubbers highlighted activity. Indian Cables were pushed up from Rs. 35.81 to Rs. 36.25. National Pipes were better at Rs. 27.94. Imperial Tobaccos, in respect of which a good working report has been released and the dividend has been raised from 8 to 9 per cent taxable, were unchanged at Rs. 12.12. Karanpura Developments recovered from Rs. 16.75 to Rs. 17.12. Goodyears were unchanged but firm at Rs. 37.25.

Madras Stock Exchange

MADRAS, *12th September*

There was a modest rally in the values of several scrips during the week under review, thanks to better professional support. The outcome of the meeting which the Union Finance Minister had with the Stock Exchange Presidents at Bombay this week was welcomed, as it disproved the worst fears of official measures to control speculation. Further, operators took note of the optimistic assessment of prospects for plantations made by Mr. S. K. Patil at the annual meeting of the United Planters Association of Southern India on Sunday the 10th inst., though they were somewhat disappointed that Mr. Patil did not hold out any assurance regarding the pleas for tax concession put forward by Mr. H. C. Kothari, the retiring President of the Association. The report that, at a meeting held in Coimbatore today, the leaders of plantation workers in Kerala, Madras and Mysore had decided to resort to direct action from the 30th of this month, if their demands for higher wages and bonus were not conceded by that time, failed to have any marked effect. Plantation shares were well maintained. Textiles ruled firm as a result of enlarged upcountry buying. Sugars attracted some attention, following Mr. Patil's indication of the possibility of the immediate removal of controls on sugar. Miscellaneous industrials, particularly cements, were quite active.

In the planting section, teas tended to look up. Peermades rose by 12 nP to Rs. 23.37. Waterfalls put on 6 nP to Rs. 3.06. Blue Mountains hardened by 5 nP to Rs. 3.14 and Periakaramalais by 3 nP to Rs. 3.62. Nonsuchs were fully steady at Rs. 28.70. Parksides at Rs. 29.62 and Haileyburias at Rs. 13.40. In the coffee group, Consolidated Coffees gathered 5 nP to Rs. 21. Ouchterloney Valleys were firm at *Rs. 3.78 and Rajendras at Rs. 12.12. But* Consolidated Coffees encountered selling and fell by 25 nP to Rs. 17.25. As for rubbers, Midlands improved by 5 nP to Rs. 11.65. Travancore Rubbers were firm at Rs. 11.87 and Malankaras at Rs. 18.

Among textiles, Coimbatore Cottons advanced by Rs. 2 to Rs. 193. Dhanalakshmis gathered a rupee to Rs. 241. Coimbatore Spinnings rose by a like amount to Rs. 55, although the Company has passed over the dividend for 1960, for the third year in succession. Madurais strengthened by 50 nP to Rs. 37.25. Loyals gained a similar amount to Rs. 46. *Travancore Rayons* picked up *35 nP to Rs. 38.80.* Radhakrishnas improved from Rs. 32.37 to Rs. 32.50. Lakshmis were maintained at Rs. 156, Buckinghams at Rs. 249 and Cannanores at Rs. 156.

The feature of trading in the sugar section was the spurt in the quotation for Cauverys from Rs. 111 to Rs. 113. Deccans increased by 13 nP to Rs. 13.08 and Travancores by 10 nP to Rs. 10.60.

Among miscellaneous industrials, Orissa Cements rallied from Rs. 14.85 to Rs. 15.20. Dalmias were higher by 10 nP to Rs. 11.10. India Cements put on 5 nP to Rs. 6.52. Mettur Chemicals rose by 10 nP to Rs. 14.55, Mysore Chemicals were fully steady at Rs. 23.85. Ranes hardened by 15 nP to Rs. 7, following the announcement of a dividend of 14 per cent, taxable, for the year ended March 1961, same as that distributed in the previous year. Standard Motors too scored a gain of 15 nP to Rs. 16.15. Aluminium Industries rose by 10 nP to Rs. 23.05. Ashok Leylands put on 5 nP to Rs. 8.50. *Textools were firm at Rs. 175,* notwithstanding the strike call by workers with effect from Wednesday, the 13th inst.

PRIVATE ENTERPRISE IN DEVELOPING ECONOMIES

SURVIVAL DEPENDS ON ITS SOCIAL UTILITY

By G. L. Mehta

[The atmosphere in which private enterprise works in India and the prospects for it, with particular reference to foreign capital, formed the main theme of the address which Mr. G. L. Mehta, Chairman of the Industrial Credit and Investmen Corporation of India, delivered before the International Industrial Conference held at San Francisco on Thursday the 14th inst. He impressively highlighted the fact that private enterprise would be judged by—and its survival depended upon—its social utility to the economy; this cast a heav responsibility on those who sponsored, organised, financed and operated private enterprise. In view of the excellent treatment, and topical importance, of the subject, the full text of Mr. Mehta's speech is reproduced here.—ED.]

ABOUT two years ago, to be precise in October 1959, I used the forum of the Far East—America Council of Commerce and Industry—to speak on the *Prospects for Private Foreign Investment in India.* Today's subject is wider in scope. However, some of the considerations are relevant to both. With this common ground, I propose to use my previous address as the base for my "take-off."

"Take-off," no doubt, is common to speakers, to spacemen and to economies. And all these require a strong base. When one looks at the Indian economy, one does become aware of a subtle change in the atmosphere, no less real because it has few external manifestations. We have not seen during the last two years any change in the broad frame-work within which the economy has to work: the industrial policy, enunciated in 1956, has not in any way been modified; the concrete measures for advance which we call the Five-year Plans remain the same—our Government have just brought out the economic horoscope for the next five years under the title of the third Five-year Plan; no broad legislative measures affecting the private sector have been brought forward—the Companies Amendment Act, enacted in 1960, was in gestation for quite long; the Income-tax Act, now in the throes of birth, is basically a tidying-up measure: its major impact may be on lawyers' income rather than on the private sector's growth.

As I said earlier, therefore, in the broad fields of industrial and economic policy, of planning, of legislation—in these fields, there has been little change. At the same time, there have been changes, almost innumerable, in the details which affect private enterprise—many of such changes have been for the better, changes which account for the improvement in the atmosphere within which private enterprise works. I should like to enumerate here some of these changes, leaving it to you to evaluate their importance.

Foreign Exchange Situation

Firstly, I would like to refer to the change in the foreign exchange situation in the country. When I spoke in 1959, we were trying to work our way out of the foreign exchange crisis by appraising and re-appraising the second Plan. Today, the situation is different. I do not say we have got over our foreign exchange difficulties or that our third Plan is less voracious of foreign exchange. But, thanks to the initiative of the World Bank and the imaginative approach of friendly Western countries—and, among these, I would particularly like to single out the U.S.A.—, as I said, thanks to these, we are better equipped to face the problems of the next five years.

Much of the proposed aid is, of course, on Government-to-Government level and you will naturally ask me: How does this help the private sector? I should straightaway say, in many ways. Firstly, it has enabled us to get rid of deferred payment terms. Deferred payment terms which private enterprise had to arrange, when foreign exchange shortage was acute, had many disadvantages in the short run as well as in the long run. In the short run, it tended to shift the responsibility of obtaining foreign exchange from the Government to the Indian entrepreneur and through him to the plant supplier. This necessarily restricted the freedom of action of the Indian entrepreneur—his choice of equipment was limited and his bargaining power weakened. Often, he had to pay more for a piece of equipment which he did not consider the best. This, in its turn, reduced, in the long run, his ability to produce at a low cost and, therefore, his capacity to compete. And while he may hope to be protected in the home market from external competition, it acted unfairly on the Indian consumer and reduced the export capacity of an enterprise—which, we are now beginning to realise, is vital for the success of our development effort.

One of the consequences of the easing of the foreign exchange situation is the greater willingness on the part of the Government to give cash import licences. This, of course, does not solve the problems of an Indian entrepreneur; he still has to find rupees to pay for the import licence—but, as I shall mention later, this is not very difficult these days; he has still to negotiate at New Delhi for the import licence—but this is a fact of life to which we have all become accustomed in the last ten years; and, because Government aid is "tied," his choice for purchase may still be restricted—but to a country rather than to a company as before. The Indian entrepreneur's path to setting up an enterprise is not all roses still, but it is not as frustrating as it used to be only three or four years back.

Capital Market

A second development is what I might call the unclogging of the capital market in the country, as reflected in the response to new issues offered to the public. This phenomenon has to be understood more clearly—both in India and abroad. To any economic observer, it is apparent that this does not represent a sudden increase in the propensity to save. Nor is India unaware of sudden frenzies of speculation or transient fancy for industrial investment—we have known all this before: in the sixties and seventies of the last century when there was speculation in cotton and real estate and in the first decade of this century when Indians, believing in the enterprise and management of Tatas, came forward to invest in capital which could not be raised in London. What distinguishes the present boom is its strength—it has now lasted almost two years and, while the earlier excesses have tended to disappear, its innate momentum still continues to lead to over-subscription, at earthlier levels, of worthwhile issues.

This trend, as I mentioned earlier, needs a closer look. Since it is not based on a wider base of saving, it reflects a shift in people's investment preference. This is a transformation through which all advanced economies have passed at one stage or another and one which we have possibly just reached. Such a shift, making people conversant with modes of investment in industry, has a more enduring value, whatever the temporary setbacks caused by market forces.

This increasing public interest in industrial investment has eased the task of entrepreneurs in raising capital. Provided complementary resources are available—and, as I mentioned earlier, the foreign exchange situation has improved to some extent—there appears to be enough scope for rapid industrial advance in the economy.

Entrepreneurship

You will no doubt remind me that industrialisation also requires entrepreneurship—do we have enough of it? This is one of those intangibles where economic *pundits* differ. I personally feel that, given the atmosphere, there is no lack of entrepreneurship in India. Industry on factory lines is more than a hundred years old in India. Indian entrepreneurs ventured into such advanced lines as iron and steel manufacture and shipping in the first two decades of this century. Before the Second War began, India was self-sufficient—no doubt at the relatively low levels of consumption then prevailing—in cloth, sugar, cement and jute. What was lacking was not entrepreneurship but conditions requisite for its exercise. A national government and planning have provided these.

Prospects for Foreign Capital

I have so far not spoken on the prospects for foreign capital in India—not because it is not important to us. I have not done so mainly because foreign enterprise, as much as Indian enterprise, is subject to the influence of the climate for investment—a climate which has turned for the better. Owing to the foreign exchange crisis, foreign enterprise is coming to be increasingly recognised as supplementing the foreign exchange resources available to the economy. The investing public has also come to associate foreign enterprise with advanced management techniques; consequently, over-subscription, to which I referred a little while ago, has been particularly heavy in cases where there is financial and technical collaboration with a good foreign company. Finally, as new and difficult lines are being taken up, foreign enterprise is seen as an important adjunct to indigenous entrepreneurship.

These advantages are recognised not only by our entrepreneurs but also by our Government, which has recently taken various measures to encourage the flow of foreign capital and know-how. In the last Budget of the Union Government, the effective rate on royalties was reduced from 63 per cent to 50 per cent. The Government always insists on royalty agreements being entered on taxable terms, and foreign collaborators have generally sought to obtain a certain carry-home return for the supply of know-how. The revised tax-rate should help to remove one of the main obstacles to the development of the trade in technique between advanced countries and India.

A second change introduced by the recent Budget is the equalisation of tax burden on companies which are subsidiaries or have minority participation of foreign companies. This equalisation has been brought about mainly by a reduction in the rate of taxation. I would like you to note that the opportunity to rationalise the tax structure was not used to raise the tax rates—as so often happens these days.

Indian Investment Centre

A third matter of interest to foreign investors is the establishment of the Indian Investment Centre. Its primary function is to encourage the flow of foreign capital into India by helping prospective foreign investors in various ways—in their dealings with the Government, finding suitable Indian parties to collaborate with, in putting Indian industrialists in touch with their foreign counterparts, by providing information on the Indian economic situation. I am almost tempted to say that the Investment Centre will provide to foreign investors technical know-how—the know-how relating to problems of operating in India.

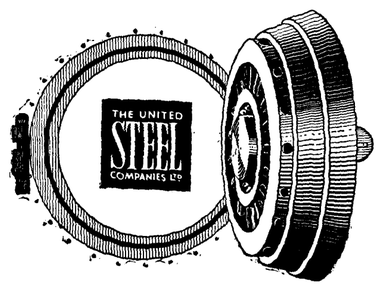
I should, therefore, say that both the receptivity of the Government and the Indian entrepreneurs in relation to foreign capital and the conditions under which it can come in and operate have considerably improved in recent times. Many foreign firms—small as well as large, U.S. as well as non-U.S.—have come in during the last couple of years. In the first quarter of 1961 alone, the Government of India approved 101 technical collaboration agreements. The Investment Centre is also handling a large number of inquiries for foreign participation and collaboration.

In this connection, I should like to mention, particularly before this gathering, that capital flows need not necessarily be associated with the flow of technical "know-how." In the past, particularly before the First World War, capital used to flow across national frontiers according to profitability. While today individuals may not be expected to undertake investment in companies in underdeveloped economies both because the political and economic risks are too great and they may not have the necessary expertise in judging investment, I suggest that investment institutions—insurance companies, investment trusts, and so on—should examine the possibility of investing in such companies. Such institutions have the necessary expertise to judge the long-term prospects of stocks and the necessary resources to absorb any shocks that may arise out of political and exchange risks. Such stocks have, besides higher profitability very favourable growth prospects; such investment will also help to diversify the portfolio of the investment institutions. I feel that a small beginning can be made in such investment;

(Continued on page 571)

Bank vaults are always made of steel . . .
because steel is so dependable!

symbol of security!



Through the years Steel has come to be considered the symbol of security . . . not merely physical security, but economic security as well! The larger the amount of steel a country produces, the higher the rung she occupies on the ladder of economically stable countries . . . the greater her credit in the international market. And that is why India today is striving so hard to raise her output of steel —Steel that will endorse her claim to economic stability . . . Steel that she can hold up to the world as a symbol of her security.

THE UNITED STEEL COS. (INDIA) PRIVATE LTD.

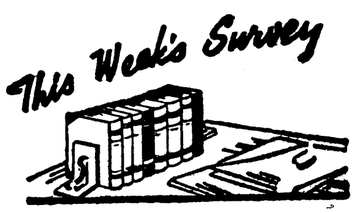
Plants US-27A



RAW MATERIALS FOR STEEL PLANTS

WHEN Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, stated in the Lok Sabha last week that the problems of supply and transport of coal and limestone were common to all steel plants both in the public and private sectors, he was entirely in the right. He was also right in saying that the high-level committee—consisting of the representatives of steel works, coal industry and principal limestone suppliers, and the Coal Controller, the Iron and Steel Controller and the Secretaries of the Ministries of Railways and Steel, Mines and Fuel—has contributed in no small measure in maintaining production in the developing steel industry in recent months. That this committee has kept a continuous watch over the situation and been able to deal with the supply and transport problems in a practical manner may be true. But it would be an exaggeration to think that it has tackled the problems so effectively as to bring about a more rapid increase in production and, thus, a fuller utilisation of installed capacities. It has only to be recalled, by way of illustration in this connection, that Mr. Biren Mookerjee's recent statement to the shareholders of the Indian Iron and Steel Company Ltd., referred to the unsolved problems of the industry—namely, the inadequate supply of wagons to the collieries by the Railways, the inability of collieries to supply the proper grade of coal, and the inadequacy of washed coal to meet the requirements of the steel works.

Sardar Swaran Singh had, of course, something to say on each of these problems by way of explanation or justification. On the question of railway transport of coal and other raw materials, the Minister said:

"Railway transport for the steel industry at present forms approximately 15 per cent of the total goods traffic and will be about 30 per cent. in the next few years. The sharp increase in traffic on account of the steel plants, all confined to one part of the country, has thrown a great strain. Government has taken various steps to meet the situation. Several long sections of railway line have had to be doubled and new yards constructed. Certain sections have been electrified. New special types of heavy wagons have been introduced so that each train will carry more than double the quantity it used to. It takes time for the collieries, the steel works and the railways themselves to adjust to these new innovations, the new methods of working and the new equipment. These teething troubles, if I may so call them, have disturbed, to some extent, the rhythm of movement of coal and limestone to the plants in the private sector but they have not led to any dislocation of production."

This explanation, though largely valid, overlooks some relevant details regarding the performance of the railways, besides ignoring the fact that, while planning, the Government had failed to anticipate all the difficulties mentioned above and take appropriate steps to eliminate them. How unsatisfactory this performance has been can be known from the experience of the I.I.S.Co., as described by Mr. Biren Mookerjee:

"It is our bitter experience that raw materials are not received at the Works to our scheduled programme because of the shortage of railway rolling stock. Deficit of wagon placements builds up and is corrected by a sudden inflow, congesting the internal traffic arrangements of the Works and taxing our unloading facilities to the utmost. The position is at all times aggravated by the number of wagons of unsuitable type that are allotted. Although our mechanised coal handling plant was, with the concurrence of the Railway Board, laid down on the understanding that at least 90 per cent of our coal supplies would be in open 4-wheeler wagons, we now receive approximately 50 per cent only in open wagons and the balance in covered wagons, with the result that our mechanised equipment stands partly idle and we have to revert to the outdated method of handling coal by manual labour. By giving us more covered wagons then we can handle each day, the Railways create periodic congestion in the Exchange Yard and advantage is at times taken of this congestion as an excuse to apply a cut on further allotments. It is clear that there is very grave shortage of open wagons in the transport system.

"Similarly, when iron ore should be brought in BOBS wagons we are forced to accept BOX wagons which disrupts the internal handling and transport arrangements in our Works and increases our cost of handling. BOBS wagons were designed for bringing iron ore to our Works and our mechanical handling equipment in turn was, again with the approval of the Railway Board, designed to handle these wagons only. There are instances when only 60 per cent of our requirements of BOBS wagons have been met in a month and we have had manually to unload and load to and from stock extremely heavy quantities of iron ore, putting a tremendous strain on our labour resources."

It would appear that practical difficulties of the above kind are additional to the "teething troubles" referred to by Sardar Swaran Singh. As for the problem of inadequate supplies of better quality metallurgical coal, it is again a question more of transport than of adequacy or otherwise of metallurgical coal reserves. Sardar Swaran Singh's view that it is a problem of sharing the "limited" resources of metallurgical coal equitably by the steel industry as a whole is not quite convincing, for it is well known that, even though such reserves are relatively limited, they will last for a good number of decades to come. The remedy will partly lie in developing the canal system between Durgapur and Calcutta for coal movement from the Raniganj field which contains the better quality metallurgical coal. Hydraulic transport of coal to steel plants situated within a distance of 150 miles of the Jharia coalfield, as suggested by the Indian Coal Productivity Team which recently studied coal mining industries in the U.S., the U.K., France and West Germany, may also have to be utilised for easing the situation.

The third problem represented by the inadequacy of washed coal can be solved only by executing the washeries programme in the public sector more expeditiously. Sardar Swaran Singh disclosed that, of the five new washeries covered by the programme, two had been completed, another was nearly complete and the remaining two would be ready in 1962 and 1963. But he also admitted that, while the commissioning of the new washeries would improve the quality of inferior coals to some extent and render them more suitable for metallurgical purposes, the demand for washed coal would also go up in the coming years. There was, however, no indication in his statement that the Government had any proposals under consideration for setting up additional washeries. Whether more washeries could be constructed in either sector as a matter of high priority with D.L.F. aid or with loans from the World Bank is a matter for immediate consideration. The importance of establishing additional washeries of adequate capacity, it may be recalled here, has also been emphasised by the chairmen of steel companies in the private sector.

CUSTOMS AND EXCISE

Since customs and excise duties are collected at the source, they must be administered in such a way as to cause minimum hardship to taxpayers, for inexpert handling gives rise to much avoidable sense of grievance. It is true that the authorities are aware of the need for a continuous improvement in administration and that several steps have been taken in this direction. But there are still a number of complaints of irregularity, delay and harassment. Mr. Shriyans Prasad Jain, Vice-President of the Federation of Indian Chambers of Commerce and Industry, certainly voiced the opinion of the business community when he urged, at a meeting of the Customs and Central Excise Advisory Council, held at New Delhi last weekend, that the basis of, and procedure for, fixing tariff values for various commodities should be reviewed and that the excise rules must be so modified as to help development of industries, besides safeguarding Government revenues.

A disquieting feature in regard to customs duties is the seemingly arbitrary manner in which tariff values are computed. There have been cases, we are told, when the duty (which is being charged on tariff values that are themselves much inflated) alone works out to 186 per cent of the actual c.i.f. value. In some cases, components imported as a part and parcel of machinery attract a higher rate of duty than the machinery rate, notwithstanding the clarifications issued by the Central Board of Revenue. This is an anomaly which was conceded by Mr. Manubhai Shah himself at the meeting of the Import Advisory Council this week and must be set right at the earliest. What is wanted is a clear, common understanding among the various Collectorates. Also, expressions such as "component parts" and "inter-changeability" need to be clearly defined. Further, there is the need for eliminating undue delays in decisions on appeals and revision petitions, as well as in getting the imported goods released.

Viewed thus, the statement of Mr. B. R. Bhagat, Union Deputy Minister for Finance, that the Sea Customs Act would be suitably amended is, indeed, reassuring. Mr. Bhagat said: "Considerable work has been done during the last few months regarding the amendment of the Sea Customs Act. I hope it would be possible to introduce the Bill in the next session of Parliament." Equally reassuring is his statement that the Government is anxious to bring down arrears of refund and drawback claims; special drives have also been carried out in the Customs Houses to get rid of the accumulations of confiscated goods, to finalise pending cases where show cause notices have been issued, and to simplify and improve in all possible ways the procedure for the clearance of passenger baggages. In this connection, the Government's move to eliminate the need for prior confirmations of the Reserve Bank when a scheduled bank stands surety for bonds, or when guarantees are given to the Customs Department, is a step in the right direction.

As for excise duties, three common complaints were mentioned by the F.I.C.C.I. Vice-President. They are: (1) The number of physical checks carried on at present only hamper the smooth functioning of factories. (2) The method of fixing the quantum of rebate on excise duties in respect of exercisable commodities required for use in a factory itself is arbitrary. (3) There are items where the excise duty is levied on both the components and the whole machinery without any provision for rebate of duty paid earlier on components. It is to be hoped that the Central Excise Reorganisation Committee will suggest concrete measures designed to remove these and other complaints.

That the Government of India is fully alive to the urgency of streamlining the Excise Administration especially in the context of export promotion is evident from the observations made by Mr. Bhagat. It is gratifying to learn that orders have been issued for granting full refund of excise duties on all such commodities that are exported. Detailed procedures have been worked out for most of these, one of them being the grant of refund on the yarn component of woollen carpets exported. Suitable instruction has been issued authorising the Collectors of Excise to grant the facility of paying duty by cheques to manufacturers whose annual payment of Central excise duty is not less than Rs. 25,000. These measures and the anxiety of the powers-that-be suitably to modify excise rules and regulations are proofs of Government's readiness to redress the genuine grievances of the trade and industry.

TRANSPORT NEEDS

In his recent address at the annual general meeting of the Calcutta Branch of the Indian Roads and Transport Development Association, Dr. L. P. Misra, Chairman, put forward a concrete suggestion for the purpose of assessing the transport requirements from year to year during the third Plan period. This suggestion is to the effect that transport 'cells' should be set up in the Planning Commission as well as in the Ministries of Transport and Railways to estimate the annual growth of traffic and devise suitable measures for handling the additional traffic. As a practical suggestion, its value can hardly be called in question. If the transport maladjustments of the kind which arose in the latter part of the second Plan were to continue in the third Plan period and if industries were to work at much less than their capacity for want of adequate facilities for transporting raw materials, it would be a distinct setback to economic growth. Dr. Misra's suggestion is certainly worthy of consideration by the powers-that-be in the context of the current transport bottleneck. It is almost a transport crisis that is now on, and its crippling effects are to be seen by way of a crisis in coal distribution, to mention only one instance.

A year-to-year assessment of transport facilities is called for, because the third Plan targets for the end-year are not quite meaningful in the absence of more realistic staggering of transport development. Any such staggering would be realistic only in the light of facts and figures bearing on the expected transport requirements in each year of the third Plan period. For instance, the Railways have decided to develop their capacity for a maximum freight traffic of 245 million tons in 1965-66, but they do not seem to know precisely what will be the additional traffic offerings in each year and what should be the appropriate rate of development per year for reaching the target in respect of lift. Similarly, the Transport Ministry does not seem to have so far devoted thought to the subject of year-to-year transport requirements. It is, therefore, not in a position to know what freight traffic will have to be handled by roads and inland waterways from year to year. Unless transport cells of the kind suggested by Dr. Misra are set up in the two Ministries and their activities are co-ordinated for continuously appraising the traffic developing in the country throughout the Plan period, ways and means cannot be found for creating timely transport facilities so as to deal, in the most economic manner possible, with the traffic offering in each year of the Plan. The powers-that-be should bestir themselves immediately, for the maximum traffic offering to all modes of transport in the end-year of the third Plan may easily exceed the provisional estimate of 320 million tons. And they would also do well to enlist the co-operation and assistance of non-official bodies like the I.R.T.D.A. by associating them with the suggested transport 'cells'.

PUBLIC DEPARTMENT

AGRICULTURAL LABOUR

Andhra Pradesh has joined the list of . . . States which have already fixed minimum wages for agricultural workers under the Minimum Wages Act, 1948. For the purpose of wage fixation, the State is divided into three zones to which different rates are applicable. In zone one, which covers the fertile Krishna-Godavari deltaic area, the minimum wage for farm servants or attached workers is fixed at Rs. 500 per annum for an adult worker and Rs. 250 per annum for a child. For casual labour on daily wages, different rates, depending upon the nature of the work, are prescribed, ranging from Rs. 4.50 for ploughing (with plough team) to Re. 1.37 (for men) and Re. 1 (for women) for weeding. In zone two, which covers the dry Andhra districts of the former Madras State such as Cuddapah, Kurnool and Anantapur, the minimum wage for farm servants or attached workers is fixed at Rs. 400 per annum for an adult worker and Rs. 200 per annum for a child. Casual workers on daily wages are to get Rs. 4 for ploughing (with plough team) and Re. 1.25 (for men) and 87 nP (for women) for weeding. In zone three, covering the dry and the relatively backward areas of the former Hyderabad State and agency areas in West Godavari and East Godavari, the minimum wage for farm servants or attached workers is Rs. 300 per annum per adult worker and Rs. 150 for [illegible] wages for casual workers have been fixed at correspondingly lower rates, the lowest being 75 nP for women engaged in weeding operations.

What is important is not the detailed schedules of minimum wages for the different categories of workers in different zones but the manner in which and the machinery through which the minimum wages are sought to be enforced. If the experience of the States in which minimum wages for agricultural labour are already fixed is any guide, the minimum wage in Andhra, too, may remain in force only on paper. This is due partly to the nature of agricultural labour itself and partly to the defects in the enforcement machinery. Agricultural labour is largely unorganised and work is carried on in scattered fields which make any kind of supervision on inspection practically impossible. The enforcement of minimum wage legislation is lax even in respect of some of the scheduled industries, where conditions are far more favourable than in agriculture. When that is the case, one can easily imagine how effective can be the administration of this law in an occupation such as agriculture. Non-maintenance of registers and records, payment of wages less than the minimum, non-payment of wages, etc., are common even in industrial establishments. Inspection and prosecution have not prevented or minimised the practice of these irregularities on an extensive scale. According to an official review of the working of the Minimum Wages Act, in 1960 alone, as many as 55,000 irregularities in respect of minimum wages were detected by the enforcement staff and 1,122 prosecutions launched against defaulting employers. As these figures cover both industry and agriculture and separate data are not available, it is not possible to say how many of these lapses pertain to agriculture. Enforcement is the number one problem and, unless it is effectively tackled, the law in regard to agricultural wages will remain a dead letter.

It is not suggested by what has been said above that agricultural workers do not deserve the protection of law to maintain a minimum standard of living. Far from it. In fact, agricultural workers are among those who deserve such protection most, because they are least benefited by the Plan. According to the Second Agricultural Labour Enquiry Report, between 1950-51 and 1956-57, the average wages of agricultural labour actually declined, while there was a rise in unemployment and indebtedness. The *per capita* income of agricultural labour declined from 104 in 1950 to 99 in 1956. This was only about one-third of the national *per capita* income of Rs. 291 in 1956-57. There are, of course, many even in Government and the Planning Commission who doubt the accuracy of these estimates. Even assuming that the actual wages received by workers in rural areas are far above than these statistical averages, none can deny that these workers are so ill paid that they cannot afford two square meals a day. But the remedy for this unsatisfactory state of affairs lies not in the fixation of unenforceable minimum wages but in the provision of (*a*) more employment opportunities outside agriculture, (*b*) greater facilities for raising the productivity of agriculture and farming. The low level of wages of agricultural workers is the result of a long period of stagnation in the rural economy and there is no solution to it apart from the vigorous development of the country sides.

ISOTOPE-POWERED WEATHER STATION

As a result of co-operative scientific work of the U.S. Department of Commerce Weather Bureau and the U.S. Atomic Energy Commission, and with the interest of the Department of Transport of Canada, the world's first isotope-powered automatic weather station will soon go into operation in the Canadian Arctic. It will operate for about two years, and it won't require a single human being to take care of it! Power to operate the station, one of the major problems which has hindered such a development, will be provided by an isotope of strontium-90. The station and power source are housed in a cylindrical, insulated container approximately eight feet long. The lower five feet will be buried in the permanently frozen ground of the Arctic. A rugged anemometer, thermometer, and barometer will measure wind direction and speed, temperature, and barometric pressure, and feed these readings into a data processing system from which they will go to the station's radio transmitter for relay every three hours to permanent weather facilities further south.

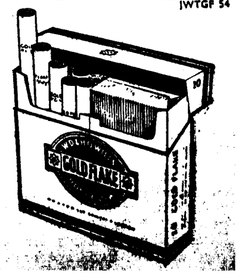
Having fun—wish you were here

Darjeeling. Bracing climate when it's not raining! Magnificent view when it's not foggy. Charming people—always smiling. Wonderful riding, fishing, hiking. (And Wills' Gold Flake? As fine as ever—superbly satisfying—wherever you go they're good.)



ON THE ARENA

By "Archer"

Economics for the Exasperated

SEVERAL years ago, there was an uncle of mine who was both a hedonist and a gourmand, but was never happy in the biological sense. When his digestive functions were normal, as occasionally they were, he ate well and much too unwisely, resulting in flatulence and a great deal of discomfort. He would then treat himself with massive doses of ayurvedic carminatives, as a result of which he would develop stomatitis and ulcers in the mouth, to cure which he would swallow butter, ground almonds and milk, and then start flatulence all over again. With a little moderation, he could have lived a happy life, but alternating between two extremes of indulgence and denial, he spent several years of his later life with a perpetual feeling of unsatisfied desires, a confirmed cynic.

The difficult and disappointing features of our economy are somewhat similar to the travails of my late lamented ancestor. We believe in increasing the standards of living of our people, and, for that purpose, we are asked to increase production, increase employment, increase earnings, increase savings, increase investments, in short, increase everything which indicates prosperity. We succeed in some efforts, and don't succeed in others. To correct the resultant imbalances, we are asked to reverse gears in certain directions. The desires and hopes of the common man remain unsatisfied, and our economic expostulations irritate and exasperate him.

In spite of massive investments over a period of eight years, we still suffer from chronic shortage of steel, cement, coal, fertilisers and all the good things of an industrial life. We have failed in achieving the projected targets of production in all these items. On the top of these troubles, our export earnings are much below our estimates of foreign exchange receipts which we envisaged under this head.

The boost to production of sugar promulgated over a year ago worked, but we cannot sell our surplus of the commodity outside the country except at a loss. The position regarding coffee is the same. Our heroic efforts to export these commodities will result in much loss to the exchequer, while our decision to sell them overseas at world parity prices will eventually amount to subsidising the foreign consumer at the expense of the domestic consumer. Mr. S. K. Patil has promised liberalisation of curbs on the movement and distribution of sugar, and hopes that there would be spurt in consumption, and a corresponding increase in fiscal revenues through excise duty. He would justify a loss of Rs. 5.5 crores in subsidising exports of sugar to Malaya and the U.S.A., as the increased excise revenue from internal sales might reach a figure of Rs. 50 crores per year. But the Sugar Directorate has a mind of its own on the question and has released only two lakh tons for the current month. Apparently the Directorate is afraid that the country may not metabolise a higher quota. It is, of course, very doubtful that internal demand will increase when the excise duty is maintained at the current level, but there is no harm in trying, and the Directorate will not even try.

The Chairman of the Tea Board has announced that the Board has embarked on some "negative methods of export promotion", like withdrawing all the propaganda units in the country, in order to restrict internal consumption of tea and release more of the commodity for export. It would seem that, as against an export of 159 million pounds of tea last year, we have actually despatched 176 million pounds till the end of July last, resulting in a rise of about Rs. 7 crores by way of foreign exchange. The Tea Board thinks that we should do even better and would therefore like us to forget all the nice things that they said about tea in the past. 'The cup that cheers' will not be available to many a consumer as frequently as before.

In the meantime, the Cabinet Committee on export promotion has approved of a comprehensive export incentive scheme (with a provision of Rs. 10 crores) which will include lower railway freights for ores, subsidy for vegetable oils, fertilisers for tea, rationalisation for textile mills and so on. It is not as though all these measures were unknown to us in the past; it is just that we did not think them to be necessary as and when each industry wanted some boosting when it was down and out. Now they are all down and out, and there is going to be an all-out omnibus boosting to exports of all exportable commodities, which might result in the indigenous consumer being asked to tighten his belt until he snaps into two. This can develop into a very disturbing trend at a later date, but we may then think of a few bright ideas to boost internal consumption all over again.

To the common man any economic explanation of these conflicting phenomena is exasperating. He believes it is just a lot of abracadabra.

* * * *

Deposit Insurance

The decision to insure bank deposits up to a limit serves a commendable social purpose, but it does not ensure (*a*) development of efficient and safe banking and (*b*) the prevention of sudden and unforeseen runs on banks. The pursuit of efficient and safe banking methods depends on the kind of tradition that has been followed, and, as we all know, lousy tradition takes a long time and strenuous efforts to be eradicated. Runs are unpredictable and unforeseeable, and, in most cases, irrational. In the past, many of them have been brought about by evil tongued slanderers engaged in whispering campaigns, by disgruntled constituents who have been refused accommodation, by dissatisfied employees with a sense of grievance, by the loose talk of overjealous canvassors of competing banks, and by wilful or exaggerated rumours of losses or bad advances. The effect of a run on a bank is similar to what happens to a human being when an artery is severed. Paradoxically, however, survival depends on the manifestation of the greatest strength and stamina to resist the drain. Such a phenomenon is never self-generated; so, a bank in distress has to be the recipient of assistance in full measure from the central banking institution until the run stops. The question, therefore, is: will the Reserve Bank of India get ready to offer such assistance in future, now that deposit insurance provides cover for an estimated 75 per cent of the six million deposit accounts in commercial banks and about 20 per cent of the entire deposits, or will it restrict providing emergency funds only to the extent of the available secured drawing power allocated to a bank in distress? Deposit insurance should generate confidence in depositors, and perhaps will, in a matter of some years, make the majority of them see the utter stupidity of giving way to panic and joining a run. But there is no guarantee that bank runs will be banished, certainly not so long as our banking system is as loosely knit as it is at present.

There are three endemic evils in our country which require strong measures to be eradicated; irrational bank runs, illegal labour strikes and irresponsible hunger strikes. All of them require firm and courageous handling. The latter two evils must be resisted with the utmost authority, while the first one can be met only by the provision of financial assistance, speedy, effective and in full measure. A clear-cut policy has to be formulated, blue-printed and kept in readiness for implementation in future, at the shortest available notice.

A Calculated Risk

A news correspondent from New Delhi reports that an export quota of 50,000 tons of groundnut oil expeller cake may be allowed during this year and that, if it is found that the export does not exert undue pressure on internal prices, an additional quota of the same size may be permitted. It is understood that the Government is willing to take a calculated risk in this regard, in view of the urgent need to maximise exports and earn foreign exchange.

Admission of the fact that a "calculated risk" is being taken is only another way of saying "we know there will be a hell of a mess, but we are going to shut our eyes and ears to it, and suggest that you had better stop whining". Under the excuse that there is urgent need to maximise exports and earn foreign exchange, many a calculated (cold-blooded?) risk is being taken in utter disregard of the chain reactions that are sure to start, with their inevitable impact on the prices of foodstuffs and cost of living of the lower middle classes. What is most amusing is the statement that, if it is found that the first export does not exert undue pressure on internal prices, an additional quota of the same size may be permitted. The apparent presumption is that prices are normal now, and the supply position even and easy. In any case, the announcement has already appeared in many of the language newspapers and prices are sure to be put up by dealers long before the export takes place. In most parts of South India, groundnut oil cake is used extensively as manure and also as cattle fodder. The miserable quadrupeds which have been getting a few ounces of cake till now will have to revert to subsisting on dry leaves and discarded newspaper. Even the latter sells at 37 nP per pound, if it is not crumpled.

The way that export quotas are established and tinkered with reminds me of the old saying "A jovial tinker stops one hole and makes three." The quotation in old English from English drama before Shakespeare (Brand I) runs as follows:

"Hoie tiftie toftie tinkers, good fellows thei bee,

In stoppyng of one hole, thei vse to make three".

The Lesser of Two Evils

A tired old man who had two wives living, and suffered a lot of cruelty from both of them, was asked which of the two was less of a terror. He replied naming the younger, for she was prepared to sit up and eat her food, while the senior termagant insisted on being fed while she was reclining in bed.

Soviet Russia has set about detonating her nuclear bombs in the atmosphere, setting in motion deadly radioactivity, poisoning the air and food in areas far away from the scene of explosion. The United States has replied to this by blasting the bombs underground, avoiding (we hope!) the genetic and biological hazards of radioactive contamination. The parable of the old man with two wives indicates a parallel if the uncommitted nations are equated with the old man, the senior wife with Russia and the junior with the U.S.A.

It may be that the Berlin crisis started a whole series of inflammatory situations, and it is interesting to hear Premier Khrushchev blaming the U.S.A. for embarking on massive re-armament, and all the Western Powers for breaking the *de-facto* moratorium on nuclear tests by permitting France to stage four explosions in the Sahara, creating panic in all the West African countries. General de Gaulle has been doing things with a mighty and cynical disdain for world opinion and the directives of the United Nations. Neither Mr. Kennedy nor Mr. Macmillan screwed the ears of the General for being naughty, but, of course, he was too tall for both of them (physically) and they would have had to climb on stools to reach his ears.

The Uncommitted Nations have done their best in Belgrade (the barbecue must have been enjoyable), and the world awaits the result of their endeavours to get Russia and America together to resolve the tangle. In the meantime, General Montgomery (Monty) is doing his piece all on his own in Peking, declaring that One China, The China, should be recognised as China, and that the two Berlins should also be accepted as separate entities. It looks as though everybody means well; only, there are no signs yet of the return to tranquility.

Amidst all this din of recrimination and controversy, the people of Bombay are going to have 'darshan' of Major Yuri Gagarin, the first cosmonaut, in the first week of October. The second cosmonaut (but the first American), Commander Shepard, seems to have receded into obscurity, apparently because he only did the pole vault into cosmos and came back in fifteen minutes. But what of Gherman Titov? He did much more than Gagarin, staying out in circumlocution for 25 hours against Gagarin's 108 minutes, and had three meals and eight hours of sleep and even skidded into topsy-turveydom for sometime. How is it that the Indo-Soviet Cultural Society has not thought of inviting Titov to join Gagarin? Does being the first man who circled the earth make so much of difference?

"Here are five ways

BOAC Air Cargo can help your business!"

★ *Fast* BOAC jetliners slash transit time by *hours.*

★ *Direct* BOAC city-to-city freighting cuts out time-wasting journeys to and from docks.

★ *Simple* (cheap) packaging is all that's needed with careful BOAC handling.

★ *Safe*, efficient BOAC freighting means lower insurance costs, wider coverage.

★ *Experienced* BOAC staff give all goods *individual* attention all the way.

We deliver your goods in hours, instead of days or weeks! And that's only one of the things you gain. Speed alone may not be enough for you—but BOAC Air Cargo gives more and more successful businessmen these extra advantages...advantages that can help and benefit *your* business!

Ask for details now—from your Forwarding Agent or BOAC offices at:

CAN EXPORTS BE DOUBLED IN TEN YEARS?

REVIEW OF THIRD PLAN TARGETS

(Contributed)

THE problem of our exports is as much a long-term problem as it is a short-term one. The immediate danger arises from the U.K. Government's decision to join the European Common Market which will immediately affect our exports to U.K. as the biggest consumer of our traditional exports. In the long term, an increase in our exports is the very basis of our Five-year Plans. We have started with targets which are difficult to scale down. Having started with such high targets, we have explored all means of external aid and there is still a substantial gap to be met by exports which have to increase substantially if any of the targets are to be realised.

The Planning Commission has a 10-year export promotion plan which will take effect from the beginning of the third Five-year Plan. According to the needs for the required increase in exports, the present level of exports has to be doubled to Rs. 1,300-Rs. 1,400 crores by the end of the fourth Plan, i.e., 1970. If this is achieved, it should ensure a self-sustained growth of the economy thereafter. It is against this background that the object in achieving export earnings of not less than Rs. 3,700-Rs. 3,800 crores over the third Plan has been set. This would mean that the annual level of exports during the course of the third Plan should rise by about Rs. 200 crores and the overall annual exports for the third Plan period should be about Rs. 150 crores more than the average during the second Plan.

Doubling our exports within a space of 10 years would mean that the present 5 per cent of our national income which is being utilised for exports will have to be raised to 6 per cent at the end of ten years, after taking into account the expected increase in our national income. This, from the point of view of national income, is not very difficult provided the income increases as planned. The increase in exports, however, has to be viewed against the fact that during the course of the last ten years, the proportion of India's trade to total world trade has fallen from 2 per cent to 1 per cent, which means that world trade has doubled and the quantum of our trade has remained constant. This of course, does not mean that doubling one's exports within a period of ten years is impossible. In the past, this has been achieved by Ireland, Germany, Japan, Israel and Yugoslavia. It is inevitable, however, that special means should be considered for commodity-wise and country-wise increase in our exports. As the total proportion of our trade with our neighbouring countries and with African countries is proportionately small, it might be advisable to increase this systematically with the aid of competent Trade Commissioners.

Promotion Measures

The Planning Commission has announced that the measures suggested for export promotion would include restraints on internal consumption, reduction in the costs of the products, increase in production and greater export consciousness in the public. The Commission has also suggested that licensing policy for industry should take due account of economies of larger scale in the case of export industries. In these industries, the level of costs has overriding importance and national interest requires that this consideration should receive precedence over certain other considerations such as balanced regional development and dispersion of economic power.

The biggest problem facing our export industry at present is probably the rising demand and good prices obtainable in India in the present inflationary situation which acts as a disincentive to exports. The Planning Commission has also given some thought to the necessity of setting physical limits to the total internal sales of individual manufacturing units so as to make surpluses available for exports. The more successful means, however, can only be various export incentives which have so far been only in the form of linking exports with preferential import licences. The bait of import licences can be useful only if they are not used for less essential industries and only if the leakage of the foreign exchange by under or over-invoicing can be checked. It is the *net* amount of foreign exchange earned which should always be a major consideration. The best export incentive would be to offer tax concessions to export industries. This may take the form of tax holidays for new undertakings, development rebate for newly installed machinery and the additional depreciation allowance equal to normal depreciation which was allowed to lapse two years ago. It is, however, necessary to go a step further and introduce priorities in the taxation structure for the export industries. Either the uniform development rebate may be converted into a higher development rebate and allowing longer tax holiday for export industries or special treatment for output set aside for exports.

The c.i.f. price of most of our exports tend to be higher than the world prices. In the case of sugar, the world price per bag is about Rs. 40 per bag, while the Indian c.i.f. price is about Rs. 110 per bag. So, even if the excise duty of Rs. 30 per bag was completely taken off, there would still be need for other financial incentives for exports. This is inevitable as the export need in some cases might be as high as 20 per cent to 25 per cent of the total output, which is an amount on which no industry can afford to bear a loss. In order to give a favourable tax structure to an export industry, any assistance by way of cheaper raw materials would not be substantial as the percentage costs of raw materials in a heavily capitalised industry will not be very much. Japanese competition to our textile exports shows that shipping and freight is one of the important factors in reducing the c.i.f. prices. It might therefore be advantageous to follow up the recent beginning in the reduction of export freights by systematic negotiations with foreign conference lines. In some of the industries, the export prices have to be anything upto 25 per cent lower than the internal prices and this can be best done by allowing exports losses set off against taxable profits in India. Exports to the less developed countries in Africa and the Far East can also be promoted by loans for specific exports or credits for the machinery for new industries to be established in the lesser developed countries. India is in a position to export cement manufacturing machinery and other engineering goods which have shown a most promising rate of growth.

Non-traditional Exports

The third Plan is based on the assumption of a substantial increase in our traditional exports like tea and cotton textiles to the traditional markets like the more developed Western countries. While the traditional exports offer the surest exports which have stood the test of time it is argued that they might not increase by more than 20 per cent over the next five years. Under the circumstances, we have to think of the non-traditional exports like cement and machinery to non-traditional countries with centrally planned economies. Something can be done in this direction provided the defects of the rupee payment agreements are corrected so as to provide for competitive quotations and conversion of the unrequited exports into convertible currencies. Some people have gone even to the length of recommending devaluation which will increase substantially the certain costs of the inevitable imports as against the possible hope of an increase in our exports which have inelastic demands. The immediate result of such a step can be suicidal because our exports may not rise except to a small extent.

One aspect which is often lost sight of is the need for quality controls in the exports especially of cotton textiles where we have lost markets permanently to our competitors by not sticking to the quality as per sample. As the Planning Commission would be going into the possibility of exports for each industry, it will surely look into information such as the enquiry made by the Tariff Commission in respect of the relative labour costs of 62 industries. It was noticed that 25 per cent of the industries had a labour cost below that of our competitors. Cheaper labour can sometimes be really cheaper and these small advantages need to be pressed home.

AMERICAN LETTER

BOOM PSYCHOLOGY SPREADING

KENNEDY ADMINISTRATION STOPS BANK MERGERS

From Our Special Correspondent

NEW YORK, *8th September*

DESPITE gathering war clouds, or perhaps because of them—it is difficult to pinpoint the reason—a boom psychology is developing in the United States. The general expectation is that the fourth quarter of the year will be shaping up as the best three months' period of 1961 and, possibly, the best ever.

The steel market has recovered. New orders have been gaining across a wide range of products at an accelerating pace. Now that the wage negotiations in the automobile industry have been settled without a strike, spokesmen predict a boom. This is one of the supporting elements in the steel picture, of course.

Home appliance manufacturers are equally optimistic. They are ordering more steel in anticipation of an upturn in the autumn. Even farm equipment manufacturers, who had been expected to suffer from this year's severe drought in some areas, registered little more than a seasonal decline in their steel orders.

Another part in the overall picture is the defence build-up for the armed forces and the civilian population. While all this is going on, business and industry are trying to adjust themselves to higher minimum wages which became effective in the beginning of this month to coincide with Labour Day. These higher minimum wages now cover also additional groups of workers not included heretofore.

Steel workers will get another—the third—pay boost next month under the last wage contract signed in January, 1960. Steel prices were not raised after the first two wage and fringe benefit raises and political pressure is now being brought to bear to make the steel industry refrain from upping prices next month.

Steel prices have not been too firm anyway, owing to foreign competition which has retained its supply position acquired during the last long steel strike. Except the major producers, most of the smaller steel companies have been labouring under reduced earnings which has not helped labour or Treasury tax revenue.

Bank Mergers Blocked

Interference in business matters by the Federal Government is becoming more and more symptomatic of the methods applied by the Kennedy Administration. Robert Kennedy, the brother of the President, as Attorney-General of the United States, is using the entire machinery of the Department of Justice in these doings.

Latest attempts have centered around the blocking of bank mergers which had been approved by the various Federal and State supervisory authorities and upheld by State Supreme Courts. The official excuse for such actions were the anti-trust laws and charges of monopoly. All this is absurd. In the 1930s, there were some 40,000 banks in the United States. The majority were small and established by local merchants who had made their money in the lush and speculative 1920s.

Most of these bankers knew nothing about banking. The net result was that, after the bank holiday, declared by President F. D. Roosevelt in 1933, only about 15,000 banks were able to reopen. Mergers have since reduced this number, but not materially. As a whole, the country is still overbanked. Canada, for example, has less than 10 banks with their large network of branches which, of course, serve a population much smaller than that of the U.S. where branch banking is frowned upon, except in a few States such as California which is blanketed by Bank of America. That, too, is a matter of politics and "politics" in the American sense has become the hand-maiden of special interests. There are many of these and they often serve cross-purposes.

A Social Problem

New York City has just emerged from one of the dirtiest primary elections for Mayor. Charges and counter-charges were ghastly, because corruption and abuse of power by public officials were rampant. Members of the Board of Education were unpleasant on television not only to eyes but to the ears in their incorrect use of the language and all this is super imposed on the racial integration problem which is almost as acute in the industrial East of the U.S. as it is in the South with its large Negro population. The protection of the latter by Washington under devout humanitarian phrases does not distract from the fact that a substantial number of potential votes are involved.

Similarly immune from prosecution is the motion picture colony in Hollywood, or at least a large number of its members, as well as members of the gambling syndicates in the States which permit casinos to operate. The reason there is that millions and millions of dollars have been spent by these groups to elect "safe" candidates. None of this makes for public confidence in Government and all of this has strong economic implications. Thus, meritorious projects, conceived in the public interest, fall often by the wayside, if the proper persons can be "persuaded" to veto them. This, of course, has gone on throughout recorded history, but something of a zenith in this area has been reached here.

G.N.P. Jumps Up

It may be one of the luxuries of prosperity. The gross national product in the fourth quarter is now projected to reach the $540,000 million mark. This is $10,000 million higher than the previous estimate and compares with $516,000 million in the first quarter of 1961. Inventories are rising slowly and factory sales have been increasing for the sixth consecutive month. There are no signs of abatement in the upward curve.

The longer-term outlook is such that some economists predict a $600,000 million economy by the end of 1962 and a reduction in the unemployment rate from the present level of a little less than 7 per cent to 4 per cent of the labour force. If war comes, there may be no unemployment at all and fewer people to satisfy statistical purists.

United Nations News

There were two major topics of discussion at United Nations headquarters in New York. One was the meeting of the heads of uncommitted nations at Belgrade and Prime Minister Nehru's subsequent—and from all reports—depressing talk with Chairman Khrushchev. The other was the splendid co-operation of Western central banks in helping the Bank of England in its difficulties to bring about a better balance of international payments.

The International Monetary Fund came in for praise, too, for the part it has played in alleviating the British crisis. This U.N. affiliate announced, incidentally, that New Zealand, which has voiced strong opposition to Britain's decision to join the European Common Market, has become the Fund's newest member. That country also joined the World Bank and the International Finance Corporation. Seventy-two nations are now members of the Fund, with total quotas of $15,002,600,000.

There is a great deal more concern among U.N. delegates about the possibility of war than there is among the American people, generally. The situation certainly is much more serious now than it has been for some time. Mr. Adlai Stevenson, the U.S. Ambassador to the U.N., is no longer as flippant as he used to be after having been exposed to the realities of international politics and international economics. Rebellious voices around the globe are too loud and too strong to be ignored even amid the materialistic prosperity which only a short time ago was believed to be the answer to ideological difficulties with other lands.

(Concluded from next column)

a commercial display—in which British firms and Indian firms with British connections will stage individual displays of their products on stands provided by the Board of Trade. This section will cover about 26,000 square feet and accommodate 48 firms indoors and two out-of-doors. Ten other firms with British connections will exhibit independently in their own pavilions on adjacent sites. Their exhibits will bring the area devoted to exhibits of goods deriving from Britain up to a total of 112,000 square feet.

PLANNING DILEMMA

REACTIONS OF TRADE UNIONS

(From Our Own Correspondent)

LONDON, *9th September*

LONDON LETTER

THIS week the Trades Union Congress (T.U.C.) has been holding its Annual Conference. The most important report before it was that on economic affairs, with particular reference to the Chancellor's request that the trade unions should assist him in planning.

The chief spokesman for the General Council said scathingly: "The Chancellor's difficulty is that he has waited until he put himself and his Government and ourselves into an impossible mess before he has come to us for co-operation. And when he does come for that co-operation, he holds us at arm's length by his actions in connection with his wage pause and by destroying the machinery of arbitration."

The point is the unions want to be consulted; they regard themselves as a serious and important body of men, but the Chancellor's imposition of a wage pause first and a plea for consultation afterwards strikes them as the wrong way round to do things!

The T.U.C.'s Economic Advisers have taken the view that the Chancellor has been altogether too much dominated by the surges in and out of hot money. They are not, of course, alone in this, for, on the employers' side, too, the Chancellor has been condemned for not providing a more stable basis on which to further the nation's economy. The view that these external money movements ought to be divorced from domestic policy is thus gaining ground.

The T.U.C. spokesman went on to criticise the *laissez faire* policy of the Chancellor "who is now so bewildered by its result that he turns to socialist policies, and, if, in planning, he stumbles and does not know quite what to do, do not let us blame him too hardly. A Conservative Chancellor carrying out socialist policy is bound to be bewildered."

But it also emerged during the Conference that, although the employers were enthusiastic about the idea of a National Planning Council, the Unions have become suspicious of it. The reason for this is that they are afraid that to the Chancellor planning might mean not more than a wage pause. They are particularly indignant at the Chancellor's decision to override the Wage Boards—that is the conciliation machinery which helps the smaller and weaker unions to negotiate wages. The road haulage workers have a claim before their Wages Council at the moment and the T.U.C. has declared that it will fight on their behalf. The trade unions have an especial veneration for the machinery for settling wages and industrial disputes. That is why they are quite genuinely shocked by the weakening of this machinery.

It seems that the Chancellor had in mind a Planning Committee of 25, representing employers, unions and Government, but the T.U.C. has declared that it could have no confidence in such a body. Its size would mean that everybody would make set speeches; it could not possibly form a consultative committee. But the T.U.C. of course favours planning and, in spite of all that has been said this week against the Chancellor's proposals culminating in a resolution denouncing his policy, it is unlikely that the trade unions would stand out against co-operating in a committee of such size and composition as would be truly consultative and truly at the centre of power.

BRITISH PAVILION AT INDIAN INDUSTRIES FAIR

"Britain as India's Industrial Partner" will be the major theme of the British exhibit at the second Indian Industries Fair to be held in Delhi from 14th November to 1st January 1962. The exhibit, which will be the most ambitious Britain has ever had in India, is being designed to give an overall picture of the extent and variety of the British contributions to the industrial development of India.

The British Pavilion, designed by Mr. Charles Munro, one of Britain's leading exhibition designers, has designed the Pavilion, will be in two major sections. The first is to be devoted to the official exhibit, "Britain: India's Industrial Partner," and will cover about 11,000 square feet. The object of this exhibit will be to outline Britain's continuing contribution to the industrialisation of India and it will include sections on finance, transport, communications, power, industrial production, health and knowledge. This will lead into the second section—

(Continued in previous column)

INSURANCE OF BANK DEPOSITS

LOK SABHA ADOPTS THE BILL

THE Lok Sabha gave its consent to the Deposit Insurance Corporation Bill, 1961 on 8th September, 1961, after a brief debate. The Bill was generally welcomed by the House. Some of the members offered a few constructive suggestions; none of them, however, was acceptable to the Government. As is only to be expected, the Communist members availed themselves of this opportunity to voice, once again, their favourite themes, namely, condemnation of the private sector and nationalisation of banking. Notable among the suggestions made were: (1) the amount payable by the Corporation in the event of failure of a bank should be raised from Rs. 1,500 to Rs. 3,000, if not Rs. 5,000; (2) the low amount covered might lead to splitting of accounts over a number of banks; and (3) co-operative banks should be brought within the scheme.

Moving the Bill for adoption by the House, the Deputy Minister of Finance, Mr. B. R. Bhagat, explained at length the objectives of the measure and its salient features. The Minister stated at the very outset that there was a consensus of opinion among those interested in the banking industry that the time was now opportune for the establishment of a deposit insurance scheme. It was now generally agreed on all hands that the scheme would increase still further the protection which was now being provided by the provisions of the Banking Companies Act and that it would strengthen and improve the banking and financial system of the country. Dispelling the apprehension that the scheme was being introduced at this juncture because of the prevalence of a crisis in the banking sector, Mr. Bhagat hastened to add that the progress of the banking system was quite satisfactory. He observed that whether one took into consideration the number of institutions or the amount of loss to depositors, bank failures in India had been neither frequent nor very significant in comparison with the experience of several other countries, including the U.S. The deposits of banks which might be regarded even by pessimists as vulnerable did not constitute 4 per cent of the total deposits of commercial banks at the present time. Mr. Bhagat stressed that, in actual quantum, the loss or erosion even in the case of these deposits was not so great as to cause any serious concern.

Complacent Optimism

These observations of Mr. Bhagat are rather too optimistic and complacent. Similar observations made by his predecessors were not borne out by events. Take for instance the shock received by the country as a whole on the failure of the Palai Bank. The amount of deposits involved here (about Rs. 10 crores) was only a small fraction of total deposits, but the repercussions of the failure were enormous. Another point to be borne in mind here is that the sufferings of persons who lose as a result of bank failures are immeasurable, as, in several cases, it may mean the loss of savings of a life time. In a way, the last mentioned point was conceded by Mr. Bhagat when he said that the primary objective in framing the present legislation was to remove the anxiety on the part of individual depositors regarding the safety of the funds. For its smooth functioning and growth, the banking system, the Minister added, must be able to offer a guarantee or assurance of protection, in respect of every deposit, whatever the position or the status of the bank or depositor might be and further the depositor should be in a position to obtain as large a portion as might be possible of the amounts due to him, in the event of any unforeseen loss, without waiting for the process of liquidation, or the realisation of the assets of the bank, to be completed. This was the rationale, remarked Mr. Bhagat, behind the deposit insurance scheme incorporated in the Bill.

Alluding to the salient features of the measure, the Deputy Minister of Finance pointed out that the main intention of the Bill was that the deposits in all commercial banks, excluding Government deposits and deposits of the insured bank themselves, should get the benefit of insurance cover within thirty days of the commencement of the Act. As regards the extent of protection which would be afforded by the Bill, the Minister informed the Lok Sabha that, on the basis of the estimates made by the Government, 75 per cent of the accounts, or 4.5 million accounts in absolute number, and 20 per cent of the entire deposits, excluding P.L. 480 funds, were likely to be covered by the scheme. He also disclosed that, to begin with, the actual rate of the premium would be fixed at 5 nP per Rs. 100 of deposit amount. This is a low rate, lower than even the most optimistic expectation in the banking world. Such a low rate of premium is possible, because the amount insured per deposit account is fixed at a very low level, a clear evidence of the half-hearted manner in which the Government is implementing the scheme. The Minister was not very convincing when he said that the small cover provided under the scheme would not induce a person to keep deposits with a number of banks in order to get full protection for his funds, as people deposited money only in banks in which they had confidence. His reasoning ignores the force of human nature. Hitherto no cover at all was available. But now that some protection will be available, depositors, especially the small and medium, will naturally try to take full advantage of it. Again, so long as the amount of deposit covered by insurance is as low as it is at present, the scheme will not be of much use as a factor minimising the possibility of runs on banks.

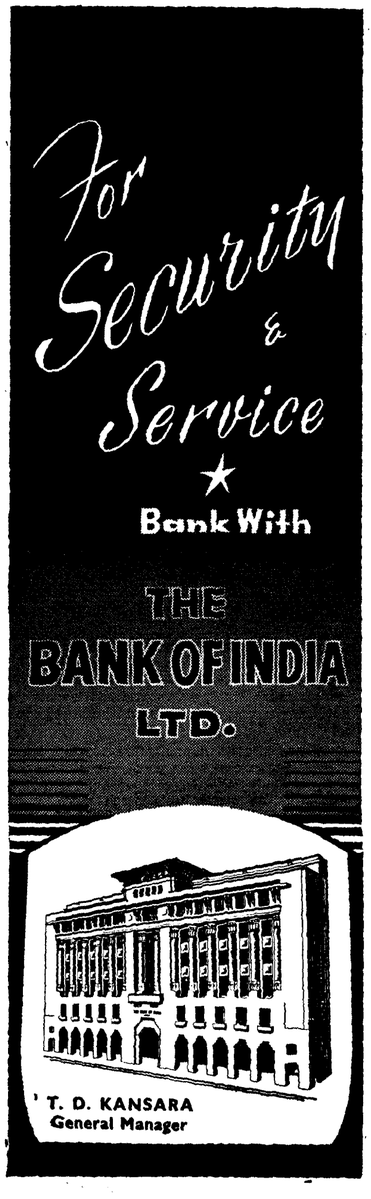
Mr. Bhagat also explained the reasons that prompted the Government to give up its original proposal for excluding the State Bank and its subsidiaries from direct participation in the scheme. His observations on this point deserve to be placed on the record of this journal:

"The State Bank and its subsidiaries are constituted as public corporations by the Central Government under special charters. This distinguishes them from other commercial banks, and it is not necessary to cover the deposits of these banks by an insurance scheme, the primary object of which is the restoration of the confidence of the depositors. However, certain legal and other difficulties have been encountered in implementing the decision in the form in which it was originally announced. Accordingly, the deposits of the State Bank of India and its subsidiaries have also been formally included in the scheme and the contributions which these banks would have made in accordance with the previous decision will now be made by them in the shape of premia."

The foregoing quotation clearly shows that the Government had taken its decision earlier without realising the constitutional implications. This does not redound well to the credit of the Government.

Co-operative Banks

Explaining the grounds for excluding the co-operative banking sector from the deposit insurance scheme, Mr. Bhagat said that, as the co-operative banking societies were exempted from the provisions of the Banking Companies Act, they were not subject to the same degree of control as the commercial banks. Also, as their number was very large, the Corporation would have difficulties in entering into agreements with them. Furthermore, the size of insurable deposits with these societies was, however, not very considerable. Nevertheless, he proceeded to say, reassuringly to Co-operators, that the Government was alive to the possible adverse repercussions that such exclusion would have on the co-operative banking sector and that the position would be reviewed in future when the Corporation had built up adequate financial resources for enlarging the scope of its activities. This statement of Mr. Bhagat, despite the difficulties involved in extending the facilities of the Corporation to co-operative banks, is typical of the Government's ideological attachment to the Co-operative Movement.



SECOND I.D.A. LOAN TO INDIA

The International Development Association (I.D.A.) extended this week a development credit equivalent to $6 million to India for the expansion of tubewell irrigation in the State of Uttar Pradesh, one of the country's most important agricultural regions. The project which the I.D.A. credit is helping to finance provides for the drilling and equipping of 800 tubewells during the first three years of the Plan period for the irrigation of 320,000 acres of land in Uttar Pradesh. The cost of the project is estimated at the equivalent of $12 million of which one-half would be covered by the I.D.A. credit.

The credit is for a term of 50 years, interest-free. It is repayable in foreign exchange, amortisation to begin, after a ten-year period of grace, on 1st November 1971. Thereafter, 1 per cent per annum of the principal will be repayable for 10 years and 3 per cent will be repayable each year for the final 30 years. A service charge of ¾ of 1 per cent per annum on the amounts withdrawn and outstanding will be made to meet I.D.A.'s administrative costs. This is the second I.D.A. credit to India; one of $60 million was granted in June 1961 to assist a programme of road construction and improvement.

The proceeds of the I.D.A. credit will be lent by the Indian Government to the State of Uttar Pradesh, whose Irrigation Department will build and operate the project. The Department has had long and successful experience with tubewell irrigation, and, by 1960, had a total of 6,000 tubewells in operation. Wherever it can be used, tubewell irrigation has certain obvious advantages. Construction time is short, as compared with major irrigation works; water is under the control of the user and is available when needed; and it can reach areas which cannot be irrigated by gravity from canals. Moreover, although tubewells are more costly to operate, they are cheaper to construct than large projects for canal irrigation. Each of the 800 new wells will irrigate about 400 acres. They will be drilled to an average depth of 300 to 400 feet and have an average capacity of 35,000 gallons per hour. The pumps will be driven by electric power to be supplied from the State grid system, and will discharge into about two miles of canal. The farmers themselves will provide ditches between the outlets of the Government canals and their farms.

NEPAL JOINS FUND AND BANK

Nepal became a member of the International Monetary Fund and the World Bank on the 6th inst., when the Articles of Agreement of the two institutions were signed at Washington by Nepal's Ambassador in the U.S., Mr. Matrika Prasad Koirala. The quota of Nepal in the International Monetary Fund is $7,500,000. Nepal's subscription to the capital stock of the Bank is 100 shares with a total par value of $10,000,000.

Seventy-three nations are now members of the Fund and the total of members' quotas is $15,011,900,000. The Bank now has 71 members and a total subscribed capital of $20,279,800,000.

Cottons labelled '*Sanforized*' will not shrink out of fit

Our technical experts keep a constant check on all mills licensed to use the internationally-known label 'Sanforized'. Such vigilance ensures that material bearing this label is up to specifications laid down by us, and that it will not shrink even after *many, many* washings.

Month after month and throughout the year, these *experts visit the licencees, carefully examining* fabrics both from the warehouses as well as off the processing machine

From each mill, they take an extensive random sampling of various fabrics. Each must be a quality fabric before it can be stamped with the label 'Sanforized'

These samples are catalogued; measured and submitted to rigorous wash and minimum shrinkage tests both here and in the U.S.A. in fully equipped technical laboratories

The catalogued samples are then re-examined and re-measured. The results of our experts' findings are recorded, each mill having its own dossier

A copy of these reports, together with their samples, are sent to the home office in New York. This multiple checking ensures that all cottons marked 'Sanforized' will not shrink out of fit

Make certain you get the full measure of value of the material you buy—

Look for ·SANFORIZED· REGD TO MK *on the label*

and your clothes will never shrink out of fit!

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

ENQUIRY INTO COTTON MILL CLOSURES

SPECIAL COMMITTEE PROPOSED—DETAILS OF SPINDLES ALLOCATION

TWO important considerations invest the need for enabling the marginal mills to avoid closure and the closed cotton mills to resume production with urgency. One, the domestic clothing requirements of the country are increasing steadily, not to speak of the necessity of earning foreign exchange through exports. Two, there will be an expansion in employment opportunities, both direct and indirect. Viewed thus, the latest decision of the Union Government to constitute a small representative committee to keep under constant review the causes of mill closures and to suggest timely steps in order to enable the marginal units to tide over their temporary difficulties is to be welcomed, though it can be asked whether such work cannot be entrusted to the Office of the Textile Commission which has quite a large staff and which gets whatever information it wants from the individual mills. The decision to set up the committee was disclosed by Mr. K. C. Reddy, Minister for Commerce and Industry, where he addressed a meeting of the Informal Consultative Committee of Parliament at New Delhi on Wednesday last week.

The Minister was confident that most of the seventeen mills which had suspended operations were likely to reopen in the near future. Mill closures—total, partial and shift-wise—may, of course, be a feature of normal existence in the cotton mill industry, but it has to be stressed that the closures of individual units should not be for an unduly long period. According to Mr. Reddy, a certain number of mills in the different parts of the country either do not work to their full capacity or remain closed at sometime or other, owing to various factors. The main causes of closures are uneconomic working or financial difficulties. The closure is also brought about sometimes by other factors such as gross mismanagement, imbalance in production and the resultant losses as a result of accumulation of stocks, labour strikes, etc.

Government Assistance

The speech of Mr. Reddy and the discussions at the aforesaid meeting brought out the following information:

The mills which suffer from financial difficulties can get assistance from institutions such as the National Industrial Development Corporation and the Industrial Finance Corporation. If it is a case of uneconomic working, the mills can avail of the services of the Survey Organisation in the Textile Commissioner's Office for conducting the survey of mills and for suggesting technical improvements necessary for efficient working. Besides, the Government has since April 1957 taken up for investigation 25 mills under Section 15 of the Industries Act 1951. Of these, investigation in respect of one mill has been given up and the report in respect of another is awaited. Of the remaining 23 mills, the affairs of 12 units have improved either with or without actual Government intervention and, as such, the necessity of having further action does not arise. Directions under Section 16 of the Industries Act were issued in the case of two mills, requiring them to reopen on or before an appointed date. One mill reopened and the other had to be taken over by the Government for non-compliance with its directions.

While the Government would be justified in taking energetic steps to re-open mills that can be successfully salvaged, it will not be justified in doing so in the case of mills which are not economically viable. There is no point in reviving dilapidated units at a heavy cost to the tax-payer or at considerable sacrifice by workers. Similarly, while trying to prevent closures of marginal mills, care must be taken to see that no premium is placed on inefficiency, whether it be of management or workers. Units of this nature deserve to be helped only if appropriate steps are taken in advance to remove their basic defects.

New Spindles

In his speech, Mr. Reddy also announced details regarding the State-wise allocation of 2.1 million additional spindles out of the 3.0 million which the Government has decided to license "immediately." Accordingly, the States have been divided into five categories. The first category comprises the highly deficit States of Andhra Pradesh, Bihar and Uttar Pradesh, the allotment made being 225,000 each. Assam, Kerala, Madhya Pradesh, Orissa, Punjab and Rajasthan come under the classification of middle deficit States, with an allocation of 150,000 each. Mysore and West Bengal have been allotted 100,000 each. Gujarat, Maharashtra and Madras are considered as surplus States, their individual share being 75,000. Fifty thousand spindles have been allotted to Manipur and an equal number to Tripura.

The allotment of 225,000 additional spindles made to Andhra Pradesh has caused dissatisfaction to the State Government. The State's Chief Minister, Mr. D. Sanjivayya, stated recently that the allotment was "too meagre." The State Government, he declared, would urge the Centre for more spindleage. In support of this plea, he referred to the numerous applications received from private industrialists whose demand exceed one million spindles and said: "Andhra being a leading State in regard to the handloom industry, it requires about two million spindles. Andhra is a major producer of cotton. It is the policy of the Government also to start a spinning mill of 18,000-spindle capacity in each district by the end of the third Plan period." The Chief Minister added that the State had at present only 200,000 spindles, as against 7.0 million in the undivided Bombay State and 3.0 million in Madras.

First Preference

Some other States may also be expected to press their claims for more liberal allotments of spindles. Before the Centre thinks of conceding these demands, it will do well to bear in mind one important fact, namely, that preference must first be given to the expansion of existing units *vis-a-vis* the establishment of new mills. Preference must also be given to the mills the spindleage of which is less than the economic size, the unbalanced units and the mills that have been allotted additional automatic looms under the Export Incentive Scheme. This aspect has been emphasised by the Indian Cotton Mills Federation in the course of a communication addressed to the authorities, a reference to which was made in this journal last week (*vide* page 486).

The Federation is of the view that, having regard to the increased cost of production, a mill will be in a position to maintain the managerial and sales staff of the requisite calibre only if the minmum economic size is increased to 25,000 spindles. The immediate implementation of such a proposal, it is stated, will require the allocation of some 2.5 million spindles to about 250 mills which have less than 25,000 spindles each. The Federation does not, therefore, consider it feasible to implement the proposal in the immedite future, and, in its opinion some gradualness will be necessary in raising the minimum economic size of a unit from 12,000 spindles to 25,000 spindles. The Federation refers next to the mills which are unbalanced in two ways: (1) between spinning frames and the back process; (2) between spindles and looms. The following criteria are suggested to determine whether a mill is unbalanced:

(*a*) The basis should be the average count spun by a mill in the last three years. If the average count is below 22s, the mill may be allowed to claim to go finer to the extent of another two counts, for ascertaining whether it is balanced or unbalanced.

(b) As regards imbalance between back process and spinning frames for the average count determined as above, no general criteria can be laid down, and technical examination of the claim made by each mill will be necessary. There should, however, be a limit of 3,000 spindles to be given to any mill for imbalance of this nature.

(c) In the case of imbalance between looms and spindles, the ratio that should be taken into account on the average count of the mill determined as suggested above is: up to average count of 17s: 1 loom to 40 spindles; 18s-34s: 1 loom to 45 spindles; above 35s: 1 loom to 50 spindles. The same ratios should be applied for determining additional spindles to mills which have been allotted additional automatic looms under the Export Promotion Scheme.

Automatic Looms

As for the allotments of automatic looms for replacement purposes, the Federation has commended for acceptance the following method:

Each applicant mill should, in the first instance, be allowed 48 automatic looms. A period of six months be given for taking effective steps for acquiring the allotted looms. If a mill fails to acquire the looms in time its allotment be cancelled. The balance of looms as well as cancelled looms be distributed *pro rata* as supplementary allotments on the basis of export performance in the following manner:

Average export performance of the three preceding years expressed as percentage of the total cloth production	Looms to be allotted				
	upto 1,000	1,001 to 1,500	1,501 to 2,000	2,001 to 2,500	2,501 to 3,000
0—14	Nil	Nil	Nil	Nil	Nil
15—25	24	36	48	60	72
26—37½	48	72	96	120	144
38—50½	72	108	144	180	216
51—62½	96	144	192	240	288
63—75	120	180	240	300	360
76—87½	144	216	288	360	432
88—100	168	252	336	420	504

Apart from the need for ensuring equitable distribution of spindles and looms, there is also the need for eliminating unnecessary delay on the part of the authorities in the issue of licences, as well as the release of the required foreign exchange and provision of other facilities in order to enable the mills to go ahead with their expansion programmes speedily. It is to be hoped that the Government will promptly attend to this need.

RESUMPTION OF TALKS ON WAGES

RESTRAINT APPEAL REJECTED—RENEWED PLEA FOR 10 PER CENT RISE

From Our Special Correspondent

MANCHESTER, *5th September*

THE National Union of Dyers, Bleachers and Textile Workers, with a membership of 50,000, has rejected the Chancellor of the Exchequer's wage restraint appeal, and submitted an application for more pay to the employers' negotiating body, the Textile Finishing Trades Association, Manchester. The basic time rate was increased in March last year, when men and women on the basic rate received an extra 5s. and 3s. 6d. a week, respectively, for those engaged in dyeing and finishing. The increase did not apply to operatives earning more than the basic rate or to piece rates.

MANCHESTER LETTER

Mr. Leonard Sharp, Secretary of the Union, said that the executive had received many letters of protest from branches about the Chancellor's economic measures. "We believe the measures will cause a serious deflationary situation which will result in the slowing down of production and demand, and may well result in unemployment in many industries.

Wages—A Critical Phase

Joint talks on the wages claim submitted by the spinning and weaving trade unions are to be resumed next week when the employers' reply to the demand for a 10 per cent increase will be presented to the operatives' leaders. Without wishing to pre-judge the issue, it would certainly appear that the millowners have a strong incentive to resist the application, in view of the call by the Chancellor of the Exchequer to avoid further advances and the standstill imposed on the various sectors of the economy which are controlled by the Treasury. Moreover, the state of trade in the mill towns at the moment, which extended holiday stoppages, seems scarcely the time to contemplate another upward twist to the wages spiral.

On the other hand, the union representatives still contend that cotton lags behind its competitors as a form of employment when wages are the sole criterion. They believe that earnings have not kept pace in recent years with the general rise in the cost of living. Recruitment of labour presents a problem, particularly when shift work is involved, so that there is something to be said for the argument that inducements in the way of higher pay might prompt more workers to return to cotton as a career.

Further documentary evidence has now come to hand about the trend of wage rates throughout British industry, provided by the Ministry of Labour in its half-yearly returns. These show that, in the six months to the end of April, a further sharp rise occurred in general earnings as well as in the various textile industries, not excepting spinning and weaving:

April, 1961 ..	301 4	150 0	158 6	99 11

The above figures for actual earnings speak for themselves. As compared with 12 months previously, men in spinning and doubling were receiving an extra 15s. a week in April and the wages of male weavers had increased by nearly 16s. Similar advances had also been secured by youths, but the gains for women and girls had not been as extensive.

The last direct wage advance occurred in March 1960, so that the upward movement in earnings now disclosed must to a large extent be attributable to the keen rate of activity in the mills, where every effort was being made to expedite deliveries of yarn and cloth in the face of continuing demand. But some commentaries made on the pending wage claim have failed to recognise that, in effect, the operatives secured an advance of nearly six per cent when the working week was reduced from 45 hours to 42½ hours at the beginning of this year, without loss of earnings.

Some idea of the pressure for supplies then being encountered can be gained from the fact that the tables showing the average number of hours worked in April had not reflected the full reduction of 2½ hours negotiated at the end of 1960. In the weaving section, the latest returns show men operating looms for 44.7 hours, as against 45.7 hours six months previously and 45.9 hours in April last year. In the case of women, the figure was 40.5 hours, as against 41.7 hours in October 1960. In the textile finishing trade, average hours worked by men fell from 51 in April 1960 to 49.5 hours a year later, the average reduction over the six months being one hour. The number of hours being worked by men in spinning and doubling in April was 47.5, as against 47.3 in October and 48.3 in April 1960. Women workers in this section were employed for 40 hours, as against 41.8 hours in October 1960.

Continued imports of cotton cloth and yarn into the United Kingdom represent an "unrelieved threat to the textile industry" says the quarterly report of the Operative Spinners' Amalgamation issued in Manchester. "These imports do not come here unsought," the report continues, "and their entry is being assisted without regard to its effect upon the home producers and, more important to us, the security of employment of the Lancashire cotton operative."

This grave situation, which is continuing to develop in a most alarming way, cannot be allowed to continue, the report adds. "An ordered import policy is an absolute need, if the same wretched chaos experienced in the 1950's is not again to overtake the industry."

New Textile Scholarship Plan

Up to £2,000 are to be spent annually by the Cotton Board in providing scholarships for textile designers—the first scheme to offer substantial awards for established designers already working for the British cotton industry. Applications for the 1961 scholarships must be submitted before the end of the next month, enabling the successful candidates to undertake their projects in the spring of 1962. The object is to provide designers with the opportunities to travel abroad to refresh their creative abilities and stimulate their enthusiasm, enlarge their knowledge of design and design trends likely to be of importance in those markets in which the British cotton industry has a substantial interest, and to study the requirements and potentialities of a particular market from the design viewpoint.

Candidates must be practising designers with a minimum of five years experience in working for the British cotton industry and will be expected to continue working in or for the British cotton industry on the completion of the scholarship. They will submit an illustrated report of their activities to the Cotton Board who will be able to use the information in whatever way is considered to be in the best interests of the industry as a whole.—*All Rights Reserved.*

PROUD OF INDIA'S FIRSTS...

Gently, he sticks the last strip of tissue-paper over the frail balsa fuselage. A little glue, a little patience and he is proud of his HF-24, supersonic jet plane.

Someday soon he will know that putting together India's first supersonic jet wasn't so easy. It would have been impossible to weld and fabricate the sleek aluminium body he admires so much without Argon.

A rare gas, Argon welds difficult metals and is now produced in India for the first time by Indian Oxygen. Like HF-24 indigenous Argon will save India much foreign exchange.

TRENDS IN BRITISH TRADE UNION MOVEMENT

COMMUNIST INFLUENCE VANISHES

A UNIQUE event in the history of the trade union movement in Britain happened this week. The Communist-controlled Electrical Trades Union (E.T.U., membership: 243,000) was expelled from the Trades Union Congress, the national centre of the British trade union movement, by an overwhelming majority vote of ten-to-one at the annual conference of the T.U.C. currently being held at Portsmouth. The expulsion was in pursuance of the recommendation by the General Council of the T.U.C., after an investigation into charges, against the executives of the E.T.U., of ballot-rigging at union elections and fraud which have been pending for about three years. Action on the part of the T.U.C. became imperative after a recent High Court judgment which held top E.T.C. executives guilty of ballot-rigging and collusion with communists. As one London commentator has pointed out, the expulsion of the E.T.C. is "only the last or latest act in a drama which began back in December 1958, when the General Council wrote its first letter to the E.T.U. about the ballot-rigging charges, and which finished a week or two ago in the High Court, with Justice Winn sacrifying the Union's communist executive for having fiddled the Union's elections in a fashion both blatant and unashamed."

The E.T.U. is the seventh largest member union of the T.U.C. The last time a major union was expelled from the T.U.C. was as long ago as 1928, the union expelled being the National Union of Seamen. This time, banishment from the T.U.C. is likely to be followed by expulsion from the Labour Party itself. It is significant that the vast majority of the members of the E.T.U. are not communists. But the Union's communist executives manœuvred the elections each time in such a way as to produce "communist victories out of a predominantly non-communist vote."

Two Alternatives

What will be the effect of the banishment of the E.T.U. from the T.U.C.? How long will the E.T.U. remain in the wilderness? These questions are being repeatedly asked in trade union circles throughout Britain. The E.T.U. can, of course, return to the fold, provided it satisfied either of the following two conditions: (1) a change of heart on the part of the communist leaders of the Union and a willingness to obey at least some of the instructions about debarring officials implicated in the recent ballot-rigging case or (2) a victory by the anti-communists in the vital E.T.U. executive elections later this month.

The hard blow struck at Communists did not stop with the expulsion of the E.T.U. Mr. Will Paynter, the solitary Communist member on the General Council, which is the executive body of the T.U.C., lost his membership of the Council in the election held on the 6th inst., thus breaking a long tradition that, once elected, a General Councillor never loses his seat. It may be noted here that it was by sheer accident (death of a non-communist candidate) that Mr. Paynter got himself elected to the General Council last year.

British observers read into these developments clear signs of a wind of change in trade union politics. Some go even to the extent of saying that it is indicative of a definite swing of British trade unions to the right. Whatever that may be, there is no doubt that the successive defeat of the Labour Party in the general elections and the fruits of an affluent society have had a decisive influence on the political colour of trade union thinking.

Recent Developments

Apart from the eradication of the last vestige of communist influence, a few other noteworthy, but less welcome, trends have also emerged in the British trade union movement. One is the growing estrangement between the officials of trade unions and their members. This indiscipline has accounted for many unofficial stoppages of work. Explaining this trend in an article in the August (1961) issue of the *Westminster Bank Review*, Dr. E. W. Evans, observes:

"The existence of many rival unions within some industries obviously adds to the problem of maintaining contact between the leadership and the rank and file. In other cases, the officials' failure to make the system of industrial relations work is contributory cause. Perhaps more important, however, is the simple matter of inadequate communications within the organisation, which is partly an inevitable result of increasing size. The vast and impressive extent of the unions has made the leaders remote from and perhaps out of contact with, the ordinary member. . . . Full employment in an affluent society may have contributed to the growing apathy. At the same time, this lack of enthusiasm itself reduces the union's appeal and effectiveness, and thus increases the number of apathetic members. Moreover, it seems probable that many existing unions, at least against the prevalent background of industrial prosperity, have very little attraction for the younger generation. The same is certainly true of the non-manual workers, whose numbers have increased roughly three times as rapidly as total employment since the war. It should be recognised that the "white-collar" workers have rarely constituted the vanguard of organised labour, if only for reasons of status. Nevertheless, the failure of most existing unions to attract the newly-created army of clerical, administrative and technical staff has deprived them not only of potential members but also of potential office-holders and officials. Undoubtedly a high proportion of these non-manual workers are women, who are traditionally difficult to organise, but this is only one aspect of a broader problem. There are now some eight million women at work in Britain, about half a million more than ten years ago. Indeed, in the age group between 15 and 21 years, women actually outnumber men in the labour force. Even more important, over half of the women at work are married, their numbers having increased by a million since 1911. Here again many unions have failed to adapt themselves to the growth in female employment, especially part-time employment."

Another notable development is the declining membership of the T.U.C. It was eight million in 1952 but has failed to rise substantially since then. In fact, between 1959 and 1960 total membership of the T.U.C. declined by nearly a quarter of a million. This fall may well have been due to the unemployment in certain industries which would clearly affect trade union strength. But the movement's inability to grow during the fifties seems to be a firmly established trend, according to Dr. Evans.

Revitalising Unions

How to revitalise the unions is a question which is agitating the minds of labour leaders in Britain. Opinions differ on the measures to be taken for making the movement a dynamic one. Dr. Evans suggests that professional advertising and effective guidance in public relations are two lessons which the trade unions might, and indeed need to, learn from management. "Many unions," he says, "will have to reorganise their internal structure, not only to attract and absorb new recruits, but also to satisfy present members." The problem, in his opinion, is not merely one of disciplining trouble-makers. Substantially greater efforts will have to be made in many cases to improve communication and contact between the leadership and the members in every possible way. "In the broader aspect," Dr. Evans concludes, "the effectiveness of all these plans will hinge upon the developments made in the general system of industrial relations in Britain." But, unless such changes are brought about, it is obvious according to him, that the sixties will present for organised labour in Britain problems far more serious than those it faced in the past decade.

Are you in need of a loan for your industry?

The problem of finance faces a small industrialist like any other entrepreneur. To help solve this problem, a scheme for the co-ordinated provision of finance has been evolved by the various financing agencies with the assistance of the Central and State Governments.

The State Bank is ready to assist small industrialists with advances against raw materials, manufactured articles and ready stocks etc., as well as with advice as to any other source from where credit can be obtained.

There may be a branch of the Bank in your town. Why not take your problem to the Agent who will be glad to be of assistance?

Drum of a Radiant-type boiler

More power for Maharashtra

AVB steam-raising plant for power boost

AVB are to make their first major contribution to power-output by providing four Babcock Radiant-type boilers fired by automatic spreader-stokers to the Maharashtra State Electricity Board at an installed cost of just over Rs 2 crores; these boilers will be installed for the extension of the Khaperkheda Power Station, which is situated fifteen miles from Nagpur.

When the installation of the AVB steam-raising plant is completed, power output from the Khaperkheda Power Station will be doubled. This is a vitally important step towards providing ample power for rapidly growing industry in the State of Maharashtra.

The total steam-raising capacity of the four Radiant-type boilers will amount to 330,000 kilograms per hour at 62 kilograms per sq. cm. with a superheated steam temperature of 496°C.

AVB are now all set to play an increasing part in the manufacture of steam-raising plant, equal to the world's best, for industry and power generation.

Spreader-Stoker:
The principal advantage of this modern coal-burning apparatus is its ability to handle a very wide range of coal quality—from the best to the lowest grades. At Khaperkheda, the spreader-stokers will burn various types of inferior coal, with high efficiency, thus preserving the high quality grades of coal for the steel industry where their use has the highest priority.

Radiant-type Boilers:
Many of the larger modern power stations are equipped with Radiant-type boilers either with or without a reheater, and equipped for pulverised coal firing, cyclone firing or fuel oil firing. The main feature of Radiant units is the large wholly cooled and moderately-rated combustion chamber in which most of the heat-transfer to the evaporation system is by radiation. This type of boiler provides great versatility of arrangement to suit specific design requirements, steam conditions and fuel burning systems.

THE HUMAN FACTOR IN ECONOMIC DEVELOPMENT—II

NEED FOR RAISING STANDARD OF EDUCATION ALL ROUND

By Professor C. N. Vakil

[In this, the second and final instalment of Professor C. N. Vakil's lecture at the Harold Laski Institute of Political Science, Ahmedabad, the author has impressively brought out the importance of raising the standard of education, right from the primary classes up to the Universities, as an urgent prerequisite for building up efficient leadership in all walks of life and for fostering a keen sense of national unity. He has also examined the conditions necessary for raising the standard of education. Another important point made by the author which deserves the attention of business men and administrators, in particular, pertains to the value to be attached to university degrees while selecting youngsters for jobs.—ED.]

OUR immediate object is not so much to attempt an analysis of the social structure, but to use this broad classification to understand the way in which the human factor in the country can play its part in the process of development. For example, it is obvious that more systematic efforts are necessary to remove some of the weaknesses in the life of the underprivileged classes and to provide incentives and opportunities for them to improve their lot. The amount of national loss due to the existing situation of the under-privileged class would be colossal, if it were possible to statistically measure the same.

It does not require any elaborate argument to prove that the neglect of the elite is inconsistent with the growth of the country. A society in which the Teacher has the lowest social status, in which the Research Worker is patronised by those who offer him assistance, in which the Expert has to flatter those in power before he can use his expert knowledge, and in which the trained and experienced Executive of a concern must be ready to take orders from 'an inexperienced young boss'—such a society is wasting valuable human resources and is definitely not working towards a self-generating economy. The task of managing the affairs of this large country in various walks of life has to be organised in such manner that we have a continuous flow of leadership and trained persons in all spheres. The fact that we are not yet organised to have such a continuous flow is one of the greatest weaknesses of our planning system. The fact that we have not shown the necessary awareness to organise such a continuous flow is most reflected in the low status of the Teacher. The task of building the character of and imparting training to future leaders of society is given to the Teachers in any country. It is not possible to expect that we shall have the requisite leadership when the Teachers who are supposed to train them are themselves kept in a position which is far from satisfactory. In consequence, the quality of the human factor suffers and the average capacity of the large population that we have, to do better, does not grow, with inevitable loss to the process of development.

Equality of Opportunity

In order to develop the human factor, so that it will be able to play its part in the process of development, prompt steps should be taken to remove all obstacles in the way of equality of opportunity to all concerned. The obstacles inherent in our existing social system as well as in the new social structure that is emerging, should be removed and conscious efforts should be made to see that every one is able to do his best in the cause of national progress. The concept of equality of opportunity should not merely adorn the Constitution; every effort must be made particularly by the privileged classes to translate it in practice, by greater humility and sense of service to others. Unless this is done, the Socialist Pattern of Society will remain a dream.

Recognition of Merit

One of the things that strikes in this connection is that we should have suitable arrangements for recognition of merit without influence or personal considerations. It is well known, for example, that, in the selection of persons for various posts, small or big, in Government departments or in private employment, there is a mechanical recognition of certain degrees, irrespective of the intrinsic merit of the candidate to do a particular job. A reference to advertisements in newspapers for posts, particularly in Government Departments and Undertakings or in Universities, makes amusing reading inasmuch as an elaborate set of qualifications are laid down, such as the types of degrees that the person should have, the classes in such degrees that he should have obtained, the amount of experience that he should possess and so on. Appointing authorities take a legalistic view of their duties, and try to judge the merits of candidates on the ground of the fulfilment of the conditions so laid down. This implies that a person who has obtained certain academic qualifications as rigidly laid down, is automatically fit for the type of work in question. No one wishes to enquire about the misfits that thus arise. No one enquires whether these elaborate qualifications are intended to describe a candidate that the appointing authority has already in view so as to exclude other competitors, thus making the appointing procedure a formal farce. Even after people are appointed to certain positions, promotions are on mechanical lines, namely, on the ground of seniority, irrespective of the quality and capacity for work. Even in Universities, recognition of teachers as research guides depends on the number of years of teaching experience, with the consequence that old Teachers who cannot guide research are recognised, and young Teachers who can do so, are denied the opportunity. Instances can be found where capable young persons who have found this system obnoxious have left important careers to take up other work, where their merit can find better scope. With the growing work in Government Departments as well as in the private sector, unless the employing authorities are able to judge the intrinsic merits of a person and give him opportunities to utilise his capacity, instead of following a routine method of selection and promotion or a corrupt method of favouritism, we shall find that the present wastage of human resources by which the growth of so many capable persons is stunted, may develop into a serious menace to society.

Suggestions to Overhaul Machinery of Education

So far as the main approach to the development of the human factor is concerned, we may venture to make a few broad suggestions to overhaul the machinery of higher education and training as well as of primary and secondary education. It is not possible to work out all the details of such suggestions in a lecture. But an attempt is made to give in broad outline a scheme which may serve as a basis of discussion and help in the evolution of a well considered scheme of reform, which is urgent and overdue.

Higher Education: Central Universities

In the first place, the Central Government should undertake to have Central Universities, at least one located in each State. These should not be replicas of the existing Central Universities. In fact, some of the existing Central Universities may require a complete overhaul. It may be possible to convert one of the existing universities in each State into such a Central University. We shall, thus, have fifteen or more Central Universities in the country. The object should be to limit the numbers in each such University so that it may be possible for the Teachers to give personal attention to each student. Each University should be a fully Residential University, where it would be possible for Teachers and students to lead a corporate life, and develop teaching and research at a high level on the one hand, and character on the other. It should be possible for students from each of these Universities to get transfers to others, and at the same time there should be an exchange of professors between these Universities from time to time. They should be in a position to develop on a level, high enough in quality, to attract foreign students who may wish to study in India. Teachers at the highest level in such Universities should be trusted to have the necessary national consciousness to develop leadership in various fields of life among the younger generation committed to their care. The question whether some of the specialised Central Institutions like the Indian Institute of Technology at Kharagpur and at Pawai should not be treated as Central Universities of this category with suitable modifications may be considered. The medium of instruction in such Universities should be Hindi and/or English.

State Universities

The existing Universities in the different States should be asked to concentrate on the improvement of their quality by appropriate methods such as limitation of numbers, improvement in the quality and standard of Teachers, improvement in the equipment and other facilities, including residential facilities, for the students. The colleges affiliated to Universities are included in this change. In order that the available human and material resources can be better utilised towards this effort at improvement of quality, additions to such Universities and colleges should not be made, till such time that they have reached a suitable standard of efficiency.

Every effort should be made, on the one hand, to attract the best Teachers both in Central and State Universities and to ensure that their status is raised as soon as possible. Interference in University affairs by politicians or even by politically-minded academicians should be avoided. Nor should political influence of any character be allowed in the work of Universities directly or indirectly. It should not be difficult to devise a system of University Administration in which academic persons of high standard shall have the dominant voice and be free to manage their affairs without outside interference. The fact that, in some of the existing Universities, some academic people have been known to organise intrigues and cliques is more a reflection of their low status and the desire to make up for it by other means, than an argument in favour of non-academic rule in Universities. We can learn plenty from the experience of well known universities in Western countries, whose model we often hold before us, but fail miserably in adopting the essentials thereof.

Vocational Training

The question will naturally arise that, if Universities and institutions such as colleges affiliated to Universities have to limit their numbers, there will be difficulties in providing facilities for higher education for which there is an increasing demand. The pressure for admission to institutions of higher learning from the highest quarters is known to all heads of institutions, who are forced to become instruments of lowering of standards. Instead of turning the Universities into coaching classes or marginal institutions at a low level, it would be preferable, in the national interest, to see that only deserving persons who can profit by real university education are allowed to work in Universities, and at the same time other provision is made for the large number of young men who wish to have training for a career. We have already some Institutions like Polytechnics and Agricultural and Commercial schools. These could be developed and even multiplied and institutions in similar other fields also brought into existence without delay. It should be open to existing colleges to convert themselves into such vocational institutions, if they so desire. The object should be that those young men who wish to have practical training for a particular career or vocation should have the opportunity to do intensive work in such Institutions, say, for two or three years, after they have finished their work in the secondary school. This would mean that the enormous waste now involved in large numbers of young persons seeking degrees in Universities at a low level, and finding themselves unfit at the end of their university career for suitable work will be avoided. Those who have the aptitude for a given vocation will have the opportunity to learn the same, and, having learned the same, they will have the opportunity to get employment in the same field, because they will be qualified for it and because there is a growing demand for such persons. Instead of having large masses of young persons filling the classes in colleges, not able to do anything effective, except waste valuable time of their life, we would have a limited number who are willing and capable of profiting by advanced studies and research. In order to ensure this, the premium on University degrees which is now current, should be removed. A University degree by itself should no longer be a passport to careers in life. The intrinsic qualities of a person should be judged and he should be given opportunities to utilise them effectively. Unless we cater to the needs of the growing number of young persons for suitable training for different careers by providing suitable institutions and facilities, we shall be gradually lowering University standards to still lower levels. The function of Universities as centres of higher learning and research must be distinguished from those of institutions in which training for different careers can be imparted.

Secondary Education

This pre-supposes that the standard of our education at the secondary school stage should be substantially improved. There is no reason why it should not be possible for us to see that a young boy who passes the School Leaving Examination, should not have the mental equipment and the general basic knowledge of certain subjects, that is characteristic of a corresponding person in England or America. If this requires the addition of a year to the secondary school, it would be worthwhile considering the same. But the more important requirement is to take far-reaching steps to improve the standard of work in secondary schools. The number of students in a given class, the number of teachers with reference to the number of students, the quality and status of teachers, the facilities by way of equipment and all other requirements of a sound basic education must be gone into thoroughly by those who understand the problem. The continuous tinkering of even courses and curricula of secondary education by changing politicians in different States have resulted in experiments on the younger generation, in overburdening the young mind and in reducing the quality of instruction in these institutions. If the politicians confine their activities to their own field, and leave education to those who know their job, it will be better for all concerned.

Primary Education

At the primary school stage, we have rightly accepted the principle of free and compulsory primary education and we are taking steps to put this idea into practice as soon as possible. In this case also, the attention is more on quantity than on quality. It is easy to find cases of young pupils who have under compulsion attended the primary schools for some time, and have thereafter lapsed into illiteracy, or have not been able to follow up their limited education. In other words, unless there is a mass consciousness in favour of acquiring even primary education, there will be difficulties in implementing this idea fully. It is, therefore, desirable to see that the principle of free and compulsory primary education is put into operation with due regard to quality. This may mean that the progress may be somewhat slower, but it would be sounder.

Average Efficiency and Leadership

If we wish to see that the efficiency of the average boy or girl in the country shows a substantial improvement, we must make determined efforts to improve the quality of our education from the bottom upwards. If we wish to have that continuous flow of leadership in all spheres of life which is essential for sound national progress, we should have real Universities as the centres of learning and character, which may find recognition all over the world, and which may help the progress of the country. In other words, the Universities should cease to be factories where we mass produce clerks. Besides raising the level of efficiency of the human factor, an educational system so re-orientated can be a better instrument for National Integration, instead of the type of situation in which fissiparous tendencies are encouraged even in educational institutions, because of linguistic fanaticism.

Common Languages—Hindi and English

(1) *Proposed Scheme*: In order to remove the poison of linguistic fanaticism as well as to introduce greater efficiency in our educational system, I have made suggestions elsewhere, see the *Times of India*, 13th and 14th July, 10th and 21st August, 1961, on the question of the common language for the country. The suggestions made by me may be summarised as under:

(a) The goal of having Hindi as the common language should be maintained.

(b) Meanwhile, the tendency to give up the study of English or to relegate it to such a position that it may be gradually given up should be checked.

(c) Students will do their work in the first instance through the mother tongue or the regional language; they should, however, have a *compulsory* second language to be learnt as efficiently as the regional language, for which there should be an option between Hindi and English.

(d) In place of the *optional second language*, which students have to take when they enter the upper classes in secondary schools, it should be open to them to take classical languages like Sanskrit; or Indian languages other than one's own, including Hindi; or modern languages like English or French.

(2) *Chief Ministers' Scheme*: The decisions of the Chief Ministers' Conference on this question as announced in the *Press Note* of 12th August 1961 are as under:

"The language subjects for teaching at the secondary stage of education should be as follows:

(a) The regional language and mother tongue when the latter is different from the regional language.

(b) Hindi or in Hindi-speaking areas, another Indian language, and

(c) English or any other modern European language.

In any event, the standard of teaching both in Hindi and English should be improved and maintained at a high level in schools and colleges."

It is not clear in the above decision, whether "the optional second language" which students have to take at present in upper classes at the secondary stage will continue. If it does, students will have to learn a fourth language before they have obtained mastery over the three languages referred to above, besides learning other subjects. If "the optional second language" is to be removed from the syllabus of secondary schools, the decision of the Chief Ministers is an improvement on my scheme. If, however, the optional second language is to continue, my scheme is better, in as much as it provides for the same objectives, while leaving it to students to take some other languages, if they so desire, and at the same time reduces the burden involved in studying four languages. The object of improving and maintaining the teaching of Hindi and English at a high level cannot be carried out, if the students are burdened with too many subjects.

Instrument of Efficiency and Integration

The Chief Ministers have overlooked the fact that they met for the purposes of achieving National Integration. They have blessed the present tendency to introduce the regional languages as media of instruction at the University stage. In the same breath, they wish that Hindi and English should be the All-India languages, and that the standard of these languages should be raised. They have not realised the inherent contradiction in their stand. If they want that Hindi and English should be the All-India languages and that their standard should be raised, they should have agreed as a corollary that the medium of instruction at the University stage throughout the country should be either Hindi or English or both. They should realise that, in the absence of such a decision, National Integration will not be possible. At the same time, they should know that the standard of education is already suffering in those places where the regional language has been adopted at the University stage. The Chief Ministers are aware that Hindi, on the development of which so much effort has been made all these years, has not yet become an effective medium of instruction for the University stage. They should know that what we have not achieved for one language all these years will not be possible to achieve for 14 languages, when the effort for each can be on a scale much smaller than for Hindi. They should be bold enough to decide that Hindi or English should be the medium of instruction at the University stage in the national interest, and should use their power and position to implement the same before it is too late. Besides being more effective instruments in raising the efficiency of the average citizen under present conditions, the introduction of Hindi and English as common languages for the country will help substantially in bringing about National Integration, in the absence of which the human factor will not be able to function adequately for economic development.

Conclusion

The aggregate effect of the various suggestions made by me would be as follows:

(a) The standard of education received by the average boy or girl in the country will be raised with a capacity to utilise it more effectively.

(b) Suitable facility will be provided for training for a career to the growing number of young persons who now crowd the Universities without adequate capacity, thus making them more efficient citizens enabling them at the same time to obtain a higher standard of living.

(c) A continuous flow of leadership in different walks of life will be ensured through the Universities.

(d) The process of National Integration by the adoption of Hindi and English as the two common languages of the country and as the media of instruction at the University stage, would be facilitated.

(e) Discipline and hard work which are lacking in our educational system will be ensured, thus making it possible for the younger generation to be accustomed to such disciplined work for the progress of the country.

Unless we improve the capacity of the human factor to put forth its contribution at the highest level in the progress of the country by means of measures such as those described above, we cannot hope to achieve the self-generating economy which is the main objective of the third Plan. We may raise hundreds of crores of rupees of investment resources within the country; we may obtain billions of dollars of foreign assistance, but, unless we are able to take care of the real investment in human resources, our progress cannot be sound and cannot be sustained. The way small countries like West Germany and Japan after the general destruction in the Second World War could come to the top, in a short period of 15 years, shows how the human factor can play the most important role in the development of a country. With forces of disintegration facing us all around within the country and with dangers of aggression from two powerful enemies from the hitherto impregnable North, we should realise that immediate concentration on the development of the human factor in preference to all others is the urgent need for the fight against poverty, disease and squalor and for the orderly progress of the country in all spheres.

INDIA AND INTERNATIONAL COFFEE AGREEMENT

By P. S. Subramaniam

SECRETARY, UNITED PLANTERS' ASSOCIATION OF SOUTHERN INDIA

THE report that the Government of India is considering the question of India's participation in the International Coffee Agreement in response to an invitation from the Secretariat of the I.C.A. Organisation will be of interest to coffee producers in this country. India is one of the few coffee producing countries which remain outside of this Agreement. Others remaining outside of the Agreement are Indonesia, Yemen, Ethiopia, Congo and Guinea.

India's participation in the Agreement was not considered seriously so far for one important reason. Until recently, our coffee crop was of a size that did not permit of a large allocation for the export market. But now the crop has grown to such proportions that a sizable part has to be disposed of in foreign markets. This situation has unfortunately coincided with a world slump in coffee due to over-production.

The main object of the International Coffee Agreement is to establish a balance between world supply and world demand. In broad principles, it is framed on the lines of the International Tea Agreement, which worked successfully for many years until 1955 and was not renewed thereafter due to lack of agreement among the tea producing countries. However, in the matter of details, the Coffee Agreement widely differs from the Tea Agreement.

Stiff Competition

Although India's share of the world's exportable coffee is less than one per cent., it meets with stiff competition in the export markets. The difficulties experienced by India are similar to those experienced by other producers, notwithstanding the fact that the bulk of our exportable coffee is of a very high quality.

The purpose of this note is to give the reader an outline of the working of the International Coffee Agreement, in order to enable him to consider whether, under present and prospective conditions it would be to India's advantage to become a participant.

The agreement was first signed in September 1959 by fifteen Latin-American countries, representing over 80 per cent of the world's exportable production of coffee. At the end of the first year, more producing countries, including the British East African territories and the French overseas territories, came into the scheme, bringing the total number of participating countries to 28, together representing over 90 per cent of the world's exportable production.

A Departure

The factors leading to the signing of this Agreement are clearly set out in the Preamble. It mentions in particular the risks present in the imbalance between coffee production and consumption, and in the growing accumulation of the stocks in the producing countries whose economies and standards of living are dependant mainly on the coffee trade. It agrees to the necessity to effect studies that would permit reaching a long-term agreement capable of providing adequate solutions to the situation, and to charge the Coffee Study Group to effect such studies with the co-operation of competent international institutions like the U.N. Food and Agricultural Organisation. It is significant that the Preamble urges the participation of consuming countries in the studies to consider the problems of production, consumption, stocks and international trade, because in this respect it follows a line different from the International Tea Agreement with which consuming countries were not associated.

The first International Coffee Agreement was meant to be a short-term agreement for one year only to meet what was thought to be a temporary problem. Its purpose was to adjust the supply of coffee to the demand for it, to insure the orderly placement of the product in the world markets and to foster its consumption throughout the world.

Article 3 authorises the appointment of a Board of Directors which shall be composed of a representative from each signatory country. In addition to the duties and powers established by the Agreement, the Board of Directors is given power to approve its own budget, issue reports on its activities and settle special questions arising from the application of the Agreement but not covered by it.

The headquarters of the Board shall be Washington and the Board shall meet at least once every two months or as and when required by a majority of the signatory countries.

It is provided that every act of the Board of Directors shall reflect the opinion of the majority of the signatory countries. The consent of each country shall be required in every instance for it to be bound by the decisions of the Board.

Export Quotas

The most important aspect of the Agreement is the acceptance of export quotas. It is provided in Article 6 that the signatory countries bind themselves to limit their coffee exports for one year beginning from 1st October 1959 in accordance with the quotas fixed. These quotas were established on the basis of (*a*) a figure of 90 per cent of the exports that took place during the best calendar year of the ten years 1949 to 1958 or (*b*) a maximum figure of 88 per cent of the actual exportable production, according to the estimates of the U.S. Department of Agriculture. Alternative (*b*) shall only apply to countries with an exportable production of less than two million bags.

The export quotas fixed for the participating producer countries in accordance with the above provision for 1959-60 were as follows:

(*In thousands of 60 Kilo bags*)

Brazil	17,431
Columbia	5,969
Costa Rica	694
Cuba	312
Dominican Republic	398
Equador	435
El Salvador	1,259
France and the Community	638
Guatemala	1,088
Haiti	500
Honduras	176
Mexico	1,303
Nicaragua	344
Panama	10
Peru	251
Portugal	1,165
Venezuela	660

It is to be noted that the quotas shall be applicable only to countries considered to be traditional consumers. Exports to "new markets" shall not be charged to the quota account of the exporting countries. The countries specified as "new markets" consist of Bulgaria, Ceylon, mainland China, Taiwan, Korea, the Philippines, Poland, Rumania, Thailand, U.S.S.R., Viet Nam and East Germany. In order to see that shipments made to a new market are not diverted or re-exported to the traditional market, it is provided that the exporting country shall require from the importing country banking or contractual guarantees necessary for this purpose.

By Article 7, the Agreement provides that the signatory countries may maintain their own export rate, but they bind themselves to combine their efforts so that the total export quota shall be proportionately and equitably distributed quarterly, in order to balance supply and demand.

Each signatory country also binds itself to adopt all measures necessary to produce a substantial increase in its internal consumption.

Publicity Campaign

The need for an effective publicity organisation also has been recognised and a work programme has been laid out for increasing the demand for coffee in the consuming countries. Towards this object each signatory country agrees to pay a contribution of up to 25 cents for each 60 Kilo-bag exported during the year beginning 1st October 1958.

The Agreement, while in force, is open to signature by the other producing countries that have not joined so far, but only under such conditions that the Board of Directors may establish for this purpose .

An interesting study of the actual working of the Agreement during 1959-60 and 1960-61 is contained in a recent number of *Annual Coffee Statistics* published by the Pan American Coffee Bureau. The method of operating the quotas is interesting.

Working of the Agreement

As already stated, the quotas, in general, correspond to 90 per cent of the largest exports that an individual country had made in any calendar year of the period 1949-58. Member countries with exportable production of less than 2 million bags per year can have an annual quota equal to 88 per cent of its exportable production.

Where a country's exportable production rises, but does not come to two million bags, it is permitted to revise its annual quota upward. With the quotas of all other countries remaining constant, upward revisions resulting from the application of the 88 per cent clause will raise the global quota of the I.C.A. This, in fact, was what occurred in 1959-60 and again 1960-61.

Prior to March 1960, the global quota for members of the I.C.A. was 32,650,000 bags. Subsequently, by reason of certain participating countries availing of the upward revision provided in 88 per cent the clause, the global quota was raised by 4 per cent to 33,952,040 bags.

The global quota, therefore, is the total volume of coffee that the I.C.A. potentially will make available to traditional world markets, and it is the sum of the individual country quotas described above. In conditions of declining production—which at present is a hypothetical consideration only—it would be more advantageous for all countries to opt for the 90 per cent of best-year-in-10 formula.

As a matter of operating procedure, the Board of the I.C.A. sets quotas for each quarter, or two quarters together, but countries that have not been able to ship their respective quarterly quotas are permitted to add the unused balance in the ensuing quarter. During the one year beginning October 1959, the actual exports fell short of the aggregate quarterly quotas by only 66,600 bags, or less than one quarter of one per cent. Each quarterly quota was agreed upon in the light of estimates of world demand, in traditional markets, for the coffees of the participating countries.

The experience of the first year has shown that it is possible to estimate closely, quarter by quarter, the volume of the demand for the coffee of participating countries in traditional markets, and that the global quota coincided closely with export results, in spite of the increases permitted to those countries who availed of the 88 per cent clause. It was also found, on the other hand, that certain countries did not have the coffee available to exercise their quota allocations.

New Markets

Another interesting fact was that the countries participating in the Agreement shipped 782,859 bags of coffee to new markets in 1959-60. Most of this was accounted for by Brazil and Columbia. In November 1959 and September 1960, various countries were added to the list of "new markets," but, in general, these were countries which absorbed little coffee in the past but which might offer some potential for increased purchases in future.

In June 1960, the Board of the International Coffee Agreement decided to extend the Agreement through the Coffee Year 1960-61 and fixed the global quota at 37,856,320 bags.

Apart from dealing with the key function of quotas, the Board of the I.C.A. concerns itself with a number of other questions related to the well-being and development of the coffee industry. The World Coffee Promotion Committee, which is a standing committee of the Board, collects funds from members for promotional work and allocates funds to various organisations. In addition, the Committee approves and selects national promotional organisations, either official or private, which are considered capable of conducting effective promotional campaigns in importing countries in which there are good possibilities for increasing coffee consumption. For instance, the Pan-American Coffee Bureau, which has been in existence for almost a quarter of a century, is the Agency recognised by the Committee in the U.S.A. and Canada.

Achievements

The present Agreement is due to expire by the end of September 1961 but efforts are being made to continue it on a long-term basis and to invite all the non-signatory countries to come within its scope. Proposals have been made to place the present stockpile and future surpluses under the control of an international organisation to be financed by both the consuming and producing countries and to invite importing countries to become members of the Agreement. It is stated that the United States of America will itself become a member and lend financial assistance for the effective working of the Scheme.

It is claimed that, during the two years it has been in force, the Agreement has succeeded in a relative stabilisation of coffee export earnings through the operation of the quota system and also established a working scheme for coffee promotion in many parts of the world. A Working Document issued by the Board of Directors of the Agreement emphasises the need for encouraging the individual consumer to drink more and better coffee and for dealing with the fiscal obstacles to the expansion of coffee consumption. It is pointed out that the Agreement will have these for its main objectives in the future.

The question of India's participation in the Agreement may be considered in the light of the following facts. The first is as regards the export quota. It would be interesting to know whether, on the renewal of the Agreement beyond the 30th September 1961, there would be any revision of the basis of allocation of export quotas, or whether it will continue on the present basis. If there is to be no change, it would be open to India either to accept the figure of 90 per cent of the exports that took place during the best year of 1949-58 or avail of the option given to countries having an exportable production of less than 2 million bags, namely 88 per cent of the actual exportable production. It is not clear, however, as to what year's production can be taken for calculating the 88 per cent. In respect of the countries already within the Agreement, the 88 per cent is calculated on the exportable production as estimated by the U.S. Department of Agriculture in March 1960. The fixation of a quota on the basis of 90 per cent of the best year of 1949-58 would seem to be of no advantage to India, since our exportable production of that period was far below the current levels.

The second point is how our participation in the Agreement will serve the national policy of maximising the exports of coffee. India's export allocation out of the 1960-61 crop is 34,250 tonnes out of a total crop of 67,000 tonnes. The next season's crop is estimated at the much lower figure of 48,000 tonnes, of which the export allocation may not be more than 16,000 tonnes. Here, again, the question is on what basis the limit of 88 per cent will be calculated. If it is to be on any other basis than the 1960-61 exportable crop, it might not meet the present requirements of the Government of India.

A third and most important point is whether international regulation of exports would be of any real value without an international regulation of crops. So far there has been no attempt to include any proposals for crop regulation by any of the major producing countries. A proposal has been made by the Coffee Study Group that production should be reduced by a system of incentives and disincentives at the individual discretion of each country but to what extent this would be feasible and generally acceptable remains to be seen.

ORGANISATION OF INDUSTRIAL ASSOCIATIONS

NEED FOR A NEW PERSPECTIVE

By C. S. Krishnaswami

SECRETARY, THE ASSOCIATION OF PLANTERS OF THE STATE OF MADRAS

INDUSTRIAL associations were first formed in India in the 1870s and 1880s. It was, however, only after World War I, when the trade union movement was born, that they assumed special importance. According to the Royal Commission on Labour, "the growth of trade unionism may be said to have been one of the factors in bringing home to associations of employers the need for common action, not only as regards working time and output, but also in respect of wages and other matters affecting the lives of their workers." When this was written, trade unionism in this country was still in its infancy. Today, though the movement is split into three or four major national federations, trade unionism has come to be firmly established as an important factor in the economic life of the nation. Whatever the initial motivation of employers in combining themselves in the face of the new phenomenon, they have come to be realistic and constructive in their approach to and recognition of the place of the trade union movement.

Two Sides of the Same Coin

Industrial associations and trade unions are the obverse and the reverse of the same coin. They have a common objective, namely, the continual improvement of the economic well-being of the nation. There may be differences on the best approach to the goal and such differences are only healthy and to be welcomed. In a pluralistic democratic society, the clash of ideas is the best guarantor of the wisdom of the ultimate decision.

Labour policy and labour legislation in the post-war and post-independence era have been constantly reviewed at all-India level by the Indian Labour Conference and the Standing Labour Committee in which the three all-India Employers' Organisations, namely, the Employers' Federation of India, the All-India Organisation of Industrial Employers and the All-India Manufacturers' Organisation are represented alongside the trade union counterparts.
