In the import section, moderate mill interest was noted in Sudan and East African varieties. Following reports that a cotton delegation from Uganda will be arriving in Bombay this week, there have been rumours of the possibility of a barter deal being concluded between the two countries under which East African cotton could be imported into India against export of textiles from here. Stray business was reported in higher grade Sudan and ready American cotton.

The import quota announcement made on Saturday night failed to have any effect on the market. The quota did not come anywhere near general expectations. It was expected that a quota of at least 400,000 bales would be released immediately. But the actual quota is for only 175,000 bales. Of this 45,000 bales are earmarked for allocation to mills against their retention quota under the Export Incentive Scheme. The balance of 130,000 bales, comprising 50,000 bales of cotton of staple length 1-1/16" and above but below 1-3/16" and 80,000 bales of cotton stapling 1-3/16" and above, will be distributed to consumers of foreign cotton on the basis of their consumption during the calendar year 1960. Mills applying for licence to import cotton of 1-3/16" and above are required to pay a premium of Rs. 170 per bale while those applying for licence to import 1-1/16" and above but below 1-3/16" are required to pay a premium of Rs. 130 per bale to the Indian Cotton Mills Federation or the South India Millowners' Association, as the case may be. The quota will be valid for shipment only after 31st December 1961 but before 31st May 1962.

The Government of India has decided to utilise 691,000 dollars out of the $1.5 million purchase authorisation issued by the United States Department of Agriculture under the India-Indonesia-U.S.A. tripartite agreement for importing American cotton stapling 1-1/16" and above. Announcing this, a Press Note issued by the Joint Chief Controller of Imports and Exports, Bombay, has stated that the entire value of $1.5 million of the purchase authorisation would not be utilised fully immediately but will become available for import according to the progress of the export of cotton yarn to Indonesia. Licences would be granted on the strength of allotment letters issued by the Textile Commissioner. The last date for contracting and shipment in respect of the above quantity will be 30th November and 31st December 1961, respectively.

The following are the latest available quotations (in rupees per candy of 784 lbs.) from the spot market at Sewri:

Bengal Deshi (December) 656, Berar 27/32 885; Khangaon 915; Gadag Laxmi 900; B.P. 52 1,265; Sudan P.L. 1,530; Sudan CG6S 1,388; Sudan G3S.

Cotton futures in Karachi ruled barely steady during the week. While domestic spinners' demand was slack, overseas buyers too were reserved. Values, however, held steady in the absence of selling pressure. The N.T.R.G. January contract rose from Rs. 76.75 to Rs. 76.80. The March position, however, receded from Rs. 75.85 to Rs. 75.65.

Liverpool cotton futures market ruled subdued during the week. Values moved narrowly in thin trading. A limited volume of Commission House selling prompted by lower New York advices was only partly absorbed in short covering. Sudan cotton contracts were neglected. Values were nominally unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December 24.15; March 24.75; May 25.25; July 25.40.

American cotton mixed growth contract: December 24.50; March 25.05; May 25.55; July 25.80.

Sudan: November, January, March 32.25.

Cotton futures in New York recorded small losses during the week. In spite of reports of heavy entry into the Government loan, futures values eased, thanks to selling prompted by favourable crop news.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	6-11-61	31-10-61	24-10-61
New York spot ...	35.65	35.65	35.65
December	34.50	34.63	34.69
March	35.25	35.40	35.46
May	35.70	35.81	—

BETTER DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *5th November*

At lower levels there was better demand during the internal sale held on Wednesday last. There were again during this week heavy shipments of tea to the United Kingdom.

Dusts on offer amounted to 27,098 packages. Among C.T.Cs, keen competition was accorded to the better liquoring teas, while prices for the plainer teas eased by 20 nP. Buyers neglected the fibrous C.T.Cs. Orthodox teas were in good demand, albeit at 10 nP to 15 nP lower than previous rates. As the sale progressed, demand was higher. Legg-cut teas were generally irregular, but the few selected lines were absorbed in no time. The quotations per 1 kg., inclusive of excise duty, were: good Assam C.T.C. dust Rs. 5.90 to Rs. 6.20, medium Assam C.T.C. dust Rs. 5.20 to Rs. 5.60, legg-cut dust Rs. 4.10 to Rs. 4.60, medium Assam dust 3.95 to 4.15, and plain orthodox dust 3.70 to Rs. 4.00.

Leaf on offer amounting to 149 packages were irregular.

Trade circles noted that, in the sales held in London during this week, there was good demand for the North Indian teas on offer but prices declined by 1d. per lb. Similarly, the sales held in Colombo earlier this week attracted good demand, but prices for the different varieties fell by 3 cents to 20 cents a lb. The general trend of decline in prices only confirms the earlier trade view that the higher output of this year throughout the world has begun to have an impact on prices in the reverse direction. The trade thought that India should be able to emulate Ceylon and abolish the export duties, at least in respect of the cheaper varieties. India should also benefit from the better salesmanship Ceylon has been able to show. For, Ceylon's tea lounges, which demonstrate fine quality teas, are apparently paying good dividends.

Discussing the possibilities of Indian tea finding new markets, the trade here emphasised the need for the Tea Board to give urgent attention for propaganda measures in West European countries. European offtake from India at present roughly works out to ½ oz. per head per year, whereas the *per capita* consumption in the United Kingdom is between 9 and 10 lbs. The trade suggests that in order to popularise tea in European Common market areas, Indian Tea Houses should be opened. The E.C.C. offers immense possibilities for tea, and if only these are carefully handled, there would be no problem of surplus tea in India. That such bright prospects exist is indicated in the recent keen bid for shares of good Indian gardens on behalf of Indian entrepreneurs in London.

Although tea shipments to the United Kingdom are satisfactory and U.S. and Russian buyers have shown good interest in the Calcutta auctions, shipments to the Sudan have fallen below earlier expectations.

GOOD DEMAND FOR TEA

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *31st October*

A total of approximately 577,000 kilograms was on offer in sale No. 44 held today. Quality from the Nilgiris was maintained with a few brighter liquoring teas on offer. From the other districts the standard showed an improvement. There was good general demand. Highgrown brokens received useful support and sold readily at slightly lower rates with a few selected lines receiving attractive prices. Similar fannings also eased, although meeting with more interest. Mediums and good mediums sold well at firm rates with buyers paying a premium for the few improved lines. The brokens were generally better supported than their equivalent fannings. Low mediums and plainer sorts came to an irregular market and were sometimes up to 10 nP per kilo easier. C.T.C. and legg-cut sorts realised about steady prices. Whole leaf grades can be quoted to be fully firm to dearer. Black leaf teas continued to sell well.

The quotations (per kg.) were:

	1961	1960
	Rs.	Rs.
Low mediums	3.85/4.15	4.35/4.70
Mediums	4.15/4.40	4.70/4.95
Good mediums	4.45/5.50	4.95/5.50
Nilgiri B.O.P.	5.20	7.80

The average price realised in sale No. 44 was Rs. 4.73 per kilo, as compared with Rs. 4.78 a week ago and Rs. 5.09 in the corresponding sale last year.

Dust Sale No. 44: A total of 291,000 kilograms was on offer in sale No. 44 held on Thursday, 2nd November. There was fair demand and prices were generally lower by 10 to 25 nP. Nilgiris were irregular, although following an easier trend. Good mediums of a clean leaf appearance met useful enquiry, although registering a decline of 15 to 20 nP, whilst the poorer and more fibrous grades were discounted by up to 15 nP. Residuals were a week feature. C.T.C. and legg-cut descriptions followed the lower trend of the market although meeting good demand.

The average price realised in dust sale No. 44 was Rs. 4.40 per kilo, as compared with Rs. 4.52 a week ago and Rs. 4.55 in the corresponding sale last year.

Export Quota: There are still no buyers and the quotation remains nominal at 1¼ nP per kilo.

Colombo: The market met with good general demand for brokens, whilst fannings met keen enquiry especially those with good liquors, which sold at fully firm and dearer prices. Highgrown brokens were irregularly 10/15 cents lower whilst mediums and lowgrowns declined by 5/10 cents.

London: North Indian and other growths: There was good general demand for all descriptions which sold at fully firm and sometimes dearer prices.

Ceylon and South Indians: In Tuesday's sale, 19,732 packages were on offer of which 7,982 originated from South India. There was an active demand for Ceylon teas and prices were generally dearer. Good liquoring highgrowns came to a substantially dearer market. Low and low medium descriptions were also in good demand and were often 1d. dearer. South Indian teas sold at firm to dearer rates.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No.* 45: 570,000 kilograms. Useful demand. Plain and stalky sorts weaker. Lower low mediums and mediums about steady. Good mediums and best liquoring firm to dearer with quality. Unorthodox weakest feature."

YARN STEADY

(From Our Own Correspondent)

BOMBAY, *7th November*

Quietly steady conditions prevailed in the yarn market during the week under review. Barring art silk yarn, which attracted speculative attention, the market presented a dull front. Buyers were reserved and disinclined to enter into fresh heavy commitments. Amilan December contract in the art silk yarn section continued to be in the limelight. Transactions in the February contract commenced on Saturday at Rs. 3,442. Trading was livelier in today's *Moorat* session. Good turnover was reported. Staple fibre yarn firmed up in support based on expectations of Government help to boost export of staple fibre fabrics. Cotton yarns were in good demand early in the session, but interest subsided subsequently on reports of slow offtake in the piecegoods market.

Art silk yarn Amilan December (per 100 kg.), as already mentioned, continued to attract buyers. It improved by Rs. 37 to Rs. 3,380. National Rayons 150 Bt. cones gained 26 nP to finish at Rs. 14.01. 120 Bt. cones sagged by 4 nP to Rs. 18.18. Among imported art silk yarn, 120 Japan and 150 Japan changed hands at Rs. 1,874 and Rs. 2,094, respectively, while 120 Italy lost ground by Rs. 27 to Rs. 1,876.

Staple fibre December was quoted lower at Rs. 865, as against Rs. 879 last week-end.

CEILING ON GROUNDNUTS

(From Our Own Correspondent)

BOMBAY, *8th November*

Official trading in oilseeds markets, which had been suspended for nine days (upto Saturday the 4th inst.) by the Forward Markets Commission, was resumed on Monday. The F.M.C. has permitted the resumption of trading subject to two conditions. In the first place, trading in groundnut January 1962 contract will be subject to a maximum of Rs. 215 per 250 kgs. and groundnut oil Rs. 17.65 per 10 kgs. in Bombay, with similar maxima at parity prices in other recognised centres. Secondly, the outward payments to longs will be withheld, apparently until further orders.

It is rather too early to assess the impact of these measures on the trend of trading. Despite these measures, the market resumed trading on a firm note on Monday morning. But gradually the sentiment turned slightly easy towards the evening, with speculators remaining hesitant to enter into fresh commitments. This declining trend persisted during the *Moorat* session on Tuesday as well. The *Moorat* trading was quite a colourless affair, unlike in previous years. If the sentiment prevailed in the *Moorat* session continues, the post-*Diwali* period is likely to witness a further fall in oilseeds prices. The closing prices were, however, much higher, as compared with those a week ago.

Groundnut January 1962 contract rose, in private transactions, from Rs. 207 on last Wednesday to Rs. 210.62 by Saturday. But it eased slightly to Rs. 209.25 by yesterday. Khandesh quality closed at Rs. 45.25, as against Rs. 43 last week. Oil January 1962 contract rose from Rs. 17.05 to Rs. 17.25 before closing at Rs. 17.20. Oil ex-mill moved up from Rs. 18.55 to Rs. 19.10, but declined subsequently to Rs. 18.90.

Among castorseeds, the March 1962 contract improved from Rs. 161 to Rs. 161.25, but moved down to close at Rs. 161.12. Ready Madras was maintained at Rs. 33. Oil commercial closed at Rs. 13.50, as compared with Rs. 13.30.

Linseed March 1962 contract ruled steady at Rs. 36.87. Bold ready put on 13 nP to Rs. 38.75. Linseed oil hardened by 10 nP to Rs. 17.10.

Cottonseed January 1962 contract rose from Rs. 97 to Rs. 98.50 before closing at Rs. 98.25.

The following table shows the closing prices of oilseeds and oils on Friday, 27th October, as compared with those of the two previous weeks:

	7-11-1961	27-10-1961	25-10-1961
Groundnut	Rs.	Rs.	Rs.
January 1962	209.25	210.12	203.75
Khandesh	45.00	44.75	44.75
Khandesh quality	45.50	45.50	44.50
Oil ex-mill ready*	18.90	18.75	18.70
Railway receipts*	18.80	18.40	18.20
Oil January 1962	17.20	17.25	16.60
Castorseed			
March 1962	161.12	163.25	160.00
Ready Madras	33.00	33.00	32.75
Ready Kanpur	31.50	31.50	31.50
Oil B.S.S.†	14.20	14.05	14.20
Oil commercial†	13.50	13.20	13.25
Linseed			
March 1962	36.87	36.87	36.44
Bold ready	39.25	38.75	38.75
Oil ready†	17.10	16.75	16.70
Cottonseed			
January 1962	98.25	97.00	94.75
Niger seed	37.50	38.10	38.50
Kardi seed	23.00	22.00	22.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

JUTES DECLINE

(From Our Own Correspondent)

CALCUTTA, *5th November*

The week under review in the jute markets was noted for two important developments: (1) the rapid fall in fibre prices, even below the rates at which the buffer-stock agency, yet to be constituted, was believed to support the market; and (2) the announcement by the Indian Jute Mills' Association of the mills' decision to unseal 2½ per cent of looms as from 13th November. From Rs. 33 a maund, Assam bottoms fell to Rs. 31.50, and so rapid a fall within a few days has rightly caused alarm. It had been earlier unofficially stated that the Government of India would authorise the buffer-stock agency to purchase fibre if the price fell to Rs. 32 and that in no case would the Government allow the price to move below Rs. 30. All action with regard to the constitution of a buffer-stock agency has however, been completed, and, according to the I.J.M.A., all that remains yet to be done is registration. On the eve of its formation, it has been unfortunate that prices have fallen. Arrivals have no doubt been maintained at the higher level, but mills have also purchased good quantities. It is to be hoped that, now that mills are unsealing 2½ per cent of looms and they will require more fibre even for daily consumption, apart from building up greater stocks in order to maintain production at the higher level, fibre prices would soon recover.

Prices of goods also declined during the week. Against the background of the mills' decision to increase production further, details of October-end stocks of goods with mills, which would be soon announced, are awaited with interest. In view of increased buying that was in evidence in the last month, it was expected that stocks would decline markedly. The 2½ per cent of looms that would be unsealed on 13th November would again be sealed at the end of the year. Trade circles thought that this provision in the decision of mills was a precautionary measure so that prices of goods would not fall. It should be remembered that, after months of uneconomic working, mills have just returned to profitability, and nothing should develop to alter this situation. In other words, the enthusiasm of mills for greater production should be maintained. Foreign demand of goods has revived, thanks to the changed international situation or a setback to substitutes and bulk handling methods, or both. At the same time, it is necessary to ensure that prices of goods are prevented from a further fall, and the trade hoped that fibre prices would soon recover and that it would not be necessary for the buffer-stock agency to begin operations on a big scale. All concerned would watch the course of trends in fibre prices carefully in the next few days. Assuming that the present increased activity in goods was maintained, it was thought that it would soon be necessary for mills to seal a further percentage of looms from the 9½ per cent that would still remain sealed even after unsealing the proposed 2½ per cent. It had been rumoured earlier that mills had at first proposed to unseal 5 per cent of looms.

Some in the trade would attribute the increased demand of goods for export as being due to overseas buyers' need to cover against essential requirements, which had been postponed. If this was true, the inference that foreign demand against replenishments of stocks had not yet started would be aided. Hence, it can be expected that if only prices of goods do not rise, still greater demand from overseas is in store. However, that the mills should execute their plan to increase production slowly and cautiously is admitted, as it is necessary that, in

order to make production economic and prevent a fall in fibre prices, the present level of goods prices should be maintained. Against this background, the decision of mills to unseal 2½ per cent of looms and that too for a limited period has been welcomed. Meanwhile, news that in the New York burlap market buyers had shown a tendency to enter into commitments for replenishment of stocks has been encouragingly noted.

The low level of activity in the Narayanganj (Pakistan) fibre market contributed in no small measure to depressing fibre prices in Calcutta, despite the fact that mills were operating fairly freely in agency areas. Although Pakistani mills bought fair quantities of fibre, overseas buyers were seen resisting current prices. Their resistance derived strength from the eagerness of sellers to secure business. The E.P.C. prices were recently cut by £3 a ton; but despite this, overseas buyers thought that present prices were higher by £3 to £4. It would be expedient to effect a further cut in E.P.C. prices.

During the week, ready delivery goods were in good demand in Calcutta, and this was evident from the addition to prices on Tuesday last. Ready hessian 40" 10 oz. gained from Rs. 54.30 to Rs. 55.00 and ready B. twills from Rs. 144.00 to Rs. 145.50. However, forward delivery goods declined due to activities in the futures market. On Wednesday, prices registered a decline following the softer trend in fibre prices and the announcement by mills of their decision to unseal looms. Australia bought 5,000 bales of woolpacks for delivery extending upto March next. B. twills eased to Rs. 143.30 and hessian 40" 10 oz. to Rs. 53.25. At the lower levels, there was good covering demand from overseas buyers, and this sustained the prices on Thursday at Rs. 143.25 and Rs. 53.00 respectively. Prices quoted on Friday were Rs. 144.00 and Rs. 53.25, respectively. The disparity between the prices of ready goods and forward goods has been a matter of concern. It was stated that burlap consumption in the United States had not shown any sign of improvement and considering that the monthly average consumption had so far been much lower than last year, the maintenance of prices mainly on speculative consideration, has caused a false sense of stability in the goods market.

Although mills bought fair quantities, fibre prices gave way. Assam bottoms declined from Rs. 33.00 to Rs. 31.50. It was expected that mills would soon be purchasing in greater quantities and that prices would soon recover.

SUGAR QUIETLY DEPRESSED

(From Our Own Correspondent)

HAPUR, *6th November*

Sugar prices ruled quietly depressed during the week despite good demand for *Diwali*, as supply position was quite comfortable following monthly quota release which was reaching the market. Demand from consuming States was slack and mills were reported anxious sellers. New production would commence by the end of the month and week-end prices here were: Rs. 107 per bag retail Rs. 1 per *seer*; mill delivery (D29) Simbhauli Rs. 106.50, (E29) Rs. 106, Bulandshar (D29) 106; (D29) per maund, Amroha Rs. 36.87; Dhampur Rs. 36.75, Bijnore Rs. 36.37.

Mill delivery prices sought lower levels in the Muzaffarnagar market during the week as all factories were anxious sellers and a number of them had not been able to sell stocks released in mid-October. Business was moderate and done for destinations of Gujarat, Punjab, Rajasthan, Kutch and Saurashtra. Superior quality prices eased 19 to 37 nP per maund, while fall in inferior quality was more marked. Some factories were quoting previous controlled rates and week-end prices were (in rupees per maund): A29 Iqbalpur 39.50; Mansurpur 39.91; Deoband 40 22 B29, Samli 39, Deoband 39.47, Lhaksar 37.72 Mansurpur 38.47; D29 Saharanpur 37.50; Meerut 37.85; Amroha 36.87; Shamli 37.90; E29 Rajakasashpur 36.81. Spot delivery prices were:—Rs. 105 to Rs. 108 per bag, damaged quality Rs. 100 to Rs. 101 per bag.

Khandsari market ruled steady during the week due to poor stocks left with trade and continued support from Punjab, Rajasthan and local festive demand. More *khandsari* units went into operation during the week but they still find it profitable to manufacture *gur* and were attracting cane from Re. 1 to Re. 1.12 per maund. Week-end prices were:—Galawat Rs. 25 to Rs. 29; non-crystal Rs. 31 to Rs. 36.50; crystal Rs. 33 to Rs. 35.50 per maund.

New *gur* arrivals mounted to 3.500 maunds today and prices eased 50 nP per maund under pressure of arrivals. Loading continued to be restricted except on Sunday, which was free loading day when two wagons were lifted to Gujarat. Old stocks have nearly been exhausted and arrivals would soon mount as *rabi* sowings would finish by week-end. Demand is fairly good but despatches were hampered for want of loading facilities. *Shakkar* prices eased Rs. 2 per maund on want of support at higher price levels. Week-end prices here were:—new best Rs. 20; *masala* Rs. 20.50; medium Rs. 17 to Rs. 19; *shakkar* Rs. 21 to Rs. 22 per maund.

New *gur* prices were steady in Muzaffarnagar market thanks to buying support from Punjab, Gujarat, Rajasthan and East U.P. Arrivals, however, were poor at an average of 750 to 1.000 maunds but would soon increase substantially and week-end prices were:—*pansera* new Rs. 19 to Rs. 21; *chaku* Rs. 21.12; *shakkar* Rs. 22 to Rs. 23; *masala* Rs. 25 per maund.

Gur futures recorded an easy trend as bears dominated the market in week-end. *Gur jaggun*, having opened at Rs. 12.62 last Monday, touched the highest and lowest at mid-session at Rs. 12.72 and Rs. 12.47, respectively, and is today quoted at Rs. 12.49.

FOODGRAINS PERFECTLY STEADY

(From Our Own Correspondent)

HAPUR, *6th November*

Perfectly steady trend continued in foodgrains during the week ended 6th November due to smaller arrivals in the face of good demand, and stockists were unwilling sellers expecting better prices at the fag-end of the season. Sowing of *rabi* grains is in full swing and is likely to be over within next week. *Rabi* acreage has gone up, thanks to last week's rains, as land recently vacated from *kharif* crops is now available for such sowings. Wheat prices here registered modest gains at Rs. 15.50 a maund for average quality and upto Rs. 17 for better farm produce. Daily arrivals were poor at an average of 50 to 75 a maund which were being lifted by consumers and demand for seed is also being met from co-operative societies and Government seed stores.

Rice prices ruled quietly depressed, thanks to increased arrivals of new produce in the markets. Thanks to better supply position the U.P. Government had lowered the rice procurement levy of coarse quality but purchase price has not been reduced. The State Government has about 68.000 maunds of rice in stock to control the market. Week-end prices here were:—rice *mainpuri sela* Rs. 20.25, *gadda kutcha* new Rs. 18.50, *ramajwayan sela* Rs. 21, *raimunia sela* Rs. 22, *basmati sela* Rs. 28, superior Rs. 30 to Rs. 35 per maund.

INSURANCE

(Concluded from page 916)

realisation of the objectives of nationalisation at an early date, the Government has only indicated its reluctance to carry nationalisation to its logical end.

A very important factor, which the Estimates Committee wanted to be taken cognisance of in considering the investment policy, was that, with the passage of time, the business will increase to such an enormous extent that the L.I.C., whose main purpose was to procure insurance business and render service, may not be able to devote sufficient time and care for assuring the most advantageous investment of the larger funds without detriment to its main work. If the Corporation is freed from the controversial and distracting work of investment, it can, argued the Committee, find all the time and energy necessary which the growing business and servicing would demand. The Government has obviously ignored this consideration and seems to have preferred to go by the view of the representative of the Finance Ministry expressed before the Estimates Committee in the following words: "The L.I.C. should be kept on its toes with regard to investments, servicing and everything else. Let it answer fully for everything. If it fails, it should be censured. But merely taking away duties from it may not necessarily help to improve its efficiency." Time alone can say whether the Estimates Committee or the officials of the Ministry of Finance had better foresight in this matter.

INDUSTRIAL GROWTH IN W. GERMANY LOWER

(Concluded from page 902)

crease its labour force by about 205,000 in August above the level in August last year. All the same, the rise in productivity, which has been one of the most striking aspects of West German economic progress, has slowed down. In August, it was only between one and two per cent higher than in the same month last year.

It is noteworthy, however, that domestic manufacturers' prices have generally remained stable, though the gap between the development of wages and that of productivity has been widening steadily. Higher wages, which had to be granted in some sections of the West German industry, are causing rises in production costs also in many other affiliated and related sections and make it increasingly difficult not to pass on these additional costs in higher prices. Thus, the "hard" wage policy of trade unions represents an additional factor to cause a tapering off in several branches of industry.

While industrial production has slowed down, the rising trend of foreign exchange reserves has actually yielded place to a downward trend in recent weeks. In the week ended 23rd October 1961, for instance, the gold and foreign exchange reserves had gone down by DM 158.6 million to DM 27,690 million ($6,922 million). This latest figure is, of course, still higher than that ($6,737 million) at the end of 1960, but the increase is less than $200 million, which is only a fraction of the spectacular rise ($2,200 million) recorded in the whole of 1960. This virtual end of the expansionist trend in external reserves is due partly to the special steps taken by the W. German Government—such as advance repayment of post-war debts to the U.S., Britain, France, contribution to the I.M.F.'s resources, and loan to the World Bank—and partly to flight of funds from W. Germany induced by the Berlin crisis and the decline in the level of interest rates.

WEEK'S STOCK EXCHANGE TREND

THE following quotations indicate the trend of transactions on the Bombay Stock Exchange during the week ended 7th November 1961.

	Closing quotations 2-11-1961	High	Low	Closing quotations 7-11-1961
TEXTILES	Rs.	Rs.	Rs.	Rs.
Ahm. Adv. (100)	100.00	—	—	100.00

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2641 BOMBAY, 18th NOVEMBER 1961 PRICE Rs. 2

SMALL INDUSTRIES

MR. Manubhai Shah, Union Minister for Industry, has always been an enthusiastic advocate of small industries and industrial estates. He can justly claim the credit for promoting their development during the second Plan period, for, within limits, they can play a useful role in India's economic development. But, of late, his enthusiasm seems to have become so excessive that two major exaggerations have crept into his approach. One of them is that the small industries offer better opportunities for increasing employment on a relatively smaller capital outlay. The other is that they provide the best answer to the problem of unemployment in rural areas. Fortunately, a certain amount of authoritative evidence has emerged in the past few days to expose the exaggeration in these claims. And it is the purpose of this article to draw attention to this evidence and to show that there is urgent need for a careful evaluation of the extent to which the small industries can fulfil the objectives assigned to them and at what cost.

At the outset, it is necessary to remove the confusion that still seems to prevail over the concept of small industries. Generally, there is a tendency to associate them with such cottage industries as handlooms. But the discussion here is not on these industries, but on modern small industries. While both are small, there is a fundamental difference. The primary distinction is that, while industries like handlooms and khadi are largely rural, using traditional methods and lacking power and machinery, the modern small industries are mostly urban industries, using both power and machinery, and techniques of production more or less similar to those employed by the large industries, and manufacturing products almost of the same type as those produced by the large industries. But this distinction is somewhat blurred by the general impression that all small industries—whether traditional or modern—are labour-intensive. This general impression is, however, belied by the finding given by Mr. P. N. Dhar and Mr. H. F. Lydall of the Institute of Economic Growth (Delhi) in a monograph, just published by Asia Publishing House and priced at Rs. 8, on the role of *small enterprises* in Indian economic development. The finding, which is based on the data contained in the National Sample Survey report on small-scale manufacture and the Delhi survey of small-scale industries, is that the *most capital-intensive* type of manufacturing establishment is the small factory using modern machinery and employing up to 50 persons. Disturbing though this conclusion is, it renders the distinction between traditional and modern small industries pretty sharp.

If thus the modern small industries are also capital-intensive, there can be no essential distinction between them and large industries; in fact, *both* are modern and mechanical, and there is no such technical gulf, for instance, between the small electric motor factory and the large electric motor factory, as there is, for instance, between sugar and *gur* making or between bullock carts and bicycles. Only, the large industries, with their greater economies of scale, are generally in a position to produce the same volume of output by using less labour *and* less capital than would be used by small factories. If small industries are not to be subsidised in a variety of ways to make up for their deficiencies caused by the absence of "economies of scale," but if, at the same time, large industries are not to be preferred in view of the difficulties of decentralising them and on the ground—dubious in our opinion—that they lead to concentration of economic power in a few hands, the only logical course would be to stimulate the transformation of small units into more efficient medium-sized firms. Whether such a course, as suggested by the authors of the I.E.G.'s study, would be consistent with the Government's policy governing industrial estates is the question. What has currently imparted some importance to this issue is not only the big third Plan programme covering industrial estates in India but also the E.C.A.F.E. Seminar on Industrial Estates which concluded its session at Madras last week-end.

The economic rationale for setting up industrial estates is that such estates provide, on a rental basis, good accommodation and other basic common facilities to groups of small entrepreneurs who would otherwise find it difficult to secure these facilities at a reasonable price. An estate also makes possible the setting up of common technical, workshop, repair and other services, which would not pay for one small factory alone but may pay for a number of them. The Government's policy regarding industrial estates so far has had these limited objectives. But now the aims are broader. Thus, the estates are expected to relieve the existing congestion in the old industrial towns and cities, thereby serving as a tool of city planning. Another objective is to stimulate the growth of small industries as ancillaries or auxiliaries to some major industrial plants. Yet another aim is to spread industry towards small towns and large villages and thus control urban growth and regulate location of industries. With these objectives in view, the Planning Commission has provided for an outlay of Rs. 30 crores on industrial estates in the third Plan, as against an estimated outlay of about Rs. 12 crores in the second Plan. As many as 300 medium-sized and large-sized estates and 500 to 1,000 small rural estates are proposed to be started during the third Plan period, as compared with the 120 estates completed or nearly completed during the second Plan period. Whether it would be worthwhile to have an expanded programme of the kind and whether the central objective of fostering small industries for their own sake is sound are two relevant questions for which answers may be found in the findings based on the I.E.G.'s field survey covering 12 industrial estates with 206 small factories. These findings are:

(1) The small factories produce products for direct consumption or parts and components for other industries.

(2) Since enterprise and skills are available only in areas where some industrial development has already taken place, industrial estates have not been quite successful in areas where such enterprise and skills are not available. If the latter areas are to develop industrially, it looks as if they must first have large industries which will create external economies of agglomeration as well as provide potential entrepreneurs from amongst the ranks of its skilled workers.

(3) Technical and economic considerations should have been given greater weight in the choosing of sites than the consideration for so-called dispersal of industry, for a wrong site results in heavier investment and heavier current costs of production.

(4) The capital costs of construction of existing estates have been excessive. These excessive overheads have provided some justification for subsidising rents.

(5) In small estates, the provision of common technical and other facilities for the purpose of improving the technical efficiency and the chances of commercial success of small enterprises is uneconomic, because they remain largely unutilised.

(6) The techniques used in factories in the estates are not labour-using and capital-saving; they do not, therefore, create larger employment opportunities than could be had from medium or large factories making the same products.

(7) One justification for the estates is that they provide nursery beds in which efficient small entrepreneurs can grow. As this objective has not been kept firmly in mind, there has been some waste of effort in trying to create "new" entrepreneurs and in offering valuable new facilities to people who are unable to make good use of them.

Since the saving of capital, which is scarce, is supremely important for rapid industrialisation of the country and the medium or large multi-shift factories have been found to be most capital-saving and the small factories least capital-saving, promotion of small modern industries would be justified only if they have the potential for growing into bigger and more efficient units. The critical view expressed by an Italian expert at the E.C.A.F.E. Seminar (*vide* Market Gossip in *Commerce* of 4th November 1961) is also to the effect that small industries and industrial estates of the kind started in India are condemned to stagnation. This expert view and the non-official findings referred to in this article underline the need for an early inquiry into the working of *all* industrial estates before further heavy outlays are made on small-scale industries and industrial estates.

It is gratifying to find, in this connection, that the E.C.A.F.E. Seminar, while recognising the importance and usefulness of industrial estates, has nevertheless come to certain cautious conclusions. One of these is that, in view of the comparative shortage of basic facilities, it would be prudent to adopt a selective approach in the matter of creating industrial estates in rural areas. Another conclusion is that the provision of ready-made factory accommodation itself should be regarded as sufficient inducement to make the industrial estates programme attractive. It would not be desirable, in the considered opinion of the Seminar, to provide special concessions and facilities which are not available to units outside the estate. A third conclusion is that entrepreneurs themselves should progressively assume responsibility for starting industrial estates by joint action through the formation of companies or co-operatives. These conclusions also point to the need for modifications in the Government's policy governing industrial estates in India. There is thus a clear case for fresh thinking on the subject and the earlier it is done the better.

DEVELOPING UNDEVELOPED AREAS

TECHNIQUES ADOPTED BY SCANDINAVIA AND NETHERLANDS

By K. L. Nanjappa

DIRECTOR, SMALL INDUSTRIES SERVICE INSTITUTE, BANGALORE

THE Scandinavian countries and the Netherlands have formulated and implemented a regional policy of dispersal of industries from crowded cities and development of backward areas. This is essentially a post-war development. In its negative aspect, the policy aims at discouraging further industrial concentration, while, in its positive aspect, it seeks to provide incentives for establishing industries in undeveloped areas. In the Netherlands, for instance, when the policy was first formulated in 1950, it had another objective also, namely, reducing what is known as structural unemployment resulting from depressed activity in specific industries and areas during certain seasons. As part of this policy, measures were taken to provide employment opportunities to persons thrown out of jobs as a result of rationalisation of agricultural production.

After the Second World War, there was rapid industrial expansion around big cities in the Scandinavian countries and the Netherlands. Owing to the concentration of industries in a few western districts of the Netherlands, nearly 50 per cent of the population was crowded on 21 per cent of the habitable area of the country, while the three northern provinces were untouched by industrial development. The overpopulation of the Western parts resulted in a reduction of horticultural area. An idea of what this means may be gained from the fact that the Netherlands earns Rs. 55 crores by exporting flowers alone.

In Denmark, 40 per cent of the population live in and around Copenhagen, while in Norway 75 per cent of all industries are concentrated in three of the 18 districts. The crowding of industry and population in a limited area has resulted in the nuisance of air pollution, problem of water supply, inadequate dwelling quarters for workers, recreation grounds and transport and traffic difficulties. In addition, there is dearth of labour for new industries.

In contrast to the high level of industrial activity in certain parts of these countries, there are others which are industrially backward and have a high percentage of unemployment. Thus, when the regional policy was initiated, the South Eastern and some of the Eastern parts of the Netherlands had an unemployment of 20 to 25 per cent. A similar situation obtained in the northern districts of Norway. In the province of Jutland in Denmark also unemployment was very high.

Development Plans : Netherlands

The fourfold aspects of the regional policy referred to at the outset are noticeable in the development plans of the Netherlands Government. The policy started with the object of solving structural unemployment and the first development scheme was formulated and implemented in respect of the South-eastern province of Drent. This was followed by investigations of the unemployment problem in other regions, where it was found that unemployment was of a structural nature. As a result, eight more areas were selected for development and it was realised that the problem of structural unemployment could not be solved by migration to other ports alone and that it would be necessary and possible to promote by simple means industrial growth in backward areas. Several measures were, therefore, taken to eliminate structural unemployment where it occurred and to industrialise undeveloped areas. Apart from creating social overheads, an inducement scheme was initiated and, according to this, a grant was paid to an industrialist if he employed one worker out of the labour reserve per every 50 square metres of new industrial building. Alongside, a scheme for subsidising the cost of shifting unemployed workers from backward areas to other parts was put in operation and, in the period between 1950 and 1958, 1,600 new jobs were provided in this manner. It was, however, later realised that migration could not solve this problem entirely and that positive plans to promote an even distribution of industry had to be adopted. Instead of moving the unemployed out of undeveloped areas, industries had to be attracted to such areas. The aim has been to create a development nuclei, so that they might develop further on their own.

With a view to attracting industries to undeveloped areas, the Netherlands Government provides subsidies to an entrepreneur (*a*) if he establishes an industry in a newly created, permanent building, having a useful floor space of not less than 500 square metres on an industrial site owned by the municipality, and (*b*) if he extends an industrial plant by a permanent new construction having a useful floor space of not less than 500 square metres, whether it is built on his own grounds or not.

In the case of new establishments, the subsidy is (1) Rs. 50 per square metre of useful floor space for the first 1,000 square metres of new construction, (2) Rs. 60 per square metre for the next 1,000 square metres, (3) Rs. 70 per square metre for the next 1,000 square metres, and (4) for useful floor space in excess of 4,000 square metres Rs. 75 per square metre.

In the case of extension of an industrial premise, the subsidy is Rs. 45 per sq. metre. The subsidy at the above rates is given subject to the condition that, in the case of new establishments, the entrepreneur undertakes to employ male labour in his factory at the rate of one man per 100 square metres of floor space and one man per 50 square metres of new floor space over and above the existing staff.

It should be mentioned, in this context, that, while financial incentives such as the ones referred to above are given by the Government for industrialising undeveloped areas, the choice of location for the industry is left entirely to the entrepreneur himself, as this is an essential part of the business risk that he takes. Secondly, movement of industries to backward areas is brought about not by force, but by persuasion that is, by creating in such areas a climate suitable for industrial development. In other words, improved communications and transport, water and other facilities and social and cultural amenities are made available so as to serve as poles of attraction.

Role of Municipalities

In several parts of the Netherlands, municipalities are playing an important part in the construction of industrial areas and providing facilities such as water, power and roads, so that entrepreneurs are encouraged to put up factory buildings without any difficulties. Land is sold or given on a lease basis, and the municipality receives 50 per cent of the selling price or the capitalised rental value from Government, provided an industrial building is erected thereon and the maximum area in respect of which price compensation is claimed does not exceed five times the area of the building site.

During the first five-year period of the area development programme, the Netherlands Government spent about Rs. 27 crores for improvement of communication and another Rs. 25 crores on subsidy to municipalities and provincial Governments to enable them to execute projects that are of importance to industrial development. Besides, another Rs. 10 to 12 crores were made available for encouragement to industry. Necessary financial assistance was also made available for subsidising social and cultural projects. Under the area development policy initiated in 1959, requests for subsidy had been granted in 250 cases by February 1961. A number of large-scale factories had moved into backward areas and employment opportunities to 17,000 people were expected to be provided.

A remarkable feature of the area development policy of the Netherlands Government needs to be mentioned. Development plans for industrialising backward areas are drawn up by a provincial Government in consultation with municipalities. To assess these plans on their merits and give advice regarding priorities and manner of implementation, a small committee of experts known as the "Committee on the Industrial Development of Problem Areas" has been constituted. This committee comprises representatives of the Ministries of Social Affairs, Home Affairs, Housing and Building, Agriculture, Fisheries, Communications and Water control and brings about co-ordination of the functions and responsibilities of all Ministries. A similar committee functions at the provincial level also.

As an illustration of the results achieved by the area development programme, the progress made by Emmen, where the policy of regional incentives to industry was first tested, may be mentioned. Emmen is an old village situated in the northern part of the Netherlands where a large number of people were employed as peat diggers during the 1940s. Owing to the competition of coal and the exhaustion of peat deposits most of them were thrown out of jobs. With a view to eliminating this structural unemployment, special incentives, as referred to earlier, were given to industries to absorb the unemployed. 375 acres of land were acquired by the municipality for developing industrial sites and facilities such as power, water, roads, schools, hospitals and dwelling quarters for workers were provided to attract new industries. Government also subsidised construction of industrial buildings. As many as 55 new factories started functioning in Emmen by the end of 1960 and provided employment to 6,000 workers. This new industrial activity resulted in indirect employment of hundreds of people in local restaurants, shops and transport undertakings. The population of Emmen increased from 6,000 in 1950 to 23,000 in 1960.

Norway

As in the Netherlands, industrial development in Norway has been confined to a limited area, namely, Oslofjord. Although there are plenty of resources awaiting exploitation, the country's three Northern districts have remained uninfluenced by modern developments and unemployment is very high. To eradicate unemployment and bring about even development of all areas, a Regional Development Plan was initiated by Government in 1948. Regional offices were opened in each district to formulate plans for the speedy development of industries, particularly those in the small-scale sector. In 1956, the Norwegian parliament approved of the establishment of a Guarantee Fund to finance industrial development in economically backward districts.

Special administrators were appointed in the Northern districts to direct the activities of the regional offices on which the President of the Municipality and representatives of various organisations work as members. The objectives of the regional bodies are: (*a*) creation of a climate suitable for industrial development; (*b*) provision of economic facilities such as industrial sites, power and water, construction of roads and dwelling houses for workers; (c) advising Government on the establishment of large industries in backward areas, and (*d*) persuading industries in Oslo to put up branches in the undeveloped Northern districts.

In Norway, too, municipalities take active interest in industrial development. They build industrial estates and share with the Government fifty per cent of the expenditure incurred by industries in obtaining technical advice from private consultant firms. Government's share of the expenditure is met out of a 500 million N. Kroner Fund earmarked for assisting industrial development.

Among the Norwegian Government's monetary and fiscal measures of assistance, the constitution of a special credit fund to assist the establishment of new industries in backward areas and finance the expansion of existing industries and the framing of special tax rules are important. Under the former, if an enterprise is unable to receive financial help through normal banking channels, the fund stands guarantee in full to the bank or other financial institutions for the credidt given in excess of their normal limit.

The purpose of the special tax rules, introduced by an Act in 1952, is to enlarge capital resources for development of industries in Northern Norway. Under these rules: (*a*) an extra depreciation allowance is given in respect of the machinery and equipment if they are considered to have been bought at prices higher than the normal ones; (*b*) special depreciation allowances, namely, advance deduction of depreciation upto three years, are also given on machinery and equipment forming part of approved investment in Northern Norway; (*c*) as an incentive for industries to invest in undeveloped areas, corporations and individual industrialists are permitted to set aside 60 per cent of the net increase in their income in a special fund for investment in Northern Norway. The income so set apart is exempt from taxation. Alternatively, the tax exempted income may be held in the form of industrial

MARKET GOSSIP

Boomlet In Shares

THE first settlement of the Hindu New Year (*Samvat* 2018) has witnessed a boomlet in the share markets. *This is a surprising development,* because it was not anticipated. True, the *Moorat* trading was cheerful, but none could have anticipated that several counters would register such substantial gains as they have done in the past four or five days. A sudden spurt of Rs. 7 in less than a week in Tata Steels is an unusual phenomenon these days and reminds one of the mad buying indulged in by operators in the summer of 1960. There have really been no new developments in the economic sphere to warrant the present extremely bullish conditions. It seems to be due mainly to a change in sentiment and the reasons for the change is not quite explicable. The visit of fifty-four American businessmen a fortnight back is reported to have improved the prospects for receiving U.S. private capital, but the continuing row between the Western oil companies and the Government of India over fixation of fair prices for petroleum products is liable to have a corrosive effect on the goodwill strengthened by this delegation. Some may say that Prime Minister Nehru's mission to the U.S. has been successful and the consequent improvement in Indo-U.S. relations is a favourable factor so far as foreign aid is concerned. But this signifies nothing in terms of profit-margins of the existing industries in the foreseeable future, apart from the fact that the differences with the U.S. had never gone to such lengths as to impede the flow of economic aid to this country.

A part of the rise in prices, especially of the counters in the forward list, can be attributed to the technical position of the market. Some operators had gone short in a few scrips as a hedge against their purchases of other shares, in which some others were short. So one has been squeezing another, with the result that the gains have been widespread. But what led to the covering operations? May be the sudden flare up in the values of many leading cash counters, both blue chips, which were already standing at pretty high levels, and non-blue chips. May be, knowledgeable persons, who have information about the working of companies in the current year, have bought some shares. It may be that some pump-priming is being done by certain interests, in order to create a favourable climate for the new capital issues they may have in mind. It is also quite possible that, bulked by the Forward Markets Commission, the speculators in commodities have turned their attention to shares.

Anyway, it looks as though there is a certain amount of rigging of the market. This is apparent from the causes given in market circles. It is, for instance, said that the rise in Tata Steels is due to receipt of Government's permission by the Company to erect an oxygen plant at Jamshedpur. But at no time was there any doubt about it, because it was the Government which was compelling the Company to take to this business, on the ground that it did not want the Indian Oxygen Company to have a monopoly in this field. In fact, this forced diversification would add to the strain on the T.I.S.Co's resources of both capital and men.

In its bullish mood, the market seems to be overlooking the probability of Maharashtra too suffering from power shortage in the coming months. And, if Mr. K. D. Malaviya persists in his policy of gradually squeezing out the Western oil companies from the Indian market, there may soon be a scarcity of petroleum products, too. At the time of writing, it is said that the Department of Mines and Oil is confident of replacing the imports of these products from the Soviet bloc. *Any attempt to do so will lead to a first class* political crisis, besides necessitating large-scale diversion of India's exports. It is worth noting, in this connection, that the foreign exchange involved in the import of refined petroleum products from non-Soviet area is well over Rs. 50 crores. Another factor that is being ignored is the possibility of cotton, soap and *vanaspati* industries having to pay high prices for raw materials, as the cotton and oilseeds crops have belied the earlier optimistic expectations.

Goodyear At Ballabgarh

The 49,000 Indian shareholders of Goodyear India Ltd. (and the U.S. business interests associated with the Company) have every reason to feel greatly gratified at the fact that, within seven months after they subscribed to the equity issue, the new Goodyear factory at Ballabgarh near Delhi has commenced operation. The factory, which represents a total investment of Rs. 6 crores, including the sum of Rs. 2.25 crores met by way of a loan from the U.S. Eximp Bank, was inaugurated on Saturday the 18th inst. by Vice-President Dr. S. Radhakrishnan. At the present level of capacity, the plant will produce 750 tyres a day on a three-shift basis, equivalent to an annual output of 210,000 tyres and tubes for cars, buses, trucks, tractors and animal-drawn vehicles. Adequate provision has been made for augmenting the capacity later to 510,000 tyres and extending the range of manufacture by the addition of tyres for aeroplanes, motor cycles and scooters, and two million lbs. of camelback (a rubber compound used by tyre retreaders and other rubber processing units).

The growth prospects for Goodyear India and the chances of a handsome return on investment are excellent. The Company's products are assured of a ready market which is bound to expand in the coming years, in keeping with the improvement in the standards of living and communications. The demand for automobile tyres alone is expected to rise 100 per cent in the next five years, in view of the high production target of 100,000 vehicles fixed to be achieved by 1965-66, as against the actual output of 53,500 in 1960-61. Appropriately enough, the third Plan envisages more than doubling the capacity for automobile tyres, from 1.61 million in 1960-61 to 3.7 million in 1965-66. The additional capacity is proposed to be achieved partly by setting up new factories and partly by the expansion of existing ones. Five new factories are already under construction, one each in Madras, Calcutta and Allahabad and two in Kerala. There are today five factories (one each at Ballabgarh, Calcutta and Ambattur near Madras and two in Bombay), with a total licensed capacity to produce about 1.8 million automobile tyres annually.

Fitting into this general picture is Goodyear's Ballabgarh plant which will doubtless "make a substantial contribution to meeting the deficit in supplies both now and even more so after expansion to the next stage." The plant, which, by the way, is the *sixtieth* of Goodyear manufacturing units located in five Continents, possesses the incomparable advantage of the world's largest tyre and rubber company, with sales exceeding $1.5 billion in 1960. Surely, Goodyear's example provides, as Mr. R. E. O. Carey, Managing Director of Goodyear India Ltd., said in his welcome speech, an incentive to others to take advantage of the opportunities that India's surging economy offers. And the statement of Mr. E. J. Thomas, Chairman of the Board of Goodyear, U.S.A., that the Ballabgarh plant testifies to the Company's faith in the future of India is reassuring.

Asian Cables

It is gratifying to find that the Directors of Asian Cables Corporation Ltd. have abandoned their move (constructively criticised in these columns, *vide Commerce* dated 28th October 1961) to deny the shareholders their full rights in the *proposed new issue.* As readers are aware, in March last, the Company had decided to raise new capital of a magnitude which meant that every existing share was entitled to two new shares. Last month, however, it was proposed to offer only one new share for every old share and offer the rest to the market with a view to enlarging the number of shareholders. This was not a fair move and quite a few shareholders said so to their directors. At a special meeting of shareholders convened for getting their approval to the proposed change, the Chairman of the Company said that the relevant resolution was not being moved in deference to the wishes of shareholders who were opposed to it. This was a commendable attitude, especially as it might not have been difficult for the management of the Company to get the resolution passed, if it were determined to do so.

F.M.C. Turns To Cotton

It looks as though the cotton futures market is going the way of the oilseeds market. Futures prices are merrily moving up, in spite of the special margins promptly imposed by the Forward Markets Commission. After an initial decline, immediately after the margins were announced, the Jarilla March 1962 contract resumed the upward trend on Tuesday. The trend gathered further momentum on Wednesday, when the contract was rigged up to a high of Rs. 652.75 (for three quintals). On Thursday, too, the rising trend continued with the contract touching a high of Rs. 658. The stringent margins are no deterrent, at least to those operators who are financially strong. It is reported that as much as Rs. 30 lakhs have been paid up by way of margin and that the net long position stands between sixty to seventy thousand bales. The contract is fast heading to the second marginal line and few doubt that it will advance past the next marginal level of Rs. 665.50, considering the firmness of spot prices which are already ruling at the ceiling prices and in some cases even above them. The sharp reduction in crop estimate and the sustained mill demand in the wake of small arrivals are mainly responsible for the upswing in ready prices.

Understandably enough, the trade is strongly critical of the F.M.C.'s action. Mr. Madanmohan Ruia, President of the East India Cotton Association, has called it as unwarranted and harmful. According to him, the F.M.C. had taken an alarmist view of the situation. The rise in price, in his opinion, was neither so steep nor so out of proportion to the increase in the price of the spot material as to warrant the hasty action of the F.M.C. which, according to him, would only result in elimination from business of the small operators who cannot pay the margin.

Should the margins prove ineffective in checking the rise in prices, what further action will the F.M.C. take? This is the question uppermost in the minds of operators. None will be surprised if the F.M.C. orders suspension of business, as it did in the case of oilseeds, as a prelude to the imposition of a ceiling within ceiling or even compulsory closure of all outstanding contracts.

Whatever the steps the F.M.C. might take, it will not succeed for long in preventing the rise in price which is a sequel to the fall in the size of the cotton crop, in the face of rising mill demand. The crop is presently estimated at no more than 4.8 million bales, as compared with the last season's record of 5.4 million bales. And what is more, except in the Punjab, new crop arrivals have been very meagre. Arrivals till the end of October amounted to only 135,000 bales, consisting mainly of Punjab and Ganganagar cotton; Oomras and other tracts accounted for only 13,000 bales. This is not only half the quantity that came to the market by this time last year but also considerably less than the arrival in the corresponding period of the 1959-60 season when the crop was no more than 3.8 million bales.

In these circumstances, cotton prices are bound to go up. The F.M.C. cannot be blamed for intervention to curb the rise. It is true that the rise in the price of the hedge contract during the past week has not been so steep as to justify drastic action. For the closing price of Rs. 642.50 on Monday, when the margin was imposed, was only three rupees higher than the highest level touched in the month of October. Perhaps the F.M.C. took the present rise in price as a portend and acted swiftly in a bid to forestall a further spurt in prices.

While the propriety of imposing restrictions on a contract which is being traded at a price which is well within the statutory limit may be questioned, there is no point in opposing margin on the ground that it will squeeze out the small fry. Futures trading, if it is done for genuine hedging, is essentially a large-scale operation. The small fry is there to speculate and make a living out of it and does not deserve all that consideration which is being shown by the E.I.C.A. authorities.

This is not to say that palliatives such as margins and imposition of ceilings can alter the basic fact of shortage of cotton in relation to the demand. There is a growing feeling among those who are genuinely interested in seeing that mills get cotton at reasonable prices and in sufficient quantity that reintroduction of compulsory surveys and requisitioning of cotton, if required, on a random basis, as was done in the past, will be more effective for holding the price line than margins or other restrictions which only serve to make the hedge contract a highly artificial one.

Jute Industry

The timely move of the East India Jute and Hessian Exchange, Calcutta, to curb speculation in the jute goods markets with a view to checking an undue rise in prices is, indeed, commendable. For three days, that is, on 14th, 15th and 16th inst., forward trading in jute and jute goods was suspended, following the squeeze in hessian and jute mills contracts caused by an acute shortage of ready goods. B. twills (November) advanced from Rs. 133.90 on the 9th inst. to Rs. 139.75 per bale two days later and hessian 40" x 10 oz. (November) from Rs. 48.82 to Rs. 51.25 per 100 yards. The rise cannot, of course, be described as "spectacular," but the upward trend would have gathered considerable momentum subsequently but for the suspension of forward trading on three days and the decision of the Exchange, at an emergency meeting held on Tuesday this week, to take other measures to check unhealthy speculation. These other measures will be implemented after the Forward Markets Commission gives its approval. One of them is imposition of a margin of Rs. 100 per bale of B. twills, if the rate were to rise above Rs. 135 in the futures market and Rs. 140 in T.S.D. (transferable specific delivery) contract. In the case of hessians, the margin will be Rs. 50 per 100 yards of 40" x 10 oz., if the price exceeds Rs. 49.50 in the futures market and Rs. 51 in T.S.D. Further, it is proposed to permit offering of optional delivery in futures contracts for alternate tenderable variety against B. twill contracts. It is also proposed to take certain steps, such as stoppage of fresh transactions in November delivery contracts, designed to prevent any exploitation of the current shortage of ready goods by market operators at the time of the settlement of the November hedge contract.*

The acute shortage of ready jute goods is evident from the low level of stocks with the mills. The total of these stocks as at the end of October *1961 was no more than 54,500 tons, as against* 78,400 tons a year before. The shortage, however, is not likely to persist for long, what with the encouraging production prospects. The jute mills are working in full swing. The 48 hours working week has been restored in almost all mills and the member-mills of the I.J.M.A. having a registered complement of more than 220 looms each have unsealed 2.5 per cent of their 12 per cent idle looms with effect from Monday the 13th inst. Although the unsealing is now made applicable only for 48 days, that is, from 13th November to 30th December 1961, the Committee of the I.J.M.A. has stated that opportunity would be taken to reduce further the mills' balances of accumulated loom-hours. It is gratifying that the jute industry has been assured of the requisite power supply by the Calcutta Electric Supply Corporation, as well as adequate supplies of raw jute. The raw jute prices, too, have come to reasonable levels. The latest available quotation for Assam bottoms at Calcutta is Rs. 31.50-Rs. 31.75 per maund, which is well below that prevailing a few months ago—as high as Rs. 61 in April.

While ample jute supplies at reasonable prices are assured and the cuts in jute goods production have been restored, it will be premature to jump to the conclusion that the mills will earn bumper profits in 1961. It must be remembered that the mills have incurred heavy losses as a result of the cutback in output during the major part of the year and the high prices it had

*Since writing the above, the Exchange has prohibited all fresh transactions in jute goods futures (Standard Contract No. 1 Hessian Cloth and Standard Contract No. 2 Sacking Bags for November 1961 Delivery) with effect from the 18th inst.

FURTHER RISE IN EQUITIES

(From Our Own Correspondents)

BOMBAY, 16*th November*

THE upward trend of prices noted on the Stock Exchange last week gathered further momentum during the week under review. Although the market opened on a quiet note after the *Diwali* holidays, it soon developed a firm trend. The *budla* rates in the last settlement on Saturday were slightly lower, thereby indicating that there was no sizable bull position. Further evidence of this was provided by the decision of the Stock Exchange authorities not to place any scrip under the special *havala* deposit scheme. This reading of the technical position of the market imparted considerable strength to the bulls. The news that the T.I.S.Co. had received official permission for putting up its own oxygen plant prompted support for Tata Steels which staged a smart rally and favourably affected the sentiment generally. There was also some strong buying in cash scrips, resulting in handsome appreciation in their value. Optimism ran high about the profits of textile mills for the current year. The news that the labour dispute in Hindustan Motors had been ended by referring it to arbitration and that the workers would, therefore, soon resume duty also assisted the general bullish psychology. On Tuesday, the market showed a tendency to consolidate the gains made on the previous day rather than to score fresh gains. After a period of cautious trading on Wednesday, with prices remaining fully steady, the market again firmed up today on renewed support by local and upcountry operators. Today's closing prices are consequently substantially higher than last week-end quotations.

Steels were well favoured. Tata Steels, as noted above, forged ahead on keen bidding from the week's opening level of Rs. 145.75 to Rs. 151 yesterday and further to Rs. 152 today and, after receding to Rs. 150, they finished higher at Rs. 152. The net gain over the week is Rs. 5.75. Indian Irons met with large-scale short covering and rose from Rs. 25.05, early in the week to Rs. 26.10 today, finishing fractionally lower at Rs. 26.05, a net gain of 90 nP over the week. Mukand Irons were well supported and spurted from Rs. 28.65 to Rs. 30 at close today, after touching a high of Rs. 30.40 on Tuesday.

Textile shares met with good support. Prices generally moved higher. Khataus firmed up to Rs. 517.50 *ex-div.* thanks to support based on expectation that the mill might get official permission for its diversification plans. Kohinoors improved from Rs. 313.50 on Friday to Rs. 332.50 today before finishing lower at Rs. 330. The net gain over the week is Rs. 16.50. This was due to an unconfirmed rumour that the veteran Ahmedabad millowner, Mr. Kasturbhai Lalbhai, has agreed to be the Chairman of the Board of Directors. Another rumour was that the Company might extend its activities by taking to the manufacture of nylon yarn and/or other goods. Morarjees at Rs. 398 *ex-div.* showed a rise of Rs. 15.80 over the week. Centurys moved up by Rs. 13 to close at Rs. 615 today, Rs. 4 below the highest for the week.

Cement shares were firm. Digvijays were in the limelight, the quotation spurting by Rs. 23 to Rs. 214 due to buying based on expectation of better results. The finish was however lower at Rs. 208. A.C.Cs. attracted moderate support and advanced by Re. 1.50 to Rs. 171.50.

In the sugar section, Belapurs proved a favourite and rose from Rs. 270 early in the week to Rs. 289 today, although the closing rate was lower at Rs. 285, a net rise of Rs. 15 over the week. Kesars hardened by Rs. 16.25 to Rs. 266.25. Hindustan Sugars shot up by Rs. 15 to Rs. 342.50. Phaltans and Walchandnagars, however, recorded only a modest gain of Rs. 2 each to Rs. 130 and Rs. 170, respectively.

Rayon shares presented a mixed pattern. National Rayons attracted the attention of speculators and rallied from Rs. 557 to Rs. 591.50 today before closing at Rs. 590. The net rise over the week is Rs. 30.50. Baroda Rayons too were well favoured and firmed up by Rs. 6 to Rs. 166. Indian Rayons gained Rs. 4.50 to Rs. 95. South India Viscose, on the other hand, shed Rs. 2 to Rs. 192. Gwalior Rayons went up to Rs. 51, only to close unchanged at Rs. 50.

Chemical shares scored further gains. Amar Dyes rallied by Rs. 26.25 to Rs. 330. Indian Dyestuffs gained Rs. 15 to Rs. 485. Poly Chems were marked up by Rs. 13.75 to Rs. 217.50. Dhrangandras (old) were quoted Rs. 13 higher at Rs. 137. The new scrip, too, was done Rs. 10 higher at Rs. 117. Colour Chems moved up by Rs. 7.50 to Rs. 390 and Dharamsis by Rs. 7 to Rs. 205. Synthetic Chemicals went up from Rs. 238 to Rs. 245, but closed lower at Rs. 237 on profit-taking.

Among engineering shares, T.E.L.Cos. attracted speculative interest. After commencing the week at Rs. 367.50, the scrip moved up on persistent buying to Rs. 383.50 on Tuesday. Although profit-taking brought the quotation down to Rs. 377 yesterday, it improved in today's dealing to Rs. 381. The close was, however, lower at Rs. 379. T. Manekials (new) spurted by Rs. 35 to Rs. 670. Alcock Ashdowns hardened by Rs. 9 to Rs. 332. Cooper Engineerings were done higher at Rs. 196, as against last week-end quotation of Rs. 188. Premier Constructions improved by Rs. 8 to Rs. 204. Jyotis put on Rs. 8.50 to Rs. 192. New Standards were quoted Rs. 6 higher at Rs. 210. Asian Cables too gained a like amount to Rs. 126. The Directors of the company have decided to give up their later decision to offer only one new right share for every one old share and stick to their earlier proposal to offer two shares for every one share. This they have done in response to the protests of some shareholders.

Among automobile shares, Premiers hardened by Rs. 12.50 to Rs. 169 and Hindustan Motors by Re. 1.24 to Rs. 20.60.

In the miscellaneous counter, Bombay Burmahs proved a bright spot. The scrip received sustained speculative support. From Rs. 651.50 last week-end the quotation rose to Rs. 713 on Tuesday. There was a decline in subsequent sessions, thanks to profit-taking which brought down the quotation to Rs. 700 at close today, a net rise of Rs. 48.50 over the week. Associated Rubbers appreciated by Rs. 11.50 to Rs. 123.

* * * *

Madras Stock Exchange

MADRAS, 15*th November*

A feature of trading on the Stock Exchange this week was the persistent support lent by operators to textile shares on hopes of good working results of textile companies in the current year, despite the upward trend of raw cotton prices. Travancore Rayons made further headway, ignoring the margin on outstanding purchases imposed by the Exchange authorities last week. Plantation shares put on a better appearance, though the volume of business actually done was relatively modest. The statement made by Kerala's Labour Minister in the State Assembly that steps were being taken by the State Government for an interim revision of wages of workers in the plantation industry was noted by operators, but it did not have any effect. Coffees and rubbers attracted good attention. Teas were well maintained. Select sugar shares, which had been easy for some-time past, staged a rally. The rally followed buying enquiries induced by expectations of the Central Government conceding the millowners' plea for lowering excise duty on sugar in order to boost consumption. Miscellaneous industrials, particularly chemicals, cements and engineerings, ruled distinctly firm.

Among textiles, Premiers forged ahead from Rs. 330 to Rs. 363 before closing at Rs. 352, with a net gain of Rs. 22 over the week. Bangalore Woollens advanced by Rs. 12 to Rs. 245. Coimbatore Pioneers were marked up by Rs. 10 to Rs. 292. Coimbatore Cottons rose by Rs. 6 to Rs. 205. Travancore Rayons spurted by Rs. 3 to Rs. 47.50. Maduras gathered Rs. 2.85 to Rs. 43.25. Lakshmis, which had declined from Rs. 170 to Rs. 169 early in the week, recovered later to Rs. 172. Metturs put on Rs. 2 to Rs. 390.

Among coffees, Cowcoodys improved by 10 nP to Rs. 4.60, following the announcement of a final dividend of 15 per cent, taxable, making a total of 25 per cent, for the year ended June 1961, same as that distributed in the previous year. Ouchterlonys picked up 5 nP to Rs. 3.70. Coffee Lands rose from Rs. 18.12 to Rs. 18.25, but later declined to Rs. 18.15. Consolidated Coffees, however, encountered selling and lost 60 nP to Rs. 21.60. In the tea group, Periakaramalais moved up from Rs. 3.69 to Rs. 3.88 before winding up the week at Rs. 3.85. Nellaimpathys gained 15 nP to Rs. 2.70. The Directors of the Company have raised the dividend from 13 per cent (taxable) for the year ended June 1960 to 15 per cent (taxable) for 1960-61. Kil Kotagiris hardened by 10 nP to Rs. 5.15. Neelamalais gained 6 nP to Rs. 4.50 on news that the Company had maintained the dividend for the year ended June 1961 at the previous year's level of 7.50 per cent (taxable).

Among miscellaneous shares, Textools advanced by Rs. 6 to Rs. 186. Tube Investments rose by Rs. 3 to Rs. 285 and Western India Plywoods by a rupee to Rs. 217. Among cements, Orissas improved by 25 nP to Rs. 15.45, and Indias and Andhras by 5 nP each to Rs. 6.71 and Rs. 9.40, respectively. In the chemicals group, Metturs spurted by 42 nP to Rs. 15.12 and Travancores by 13 nP to Rs. 22. Among others, Ashok Leylands scored a gain of 35 nP to Rs. 9.60. Aluminium Industries picked up 10 nP to Rs. 23.90.

Do you require any specific information on trading opportunities in overseas markets?

THE STATE BANK OF INDIA has for the benefit of its constituents a full fledged INFORMATION SERVICE to provide answers to these questions and many more—all free and without obligation.

Here is an opportunity for expanding existing connections and building up new ones in your overseas trade. Your enquiries will receive individual and prompt attention.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Bombay, one of more than 909 offices waiting to offer you complete banking facilities for overseas trade.

STATE BANK OF INDIA
INDIA'S LEADING BANK

NEWS IN BRIEF

A DEVELOPMENT Council for glass and ceramics has been set up by the Government of India.

The Austrian Government has agreed to join the "Aid-India" Club for financing the third Plan, at its next meeting at Washington in January next.

The Government of India has decided to extend the benefit of compulsory contributory provident fund under the Employees' Provident Funds Act to industries engaged in stoneware jars and crockery, with effect from the 30th inst.

Extensive deposits of high grade copper ore have been discovered near Khaltse in Ladakh. These deposits are expected to yield 30,000 tons of copper annually. The ore has 6 to 8 per cent copper content.

The International Development Association of the World Bank has agreed to give a loan of $10 million for financing flood control and drainage schemes in the Punjab. These schemes in the State are expected to cost Rs. 15 crores in the third Plan.

The Central Warehousing Corporation has decided to set up at Delhi a cold storage, with a capacity of 1,500 tons, for stocking potatoes, oranges and apples. It will also construct a 12,000-ton general warehouse at Delhi. The two projects together are estimated to cost Rs. 13 lakhs.

The State-owned Indian Oil Company has commissioned fifteen fuel stations in Kerala. These stations will supply high speed diesel oil imported from Russia to the Kerala State (Road and Waterways) Corporation. The I.O.C. supplies similar oil to Transport Coporations of Maharashtra, Gujarat and Andhra Pradesh.

India and Afghanistan have signed a one-year trade agreement, with retrospective effect from 1st October 1961. The Governments of the two countries have pledged to promote mutual trade. India's principal imports from Afghanistan consist of dried and fresh fruits and asafœtida. Its exports to Afghanistan include certain engineering goods, apart from traditional items, such as tea and textiles.

A process for the manufacture of leather boards from tanned leather shavings and trimmings, discarded in shoe factories and tanneries, has been developed at the Central Leather Research Institute, Madras. The boards can be used as insoles for shoes. About 3,000 tons of leather trimmings available annually are discarded as waste. It is estimated that nearly Rs. 25 lakhs worth of leather boards can be produced from it.

The Jayant Shipping Company of India has placed an order for eight bulk cargo carriers with a Japanese firm, the Mitsubishi Shipbuilding and Engineering Company. Payment will be on deferred basis, being from out of the freight earnings of carriers. The Company proposes to place another order for four bulk cargo carriers with a Dutch shipyard. All these twelve ships, with a total capacity of 310,000 tons, are expected to be delivered before June 1964.

During the first ten months of the current year, the Export Risks Insurance Corporation issued 300 policies, with a maximum liability of Rs. 7.74 crores, as against 324 policies, with a maximum liability of Rs. 8.14 crores during the whole of 1960. Shipments, contracts and credits insured amounted to Rs. 9.23 crores, as against 6.96 crores. The premium income is Rs. 2,51,000 as against Rs. 2,36,000. Since its inception in October 1957, the Corporation has paid 80 claims aggregating Rs. 8.61 lakhs.

The production of cotton textiles during the month of September 1961 is provisionally placed at 73 million kgs. (160 million lbs.) of cotton yarn and 386 million metres (424 million yards) of cotton cloth. The total production in the first nine months of this year amounts to 638 million kgs. (1,404 million lbs.) of cotton yarn and 3,531 million metres (3,884 million yards) of cotton cloth. At the end of September, the composite mills of the cotton textile industry held an estimated stock of 173,000 metric bales of cotton cloth as unsold and 189,000 metric bales of cotton cloth as sold but not lifted.

The Government of India has granted an industrial licence to Messrs. Echjay Industries Pvt. Ltd., Bombay, for the manufacture of capstan lathes of 2" bar capacity and turret lathes of 1" and 1⅜" bar capacity. The annual production of the plant will be 72 pieces of capstan lathes and 120 pieces of turret lathes. The factory, which will be located at Bhandup, a suburb of Bombay, is expected to go into production in March 1962. In the first year of production, the scheme, it is said, will save foreign exchange of Rs. 36 lakhs. Most of the machinery required for the plant is to be purchased indigenously. Negotiations for the import of high precision machinery as well as for expert foreign collaboration are being finalised.

The award of nineteen cash prizes, ranging from Rs. 50 to Rs. 2,500, has been announced by the Inventions Promotion Board in the Union Ministry of Commerce and Industry. This is the first series of cash prizes awarded by the Board to encourage and inculcate a spirit of invention among independent workers, artisans and technicians. The Inventions Promotion Board, it will be recalled, was set up early in 1959 to promote new ideas and inventions by suitable technical and financial assistance. Inventions, whose practical value is proved or whose workability is demonstrated, are eligible for such assistance. The inventions submitted to the Board are adjudged by a panel of experts consisting of outstanding persons in different fields of work.

A credit information bureau will shortly be set up by the Reserve Bank of India. A Bill to amend the Reserve Bank of India Act to enable the Bank to set up such a Bureau will be introduced in the winter session of Parliament commencing on the 20th inst. Bills to amend the Wealth Tax Act, the Gift Tax Act, and the Expenditure Tax Act will also be introduced in the session to bring the assessment, penalty and recovery provisions in them in line with the recent amendment to the Income Tax Act. The Duties and Powers of the Comptroller and Auditor-General Bill is another legislative measure to be taken up. A Bill to amend the State Financial Corporations Act will also be introduced to remove certain difficulties experienced in the working of the State Financial Corporations.

A three-member delegation of the State-owned Indian Refineries Ltd., led by Mr. P. R. Nayak, I.C.S., Managing Director, has left for Moscow to finalise details of the public sector refinery to be set up in Gujarat during the third Plan. During its two-week stay in the Soviet Union, the delegation will prepare the time schedule for the construction and commissioning of the refinery, including supply and delivery of equipment to India. It will also discuss the product-pattern of the refinery. Besides, the delegation will discuss further details of the Barauni refinery which is being set up with Soviet aid.

The *ad hoc* Steel Committee, appointed by the Union Government, has recommended further reduction in the concessional prices of steel sold specifically for manufacturing export goods. In order to encourage export of engineering goods, the Union Government had introduced in 1958 a scheme under which various categories of steel were made available for export purposes at prices lower than the controlled rates. The Committee was set up to examine the feasibility of further concessions in steel prices. The Committee is of the view that the higher prices of steel, pig iron and tin-plate mainly account for the increase in the value of raw materials used in the manufacture of goods in the country. It has also come to the conclusion that there is no possibility of reducing wages or any other major items of cost.

From Abroad

Indonesia is planning to sell 3,000 tons of black pepper to Russia.

Ireland has accepted an invitation from the Common Market to discuss its application for membership of the trade bloc.

Egypt and Sudan propose to set up a joint petroleum company with a capital of £1 million to exploit oil resources in the Sudanese territory.

The Portuguese Government has approved a decree seeking to establish a "Portuguese Common Market," that will eliminate all tariffs between that country and its overseas territories within ten years, beginning from 1st January 1962.

President Kennedy has signed an executive order last week envisaging the formation of an institution for co-ordinating U.S. foreign aid, namely, the Agency for International Development. The Agency will take over the functions of the D.L.F. and International Co-operation Administration and other foreign aid agencies.

World production of soyabeans in 1961 is estimated by the U.S. Department of Agriculture at 1.1 billion bushels, the largest crop ever produced. This is higher by 17 per cent and 65 per cent, as compared with 1960 and the average of 1950-54, respectively. The increase is the result of a record U.S. harvest.

Britain's adverse trade gap narrowed last month to £46.6 million, as compared with £70.2 million in September. Exports aggregated £319 million, re-exports £13 million and imports £379 million. As compared with September, exports rose by nearly £59 million and re-exports by £0.5 million. Imports were up by nearly £36 million.

In a bid to prevent the growing vertical integration in the plastics industry, the U.S. Federal Trade Commission has asked the Union Carbide, the largest polythene producer in the U.S., to dispose of its subsidiary, Visking (the largest producer of polythene film in the U.S.), which it acquired in 1957.

West Germany has decided to enter into an agreement with Argentina for the mutual protection and promotion of private investments. It has already concluded similar agreements with Pakistan, Malaya, Greece and Togo. The primary object of these agreements is to promote the flow of private German capital abroad.

Canada's total production of wheat fell sharply to the lowest level since 1937 to 262 million bushels this year, which compares with 490 million bushels last year. This setback is attributed to drought conditions. The output of oats also declined from 456 million bushels to 334 million bushels, barley from 207 million bushels to 123 million bushels, rye from ten million bushels to six million bushels and flaxseed from 23 million bushels to 15 million bushels.

The U.S. Government has announced a one-year programme under which it will sell a maximum of 5,000 long tons of rubber per month from its stockpile, when its price is under 32 cents per lb., and an unlimited amount when the price rises above that level. The U.K. has also decided to sell 1,000 tons of rubber a month from its stocks, when price is ruling below 27*d.* per lb., and an unlimited amount when the price is higher.

The Organisation of the Petroleum Exporting countries, which met at Teheran recently, has decided to take joint action to secure increased oil revenues by stabilising oil prices and revising the present 50-50 profit-sharing arrangements with oil companies. A joint communique on the conference is expected to be announced shortly. The members of the Organisation are Iran, Iraq, Saudi Arabia, Kuwait, Qatar and Venezuela.

The first textile fair in Western Europe, exclusively devoted to products of man-made fibres, *textil* 62, will be held in Gothenburg on the premises of the Swedish Industries Fair from 10th to 18th March 1962. Manufacturers from the U.S., the U.K., France, Austria, West Germany, Holland and Scandinavian countries will be among the participants in the fair, which will feature a comprehensive survey of the new materials as well as fashion displays.

The Council of Ministers of the Six-nation European Economic Community has agreed to resume negotiations with Turkey on the question of Turkish association with the E.E.C. towards mid-December if, in the meantime, the Six could agree among themselves on outstanding differences over the issue. The differences are concerned with the essential problems of E.E.C. financial aid to Turkey and quotas for the import by E.E.C. member-countries of certain commodities.

Orderbooks in the Swedish engineering industry, excluding shipyards, at the end of August were 17 per cent larger than in the same month of 1960 and 4 per cent larger than in February, according to a survey by the Swedish Institute of Industrial Investigations. The stock of orders in the shipbuilding industry, however, was 10 per cent smaller than a year ago. The largest increase in orders was accounted for by the electrical engineering industry, with a rise of 20 per cent. The comparative figure for the mechanical engineering industry was 17 per cent and for the metal manufacturing industry 9 per cent.

The aggregate expenditure on plant and equipment in the U.S. next year will rise by 4 per cent to $35,840 million, as compared with the estimated level for 1961, according to a survey by the Department of Economics of the McGraw-Hill. The anticipated increase is attributed primarily to optimism regarding business outlook, the manufacturers forecasting a seven per cent expansion in the physical volume of sales. The actual extent of the rise is expected to be 9 per cent in non-ferrous metals and 8 per cent in industries, such as cars, glass and rubber. Last month, the U.S. was utilising 81 per cent of its total industrial capacity, as against 77 per cent during the recession of December 1960.

The U.S. Lockheed Aircraft International has been given a $779,000-contract by the Indonesian Garuda Airways to provide technical assistance in the operation and maintenance of its airline fleet. The contract is supported financially by the International Co-operation Administration as part of the U.S. Technical Assistance Programme. Under the terms of the three-year agreement, Lockheed International will assist the Garuda to plan and develop more efficient operations maintenance and overhaul facilities for its transport aircraft and train Garuda personnel in their use. The State-owned airline currently operates approximately 20 Dc-3s, 20 Convair 240 and 3 Lockheed Electras domestically and throughout South-East Asia.

The total West German labour force in October 1960 was 25.44 million, about 262,000 more than in October 1959. The number includes workers and employees as well as persons operating their own business. A remarkable feature is that the total labour force in farming and forestry continued to decline by 271,000 over the year ended October 1961. This increase, however, was more than offset by a rise of 533,000 in all other sections of the West German economy. The number of foreign workers in that country stood at 544,700 at the end of September, as against 325,900 a year ago. They included 223,961 Italians, 60,887 Spaniards and 52,845 Greeks.

PERSONAL

MR. T. Fife Clark, C.B.E., Director-General of the British Government's Central Office of Information, has arrived in New Delhi on a three-week visit to India.

Mr. S. L. N. Simha, Deputy Economic Adviser, Reserve Bank of India, has been appointed Alternate Executive Director of the International Monetary Fund. He will take charge of his new office with effect from 12th December 1961.

Mr. E. Jonai, Director of the Hungarian Chamber of Commerce, is now in India on a short visit.

Mr. J. C. Ryan, Chief Officer, Agricultural Credit Department, Reserve Bank of India, has retired from service, with effect from 18th November 1961.

Mr. James H. Goss, Vice-President and Group Executive of the General Electric Company of the U.S., arrived in India on Wednesday this week. During his stay in the country, he will acquaint himself with power development programmes in India during the third Plan and investigate the possibilities of his Company's participation in the projects. He will also visit Poona where the General Electric Company is erecting a factory for the manufacture of light electrical products.

ASIAN ECONOMIC CO-OPERATION

THE keynote of the speeches made by various delegates at the thirteenth session of the Colombo Plan Consultative Committee's ministerial meeting, which began at Kuala Lumpur on Monday this week, and the inaugural address of Malaya's Prime Minister, was that, while the progress achieved under the Plan since its inception more than ten years ago has been quite encouraging, the task that yet lies ahead is a colossal one. Evidently, the delegates have been prompted by the continuing considerably low living standards and serious limitations to bringing about rapid rise in living standards, such as persistent pressure on balance of payments, inefficient production techniques, inadequate numbers of trained people for administration, management and production, and shortage of food (in some of the countries). These disquieting features prevail in the majority of the Colombo Plan's 21 member-countries in which are inhabited 700 million people who together account for over one-fourth of the world's population, whereas the land area is just one-sixteenth of the world's total area. Focussing most forcefully the magnitude of the problem confronting these countries, the 1960-61 report of the Colombo Plan Council says:

"The rate of population growth has been much more rapid in South and South-East Asia than that envisaged even by the highest official estimates. The result brings a fresh sense of urgency to the task of putting resources to work to provide food, houses, schools, medical services and jobs for the much larger generation of tomorrow. Overpopulation is a distressing term, since it suggests surplus and unwanted people. The task is to ensure that they are not surplus because the economy is expanding fast enough to absorb them and that they are not unwanted because there is a role in the community for them to play. If the people of South and South-East Asia are to be liberated from poverty, a still greater investment would be needed in human resources. Higher production, however stimulated, will not last on a self-perpetuating basis unless there is also the will and the incentive to save and to invest savings profitably.... The best plans, well financed, will fail, if there is not the administrative capacity to carry them out and to follow them up. These are the human problems of economic development. Wisdom and perseverance as well as money are required to solve them."

This, in brief, is the challenge posed before the economically prosperous countries, be they in the free world or the Communist bloc. Mrs. Tarakeshwari Sinha, Union Deputy Minister for Finance and leader of the Indian delegation to the Kuala Lumpur session, certainly voiced the opinion of the whole region when she declared that the less developed nations, the capital needs of which are estimated at $7,000 million a year, would be set on the road of self-sustaining growth, if the developed countries were to earmark one per cent of their national incomes for investment in these countries. The developed countries should also pull down, as was pertinently stressed by Mr. Tengku Abdul Rehman, Prime Minister of Malaya, trade barriers and abolish internal policies which discourage consumption of products from primary producing countries. It is, indeed, reassuring to be told by Mr. Chester Bowles (U.S.) and Lord Lansdowne (U.K.) that their countries were fully conscious of the vital importance of increasing export markets for countries in the Colombo Plan region and of the stabilisation of commodity prices. But a stage has been reached when the actual implementation of these assurances has become imperative.

It was, again, the Malayan Prime Minister who impressively highlighted the urgency of making the Colombo Plan "even more effective than what it is now" and broadening the frontiers of economic co-operation. The four ways of doing so, as suggested by him, are expansion of world trade, achievement of stability in commodity prices, avoidance of any actions which can artificially depress export prospects of primary producing countries, and co-ordination of regional development plans. The responsibility for all this lies not merely on the developed countries but also on the Colombo Plan countries themselves. Mrs. Tarakeshwari Sinha certainly deserves to be complimented for having spelt out precisely the tasks before the Asian countries themselves and urged freedom from hackneyed economic generalisations.

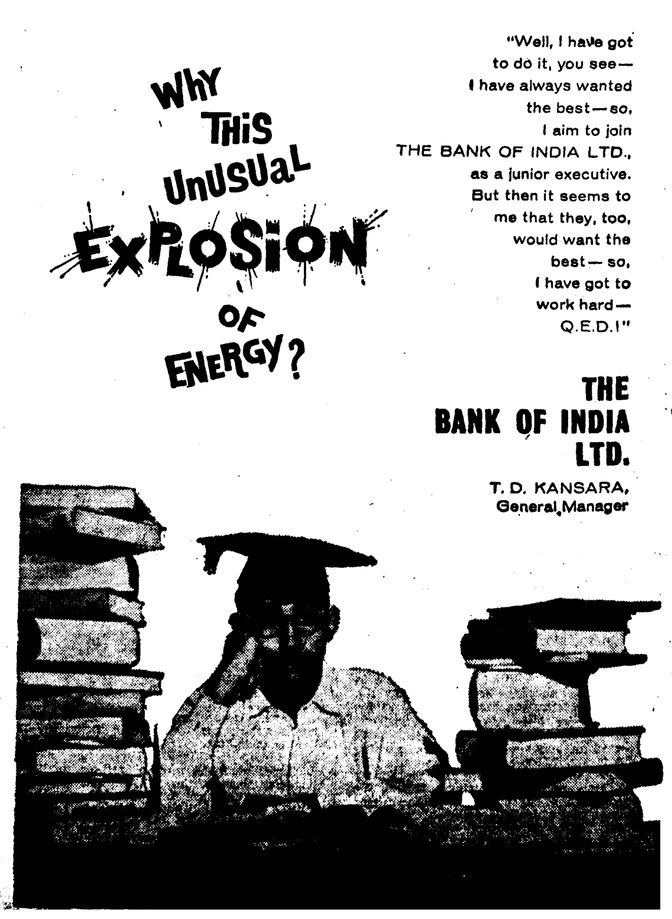
An important idea that is being actively canvassed at the Colombo Plan Conference pertains to regional economic co-operation among Asian countries. The current thinking on the subject, it would appear from Press reports, centre round four points. First, there are quite a few goods, as, for instance, textiles, which the countries of the region can import from within the region itself, instead of from other countries as is now the case. Secondly, two or more countries should jointly establish industries in any one of them with a view to ensuring the economic utilisation of the available resources, while, at the same time, meeting the industrial needs of all partners. Thirdly, regional co-operation in perspective planning will be necessary. Finally, there is great scope for mutual help in technical training. Is such regional economic co-operation feasible? If so, how can it be brought about? It will be interesting to see how these questions are answered by the expert body (appointed by the E.C.A.F.E.) consisting of Mr. K. B. Lall (India), Mr. Okita (Japanese planning expert) and Mr. Luang Thavil (a Thai economist). This Committee, as readers may recall, is expected to submit its report in March next.

INDIAN INDUSTRIES FAIR

A fascinating spectacle of Indian and foreign industries is furnished in a nutshell by the Industries Fair, inaugurated by Dr. S. Radhakrishnan, Vice-President, at Mathura Road Exhibition Grounds, New Delhi, on Tuesday this week. The Fair, organised by the Federation of Indian Chambers of Commerce and Industry, is, of course, much more than a mere showpiece, for it affords an opportunity for assessing the nature and extent of progress made in India since the first Fair held in 1955, that is, roughly during the period of the second Plan. All the industrially developed countries are taking part in the exhibition; this provides, in a way, a comparison bringing out the vast ground which India has yet to cover before it can attain a place of greater eminence among the leading industrialised countries. Although industrially young, India has created a fairly sound base for economic growth on which the super-structure of industrialisation could be raised. This has enhanced its capacity for absorbing investment—a point which the prospective foreign collaborators will not fail to notice. What is more, as pointed out by Mr. Madanmohan Ruia, Chairman of the Fair, it would create conditions for increased international trade between India and the rest of the world by demonstrating to foreign visitors India's export possibilities as well as its import requirements.

With the rapid growth of several industries during the second Plan period, the scope of the Fair has also widened considerably. The establishment of three mammoth steel plants and other basic industries and the vast strides made in the field of heavy and light engineerings, chemicals and pharmaceuticals are some of the impressive achievements of the second Plan, notwithstanding certain cases of sectoral imbalances and shortfalls in production targets. The development of industries has been aided by the expansion of communication facilities, and also by the increase in agricultural production. The third Plan envisages further expansion of industries. Industrialisation, as stressed by Dr. Radhakrishnan, is the greatest leveller, because it raises the standard of living of the masses and narrows down the frontiers which separate the different sections of the people from one another. Moreover, in order to improve the lot of rural masses, it is essential to set up fertiliser plants, machine-making units and hydro-electric projects.

The Fair, which covers a land surface of 180 acres, is claimed to be the largest of its kind ever held in this part of the world. The value of foreign goods exhibited in the Fair alone exceeds Rs. 25 crores. The U.S. pavilion is one of the major attractions, holding as it does a mirror to the industrial landscape of America. The other leading participants are Britain, Russia, West Germany, Japan and Egypt. If the foreign exhibits at least make Indian industrialists and authorities realise the imperative need for improving the competitive capacity of domestic goods both in terms of quality and price, the Fair should be considered a success.



IRRIGATION AND POWER

The total annual flow of water through the rivers of India is estimated at 1,356 million acre feet. But the utilisable portion of this flow is only 450 million acre feet, of which about a third in all is expected to be gainfully utilised in irrigation and power generation by the end of the third Plan. On the power side, the country's total hydro-power potential is estimated at 40 million kw., but, of this, no more than 7 million kw. will have been developed by the end of the third Plan. There will thus be enormous scope for irrigation and power development in the fourth and subsequent Plan periods. While this is the position for the country as a whole, there are some States like Madras and Rajasthan which have practically exhausted all available water resources for irrigation and power generation. It is particularly for such States that inter-State accord on water utilisation is supremely important. The kind of intelligent inter-State co-operation that has characterised the Rajasthan Canal Project in the North and the Aliyar Project in the extreme South will be increasingly required, for not all States are uniformly well placed in the matter of water resources.

Mr. U. Ananda Rau, President of the Central Board of Irrigation and Power, did well, therefore, to emphasise the need for greater inter-State co-operation in his address at the thirty-third annual meeting of the Board held at New Delhi on the 13th instant. His strong recommendation that the Board should set up a committee for initiating studies on the water problem of deficit States was particularly relevant in this context. This idea has had the backing of Mr. Lal Bahadur Shastri, Union Home Minister, who is to take up the matter of inter-State differences on the utilisation of river waters with the State Governments both in the Zonal Council and outside. But Mr. Shastri's admission that it has not always been possible for the States concerned to appreciate the viewpoints of the other in the recent meetings of the Zonal Councils is rather disheartening.

If it is so very difficult to bring about inter-State accord even in cases where only two or three States are involved, how much more difficult will it be to implement the proposal (mooted some time back by some non-officials) of linking large rivers and providing for navigable canals throughout India, as a cheap mode of transport between the different States, can be readily imagined. While Mr. Rau has supported this proposal, he has not said anything about its financial implications or about its feasibility. His idea that this proposal should also provide for irrigation adds, no doubt, further novelty to it, for there could then be "water grids" to provide for both irrigation and navigation, on the analogy of "super grids" to supply power from one State to another. But it would appear that, wonderful though such ideas are, they are not likely to fructify in the foreseeable future, in view of further inter-State differences that should be expected to crop up. There is so much to do in the matter of inter-State co-operation and co-ordination pertaining to irrigation, flood control and power generation that inland navigation through linking of rivers can afford to wait. In any case, it is doubtful if inland navigation of the kind will be cheaper in terms of outlays than development of roads and road transport.

SIX—U.K. TALKS

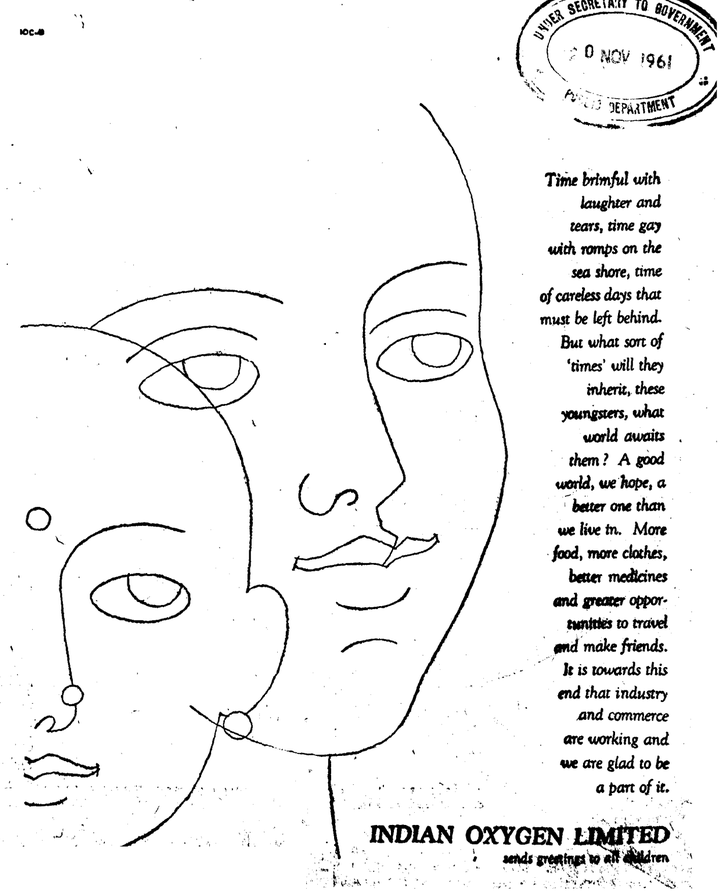
Much of the suspense and uncertainty over the possibility of British entry into the Common Market has been removed, with the formal commencement last week of talks at Ministerial level on the question between the Six and the U.K. at Brussels. The Ministerial meeting has been characterised as of historical significance by the participants. This appears to be no exaggeration. For, if the Six had pitted themselves against Britain's entry or even coldshouldered its application, they would have rendered European unity as elusive as ever. But from what has already transpired, it appears that the Six have displayed a commendable spirit of accommodation at the meeting. Significantly enough, the Chairman of the meeting, Prof. Muller-Armack, West German State Secretary for Economic Affairs, has stated categorically that the statement made by Mr. Edward Heath, leader of the British delegation, at Paris on 10th October is a basis on which successful negotiations should be possible. Mr. Heath, it may be recalled, had stated that the U.K. was prepared to accept the objectives of, and institutions under, the Rome Treaty and its political aims, while expressing, at the same time, the hope that protocols to protect Britain's special interests would not go against the spirit of the Treaty. Britain's special interests, as is well known, relate to its agriculture and its membership of the E.F.T.A. and the Commonwealth.

All the participants in the meeting have agreed to push forward with the work of finding out agreed formulæ on the various outstanding questions. They have formed the impression that the most crucial problem, which stands in the way of U.K.'s entry, is Commonwealth preferences. The other two problems, namely, British agriculture and E.F.T.A. are considered less intractable. The British farmers, by and large, have reconciled themselves to the possibility of participation in the Common Market. In respect of E.F.T.A. several of its members have decided to follow Britain's lead in joining the Common Market either as full-fledged members or as associate members. But the issue of Commonwealth preferences still hangs fire. For the time being, the Six and the U.K. have decided to follow the line of least resistance by avoiding a clash on the issue. But Professor Hallstein, President of the E.E.C. Commission, has made the point that any protocols to the Treaty, as suggested by Mr. Heath, should have a time limit. The British position, it is learnt, is that, if these protocols were to expire, the Commonwealth should be given some assurance about how its interests would be safeguarded in the long run. The Six are understood to have expressed the view that there are three possible types of solutions for the Commonwealth problem, namely, (1) association with the Common Market, which is a solution favoured for African countries in the Commonwealth, (2) tariff reductions and import quotas and (3) protocols of various kinds, which will not necessarily be in the form of quotas.

A clearer picture of the possible solutions for safeguarding Commonwealth interests will be available when the Ministerial negotiations are resumed at Brussels on 8th and 9th December. In the meantime, the Ministers have assigned to officials the task of working out details on the possible lines of solutions for the Commonwealth problem. These officials are expected to meet later in the month. The first group of tariffs affecting the Commonwealth, with which the officials will deal, covers raw materials, manufactures and tropical products. As the Six levy tariffs on only a few raw materials—aluminium, some non-ferrous metals, newsprint and pulp—it should not be difficult to reach an agreement in this field. The question of manufactures is not easy of solution, for the Six are not likely to grant an assurance for textiles from the so-called "low-cost" countries, as also chemical products from Canada. In the sphere of tropical products, the U.K. is said to be trying to see what terms can be obtained for the association of Ghana, Nigeria and other African producers with the Common Market. India will be concerned with any development of this sort to the extent that this association implies discriminatory treatment even among the different Commonwealth members.

BURMAH-SHELL IN 1960

Burmah-Shell's illustrative survey of its activities in 1960 is notable for the telling way in which the facts have been presented. It is, for instance, conveyed in an easily intelligible manner what the components of the price of motor spirit and of high speed diesel oil to the customer are. Of the price of Rs. 3.29 for 5 litres of motor spirit, the Company's basic price accounts for only 88 nP and dealer's commission (21 nP), sales tax (45 nP), Central Government duty (Rs. 1.70) and wharfage (5 nP) account for the balance. In the case of high speed diesel oil, the Company's basic price accounts for 73 nP, and dealer's commission (9 nP), sales tax



(10 nP), Central Government duty (Re. 1.60) and wharfage (3 nP) account for the balance of its price of Rs. 2.55 for 5 litres. Two other illustrative diagrams—one pertaining to the different petroleum products covered by the sale proceeds and the other pertaining to the disposal of the sale proceeds—bring out in a nutshell the dimensions of Burmah-Shell's operations and its contribution to the Central and State exchequers in 1960. The first diagram shows that aviation fuels accounted for Rs. 9.2 crores, motor spirit Rs. 38.7 crores, kerosene Rs. 38.4 crores, light and heavy diesel oils Rs. 49.7 crores, furnace oil Rs. 8.1 crores, bitumen Rs. 7.4 crores and other products Rs. 20.7 crores in the total sales of 3.7 million metric tons, representing a turnover of Rs. 172.1 crores. And the second diagram reveals the following:

	Rs. crores
C.I.F. cost of products	58.9
Wharfage and railway freight	12.1
Sales taxes and Central Government duties	71.3
Marketing expenses	23.0
Income-tax	4.7
Profit	2.1
	172.1

It may be calculated from the above figures that, while the *c.i.f.* cost of products represented 34 per cent, sales taxes, Central Government duties and income-tax accounted for 45 per cent of the Company's gross sale proceeds of Rs. 172.1 crores. The profit, after tax represented, on the other hand, a net return of only 3.97 per cent on the total capital employed (Rs. 53.3 crores). These figures tell their own story. It is a story which does not reflect badly on the oil business in this country. Incidentally, it may also be noted here that the total contribution of oil products marketed by all oil companies has risen from Rs. 42 crores in 1955-56 to Rs. 119 crores in 1960-61.

A noteworthy feature of Burmah-Shell's activities in 1960 is related to productivity. The Company's Efficiency Research Department, which was formed in 1958, was very active during 1960, dealing with such subjects as space utilisation in offices, methods in installations and depots, methods for storage and distribution of oil products, selling methods, invoicing and other accounting methods and standardisation of containers. Its work is stated to have increased the Company's operating efficiency and, thus, its capacity to compete in the market. At the same time, it is admitted that the Company has yet to cover a lot of ground in the field of productivity.

SEMINAR ON HUMAN RESOURCES

A unique seminar is being organised next week in the City by the National Productivity Council. The subject of the seminar will be utilisation of human resources in industry. A team of four T.C.M. experts will guide the proceedings of the seminar which will be attended by eighty participants drawn from various fields of activity such as industry, trade unions, professional/educational institutions connected with personnel management and industrial relations in the States of Maharashtra and Gujarat.

The objects of the seminar are: (1) to provide an opportunity for free exchange of ideas and experience between the representatives of top management and trade union leaders and the T.C.M. experts; (2) to provide a thorough understanding of the role of management in personal policy-making, communication, collective bargaining and adoption of modern personnel management technique; and (3) to help the participants, through close contact with fellow executives and trade union leaders and the members of the visiting team, to know how the problems pertaining to industrial relations, collective bargaining, labour-management participation, sharing the gains of productivity, personnel compensation, etc. are being tackled and solved in other organisations in the country as well as in other countries, especially the U.S. A special feature of the seminar will be that the representatives of management and labour will get the opportunity of meeting each other separately as well as jointly.

The seminar is one of a series being held at New Delhi, Calcutta, Madras and Bombay. Inaugurating the New Delhi seminar early this month, Mr. C. D. Deshmukh, a former Union Finance Minister, made a brief survey of the industrial scene in the country, with particular reference to productivity. He said that the atmosphere in regard to productivity was very much better in this country now than five or ten years ago and that it was improving every day. This, he gracefully conceded, was because of the good sense shown by employers and employees and the sympathetic guidance of the State. Two beneficial results at work in the industrial sphere, Mr. Deshmukh went on to say, were the growing sense of social justice or social responsibility and the revolution in management that has taken place during the last five years or so. The attitude of private management to their employees had considerably changed. There had emerged, in the industrial world, ideas of social justice and responsibility. On the part of the employers in India, according to Mr. Deshmukh, there is a "very lively sense of social responsibility" of which there was no evidence ten years ago. Along with this change in management attitude, there had also been an improvement in services in the private sector. Public services, on the other hand, had deteriorated. He attributed this improvement in private services to the presence of checks and balances in management provided by trained and competent managerial staff.

The tribute to private enterprise, coming as it does from a person of great eminence like Mr. Deshmukh, can be taken as an unbiased verdict on the standard of service in the public and private sectors. It is noteworthy that, among other things, better utilisation of human resources is one of the main factors responsible for the kind of efficiency which Mr. Deshmukh has praised in the private sector. Those who decry the private sector and want the public sector to be indiscriminately expanded to cover every field of activity should ponder this point.

a commonwealth of industry

The publications lying on this official's table at the Dunlop factory at Sahaganj are marked "PRIVATE & CONFIDENTIAL". Published by Dunlop, U.K., they represent a medium for the continuous exchange of technological ideas that goes on between Dunlop factories the world over.

Brought together on their pages are reports of important developments at various Dunlop factories. What has Kobe done to reduce tyre abrasion ? How is Hanau strengthening tyre casings ? Or an idea from Sahaganj to reduce cord friction in tyres.

Every item of information is given careful attention at Sahaganj, every suggestion is considered worth studying, for it is not known which will spark off a train of new ideas, start a new chain of developments that will result in a better Dunlop product.

There are also frequent training and refresher courses arranged by Dunlop companies in other parts of the world, where participating Sahaganj technicians come across fresh ideas which they can put into use in their own factory. It is this constant international exchange of ideas which makes the Dunlop organisation truly a "Commonwealth of Industry"

PEOPLE ARE TALKING ABOUT LIC

The LIC is winning favourable notice everywhere. And with reason. In 1960, the LIC achieved Rs 496 crores in "new business". This was an increase of 91% since Life Insurance was nationalized only a few years ago.

Consider also the value of the total policies in force. By 1960 it had spiralled to Rs 2285 crores or nearly double the pre-LIC level.

The rapid strides made by the LIC have created a new confidence in the insuring public—a growing trust in the LIC's business initiative and sense of social mission.

SOME IMPRESSIONS OF SECOND INDUSTRIES FAIR

STATES' SECOND YEAR OF THIRD PLAN

From Our Special Correspondent

NEW DELHI, 14th November

DELHI LETTER

NEW Delhi is now rigged for the Fair. Arrangements are still incomplete at the Exhibition Grounds for the Second Indian Industries Fair which is opening today, but there is no doubt that, when the pavilions and stalls are completed, it will present a spectacle far more impressive than the first Fair held six years ago. Then India was still on the verge of her second industrial revolution; development of heavy industry had not started. The public sector was largely a matter of ideology, except in the sphere of railway transport; now it is an accomplished fact, with achievements to show in steel, heavy machinery and electrical equipment and coal. More industries have come into the field during these years and the fact that more acre-space has been taken up (even apart from the foreign stalls) is evidence of a greater enthusiasm to display these wares before international visitors and participants. Small industries, hardly dreamt of in 1955 on the scale now developed in some areas in this country, will have a prominent place in the show.

Though in many respects this will appear to be only an enlarged version of the 1955 Fair, its main significance as concrete evidence of the progress under the second Plan by both the sectors in Indian industry cannot be lost sight of by anyone familiar with the features of the Indian economy. The Federation of Indian Chambers of Commerce and Industry has wisely refrained from making the Fair too frequent; perhaps, in view of its great value in educating Indians, it could have been held in other cities, preferably in areas where industry has not made much headway yet to promote wider national consciousness and enthusiasm for development. European Trade Fairs are more businesslike and are held for shorter periods, so that the exhibitors can do the maximum amount of business and secure orders for the products displayed. With the increasing emphasis on export promotion and the importance of selling manufactures to the advanced countries, the Fair authorities must find methods of drawing the attention of foreign visitors to exportable goods. The present layout of the stalls does not, however, suggest that this consideration has been borne in mind. Size is always impressive, especially in this country, but it is somewhat unrealistic to expect an interested visitor to cover 180 acres and about 35 miles of roads to know what India has to offer, besides the grand spectacle which every tourist is bound to appreciate.

As on the last occasion, the industrially advanced countries belonging to both blocs have vied with one another in trying to impress developing India with the excellence of their achievements. They may, perhaps, discover that India today is more sophisticated in matters relating to industry. Even so, their wares worth about Rs. 25 crores on display at the Fair may find a ready market, if foreign exchange creates no serious problem. British aircraft and electrical equipment will be on show; here, the object is to emphasise that Britain still remains India's best trading partner and customer. As always, the American display will be spectacular and will seek to impress the visitor with U.S. achievements in technology and science while also offering items of immediate interest to India. So with the Russian pavilion which demonstrates recent political trends by the imposing statue of Lenin as much as the importance given to power projects in the Soviet Union. Ultimately, however, neither camp can overlook the fact that their rival attractions will not make any difference to the Indian seeing the visible fruits of a mixed economy in which he is growing up.

State Plans for 1962-63

The Planning Commission will soon be engaged in long-drawn-out negotiations with the State Governments over their Plan outlay in the second year of the third Plan. The reason for some concern at this stage is the low proportion of their Plan outlay in the current year, in spite of their excited demands for increasing the size of the physical and financial Plan even beyond the level of Rs. 3,837 crores now accepted. It is said that the Commission is persuading them to step up their outlay in the second year to approximately 25 per cent of the total allotted to States. This is hardly realistic; since no efforts towards raising additional resources can be expected before or immediately after the General Elections, any such higher target which depends on their initiative will remain an aspiration rather than a practicable programme. Even excluding the question of resources, there is much uncertainty about the extent of preparedness on technical details of schemes which have been accepted as part of the Plan. Though the third Plan has been taking shape over the last three years, it was observed by the Planning Commission in the latest and final version that "many of the projects proposed for inclusion were not worked out fully, nor were they presented adequately. The information available even at this stage leaves much to be desired." The time available since the publication of the Plan could not have been sufficient for making up the deficiency; for example, though States have been meeting in regional conferences on minor irrigation and demanding many things of the Centre, few States have on hand clear-cut projects worked out sufficiently in advance for implementation without delay.

Health Programme

An allied problem which the Commission will have to face is how far its health programme should be revised in the light of the far-reaching recommendations of the Lakshmanaswami Mudaliar Committee. This body was appointed two years ago to inquire into developments in medical relief and public health since Independence and to formulate recommendations about future planning. In some respects the Bhore Committee's report, which now holds the field, has become less practicable and also a little out of date. Free medical treatment by the State which it set as an objective is not favoured by the Mudaliar Committee which considers that graded medical charges in hospitals to be preferable, except in the case of those who are absolutely poor. Experience abroad of socialised medicine may reinforce this view and there is much to be said against maintaining free services which cannot be kept at a high pitch of efficiency owing to lack of money or to overcrowding. Already the lack of distinctions between serious and ordinary cases has caused congestion in hospitals.

Even more urgent than overcrowding is the problem of training medical personnel in adequate numbers. The only claim for achievement for the outlay of Rs. 140 crores in the first Plan and Rs. 225 crores in the second is that training facilities for doctors has barely kept pace with the growth of population, the ratio between the two remaining constant at about 6,000 to 1 over the last decade, unlike other spheres of development where some advance has been possible. Stagnation in a field like medical services which are not altogether new to this country is particularly disappointing. This ratio also conceals the fact that while doctors increased by about 9,000 during the first Plan period, only 5,000 more were added during the second Plan; the third Plan proposes to augment their strength by 11,000 which is only a little above the first Plan rate.

The real difficulty has been the shortage of teachers, especially at the post-graduate level. The Mudaliar Committee wants this aspect to become the responsibility of the Centre functioning through a National Council of Medical Education. It does not view with favour the short-term expedient of abridged courses for medical assistants for work in rural areas. The right solution, according to the Committee, for the shortage of doctors in villages and the reluctance of most of them to serve there is to run mobile dispensaries, operated with district hospitals as the base, so that the services of specialists also could be made available. Treatment as outpatients in all but the essential cases offers the only solution to the problem of reducing overcrowding in hospitals.

The third Plan outlay on health will be Rs. 342 crores, of which Rs. 297 crores will be in the States. The Centre should take steps to remedy the shortage of teachers estimated at 2,000; it can also lay down the right patterns of medical care and extend the contributory health schemes and the Employees' State Insurance Schemes. But the States alone can take measures for environmental sanitation by providing drinking water in towns and villages and proper drainage. Their organising ability will decide whether preventive steps like vaccination and inoculation against infectious diseases and slum clearance will become effective or not.

THE FLOOD GATES OF INVESTMENT

BEST OF BOTH WORLDS

(From Our Own Correspondent)

LONDON, 10th November

LONDON LETTER

IT is well known that the aim of the Government is to reduce general expenditure and that the methods which they have used to do this, including high interest rates and the tightening of credit, are making life difficult for capital investors. But the Government does not claim that it wishes to cut down investment—this is one of the inconsistencies of policy which do give rise to criticism—and a White Paper which they have just issued reveals in the sector in which their influence is paramount, that is in the sector of public investment, that there is a marked rise. In the current year public investment will be about £100 million greater than last year, and in 1962-63 a further increase of nearly £100 million is forecast. Thus spending on public investment next year will be roughly 12 per cent higher than last year. Investment in the nationalised industries, e.g., transport, coal, electricity, will be up by £50 million and investment in the public services such as roads, hospitals, the Post Office and the aggregate of local authorities' programmes will be up by £150 million.

The Government admits that the increase next year would have been much greater but for their action this summer to relieve the pressure on internal demand. Various adjustments have been made in the different investment programmes which, the Government claims, will help to bring the rate of increase of total expenditure into a better relationship with prospective resources and which will strengthen the nation's efficiency and competitive power. They thus claim that their investment policy is having the best of both worlds; it is making some savings but it is also strengthening efficiency and competitive power.

More precisely, the influence which the Treasury has been able to bear on the various authorities responsible for public investment has succeeded in moderating its growth rather than stopping any increase. Some branches of the economy, for example, coal production and atomic energy production are, for one reason or another, suffering cuts in investment—in the case of atomic energy it is not that a deliberate cut is being made but that for technical reasons the money cannot be spent faster. But electricity, roads, hospitals and the Post Office in particular are all having more money spent on them. To give an idea of the importance of this sort of investment in national economy, the target fixed for next year is approaching £2,000 million; that is half as high again as that for six years ago.

It is interesting to compare the figures of projected increase in public investment (£100 million in the coming year over the current year) with the help which this country is giving to India for capital expenditure. If some of the latter figures appear small compared with the U.K. domestic investment, it must be remembered that the margin within which the U.K. can increase its overseas investment is very much smaller than that which it has available on the home front. Part of the reason for the U.K. balance of payments difficulties has been the established trend to invest overseas even when the resources were not there.

INTER-SECTORAL TERMS OF TRADE

HAS IT BEEN IN FAVOUR OF AGRICULTURE?

By C. Muthiah

THE main theme of Mr. Patnaik's article entitled "Price Policy in a Developing Economy" in a recent issue of *Commerce* (30th September 1961) is that, in recent years, the terms of trade have shifted in favour of agriculture and this has adversely affected the savings. Similar views have been held by many other persons also. This paper aims to raise the question whether there are any reasonable grounds to hold this thesis.

At the very beginning of the article, Mr. Patnaik states that "the influence of prices on agricultural production seems to be negligible." He tries to establish this from the fact that a significant rise in wholesale price index from 76 in 1955-56 to 96 in 1956-57 produced little effect on the 1957-58 crop. On closer scrutiny, one finds that the rise in prices is not *really* an increase in actual prices but only a *corrective* factor. What happened was, the agricultural prices, which had reached the lowest levels in 1955-56, started regaining during the next year. To view this as an increase in prices is to close our eyes before the reality. Again, it was pointed out in the article that the increase in prices between 1957-58 and 1958-59 had no effect on the crop in the subsequent year. Such a statement assumes (without any strong ground) that an increase in prices during a particular year should have an effect immediately on the next year's crop. There are many objections to such an assumption. Firstly, there is a difference in periods for which the prices and production data have been supplied. While the prices refer to the 12 months, April to March, production data are given for the agricultural year, July to June. It is common knowledge that *rabi* crops, for which production data are supplied in the agricultural year, are not generally marketed before April and, therefore, the influence of new arrivals at the markets would not be shown by the price figures quoted for the period, April-March. In this connection, it would be interesting to note that, if one were to compare the prices and production *during the same year*, a strong relationship emerges between prices and production. Lastly, it is a moot point whether prices influence production or production (supply) influences prices.

Mr. Patnaik tries to substantiate his thesis by quoting the following from Dr. Kushro:

"The sector which is the main saver in society is obliged to save less while the sector which habitually does not save very much gets more income and cannot save very much."

It may be pointed out that the contention of Dr. Kushro also suffers on similar grounds. The foremost among them is that the terms of trade have been measured by taking the wholesale prices of agricultural commodities. These prices, which are the averages of wholesale prices prevailing *throughout the whole year*, do not reflect truly the terms of trade of the agricultural sector, as most of the price quotations relating to the lean months, which incidently push up the annual average, refer to the transactions between different traders rather than between the producers and traders. The next objection is with regard to the way in which the terms of trade have been measured. If we measure the terms of trade by the price ratio of commodities exported from and imported into the agricultural sector, we find that the terms of trade have not actually gone in favour of agriculture. A recent publication,* brought out by the Ministry of Food and Agriculture, gives the ratio of the wholesale prices of some of the principal commodities purchased by the agriculturists to the prices of cereals. While the ratio for fertilisers and kerosene oil were less than 100, they were consistently more than 100 for other commodities. The relevant particulars are reproduced below:

Year	Iron and steel manufactures	Cement	Leather	Cotton manufactures
1953 ..	107	92	101	103
1954 ..	131	114	115	127
1955 ..	158	136	138	144
1956 ..	140	115	116	124
1957 ..	136	121	107	114
1958 ..	138	123	102	108
1959 ..	139	124	103	109
1960 ..	140	123	103	122

*Economic Survey of Indian Agriculture, 1959-60.

As regards the savings, Mr. Patnaik observes that the volume of saving in the economy declined during 1951-52, 1953-54 and 1957-58 and *these were the years when the food prices had gone up steeply.* But, if we refer to the figures given by him in Table I on the same page, we find that, during the years 1953-54 and 1957-58, the index number for prices of cereals and pulses never crossed the mark of 100. Further, he attributes the steep fall in the savings-income ratio during 1957-58 partly to the increase (actually there was no rise) in food prices during the same year. It may be pointed out here that, in 1957-58, the share of agriculture in the national income had gone down considerably, as a result of the sudden fall in the index of agricultural production from 124.0 in the previous year to 114.6 in 1957-58. It needs no emphasis that the quantum of income has a much more decisive effect on savings than the increase in food prices.

The object of this paper will be served, if it is able to raise some doubts about the common notion that, in recent years, the terms of trade have gone in favour of agriculture.

I.M.F.'S OPERATIONS

A $280 million repayment by the United Kingdom, and a $60 million drawing by Argentina represented the largest exchanges of currency at the International Monetary Fund during October. They are not reflected in the November issue of *International Financial Statistics*, published early this month, which contains information on the Fund's accounts as of 30th September 1961. The publication shows that total drawings were equivalent to $6,078 million, undrawn portions of stand-by arrangements $1,016 million and total amounts outstanding $2,209 million.

The Argentine drawing was effected $12 million each in Belgian francs, Deutsche mark, French francs, Italian lire and Netherlands guilders, and was made under a twelve-month stand-by arrangement for $100 million concluded in December 1960. Argentina's net drawings from the Fund were increased to $237 million. Its quota is $280 million.

The repayment by the United Kingdom follows a drawing in nine currencies amounting to $1,500 million, agreed in August of this year, and was made in U.S. dollars. The Fund's policies on drawings made in conjunction with stand-by arrangements (the U.K. has one for $500 million) makes the full amount of the drawing available through the term of the stand-by. The amount repaid by the U.K. in October could therefore be drawn again, if desired, at any time up to 7th August 1962.

The number of Fund members was increased to 74 on 27th October, when Syria regained independent membership status. During their annual meeting in Vienna (18th-22nd September), the Governors approved membership applications and quotas for Liberia, Sierra Leone, Togo and Senegal, thus preparing the way for their signatures of the Articles of Agreement.

EXTERNAL AND INTERNAL INFLUENCES ON CREDIT POLICY

BRITISH BANK RATE CUT AGAIN

By W. T. C. King

EDITOR OF *THE BANKER*, LONDON

BRITAIN'S experience during the past few months has demonstrated, once again, how sharp a conflict can develop in the short run between the external and the internal influences that determine the desirable course and pattern of monetary policy. In spite of the fact that the authorities evidently wish to maintain at full strength the various restraints put upon the domestic economy last July, the rediscount rate of the Bank of England has been reduced twice since the date of my last letter—by half per cent to 6 per cent on 2nd November, a few hours before this letter was written.

Both of these moves have to be attributed to external influences—influences stemming in part from the July measures themselves and in part from extraneous forces originating overseas. The British actions of end July had a dramatic and almost immediate psychological success in the international money markets: whatever room for doubt they may have left about the course of sterling in the longer run, they completely satisfied overseas observers about its likely behaviour in the shorter run. Hence the opening of new short positions in sterling was abruptly stopped, and speculators and traders, who had left sterling requirements uncovered, or who had run down working balances or otherwise altered their positions on the hypothesis that sterling might depreciate, began to reverse these operations. The pendulum of "leads and lags" in payments, which had been pushed over to a position highly adverse to sterling, began to swing back towards normal, and, at the same time, the raising of Britain's Bank rate to the crisis level of 7 per cent carried London money rates to a very wide margin above those ruling in other major international markets. Admittedly, for overseas institutions that are not in any case prepared to switch funds without guarding themselves against exchange risk, by repurchasing their own currency in the forward market, the cost of obtaining such cover offset a large proportion of the gross margin between overseas and London interest rates. But some net margin still remained.

Aside from this, as evidence of sterling's return to favour became more pronounced, so did other institutions switch funds to London without covering in the forward market. It seems probable, too, that transfers of both kinds were motivated in some instances by loss of confidence overseas—by the recrudescence of doubts about the U.S. dollar and by nervousness arising from the Berlin situation.

Short-term Money Not Welcome

For all these reasons, sterling came into strong demand in the exchange markets and, though the British exchange equalisation account allowed the spot rate to rise steadily to not far short of its upper limits in terms of the dollar—at one time, the middle quotation was $2.81-11/16—it repurchased large quantities of foreign exchange. As I noted in my last letter, in consequence of certain major special transactions—especially the drawings on the International Monetary Fund and the repayments of the 'Basle' indebtedness to European central banks—the exact extent of the 'true' accretion to the reserves could not be ascertained from the monthly published figures, but it was generally understood that, in August, the true gain was in the region of £50,000,000 and in September rather more than that. Upto that point, the greater part of the net purchases of sterling were thought to have reflected the still continuing reversal of the "leads and lags" and the rebuilding of working balances, but from about the middle of August onwards the market had begun to talk of the return of 'hot' money, and, a month or so later, there were indications that this movement might be becoming significant. The British authorities, however, had made it clear that it was no part of their policy to induce such an inflow. The September issue of the Bank of England's quarterly *Bulletin*, which I quoted last month, explained that, while the increase in the Bank rate to 7 per cent had been intended to help to check the outflow of funds from London, "it was not desired to attract any substantial amount of overseas funds" and it went on to say that any inflow of short-term money resembling that of 1960 would not be welcome."

Early in October, therefore, the authorities decided that it was more important to try to stem the inflow of funds by some reduction in interest rates than to avoid the risk that the reduction might be regarded as a "green light" to the domestic economy—and especially, perhaps, to those who might be disposed to resist the Government's 'pause' in increases in wages and salaries and dividend. It seems evident however that they had some doubts on this latter score, and therefore cut the Bank rate by a mere half per cent whereas precedent had suggested that from a level so high as 7 per cent the cut might be one per cent. Unfortunately, the move had given little if any relief in the exchange markets. International as well as domestic observers were quick to see that the arguments adduced for reducing the rate from 7 to 6½ per cent were almost equally applicable to a reduction from 6½ to 6 per cent. If there was no longer need for a 'crisis'—one designed to compel a rapid response and give a sense of urgency for the sake of 'first-aid' support for sterling—surely, argued the international speculators, the rate would not long be held at 6½ per cent. Thus the first reduction in the Bank rate, so far from retarding the buying pressure on sterling, actually accentuated it.

I.M.F. Loan Reduced

The next move of the British authorities was to demonstrate to the world that the incoming funds were indeed unwanted. If the inflow could not be immediately arrested, it could at least be prevented from causing avoidable strain on international liquidity. The authorities, therefore, decided to make an immediate repayment to the International Monetary Fund of £100,000,000 of the £535,000,000 that had been drawn from it only two months previously. This transaction was not, of course, a repayment of debt in any real sense: in effect, Britain has merely substituted borrowings from a large number of private holders of internationally mobile funds for a single large borrowing from an international institution. The exchange is not, moreover, without some degree of risk for sterling. The funds from the I.M.F. which could have been retained, together with the other £435,000,000, for at least three years, may be made available to Britain, again, in case of need, though they could not be reborrowed without formalities, whereas the mobile private funds that have taken their place may be withdrawn at very short notice. The risk has seemed worth running, however, in order to demonstrate Britain's readiness to co-operate so far as possible in the effort to keep down the strains on international liquid resources—to return funds to the central I.M.F. pool as soon as possible and, perhaps, thereby to ease the pressure that has built up against the U.S. dollar.

From this standpoint, the repayment to the I.M.F. was unquestionably desirable, yet it had psychological effects in the markets that served to aggravate the pressure. The convincing evidence thus afforded of the short-term strength of sterling fortified the expectations of a further fall in London interest rates and caused overseas funds to flow even faster into the United Kingdom Treasury Bills, short-term loans to British local authorities and other channels for employing money in and through the London market. As a result, the gold figures for end October showed an even bigger true inflow than that experienced in the previous two months. After providing for the £100,000,000 sale of exchange to the I.M.F. for further small repayments arising from the winding up of the European Payments Union, for the withdrawal of dollars to the equi-

(*Continued on page 957*)

If you can say so about all the purchases you make, you will be saying good-bye to the uncertainty of material, quality, durability of product etc.

Unfortunately, there are many articles produced in India which do not conform to any standard—although they should. For, standards ensure quality products, fair competition, consumer goodwill, increased profits. To manufacturers producing goods according to Indian standards, the Indian Standards Institution grants licences for applying on their goods the ISI mark which is a third-party guarantee of quality.

Write to ISI for a list of products which are manufactured to prescribed standards and carry the ISI mark. Make sure that the next time you buy anything, it is a quality product carrying the ISI mark.

DEVELOPING FOREIGN TRADE

SCOPE FOR BARTER AND OTHER TRADING METHODS

By Chinoobhai C. Javeri

IN a large measure, the prosperity of a country depends upon its foreign trade. Naturally, there is keen tussle among the countries of the world to promote exports, in order to earn valuable foreign exchange needed for the economic development of the country. There is also an urge in the underdeveloped and primary producing countries to industrialise and be self-sufficient in important and major items of their requirements, since they feel that they cannot depend entirely upon agriculture to provide employment for the growing population and improve the lot of the people. To achieve this objective, they have taken strict and stringent measures to regulate imports through restrictions and high tariffs wherever warranted. These and other varied reasons and conditions have led to several hurdles and inhibitions in the way of promoting exports.

The paramount facts is that foreign trade is a two-way traffic. There can be no export without import and *vice versa*. India has, therefore, got to boost its exports to pay for its imports which are mounting up. Fresh avenues have to be explored and tried out to meet the situation.

Triangular Trade

Triangular trade is the most intricate type of business. To put through a deal of this type, it is implied that the trading conditions are free of import and foreign exchange controls. In practice, such a deal is easy to negotiate by Communist countries where trade is carried on by a central Government agency without profit-motive or other usual commercial considerations. But in non-Communist countries, where the trade is in the hands of the private sector and a number of import, export and exchange control restrictions exist, as at present, and the time-lag in concluding a deal is heavy it is not worth the trouble and risk involved in such arrangements. Let us, nevertheless, examine how far such a trading method could be availed of by us to serve the purpose.

The occasion and expediency for such a deal arises and becomes compelling when the country 'A' wants to promote exports to the country 'B' which already buys from the country 'A' more than the country 'A' buys from it; and it is not possible for the country 'A' to buy the country 'B's products which are either competitive in nature or unwanted by the country 'A'. So what happens is that a merchant in the country 'A' (for instance, India) sells its engineering goods to the country 'B'. Then, 'A' buys cocoa from the country 'B' against engineering goods and sells that cocoa to the country 'C'. Thereafter, 'A' buys chemicals from the country 'C' against cocoa and sells the chemicals in its domestic markets where prices of chemicals are high and thereby makes a substantial profit. Since prices of engineering goods of 'A' are higher than international parity, the merchant in country 'A' sells them to the country 'B' at a loss. Likewise, 'A' incurs loss in its cocoa sale because the merchant in the country 'C', being a regular buyer of cocoa from the country 'B', would prefer to buy it from the usual source, unless he gets it at a lower than the market price. Thus, the loss on the two transactions by 'A' (India in this case) has got to be made up from the profit on its imports of chemicals which should leave it residual profits sufficient to induce it and make it worthwhile to undertake the risk and labour involved.

By and large, the type of negotiations and operations involved in such a deal is intricate and necessitates the consent and co-operation of the Governments concerned to retain or utilise or adjust the foreign exchange as may be warranted. Special licence or permit from the respective Governments are to be obtained either for export or import of the commodity. And no country would agree to its product being sold at a lower price in its regular markets. By agreeing to it, its regular sales to that particular market would be affected without any advantage.

Viewed in this context, the country 'B' will no doubt agree to allow export of a non-traditional item against import of engineering goods from the country 'A', which it needs, but it will entail prior market research and a vigorous drive to sell it in new markets by a merchant from the country 'A,' which might take a long time delaying his import from the country 'C'. And, in such deals, time is the essence and the product has got to be easily marketable.

Triangular type of trade does serve the purpose when a traditional trade item of one country is saleable in the third country and the former country cannot do it due to certain reasons.

Over and above these implications, the time-lag and other hardships would stand in the way of such deals. Triangular trade in traditional items, in the normal course, reaps no special advantage. Therefore, great store cannot be set by it, except in cases where the items exported are non-traditional.

Barter Deals

Barter deals represent another method of promoting exports under unfavourable conditions. It is simpler than the triangular trade. Its underlying object is to link exports to imports, so that the country can obtain its requirements of essential items. A proper evaluation of barter transactions in the light of the experience gained, so far, would be useful guide in formulating the future policy. Theoretically, subject to Government approval, private parties are permitted to transact barter deals, but, in actual practice, they are largely concluded by the State Trading Corporation. An impartial examination of the barter deals concluded by the State Trading Corporation would be worthwhile. A report prepared by the *Economist* Intelligence unit, London, at the instance of the Council for Economic Education, Bombay, states that India is a loser on barter deals. It was pointed out that, in such deals, either the price of the Indian goods had to be reduced or the price of the imported goods enhanced above the normal level to make it worthwhile for the foreign party to enter into transaction when the item offered is non-traditional.

Therefore, certain cardinal factors have to be borne in mind in allowing barter deals. It has to be predetermined whether the price India pays for the imported item is normal or abnormal as compared with the international price of a similar commodity. Since the commodity concerned is to be imported only from a particular commodity the price offered may not be competitive. Equally important is the evaluation whether barter deals have actually increased the volume of the country's export trade, especially when the importing countries sell our goods to a third country thereby affecting adversely our regular direct trade to it, on the one hand, and becoming our competitors and foreign exchange earners, on the other.

It is, therefore, essential to stipulate in a barter deal that the importing country should consume the product locally or sell it in a third country after processing it. Besides, in barter deals, the items exported should be non-traditional; otherwise, there is no advantage because the traditional items could be exported in the regular course.

In barter deals, the main consideration should be whether there is a net advantage to the country. The criterion is not the selling price in the country, because, due to import restrictions and high internal prices, anything imported could be sold. The point at issue is whether the country is compensated in its exports to the extent of the high price paid for a particular item of import.

Bilateral Trade Agreements

Since independence, India has entered into bilateral trade agreements with a number of countries. The scope of these agreements is limited in the sense that they are entered into between two countries. Their underlying object is not to strike a balance in the trade between the two countries but to provide facilities for developing trade by regulating it strictly in accordance with the terms of export, import and foreign exchange control regulations prevailing in their respective countries. In such agreements, no special commitments or concessions, involving departure from the general multilateral foreign trade policy, are sought. Viewed against this background, bilateral trade agreements do not attempt to promote export of any particular commodity. But they do foster and strengthen trade relations and encourage direct sales which otherwise stagnate, hang fire and drop off. With certain countries, they enable us to exchange concessions for concessions. Special quota for import of the so-called restricted items are granted by the importing country in return for our giving them similar concession. This facility definitely promotes exports, but its scope is limited since there is no element of enforcement in it.

However, bilateral agreements, under the existing conditions, are necessary for developing trade with countries which need our products but are unable to import them since they have an adverse trade balance with India and no foreign exchange to pay for continuing even the present volume of trade let alone additional imports. These are largely the underdeveloped countries, particularly the newly independent countries of Africa. These countries are, therefore, buying their requirements from those who buy their products. A comprehensive survey of the products of these countries may, therefore, be carried out to find out the possibilities of our importing them. On these findings, a suitable basis may be found for entering into bilateral trade agreements with different countries wherever necessary, adjusting our policies accordingly.

Rupee Payment Agreements

In order to overcome the difficulties and hardships experienced in promoting trade between India and Communist and other countries which have different banking systems, the Government of India has concluded agreements with those countries under which payments for imports and exports are made and received in Indian rupees. The agreements stipulate the maintenance of the rupee accounts by the State banks of such countries with the Reserve Bank of India or any Indian bank authorised to deal in foreign exchange. India has such trade agreements with Egypt, the U.S.S.R., Poland, Yugoslavia, etc. The payment of all trade transactions for exports and imports between India and these countries are made in the Indian rupee.

The main advantage of imports from the rupee payment countries is that the price of the same being paid in rupees, the question of expenditure of foreign exchange does not arise. The rupee payment agreements no doubt help in promoting trade with those countries and in procuring our requirements of essential commodities which otherwise might be limited or restricted. But such arrangements need specific stipulations. It is alleged that the prices these countries quoted to India had not been reasonable and competitive. Often, the goods supplied were not of the type and specification the country needed. At times, unwanted and inferior quality of goods had been dumped on this country. Difficulties also arose in procuring spare parts of the imported equipment, since they were not of the regular and standard type.

Experience has shown that imports under rupee payment agreements from Communist countries, canalised mostly through the State Trading Corporation, have often resulted in irregularity in arrivals and high prices. In the circumstances, it is desirable to plan out properly those imports beforehand every six months, as is being done for other countries—leaving the normal established trade channels to handle the trading and distribution work, by issuing import licences. This will benefit the country to a considerable extent.

Prices may be controlled by keeping a check on and holding the recognised associations of the respective commodities responsible for regulating it. They may introduce a scheme of registration under the auspices of the licensing authority. The trade may also be warned against any abuse of the scheme which will result in its elimination. Where a commodity constitutes a raw material required by an actual user, the licence may stipulate that the article is to be sold only to an actual user at a fixed price. A practical view may, however, be taken of minor lapses in the working of the scheme.

The goods of the third country, it is further alleged, had also been procured and sold to India by charging high prices. Such transactions fantamount to India buying foreign exchange at a high premium. It might be argued that, rather than allow irregular imports and pay high prices in rupees, it would be profitable to sell more of Indian traditional products in a third country at slightly lower than market prices and thereby earn additional foreign exchange. But it can be done only by charging lower prices on the entire quantity regularly exported to the third country which in the aggregate would bring a loss to the country. Instead, it might be advantageous for India to buy goods of a third country by paying reasonable high prices in rupees, which could be determined in each case after proper consideration, granting permission to do it only in the last resort, when deemed absolutely necessary, and in respect of

SERICULTURE INDUSTRY IN SECOND PLAN

PROGRESS ACHIEVED NOT ENCOURAGING

THE progress made in the implementation of the development programme for the sericulture industry has not been quite encouraging. This is evident from the inordinately slow pace at which the production of raw silk has expanded in the past five years. The actual output during 1960—this year corresponds almost to the last year of the second Plan—was no more than 3,298,724 lbs., representing a rise of a bare 141,584 lbs. as compared with 1955 (last year of the first Plan), as against the net addition of about 843,000 lbs. anticipated in the second Plan. In other words, the shortfall in the fulfilment of the Plan target of four million lbs. was to the extent of as much as 701,276 lbs. Indeed, the output during 1960 was less than what was produced in the previous year, namely, 3,366,840 lbs. The net increase of 141,584 lbs. in raw silk production over the second Plan period compares unfavourably with the rise of 623,507 lbs. achieved during the first Plan period. The comparison is all the more glaring because no specific financial provision had been made in the first Plan, whereas a well-chalked-out programme with a relatively large outlay (Rs. 5.00 crores revised subsequently to Rs. 4.08 crores) had been drawn up in the second Plan with a view to making the country self-sufficient in raw silk supply by the end of 1960-61.

That all was not well with the implementation of the scheme for the development of sericulture industry will be evident from the fact that, as against the total second Plan budget provision of outlay amounting to Rs. 503.80 lakhs. the sum actually spent was just Rs. 320.00 lakhs. The gap thus is accounted for by both Central and State schemes. It is surprising that, while the grants and loans made available by the Centre to the States have been on a liberal scale, the expenditure actually incurred by the State Governments is low, as will be seen from the figures given below.

(In lakhs of rupees)

Year	Amount sanctioned/allocated		Expenditure incurred by State Governments	
	Grant	Loan	Grant	Loan
1956-57	33.36	27.27	11.09	10.77
1957-58	32.77	25.47	24.85	21.18
1958-59	34.85	2.80	27.68	3.80
1959-60	47.83	11.36	34.69	11.25
1960-61	40.00	31.36	24.41	28.98
Total ..	188.86	85.26	122.72	75.98

The year 1960, as already noted, witnessed a setback in raw silk output, the quantity actually produce being 3,298,724 lbs., as against 3,366,840 lbs. in 1959. The decline was accounted for entirely by non-mulberry silk, the production of which fell from 832,148 lbs. in 1959 to 759,744 lbs. in 1960, while mulberry silk output increased slightly from 2,534,692 lbs. to 2,538,980 lbs. In the case of silk waste, the output was higher at 1,676,030 lbs., as against 1,640,483 lbs., though it was much less than the production of 1,868,019 lbs. in 1955. There was no production of spun silk yarn in the country during 1960, due to the closure of the Mysore Spun Silk Mills, Channapatna. The Assam Spun Silk Mills, a Central Government aided project, is likely to start production by the end of this year.

Trend of Output

The following table gives breakdown figures relating to the production of the different kinds of silk and silk waste during the year 1960, as compared with 1959, 1955 and 1951.

(In lbs.)

	1960	1959	1955	1951
Mulberry silk:				
Filature	345,990	280,818	319,224	249,714
Charka	1,806,975	1,996,450	2,107,582	1,708,108
Cottage basin ..	311,965	197,376	..	..
Duplex	74,350	70,048	..	..
Total ..	2,538,980	2,534,692	2,427,056	1,958,822
Non-mulberry silk:				
Tussar	264,230	260,559	307,546	254,030
Eri	246,272	295,189	266,068	338,281
Muga	118,551	186,400	157,070	100,500
Total ..	759,744	832,148	730,084	580,811
Grand Total ..	3,298,724	3,366,840	3,157,140	2,533,633
Silk waste:				
Mulberry ..	1,676,030	1,167,156	1,127,926	1,084,964
Non-mulberry ..	297,813	473,327	730,094	560,511
Total ..	1,973,843	1,640,483	1,868,019	1,605,075

Even the negligible rise in mulberry silk output during the second Plan period was not commensurate with the expansion in acreage under mulberry cultivation, as is evident from the table below.

	1955	1959	Percentage rise
Area under mulberry (hectares) ..	68,658	76,492	11.4
Raw silk production (kg.)	1,092,175	1,140,011	4.4
Disease-free mulberry silk-worm seed (kg.)	12,036	16,219	34.7
Production (kg.) of:			
Tassar	138,306	162,252	17.3
Eri	119,306	128,335	7.5
Muga	70,952	83,880	18.2

It is thus seen that the productivity of mulberry silk industry has declined. The decline is attributed to a number of factors, especially (*a*) diversion of marginal lands and lands without adequate irrigation and other facilities, (*b*) lack of adequate attention devoted to the rearing of mulbery silkworms under climatically favourable conditions, and (*c*) poor progress made in the sphere of silkworm seed output, the actual production in 1959 being only 570,909 ounces, as against the estimated total requirements of more than a million ounces.

Prices Still High

It is true that there has been a fall in raw silk prices, but the extent of the fall is negligible. The latest available quotation for filature raw silk (Kollegal 20/32 denniers) in the Bangalore silk market is Rs. 85.99 per kg., which, though it is lower than the rate of Rs. 90.20 prevailing a year before, is well above the f.o.b. value of Rs. 55.00 (landed cost with duty is Rs. 85.78) for the Japanese 22/22 A grade silk. Besides the high prices, the quality of indigenous silk does not seem to have registered any marked improvement. Viewed thus, the Central Silk Board has certainly struck a note of realism when it declares, in the report covering its activities during the financial year 1960-61, that the main problems before the sericulture industry continue to be its high cost of production and poor quality. The Board has, however, expressed its confidence that, with the active co-operation of the State Governments, coupled with the execution of schemes directly by the Board, "the progress in the industry will no doubt be accelerated." To quote it:

"It may be noted that, as a result of the efforts made for improvement of silk reeling industry, a new line of production has been introduced. Since 1957, the production of cottage basin silk, which is far superior in quality to the charka silk, has constituted the bulk of Indian silk production. The production of cottage basin silk has been registering a gradual increase from 55,659 in 1957 to 62,536 in 1958 and 89,716 in 1959. It is hoped that, with the implementation of schemes calculated to substitute charkas with cottage basins, particularly in Mysore and West Bengal, it would be possible for the industry to show quite a tangible progress with regard to improvement of quality of raw silk by the end of the third Plan. The Board is alive to the current problems of the industry, and it will be its endeavour in the years to come to address itself to the task of finding ways and means by which the cost at each level could be reduced and the quality improved. It is in this direction that the Board has stressed time and again on the State Governments to improve and place their silkworm seed organisations on a sound footing."

If the sericulture industry is to achieve a quantitative and qualitative expansion of output, it is imperative that the research activity is intensified. The Silk Board has done well to constitute a Central Research Co-ordination Committee to advise it with regard to the formulation of a programme of systematic research with a view to evolving superior races of silkworms and strains of mulberry for replacing the existing varieties upon which the ultimate solution of high cost of production rests. It has also done well to set up a committee (Chairman: Dr. H. L. Dey, a former Chairman of the Tariff Commission) to investigate the problems of filature silk industry. The findings of the Committee will doubtless help in the efforts to organise the industry on sound lines during the third Plan period.

It may be noted here that the draft third Plan, prepared by the States on the lines re-

1960 A GOOD YEAR FOR EUROPEAN COTTON INDUSTRY

BRITAIN CANNOT REMAIN AN OPEN MARKET, ASSERTS MR. MOORE

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 7th November

OUTPUT of yarn and cloth achieved by European cotton spinners and weavers was higher in 1960 than for several years back and less machinery working longer average hours produced more goods.

A report by the International Cotton Federation issued in Manchester indicates that 1960 was a good year for the trade. Total yarn output in European countries increased by 121,573 tons or 7.1 per cent over the previous year but most of the gain came in the first six months.

Machinery hours worked in spinning were nearly 10 per cent below the 1957 level but output was almost identical. The cotton weaving mills of Western Europe turned out 5.7 per cent more cloth last year than in 1959. Rises above the general average were recorded in Belgium, Denmark, Italy, Norway and Portugal where the increase over 1959 was in each case at least 10 per cent.

If Lancashire textile mills are to meet the competition of Continental textile industries in the Common Market, mill machinery may well have to be worked for 120 hours a week, not 42½ hours a week, Mr. D. B. Moore, General Secretary of the Textile Institute, said in Manchester.

One of the most formidable factors about competition, he told the Manchester Chamber of Commerce, would be a competition against mills equipped with the most up-to-date machinery.

Mr. Moore said he could not understand the fears sometimes expressed in the North of England that three-shift working would dislocate social life.

"I do not believe it has any such effect elsewhere and I see no reason why it should have it here. Unless we can use our machines to the limit of their capacity I do not see how we can hope to compete in the modern world."

Mr. Moore said although many people felt that, while Commonwealth relationships were important and must continue in their political and economic forms, they could well do with a breath of fresh air.

We could not remain an open market for a Commonwealth whose individual members did not hesitate to use quotas against us.

Ethical Duty!

Nor could we accept that it was our ethical duty to take low-cost products from underdeveloped countries.

"This is a most dangerous doctrine which, over the course of years, might well spread in many manufactured goods. It certainly cannot be held to apply to the co-operative of Hong Kong with their up-to-date machinery."

Mr. F. J. Erroll, President of the Board of Trade, is to visit Manchester for talks with leaders of the Lancashire cotton industry on current problems. He will have separate discussions on 8th December with millowners and union officials representing 180,000 spinning and weaving workers.

Mr. Erroll's visit—the first since his appointment as President—comes at a time when the industry is worried about the future. Short-time working is spreading because of the falling off in orders and modernisation of the mills is in the balance because of the flood of cheap imported textiles from abroad.

A union leader said that Mr. Erroll would be left in no doubt that the industry faced a crisis unless Government action was taken to control the level of imports.

Atomic Energy and Textile Industry

Ways in which the Atomic Energy Authority can work hand in hand with the textile industry were outlined in Manchester by Sir Roger Makins, Chairman of the United Kingdom Atomic Energy Authority.

There is common ground between both industries, the one very old and the other very new, he told the Textile Institute..

"We are equally concerned with the problem of keeping up to date with novel, rapidly expanding technologies and of deciding how best our resources can be deployed to meet the challenge of a changing environment."

The aim of the two industries should be to gain new knowledge, to see that it was communicated rapidly to those who needed it and to apply fresh scientific knowledge to the industrial scene. This would lead to greater efficiency and economy.

Sir Roger said there was one field in which the Atomic Energy Authority and the textile industry already had a mutual interest—the use of radioisotopes.

Various uses had already been found for radioisotopes. They were being used to eliminate static on looms, to measure the density of weave and even to ensure uniformity of thickness in felt hats.

"We believe that there is great scope for the increased use of radioisotopes in industrial processes, and I am glad to know that they have already found applications in the textile industry."

A Place in the Economy

It is as well that now and again defenders speak up on behalf of Britain's textile industry, when it is recalled how much adverse publicity goes out about the trade. Some salutary information was contained in a talk given recently to the Huddersfield Chamber of Commerce by Mr. D. B. Moore, General Secretary of the Textile Institute.

Although his immediate task was to deal with the implications of Britain's probable entry into the European Common Market, he prefaced his remarks by clearing up some misconceptions about the size of the textile industry in the United Kingdom, which in this case, of course, included the use of all fibres, including wool.

Out of total national exports of £3,330 million in 1959, the textile industry, he pointed out, contributed well over £400 million or nearly one-eighth of the total export earnings of the country. This did not include textile yarns used for industrial purposes or in furnishing fabrics, and others not listed separately in the official returns.

Workers by the Million

The number of those employed in textiles, admittedly a declining figure, is still very large although the individual sections, such as cotton spinning and weaving, are now only about half their pre-war size. Mr. Moore included in his total those working directly in textile manufacture and in the clothing industry, as well as in mechanical engineering making textile machinery but omitted those in the chemical and allied trades servicing textiles. The total so employed, he said, in June this year was 1,340,000 workers, three times as many as in the manufacture of vehicles.

Among other statistics, which he produced to augment his case that the textile industry was worthy of very strong consideration within the national economy, was the fact that cotton and man-made fibre cloth produced in June this year exceeded 150,000,000 yards while, on the woollen side, nearly 33,000,000 yards of wool and worsted fabrics were turned out by the mills. In the three months ended January 1961, no less than 8,410,000 pairs of men's socks were produced by the hosiery industry and 25,000,000 pairs of women's full-length stockings. Deliveries of textile machinery in 1960 amounted in value to £80,000,000.—*All Rights Reserved.*

JAPANESE STEEL PRODUCTS EXHIBITED

THE INDIAN INDUSTRIES FAIR, 1961

Huge tonnage of iron ores from India flow into steel mills of Japan every day to be made into quality steel and steel products. Japanese steel producers, now achieving the 4th largest output in the world, thus contribute to solidify the trade relations between India and Japan. Japan Iron & Steel Exporters' Association invites you to inspect quality steel and steel products from Japan at The Indian Industries Fair.

DECONTROL OF SUGAR AND AFTER

PRICES FALL SLIGHTLY—'KHANDSARI' AND 'GUR' OUTPUT ENCOURAGED

SINCE the abolition of controls on prices, distribution and inter-State movement of sugar with effect from 27th September 1961, sugar prices have moved downward, though the extent of the decline has not been as marked as some sugar circles had feared before. Thus, as against the previously controlled ex-godown rate of Rs. 113.00 per quintal bag of Belapur D29 sugar, the currently ruling price in Bombay market stands at Rs. 110.25. Similarly, Maharashtra B29 grade is quoted lower at Rs. 114.50 (controlled price: Rs. 116.06), Kalam A29 grade at Rs. 117.00 (Rs. 117.75), Neera C29 at Rs. 111.25 (Rs. 114.05) and Laxmiwadi E29 at Rs. 107.00 (Rs. 112.55). The prices of sugar in other centres have also shown a tendency to recede. The latest available rate for D29 grade at Meerut is Rs. 104.24 per bag of 100 kg. and that for dry crystal variety at Muzaffarnagar is Rs. 107.50, as against the controlled prices of Rs. 105.37 and Rs. 108.25, respectively. In several centres in Uttar Pradesh and Bihar, prices have declined by an average of one rupee per maund.

The decline in the prices of sugar has followed availability of plentiful supplies. Anyone can get any quantity of sugar even in the remotest corner of the country. Indeed, it is said that consumer resistance is emerging gradually. And traders are reluctant to enter into long-term large commitments, as the feeling is that, with further pressure of sales, prices may fall again.

The downward trend of sugar prices is expected to gather further momentum in the coming weeks. The expectation seems to be quite justified. Most of the sugar factories in the Deccan region have already commenced crushing operations Several mills in North India, too, have begun crushing. The sugar mills, however, have made representations to the Government, urging it to delay the next release of sugar by at least a fortnight. As a long-term solution, the mills have pleaded for the adoption of measures to stimulate consumption. The Indian Sugar Mills' Association has suggested reduction in excise duty, creation of a buffer-stock of about 500,000 tons by the Government and maximisation of exports.

Suggestion Very Sensible

The first suggestion is a very sensible one and deserves to be implemented immediately. In fact, Mr. S. K. Patil, Union Food and Agriculture Minister, had asked the Finance Minister quite some time ago to examine the question of lowering excise duty on sugar. One wonders why the Finance Minister is still not inclined to accept the suggestion. It will be recalled that the excise duty on sugar was raised from Rs. 4.12 to Rs. 8.26 per maund in May 1957 with the specific object of restricting domestic consumption. Why, then, should the Government continue to stick to the enhanced levy when what is wanted is a boost to sugar consumption by way of a reduction in price?

So far as the cane price is concerned, a reduction will not be possible in the current season, so that the mills will have to endure lower profits or even losses. Although this is not a pleasant prospect, there seems to be, as we mentioned in the course of an editorial a few weeks ago (*vide* page 629 of *Commerce* dated 30th September 1961), no way out of it.

Encouraged by the high minimum prices fixed for cane, the agriculturists, especially in the State of Uttar Pradesh, have sown a larger area to the cane crop. Indications are that the aggregate yield of cane in the season (1961-62) will be much more than what was produced (82 million tons) during 1960-61. In order to ensure that the cane growers do not suffer as a result of glut in output, the U.P. Government proposes to relax restrictions on the production of *khandsari* sugar and to grant certain concessions for the current season. The concessions are (1) a reduction of licence fee to a third of the current rate of Rs. 300 for power-crusher, Rs. 200 for bel crusher, Rs. 100 for power-driven centrifugal crusher and Rs. 10 for hand-driven centrifugal crusher; (2) cut in the fine for delayed renewal of licences; (3) abolition of the purchase tax of 6 nP per maund; and (4) remission of commission payable by licensed units to the cane development councils. The Government has also sanctioned a loan of Rs. 10 lakhs (at 5 per cent interest and repayable in five years) to be advanced to the Cane Co operative Federation, the amount being utilised by cane co-operatives for the purchase of crushers with a view to enabling them to convert the surplus cane into *khandsari* sugar.

As a result of the aforesaid concessions, the production of *khandsari* is bound to go up quite markedly. Such a rise in output will lead to a fall in prices of this product. Further, in view of abundant cane supplies, the *gur* output will also increase and its prices will fall. The drop in the prices of these substitutes for white sugar is bound to result in a similar decline in white sugar prices. The mills will, therefore, be put to severe hardship. The hardship can be reduced considerably if only the Government lowers the excise duty on sugar.

Cutback in Sugar Output

Meanwhile, the Central Government have framed rules under the recent Ordinance to regulate production of sugar, in view of the current heavy surplus. In accordance with these rules which have come into force with effect from the 1st of this month, the production in mills already established but which have no programme of expansion in 1961-62 is limited to 90 per cent of the output attained in the seasons 1959-60 and 1960-61, whichever is higher. In the case, however, of a factory which during each of these two years produced less than 11,000 metric tons of sugar, the rules lay down that the quota shall be not less than the highest level of output from that unit in either 1959-60 or 1960-61. In the case of a factory with an output that exceeded 11,000 metric tons in either of the past two seasons, the quota shall not be less than this quantity. No quota is to be fixed in respect of a factory which (*a*) produced less than even two-thirds of 11,000 tons in 1959-60 to 1960-61, (*b*) goes into production in 1961-62 or which had only a trial run in the previous year, and (*c*) did not work during 1960-61 for any reason.

If a factory effects "substantial expansion" in the sugar year, its target of production shall be fixed on the basis of a formula specified in the rules. According to this formula, the target will be 90 per cent of the factory's production in 1959-60 or 1960-61, whichever is higher, plus 90 per cent of the calculated production resulting from the extra crushing capacity in 1961-62. Another formula governs the case of new factories, that is those which were begun only in 1958-59 or later and were not able to attain normal crushing by 1960-61. This formula takes into account the licensed working capacity of the new factory, the average duration of the crushing season in 1960-61 of the State in which the factory is situated and the recovery of sugar from the factory in 1960-61.

Despite the enforcement of a cut in production, white sugar output in the current season will be maintained at a high level. One estimate places the output at over 2.60 million tons, which, together with the previous season's carryover stocks of 1.22 million tons, brings the total available supply to 3.82 million tons. It is clear, therefore, that, unless domestic consumption is stimulated and exports are quite sizable, the sugar surplus in the current season will continue to be more burdensome than in the past season.

Rebuilding this ancient land of ours

RAZA BULAND SUGAR CO. LTD.
Rampur (U.P.)

Where we make the finest quality white crystal sugar made anywhere in India !

ORISSA CEMENT LTD.
Rajgangpur (Orissa)

Where the most up-to-date equipment and the latest production methods make possible a large output of highgrade **refractories,** to meet the needs of all types of furnaces in the Steel, Cement, Glass and large number of other industries.

DALMIA CEMENT (BHARAT) LTD.
Dalmiapuram (Madras State)

Where we are busy steadily producing increasing quantities of **cement,** one of the essential industrial products for all development projects, for helping build the brighter tomorrow of our dreams.

Burning the midnight oil

The light from the oil lamp burned low as A.P. Stockwell sat working into the middle of the night to complete his report of 1903 on the possibilities of a typewriter market in India. It was this report which prompted the opening of the first Remington office in Asia at Calcutta.

In 1952, after an extensive survey of India's Industrial sites and prolonged discussions in Delhi with the Government, the Indian Company—Remington Rand of India Limited—was born. Its objectives, to manufacture and sell Remington Rand office equipment in India.

Now at the Howrah factory about 1,300 of Remington's staff of over 2,300 personnel still burn the midnight oil as they work overtime to catch up with India's typewriter needs. Production of typewriters was doubled in the last few years and negotiations are now under way for further expansion which will again double production. This move will not only save valuable foreign exchange, but will offer employment to hundreds of skilled and unskilled workers throughout the country.

The policy of the Company is Indianisation and the task of recruiting and training Indian personnel at all levels is constantly under way. We are proud of the contribution we are making to the prosperity of this fast growing country.

ROAD-RAIL CO-ORDINATION

I.R.T.D.A.'S MEMORANDUM TO NEOGY COMMITTEE

A COGENT and well-argued memorandum has been submitted by the Indian Roads and Transport Development Association, Bombay, to the Committee on Transport Policy and Co-ordination (otherwise known as the Neogy Committee). The memorandum covers not only the issues raised and figuring in the preliminary report of the Committee but also the fresh questionnaire issued by it. Notable features of the memorandum are the survey of progress and trends in the field of transport in the country and some constructive suggestions. Road development has been dealt with in the memorandum in a practical manner. Referring to the National Highways in this connection, the memorandum points out that these have assumed importance in the economic development of the country, although the Centre's record in developing fully a comparatively small mileage of about 15,000 over the past 15 years is not quite impressive. The Chief Engineers (belonging to the Central and State Governments) have, therefore, recommended that their mileage should be raised to about 32,000 by 1980-81, that is, nearly the same as the railways' present mileage of 35,000. From the map attached to the Chief Engineers' Report on the Road Development Plan it could be inferred that, as India's railways converge towards the ports, they are less suited for the internal development of the country. It could also be inferred that the proposed National Highways system would be essential to a developing economy, as it criss-crosses the country in all directions and from end to end, forming a closely-knit pattern of internal development. The criss-cross pattern forms regions, each with an apex from which roads radiate in various directions. This fact means that, in addition to long-distance through traffic, short hauls will also be available according to requirements. This will lead to diffusion of traffic and, to the extent to which it travels over short distances, it will ensure a quicker turnround of empty vehicles with a consequent reduction in their number. This is not possible with the railway system. The Association has explained at length the advantages of a possible two-lane National Highway system as follows:

It will boost up the development of truck-trailers and semi-trailer combinations which, as pointed out in Appendix 26 of the Report of the Indian Productivity Team on Road Transport, has been found in some countries to reduce the operating cost of road vehicles appreciably and which, in our case, is likely to reduce our present average road rate from about 15 nP for a 9-tonner, 6.4 nP for a 12-tonner, 5.1 nP for a 15-tonner and 3.5 nP for a 22½-tonner. In other words, it will be close to, and even less than, the average railway rate for revenue-earning traffic which in 1959-60 was 6.10 nP per ton-mile (page 159, Railway Road Report II, for 1959-60) for about three times the speed of travel. From the point of view of cheapening the cost of transport and ensuring a quick turnover of goods this development will be of considerable importance.

According to Appendix VII, Items (2) and (5), page 55 of the Chief Engineers' Report on Road Development for 20 years, the initial cost of construction of a new National Highway to carry two lanes of traffic on a 24-feet wide pavement with a formation width of 38 feet ranges from Rs. 1.95 to Rs. 2.38 lakhs, say, an average of Rs. 2.17 lakhs per mile. With cross drainage works it may be taken at about Rs. 3 lakhs, which is about one-third the initial cost of about Rs. 10 lakhs per mile of a broad-gauge railway track 5 feet 6 inches wide. Further, it does not require any steel except in small quantities in the construction of bridges. On the other hand, the entire length of a railway line requires steel which it may be in the interest of our economy to save for other useful purposes.

In due course such a road will be capable of carrying vehicle-combination of 32 tons gross, to carry a pay-load of more than 20 tons, as in other countries. With them the operating cost will be about one-fourth that of a 6-ton vehicle, i.e. about 3.5 nP per ton-mile, i.e., less than two-thirds of the present average railway rate of 6.10 nP for their revenue-earning traffic.

In the opinion of the Association, the case of road transport goes by default, because there is at present no Government agency to study the economics of road transportation. The time has now come, according to it, to form a Road Board for this purpose. This Board should function like the Railway Board in all matters of policy regarding roads and road transport. While the power to levy taxes on motor vehicles may continue to vest in the Centre and States as at present, they should be consolidated to the extent possible and their allocations made on the basis of service charges. The Association's suggestions here are twofold: first, the proceeds from Central taxes can be earmarked towards interest on the investment in roads, a sinking fund to recoup the investment, maintenance of National Highways and important inter-State roads carrying through traffic, grants as at present to Union Territories, administration, a provision for development or special repairs and a reserve; second, the proceeds from State taxes can be allocated towards the maintenance of State roads, subvention to local bodies, enforcement of regulatory and safety measures under the Motor Vehicles Act, administration, a provision for development or special repairs and a reserve. All this, in the opinion of the Association, can be done within the present scales of taxation.

Road Board Scheme

The reasons which have prompted the Association to suggest the formation of a Road Board are several. Firstly, it is estimated that, by 1965-66, the investment in roads and motor transport will be practically of the same size as that in the railways, namely, over Rs. 2,000 crores. The details of this estimate are as follows:

		Rs. crores
1.	*Roads and Road Transport*:	
	Total investment in roads ...	900
	Total value of vehicles	970
	Investment for the production of motor vehicles	115
	Investment in sister concerns ...	85
	Total, excluding the value of bicycles and bullock-carts ...	2,070
2.	Railways' capital-at-charge ...	2,313

The second reason is that the current gross earnings of commercial motor transport are estimated to be the same as those of the railways. The relevant estimates for road transport and railways for 1958-59 are:

		Rs. crores
Gross earnings of road transport:		
Passenger vehicles		151
Goods		192
	Total ...	343
Gross railway earnings:		
Passenger		140
Goods		241
Sundry		9
	Total ...	390

It is obvious, continues the I.R.T.D.A. memorandum, that an investment and transaction of the magnitude revealed by the above estimates should have a central controlling agency in respect of policy, allotments, allocations and development.

Advantages Claimed

The advantages visualised by the Association for the Road Board scheme suggested by it are:

The fixing of road service charges on the same basis as rail service charges and making allocations for them under the same heads, namely, interest on the capital on roads, depreciation, maintenance, administration, development and a reserve will furnish a yardstick not only to compare road and rail service charges but also to give the public and Parliament an idea of how the two services have been functioning in regard to them.

The road and rail reserves in their respective budgets will provide a nucleus out of which subsidies on account of concessional freight rates fixed by Government for certain commodities can be made to either service.

The Road Board will be able to fix economic rates for commercial vehicles and take steps to enforce them so that even in the case of services run by individual operators a definite standard will be maintained. This fact, together with an obligation to carry freight offered at economic rates, will remove a major cause of complaint by the railways and will create a climate of healthy operation for both.

Both the services will be on the alert to think about and plan for development and improvements to their respective spheres both in technical and administrative matters and the country will be benefited by their schemes of continually cheapening the cost of transport.

Another crucial suggestion made by the I.R.T.D.A. is that a Co-ordinating Board be set up to bring about co-ordination between different modes of transport, especially between railways and road transport. In this connection the Association has criticised the Neogy Committee's preference for "co-ordination through appropriate Government regulation." The Association is against co-ordination by regulation, as it is bad in principle and as it is most likely to degenerate in practice into 'restriction.' If some other countries which have a nationalised rail transport system, have taken recourse to the regulation of road transport which has developed far more than rail transport, it may be to raise the utilisation of their investment in rail tracks. In India, the position is the other way round, since the utilisation of its rail track is possibly the highest in the world, while that of its roads is the lowest. The principle of regulating road transport cannot obviously suit this country. Moreover, regulation will interfere with the freedom of public choice.

Co-ordinating Board

Real co-ordination, in the considered opinion of the Association, can be achieved only through a high-powered agency like the Co-ordinating Board suggested by it. This Board, like the Road Board earlier suggested, should have some non-officials on it. As the object of co-ordination should be to prevent overlapping not in the interest of one service or another as at present but in the interest of the country's overall development, it is suggested that all schemes of development should be submitted by the Railway Board and the Road Board to the independent Co-ordinating Board. The Co-ordinating Board should then approve, disapprove or amend the schemes after scrutinising them from the point of view of their economic justification and avoidance of overlapping. Allotments for development should be made by the Planning Commission on the recommendation of this Board, and the functions of the Railway Board and the Road Board should be to implement the schemes finally sanctioned. The advantage claimed for this procedure is that co-ordination by the Co-ordinating Board will be free from any suspicion of undue obsession in favour of one service or another. The Association's emphatic opinion is that co-ordination at the implementation level or at the Government level by executive orders as at present will create a lot of bad blood, as it has already done between the two principal modes of transport.

JAPAN'S AUTOMOBILE INDUSTRY

Some general trends relating to Japan's automobile industry have been reviewed in the latest (October 1961) monthly review of the Mitsui Bank, Tokyo. The major trend is that the industry has been undergoing a steady structural change in the post-war period, with the emphasis shifting from ordinary trucks to midget trucks and then to passenger cars. This points to the future development of the industry chiefly on the basis of passenger cars. In the following table are given figures of Japan's automobile production:

(In thousand units)

Types	1957	1961 (Estimated)	1965 (Estimated)
Ordinary cars:			
Trucks	46.8	98.0	140.0
Buses	7.8	10.0	11.4
Small cars:			
Trucks	80.6	454.9	420.0
Passenger cars	50.1	342.8	550.0
Total 4-wheelers	185.3	905.7	1,121.4
2 and 3-wheelers	540.1	3,504.7	2,925.0
Grand total	725.4	4,410.4	4,066.4

In spite of the big increase in the production of automobile cars, the position (measured in terms of population per automobile) continues to be that Japan is far behind the other advanced countries in Europe and America. The comparative diffusion of automobiles in selected countries is brought out in the following table. (Source: *American Automobile.*)

(As of 1st January, 1959)

Country	No. of automobiles per 1 sq. km.	Population per automobile	
		Passenger cars	All cars
U.S.A.	7.4	3.1	2.6
Great Britain	23.6	11.7	8.0
France	10.7	10.2	9.0
West Germany	14.6	16.1	17.8
Italy	6.1	34.6	30.0
Netherlands	17.8	25.9	19.8
Sweden	1.4	8.0	7.5
Australia	0.8	5.8	4.0
Brazil	0.1	147.1	77.5
Japan	2.7	294.1	91.7

Japan, according to the review, is only a modest exporter of passenger cars. In 1960, it exported 24,700 vehicles (valued at $42 million), of which passenger cars accounted for 9,600 (valued at $11 million). The import liberalisation now in progress in Japan is expected to improve the quality and efficiency of its automobiles to the international standard. The reason for the relatively low level of exports of Japanese automobiles is to be sought not only in some of their qualitative demerits but in the fact that their prices are 20-30 per cent higher than those of foreign cars of the same types. When the plans for rationalising equipment with a view to bringing about mass production in the coming years are completed, it is expected that Japan's automobile industry will be able to compete with its foreign counterparts on equal terms.

COLOUR

Nature's Beauty Aid!

MAN has taken his lesson from Nature... has employed many and varied processes from the brewing of dyes from herbs and leaves to the most modern scientific methods—to make his own life as colourful and gay as the variegated hues of Nature. Judging from the frescoes of Ajanta, 'colour-chemistry' in India has been an advanced science since ancient times.

Today, AMAR DYE are leaders in the indigenous manufacture of dyes—having established a name for the excellent quality of their Amarthols & Fast Bases. Intensive research and a rapid expansion programme will soon make India totally self-supporting in the requirements of coal tar dyes.

—enrich India's life with COLOUR!

NEW PRODUCTS AND PROCESSES

Anti-corrosive Coating

LATEST addition to the Adcora range of anti-corrosive coatings made by E. and F. Richardson of Buckingham, England, is Adcora Pervon. This is described as a polyurethane pitch coating which cures rapidly at all temperatures; even those below freezing point. The manufacturer says it can be applied effectively both to blast cleaned metallic surfaces and to those prepared by less thorough methods. For continuous immersion however, blast cleaning and a certain film thickness is recommended, and in some other types of service where blast cleaning is not an essential prerequisite, the use of a special primer is recommended. Adcora Pervon is essentially a protective coating, not a decorative paint. The pitch component limits the colour availability to black only but it can readily be decorated with other types of products.

Adhesives for Metals and Fabrics

Two adhesives—one for bonding metal-to-metal, the other for fabric combining in general and for bonding polyurethane foam to textiles—have been introduced. The metal bonding adhesive is described as a tough flexible solvent-free substance suitable for application to steel and aluminium, and according to the manufacturer, the B.B. Chemical Company, Ulverscroft Road, Leicester, England, it is already being used on cars for reinforcing sections of boot lids and bonnet tops. It is a heat gelling compound designed for metal bonding where the assembly will subsequently be heat treated, thus curing the substance to a tough, rubbery consistency. The adhesive for fabrics, produced by Evode of Stafford, is claimed to be resistant to water, oil, high temperatures and also to all solvents used in dry cleaning and is known as Adhesive 6108.

Oil Injection System

The first full-scale experiments to be carried out in Britain on the technique of the injection of oil to improve blast furnace performance have justified retentions of the system. The experiments have been undertaken by a South Wales firm, Richard Thomas and Baldwins Ltd. They announce that following a six months' trial period during which 50 tons of oil per day were used, an analysis of results showed advances in output quality and general furnace performance. Two methods of injection have been tried through stainless steel lances and also specially designed tuyeres. Experiments are continuing to decide the most effective techniques and further improvements are anticipated. The installation consists of small-bore feed pipes to each tuyere or lance, pumps to maintain the oil pressure, and a bulk storage, heating and circulating system. The firm say that the injection of oil in this lower zone of the furnace provides an efficient method of reducing the iron oxides of the ores to the metallic state and reduces the quantity of prime metallurgical coke charged to the furnace.

Upholstery Strapping

A new type of upholstery strapping has been developed by the general rubber goods division of the Dunlop organisation. They have evolved a special rubber compound which is used with a veneer of synthetic material. The veneer has a damping effect on the natural rubber, providing complete control of the amount of yield, and also perfect recovery. This is something which hitherto has not been possible. The strapping, called Ribflex, is ribbed in pattern and this helps to prolong its life by reducing the spread of any accidental cuts or tears. It is suited for use in seating in cars, coaches and aircraft, as well as easy chairs and divans. It is inexpensive but hard wearing, and easily, quickly and securely applied by unskilled labour.

Crimping Synthetic Yarn

Among the many new machines introduced at the International Knitting Machinery and Accessories Exhibition, held at Manchester, England, recently, was a super-speed crimper for processing synthetic and natural fibres. Named the C.S.9, it has been developed by a member firm of the Scragg Group, one of Britain's biggest knitting machinery manufacturers. In the past five years the company has been building up the speeds of their false-twist crimping machines and speeds have advanced from 30,000 r.p.m. to 80,000 r.p.m. Now they have designed and built a machine which runs at 300,000 r.p.m., which is claimed to be a significant break through. The machine enables production, in just 28 hours running, of a six lb. package (or giant bobbin) of two-fold seventy denier yarn. On lower speed machines it would take three days for a similar 6 lb. package to be produced. The machine is easy to operate and operatives require little training.

Tyre Buffeting

A machine which reduces the average time for buffing motor car tyres for retreading has been introduced by a British firm, F. H. Bentham Ltd. The entire process from attaching the worn tyre to removing it buffed exactly to the desired contour, takes less than two minutes. The tyre is held on the machine by means of two end plates which clamp the beads together. A safety locking lever is knocked into place and the tyre inflated to 18 lb. per sq. inch by means of a built-in inflator. The tyre is rotated at about 250 r.p.m. by a friction drive which ensures a constant speed for different sizes of tyre. The actual buffing is done radially by a bladed rasp designed by the company. This is guided by a roller following a template. The rasp moves across the width of the tyre once in each direction and then automatically returns to the rest position to allow the operative to remove the tyre. Three electric motors are used for the main power drives and pneumatic cylinders are employed to hold the end plates in position and bring the rasp into contact with the tyre. Provision is made for the removal of rubber dust and smoke by means of tubing from the rasp guard which can be connected into the factory's main extraction system.

Sealed-charge Car Battery

Two new ranges of car batteries, in which the plates have been charged and hermetically sealed at the factory, are being introduced by Associated Electrical Industries Ltd. Transported and stored in dry condition, they are ready for use shortly after the addition of acid. Within half an hour of purchasing, a customer can have installed in his car an A.E.I. battery which he knows is brand-new and working at its full capacity. Indefinite shelf life is claimed for the new ranges of batteries. Because of the effectiveness of the drying-out and sealing processes carried out at the factory after the plates have been formed, the batteries are unaffected by humidity. The sealed-charge principle means that banks of batteries no longer have to be kept in fully charged condition by the distributor, who is also relieved of the task of constantly checking the condition of batteries in stock. The new ranges of A.E.I. batteries are being produced as standard and heavy duty units in both 6 and 12-volt sizes. The heavy duty unit carries a two-year unconditional guarantee—replacement or repair is carried out free of charge in the event of failure during this period.

Detergents From Sugar

As a result of research at Britain's Tropical Products Institute in London, sugar now being produced in excess of domestic needs can be made into detergents as good as, and in some ways better than, petroleum-based products. Sugar-producing countries can now convert their surplus production into detergents in cheap and simple plant and so save imports of conventional products. These sugar detergents are better than the petroleum products in several ways. They can be completely broken down in sewage treatment, so that they neither give rise to foam problems in sewage works and rivers nor prevent the re-oxidation of the river water. They are edible, even nutritious, so that they can be used without trouble for washing vegetables and fruit before packing them for the market. They can be used also with benefit in diets to help sick people with certain ailments.

Dr. G. R. Ames, of the Tropical Products Institute, talking about his work on producing new forms of sugar-based detergents, said that, until recently, these substances had mainly been made by reacting sugar with a fatty acid to give a product which was not very soluble in water—a defect which restricted its use as a domestic detergent. Dr. Ames has evolved a method for making soluble products by introducing a second simple acid into the sugar molecule. He is now working on methods for making new soluble detergents which will contain a greater proportion of sugar to fatty acid.

New Trends in Food Packaging

Commercial development in the U.S. of a variety of convenience-keyed aerosol food specialities moved a step closer to reality with the announcement on 6th October 1961 by the United States Food and Drug Administration that "Freon" C-318 propellent has been approved for use in foodstuffs. Developed by the Du Pont Company, the compound has been under test for nearly two years, awaiting government review of all data. Acceptance of "Freon" C-318 by other countries for use in push-button foods is expected to follow approval by the U.S.A. nutritional and health agency. First food item to appear in aerosol packages using "Freon" C-318 as the propellent or pressure-dispensing agent is expected to be whipped cream. Experiments with that type of product indicate that a propellent mixture of "Freon" C-318 and nitrous oxide should provide whipped creams superior in both appearance and stability to those now available in pressurized containers using either nitrous oxide alone or mixtures of nitrous oxide and carbon dioxide as the propellent. "Freon" C-318 for use in aerosol food packages is now available from the Du Pont Company's "Freon" Products Division through its distributors. Other food specialities, which might be adaptable to aerosol packaging, include salad dressings, dessert toppings, canape spreads, mustard, and foamed butter for use on crumbly muffins and biscuits. Chemically, "Freon" C-318 propellent is octafluorocyclobutane, a combination of fluorine and carbon which exists as a liquid below 21 degrees Fahrenheit, or minus six degrees centigrade. Above that temperature, it is a colourless, virtually odourless, and non-toxic gas which has no adverse effect on foodstuffs.

New Adhesive

The use of foamed plastic materials for sound and heat-insulation in the building industry continues to grow and a new adhesive has just been developed for use with expanded polystyrene, and other rigid foams. It has also been used with acoustic tiles. It will give a very rapid bond to both wall and ceiling surfaces in plaster, cement, smooth concrete, hardboard, timber and flat asbestos sheeting, by simple hand pressure. There is no need, the manufacturers claim, for sustained mechanical pressure.

THE STATE BANK OF HYDERABAD

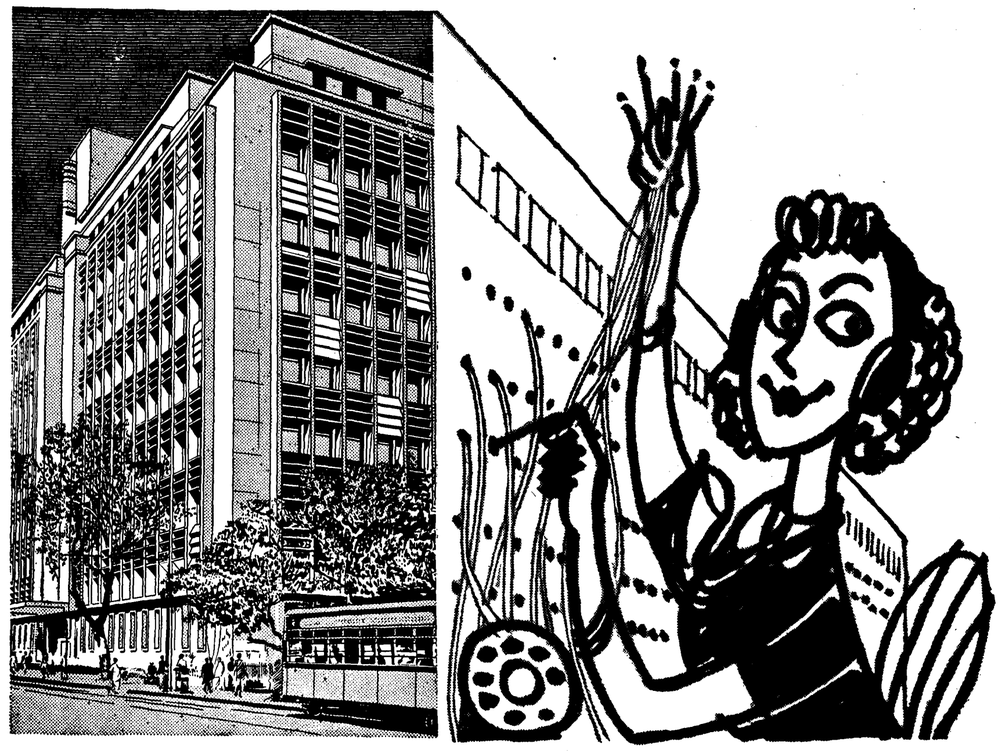
H.O. Hyderabad (A.P.)

Deposits and Banking business of every description including Foreign Exchange to suit all classes of customers are undertaken on attractive rates and terms which may be ascertained from any of our 73 offices in Andhra Pradesh, Maharashtra, Mysore and Madras.

SBH-8

They're on the right line with Carrier

at Calcutta's Telephone Exchange



The lines at "Telephone Bhavan", Calcutta, are humming 24 hours of the day. Business calls. Personal calls. Some interminable teenage tête-à-têtes! But we've no time to gossip. Or to listen in. Too busy keeping people cool...the building quiet...instruments operating perfectly.

We're air conditioning people. Call any of our friends. They'll tell you about us. Our dependable Carrier equipment. Voltas' expert installation and service. They're bound to say (nice people!) "Carrier and Voltas are the people who know air conditioning best."

Some other public buildings air conditioned by us:

Bihar Legislative Assembly Chamber, Patna.
Council of Scientific and Industrial Research, New Delhi.
Indian Council of World Affairs, New Delhi.
Lok Sabha and Rajya Sabha, New Delhi.
National Archives, New Delhi.
National Gallery of Arts, New Delhi.
Vigyan Bhavan, New Delhi.
West Bengal Legislative Assembly Chamber, Calcutta.

TRENDS IN INDUSTRIAL DIVERSIFICATION

NEED FOR BALANCED JUDGMENT

(Contributed)

THESE days the term "diversification" is very frequently referred to in the economic journals and newspapers as also in the discussions in economic and administrative committees dealing with current problems of trade and industry in and outside the Government in our country. It is used in diverse and varied contexts and senses. In the context of foreign trade, the term has come to signify the broadening of the range of export goods to solve the difficult problem of balance of payments and shortage of foreign exchange and to meet the challenging situation arising from the decision of the United Kingdom to join the European Common Market. In the context of industrial development, the usage of this term means the multiplication of new industrial processes and products such as petrochemical products, synthetic fibres, plastic products, etc. Yet, in a third sense, somewhat a narrower one, this expression symbolises the decision of an established one-product company to branch off into a new line of manufacture which is totally unconnected with the existing business and to convert itself into a multi-line company. It is really this aspect of diversification which has become a subject of considerable debate and controversy in our country.

Really speaking, the phenomenon of diversification came under the close focus of Government's attention towards the end of 1959 and beginning of 1960 when the calmness and tranquillity over the national stock exchange was disturbed by the sudden noise of a dramatic stampede and clamour for shares of certain well-established companies which announced their intention to take into their laps certain new lines of business. In that general atmosphere of excitement, precipitated by the hatchings of speculative rumours regarding the diversifying companies by professional speculators, people from even the middle strata of society were tempted to purchase the shares of well-established companies going into new and promising industrial fields at unduly high premiums which could lead to frustrating and disastrous consequences at the slightest change of strategy by the speculators and of developmental plans by the concerned companies. Governmental circles were quick to express their anxiety at the dizzy speculative heights touched by prices of shares of many leading companies under the influence of a powerful flavour of affluence aired by the speculators and at the unusual size of crowds of investors walking up the garden path shown to them by the professionals from the stock exchanges. All these developments lent a sharp edge to the question of diversification in our country.

Not New

In fact, so long as the cases of diversification were few and far between as also less spectacular and strange in nature, they did not attract the attention of either the public or the Government. For a long time, the instances of such multi-product companies as the Delhi Cloth and General Mills, Rohtas Industries, etc., have been known to us and no exception had been taken to their activities in any quarter. But the multiplication of instances of textile companies going in for the manufacture of PVC and rayon tyres and chords, chemical products, etc., of engineering companies going in for the manufacture of high grade writing and printing paper, of cement companies making PVC resins and compounds, engineering goods, etc., of paper companies sportively leaping into the production of chemicals, of vegetable oils and soap companies taking up the manufacture of skimmed milk and powder, etc., and the instances of that type, gave rise to the fears of possible uneconomical use of financial resources of existing companies, to the fear regarding the chances of handling of completely new lines of manufacture by untrained and inexperienced technical personnel and to the apprehensions about the extension of control of big business groups into new fields of industrial activity. All these disquieting possibilities gave considerable contemporary urgency to the need for finding a satisfactory solution of the dilemma created by the phenomenon of diversification, of which full consequences are even today very dimly known to people in this country.

The controversy around this question is not yet settled and is one of the few questions in which more than one department of the Union Government are interested. In the main, three departments of the Government are directly concerned with this question, namely the Economic Affairs Department of the Finance Ministry which deals with the Control of Capital Issues and Stock Exchanges, the Licensing Wing of the Ministry of Commerce and Industry and the Department of Company Law Administration. These official agencies have jointly to evolve a clear-cut policy and approach for tackling the thorny question of diversification and end the present state of suspense which at times comes in the way of striking collaboration deals with the foreign companies reported to be keen and willing to participate in the industrial revolution of our times in our country. The lack of co-ordinated thinking and of fusion of angles among the concerned official departments to examine schemes of industrial expansion, if allowed to last long, can very markedly slow down the progress of industrial development and also interfere with the broadening of the industrial base of the country's economy as visualised in the third Five-year Plan.

Foreign Countries

The diversification trends are neither a new nor an exclusive phenomenon and experience for our country. In the United States, the United Kingdom and the Continent, diversification trends have been in evidence for the last twenty years or so. These trends and developments have gained considerable force during the last five years, as a result of the widening of the industrial vision brought about by the opening of new lines of manufactures and by advanced scientific researches.

Some very interesting cases of diversification have recently been noticed in the West. For instance, in the U.K., there is the famous case of diversification by Courtaulds, whose original lines of manufacture are cotton textiles, rayon and other synthetic fibre goods, but who, through the mechanism of mergers, take-overs, royalty arrangements, etc., has diversified into the fields of manufacture of paints and packing materials. Some textile companies in England are reported to have moved into such strange and unconnected fields as brick-making and confectionery.

In the United States, recently, the Ford Motor Company is reported to have diversified its activities through the take-over bid for Philco which is one of the leading manufacturers of television sets and other consumer appliances in the States. The Ford Motor Company has sought to diversify its activities into new directions to make itself more fully competitive with General Motors and Chrysler Company in fields outside the motor industry. In fact, the Ford Motor Company is expected to diversify its activities still more spectacularly in the course of the next few years, as it is "preparing its bid to manufacture the biggest and most powerful American entry in the space race—the first stage booster for the giant 'Saturn Vehicle' and aims at becoming the designer and developer of the most advanced kinds of equipment." General Motors is already heavily involved in the manufacture of cars and at the same time is also one of the leading manfacturers of refrigerators, air-conditioning equipment, locomotive engines, earth-moving equipment and defensive products. Similarly, the Chrysler Company makes air-conditioning, marine and industrial engines besides engaging on a number of defence projects.

Logical Development

In fact, many of the world's biggest industrial giants have attained their present stature through the process of diversification, that is, by following the policy of spreading their operations over several significantly different fields of manufacture. As one authority has said, "most firms in the real world produce many products, frequently add more and are successful. In the mature industrial economy, the diversified firm seems to have replaced the specialised firm of the nineteenth century." Many of the world's industrial giants resorted to diversification as a part of well-timed and phased programmes. That is to say, at first, they started as a single-line concern and later multiplied the varieties and qualities of a single product. At the next stage, they took to vertical expansion by taking up the related lines of manufacture whose products were required in the assembly or manufacture of the final product. And then came the third stage of development symbolised by the term "diversification," when they took to the manufacture of completely unconnected products.

Thus, diversification in the sense it has come to be understood by us in this country is a logical developmental stage in the life of a company which wants to survive the jerks and shocks of competition and possesses an exuberant vision of acquiring such a size and status that its existence would be of some consequence in the national economy of the country. In other words, diversification is an integral part of the strategy of growth and a means through which a company can escalate and develop into an industrial giant and co-exist with other companies of their size during the present era of gigantic industrial development sweeping all the world over. The diversified and multi-faced giants are engaged in further diversification of their activities and there is no end to this process. Alongside the giants, industrial concerns of medium size are also seen to take recourse to diversification largely as a hedge against losing businesses or industrial products suffering either from inelasticity of demand or from conditions of oversaturated supplies with little intake in the near future or from restricted growth in the long run.

In the industrially developed countries of the world, the issue between industrial specialisation and diversification has, on balance, long ago been decided in favour of the latter. Specialisation of processes and products no doubt promise increased productivity and lower unit costs but certain factors are also there which do not usually allow the process of specialisation to go beyond a certain extent. For instance, the extent to which a firm can profitably specialise in its process is limited by the scale of operation and by the size of market and, with this, the firm's position can become very vulnerable to the threats of ebbing demand and sharpened competition. This vulnerability can, however, be reduced and effectively mitigated if specialisation could be combined simultaneously with diversification. This would happen in the case of a big company only. In this connection, the observations of Dr. Lloyd Amey of Nottingham University are significant. He says:

"If a firm in large enough, it can simultaneously diversify and reap the full advantages of a high degree of specialisation of processes (including management) and of products. But, more generally, while there may be a constant incentive for firms to specialise and narrow their range of production as an industry develops, there are strong forces—research, competition in the improvement of products and complementary marketing, to mention only a few—constantly operating within and upon the firm in the opposite direction."

Reasons and Motives

Thus, in any discussion on diversification, the foregoing two basic facts have to be borne in mind. It would be wrong to think that diversification is an unmixed evil and must be dealt with in a blanket and wholesale manner. There are, in fact, a large number of reasons and motives for which industrial firms usually go in for diversification. All these motivating factors should receive our full and careful attention before we fix our views on this issue. These motives fall into three broad groups: one group is of such motives which are genuine economic considerations and another comprises considerations to get round certain existing fiscal difficulties and administrative policies of the Government; the third set is made up of motives founded on emotional appeal.

To take up the first set of considerations, as said above, many a firm go in for diversification because of the limitations attending specialisation. Secondly, at times, firms resort to diversification with a view to checkmating and counterbalancing losses apprehended in the existing lines of business. Thirdly, some concerns are motivated by a desire to properly utilise the surplus funds lying with the bank or invested in gilt-edged securities and industrial stocks. Fourthly, some concerns embark upon diversification plans with a view to utilising the technical and managerial skill available with them. Fifthly, seasonal concerns like the sugar companies might be prompted to utilise some of their plants and machinery, working capital and existing personnel throughout the year which otherwise would have to be kept idle or even disbanded. Sixthly, trading concerns might sometimes like to manufacture goods traded by them and thus increase their profit margins. Seventhly, concerns which have strong industrial research laboratories on having struck upon some new processes and products, very often want to utilise the benefits of their researches themselves instead of selling them to outsiders. Eighthly, some concerns take under their wings certain growth industries to add to the existing products or industries with stabilised demand and thus increase their quantum of profits. Ninthly, some concerns take recourse to diversification with a view to associating themselves with some well-known foreign concerns to which they have fortuitously or accidentally been introduced. Besides these, there can be other economic reasons also. Of course, here we have not to forget that, most often, many concerns take to the manufacture of intermediate products to ensure their regular supplies at economical prices for use in the manufacture of the final end-product.

In the second group of motives, the most important one is the ambition of some concerns to beat their competitors in terms of size of turnover, profits, capital resources controlled by them and employment offered by them to the people. It is the high sense of ego that prompts them to become economically powerful in the national and international spheres. The mechanism of such diversification is take-overs, mergers, amalgamations, etc.

Position Under Company Law

In the third group of reasons, some concerns take to diversification to circumvent the provisions of the Companies Act which restrict the number of companies to be managed by managing agents and managing directors to 10 and 2, respectively. Further, where some prominent person belonging to the business group is holding the maximum number of directorships permissible under the provisions of the Companies Act, attempt is made to escape the mischief of the provisions of Section 275 of the Companies Act by establishing new departments within the company or companies. Secondly, in order to avoid the rigours of Section 372 which requires approval of the Central Government where inter-corporate investments exceed certain limits set out in that section, some companies prefer to establish new departments. Thirdly, most often, it is seen that the established concerns, by resorting to diversification of their existing activities, try to take advantage of tax laws and reduce the overall tax liability. The alternative course of establishing completely new companies as subsidiaries of existing companies would impose a double tax burden on the investing companies which, through the adoption of diversification, is advantageously avoided and even scaled down under certain circumstances if the existing business of the company is giving losses. And, in case the new line of business shows a loss, this loss can be adjusted against the profits of the existing business and by this process overall tax liability can be considerably brought down.

From the above analysis of motives, it will be clear that diversification is neither to be frowned upon on all counts nor is to be upheld as a desirable or sound practice on merits under all circumstances. To take the last named two groups of motives first, the circumvention of the spirit of the provisions of Sections 275, 316 and 332, which aim at checking concentration of economic power in the hands of managerial personnel through the process of diversification under a single firm-umbrella, is clearly an undesirable attempt. In the absence of a size limit upto which a company can expand itself, it may be perfectly legal to diversify in an elegant and massive style, but in so far as the spirit of the aforesaid provisions is slashed and slandered and thereby the Government's policy of checking the build-up of monopolistic strongholds is negatived, it is socially objectionable.

Cushion Against Big Swings

Competent opinion in our country and outside feels that the role of taxation in the present trends of diversification is rather overemphasised in Governmental circles. In the U.K. and the U.S.A., where firms are diversifying on a large-scale, experts are of the opinion that the tax considerations are not an important factor much less any kind of a booster. Diversification in those countries is adopted to create a "cushion against big swings in profits" and to "ensure additional security" to the business concern. On the question of tax considerations, the views of Dr. Amey of the Nottingham University, who has closely studied the various aspects of diversification in the U.K., are very significant. He has come to the conclusion that "the role of taxation has probably been relatively unimportant. While it may be thought that, with high levels of company taxation, the risks involving in branching out into new fields will be considerably lessened by the provision for offsetting losses against profits earned in other trades. But high taxation depresses the prospective yield from investment at the same time as it reduces the risk of loss. Moreover, most businessmen do not like making losses whether or not they can offset them for tax purposes."

In our country, opposition to diversification is based on suspicions, fears and technical grounds. Misgivings regarding tax avoidance through diversification exist, because of the tax evasion and avoidance indulged in on a large-scale in the past in our country by bad elements in the business world. Similarly, the general impression left on the mind of the public and Government by the past dubious and shady acts of certain business concerns cunningly to evade the provisions of regulatory laws passed by Government is still alive and exercises a powerful influence on the shaping of opinions on current business problems. Thus, there is a clear need to lift the fog of suspicion around their activities on the part of the business by conducting their affairs in the open so as to let the public and the Government have a gold-fish-bowl view at them and reorient their current thinking on the problems of trade and industry.

Apart from the opposition of diversification on the foregoing two grounds, a third reason is that powerful speculative forces and tendencies are generated by premature and loose talks about the impending diversification moves by the well-established companies and, as a result, unhealthy conditions of boom start ruling over the stock exchanges which eventually do more harm than good to the interests of the general run of investors. Fourthly, diversifiication sometimes tends to reduce competition and creates formidable difficulties in the way of small and medium-sized businesses, to come up. In other words, it creates barriers in the way of promotion of small and medium businesses for which Government are spending such a lot of time and money. Fifthly, in so far as diversification restricts opportunities for participation in new fields on industrial activity to the existing investors only to whom rights issues are issued, new and prospective investors who are increasingly emerging from the ranks of middle strata of the society are stopped from participating in the growth industries and as a result of this, investment base is stopped from becoming a broad-based one and the trend towards dispersal of ownership of nation's industries in the private sector is impeded. Sixthly, diversification leads to a messy production of financial accounts from which investors cannot make out the performance of new and old lines of manufacture. Similarly, other people interested in the relative profitability of capital investment and efficiency of managerial and technical personnel are not able to get a clear view as to which of the several lines of manufacture is a better proposition and thereby form some judgment that the use of capital and technical and manpower resources was being most economically made. In a country like ours which suffers from the tragic scarcity of almost every constituent that makes an industrial undertaking a success, it is imperative for us to make the optimum use of the resources available in the country.

Lastly, and by far the most important ground for opposing diversification is that it leads to concentration of economic power in the hands of small groups of people. Government's policy in this regard is too well known and has, once again, been made clear in a most telling and direct manner in the Third Plan which states that "excessive economic power in relatively few hands and the uses to which it may be put, disturb the balance of power in a democracy, expose the social structure to new strains and tensions and come in the way of diffusion of economic opportunities." The tendencies leading towards concentration of economic power have to be countered effectively, as the Third Plan states, "firstly, through the extension of the public sector into fields requiring the establishment of large-scale units and heavy investments; secondly, through widening opportunities for new entrants and for medium and small-sized units as well as for industries organised on co-operative lines; and thirdly, through effective exercise of Government's powers of control and regulation and use of appropriate fiscal measures."

The above elucidation of the Government's policy shows that Government's opposition to diversification is *a priori* based on social grounds which are gaining steadily more and more importance in our country.

But social grounds, however, could not be allowed to sway our judgment entirely, as it is of paramount importance to see that the development of industry in our country proceeds on sound economic lines and that the competitive strength of corporate bodies is steadily bettered so as to meet the challenge of foreign competitors from highly industrialised areas, in the South-East Asian, Middle East and African markets. At the same time, it is also to be ensured that the industrial corporate leaders of our country do not fade away or lag behind in scientific and technological developments because of certain doctrinaire approaches and policies of the Government. Competent opinion in Western countries holds the view that diversification would be perfectly desirable if, on examination, it is found that the expansion of production of existing products would prove less profitable in the long run. Further, if a concern is motivated by a desire to maximise profits, the firm should be allowed to diversify. Also, if diversification is undertaken in the face of a threat of loss of market due to extraneous causes such as the emergence of a strong rival concern enjoying special advantages, then the concern thinking of diversifying is not only permitted to do so

SCHEDULE

Illustrative list of the Hard Type of Diversification Instances

Name of company	*Main business for which registered as per original objects clause*	*Additions proposed by the company in the Memorandum of Association to be confirmed by the Court under Section 17 of the Companies Act*
Eastern Woollen Mills Ltd.	To carry on any or all of the following business, viz. wool merchants, wool combers, spinners, woollen stuff manufacturers, cotton spinners, jute merchants, buy and sell and deal in linen cloth and other goods and fabrics whether textile, felted, looped and to supply for	Business of printers and publishers
Kalyan Pictures Private Ltd.	Business of cinema pictures, distribution and exhibition thereof at Amravati, opening and running cinema houses, distributing and producing films, financing and dealing in motion pictures, etc.	To buy and sell, import, export, manufacture and deal in cotton, jewels, gold, silver, grainseeds, oil, cloth and other mercantile commodities, to enter into partnership, to lend money and negotiate loan to issue on commission, etc. shares, Government securities, etc. to undertake, execute any trust to carry on and undertake any business as bankers, capitalists, promoters, financiers.
D. Macropolo & Co. Private Ltd.	To carry on the business of cultivators, manufacturers and importers and exporters of and dealers in all kinds of tobacco, cigars and cigarettes, tea, coffee, matchlights, pipes, etc.	To carry on the business of publishers and distributors of journals, magazines and books, etc.
The United Mercantile Co. Private Ltd.	Investment business	To buy, sell, manufacture, etc. piecegoods, minerals, steel and iron and other sundry items and carry on business of constructional, mechanical and electrical engineers, iron founders, etc.
Upper India Sugar Mills Ltd.	To manufacture or refine sugar and for that purpose to erect a mill or mills in any suitable place or places in India	(i) To carry on the business of textile merchants, textile mill proprietors, producers of all kinds of textile fabrics, etc. (ii) To plant, cultivate, produce and raise sugarcane, maize, etc. (iii) To carry on all or any of the businesses of silk mercers, weavers, spinners, etc. (iv) To grow itself or finance the production of or otherwise to deal in all kinds of crops and plants, etc. (v) To manufacture strawboard, paper, celotex, etc. (vi) To manufacture cement, etc.

(Continued on next page)

but should also be actively helped in developing into a countervailing power in the market. Further, when the profitability of existing lines of manufacture is seen to be steadily falling, firms should be allowed to seek and adopt alternative lines of manufactures.

Ensuring High Levels of Productivity

In fact, most often more than one economic consideration lie at the back of the diversification move. The assessment of competent authorities is that "sometimes the decision to diversify and the choice of a product or activity by which to effect it are simultaneous decisions, for example, as a result of research in the case of functionally related products. In other cases, they are separate and here all sorts of things may influence the choice, including the firm's background and particular strength (for example, experience of the market and its prospective rate of growth, experience in some technology or marketing skills, the size of the market and its prospective rate of growth, ease of 'entry' and the capacity of the management to adapt itself to the new situation). It needs to be remembered that, in addition to the rate of return it expects from the new activity, the firm must be reasonably assured that its resources are sufficient to support the investment needed to maintain its position *vis-a-vis* competitors in each of its activities." Thus, if diversification takes place as a result of these considerations, it is very likely to lead to "higher level of efficiency in business enterprise, more rapid adjustment to change, greater mobility of resources and possibly lower prices" and give "greater stability to industrial structure." The importance of these lofty aims in the industrial sphere is not lost on the planners in our country also. The Third Five-year Plan expressly states that the object of the industrial policy of the Government is also to be the promotion of "a pattern of industrial organisation which will lead to high levels of productivity."

Balanced Judgment

The national interests at this momentous juncture of industrial development in our country require that a balanced judgment should be formed on the issue of diversification by influential public opinion in the country and by various departments of the Government. The historical and economic arguments in favour of the diversification should be taken into consideration alongside the social aspects and consequences of diversification. Further, the issue is to be adjudged against the contemporary world economic forces at play. In this connection, it is to be remembered that world industries are increasingly becoming combative in nature and, to meet the challenge thrown by them in the sphere of foreign trade and foreign markets, our leading industrial concerns have to live with current technological and scientific progress and reorientate and readjust their activities so as to make the optimum use of technological opportunities open to them. Any set of guiding principles that the Government Departments directly concerned with this problem might evolve, would have to be, indeed, very broad and flexible in application. These have to be drafted very carefully with the dynamic urge of the people to raise their standards of living in a short and foreseeable time at the back of their minds by the official policy makers. Doubtless, we must have some guiding principles in the matter, but more than that what is required is that there should be a corps of competent technical experts to examine the technical details of the industrial proposals brought before the Government by private *entrepreneurs*. This alone will not do; there ought to be administrators with broad vision also to take a comprehensive view of the proposed schemes and these two classes of officers have jointly to reach a decision on a diversification case. In other words, each diversification case will have to be intensively investigated and adjudged on technical, economic and socio-economic grounds.

The decisions on diversification cases will by no means be easy. It is likely that, on the first study of a case, one may be easily inclined to scuttle the proposal; but it is as well possible that, behind the unusual and fantastic appearance of the proposal, there might be some very cogent economic justifications to make a bold attempt into completely new fields of activity. An idea of how strange the proposals and schemes involving diversification sometimes are and consequently how difficult it could be to pronounce decisions thereon, can be formed from the cases listed in the schedule appended to this

SCHEDULE (*continued*)

Name of company	*Main business for which registered as per original objects clause*	*Additions proposed by the company in the Memorandum of Association to be confirmed by the Court under Section 17 of the Companies Act*
Modi Sugar Mills Ltd.	... To purchase, manufacture, produce, refine, prepare, import, export, sell and generally to deal with sugar, sugar beets, sugarcane, molasses, syrups, etc.	To carry on the business of iron founders, mechanical engineers, manufacture of agricultural implements and other machinery, etc.
Fort Gloster Jute Manufacturing Co. Ltd. (now renamed as Fort Gloster Industries Ltd.)	... Business of spinners and weavers of jute, etc.	Business of manufacturers and dealers in wires, cables, and hire of all kinds, electricians, electrical engineers, etc.
Shalimar Tar Products Private Ltd.	... To carry on in India and elsewhere the trade of the business of distillers of coal tar and all other products and by-products therefrom	To carry on all or any of the businesses of architects and surveyors, builders, contractors, roadmakers, etc.
Savilles Private Ltd.	... To carry on business of manufacturers of plant and machinery, locomotives, internal combustion engines, agricultural equipments, electrical apparatus, scientific instruments, etc.	To carry on business of advertising contractors, advertising agents, printers, publishers, etc. To purchase, take on lease or in exchange, hire or otherwise acquire or deal in any factory, workshop, exhibition or other building, etc.
Shree Hanuman Cotton Mills Ltd.	... To carry on business of spinning and weaving mills in West Bengal or elsewhere in India.	To carry on in India or elsewhere the business of cast iron and steel founders and manufacturers, etc.
Kerala Valley Tea Co. Ltd.	... To cultivate tea, indigo, cotton, sugarcane, jute, paddy or agricultural products, etc.	To make (i) roads, bridges, railways, manufacturing of bridge, cement and line constructions; (ii) appointment of selling agents; (iii) to provide for grants of benefit of employees or ex-employees.
Premier Film Corporation Ltd.	... Film production.	Manufacturing, buying and selling and dealing in soaps, toilet articles, chemicals, fertilisers, etc.
J. D. Jones & Co. Private Ltd.	... To carry on the business of mica manufacturers, merchants and any other trade or business whatsoever which in the opinion of the company can be advantageously or conveniently carried on.	To undertake, contract for and carry out the work of thermal insulation of steam boilers and ancillaries, steam pipes, various machines, their parts, in ships, factories, buildings and structures and many other commercial and business activities (old set of Memorandum of Association replaced by the new one).
Hardcastle and Waud Manufacturing Company Private Ltd.	... To carry on business of iron founders, mechanical engineers, manufacturers of all kinds of machinery, repair them and sell them.	To manufacture and sell furnaces, pots and all kinds of paints, colours, etc.
Ruby Theatres Ltd. (changed to M. S. Bansal Private Ltd.)	... To open cinema studios and distribution offices throughout India, etc.	To carry on the business of iron and brass founders, mechanical engineers, etc. To get, smelt, refine, dress, amalgamate and manipulate and prepare for market use metal and mineral substances of all kinds, etc. To manufacture, prepare, treat, import, export, buy, sell and deal in commodities, etc. To apply for, purchase or otherwise acquire patents, licences, concessions, etc. To enter into any agreement, contract or arrangement or other dealing, etc. To do all or any of the above things in any part of the world, etc., and generally to do any other business that may from time to time be deemed desirable, etc.
Delhi Iron and Steel Co. Private Ltd.	... To produce, manufacture, purchase, refine, prepare, import, sell and generally to deal in iron and steel in all forms.	To construct, maintain and run cinema theatres, etc., to carry on business of printing and publishing, to open, organise, maintain and manage schools and colleges, etc., to open, buy, sell, give or take on lease any land for benefit of company; to open, organise, maintain and control dispensaries and hospitals both for males and females or livestock; to carry on the business of poultry, etc.; to carry on the business of preserving and tinning of fruits, etc.; to carry on the business of cold storage.
Raza Buland Sugar Co. Ltd.	... Manufacture of sugar.	To build or contribute to the building of huts, houses, etc.; to carry on the business as financiers, concessionaires and merchants, etc.; to amalgamate with any other company; to carry on the business of hotels, restaurant, cafe, tavern, etc.; to develop and turn to account any land acquired by the company or in which it is interested and in particular by laying out and preparing the same for building purposes, etc.
R. G. Bhandari Private Ltd.	... To carry on business as contractors and engineers.	To deal in automobiles, machinery, property, building material, marketing and advertising agents.
Simla Hills Transport Service Ltd.	... Transport.	To purchase, sell, manufacture and hire out agricultural machinery, tractors, implements, earth moving machinery, engines, pumps, pumping sets, accessories and spare parts thereof. To purchase, sell, manufacture and hire out typewriters, office equipment (including steel equipment for home, office and hospital), office machines of all descriptions and accessories and spare parts thereof. To purchase, sell and manufacture paper, cardboard, strawboard and stationery of all types and to set up and run printing presses and factories, to achieve any or all of these objects.
Devi Films Private Ltd.	... To produce films.	To deal in plastic and allied synthetic materials and products.

THE HONGKONG AND SHANGHAI BANKING CORPORATION
(Incorporated in Hong Kong with Limited Liability)

Capital Authorised .. .. HK. $100,000,000 (Rs. 8,33,33,333)

Excellent progress being made around the world on General Electric boiling water reactor projects

North of Naples, Italy, on the Garigliano River, construction of the 150,000 kw nuclear power plant for SENN recently passed the halfway point. The General Electric design was selected by SENN for the nuclear power reactor after a seven man international team of nuclear experts analyzed the reactor proposals made by nine groups. The evaluation showed that the G-E boiling water reactor, using enriched uranium fuel, would provide the lowest power costs of all reactor concepts, and the simplicity of the G-E BWR design would require the lowest possible capital investment. The plant allows for an increase of 50% in kw output without major construction changes.

On the other side of the globe, General Electric Japan, Ltd. is building a direct-cycle boiling water reactor for the 12,500 kwe plant at Tokai Mura, Japan, for the Japanese Atomic Energy Research Institute (JAERI). This plant, designated JPDR, is expected to be the first nuclear power generating plant in the Far East and is presently on schedule.

In the U.S.A. two more nuclear power stations, using the G-E BWR, are under construction and on schedule. One is located at Big Rock Point on Lake Michigan and the other at the Humboldt Bay Power Plant site near Eureka, California.

Long identified as a leader in atomic development, G.E. is engaged in a widely diversified program of nuclear application. BWR plants are now being offered up to 500 megawatts, incorporating such advanced concepts as high-power density cores, pressure suppression containment and internal steam separation. Other atomic products and services include reactor subsystems, components, fuel, control and instrumentation, engineering studies, computer services, research, development and irradiation services. *For further information write to International General Electric Company, Dept. 30-20 R, 159 Madison Avenue, New York 16, N. Y., U.S.A.*

◀***The giant 160-foot containment sphere*** of the Garigliano Nuclear Power Station in Italy. The sphere, twice the size of St. Peter's dome, will house the G-E dual-cycle boiling water reactor.

Progress Is Our Most Important Product

GENERAL ELECTRIC

CALCUTTA ELECTRIC SUPPLY CORP. LIMITED

SHORTAGE OF POWER LIKELY TO PERSIST FOR THE NEXT FEW YEARS

REASONS FOR BREAKDOWN OF GENERATORS

CHAIRMAN, SIR HARRY BURN'S REVIEW

THE reasons for the breakdown of the generators at the New Cossipore Station in April last, resulting in one of the worst-ever power crises in Calcutta, were lucidly explained by Sir Harry Burn, Chairman of the Calcutta Electric Supply Corporation Ltd., in his latest annual review circulated to shareholders along with the Directors' report and statement of accounts for the year ended 31st March 1961 which were adopted at the Sixty-fourth Annual General Meeting of the Corporation held at London on 9th November 1961. The Chairman pointed out that, despite persistent requests throughout 1960 and early 1961, the Damodar Valley Corporation, contrary to its contractual obligation, had failed to supply more than 60 mw. at the time of peak demand. As a result, according to Sir Harry, it was not possible to take out of service for routine maintenance the turbo-alternators at the New Cossipore Station, which consequently failed one after another. Referring to the future, Sir Harry disclosed that the West Bengal Government, reversing its earlier decision, had granted permission for the Corporation to go ahead, with the utmost despatch, with its plan to increase the capacity of the New Cossipore Station by 50 mw.

The following is the full text of the Chairman's review:

"There were increased sales to all classes of consumers during the year ended 31st March, 1961. The total energy sold of 1,955 million units shows an increase of 138 million units over the previous year. Sales of energy have increased each year for the last 14 years and over that period sales have increased more than threefold, thus reflecting the ever-increasing need of electrical energy, particularly for industrial purposes. It is indicative of the great expansion that has been happening in India and our forecasts show that this expansion will continue. Later on in this review I refer to the grave shortage of power in the industrial areas of West Bengal and Bihar and to the extensions to your Company's plant that are being put in hand.

Pattern of Demand

"Industrial demand accounts for 90 per cent of the energy sold for power purposes. The balance is divided equally between sales to public waterworks and for domestic power, the latter being used principally for air-conditioning and refrigeration. There was a small increase in sales to the jute industry, our largest consumer and responsible for 34 per cent of our total industrial demand. An acute shortage of raw jute made trading conditions very difficult for the jute mills. Once again rolling mills and engineering workshops showed a large increase; their consumption rose by 37 million units, equivalent to an increase of 15 per cent. Next in importance are cotton mills, chemical works and paper mills; in each case, their consumption rose by 10 per cent. The five classes of industry mentioned above were responsible for 80 per cent of the Company's sales of high tension energy for industrial purposes.

"Demand for low tension industrial power expanded further with sales increasing by 9 million units to 123 million units; the number of consumers rose by over 1,200 to more than 16,700. Consumption by public waterworks increased to the extent of 4 per cent and was solely due to larger demands from the Calcutta Corporation. Sales of domestic power again showed a substantial rise, mostly due to the growing popularity of small air-conditioning units suitable for residences and small offices.

"Sales of energy for lights and fans increased by 16¼ million units to 259 million units. Housing development continues, but it mostly confined to the outskirts of the Calcutta suburbs.

"Public lighting sales have increased by approximately one million units in each of the last two years. Expansion of electric street lighting by the Calcutta Corporation has not been as extensive as hitherto.

"The Calcutta Tramways Co. Ltd. is the sole consumer for traction purposes. Improvement in their operating conditions is reflected in the increase in consumption of 2¼ million units.

Bulk Supplies

"Bulk supplies are given to some nine distributing undertakings, seven of which are owned by the State Electricity Board and the remaining two by the Riverside, (Bhatpara) Electricity Supply Co. Ltd. and the Chandernagore Electric Supply Co. Ltd. The State Board was responsible for 94 per cent of the total sales of 89½ million units and for almost all of the increase of 23 million units over the previous year. The largest State undertaking is the North Calcutta Grid, which distributes energy entirely outside the Company's licensed area.

"Sales under special contracts increased by nearly 8 million units to more than 100 million units. The bulk of those sales, and of the increase in consumption, were at our special tariff to owners of large office and residential buildings, public institutions, cinemas, and hotels. That tariff is particularly designed to give relief to our low tension distribution. The remaining consumers under special contract are the Central and State Governments, the Calcutta Corporation and the Calcutta Port Commissioners; their consumption showed little change from that of the previous year.

Revenue Account

"I have already referred to increased sales to all classes of consumers. Despite the restrictions I refer to below sales of energy for the current year continue to improve. The revenue account shows that the revenue from the sale of current rose by nearly £1 million to £9,800,000. The gross revenue exceeded for the first time £10 million. Interest received amounts to £88,305, an increase of £44,578 over the previous year and is attributable to the return on treasury bill investments and interest on bank deposits. Commensurate with higher revenues is heavier expenditure. The cost of generation and distribution rose by £530,000 to £5,088,000. Coal accounts for £414,000 of this increase. Expenditure on coal, including handling and ash disposal charges, amounted to £3,240,000 (consumption 1,293,000 tons) and accounts for 80 per cent of the total operating cost of generation. Power purchased from the Damodar Valley Corporation cost £288,000 more than the previous year. 390,406,000 units were imported, an increase of 87,850,000 over the previous year, but the power made available was insufficient to give the relief necessary to allow essential and urgent plant overhauls to be taken in hand. I will revert later to the present power position. Increases in wages include adjustments of dearness allowances and overtime rates. Cost increases in respect of materials call for no special comment and are commensurate with the expansion of the Company's system. By comparison with the previous year, administration and general establishment charges show a considerable increase. This is mainly due to expenditure in the previous year having been reduced by the writing back of a provision created during other years and no longer required. Nevertheless, there as a moderate increase in expenditure during the year under review and it will mainly due to higher salaries and wages costs. The wealth tax, for which there was a charge of £99,723 in the previous year, was abolished with effect from 1st April, 1960. The depreciation charge has risen by £31,500 to the figure of £960,600. The balance on revenue, after taking into account the depreciation charge, has increased by £213,000.

Taxation

"I will now deal with the net revenue account. The Indian tax charge is £1,164,387 as compared with a charge of £595,923 for the previous year which was materially eased by the adjustment of provisions set free on settlement of appeals relating to assessments of previous years. It will be noted from the Directors' report that the sum of £356,541 has been transferred to net revenue account in order to equate the Company's clear profits with its reasonable return. This transfer has been made from reserves created in the past specifically for this purpose, and leaves a balance, at the end of the year, of £187,816 all of which it is expected will be utilised during the current year. When these reserves are exhausted it is essential that the Company's tariff structure should be able by itself to earn the reasonable return and thus ensure the provision of the internal finance that will be required during the next three or four years in connection with the major extensions at New Cossipore to which I refer below. Initial allowances for depreciation eased the burden of taxation during the period these were operative. This acceleration of the depreciation charge as permissible for tax purposes connoted higher assessments and therefore higher taxation in future years and as stated above the Company has now entered this period. Our rates have been held unaltered for the last 15 years, but now with the steadily rising costs of generation, distribution, repairs and maintenance and an increased tax charge it has become necessary to place the structure of the Company's tariffs under close examination with the object of ensuring that, when required, rates are so adjusted as to earn the reasonable return permitted by the Electricity (Supply) Act, 1948. An investigation into the Company's rate structure is, therefore, now being carried out.

"The allocation for the contingency reserve fund has been made as required by the Act and it is proposed to make the customary contribution to the retiring gratuity fund. Provision has been made for the debenture interest and sinking fund charges. The continued expansion of the Company's operations makes it essential to conserve our finances to meet the consequent capital expenditure. The Board have, therefore, deemed it advisable to appropriate a sum of £550,000 to special appropriations for plant expansion, replacements and contingencies. Dividends on the preference stock amounting to £63,650 have been paid and it is proposed to pay a final dividend of 4 per cent (actual) for the year. The balance left to be carried forward on net revenue account is £124,585.

Balance-sheet

"The balance-sheet shows an increased holding in Treasury bills, £979,300, as against £771,700 at 31st March 1960. Thus, funds are available to meet current commitments in respect of plant and other payments falling to be made in the United Kingdom. Payments of Indian tax falling due during the concluding months of the year, to which reference was made in last year's review, have reduced the deposits with bankers to £55,000. At the end of the previous year these deposits stood at £531,000.

"Capital expenditure during the year amounted to £1,332,000, and was almost entirely for our transmission and distribution system. By far the greater part of the expenditure was on mains and service connections. As a provision for capital expenditure during the year there was available the sum set aside for depreciation of £960,000 and the allocation to special appropriations for plant expansion, replacements, and contingencies amounting to £550,000, thus making a total provision of £1,510,000. During the period 1st January 1951 to 31st March 1961, the outlay on capital expenditure was £13,400,000, which was met by the internal finance made available over that period from depreciation reserves and appropriations for plant expansion and replacements.

Power Supply Position

"In July of 1960, Mr. Macpherson and Mr. Hobson visited Calcutta and met the Chief Minister, officials of the Government and of the State Electricity Board and representatives of the Damodar Valley Corporation. The Company's assessment of the supply position and the impending shortage of power it revealed was conveyed at a conference convened for the purpose and permission was requested to install a fourth set at the New Cossipore generating station as providing a further contribution to the generating capacity available in the State as a whole. Permission for this project, to which reference was made in last year's review, was not then forthcoming.

"I was in Calcutta this year throughout the month of February and discussed the matter with the Chief Minister when he informed me that we were then at liberty to go ahead with the project. During my visit, I also met the Chairman of the State Electricity Board, the Chairman and the General Manager of the Damodar Valley Corporation and leaders of commerce and industry in Calcutta and West Bengal with whom I had talks on the power situation. I went over all sections of our organisation and was afforded ample evidence of the care and attention which our staff devote to their work. Dr. Roy, the Chief Minister, and his officials take a keen interest in the Company's activities. They are fully aware of our problems and the service we render to the industrial and residential communities. I desire to say how much the Board appreciate the assistance given by Dr. Roy over the issue of import licences and supplies of the necessary indigenous materials.

"Our Secretary, Mr. Colley, who was Commercial Manager in Calcutta for a number of years, accompanied me during my visit and carried out an inspection of the various sections with which he is concerned.

"Special attention continues to be given to the training of Indian engineers. Quite a number of our permanent staff were originally appointed under our technical training scheme which was started in 1946 for young Indian graduates chosen by a selection committee in Calcutta for training in the United Kingdom. In addition, short refresher periods of training in the United Kingdom are given to selected members of our permanent staff. We are grateful to the Electricity Council, the Area Boards, and various manufacturing companies who provide facilities for this training.

Breakdown of Generators at Cossipore

"In last year's review I referred at length to the question of the future supply within the Company's licensed area and recounted the steps which had been taken over the decade and a half that had elapsed since the end of the war to meet the growth of demand on the system. I also related the circumstances which brought the Damodar Valley Corporation into the picture and how our expectations for an adequate supply of power from this source—as provided for by agreements entered into in April 1954, and January 1959 had not been fulfilled. We anticipated, however, that by the end of 1960 the Damodar Valley Corporation would have commissioned sufficient new generating plant to have enabled them to honour their commitment to us of 95 mw. for the year 1960-61. Unfortunately, our hopes were not realised and despite our most persistent requests throughout 1960 and early 1961 to the Damodar Valley Corporation to afford us power up to their full contractual obligation, they never found it possible to afford us a supply of more than 60 mw. at the time of our daily system peak. As a result, we were unable to take out of service for routine maintenance the turbo-alternators at our New Cossipore station all of which were long overdue for overhaul. I regret to have to report that all three failed on load, the 50 mw. machine on the 9th February this year followed by the two 30 mw. machines on the 1st and the 11th April. All three turbines failed by a breakdown of blading and this can be directly attributed to the necessity to keep the machines in commission beyond the time when they were due for normal overhaul. The Company took the view that they would be failing in their duty to consumers had they not accepted the considered risk of keeping these machines in service at a time when they were entitled to expect an early augmentation of the import from the Damodar Valley Corporation. The 50 mw. Machine was recommissioned on the 7th May and the 30 mw. Machine No. 2 on the 25th May, thus restoring the Company's total effective generating capacity to about 275 mw. The remaining machine required extensive overhaul which was not completed until the 21st August on which date the machine was again on full load. I wish now to express the Board's high appreciation of the work carried out by the Agent Dr. Bowker, and the Chief Engineer, Mr. Kanga, and the station engineers and those members of their staff concerned in getting the station on load again and in dealing with the allocation of power during this period of emergency—their hours were long and the work arduous. I also desire to pay a warm tribute to the turbine manufacturers and the craftsmen they so promptly sent out to remedy matters and get the machines into commission with the minimum of delay.

"The maximum demand on the Company's system at the time of these failures was approximately 385 mw. sent out and although the Damodar Valley Corporation were able, at times, to increase their export to 85 mw. (and for a short period to 105 mw.) the outage of the New Cossipore plant, totalling 110 mw., entailed load shedding on an extensive scale. In shedding this load, the Company endeavoured at all times to maintain its low tension supplies, particularly to hospitals, pumping stations and other essential services, the restrictions falling mainly on high tension consumers, including, unfortunately, those taking high tension supply for domestic purposes. The Board desire to express their very great appreciation of the voluntary acceptance by its large industrial consumers, particularly the constituents of the Indian Jute Mills Association and the Indian Engineering Association, of restrictions on their demands on the Company at the time of its peak loads during this crisis. These restrictions, which were devised to spread the burden on the most equitable basis over all sections of industry, mitigated to a very considerable degree the hardships imposed on other sections of the community.

Additional Supplies

"Although the breakdowns to which I have referred greatly increased for the time being the impact on the public of a shortage of power in the City, a shortage is bound to continue to a lesser extent for the next few years, since the demand in the area is already outstripping the Company's maximum generating capacity augmented by the offtake available from the Damodar Valley Corporation. As I explained in my review of last year, the Company has been assured by Government that they will provide the ultimate solution of the problem in the shape of a bulk supply through the West Bengal State Electricity Board, first some 60 mw. (not now expected to be available until January 1964) from Government's Durgapore Station and thereafter increasing supplies from the station they intend to build in the Bandel area near Calcutta which will increase their supply to some 120 mw. by January 1966. The Company now anxiously await these additional supplies and our best wishes are with the State Board in the speedy accomplishment of the various power projects they are now engaged on. We trust that the construction and commissioning of the plant will proceed smoothly as planned.

"In the meantime, I am glad to be able to report that Government, reversing the decision communicated to us a year ago, have now agreed that we should, with the utmost despatch, proceed with our plan to increase the capacity of our New Cossipore Station by the installation of a further machine of 50 mw. Finance in respect of expenditure to be incurred in India has been arranged on reasonable terms and, advised by our consultants, Messrs. Merz & McLellan, we are now engaged in negotiating the necessary contracts. It is hoped to commission this machine, at an all-in cost of some £3,500,000, towards the end of 1963, some 12 months before the State Board anticipate having their new Bandel Station in operation.

Growing Load

"Even before the recent crisis, it was apparent that the growing load on the Company's system was bound, over the next few years, to exceed the total power resources available and we, accordingly, requested Government to arrange for the control of the distribution and consumption of electricity under Section 22B of the Indian Electricity Act. Government, accordingly, appointed an Electricity Supply Control Advisory Committee on whose advice they issued orders that no new or additional supply of electrical energy for a connected load of 100 kw. or above shall be given to any impending or existing consumer as the case may be without the prior sanction of Government. Provided the full contractual supply of 100 mw. is available from the Damodar Valley Corporation this restriction, taken in conjunction with the continued voluntary agreement by certain large industrial units to restrict their demands at the time of the Company's evening peak loads, should, as far as can be seen, enable the Company without further substantial load shedding to carry out proper and regular maintenance of its plant and thus alleviate the position until our new plant is commissioned two years hence.

"Following the recent breakdowns at New Cossipore to which I have referred, there has been a certain amount of ill-informed criticism in the Press and in particular it has been suggested that the Company's generating plant is largely worn out. This is far from true, as in fact the plant at New Cossipore (now completely repaired) and that at Mulajore are in first class condition and capable of many years of useful service, while the Southern Station, though old and not so efficient, has been well maintained and will continue to provide a satisfactory source of power especially during peak load periods.

"Mr. W H. Thompson, C.S.I., has intimated his intention to retire from the Board after the annual general meeting and I, therefore, take this opportunity of stating how much we appreciate his services to the Company and the keen interest he has taken in its affairs. He was Secretary from 1936 to 1945 and became a member of the Board in the latter year. Mr. Thompson had a distinguished career in the Indian Civil Service and, on retirement in 1922, he became General Manager of the Bengal Telephone Corporation Ltd. He also represented the Bengal Chamber of Commerce on the Bengal Legislative Council until he returned to the United Kingdom in 1936. During the war he was Assistant Secretary, Ministry of Home Security in charge of the Air Raid Warning System. Mr. Thompson has our best wishes for pleasant years of retirement which he contemplates in the countryside of his choice.

Tribute to Staff

"It affords me much pleasure to express our thanks to the staff and employees in Calcutta. The expansion of the Company's operations and their devoted efforts in meeting the calls on their services bear witness to the interest and zeal they take in the affairs of the Company.

"Mr. Henderson demitted his charge as Agent on 31st March 1961, having carried out his responsible duties with care and competence. Mr. Canning, the acting Chief Engineer, also retired after many years of yeoman service particularly at the generating stations. We wish them both happy years of retirement.

"Dr. Bowker, our Chief Engineer, took over the post of agent as from 31st March 1961. He has a wide experience of the Company's affairs, having been with us since 1936, is well qualified to carry out the duties of agent and has amply illustrated this during recent months. I also desire to record the Board's appreciation of the able manner in which Mr. Colley has carried out his duties as secretary."

The report and accounts were adopted.

Note:—*The above statement is not a report of the proceedings of the annual general meeting referred to.*

EXTERNAL AND INTERNAL INFLUENCES ON CREDIT POLICY

(*Concluded from page 941*)

valent of £11,000,000 by Nigeria (for its separate reserve) and for the discharge of the balance of the Basle indebtedness (apart from £18,000,000 which is being funded into a three-year loan from Switzerland), the total gold and convertible currency reserves dropped by only £8,000,000. This suggested that the true increase must have been at least £120,000,000 or so, the biggest monthly gain for a decade.

Bank Rate Six Per Cent

At this point, the authorities abandoned, not surprisingly, their effort to hold the Bank rate at 6½ per cent. In the preceding weeks they had been trying hard to put an effective break on the falling bill rate, by repeatedly ensuring a squeeze on funds in the short loan market and forcing the discount houses to finance a part of their portfolios by taking 'last resort' loans from the Bank of England—expensive loans, because they not only pay Bank rate but because they have to be taken for at least a week. These tactics, however, failed to prevent a steep decline in Treasury Bill rates in response to the keen competition for bills. The weekly average allotment rate which had dipped to 6½ per cent on the morrow of the first cut in the Bank rate, was down to well under 5¾ per cent by the last tender in October; and immediately after the Bank rate came down to 6 per cent the bill rate fell further to just under 5-7/16 per cent.

The authorities have emphasised, just as they did on the previous occasion, that the Bank rate cut does not portend any relaxation of the restraints on the domestic economy; in particular, all the quantitative and 'directive' restraints on credit are fully maintained. There will be no relaxation, it is affirmed, until it can be seen that a growth in exports justifies a resumed expansion of the economy—or, rather, a faster expansion, since the authorities are still estimating that there should in any case be some net growth in 1962. Though export prospects are now regarded as good, and likely to become better still, the latest export figures (those for September) were rather disappointing. Meanwhile, evidence accumulates to show that the domestic measures are, indeed, bringing about some easing of the pressure of demand against available productive resources, most notably perhaps in labour market.

PROGRESS OF CO-OPERATIVE MOVEMENT

DECISIONS OF NEW DELHI CONFERENCE

By Our Special Correspondent

NOTWITHSTANDING the key role assigned to the development of the Co-operative Movement by the National Development Council in November 1958 and the studies since completed of various aspects of implementation, co-operation still remains an academic subject on which platitudes can be repeated with impunity. The exception, of course, is co-operative farming, which enlivens political controversy and in turn secures greater emphasis from the Prime Minister. In a week in which film stars and Commonwealth Press delegates held the limelight in the capital, the third Conference of State Ministers of Co-operation was dull fare for the Press and Public. Even so, it was notable for the fortright address from Mr. Nehru, in which he deplored the lack of interest in the eastern States in promoting the co-operative movement and commended those which are forging ahead.

Causes for Backwardness

It is well known that Madras and Bombay had, since the early decades of this century, built up a co-operative movement from small beginnings and the Punjab in the north had also laid sound foundations. That experience has proved helpful to them in the new context. Several factors favoured these two areas in developing co-operative institutions: Mr. Nehru mentioned one, that the *ryotwari* system had favoured growth of co-operatives, while the *zamindari* system had kept the masses illiterate and backward. Higher percentages of literacy in the Southern and Western Zones helped the emergence of men with initiative and sense of responsibility; the villages themselves were generally of medium and large-size, so that there were enough men in each to form a primary credit society and keep it going. But above all these social factors which favoured the movement was the selfless work of a band of devoted public workers whose names are still cherished by co-operators in these areas. Recalling this, Mr. Nehru argued that, in the same way, individuals must now come forward to build up co-operatives, with the State only providing the facilities like funds and institutions for training.

Fallacious Assumption

But a fallacious assumption behind this argument is that other conditions remain unchanged. What is now sought is not a natural growth of the movement as before but a planned expansion according to certain targets, whether rigid or flexible, irrespective of the social and economic differences between the various areas. How far the movement could still remain voluntary in the strict sense of the term has been doubtful. Excessive official control and interference is undesirable anywhere, but, to a large extent, the guidance needed to direct the movement on right lines must inevitably come from the State Governments and the Reserve Bank of India. Education and Community Development should also help each village to find trustworthy men but surveillance cannot altogether be dispensed with, especially when the record of many credit societies in the matter of collection of old outstandings is poor; the policy of granting loans in future, to landless tenants and small cultivators on personal security has emphasised the need for supervision as the risks are greater. The Rural Credit Survey took this view, but there has since been a rebound to the opposite, because of complaints of official control—not all of which were inspired by worthy motives. At present, there is need to train and indoctrinate officials on right lines, in order to help them to bring the proper approach to their task.

Over the first two Plans, the number of primary agricultural credit societies (which is the main yardstick of growth) has doubled from 105,000 to 210,000, and their membership has gone up from 44 lakhs to 170 lakhs in 1960-61. Loans advanced by them have risen from Rs. 23 crores to Rs. 200 crores. The third Plan proposes to increase the number of societies by only 20,000 (or 10 per cent), but to expand membership to 370 lakhs, short and medium-term loans to Rs. 530 crores and long-term credit to Rs. 150 crores. The emphasis is mainly on revitalisation of moribund societies; 42,000 societies were taken up for this purpose in the second Plan period and 52,000 are proposed for similar treatment in the next five years.

These figures tell an impressive tale of success. The weakness, however, lies in the uneven progress referred to earlier. The gap between the advanced and the backward groups is shown by the following figures:

	No. of societies (30-6-60)	Members (1,000)	Advances (Rs. lakhs) 1959-60	Societies working at a loss %	Overdue as % of outstandings
Advanced Group:					
Andhra Pradesh	12,527	1,282	1,750	27	14
Gujarat ..	7,053	750	2,126	33	25
Maharashtra ..	17,816	1,531	2,937	21	27
Madras	9,589	1,584	1,737	24	11
Backward Group:					
Assam	3,070	159	137	34	55
Bihar	16,322	705	129	37	55
Orissa	6,520	369	235	35	20
West Bengal ..	13,076	571	227	27	48

While in Bihar and West Bengal the number of societies is comparable to that of Maharashtra and Andhra Pradesh, their membership is less than half and their total advances constitute only a small fraction of the latter. Even for this low volume of credit, the overdues are very high (except in Orissa). It is not surprising that the Prime Minister described the record of the second group as "too painful for words."

Personnel

The Ministers of these latter States met separately and the only momentous decision they were able to take was that Ministers and officials should be excluded from the institutions which they now overlorded—as if that by itself could bring about a sea-change. Rural population covered by co-operative credit was only about 8 per cent in Assam and Bihar in 1958-59, as compared to 29 per cent in Madras, 26 per cent in Maharashtra and 36 per cent in the Punjab. While most of the States are training senior and middle grade officers in sufficient numbers, shortage of trained personnel is observed mainly at the lowest levels. Madras holds the best record, with 6,425 trained junior officers up to 31st March 1960, as against 2,310 in Andhra, 4,779 for Gujarat and Maharashtra together, 2,934 in U.P. and much smaller numbers in other States.

Described as "far-reaching," the main recommendation of the State Ministers' Conference in New Delhi was decentralisation and de-officialisation of co-operative training and education and transfer of this responsibility to State and National Co-operative Unions. In other respects also, the Ministers passed on their responsibilities to others. In the field of co-operative marketing, success so far has been due entirely to State initiative exercised through the National Co-operative Development and Warehousing Board; 1,869 primary marketing societies have been set up during the second Plan with State participation in capital and 600 more are to be set up in the third Plan period (excluding the sugarcane supply societies which exist in large numbers already in Bihar and U.P.). As these societies will have to handle agricultural produce increasingly, State Ministers have recommended that a basic price policy for agricultural commodities should be laid down by the Government. The conference also called upon the State Bank of India to take an active part in granting facilities and credit—which it is already doing. These, however, have already been accepted as part of third Plan policy.

Processing Societies

Co-operative processing is another field in which some fresh thinking is needed. In the work of preparing some agricultural products for the market, there is, indeed, great scope for expansion of processing activity and 378 units (other than sugar factories) have been set up during the second Plan period. Here there is scope for further expansion. But, in the sugar industry, about 41 units have come up (of which 30 are in production) and already there is excess capacity. Also, some of these now resemble what Mr. S. K. Dey described as "a private limited company with a co-operative signboard."

The conference had little to add to the recommendations of the Committee on consumers'

(Continued on page 966)

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; Lebanon; Libya; Morocco and Tunisia; these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

Don't throw away parts and money...

It sounds like an impossibility, we know, but it is none the less true. Many hard-to-replace parts costing valuable money are literally thrown away because they have been ruined due to faulty lubrication.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

AGRICULTURAL LABOUR IN MAHARASHTRA

STUDY GROUP'S SUGGESTIONS FOR ECONOMIC BETTERMENT

IN spite of the solicitude shown by the ruling party for agricultural labour, nothing very tangible has been done so far to improve their lot. The benefits, if any, that might have accrued to them during the first and second Plans are not the result of measures directly aimed at benefiting agricultural labourers as such but the incidental results of schemes which had other objects in view. The consequences of this neglect of one less vociferous and unorganised section of the community were brought to light by the Second Agricultural Labour Enquiry which revealed a decline in the income and employment of agricultural labourers. Many have, of course, doubted the validity of this conclusion but they have not provided sufficient evidence to support their contention, which at best is only an impression.

Foremost among the States which have of late shown keen awareness of the problem of landless agricultural labour and have included in the third Plan specific programmes for the economic betterment of landless labour is Maharashtra. The Maharashtra State Consultative Committee on the third Plan appointed a Study Group under the chairman of Prof. D. R. Gadgil to examine the economic condition of landless agricultural labourers in the State, generally, and with particular reference to the benefits derived by them under the first two Plans and to suggest specific schemes for improving the lot of agricultural labourers for inclusion in the third Plan. The report of the Study Group, which was placed before the Consultative Committee in May 1961 and which adopted it, has been now published. The various recommendations made by the Study Group are said to have been taken into account in framing the State's third Five-year Plan.

Terms of Reference

The Study Group had very limited terms of reference. It was asked (1) to examine generally the economic condition of the landless agricultural labourers, with particular reference to the benefits derived by them under the measures taken by the State Government in the first two Five-year Plan periods and (2) to suggest schemes *other than land reforms* for improving the economic condition of landless agricultural labourers. The Study Group has defined the term "landless agricultural labour" in much the same way as the 1951 census defined cultivating labourers, namely, as households whose major share of earnings accrues from wage employment in agricultural work. According to the 1951 census, the number of cultivating labourers and their dependents, in the geographical area which is now Maharashtra, was 4.733 million. They constituted 14.79 per cent of the population of the State, 20.80 per cent of the rural population and 23.12 per cent of the population dependent on agriculture. The corresponding percentages for the country as a whole is 12.56, 15.19, and 17.99, respectively. This comparison shows that the proportion of agricultural labourers to the total population, the rural population and the population dependent on agriculture is more in Maharashtra than in the rest of India. Assuming an increase of 9 per cent in the population of the State during the first Plan period, the Study Group estimates the population of landless agricultural labour in 1955-56 at 5.16 million.

Negligible Effort

The Study Group notes that the efforts made during the second Plan period in the State deliberately and directly to improve the economic condition of landless agricultural labour were negligible and confirms the All-India experience that whatever benefits accrued to them were the indirect results of schemes undertaken with other objectives in view. The main factors responsible for the indirect benefits derived by landless agricultural workers, according to the Study Group, are: (1) intensification of agriculture, (2) grant of land, (3) increase in the level of construction activity in rural areas, (4) increase in industrial employment in rural areas, and (5) increase in tertiary activity owing to increase in production in rural areas. The Study Group estimates that, as a result of the developments said to have taken place in the above sectors during the second Plan period, the growth in *per capita* incomes of landless agricultural labour during the second Plan must have been much lower than the average for the State population as a whole.

According to a Survey of Agricultural Labour conducted in 1956-57, the *per capita* income of agricultural labour in the State was about Rs. 92. The estimated national income of the State during the year was Rs. 331 *per capita*. The *per capita* income of landless agricultural labour was thus only 31 per cent of the average for the State as a whole. On the basis of the estimated comparative growth of *per capita* income during the second Plan, the *per capita* income of landless agricultural labour at the end of the second Plan works out to 28 per cent of the average for the State as a whole.

The Study Group is of the opinion that the present disparity between the economic condition of the landless agricultural labour and that of the State population as a whole should be narrowed down to some extent at least during the third Plan period. The third Plan aims at securing a rise in national income of over 5 per cent per annum. This would imply an increase in *per capita* income of the State of about 16-17 per cent during the third Plan period. The Study Group has, therefore, recommended that the target for the growth in *per capita* income of landless agricultural labour during the third Plan should be fixed at least at double the rate for the State population as a whole, that is, at 33 to 34 per cent.

Other Measures

A number of measures have been recommended by the Study Group to secure an increase of this magnitude in the *per capita* income of agricultural labourers. In the opinion of the Study Group, an important means available for betterment of the economic condition of landless agricultural labour is the grant of land to them by means of ceilings on land holdings. It has, however, not dealt with this solution, as it is outside its terms of reference. Though the Study Group has taken note, for the purposes of calculation, of what the authorities have declared to be the likely extent of settlement on land which may be expected during the third Plan as a result of land reforms proposed at present, the Group has confined itself mainly to the consideration of other measures for bringing about an improvement in the economic condition of landless agricultural labour.

Industrialisation

Among the measures suggested by the Study Group, the most important is development of industries in rural areas. According to it, among the rural population, landless agricultural labour should have the least inhibitions in changing their present vocation in favour of industrial employment. By industrial employment, the Study Group means industry, including mining, based on sufficiently modern technique. It does not set much store by the deliberate adoption or continuance of backward techniques as a means of expanding industrial employment among landless agricultural labour. Industrial employment is more secure, more continuous and less uncertain than the kinds of employment at present available to landless agricultural labour, namely, agricultural employment, construction employment or tertiary employment. A large increase in the *per capita* income of landless agricultural labourers cannot be achieved, asserts the Study Group, unless progressively larger portions of the labour force of the landless agricultural labour are absorbed in technically efficient industrial employment.

According to the Study Group, in the present state of availability of entrepreneural ability, capital, know-how and social and economic overheads, the main scope for immediate industrial development in rural areas lie mainly in co-operative agricultural processing industry, namely, conversion of paddy into rice, oilseeds into oil and cake, seed cotton into pressed cotton, sugarcane into sugar, etc. The Study Group is of the opinion that, with the experience already gained in Maharashtra, the entire scope for additional processing capacity that arises in the third Plan period as a result of additional production should be absorbed in the co-operative sector. It is, however, of the view that, while co-operative agricultural processing activity at the preliminary stage will have to be expanded to the fullest extent, the processing activity at the secondary stage may not always be feasible for being undertaken by the growers' co-operatives on account of the larger risks involved and the more complicated technical know-how required. This would, according to it, be a sphere for the promotion of the "joint sector." It believes that it will be increasingly difficult for the private sector by itself to participate in industry based on agricultural produce or its co-operatively processed by-products and that the joint sector has thus a definite contribution to make in extending industrial development based on rural physical resources.

But even the joint sector, according to the Study Group, might be selective and cautious and will confine itself to well-established industrial uses of easily procurable produce of the rural areas. It has, therefore, suggested the setting up of District Industrial Boards, on the pattern of the Housing Board or the State Electricity Board, on a pilot basis for the intensive utilisation of locally available materials for supporting industry in rural areas. Further, under it, according to the Study Group, the resources and capacity to bear risks can come from the Government, while the day-to-day execution and management of such industrial projects are left to a body which can take quick decisions. The merit of a District Industrial Board, in the Study Group's opinion, is that it can harness non-official leadership in a district for undertaking a programme of this kind with enthusiasm. The Study Group has suggested that, to start with, the experiment of industrialisation through District Boards may be tried on a pilot basis in three districts of the State, one each from the Vidarba, Marathwada and Western Maharashtra regions.

Adjustments

According to the estimates of the Study Group, the programme of industrialisation prescribed by it, coupled with developments during the third Plan in other sectors such as intensification of agriculture, grant of land, increase in construction and tertiary activities can be expected to increase *per capita* income of agricultural labour by only 20.4 per cent, as against the target of 33.4 per cent. There is thus a gap of 13.0 per cent. The gap will have to be filled by making suitable adjustments in other sectors. One such adjustment suggested is more concentrated effort to link agricultural labour with programmes of milk production and poultry farming. It has recommended that at least 25 per cent of the Plan outlay provided for developing milk and poultry production in rural areas should be utilised for the benefit of landless agricultural labour. Another adjustment suggested is taking up of additional construction activity. The Study Group has prescribed a minimum programme of contour bunding, road construction, afforestation and local development work, involving a total outlay of Rs. 25 crores. The Study Group has struck a note of caution that care should be taken to see that local building materials, which generate local employment, are not abandoned in favour of materials bought from outside. It has also emphasised the need for guarding the employment potential of the construction activity against the temptation of mechanisation, though it concedes the necessity for the use of machines in certain types of construction activity. The Study Group has concurred with the suggestion of the Planning Commission that a Board should be established at the State level to keep a constant watch over the employment situation and to make recommendations regarding the programme for the economic betterment of landless agricultural labour.

Criticism

From this brief account of the maior recommendations of the Study Group, it will be seen that, on the one side, the Group has based its estimate of the discrepancy between the *per capita* income of agricultural labour and that of the rest of the population, on data the accuracy of which has been questioned even in official circles. Its conclusion is, therefore, valid only to the extent that the data, which are still under scrutiny, prove correct.

CUT
AIR CONDITIONING COSTS
CUT
with BLUE STAR-WORTHINGTON
Packaged Air Conditioners
5, 7½, 10 tons
Now made in India

Here's how BLUE STAR-WORTHINGTON Packaged Air Conditioners offer you a four-way saving in air conditioning costs.

CUT COSTS on tonnage. Single units range from 5 to 10 tons, operate independently.

CUT COSTS on installation. Units can operate without ductwork.

CUT COSTS on subsequent expansion. Single units connect up into multiple systems with minimum alterations.

CUT COSTS on operation and maintenance. Every unit is engineered, built and individually performance-tested in BLUE STAR'S own plant to WORTHINGTON specifications.

For a better air conditioning job, call in BLUE STAR

PSBS-W 79/61

HEAVY CHEMICALS MAKE HEADWAY

LARGE DEMAND FOR SULPHURIC ACID ENVISAGED

THE development of heavy chemicals, which serve as essential raw materials for a wide range of other important industries, is a significant indicator of the tempo of overall industrial expansion. It is, therefore, only appropriate that heavy chemicals, particularly sulphuric acid, should have been assigned a vital role in the industrial development programmes envisaged in the third Plan. A clear picture of the present position and prospects of these industries has been provided in the latest annual report of the Development Council for Heavy Chemicals (Acids and Fertilisers), submitted to the Central Advisory Council of Industries. The output of sulphuric acid rose from only 165,200 tons in 1956 to 350,000 tons in 1960. The production of nitric acid, too, increased from 1,360 tons to 5,200 tons mainly as a result of additional demand for the production of fertilisers and explosives. The output of phosphoric acid went up from 220 tons to 1,600 tons during the same period, reflecting increased demand for phosphates, mainly for water treatment purposes. The output of hydrochloric acid has been maintained at about 10,500 tons. The tempo of manufacture of other chemicals, such as copper sulphate, alum, aluminium sulphate (ferric as well as iron-free grades) has been steadily gaining momentum, and the domestic demand for them is now met exclusively from domestic production.

Third Plan Target

During the third Plan period, the total capacity for sulphuric acid is proposed to be stepped up from the present level of 476,000 tons to 1.75 million tons annually. The target of production is set at 1.5 million tons. The growth of sulphuric acid production in the public sector is visualised in conjunction with fertiliser production, by-products recovery and pickling operations at the steel plants, petroleum refining, manufacture of organic intermediates and drugs and uranium extraction from the ores. There are at present 40 units engaged in the manufacture of sulhpric acid. Seven new units, with a total capacity of 92,100 tons, went on stream during 1960-61. These units have been put up by the following undertakings: (1) Messrs. Keshoram Cotton Mills Ltd., Calcutta, (2) Hindustan Steel, Bhilai, (3) Hindustan Steel, Durgapur, (4) Atul Products, Atul, (5) Indian Explosives Ltd., Gumia, (6) Andhra Fertilisers Ltd., Tadopallo, and (7) Travancore Titanium Products, Trivandrum. Some of these units have not been operating throughout the year; this explains the apparent underutilisation of capacity in 1960. In fact, the Development Council states that the other units were working to full capacity, except for planned shutdowns during the maintenance periods. Despite this, stocks with producers are "not unduly high" and even shortages are reported from certain areas in Bombay. All the producers have been marketing the product in conformity with the ceiling price for the acid stipulated by the Development Wing, Government of India.

The following table shows the installed capacity and production of sulphuric acid in 1960-61 and the corresponding targets for 1965-66:

(In '000 tons)

	1960-61	1965-66
Capacity	476	1,750
Production	363	1,500

The Development Council points out that the most economic size for the production of sulphuric acid is a unit with a capacity for the production of 50 tons per day. Licences for new units to be issued during the third Plan period may, therefore, be for not less than the above unit size of 50 tons per day, except under special circumstances. The Council estimates the current annual requirements of sulphuric acid at 600,000 tons and expects it to go up to 1.25 million tons by the end of the third Plan; this means a doubling of consumption in the next five years. Table in column one shows the demand for sulphuric acid from different industries as in 1960-61 and at end of the third Plan, as estimated by the Development Council.

Demand for Sulphuric Acid

(In thousand tons)

Consuming industry	1960-61	1965-66
Superphosphate/ammonium phosphate	180	580
Ammonium sulphate (acid process)	115	147
Pickling of iron and finished steel	47	83
Rayon yarn and staple fibre	93	190
Aluminium sulphate	20	40
Titanium dioxide	9	27
Petroleum refining	8	20
Bichromates	3	7
Phosphoric acid	2	6
Alum	3	6
Hydrochloric acid/sodium sulphate	2	4
Nitric acid	3	4
Magnesium sulphate	2	2
Copper sulphate and ferrous sulphate	2	4
Miscellaneous (tanning, dyestuffs and intermediates, dyeing, chromic acid, drying of chlorine and industrial explosives)	110	180
Total ..	603	1,314

The Development Council's estimate of demand, it may be noted here, does not tally with the figures of demand provided by the Planning Commission. According to the latter, the demand for sulphuric acid was 360,000 tons in 1960-61, which would go up to 1.5 million tons by 1965-66. It is possible that these two sources adopted different bases for working out these figures. If we follow the estimate of the Development Council, the demand from fertilisers, which is the largest consumer of sulphuric acid, will go up from about 300,000 tons in 1960-61 to 730,000 tons by 1965-66. Rayon and staple fibres, steel and aluminium sulphate are the other major consumers.

Sulphur

One of the major difficulties in the progress of sulphuric acid manufacture is the absence of domestic sources of sulphur. The present requirements of sulphur are met entirely from imports. Current consumption of sulphur by all industries taken together is of the order of 200,000 tons annually. Consumption of sulphur, it is estimated, will rise to 537,000 tons by the end of the third Plan. The estimates of consumption of sulphur in 1960-61 and the projection for 1965-66 are given in the following table:

(In tons)

Consuming industry	1960-61	1965-66
Sulphuric acid	175,000	437,000
Crude sulphur:		
Carbon disulphide	25,000	50,000
Sugar	8,000	12,000
Hydrosulphite of soda	3,000	6,000
Paper	2,000	3,000
Miscellaneous industries like starch, dyestuffs, etc.	3,000	6,000
Refined sulphur:		
Sugar	6,000	6,000
Rubber	2,000	4,000
Matches	2,500	4,000
Pharmaceuticals	1,500	3,000
Industrial explosives, fireworks, etc. ..	500	1,000
Agricultural dusting	2,000	5,000
Total ..	230,500	537,000

Efforts are now being made to discover domestic sources of sulphur. The Development Council has this to say on this question:

"Although we have no domestic resources of sulphur, large reserves of pyrites located at Amjor in Bihar can be profitably used for the production of sulphur therefrom. There is only one plant in the world producing sulphur from pyrites on a commercial sale, namely, the Orkla Metals in Norway. About 500 tons of Amjor pyrites was tested in the Norwegian plant and since the initial trials are not discouraging, it is understood that a few thousand tons of the ore required for large-scale trials in the Norwegian plant are proposed to be mined and shipped. In view of the strategic nature of sulphur and the present dependence of diverse industries on the use of imported sulphur, the Development Council has urged Government that no efforts should be spared for setting up domestic production of sulphur from Indian pyrites. Vast deposits of iron pyrites have been proved in the Amjor area in the district of Shahabad, Bihar. According to the Indian Bureau of Mines, the proved reserves are of the order of 80 million tons and the semi-proven reserves are of the order of 300 million tons. Proving work is still in progress.

"Besides Amjor, deposits of pyrites have been reported at Ingaldahl near Chitaldurg (Mysore State), about 300 miles from Mangalore. The investigations carried out by the State Department of Mines and Geology have proved the existence of approximately 1.5 million tons of pyrites, with a sulphur content of 25 to 30 per cent. There are indications that the deposits are more extensive and further exploratory work is in progress. It is understood that the progress of the excellent work so far done at Ingaldahl by the Mysore Department of Mines could be expedited by provision of more drills. Since pyrites offer scope for reducing our dependence on imported sulphur, the Council recommends that prospecting for pyrites at Ingaldahl should be intensified and all necessary assistance rendered on priority basis."

Imports of sulphur cost the country about Rs. 3 crores in foreign exchange annually now, and will be Rs. 7-8 crores by the end of the third Plan. In view of this, the authorities will do well to make vigorous efforts towards prospecting and developing indigenous sources of sulphur, and thereby reduce dependence on imports and encourage the growth of sulphuric acid industry.

The development of sulphuric acid will help the steady expansion of fertiliser industry in the country. Currently, demand for fertilisers is far in excess of production. Imports of fertilisers, particularly ammonium sulphate (Rs. 7.73 crores as in 1959-60), urea (Rs. 3.87 crores), ammonium sulphate nitrate (Rs. 2.05 crores) and calcium ammonium nitrate (Rs. 1.62 crore), aggregate about Rs. 15 crores annually. At present, ammonium sulphate, urea, double salt and ammonium chloride are the only nitrogenous fertilisers being produced in the country. Installed capacity increased by 47,000 tons nitrogen (N) when the plants for the production of urea and double salt at the Sindri Fertilisers were commissioned. Production of ammonium chloride at Sahu Chemicals as co-product of soda ash has commenced with installed capacity for 40,000 tons. The construction of the new ammonia plant at F.A.C.T. based on electrolytic hydrogen has been completed, thus augmenting fertiliser production capacity by 10,000 tons N. F.A.C.T. has also installed the necessary plant for processing ammonia to ammonium phosphate fertiliser, this being the first unit in India for the production of the complex fertilisers. The total installed capacity at present amounts to 144,575 tons N. Fertiliser factories are under construction at Nangal, Rourkela and Neyveli. The Nangal factory is expected to go on stream shortly; those at Rourkela and Neyveli will reach the production stage in 1962 and 1963 respectively. Tenders have been received for setting up a large factory at Trombay and the contracts for the supply of equipment and erection have been finalised.

The installed capacity for nitrogenous fertilisers at the end of the second Plan is estimated at 244,400 tons N. This, however, falls far short of the second Plan target of 382,000 tons N. The shortfall is attributed to the foreign exchange shortage and the consequent difficulties for getting plant and machinery from abroad. The capacity is proposed to be expanded to one million tons N by the end of the third Plan. Of this, 920,000 tons N have already been licensed, the gap to be fulfilled being only 80,000 tons N. The Development Council has suggested that, in view of the increasing demand for fertilisers, their capacity target in the third Plan should be revised upward to 1.25 million tons N per annum.

Phosphatic Fertilisers

The demand for phosphatic fertilisers is also increasing very rapidly. The output of this type of fertilisers rose from 13,750 tons of P_2O_5 in 1956 to 60,000 tons by 1960, or a fourfold increase. But phosphatic fertilisers have also failed to fulfil the second Plan target of 120,000 tons P_2O_5 owing to foreign exchange difficulties. During the third Plan period, capacity is proposed to be raised to 500,000 tons P_2O_5. In this connection, the Development Council has drawn pointed attention to the disproportionately lower consumption of phosphatic fertilisers, as compared with nitrogenous fertilisers, the present ratio being 1 : 4. It has pointed out that, in the long-term interests of crops and soils, the intake of fertilisers should preferably aim at a ratio of 1 : 1 between the two types of fertilisers. For improving the offtake and consumption of phosphatic fertilisers, the Development Council has recommended the following measures:

"(a) Loan facilities should be made equally available for purchase of phosphatic fertilisers and mixed fertilisers, and not merely for the purchase of nitrogenous fertilisers alone as at present.

"(b) Progressively increasing quantities of nitrogenous fertilisers should be supplied to the mixed fertiliser manufacturers in corresponding degrees to the quantities released for direct use of nitrogen alone.

"(c) Supplies of nitrogen should be regulated to render it difficult to procure nitrogen alone for straight application and, at the same time, ensure adequate supply of mixed fertilisers.

"(d) The nitrogen sold for direct application should be appropriately priced and the mixtures should be subsidised and thus made cheaper for the farmer to the extent necessary to make its use attractive, as compared to the use of nitrogen alone."

The Development Council has also urged the manufacturers to take the following steps in order to encourage the use of phosphatic fertilisers:

"(1) Every manufacturer or a group of manufacturers should maintain an organisation or advisory service cells consisting of a sufficient number of agronomists to work in co-operation with the local agricultural department, extension services, community development department, etc.

"(2) Pamphlets should be brought out regularly in the regional languages pointing out the advantages in the use of balanced quantities of N and P.

"The manufacturers should make free supplies of superphosphate for demonstration trials.

20 NOV 1961 963 PUBLIC DEPARTMENT

SALES AND PROFIT OF TUBE INVESTMENTS EXPAND

RESERVES REPLENISHED—DIVIDENDS UNCHANGED

THE annual report of the Tube Investments of India Ltd. (Chairman: Sir A. Ramaswami Mudaliar, Madras) for the year ended 31st July 1961 makes happy reading. Experiencing buoyant trading conditions, the sales of the Company's well diversified line of products have increased handsomely from Rs. 379.08 lakhs to Rs. 573.13 lakhs, showing a rise of well over 50 per cent. The improved industrial activity has nevertheless brought about a rise in the various items of expenditure. The cost of raw materials and stores consumed, for example, is up from Rs. 208.62 lakhs to Rs. 315.26 lakhs, expenses on salaries, wages and benefits to employees have risen by Rs. 14.05 lakhs to Rs. 52.89 lakhs, and other expenses have increased quite substantially by Rs. 21.85 lakhs to Rs. 77.42 lakhs. Despite these increases, the gross profit is higher by as much as Rs. 53.47 lakhs at Rs. 140.44 lakhs. After deducting the sums earmarked for depreciation (Rs. 27.74 lakhs, as against Rs. 19.50 lakhs) and taxation (Rs. 48.00 lakhs, as against Rs. 23.00 lakhs), the year's trading shows a net profit of Rs. 64.70 lakhs, as compared with Rs. 44.47 lakhs in the preceding year.

With a larger profit now available, transfer to reserves has been stepped up from Rs. 16.84 lakhs to Rs. 30.71 lakhs. Of this amount, the development rebate reserve gets Rs. 9.46 lakhs, (as against Rs. 16.84 lakhs), general reserve Rs. 17.00 lakhs (nil) and dividend equalisation reserve and development, replacement and research reserve Rs. 4.25 lakhs (nil). The ordinary dividend, which has once again been maintained at 10 per cent subject to deduction of tax, claims Rs. 25.00 lakhs, leaving a substantial carryforward of Rs. 12.03 lakhs, as compared to Rs. 3.04 lakhs brought in.

The progress made by the Company since its reorganisation under the present set up a few years ago is presented synoptically in the comparative table given below:

(In lakhs of rupees)

	For the year ended 31st July			
	1961	1960	1959	1958
Sales (net)	5,73.13	3,79.08	3,28.82	3,04.70

Ordinary dividend ..	25.00	25.00	16.84	7.00
Carry forward	(10%)* 12.03	(10%)* 3.04	(10%) 0.41	(10%) 0.04

* Subject to deduction of tax. The figures for the year ended 31st July, 1959 relate to a period of thirteen months.

The financial position of the Company as disclosed by its balance-sheet as at 31st July 1961 is highly satisfactory. The share capital of Rs. 250 lakhs, all in equity shares of Rs. 100 each, is supported by reserves and surplus amounting to no less than Rs. 168.85 lakhs. Secured loans, outstanding on the date of the balance-sheet, aggregate Rs. 145.72 lakhs, in addition to unsecured loans of Rs. 67.59 lakhs and current liabilities and provisions of Rs. 134.77 lakhs. The gross block is carried in the Company's books at a cost of Rs. 397.55 lakhs and, on deduction of Rs. 93.05 lakhs as the depreciation earned to-date, yields a net block of Rs. 304.50 lakhs. To this has to be added Rs. 113.41 lakhs as the capital work-in-progress. The total net block thus works out to Rs. 417.91 lakhs. Current assets, including investments, loans and advances, aggregate Rs. 349.02 lakhs which are just sufficient to cover all liabilities with the exception of share capital and reserves.

It will be recalled that the Company came into existence towards the beginning of 1958, following the merger of the Tube Products of India Ltd. with the T.I. Cycles of India Ltd. Since this merger, the various factories under the management of the two constituent companies have continued to function as independent divisions of the Company. During the year, the working of these divisions presented a mixed pattern. Despite power cut and shortage of water for a short period, the production of cycles by T.I. Cycles of India was satisfactory, with the component output showing an increase as compared with the previous year.

A delay in the production of saddles was experienced by the Wright Saddles of India due to late receipt of certain plant. Trial runs have, however, been already made and found satisfactory. Bicycle saddles are expected to be in the market soon.

The expectations expressed in an earlier report regarding the installation and commencement of production by the cold rolling mill, to be put up by Tube Products of India, could not be realised due to the late arrival of plant and machinery. It is now anticipated that this will go into production by the end of the current year. The tube mill could not be worked to capacity during the year as a result of shortage of raw materials and power. It is hoped that the addition of the cold rolling mill will, to a large extent, safeguard the requirements of raw materials, provided, of course, that the supply of steel strips from indigenous sources is properly maintained. With the commissioning of draw benches and ancillary equipment during the year, it became possible to increase the range of tubing by the introduction of four new types, namely, cycle brake tubing, pump tubing, general mechanical tubing, and high quality cylinder bore tubing for shock absorbers. Electrical conduit tube production has also now commenced.

The working of the two subsidiary companies was also satisfactory. The T.I. Diamond Chains Ltd., now a public limited company, started production of bicycle chains at its temporary factory at Avadi. The permanent factory at Ambattur is under construction and it is expected that the Company will move into its new premises early next year when it should be possible to increase the production of bicycle chains and start that of industrial chains.

T.I. Miller Ltd., another public limited company, has already obtained the necessary import licences for plant and machinery for which orders have been placed. According to current expectations, production of lamps, for which the Company has been floated, will be started by the close of the current year.

As a step towards further diversification of its interests, the Company asked for and has now received a licence for manufacture of metal sections. Necessary factory space to house the plant has been found and building work has started. The unit is expected to go into production by late 1962.

The present market quotation of the Company's Rs. 100 fully paid ordinary share is Rs. 282.00 cum-div. On ex-div. basis, the net yield works out to about 2.6 per cent.

The Canara Industrial and Banking Syndicate Limited, Mysore, which has a paid-up capital of Rs. 47,21,419, has been granted consent to the issue of capital of Rs. 50 lakhs in 500,000 (B) class ordinary shares of Rs. 10 each for cash at a premium of Re. 1 per share to the existing shareholders on rights basis. The proceeds will be utilised for strengthening the Bank's capital structure.

BROOKE BOND EARNS LESS

DIVIDEND SLASHED

THE severe drought conditions that prevailed throughout North Assam during 1959-60, the effects of which were felt even in the succeeding year, have very adversely affected the working results of the Brooke Bond Estates India Ltd. (Chairman: J. P. Hannay, Calcutta) for the year ended 30th June 1961. There was a decline of as much as 13 per cent in the crop yield, the actual output receding from 1,407,000 kg. to 1,216,000 kg., and the quantity of tea sold during the year was lower at 1,167,000 kg., as against 1,445,000 kg. in the previous year. The higher sale price of Rs. 5.31 per kg. (after deducting all tea sales charges and cost of exports), as compared with Rs. 5.00 previously, which the Company could realise during the year has no doubt gone a long way towards remedying the situation, but, even then, the net effect is still on the adverse side. The sale proceeds of tea have declined by Rs. 9.84 lakhs to Rs. 68.13 lakhs and the gross profit, with no compensatory reduction in standing charges, by about Rs. 5.00 lakhs to Rs. 12.45 lakhs. The somewhat smaller decrease in gross profit as compared with that in sales is to be ascribed to a higher closing stock of tea which stands at Rs. 7.92 lakhs, as against Rs. 5.92 lakhs a year before.

Provision for depreciation is slightly higher at Rs. 2.62 lakhs, as compared with Rs. 2.42 lakhs, whereas the sum provided for taxation is reduced by Rs. 1.85 lakh to Rs. 3.35 lakhs, due no doubt to the smaller taxable profit. These provisions leave a net profit of Rs. 6.48 lakhs which is lower by Rs. 3.34 lakhs than the previous year's figure. The sharp decline in net profit has naturally meant a cut in the transfers to the various reserves which have been pruned to Rs. 1.64 lakh, as against Rs. 4.27 lakhs previously. As a consequence of the Preference Shares (Regulation of Dividends) Act 1960, the preference shareholders are to get a little less on their holding than what they had been getting hitherto. Accordingly, a sum of Rs. 2.00 lakhs (as against Rs. 2.10 lakhs) has been set aside to meet this liability. Since the balance now available is not found enough to declare ordinary dividends at previous levels, the rate of dividend (subject to deduction of tax) payable to ordinary shareholders has been cut from 15 per cent to 10 per cent. The dividend distribution absorbs Rs. 3.50 lakhs, leaving a carryforward of Rs. 1.63 lakh, which is lower by Rs. 91,000 as compared with the amount brought in.

The working results of the Company for the past four years are set forth in the following comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sales proceeds of tea	68.13	77.97	77.49	72.86

Average price per kg. realised ..	5.31	5.00	5.05	..

* Subject to deduction of tax.

The financial position of the Company is quite satisfactory. The share capital consists of Rs. 35 lakhs in preference shares of Rs. 100 each fully paid and another Rs. 35 lakhs in ordinary shares of Rs. 10 each fully paid. This is backed by reserves and surplus amounting to Rs. 17.02 lakhs. Unsecured loans and current liabilities and provisions together aggregate Rs. 29.26 lakhs. On the assets side, the gross block possesses a book value of Rs. 97.20 lakhs and, on adjusting for depreciation, yields a net block worth Rs. 61.57 lakhs. Capital expenditure, incomplete at cost, is valued at Rs. 1.46 lakh. Current assets, inclusive of investments, as well as loans and advances, are placed at Rs. 53.25 lakhs, nearly twice as much as all current liabilities and loans put together.

Although the Company's estates were subjected to severe climatic conditions in the course

(Continued in previous column)

(Concluded from next column)

of the year, the Directors confidently report that no lasting damage has been done. All areas are now growing well and those bearing immature tea have fully recovered from the effects of the drought. Replacement of uprooted areas continues and permission has been obtained to plant new extensions of approximately 34 hectares. A number of regrading experiments were successfully completed which led to the realisation of a higher than the average price for the Company's teas sold in the Calcutta auctions. Modernisation plans for equipment at various factories also continued during the year.

As for the prospects for the current year, the Directors state that, according to present indications, the 1961 world crop is expected to reach a record high level and that market prices have already started running well below those obtained last year.

The Rs. 10 fully paid ordinary share of the Company is currently being quoted on the Calcutta Stock Exchange at Rs. 15.56 cum-div. The net return on investment on ex-div. basis works out to 4.7 per cent per annum.

DECCAN SUGAR SUFFERS SETBACK

PROFIT DOWN BY A QUARTER

ANOTHER sugar company belonging to the Parry Group, the fortunes of which have been affected by adverse trading conditions, is the Deccan Sugar and Abkhari Company Ltd. (Chairman: Mr. C. R. Srinivasan, Madras). Although both the factories of the Company (one at Samalkot and the other at Pugalur) were able to step up their production during the year ended 31st May 1961, the profit has suffered a substantial fall. The Samalkot factory, for instance, produced 12,633 metric tons of sugar from 140,523 metric tons of sugarcane in 1960-61, as against 11,358 metric tons of sugar from 119,578 metric tons of sugarcane in the previous year. The Pugalur factory produced 24,795 metric tons of sugar from 252,410 metric tons of sugarcane in the year under review, as against 18,725 metric tons of sugar from 186,844 metric tons of sugarcane in the preceding year. But sale proceeds have declined sharply by more than 21 per cent from Rs. 361.23 lakhs in 1959-60 to Rs. 281.91 lakhs in 1960-61. This was clearly due to the policy of controlled releases of sugar followed by the Government of India which not only prevented sales keeping pace with the increase in production but actually accounted, according to the Directors' report, for a fall in sales. This state of affairs is reflected in a rise in closing stocks of finished goods and goods in process from Rs. 83.90 lakhs as at the end of May 1960 to Rs. 176.23 lakhs.

Lower sales realisation has been instrumental in bringing down the gross profit from Rs. 40.26 lakhs for 1959-60 to Rs. 30.03 lakhs, a fall of 25 per cent. The Managing Agents' remuneration takes up Rs. 2.20 lakhs, as against Rs. 3.46 lakhs in the preceding year. The provision for depreciation is slightly lower at Rs. 6.68 lakhs, as against Rs. 7.18 lakhs for 1959-60. Taxation absorbs Rs. 2.60 lakhs less at Rs. 10.50 lakhs, as compared with the previous year. Despite these lower provisions which have a prior charge on the gross profit, the net profit has suffered a recession of Rs. 5.82 lakhs or as much as 35 per cent to Rs. 10.65 lakhs. As a result, the cover for the dividend has narrowed down. The Directors have, therefore, found it necessary to cut the dividend to 21 per cent taxable from 25¾ per cent taxable paid for the previous years. They have also reduce the appropriation to reserves from Rs. 4.95 lakhs to a mere Rs. 1.45 lakh.

Financial Position

The balance-sheet as at 31st May 1961 discloses a strong financial position. The paid-up capital of Rs. 46·84 lakhs (Rs. 39.84 lakhs in equities of Rs. 5 each and Rs. 7 lakhs in 7 per cent cumulative preference shares of Rs. 5 each) is supported by reserves and surplus of Rs. 44.94 lakhs. In addition, there are Rs. 10.03 lakhs in taxation equalisation reserves. The reserves are thus actually in excess of the paid-up capital. It has no secured and unsecured loans. Current liabilities and provisions are of the order of Rs. 209.01 lakhs and are adequately covered by current assets amounting to Rs. 239.17 lakhs. Besides, there are investments of the value of Rs. 3.68 lakhs, the market value of which is shown at Rs. 4.61 lakhs. The gross block at Rs. 148.93 lakhs stands satisfactorily depreciated at Rs. 65.15 lakhs. In addition, there are building, machinery and plant, etc. under construction valued at Rs. 2.82 lakhs.

The Rs. 5 paid up ordinary shares of the Company are currently quoted at Rs. 12.35 *cum*-final dividend (13.5 per cent.) On an *ex*-dividend basis and at the proposed rate of dividend they approximately yield 6.1 per cent per annum, net of taxation. A year ago, these shares were standing at Rs. 13.70 *c-d*. There has thus been a capital depreciation of about 10 per cent over the year.

COMPANY AUDITORS

The Department of Company Law Administration, Union Ministry of Commerce and Industry, has clarified that the Institute of Chartered Accountants of India, constituted under the Chartered Accountants' Act, 1949 is the only statutory body, whose members, along with Restricted State Auditors: are entitled for appointment as auditors of companies under Section 226 of the Companies Act. The Department has issued this clarification, since it has been noticed that a society called the "All India Society of Corporate Accountants and Auditors" has been registered in Calcutta reportedly for training up students in accountancy. This society is not recognised either by the Union Government or by the Institute of Chartered Accountants and its members are not eligible for appointment as auditors of companies or to undertake any other audit work required by law to be done only by chartered accountants. The Department would advise that engaging any member of this Society for work, which is statutorily required to be performed by a chartered accountant, would not amount to compliance with the relevant provisions of the Company Law and invite the penal consequences flowing from non-compliance.

EXTRUDED ALUMINIUM CAPACITY

An additional aluminium extrusion press, with a licensed yearly capacity of 2,500 tons of extruded sections, has now gone into operation at Alupuram, near Alwaye (Kerala). India's first commercial extrusion press for aluminium had started working at the same works in March 1955 with an annual capacity of 1,200 tons of sections. Thus the country now has a total extruded aluminium capacity of 3,700 tons. The new press will meet the demand for a variety of aluminium shapes required by the building, transportation and agricultural industries. The new press will make larger and heavier sections than produced hitherto, which will vastly increase the range of application for extruded aluminium. Among the new types of extrusions will be irrigation tubing up to 6" diameter, sections for curtain walling and entrance doors, large sections for trucks and rail coaches, structural sections for bridges and airfield runway matting. On account of the overall shortage of aluminium metal which persists, this expansion however may not enable, the Company to run the presses to full capacity for a while.

The Glass Corporation Private Limited, Dholpur, Rajasthan, with a paid-up capital of Rs. 1.00 lakh, has been accorded consent to issue bonus shares of the total value of Rs. 35,000 in the ratio of seven bonus shares for 20 shares held on capitalisation of the Company's reserves to a like extent.

	(2½%)	(Nil)
Carried forward	1	(—) 1,06

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.
* After providing for depreciation.

Extracts from the Directors' Report: The results for the year have not been much upto expectations as there was again a labour strike in March 1961 for a brief period of above one month, which hampered production. The other re-rolling plant which was also imported from Japan is still under construction at Sodepur and the directors hope to put the same into commission during the current accounting period.

The Company's indebtedness to the Bank of Tokyo Ltd. has been further reduced by Rs. 75,000 during the current year. As considered and desired by the board of directors the Company has been granted an industrial licence for the new undertaking of a wire-rod mill and application has been made for the import licence of requisite machinery, for the same. The directors regret to point out that the billets which constitute the raw materials of the company, have throughout the year remained in short supply, in spite of their repeated efforts. They also have to observe that the prospects of increased supplies of billets during the coming years are not very bright.

Accounts in brief as at 30th April 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	5,00,000	Gross block	18,40,771

	(12%)	(15%)
Carried forward	19	28

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: It transpires that the depreciation provided by the Company on its fixed assets in the previous years, was in excess of the statutory scale by over Rs. 4,60,000. A sum of Rs. 4,60,000 has, accordingly, been written back and transferred to capital reserve.

Barrah factory commenced crushing on 7th November, 1960 and closed on 28th May, 1961 with a crush of 15,00,456 Quintals or 40,20,062 (26,49,700) mds. Chanpatia factory crushed 14,43,745 Quintals or 38,68,121 (32,30,980) mds. of cane, crushing having started on 7th November, 1960 and continued upto 29th May, 1961; the quantity of cane crushed at both the Company's factories, being the maximum available. The recovery obtained at Barrah factory was 9.12 per cent as against 9.49 per cent in the previous year; while at Chanpatia factory it was 9.40 per cent, as against 9.28 per cent last year. The lower recovery at Barrah is mainly attributable to the general deterioration in the quality of cane coupled with the longer duration of the crushing season.

The Company's Estates continued to produce cane both for crushing and seed purposes. Cane plantings for the current season in the areas serving the Company's factories, have been on an increased scale as compared to the last year.

Both the factories have been maintained in good condition. Rehabilitation reserve has been utilised to the extent of Rs. 4,80,000. As a result of the implementation of the Wage Board recommendations, a recurring expenditure of Rs. 2,46,000 has been incurred during the year under review.

The Central Government, with effect from 28th September, 1961, have lifted all the controls on movement, distribution and prices of sugar. Releases, however, will continue to remain under Government control to prevent any violent fluctuations in prices. By the promulgation of the Sugar (Regulation of Production) Ordinance 1961, sugar production in the ensuing crushing season is being restricted. It remains to be seen, how far these belated measures will be found adequate to tackle the problem created by surplus sugar stocks.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	18,00,000	Gross block	86,85,573
Reserves and surplus	54,74,064	—Depreciation	59,25,607

* Paid-up capital consists of 1,80,000 ordinary shares of Rs. 10 each, fully paid up.

Zenith Steel Pipes Ltd.

(*Secretary*: Mr. R. H. Toprani, Bombay.)

First Annual General Meeting—27th November.

Extracts from the Directors' report: The accounts for the period from 5th August 1960 to 30th June 1961 show a surplus of Rs. 23,584 after transferring an amount of Rs. 1,13,915 to the "expenditure for construction account" and after providing Rs. 21,350 for taxation. The directors recommend that this surplus be carried forward to the next year's account.

The issue of 3,50,000 equity shares of Rs. 10 each offered to the public met with a very good response. A final call of Rs. 5 per share has since been made and the equity shares have now become fully paid up.

Khopoli, which is about 65 miles from Bombay, has been selected for the site of the factory at which ample supply of water is available. Besides, the site is easily accessible by road and rail. In selecting this site, the directors have also taken into account the needs of the future development.

The Company has entered into an agreement with the well-known West German firm of Messrs. Mannesmann-Export G.m.b.H., for the supply of plant and machinery the shipments of which are expected to be completed before the end of November 1961. The factory and other buildings are under construction. According to the present indication, it is hoped, that the factory would come into operation in the second quarter of 1962. A technical collaboration agreement has also been concluded with Messrs. Mannesmann Meer AG. of West Germany and the same has received the approval of the Government of India.

The Company has already concluded an agreement with the Industrial Credit and Investment Corporation of India Ltd., Bombay, for a foreign exchange loan of the equivalent to about Rs. 40 lakhs and also for a rupee loan of Rs. 15 lakhs to meet the cost of capital expenditure. An arrangement has also been made with them for borrowing additional foreign exchange equivalent to about Rs. 2.44 lakhs to meet enhanced requirements as a result of revaluation of Deutchemark.

The directors have also decided to make pipe sockets for which an industrial licence has been received and, it is hoped, that with an additional foreign exchange of the order of Rs. 3.50 lakhs agreed to be made available by the Industrial Credit and Investment Corporation of India Ltd., it will be possible for the Company to undertake this additional line of manufacture.

Further orders for machinery and equipment of the value of about Rs. 8 lakhs have been placed since the close of the year under report.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	34,21,562	Gross block	3,69,008
Reserves and surplus	23,584	—Depreciation	4,291
Other liabilities	2,51,993		
		Net block	3,64,717
		Building under construction	6,80,944
		Expenditure for construction a/c	1,13,915
		Loans and advances	4,09,329
		Investments	5,600
		Cash	20,07,218
		Miscellaneous expenditure	1,15,516
	Rs. 36,97,139		Rs. 36,97,139

* Paid-up capital consists of 7,00,000 equity shares of Rs. 10 each—Rs. 5 per share called up. Calls in arrears amount to Rs. 78,488. Since the period under report the final call of Rs. 5 has been made, making the equity shares fully paid up.

Steel Products Ltd.

(*Board of directors*: Mr. S. G. Khaitan; Mr. G. N. Khaitan; Mr. B. L. Rajgarhia and Mr. O. N. Jajodia) Regd. Office: Calcutta.

64th Annual General Meeting—Held on 31st October.

Working Results:

	For the year ended 30th April (In thousand rupees)	
	1961	1960
Sales	24,09	31,03
Closing stock	9,11	7,51
Gross profit	62	1,13
Transfer to depreciation	19	21
,, ,, development rebate	2	9
,, ,, taxation	20	36
Net profit	21	47
Adjustments	(—) 5,52	(—) 5,89
Appropriations:		
Total available balance	21	47
Proposed dividend (taxable) C. Preference	19	20
To adjustment of loss brought forward	2	27
Carried forward	(—) 5,50	(—) 5,52

N.B.—Adjustments represent the debit balance brought forward from the previous year.

Extracts from the Directors' report: The Board recommends payment of dividend on preference shares for the year ending 30th April 1961, in accordance with the Preference Shares (Regulations of Dividend) Act, 1960. This proposed dividend comes to Rs. 19,500 and has been calculated by increasing the 5 per cent tax-free preference shares by 30 per cent i.e. to 6½ per cent. Owing to smallness of profit it has not been possible to clear any arrears of dividend this year as settled at the Extra-Ordinary General Meeting held on 30th day of January 1961.

It will be observed that the sales of the company for the present year are Rs. 24,08,933 against Rs. 31,03,478 for that of the previous year. The drop in sale is due to the fact that the Company experienced considerable difficulty in obtaining iron and steel material required for normal production. Due to shortage of material the workers were laid off for about 5 months during the year under review. This factor has resulted in the drop of sales and the net profit of the year under review.

Accounts in brief as at 30th April 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	5,80,000	Gross block	6,35,655

1959-60 Season's Crop	401	..
1960-61 Season's Crop	1,021	..
Total	1,422	..

Construction of the new machinery hall, and installation of mechanical graders and other equipments have all been completed, and the Company is now having mechanical grading of all Plantation Coffee. In view of this the Company is now in a position to complete the curing more expeditiously in future years.

Installation of 150 K.V.A. Transformer has also been completed and the Company is awaiting H.T. supply from the Electricity Company. The cost of transformer and equipments amounting to about Rs. 12,000 will come in only in 1961-62 accounts.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	2,50,000	Gross block	5,85,499
Reserves and surplus	4,33,595	—Depreciation	1,83,905
Other liabilities	8,30,509		
		Net block	4,01,594

Transfer to Managing Agents' remuneration	14	20
,, ,, Secretaries' and Treasurers' remuneration	4	Nil
,, ,, depreciation	39	8
,, ,, development rebate reserve	20	Nil
Adjustments	1,39	3
Total debit balance carried forward	6,35	1,39

N.B.—Adjustments include only the debit balance brought forward from the previous year.
* Gross loss after providing for sundry adjustments; Managing Agents' remuneration; Secretaries' and Treasurers' remuneration; depreciation and development rebate reserve.

Extracts from the Directors' report: The directors regret to report that during the year under review there was a fall in the production

and the turnover which affected the working results of the year adversely. The loss for the year has gone up considerably as compared to the earlier year in view of the adjustments made and bad and doubtful debts written off. Full depreciation at income-tax rates has been provided. Development rebate reserve as required under the Income-tax Act has also been provided.

The directors are glad to report that during the current year the production and sales are expected to go up and they hope that the working results will show improvement.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,08,500	Gross block	9,70,006
Reserves	29,700	—Depreciation	6,60,147
Other liabilities	17,81,994	Net block	3,09,859

Carried forward	97	1,94

N.B.—Adjustments include only the balance brought forward from the previous year.

† Calculated at 6.5 per cent. in accordance with the provisions of the Preference Shares (Regulations of Dividends) Act, 1960.

Extracts from the Directors' report: The Mills remained closed during the period covered by this report but the loom hours were again sold to other Mills within the McLeod Group. The godowns and part of the Main Mill Building have been leased to the Food Department, Government of India, for the storage of foodgrains. The revenue obtained from the sale of loom hours and rent of godowns has again enabled the Company to show a profit.

Accounts in brief as at 31st May 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,00,000	Gross block	82,35,736

Hindustan Wire Products Ltd.

(*Chairman*: Mr. Benu Gopal Bangur, Calcutta.)

Registered Office: Patiala.

Annual General Meeting—30th November.

Extracts from the Directors' report: The accounts of the Company for the year ended 31st March 1961 shows a loss of Rs. 3,87,108 which the directors propose to carry forward. Depreciation could not be provided for due to losses.

In the beginning of the year under report production was going on smoothly, but thereafter labour troubles started in the Factory and the labourers went on strike which resulted in a considerable loss of production. However, settlement was arrived at with the labourers and since then the production has improved.

Services of foreign technicians were availed of by this Company for improving the quality of its products and also for making necessary alterations in the machines to bring down the cost of production. This has resulted in considerable improvement. The Company's products are in good demand and it is expected that sales will go up.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	12,50,000	Gross block	15,14,922
Debentures	5,00,000	—Depreciation	47,538
Reserves	1,63,998		
Other liabilities	82,78,516	Net block	14,67,380
		Current assets	21,12,514
		Cash	13,986
		Miscellaneous expenditure	900
		P. L. a/c (deficit)	3,87,108
	Rs. 99,51,806		Rs. 99,51,806

* Paid-up capital consists of 1,25,000 equity shares of Rs. 10 each, fully paid up. Out of this 72,979 equity shares of Rs. 10 each are held by Belsund Sugar Co., Ltd., the holding company.

TEXTILES

(*Concluded from page 942*)

commended by the Working Group and considered by the Silk Board, envisages a target of as much as 5.25 million lbs. of raw silk, a rise of 1.95 million lbs. as compared with the output of 3.30 million lbs. in 1960. The State Governments put up proposals amounting to Rs. 965.44 lakhs for achieving the target. In view, however, of the ceiling of Rs. 550.00 lakhs fixed by Planning Commission, the State Governments were advised suitably to revise the proposals. The ceiling, together with the sum of Rs. 150 lakhs earmarked for central schemes and Board's administration, brings the total plan allocation to Rs. 70 crores as against Rs. 10 crores recommended by the Working Group. The sericulture industry provides employment to 2,799,164 persons (2,764.164 part-time and 35,000 wholetime). The average annual earning of a household is about Rs. 80 in univoltine mulberry area and Rs. 350 in multivoltine area. The earning in the case of non-mulberry *tassar* and *eri* is Rs. 120 and Rs. 110, respectively. The workers engaged in the filatures, as well as in charka and cottage basin reeling establishments, are paid daily wages; the average annual earning is placed at about Rs. 300. It is proposed to increase the earnings of sericulturists by introducing improved techniques in rearing and also by increasing the number of rearings in a year.

PROGRESS OF CO-OPERATIVE MOVEMENT

(*Concluded from page 958*)

co-operation, though it recognised this is an important sphere of activity requiring attention. There has been a setback to consumers' societies, which have declined from 9,757 to 7,168 in the last decade; only a third of these are running at a profit, though they cater to the more educated members, whose numbers have increased and who have every reason to take interest in maintaining them during a period of rising prices and adulteration of foodstuffs.

With such a wide non-controversial field available for strengthening co-operative institutions through practical measures, there was not much purpose in discussing the more complex problems of pooling land in co-operatives. Organisational ability must first grow sufficiently in expanding service co-operatives. It will be difficult to fix responsibility or apportion blame for shortcomings, so long as it is assumed that de-officialisation alone holds the key to success.

NEW DELHI, 6*th November*.

(*Delayed in transit*)

LABOUR

(*Concluded from page 961*)

As regards its recommendation for increasing the employment opportunities in the countryside, the Study Group reiterates the need for industrialisation which has been stressed time and again by various committees and commissions. The Study Group lays much store by the development of co-operative agricultural processing industry for providing employment to agricultural labour. In fact, it goes to the extent of saying that it provides the main scope for immediate industrial development in rural areas. It is difficult to share the Study Group's optimism regarding the efficacy of co-operativisation of agricultural processing industry to create employment opportunities and raise *per capita* income for the reason that successful running of co-operative agricultural processing industries requires a kind of leadership and initiative among the villagers which simply does not exist. The alternative is to attract private entrepreneurs by offering sufficient inducements to them to start agricultural processing or manufacturing industries which will provide employment and increase output. The Study Group has not only overlooked the practical difficulties in the way of establishing and running processing units on a co-operative basis but also leans heavily on the increase in agricultural production during the third Plan period, which itself is subject to so many uncertainties. A passing comment of the Study Group betrays its ideological, as against the pragmatic, approach to the entire question. It says that one of the important means available for betterment of the agricultural labour is the grant of land to them by means of ceilings on landholdings. Apart from the poor consolation of being an owner of a strip of land, which is insufficient to support a labourer and his family, redistribution of land by itself will do nothing either to increase productivity or to create more employment in the rural areas which should be the primary aim of any programme of rural reconstruction.

Notice

THE BRITISH BURMAH PETROLEUM COMPANY LIMITED

(*Registered under the English Companies Act*)

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Fiftieth Annual General Meeting of the Company will be held at Noble Chambers, Parsi Bazar Street, Fort, Bombay, on Thursday, the 21st December, 1961, at 4.30 p.m. (S.T.), for the following purposes:—

(*a*) To receive the Balance Sheet and Statement of Accounts for the year ended 31st March 1961, together with the Reports of the Directors and Auditors thereon.

(*b*) To declare a Dividend.

(*c*) To elect a Director in place of Mr. Tricumdas Dwarkadas, who retires by rotation and being eligible offers himself for re-election, and for that purpose to consider, and if thought fit, to pass the following Resolution as an ordinary Resolution, of which Special Notice as required by Section 185 of the English Companies Act, 1948, has been received by the Company:—

"RESOLVED THAT Mr. Tricumdas Dwarkadas who has attained the age of 74 years and who retires by rotation, be and is hereby re-elected a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 185 of the English Companies Act, 1948, shall not apply to him."

(*d*) To elect a Director in place of Mr. P. S. Mistry, who retires by rotation and being eligible offers himself for re-election.

(*e*) To appoint Auditors and fix their remuneration.

A Member of the Company entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote, instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,

THE BRITISH BURMAH PETROLEUM CO. LTD.,

F. S. PANTHAKI,
Acting Secretary.

NOBLE CHAMBERS,
PARSI BAZAR STREET,
FORT, BOMBAY.
16*th November* 1961.

The Transfer Books of the Company will be closed from Tuesday the 5th December 1961 to Wednesday the 20th December 1961.

If the Dividend as recommended by the Directors will be passed at the Meeting, payment of the same will be made on and after 29th January 1962, to those Members whose names stand on the Company's Register on Tuesday the 5th December 1961.

Shareholders are requested to notify any change in their addresses without delay.

MONEY STRINGENT

(*From Our Own Correspondent*)

BOMBAY, 15*th November*

Conditions in the short-term money market continued to remain stringent for the major part of the week under review. The inter-bank call money rate, which had spurted by ½ per cent to 4½ per cent last week, ruled at that level throughout the week. Towards the close of today, the market turned slightly comfortable for the borrowers, but the call rate remained unchanged. Other rates were unchanged as under:

Notice money:	Per cent
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3¾
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91-days' Government of India Treasury Bills disclosed that, as against an invitation for Rs. 2 crores, the amount offered and accepted was the same. The average rate of accepted tenders remained unchanged at 2.52 per cent per annum. The 91-days' intermediate Treasury Bills sold from the 8th to 11th inst. aggregated Rs. 35 lakhs, as compared with Rs. 24 lakhs last week. Their sales are being continued from the 15th to the 18th inst., both days inclusive.

The statement of affairs of the Reserve Bank of India for the week ended 10th November 1961 discloses an expansion of Rs. 42.27 crores in notes in circulation, as compared with the previous week. This is on top of a rise of Rs. 22.01 crores witnessed last week. As the notes held in the Banking Department have also gone up by Rs. 4.98 crores, total notes issued have advanced by Rs. 47.25 crores. Foreign securities held in the Issue Department are unchanged at Rs. 116.86 crores, but the total foreign assets at Rs. 142.60 crores have improved by Rs. 5.20 crores, thanks to the addition to the balances held abroad by that amount. This is apparently due to the latest untied loan of £5 million (about Rs. 6.6 crores) granted by the U.K. Government to India. Deposits of the Central Government have risen by Rs. 2.54 crores, but those of the other Governments have shrunk by Rs. 7.44 crores. Deposits of Banks are higher by Rs. 3.49 crores. Reserve Bank's holdings of Government of India Treasury Bills have registered an increase of Rs. 21.63 crores. Investments, however, display a sharp decline of Rs. 49.85 crores following an increase of a like amount in the rupee securities held in the Issue Department. Other loans and advances; which include advances to scheduled banks against usance bills also have increased by Rs. 12.89 crores to Rs. 154.70 crores.

A contraction of Rs. 8.94 crores in demand deposits and an expansion of Rs. 1.24 crore in time deposits are disclosed by the statement of affairs of the scheduled banks for the week ended 3rd November 1961. The deposit liabilities of the State Bank of India have risen by Rs. 1.04 crore. The banks borrowed Rs. 10.04 crores more from the Reserve Bank, of which Rs. 5.28 crores were accounted for by those against usance bills. Their borrowings from the State Bank of India of demand and time nature also increased by Rs. 1.39 crore and Rs. 8.42 lakhs, respectively. On the assets side, the gilt-edged portfolio shows an expansion of Rs.. 5.79 crores, on top of a rise of Rs. 12.04 crores a week ago. Of the increase during the week under review, the State Bank of India accounted for as much as Rs. 5.14 crores. Bank credit (advances and bills discounted) too has been marked up by Rs. 2.85 crores. The advances of the State Bank alone have risen by Rs. 1.58 crore.

The Government securities market was dull and listless. The Conversion Loan eased by 40 nP to Rs. 71.65. 3 per cent 1970-75 First Development Loan shed 10 nP to Rs. 90.35. 3½ per cent 1964 National Plan Loan softened by 5 nP to Rs. 99.85. 3¾ per cent 1968 Fifth National Plan Bonds was quoted at Rs. 100 as against Rs. 100.10 last week. 3¾ per cent 1974 lost 5 nP to Rs. 99.50. The States loan section, too, displayed little activity. The prices of most of the State issues were unchanged.

In the foreign exchange section, the rupee improved slightly in relation to the U.S. dollar. The banks' selling and buying rates for ready T.T. on New York were Rs. 475.50 and Rs. 472.25 per 100 dollars, respectively, as compared with Rs 475.75 and Rs. 472.25 last week. In the New York Exchange, the pound sterling appreciated in value *vis-a-vis* the U.S. dollar. The latest available rates are 281.520-281.550 cents per £ for spot and 279.860-279.890 cents per £ for three months' forward. As compared with the last week's rate, the pound sterling gained 0.20 cent each in the spot and forward.

LINSEED FIRMER

(*Messrs. A. Bradley and Co.*)

CALCUTTA, 13*th November*

A generally firmer tone which featured last week's trading in the linseed market strengthened further this week due to firmness at centres. The anticipated improvement in arrivals of seeds did not materialise and, with sellers reserved and buyers generally keen, ready goods advanced further with buyers over for ready and forward deliveries. *Diwali* night business was rather disappointing.

The oil market was active, but sellers were reserved. Only small business was done, owing to limited stocks in the hands of millers.

The oilcake market was very firm, owing to improved local demand but stocks were low.

Ready November delivery was quoted at Rs. 31 per maund.

GOLD EASY, SILVER FIRM

(*From Our Own Correspondent*)

BOMBAY, 15*th November*

Gold ruled easy during the major part of the week under review, while silver was firm. The easiness of gold was due to the reported sizable inflow of contraband metal and selling by spot houses in view of poor demand. The downward trend persisted till the close of today when a recovery was in evidence, thanks to support at lower levels. Even so, the closing rates were lower than those prevailing a week before. The white metal, however, registered a rise in prices, following good buying induced by encouraging advices from up-country centres and reduced arrivals.

Adjustment rates fixed today were Rs. 123.90 per 10 grams of gold and Rs. 209.30 per kilogram of silver. The corresponding rates for Tuesday the 7th inst. (*Moorat* session) were Rs. 124.00 and Rs. 207.35, respectively.

Offtake and arrivals of gold during the week were both lower than those last week; the daily average rate was 3,000 tolas and 4,250 tolas, as against 5,000 tolas and 6,000 tolas, respectively. In the case of silver, the daily offtake was slightly higher at 6 bars, as against 4.5 bars, while arrivals were smaller at 12 bars, as against 22.5 bars. The floating stocks are reported to be around 30,000 tolas of gold and 1,600 bars of silver.

The *Margashir* (December) settlement in gold began at Rs. 124.70 on Friday the 10th inst., as against the closing of Rs. 124.80 during *Moorat* trading on the 7th inst., and, after rising to Rs. 124.95 on the following day, receded thereafter to touch Rs. 124.25 yesterday. The settlement recovered to Rs. 124.60 today.

Ready gold was quoted at a discount under the forward throughout the week. The actual discount which had gone up from 25 nP early in the week to 75 nP on Monday the 13th inst. declined to 45 nP yesterday and today. The closing rate for the metal today was Rs. 124.15, as against Rs. 124.25 in *Moorat* session, the highest and lowest levels touched being Rs. 124.70 (Saturday) and Rs. 123.70 (Monday), respectively.

In silver, the *Margashir* settlement evoked good buying enquiries and advanced from Rs. 208.40 (*Moorat* session closing) to Rs. 209.85 today. The settlement, however, finished a shade easy at Rs. 209.80.

Ready silver was well supported, the quotation moving up from Rs. 207.15 to Rs. 209.35 before closing at Rs. 209.30. The discount under the forward was lower at 50 nP today, as against Re. 1.25 in *Moorat* trading.

The world price of gold in the London bullion market was unchanged at $35.19¾ per fine ounce throughout the week under review. But the sterling price eased from 250*s*. 1¼*d*. to 250*s*. but recovered subsequently to 250*s*. 1¼*d*. Ready and forward silver continued unaltered at 80*d*. and 80⅛*d*., respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of prices during the week under review:

	15-11-61 (closing)	High	Low	7-11-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.995 fine)	124.35	124.70	123.70	124.25

* 25th December settlement. † 26th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COW HIDES ARRIVALS MODERATE

(*From Our Own Correspondent*)

MADRAS, 13*th November*

Arrivals of tanned cow hides were moderate and clearance was fair-sized at unchanged prices, though export trading was subdued. Demand for lower selections in cow hides for local trade was brisk and prices hardened by 6 nP to 10 nP per lb. Arrivals of buffalo hides met with ready clearance at firm levels. Cow calf and buff calf ruled weak, as overseas inquiries were dull.

In the tanned skins section, shipment business was negligible. Importers seemed to prefer to wait for prices to decline appreciably.

Shipments during October were 3,203 cow, 310 cow calf, 33 buffs, 223 buff calf, 410 goat and 270 sheep to the U.K.; 23 cow, 69 cow calf, 4 buffs, 7 buff calf, 934 goat and 374 sheep to the Continent; 78 buffs, 69 buff calf and 173 goat to the U.S.A.; 126 sheep to Japan.

Under an agreement signed last week, the U.K. will give a loan of £5 million (about Rs. 6.6 crores) to India. With this loan, the U.K. has authorised the release of half the £90 million aid to India's third Plan, offered through the Aid-India Club last year. The loan is not tied to any particular project and is to be repaid in 25 years, the first instalment falling due eight years hence. The rate of interest will be ½ per cent higher than the rate at which the U.K. Treasury can raise a similar loan in London.

SPECIAL MARGINS IN COTTON

(*From Our Own Correspondent*)

BOMBAY, 15*th November*

The worst fears of the cotton trade have come true. The Forward Markets Commission has stepped in to impose special margins on the hedge contract in cotton in a bid to check the rising trend of futures prices. The Commission, according to a Press note issued on Monday the 13th inst., has fixed Rs. 645.50 as the level at which margins will come into force. A rise in the price of the contract above this level would attract margin at the rate of Rs. 60 per bale of outstanding purchases. This will go up to Rs. 120 per bale should the price of the contract rise above Rs. 665.50. There will be no free limits. Similar margins have also been levied in respect of hedge contracts traded at Ahmedabad, Akola, and Ujjain.

Giving reasons for imposing the special margins, the Forward Markets Commission stated in the Press note:

"While agreeing to the request of the cotton trade to permit forward trading in cotton in the 1961-62 season without restrictions, the Forward Markets Commission, in its Press note issued on 6th July last, had, *inter alia*, stated that there would be no special margins on the hedge contracts in cotton. The Commission, had, however, made it quite clear, in the aforesaid Press note, that the above concession was agreed to on a purely experimental basis and that it would not hesitate to reimpose special margin should conditions necessitate the same. The forward prices of cotton have risen appreciably during the past few weeks, despite the note of caution issued by the President of the East India Cotton Association a month ago, emphasising the responsibility of the trade in ensuring that the prices did not rise too steeply in the face of cotton crop, which is estimated to be much lower than in 1960-61. The Commission now considers that a time has come when restrictive measures should be imposed on the freedom of operations in the futures market in cotton."

The intervention of the F.M.C. was not a surprise to anybody. The F.M.C. was watching with increasing concern the trend of futures prices for sometime now. The immediate provocation for the imposition of the margin seems to have been the flare up in the prices of futures on Monday, when the hedge contract touched the level of Rs. 647.75, the highest touched till that date and only Rs. 45.25 below the statutory ceiling of Rs. 693. Large-scale short covering and fresh support prompted by the strength of the spot market, where, following small arrivals of new crop and sustained mill demand, prices of most of the varieties had pierced the ceiling. However, the fear that the F.M.C. will impose margins brought forth profit-taking and the contract consequently declined to Rs. 645.50 at close on Monday. This is the rate that was fixed by the F.M.C. as the marginal level. The margin, however, had no lasting effect on the market. After an overnight decline to Rs. 642, the contract again firmed up to Rs. 646 yesterday. The bullish fervour was further fanned today and the contract was marked up to Rs. 652. The contract is fast heading to the next margin level and few doubt that it will advance past that level. Many operators were prepared to pay up margin at the rate of Rs. 60 per bale, in view of the fact that the spot prices are much higher than the futures prices. The financially weak operators, who could not bear the burden of the heavy margin, had to refrain from doing business above the marginal level.

The cotton trade is strongly critical of the F.M.C's action. Mr. Madanmohan Ruia, President of the East India Cotton Association, has himself termed the imposition of special margins as "unwarranted and harmful." Instead of halting the runaway prices, the F.M.C's action, according to Mr. Ruia, would only result in diminution of turnover and squeezing out the small traders from business. In a statement issued to the Press, Mr. Ruia said that the imposition, particularly at this stage, had come as a surprise to the trade inasmuch as it was generally understood that such measures were to be introduced to curb excessive speculative activity or runaway prices. There was, according to him, no speculative activity which could be held responsible for the rise in price. Present prices could not be said to be unwarranted by the statistical position of cotton. He pointed out that prices of most varieties of cotton presently coming into the market were ruling at the ceiling price and it was, therefore, only natural that the hedge contract too should move up. In his opinion, therefore, the F.M.C. had taken an alarmist view of the rise in futures prices.

Trading in the spot market was very active. Keen mill demand was reported for all popular varieties of cotton. Some varieties such as Khandesh, Berar, Kalyan and L.147 attracted buying in bulk. Prices hardened as a consequence. Most varieties are quoted at or near the ceiling prices while the same have even priced it.

There has been a revival of export interest in Bengal *Deshi*. Both Japan and Continental countries are reported as buyers. Sizable turnover has been recorded. Apart from this, this cotton is also in demand for mixing purposes.

Demand for foreign cotton centred mainly round East African and Egyptian cotton following reports of damage to the cotton crop in both East Africa and Egypt. Ready lots of East African and Egyptian cotton were much sought after. B.P. 52 new was done at Rs. 1,285-Rs. 1,290 per candy. B.P. UNUG changed hands at Rs. 1,305. Limited interest was also reported in American and Sudan cotton. American good middlings were booked at Rs. 1,290 per candy. Sudan 4338 and G.4L were quoted at Rs. 1,688 and Rs. 1,455 per candy, respectively.

Trading conditions in the Karachi cotton futures market remained more or less the same as last week. Prices tended to recede early in the week, thanks to the pressure of new crop arrival in the wake of lower mill demand and reduced export interest. Later, however, they firmed up. The N.T.R.G. January was done at Rs. 77.15. The March contract came in for selling and after declining from Rs. 75.65 to Rs. 75.55, finished higher at Rs. 75.85.

Cotton futures in Liverpool recorded small losses during the week. Lower New York advices and the general lack of local buying interest led to a decline in prices. Both the American and the American type contracts receded. The Sudan contracts were, however, quietly steady. The following are the latest available quotations—in pence per lb. from Liverpool:

American cotton one inch staple contract: December 23.85; March 24.60; May 25.15; July 25.30.

American cotton mixed growth contract: December 24.20; March 24.90; May 25.45; July 25.70.

Sudan: November, January, March 32.25.

In its November crop report, the U.S. Department estimated the current season's cotton crop in the U.S. at 14.58 million bales, as against 14.33 million bales forecast a month ago and last season's final crop of 14.27 million bales.

Reacting to the crop report, the New York cotton futures market staged a decline. The crop estimate was higher than the estimate of leading spot houses. Commission Houses liquidation and hedge selling resulted in a decline in prices. Cotton futures, however, recovered in subsequent sessions, thanks to support forthcoming at lower levels. This was inspired by the active conditions in the spot market.

Large business was reported in ready cotton in areas when harvesting was brisk. Demand for qualities below Middling was strong and they fetched prices much above the loan rate. Middling and higher grades were reported to be entering the loan programme in an increasing volume. Domestic and foreign demand for them was good.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	14-11-61	6-11-61	31-10-61
New York spot ...	35.65	35.65	35.65
December	34.41	34.50	34.63
March	35.13	35.25	35.40
May	35.54	35.70	35.81

BLACK PEPPER MOVES ERRATICALLY

(Messrs. Parekh and Co.)

BOMBAY, *15th November*

Malabar black pepper in the past fortnight moved erratically without any definite trend, the highest and lowest prices for garbled being Rs. 364 and Rs. 337, respectively. After touching the lowest at Rs. 328 for ungarbled, Cochin improved in sympathy with Singapore where prices for black, after dropping to $M117½, recovered to $M130, following rumours that Indonesia agency sold 3,000 tons of Lampong pepper to Russia. Recent rain in Malabar areas, which is considered beneficial to pepper crop, interrupted the flow of arrivals of new crop in the terminal market. This gave handle to the local bulls to push up the price for garbled to Rs. 364. But the improvement did not last long for want of following. Nobody came to make fresh purchases at an advanced price on New Year Day. Ungarbled moved between Rs. 328 and Rs. 344. December delivery moved both ways according to alternate bouts of selling and buying, the highest and lowest being Rs. 358 and Rs. 332, respectively. January delivery was sold at a premium of Rs. 2. Calicut moved between Rs. 325 and Rs. 340.

A cloud of depression seems to have decended on the pepper market in Singapore. Pepper dealers there are passing through an extremely nerve-racking period. Singapore price stands at $M125 for black and $M160 for white, as compared with $M160 and $M270, respectively, at this time last year. It is agreed by almost all traders that the present level is only a temporary one, but, when it comes to forecasting the immediate future, opinions differ. Some believe that, by the new year, the prices for nearby shipments may recover to the parity of $0.40 per lb. C. & F. New York, if New York continues to show interest, while others expect a decline to about $0.30 in the coming months, as a result of a possible keen competition in selling between India where Malabar crop is now estimated at 27,000 tons plus a carryover of 2,000 tons and Indonesia where Lampong new production of 10,000 tons and 4,000 tons carryover from the year 1960 are lying unsold, in addition to physical stock of Lampong black of about 8,000 tons plus 2,000 tons Sarawak black plus 2,000 tons white pepper are lying unmarketed at Singapore. Everything depends upon the Indonesian agency which is holding in Singapore as well as in Indonesian a big quantity which it is pressed upon to dispose of immediately by its Government. The Singapore agency was asked for an explanation why it withheld sales for such a long time. As a consequence, the agency is reported now running here and there for finding out buyers. It is trying to sell to the U.S.S.R., but the selling of pepper can never be done by request, with hat in hand. Reports that the sales of 4,000 tons of Lampong to merchants in Singapore and 3,000 tons to the U.S.S.R. are being circulated, but the knowledgeable source treats all these as mere propaganda to prop up the otherwise dropping market. Short covering having been finished, the market at Singapore turned quiet, as New York refused to follow the advance and local traders began to treat all rumours of big sales of Lampong with reserve.

New York spot rallied from $0.39½ to $0.41 to come down to $0.40. The U.S. dealers are reported to have bought almost all the afloat consignments of Malabar from $0.37 to $0.38. They showed interest in long forward. Some sales for Jan.-Feb.-March were reported done at $0.34. Though stock with grinders are limited, they are unwilling to buy at the higher price, as they think that there is no shortage of supply and the world's pepper production is more than its consumption.

Ready pepper in Bombay is quoted at Rs. 187 per 50 kilos.

YARNS FIRM

(From Our Own Correspondent)

BOMBAY, *15th November*

Barring certain deniers of indigenous art silk yarn which tended to look down, the yarn market presented a cheerful appearance during the year under review. Foreign art silk yarns met with good support which emerged from reports suggesting enlarged offtake in consuming centres. In sympathy, staple fibre yarn forward deliveries showed a tendency to rise. Cotton yarns were steady, quotations for the most of the counts remaining unchanged from the levels of last week. Indigenous yarns, however, encountered selling. The decision of the Indigenous Art Silk Yarn Distribution Committee (Bombay) to extend the last date for submitting applications for supply of yarn during the current quarter from 10th to 20th inst., announced this week, had no effect.

Amilon (20 x 1) December contract rallied from Rs. 3,380 last week-end to Rs. 3,445 yesterday. At this level, there was bull liquidation and the contract declined to Rs. 3,418. It, however, recovered to Rs. 3,437 today. There were no transactions in JP Bemberg yarn (40 x 1) December delivery, in view of paucity of stocks. The nominal rate was Rs. 3,660. Spot 120 Japan spurted by Rs. 27 to Rs. 1,901. 120 Italy hardened by Rs. 25 to Rs. 1,901. 150 Japan was fully maintainer at Rs. 2,094. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade receded from Rs. 14.01 to Rs. 13.64 and 120 Bt. cones 1st grade from Rs. 18.18 to Rs. 17.73.

Staple fibre yarn (40 x 2) December delivery picked up Rs. 5 to Rs. 870. February 1962 position gathered a like amount to Rs. 880. Spot Citys were firm at Rs. 9.97, as also Hinds at Rs. 9.83.

In the cotton yarn section, prices, as already stated, were generally unchanged from the previous week's levels.

The following table gives the prices of rayon staple fibre and cotton yarns today, as compared with those prevailing a week ago:

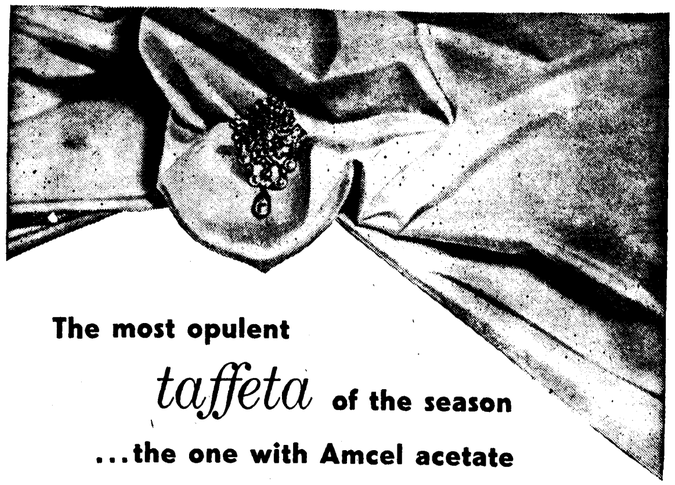
	15-11-1961	7-10-1961
	Rs.	Rs.
Art silk yarn—		
20/1 Amilan (100 kg.)—		
December	3,437.00	3,380.00
February	3,507.00	—
120 Japan (per 100 kg.)	1,901.00	1,874.00
150 Japan (per 100 kg.)	2,094.00	2,094.00
120 Italy (per 100 kg.)	1,901.00	1,876.00
Nat. Ray. 150 Bt. I	13.64	14.01
Staple fibre yarn (40 x 2)—		
December	870.00	865.00
February	880.00	875.00
Hind (per kg.)	9.83	9.83
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.37	17.37
20s Gokak	22.62	22.69
30s New Great	26.50	26.50
40s Madura	32.50	32.00
50s Finlay	61.61	61.61
80s Modern	66.50	66.50

SEEDS RECOVER AFTER INITIAL FALL

(From Our Own Correspondent)

BOMBAY, *15th November*

Oilseeds and oils staged a rally towards the close on heavy speculation, after remaining subdued during the major part of the week. The earlier easiness was the result of selling induced by the official controls introduced last week. But subsequently the spot prices tended to move up, owing to the delay in arrivals of new crops from upcountry centres. Ready groundnut and groundnut oil ruled distinctly bullish, thanks to tight statistical position, though a section of speculative interests turned their attention to other seeds, following fixation of ceilings in groundnuts and special margins in mustardseed as well as raw cotton. Despite any visible improvement in outlook for castor oil exports, the castorseeds and oils were buoyant. The upward trend in linseed was aided by the absence of any large local stocks, sustained demand for linseed oil (both for consumption and for mixing it with groundnut oil) and firmness of mustardseed in North Indian Markets. Cottonseed spurted to touch a new high of the season in sympathy with the bullish fervour in the raw cotton market.



The most opulent

taffeta **of the season**

...the one with Amcel acetate

The advantages of Amcel's Acetate for dress fabrics such as satins and brocades are already well-known. Amcel's Acetate also makes the finest taffeta. It can be finished in many luxurious ways and takes glowing colours.

Amcel's Acetate filament yarns are spun to meet your specific needs for each type of cloth. There is an Amcel yarn for luxuriously heavy to light satins, for all types of taffetas, light-weight to heavy faille, for tricot jerseys, sheer cloths, brocades or novelties such as suitings of sharkskin or tweed effect.

DUNCAN BROTHERS & CO., LTD. are pleased to announce their appointment by AMCEL CO., INC. as the exclusive sales agents in India for all Amcel products. Messrs. Mittersain Rupchand, 336 Kalbadevi Road, Bombay are sub-agents in the states of Maharashtra and Gujerat and Messrs. Sardesai Brothers Ltd., M-106 Radial Road, Connaught Place, New Delhi-1, sub-agents elsewhere in India.

National/kal-DA119A

Groundnut January 1962 contract slumped from Rs. 209.25 to Rs. 206.12 before touching Rs. 210.12 yesterday. It, however, eased to Rs. 209.25 today. Nizam hold hardened by 25 nP to Rs. 44.25. Khandesh quality fell from Rs. 45 to Rs. 43.25, but recovered later to finish at the previous week's closing of Rs. 45. Oil ex-mill were done at Rs 19.10, as against Rs. 18.90. Oil January 1962 contract declined initially from Rs. 17.20 to Rs. 16.85 before improving to Rs. 17.25.

Castorseed March 1962 contract, after declining initially from Rs 161.12 to Rs. 157, forged ahead to Rs. 163.13 today. Ready Kanpurs improved by 25 nP to Rs. 31.75; it had fallen to Rs. 30.50 earlier. Oil commercial put on 10 nP to Rs. 13.60.

Linseed March 1962 contract advanced by Re. 1.50 to Rs. 38.37. Bold ready spurted by Rs. 2 to Rs. 41.25. Linseed oil hardened by 50 nP to Rs. 17.60.

Cottonseed January 1962 contract was marked up by Rs. 4.25 to Rs. 103.50. Both Berars and non-whites strengthened by 90 nP to Rs. 19.90.

The following table shows the closing prices of oilseeds and oils on Wednesday, 15th November, as compared with those of the two previous weeks:

	15-11-1961	7-11-1961	27-10-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	209.25	209.25	210.12
Khandesh	45.00	45.00	44.75
Khandesh quality	44.75	45.50	45.50
Oil ex-mill ready*	19.10	18.90	18.75
Railway receipts*	18.90	18.80	18.40
Oil January 1962	17.25	17.20	17.25
Castorseed			
March 1962	163.12	161.12	163.25
Ready Madras	33.00	33.00	33.00
Ready Kanpur	31.75	31.50	31.50
Oil commercial†	14.75	14.20	14.05
	13.60	13.50	13.20
Linseed			
March 1962	38.37	36.87	36.87
Bold ready	41.25	39.25	38.75
Oil ready†	17.60	17.10	16.75

January 1962	103.50	99.25	97.00
B'ger seed	38.50	37.50	36.10
Kandi seed	23.00	23.00	22.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEA FIRM

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *6th November*

At sale No. 45 held on the 6th inst., a total of 571,800 kilograms was on offer. Quality of Nilgiri teas was irregular but generally about maintained. A few useful invoices were on offer. Other districts maintained quality and often showed improvement. There was useful general demand. Highgrown brokens were generally firm to dearer following quality, but with similar fannings again better, weaker than brokens. Good mediums were well supported and were about firm to dearer with quality. Brokens were better supported than similar fannings. Low medium and medium brokens met with fair demand and were steady but similar fannings were often easier. Plain and stalky descriptions were weaker and sold at lower rates. The better whole leaf grades were fully firm but some of the poorer descriptions were only barely steady. Black leaf teas received good support at fully firm rates. Unorthodox teas were the weakest feature and much easier.

The quotations (per kg.) were:

	1961 Rs	1960 Rs.
Low mediums	3.80/4.15	4.45/4.85
Mediums	4.15/4.40	4.85/5.15
Good mediums	4.50/5.35	5.20/5.60
Nilgiri B.O.P.	5.20	8.00

The average price realised in sale No. 45 was Rs. 4.69 per kilo, as compared with Rs. 4.73 a week ago and Rs. 5.29 in the corresponding sale last year.

Dust Sale: At dust sale No. 45 held on Thursday the 9th inst., a total of 300,000 kilograms was on offer. There was good demand but with prices generally showing a decline. Highgrowns were well supported at around last rates. Low mediums and mediums sold well at prices up to 20 nP below last. Plainer sorts also eased by 20 nP per kilo. C.T.C.'s and legg-cuts met with good demand but were a little easier. C.T.C. types, however, were irregular and sometimes easier.

The average price realised in dust sale No. 45 was Rs. 4.26 per kilo as compared with Rs. 4.40 a week ago and Rs. 4.67 in the corresponding sale last year.

Export Quota: Some business has been reported at ½ nP per kilo at which price there are sellers with no buyers.

Colombo: The market met strong demand. Western types advanced by 5 to 15 cents and mediums were dearer by 5 to 10 cents. Uvas was irregular and lowgrowns slightly easier. Offgrades and dusts came to a dearer market except for the stalkiest off-grades.

London: North Indian and other growths: On Monday there was a strong demand with prices often dearer except in the case of some thin liquoring types. On Wednesday the market was about steady with buyers closely following quality.

Ceylons and South Indians: In Tuesday's sale there was good demand with Ceylons coming to a firm to dearer market for all types. South Indians also met with good demand and were generally dearer except for the plainer fibrous fannings which were sometimes easier.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire:

"*Sale No.* 46: 518,000 kilograms. Fair demand. Prices 20 nP to 30 nP lower for everything except best liquoring Nilgiris which are irregularly dear."

DEVELOPING FOREIGN TRADE

(Concluded from page 941)

essential goods. A committee, including businessmen and economists, may be appointed to scrutinise whether the price to be paid is fair and reasonable. Only after the committee approves of the price and quality must the goods be permitted into the country.

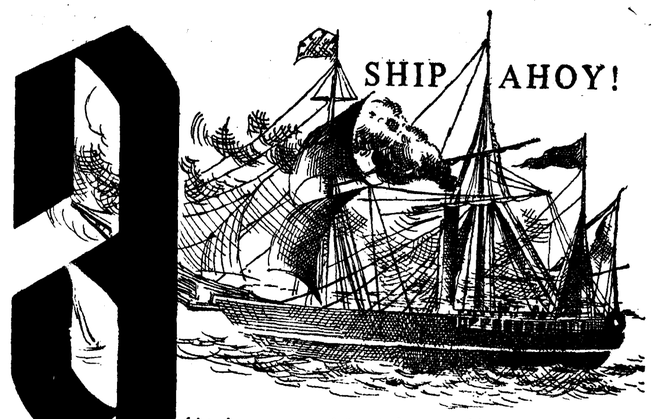
However, the policy pursued at present in regard to our imports in rupee does not benefit the country as envisaged. It is, therefore, imperative to review and revise the entire rupee payment arrangements in the light of the above facts.

The other disadvantage that India suffers in its dealings under the present rupee payment agreements is that it is compelled to pay high prices for its imports while its exports fetch the competitive, world-market prices: It might be further pointed out that there is no real export promotion under the existing rupee payment agreements since there are considerations other than the price factor which sometimes actuate these countries to buy goods. Hence there is no certainty that the same product will be bought in the future.

The policy of allowing exports to a third country through the medium of the country 'B', if pursued blindly and continuously, would be detrimental to the country and result ultimately in the loss of the regular direct trade with the third country. The experience of Egypt is a case in point. In 1956, the Soviet Union bought Egyptian cotton at attractive price and dumped it on Egypt's traditional markets. Since then, it has been difficult for Egypt to regain its old customers.

These facts emphasise the need for promoting our export trade with these countries by conducting it systematically and in an organised manner, an object which could be achieved by canalising it through those who have the knowledge and experience of export trade and are well conversant with its intricacies.

Looking objectively, it will be observed that these diverse methods of trading for boosting foreign trade require wide experience of commerce and trade, intimate and expert knowledge of different markets and sound judgment of price adjustments. In using other than normal methods of trading in negotiating deals, considerable circumspection and foresight have to be exercised; otherwise, they might do more harm and damage the country's regular foreign trade. The views expressed here are neither exhaustive nor conclusive. These methods of trading, therefore, need further critical observation and study.



SHIP AHOY!

historic voyage ended as the steamship "Enterprise" reached Calcutta on 9th December, 1825. The first steam-powered vessel to make the England-India run, the 500-ton "Enterprise" won a cash prize of Rs. 100,000 offered by Calcutta's trading community for this truly pioneering achievement. Her captain on the hazardous voyage round 'the Cape' was James Henry Johnson, Commander, Royal Navy, and a hero of Trafalgar.

Though the "Enterprise" was the first ocean-going, partly steam-propelled ship to arrive at any Indian port, small steam-powered craft were being built in Calcutta as early as 1823.

Among the oldest and best known marine and general engineering firms in the country, a privately-owned concern known as Reid & Company's Hooghly Dock (founded 1819), the forerunner of The Hooghly Docking & Engineering Company Limited, was already flourishing before the introduction of steam to India.

The 'Hooghly Docks' are a part of the vast industrial and engineering organisation of Martin Burn Ltd., an organisation which is playing an important role in India's industrial progress.

MARTIN BURN LIMITED

MARTIN BURN HOUSE, 12 Mission Row, Calcutta 1

Note :—Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—Issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year prize bonds were issued from 1st April 1960 and the total outstandings at the end of July 1961 amount to 16.78 crores of rupees.

—The reserve of Straw Products Ltd. includes a non-distributable amount of Rs. 62,40,684 brought about by revaluation of land, buildings, plant and machinery in the year ended 31st December 1958. §§ Investment at cost. • Includes bonus.
—Give Raw Investment—Dividend for 1960 includes additional dividends of 0 nP for the year ended 30th March 1956 and 37 nP for the year ended 31st March 1958.
—Managed by the Board of Directors. N.E.—Dividends paid since 31st March 1960 are shown as nominal. (a) Investments.
—Associated Battery Makers (Eastern) Ltd. The effective dividend for the year 1960 would work out to Rs. 10.50 per spot approximate, as the final dividend of 10 per cent was paid on the increased capital of Rs. 116 lakhs, whereas interim dividend of 15 per cent was on a paid-up capital of Rs. 80 lakhs only.

DEVELOPING UNDEVELOPED AREAS

(*Concluded from page 930*)

assets for being used by industries in undeveloped areas. Such assets are given a special depreciation allowance of 75 per cent of their value for purposes of calculating income-tax in the year of purchase.

As a result of the Norwegian Regional Development Plan, industrial production in Northern Norway has increased rapidly. In the period between 1952 to 1958 about 700 new projects were established and employment opportunities were provided to about 7,000 people.

Denmark

With a view to eliminating unemployment and promoting industrialisation of undeveloped areas, the Danish parliament passed an Act in 1959, under which both free technical advice and financial support are available for sound industrial projects. Financial support is given either in the form of direct loans or through guarantee of loans given by commercial banks. These facilities enable industries to finance up to 90 per cent of permanent installations and machinery. Financial assistance for acquiring and installing machinery in rented premises is limited to 45 per cent of the purchase price of the machinery. While direct and Government guaranteed loans are to be repaid in 15 years, the period of repayment in respect of loans for machinery only is 10 years.

With the help of the various measures of assistance given by Government and the facilities such as water supply, dwelling quarters, schools and hospitals provided by municipalities, several firms in Copenhagen, which could not expand for want of space, have moved into new areas. A number of small industries have also come up in the undeveloped areas, especially in Jutland.

MARKET GOSSIP

(*Concluded from page 931*)

to pay for raw jute. The quantity of jute goods actually produced during the first ten months of the year was just 766,600 tons, which compares very unfavourably with the production of 890,500 tons in the corresponding period of 1960. The only consolation that the country can have is that the jute industry has turned the corner and that the

William Blake.

VOL. CIII. No. 2642 BOMBAY, 25th NOVEMBER 1961 PRICE Rs. 2

PROBLEM OF PETROLEUM PRICES

ECONOMICS of oil (petroleum) industry is a highly complicated subject, because it pertains to an integrated industry with its various operations spread over a number of countries. More literature on the subject is available now than even, say, at the beginning of the 'sixties. And yet the old saying "a little knowledge is a dangerous thing" can be commended to those who wish to unravel the mysteries of this branch of industrial economics. This is particularly true of the underdeveloped countries that are now politically free and wish to have the best bargain possible either as producers or consumers of oil. They suffer from a handicap in this respect, in that they have to deal with oil companies which in the colonial days had been accustomed to a large measure of freedom and a considerable number of privileges as the supplier of a strategic commodity. Rightly or wrongly, these countries have come to believe that the oil companies have been making enormous profits at their expense and that they are entitled to a share in them. Some of them would even like to keep the oil companies out of their markets, if they could do so without impairing the flow of oil supplies, so that they might have the entire profit to themselves. The secretive nature of oil companies' affairs in these parts of the world has only served to whet their appetite for more information and strengthened their impressions about oil business. The entry of Soviet Russia and quite a few independent operators into oil business has made it possible for these countries to drive a hard bargain with the oil companies and endeavour constantly to obtain a share in their profits.

Unfortunately, the oil companies have been slow in yielding to the pressures of nationalism. Instead of gracefully adjusting themselves to the new forces, they have invariably tried to resist them, thereby forcing the countries concerned to seek the aid of Soviet Russia and independent operators in the free world. They are as much responsible for the policy of brinkmanship followed by the national Governments as the latter. If they had shown a readiness to associate domestic capital in the area of their operations and yielded, of their own accord, some of the ground which they have done after considerable pressure and persuasion, they would have been on stronger ground in claiming their legitimate share in the expanding markets for oil in the developing countries. Oil is a commodity in which politics overlaps economics and, to a dispassionate observer, it looks as though the oil companies of Western origin ought to display a little more political wisdom than mere economic righteousness. Despite their flexibility, they have not been successful in erasing the impression in the minds of the public in underdeveloped areas that they are trying to take undue advantage of scarcity of capital, technicians and know-how from which these areas are suffering. Such a development is inimical to their own future, for nothing is more harmful than creating a feeling that one is being exploited. The oil companies are undoubtedly right in saying that they can deliver the goods cheaper and quicker, if they are given sufficient freedom and incentives, leaving the domestic capital and other resources to be used for developing the other spheres of a national economy. And this journal has been foremost in upholding that view. But there is no point in ignoring political realities or in throwing away the sponge in utter disgust. The only people who will be happy at such a development are the Russians, Chinese and fellow travellers.

These thoughts are provoked by the half-hearted reception given by the three Western oil companies to the findings and recommendations of the Damle Committee on the pricing of oil products marketed in India. The Damle Committee was a sort of an umpire settling a dispute between two parties. The oil companies were given full opportunity to explain their side of the case and, after a fair hearing, the Committee arrived at certain conclusions. Although the full text of the Committee's report is yet to be released to the Press, the major portions thereof have been "leaked" out by official sources as and when it suited their convenience. It seems from such information as is now available that, by and large, its recommendations are fair. The Committee has framed its recommendations in such a way as to enable the companies to earn a return of 12 per cent on capital employed, which is by no means so low as is made out by some. Although at one stage the Government was inclined to feel that the Committee had given away more to the companies than was necessary, it finally decided to accept them *in toto*, except on one point which pertains to the Government's relationship with consumers. Thus, whereas the Committee wanted the reductions in prices to be passed on to consumers of petroleum products, the Government has decided, as in the past, to take the saving to the Exchequer. The companies, too, which at one time felt irritated over the Government's delay in coming to a decision on the Damle Committee's recommendations, ought to have decided to abide by them. Instead, they have accepted all the recommendations except one, namely, discounts on "posted-prices" in regard to

of crude or agree to distribute the products obtained by India from anywhere in the world, on the basis of a mutually agreed profit-margin. If they feel that India should not dictate the price at which they could import oil, then they, too, should not dictate to this country from the commanding position they hold here. From the point of view of both principles and expediency, the oil companies have been wrong in the stand they have taken on this particular issue. None wants them to incur a loss for the sake of India. If they are unable to obtain the discounts which the Damle Committee says they could, then, in fairness to this country, they should volunteer to market the products imported by the Government of India, whatever may be the source. That is what any national concern is bound to do, and will certainly do, placed as India is in regard to foreign exchange.

The oil companies, however, are right in saying that the refining capacity they have developed in the country must be used to the fullest extent by increasing the supply of crude. It would, indeed, be ridiculous not to do so. If the refineries have expanded their capacity by some minor modifications of their plants or through improvement in the technique of their operations without causing any strain on the foreign exchange resources of the country, it is something for which they should be complimented. In any case, the demand for petroleum products is there and the public sector projects have been lagging behind. By stepping up refining in the country, a larger amount of foreign exchange can be saved, and an increase in the supply of by-products and employment opportunities can be secured. The Government, too, can get a larger amount of revenue. There is thus every reason for permitting the existing refineries to import all the crude they need for utilising their capacity to the maximum extent possible. Indeed, this journal would even go further and reiterate its earlier stand that, as the demand for petroleum products in the coming years will be greater than the capacity under the existing plans for expansion, which will all be in the public sector, it is necessary to let the existing three refineries also to expand their capacity. The shilly-shallying by the Government on this issue is not in the larger, including the strategic, interests of the country. The oil companies, on their part, have agreed and are ready to refine domestic crude, even if it is produced by the public sector. Besides, there are now no differences of opinion between them and the Government in regard to pricing of imported crude. They have, in actual practice, accepted many modifications to the original refinery agreements. And, what is more, they are prepared to find the foreign exchange necessary to cover the cost of plant and machinery.

INDIA'S FOREST POLICY

FORESTS in tropical countries once had their frightening associations in one's mind—frightening because of their wild life and inaccessibility. They are less frightening now, at any rate in India, for man's depredations by way of deforestation, unregulated fellings and over-grazing have led to their denudation and, thus, to the depletion of wild animals too. The gradual extinction of wild life, which is unfortunately under way, has also rendered forests less attractive to hunters of game. Even the irresistible attraction they once had for the devout Hindu on the threshold of *vanaprastha*, the third stage in his life, is no longer there. But in another sense which may be called 'commercial' or 'economic,' forests and forestry have begun to attract the attention of enlightened agriculturists, industrialists and 'natural resource planners'—all of whom seem to be agreed on the need for scientific forest management, conservation and reforestation for the purpose of maintaining indefinitely, or even increasing, the productivity of forests.

Let us, however, forget, for the nonce, the recreational, spiritual and commercial attractions provided by forests and think a while of their balancing and beneficent role in Nature. Undisturbed forests, it has been well and truly said, are notably resistant to the inexorable wearing down of the earth's surface; the rates of soil development in them generally exceed the slow process of depletion, but the rates of erosion rise inevitably on the heels of activity of man. Vegetative control begins with the protective canopy of trees. While some of the falling rain may be caught by the crowns of trees and thus may not even reach the ground, vegetation breaks the force of most of the rain, so that drops reaching the forest floor are less [illegible] detaching the soil particles and washing them away. As forest lands are commonly confined to mountainous terrain and as mountains, in their turn, receive normally very heavy rainfall—all the heavier because of their vegetative cover—and start most of the big rivers on their courses, the efficacy of mountains as catchment areas depends a great deal on their forests. It is here that man's activities in forest areas—road building, timber cutting, grazing and burning—can bring about the erosion of mountain slopes if they are indiscriminately practised, and thereby disturb or even destroy the delicate natural balance which has all along provided maximum control of the soil. Conservation of forests, even while exploiting them for man's immediate purposes, is thus required by Nature itself.

The need for such conservation has always been recognised in India, for the role of forests in the conservation of soil fertility, and in the maintenance of the water regime of the land has been clear. The report of the first Plan, for instance, has provided a succinct description of this role in the following passage:

> "The organic matter they (forests) yield improves the tilth and increases the water holding capacity of the soil, thereby reducing the run-off. The presence of vegetation acts as a physical check to the velocity of the run-off and reduces its soil-carying capacity. Thus, forests protect the hilly areas against excessive soil erosion. Similarly, they protect flat lands against dessication and erosion caused by winds. They exert a beneficial influence on the growth of agricultural crops and on the climate of the region in which they exist."

To what extent has this recognition of the role of forests imparted vigour to a policy of conservation and regeneration? It is well known that India is by no means very well placed in the matter of forest vegetation. Its forest area of 127 million acres represents no more than 16 per cent of its geographical area—a proportion which is much lower than in most other countries. The Forest Policy Resolution of 1952, it may be recalled, had laid down that India as a whole should aim at maintaining one-third of its total land area under forests. The Resolution continued that a much larger percentage of the land, about 60 per cent, should be kept under forests for their protective functions in the Himalayas, the Deccan and other mountainous tracts liable to erosion. It envisaged a proportion of 20 per cent for the plains (where the ground is flat and erosion is normally not a serious factor) and suggested the extension of tree lands on river banks and other convenient places not suitable for agriculture, in view of the pressure of population on cultivable land. If it had been possible, by any miracle, to attain, in the last decade, these goals of national forest policy, India's forest area would now be upwards of 250 million acres.

But what has actually been achieved during the first and second Plan periods with an aggregate outlay of about Rs. 29 crores is precious little, as compared with what was planned, let alone what remains to be done. It has been possible, during the last ten years, to rehabilitate only 400,000 acres of degraded forests, to undertake new plantations of industrial timber extending over an area of just 330,000 acres and of matchwood covering about 55,000 acres, and to build 9,000 miles of forest roads. Over the same period, on the other hand, exploitation of forest wealth has not abated in the least, for annual production of timber and firewood has remained virtually stationary at the 1950-51 level of 550 million cubic feet. India's forests have thus continued to provide the wood for its paper, match and plywood industries, the timber for construction purposes and the firewood and charcoal wood for domestic use. It is, indeed, distressing to find that, of the annual production of 550 million cubic feet of timber, as much as 400 million cubic feet represent firewood and charcoal wood. The production of minor forest produce (bamboos, canes, fibres, gum and resins, etc.) has also remained more or less constant during the period. The total value of timber, firewood and minor forest produce, at current prices, is of the order of Rs. 40 crores. In spite of so much utilisation of forest wealth, there has increasingly been in evidence a serious shortage of raw materials for the forest-based industries. This situation also calls for extensive forest regeneration and, happily, forests, unlike coal mines or mineral deposits, are renewable resources. If man can deforest as he has been doing all along, he can also afforest. But, as afforestation, especially on the scale required in India, is a long-term enterprise, any delay in taking it up in right earnest will have a retarding effect on India's economi progress.

The third Plan has provided for new planta tions covering only one million acres—700,00 acres under teak, bamboo, matchwood, wattl and casuarina and 300,000 acres under fast growing species of industrial wood. Even thi programme, which includes the development o 15,000 miles of forest roads, will involve an out lay of about Rs. 50 crores. At this rate, no much can be achieved by way of afforestatio and regeneration, unless, of course, something more energetic is done in the rural areas t plant such species of trees as will yield fire wood, small timber and green manure. A commendable lead has recently been given in the latter connection by the Forest Department o the Madras Government. The Department's pilot scheme, launched in 1960-61, has been designed to create small wood lots in *poramboke* and other waste lands available in and around villages, as a measure of attaining self-sufficiency in the matter of fuel, small timber and manure leaf needed by the local population. I the Community Development agencies throughout the country can take up this work of simple rural afforestation as a matter of high priority in the next five years, the pressure on forests for firewood will be progressively reduced and forest conservation will also become easier.

It is this aspect of conservation that has always claimed the greater attention of India's Forest Administration which celebrated this week its Centenary at the Forest Research Institute, Dehra Dun. It has been the task of forest administrators to keep the forests under proper management and conserve them in such a way that larger quantities of timber and fuel and other forest products may be available on a sustained yield basis. The Forest Administration can certainly claim some credit for what it has done by way of scientific forest management and conservation, road construction in trackless interior regions, introduction of some useful species of trees and preservation of wild life as far as possible. But unfortunately, it has had to contend against a number of unwelcome and unexpected trends in the last ten years or so. In the first place, there has been in evidence greater keenness on the part of the State Governments to get more revenue out of forests through leases and auctions. Secondly, popular demand for forest lands for agricultural purposes in several areas has been persistently on the increase. Thirdly, the anti-social practices of wanton molestation and cutting down of trees and of poaching and encroachment in forest areas have been seriously on the increase. And, fourthly, submersion of big forest areas by reservoirs in some States, heavy deforestation in connection with the establishment of some mining and industrial units and damage caused to forests by shifting cultivation in several areas—all these adverse factors have also been in operation. It has been no enviable task for the Forest Administration which has to contend against these trends and still carry on its principal work of forest conservation and management.

If the Administration continues to do this work in the next decade as efficiently as it can in spite of the disconcerting trends in operation, it will deserve well of the country. If it also carries out the proposed comprehensive preinvestment survey of forest resources and industries for assessing the requirements of forest-based industries over the next 15 years, it will have not only shown the way for opening up more forest regions in the interior but also facilitated the formulation of long-term programmes for planting quick-growing species. The Planning Commission's tentative estimate is that the requirements of industrial wood (including pulp material), which amount to 4.5 million tons at present, would increase to about 9.5 million tons by 1975. As new plantations take 25 years to develop, the Commission's view is that production may not increase beyond 5.5 million tons by that year. Forest administration and forest research in India will thus have the challenging task of narrowing the gap by improved methods of utilisation of low-grade timbers and by economies in fuelwood consumption. But any measures pertaining to intensification of production of timber and exploitation of hill forests would have to be most carefully thought out and applied without prejudice to the central goals of forest conservation and soil conservation of timbered slopes. Exploitative forestry, like exploitative farming, cannot be contemplated with equanimity. But compulsions of the day can by no means extenuate such a folly.

MARKET GOSSIP

Boomlet Gone

THE boomlet in share markets has proved to be a short-lived affair. This is not surprising, for the sudden rise in prices noted last week was not warranted. The basic trend of the markets, however, is still bullish, for investors are reluctant to book their profits and the sentiment has not changed. Many do talk that there is not much scope for any further sizable appreciation in equity values and that the markets have become highly vulnerable to adverse news. But very few of them are prepared to act by this conviction. It is significant that the disclosure in the Lok Sabha on Monday this week that the Chinese have committed further aggression by occupying an additional 2,000 square miles in Ladakh area was completely ignored. On the contrary, the share markets have since then been displaying a distinctly steady trend, with selective buying on prospects for certain individual companies. Typical instances of these are Bombay Burmahs, Tata Chemicals, Dunlop Rubbers, Alkali Chemicals and Voltas.

The reluctance of investors to book profits in the hope of seeing still higher price levels is leading to scarcity of stocks. Consequently, several of them jump up even when the demand is small. There are also allegations that, in some scrips, there has been deliberate manipulation of prices by interested parties, but it is hard to prove them. Whatever that may be, a stage has now been reached when investors must not ignore considerations of yield, except where there are sound reasons to believe that growth prospects for particular companies have not been fully discounted.

Mr. J.R.D. Tata On Investment Prospects

In his statement to the shareholders of the Investment Corporation of India, Mr. J. R. D. Tata, Chairman, has made certain observations which are of interest to investors. Speaking in general terms on the outlook for investment in this country, he says:

"Businessmen in India and abroad have realised the vast opportunities for industrial enterprise that exist in a developing economy with an enormous protected market, and, despite the impediments of frustrating restrictions, delays and shortages, efforts to attract foreign capital have borne fruit in a large number of collaboration agreements with foreign entrepreneurs culminating in an unprecedented flow of capital issues by newly formed companies.

"Of late, shortages in the supply of electric power and of transport to carry vital coal and raw materials, together with continued shortages of imported raw materials, have cut back production and profits and contributed to rising costs, making India a compartively high-cost producer in many manufactured products entering international trade to the detriment of her export earnings. Whereas the general investment outlook remains promising, these obstacles to higher production and expansion of industry need to be tackled vigorously by Government, in order to maintain the steadily growing tempo of industrial investment which has been a feature of the Indian economy during the last few years."

Mr. Tata then gives a valuable tip to investors, especially of modest means, when he observes:

"A disappointing feature of investment companies in India is the relative lack of interest in their shares disclosed by the investor. I have been unable to understand the reason for this lack of interest, as, in the more advanced countries of the West, the shares of sound and well run investment companies are sought after by investors and, in fact, are usually quoted on a yield basis lower than that of high grade industrial stocks. In some cases, shares of such companies are quoted at higher prices than their break-up value. Whilst it is true that the shares of prudently run investment companies may not offer speculative opportunities for quick appreciation, as do the shares of manufacturing companies with an exceptionally favourable growth potential, they offer, particularly to the small investor, a valuable opportunity of participation in a highly diversified portfolio, covering a wide range of industries and combining safety with scope for appreciation which he could not achieve on his own. In a rapidly developing economy, the investment of funds is a complicated business and the average investor is handicapped by the lack of specialised knowledge and information on numerous industries or of the technique of operations on stock exchanges. These he automatically secures when he buys shares of a sound and well-run investment company. This does not seem to have been as yet fully appreciated in India, where the market quotation of investment company shares are usually much below their intrinsic value as represented by the market value of their portfolio. It is to be hoped in the interests of the investing public that, in the years to come, better appreciation will prevail of the value and attractiveness of the shares of good investment companies."

Although Mr. Tata has ably argued his point, the mania for capital appreciation and quick profits is so strong today that his observations may go unheeded by many.

Management of State Enterprises

Public enterprises have in recent years raised some complex issues of organisation and management—so complex that the final report of the third Plan has devoted a whole chapter to them. The recommendations of the Krishna Menon Committee on State Undertakings have also been in the field for some time and influenced the Planning Commission's approach. Some of these recommendations have just been accepted by the Government. The most important decision of the Government pertains to the proposed constitution of a Joint Committee of Parliament for ensuring the public accountability of State undertakings. The Government has also accepted the Committee's suggestion that Members of Parliament should not be appointed to the Boards of Management of these undertakings and that a Secretary of any Ministry or any Department should not be appointed as a Director; other Secretariat officials will not be appointed in more than three or four companies at a time. It may be recalled that the Vishnu Sahay Committee saw no objection to the appointment of officials as ordinary directors (in addition to their own duties), if they were outside the controlling Ministry. But, in the third Plan (which represented a further stage in the evolution of Government's thinking on this subject), a preference has been shown to officials who are actually dealing with a project in the administrative Ministry concerned, so that they can interpret the various points of view to the Government or the Board as the case may be when differences arise between them and thus serve as a co-ordinating link.

There is a similar relaxation in favour of appointment of part-time directors drawn from business, so long as there is no conflict of interest, direct or indirect, between their business and the public sector. However, in the case of chairmen and managing directors, it has been decided that their appointment will be on a full-time basis (except in the case of very small concerns).

Quite appropriately, the Government has turned down the suggestion of the Krishna Menon Committee that the rest of the Board should be "drawn from the ranks of the Company and indeed the promotion to directorship would be one of the incentives and rewards of competent and loyal service." The anomaly of a double role for the employee has been recognised.

While the, K. M. Committee favoured the continuance of the present practice of the Government making appointments of persons to posts carrying a monthly salary of above Rs. 2,000, the Government has now raised this limit to Rs. 2,250. The real difficulty hitherto was in obtaining Government's approval quickly and many posts in the public sector enterprises have been left unmanned because of this procedure.

Mr. Manubhai Shah's statement on the subject in Parliament is somewhat cryptic about the proposal of the Committee to give overriding powers to the chairman and managing director; apparently, in all such cases of difference of opinon with the board, the chairman will in future be required to reserve any matter for the Government's decision and thus invite a directive which is the only way in which the matter can be decided consistently with the need to preserve the autonomy of the undertaking. Mr. Shah's statement does not exhaust all the issues raised by the K.M. Committee, but some of the other matters have been indirectly dealt with in the Plan chapter on public enterprises and more may be elicited during future discussions on the subject.

Mr. J. J. Ghandy on Steel Industry

A disquieting feature of our economy is that a considerable part of the steel industry's capacity continues to remain unutilised, with no prospect of early improvement in this position. The actual output of finished steel during the last year of the second Plan, that is, 1960-61, was no more than 2.2 million tons (or 3.5 million tons in terms of ingots), as against the installed capacity of 4.5 million tons (6.0 million tons ingots), the capacity lying idle being of the order of as much as 51 per cent. The shortfall in finished steel production as compared with the target of 4.3 million tons set in the second Plan was 49 per cent. What is more, the position seems to have actually deteriorated further since the third Plan began on 1st April 1961. What are the factors responsible for this disturbing trend? And what should be done to improve the situation, so that the performance by the end of the third Plan at least will be equal to the production target of 6.8 million tons of finished steel (9.2 million tons ingots)? Clear answers to these questions were given by Mr. Jehangir J. Ghandy, Director-in-Charge of the Tata Iron and Steel Company, while addressing the members of the Defence Services Staff College at Willington, Nilgiris (Madras), on Tuesday this week.

The reason for the failure of steel production to keep pace with the upsurge in demand, Mr. Ghandy said, lay in the fundamental imbalance in the raw material base of industry, resulting mainly from shortage of cooking coal and limestone close to the steel belts. The blame for this imbalance lies largely with the powers-that-be. As Mr. Ghandy rightly pointed out, the planners' energies and attention during the last ten years have been greatly occupied with the construction of steel plants at the expense of other related spheres where simultaneous development has been neglected to the extent of jeopardising the end-result.

One of the most pressing difficulties that continue to confront the steel industry is the high ash content in the currently available metallurgical coal, coupled with its erratic supplies. An absolute sellers' market, we are told, already prevails in coking coal. Further, the quality of pig iron as well as limestone is generally poor. There is also shortage of refractories (fireclay, silica, and basic bricks). The manufacturing capacity in basic bricks is very limited; out of the total capacity of one million tons of refractories likely to be in existence by next year, basic bricks are expected to account for just 65,000 tons. What is worse, serious transport bottlenecks have developed in the steel and coal belts where the density of traffic is the highest. A more disquieting problem than these is, according to Mr. Ghandy, the lack of skilled personnel with adequate knowledge and experience.

Unless the aforesaid difficulties are removed, the rate of steel output cannot be stepped up to any significant extent. The country may have more steel-making capacity, but not necessarily more steel. Surely, it would, as Mr. Ghandy observed, be very injurious to the national interest, if any part of the massive investment now proposed and that already made in the past five years were to remain unproductive through weakness in planning. Calling for long-term, realistic planning in the steel industry, Mr. Ghandy warned that, in erecting new plants or in expanding the existing ones, the vital importance of the work to be done outside the plant perimeter—in the ores and coal mines, in limestone and dolomite quarries, in providing adequate communications and transport, and in training skilled manpower—should not be lost sight of. This warning has no doubt been sounded before, but its reiteration will be pertinent so long as the problem persists.

Compulsory Survey in Cotton

With the premier associations of cotton traders and cotton manufacturers in the country, namely, the East India Cotton Association, Bombay, and the Indian Cotton Mills' Federation, as also the Cotton Advisory Board, having favoured compulsory survey, its reintroduction by the Government was almost a foregone conclusion. Announcing the decision to introduce compulsory survey, the Textile Commissioner, in a Press note issued on Saturday last, stated that the supply position now, as compared with what was anticipated early in the season, had suffered a setback as a result of unfavourable weather conditions and there was, therefore, the danger that, unless adequate steps were taken from now onwards, prices might pierce the statutory ceiling, thereby increasing the cost of production to the mills and defeating the efforts of the Government and the industry to ensure the supply of cloth to the consumer at reasonable prices. The Government, the Press note went on to add, had received representations from the aforesaid bodies that compulsory survey should be reintroduced so that cotton should not change hands at the earlier stage in the marketing process at prices above the statutory ceiling. Government had, therefore, decided to reimpose the compulsory survey system and steps were being taken to establish regional committees in different areas for this purpose.

The details of the survey, notified on Wednesday, are as follows:

(i) Compulsory survey shall be applicable to all cotton ginned and/or pressed from the date of the appointment of the regional survey committees by the East India Cotton Association Ltd., Bombay, with the approval of the Textile Commissioner.

(ii) Cotton which has been ginned and/or pressed before the date of the appointment of the regional survey committees shall not be subject to survey by the initial holder but the buyers shall have the right of survey by the regional committee or the East India Cotton Association Ltd., Bombay.

(iii) Mills which have been permitted to purchase *kapas* for ginning and/or pressing in their own factories are required to ensure that such cotton is surveyed and the maximum price thereof determined before they take it up for consumption.

(iv). The initial survey and controlling fees are required to be paid by the seller, but the seller has the right to pass on such fees to the successive buyer in turn and the mills shall be required to pay ultimately these expenses in addition to the prices fixed by the Textile Commissioner.

It has been simultaneously announced by the Textile Commissioner that officers have been deputed to certain cotton growing areas for the purpose of requisitioning cotton wherever necessary. Mills desiring to have cotton requisitioned from the areas where it is presently moving have been asked to intimate their minimum requirements and to deposit with the East India Cotton Association an amount calculated at the rate of Rs. 25 per bale refundable after the delivery is completed.

These measures are no doubt irksome to growers and traders alike. But they have become unavoidable in view of the tightening supply position of cotton. There have, however, been protests against the imposition of compulsory survey from some quarters, especially from Gujarat, claiming to represent cotton growers and traders. Their opposition is based on three grounds. First, there is no need for compulsory survey because the crop, in their opinion, will not be as small as is officially estimated. As against the official estimate of 4:8 million bales, which is also in line with the estimates of some leading cotton firms, these quarters place the crop at well over five million bales and even close to 5.2 million bales. In view of the higher carryover at the beginning of the season and the imports promised by the Government, the raw cotton supply position, these quarters contend, is not as tight as is made out by the Government. Secondly, compulsory survey is unjust and inequitous, because, under it, it is not obligatory on the part of the buyer to accept the result of the survey and buy the cotton. Thirdly, such frequent interference in the marketing of the trade constitutes a disincentive to production which will set at naught the efforts made by the Government to increase production.

EQUITIES RECOVER AT CLOSE

UNDERTONE STEADY

(From Our Own Correspondents)

BOMBAY, 23rd *November*

THE stock exchange ruled distinctly easy during the major part of the week under review and, though a recovery was in evidence in the last two sessions, today's rates for most of the scrips were well below those prevailing a week ago. Early in the week, fear of anti-speculative curbs seemed to weigh heavily on market sentiment. Operators were, therefore, hesitant to extend support at high levels and preferred to book profits. Those who had built up long positions last week rushed to liquidate a part of the holdings to be on the safe side. There was, besides, the pressure of persistent selling by some Calcutta operators. Values, as a consequence, staged a retreat. The downward trend was, however, halted somewhat yesterday when, following active support for a few selected leading scrips and scattered enquiries for some others, the market put on a cheerful appearance with a recovery in prices. The recovery gathered momentum today, though business actually put through was restricted, in view of end-of-account consideration. Selected counters scored gains in today's dealings. The undertone remained generally steady. Nevertheless, the closing prices, as stated at the outset, were substantially lower than the last week-end quotations.

In the steel section, prices declined on persistent selling. Tata Steels came down from Rs. 152 to Rs. 148.75 on Tuesday, the 21st inst. After recovering to Rs. 150.25 today, they finished lower at Rs. 149.75. The net loss over the week was Rs. 2.25. But for support from Calcutta operators, Indian Irons would have declined more steeply. They receded from Rs. 26.50 last week-end to Rs. 25.95 today; the quotation was lower still at Rs. 25.55 at one time on Tuesday. Mukand Irons receded from Rs. 30 to Rs. 28.75 in mid-session but finished better at Rs. 29.25.

Textile shares were generally weak. Centurys retreated from Rs. 615 to Rs. 603 on Saturday, but improved in subsequent sessions to touch Rs. 616 today. Towards the close, they were again depressed at Rs. 612. The net loss over the week is Rs. 3. Kohinoors, in contrast to the speculative support they received last week, encountered selling and shed Rs. 20 to Rs. 326. Simplex declined from Rs. 168 to Rs. 164 before finishing at Rs. 165. Khataus were marked down from Rs. 517.50 to Rs. 495, notwithstanding rumours of a possible bonus issue. Finlays dropped Rs. 4 to Rs. 333 and Gokaks Rs. 3.50 to Rs. 205. Podars were quoted Rs. 2.50 lower at Rs. 152.50. Standard Mills eased by Rs. 13 to Rs. 1,172. Svadeshis receded by Rs. 4.75 to Rs. 282.75 and Tata Mills by Re. 1.70 to Rs. 72.80. B.R. Cottons, however, forged ahead from Rs. 47 to Rs. 63, thanks to support influenced by the report that the mill had turned the corner. Although no dividend has been declared for the year ended 31st March 1961, the results are said to be much better and the earlier losses have been wiped out. Ahmedabad Advances picked up Rs. 9.50 to Rs. 200.50. Shreeniwas strengthened by Rs. 11 to Rs. 296.

Cement shares lacked support. Associated Cements declined from Rs. 171.50 to Rs. 168.75 on Tuesday. After recovering to Rs. 170 today, they finished lower at Rs. 169. The net decline over the week is Rs. 2.50. Digvijays came in for selling and shed Rs. 4 to Rs. 204. Jaipur Udyogs lost 24 nP to Rs. 12.12. But Orissa Cements gained 44 nP to Rs. 16.36 on special support.

In the sugar section, Belapurs moved down from Rs. 285 last week-end to Rs. 273 on Tuesday. A recovery was in evidence subsequently, the quotation rising to Rs. 278 before closing at Rs. 276.50. The net loss over the week is Rs. 8.50. Dhaltans shed a rupee to Rs. 129. Walchandnagars receded by Re. 1.50 to Rs. 168.50. Oudh Sugars softened by Rs. 2 to Rs. 189 and Ravalgaons by Re. 1 to Rs. 61. Maharashtras, however, gained 50 nP to Rs. 189.50.

Among shippings, Scindias declined from Rs. 13.52 to Rs. 13.24 at close, after being lower still at Rs. 13.12 on Tuesday, while Great Easterns scored a gain of 28 nP to Rs. 13.36.

In the automobiles group, Premiers eased by Rs. 4.25 to Rs. 164.75, despite all-time record sales in 1960-61 and expansion schemes. But Hindustan Motors gathered 4 nP to Rs. 21.64.

Rayon shares were subdued. National Rayons declined from Rs. 590 to Rs. 580 on Saturday. After recovering to Rs. 589.50 today, they wound up the week at Rs. 584. The net loss over the week is Rs. 6. Baroda Rayons declined by Rs. 3.50 to Rs. 162.50. Indian Rayons changed hands Rs. 4 lower at Rs. 91. South India Viscose dropped Rs. 5 to Rs. 187. Gwalior Rayons were, however, a shade better at Rs. 50.50, as against Rs. 50 last week-end.

Chemicals presented a mixed pattern. Amar Dyes slumped by Rs. 27.50 to Rs. 302.50. Indian Dyestuffs eased by Rs. 7.50 to Rs. 477.50 and Poly Chems by Rs. 3.75 to Rs. 213.75. Colour Chems, however, advanced by Rs. 20 to Rs. 410. Dharamsis put on Rs. 6.25 to Rs. 211.25. Synthetics hardened by Rs. 5 to Rs. 242. Tata Chemicals strengthened by 48 nP to Rs. 21.56 on support influenced by renewed reports that the Company would participate in a joint bauxite project with the Bombay Burmah Trading Company.

Engineering shares lacked support. Telcos were subjected to selling and receded from Rs. 379 last week-end to Rs. 369 on Tuesday. After moving up to Rs. 376 today, they finished easy at Rs. 372. The net loss over the week is Rs. 7. Asian Cables fell by Rs. 6 to Rs. 120. Alcock Ashdowns shed Rs. 5 to Rs. 327. Premier Constructions declined by Rs. 4.50 to Rs. 199.50. T. Manekalals (old) eased by Rs. 15 to Rs. 705. New Standard Engineerings changed hands Rs. 5.50 lower at Rs. 204.50. Cooper Engineerings lost a rupee to Rs. 195. Larsen and Toubros softened by 25 nP to Rs. 39.25. Texmacos shed 60 nP to Rs. 20, Greaves Cottons Rs. 3.50 to Rs. 181.50 and Hindustan Electrics Rs. 5 to Rs. 180. Kamanis, however, were quoted 72 nP higher at Rs. 18.24. Jyotis hardened by Rs. 4.25 to Rs. 196.25.

In the miscellaneous group, Bombay Burmahs provided a bright spot. Although the scrip lagged behind early in the week, it firmed up in subsequent sessions, thanks to speculative support induced by the possible collaboration of the Company with the house of Tatas in the establishment of a bauxite project. From Rs. 700, last week-end, the quotation had declined to Rs. 686 on Tuesday, but recovered to Rs. 714 today before closing at Rs. 709. The net gain over the week is Rs. 9. Shivrajpurs encountered selling and declined by Rs. 5.50 to Rs. 46.50. Premier Tyres eased by Rs. 7.50 to Rs. 152.50. Ceat Tyres were quoted Rs. 3.75 lower at Rs. 220. New India Industries declined by Rs. 2.50 to Rs. 400. Allied Camphors were marked down by Rs. 6 to Rs. 73. Chemicoats receded by Rs. 3.50 to Rs. 119.50. Hindustan Levers shed 80 nP to Rs. 58.20. West Coast Papers lost Re. 1.50 to Rs. 180. Hind Cycles, however, hardened by Rs. 4 to Rs. 110. Permanent Magnets were unchanged at Rs. 140.

* * * *

Calcutta Stock Exchange

CALCUTTA, 22nd *November*

Barring a few popular scrips which scored handsome gains on good investment support, the Stock Exchange ruled easy during the week under review. The easiness was due to stale liquidation, induced by fears of official intervention to curb speculation. Operators, no doubt, took note of the improving cilmate for the flow of foreign capital to India, following Prime Minister's visit to the U.S. and the visit of the Japanese Premier to this country. But they were not enthusiastic to enter into long commitments, thanks to the continuously rising trend of production costs and apprehensions regarding higher tax burden. In particular, engineering shares were subdued on account of the persistent shortage of raw materials and fuels. Despite improvement in raw jute supply position and reports that the mills were working in full swing, jute shares ruled listless. Coals were neglected owing to continuing transport difficulties, to which particular attention was drawn by the President of the Coal Consumers' Association of India in his speech at the annual meeting last week. Activity in the tea section was restricted. Miscellaneous shares, particularly, cements, paper and textiles drifted downward, though a few leading scrips put on a better appearance.

Among coals, Seebpores lost 50 nP to Rs. 43.50. Burrakurs declined from Rs. 19 to Rs. 18.50 before closing at Rs. 18.81, with a net loss of 19 nP. Standards fell by a like amount to Rs. 13.81. Raneeganjs shed 12 nP to Rs. 15.25. Bengals, however, met with special support and rose by Rs. 10 to Rs. 364. South Karanpuras gathered 58 nP to Rs. 8.69 and East Indias 25 nP to Rs. 33.

In the jute section, Nuddeas dropped Rs. 3.75 to Rs. 58.25. New Centrals eased by Re. 1.12 to Rs. 17.75. Howrahs receded by a rupee to Rs. 21.50. Birlas shed 50 nP to Rs. 28.87 and Megnas 13 nP to Rs. 13.87. But Alliances spurted by Rs. 5 to Rs. 97. Ganges hardened by 50 nP to Rs. 13.

Engineerings, as already stated, were subdued. Binani Metals and Calcutta Steels suffered a loss of 56 nP each to Rs. 12.44 and Rs. 17.69, respectively. Texmacos eased by 50 nP to Rs. 20. Jessops were lower by 44 nP at Rs. 21.12 and Jays by 31 nP at Rs. 27.75. Guest Keens softened by 13 nP to Rs. 41.12. Indian Irons declined from Rs. 25.92 to Rs. 25.66, but recovered to Rs. 25.90. J.K. Steels, however, improved by Re. 1.04 to Rs. 23.66, on expectations of a further issue of right shares. The Directors of the Company have maintained the dividend for the year ended March 1961 as at the previous years level of 20 per cent. taxable.

Among teas, Grobs fell by 44 nP to Rs. 9.62. Tezpores retreated by Rs. 17.62 to Rs. 17.31. Hasimaras were quiet at Rs. 30.75, as also East Indias at Rs. 19.50. But Brooke Bonds picked up Re. 1.25 to Rs. 16.81. Killcotts gathered 19 nP to Rs. 19.69.

Phosphates were in the limelight in the miscellaneous section, the quotation rising by Rs. 30 to Rs. 330. Although the Company has reduced the dividend from 35 per cent to 25 per cent, operators seemed to be optimistic about the prospects for the current year, in view of the expansion programme of the Company. Union Carbides rose by Rs. 3 to Rs. 53.75. Alkalis, however, eased by Re. 1.75 to Rs. 42. Among others, Indian Cables moved down by Re. 1.19 to Rs. 36.31. Rohtas fell by 38 nP to Rs. 17.81. Indian Aluminiums sagged by 37 nP to Rs. 38 on fears that the Company was not likely to issue any right shares for financing its expansion project. In the paper group, Shree Gopals eased by 37 nP to Rs. 27.25, and Orients by 5 nP to Rs. 38.55. Among cements, Jaipur Udyogs declined by 6 nP to Rs. 12.25. Sone Valleys were neglected at Rs. 5.31. Sirsilks were quoted lower by 31 nP at Rs. 11.44. But Dunlop Rubbers strengthened by 56 nP to Rs. 60 as they are to be listed ex-right from Thursday. Hindustan Motors increased by 6 nP to Rs. 21.56 on hopes of resumption of work in the factory.

Madras Stock Exchange

MADRAS, 22nd *November*

The buoyancy of equities noted last week was arrested during the week under review, as follow-up support was lacking and profit-taking was on a large scale. In fact, several counters suffered a distinct setback in values. Textile shares encountered selling with the exception of a few select scrips which maintained a firm front. Sugar shares were also subjected to persistent selling, notwithstanding the assurance issued by the Union Food and Agriculture Ministry that it would regulate sugar releases with a view to restricting a further fall in prices. Teas tended to move down. The suspension of the system of allotment of export quotas to tea estates announced by the Tea Board failed to inspire resentment. Rubbers ruled subdued on reports that rubber prices were ruling at the lowest level in the recent past and that the trend would continue for sometime more. In sympathy with teas and rubbers, coffees were dull. Miscellaneous industrials, too, developed a sagging tendency.

A sharp decline in the quotation for Premiers from Rs. 352 to Rs. 340 was the feature of trading in the textile section. South India Viscose were marked down by Rs. 3 to Rs. 188. Lakshmis suffered a loss of Rs. 2.50 to Rs. 169.50. Travancore Rayons dropped Re. 1.75 to Rs. 45.75 on margin considerations. Madurais fell from Rs. 43.25 to Rs. 42.15 before closing at Rs. 42.25. Radhakrishnas lost 50 nP to Rs. 40. Loyals shed 10 nP to Rs. 51. Coimbatore Cottons, however, were well favoured by bulls, the quotation jumping up by Rs. 20 to Rs. 225. Cannanores advanced by Rs. 7 to Rs. 183, following the announcement of an interim dividend of 10 per cent. taxable. Buckinghams spurted by Rs. 4 to Rs. 259 and Metturs by Rs. 3 to Rs. 393. Bangalore Woollens gathered a rupee to Rs. 246.

Among teas, Parksides eased by 95 nP to Rs. 28.50. Neelamalais retreated by 20 nP to Rs. 4.30 and Waterfalls by 13 nP to Rs. 2.87. Periakaramalais were lower by 10 nP to Rs. 3.75. Peermades shed 9 nP to Rs. 22.75. Blue Mountains lost 8 nP to Rs. 2.90. Kil Kotagiris moved down by 7 nP to Rs. 5.08. Chandramalais were quiet at Rs. 2.74. The Directors of the Company have maintained the dividend for the year ended June 1961 at the previous year's level of 10 per cent, taxable.

Coffee Lands fell by Re. 1.15 to Rs. 17, notwithstanding the increase in the dividend from 6 per cent, taxable, for the year ended June 1960 to 12 per cent for 1960-61. Consolidated Coffees declined by 20 nP to Rs. 21.40. The Directors have announced a dividend of 20 per cent for the year ended June 1961, same as that distributed in the previous year. Anaparais shed 16 nP to Rs. 3.40.

In the rubber group, T. R. & Ts slipped by 30 nP to Rs. 10.85. Cochin Malabars sagged by 20 nP to Rs. 7.40. Malankaras were featureless at Rs. 17.50 and Vaikundams at Rs. 32.50. Midlands, however, hardened by 10 nP to Rs. 11.20.

In the miscellaneous section, Andhra Cements fell by 30 nP to Rs. 9.10, and Dalmias by 25 nP to Rs. 12.45. India Cements declined by 10 nP to Rs. 6.61. But Orissa Cements scored a gain of 45 nP to Rs. 15.90. Among chemicals, F.A.C.Ts eased by 18 nP to Rs. 9.12. Travancore Chemicals were dull at Rs. 22, despite the announcement of an interim dividend of 10 per cent, taxable. Among others, Ashok Leylands dropped 30 nP to Rs. 9.30 and Aluminium Industries 20 nP to Rs. 23.70. Textools and Tube Investments, however, advanced by Rs. 4 each to Rs. 190 and Rs. 289, respectively.

INDIAN ALUMINIUM'S HIRAKUD SMELTER

The construction of the second stage of the Indian Aluminium Company Limited's Hirakud smelter was completed early last month, five months ahead of the original completion schedule. The Government of Orissa was also able to make available, ahead of schedule, a partial supply of power to the smelter, so that half of the expanded facility has gone into operation. The smelter is expected to go into full operation early next year when the balance of the power will become available. This expansion will increase the Hirakud smelter's capacity from 10,000 tonnes to 20,000 tonnes per annum and will raise India's total aluminium smelting capacity from 18,000 tonnes to 28,000 tonnes, representing an increase of about 55 per cent.

The first stage—10,000 tonnes—of the Hirakud smelter was commissioned early in 1959. Soon after, in order to meet the rapidly increasing demand for aluminium in the country, the Company decided to double the Hirakud's capacity to 20,000 tonnes.

The current demand for aluminium in India is about 50,000 tonnes and is expected to rise to about 120,000 tonnes by the end of the third Five-year Plan. Besides the existing units, several new smelters are likely to be established by 1966, raising the total installed capacity in the country to 97,500 tonnes.

NEWS IN BRIEF

IT has been decided to undertake manufacture of diesel locomotives at the locomotive components works at Varanasi.

The setting up of a "Recontrol Institute" to safeguard the purity of drugs manufactured in the public sector is under the consideration of the Government of India.

Air-India *International is considering the introduction* of Boeing 707 aircraft in the place of Super-Constellations on Delhi-Moscow route next year, when it will be operating all its services with jet aircraft.

The West German Government has agreed to find placement for 250 qualified engineers and technicians from India who will work as regular employees in German industries for two to three years.

The Government of India is considering the question of revising the present tariff structure in regard to the import of machinery and components with a view to fostering the growth of industries in the country.

An enforcement directorate is being set up by the Forward Markets Commission in Bombay to look into the matter of illegal trading. This was stated by Mr. Nityanand Kanungo, Union Minister for Commerce, in the Lok Sabha this week.

China has agreed to contribute in cash and in consumer goods, including textiles, towards the cost of certain Chinese-aided projects in Nepal. Disclosing this in the Lok Sabha, Mr. Nityanand Kanungo stated that imports of textiles from China would be only of minor significance to India.

Soviet Russia has agreed to supply equipment and technical service needed for executing the Mettur tunnel scheme (Madras), according to Mr. Hafiz Mohammed Ibrahim, Union Minister for Irrigation and Power. India will make payment to Russia in non-convertible rupees.

The National Productivity Council has set up a committee, with Mr. Naval H. Tata as Chairman, to evolve a formula for sharing the profits of increased production between workers and managements, according to Mr. Manubhai Shah, Union Minister of Industries. The Committee is expected to finalise its report early next year.

The Coffee Act, 1942, has been so amended as to modify the methods of constituting the Coffee Board. As a result of the amendment, the Board will consist of a chairman to be appointed by the Central Government, three members of Parliament, and not more than 29 other persons nominated by the Centre to represent various interests.

The electric bulb manufacturers have been asked by the Central Government to produce low-wattage lamps to the extent of one-third of the licensed capacity in a bid to overcome shortages. Additional capacity has also been licensed. The Government is now awaiting the Tariff Commission's report on the cost structure and fair prices of electric lamps.

The Government of India has accepted the Krishna Menon Committee's recommendation for the setting up of a joint committee of Parliament on public undertakings. The Government has also accepted the Committee's suggestion that members of Parliament should not be appointed on boards of management.

The trends in Indo-Soviet trade since the five-year agreement was signed in 1959 was reviewed and letters were exchanged last week by the representatives of the two Governments. As a result, the volume of trade is expected to go up by 30 per cent over the present level in 1962.

A wool research institute is proposed to be set up by the Government of India in Rajasthan in collaboration with the U.S. Government. The Institute will provide facilities for research and training in wool production, shearing, grading, sheep breeding and other problems relating to sheep husbandry.

Trade between India and Poland is expected to expand considerably during the year 1962, following the revision in the schedules of goods for 1962 under the trade agreement signed in 1959. India's exports to Poland last year aggregated Rs. 3.35 crores and imports were of the order of Rs. 2.99 crores.

The Government of India has dropped the proposed scheme for the manufacture of rayon pulp from bagasse on a commercial scale. Although the National Development Corporation has an idea of putting up such a project, report of foreign experts have shown that sufficient technological development has not yet taken place in the country to justify the setting up of such a plant.

The Indian Detonators Limited proposes to establish a detonator factory in Hyderabad in collaboration with the Hungarian Organisation, Komplex. The plant, which will have an annual capacity of 64 million, will be the first of its kind in India to produce plain and electric detonators. The current imports of detonators involves foreign exchange of about one crore of rupees.

The report of the Law Commission on the law relating to hire-purchase has been presented to to the Lok Sabha. The Commission's proposals, put in the form of a draft Bill, are applicable to all hire-purchase agreements irrespective of the amount payable under each. According to the Commission's report, owners cannot exercise their right to seize the goods otherwise than through court where the hire-purchase price exceeds Rs. 15,000 when three-fourths of it have been paid and where it is less than Rs. 15,000 when half of it has been paid.

The World Bank has expressed the view that the proposal to undertake construction of a satellite port at Haldia, near Calcutta, should be deferred until further data relating to the hydraulic aspects of the site and its approaches are collected. For collecting such data, the Union Government proposes to set up shortly a hydraulic research department. It is expected that the department will take two years to complete the study. The cost of the study is estimated at Rs. 95 lakhs of which foreign exchange amounting to Rs. 53 lakhs will be provided by the World Bank.

Facilities for the amicable settlement of commercial disputes arising between parties in India and Russia have been provided in an agreement entered into between the Arbitration Tribunal of the Federation of Indian Chambers of Commerce and Industry and the Russian All-Union Chamber of Commerce, at New Delhi last week. This is the fourth agreement in the field of arbitration to be entered into by the Federation with commercial organisations of foreign countries. The first three agreements were signed with Japan, the U.S. and East Germany.

Detailed work in the Khetri-Daribo area of Rajasthan and Rangpo area of Sikkim has established workable deposits of copper ore of 28.35 million tons. The Khetri reserve of 28 million tons has an average copper content of 0.8 per cent. The copper content of Rangpo deposit—350,000 tons—averages about 6.24 per cent. The occurrence in Daribo is richer in copper, but the extent of the reserves is yet to be fully proved. The reserves proved in Khetri and those indicated in Daribo are considered adequate to feed a smelter with a capacity of 11,500 tons of electrolytic copper per annum. The third Plan has provided an outlay of Rs. 12.5 crores for the mining and concentration of the ore at Khetri and Daribo and smelting the concentrates at a smelter being established at Khetri. The reserves at Rangpo, though richer in grade, are comparatively small in size. These are to be exploited by the Sikkim Mining Corporation, a joint venture of the Sikkim Durbar and the Government of India.

India imported 164,000 tons of copper, lead and zinc in 1960, as against 128,000 tons in the previous year. There is only one copper producing unit in the country—the Indian Copper Corporation's plant at Ghatsila—the production of which is more or less stagnant around 8,000 tons a year. The annual consumption of copper is expected to be at 180,000 tons by the end of the third Plan period. Although India's per capita consumption of copper is only 0.02 lb. at present, it is expected to rise to 0.4 lb. by the end of the third Plan period. In the U.S., the per capita consumption of copper is as high as 17 lbs. in the U.S. and 5 lbs. in Europe.

India exported 238,000 metric tons of sugar from 1st January to 12th November this year. Exports to the U.S.A. aggregated 148,000 tons and those to other countries 90,000 tons. The amount of foreign exchange earned is estimated at Rs. 11.6 crores. The average f.o.b. realisations are put at Rs. 536 per metric ton on exports to the U.S.A. and at Rs. 411 per metric ton on exports to other countries. It is estimated that these exports involve a subsidy of about Rs. 5.5 crores by the Government during the current year. A supplementary grant was sanctioned by Parliament during the last session for this purpose. The exact amount of subsidy will, however, be known only after the accounts have been finalised.

Production of iron ore during the month of September 1961 was 930,000 metric tons, bringing the total output during the first nine months of 1961 to 8,654 metric tons which is higher by 7 per cent, as compared with the output in the corresponding period last year. Orissa was the leading producing State, with an output of 375,000 metric tons, followed by Bihar which recorded an output of 232,000 metric tons. Production in Madhya Pradesh, Mysore and Maharashtra amounted to 200,000 tons, 144,000 tons and 17,000 tons, respectively. During the month, despatches of iron ore for consumption in the iron and steel plants aggregated 690,000 tons and those for export were of the order of 135,000 metric tons.

The construction of the new building of the Central Warehouse at Sangli, Maharashtra, has been completed. The building has a storage capacity of 5,400 tons and special provision has been made for storage of three commodities—groundnut, turmeric and gur. Fourteen bins, with a storage capacity of 300 tons of loose turmeric, have been constructed. Similarly, ten bins, with a storage capacity of 200 tons of loose groundnut, have also been built at the warehouse. A specially constructed godown in the building provides for the storage of 100 tons of gur which needs special precautions for preservation during the monsoon and summer. In addition to these three commodities, the three godowns in the new building provide for storage of 4,800 tons of foodgrains in bags. Set up in 1957, the Central Warehousing Corporation has so far established 50 warehouses in the country which provide for scientific storage of agricultural commodities.

The Indo-Japanese Prototype Production Centre was inaugurated at Howrah (Calcutta) by the Japanese Prime Minister, Mr. Hayato Ikeda, on the 17th inst. The Centre, which has been established under an agreement between the Governments of the two countries, will undertake the development of prototypes of machines, tools and accessories for making them available to small units for the purpose of copying and production on a commercial basis. It will also supply the small-scale units designs, instruments for the production of machines and tools of standard quality, besides imparting theoretical and practical training in all fields of technology. Under the agreement, the Japanese Government will supply teaching aid, machinery and equipment, tools and spare parts and also requisite technical experts at a total cost of Rs. 60 lakhs. The Government of India will meet the cost of land and buildings, raw materials and other incidentals, amounting to Rs. 70 lakhs.

PERSONAL

MR. K. B. Lall, Special Secretary in the Union Ministry of Finance, has been appointed Ambassador of India to Belgium and concurrently Ambassador to the Grand Duchy of Luxembourg.

Prime Minister Nehru returned to New Delhi on Monday the 20th inst., after a tour of the U.S. and Mexico.

Mr. T. S. Rao, until recently Joint Chief Officer, Agricultural Credit Department of the Reserve Bank, has taken over charge as the Chief Officer of the Department with effect from the 20th inst., vice Mr. J. C. Ryan who has retired.

Mr. M. P. Mathur, at present Director of Export Promotion in the Union Ministry of Commerce and Industry, has been appointed India's Ambassador to Czechoslovakia. He will be concurrently accredited as India's Ambassador to Rumania.

Mr. K. C. Reddy, Union Minister for Commerce and Industry, left for Frankfurt for a ten-day tour of Europe on Monday the 20th inst. While abroad, he will discuss with West German authorities trade matters of mutual interest and then proceed to Geneva to lead the Indian delegation to the G.A.T.T. conference beginning next week.

Mr. L. D. Mudie, General Manager of Burmah-Shell Oil Storage and Distributing Company of (India) Ltd., has retired after 28 years of service, of which 20 years have been in India. After a short holiday, Mr. Mudie will join the Shell International Petroleum Company, London, as Co-ordinator of its activities in Far-East Asia.

From Abroad

The International Confederation of Free Trade Unions will hold a three-week Asian Seminar on trade union research at Calcutta from 27th inst. About 15 delegates from 12 Asian countries will attend this seminar.

The index of output in the U.S. mines, factories and utilities rose by 13.1 per cent in October, as compared with 1957. The rise is attributed mainly to resumption of automobile production, after a strike in September and partly also to higher output of clothing and household items.

Canada has pledged an initial contribution of $5 million in food and cash for the $100-million World Food Bank, proposed to be set up under the ægis of the U.N. Food and Agriculture Organisation. The Food Bank is designed to use surplus food to fight hunger and help underdeveloped countries.

West Germany has made contributions amounting to DM 42 million to several U.N. special funds. This amount included DM 30 million earmarked for special schemes under the U.N. technical aid programme. The remaining DM 12 million will be added to the U.N. special fund for the Congo.

World total fish catch for 1960 rose by six per cent to a new high of 37.7 million metric tons. Japan, the leading producer, accounted for 6.2 million metric tons, representing a rise of 300,000 tons over 1959. The other countries, the fish catches of which rose during 1960, were Peru, South Africa, South West Africa, Russia, India and Spain.

The U.S. Government has agreed to import 150,000 tons of sugar from South Africa annually during the next five years at a price of £35 15s. per ton, which is well above world prices. Excess of the stipulated quantity will be made only by special arrangement with the U.K. Ministry of Agriculture and will be sold to buyers at the ordinary market price. The new agreement, which has been rendered necessary by South Africa's decision to leave the Commonwealth, will come into effect on 1st January 1962.

World production of steel during the first nine months of 1961 was higher at 276 million tons, as against 274 million tons in the same period last year. The U.S., the world's leading steel manufacturing country, produced 70 million tons. This quantity, however, was lower by 12.5 per cent, as compared with the corresponding period of 1960. This decrease is attributed to a strike in the U.S. automobile industry in September. The European Coal and Steel Community (West Germany, France, Belgium, Luxembourg and Italy) came second with a total output of 61 million tons, as against 59 million tons. Russia is the third largest steel producer, its steel output having gone up from 53 million tons to 57 million tons.

HOUSING

THE shortage of houses in urban areas alone in 1951 was 2.5 million. This increased to 5.0 million in 1961, thanks to a 40 per cent increase in the population of towns with 20,000 or more people. In the second Plan period, only some 500,000 houses are estimated to have been constructed with the help of a public sector outlay of about Rs. 250 crores, including the expenditure on housing by individual Ministries; in the same period, a net investment of about Rs. 1,000 crores is stated to have been made in housing in the private sector, accounting probably for 2 million new houses. All these are only estimates and it is not known to what extent actual performance is close to them. Any way, one will not be wrong in saying that, but for whatever construction there has been in the past ten years, the shortage in housing at the end of the second Plan would have been much more serious than is suggested by the figure of 5 million. This, however, can be no consolation to the hard-pressed urban population. If anything, the depressing thought of a continuing shortage, which is likely to increase rather than decrease over the third Plan period, should be very much in its mind. The anxiety of the urban public on the score of housing will not be greatly allayed by the third Plan schemes for building 900,000 houses at an estimated outlay of about Rs. 450 crores (including the expenditure of Ministries) by the public sector and 2.2 million houses at an estimated outlay of Rs. 1,125 crores by the private sector, for the demand for new houses will have also increased during the third Plan period and there will still be a shortage to the tune of about 4 million houses by the end of that period. These estimates show that the problem of catching up with the arrears of housing and with the growth of urban population will continue to present serious difficulty in the fourth and fifth Plan periods.

The magnitude of the housing problem is such that no appreciable relief can be expected over the short-term. But the question is bound to be asked whether there are no means of quickening the pace of house building so as to remove the shortage at least in the next ten years. As far as the public sector is concerned, there is some indication in the address of Dr. B. Gopala Reddi, Union Minister for Works, Housing and Supply, at the sixth conference of the Housing Ministers held at Bhubaneswar last week, that the third Plan allocation for housing would be considerably augmented with the setting up of a Central Housing Board. The final report of the third Plan, it may be recalled here, has envisaged the establishment of such an organisation for channelling *additional* funds into housing, encouraging the flow of credit on easy terms by means of insured mortgages, improving lending practices and providing the machinery needed for the creation of a sound mortgage market in housing. The Board could, for instance, raise finance directly to some extent and provide loan assistance to State Housing Boards (which at present are merely construction agencies for the State housing programmes) for purchase and development of land and construction of houses. It is thus hoped that, together, these institutions could assist in evolving housing policies which would facilitate construction of houses by persons of limited means for their own use and also enable banks and other financial institutions to undertake various services. That a certain quickening of the pace of house building may come about when a Central Housing Board is in the picture, can be foreseen. But its mobilisation of "resources which might not be otherwise readily available" may possibly eat, to some extent, into the resources that would normally go into housing in the private sector.

Another noteworthy development, referred to in the Housing Ministers' Conference, is the Government's proposal to provide some housing, at a concessional rate of rent, to persons with an income of less than Rs. 1,800 a year under the low-income group scheme which has mostly benefited so far persons in the income-group ranging between Rs. 1,800 and Rs. 6,000 a year by providing them with house-building loans. What is now envisaged for persons with incomes of less than Rs. 1,800 a year is not housing loans repayable in 30 years but only rental housing on a subsidised basis. This is good in so far as it goes. But what is not so very good is the proposal that employers might be compelled to build more houses for their workers under the low-income group housing scheme itself. If compulsion on employers is now envisaged, is it because the subsidised industrial housing scheme has not, by any chance, worked satisfactorily? Since an allocation of as much as Rs. 30 crores has been made under the third Plan for subsidised industrial housing, it would be prudent to work this scheme well by persuading employers and co-operative societies of industrial workers to take the fullest advantage of State assistance by way of loan and subsidy. There would be no point in compelling employers to build more houses when workers themselves in a number of places are stated to have displayed no enthusiasm for co-operative housing for which loan assistance to the tune of 90 per cent of the cost is given in addition to a subsidy. The Housing Ministers' Conference could have more usefully concerned itself with the need for imparting greater vigour and efficiency to the existing housing programmes in the public sector and also with that neglected question of ensuring adequate and prompt supplies of building materials, if not credit facilities, for housing in the private sector. It is futile to talk of compelling anyone to construct houses when there is an acute short-supply of cement, steel, bricks and skilled workers.

APPRENTICE TRAINING

On Tuesday the 21st inst., the Lok Sabha swiftly put its stamp of approval on the Apprentices Bill, 1961, without any elaborate debate. It looks as though the House was in a great hurry to get on to the next item on the agenda. The Bill seeks to saddle the Government with powers to utilise fully the facilities available both in the private and public sectors for the training of apprentices and to ensure that the training is in accordance with the programmes, standards and syllabi drawn up by expert bodies. The Bill was generally welcomed by all sections of the House. Some even considered it as a "great step forward" in the country's efforts to speed up technical training. A suggestion for referring the Bill to a Select Committee having been rejected by Mr. G. L. Nanda, Union Minister for Labour, the Bill was passed by the House without much ado. Mr. Nanda, however, accepted an amendment providing for representation of labour on the Central and State Apprenticeship Council and the House, too, agreed to it. In fact, this amendment is the only significant change made in the provisions of the Bill which was presented to the Lok Sabha as early as on 19th August 1961.

It may be recalled here that, according to the Statement of objects and reasons of the Bill, the failure of industry to organise fully training programmes on a systematic basis in the context of the increasing demand for skilled craftsmen was the main reason for the Government bringing forward legislation for this purpose. Further, legislation was favoured by both the Shiva Rao Committee and the Advani Committee. The Government, too, had recognised the need for legislation for quite some time now. The delay in introducing the Bill, according to Mr. Nanda, was due to Government's anxiety to reach an understanding with employers and bring forward an agreed scheme. The delay was worthwhile, as the Government has succeeded in its move and the scheme embodied in the Bill carries the support of employers.

The Bill seeks (1) to regulate the terms and conditions of apprenticeship training and (2) to compel employers to train a certain number of apprentices every year, the number to be fixed by the Government in accordance with a predetermined ratio. In determining the ratio, the Government will take into account the facilities available for apprenticeship training in the designated trade concerned as well as the facilities that may have to be made available under any other scheme approved by the Government. The State Governments also are empowered to ask the employers to train apprentices in excess of the ratio determined by the Central Government, if they found it necessary.

During the brief debate on the Bill, some members suggested that such labour legislation as the Factories Act, the Workmen's Compensation Act and the Payment of Wages Act be made applicable to the apprentices and that minimum standards in respect of hours of work, leave, holiday with pay, etc. for the trainees should be laid down. Some others went further and wanted the Government to provide in the Bill a guarantee that, after training, the apprentices would be given jobs. It was also suggested that apprentices should be permitted to become members of trade unions. These suggestions are indicative of the anxiety of some members of Parliament to be popular with the have-nots at the expense of employers. Dealing with these suggestions, Mr. G. L. Nanda, in his reply to the debate, pointed out that, since the Bill envisaged a new scheme, the Government did not want to be too rigid in the provisions regarding the apprenticeship contract. In any case, the Bill contained, he pointed out, sufficient protection to apprentices against arbitrary termination of the apprenticeship contract, violation of the terms of the contract, etc. Referring to the criticism that the Bill did not specifically state to which of the industries the apprenticeship scheme would apply, Mr. Nanda said that the scheme would be introduced in those industries where there was a great demand for skilled workers. The Government, he added, did not think that it was necessary to lay down precise and detailed conditions regarding stipends.

The contention that the apprentices should be brought under the purview of all labour laws normally applicable to workers is based on an erroneous equation of the former with the latter. Every apprentice undergoing training in a designated trade in an establishment is a trainee and not a full-fledged worker. Not only will a trainee be not in a position to make any significant contribution to production and profits, but he will actually cost the employer a considerable amount in the form of (*a*) outlays on providing facilities for training raw hands and (*b*) loss of production of workers earmarked for training them. There is, therefore, no equity in the suggestion that the provisions of law in respect of regular workers should apply to them. It is regrettable that Mr. Nanda's reply on this point was rather equivocal, instead of being categorical. The suggection that the employers should be legally obliged to give jobs to the apprentices is surely ill-conceived, for it will not only prevent employers from coming forward in large numbers to train apprentices but would also mean, in effect, forced employment. Legislation in a sphere like this could succeed only if employers wholeheartedly co-operated with the Government in meeting a national need. Moderation and a spirit of accommodation are essential prerequisites for the scheme's success and it is gratifying to find that the Bill represents such an approach.

POWER DEMAND IN CALCUTTA

The Calcutta Electric Supply Corporation, which belongs to the private sector, has a total effective generating capacity of 275 MW., representing a fourth of the aggregate installed capacity in the entire Bihar-Bengal area. The demand for power in this vital industrial area has more than doubled since 1955-56, but neither the C.E.S.C. nor the public sector has found it possible to satisfy the entire energy requirements of industrial consumers in particular. In the case of the C.E.S.C. which has been catering to the Calcutta area, industrial consumption has accounted for 90 per cent of the energy sold for power purposes. But the Corporation has been in no position to satisfy the maximum demand (about 400 MW.) in full even with the help of the D.V.C.'s supply of 60-75 MW. in 1960-61. The expected power in the next few years may, however, be partly relieved by the Corporation's new machine of 50 MW. capacity which is under installation now and will be commissioned towards the close of 1963. Further relief may be had from the promised supply of 60 MW. by January 1964 from the West Bengal Government's Durgapur station. But by this time, the maximum demand for power in the licensed area of the Corporation may well exceed 500 MW. on the assumption of a minimum rate of increase of 10 per cent per annum.

Where, thus, the growing load on the Corporation's system is expected to exceed the total power resources available, the present restriction governing new or additional supply of electrical energy may not be removed in the near future. According to this restriction, no new or additional supply of electrical energy for a connected load of 100 KW or above shall be given to any impending or existing consumer without the prior sanction of the Government. The continuance of this restriction, the possible full contractual supply of 100 MW. from the D.V.C., and the continued voluntary agreement by certain large industrial units in Calcutta to restrict their demands at the time of the Company's evening peak loads—these, according to Sir Harry Burn, Chairman of the C.E.S.C., whose annual review was published in last week's *Commerce*, will enable the Company, without further substantial load shedding, to carry out proper and regular maintenance of its plant and thus alleviate the position until the new plant is commissioned two years hence. Sir Harry Burn's optimistc expectation is not likely to be fulfilled two years hence, for by that time the demand for power will have further outstripped the supply. In a situation like this the C.E.S.C. may be rightly expected to think in terms of greater expansion of its own generating capacity. Its experience in the matter of getting the West Bengal Government's permission for installing another 50 MW. machine before the end of 1963—the proposal was turned down in July 1960 but reconsidered and approved in February 1961—has probably discouraged the Company's enthusiasm for further expansion. But its bitter experience in the matter of getting the D.V.C. supply should have impelled it to ask for more adequate expansion. Since the expected supplies from the D.V.C., and the Government's Durgapur and Bandel stations may or may not materialise in full by January 1966 and since the need for periodically retiring the older plant for overhaul will continue to be there, it would not be an unduly ambitious proposition if the Corporation were to ask for further adequate expansion of its own generating capacity.

W. GERMAN AID FOR INDIA

West Germany has been evincing much interest in India's economic development. The actual financial assistance given for the second Five-year Plan was over Rs. 124 crores, out of the total aid authorisations amounting to Rs. 1,090 crores by all countries. The quantum of assistance for the third Plan is expected to be markedly higher. The credits already earmarked for the first two years of the Plan period aggregate Rs. 210 crores. Surely, this amount is, as Dr. Peter von Siemens, chief of the delegation of the German industry for the Indian Industries Fair at New Delhi, said on the occasion of the German Day of the Fair on Saturday last, in no way a mean sum and it may be taken as further evidence of the confidence West Germany is placing in its economic partner, India. Expressing more or less similar sentiments, the German Federal Minister, Dr. H. I. von Merkatz, assured India that his country had one main interest: "to improve the existing contacts between the industries of our two countries and thereby to make a genuine contribution to Indo-German friendship, in particular, and to international understanding, in general."

During the last six years, the economic ties between India and West Germany have strengthened quite considerably, as witness the series of joint ventures in the industrial field. A significant feature of these ventures is the importance attached to the training of personnel. The German industrial undertakings which have their own organisations in India maintain their individual training centres in this country as well as in Germany. The number of Indian trainees and students now in Germany is said to be 2,000. There is no doubt that the contribution made by Germany to impart training facilities "will," to quote Dr. Peter von Siemens, "effectively supplement India's own great efforts in organising industrial training."

A MODEL CHARITABLE TRUST

Among the none-too-many charitable institutions in the country engaged in the mission of mercy, H.E.H. the Nizam's Charitable Trust occupies an important place. It is not only one of the best-managed charitable trusts in the country but also one which, by the range and nature of its artivities, has come to be regarded as model trust. The latest annual report of the Trust, covering the year ended 31st March 1961, gives one a glimpse of how the Trust seeks to further the noble objectives which the creator of the Trust, H.E.H. the Nizam of Hyderabad, had set for it. These are relief of the poor, support of religious institutions, provision of medical aid, advancement of education and for any other objects of public utility.

Every year, the Trust receives applications for help far beyond the financial resources of the Trust. A rigid scrutiny of each and every application is, therefore, made, so that the most deserving, irrespective of other considerations, get support. Five categories of help was given during the year: (1) maintenance allowance, (2) scholarships, (3) lump sum medical aid, (4) lump sum educational aid, and (5) special lump sum medical aid. But the Trust's activities are not confined to these. It has decided to build an Orthopædic Hospital at Hyderabad. Land for the purpose has been acquired at a cost of Rs. 2,90,000 and work on the hospital building has already commenced. Another new field into which the Trust has ventured is technical education. The Trust proposes to establish a technical school for training artisans and mechanics and a provision of Rs. 10 lakhs has been made for this purpose. It has also started a textbook lending library which will provide poor students with books. All these useful activities, it is need to add, will not have been possible but for the judicious manner in which the Trust's funds have been invested.

O.E.C.D. GROWTH TARGET

A fifty per cent growth in real gross national product during the decade ending 1970 is the combined target set for the twenty member-countries of the Organisation for Economic Co-operation and Development—the O.E.C.D. for short. The countries include all the eighteen West European nations, the U.S. and Canada. The target, which was mooted by the U.S., was accepted by the O.E.C.D. Council of Ministers at its first meeting held at Paris on the 16th and 17th inst. The acceptance was, however, subject to several qualifying clauses in accordance with the reservations expressed by Britain and some other countries. Among these clauses, the following four are considered to be specially important:

1. The rate of growth may vary from year to year and from country to country. As the target is a collective one, individual countries may fall short or exceed the target in varying degrees.

2. Those member-countries which are in the process of development should have a relatively higher rate of growth. In order to induce a real increase in their growth rates, the O.E.C.D. must assist such countries in their efforts, including preparation of sound development plans.

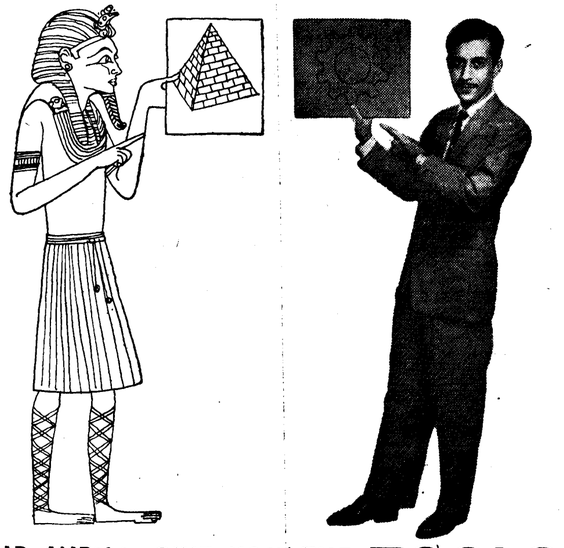
3. It is particularly urgent that a proper equilibrium is maintained in the external payments of member-countries. Efforts must be made "to develop still further" the close co-ordination of financial and economic policies as well as mutual sense of responsibility between deficit and surplus countries.

4. Price stability is of the highest importance. Gains through higher productivity should be fairly distributed and increases in money incomes kept generally in line with productivity measures.

The target of 50 per cent growth over a period of ten years may not be easy of fulfilment, but it cannot be termed "too ambitious," nor can it be dubbed, as some have done, as a piece of cold war propaganda intended to counter the targets for Soviet growth recently proclaimed by Mr. Khrushchev. For the target requires no more than the effort that was put in to achieve a 45 per cent rise in real gross national product dur ng the decade 1950 to 1960. Moreover, account has to be taken of the estimated rise of 10 per cent in population in the O.E.C.D. countries, so that the target in terms of growth per head will be lower; this has been worked at a little over 36 per cent. Nevertheless, the successful achievement of the target seems to depend on three vital questions. One, will the balance of payments surplus and deficit countries be more ready than now to recognise one another's problems? Two, will there be greater willingness on the part of the O.E.C.D. countries to share the common burden of aid to the developing countries and to tackle the problems created by the potential instability of the pound sterling and the U.S. dollar? Three, will the tariffs between the European Economic Community and other areas be lowered as far and as fast as possible?

The adoption of a target of 50 per cent economic growth by the O.E.C.D. Ministerial Council is a development of considerable significance to the underdeveloped countries, including India. For, to the extent to which the target is attained, the industrialised members of the O.E.C.D. will be enabled, as Mr. Selwyn Lloyd, British Chancellor and leader of the U.K. delegation to the Paris meeting, said, to contribute more effectively to the development of the less advanced nations both through the provision of financial and technical assistance and through a widening of their export markets. Indeed, the meeting recognised the need for a further increase of development assistance to less developed countries. The *communique* stated that the Development Assistance Committee of the O.E.C.D., which includes Japan also, would institute, beginning in 1962, an annual review of aid efforts and promises of member-countries. The underdeveloped countries might, however, have felt more grati-

TELL US YOUR JOB—



AND WE'LL GIVE YOU THE TOOLS

The size, shape or complexity of a project doesn't overawe us. We have the tools to help build it with a minimum of time, labour and cost. For nearly 70 years, BATLIBOI have supplied Industry and Trade in India with goods ranging from complete power plants to hacksaw blades. We represent internationally known manufacturers from the United Kingdom, U.S.A. Czechoslovakia, France, Germany, Japan and many other countries. BATLIBOI also represent some of India's leading manufacturers of Machine Tools, Diesel Engines and various other types of machinery. Industry and Trade are vitally connected with the economic growth of any country, and BATLIBOI are vitally connected with Industry and Trade in India.

fied if at least a broad indication of the size of assistance that would be made available had been given. One had thought that the U.S. call to members to give one per cent of their combined gross national products as development assistance would be accepted and that some concrete measures would be proposed to give effect to it.

INDIA'S FOREIGN TRADE

India's exports, which had picked up in July and August last from the year's low level touched in June, have, once again, tended to move down. According to provisional figures released by the Department of Commercial Intelligence and Statistics, Calcutta, for the month of September, exports were of the order of Rs. 59 crores, which compare unfavourably with Rs. 61 crores in August. This decline in exports, however, does not warrant any undue alarm, for it is possible that after September, exports might have recovered owing to seasonal factors, as in previous years. Imports were, however, higher by Rs. 5 crores at Rs. 77 crores in September. As a result of the decline in exports and rise in imports, the adverse balance of trade widened by Rs. 7 crores to Rs. 17 crores. Despite the setback suffered in exports and in the balance of trade position in September, India's overall performance on the trade front during the first three quarters (January to September) taken as a whole was certainly better than in the corresponding period of 1960. During the nine months period, exports aggregated Rs. 498 crores, reflecting an increase of Rs. 46 crores over January-September 1960. This represents, if projected for the whole year, a total of over Rs. 660 crores. In 1960, exports had amounted to only Rs. 635 crores.

One of the major contributory factors behind the increase in exports is the higher price fetched for jute goods, India's leading export item. This should be considered just a windfall and not the result of any perceptible improvement in the basic structure and pattern of India's trade. In fact, the persistent high prices for jute goods would have only encouraged foreign customers to turn to substitutes. This conclusion is substantiated by the recent trends in U.S. consumption of burlap. The total consumption of burlap in that country fell by 74 million yards to 639 million yards during the ten months ended October 1961, as compared with the corresponding period in 1960. What is needed now, therefore, is to promote the cultivation of raw jute in a planned manner and ensure adequate machinery for stabilising the prices of jute and jute goods. Besides jute goods, shipments of tea have also gone up, in spite of increasing competition from Ceylon and other countries. It must, however, be borne in mind that 1960 was a year of low exports for Indian tea.

The following table shows the month-to-month trend of India's imports and exports during the three quarters of 1961, as compared with the corresponding period in 1960:

(In crores of rupees)

	Import†	Exports (including re-exports)	Balance of Trade
1961*			
January	83.79	54.34	— 29.45
February	73.50	53.43	— 20.07
March	81.38	57.32	— 24.06
April	85.90	53.84	— 32.06
May	85.57	57.12	— 28.45
June	87.34	49.88	— 37.46
July	69.00	51.00	— 18.00
August	71.54	61.36	— 10.18
September	76.56	59.29	— 17.27
Total	714.58	497.58	—217.00
1960*			
January	70.71	51.35	— 19.36
February	78.28	48.75	— 29.53
March	96.42	52.87	— 43.55
April	98.57	46.63	— 51.94
May	92.97	49.84	— 43.13
June	93.79	47.13	— 46.66
July	83.55	46.03	— 37.52
August	82.45	57.07	— 25.38
September	75.40	52.51	— 22.95
Total	772.20	452.18	—320 02

* Provisional.
† Excludes certain consignments on Government account.

While exports have tended to move up during the January-September period, imports have declined. During the first three quarters of 1961 imports amounted to Rs. 715 crores, this represented a fall of Rs. 57 crores, thanks to the restrictive import policy pursued by the Government of India. With the increase in exports and decline in imports, the adverse balance of trade narrowed down by as much as Rs. 100 crores to Rs. 217 crores. It must, however, be stressed that, when certain consignments on Government imports awaiting adjustments are included, the trade gap may become larger, though it is possible that it may be somewhat smaller than was the case in 1960. Even the present trade gap is still wide and, but for the aid offered by the Aid-India Club, the World Bank and the I.M.F., our foreign exchange position would have been critical. It may also be noted here that India's sterling balances, which had gone down from about Rs. 148 crores in the beginning of January 1961 to Rs. 98 crores by the end of July, had moved upto Rs. 145 crores by the end of September.

A notable feature of India's foreign trade during the first three quarters of the current year was the sizable expansion of its trade with the U.K., the largest trade partner. According to figures released by the Trade and Navigation Accounts of the U.K., India stepped up its exports to that country from £101.22 million during January-September 1960 to £106.15 million (on a c.i.f. basis) during the same period of the current year. This increase was almost exclusively the result of a larger offtake of Indian tea, being higher by £6 million at £41.19 million. Exports of cotton yarns, manufactures and miscellaneous textile goods, however, fell from £19.80 million to £19.12 million. Shipments of leather and its manufactures too suffered a setback, having gone down by £2 million to £8.44 million. During the same period, India's imports from the U.K. (f.o.b. basis) rose from £116.06 million to £123.34 million. Significantly enough, the increase was accounted for by the relatively less important items such as chemicals, scientific instruments, photographic goods, etc. On the contrary, the chief components of Indian imports, particularly machinery, road vehicles and aircraft fell sharply.

BRITISH COMPANIES WORKING FOR INDIA

INDUSTRIAL TRAINING IN BRITAIN

METHODS AND MACHINES WIDELY USED

By Maud D. Reed

ONCE, when the word "communication" was generally understood to mean "letter" and nothing more, industrial, commercial and adult groups passed on information by writing. Industrial and commercial training was by means of the lecture or the textbook; learning was by reading or listening, and hoping to understand and remember. It was not until, following World War II, economic survival was seen to depend on increased productivity, that the use of visual aids was taken seriously in adult training in industry. Increased productivity clearly depended, to a large extent, on the acceptance of new ideas, and the need was to transmit these ideas effectively.

Industrialists returning from the war remembered the principles and practice of instruction laid down in the Services: that the most practical method of instruction is that which teaches through the greatest number of senses simultaneously. And today, the use of visual aids in training is well established in Britain. They are used by personnel managers carrying out staff induction; to teach foremen how to supervise; by operatives to learn the importance of safety; and by retail assistants to learn the art of selling and dealing with customers. Even the sales representative is taught the techniques of reaching his customer by visual aid.

Here is a brief outline of some visual aids in common use, for instance, chalkboards and blackboards. Because, in most places where instruction is given, it is possible to find a blackboard, this is still the most commonly used visual aid. Modern versions of the blackboard are available in various colours—dark blue or purple chalks on primrose coloured etched glass or wall cloth, either fixed permanently to the walls or of the roller type. The advantage of the blackboard is its simplicity. Items can easily be written, drawn or rubbed out, and it can be ruled in advance with lines, squares, and so on and trainees can easily take part in an exercise. The disadvantage is that, because of limited space, material sometimes has to be rubbed off prematurely leaving no record for future reference. Some instructors prefer to have one board for recording the lesson and another for illustrations and explanations as the instruction proceeds.

Alternatives to Blackboard

An alternative is the pad of newsprint paper clipped on to a hardboard of plywood backing. Coloured crayons, chalks and felt pens are used to write and draw on the paid; sheets can be prepared beforehand or used spontaneously and afterwards either discarded or kept as a permanent record. More complicated drawings may be made by projecting a diagram on to the pad and drawing over it, but diagrams must be right first time; they cannot be erased. To make a flannelgraph flannel, felt or blanket material is stretched tightly over a solid board, and used in conjunction with cut-outs made of flannel, paper or card, backed with flockpaper or sandpaper, which will stick to the flannelboard. It is suitable for use with large or small groups, as the flannel is available in bright, bold colours and illustrations can be made suitably large. The illustrations stick immediately, can be used over and over again and, provided they are previously arranged in their correct order, will cause no interruption to the instructor's discourse. Flannelgraphs, for instance, are useful to illustrate a sales instruction session.

Another aid is the plastigraph, which is based on the principle that shiny plastic surfaces adhere to each other by suction. The plastigraph is composed of flexible, glossy plastic sheets, in transparent or opaque colours, placed on any clean, polished surface like rigid plastic, glass or American cloth. As with the flannelgraph, models can be built up from cut-outs of this material, and any number of layers in different colours can be placed one on top of the other and removed again, to illustrate points of instruction. This is a good method of showing the parts of a machine, and how they work.

Using disc magnets, cut-outs in wood or metal can be made to adhere to sheets of iron or tinplate, usually painted or lacquered in colour. This is the magnetic board, which can hold heavier and larger models than the flannelboard or plastic-board, and it is, therefore, suitable for the more permanent type of display, as, for instance, where one wants to show the actual parts of machine tools and how they work.

The well-known domestic hardboard, which comes in many colours, perforated with holes in regular rows at three-quarter inch intervals, making a peg-board, is yet another visual aid that can carry three-dimensional specimens which can be big and heavy. Pegs or wire supports for the items fit the holes, and attractive permanent displays can be made with the aid of plastic lettering, while by using coloured string or elastic, admirable graphs can be shown.

For my own office, I have made a simple peg-board progress chart for my filmstrip production programme. A red peg against an item such as "Write Script" warns me that nothing has been done; a yellow peg reminds me that I have begun, but not completed it; a green peg tells me that the project is finished.

Projected Visual Aids

In addition to the simple, relatively inexpensive aids already listed, there are the projected visual aids. These include lantern slides, film strips (with or without sound), films (silent or sound), larger transparencies (by the overhead projector) and opaque objects (by the episcope). The overhead projector will screen transparencies up to ten inches square. It also allows the instructor to face his group while he is illustrating his talk. He can write, for instance, on a sheet of plastic resting on the copy surface of the machine, or he can build up a diagram in stages by using transparent overlays. The writing or the diagrams appear on the wall-screen above his head.

The episcope will reflect an opaque object like a picture, the page of a book, up to ten inches square. With the newer types of episcope the room need not be blacked out, though one of the disadvantages of this kind of projected picture is that the illumination is low. Where slides or filmstrips are not available, or cost is a consideration, the episcope could illustrate an induction course by using existing pictures of a factory and its products.

The 16-millimetre film is too well known to need description. It is used in Britain in various ways. For instance, new entrants are frequently shown a film of the firm's history, set-up and products, at their induction. Accident prevention films are introduced into safety training programmes and salesmen training films are widely used. Supervisory films, with case histories, are used in training foremen; and sponsored films on hygiene are used in the training of canteen assistants. Excellent films on productivity and work study are produced by the British Productivity Council, and widely distributed among supervisory and other managerial grades.

Filmstrips and Slides

Films are particularly recommended when movement is a vital part of the instruction to be given. But when movement is not essential, the filmstrip will be found to be a cheaper and more flexible tool. This is a series of still pictures in black and white or colour, and has become increasingly popular during the past 10 years as a training aid in industry and commerce. Strips are shown through a filmstrip projector and are either whole frame (36 by 24 millimetres) or single frame (18 by 24 millimetres).

Filmstrips are either accompanied by sets of printed notes for use by the instructor, as in the case of involved technical instruction, or by a gramophone record or tape, in case studies of human relations situations. The 83 sound filmstrips produced by the Industrial Welfare Society are all accompanied by gramophone records. These filmstrips come under the headings of "Human Problems at Work," "People and Production," "Training," "Sales Training" and "School to work."

While "standard slides" (three and one-quarter inches square) are still used in adult education, the smaller slide (two inches square) is much more popular and far cheaper to produce, particularly with the widespread availability of the 35 millimetre camera and the colour film. So popular are slides and filmstrips as a training aid in industry that many companies are making their own as a supplement to the professionally-made series.

Making Sound Filmstrips

Groups wishing to make their own filmstrips usually adopt one of three courses: (1) After deciding on the subject matter and treatment, they arrange for scriptwriting, photography, production and recording to be done professionally. Thus, a filmstrip of 30 to 40 frames might cost £300 or more, depending on whether it was in black and white or colour, and whether it consisted mainly of photographs, or art work. (2) They do part of the work themselves: that is, write the script and provide photographs or drawings, leaving the studio to copy the pictures on to film. The studio charge including titling, retouching prints and so on, would be in the region of £10 for an uncomplicated print. Finally, they would record their script on tape. (3) They do the whole thing themselves. This presupposes, of course, that they have the necessary equipment. An interesting example of this is the case of a company that wanted to tell its new employees about the firm's sickness regulations. A lively and imaginative script was written and illustrated by simple "pin-men" drawings, and the commentary recorded on tape. The cost of the materials used was 25 shillings, and the result was a highly successful training aid.

An Even Simpler Method

Even easier than making your own filmstrip, is to make your own set of slides or transparencies. Here, the procedure would be to consider the purpose of the slides and the audience for whom they are intended; decide on the approach; write the script; decide on the pictures to illustrate it then take the pictures (with a 35 millimetre camera loaded with reversal colour film such as "Kodachrome" or "Ektachrome").

When the film has been processed, it will be returned in the form of slides. After these have been put in the order in which it is planned to use them, the commentary is recorded on tape. Here slides have one big advantage over the filmstrip. If, for example, a machine shown in a picture was suddenly out of date, the slide could be replaced by taking another shot of the newer type of machine and substituting it for the earlier one, without the necessity of re-shooting the whole negative, as would have to be done in a filmstrip. And, of course, the slides are in colour, which is usually considered an additional attraction.

Tape Recorders and Television

The tape recorder is widely used in Britain in industry, commerce, adult education and the church in training people whose everyday work involves speaking to members of the public—lecturers, preachers, telephonists, demonstrators and sales representatives. The Industrial Welfare Society organises regular training courses for industrialists on speaking successfully in business and in public.

I have seen small groups of women supervisors listening to recordings of themselves issuing instructions; criticising themselves and each other, and so learning the principles of making themselves understood and presenting their instructions, comments and criticisms acceptably. In another sphere, church organisations distribute recorded tapes for use in general discussion groups, youth clubs and drama groups. One well-known company, with branches all over the world, uses tape recorders to teach languages to members of its organisation who are going overseas.

Television is the newest audio-visual aid. Apart from its widespread use in schools, it is used increasingly in closed-circuit for the purpose of illustrating the discourse of a speaker at a large meeting or in the training of speakers in the techniques of speaking on television.

THE AMBIGUOUS CHANCELLOR

BUDGET MAY PROVE A DIFFICULT ONE

(From Our Own Correspondent)

LONDON, *17th November*

LONDON LETTER

IN the middle of this week, the London stock market jumped more than 1 per cent, the following day it dropped by nearly as much—the explanation being that the Chancellor of the Exchequer had been speaking at lunch to the National Union of Manufacturers! The first half of his speech was so bullish that one has the impression that many of his listeners must have dashed out after finishing their coffee and rung up their brokers to buy; his less volatile hearers, however, weighed up the implications of the second half of his speech and must have come to the conclusion that all the potential expansion for 1962 might after all be held back by balance of payments difficulties through failure to export sufficiently.

There was a peevish note in the City at the week-end that it would be better if the Chancellor, no matter how good his lunch, is more precise in his analysis of which way the economy is going. The more so, as, right at the beginning of his observations, the Chancellor declared that, "as a nation, we cannot afford ambiguity as to our objectives"!

As a prelude to his happier remarks, the Chancellor analysed the problems that faced him in July as the following:

(i) The spring pressure upon sterling;

(ii) The underlying weakness of our balance of payments;

(iii) The need to achieve a steady growth in the economy;

(iv) The question of our national habits, practices and attitudes in facing the commercial problems of the world.

The Bright Side

Having given his listeners the problems, he then made a résumé of his success in meeting them. "There has been," he declared, "a greatly improved confidence in sterling. . . ., there has been a considerable strengthening of the reserves" and then, of course, the bank rate has been reduced from 7 to 6 per cent, and dollar rate stands above parity at $2.81½ per cent and the U.K. has paid back £100 million of its drawings from the I.M.F. As for the balance of payments, the deficit has been narrowed quarter by quarter; it was £64 million a month in the first quarter, £45 million in the second and £33 million in the third—the improvement being almost entirely in the reduction of imports, both in volume and price. Then came the significant phrase "on current account, we are probably just about in balance."

Growth

On the problem of growth in the economy, the Chancellor pointed out that production and employment were rising strongly in the first half of the year and he viewed with satisfaction what he called the reduction in the pressure of demand indicated by a slight fall in vacancies, but he said "an easing in the pressure does not mean that we are heading for a recession," and, though he noted that investment in manufacture was likely to turn downwards, at present it was 20 per cent higher than a year ago and in other branches of industry it was going to be maintained.

Finally, throwing caution to the winds, the Chancellor declared that "world conditions are favourable to a further growth of exports and look like being so for some time ahead. With the ending of the recession in the United States, our sales to that highly competitive market have increased encouragingly. Demand from the countries of Western Europe has also risen significantly and this trend seems likely to continue. The improvement, actual or prospective, in the position of the primary producers also offers a better prospect for our sales." This led him to summarise that there would be a favourable opportunity for the country to be moving on from emergency or crisis steps "to the shaping and developing of longer-term policies."

The Dark Side

It must have been at this point that some of his hearers dashed out of the luncheon room to buy. When the Chancellor came to explain what he meant by developing of longer-term policies the prospect of jam seemed to recede. He said that he wanted a broadly acceptable policy on incomes and pointed out that, in the second quarter of 1961, wages and salaries were 10 per cent up on the previous year, while production was averaging only 3 per cent up.

There must come checks upon private consumption and the budget would be the Chancellor's means to that end. He said that the country needed "a very carefully balanced combination of monetary and fiscal policies"—whatever they might be.

Next, the Chancellor, now riding his favourite mount, called for a five-year investment plan, but he envisaged his main function inside that plan to be controlling investment by saying "no." Carrying this thought on into private industry, he sees the need for planning there, through the new machinery for National Economic Development. Without such planning and without a proper control of the economy, the Chancellor feared inflation. The cake, he said, must be there before you try to eat it. Although many of the Chancellor's remarks were inevitable platitudes, they did suggest that the keynote of his thinking was still extreme caution.

FINANCE FOR SMALL INDUSTRIES

A SCHEME FOR PROVIDING EQUITY CAPITAL

By R. L. Varshney

LUCKNOW UNIVERSITY

THE importance of adequate equity capital for the establishment of a new business or industry or for its growth cannot be over-emphasised. Very often, small industrialists start their concerns with a low capital base. In course of time, they find their financial resources inadequate and look for financial aid from Government agencies or for accommodation from banks and other financial institutions. Government agencies cannot provide their entire requirements. They can only supplement the funds collected by the industrialists themselves. Similarly, loan or debt financing can be appropriate only to a certain extent. Often large funds cannot be obtained on favourable terms when a concern is still struggling to establish itself or is progressing very rapidly or undertaking large expansion. If adequate funds are not available at the stage of growth, the companies concerned will be doomed to stagnation. In such circumstances, expansion of the capital or equity base is the real solution.

An increase in equity capital permits a more rapid growth than would be possible otherwise. Neither bank or trade credit nor Government aid is a safe or permanent substitute for risk and/or non-repayable fixed interest-bearing capital. It is common knowledge that the amount of bank or other credit obtainable is closely related to the equity capital of the borrower. Additional equity capital expands the credit base of a company and enables it to borrow on more favourable terms.

In India, there is no specialised institution for the provision of equity capital to small industrial units. If this essential gap is bridged, there would be an added inflow of credits for such concerns. In an underdeveloped country like India, there is not much venture capital. Private investors are only interested in investing their capital in established concerns or in concerns floated by industrialists who have already established a sound reputation. Hence the need for a specialised institution is greater. In this connection, it may be noted that State Financial Corporations are prohibited by statute from subscribing to the shares or stock of concerns having limited liability. Hence they cannot supply the much needed equity capital.

Some Encouraging Trends

In the U.S.A., three major automobile manufacturers—General Motors, Ford and Chrysler—have supplied equity capital to their dealers. This practice has now been adopted by many more concerns and could be profitably adopted in India, especially by large-scale industries depending upon small industries for the supply of their parts and components or for distributing their products. The Hindustan Machine Tools, a Government of India undertaking, has made an offer to small industrialists to set up industries in its vicinity and supply it with parts and components, the capital being provided by the National Small Industries Corporation. In Bombay, the All-India Manufacturers' Organisation has sponsored a new firm, called Free Enterprises Ltd., with the object of encouraging the growth of new industrial units by extending assistance in the shape of loans, equity capital and technical and managerial advice. These trends need all possible encouragement and support.

The problem of the provision of equity capital to small industries has, of late, been engaging attention in India. As early as in 1954, the Shroff Committee on Finance for the Public Sector had recommended that a Special Development Corporation be set up, with power to subscribe to equity and preference share capital. More recently, the question was considered by the Sub-committee on Credit Facilities of the Small-Scale Industries Board. This Sub-committee felt that equity capital should be provided by the Government and other institutions to enable small industrial units to strengthen their position and raise larger loans for working capital and other purposes. According to the Sub-committee, the gains of Government participation in equity capital are several: (i) Gifted but indigent individuals would be helped to set up business; (ii) industries could be encouraged to move to underdeveloped areas; and (iii) many industries which could be established but in which entrepreneurs are reluctant to venture on their own could be brought into being in the wider interests of the economy.

It may be noted, in this connection, that the Orissa Government started in 1957-58 a scheme for floating limited companies, with a part of the shares held by it. The scheme envisaged (i) formation of private limited companies in association with private entrepreneurs having a share of at least 10 per cent, the balance being contributed by the Government out of funds available under the State Aid to Industries Act; (ii) nomination of representatives by the State Government on the board of directors of such companies, and (iii) the freedom for private entrepreneurs to buy the Government share in course of time.

Effective Utilisation of Loans

Some of the enterprises under this scheme are, however, not being properly managed, as the financial stake of the entrepreneurs is too low to sustain their interest in the success of the ventures. While practically all the risk has been assumed by the State Government, the management is left in the hands of private entrepreneurs. After examining this scheme, the Sub-committee on Credit Facilities felt that entrepreneurs should provide at least 50 per cent of the venture capital, the rest being provided by the State. Even though a provision for purchase of shares and debentures by Government had existed in some States under State Aid to Industries Acts, this power has been used only in very few cases. This is because funds have to be provided from out of the budget provision for State aid which the State Governments preferred to use for direct loans. The sub-committee, therefore, recommended that such States as have the provision should be encouraged to use it in an effective manner and the principle should be extended to other States where State Aid to Industries Acts do not contain specific provisions.

There are, however, inherent limitations to direct participation by the State in the equity capital of industrial ventures and the principle is open to certain objections. An important limitation is the difficulty in selecting the right type of entrepreneurs. The entrepreneur selected must be one with know-how, ability and a technical background. The success of the venture would depend upon adoption of sound financial planning and appropriate business policies. The State, because of its financial stake, will have to see to it that all this is properly done. Theoretically, it is possible for Governments to exercise an effective control through their representatives on the board of directors, but, in actual practice, this is bound to be a difficult job. Very often undue interference by Government directors may jeopardise the success of the venture. There would be many chances of conflicts between the two types of directors which may not be in the interests of the venture. Government directors may not always be fit, either by training or background, for running an industrial unit in a businesslike manner. Nor can they be expected to master the technical details of several different kinds of industries, especially because their work as directors would be in addition to their usual duties. In fact, it is doubtful whether they would be able to make any useful contribution at all by their membership on the boards of directors.

Meeting Losses

The principle suggested by the sub-committee is to allow the entrepreneurs the maximum right to operate without frequent Government interference but with maximum safeguards for the Government to ensure against mismanagement. But even this objective would be difficult to implement. If, ultimately, the small industrial units sponsored this way are unsuccessful, the loss will have to be borne by Governments and this may be pretty heavy. On grounds of equity to tax-payers, they may not be justified in meeting losses due to lack of foresight on the part of some entrepreneurs out of the general exchequer.

Again, the scheme has to be so operated that the Government do not stay in any unit permanently and the entrepreneur buys the Government share within a reasonable period of time.

MANSFIELD

a modest achievement...

pilot plant production

- The name is Mansfield. The pilot plant to manufacture Mansfield truck and car tyres, at the Madras Rubber Factory, will now commence production.
- This is a modest achievement, compared to the time taken to commission this plant.
- Licenses to import machinery were received and orders placed and confirmed only three months back.
- This performance is mainly due to the valuable support, cooperation and encouragement of our great partners and collaborators, Mansfield Tyre and Rubber Co., one of the biggest tyre manufacturers in the United States.
- We feel this is a good beginning. The plant which will manufacture 30 tyres a day, will give our workers, technicians and chemists extra experience, when the factory goes into full production by the middle of 1962.
- Everybody at the Madras Rubber Factory is working hard to hasten the day when the factory will produce daily 1,000 tyres and tubes.
- Plans are also complete to expand the present capacity of MRF camelback, which commands the highest sales in India.
- MRF camelback is also exported to 14 countries..

WOOLLEN INDUSTRY AND ITS PROBLEMS

TARIFF COMMISSION BEGINS INQUIRY INTO COST-PRICE STRUCTURE

MORE than a year has elapsed since the Government of India asked the Tariff Commission to examine the question of fixing fair prices of woollen yarn, fabrics and hosiery goods, but it was not until Friday the 17th inst. that the Commission could hold the public inquiry. This inordinate delay has been due not to any heavy work or carelessness on the part of the Commission but to the lack of co-operation on the part of the industry. Here is what Mr. K. R. P. Aiyangar, Chairman of the Commission, stated in his speech while opening the public inquiry: "We have had to wait for nearly a year to get replies from many units of the industry and even from their parent associations. Extensions of time for replies had to be given several times and, in spite of goading, receipt of replies has been very tardy, resulting in unnecessary delays in our working programme." Such an attitude on the part of the industry is certainly disquieting. Both the large and small units will do well to recognise the fact that price inquiries are important not merely from the point of view of the consumer and the general economy but in their own interest.

The decision of the Government to ask the Tariff Commission to consider the issue of woollen goods prices, it will be recalled, was a sequel to the complaints over the high prices of woollen and worsted manufactures which, it was alleged, were not justified by the actual production costs. In particular, the hosiery goods producing units urged the authorities to remove the great difficulty experienced in obtaining their yarn requirements. Pending the examination by the Commission, the authorities have taken several steps, as a result of which the industry is at present subjected to some measure of statutory and voluntary control in regard to production, distribution and prices. Although the objective of control orders is laudable, it does not seem to have been fulfilled, thanks to several malpractices indulged in by a section of the industry and trade. How can such malpractices be avoided when there is shortage of supplies and a considerable part of the woollen industry's capacity continues to remain idle, due to insufficient supply of raw materials, especially wool and wool tops, dyes and chemicals, and machinery, stores and spares?

Low Rate of Output

The actual production of yarn is currently at an annual rate of no more than 30 million lbs., as against the estimated consumption requirement of woollen yarn at 36 million lbs. (worsted yarn accounts for 17.5 million lbs., weaving 10.0 million lbs., hosiery 4.0 million lbs. and knitting 3.5 million lbs.), woollen and shoddy yarn for 15.5 million lbs. and other yarns (including carpet yarn) for 3.0 million lbs. Similarly the rate of fabrics output is just 13 million yards, which is considered to be well below the actual requirements. The actual extent of under-utilisation of capacity on three-shift basis is indicated below:

	Yarn (Mill. lbs.)	Fabrics (Mill. yds.)
Productive capacity	89.7	71.7
Production in 1960	27.9	15.8
Idle capacity (per cent.)	68.9	78.7
	(53.0)	(68.0)
Production in 1961*	30.0	13.8
Idle capacity (per cent.)	65.9	81.5
	(50.7)	(70.4)

* Estimated on the basis of the actual output in the first eight months of the year.

Figures in brackets relate to percentage of idle capacity assessed on two-shift basis.

The causes for the under-utilisation of the capacity in woollen industry were neatly summed up by Mr. Aiyangar. The main problem, we are told, is availability of raw materials. Although India is a large wool producing country, the progress made in sheep rearing, wool clipping and grading has not been adequate. The country is, therefore, compelled to export the greater part of the coarse wool, which is best suited for carpet weaving, manufacture of blankets, etc., and to import fine grades of merino and cross-bred wool for producing yarn and fabrics. The dependence on imports, as Mr. Aiyangar said, naturally lays the country open to the impact of fluctuations of wool prices in world markets. Again, the growing foreign exchange difficulties, according to him, have affected the quantum of wool, wool tops and shoddy wool imports. What is worse, the process of readjustment in the industry to effect changes in raw material utilisation and production processes are slow. It may be noted here that the woollen industry is believed to have consumed last year (1960) 45 million lbs. of raw wool, 15 million lbs. of wool tops, and 8 million lbs. of shoddy wool and wool waste.

Unless earnest efforts are made to improve the supply position of raw materials, the woollen industry cannot be expected to achieve the production targets fixed for it in the third Plan. The targets are 52 million lbs. of yarn and 35 million yards of fabrics, as compared with the estimated output of 28 million lbs. and 15 million yards, respectively, in 1960. Since the existing installed capacity (89.7 million lbs. of yarn and 71.7 million yards of fabrics on three-shift basis) is higher than the target, the Planning Commission has not recommended any further expansion of the spinning and weaving sectors. Actually, with the installation of the additional capacity already licensed (720 woollen, 6,408 shoddy and 4,500 worsted spindles for six new units and for expansion of certain existing units), the spinning capacity is expected to go up to 96 million lbs. and weaving capacity to 72 million yards.

Raw Material Requirements

In keeping with the production targets set for the woollen industry in the third Plan, the estimated requirements of raw materials are estimated at 90.0 million lbs. of raw wool, 31.5 million lbs. of wool tops, and 12-15 million lbs. of shoddy wool and wool waste. The Government has licensed a capacity of 17.2 million for manufacture of wool tops in six units of which two, namely, Isaac Holdens (Calcutta) and R.K. Wool Combers (Ludhiana) are now installed for production. Besides, within the monetary ceilings, the manufacturers who have facilities for making tops are permitted to obtain allocation of raw or greasy wool out of the exchange saved in terms of combing costs. The B.I.C. units at Kanpur and Dhariwal and the Raymond Mills at Thana possess such facilities at present.

While the need for ensuring regular and adequate supplies of raw wool and wool tops is urgent, it has to be emphasised that more economic production in woollen mills can be achieved only if due attention is paid to the problem of improving the productivity of plant and machinery. The Working Group has estimated the total requirements of rehabilitation at Rs. 11.25 crores. In the opinion of the Tariff Commission's Chairman, the two main hurdles to progress in modernisation are existence of unutilised capacity and foreign exchange difficulty for machinery import. The latter difficulty can be resolved with the development of an indigenous machinery industry. A new unit in Ludhiana has taken up manufacture of worsted plants and several others have been supplying hosiery machinery and parts for some years now. The present average replacement value of machinery installed by a few mills is said to be over 300 per cent higher than the original cost. Drawing attention to this factor, the large-scale sector of woollen industry has put forward the following suggestions:

Since the usual depreciation allowed for income-tax purposes is not sufficient to cover rehabilitation, an extra element may be conceded in the price of woollen goods.

The fair rate of return should be 20 per cent of the capital employed adequately to cover the incidental expenses which are charged to profits.

Provision for an element for replacement, rehabilitation and modernisation must be made separately in the price.

The possibility of allowing a return on the cost per unit of production at 10 per cent of its fair price may be considered; the Hosiery Federation (Ludhiana) has pleaded for a return of 25 per cent on the output cost of hosiery goods.

Before the suggestions are accepted, a thorough investigation has to be made in respect of cost of raw materials, power, wages and other overheads. Appropriately enough, the Tariff Commission's terms of reference are quite wide. Thus, the Commission is required to examine the *entire* cost structure of *all* types of yarn, woollen, shoddy and worsted (including hosiery yarn) and woollen fabrics (including hosiery goods and manufactures) and to determine their fair ex-mill prices, wholesale and retail prices, and prices payable by consumers in the different regions of the country. By implication, the terms of reference rule out the fixation of uniform prices. It is true that uniform prices are simpler to determine and easier to administer than varying regional prices, but the fixation of such prices does not seem to be practicable or desirable for the simple reason that there is no standardisation of quality in regard to woollen fabrics. That apart, one wonders whether there is any need at all for price control.

Structure of Industry

In conclusion, a brief reference may be made to the structure of the woollen industry in India as reviewed by the Chairman of the Tariff Commission. The review reveals that the industry witnessed upsurges of demand during war years and has grown up without protection or detailed planning. It has two broad sectors —the large-scale one comprising the units registered under the Industries Act and the small-scale sector covering other units. The total number of woollen factories as on 1st January 1961 was 257, of which 43 units (comprising 21 composite mills, 18 purely spinning and 4 purely weaving units) are registered under the Act. Besides, there are in the small-scale sector 5 composite, 18 purely spinning and 191 purely weaving units. The State-wise location of these units is 220 in Punjab, 18 in Maharashtra, 5 in West Bengal, 6 in U.P., 2 each in Gujarat and Mysore (one of which has since closed down), and one each in Delhi, Rajasthan, Madhya Pradesh and Jammu and Kashmir.

As on 1st January 1961, the installed capacity of the industry was 195,315 spindles, of which 126,284 were worsted, 53,504 woollen and 15,527 shoddy spindles. Of these, the number of spindles for the units licensed under the Industries Act were 176,175 (115,768 worsted, 50,843 woollen and 9,564 shoddy spindles). The number of powerlooms existing as on 1st January 1961 is said to be 3,985, of which 1,884 power-operated looms belong to 221 composite/weaving units in the large-scale sector. Excluding some nine mills in the large-scale sector which have hosiery departments, the total number of woollen hosiery units comes to 904 at present. In addition, some 163 units are reported to have closed down, owing to non-availability of hosiery yarn. The capacity of the hosiery sector has been sought to be estimated in terms of the number of knitting machines which is put at 11,938. Of these, 577 machines cover the hosiery departments of the mills in the large-scale sector, while 10,683 machines are at Ludhiana and 678 machines at other centres. The annual productive capacity per shift of eight hours has been computed at about 45 million lbs. for the small-scale sector alone. The actual consumption of yarn by the hosiery sector as reported by the Hosiery Industry Federation has been 2.80 million lbs. in 1956-57, 3.10 million lbs. in 1957-58, 3.20 million lbs. in 1958-59 and 2.96 million lbs. in 1960.

The cotton and chemical industries may be on the threshold of a new research development which will be as important as the development of wash-wear cottons ten years ago. Cotton fabrics with durable loft, warmth and recoverable stretch, have been produced in the laboratory and are headed for commercial development, scientists at the Cotton Chemical Finishing Conference were told in Washington, recently. One of the most promising methods involves resin treating highly twisted cotton yarns, curing and then reverse twisting. This produces a kinked yarn which can be knitted or woven into garments having high recoverable stretch. Work on the development of warm cotton fabrics with loft and durable, low-weight bulk is well under way in several laboratories in the U.S.A. Cottons with improved warmth, it is said, could result in a three-quarters-of-a-million-bale increase in cotton consumption.

DULL TRADING IN COTTON TEXTILES

MILLS' LABOUR FORCE DECLINES

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 14*th November*

MANPOWER in the Lancashire cotton spinning and weaving industry has fallen by a further 2,300 workers in a four-week period—the sharpest setback for 18 months. The number of workers on employers' books now stands at 174,840. This means that the labour force of the industry has been reduced by more than 140,000 since the post-war peak set up ten years ago.

The problem of obtaining the right type of labour at the right place is one which most mill managements are finding increasingly difficult. Transport arrangements are being provided and, in the past decade, a great deal has been done to improve the amenities of the factories in an effort to make them as competitive as possible with the alternative sources of employment which have sprung up in many parts of the area. It scarcely needs emphasis at this point that the new and expensive machinery which the trade is being urged to install must be run as efficiently as possible if it is to pay its way.

Production of yarn in September was almost identical with the August weekly average, mainly as a result of an increase in waste yarn output. Compared with the same month last year, however, there was a reduction of over 2,000,000 lbs. weekly. Although the volume of cloth woven in the mills in September continued its upward trend with a rise of 1,000,000 yards weekly over August, the fall in output over the same month last year was practically 2,000,000 yards a week.

Cotton Board returns show that production of single yarn in the four weeks ended 30th September averaged 12,410,000 lbs. weekly. Cloth output averaged 34,700,000 yards weekly. The period included long week-end holidays in many mill centres.

Squeeze Continues

One of the peculiarities of the phase of dull trading in Lancashire cotton goods which has persisted for nearly twelve months has been the variation in the strength of the different sections of the yarn market. At the end of the first six months of 1961, figures showed that only then were prices in the American yarn section coming under sustained pressure. In the Egyptian type branch, a steady fall had been noticeable since the beginning of the year. In the past four months, however, there has been a switch in the situation, so that sellers of American type yarns have been forced to give ground, while those producing the finer qualities have kept their quotations reasonably steady. To some extent, this apparent strength in the Egyptian section can be attributed to the firmer tendency lately displayed in spot prices for Sudan cotton which suffered a relapse earlier in the year.

The contrasting movement between the prices quoted for the different types of yarn and basic quotations for the raw material are shown below:

(In *d.* per lb.)

From the viewpoint of salesmen, the absence of workable demand can only be exceedingly disappointing, particularly as concessions have been made which might have stimulated interest in more favourable circumstances. Buyers, however, are constantly aware of the numerous outside elements which seem to have a more direct bearing on sentiment than the normal trade relationships of supply and demand.

Traders are invariably reluctant to operate in a falling market, however tempted they may be by the attractions of what appear to be cheap rates. An upturn in prices is the moment for a revival in activity, as there are always many customers who hope to secure goods at the lowest possible point. Meanwhile, producers are having to sacrifice their margins in an effort to stimulate enterprise among users. Overhead charges show no sign of decreasing, yet the burden of competing arrivals from abroad at very low costs constitutes a serious threat to the profitability of spinners and weavers in the months ahead.

True Crop Assessment

Wide variations in the official forecasts made by the United States Government relating to each season's American cotton crop seem to be a thing of the past. Gone are the days when estimates showed big switches from month to month during the growing period, and in recent years the predictions have been much nearer the mark.

During the current season, the main feature has been the steady growth of the crop after a slow and uncertain start. When the first estimate was made in August, the output was lower than expected at 13,918,000 bales and the yield per acre at only 427 lbs. was frankly disappointing. It has taken three months for the true value of the crop to be assessed, and now it would appear the production is likely to exceed last year's total by about 250,000 bales. The November estimate shows the yield per acre at 446 lbs., exactly the same as the final yield for last season, and the size of the probable crop at 14,538,000 bales.

Already the thoughts of growers in the United States have turned to the 1962 crop and, in these days of Government control, this means that speculation is centred on intended legislation. Allotments for cotton next year show a reduction by some 350,000 acres from the 1961 allocation, being 18,102,000 acres. The minimum permitted by law would be only 16,310,000 acres.

Although any forecast at this stage can only be guesswork, it has already been suggested that the harvest for 1962 will be much in line with the current output. Based on average yields, the planting of the entire acreage allotted would bring a crop in excess of 15,700,000 bales, but underplanting is inevitable and there is no reason to doubt that a similar quantity of cotton will be grown next season as that now being harvested.

1960 Good Year

Total yarn production in cotton spinning countries in Europe increased by six per cent in 1960 as compared with 1958, according to the figures issued by the International Cotton Federation in Manchester. Last year, the report states, was a good year for European cotton spinners and weavers. Less machinery working longer average hours produced more yarn and cloth than for several years. Total yarn production in 1960 increased by 121,573 tons or 7.1 per cent over 1959, but the greater part of the gain came in the first six months.

Machinery hours worked during 1960 were nearly 10 per cent fewer than in 1957, but output was almost identical. Cloth production in the cotton weaving mills of Western Europe rose by 5.7 per cent last year as compared with 1959. Increases above the general average were recorded in Belgium, Denmark, Italy, Norway and Portugal where the rise was in each case at least 10 per cent.—*All Rights Reserved.*

BEST TODAY—STILL BETTER TOMORROW

EXTRA-LONG STAPLE COTTON

SUPPLY LOWER DESPITE HIGHER OPENING STOCKS

A PRELIMINARY estimate of the prospects for extra-long staple cotton made by the International Cotton Advisory Committee, Washington, was published in our issue dated 7th October 1961 (*vide* page 688). From provisional estimates of the crop available at that time, and also in view of the larger carryover at the beginning of the current season, that is, 1961-62, it was estimated that the supply of long-staple cotton during the season would be larger than in the last season. It was also pointed out that the estimate was very tentative and that it was subject to revision when a clearer picture of the crop became available later this season. The I.C.A.C. has now made such a revision based on the latest crop position. The estimate reveals a picture which is different from the one that emerged from the earlier one. As against the higher supplies anticipated earlier, total supplies during the current season are now expected to be lower at 2.3 million bales as compared with 2.5 million bales last season. The reduction is due to a decline in production which is estimated to be between 1.5 and 1.6 million bales, as against last season's 1.8 million bales. Opening stocks at the beginning of the season were, on the other hand, higher at 800,000 bales, as against 675,000 bales last season and 897,000 bales in 1959.

The fall in production has occurred in spite of an expansion in acreage, especially in Sudan, one of the major producers of extra-long staple cotton, which is near the 1958-59 record. In Egypt, leaf-worm attack has caused heavy damage to the crop which is expected to be lower by nearly one-third as compared with last season and the smallest since 1956-57. Production of extra-long staple cotton last season exceeded disappearance by a fair margin and hence the increase in opening stocks.

While supply is thus expected to be lower, it is impossible to predict, according to the I.C.A.C., as to what will happen to disappearance. Consumption of extra-long staples declined in a number of countries, notably the U.K. and India, and total free-world consumption last season is estimated to have fallen to under 1.2 million bales, as against 1.3 million bales in 1959-60. In many cases, the decline in consumption of extra-long staple cotton occurred while consumption of other staples was still increasing. Reports from Japan and Europe indicate that the overall textile outlook may not be so favourable in the current season but in the U.S., consumption of all cotton is expected to increase.

Exports to Communist Countries

The other component of total demand, namely, exports to the communist countries, is also indeterminate at this time. In 1959-60, such exports aggregated 680,000 bales but they declined during last season by about 100,000 bales. Even so, as a percentage of total exports, trade with these countries rose to 39 per cent in 1960-61, as against 35 per cent in 1959-60. About 85 to 90 per cent of total imports of extra-long staples by the communist countries originate from Egypt which is now anxious to increase its exports to the free-world countries. Exports to the free-world countries last season amounted to 920,000 bales, as against 1,200,000 bales in 1959-60. This compares with a consumption in importing countries of about one million bales, the excess of consumption over imports reflecting the reduction of stocks in these countries. Total exports of extra-long staple in 1960-61 declined by about 450,000 bales from the 1959-60 level. Egyptian exports fell by over 300,000 bales, principally in trade with the free world. The decline is perhaps one of the reasons behind the measures recently taken giving the Government much greater control of the cotton trade in that country. Proportionately, the decline in exports from the Sudan was even greater; Peruvian exports, on the other hand, were the highest on record.

Total disappearance in the producing countries in 1960-61 amounted to 1,660,000 bales and, if there is no increase during the present season, current production and offtake will be roughly in balance and supplies should be adequate, despite much smaller crop.

Reflecting reduced demand, prices declined continuously since the end of 1960. However, there has been a noticeable recovery in Egypt and Peru of late but Sudan prices have risen only slightly.

Looking further ahead, the Committee points out that there is the inescapable fact that, in recent years, the tendency, as indicated by acreage data, has been for production to exceed disappearance, with always the possibility of a build-up in total stocks. The accumulation of stocks in producing countries has been held down by a series of fortuitous occurrences in 1957-58 by a crop failure in Sudan, in 1959-60 by extensive purchase for stock by importing countries induced by abnormally low prices, in 1960-61 by low yields in Sudan and in the current season by extensive damage by leaf worm in Egypt. In each of the last four seasons, more than 2 million acres have been planted with extra-long staple cotton which, under favourable circumstances, could be expected to produce close to 2 million bales. In this respect, therefore, the 1958-59 season may be the most representative one from the supply point of view. On the other hand, disappearance has only once exceeded this level—in 1959-60 when, with record consumption and extensive purchase for stock, offtake rose to 2.1 million bales. All this re-emphasises the need to find ways and means to stimulate consumption of extra-long staple cotton on a permanent basis.

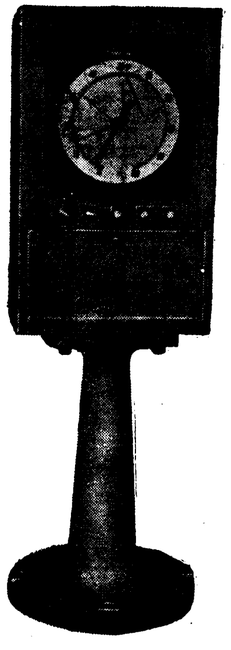
PROMOTING COTTON CONSUMPTION

Meetings of two Committees of the International Federation of Cotton and Allied Textile Industries (I.F.C.A.T.I.), Manchester, were held at Barcelona (Spain) last month at the invitation of the *Servicio Comercial de la Industria Algodonera and the Centro Algodonero Nacional*. The Raw Cotton Merchants' Committee, under the Chairmanship of Monsieur Maurice Thieullent (France), made a general review of cotton quality of all growths. There was an exchange of experience so far with arbitration based on micronaire readings, and the question of insurance in case of damage to raw cotton bales incurred prior to shipment ("country damage") was also discussed.

Mr. Alfredo Sedó (Spain) presided over a two-day meeting of I.F.C.A.T.'s Committee for Market Research and Sales Promotion, which reviewed and evaluated the cotton textile market development programmes carried out over the past five years in the chief consumer markets in Europe, Japan and the United States. The Committee also made plans for future long term action to be taken in the field of market research and sales promotion, with the aim of increasing consumption of cotton textiles. The Committee stressed the need for all cotton growing and exporting countries to contribute finance to such cotton textile market development programmes and considered various possibilities for achieving this. The following conclusions could be drawn from the two meetings: provided that the quality of raw cotton is maintained and, wherever necessary, improved and provided that the industry continues to intensify its efforts in market research and sales promotion and modernises its techniques of merchandising, the prospects of increasing cotton textile consumption over the present level seem good. It is, however, essential that the financial burden of these market development programmes should not be carried by the textile industry alone, but that the growers and exporters of raw cotton in all cotton producing countries should also contribute finance and join in the common effort.

EXPORTS OF COTTON TEXTILES TO U.K.

All exporters of cotton textiles to the United Kingdom have been asked to submit applications in the first instance to the Cotton Textiles Export Promotion Council, which, after scrutinising the applications, will issue the appropriate quota certificate or other recommendatory letter. Thereafter, the holders of the quota certificate should submit applications accompanied by such a certificate, etc., to the Joint Chief Controller of Imports and Exports, Bombay, who will issue the necessary licence. Licences will be valid for shipment from all Ports in India. In order to facilitate shipment, applicants may indicate in their application the approximate quantities which they expect to export through the different Ports.



Now you can control WARP REGAIN easier, more accurately than ever before

Improved MOIST-O-GRAPH measures regain... controls automatically

The electronic Moist-O-Graph takes the guesswork out of regain control. In addition to measuring regain for fibres and filament, regardless of blends or sizes, it provides automatic control that helps speed up production and improve quality in the slasher room; increase efficiency in the weaving room.

Honeywell is the recognized world's leader in the design and manufacture of automatic control equipment. An organization of more than 30,000 persons, with factories in the United States, Canada, France, Germany, Holland, Japan and the United Kingdom, Honeywell products are used in scores of widely diversified fields.

Honeywell products--more than 13,000 of them—fall into these three principal categories:

Heating and air conditioning controls and control systems for residences and industrial, commercial, public and educational buildings.
Instruments and instrumentation systems, process controls and control systems, valves, precision switches and data processing systems for business and industry.
Precision electronic instruments and control systems for aircraft and missiles.

DESIGN...
for finest performance

Of all aspects of industrial endeavour the most intriguing is thermodynamics, for it is this medium that provides industry with its greatest power—steam. Therefore, wherever high pressure steam-raising plant is used, there is a story...a story of experience, analysis and design.

Varying Conditions
Wherever new steam-raising plant is to be installed, either for generating power or in industry, it is essential that skilled investigation and analysis be carried out to ensure that the plant is *tailor-made* to give optimum performance under varying *local* conditions and requirements.

Fuel
Having established the purpose for which the steam power created will be required, it is necessary for the design engineer to identify the type of fuel to be used, either oil, gas or coal. Coal is by far the most widely used fuel, but its thermal content varies and it is therefore necessary to make an analysis to establish the percentage of principal heat-producing elements present. The thermal content of fuel has an important bearing on the designing of the kind of plant to be installed. Generally low-grade coal is used with anything up to 50% ash content. It should be remembered that steam must be raised as economically as possible.

Waste fuel
Particular attention has to be given to industries that wish to use waste material as fuel. For instance, the sugar industry absorbs vast quantities of waste material in the form of bagasse for fuel; again, in the pulp and paper industry it is now the practice to combine the processes of chemical recovery and steam raising by burning the 'black liquor' from the digestors in a special type of boiler unit. Of course, these industries cannot keep their steam-raising plant functioning entirely on waste materials. So, in their designing and planning, the technicians and design engineers must allow for varying fuels to be used and at the same time achieve optimum performance.

Powerful Ally
The new and powerful industrial group of ACC-Vickers-Babcock Ltd., with its vast resources of technical knowledge and the rich, wide experience of its partners, will undoubtedly prove a powerful ally in achieving the high target set by the government for the installation of boiler and thermal power plant during the third Five-Year Plan. AVB will be able to draw on the finest engineering minds to study, design and draw up plans that will *tailor-make* not only vital steam-raising plant but also heavy mining and cement-making machinery which will help meet the exigencies of industrial expansion and, in addition, ultimately contribute towards the earning of foreign exchange through export.

The AVB industrial plant at Durgapur is in the final stages of erection. Here, in Durgapur, all the advanced technical knowledge of AVB will be utilised to the fullest extent to ensure that each project is designed for the finest possible performance.

INCOME-TAX AND CHARITABLE OR RELIGIOUS TRUSTS

NEW ACT MAKES STRINGENT PROVISIONS

By Premjus Roy

THE Income-tax Act 1961 has made substantial changes in the position of charitable and religious institutions, so far as their exemption to income-tax is concerned. While such institutions were considered under Section 4(3) (i) and 4(3) (ii) of the previous Income-tax Act, which applies to all assessments upto the assessment year 1961-62, Sections 11 to 13 of the Income-tax Act 1961 would apply to such institutions in respect of the assessment year 1962-63 and onwards.

Let us first consider Section 11. The opening words in sub-section (1) are "Subject to the provisions of Sections 60 to 63." These sections refer to such cases as where assets are not transferred by the transferor to the transferee, or, although the assets are transferred, the transfer of assets is revocable, in either of which cases the income from the property transferred is to be taxed in the hands of the transferor and is not to be treated as the income of the transferee. For instance, if a person settles some of his property upon a trust for charitable purposes, but the transfer is revocable, income from such property will continue to be taxed in the hands of the settler and will not be treated as the income of the charitable trust. Sub-section (1) of Section 11 can have no application unless the source of income is some property and also unless the property is held wholly or partly for charitable or religious purposes. The property itself should be made the subject of a trust, and the income must arise from property so held under trust. If merely the income, and not the property from which it is derived, is held upon a charitable trust, there is no exemption under this sub-section. For example, if a lawyer dedicates his fees to a charitable purpose, there will be no exemption under sub-section (1), since the fees do not have any property as their source. Explanation 1 to Section 13 states that "trust" includes any other legal obligation.

Income From Property

Clause (a) of sub-section (1) of Section 11 deals with income from property held under trust wholly for charitable or religious purposes, while clause (b) deals with income from property held partly for charitable or religious purposes. The word "property" used in Sections 11 to 13 is of very wide import and, as stated in Section 11(4), "property held under trust" includes a business undertaking so held under trust. It appears that the exemption could apply only if the business undertaking is entirely held by the trust, and not where the trust is just a partner in the business along with other individuals. "Charitable purposes" are defined in clause (15) of Section 2 as including "relief of the poor, education, medical relief, and the advancement of any other object of general public utility not involving the carrying on of any activity for profit." If there are several objects of a trust, some of which are charitable and some non-charitable, and the trustees have the discretion to apply the income to any objects, the whole trust fails and no part of its income is exempt from tax. In other words, where the objects are distributive, each and every one of the objects must be charitable in order that the trust might be treated as charitable. The words "charity" and "charitable purposes" must be construed in their legal or technical sense, which is different from their popular meaning. The definition of charitable purposes in Section 2(15) is not an exhaustive definition, but is only an inclusive definition which states some of the broad categories of purposes which can be regarded as charitable.

To earn the exemption under clause (a) of sub-section (1) of Section 11, it is necessary that the trust fulfils certain conditions. First, the property from which income is derived should be held under trust. Secondly, the objects of the trust should be wholly charitable or religious. Thirdly, the income from such property must be applied to the charitable or religious purposes for which the trust is established. Also, the charitable purposes for which income is applied should be applied to such purposes in India, and not outside India. However, it is not necessary that the trust itself should be expressly confined to purposes within India. If the trustees, as a matter of fact, though not as a matter of legal obligation under the trust, restrict the application of the income to purposes within India, it would be sufficient compliance with this requirement. If the income from trust property is not so applied to charitable purposes but is applied to non-charitable purposes, such income will not be entitled to tax exemption. Fourthly, either the whole or at least 75 per cent of the income from the trust property must be spent for charitable or religious purposes. The accumulation for future application is permissible only to the extent of not more than 25 per cent of the income from the property or Rs. 10,000, whichever is more. For instance, if the income of the trust property is Rs. 1 lakh, it must spend at least Rs. 75,000 in the year. If the income from the trust property is Rs. 20,000, it would do if the trust spends Rs. 10,000 and accumulates Rs. 10,000 for expenditure on charitable purposes in future.

Donations or Voluntary Contributions

The income of the trust would usually be from (1) property income such as dividends from shares, rental income from house property, interest income from deposits, etc., and (2) donations or voluntary contributions. So far as income under category (1) is concerned, it is now made obligatory that at least 75 per cent of such income in the year should be spent for charitable purposes, and no more than 25 per cent is accumulated. But so far as income from category (2) is concerned, namely, that from donations or voluntary contributions, it could have been dealt with in one of the following two ways:

(i) Such receipts from donations or voluntary contributions might be credited to income and expenditure account of the trust; or

(ii) such income could be taken directly to the balance-sheet by credit to fund account and not credited to the income and expenditure account.

In the first case, that is, where the donations received are also credited to income and expenditure account, the Income-tax Officer could argue that the expenditure on charity made by the trust during the year should be deemed to have come proportionately from property income and receipts from donations. For instance, if in the income and expenditure account, income from trust property is shown as Rs. 30,000 and receipts from donations as Rs. 20,000, while expenses on charity are shown as Rs. 25,000, while balance of Rs. 25,000 is taken to reserve, the I.T.O. might conceivably contend that, the total receipts being Rs. 50,000 and expenses being Rs. 25,000, it would be presumed that only half of the property income has been spent for charitable purposes, and not that the entire amount spent on charity, namely, Rs. 25,000 would be deemed to have been spent out of the property income of Rs. 30,000. On this reasoning, the I.T.O. might argue that at least 75 per cent of the property income not having been spent during the year for charitable purposes, tax exemption under clause (a) of sub-section (1) of Section 11 is not available. To avoid such difficulty from the income-tax authorities, it would appear desirable to credit any receipts from donations directly to the fund account in the balance-sheet, and not bring such receipts into the income and expenditure account. For instance, to pursue the above illustration, if donations received amounting to Rs. 20,000 had been credited directly to the fund account in the balance-sheet, the income and expenditure account would show only property income of Rs. 30,000 and expenses on charity of Rs. 25,000, which would be more than 75 per cent of the property income and would thus satisfy the requirement of clause (a) of sub-section (1) of Section 11.

The explanation to sub-section (1) of Section 11 states that, for the purpose of computing the maximum of 25 per cent of the income from property which could be accumulated for charitable purposes during a year, the income from property for the preceding year might be adopted, if that income is higher than the income of the previous year. This explanation gives a useful option to the assessee. For instance, if the property income of the previous year is Rs. 50,000, 25 per cent whereof is Rs. 12,500 and that of the preceding year was Rs. 60,000, of which 25 per cent is Rs. 15,000, the trustees might accumulate in the previous year Rs. 15,000, instead of Rs. 12,500, and spend the balance of Rs. 35,000 only.

It is not clear how this 25 per cent, which is the maximum that can be accumulated, would be computed—that is, whether this would be of the gross property income before deducting the expenses of the trust such as for office rent, establishment expenses, audit fees, etc., or of the property income less so much only of the trust expenses as are allowable as a deduction under the Income-tax Act, or of the property income less the entire expenses of the trust. The position of trust expenses in arriving at the maximum accumulation permissible will need to be settled.

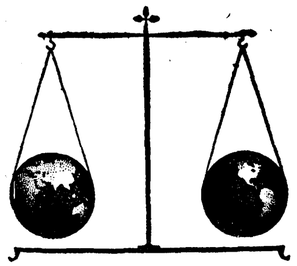
Sub-section (2) of Section 11 states the conditions under which the trust could accumulate more than 25 per cent of the income in certain years. Those conditions include a written notice to be given to the Income-tax Officer by the trustees, specifying the purpose for which the income is proposed to be accumulated and the period for which the income will be accumulated for such purpose. The moneys to be so accumulated should also have to be invested in Government securities. Sub-section (2) of Section 11 would be very difficult to avail of in practice, because usually it is not possible to work out expenses for charitable purposes so many years in advance and in such a rigid pattern as is contemplated by this sub-section. Also, the requirement of the accumulated funds being kept invested in Government securities would enable the funds to earn only a small return than would be possible by judicious investment of the funds in other than Government securities.

Serious Practical Difficulty

The new provisions pose a serious practical difficulty. The trustees would normally and reasonably take into account, for the purpose of deciding the total amount to be spent on charitable purposes, the income from property as credited to the income and expenditure account of the trust for a particular year. The Income-tax Officer, on the other hand, at the time of computation of income under the Income-tax Act, might consider the income of the trust as larger than what is accounted for in the income and expenditure account. For instance, certain dividends on investment of the trust in shares, though declared by the Company, might not be accounted for in the income and expenditure account until they are actually received after the close of the previous year. The Income-tax Officer might argue that he is entitled to treat them as income of the year in which the dividends were declared. Again, in the income and expenditure account, there may be a debit of capital loss on sale of Government securities, but the Income-tax Officer might not allow adjustment of such loss against the property income. If the trustees will have spent on charitable purposes 75 per cent of the income as per income and expenditure account, but the amount spent falls short of 75 per cent of the income as computed by the Income-tax Officer, it would obviously lead to difficulty for the trust. Correctly, income to be considered for the purpose of Section 11 should be only such income in the income and expenditure account as is actually available for being spent on charitable purposes and not any larger income.

Amount Accumulated

Suppose, in accordance with Section 11, the maximum amount which could be accumulated by the trust in a particular year is Rs. 20,000, but the trust has actually accumulated Rs. 30,000. In other words, suppose the trust has spent on charitable purposes Rs. 10,000 less than what it must have spent in the year in accordance with Section 11, what is the result? Strictly construed, sub-section (3) of Section 11 would not cover such a case, because, when a larger amount is accumulated than is permissible under Section 11, it cannot be said that the additional amount accumulated is "applied to purposes other than charitable or religious purposes." Since no other provision has been made elsewhere for this contingency, it appears that the amount of excess accumulation would be brought to charge under sub-section (3) of Section 11. For instance, in the above example, if the maximum amount which could be accumulated was Rs. 20,000, but



In both hemispheres . . .

. . . there are businessmen, and in both hemispheres there are banks. This is all very well as far as it goes, but contact between east and west is a different matter, and one of great and growing importance. That is where The Hongkong and Shanghai Banking Corporation comes in. Providing a complete banking service throughout south and east Asia, we also enable the businessman in that half of the world to contact his opposite number in the other. In both hemispheres you will receive excellent service from the biggest bank established by the Far East for the Far East.

the amount actually accumulated in the year is Rs. 30,000, the difference of Rs. 10,000 would be treated as taxable income of the trust, that is, the amount which is required to be spent on charitable purposes but has not been so spent would cease to enjoy exemption of tax and would suffer tax.

Limitation to Expenditure

The first year of assessment under the new law is assessment year 1962-63, that is, the income of the trust for the previous year ended 31st March 1962, or any date earlier than this to which the trust makes up its accounts. It would appear that the limitation as to the minimum of charitable expenditure under sub-section (1) of Section 11 would apply to assessment year 1962-63, or in other words, that for assessment year 1962-63 the income-tax authorities could insist that at least 75 per cent of the income from trust property in the previous year must have been spent on charitable purposes. But, such restriction would be unfair in most cases, because, since the Act has been only recently passed and has not been sufficiently understood, the trustees will not have enough time to plan for whatever additional expenditure on charitable purposes they might be required to incur to meet the requirements of the new law. In the case of those trusts whose account year ended on 30th June or 30th September 1961, or might end on any other date prior to 31st March 1962, the requirement of the minimum expenditure in the previous year for assessment year 1962-63 would be still more harsh.

Coming now to clause (*b*) of sub-section (1) of Section 11, this applies to income from trust property held only in part for charitable purposes. The benefit of tax exemption under this clause would be available only if the trust existed before the commencement of the new Act, that is, before 1st April 1962. The old Act gave exemption of tax not only to trusts established wholly for charitable purposes but also to trusts only part of whose income was spent for charitable purposes. Having regard to the old Act, clause (*b*) of sub-section (1) of Section 11 continues tax exemption in respect of such trusts created prior to 1st April 1962, part only of whose income is held for charitable purposes. Any trust which is created after 1st April 1962 will have to have the property under trust wholly for charitable purposes, in order to be entitled to tax exemption. Exemption under clause (*b*) of sub-section (1) of Section 11 is available only if income is actually applied for charitable purposes. Accumulation of no more than 25 per cent of the income is permissible, as under clause (*a*). Unless the income for which exemption is claimed is either actually spent on charitable purposes or finally set apart for application to such purposes, there would be no tax exemption. Of course, the part of income derived from property which is not held for charitable purposes will not be entitled to exemption from tax. In other words, income from property applied or set apart for charitable purposes will have to be dealt with separately from income from property applied or set apart for non-charitable purposes, and it is only income applied for charitable purposes for which exemption of tax will have to be considered under clause (*b*) of sub-section (1) of Section 11.

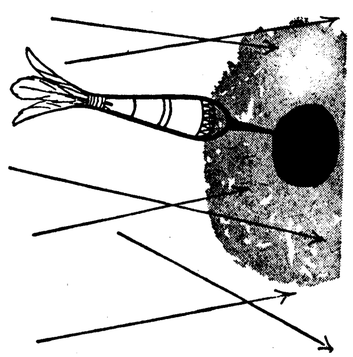
Income Spent Outside India

As we have seen, it was the condition of the exemption under clauses (*a*) and (*b*) of sub-section (1) of Section 11 that the income of the charitable trust should have been spent or applied to charitable purposes within India. Clause (*c*) of sub-section (1) of the same section deals with the case of a trust for a charitable purpose which stands to promote international welfare. If the trust is formed on or after 1st April 1952, it must be for only charitable purposes, while if it is formed before 1st April 1952 it could be for religious or charitable purposes. But such a trust, which spends its funds for charitable purposes outside India, would be entitled to exemption for tax only if there is a general or special order of the Central Board of Revenue by which such trust becomes entitled to exemption. The provisions of clause (*c*) adopt the exceptions in paragraph (*a*) of the proviso to clause (1) of sub-section (3) of Section 4 of the present Income-tax Act. The basis for these provisions is that a trust which spent its funds on charitable purposes outside India, which enjoyed exemption from tax under the old Act, should continue to enjoy tax exeption under the new law as well. It will, however, be noted that, for the trusts falling under clause (*c*) of sub-section (1) of Section 11, exemption applies only to income actually applied, and not to any unspent income which is accumulated for being spent for charitable purposes outside India in future.

Sub-section (1) of Section 12 adopts the existing provisions in Section 4(3)(ii) of the old Act. Sub-section (2) of Section 12 is, however, new. What this sub-section does is merely to forestall a possible device of one trust making donations to another with a view to escaping from the restriction of minimum expenditure on charitable purposes under Section 11(1). For instance, if a trust A makes a contribution to another charitable institution B, such contributions are to be treated under Section 12(2) as property income of institution B for the purpose of application of Section 11. As a result, institution B would be required to spent 75 per cent of its income from trust property, including the amount of contribution received by it from trust A. If sub-section (2) of Section 12 was not there, the effect would be that, if a contribution is made by trust A to institution B, in the hands of A the same was to be treated as charitable expenditure, while in the hands of B it would have been left out of account as income from voluntary contribution.

Section 13

Section 13 deals with cases in which tax exemption under Section 11 will not be available. Clause (*a*) of this section adopts part of the definition of "charitable purpose" in sub-section (3) of Section 4 of the old Act. Private individuals or a fluctuating body of private individuals cannot be the object of a public charitable trust, for example, employees of a corporation. Gifts for public religious purposes are exempt. Religious purposes (which are not defined) would include the advancement, support or propogation of a religion and its tenets. A charitable trust must always be public, but a religious trust may be public or private. The exemption granted by this sub-section is confined to public religious trusts and does not extend to private religious trusts which do not enure for the public benefit. This is made clear by Section 13(*a*) hereof. If the trust is wholly for religious or charitable purposes, clause (*a*) of sub-section (1) of Section 11 would apply, while if only part of the property is held for charitable purposes and the other part is held for private religious purposes, the case would be governed by clause (*b*) of that sub-section.



HIT THE BULL'S EYE

There is a surer way of getting your rightful share of the rich export market. If you exercise strict quality control in the manufacture of your goods, maintain regular supplies, produce according to the buyer's specifications, arrange for after sales service facilities, a tidy sum in foreign exchange is yours. In the Export markets you are competing face to face with the highly industrialised countries of the west. For the buyer to select your goods in preference to those of other countries you have to compete on quality.

INDIA EXCHANGE (7th FLOOR) CALCUTTA-1

EEPC-13

Clause (*b*) of Section 13 is very important. A trust created after 1st April 1962 will not be entitled to exemption in either of the following two cases:

(i) The benefit of the trust is made available to any particular religious community or caste, and

(ii) under the terms of the trust or rules of the institution, any part of the trust income enures directly or indirectly for the benefit of the founder of the trust or any of his relatives.

It will be noticed that the definition of "charitable purpose" in Section 4(3) of the old Act does not import the restriction that the trust should not have been established for the benefit of any particular religious community or caste, but, under sub-section (2) of Section 15(*b*) of the old Act which dealt with rebate of tax on donations paid to a charitable trust, it was required that the institution or fund to which donation was paid should not be "expressed to be for the benefit of any particular religious community." The words in clause (*b*) of Section 13 of the new Act have gone beyond the words "religious community" in old Section 15B and, if the benefit of the new trust is restricted to any particular caste, such trust created after 1st April 1962 will not be entitled to exemption from tax. However, the benefit of exemption can be availed of not only by a charitable trust but also by a religious trust, provided its benefits are not restricted to a particular religious community or caste.

A Restriction

Referring to sub-clause (ii) of clause (*b*) of Section 13 of the new Act, it will be noticed that the restriction applies "if under the terms of the trust or the rules governing the institution" any part of the trust income enures for the benefit of the founder of the trust, etc. If under the terms of the trust deed or any written rules formulated by the institution for which tax exemption is claimed, no benefit is specifically provided for the author of the trust or any of his relatives, the restriction in this sub-clause will not apply, though, in practice, the trustees may have conferred any direct or indirect benefit to the founder of the trust or any of his relatives. For instance, if the trust deed does not declare that the founder of the trust is entitled to occupy a room in the trust property for his personal residence, the restriction in sub-clause (ii) will not apply, though, in fact, the trustees may have allowed the founder to occupy a portion of the trust property for his personal residence. The restriction in this clause applies not only to the founder of the trust but also to his relatives, the word "relative" being defined in explanation I as including "a lineal descendant of a brother or sister." It would appear that, if a trust created after 1st April 1962 comes within the mischief of either sub-clause (i) or sub-clause (ii) of clause (*b*) of Section 13, that is, if either it is for the benefit of any particular caste or religious community or if there is any benefit reserved for the author of the trust, the tax exemption is not available to the trust at all. It will not be open to the trustees to argue that any amount spent for admittedly charitable purposes should be treated as exempt, and that only the balance might be subjected to tax in the hands of the trust.

As would appear from the above discussion, the new law makes very stringent provisions in respect of charitable and religious trusts. It would be in the interest of the trust for the trustees to take careful note of various conditions and restrictions imposed by the new provisions and to arrange the affairs of the trust strictly in accordance with the new law. Unless this is done, there is a serious risk of the trust being held as not entitled to exemption from tax and being called upon to pay considerable amounts of tax from funds which were intended to be spent on public charitable purposes.

the amount actually accumulated in the year is Rs. 30,000, the difference of Rs. 10,000 would be treated as taxable income of the trust, that is, the amount which is required to be spent on charitable purposes but has not been so spent would cease to enjoy exemption of tax and would suffer tax.

Limitation to Expenditure

The first year of assessment under the new law is assessment year 1962-63, that is, the income of the trust for the previous year ended 31st March 1962, or any date earlier than this to which the trust makes up its accounts. It would appear that the limitation as to the minimum of charitable expenditure under sub-section (1) of Section 11 would apply to assessment year 1962-63, or in other words, that for assessment year 1962-63 the income-tax authorities could insist that at least 75 per cent of the income from trust property in the previous year must have been spent on charitable purposes. But, such restriction would be unfair in most cases, because, since the Act has been only recently passed and has not been sufficiently understood, the trustees will not have enough time to plan for whatever additional expenditure on charitable purposes they might be required to incur to meet the requirements of the new law. In the case of those trusts whose account year ended on 30th June or 30th September 1961, or might end on any other date prior to 31st March 1962, the requirement of the minimum expenditure in the previous year for assessment year 1962-63 would be still more harsh.

Coming now to clause (*b*) of sub-section (1) of Section 11, this applies to income from trust property held only in part for charitable purposes. The benefit of tax exemption under this clause would be available only if the trust existed before the commencement of the new Act, that is, before 1st April 1962. The old Act gave exemption of tax not only to trusts established wholly for charitable purposes but also to trusts only part of whose income was spent for charitable purposes. Having regard to the old Act, clause (*b*) of sub-section (1) of Section 11 continues tax exemption in respect of such trusts created prior to 1st April 1962, part only of whose income is held for charitable purposes. Any trust which is created after 1st April 1962 will have to have the property under trust wholly for charitable purposes, in order to be entitled to tax exemption. Exemption under clause (*b*) of sub-section (1) of Section 11 is available only if income is actually applied for charitable purposes. Accumulation of no more than 25 per cent of the income is permissible, as under clause (*a*). Unless the income for which exemption is claimed is either actually spent on charitable purposes or finally set apart for application to such purposes, there would be no tax exemption. Of course, the part of income derived from property which is not held for charitable purposes will not be entitled to exemption from tax. In other words, income from property applied or set apart for charitable purposes will have to be dealt with separately from income from property applied or set apart for non-charitable purposes, and it is only income applied for charitable purposes for which exemption of tax will have to be considered under clause (*b*) of sub-section (1) of Section 11.

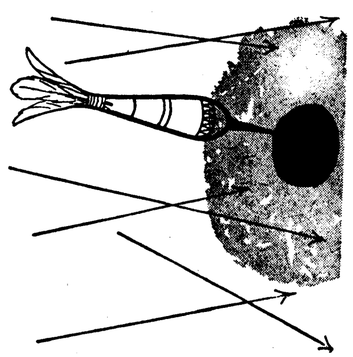
Income Spent Outside India

As we have seen, it was the condition of the exemption under clauses (*a*) and (*b*) of sub-section (1) of Section 11 that the income of the charitable trust should have been spent or applied to charitable purposes within India. Clause (*c*) of sub-section (1) of the same section deals with the case of a trust for a charitable purpose which stands to promote international welfare. If the trust is formed on or after 1st April 1952, it must be for only charitable purposes, while if it is formed before 1st April 1952 it could be for religious or charitable purposes. But such a trust, which spends its funds for charitable purposes outside India, would be entitled to exemption for tax only if there is a general or special order of the Central Board of Revenue by which such trust becomes entitled to exemption. The provisions of clause (*c*) adopt the exceptions in paragraph (*a*) of the proviso to clause (1) of sub-section (3) of Section 4 of the present Income-tax Act. The basis for these provisions is that a trust which spent its funds on charitable purposes outside India, which enjoyed exemption from tax under the old Act, should continue to enjoy tax exeption under the new law as well. It will, however, be noted that, for the trusts falling under clause (*c*) of sub-section (1) of Section 11, exemption applies only to income actually applied, and not to any unspent income which is accumulated for being spent for charitable purposes outside India in future.

Sub-section (1) of Section 12 adopts the existing provisions in Section 4(3)(ii) of the old Act. Sub-section (2) of Section 12 is, however, new. What this sub-section does is merely to forestall a possible device of one trust making donations to another with a view to escaping from the restriction of minimum expenditure on charitable purposes under Section 11(1). For instance, if a trust A makes a contribution to another charitable institution B, such contributions are to be treated under Section 12(2) as property income of institution B for the purpose of application of Section 11. As a result, institution B would be required to spent 75 per cent of its income from trust property, including the amount of contribution received by it from trust A. If sub-section (2) of Section 12 was not there, the effect would be that, if a contribution is made by trust A to institution B, in the hands of A the same was to be treated as charitable expenditure, while in the hands of B it would have been left out of account as income from voluntary contribution.

Section 13

Section 13 deals with cases in which tax exemption under Section 11 will not be available. Clause (*a*) of this section adopts part of the definition of "charitable purpose" in sub-section (3) of Section 4 of the old Act. Private individuals or a fluctuating body of private individuals cannot be the object of a public charitable trust, for example, employees of a corporation. Gifts for public religious purposes are exempt. Religious purposes (which are not defined) would include the advancement, support or propogation of a religion and its tenets. A charitable trust must always be public, but a religious trust may be public or private. The exemption granted by this sub-section is confined to public religious trusts and does not extend to private religious trusts which do not enure for the public benefit. This is made clear by Section 13(*a*) hereof. If the trust is wholly for religious or charitable purposes, clause (*a*) of sub-section (1) of Section 11 would apply, while if only part of the property is held for charitable purposes and the other part is held for private religious purposes, the case would be governed by clause (*b*) of that sub-section.



HIT THE BULL'S EYE

There is a surer way of getting your rightful share of the rich export market. If you exercise strict quality control in the manufacture of your goods, maintain regular supplies, produce according to the buyer's specifications, arrange for after sales service facilities, a tidy sum in foreign exchange is yours. EEPC-13

Clause (*b*) of Section 13 is very important. A trust created after 1st April 1962 will not be entitled to exemption in either of the following two cases:

(i) The benefit of the trust is made available to any particular religious community or caste, and

(ii) under the terms of the trust or rules of the institution, any part of the trust income enures directly or indirectly for the benefit of the founder of the trust or any of his relatives.

It will be noticed that the definition of "charitable purpose" in Section 4(3) of the old Act does not import the restriction that the trust should not have been established for the benefit of any particular religious community or caste, but, under sub-section (2) of Section 15(*b*) of the old Act which dealt with rebate of tax on donations paid to a charitable trust, it was required that the institution or fund to which donation was paid should not be "expressed to be for the benefit of any particular religious community." The words in clause (*b*) of Section 13 of the new Act have gone beyond the words "religious community" in old Section 15B and, if the benefit of the new trust is restricted to any particular caste, such trust created after 1st April 1962 will not be entitled to exemption from tax. However, the benefit of exemption can be availed of not only by a charitable trust but also by a religious trust, provided its benefits are not restricted to a particular religious community or caste.

A Restriction

Referring to sub-clause (ii) of clause (*b*) of Section 13 of the new Act, it will be noticed that the restriction applies "if under the terms of the trust or the rules governing the institution" any part of the trust income enures for the benefit of the founder of the trust, etc. If under the terms of the trust deed or any written rules formulated by the institution for which tax exemption is claimed, no benefit is specifically provided for the author of the trust or any of his relatives, the restriction in this sub-clause will not apply, though, in practice, the trustees may have conferred any direct or indirect benefit to the founder of the trust or any of his relatives. For instance, if the trust deed does not declare that the founder of the trust is entitled to occupy a room in the trust property for his personal residence, the restriction in sub-clause (ii) will not apply, though, in fact, the trustees may have allowed the founder to occupy a portion of the trust property for his personal residence. The restriction in this clause applies not only to the founder of the trust but also to his relatives, the word "relative" being defined in explanation I as including "a lineal descendant of a brother or sister." It would appear that, if a trust created after 1st April 1962 comes within the mischief of either sub-clause (i) or sub-clause (ii) of clause (*b*) of Section 13, that is, if either it is for the benefit of any particular caste or religious community or if there is any benefit reserved for the author of the trust, the tax exemption is not available to the trust at all. It will not be open to the trustees to argue that any amount spent for admittedly charitable purposes should be treated as exempt, and that only the balance might be subjected to tax in the hands of the trust.

As would appear from the above discussion, the new law makes very stringent provisions in respect of charitable and religious trusts. It would be in the interest of the trust for the trustees to take careful note of various conditions and restrictions imposed by the new provisions and to arrange the affairs of the trust strictly in accordance with the new law. Unless this is done, there is a serious risk of the trust being held as not entitled to exemption from tax and being called upon to pay considerable amounts of tax from funds which were intended to be spent on public charitable purposes.

PANYAM CEMENTS AND MINERAL INDUSTRIES LIMITED

NEW UNITS MUST BE ENCOURAGED TO EXPAND

CHAIRMAN'S SPEECH AT ANNUAL GENERAL MEETING

ADDRESSING the shareholders at the Sixth Annual General Meeting of the Panyam Cements and Mineral Industries Ltd., held at Cement Nagar, Kurnool District, Andhra Pradesh, on the 14th inst., Mr. T. S. Sundaram, Chairman of the Company, expressed satisfaction with the Government's decision to fix the highest price for the portland cement produced by the Company. In his opinion, since the size of the cement plant was one of the important factors influencing productivity, new units should be given every encouragement to expand to more economic sizes. The Chairman disclosed that work on the expansion of the factory was progressing satisfactorily and that the 300-ton plant was expected to be commissioned in the second quarter of 1963.

The following is the full text of Mr. Sundaram's speech:

"GENTLEMEN,

"It gives me great pleasure to welcome you to the sixth annual general meeting of the Company. The audited statements of accounts for the year ended 31st August 1961, along with your Directors' report on the affairs of the Company, have been circulated to you and, with your permission, I shall take them as read.

Results Satisfactory

"It is a matter of gratification to one and all of us that the result of the working of the Company during the year under review has been exceedingly satisfactory. As you will have noted, the profit and loss account shows a net profit of Rs. 11,78,934 after providing Rs. 10,20,231 for depreciation, including extra shift depreciation. This substantial profit has enabled us to completely write off the preliminary expenses, commission and brokerage of Rs. 40,469 and to make provision for payment of the arrears of dividends on preference shares of Rs. 3,72,000 from the date of allotment to 31st August 1960, at 6 per cent tax-free, i.e., 8-4/7 per cent, subject to deduction of tax.

"The Managing Agents have waived their remuneration for the second year in succession. I have to place on record on your behalf our sincere gratitude to the Managing Agents for their generous gesture.

Production Cost High

"I am glad to inform you that the Government of India, after examining the report of the Tariff Commission on the retention price payable to the cement industry, have fixed for our Company the highest price fixed for portland cement. Underlining the importance of the industry, the Commission had proposed prices which will help its development to achieve the capacity target fixed by the Planning Commission. Whilst right and due emphasis has been laid by the Government of India and also the Tariff Commission on improvement of efficiency and reduction in the production costs of the industry, I hope it is appreciated that the high cost of production of the units of this capital-intensive industry, especially of those which have come into being in recent years, is mainly due to the steep increase in the capital costs. With the cost of coal and purchased power and railway freight determined or influenced by Government's policies, wages and salaries fixed by Wage Boards, prices of inventory stores steadily rising and the production targets getting adversely affected by unforeseen circumstances such as coal shortage or wagon shortage and power cuts, only little is left in the hands of the producers to reduce their production costs.

"As you are aware, the size of the cement plant is one of the important factors influencing its productivity. I hope the Government, keeping in view the overall, balanced and rational development of this industry to exploit the raw material deposits in all parts of the country, will ensure, by their licensing and other policies, that the new units are given preference, encouragement and facilities to expand to more economic sizes.

"I welcome the Government's decision to allow the State Trading Corporation to continue in the field of cement distribution.

"I am happy to inform you that work on the expansion of our factory is progressing satisfactorily. Orders have been placed for a 300-ton unit with the indigenous suppliers, Messrs. A.C.C., Vickers, Babcock Ltd., Bombay. The equipment is due to be delivered during the second half of 1962 by which time civil construction works are also scheduled to be completed. The plant is expected to be commissioned in the second quarter of 1963.

Capital to be Raised

"It is proposed to enhance the authorised share capital of the Company from Rs. 1 crore to Rs. 2 crores. The appropriate resolutions with regard to this and the present capital issue for Rs. 46.36 lakhs are being placed before you. I am sure we will have your enthusiastic co-operation in making this issue a success.

"As mentioned in my last year's speech, the budgeted outlay for this expansion project is estimated at Rs. 120 lakhs. This will be met by the proposed issue of share capital of Rs. 46.36 lakhs and borrowings. You will be glad to hear that your Directors have been successful in securing a long-term loan of Rs. 40 lakhs from the Industrial Credit and Investment Corporation of India Ltd., Bombay, and a medium-term loan of Rs. 20 lakhs under the Scheme of Refinance Corporation for Industry through our bankers, The Bank of Baroda Ltd.

"I come now to the pleasant part of my duty of expressing our thanks to our Managing Agents for the care and interest evinced by them in the management of the Company and officers, members of the staff and operatives of all categories for their sense of duty and hard work willingly rendered by them.

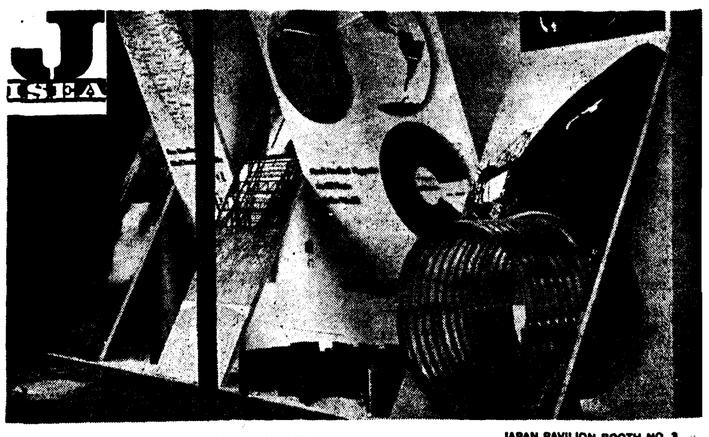
"I now have pleasure in moving that the Directors' report and the audited statements of accounts for the year ended 31st August 1961, with the auditors' report attached thereto, be adopted."

Note: *The above statement is not a report of the proceedings of the annual general meeting referred to.*

P.L. 480 FUNDS FOR INDIA

The United States Government has concluded four agreements with the Government of India providing for grants aggregating Rs. 26.4 crores ($55 million) for national highways, dairy development, soil and water conservation and groundwater exploration projects. This amount will come out of the money earmarked as grants to the Government of India from the sale proceeds of agricultural commodities supplied to India under U.S. Public Law 480. The grants will cover the anticipated expenditure on the projects during the first two years of the third Five-year Plan.

Bulk of the grant, Rs. 20 crores, will be utilised for the improvement of national highways whose mileage was 15,000 at the end of the second Plan. About 787 schemes have been carried over to the third Plan and work has begun on a number of new schemes. A sum of Rs. 3.6 crores will be utilised for milk schemes in Amritsar, Bangalore, Barauni, Calcutta, Hyderabad, Jabalpur, Kanpur, Kozhikode, Madras, Madurai, Nagpur, Surat, Vijayawada and Worli and also for research projects undertaken by the National Dairy Research Institute in the Punjab and the Dairy Science College, Gujarat. About Rs. 2 crores have been earmarked for soil conservation projects in the catchment areas of Bhakra-Nangal, Damodar Valley Corporation, Machkund, Hirakud, Chambal, Kosi, Mayurakshi, Kundah, Tungabhadra and Ramganga Projects. part of this development programme includes Contour Building and Terraching, afforestation, pasture development and control of landslides. A sum of Rs. 80 lakhs is intended for the ground water exploration programme. Under this programme, a hundred exploratory wells a year will be drilled in Andhra Pradesh, Assam, Bihar, Gujarat, Kerala, Madhya Pradesh, Madras, Maharashtra, Mysore, Orissa, Punjab, Rajasthan, Uttar Pradesh, West Bengal, Himachal Pradesh and Tripura. During the second Plan, 287 tubewells were drilled with American assistance.



JAPANESE STEEL PRODUCTS EXHIBITED
THE INDIAN INDUSTRIES FAIR, 1961

JAPAN PAVILION BOOTH NO. 3

Huge tonnage of iron ores from India flow into steel mills of Japan every day to be made into quality steel and steel products. Japanese steel producers, now achieving the 4th largest output in the world, thus contribute to solidify the trade relations between India and Japan. Japan Iron & Steel Exporters' Association invites you to inspect quality steel and steel products from Japan at The Indian Industries Fair.

COAL TRANSPORT PROBLEM

MR. D. C. DRIVER'S OBJECTIVE ANALYSIS AND SUGGESTIONS

FOR about a year now industries in different parts of the country have been seriously inconvenienced by shortages in coal supplies. These shortages were originally caused by the inadequacy in transport facilities rather than by any lag in coal production as such, although more recently the insufficiency of transport has operated as a deterrent to the planned production of coal. With greater pithead stocks which could not be transported in time, the coal industry has had to slow down the tempo of production in recent months. But this will be a passing phase only if the *imbalance* between the availability of transport and the requirements of coal is rectified more energetically and systematically in the first few years of the third Plan. Otherwise the coal distribution problem is bound to affect factory production in general, decreasing the productive efficiency and, thereby, increasing the production cost of Indian industries. A sound approach to this problem could, however, be evolved only in the light of lessons drawn from the last two years of the second Plan when industrialisation gathered momentum, requiring more coal, more power and more transport than had been originally envisaged. There were, of course, serious miscalculations and underestimates by the Union Ministries concerned, but no single Ministry was wholly responsible for the transport muddle. An objective and fair-minded approach would be to present all the facts and developments and find out the causes of coal transport failure, with the object of drawing suitable lessons. Such an approach, it is gratifying to find, has just been made by Mr. Darab C. Driver in his presidential address at the sixteenth annual general meeting of the Coal Consumers Association of India, held at Calcutta on the 17th inst.

Causes of Crisis

At the outset, Mr. Driver has ascribed the failure of coal transport to the following causes:

1. For the second Plan, railways' demands were for Rs. 1,480 crores, against which the Planning Commission allocated Rs. 1,220 crores only.

2. The Planning Commission relied upon Korba and other Central India coalfields to supply most of the coal to Western India, U.P. and Punjab side, so that they might take most of their coal from a shorter distance with quicker turnround of wagons than from the Bengal-Bihar coalfields. But that was not to be, since Korba and other Central India coalfields produced five million tons less than was expected. Also, the quality of coal from Central India was found much below expectations.

3. Lack of steel rails hampered the doubling of track on certain routes such as Bezwada, Madras, Moradabad-Saharanpur, Allahabad-Kanpur, Jaffrabad-Varanasi and Anuppur-Katni. Unavailability of steel in time in matching quantities and insufficiency of power considerably retarded wagon-building activity in the country.

4. Against the target of electrification of 826 miles of railway track, the actual achievement was woefully below the mark. Even though the railway tracks had been completed for the purpose, there was not enough power for their electrification.

5. Steel works which were estimated to take their raw materials from adjacent sources had to haul some of them from longer distance owing to failure of quality.

6. The transport and construction work on rail tracks was disturbed by the railwaymen's strike in July 1960.

7. It is said that, from 1956 upto now, inadequate loading arrangements at the N.C.D.C. mines were responsible for the detention of about 48,000 wagons for which they paid to the railways Rs. 10 lakhs as penalty and detention charges. This still continues, the daily average detention being 63 wagons and 80 wagons during June and July of 1961.

8. The demand of railways for coal has increased by two million tons per year, which means 250 extra wagons per day, mostly owing to the inferior quality of coal consumed.

9. Delays in movement of loaded wagons stabled at marshalling yards.

If the coal transport problem which came to the fore in the last year of the second Plan has become a crisis in the first year of the third Plan, all the causes listed above were cumulatively responsible for it. For its part, the third Plan, with its bigger coal production target, adds vastly to the dimensions of the problem. According to Mr. B. P. Singh Roy, Chairman, Coal Transport Advisory Committee, the planned increase of coal production from 60 million tons to 97 million tons under the third Plan would require the following *daily* average number of wagons as phased by the Coal Controller:

1961-62	... ...	7,183	1963-64	...	9,610
1962-63	... ...	8,561	1964-65	...	11,502
	1965-66	... ...	12,339		

Mr. Driver asks pertinently where these wagons are to come from, for the railways can provide at present only about 5,865 wagons. The facts he has given regarding wagon-building are disquieting. The annual wagon manufacturing capacity in the country, according to him, is for 26,000 wagons. But this capacity has been consistently underutilised up till now for lack of power and steel. Four of the railway workshops have, of course, been recently put on the manufacture of Box wagons of the capacity of 35 tons. Fifteen thousand tons of steel have been imported for the manufacture of Box wagons. During the recent conference at Delhi on the 13th and 14th September 1961, the representative of the of the Railway Board advised that during the third Plan, there would be 20,000 heavy Box type wagons made available, out of which 5,000 would be reserved for coal transport to industries other than steel and this would, to a great extent, relieve the present coal crisis. But Mr. Driver does not think that this development will bring any very great relief. His arguments in this connection are:

"Our experience of the delays in the manufacture of wagons, the rising number of new industrial units, requiring more and more coal, and the power shortage during the third Plan, make it difficult to share the hope for any considerable improvement in wagon availability for coal relative to demand, especially when, besides wagon shortage, there are other difficulties to be considered—insufficient marshalling yards, limited line capacity, shortage of locomotives, need to strengthen sidings to bear the heavy weight of 55-ton capacity Box wagons, etc.' Speaking of Box type wagons, the extra cost to industries receiving their coal in such wagons may be noted. Since there are no weighbridges to weigh these heavy-type wagons, unscrupulous suppliers underload such wagons, sometimes to the extent of 30 per cent, and make the consumers pay according to the wagon capacity; mechanical devices in large-size works for unloading old type four wheelers cannot be used for this new type wagon and at times the extra cost of unloading comes up to more than 30 per cent."

Shortfalls in Supplies

Another relevant factor to be remembered is that the steel industry alone adds greatly to the strain under which the railways have to operate, for one million tons of steel require five million tons of raw materials. It is estimated that at present the railway transport for the steel industry constitutes about 15 per cent of the goods traffic and that this proportion is expected to increase to about 30 per cent in the course of the next few years. No wonder, therefore, that, as compared with allocations, there is an average shortfall in supplies of coal to all other established industries to the extent of 25 to 30 per cent owing to lack of wagons. In the case of industries recently started, coal supplies are even less than 50 per cent of their requirements.

The powers-that-be have, of course, been apprised of this situation of enforced reduction of production in many industries for lack of coal. But they do not seem to have been fully aware of the serious consequences of the underestimate of the requirements of coal transport. Their half-hearted measures and improvisations in the last one year bear out that they have not come to grips with the problem. Even these are only experimental measures which are undergoing the process of trial and error. First, one million tons more than before, that is, two million tons of coal per year are to be sent to Southern and Western ports by the rail-cum-sea route. How this measure has so far fared may be known from the following account given by Mr. Driver:

"From May to August 1961, 95 ships left Calcutta against the estimate of 120 ships at the rate of 30 per month, carrying altogether 4.48 lakh tons of coal against the target of 6.66 lakh tons. To maintain 30 sailings a month, the number of ships required is about 55, in order to take care of delays due to (1) survey of ships and their repairs, (2) dislocation due to weather and draft conditions in the Hooghly, (3) strikes at ports, and (4) delay in unloading at destination ports, etc. Relying on the estimate that, during May to August this year, Southern and Western India would get by the rail-cum-sea route 6.66 lakh tons, the railways reduced their wagon supply accordingly, which made the coal scarcity worse for these States."

Secondly, coal dumps have been set up in some States under State control, to which coal will be despatched in trainloads in order to economise transport and from which medium and small size industries not having siding facilities will draw their supplies by lorries and trucks; for other States negotiations are under way. The main difficulty consumers will have about dumps, apart from the high cost of coal delivered, is that they cannot get the size and quality of coal from dumps, as they used to get direct from collieries; also the elimination of middlemen in the dump business means deprivation of credit facilities which middlemen generally extend to consumers. Thirdly, for industries very near Bengal and Bihar coalfields, the Coal Controller is thinking of moving all coal by road, except for steel works and railways. The Government is considering a proposal to move annually altogether 6 million tons of coal by road, which does not seem practicable in the third Plan for lack of sufficient trucks. The present high freight charges of trucks will mount with additional coal traffic. Also the condition of roads does not permit such heavy traffic by trucks. Fourthly, Madhya Pradesh and Maharashtra coalfields are to be developed to supply coal to Western India in order to save the present long haulage of their coal supplies from Bengal and Bihar coalfields. Fifthly, the railways urge that loading one ton of coal more per wagon will improve overall transport capacity by 700 wagons. It has now been enforced from 1st November 1961 that the minimum weight of wagonloads for coal at owner's risk will be the carrying capacity *plus* 1 tonne instead of marked carrying capacity, except for Talcher coalfield. The railways also ask for seven days' loading of coal which has been effected in some collieries.

Permanent Remedy

It remains to be seen whether these measures will be reasonably effective in solving the coal transport problem. Mr. Driver does not seem to think that the existing disparity between the availability of coal and wagons for its transport will be wholly removed by such measures. The only substantial course would be to increase the railways' haulage capacity still further. If it is true that the Planning Commission has authorised the railways to exceed their annual allocation by as much as 40 per cent in order to increase their haulage capacity, the Government should bestir itself and find the ways and means for doing so. Mr. Driver's suggestion that a higher priority be given in foreign exchange allocation to transport equipment is one of the ways. Others could conceivably be a further step-up in wagon-building in both the sectors, a suitable upward revision of coal freight rates to get more revenue in the next Railway Budget, early advice to industries about economical and efficient utilisation of coal, etc. The last mentioned idea, it is gratifying to know, is already catching on, for the Government has set up an organisation to advise industries regarding economy in coal utilisation. This is a technical job, and it is to be hoped that the new organisation will be competently manned to impart the advice to all industries with expedition.

NEW PRODUCTS AND PROCESSES

Refractory Insulating Bricks

A NEW process for the manufacture of refractory insulating bricks and special shapes, known as the "23 range," has been evolved by Thomas Marshall & Co., England. The process produces standard rectangular shapes with a density of 48 lb. per cubic ft. and special forms of 60 lb. per cubic ft., both with a service temperature of 2,300°F. The new method breaks away from the traditional process in which a mixture of clay and combustible is kilned in order to produce an oversize block from which the finished brick has to be machined. The need for a combustible constituent is entirely eliminated, and the as-kilned product is true to shape and ready for despatch. Production rate is twice that of the traditional system.

Atmospheric Pollution Recorder

Sampling apparatus designed to provide accurate and speedy recording of dust, grit and fume emission from factory and other stacks has been successfully developed by Viscos Ltd., England. The equipment is a production version of an advanced system based on principles issuing from recent investigations by the British Iron and Steel Research Association into amospheric pollution. The positive control of smoke stack effluent is of immediate concern to the heavy industries. At the same time, present high fuel costs demand increasing efficiency in process control to which this apparatus is calculated to make a significant contribution, for by measuring the flow rates and temperatures of gases it thereby indicates the presence of air leaks resulting in wastage of heat and fuel. One of its advantages is the speed at which samples can be taken. For example, the filter may be easily changed within 30 seconds. Another attractive feature is the ease with which it can be used in confined spaces. The apparatus consists essentially of five linked units—sampling probe, filter unit, cooling coil, pump unit and instrument unit. In addition, a combined pitot tube and pyrometer is provided for measuring gas velocities and temperature.

Paper From Sisal Fibre

High stretch paper, with satisfactory strength properties, has been prepared from sisal fibre by the sulphate digestion process as a result of investigations undertaken at the Forest Research Institute, Dehra Dun. Compared with paper produced from coconut coir, paper from sisal has a slightly lower stretch but a much higher yield and better strength properties. The colour of the paper from sisal is light brown while that from coir is dark brown.

Corrugated Eternit—A New Building Material

After sixty years of satisfactory results one may well say that asbestos-cement ("Eternit") has become one of the most popular building materials. The modern architect who plans industrial structures will be very pleased with a new development of this traditional material, namely, corrugated Eternit. It is furnished in slabs of two types. Type No. 5 has a profile with 5¼ undulations, and a length of 1.000, 1,250, 1,500, 1,800, 2,000 and 2,500 mm. type No. 10 10¼ undulations and 1,250, 1,800, 2,000 and 2,500 mm. The undulations of the slabs overlap thus forming a homogeneous scaly surface with characteristic horizontal lines where one line of slabs covers the other. The connections are made by means of corrugated shaped stones which gives the structure a uniform character hardly to be achieved by any other building system. An important technical feature is the uniformity of the material which prevents the formation of stresses, coefficients of expansion and corrosion within the lining surface. Corrugated Eternit is used with excellent results for the covering of roofs of gentle slope as well as for the lining of large-size surfaces. Apart from the technical advantages of the material for roofing flats roofs, corrugated Eternit gives very pleasing artistical effects when used for lining ceilings without shutterings. The material comes also very handy whenever conduits are to be hidden behind the slabs owing to their size, light weight, resistance to rot and fire.

ORIENT EXPRESS

Travel Service

Through its 4 offices in India and 350 correspondents in all principal cities throughout the world, Orient Express Travel Service places at the disposal of its clients a complete Travel Service.

Air, Rail and Steamer tickets issued at tariff rates. Hotel reservations made anywhere. Advice and assistance given in securing Passports, Visas, Health Certificates and Travellers Cheques.

New Saw for Cutting Timber Logs

A craft enterprise in Upper Austria has developed a new saw specially designed for veneer cutting from extra-big exotic timber logs. The new equipment is able to handle logs as thick as 2m. and as long as 6m. In the box-shaped design the load lies very low, near the rails. Thus tilting or lifting of the saw blade becomes impossible and operation is absolutely shock-free. The height of the cutting device is adjusted by means of a tackle which lifts or lowers four cylindrical guide elements gliding up and down the lateral columns. A blocking device prevents shifting. The new three-strap planing gear-chain of hard chromium-plated material gives an excellent performance even under extreme conditions and at maximum feeding speed.

New Glass for Lighting Fixtures

After eleven years of research, an Austrian enterprise, specialising in the production of lighting fixtures, has developed a new special glass quality. Its main feature is its high transparency which surpasses by roughly 30 per cent that of the usual opal or frosted glass. Owing to its prismlike structure, the light rays are broken several times and an anti-dazzle effect is thus being achieved without having to resort to the usual admixtures. The new glass does not come under the heading pressed glass, but its structure rather reminds lead crystal glass. In varying shapes it is being used for chandeliers, ceiling lamps, suspended lamps, etc.

Artificial Blood Vessels

The doctor and engineer have together created one more medical marvel: artificial blood vessel. On the basis of a project drawn up by Soviet engineers, the Leningrad plant "Vulkan," has created a machine called the KVT. The blood vessel made by it, is knitted. It can be cut and sewn. Polyester fibre, lavasan, is used as the raw material. After being knitted on such a machine the artificial blood artery undergoes a number of operations, e.g., washing, drying, crimping and thermostat processing. Then it is placed in packing of polyvinyl film, is sterilised in an autoclave, and the packing is sealed by high frequency currents. The vessel can then be preserved for many years and can be used at any moment for transplantation into human body. The Leningrad Scientific Research Institute for Blood Transfusion has already performed 24 operations for the transplanting of artificial blood vessels in man, and all of them are claimed to be successful.

Light Plastic Material

A petro-chemical firm in Lower Austria, Messrs. Danubia-Petrochemie A.G., Schwechat/Austria, has developed a completely new plastic material which, with a specific weight of 0.90 may be considered one of the lightest plastics manufactured up to now. The plant, built according to most up-to-date criteria, has taken up production quite recently. At present it has a capacity of approximately 5,000 tons of isotactic polypropylene per year. Articles made of the new plastic material float on water and are remarkable for their high resistance to tearing and compression as well as for their considerable resilience. The hardness of the material makes it possible to give the surface a highly polished glossy finish. Most important of all, the resistance to high and low temperatures surpasses by far that of all other similar materials available on the market. The new plastic material may be used for a multitude of purposes. Among others it can be turned into parts for radio and TV sets, textile and dyeing machines, used in the chemical industry, for sanitary articles that are to be sterilised and in the automotive vehicle industry. Moreover, it can be shaped into tubes, slabs, transparent or opaque colourless or coloured foils, cable and wire sheathings and different household articles.

Operational Solar Battery

An operational solar battery capable of supplying power for many hours for lighting and other purposes at an on-load voltage of 24 V. has been developed as a result of extensive research work at the Centre de Recherches Physico Chimiques of the Campagnie Generale de Te'le'graphie Sans Fil (C.S.F.), near Toulon in France. The development is claimed to be a milestone in the field of direct transformation of solar energy into electric energy. This is the largest static generator hitherto developed which can recover energy from solar heat. Unlike in the selenium and silicon batteries which use the solar energy in its light form, the C.S.F. battery uses solar energy in the heat form only. Its operation is based on collecting and holding the maximum possible heat energy in the sun's radiation (c. 800 W./sq.m. at Toulon, and can be more in a tropical country) and manifesting it as a temperature difference between the hot and cold junctions of a calcined bismuth telluride thermo-couple. The solar generator provides electric energy which is perfectly adapted to supply electronic circuits fully or partially transistorised. It is completely static, quite stable, requires no maintenance and lasts almost indefinitely. French scientists and engineers have also developed a smaller version of the generator which can be charged during the day by mere sunlight and supplies power during nighttime to a self-contained, portable lamp which can be worked continuously for hours.

RELATIVE PRICE MOVEMENTS IN SECOND PLAN PERIOD

PRODUCERS OF RAW MATERIALS EARN MORE

By Dr. Ayodhya Singh
BANARAS HINDU UNIVERSITY

IN his *Treatise on Money*, Keynes expresses himself unequivocally against too much concentration on the general price level and emphasises what he calls the "plurality of secondary price levels." And Hayek in his *Prices and Production* goes to the length of discarding the concept of the general price level altogether and makes relative price movements the basis of his theory of trade cycle. Undoubtedly, the concept on the general price level is an abstraction and does not tell us much. It is misleading to concentrate on this abstraction and to neglect relative price movements, since the most important effects of changes in the quantity of money or its velocity of circulation are not changes in the general price level but changes in the structure of relative prices and the relative position of different income groups. Further, as the quantity of money at the disposal of individuals increases, the number of units of money exchanged against any given amount of the various goods tends to increase, but there is no reason to expect that all prices will vary in the same proportion; the increased quantity of money is distributed in such a way as would alter the price relationships of different goods. Those persons who receive larger incomes are able to increase their demands as compared with those whose incomes are more or less fixed. Production is thus naturally adjusted to these changed relative demands.

Again, a change in the quantity of money by itself may affect different groups of commodities differently, the process depending upon the channel through which the additional money passes into the economy. If, for example, an increase in the quantity of money takes place via budget deficit, it gets into the hands of the Government; if the new money comes via export surplus, it gets into the hands of merchants dealing in foreign trade; and if it comes via expansion of bank credit, it is concentrated in the hands of entrepreneurs who borrow from banks. The disposition of money thus varies according to the manner in which it is created and leaves a lasting effect upon relative prices. In fact, there exists no general average of prices which can be regarded as an expression *par excellence* of the value of money. We may even doubt that we are primarily interested in finding such an expression. The problem is mainly confined to the influence of monetary factors on relative prices of goods either as a source of income or as a means of the satisfaction of wants.

Price Trends

The second Plan period witnessed not only a high degree of inflation but also wide and chaotic movements in relative prices. The endeavour here is not to explain the well-known causes of these price movements but to indicate the degree of price fluctuations over the period and derive important inferences from them. The table on this page contains the Economic Adviser's index numbers of wholesale prices of certain groups and sub-groups, along with the General Price Index with base 1952-53=100. In order to attain the truly representative character of indices for the five years of the second Plan, the *annual* average of weekly indices has been used unlike the use of average for the month of March in each financial year, a practice often adopted in most official reviews. In the absence of yearly foodgrains index number, the annual average index of foodgrains has been constructed on the basis of weekly price indices of cereals and pulses utilising the weightage given by the Economic Adviser to the Government of India.

The table shows that the General Index of Wholesale Prices was characterised by a persistent upward trend, rising from 92.5 in 1955-56 (Base: 1952-53=100) to 124.8 in 1960-61. The virtual slump in prices of food articles, in general, and foodgrains, in particular, resulting from the bumper crop of 1953-54, though arrested by June 1955, could be corrected wholly by 1956-57 (the index for food articles in March 1963 and March 1957 being 102.2 and 102.3, respectively). The price index of food articles since then continued rising, with a marked increase in 1958-59 (115.2, as against 106.4 in 1957-58) and insignificant increase in 1960-61 (120.0 from 119.0 in 1959-60). Excepting 1958-59 and 1959-60, the price index of food articles was below the General Index, revealing a relatively higher increase in the group constituted of "non-food articles."

The prices of foodgrains maintained their upward trend up to 1958-59 (106.2), followed by a downward trend in 1959-60 (102.1), with a mild subsequent increase in 1960-61 (102.3). This shows that the prices of food articles other than foodgrains recorded a higher increase than the latter throughout the second Five-year Plan period. Within the group of foodgrains, the price index of cereals always remained higher than that of pulses. Both cereals and pulses, however, showed a decline in their prices during 1959-60, which was mild in the former (from 106.8 in 1958-59 to 104.1 in 1959-60) and significant in the latter (from 103.9 in 1958-59 to 93.5 in 1959-60).

In spite of the fact that the weightage to cereals is 4½ times that given to pulses, the foodgrains price index failed to be near to the index of the former except in 1958-59 when pulses also recorded a perceptible increase in their prices. It is significant to note that the bulk of the rise in the general price index over the year 1958-59 occurred under the group "food articles." Nevertheless, the index of foodgrain prices remained throughout below the general price index.

Industrial Raw Materials

The prices of industrial raw materials rose steeply by 17 points from 99.0 in 1955-56 to 116.0 in 1956-57 and remained almost stationary in 1957-58 with a slight decline in 1958-59, followed by a marked increase in 1959-60. The rise in 1960-61 over 1959-60 was conspicuous, the price index moving from 123.7 to 145.7. It is again significant to note that, during 1958-59 when there was an appreciable increase in the prices of food articles, the industrial raw material prices showed a mild decline by 0.9. However, even in 1958-59, the price index of industrial raw materials remained above the general price index. Within the group of industrial raw materials, the continuous increase in the prices of oilseeds is noticeably marked. The prices of fibres also recorded almost continuous rise (except 1958-59 when the index declined to 108.0 from 117.5 in 1957-58), which became steep in 1960-61 (151.6), the index showing a rise of 37 points over 1959-60 (114.6). The price index of oilseeds (85.4) which was well below that of industrial raw materials (99.0) in 1955-56 lagged behind the latter throughout the five years of the second Plan.

The prices of manufactured goods continued to rise almost throughout the second Plan period, the substantial increases being in 1956-57 (105.6 from 99.6 in 1955-56) and 1960-61 (122.8 from 111.3 in 1959-60). The prices in 1958-59 when food articles recorded an appreciable increase and industrial raw materials suffered a mild decline, manufactures revealed a slight drop of 0.1 to 108.1. During 1955-56, the price index of manufactures (99.6) was slightly higher than that of industrial raw materials (99.0), but, due to the relative rise in the prices of the latter practically throughout the second Plan period, the former index became lower and, indeed, the gap continued widening first gradually and then conspicuously in 1960-61.

Important Features

An important feature of the price situation during the second Plan period was that the two groups, industrial raw materials and manufactures, which for the first time since 1950-51 h emerged as the notable contributory groups the rise in the general price level in 1959-6 continued to dominate the trend even in 1960-6 On the other hand, while the rise in the pric of the "food articles" group was relatively sma in 1959-60, unlike in previous years, the contribu tion of this group under sub-groups other than cereals and pulses (including fruits and vege tables, milk and ghee, edible oils, fish, eggs and meat, sugar, *gur*, tea and coffee) was by and large negligible in 1960-61. In other words, it is the rise in the prices of other constituents of food articles that accounted for the persistently upward trend in the price index for that group.

It appears that the relative shortage of food grains was the major factor accounting for price increases in the initial stages of the second Plan. In the later part of the Plan period, the leading factor in the upward trend of prices seemed to be shortage of agricultural raw materials. Of the rise of 14 per cent in the general price index since the end of 1958-59, about two-fifths was due to the rise in raw material prices and another two-fifths was contributed by the rise in the prices of manufactures, which might partly be the result of the increased raw material prices.

On the whole, the percentage increase in prices during the second Plan period was the highest in industrial raw materials, particularly oilseeds followed by those of food articles other than foodgrains, that is, fruits and vegetables, milk and ghee, edible oils, fish, eggs, and meat, sugar, *gur*, tea and coffee. Next come the price movements of foodgrains, particularly cereals and manufactures. While there were significant ups and mild downs in the price variations of foodgrains, the prices of manufactured goods showed continuously moderate increases which became steep only in 1960-61.

Further, the anxiety against any abnormal rise in foodgrains prices is clearly understandable, for, in a poor country like India, expenditure on foodgrains forms the major part of total consumer expenditure culminating in many cases to 80 per cent. But that should not blind us to the dangers involved in ignoring the implications of relatively higher price increases in other groups, namely, food articles other than foodgrains, industrial raw materials and manufactures. At the same time, the trend in prices of foodgrains *vis-a-vis* non-foodgrains since early 1959 in the face of a substantial rise in Plan outlay and budgetary deficit indicates the hope and the line of action for holding the price line within reasonable limits during the third Plan period.

Broad Inferences

The preceding analysis of relative price movements leads to certain broad inferences. Exclusively confining ourselves to the relative price movements during the period of the second Plan, we find that, in general, the producers of industrial raw materials seem to have gained the most. Within this group, the gains of producers of oilseeds appeared to be significant in relation to those of the producers of fibres, that is, cotton and jute. The gains of the producers of food articles other than foodgrains approximated those of the producers of cotton and jute. The producers of foodgrains, in general, and pulses, in particular, seemed to have gained less than the producers of fruits and vegetables, milk and ghee, edible oils, fish, eggs and meat, sugar, *gur*, tea and coffee. The producers of cereals and manufacturers were probably on equal footing. The producers of pulses seemed to have gained the least amongst all these groups.

To conclude, the failure in holding the price line during the second Plan period does not rest exclusively on foodgrains as is usually assumed. Greater attention is needed during the period of the third Plan to control and regulate the

DRAC-44A

N.P.C.'S EFFORTS BEGIN TO BEAR FRUIT

PRODUCTIVITY INCREASES IN SELECTED INDUSTRIAL UNITS

A CONCERTED and carefully programmed drive for increasing productivity can be said to have been launched in India only in 1958 when the National Productivity Council (N.P.C.) was established as an autonomous organisation for the promotion of productivity and productivity consciousness in the country. The Council, along with the 44 local productivity councils established by it all over the country since 1958, spearheads a movement which aims at (1) ensuring maximum utilisation of available resources of men, machines, materials and power, (2) to wage war against wastes in general, and (3) to help secure for the people of the country a better standard of living. The Council's programme of action includes collection and dissemination of information about techniques and procedures of productivity, organisation of training programmes for management personnel at various levels in productivity subjects and rendering advisory service for industries to facilitate introduction of productivity techniques. The N.P.C. also seeks to carry, through the media of films, radio and publications of books, pamphlets and periodicals, the message of productivity and to create a climate suitable for increasing productivity.

Productivity in Third Plan

The authors of the third Plan have rightly recognised the role of higher productivity in realising the plan objectives, and highlighted the importance of productivity in the following words:

"Industry is being called upon to meet as rapidly as possible the claims on behalf of the workers for a living wage, better living and working conditions, the needed volume of employment opportunities and a fuller measure of social security. It must yield a reasonable return on capital and provide for capital formation on an adequate scale. Neither the exercise of their organised strength in industrial conflict nor laws and the intervention of the State can help the workers much in realising their aspirations. Their gains can arise only out of the strength and dynamism of the economy, the only enduring basis of which is a rising level of productivity. No increase in profits, which does not come out of improvements in productivity but has its origin in current scarcity and the stress of development, can be regarded as a sign of development. . . . For the workers no real advance in the standard of living is possible without a steady increase in productivity because any increase in wages generally beyond certain narrow limits would otherwise be nullified by a rise in prices. Workers have therefore to insist on and not resist the progress of rationalisation in their own interest and in the larger interest of the country."

The significant work being done by the N.P.C. has been noted by the Planning Commission and its role in making productivity concepts more widely understood has been underlined by it in the third Plan. Since its inception three years ago, the N.P.C. has established 44 regional councils. It has also organised over 250 training courses in which about 4,000 managers, technicians and supervisors have taken part. Senior executives have also participated in advanced management programmes. In due course, the programmes of the National Productivity Council are expected to be linked with the work of the All-India Institute of Management and the National Institute of Training in Industrial Engineering. It is proposed to extend during the third Plan the general training programme for managers, technicians and supervisors, to apply productivity techniques in plants on a larger scale and to train instructors in selected productivity techniques.

Tangible Results

Have the efforts of the N.P.C. yielded any results so far? Although three years is too brief a period to assess the results of a movement which will take years to bear fruit, there is no doubt that a climate favourable to productivity improvement has been created in the country. No less a person than Mr. C. D. Deshmukh has conceded this fact. According to him, the atmosphere in regard to productivity is very much better in this country now than five or ten years ago. In bringing about this congenial atmosphere, the N.P.C. has no doubt played a notable part.

Apart from this, have any tangible results flowed from the productivity movement? An answer to this question has to be based on a study of the trend of productivity since 1958. Even if such a study were made, it would be difficult to isolate the factor responsible for the improvement, if any, in productivity, much less to attribute it to the N.P.C. The N.P.C. has, however, made an assessment of productivity increases in selected industrial units since 1956-57 and the results, which are significant in the context of the current interest in the subject, have been published as a brief survey by Mr. G. K. Nayar, senior economist, N.P.C., in a special issue on measurement of productivity in *Productivity*, journal of the N.P.C.

Several forces, according to the survey have been operating in the industrial field since 1958 when the N.P.C. was established, including fresh investments, new enterprises and expansion of both private and public sectors which make it somewhat difficult to identify and isolate the factors that have contributed to increased industrial productivity during the period. However, a broad appraisal has been attempted and the results obtained are revealing.

Preliminary Data

The N.P.C. approached a number of industrial concerns for basic productivity data which would broadly indicate the trend in productivity during the past few years. The response was encouraging. About 100 replies were received. Considering the preliminary nature of the assessment, the data received were considered not insufficient for a preliminary assessment. From the replies received, it was found that only 40 firms had submitted productivity data, out of which the material of 31 firms could be made use of for determining the increase in productivity. A closer analysis led to the elimination of another 10 firms, with the result that the data of only 21 firms have been calculated.

Though the number of firms is thus small, the scrutiny made of the statistics, claims the N.P.C.'s economists, has been "thoroughgoing and to that extent reliable." The percentage increases in productivity of each of the 21 firms during the period 1956-57 to 1959-60 are as follows:

Number of the firm	*Percentage increase in productivity in 1959-60 over 1956-57*
1	29
2	8
3	22
4	31
5	56
6	46
7	31
8	28
9	12
10	15
11	3
12	37
13	46
14	36
15	43
16	10
17	70
18	14
19	17
20	20
21	29

The industries covered by these statistics are sugar, confectionery, paper, cement, cotton textiles, chemicals, engineering, cycle, transport and printing. The firms have been listed according to the date of receipt of data from them and hence the presentation is statistically random. Productivity has been measured in terms of output per unit labour time. An increase of productivity indicates so much less time taken to produce a unit of the same output.

It is evident from the above table that, in the case of the 21 firms, increases in productivity during the period ranged from 3 per cent to 70 per cent. It will also be noted that quite a large number of firms recorded increases exceeding 20 per cent.

According to the returns submitted by the

INDIA'S TRADE WITH NORTH AMERICA

PROSPECTS FOR EXPORTS BRIGHT

A STUDY of the problems of, and prospects for, India's exports to North America (the U.S. and Canada) is of great topical importance. This is so, particularly because the U.S., which is India's second largest export market, is about to approach the European Common Market for a 20 per cent reciprocal tariff cut—a cut which the U.S. proposes to extend to all other countries, including India. The trends in Indo-Canadian trade, too, deserve to be looked into closely, for the Commonwealth preferences, now being enjoyed by the two countries in their mutual trade, are hanging fire, with the pivotal member of the Commonwealth, namely, the U.K., going ahead with its plan to join the Common Market by ratifying the Rome Treaty, albeit with certain reservations. In this context, the publication, entitled *India's Export Trade with the U.S. and Canada,** brought out by the Indian Chamber of Commerce, Calcutta, acquires a rare relevance. The publication is mainly devoted to a commodity-wise analysis of India's export trade with the other two countries. Exhaustive data on the recent trends in trade are also appended. The authors of the study have thrown certain suggestions designed to help the present and prospective Indian exporters. But, of course, most of these suggestions are by no means new and have been discussed on several occasions. Reiteration, at any rate, does not make them any less important.

Although the present study is an improvement upon similar previous publications of the World Trade Department, it is still not devoid of blemishes. In the first place, the analysis is somewhat academic in approach, with certain observations tending to be platitudes. One naturally expects a study by the Research Wing of one of India's leading trade bodies to be much less academic and more comprehensive. The objective of the study would have been served better, had the authors examined closely the trends in the nature and extent of competition in the U.S. market in select goods, and given possible specific solutions (including, say, for instance, freight concession or other export incentives) for improvement in India's position, as also the question of terms of trade and role of barter deals. Nor have the authors devoted adequate attention to assessing the possible repercussions of such developments taking place in the field of world trade as the formation of trade blocs in Latin America and Europe, on the prospects for India's exports to North America. Besides, some of India's export items, particularly textiles, have not been adequately dealt with in the study. Despite these factors on the debit side, there is no denying the fact that the study provides an authentic analytical account of the recent trends in Indo-N. American trade.

Exports to U.S.

The volume of India's export to the U.S. is much higher than those to China. As is well known, the pattern of India's trade with these two countries, too, is different. It is, therefore, necessary to examine the trend of trade separately for each country.

The following table shows the trend of India's exports to, and imports from, the U.S. during the last decade:

(In crores of rupees)

	Imports	Exports	Balance of trade
1952	276.58	117.47	—159.11
1953	90.55	96.18	+ 5.63
1954	74.43	86.36	+ 11.23
1955	89.81	92.22	+ 2.42
1956	93.19	89.60	— 3.59
1957	170.32	131.87	— 38.45
1958	161.46	93.08	— 68.38
1959	217.85	95.24	—122.61
1960	240.02	101.64	—138.38

The Indo-U.S. trade, which had been negligible during the pre-war period, rose considerably during the time of war and thereafter. India's exports touched record levels during 1951-52, following the Korean boom, but fluctuated widely thereafter. An increasing trend in exports was in evidence in 1959 and 1960. But as a result of larger imports, the balance of trade remained distinctly adverse to India. It is true that India has hardly touched the fringe of the vast U.S. market. With a population of over 170 million and an average family income of $6,130 per year, the U.S. provides an expanding market for several Indian goods. At present, imports from India constitute hardly 1.5 per cent of the total imports into the U.S., which aggregate about $15,000 million (about Rs. 7,125 crores) annually. India's share of the total imports of the U.S., in fact, declined from 19 per cent in 1955-56 to 16 per cent in 1960-61. The major items of India's exports to the U.S. are jute goods, cashewnuts, pepper, castor oil and manganese ore. India supplied (as in 1958) 83 per cent of the U.S. requirements of burlap, 95 per cent of cashew nuts, 32 per cent of tea, 21 per cent of black pepper, 26 per cent of goat and kid-skins, 23 per cent of natural bristles and 30 per cent of castor oil. Besides, India supplied three-quarters of the U.S. imports of mica and one quarter of manganese ore.

*Prepared by the World Trade Department of the Indian Chamber of Commerce, Calcutta. Published by the Oxford Book and Stationery Company (Calcutta-16 and New Delhi). Pages: 52. Price Rs. 4.

Jute Goods

Jute manufactures are the most important item of export from India to the U.S., accounting for about 40 per cent of total exports. The U.S., incidentally, is the largest market for Indian burlap, which is used for the manufacture of bags (80 per cent) and for other industrial purposes (20 per cent). The total U.S. consumption of burlap rose sharply from 189,000 metric tons in 1954 to 239,000 tons in 1956 and 260,000 tons in 1959, but declined slightly to 243,000 tons in 1960. India accounted for 84 per cent of U.S. imports of burlap in 1960, which compares with 85 per cent in 1959, 86 per cent in 1958 and 82 per cent in 1954. The I.C.C.'s study points out that prospects for Indian jute goods "in the near future" are encouraging, "provided the industry can ensure regular supplies and reasonable stability in prices." This is all the more important because of the increasing competition from the multi-wall paper bag, the trend towards smaller packages and the growth of bulk handling. An idea of the prospects for Indian jute goods in the American market is provided by the publication in the following words:

"Since the end of the last war, there has been a large-scale substitution of multi-wall paper sacks for jute, a trend encouraged by the relatively high prices of the latter. It is estimated that, by 1948-49, the quantity of jute used in packing was one-third lower than before the war, while the one of shipping sack paper had risen to about 2½ times the pre-war level. The average price of burlap sacks rose by nearly 140 per cent, as against only 60 per cent for shipping sack paper in the same period. Apart from price, other factors that have favoured paper bags are the facility for printing attractive advertisements in them, the care with which they can be tailored to specific uses and certain technical superiority over jute.

"Although the development of bulk handling has made considerable progress in the sphere of animal feed, raw sugar, cereals, oilseeds, etc., the demand for jute goods is expected to continue to be strong because of its superiority for packaging raw cotton, raw wool, coffee, cocoa and other commodities. Besides, jute finds increasing use in other industries like electrical cables, upholstery and soft furnishings, rope and twine automative felts, roofing felts and for military uses like webbing, camouflage nets and sand-bags. In view of its vital importance as a dollar earner and the very keen competition from other producers, particularly Pakistan, both Government and industry should see to it that India not only maintains but also increases steadily her share of the expanding American market by expediting its modernisation programme in the weaving section, by achieving self-sufficiency in raw materials and by maintaining reasonable stability in prices."

The stability in the price of jute goods can be ensured only by increasing production of raw jute in a planned manner. The recent trends in production of raw jute have been unsatisfactory, resulting in a boom in jute prices. The long-term impact of this trend will be to encourage the use of synthetic substitutes, unless jute prices are controlled effectively in time.

Cashewnuts

Next to jute goods, cashewnuts constitute the leading item of export to the U.S. The U.S. bought 64 million lbs. of cashewnuts (valued at $28 million) in 1960. While India accounts for over 90 per cent of its imports of cashewnuts, the U.S. buys some quantities from Mozambique and British East Africa. In respect of manganese ore, India's exports at 441,000 tons in 1960, although higher than those in 1959 (380,000 tons), were much lower, as compared with 1957 (792,000 tons). The I.C.C. study indicates that the requirements of manganese ore are expected to increase steadily in view of the rising steel production in the U.S. If Indian prices are competitive, the scope for exports is bright. Brazil, however, has become a major competitor for manganese ore in U.S. market. The U.S. businessmen, it is said, have also felt dissatisfied with the working of the State Trading Corporation of India.

India's share in the U.S. imports of tea is not only small, but has shown a tendency to decline, presumably as a result of "uncompetitive prices" and also uncertainty over the fluctuation in export duty. India's export of tea to the U.S. fell from 36.1 million lbs. in 1955 to 24.8 million lbs. in 1960, with the corresponding share in total U.S. purchases declining from 34 per cent to 22 per cent. In this connection, the I.C.C. study has stressed the need for intensifying the campaign for publicity. It has also called for serious efforts to develop the U.S. market for coffee. Although coffee is the national beverage in the U.S. and it consumes annually about 2,200 million lbs., its purchase of coffee from India is negligible. Its main suppliers are Brazil, Colombia, British East Africa and Mexico.

The Indian handicrafts also may be able to make headway in the American market, with larger supplies, greater attention to quality, simplification of design, better display and by giving them more utility value. Several other Indian goods are expected to have good market in the U.S., if they are made competitive in terms of price and quality. These goods include cotton textiles, hides and skins, fish and fish products, rubber and leather shoes, sandalwood oil, precious stones, drugs and herbs, silk manufactures, brass and bronze manufactures, antiques, pepper, castor oil, mica, shellac and engineering goods. Exports of some of the important commodities in 1959 and 1960 are given in the following table:

(In lakhs of rupees)

	1959	1960
Hessian cloth	33,07	37,31
Jute bagging for cotton	2,31	3,95
Sacking cloth	60	53
Webbings of jute	36	35
Cashew kernels	10,60	11,87
Manganese ore	5,73	6,06
Tea	6,13	5,28
Sheep and lamb wool	3,65	1,60
Mica	3,28	1,54
Castor oil	1,85	3,37
Pepper (black)	1,59	3,74
Goat skin, dry and wet salted	2,12	1,90
Ilmenite	1,21	75
Gums	1,04	1,32
Shellac	52	59
Opium, crude	1,21	86
Ferro-manganese	40	3,67
Goat skin, undressed	78	98
Mill-made sheetings	1,29	97
Cotton waste	49	42
Prawns	47	54
Hog, pig and boar bristles	41	59
Lemon grass oil	31	83
Condenser, mica	29	17
Raw cotton	86	21
Fish, canned	14	11
Total (including others) ..	94,89	99,11

The publication has given some useful hints to Indian exporters designed to help develop trade with the U.S. It observes:

"The U.S. market is not only vast, but also specialised and highly competitive. This involves intensive and imaginative publicity. The consumers' tastes in the U.S.A. change rapidly and, therefore, Indian exporters should study the specific requirements and plan their sales programme accordingly. It is reported that sometimes goods exported from India arrive in the U.S.A. in a bad condition involving breakage, etc. Therefore, greater attention should be given to make the packing stronger and more attractive. Prices quoted should be c.i.f. in dollars as a rule at a specified port. By undertaking effective publicity, by ensuring quality according to sample, by maintaining delivery commitments and by strictly fulfilling contractual obligations, it should be possible for Indian businessmen to expand exports to U.S.A. to a far higher level in the next few years."

Indo-Canadian Trade

There is good scope for promoting India's exports to Canada as well. In its trade with Canada, India had a favourable balance of trade to the tune of Rs. 2 crores in 1960, as against a deficit of Rs. 13 crores in 1959. India's exports touched a record level of Rs. 16.94 crores in 1960, but this is not much, as compared with Rs. 15.19 crores in 1959 and Rs. 15.65 crores in 1955. But imports have been going up very fast, except for a setback in 1960. The following table shows the trend of India's trade with Canada since 1952:

(In crores of rupees)

	Imports	Exports	Balance of trade
1952	30.08	12.76	— 17.32
1953	18.97	13.91	— 5.06
1954	9.78	15.10	+ 5.32
1955	6.65	15.65	+ 9.00
1956	7.01	15.60	+ 8.59
1957	18.58	18.92	+ 0.34
1958	34.66	14.58	— 20.18
1959	27.87	15.19	— 12.68
1960	14.91	16.94	+ 2.03

India's main exports to Canada are traditional items like jute goods, tea, cotton textiles, cashewnuts, carpets, spices, etc. Tea, cotton textiles and jute goods account for 75 per cent of total exports to Canada. An important suggestion made by the I.C.C. study is that India should diversify the composition of its exports by introducing new items. Among engineering goods, only sewing machines have been exported so far to Canada. The study reveals that there are good prospects in Canada for India-made foundry products and steel castings for the machine-building industry.

The following table shows the important items among India's exports to Canada:

(In lakhs of rupees)

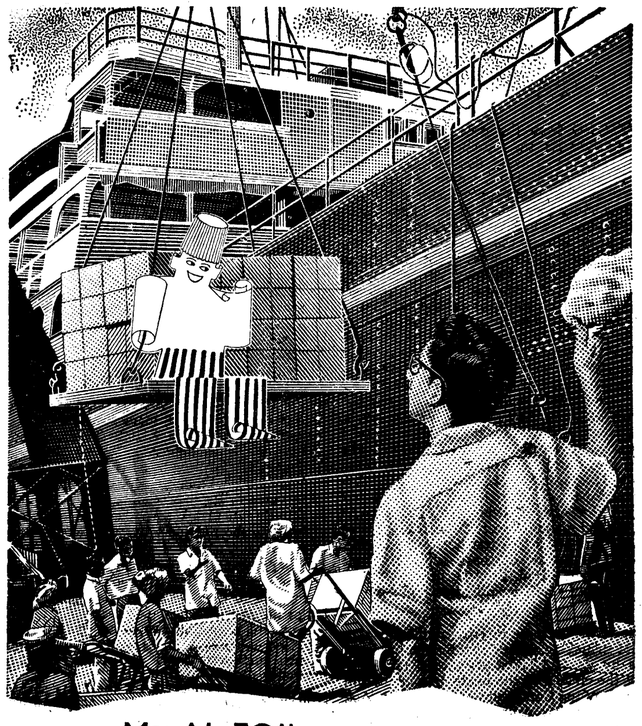
	1959	1960
Hessian cloth	5,94	6,88
Tea	4,41	4,59
Cashew kernel	55	65
Cotton sheetings, grey	38	35
Pepper (black)	22	39
Cotton drills and jeans, grey	17	15
Grey mill-made cotton fabrics	17	22
Dyed cotton fabrics	13	15
Footwear	12	15
Total (including others) ..	15,16	16,93

In order to step up India's exports, the domestic exporter should keep in mind certain characteristics of the Canadian market. Canadians are stated to be very discriminating customers. Quality of goods is vital to them and style, design and finish are also equally important. Tastes and fashions change fast in the market and exporters must keep up with this dynamic trend. According to the I.C.C. study, Canadians attach a lot of importance to the packing of goods both from the point of view of protecting and presenting in a nice way. In the Canadian departmental stores, there is little personnel service and the customer making the selection is influenced by the appearance and presentation of the articles. There have been several complaints against Indian exporters for shipping goods inadequately packed which had resulted in the merchandise being damaged or soiled in transit and many orders have been and are being lost by Indian exporters because of this deficiency. Another factor which deserves the attention of the Indian exporters is the terms of business. Canadian importers, it is said, are able to secure easy terms of payment for their imports, for instance, payment at 90 days after sight, from other sources. Indian exporters invariably ask for an irrevocable letter of credit. This, due to uncertainty over deliveries, makes the Canadian importer lock up his funds over a long period. The I.C.C. study expresses the view that Indian exporters can do much more business, if they offer easier terms of credit. Another important point to be noted by the Indian exporters is that the Canadians are very particular about the dates of delivery and conformity to samples.

PLASTICS ANNUAL

The plastics industry in India is poised for spectacular progress in the third Plan, with the increasing prospects for the availability of petrochemicals and other basic chemicals. Its healthy growth will, however, depend on how far it is able to keep abreast of technological improvements and other developments taking place not only in industrially advanced countries, but also in larger and better-equipped units within the country itself. This calls for wider means for dissemination of information on plastics. This object is sought to be served well by the *Plastics Annual* (edited and published by Mr. Y. R. Merchant, Hamam House, Hamam Street, Bombay-1). Opening with a message from Mr. G. L. Mehta, the plastics annual, now in its third year of publication, has brought together in one volume several articles of economic, commercial and technological importance. One of the notable contributions in the publication is "Progress and Prospects of Plastics in India" by Mr. N. Srinivasan, Industrial Adviser to the Government of India. Among the technical papers, mention may be made of "Yellowing of Polystyrene" by Mr. B. P. Waghe, "Plasticisers" by Mr. A. B. Diwekar and "Polymer Progress and Plastics in the Third Plan" by Mr. T. V. Subba Rao. Some of the articles, contributed by foreign experts, are of particular interest to Indian readers, for instance, "New Plastics Need New Forming Machinery and Techniques" by Mr. James A. Currie (U.K.) and "Plastics for Surgical Application" by Mr. Peggy Dellus (U.S.). A separate section gives an account of the new plastics projects which are either under way or licensed for production in the country. The annual also contains a directory of the plastics trade and industry, which gives brief information on leading producers of, and dealers in, plastic goods. The annual is bound to be read with interest by all those who are concerned with either production or distribution of plastics goods.

A trade delegation from Indonesia was in Bombay on four-day visit from the 16th to 22nd inst. The delegation was led by Mr. Haroun A. R. Rashid Saleh, Director of the Division of the Economic Affairs of the Indonesian Government's Foreign Affairs Department. During their stay, the members of the delegation held discussions with a wide cross-section of trade and business interests.



MR. AL FOIL GOES OVERSEAS

"Westward Ho!" shouted Mr. Foil, importantly perched upon a tea chest. "I go as a Protector of Tea (Aluminium lining for tea chests and packages) and come back with foreign exchange. Busy voyage ahead, though," Mr. Foil continued shouting, "What with having to keep out the damp devil and keep in the tea flavour. But I am not worried. Have long experience in the matter of lining tea chests with aluminium foils which stand up to all sorts of ill usage like rough crossings and wet weather (the Bay of Biscay and the Channel y'know) ... In fact, aluminium foil packaging keeps the tea full flavoursome and factory fresh right up to the tea lover's table ... to England, America or any place in the world ... I, Al Foil, alummus of aluminium, guarantee satisfaction".

Long and extensive experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionery, Tea and many other industries.

SALES OF PREMIER AUTOMOBILES TOUCH ALL-TIME HIGH LEVEL

PROFIT HIGHER, BUT NOT DIVIDEND

BENEFITING from the prevailing favourable conditions for the automobile industry, in general, and the growing demand for its products, in particular, the Premier Automobiles has been able to complete on 30th June 1961 another trading year on a most happy note. Sales of products, which had registered most impressive gains during the preceding year, continued to grow and the gross profit reached an all-time high. Unfortunately the Company could not avail of the opportunities to the fullest extent, because the embargo on the production of big cars, laid a few years ago, continued to be operative and restricted the Company from exploiting the existing market for these types of vehicles. The demand for spares and replacement parts for the vehicles already operating, however, was fairly high and this helped the Company to boost its sales to higher levels. Sales of cars, trucks and spares have thereby improved by Rs. 178.38 lakhs to Rs. 2,273.87 lakhs and the gross profit has risen quite appreciably to Rs. 193.86 lakhs, from Rs. 153.88 lakhs in 1959-60. It is to be noted that this latter figure has been arrived at after allowing for Rs. 15.00 lakhs paid to a local manufacturer of diesel engines as part consideration for the transfer of the licence for the manufacture of these engines in the Company's name. Had it not been for this payment, the gross profit would have undoubtedly been higher.

Despite the increase in gross profit, the provision for managing agents' commission has been reduced by Rs. 2.13 lakhs to Rs. 8.83 lakhs because of the change in the mode of computation introduced by the Companies (Amendment) Act, 1960. Provision for depreciation, on the other hand, has been stepped up from Rs. 44.23 lakhs to Rs. 56.44 lakhs, following the large-scale additions to fixed assets during the previous year, and that for taxation has been raised sharply by Rs. 21.00 lakhs to Rs. 55.00 lakhs for obvious reasons. Notwithstanding these substantially increased essential provisions, the net profit still shows a rise of no less than Rs. 8.90 lakhs to Rs. 73.59 lakhs.

With an overall decline in the value of additions to fixed assets during the year there has naturally been a fall in the amount of development rebate which the Company could claim and this has resulted in a reduction in the amount transferred to the development rebate reserves, from Rs. 22.50 lakhs to Rs. 13.00 lakhs. Transfers to general reserves and the dividend equalisation reserves which had received Rs. 15.27 lakhs and Rs. 5.00 lakhs, respectively, in the previous year have been suspended and, instead, a sum of Rs. 10.00 lakhs has been credited to the contingency reserve. Once again, no change has been proposed in the rate of dividend of 9 per cent subject to deduction of tax on ordinary share capital. The total dividend absorption comes to Rs. 49.82 lakhs, as compared with Rs. 30.97 lakhs a year ago. A sum of Rs. 4.76 lakhs has been carried forward, as against Rs. 3.24 lakhs brought in.

The progress made by the Company during the last four years is set forth in the comparative table given below.

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale proceeds	22,73.87	20,04.88	17,42.80	14,47.32

Carry forward	4.76	3.24	2.72	4.79

* Subject to deduction of tax.

In the course of the previous year, it will be recalled, the Company had issued further equity capital and that a large portion of it had remained unpaid towards the close of that year as calls in arrears. This amount, with the exception of Rs. 91,650, was received during the year under review and, together with the further conversion of debentures into ordinary shares, resulted in an increase of Rs. 84.22 lakhs to Rs. 557.51 lakhs in the subscribed share capital as at 30th June 1961. This is backed by reserves and surplus aggregating Rs. 145.64 lakhs and comprising mainly of Rs. 66.50 lakhs in development reserve, Rs. 35.00 lakhs in general reserve, Rs. 10.00 lakhs each in dividend equalisation and contingency reserves and Rs. 16.19 lakhs in deferred taxation reserve. Capital reserve stands higher at Rs. 1.13 lakh and investment reserve at Rs. 2.07 lakhs. There has been a slight fall in the outstanding amount of the convertible debenture stock, from Rs. 7.43 lakhs to Rs. 6.24 lakhs. Bank overdrafts, unsecured loans and current liabilities, and provisions altogether amount to Rs. 739.57 lakhs. As against these current assets, loans, advances and investments aggregate Rs. 1,115.15 lakhs, or more than one and a half times. During the year, the Company acquired new assets worth Rs. 61.33 lakhs and, with these, the gross block has risen in value to Rs. 652.99 lakhs. On deducting from this Rs. 319.44 lakhs as the depreciation earned to date, the net block works out to Rs. 333.54 lakhs.

The Company has made further progress in the implementation of its programme of phased manufacture of parts and components required for its makes of cars and trucks. This is evident from the Directors' report which states:

"There was an increase in the proportion of parts and components of vehicles made in the Company's works.

"All the components of the Fiat transmission, including gears, sliding sleeves and hubs are now being produced in the factory and we expect to mount locally-made transmissions on the Fiat cars before long.

"As regards axles for Fiat cars, the machinery of major items like brake drums, ring gears, pinion and axle shaft has been completed and the assembly of the axles is due to begin shortly.

"In the last year's report, it was mentioned that the manufacture of front and rear axles for trucks was making fair progress. The Company is now manufacturing truck axles and these have been in regular production for some time past.

"The production of Meadows engines has begun, but it will take some time more for full production capacity to be reached, as a number of machine tools are still to be imported."

The application made by the Company to the Government of India for expansion programme is still under consideration. The Company has applied to the Controller of Capital Issues for permission for the issue of further equity capital of Rs. 2 crores in shares of Rs. 100 each, as rupee expenditure will have to be incurred for the purchase of land, buildings, etc., in connection with its sheet metal project. The space available at the factory at Kurla is not sufficient to accommodate the new project of sheet metal components. The Company has now selected suitable land admeasuring about 300 acres on the Kalyan-Shill Road, near Kalyan. Proceedings to acquire the land for the Company have been started by the Government of Maharashtra and are making fair progress.

The current market quotation of the Rs. 100 paid-up ordinary shares is Rs. 163.50 *cum-dividend*. At this price, the net return on investment works out to 4.1 per cent per annum.

(Concluded from next column)

proposed loan of Rs. 75 lakhs from the N.I.D.C., the liability on this score would rise considerably during the current year. Current liabilities and provisions stand at Rs. 67.85 lakhs. Current assets, loans and advances amount to Rs. 127.49 lakhs. There is a contingent liability of Rs. 3.57 lakhs for the Jute Wages Tribunal Award of September 1948. Investments total Rs. 33.23 lakhs, including Rs. 33.17 lakhs, representing the Company's holdings of 543,530 ordinary shares of Rs. 10 each in its subsidiary, the Megna Mills Company, Ltd. The gross block account increased during the year from Rs. 174.81 lakhs to Rs. 186.83 lakhs and has been written down to Rs. 77.79 lakhs. On the whole, the Company's financial position is sound.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 16.44 *cum-div.* The yield on the *ex-div.* quotation of Rs. 15.40 works out to 7 per cent, free of tax, per annum.

INDIA JUTE REPORTS LOWER PROFIT

DIVIDEND CUT—OUTLOOK BETTER

CONSIDERING the abnormal situation in which the country's jute industry was placed last year owing to the shortage of raw material the price of which rose very sharply and out of proportion with that of the manufactured goods, the India Jute Company Ltd. (Director: Mr. T. R. Jalan), it must be said, has fared creditably during the year ended 31st March 1961. Gunny sales increased from Rs. 219.51 lakhs to Rs. 296.06 lakhs, and cotton yarn and waste sales from Rs. 0.47 lakh to Rs. 33.58 lakhs. The Company realised Rs. 4.69 lakhs against Rs. 11.85 lakhs previously from sale of loom-hours and raised an income of Rs. 8.76 lakhs against Rs. 5.85 lakhs previously from other sources. The gross profit has, however, declined slightly from Rs. 36.55 lakhs to Rs. 33.18 lakhs. There was a considerable increase in the cost of raw jute consumed from Rs. 112.09 lakhs to Rs. 214.08 lakhs and of cotton from Rs. 1.04 lakh to Rs. 25.76 lakhs. Other manufacturing expenses increased from Rs. 82.69 lakhs to Rs. 87.83 lakhs. After providing Rs. 8.81 lakhs (Rs. 6.99 lakhs) for depreciation and Rs. 8.25 lakhs (Rs. 11.48 lakhs) for taxation, the net profit is only slightly lower at Rs. 16.12 lakhs, as compared with Rs. 18.08 lakhs a year ago. Nevertheless, the Directors have pruned the dividend on ordinary shares of Rs. 12.50 each from Re. 1.75 to Re. 1.50 per share, which gives a net return of Re. 1.05 against Re. 1.22 for the previous year, for they have credited a larger amount (Rs. 4.85 lakhs against Rs. 1.44 lakhs previously) to reserves. The carry forward is Re. 0.76 lakh, as against Rs. 4.94 lakhs brought in.

The Company's working in the past four years is compared in the following table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958

Carry forward	0.76	4.94	0.62	0.86

The dividend is subject to deduction of tax.
In 1958, the ordinary share of Rs. 125 was split into 10 shares of Rs. 12.5 each.

The Directors state that the prospects for the current year at the time of writing their report to the shareholders were somewhat more encouraging in view of the possibility of continuous business being done at profit, thanks to a welcome change in the position of raw materials supplies this season. The modernisation of the preparing and spinning departments of the jute mill section progressed satisfactorily during the year under review. The Company acquired a cotton mill last year, which then commenced production on a moderate scale. There are now 15,100 spindles operating in this mill on a treble-shift basis and the working of this unit is progressing satisfactorily. The proposed loan of Rs. 75 lakhs from the National Industrial Development Corporation Ltd. for modernising this mill was expected to be sanctioned during the current year. In connection with the proposed sale of No. 3 Mill's land, building and electrical installation to Madura Mills Company, Ltd. for a consideration of Rs. 10 lakhs, the Directors state that the N.I.D.C. has released the property. Legal formalities for the formal transfer of this property were in the final stages at the close of the last year and the transaction would be given effect to in the current year's accounts.

The issued capital of Rs. 87.30 lakhs in ordinary shares of Rs. 12.50 each includes capitalisation of reserves to the extent of Rs. 65.25 lakhs and, therefore, the reserves and surplus are no more than Rs. 27.40 lakhs. Secured loans from banks have gone up from Rs. 33.96 lakhs to Rs. 60.72 lakhs, and, with the

(Continued in previous column)

KHARDAH COMPANY'S RESULTS

PROFIT SHARPLY DOWN

COST inflation has cut deeply into the profit of the Khardah Company Limited (Managing Agents: Anderson Wright Ltd., Calcutta) for the year ended 31st March 1961. Thus, despite almost a cent per cent increase in its turnover during the year to 31st March 1961 over the preceding year, it has earned only a little more than one-third of its previous gross profit. To give the actual figures. Sales proceeds shot up during the year under review to Rs. 675.49 lakhs from Rs. 343.06 lakhs in the previous year, but gross profit has declined sharply from Rs. 33.06 lakhs to Rs. 13.94 lakhs. Higher turnover reflects more the rise in jute prices, witnessed last year, than any appreciable increase in the quantum of sales. The Company's profitability was hit by a disproportionate rise in the price of raw material in relation to that of the manufactured goods. The cost of raw jute consumed by the Company during the year went up to Rs. 245.91 lakhs from Rs. 143.38 lakhs in the previous year and that of gunnies bought from the market soared from Rs. 57.91 lakhs to Rs. 319.93 lakhs. Manufacturing expenses other than the cost of raw materials, however, declined from Rs. 145.29 lakhs to Rs. 121.57 lakhs. The provision for depreciation is higher at Rs. 7.57 lakhs, as compared with Rs. 5.99 lakhs previously because of certain changes made in the basis of computation under Section 350 of the Companies Act. The provision for taxation, however, is lower at Rs. 2.71 lakhs, as against Rs. 10.80 lakhs last year. This is only as it should be, in view of the marked fall in gross profit. Net profit has fallen from Rs. 13.62 lakhs to Rs. 3.05 lakhs, the lowest for several years.

The following table gives a fair idea of the Company's working in recent years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	675.49	343.06	307.87	320.92
Stocks of finished goods and jute in process	46.48	21.37	20.51	28.89
Raw jute consumed	245.91	143.38	151.02	135.97
Purchase of gunny	319.93	57.91	17.38	21.40
Other expenses	121.57	145.29	110.40	108.06
Gross profit	13.94	33.06	21.31	11.43
To provisions—				
Depreciation	7.57	5.99	5.51	4.94
Taxation	2.71	10.80	4.39	0.64

Net profit	3.05	13.62	9.72	5.12
Transfer from reserves	..	..	5.33	..
To reserves	0.36	1.50	4.06	0.06
Dividends—				
6 per cent. preference	0.70	0.54	0.54	0.54
Ordinary	2.70 (5%)	10.80 (20%)	4.32 (8%)	4.32 (8%)
Carry forward	..	0.74	0.10	0.27

The dividend is subject to deduction of tax.
In 1960, the ordinary share of Rs. 100 was split into 10 shares of Rs. 10 each.

The shareholder has been hit hard by the Company's highly disappointing performance, as he gets a taxable dividend of 5 per cent, or net dividend of 3.5 per cent on the ordinary shares of Rs. 10 each, which is the lowest return paid by the Company at least in the last decade. Only last year did the Directors step up the dividend from 8 per cent, taxable, to 20 per cent, taxable, giving a net return of 14 per cent. It would take some time for the Company to repeat this dividend. Under the Preference Shares (Regulation of Dividends) Act, 1960, the dividend on preference shares of Rs. 100 each has been raised to 7.8 per cent subject to deduction of tax. The dividends take away Rs. 3.40 lakhs (Rs. 11.34 lakhs) and the Managing Agents' commission absorbs Rs. 0.61 lakh (Rs. 2.65 lakhs). Reserves get Rs. 0.36 lakh against Rs. 1.50 lakh a year ago. The carry forward is Rs. 300, against Rs. 74,405 brought in.

The Directors state, in their report to the shareholders, that, although the trading conditions were difficult throughout the year, the Company was in an advantageous position with sales of finished goods well covered by jute on forward deliveries at comparatively low prices. But, when the prices advanced in the second half of the year, a considerable number of jute suppliers defaulted and some of them denied their commitments. Consequently, the Company was obliged to obtain fresh supplies of jute at much higher prices to cover the sales of finished goods already made, and the position of advantage enjoyed so long was not only lost but resulted in heavy working losses in respect of these sales. A large quantity of jute had to be accepted at a premium over the contracted prices. Many contracts had to be settled at prices below the prevailing market rates and some were subject to litigation. In addition, the No. 1 Mill of the Company was closed from 3rd to 30th October 1960, due to "unwarranted" strike by the workers. Production also suffered to some extent due to shortage of electric power in the industrial area for about three months during the year.

The Directors, however, strike an optimistic note for the current year's working. With the arrival of the new season's crop, the conditions have improved considerably to allow a profitable working of the mills and it is hoped that the current year would close with a reasonable amount of profit. The last phase of the modernisation programme in progress is expected to be completed by March 1962. This would complete the modernisation of the preparing and spinning sections of the mills.

The financial position of the Company leaves much room for improvement. The issued capital of Rs. 63.00 lakhs, of which Rs. 9 lakhs is preference and the balance ordinary, is inadequately supplemented by reserves and surplus aggregating Rs. 23.99 lakhs. The secured loans at Rs. 100.82 lakhs are more or less maintained at the last year's level of Rs. 105.95 lakhs. The liability on account of the loan from the National Industrial Development Corporation Ltd. is, however, reduced from Rs. 30.73 lakhs to Rs. 23.62 lakhs. In addition, there are other current liabilities and provisions of Rs. 93.51 lakhs. As against these, there are current assets, loans and advances of Rs. 197.57 lakhs. This means that floating assets are just sufficient to cover current liabilities. Investments of Rs. 4.96 lakhs command a market value of Rs. 5.95 lakhs. The gross block account increased during the year by Rs. 2.04 lakhs to Rs. 218.74 lakhs, and has been adequately written down to Rs. 78.83 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 17.56 *cum-div.*, and, at the *ex-div.* value of Rs. 17.21, offer a yield of about 1.1 per cent, free of tax, per annum, which, it is needless to say, is too low for the shares of a jute company the fortunes of which are subject to wide variations.

MEGNA MILLS COMPANY FARES BETTER

The Megna Mills Company Ltd. (Director: Mr. T. R. Jalan), a subsidiary unit of the India Jute Company Ltd., which holds roughly five-eighths of the issued and subscribed capital, had a very successful run during the year to 31st March 1961, with an increase in the gunny sales from Rs. 351.53 lakhs to Rs. 487.43 lakhs and in the gross profit from Rs. 27.89 lakhs to Rs. 51.16 lakhs. This is in refreshing contrast to the experience of other jute mills. The Company would have fared still better but for a very steep rise in the cost of the raw material consumed from Rs. 181.97 lakhs to Rs. 329.84 lakhs, which, with higher closing stock of finished goods at Rs. 50.50 lakhs against Rs. 25.10 lakhs, goes to suggest an increase in production. The satisfactory results have prompted the Directors to step up further the dividend on ordinary shares of Rs. 10 each from 12 per cent to 12.5 per cent, giving a net return of 8.75 per cent against 8.4 per cent previously. The dividend is, however, much below the 17.5 per cent paid for 1958.

The net profit is higher at Rs. 23.12 lakhs, as compared with Rs. 14.20 lakhs a year ago, after providing Rs. 11.04 lakhs (Rs. 9.90 lakhs) for depreciation and Rs. 17 lakhs (Rs. 3.79 lakhs) for taxation. The Directors have ploughed back Rs. 10.31 lakhs, as against Rs. 6.51 lakhs last year, to reserves, while the dividend absorbs Rs. 10.21 lakhs against Rs. 9.79 lakhs in the preceding year. The carry forward is Rs. 0.85 lakh against Rs. 0.57 lakh brought in.

The results of the Company in the past four years are compared in the table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Gunny sales	4,87.43	3,51.53	3,77.25	3,41.76
Closing stock of finished goods	50.50	25.10	29.19	17.78
Looms hours realisation	3.46	6.79	12.84	4.43
Raw materials consumed	3,29.84	1,81.97	2,07.06	2,00.15
Purchase of gunny	4.55	8.23	25.23	1.27
Other expenses	1,34.72	1,38.60	1,46.85	1,19.93
Gross profit	51.16	27.89	29.40	33.63
To provisions—				
Depreciation	11.04	9.90	7.80	6.46
Taxation	17.00	3.79	12.54	5.84
Net profit	23.12	14.20	9.81	21.30
Provisions, etc., written back	0.01	..	0.02	0.06
Transfer to reserves	10.31	6.51	2.84	3.63
Expenses written off	0.04	0.15	..	..
Dividend	10.21 (12.5%)	9.79 (12%)	8.16 (10%)	14.29 (17½%)
Carry forward	0.85	0.57	2.82	4.00

The dividend is subject to deduction of tax.
In 1958, the ordinary share of Rs. 100 was split into 10 shares of Rs. 10 each.

With more favourable trading conditions during the current year due to satisfactory supplies of the raw material, the Directors are hopeful of better working in the near future. The modernisation of the preparing and spinning departments

of the mills progressed satisfactorily during the year under review, and the first phase of the broad loom project, consisting of 50 broad looms and ancillary machinery, was completed. Installation of a like number of broad looms and ancillary machinery for the manufacture of tufted carpet backing has now been taken in hand; three of these looms have already been put into production. The National Industrial Development Corporation Ltd. has agreed to grant the Company a loan of Rs. 10.98 lakhs to meet a part of the cost of the broad loom project expansion and the necessary formalities are being finalised. The Company has plans for diversifying its activities by setting up a paper and pulp mill in Assam, with an installed capacity of 100 tons of rayon and paper pulp per day. The Directors report that negotiations with the Government of Assam for the selection of the site and the lease of the necessary bamboo forests have reached a closing stage.

The financial position of the Company is sound. Its issued capital of Rs. 81.65 lakhs, divided equally into ordinary shares of Rs. 10 each, includes capitalisation of reserves to the extent of Rs. 48.99 lakhs. Nevertheless, it still has reserves and surplus totalling Rs. 45.80 lakhs. The liability on account of secured loans has, however, gone up from Rs. 115.67 lakhs to Rs. 137.49 lakhs. Then there are current liabilities and provisions of Rs. 65.17 lakhs, giving a total indebtedness of Rs. 202.66 lakhs which is adequately covered by current assets, loans and advances of Rs. 208.34 lakhs. Investments are maintained at the previous year's level of Rs. 0.26 lakh. The gross block account increased during the year from Rs. 270.91 lakhs to Rs. 288.24 lakhs and has been adequately written down to Rs. 121.52 lakhs.

The Rs. 10 fully paid ordinary shares are currently quoted at Rs. 13.31 *cum-div.*, and, at the *ex-div.* price of Rs. 12.43, offer a yield of 7 per cent, free of tax, per annum.

FRESH CAPITAL ISSUES

The following companies have been authorised new capital issues:

Glaxo Laboratories

Issue of further capital of Rs. 1 crore in 1,000,000 equity shares of Rs. 10 each to be issued as bonus shares on capitalisation of reserves.

Gammon India

Issue of 250,000 equity shares of Rs. 10 each as fully paid-up bonus shares on capitalisation of its reserves to the extent of Rs. 25 lakhs. The Company's existing paid-up capital is Rs. 30 lakhs. It will issue five bonus shares to the holders of six shares.

New Commercial Mills

Issue of bonus capital of Rs. 14,31,750 divided into 5,772 equity shares of Rs. 250 each. The bonus shares will be issued to the existing equity shareholders of the Company in the ratio of one bonus share for every five equity shares held, on capitalisation of the share premium account of the Company.

Devashola (Nilgiri) Tea Estates

Issue of equity bonus shares of the value of Rs. 2,40,000 on capitalisation of the Company's reserves to a like extent. The bonus shares will be issued in proportion of two bonus shares for every five shares held by the existing shareholders.

Seshasayee Industries

Issue of further capital of Rs. 40 lakhs in the form of equity shares of Rs. 10 each for cash at par. The proceeds of the issue will be utilised for the manufacture of H.T. and L.T. porcelain insulators, transformer bushings, etc.

Simco Meters

Issue of capital of Rs. 35 lakhs, consisting of equity shares worth Rs. 32 lakhs and 9 per cent preference shares of Rs. 3 lakhs for cash at par. The proceeds will be utilised for the manufacture of house service electricity meters, in collaboration with Denis Ferranti Meters Limited, U.K.

Southern Brick Works

Issue of equity capital of Rs. 25 lakhs for cash at par privately. The proceeds of the issue will be utilised for starting a factory in Madras for the manufacture of bricks and tiles.

Perfect Pottery Company

Issue of further capital of Rs. 5,93,850 divided into 11,877 equity shares of Rs. 50 each to existing equity shareholders in the ratio of one new share for three shares held, for cash at par. The proceeds of the issue will be utilised for establishing a new works at Bharatpur for the manufacture of 7,200 tons of stoneware pipes and 7,200 tons of refractory firebricks annually.

INVESTA MACHINE TOOLS AND ENGINEERING CO., LTD.

The Investa Machine Tools and Engineering Company Limited has received permission from the Controller of Capital Issues to issue to the holders of existing ordinary shares further equity capital of Rs. 20 lakhs. At a meeting held on the 21st inst., the Board of Directors decided, subject to the approval of the shareholders, to increase the capital of the Company by the issue of 20,000 new ordinary shares of Rs. 100 each at par to be offered to the existing ordinary shareholders in the ratio of two new ordinary shares to three existing shares.

27 NOV 1961 1017 PUBLIC DEPARTMENT

SYNOPSES OF COMPANY REPORTS

Mysore Tobacco Co., Ltd.

(*Chairman*: Mr. N. V. Siddalingappa, Bangalore.)

Annual General Meeting—29th November.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales	18,43	21,14
Closing stock	2,91	1,31
Gross profit	99	2,05
Transfer to depreciation	70	68
,, ,, taxation	11	62
,, ,, provision for development rebate	6	Nil
,, ,, for loss on investments	2	Nil
Net profit	10	75
Adjustments	1	25*
Appropriations :		
Total available balance	11	1,00
Proposed dividend (taxable) Equity	Nil	1,00
	(Nil)	(10%)
Carried forward	11	†

N.B.—Adjustments include the balance brought forward from the previous year.

* This represents an amount of Rs. 25,000 withdrawn from dividend equalisation fund.

† Only a small sum of Rs. 622.

Extracts from the Directors' report: On account of inadequacy of profits the directors regret that no dividend is proposed to be declared for the year. It may be mentioned that dividends were paid during the past two years by drawing substantial sums from the dividend equalisation fund. The directors feel that to draw once again from the dividend equalisation fund would not be in the interests of the Company.

The seasonal conditions continued to be unfavourable during the year under report. The successive failures of monsoon for the past four years and continuous spell of drought for six months during the year resulted in inadequate supply of water to undertake cultivation of tobacco in Gowribidnur. The tobacco cultivation in Mandya and Mysore districts also suffered due to failure of rains during the period of curing. The spot disease continued to reduce the value of tobacco in Mandya and Hunsur areas.

While the Company's operational expenditure particularly the costs on labour have been on the increase due to the general rise in the prices, with the decrease in the quantitative output, the margins available to the Company have also decreased. In addition, the Company was obliged to give effect to the decision of the Industrial Tribunal revising the scales of pay of the employees with effect from 1st April 1958 which resulted in an extra payment of Rs. 68,500 apart from the increase in the dearness allowance.

The Company acquired 97,31,590 pounds of green leaf from a planted area of 2,582 acres in the year under report as against 1,01,41,935 pounds obtained from 3,083 acres in the previous year. The quantity of cured leaf acquired during the year was 6,30,741 pounds as against 5,99,368 in the previous year.

It is gratifying to report that the Company was able to get larger quantities for redrying, at its Whitefield grading station from outside agencies. The directors consider that the prospects for the year ending March 1962 are encouraging on the strength of the present indications and that they may be able to present a much better picture of the financial position in the near future.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	10,00,000	Gross block	20,39,188
Reserves and surplus	3,34,593	—Depreciation	12,41,906
Other liabilities	7,94,593		
		Net block	7,97,276
		Current assets	10,84,031
		Investments	1,85,765
		Cash	62,054
	Rs. 21,29,126		Rs. 21,29,126

* Paid-up capital consists of 1,00,000 equity shares of Rs. 10 each fully paid up.

Beharilal Ramcharan Cotton Mills Ltd.

(*Chairman*: Mr. Gulabchand Jain, Bombay.)

51*st Annual General Meeting*—11th December.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales	1,89,56	1,71,87
Closing stock	44,25	26,63
Gross profit	12,67	2,15
Transfer to depreciation	5,38	Nil
,, development rebate reserve	13	49
Net profit	9,17	1,72
Adjustments	1,26	15
Appropriations :		
Total available balance	10,43	1,87
To payment of bonus for 1958	75	88
,, expenses relating to previous years	1,76	Nil
,, arrears of depreciation written off from 1st April to 31st March 1960	4,95	Nil
Carried forward	2,99	99

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

Extracts from the Directors' report: Profit has been arrived at after payment of staggering compensation amounting to Rs. 1,03,016 for the year 1951-52, according to the decision of the Supreme Court, and the bonus for the year 1958, amounting to Rs. 73,162 the liabilities for which were determined during the year.

Normal depreciation has been provided in respect of all the past years and depreciation for the year under review has been provided as required by Section 350(2) of the amended Indian Companies Act, 1956. In view of the carry over of losses from the previous years, no provision for income-tax is necessary and therefore none has been made.

There was general improvement in the working of the Mills during the year under review as will be apparent from the increased sales and profit. High prices of raw cotton and stores and the much heavier wage bill consequent upon the implementation of the recommendations of the Central Wage Board in regard to the operatives and the revision of scales of pay of clerical staff and stepping up of their grades and increment, however, made a heavy inroad on the profitability of the working. The average rate of dearness allowance paid during the year also touched a new high, breaking all the earlier records. At the same time, prices of cloth and yarn were substantially reduced as directed by the Indian Cotton Mills Federation, at the desire of the Government, twice during the year, once from 1st September 1960 and again from December 1960. Goods worth Rs. 49,79,870 were sold in export.

The working during the current year also has so far been encouraging and satisfactory. The directors feel that the Company has now turned the corner and may look forward to better results in future.

During the year, a total sum of Rs. 62,100 has been realised by the Company from the Liquidator of the Gujarat Cotton Mills Co., Ltd., (in liquidation) in respect of its claim and a further sum of Rs. 65,000 has been received from him. The position regarding the amount due from Messrs. Ormerods (India) Pvt. Ltd. on the security of shares of Messrs. Gannon Dunkerely & Co., Ltd., remains the same as reported last year.

The directors are pleased to inform that the work of modernisation and rehabilitation of the plant has been taken in hand. During the year, SKF pendulum arm high drafting equipment was installed on 23 ring frames and further 15 frames have been converted in the current year. The working of humidification of spinning department has also been completed on one floor and the work on the second floor is under way and is expected to be completed before the next summer. Orders for the undernoted machinery and plant have already been placed and/or have been almost finalised. Deliveries are expected during the current year and in the next year. The Company proposes, and expects, to be able to finance this modernisation from its own resources and therefore the Directors are not recommending payment of any dividend.

The amount payable to the Regional Provident Fund Commissioner under second mortgage which stood at Rs. 2,92,213 as at the close of the year under review i.e. 31st March 1961 has since been reduced to Rs. 92,213 only and this also will be paid off during the current year.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	50,00,000	Gross block	1,21,07,426
Debentures	8,00,972	—Depreciation	85,20,253
Reserves and surplus	14,54,806		
Other liabilities	69,17,734	Net block	35,87,173
		Current assets	1,01,01,295
		Investments	4,55,742
		Cash	28,802
	Rs. 1,41,73,012		Rs. 1,41,73,012

* Paid-up capital consists of 40,000 equity shares of Rs. 100 each and 10,000 six per cent tax-free cumulative preference shares of Rs. 100 each.

Mandya National Paper Mills Ltd.

(*Managing Agents*: Bedi & Company Management Ltd., Bangalore.)

Third Annual General Meeting—21st December 1961.

Extracts from the Directors' report for the year ended 30th June 1961: As all the transactions are of a non-revenue nature representing expenditure incurred during the period of construction to be allocated towards capital expenditure, the profit and loss account has not been drawn up.

The construction of the factory building is practically complete and the entire plant and machinery, except for a very small consignment, has been received at site. The erection of the machinery will be over very shortly and it is expected that the Company's mills will be in production before the end of 1961. As the latest and the most modern machinery has been installed in the mills, the directors are confident that the mills will produce the highest grades of superior writing and printing paper, which will establish a reputation for quality.

On the basis of negotiations with the Government of Mysore in the initial stages, the directors were given to understand that the electric power will be made available when the mills are ready to go into production, but it appears that there may be some difficulty in supplying all requirements of power to the mills when the Company go into production, owing to delay in the completion of their power-generating projects. Keeping this in view, the Company has purchased a generator set which has been received at site and is being installed at great speed by working round the clock. As the cost of independent generation will be much higher than the cost of hydro-electric power supplied by the State Government, the Company has approached the State Government for subsidising the difference between the cost. The negotiations are also proceeding with the Government for the purchase of this generator set and for the provision of the required power to the Company.

The present production capacity of the mills is 35 tons per day. As shareholders are aware, it has been decided to develop the capacity to 70 tons per day. The Industrial Finance Corporation of India has already sanctioned a loan of Rs. 1.20 crores to implement the expansion project. In addition, a further amount of Rs. 80 lakhs will be raised in the form of equity shares from the shareholders, as already approved by the members in the general body meeting held on 28th July 1961, for which sanction from the Controller of Capital Issues has been received. The Company may be in a position to issue the capital to the shareholders early next year. It is expected that the mills will go into expanded production before the middle of 1963.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,98,68,025	Block a/c	3,23,83,406
Other liabilities	1,61,28,589	Current assets	18,43,245
		Cash	24,14,564
		Miscellaneous expenditure	3,76,019
	Rs. 3,59,97,524		Rs. 3,59,97,524

* Paid-up capital consists of 14,00,000 equity shares of Rs. 10 each (less calls unpaid Rs. 94,190) and 60,000 seven per cent. tax-free redeemable cumulative preference shares of Rs. 100 each (less calls unpaid Rs. 36,875) redeemable at par on the expiry of 15 years from the date of allotment.

Muttra Electric Supply Co., Ltd.

(*Chairman*: Mr. K. C. Bhagat, Calcutta.)

Annual General Meeting—29th November.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Revenue from light and power loads	10,33	9,97
Gross profit	2,65	2,49
Transfer to depreciation	70	63

THE BELAPUR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Register of Members and the Transfer Books of the above Company will be closed from the 2nd day of December, 1961 to the 30th day of December, 1961, both days inclusive.

By Order of the Board of Directors,
W. H. BRADY & COMPANY, LIMITED,
Managing Agents.

RELATIVE PRICE MOVEMENTS IN SECON PLAN PERIOD

(Concluded from page 1008)

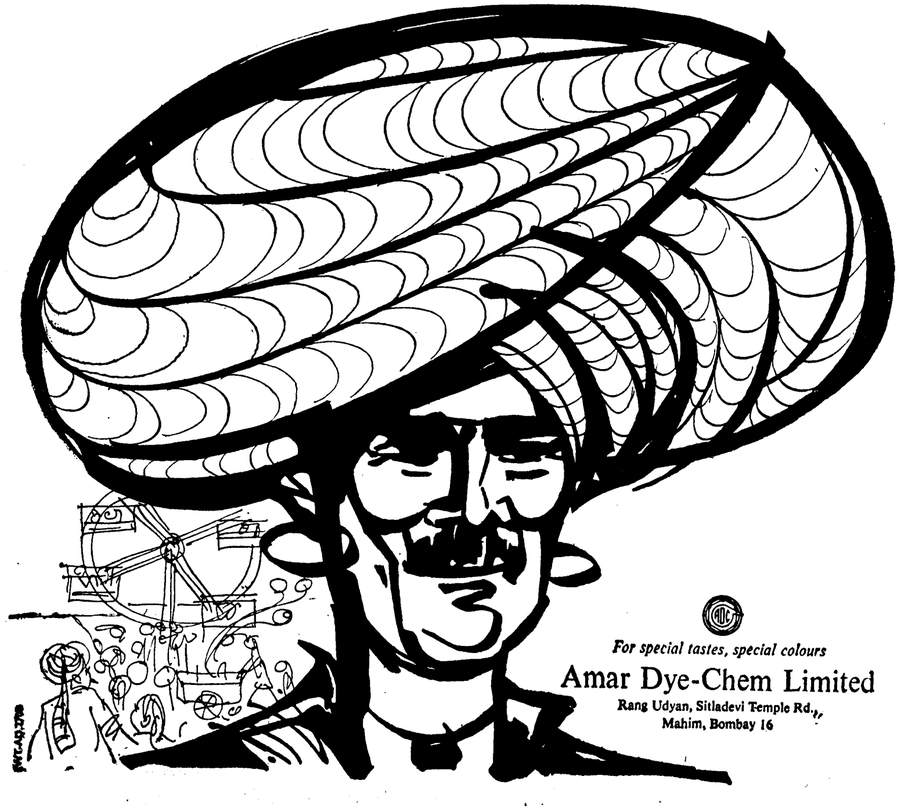
prices of industrial raw materials and manufa tures. Food articles other than foodgrain should also be given due place in any schem of price controls. Hence, in the face of th continuously rising pressure of demand result ing from the growth of population and mone incomes in the years to come, a comprehensive plan of price regulation, controls and stabilisa tion coverirg the essential items of all the groups and sub-groups (discussed above) is indispensable. In the absence of such a policy, the ideal objective of holding the price line will simply remain a cherished hope, as it has remained so far. Such a policy is all the more necessary for maintaining and accelerating substantial investment programmes, on the one hand, and facilitating the establishment of "progressively greater equality of opportunity by bringing about reduction in disparities in income and wealth and a more even distribution of economic power."

Gaiety and Colour

It's the village fair...where business vies with fun. At this seasonal get-together, villagers sell the products of their farms and handlooms. The day's business done, they indulge in a little gaiety and at dusk, return to the farm and the loom.

The colourful handloom products displayed at the fair are an eloquent tribute to their traditional art. The quaint patterns and the essential harmony of colours is utterly captivating. Small wonder, then, that the products of the handlooms find a ready market among the sophisticated in India—and abroad.

These colour-conscious artisans largely rely upon Amar Dyes for their requirements of dyes. They have good reasons too. Amar dyes offer a wide range of colours of astonishing fastness and quality, at extremely competitive prices...prices *they* can afford.



For special tastes, special colours

Amar Dye-Chem Limited

Mahim, Bombay 16

MONEY EASY

(From Our Own Correspondent)

BOMBAY, *22nd November*

The short-term money market was well supplied with funds and the position was quite comfortable to borrowers. There was, however, not much activity in the inter-bank section, due to placing of deposits by an institutional investor. Advices from Calcutta and Madras also pointed to prevalence of slightly easier conditions. Accordingly, the inter-bank call money quickly declined from 4.5 per cent on the 15th inst. to 3.5 per cent per annum by the 18th inst. and remained at that level during the rest of the week. Both the big banks and small ones could do business at this rate. In view of this, none of the banks is likely to have borrowed from the Reserve Bank this week.

The rates of interest for short-term deposits underwent no change, with no bank eager to quote lower than the maximum levels fixed under the inter-bank agreement. These are as follows:

	Per cent
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3¼
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The tale of Treasury Bills, too, is in keeping with the aforesaid trend. Although tenders invited were Rs. 2 crores and tenders offered and accepted also were Rs. 2 crores, the average rate was a shade lower at 2.500 per cent, as compared with 2.520 per cent paid by the Government in the preceding two weeks. Thus, the rate has gone down to the level that was prevalent between 12th September 1961 and 31st October 1961. While this marking down in the rate is in tune with the prevailing easy money conditions, the demand for intermediate Treasury Bills, however, was a little less than in the previous week; the offtake of such bills from 15th November to 18th November was only Rs. 15 lakhs, as against Rs. 35 lakhs during 8th to 11th November. Sales of both the types of Treasury Bills are being continued.

After registering a spectacular rise of Rs. 64 crores in the fortnight ended 10th November 1961, notes in circulation have contracted by Rs. 26.11 crores in the week ended 17th November 1961, according to the Reserve Bank's statement for that week. Since notes held in the Banking Department also have fallen by Rs. 2.63 crores, the total notes issued are down by Rs. 28.74 crores. This has been balanced by taking out Rs. 30 crores worth of rupee securities and increasing the rupee coin by Rs. 1.26 crore. No change has been made in the foreign securities, but balances held abroad are down by Rs. 1.15 crore; the total foreign assets now stand at Rs. 141.44 crores.

There have been no significant variations in the deposits of either Central or State or other Governments with the Reserve Bank. Only the balances held by banks have gone up by Rs. 5.17 crores, bills payable by Rs. 3.50 crores and other liabilities by Rs. 8.09 crores. Reflecting the withdrawal of Rs. 30 crores of rupee securities from the assets side of the Issue Department, investments held in the Banking Department have gone up by Rs. 29.52 crores. An increase of Rs. 3.43 crores is noted in Government Treasury Bills also. Loans and advances to Governments have risen by Rs. 7.76 crores, but other loans and advances have declined by Rs. 22.85 crores, of which advances to scheduled banks against usance bills alone account for Rs. 10.48 crores. This fall is in consonance with the comfortable conditions reported in the money market last week.

As usual, the weekly statement of scheduled banks that is available at the time of writing this report is a week behind that of the Reserve Bank, the latest being the one covering the week ended 10th November 1961. This shows an all-round fall in deposits, the decline being of the order of nearly Rs. 8 crores. Borrowings from Reserve Bank in that week were larger by Rs. 9.62 crores, of which Rs. 4.92 crores were against usance bills. Bank credit was a shade higher by Rs. 5.68 crores at Rs. 1,234.65 crores. Investments were down by Rs. 19.78 crores, while cash balances were better by Rs. 2.10 crores.

An analysis of the State Bank's statement for the week ended 10th November 1961 shows that, while its deposits declined by Rs. 5.68 crores, its advances rose by Rs. 5.45 crores. Investments were sharply lower by Rs. 19.81 crores and so also its liquid assets by Rs. 2.90 crores. It will thus be seen that much of the variations noted in the position of scheduled banks as a whole has been on account of the State Bank. The heavy depletion in the investments of the State Bank of nearly Rs. 20 crores apparently reflects the transfer of P.L. 480 funds to the Reserve Bank. In view, however, of the fact that the decline in deposits was slightly less than Rs. 6 crores, it would appear that the transfer of P.L. 480 funds during the week under review was neutralised, to a very considerable extent, by a sizable growth in the other deposits held by the Bank.

The Gilt-edged market was dull and drab during the week under review. The turnover was extremely poor and the trend was a shade quiet. In the Central Government section, 3 per cent 1970-75 and 3½ per cent 1967 went down by 10 nP each. There was a fall of as much as 55 nP in 3 per cent 1986 Conversion Loan. Among State loans, a fractional improvement of 10 to 15 nP was recorded in the 4½ per cent 1972 issues of Madras, Andhra, Orissa and U.P.

There was no change worth mentioning in the foreign exchange market. Today, the banks were sellers at Rs. 475.50 per 100 dollars for ready T.T. on New York and buyers at Rs. 471.25 per 100 dollars; these are the same as those a week ago. The £ sterling well held its position in the foreign exchange markets in the world. In New York, for instance, there has been a slight improvement both in spot and three months' forward. The latest available rates are: 281.590-281.630 cents for spot and 279.790-279.830 cents for three months' forward. As compared with the position a week ago, these show a gain of 0.070 cent and 0.130 cent, respectively.

BULLION WEAK

(From Our Own Correspondent)

BOMBAY, *22nd November*

A downward trend was witnessed by the bullion market during the week under review, the drop in prices being sharper in gold than in silver. In fact, gold took the lead in staging the retreat and silver merely followed. The marked setback in gold was the result of hurried liquidation by bulls who had bought sizable lots in previous weeks in anticipation of good demand. Offtake of both gold and silver continued to be poor, the daily average being no more than 2,800 tolas and six bars, respectively, same as last week. As against this low offtake, arrivals were quite heavy, the daily average rate being 5,600 tolas of gold and 20 bars of silver; the corresponding figures in the previous week were 4,250 tolas and 12 bars. It will thus be noted that the inflow of metals was heavier in the week under review. Apart from the actual experience, arrivals, particularly of gold, were expected to be larger still in the coming weeks, due to unconfirmed reports that large quantities of contraband metals have been brought into the country. It was, therefore, feared that the stocks in the local market would increase further in the coming weeks. Even the current position is heavy, which a section of trade estimates at 100,000 tolas of gold and 1,600 bars of silver. In the face of this position, even reports suggesting the possibility of reduced silver coin inflow through North Indian border because of the late political developments there failed to have any marked effect. Nor were the measures taken by the Forward Markets Commission in cotton, oilseeds and jute markets of any avail. Operators would not believe that restrictions on trading in these markets might divert funds to the bullion market. The undertone of the market was weak.

Some recovery was in evidence today, but this was due not to any encouraging news but to profit-taking at low levels. The recovery was, of course, not marked enough to make good the previous losses, so that today's closing rates were well below those prevailing at the end of last week.

Adjustment rates fixed today were Rs. 122.00 per 10 grams of gold and Rs. 209.15 per kilogram of silver. The corresponding rates for Wednesday the 15th inst. were Rs. 123.90 and Rs. 209.30, respectively.

In gold, the *Margashir* (December) settlement encountered selling and moved down from Rs. 124.60 to Rs. 122 yesterday. After recovering to Rs. 122.65 today, the settlement finished at Rs. 122.40. The net loss over the week was Rs. 2.20.

Ready gold continued to be quoted at a discount under the forward, though the actual discount declined from 45 nP last week-end to 15 nP today. The spot rate receded from Rs. 124.15 to touch a low of Rs. 121.25 yesterday. It rose to Rs. 122.65 today, but closed lower at Rs. 122.25.

The *Margashir* settlement in silver began the week at Rs. 209.80, same as last week, and gradually eased to Rs. 208.45 yesterday. At this level, some speculative support ensued and the settlement recovered to Rs. 209.60 today before finishing at Rs. 209.40.

Ready silver eased from Rs. 209.30 on Wednesday last to Rs. 208.20 on Monday and yesterday. After advancing to Rs. 209.35 today, it finished at Rs. 209.15. The discount under the forward when official official trading closed today was 25 nP, as against 50 nP a week before.

The world price of gold in the London bullion market declined by one cent from $35.19½ to $35.18½ per fine ounce. The sterling price, too, receded from 250s. 1½d. to 249s. 11½d. Ready and forward silver, however, continued to remain unaltered at 80d. and 80¾d., respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of prices during the week under review:

	22-11-61 (closing)	High	Low	15-11-61 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	122.25	123.85	121.25	124.35
Forward: Margashir* ..	122.40	124.60	122.00	124.60
Sovereign	98.25	98.25	96.00	96.00
SILVER				
Ready (.996 fine)	209.15	209.60	208.20	209.30
Forward: Margashir† ..	209.40	210.10	208.45	209.80
London—				
Silver Ready	80d.	—	—	80d.
Silver Forward	80¾d.	—	—	80¾d.
Gold	249s. 11½d.	250s. 1½d.	249s. 11½d.	250s. 1½d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th December settlement. † 26th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas). London and New York quotations are per ounce.

COMPULSORY SURVEY IN COTTON

(From Our Own Correspondent)

BOMBAY, *22nd November*

In contrast to the bullish trend witnessed last week, the cotton futures market was in a hesitant mood during the week under review. The stringent margin imposed by the F.M.C. last week to check the rise in prices and the reintroduction of compulsory survey this week had a somewhat restraining influence on the market. Although the margin failed to check the rising trend of prices, it did affect the volume of business which declined considerably. Prices, however, continued to advance and touched a peak of Rs. 658.50 on Thursday. Apprehension that the F.M.C. will be provoked to take more drastic action and that compulsory survey of cotton would be reintroduced acted as a check on further rise in price. The Jarilla March contract declined to Rs. 650 on Saturday, the 18th inst. The Textile Commissioner's announcement introducing again the system of compulsory survey, which was lifted only a few months back, was made on Saturday night. The relevant Press note issued by the Textile Commissioner stated:

"The position in regard to the supply of cotton during the current season was expected to be satisfactory inasmuch as the opening carryover stocks were over 2.1 million bales and it was hoped that the new crop would be about the same as the previous season's crop. A decision was, therefore, taken at the request of the trade and other concerned interests, to remove the system of compulsory survey of Indian cotton.

"The supply position has since altered substantially as a result of unfavourable weather conditions. The crop is now estimated to be only about 4.8 million bales. The demand on account of mill consumption is, on the other hand, on the increase. There is, therefore, the danger that unless adequate steps are taken from now onwards, prices may pierce the statutory ceilings, thereby increasing the cost of production to the mills and defeating the efforts of Government and the industry to ensure the supply of cloth to the consumer at reasonable prices.

"The Government has received representations from the Cotton Advisory Board, the Indian Cotton Mills' Federation, the East India Cotton Association and others requesting the re-imposition of the compulsory survey system, so that cotton should not change hands at the earlier stages in the marketing process at prices higher than the statutory ceilings.

"The Government has considered these representations in the light of all relevant factors and has decided to accede to the requests made and to re-impose the compulsory survey system during the current season. Steps are, accordingly, being taken to establish Regional Committees in the different areas for this purpose on the same lines as during the previous season."

The news, however, did not result in any precipitate fall in prices because it was already anticipated by the trade and discounted in advance. The Jarilla March contract declined fractionally to Rs. 659.50 on the day following the announcement, that is, on Monday. After hovering round that level, the contract improved to Rs. 654 yesterday on short-covering and to Rs. 655.50 today, thanks to support by upcountry operators and higher spot advices.

Spot prices continued to rule firm. Trading was active and turnover large. The introduction of compulsory survey did not adversely affect sentiment, although news of requisitioning of cotton made buyers nervous and hesitant to enter into large commitments. Needy mills, however, bought such varieties as 197/3, Vijay, and Kalyan at or near ceiling prices. Bombay mills are reported to have applied for 8,000 bales to be requisitioned and that 7,000 bales have been requisitioned.

Renewed export demand was noted for Bengal *Deshi*. Bengal *Deshi* delivery contract firmed up to Rs. 10 over the ceiling. Export sales registered till the 18th inst. are estimated at 69,800 bales.

Demand for foreign cotton was moderate. Higher grade Sudan and East African attracted mill attention. Some business was also reported in U.S. cotton. The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 702; Vijay 900; Hubli Laxmi 955; Khamgaon 197/3 (old) 875; B.P. 52 1,298; Sudan G. 3S 1,645; American 1-5/32" G.M. 1,275.

Cotton futures in Karachi ruled quietly steady during the week. Values moved in a narrow range, showing negligible net change over the week. N.T.R.G. January was unchanged at Rs. 77.15. The March contract, however, declined fractionally from Rs. 75.85 to Rs. 75.70. The following are the latest available quotations—in rupees per maund of 82 lbs.—for a few popular varieties of Pakistan cotton prevailing at Karachi:

Sind *Deshi* 78; Punjab *Deshi* 76; 4F Punjab Roller 85.70; S.G. 84; L.S.S. Punjab Roller 83.00; S.G. 88; N.T. Roller 87.70; S.G. 94.20; 289F Punjab Roller 95.20; S.G. 105.70.

Further losses were recorded by cotton futures in Liverpool during the week. There was a general lack of buying interest influenced by apprehension of a possible reduction in U.S. support price next season. Both the American and American type contracts receded on hedge selling. Sudan contracts were quiet. Values were unchanged. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December 23.75; March 24.55; May 25.10; July 25.25.

American cotton mixed growth contract: December 24.10; March 24.55; May 25.40; July 25.05.

Sudan: November, January and March 35.25.

New York cotton futures market ruled subdued during the week. Prices receded on selling by Californian interests, commission house liquidation and stop-loss orders. Continued uncertainty about the support level for 1962 crop weakened the distant positions. In contrast to this trend in futures, trading in spot cotton was active. Purchases in the 14 spot cotton markets during the week ended 16th November, according to the U.S. Department of Agriculture, aggregated 769,800 bales, as against 535,600 bales a week earlier, and 929,500 bales in the corresponding week a year ago. Farmers continued to offer current ginnings freely, particularly in areas where medium and lower grades were becoming more predominant. Local buyers, however, were generally confining their purchases to cotton that was readily re-saleable. Both shippers and mill representatives were active buyers in many upcountry markets.

Inquiries from domestic mills increased in some markets for both prompt and forward delivery. Demand continued to be strong for medium and lower grades with an increased interest reported for middling and higher grades stapling 1-3/32" and longer. Sales to mills, however, did not increase materially over the previous week as most shippers were reluctant to sell at prices bid. Inquiries from foreign sources slackened and the volume of sales for export was smaller than in recent weeks:

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	21-11-61	14-11-61	6-11-61
New York spot ...	35.60	35.65	35.65
December	34.25	34.41	34.50
March	34.99	35.13	35.25
May	35.34	35.54	35.70

OUTLOOK FOR PEPPER BEARISH

(Messrs. Parekh and Co.)

BOMBAY, 22*nd November*

Thanks to manipulations by bulls following delayed arrivals in the terminal market, Malabar black pepper remained fairly steady during the week. Ungarbled and garbled were quoted at Rs. 342 and Rs. 352, respectively. Arrivals which proved meagre were all taken up for inland consumption, as the demand at distributing centres such as Bombay was reported to be comparatively good. Bulls tried to push up prices in futures, the highest for the week being Rs. 354 for December and Rs. 356 for January. There was, however, lack of follow-up support, as the general opinion among traders was that present prices could not be maintained on the expansion of arrivals in the coming weeks due to: (1) absence of forward sales in the overseas' market, (2) absence of foreign inquiries, (3) unsold holdings of the Indonesian Agency which is acting as a hanging sword on the market, (4) accumulation of entire stock of new crop of Lampong black in Sumatra which has so far remained unsold, and (5) delayed harvesting and marketing of Brazilian crop owing to unseasonal weather in the past few months.

The future outlook of world pepper appears to be bearish, as the supply exceeds demand. The statistical position of pepper as on 1st November 1961, compiled from available data, is as under:—

(In tons)

Estimated stock in Singapore:		
Lampong black	9,000	
Sarawak black	1,500	
White pepper	1,000	
		11,500
Estimate d stock in Indonesia:		
Carryover of Lampong from 1960 ..	4,000	
Crop of Lampong during 1961 ..	12,000	
Stock of Muntok white	3,000	
		19,000
Estimated stock of Malabar black:		
Carryover from 1960-61	2,000	
Estimated crop for the year 1961-62..	27,000	
		29,000
Estimated stocks:		
Black and white in Brazil		4,000
Black and white in Sarawak		4,000
In principal consuming countries ..		2,500
Total ..		70,000

Over and above this quantity, there will be new crops of Sarawak, Lampong, Muntok and Brazil for the year 1962, coming some time between June and September 1962. It is foolhardy to estimate these crops of 1962 at this time of the year, as they are subject to unpondorable vagaries of nature.

World twelve-month consumption is said to be between 57,000 and 60,000 tons, making an excess of supply over demand of about 10,000-13,000 tons without taking into consideration the new productions in Sarawak, Lampong, Muntok and Brazil for 1962.

The Singapore market remained in the doldrums, lacking new incentives and for want of any confirmation of the reported sales by the Indonesian Agency. Traders are unwilling to take risk, as the future picture of the stock position of Lampong is obscure. Black pepper in Singapore is quoted nominally at $M130. Singapore, by withholding sales for a long time, has missed the bus. Malabar crop is now on and the control of the world market is likely to pass into the hands of India. At the time of writing, though Singapore is steady at $M130, Malabar is quiet, December and January delivery being quoted at Rs. 347 and Rs. 349, respectively, under pressure of arrivals which are now expanding.

Spot in New York, after coming down to $0.38½, improved to $0.39. But there is no enthusiasm among traders to operate, as the grinders are sidelining and in view of approaching December, which is considered to be a traditional dull month of the year, as most of the traders and stockists are engaged in taking inventories.

Ready pepper in Bombay is quoted at Rs. 188 per 50 kilos.

HIGHER PRICE FOR 120 DART SILK YARN

(From Our Own Correspondent)

BOMBAY, 22*nd November*

It is reported that the Textile Commissioner has conceded the demand of indigenous art silk yarn producers for an upward revision in the ex-factory price to the extent of 37 nP per lb. It is further reported that the Textile Commissioner has approved of the announcement reached between the spinners of art silk yarn and the weavers of fabrics in regard to the price of 120 deniers under the export incentive scheme. Accordingly, in respect of yarn given to weavers under the scheme against 30 per cent surrender of foreign exchange, the price of 120 denier will be higher by 32 nP as compared with 150 deniers. Hitherto, the spinners were incurring losses, because the prices of both 120 deniers which are a finer variety and 150 deniers were kept on equal footing so far as exports of art silk fabrics were concerned.

Despite above reports, indigenous art silk yarns drifted downwards. National Rayons 120 Bt. cones 1st grade fell by Rs. 88 nP to Rs. 16.85 per kg. 150 Bt. cones 1st grade dropped 44 nP to Rs. 13.20. Imported yarns also suffered a setback, following selling pressure induced by the release of a large quantity of yarn imported by the State Trading Corporation. The announcement by the Government that no manufacturer would be entitled to import art silk yarn under the Export Promotion Scheme in excess of Rs. 10 per loom-shift (accumulation or adjustments of quarterly licences might be allowed up to half-year) had no effect. There were no transactions in J. P. Bemberg yarn (40 x 1) December delivery this week, too, in view of paucity of stocks. Staple fibre yarns, however, evoked good buying enquiries from consuming centres and tended to move up. Cotton yarns were generally firm, the rates being more or less maintained at the levels of last week.

The market was officially closed today on account of *Kartik Poornima*.

Imports of art silk yarn into Bombay port during the month of October amounted to 946,715 kg. as against 811,980 kg. in September. Synthetic yarn imports were of the order of 158,703 kg., as against 114,202 kg., and cotton yarn imports increased considerably to 12,097 kg. as against 6,364 kg. Total imports during the ten months amounted to 86,70,426 kg. of art silk yarn, 978,724 kg. of synthetic yarn, 8,220 kg. of staple fibre yarn and 58,848 kg. of cotton yarn. Exports of cotton yarn from Bombay during October were higher at 282,641 kg., as against 230,375 kg., while exports of cotton sewing thread were lower at 12,381 kg. as against 16,710 kg. in September.

The following table gives the prices of rayon staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	21-11-1961	15-11-1961
	Rs.	Rs.
***Art silk yarn*—**		
20/1 Amilan (100 kg.)—December	3,422.00	3,437.00
120 Japan (per 100 kg.)	1,915.00	1,901.00
150 Japan (per 100 kg.)	2,040.00	2,064.00
150 Italy (per 100 kg.)	1,874.00	1,901.00
Nat. Ray. 150 Bt. I	13.20	13.64
***Staple fibre yarn* (40 × 2)—**		
December	878.00	870.00
February	888.00	880.00
Hind (per kg.)	9.95	9.83
***Cotton yarn* (per bundle of 10 lbs.)—**		
10s Podar	17.37	17.37
20s Gokak	22.62	22.62
30s New Great	26.50	26.50
40s Madura	32.50	32.50
60s Finlay	61.61	61.61
80s Modern	66.00	66.50

OILSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 22*nd November*

The upward trend of oilseeds and oil prices noted towards the close of last week gathered further momentum during the week under review, though a part of the gains was erased later. The renewed firmness was engendered principally by the strength of mustardseed in North Indian markets which led to heavy speculation in the local market. Groundnuts met with sustained support, as arrivals of the new crop were at a low level, presumably because the farmers were preferring to hold stocks in co-operative warehouses in anticipation of a further increase in prices. The spot section was distinctly cheerful, with fairly good demand from crushers and *vanaspati* manufacturers. There was brisk trading in linseeds and values forged ahead as a result of tight supply position and good offtake. North Indian operators continued to extend support even at higher levels. Cottonseeds staged a spectacular rally, the futures contract touching a new high of the season, thanks to bullish advices from the raw cotton market. Castorseeds moved up in sympathy with other seeds early in the week, but subsequently there was heavy selling. Foreign enquiries for castor oil continued to be absent.

An important development of the week was the decision taken by the Board of the Exchange in regard to the outward payment for the purpose of clearing. It may be recalled that, while imposing a ceiling on groundnut futures a fortnight back, the Forward Markets Commission had directed the Exchange to withhold the outward payments as well. As the practice so far has been to prepare a consolidated statement for all oilseeds, the payment restriction became applicable to seeds and oils other than groundnuts also. The Exchange has now decided to permit operators to submit two separate statements, one for groundnut and groundnut oil, and the other for castorseed, linseed and cottonseed in a consolidated form.

Groundnut January 1962 contract spurted from Rs. 209.25 to Rs. 212 before finishing at Rs. 211.12. Khandesh quality was done at Rs. 44.75; it had touched Rs. 45.25 earlier. Oil January 1962 contract moved up from Rs. 17.25 to Rs. 17.45 but closed slightly lower at Rs. 17.35. Oil ex-mill hardened from Rs. 19.10 to Rs. 19.25, though it drifted down to Rs. 18.80.

Linseed March 1962 contract rose from Rs. 38.37 to Rs. 39.06, but declined subsequently to Rs. 38.97. Bold ready advanced by Rs. 3.25 to Rs. 44.50. Linseed oil picked up 50 nP to Rs. 18.10.

Cottonseed January 1962 contract strengthened by Rs. 2.75 to touch a new high of Rs. 106.25. Both Berars and non-whites put on 20 nP to Rs. 20.10.

Among castorseeds, March 1962 contract rose from Rs. 163.12 on Saturday, but gave way subsequently to Rs. 161.62. Madras small fell from Rs. 33 to Rs. 32.75, after touching Rs. 33.75 earlier. Oil commercial, however, gathered 10 nP to Rs. 13.60.

The following table shows the closing prices of oilseeds and oils on Wednesday, 22nd November, as compared with those of the two previous weeks:

	22-11-1961	15-11-1961	7-11-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	211.12	209.25	209.25
Khandesh	45.25	45.00	45.00
Khandesh quality	44.75	44.75	45.50
Oil ex-mill ready*	18.80	19.10	18.90
Railway receipts*	18.60	18.90	18.80
Oil January 1962	17.35	17.25	17.20
Castorseed			
March 1962	161.62	163.12	161.12
Ready Madras	32.75	33.00	33.00
Ready Kanpur	44.75	44.75	45.50
Oil D.S.S.†	14.30	14.75	14.20
Oil commercial†	13.70	13.60	13.50
Linseed			
March 1962	38.97	38.37	36.37
Bold ready	44.50	41.25	39.25
Oil ready†	18.10	17.60	17.10
Cottonseed			
January 1962	106.25	103.50	98.25
Niger seed	38.50	38.50	37.50
Kardi seed	23.00	22.00	23.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms except linseeds for which rates are per 50 kilograms. Spot quotation of seeds are per 50 kilograms and oil per 10 kilograms.

KIPS QUIET

(From Our Own Correspondent)

MADRAS, 20*th Novembe*

The kip market ruled quiet, except for buffal hides and lower selections in cow hides. Overseas inquiries were negligible, as importers did no evince any interest in current offerings. Tanner were willing to shade their prices to some extent if it would bring in business.

Tanned skins were stagnant, as exportin trading was poor. Tanners were nervous an were offering at lower prices to attract orders bu in vain. Such offerings were expected to pre cipitate a further decline in prices eventually.

TEAS RECEDE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.

COCHIN, 14*th Novembe*

Offerings in sale No. 46, held today, amounted to 517,000 kilograms. Quality from all districts was irregular. There was a fair but less general demand with prices lower for all but the more useful kinds. Interest slackened towards the close. Best Nilgiri descriptions were well supported and generally sold at firm prices but the lesser kinds were often easier by 20 to 40 nP per kilo. Good mediums met useful demand and sold at rates up to 20 nP easier on last with brokens again meeting more support than their equivalent fannings. Low medium and medium brokens came to an active but irregular market and closed up to 15 to 20 nP easier with similar fannings again weaker. Plain and stalky descriptions were irregularly easier. Nilgiri whole leaf grades sold well but medium sorts were a weak feature and irregularly lower. Black leaf teas again sold well C.T.C's met fair but irregular demand and were barely steady. Other orthodox types were about firm.

The quotations (per kg.) were:

	1961	1960
	Rs.	Rs.
Low medium	3.75/4.00	4.60/5.00
Mediums	4.10/4.35	5.00/5.30
Good mediums	4.50/5.25	5.30/5.60
Nilgiri	5.15	5.50

The average price realised in sale No. 46 was Rs. 4.61 per kilo, as compared with Rs. 4.69 a week ago, and Rs. 5.38 in the corresponding sale last year.

Dust sale No. 46 was held on Thursday 16th inst. Offerings amounted to 410,000 kilograms. There was a good general demand but prices were again lower. Highgrowns met useful support and sold readily at generally firm prices. Low mediums and mediums, if of good appearance, met active

BANKING

(*Concluded from page 992*)

The implementation of this idea, too would present many difficulties. It would be difficult to determine as to what is a reasonable period which is likely to vary with the nature of the industry. In some industries, the profit potential in the initial period may be very low. In such cases, the anxiety to purchase the Government's share may hang too heavily upon the entrepreneur and might affect the proper working of his enterprise. It is suggested by some that to enable the industrialist to purchase the Government's share, a substantial part of the profits should be retained in the undertaking itself and the companies concerned should not be allowed to declare dividends at more than 5 per cent till the Government's share has been purchased. Though the principle of ploughing back of profits is very good and is usually followed by most industrial concerns, a limitation of dividends at 5 per cent will, however, act as a serious damper, in view of the fact that the bazar rate of interest is round about 12 per cent. Then, again, the valuation of Government share for purposes of purchase would present a serious problem. This may give rise to a conflict of interests.

All these problems can be easily avoided, if investment companies are formed on the pattern of U.S. Small Business Investment Corporations, for the purpose of providing equity capital to small-scale industries. The privately owned and operated U.S. Small Business Investment Corporations have been established under the Small Business Investment Act of 1958 to provide long-term loans and equity capital to small business concerns. They receive substantial aid from the Small Business Administration in the form of long-term funds at a low rate of interest. Similar investment companies can be established in India. Such investment companies should be privately owned and operated but should receive financial assistance from the State Governments through the agency of the respective State Financial Corporations.

The scheme for the establishment of investment companies may be formulated on the following pattern :

The State Financial Corporations should be allowed to lend funds to such Small Industries Investment Companies (S.I.I.Cs) as may be formed by private entrepreneurs. The primary function of these S.I.I.Cs would be to provide long-term loans and equity capital to small industrial units. Any 10 members should be allowed to form such a S.I.I.C., provided they can manage to invest Rs. 5 lakhs. The minimum capital to start business should be Rs. 10 lakhs, the balance being provided by the S.F.Cs to each such company through the purchase of 5 per cent subordinate debentures, that is, subordinate to any other obligation of the S.I.I.C. The maturity of debentures should be about 20 years, amortisation to begin not later than the beginning of the second half of the term thereof. The S.I.I.Cs shall also borrow money from private sources from where they should derive the major portion of their funds. However, the ratio of the total outstanding indebtedness of a S.I.I.C. to its paid-up capital and reserves should not be allowed to exceed 4 to 1. In other words, a S.I.I.C., starting with the minimum capitalisation of Rs. 10 lakhs would be allowed to borrow initially upto Rs. 40 lakhs. Thus an initial investment of Rs. 5 lakhs could be increased to Rs. 50 lakhs. Besides purchasing debentures to the extent of Rs. 5 lakhs or more as contribution to the initial capitalisation, State Financial Corporations may be further allowed to lend funds to the S.I.I.Cs upto 50 per cent of their paid-up capital and reserves at 5 per cent for a maturity not exceeding 20 years. (The S.F.C. contribution to initial capitalisation would be treated as paid in capital of the S.I.I.Cs for all practical purposes.) Scheduled banks should also be encouraged to hold shares in such S.I.I.Cs. In fact, the Small Business Investment Corporations in the U.S. have received good response from banks in that country.

The S.I.I.Cs would provide equity capital to small industrial units through the purchase of their shares or through the purchase of convertible debentures, i.e. debentures convertible into shares at the option of S.I.I.Cs at the sound book value of these shares as determined at the time debentures are issued. Convertible debentures shall bear interest at 6 to 7 per cent and shall have a maturity of not less than five years. In addition, S.I.I.Cs would make loans to small industrial units, both corporate and non-corporate. These loans may be made directly or indirectly in participation with other lending institutions. The minimum maturity should be five years and the maximum 20 years. Interest shall be charged at reasonable rates. The total amount which a S.I.I.C. may lend or invest in a single unit may not exceed 20 per cent of its own paid-up capital and reserves. Surplus funds at the disposal of S.I.I.Cs may be invested only in Government securities.

Small Business Investment Corporations in the U.S.A., it may be noted, have been allowed some attractive tax concessions. Similar concessions may also be allowed to S.I.I.Cs in India. Losses suffered by persons investing in the shares of S.I.I.Cs on account of the worthlessness of such shares or on sale of such shares should be allowed as deductions from income for purposes of income and super taxes. Similarly, losses suffered by S.I.I.Cs on convertible debentures or on sale of shares received pursuant to the conversion privilege should be deductible for purposes of income-tax as would be the case with other investment companies.

A scheme on the aforesaid lines would have the benefit of combining private initiative and capital with the financial and moral support of Governments. It also fits in with the pattern of mixed economy. It will not have the limitations inherent in direct State participation in industries. The Government's financial stake in industrial units would be limited. First, the State Financial Corporations are not wholly Government owned. Secondly, State Financial Corporations would lend only to S.I.I.Cs and thereby diversify their risk. Thirdly, S.I.I.Cs would, in turn, lend to different industrial units, so that the limited risk of the State would be further diversified. As S.I.I.Cs will try to satisfy themselves as to the soundness of the enterprises financed by them, the loss to the Government, if any, by this indirect participation would be insignificant and is likely to be offset by gains elsewhere. The Government will not have to bother about the management of the concerns financed in such a manner. As the direct loss, if any, is likely to be suffered by the S.I.I.Cs, the responsibility to see that the concerns financed by them are soundly managed will shift to the S.I.I.Cs. It is assumed that the various S.I.I.Cs will prefer to specialise in one or two connected industries. In that case, they will have the necessary competence and technical ability to see that the concerns financed by them are technically well planned and soundly managed.

LABOUR

(*Concluded from page 1010*)

firms, the techniques usually employed to increase productivity are the following in order of frequency: (1) incentive schemes, (2) improved maintenance, (3) better layout, (4) training of workmen and managers, (5) good human relations, and (6) installation of the latest type of machinery. Other techniques usually adopted to improve productivity are materials handling, methods study, joint consultation and suggestion schemes. In some cases, increase of productivity has also been achieved by plant expansion not associated with a proportionate increase in manpower.

While it is true that this can reasonably be taken as a fairly representative sample, showing a general increase in productivity over the whole range of industry and, in certain cases, very considerable increases, it would be difficult, as the N.P.C. economist himself concedes, to base a firm generalisation on this. A statistical average of increases recorded above works out to 29 per cent. But it is again difficult to say whether this average could be taken as the average increase in industrial productivity during the period under review. Subject to these qualifications, it would not be unwarranted to conclude from the foregoing that there has been an improvement in productivity during the period 1956-57 to 1959-60, at least in the firms which submitted returns. Although this improvement cannot be attributed entirely to the efforts of the N.P.C., it cannot be denied that it too had contributed, in some measure, to this gratifying result.

MARKET REPORTS

(*Concluded from page 1020*)

support although registering a decline of 15/25 nP, while poor kinds were easier by 20/30 nP and sometimes more. Residual grades were irregular and considerably lower. C.T.C. kinds met fair inquiry at easier rates whilst there was a less activity for legg-cut types which were considerably lower and sometimes withdrawn without bid.

The average price realised in dust sale No. 46 was Rs. 4.13 per kilo, as compared with Rs. 4.26 a week ago and Rs. 4.77 in the corresponding sale last year.

Export Quota: There are still no buyers and the quotation remains nominal at ¼ nP per kilo.

Colombo: Just over 6¾ million pounds were offered this week. The market opened to a strong general demand at firm to dearer rates for Dimbulas and useful mediums. Uvas were, however, substantially lower following quality, whilst low mediums declined by 3/5 cents. Lowgrowns were about steady.

London: North India and other growths: There was a good general demand with the better liquoring types selling well at firm to dearer rates. The lesser kinds, however, were irregular and sometimes easier. Plain broken pekoe is quoted at 3/3½d.

Ceylons and South Indians: In Ceylon and South Indian sale prices were ½d. easier.

As we go to press, Messrs. Forbes, Ewart and Figgis Ltd. were as follows:

"*Sale No.* 47. 742,000 kgs. offered. Less demand. Plain and low medium upto 40 nP lower. Similar fannings 20 nP to 30 nP easier. Medium and good mediums 30 nP to 40 nP lower. Highgrowns irregular and easier. Unorthodox much easier."

FOODGRAIN ARRIVALS SMALL

(From Our Own Correspondent)

HAPUR, 20*th November*

Steady conditions continued to prevail in the foodgrains market during the week under review. Arrivals were small and stockists were retaining their stocks in expectations of better prices later. *Rabi* sowings were nearly complete, barring scattered area recently vacated from sugarcane where peas is being sown. Germination of grain was satisfactory, thanks to good moisture in the soil. Wheat continued to be quoted at Rs. 15.50 a maund for average quality and upto Rs. 17.25 for better farm produce. Daily arrivals were at an average of 150 maunds which were being lifted by consumers and local stock also ran down slightly to 20,000 maunds.

Rice continued to rule quiet, thanks to arrivals of new produce in the producing areas which were reaching in other centres as well. Week-end prices were:—*mainpuri sela* Rs. 20; *gadda kutcha* new Rs. 18.50; *ramajwayan sela* Rs. 21; *raimunia sela* Rs. 22; *basmati sela* Rs. 26 to Rs. 27; paddy new Rs. 11 per maund.

Gram ruled steadier at Rs. 14.50 to Rs. 14.62 a maund for Punjab produce and arrivals were small in the face of better demand and steady advices from Punjab. Local stock shrank to 24,000 maunds. Barley continued to rule steady at Rs. 10.50 to Rs. 11.25, *bejhar* inferior at Rs. 11 and *moongia* variety at Rs. 12 per maund. Maize arrivals were heavy from Rampur-Bareilly side and, as arrivals during the week aggregated about 12,000 maunds, prices were not affected. In fact, they continued steadier on brisk consumer demand and stocks improved to 5,000 maunds. New *bajra* attracted good demand and improved to Rs. 14 per maund. Methi was quiet at Rs. 26 to Rs. 27 and other coarse grains were listless, *juwar* being quoted at Rs. 11, *guwar* at Rs. 14 and oats at Rs. 11.50.

Among pulses, peas and *arhar* improved with marked gains recorded by the latter on brisk demand for conversion into *dal* and local stocks were fast running down as loading facilities were available. A prominent Agra operator made heavy purchases in expectations of early exports. Other pulses were also steadier in sympathy and as a result of good consumer demand. Week-end prices (in rupees per maund) were: peas *dara* 12.50 to 12.75; farm 13; peas *dal* 14; gram *dal* 16.75; *arhar* 14.75; farm 15.75; *arhar dal* 18.25; *urd* 23; *urd dal* 25 to 27; *moong* 17 to 19; *moong dal* 20 to 22; moth 18; moth *dal* 22 to 23; *massoor* 14 to 17; *massoor dal* 18.25.

SUGAR QUIETLY DEPRESSED

(From Our Own Correspondent)

HAPUR, 20*th November*

Sugar was quietly depressed during the week, due to slack demand from consuming areas. Mills were anxious sellers, as the new monthly release was expected soon. In order to lessen the burden of stocks, traders were of the opinion that the Government should increase the monthly releases from 200,000 tons to 300,000 tons. Some factories would begin their new production season by the end of the week which is about a month late than last year. Week-end prices were:—Rs. 106.50 per bag retail Re. 1 per *seer*; mill delivery D29 Simbhauli Rs. 105.87; E29 Rs. 105.37; Bulandshar D29 Rs. 105.50; D29 Amroha Rs. 36.75; Dhampu Rs. 36.50; Bijnore Rs. 36.25.

Sugar turned weak towards the week-end in the Muzaffarnagar market in the absence of demand from Gujarat, Rajasthan, Madhya Pradesh Saurashtra and Punjab. The factories producing inferior qualities were quoting at a discount o 12 nP to Re. 1 per maund and week-end prices (in rupees per maund) were:—A29 Mansurpu Rs. 39.97 ; Iqbalpur Rs. 39.60; Shamli 40.20; Lhaksar 39.49; B29 Lhaksar 38.47; Deoband 38.59 Buland 39.28; Mansurpur 39.34; C29 Dhampur 37.25 Deoband 38.66; Lhaksar 37.72; D29 Meerut 37.85 Amroha 36.75; Shamli 38.

Arrivals of new *khandsari* were still meagre While moist variety fetched Rs. 34 a maund, dr stuff was lifted at Rs. 36.25. Punjab and Rajas than were the main lifters. *Khandsari* and *gu* manufacturing units were purchasing cane a 87 nP to Re. 1 per maund.

New *gur* drifted lower to be quoted at Rs. 1 for best variety and medium was quoted at Rs. 1 to Rs. 15 per maund. Fall in prices was due t pressure of arrivals which during the week aggre gated 30,000 maunds. Despatches were heavy at 2 wagonloads, mostly to Gujarat, and *gur* was being freely lifted from all *mofussil* markets. Arrivals, which were about 8,000 maunds were expected to mount further, as the cultivators were sowing peas in the land vacated from the sugarcane crop. *Shakker*, however, was steady upto Rs. 18 a maund on Rajasthan and Punjab demand.

COMMERCE

"For Commerce, though the child of Agriculture, fosters his parent Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2644 — BOMBAY, 9th DECEMBER 1961 — PRICE Rs. 2

ASSOCIATED CHAMBERS GIVE THE LEAD

FOR the third time in the last twelve years, the Associated Chambers of Commerce of India had the privilege of hearing Prime Minister, Mr. Nehru, expound his Government's economic policies at their annual general meeting held at Calcutta on the 2nd instant. It must have been a pleasant surprise to them to have had a much larger area of agreement between Mr. President, Mr. N. Stenhouse, who spoke first, and the Prime Minister who spoke next. And it must have been no less pleasing to them that, even in that smaller area of disagreement, Mr. President had advanced his criticism in a dignified and statesmanlike tone and Mr. Nehru replied to it in like manner. There was nothing in Mr. Stenhouse's speech that could have caused irritation to Mr. Nehru; there was, therefore, no occasion for the latter to adopt the technique of counter-irritation. The happy result is that the practical approach of Mr. Stenhouse to the country's economic problems struck a responsive chord in Mr. Nehru, drawing out his pragmatic sense. There was enough indication in the Prime Minister's speech that he was thinking less and less in terms of ideology and doctrine.

Let nobody, however, jump to the conclusion that ideological and doctrinaire considerations would soon cease to weigh with the Government and the planners in their policies. The process of discarding such considerations would not be that easy. There are obviously two to a quarrel and private enterprise, too, would have to think less and less in terms of ideology and doctrine. It is quite some time now since the private sector has realised this point. For almost over a year, its spokesmen have been urging that the controversy between the public sector and the private sector should cease. Mr. Stenhouse's speech, too, contained a reiteration of this helpful approach, witness the following extract from it:

"As the vastness of the task before the country becomes more apparent and is more appreciated, so do some of the earlier controversies seem both unreal and unnecessary. What is going to matter in the next decade or two is not which particular sector of the body politic or of the economy developed a given part of the new industrial India, but how quickly and how effectively the task was carried out by all communities and sectors of the people working together."

It was equally statesmanlike on Mr. Nehru's part to have frankly recognised the spirit behind this approach and expressed his preference for the practical way of dealing with economic problems without bringing in ideological considerations. His own experience, first as Chairman of the National Planning Committee 20 or 22 years ago and later as Chairman of the Planning Commission, was that, when one came down from theoretical argument to what might be called brass tacks, questions of ideological approach did not come in the way or came in the way very little. It was something extraordinary, according to Mr. Nehru, that people differing from one another in basic approach came to broad agreement when presented with specific problems. In the same way, he too found himself "broadly in agreement," at the Associated Chambers meeting, with a good deal of what Mr. Stenhouse had said, especially about the three most pressing requirements—foreign exchange, power and transport.

Whether the Prime Minister's "broad agreement" with much of what Mr. Stenhouse said would specifically involve official acceptance of the latter's concrete suggestions is the crux of the matter. Obviously, the Prime Minister could not have straightaway committed himself to their acceptance even if he had wanted to do so. But his broad agreement with Mr. Stenhouse's practical ideas would appear to suggest that the business world could look forward to greater responsiveness at the different levels of administration. Another circumstance that augurs well for greater co-operation between the Government and the business community is the constructive and understanding approach for which the Associated Chambers stand. This approach is typified by the following passages in Mr. Stenhouse's address:

"While there are certain targets and certain objectives laid down for each plan, these may not be attained in any one particular plan period. Failure to attain these objectives should not be over-emphasised."

"It is supremely important to us to be able to take our problems and difficulties (relating to foreign exchange, power, transport, etc.) quickly to those in control of economic policy and especially to those who apply and interpret it. It is a matter of great satisfaction and of the greatest possible assistance to us that all concerned in Government, whether they be Ministers, high officials or executives, have created a tradition of approachability and courteous readiness to listen to views and to deal with opinions which may often be critical. *The business world can best reciprocate by being objective in its approach and by endeavouring to be solidly constructive in any proposals which it may make.*" (Italics ours.)

"While we accept that, in a state of controlled development, planning and administrative supervision are required, contemporary experience shows that constant effort is necessary if the machine is not to slow down. Experience also shows that, where this effort has been applied, delays in the administration of controls have now been substantially removed. There is still much room for improvement, particularly in the rationalisation and simplification of procedures, in the administration of controls, and in the centralised collection of statistical information."

A certain readiness to give credit where it is due and a sense of high responsibility to Government and to the community are the two most commendable elements in this approach. Mr. Stenhouse's specific suggestions and ideas are doubly more persuasive in the background of this approach. For instance, there is a compelling logic in the order of priorities outlined by Mr. Stenhouse for allocation of scarce foreign exchange in so far as industry is concerned. Since industry, existing and already licensed, should be enabled to work to maximum capacity, import of raw materials, spare parts and replacements should have the first priority. Next in importance is the import of plant and machinery to manufacture from indigenous materials goods which are at present imported or which can be exported. Import of raw or semi-processed materials which can be finished or converted into goods for export or for replacing imported goods should also have priority. No less important is the import of modern plant and machinery to replace outdated plant in the export industries. No serious objection can be taken to the view that, when the licensing of new units is being considered, the authorities should satisfy themselves that there is no spare capacity in the country capable of producing the goods proposed.

Mr. Stenhouse's suggestions for earning more foreign exchange are even more valuable than the ones he advanced for its judicious allocation. Such traditional export industries like jute and cotton textiles and tea, in his view, should be enabled to maintain, if not increase, the level of their export trade. For this, jute and cotton textiles must be encouraged to modernise and tea relieved of the heavy fiscal burdens. Secondly, all industries, traditional or newer, should *voluntarily* adopt a positive and active policy of exporting at least a part of their production, for, otherwise, it would be impossible for the country to provide for the growing import requirements of a rapidly expanding economy. Thirdly, in view of the fact that price rather than quality is acting as the brake on increased exports, a sustained drive to increase productivity and thereby reduce the unit cost of an article would be absolutely necessary. Here the Labour Ministry's current appreciation of the view that increases in remuneration must be linked with increases in productivity should be reflected in the findings of the Bonus Commission and of the various Wage Boards. At the same time, industry, too, should play its part by adopting new techniques and multiple-shift working. Fourthly, the Government should examine the possibilities of a scheme for tax exemption in respect of new or increased export arising from fresh capital investment by a company. Fifthly, the Government should strive by some mutual compromise with Britain in the event of the latter's entry into the Common Market, to secure for India a place in the large and growing markets of Europe. And, above all, a separate Ministry for Export Promotion should be formed. This Ministry, in Mr. Stenhouse's view, should have power to co-ordinate and, if necessary, to subordinate the policies and programmes of other Ministries to the over-riding necessity of improving and putting on a sound basis the country's balance of trade. It would not be far wrong to say that no other commercial body has put forward a more cogent and earnest plea for export promotion. The tendency to pay lip-service to export promotion while having an eye on the enormous potential internal demand for the products of industry, is singularly absent from the approach of the Associated Chambers. If industry as a whole is earnest about export promotion, there is no reason to believe that Mr. Stenhouse's plea for judicious extension of the present tax relief as to enhance capital accumulation would fall on deaf ears.

LAW COMMISSION'S PROPOSALS ON HIRE PURCHASE

HIRE purchase occupies a prominent position in Western industrial societies as a source of consumer credit. It is a convenient method of purchasing equipment on fixed terms where the equipment itself can provide adequate security for the loan and the loan can be paid off by regular instalments. Both small businessmen and householders have found this system suitable. Just as a mortgage is the normal method of borrowing for the purchase of a house, hire purchase is becoming the chief source of credit for equipping it, the period of the credit often varying between six months and three years. The system thus enables one to buy goods in advance of one's savings and enjoy some of the amenities of life which he or she may forgo if compelled to pay cash or buy on the strength of credit with the dealers.

The main difference between a sale on credit and hire purchase (H.P.) is that, in the latter, the ownership of the goods does not pass to the consumer until the debt has been discharged. Under a credit sale, the consumer becomes the owner as soon as he makes the first payment and the balance remains an ordinary debt recoverable in the normal way; the hirer, under H. P., is only given a right to purchase goods on certain conditions and is thus given an option which he may exercise during a specified period by either fulfilling all the conditions for the purchase or returning the goods and terminating the agreement in the manner provided in each contract. This option to withdraw is thus considered to be the essence of H.P.

In Britain, for instance, the total amount of credit provided in this manner amounts to over £950 million, about half of it is for the purchase of motor cars, a quarter for furniture and the rest for household equipment like radio and television sets, electric and gas cookers, and refrigerators. H.P. credit for the purchase of industrial and agricultural equipment is very small and does not amount to more than £100 million; one explanation for this feature is the restriction enforced until recently on the minimum first payment and the total period of repayment. While this has not affected purchases of equipment with limited life like commercial vehicles, tractors and earth-moving machines and plant and machinery for small industries, it has prevented those who needed a much longer period of credit for industrial equipment.

Hire purchase methods had their origin in the last century in Britain and all along they were governed by ordinary laws relating to contracts for the sale of goods. When the practice became widespread, certain evils also crept in and it was found that buyers were subjected to penal terms in agreements and misuse of the power to seize goods, forfeit all payments made and claim compensation. Legislation to regulate H.P. did not, however, come until 1938 and the Act then passed was supplemented only recently in 1954.

The position in India now is the same as in Britain before 1938, except that the H.P. habit has not spread widely and there is not much likelihood of its adoption on a large-scale, because most consumer durables are likely to have a seller's market and the Government's policy of imposing curbs on consumption is contrary to the deliberate stimulation of consumer offtake which is implicit in any encouragement to sales of goods on credit. Immediately, therefore, the object of any official measures to regulate this system should be to facilitate purchase of equipment for productive purposes; already the system is in vogue in the matter of purchase of lorries and trucks by road transport operators. The National Small Industries Corporation itself is operating a scheme under which small units have to make a down-payment of 20 per cent of the value of machines supplied and pay the balance in instalments spread over a period of seven years. Other private credit on the same lines may be needed to supplement it. Meanwhile, a limited amount of business is being done in selling household articles also, like sewing machines, fans and radios.

Accordingly, the Law Commission felt that safeguards should be provided in this country also on the lines of the Acts in Britain and has drawn up a model Bill based largely on those principles. Its report, together with the draft Bill, is now before the Lok Sabha. It is, therefore, clear that the proposed legislation is intended not to introduce afresh any new hire purchase system but to regulate contracts permissible even now under the general law. In Britain, the effects of regulation are felt mainly by the finance companies which provide the credit, because wholesalers and dealers cannot directly enter into hire purchase transactions, unless they have also facilities for the disposal of second-hand goods with which they will be loaded when they seize goods after default by hirers or when hirers terminate agreement without exercising their option to purchase and return the goods.

The draft Bill provides that a hire purchase agreement should be in writing and signed by all the parties; it should specify the H.P. price as well as the cash or market price on the date of commencement of the contract and the precise number of instalments and dates of payment. The description of the goods should be clear and any other consideration (exchange of an old car for a new one, for example) has to be stated; to prevent circumvention of the law by the execution of separate agreements each of which does not amount to a hire purchase contract, it is provided that such documents should be taken and read together.

It is enough under the proposed law if an owner, that is, the person who gives the goods to the hirer on H.P. terms, acquires the right to sell the goods before the hirer gets the right to purchase them by completing the payments due. The object is to enable finance companies to get goods from manufacturers or dealers on credit and pay off the debt as and when they receive the instalments from the hirer. This is in accordance with the British Law and consistent with the aim of promoting sales of manufactured durable goods; it is not likely to result in any hardship to the hirer, except when the finance company fails to pay up. But since finance companies are often subsidiaries of manufacturers, it is improbable that such situations will arise; even if they do, the hirer has redress against the finance company and can in any case exercise his option to terminate the agreement before the title to the goods has passed to him.

The Bill seeks to provide also that the goods shall be of merchantable quality, but there are some exceptions, as, for instance, when the owner could not reasonably be expected to be aware of defects (or when the hirer has examined them for such defects) and in the case of second-hand goods. In Britain, disputes about quality have given rise to much litigation and even today legal experts consider that the safeguards are not sufficient. Motor vehicles hardly fit for the road have been sold to purchasers of second-hand cars and judicial decisions are often based on the circumstances in which goods are hired and on whether there are reasonable grounds for the presumption that the hirer was made aware of the defects.

The hirer need not wait until the last instalment matures in order to own the goods. He can accelerate the purchase at any time during the subsistence of the agreement. It is recognised that, in such cases, the hirer should be given a rebate, calculated on the difference between the H.P. price and the cash price. The Bill provides that, after deducting one-third of this as office charges, a rebate proportionate to the unexpired period of the agreement should be given. The Government is given the power to withdraw such rebate, if it does not wish to encourage early purchase of goods. When the hirer wishes to terminate an agreement, he should do so after proper notice, re-deliver the goods and tender all the instalments due up till then on the H.P. agreement; where the total due falls below one half of the price, he should make up the difference which is a kind of penalty. But his rights of termination cannot be limited in any way by contract; when he has more than one H.P. agreement, he is given the right to appropriate his payments in such a manner that he can save some of the goods at least, if he cannot save all of them. If no such appropriation is made by the hirer, the Bill provides that amounts should be appropriated in the order in which agreements are entered into.

The British Law does not give the hirer a specific right of assignment of his interests under H.P. agreements, but permits it where there is no contract to the contrary. The Law Commission's Bill provides for assignment with the consent of the owner, if it is possible, and with the approval of the court, if consent is unreasonably withheld; also, in cases of insolvency of the hirer, his rights will vest in the Official Receiver who can assign them to others in turn. This is an important provision, since it will help a hirer to make the best of the bargain when he is unable to continue payments as stipulated.

The owner's right to terminate the H.P. agreement in the event of default of payments, misuse of goods or breach of other conditions is subject to certain restrictions. He is entitled to retain the hire paid, recover arrears, to seize the goods or recover possession through court and claim damages for non-delivery of goods for the period during which it is delayed. The right to seize goods is, however, sought to be restricted, by providing that it shall be done only through court proceedings, if half the hire purchase price has been paid in cases where the value of the goods is less than Rs. 15,000 and three-fourths in other cases. This is intended to prevent oppression by the owner. The corresponding provision in the British Law, it may be noted, is to the effect that, if one-third of the price had been paid, the right to seize should be exercised only through a court. But there the H.P. Acts apply only to transactions below £1,000 in the case of livestock and below £300 in the case of others. No such pecuniary limit is contemplated in the Indian legislation. There is, therefore, a greater disadvantage on the owner in regard to the right to seize goods, especially when costly transport vehicles are involved. Even so, the grant of the power of seizure until three-fourths of the price is paid in cases above Rs. 15,000 gives owners sufficient protection, though, at the last meeting of the Central Advisory Council of Industries, a representative of transport finance interests felt that this restriction would hamper H.P. transactions. The Law Commission, on the other hand, thought that, since goods taken on H.P. constituted the main source of livelihood of the hirer, sudden deprivation would cause hardship. Besides the concession for owners of costly motor vehicles, the Bill has provided that court proceedings should be by way of petition and not a suit which may take a long time for disposal.

A significant improvement on the British Law has thus been effected by the mere removal of the monetary limit prescribed therein for the application of the protective provisions. In respect of the owner's responsibility for the quality of the goods, however, the same conditions will prevail here and perhaps the same anomalies will be repeated, until more experience indicates the lines on which further safeguards can be provided. An important consideration against leading the law too much against the owner is that H.P. in India is still in its infancy, unlike in Britain where the system had developed well before the State intervened to protect hirers. While the National Small Industries Corporation has shown the way in which small entrepreneurs could be helped under H.P. methods, it cannot obviously cover their entire needs of machinery and equipment. The test of success will, therefore, lie in the extent to which finance companies come forward to undertake H.P. activity on an increasing scale.

Whether there should be a maximum for the repayment period under H.P. is one of the questions that may have to be faced. In Britain, two years was the limit until recently, when it was increased to three years. The Law Commission proposes no such limit and the Government may have to bring it in as part of its credit control policy, though, even then, the seven-year period adopted by the National Small Industries Corporation will have to remain an exception. If finance houses should continue to do sound business, they should be able to recoup their money by repossessing the goods and selling them in the second-hand market, but too many instalments may mean that the article hired becomes a wreck when it is returned and the hirer's equitable interest in it depreciates; when that stage is reached, the hirer will have no interest in keeping up payments and purchasing the goods. Concessions and protection to hirers should not, therefore, be taken to a point when too much unsound business will be transacted, bringing the whole system into disrepute. In this country, the immediate objective is to help purchase of production and transport equipment and it is possible to place the terms of hire purchase on a business basis; perhaps, two sets of rules, one for household goods and another for productive equipment, are desirable. There is time to consider all these aspects before legislation is enacted by Parliament and the interests concerned should bestir themselves before it is too late, examine the Bill in an objective manner, and put forward constructive suggestions designed to safeguard the legitimate rights of owners, hirers and financiers.

MARKET GOSSIP

Severe Shake-out in Shares

A FORTNIGHT ago, we stated in these columns that the share markets had become highly vulnerable to adverse developments. The extent of their vulnerability became apparent this week, when they were confronted with two disturbing political developments—further evidence of Chinese belligerent attitude towards India and acute tension on Goa borders necessitating movement of troops to that area. The actual introduction of the new margin system did not aggravate the bearish trend generated by these political events; on the contrary, it was received with a sigh of relief, for it was thought that it would have a restraining effect on bears.

The deterioration in Sino-Indian relations had manifested itself as early as 20th November 1961, when it was disclosed in the Lok Sabha that the Chinese had obtained control over an additional area of some 2,000 square miles in Ladakh. But speculators were inclined to dismiss it as an event of no consequence to share markets and persist in taking a bullish view. The various statements made in the Lok Sabha this week in the course of the debate on the situation in our northern and north-eastern borders, however, have frightened them. The Prime Minister's disclosure that China had threatened to cross the MacMahon Line in North Eastern India, unless India stopped its military preparations in the Ladakh region, had a demoralising effect on a market which had already suffered a sizable drop following reports about serious preparations to prevent border violations by the Portuguese in Goa. The fears now haunting the share markets are: (1) Will the trigger-happy Portuguese commit the indiscretion of attacking Bombay and the neighbourhood of Goa? The reports that they have assembled fleets of frigates armed with modern equipment and jet aircraft are chiefly responsible for this poser. (2) Will the Chinese, who now know that India means business and is actively preparing to defend its frontiers, keep quiet, leaving India to gather the military strength which it lacks now? Will they not take time by the forelock and try to gain their objectives? If they do, it will mean (a) that India will be compelled to devote a larger share of its resources to defence than is the case now and (b) a certain amount of dislocation in the normal economic activity in certain parts of India.

With all this uncertainty, it is no wonder that some of the big bull operators decided in favour of caution and rushed to reduce their commitments drastically. The bears, too, did not want to miss the opportunity for which they were waiting all along. The result was a sudden flop in the value of equities. Although values have staged a smart recovery in several scrips from the lowest levels witnessed on Tuesday and Wednesday this week due partly to bear-covering and partly to L.I.C.'s buying of some leading scrips, there has been no decisive improvement in the sentiment of the market. The tendency among operators is still to think and talk bearishly. To give an instance. Nobody today thinks of the fact that the current Hindu calendar year began in a cheerful mood. On the contrary, they all vividly recall the earlier astrological forecast to the effect that the confluence of eight planets on 5th February 1962 was a bad omen for this planet and that there might be heavy damage to mankind. To give another instance. A fortnight ago, it used to be argued that, as the Budget in February would be a lame-duck affair, the effective Budget would only be in May 1962, thereby delaying the season for pre-budget rumours by at least two months; this possibility was being mentioned as a bullish factor. But, today, none talks about it. Such is the psychology of speculators.

While it is not possible to predict the course of political developments which depend on the conduct of its unpredictable neighbours, any further substantial fall in equity values from the current levels (as of Thursday the 7th inst.) could be regarded as an opportunity for selective buying by those who have resources to spare and wish to add to their investment portfolio. One must, however, remember, in this connection, that, while it is extremely difficult to locate the bottoms or tops, staggered purchases at every setback during a bearish phase will enable one to pick up investments at an average cost which will be nearer to the bottom.

The lesson to be learned by investors from the shake-out caused by China and Portugal is that one should not allow oneself to be carried away by talk of growth prospects, etc., beyond reasonable limits. By "reasonable limit" is meant a level which provides sufficient room for absorbing shocks such as those witnessed this week. While this may vary from individual to individual, from time to time and from scrip to scrip, an average *net* yield of 4 to 4.5 per cent per annum should be aimed as the minimum that an average investor must have on first class investments in these days of inflation. To make investments in shares at a price which gives a yield lower than this limit is to take risks of a distinctly speculative nature. Such a person must be prepared for shocks and sleepless nights, though ultimately he may lose nothing and perhaps gain something.

New Margins on Shares

The new system of automatic margins on shares, referred to by the Finance Minister in the Lok Sabha last week, has come into force earlier than expected. Our assumption that it might not be enforced before the commencement of 1962 has happily, proved wrong and, as events have now shown, when Mr. Morarji Desai said that it would be in operation "shortly," he really meant it. A feature of the new system is that it will have been adopted by all the seven stock exchanges before this week-end. The Madras Stock Exchange has introduced it with effect from the 1st inst. and Calcutta from the 7th inst.; Bombay and Ahmedabad are applying it to the settlements commencing from the 11th inst. and so also Delhi. Since this is the first time in the history of stock exchanges in India that a uniform system of margins is being enforced in all of them, this event is an important landmark. As a result of this all-India applicability, the scope for operators to evade the margins by transferring their activities from one market which has margins to another which does not, as used to be the case hitherto, has been practically eliminated.

The new margins are known as automatic, because their operation will be automatically dictated by movements in prices of shares and the volume of outstanding business on the settlement day, and not by the authorities of respective stock exchanges. A defect in the margin systems operated hitherto was that the whole thing depended upon the sweet will of the stock exchange president and/or the governing board. Nobody knew in advance when the margins would be imposed or removed, at what rates and on what scrips. These uncertainties themselves served as a source of speculation. Again, as human beings are not infallible, there was always the possibility of mistakes in judging the situation. On many an occasion in the past, the imposition of margins was a case of bolting the stable door after the horse had been stolen. Further, after the margins were thus introduced, the affected parties always used to grumble and make all sorts of allegations against the authorities concerned. In any case, a lot of heartburning was not an uncommon feature. There is not much room for such deficiencies in a system of automatic margins. Under it, everybody will be operating with his eyes wide open and will know in advance at least the minimum amount of handicaps one will be subjected to in a given situation. The introduction of such a system of margins was long overdue.

The new system of margins, which is applicable only to shares enjoying the facility of forward trading, is in two parts. One is linked to the amount of business carried forward from one settlement to another and the other is related to price fluctuations and both are applicable to bears and bulls alike. The margin on the business outstanding on the settlement day is on a slab system, varying from 2 per cent to 30 per cent—the larger the outstanding the higher the margin. Thus, the margin is 2 per cent, if the business carried forward is Rs. 5 lakhs, and 3 per cent for the next slab of Rs. 5 lakhs; the maximum rate of 30 per cent is applicable to the outstandings of Rs. 40 lakhs and over. But the actual amount of margin payable by the member will be arrived at after adjusting the value of his membership card and security deposit, subject to a ceiling of Rs. 45,000 in the case of individual members, Rs. 65,000 in the case of a partnership of two members and an addition of Rs. 20,000 for each member where the partners are in excess of two.

This type of margin will not, in actual practice, be as effective as it may seem. In the first place, there is an exemption limit upto Rs. 5 lakhs. This will encourage big speculators to spread their operations thinly over a number of brokers. Secondly, the setoffs permitted reduce the quantum of margin payable. Thirdly, as a member is called upon to pay only on his net outstanding, he can adjust the sales of one of his clients against the purchases of another client. And, fourthly, it will not be difficult to reduce one's outstanding business through skilful manipulation and *collusion* with members having the opposite position.

The other type of margin, however, may be more effective. Under this second type, when prices rise by 10 per cent over the making-up price for the previous settlement, 50 per cent of the rise will have to be deposited by the bull. If they fall by 10 per cent, the bears will have to pay. Supposing that, during the currency of a settlement, the prices do not rise by 10 per cent and that in the next settlement they rise further, the 50 per cent margin will become payable as soon as the total increase works out to 15 per cent over the making-up price at the commencement of the first settlement. The bears will have to pay the margin when the price variation is in the opposite direction. Again, if in one settlement the price rises by 5 per cent or more over the first 10 per cent rise and the interim making-up price fixed to collect the margin on that rise, 50 per cent of the second instalment of increase will be payable by bulls; the bears will pay if the movement is in the other direction. It is understood that the bears will pay margin only when the prices move down from the *basic* making-up price that is chosen when this system is introduced and not when the decline takes place from the levels at which the margin payable by bulls is attracted. Suppose, for instance, X scrip goes up from Rs. 600 to Rs. 661, the buyer pays the margin; he will pay more, if it goes up by another 5 per cent or more. If, after going up to Rs. 700, this scrip drops back to Rs. 630, the seller will not have to pay any margin. The bears will be obliged to pay margin only when the scrip goes down to Rs. 540 and below. If this interpretation is correct, then the rates prevailing at the time of introducing the margin system will attain

HELPING DEVELOPING COUNTRIES

BRITAIN MUST DO MORE

From Our Own Correspondent

LONDON, *30th November*

LONDON LETTER

"THE wind of change makes the journey from colonisation to Co-operation a rapid one, but the spirit of service and the principle of free association remain common to both and give strength to the Commonwealth." Thus the Secretary for Technical Co-operation (Mr. Dennis Vosper) said last week. "In one form or another," he said, "Britain has been sending technical assistance overseas for more than 300 years, ranging from teaching Peter the Great to build ships and waterways to assistance currently given under the Colombo Plan."

The British Government is taking its obligations in the matter of technical assistance very seriously; such assistance can cover four main activities—the training of overseas students, the provision of experts, the provision of advisory and technical services, and the supply of equipment for training ... last year, for example, over 800 experts—using the word "expert" in a wide sense, since, as Mr. Vosper said, today everybody is an expert—were recruited and trained for the dependent territories alone. These include 400 high-grade steel workers trained in the U.K. for the new Durgapur Steel Works in India, to which both the U.K. Government and industry made a significant capital contribution.

Financially, the British Government which provided £150 million in 1960 is contributing £180 million in assistance for the less developed countries this year. Nearly as much again will come from private sources. "Today Britain leads the world in the provision of experts under international programmes and is a very large provider under bilateral programmes."

But Britain's commercial assistance is not limited to the provision of funds: it is even more importantly present in its trade policy. For trade rather than aid has been adopted by the U.K. as a guiding principle in assistance. The Secretary for Technical Co-operation while rehearsing what the U.K. has already done and commenting that, because the assistance was dispersed among many organisations, the size of the effort was not always appreciated, proposed that even more should be done. And in another sphere this week, Mr. Erroll, the President of the Board of Trade, was urging the needs of the less developed countries at G.A.T.T. in Geneva.

He urged that the industrialised countries should offer expanding markets for the primary producers and be prepared to let in more manufactures from the less developed countries—only so would the latter be able to achieve the swiftest possible rate of growth.

But Mr. Erroll had another problem on his mind—that of cotton goods imports. Nearly 40 per cent of the British market for cotton textiles is met from imports—the bulk from the less developed countries. British imports of cotton yarns and piecegoods from India and Pakistan more than doubled between 1954 and 1960. Last year, they were worth £17 million; in the same year, imports of manufactures from these countries were worth £50 million or nearly 30 per cent of our total imports from them.

So the President of the Board of Trade made it clear to the other delegates that, in this sphere of cotton textiles, the U.K. should not be asked, "to accept any new commitment in the G.A.T.T. to do more, at least until others have made a comparable contribution." The hope of the British Government at this session was that other industrialised countries too would keep their markets open and try to get rid of remaining restrictions.

SUGARCANE NOT A GREEN VEGETABLE

The Supreme Court has held that "sugarcane" is not a "green vegetable" and, therefore, it cannot be exempted from sales tax under the exemption given by the Bihar Government notification of 28th August 1947, issued under Section 6 of the Bihar Sales Tax Act of 1947. This decision was given by the Court while dismissing two writ petitions and three appeals challenging assessment of sales tax on sugarcane on the ground that sugarcane came within the definition of green vegetable and was, therefore, exempted from sales tax under the notification.

ALL-ROUND FALL IN EQUITIES

DISTURBED FEELING STILL PERSISTS

(From Our Own Correspondents)

BOMBAY, *7th December*

AFTER ruling fairly steady during the first two days of the week, the share market suddenly turned bearish on Monday, when prices suffered a sharp setback. The downward trend gathered momentum in the following two sessions, with the result that most of the scrips touched their lowest levels for the year. A recovery was witnessed towards the close of yesterday and today (Thursday) and a part of the earlier losses were recovered. Over the week, however, prices show a marked decline, with losses spread over the entire list.

The steadiness witnessed in the initial sessions reflected the continuation of the recovery noted towards the close of last week. There was a landslide in values on Monday, following nervous bull liquidation and heavy bear pressure, touched off by fear of possible military action against the Portuguese in Goa. Large-scale cancellation of goods booking by railways and cancellation of a number of passenger trains gave rise to the surmise that the railways were preoccupied with troop movement. On Tuesday came the disturbing news of a fresh Chinese threat (contained in the latest note sent in reply to India's protest) to cross the MacMahon Line. This news broke the back of the market. Almost all equities slumped, with most of them touching the lowest levels that have taken the post-boom curve to a new bottom. The extent of fall in prices can be gauged from the following table, which gives the recent highest, the lowest touched yesterday and the latest closing quotations for some leading scrips.

Scrips	Recent highest (in the week ended 23-11-1961)	Lowest touched (on 6-12-1961)	Closing (7-12-1961)
Tata Steel	151.50	135.50	139.00
Indian Iron	26.00	23.52	24.04
T.E.L. Co.	382.00	325.50	344.00
Voltas	317.50	280.00	293.00
Bombay Burmah*	714.00c.d.	591.50x.d.	628.00x.d.
Century	618.00	547.00	570.00
National Rayon	589.50	520.00	547.50
Kohinoor	332.00	289.00	297.50
Standard	1,200.00	955.00	1,030.00
A.C.C.	171.25	156.50	161.00
Gwalior Rayon	50.50	45.75	46.10
Synthetic Chemical	247.00	205.00	222.00

*Final dividend was Rs. 20.47 per share.

The low levels touched on Wednesday attracted some bear covering and fresh support. The L.I.C. was seen picking up some good scrips at what appeared to be bargain prices. Consequently, values looked up to some extent in the latter half of Wednesday. Today's session witnessed a further improvement in prices. The decision of the Stock Exchange authorities to enforce automatic margins with effect from the next settlement starting from the 11th inst., on the basis of making-up prices on the 8th inst., had no adverse effect on market sentiment today when it came to be known to everybody.

Steel shares suffered a further sharp setback. Apart from the aforesaid factors affecting the market as a whole, lower production in November, as compared with the previous month, by both T.I.S.Co. and I.I.S.Co. was an additional reason for steel shares remaining depressed. Tata Steels, the range of fluctuation in which does not normally exceed a rupee or so, slumped by as much as Rs. 10 at one time during the week. Opening at Rs. 145, as against the previous close of Rs. 145.25, the scrip improved to Rs. 145.75 before declining to Rs. 135.50 on Wednesday, the lowest level for the week. It, however, closed higher today at Rs. 139. The net loss over the week is Rs. 6.25. Indian Irons encountered selling and slumped from Rs. 25.45 (as against the previous close of Rs. 25.50) to Rs. 23.52 yesterday. There was a recovery thereafter and the quotation improved to Rs. 24.04 at the close today. The net loss over the week is Re. 1.46. Mukand Irons, too, fell in line with the other steel shares. Opening at Rs. 28.50, 10 nP lower than the previous close, the scrip eased to Rs. 25.75 yesterday but finished higher today at Rs. 27.10, registering a net decline of Re. 1.50.

Textile shares met with heavy selling and nervous liquidation. Standard Mills succumbed to selling and declined by Rs. 102 to Rs. 1,030. Centurys opened higher at Rs. 596, as against the previous close of Rs. 595.50 and, after improving to Rs. 607 on Saturday, reacted to Rs. 547 yesterday. There was a smart recovery in the subsequent session. A part of the losses were made up and the scrip wound up at Rs. 570, showing a net loss over the week of Rs. 25.50. Kohinoors commenced the week's business at Rs. 318.50, same as the previous close and, after edging higher to Rs. 322, eased to Rs. 289 yesterday, the lowest level for the week before recovering to close at Rs. 297.50 today. The net loss over the week is Rs. 21. The range of fluctuation was narrow by comparison in Bombay Dyeings, which, after opening the week a shade higher at Rs. 67.60, declined to Rs. 64.80 on Wednesday but finished higher today at Rs. 66.30, the net loss over the week being Re. 1.20. Swan Mills were marked down by Rs. 30 to Rs. 615, in spite of the news that the management of the mill had received permission of the Controller of Capital Issues to issue bonus shares in the proportion of two shares for every three held. Morarjees were marked down by Rs. 18 to Rs. 370. Shreeniwas dropped Rs. 13 to Rs. 284. Khataus reacted by Rs. 12.50 to Rs. 467.50. Podars shed Rs. 7 to Rs. 141. Finlays lost ground by Rs. 9 to Rs. 316.

Cement shares drifted downwards. Associated Cements encountered selling and reacted from Rs. 169 last week-end to a low of Rs. 156.50 yesterday, but finished higher at Rs. 161 today after having risen early in the session today to Rs. 162.50. The news of the maintenance of dividend at Rs. 12 per share gross (Rs. 8.40 net) fell flat on the market, as it was in line with earlier expectation. Digvijays eased by Rs. 8 to Rs. 195.

Sugar shares were depressed. Belapurs met with selling. Commencing the week's business at Rs. 276.50, as against the previous close of Rs. 276, the scrip eased to Rs. 260 yesterday, but improved to Rs. 269 today, before finishing lower at Rs. 267; the net loss over the week is Rs. 9. Phaltans receded by Rs. 2 to Rs. 126 and Walchandnagars by Rs. 2.50 to Rs. 164.50. Maharashtra Sugars, however, received scattered support and improved by 50 nP to Rs. 189.50.

In the shipping group, Scindias recorded a further fall of 24 nP over the week to Rs. 12.68. Great Easterns too lacked buyers and dropped 32 nP to Rs. 12.84. Among automobile shares, Premiers came in for selling and eased by Rs. 8.75 to Rs. 54.50. Hindustan Motors receded by Re. 1.28 to Rs. 19.68.

Among rayon shares, barring Indian Rayons, all were down. National Rayons opened at Rs. 576 and, after rising to Rs. 587.50, fell headlong to touch Rs. 526 yesterday, then staged a smart rise to Rs. 553 today, before finishing at Rs. 547.50, a net loss of Rs. 27 over the week. Baroda Rayons were quoted Rs. 7.50 lower at Rs. 152.50 and Gwalior Rayons Rs. 3.90 lower at Rs. 46.10. South India Viscoses met with selling and eased by Rs. 8 to Rs. 172. Indian Rayons, on the other hand, picked up Rs. 6.10 to Rs. 92.

In the chemicals group, Synthetics slumped by Rs. 18 to Rs. 222. Indian Dyestuffs were marked down by Rs. 20 to Rs. 440. Colour-Chems lost ground by Rs. 10 at Rs. 410. Poly-Chems shed Rs. 7.50 to Rs. 200, and Alembics Rs. 5 to Rs. 237.50. Amar Dyes were done Rs. 2.50 lower at Rs. 295.

Engineering shares too proved a vulnerable lot. T.E.L.Co. encountered selling and reacted from the opening level of Rs. 361, 50 nP higher than the previous close, to Rs. 325.50, on the 6th inst. before improving to close at Rs. 344 today, the day's highest. The net loss over the week is Rs. 16.50. Alcock Ashdowns were marked down by Rs. 15 to Rs. 304. Cooper Engineerings eased by Rs. 14 to Rs. 180 and New Standard Engineerings by Rs. 10 to Rs. 190. Texmacos lost Rs. 2 to Rs. 19.76. Asian Cables and Brady Engineerings shed Rs. 2 each to Rs. 107.50 and Rs. 93, respectively.

The miscellaneous section was no exception to the general trend. Bombay Burmahs opened the week at Rs. 658, Re. 1.50 lower than the previous close and, after rising to Rs. 661 the next day, met with selling and declined to Rs. 591.50 on Monday. The scrip, however, recovered to Rs. 632 today before finishing at Rs. 628, registering a net fall of Rs. 31.50 over the week. Voltas slumped by Rs. 16.50 to Rs. 293. Hindustan Levers eased by Rs. 2.50 to Rs. 55.20. Permanent Magnets shed Rs. 8 to Rs. 128. Ceat Tyres were quoted Rs. 7.50 lower at Rs. 212.50. Premier Tyres suffered a further setback and fell by Rs. 7 to Rs. 143. Camphors dropped Rs. 5.10 to Rs. 68. Killicks eased by Rs. 2 to Rs. 93.80. Shivrajpur Syndicate were done at Rs. 43, as against Rs. 45.50 last weekend. A month ago, they were Rs. 54; the marked fall over this period reflects the Company's decision, made public last week, to effect a drastic cut in production of manganese ore owing to heavy accumulation of stocks and poor demand.

Although the market seems to have attained a certain measure of stability at the time of writing and the heavy selling by bears has created a technical position which will be favourable to the bulls when the climate changes, a feeling of uneasiness among operators still persists.

Calcutta Stock Exchange

CALCUTTA, *6th December*

There was a landslide in share values during the week under review which prompted the Committee of the Stock Exchange to impose margins on fresh offerings of the highly speculative cleared scrips—at Rs. 3 each on Indian Iron, Dunlop, Indian Cable, Orient Paper and Indian Aluminium, Rs. 2 each on Hindustan Motors, Burrakur Coal, Texmaco, Rohtas, Shree Gopal and Howrah, and 50 nP on Indian Copper. The decision was taken by the Committee at an emergency meeting held on Tuesday the 5th inst., with a view to checking unhealthy speculative selling. The margins, however, were of no avail, in as much as the leading counters suffered a further setback in values today. The bear pressure was induced mainly by the deteriorating reports about Chinese aggression in Ladakh and N.E.F.A. and tension in Goa borders. Another unhelpful factor was lower production at the Indian Iron and T.I.S.Co. factories in November.

Among engineerings, Indian Irons fell by Re. 1.94 to Rs. 23.66. Calcutta Steels dropped Re. 1.87 to Rs. 16. Texmacos lost Re. 1.80 to Rs. 20.15. Guest Keens moved down by Re. 1.63 to Rs. 38.37, J.K. Steels by 81 nP to Rs. 21.50 and J.K. Steels (new) by 37 nP to Rs. 20.19. Dalmia Irons retreated by 19 nP to Rs. 10.50 and Kumardhubis by 6 nP to Rs. 6.75.

In the jute group, Howrahs suffered a setback of Re. 1.75 to Rs. 19.75. Megnas eased by Re. 1.44 to Rs. 12.31 and New Centrals by 97 nP to Rs. 18.34. Ganges declined by 56 nP to Rs. 11.75. Nuddeas, however, picked up 50 nP to Rs. 61.

Among coals, Burrakurs fell by 81 nP to Rs. 17.81. West Bengals declined by 47 nP to Rs. 9.19 and Bengals by 50 nP to Rs. 357. East Indias were quiet at Rs. 33, South Karanpuras at Rs. 8.69 and Standards at Rs. 13.81.

Among miscellaneous industrials, Orient Papers fell by Rs. 3.10 to Rs. 37.90. Dunlop Rubbers retreated by Rs. 2.62 to Rs. 38. Hindustan Motors and Indian Aluminiums lost Re. 1.75 each to Rs. 19.37 and Rs. 36.37, respectively. Indian Cables moved down from Rs. 36.44 to Rs. 34.87. Rohtas fell by Re. 1.57 to Rs. 16.12. Shree Gopals fell by Re. 1.12 to Rs. 26.25.

Madras Stock Exchange

MADRAS, *6th December*

Equities suffered a distinct setback in values during the week under review on persistent selling which followed deteriorating situation on the Goa border. The move to introduce automatic margins on cleared securities also acted as a damper. The Exchange authorities informed members that the scheme would come into effect from the 1st inst., in securities for 20th December and subsequent clearings. Under the scheme, each member will have to deposit two per cent of the value of the shares he carries forward. Textiles ruled distinctly easy. Offerings were quite large, while buyers were scarce. Almost all leading scrips faced a severe jolt. Teas were listless, as also coffees and rubbers. There was a marked decline in sugar shares as well. Transactions in the miscellaneous section were few and far between, with the undertone remaining subdued.

Among textiles, Premiers were marked down by Rs. 15 to Rs. 305. Anglo-Frenchs fell by Rs. 14 to Rs. 128. Coimbatore Cottons suffered a loss of Rs. 8, today's closing rate being Rs. 213. South India Viscose dropped Rs. 6 to Rs. 177 and Metturs Rs. 5 to Rs. 388. Travancore Rayons eased by Rs. 3.50 to Rs. 41.50, Madurais by Rs. 2.60 to Rs. 39.50 and Radhakrishnas by 87 nP to Rs. 39. Lakshmis were dull at Rs. 150, as also Bangalore Woollens at Rs. 242 and Coimbatore Pioneers at Rs. 292.

In the tea group, Nonsuchs retreated by Rs. 2.05 to Rs. 25.50. Parksides softened by Re. 1.50 to Rs. 27. Kil Kotagiris decreased by 5 nP to Rs. 5.20. Blue Mountains and Chembras declined by 3 nP each to Rs. 2.87 and Rs. 3.55, respectively. Periakaramalais were neglected at Rs. 3.65 and United Nilgiris at Rs. 23.50.

Among coffees, Consolidateds fell by 65 nP to Rs. 20.10. Balanoors lost by 20 nP to Rs. 14. Ouchterlony Valleys eased by 5 nP to Rs. 3.50. Coffee Lands were quiet at Rs. 17, and Cowcoodys at Rs. 4.60. Anaparais were dull at Rs. 3.40, reflecting the disappointment of operators over the lower dividend of 15 per cent, taxable, for the year ended June 1961, as compared with 20 per cent distributed in the previous year. Bababuddins were unchanged at Rs. 8. The Directors of the Company have maintained the dividend for the year ended June 1961 at the previous year's level of 8 per cent, taxable.

Among rubbers, Malankaras softened by 25 nP to Rs. 16.75. Midlands and T.R. and T.s shed 5 nP each to Rs. 10.95 and Rs. 10.80, respectively. Cochin Malabars were neglected at Rs. 7.43, as also Travancores at Rs. 12.25 and Vaikundams at Rs. 32.50. Mercaras were unchanged at Rs. 8.80. The Company has maintained the dividend for the year ended June 1961 at the previous year's level of 20 per cent.

In the sugar section, East India Distilleries lost a rupee to Rs. 36.25. Cauverys fell by a like amount to Rs. 119. Travancores receded from Rs. 9 to Rs. 8.80, following reports that the Company had suspended the operations of its pharmaceutical section. Deccans shed 7 nP to Rs. 11.65 *ex-div.* United Breweries ruled dull at Rs. 101.55, Indias at Rs. 11.10 and Mysores Rs. 56.50.

Among miscellaneous industrials, Aluminium Industries encountered selling and fell by a rupee to Rs. 22.50. Reports about the inauguration of a new steel wire core plant by the Company did not have any effect. Textools were lower by a rupee at Rs. 184. Ashok Leylands fell by 65 nP to Rs. 8.70. Among cements, Dalmias shed 10 nP to Rs. 12.35. Indias sagged by 8 nP to Rs. 6.42. Andhra Cements were neglected at Rs. 9.10, Orissas at Rs. 16.15 and Travancores at Rs. 8.10. In the chemicals group, Metturs lost 30 nP to Rs. 14.60 and Mysore Fertilisers 10 nP to Rs. 10.70. Travancores closed at Rs. 19, *ex-right cum-div.*, as against Rs. 21.75 *cum-right cum-div.* a week ago. Among others, Ruby Rubbers were quoted unchanged at Rs. 5, notwithstanding the announcement of a dividend of 4.50 per cent, taxable, for the year ended June 1961; no dividend had been paid in the previous year. Western India Plywoods, however, strengthened by Rs. 2 to Rs. 220 and Tube Investments by 50 nP to Rs. 291.50.

NEWS IN BRIEF

A RESEARCH station for conducting research on tobacco is proposed to be set up by the Government of Gujarat.

The refrigerator factory of the Vinar Private Ltd. located at Behala, West Bengal, was inaugurated by Dr. B. C. Roy, State's Chief Minister, last week.

A pilot scheme to help tobacco growers in Andhra Pradesh by providing credit and marketing facilities is under the consideration of the State Government.

The Government of India has accepted in principle a proposal to raise the rate of provident fund contributions of coal mine workers. An official announcement on this matter is expected to be made shortly.

A statutory body called the Industrial Areas Development Corporation is proposed to be set up by the Government of Gujarat in order to promote the growth of industries in specially demarcated areas around bigger cities like Ahmedabad, Surat and Baroda.

The Central Warehousing Corporation has decided to construct a warehouse building at Cochin harbour, with a storage capacity of 3,000 tons at an estimated cost of Rs. 6 lakhs. The Corporation has already started five warehouses in Kerala in hired accommodation.

An official team, led by Mr. D. Sandilya, Joint Secretary in the Union Ministry of Commerce and Industry, is expected to leave for Karachi on the 17th inst., to review the working of the Indo-Pakistan trade agreement. The agreement, it may be noted, provides for a half-yearly review of mutual trade.

The Government of India has agreed to the Kreditanstalt (West German Bank of Reconstruction) extending a credit of DM 15 million (Rs. 1.8 crore) to the Industrial Finance Corporation of India. The agreement for this credit is yet to be finalised.

In response to the global enquiry for the construction of an atomic power station near Tarapur, seven tenders have been received from four countries, namely, Canada, France, the U.K. and the U.S. The tenders are still under scrutiny and no decision has yet been taken.

An inter-ministerial committee is understood to have been appointed by the Government of India to examine the applications of fourteen firms seeking permission to manufacture automobile tyres and tubes. Of these, eight firms propose to set up new industrial undertakings.

The I.B.M. World Trade Corporation, a subsidiary of the International Business Machines Corporation of the U.S., proposes to set up a plant near New Delhi for the manufacture of punch card equipments. It is expected that the proposed plant will go into production by the middle of next year.

The Government of India has decided to permit the State Government of Orissa to acquire the present interest of the Centre in the Orissa Mining Corporation. The Corporation was set up in May 1956 as a joint venture of the Central and State Governments. The Corporation is at present working three iron-ore mines in Orissa.

A scheme for the installation of 200 windmills in rural areas, now lacking electric power, is under the consideration of the Union Government. In rural areas, where wind is favourable and cheap electric power is not available, windmills, it is said, will provide an alternative source of energy for lifting water from wells for irrigation and drinking.

The next meeting of the Aid-India Club is scheduled to take place at Washington on 29th and 30th January next. At this meeting, the members of the Club are expected to make a firm commitment about their aid for the second year of India's third Plan. Austria and Holland are expected to join the meeting as new members of the Club.

Small-scale industries will be eligible to supply 46 items of stores required by the Central Government Department, according to a decision taken by the Government. So far, only 27 items were included in the list. The 19 products which have been added include cotton and woollen goods, leather products, iron and steel products, such as blacksmith's hearth and steel trunks, tarpaulin and brushes.

Prices of fertilisers have been reduced by the Government of India with effect from 1st inst. Farmers will benefit to the extent of Rs. 14.50 per metric ton on ammonium sulphate, Rs. 14.10 on urea, Rs. 8.50 on ammonium sulphate nitrate and Rs. 12.80 on calcium ammonium nitrate. New prices per metric ton for these fertilisers are Rs. 320 for ammonium sulphate, Rs. 670 for urea, Rs. 460 for ammonium sulphate nitrate and Rs. 310 for calcium ammonium nitrate.

Rajasthan will set up 400 laboratory information centres during the next five years to transmit findings of agricultural research to farmers. The proposed centres will provide facilities for demonstration and discussion of various problems and programmes pertaining to agriculture, animal husbandry and co-operation. A provision of Rs. 70 lakhs has been made in the third Plan for strengthening agricultural research work in the State.

A Rs. 50-lakh steel core wire plant, put up by the Aluminium Industries, Kundera, in Kerala, in collaboration with the Japanese firm, the Kokku Iron and Steel Manufacturing Co., was commissioned last week by the President of the Japanese Company, Mr. Yasumichi Iwasaki, who is on a visit to India. The plant is designed to produce 6,000 tons of high tensile galvanised steel core wire.

An agreement has been finalised between the West Bengal Government and a French firm, Krebs and Cie of Paris, providing for consulting services for setting up a chemical plant at Durgapur mainly utilising the by-products of the Durgapur coke-oven plant. The proposed plant will manufacture 6,600 tons of phenol, 3,300 tons of phthalic anhydride and 990 tons of pentachloro phenol, besides caustic soda and chlorine and some minor organic chemicals. The total capital cost of the project is estimated at Rs. 6 crores.

The Rural Industries Planning Committee, constituted by the Planning Commission to study problems of policy and planning relating to rural industries and to suggest measures and policies for the intensive development of industries in rural areas, held its first meeting at New Delhi on Tuesday this week. At the meeting, the Committee agreed that an integrated approach should be made to the development of rural industries. It also set up a sub-committee to work out proposals for pilot projects for the intensive development of rural industries which the Planning Commission proposes shortly to initiate in selected areas along with the rural works programme for the fuller utilisation of rural manpower.

• • • •

From Abroad

The index of industrial production (base 1950=100) in West Germany rose by 5.4 per cent to 275 in October, as compared with the previous month, mainly as a seasonal upturn.

Prices of industrial goods in West Germany have remained unchanged so far throughout this year. The index stood at 128 (1950=100) in October, the same level as in January last.

The Government of Ceylon has appointed a committee of officials to draw up a scheme for the formation of a State trading corporation. The proposed corporation, it is said, will handle imports and exports of a wide range of products, including the country's main products, namely, tea, rubber and coconut.

West Germany and Thailand have concluded an agreement on the mutual promotion and protection of private investments. Similar agreements, intended to promote private West German investment abroad, have already been concluded with Pakistan, Malaya, Greece, and Togo. Another agreement with Argentina is expected to be signed shortly.

Action to develop national news agencies in Asia and the Far East will be considered by a meeting of experts being convened by U.N.E.S.C.O. at Bangkok from 19th to 23rd inst. The meeting will suggest possible measures to help establish news agencies in countries lacking them, to expand existing news agencies and to promote the wider exchange of news services within Asia and with other regions of the world. Mr. K. N. Ramanathan, General Manager, Press Trust of India Ltd., will represent India in the meeting.

The World Bank has announced a loan equivalent to $8.4 million to Kenya to help finance the development of farmlands in the Scheduled Areas of Kenya (formerly known as the Highlands) which heretofore have been reserved for Europeans. The land will be purchased from European farmers, further developed and resettled mainly by African farmers. The total cost of the programme in the three-year period is estimated at the equivalent of $24.5 million (£8.8 million). The Government of Kenya will finance about half the cost mainly through loans and grants from the U.K. amounting to £3.7 million. The remainder will come from a loan of £1.5 million from the Colonial Development Corporation and the World Bank loan of $8.4 million (£3 million). When a portion of the Bank's loan is committed for a sub-project, it will carry interest at the rate then prevailing for Bank loans. The loan is for a term of 20 years; amortisation will begin on 15th September 1965. The loan, made to the Colony and Protectorate of Kenya, is guaranteed by the United Kingdom.

The World Bank has announced a loan equivalent to $2 million to the Development Bank of Ethiopia. Like an earlier Bank loan of $2 million to the Government of Ethiopia, this loan will be used to meet the foreign exchange requirements of projects financed by the D.B.E. The Development Bank was established in 1951 to provide a source of medium and long-term credit for Ethiopian agricultural and industrial development. Since then it has made a definite though modest contribution to economic growth. It has made 3,190 loans amounting to Eth.$24 million (U.S. $9.5 million) to small and medium-sized industries, which have provided opportunities for Ethiopians to acquire some of the technical skills essential to a modern economy. The Bank loan is for a term of 10 years which may be extended to 14 years by agreement between the Bank and the Development Bank of Ethiopia with respect to individual projects for which a longer period is appropriate. Interest will be applied to each portion of the loan at the Bank's current rate when the portion is committed for one of D.B.E.'s projects. Amortisation of the loan will begin on 1st March 1965. The loan is guaranteed by the Empire of Ethiopia. This is the fifth loan made by the World Bank in Ethiopia, bringing the total lent there to $25.5 million. Loans of $21.5 million have been made to finance improvements in road transport and telecommunications.

PERSONAL

MR. K. C. Reddy, Union Minister for Commerce and Industry, has returned from Geneva, after attending the recent G.A.T.T. session.

Dr. Arturo Frondizi, President of Argentina, arrived in New Delhi on Tuesday this week for a short visit to India.

Dr. B. P. Kedia has been elected President of the Gunny Trades Association for the year 1960-61. Mr. G. C. Sil and Mr. Bilasroy Agarwala have been elected Deputy President and Vice-President, respectively.

Mr. H. A. Eccles has been appointed Chief Representative of Burmah-Shell in India. He will have his headquarters at New Delhi in order to ensure speedy disposal of all issues and establish the best possible channels of communication with the Government of India. He is also the Chairman of the Burmah-Shell Refineries Ltd.

Banking Increases National Wealth

P. N. B. Serves the Nation's Industry, Agriculture and Commerce.

BANKING SERVICE OF EVERY DESCRIPTION OFFERED.

THE PUNJAB NATIONAL BANK LTD.

Established 1895

Head Office : New Delhi.

ORIENT EXPRESS

Travel Service

Through its 4 offices in India and 350 correspondents in all principal cities throughout the world, Orient Express Travel Service places at the disposal of its clients a complete Travel Service.

Air, Rail and Steamer tickets issued at tariff rates, Hotel reservations made anywhere. Advice and assistance given in securing Passports, Visas, Health Certificates and Travellers Cheques.

THE ORIENT EXPRESS CO. PRIVATE LTD.

HEAD OFFICE 70, JANPATH, NEW DELHI-1

BOMBAY OFFICE 359, D. NAOROJI ROAD

CALCUTTA OFFICE 1 & 2, OLD COURT HOUSE CORNER

MADRAS OFFICE : 38, MOUNT ROAD

S. S. Poddar, Managing Director

POWER TARGET

THE Associated Chambers of Commerce were the first to warn the powers-that-be, at about this time last year, of the serious power shortage that was bound to arise, if the lag in generation and distribution of electricity continued. Their warning has been fully vindicated by the shortfall of 1.2 million kw. in the second Plan's power target of 6.9 million kw. and the resulting shortage that has afflicted several industrial areas in the country throughout this year. Of course, the warning has not gone wholly unheeded, for the planners have duly appreciated the seriousness of the situation and laid down in the final report of the third Plan a higher power target than what had been originally envisaged in the *Draft Outline*. Of the revised third Plan target of 13.4 million kw. by way of installed capacity, 12.7 million kw. are expected to be in commercial operation by 1965-66. But this target, even if duly achieved by the end of the third Plan, will still not bring appreciable relief to all industrial areas, for the proposed annual phasing of new capacity leaves much to be desired. If only about a third of the additional capacity planned is to be commissioned for generation in the first three years of the current Plan, power supply will continue to lag behind the demand therefor in most parts of the country. This will be bad enough, but it can be remedied to some extent by rephasing the power schemes wherever possible. In a worse situation which is likely to result from the estimated overall insufficiency of the entire power target, there can be no alternative to a further upward revision of that target. The Associated Chambers of Commerce have, therefore, done well to pass the following resolution at their annual meeting at Calcutta last week:

"The Associated Chambers consider that the investment in electric power generation and distribution provided for in the third Plan is insufficient for the country's industrial needs and that, even if the projected targets are achieved, a serious power shortage will remain. Critical and persistent shortages have resulted in industrial plants having to shut down or to stagger their working hours; industrial efficiency has consequently been impaired; and the continuing power shortage must seriously inhibit the expansion of industry. The Chambers, therefore, urge that immediate consideration be given to an upward and realistic revision of power targets and that the highest priority be given to the implementation of existing expansion plans."

The reference in the above resolution to critical and persistent power shortages has no element of exaggeration in it. For instance, in North India, power cuts are made every year due to the fall in water level in the dams. Fluctuations in the availability of power due to lack of water in the dams have also been a recurring problem in the South. The coal industry in West Bengal has been hard hit by frequent power cuts. It has been estimated that the jute industry lost over 4 million man-hours and 12,000 tons in production due to power cuts in February-June this year. Some units of the engineering industry have reported production losses of as much as 40 per cent on account of power shortage. The railway wagon fabrication programme in the private sector units has been most seriously affected and the electro-chemical plants designed for continuous running have been particularly hit by the unsteady supply of power. These instances of shortage in the last one year and the likelihood of still greater power shortage in the first two or three years of the third Plan suggest the need for some vigorous short-term expansion in generating capacity. Mr. A. R. Foster of the Bengal Chamber of Commerce and Industry has suggested, in this connection, the following short-term programme:

"For the present, standard sets of 50-75 mw. should be installed. They are readily available and their efficient operation presents no difficulties. There are obvious advantages in siting power stations near washeries, where they exist. Poor grade coal can thus be used to generate power for transmission by grid to industries within economic range. These grids, however, must be properly designed. Otherwise, consumers situated close to the source of power suffer outages resulting from breakdowns in remoter sections of the grid.

"Over and above what can be done to install fresh capacity in the form of large new units, more use should be made of expanding the capacities of organisations already in existence, with distribution networks in being and wide experience of operating them. If their future were more certain, they could do this, and produce results relatively quickly. Relief could also be obtained by bringing in small generating sets, diesel or steam, of capacity 50 to 2,000 kw. for the use of individual industrial units. The cost in foreign exchange would be well repaid by increased industrial production."

Mr. Foster's view that the capacities of organisations already in existence should be expanded is presumably in reference to the private licensees. Since these licensees are finding themselves hamstrung by the rigid controls exercised by the Electricity (Supply) Act, it has been rightly said that liberalisation of this control is bound to unleash an appreciable amount of technical talent and resources that are available with them. The commercial licensees, given the opportunity and the encouragement, may yet make a decisive contribution to power generation and distribution even in the short-term.

PAYMENT DELAYS BY GOVERNMENT

As the largest buyer of stores and supplies in the country, the Government is, to many manufacturers, the biggest customer. The purchase policy of the Government and the mode of payment are, therefore, of direct concern to thousands of concerns in the private sector. Total Government purchase of stores and equipments, indigenous and imported, were of the order of Rs. 372 crores during 1957-58, the latest year for which figures are readily available. To the suppliers, this represents sales of that magnitude. Payment delays in respect of purchases made by the Government cause considerable hardship and loss to suppliers because they result in crores of rupees being locked up. A pointed reference to this was made at the annual meeting of the Associated Chambers of Commerce and Industry, held at Calcutta this week, by adopting a resolution on it. The resolution reads:

"The Associated Chambers view with grave concern the very large sums of money which are tied up with Government, owing to delays in the payment for goods and services and in the settlement of claims and refunds, and they are perturbed by the serious effects of these outstandings on the financing of trade and industry. They consider that the prime cause of these delays is Government's system of passing and paying these bills and urge that immediate consideration be given to the reorganisation of the system in order that it may be able to cope efficiently with the vast increase in the size and number of contracts placed by Government and in particular by the new large-scale public sector industries."

Moving the resolution on behalf of the Bombay Chamber of Commence and Industry, Mr. F. E. H. Goddard, Manager of the Chartered Bank, Bombay, pointed out that members of the Chamber, who sell to various Governments, had a sorry tale to tell of large sums remaining unpaid for inordinate periods. He conceded that there had been a very considerable reduction in the time taken by the Director-General of Supplies and Disposal (D.G.S. & D.)—the central purchase organisation of the Government of India—to make payments in connection with Government purchases. The number of cases for finalisation was 5,157 as at the end of April 1960. 12,283 new cases arose between April 1960 and February 1961. Out of this total of 17,440, only 4,169 were pending in April 1961. This reduction in the time taken has taken place only in respect of purchases made by the D.G.S. & D. But Government purchases are not confined to those by or through the D.G.S. & D. Purchases are made by State Governments, P.W.Ds and Municipalities, all which have their own procedures. Even more important, in terms of volume, are the purchases made by large new industrial organisations in the public sector, notably the chemical and fertiliser undertakings, the Defence organisations and the steel plants. The payment of bills in respect of these purchases are not as prompt as in the case of purchases by the D.G.S. & D.

The reasons for the delay are quite numerous. Apart from the difficulties arising out of the finalisation of rates and prices, there are, according to Mr. Goddard, some "symptomatic reasons" such as changes in customs duty, extension of delivery dates, non-receipt of consignee's receipts, lack of co-ordination between the indenting departments and paying authorities and want of sanction from Government budget provisions. These have been designated as "symptomatic reasons" by Mr. Goddard, because they are, in most cases, the outward and visible signs of an internal administrative inability to devise office methods which will reduce paper work and the number of movements of paper from one person to another, the primary reason for delay in payment.

After thus analysing the causes for delays, Mr. Goddard made a specific suggestion for overcoming them. The D.G.S. & D. makes the purchase and arranges for the payment, whereas, in a private commercial concern, purchases are initiated by the purchase department (equivalent to the D.G.S. & D.) but, once the purchase is initiated, the arrangements for payments are no longer the concern of the purchase department. They are made by the storekeeper (equivalent to the consignee in the case of the D.G.S. & D.'s purchases) and the accounts department. Mr. Goddard conceded that, in the case of the D.G.S. & D., there are many cases where contractual obligations are involved and documents have to be referred back to the D.G.S. & D. itself. But, in a number of cases, notably where f.o.r. contracts are employed and the purchases are concerned with goods which are ordered over and over again, there should be no need for any reference back to the D.G.S. & D. He further suggested that once the seller has fulfilled his obligations by railing the goods, he should be able to apply at once for 90 per cent payment against railway receipt without having to wait for any form of receipt from the consignees.

Seconding the resolution on behalf of the Upper India Chamber, Mr. P. K. Sahgal also referred to complaints from a number of firms that, even after their supplies had been approved by the indenting authorities and received by consignees, bills remained unpaid for many months and that requests to expedite payment elicited no response.

It is evident from the aforesaid account that procedural shortcomings are by far the most important cause of delay in payment. It is true that Government Departments have to conform to certain set of patterns of procedure for making payments. But these procedures could surely be made less cumbersome and less time-consuming than they are at present. The organisation and Methods Division of the Government of India may usefully address itself to this question. As for industrial and commercial undertakings in the public sector, there is no reason why they should follow equally rigid rules and regulations. They have been patterned after the joint-stock enterprises so that they could be run in a businesslike manner and there is nothing to prevent them from adopting the procedures followed by the undertakings in the private sector for indenting and making payments.

EXPORT PROMOTION

The resolution on exports adopted by the Associated Chambers of Commerce, at its meeting at Calcutta last week, does not contain any new suggestions for promotion of exports. All the same, it seeks to highlight the need for a new sense of urgency on the export front—"urgency in the grant of permits and licences, urgency in the movement of goods, urgency in the making of decisions at all levels and urgency in every process of production." The main theme of the resolution is the inhibiting effect on exports of the high cost of industrial production. Emphasising the primary importance of a fuller utilisation of existing industrial capacity, the Associated Chambers have suggested that every encouragement be given to units which have the export potential to modernise and expand their productive capacity, thereby reducing costs and strengthening India's competitive position in the world markets.

It is this cost aspect of export promotion which was vigorously underlined by Mr. R. M. King of the Madras Chamber of Commerce, the mover of the resolution on export at the A.C.C.I. meeting. Mr. King pertinently called for a careful examination of every item of cost, with a view to resisting inflationary tendencies. In this connection, he suggested that the Government of India should give due consideration to economies of large-scale production while giving manufacturing licences. Emphasising the need for entrusting existing efficient units with the task of export promotion, Mr. King observed as follows:

"Substantial expansion of an existing unit of proved efficiency, particularly in the field of export, is likely to become effective more quickly than a new undertaking with all its teething troubles and growing pains still to be diagnosed, treated and cured. The Annual Report of the Development Wing contains statistics which show the number of units among which licensed capacity is distributed, and the average size is manifestly too

small in many cases to compete with larger units in other countries. Managerial talent, whether technical or administrative, is in short supply, and managements which have proved their ability to organise production on sound and successful lines for export should be the first to be entrusted with the tasks of expanding output up to the level of Plan targets. In the field where four units are already operating successfully an average expansion of 25 per cent can, in all ordinary circumstances, be achieved at lower cost and with much greater rapidity than the introduction of a fifth unit."

There is a lot to be said for the case built up by Mr. King for giving preference to existing units in the matter of exports. His view that traditional exporting industries, such as tea, jute goods, and textiles would return a much quicker dividend than the newer industries which have yet to establish in overseas markets is, of course, sound within limits. But this is no reason why serious attempts should not be made to promote the exports of a wide range of industrial goods that are being produced in the country for the first time, provided the cost of such export promotion is not unduly high and there is a reasonable prospect of earning additional foreign exchange. Whether the accent in export promotion is on traditional items or on newer ones, the two common problems facing all industries are the unrestrained tendency to concede wage increases without relating them to productivity and the disinclination of the Government to forgo taxes on export goods. Since both these factors have the effect of swelling cost and increasing the final export price, Mr. King's plea for remedying this state of affairs is unexceptionable.

CLOSURE OF MANGANESE MINES

The manganese ore industry has been in the doldrums for the last few years due to the growing competition in export markets, particularly for superior grades of ore, and the dog-in-the-manger policy of the Government of India. While the Government is slow in realising the industry's difficulties, Indian ore is being priced out of world markets. For instance, exports of manganese ore to the U.S., India's leading customer for this commodity, declined sharply from 792,000 tons in 1957 to 379,000 tons in 1958 and 380,000 tons in 1959. In 1960, there was a slight increase in exports to 410,000 tons, but this increase was insignificant, as compared with the performance of India's competitors, following the post-recession industrial expansion in that country. Brazil has stolen a march over India in this respect. Competition in other markets, too, has been no less harmful to India. Indonesia, the Philippines and Australia have gained ground in the Japanese market for manganese ore, so also South Africa, Russia and Ghana in the U.K. market, Russia in the West German market and North Africa and Eastern Europe in France. The total value of exports of manganese ore has fallen from Rs. 32 crores in 1957 to Rs. 16 crores in 1958 and still further to Rs. 13 crores in 1959. There was a modest increase in 1960 to Rs. 14 crores. Currently, exports are running at a very low level.

During the five-year period 1956-60, India's manganese ore exports averaged 1.2 million tons per year, realising about Rs. 19 crores, or an average price of about Rs. 154 per ton. They, fell, during the first half of 1961, to 318,000 tons (an annual average of only 636,000 tons), fetching a price of no more than about Rs. 100 per ton. A part of this decline in value is, of course, to be attributed to the fact that, while overseas demand for India's medium and higher grades of ore has been at a low ebb, there has been good offtake, particularly by Japan, of low-grade ore, with manganese content of less than 40 per cent.

At present, the signs are that the crisis in the manganese ore industry, instead of getting resolved, is fast becoming chronic and assuming alarming proportions. This conclusion is warranted by the circumstances leading to the decision of the Shivrajpur Syndicate Ltd. to cut production of its manganese mines by 50 per cent, resulting in the retrenchment of about 1,800 employees, or over 70 per cent of its total workers. It is also feared that, unless effective measures are taken by the Government to help the industry, the Company may not continue even the remaining operations for very long. Explaining the decision of the Board of Directors of the Company, Mr. A. N. Haksar, Chairman, stated the other day in Bombay that there had been "accumulation of large stocks of ore, and, under the present circumstances, there seems little likelihood of disposing these at economical prices." To those who have been following the recent trends in the industry, the decision of the Company has not come as a complete surprise, although it is distressing. During the last one year, a large number of small mines owned by others have been closed down. But the large-scale units could, by and large, withstand the onslaught. The reduction in the mining operations of Shivrajpur Syndicate, however, shows that a stage has been reached when even the giants are forced to give way. The Shivrajpur Syndicate, it may be added here, is one of the leading producers of manganese ore in India, undertaking large-scale systematic underground mining.

The Government, of course, has not been unaware of the plight of the industry. In fact, following the meeting of the Mineral Advisory Board in May 1961, a special *ad hoc* committee for manganese ore was formed at the instance of the Union Minister of Mines and Fuel and this committee made a number of extremely useful recommendations. Unfortunately, none of the recommendations have been implemented so far by the Government. The question of manganese ore exports was also discussed at the annual meeting of the Export Promotion Council last September, and this was followed by two conferences arranged by the Ministry of Commerce in September 1961 when the views of the trade, the State Trading Corporation and the Government were fully discussed. At that time, assurances were given that the industry would receive immediate reliefs, and later in September, the Union Minister for Railways was reported to have agreed to a 50 per cent reduction in freight on manganese ore, which would be a substantial relief. These promises, however, have proved to be the victims of bureaucratic delay and not been given effect to so far. This state of affairs does not redound to the credit of a Government, which swears by export promotion. In fact, the aforesaid Committee has made several practicable suggestions involving minimum of financial loss to the exchequer. It is learnt that the Committee has suggested, besides a reduction of 50 per cent in railway freight already referred to, a cut of 30 per cent in dock charges, and of about 33 per cent in the royalty on high grades of ores. Any further delay in granting these incentives will harm India's interests abroad permanently, for, if its competitors entrench themselves in one market, it will be well-nigh impossible to regain the lost ground. It is also necessary to appraise objectively the activities of the S.T.C. in manganese ore trade and take such remedial measures as may be warranted by the appraisal. Whether barter deals, which have been suspended this year, are to be resumed in response to the industry's plea, would also need to be examined forthwith.

INCENTIVE BONUS IN HINDUSTAN STEEL

Hindustan Steel Ltd. which manages the three public sector steel plants at Bhilai, Rourkela and Durgapur, has just announced the introduction of a scheme of incentive bonus based on production with effect from 1st December 1961. Under the scheme, bonus payable to workers will be related to total production, on the one hand, and the output of individual section of the plant to which the worker belongs, on the other. Bonus will be payable only on the attainment of 60 per cent of the rated level of output as determined from month to month, taking into account the conditions of production.

Announcing the scheme, Mr. J. M. Srinagesh, Chairman of Hindustan Steel, said at Calcutta on the 5th inst., that the production bonus scheme was a quicker and surer way of increasing output. According to him, without the additional attraction of bonus, which their co-workers in the private sector steel plants were getting, the workers in the public sector may not put in their best efforts. The Chairman could not say how much the bonus scheme would cost by way of remuneration for workers, but he felt that the cost in terms of rupees would be "considerable."

The introduction of the incentive bonus scheme by Hindustan Steel is an indication that the public sector, too, has realised the value of incentives in getting higher production. It is an admission of the fact that the ownership pattern of a concern has little direct relation to the incentive for work.

There is, of course, nothing new or revolutionary in the bonus scheme introduced by Hindustan Steel. In fact, a similar scheme, which related bonus to the total monthly production, on the one hand, and to the output of individual sections of the plant, on the other, was in force in the Tata Iron and Steel Works at Jamshedpur till 1959. This was replaced by a new and a more refined incentive scheme by mutual consent between the management and workers, under which the quantum of bonus has been divorced from the total output of the plant and linked only to the output of individual sections thereof. It may be noted here that the incentive bonus now in force in the T.I.S.Co. forms one of the three elements in the wage structure of workers, the other two being basic wages and dearness allowance.

DAVANGERE COTTON'S SILVER JUBILEE

Congratulations to the management and staff of the Davangere Cotton Mills Ltd. in Mysore State on the occasion of the Mills' Silver Jubilee celebrated last week-end! From a modest beginning twenty-five years ago, the Mill ranks today as one of the biggest cotton textile manufacturing enterprises in Southern India. The Mill commenced operations purely as a spinning unit, but extended the operations to weaving in 1953-54. The number of spindles installed has gone up from just 12,096 in 1939-40 to 40,864 in 1960-61 and the number of looms from 100 to 1953-54 to 300 in 1960-61. Following the expansion in capacity, production has registered an appreciable increase. The actual output in 1960-61 was nearly 5.18 million lbs. of yarn, as against 2.34 million lbs. in 1940-41, and 5.63 million yards of cloth, as against 367,420 yards in 1953-54. The Mill provides direct employment to 1,956 persons (733 persons in 1939-40), with a total annual wage bill amounting to about Rs. 21.35 lakhs (Rs. 85,409 in 1939-40).

Alongside the quantitative expansion of the Mill, there has also been a welcome improvement in the quality of goods produced by the Mill. It is claimed that the quality of yarn, longcloth and mull compares favourably with the products of other leading mills in India and even abroad. Encouraged by the progress achieved so far, the management has plans for a further expansion of the Mill. A mill with 12,000 spindles and 218 looms in Gadag has been purchased and official permission has been sought to raise the spindlage to 25,000. Modernisation of existing machinery with a view to reducing cost and improving quality is already under way. Further, it is proposed to install modern humidification and ventilation systems in all the sections. On the cloth processing side, mercerised plant, cheese and beam dyeing plant, printing machinery and change-over to continuous peroxide bleaching are included in the scheme.

The working results of the Company for the past few years have been highly encouraging. The value of sales in the year ended March 1961 reached a new record of Rs. 1.68 crore, being 19 per cent higher than the previous year's figure of Rs. 1.41 crore. The gross profit showed a much sharper rise, namely, 59 per cent (or Rs. 15.77 lakhs) to Rs. 36.94 lakhs. The profit earned in the year ended June 1941 was no more than Rs. 93,000. As a result of improvement in profit, the shareholders of the Company have benefited by way of handsome dividends; the gross dividend paid in 1960-61 was 12 per cent *plus* a silver jubilee cash bonus of 5 per cent, the total amount actually distributed being Rs. 5.08 lakhs, as against Rs. 47,000 in 1940-41.

The progress achieved by the Davangere Cotton Mills is thus quite remarkable. Surely, those who are at the helm of affairs of the Mills can look back with pride on the achievements of the past and look forward to a future of further expansion and service to the country.

ROMANCE OF TEA

The tea auction centenary, which Prime Minister Nehru inaugurated at Calcutta on the 2nd inst., brings vividly to one's mind the enchanting role played by tea in the economy of India, in general, and the importance of auctions, in particular. The history of Indian tea dates as far back as 1836, when one Mr. Charles Bruce produced for the first time indigenous tea in Assam. Since then, the industry has grown so remarkably and carved for itself such a prominent place in the country's economic set-up that a proper history of tea, if written, would, as Mr. Nehru very characteristically put it, be "immensely fascinating, much more fascinating than the dull accounts of kings." India is the world's largest producer of tea, accounting as it does for well over a third of the total world output, and, out of every three pounds of tea drunk elsewhere in the world, the share of Indian tea comes to almost one pound. The tea industry is one of the

largest employers (the daily average number employed is nearly a million) and the largest earner of precious foreign exchange every year (Rs. 129 crores out of the aggregate exports of Rs. 640 crores during 1960).

Although production of tea commenced in 1836, it was not until the end of 1861 that some sort of an orderly marketing of the output had been organised; on 27th December of that year, 450 chests of tea were first sold by way of auction by Mackenzie Lyall and Company. The system of auction sales became more and more popular year after year, as witness the substantial rise in the volume of tea sold at the auctions, the extent of the rise noted in the Calcutta market since 1938 being 130 per cent. At present, nearly 60 per cent of tea produced in North India is sold at these auctions annually. The auctions represent a scientifically evolved and efficient system of marketing which, in the weekly three-day sales, handles 100,000 chests of tea, comprising some 4,000 to 5,000 lots. The brokers (who are the auctioners), the buyers (representing exporters), and the blenders and internal traders are all so highly specialised that "lots are knocked down at the rate of four to five a minute, and teas worth Rs. 2-2.5 crores change hands during these three days." The auctions are conducted in accordance with the rules and regulations laid down by the Calcutta Tea Traders' Association.

To revert to the tea auction centenary celebrations. In his speech, Mr. Nehru merely narrated in brief the history of tea and he did not, contrary to expectations, refer to any of the problems confronting the industry. The industry, as readers are aware, is burdened with a heavy tax impost, on the one side, and high cost of production, on the other. The industry, no doubt, appreciates the need for funds (by way of taxes) felt by the Government for implementing the Plan, but only pleads for reducing taxation to a reasonable level. Tea, as Mr. N. Stenhouse, President of the Associated Chambers of Commerce of India, urged at the annual meeting of the Chambers, must be relieved of the heavy fiscal burdens which may inhibit the expansion necessary to fulfil the third Plan target. Further, the tea industry, while it is one with the Government in regard to the provision of better and better amenities to labour, emphasises that any increase in wages should be linked to productivity.

This year's tea crop, it may be noted here, is a bumper one, the estimated output being 750 million lbs. and the trend of production is likely to be upward in the coming years also. Common varieties of tea can be exported in their entirety after providing for internal consumption only if the foreign buyer can be accorded a reduction in prices. Such a reduction cannot be achieved, unless the Government lowers the excise and export duties.

S.T.C.'s PERFORMANCE

The State Trading Corporation's fifth annual report, unlike its fourth annual report which covered only the nine-month period from 1st July 1959 to 31st March 1960, has a full twelve-month coverage from 1st April 1960 to 31st March 1961. It highlights the fact of relatively better performance by the Corporation, in terms of both total turnover and exports in particular, as compared with the nine-month period covered by the previous report. The total turnover (covering both imports and exports) in 1960-61 was Rs. 65 crores, whereas in the previous period it was Rs. 43 crores. Exports alone in the respective periods were Rs. 36.6 crores and Rs. 23.1 crores. The Corporation's working results have led to a net profit of Rs. 1.44 crore, permitting a dividend of 10 per cent on share capital, as compared with 9 per cent for 1959-60.

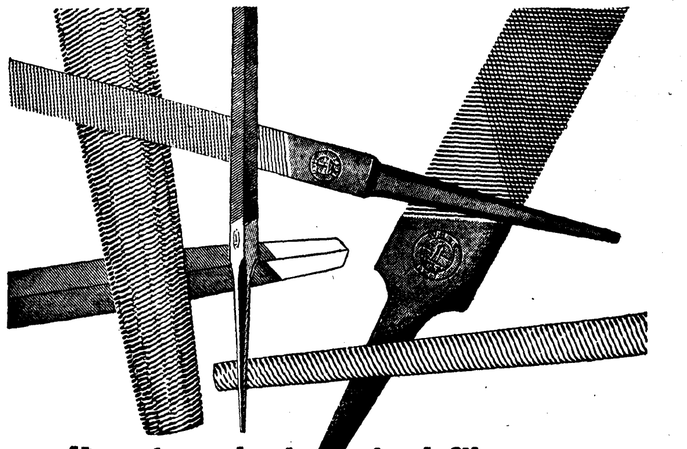
It is noteworthy that a larger proportion (52 per cent) of the 1960-61 exports, as compared with the 44 per cent of exports in the previous period, was accounted for by ores and mineral products. In the year under review, the Corporation exported more than three million tons of iron ore and also finalised a three-year agreement with the Japanese steel industry for a total supply of 6 million tons of Indian iron ore. As a result of barter deals and joint-marketing arrangements, the Corporation's exports of manganese ore increased from 3.9 lakh tons in the nine-month period of 1959-60 to 8.5 lakh tons in 1960-61. If exports of manganese ore and ferro-manganese are taken together, the total works out to about one million tons, representing twice the exports in 1959-60. It would appear that the further improvement in the exports of mineral ores, which have always constituted the larger part of the Corporation's export business, represents the main *raison d'etre* of the S.T.C. This function of mineral ore export is likely to be discharged still better in the years to come when the trade development fund, which the S.T.C. has created out of its profits and which now amounts to Rs. 2.2 crores, is mainly used for the stipulated purpose of financing schemes connected with improvement of mining, transport and port facilities.

How well the Corporation will be able to discharge its various functions taken together, is open to doubt. These functions, which have just been broadly defined by the Union Minister for Commerce in the Lok Sabha in response to the Estimates Committee's relevant recommendation calling for their definition in the light of experience gained hitherto, are: first, the function of trading generally with State trading countries as well as other countries in commodities entrusted to it; secondly, the exploration of new markets for traditional items of export and the development of new items of export with a view to diversifying and expanding India's export trade; thirdly, the import and/or internal distribution, at the instance of the Government, of any commodities in short supply with a view to stabilising prices and rationalising distribution; and, lastly, the implementation of such special arrangements for import, export and/or internal distribution of particular commodities as the Government might adopt in the public interest. The S.T.C. has, of course, been discharging these functions, in recent years, though how well has been a debatable issue. It has arranged imports of several scarce items like caustic soda, fertilisers, non-ferrous metals and art silk yarn, but it does not appear to have been perceptibly successful in bringing down or stabilising their internal prices, though it claims to have sold them to actual users at prices allowing for only a small margin of profit for distributors. The Corporation's handling of imports of some of these commodities in short supply in exchange for a variety of Indian goods like manganese ore, footwear, hides and skins and tobacco has been criticised on the ground that, in such 'canalised' barter deals, it has either accepted lower prices for Indian goods or paid higher prices for foreign goods as compared with the prevailing prices, with the result that the country has been a loser in the end.

There is as yet no cogent reply from the official side to this line of criticism relating to the S.T.C.'s barter deals. The Corporation's rejoinder, recently published in a Bombay paper, is not quite enlightening on the question for it has dealt with it in a summary fashion without giving full details regarding the various barter deals. Whether the special trade arrangements finalised in 1960-61 by the Corporation with various countries in Western Europe for an overall trade of about Rs. 15 crores either way will be uniformly beneficial to India, cannot be claimed with certainty. It is not unlikely that, even where they are less advantages to this country, the Government will seek justification for them in the circumstance of a large adverse balance of trade with Western Europe. Again, recent complaints that some of the Indian goods exported by the S.T.C. to East European countries under special arrangements have been re-exported by them to other countries have brought some discredit to the Corporation's special trade arrangements. The Corporation's import and export activities, which are stated to have increased further in 1961-62, should, therefore, be subjected to closer scrutiny by experts.

Britain has repaid a further £50 million of its recent borrowing from the International Monetary Fund. This early repayment has been made possible by a continued return of international funds to Britain following the restoration of confidence in sterling by the measures taken on 25th July 1961.

It will be recalled that on 4th August last, the I.M.F. agreed to a drawing by—that is, agreed to lend to—Britain the equivalent of $1,500 million (about £535 million), together with a one-year "stand-by arrangement" for a further $500 million (about £178 million) which could be immediately drawn upon as required and which has not been used. These arrangements were made in order to help Britain resist the speculative pressure on sterling which had built up during the summer.



How to select steel files with built-in efficiency...

LOOK FOR THESE SUPERIOR QUALITIES IN YOUR LIGHTHOUSE STEEL FILES:

Precision: The uniformity in the angle and the level of each cut are precision-perfect for precision-filing.

Efficiency: The special angle of the cuts results in greater efficiency with less exertion by your workers.

Durability: Made from the finest steel and meticulously heat treated, Lighthouse files are ideal for various applications, even under rough handling.

Craftsmanship: Lighthouse Steel Files are tooled by skilled craftsmen working under expert supervision.

Lighthouse Steel Files are available in a wide range.

MR. KANUNGO STOUTLY DEFENDS S.T.C.

AIR TRANSPORT—COMMON MARKET—G.A.T.T.

From Our Special Correspondent

NEW DELHI, *5th December*

THE Minister of Commerce, Mr. Nityanand Kanungo, made a statement in the Lok Sabha last week on the functions and activities of the State Trading Corporation which substantially reiterated the Government's satisfaction with its present role and activities. "The Corporation," he said, "has now become a most valuable instrument of the Government's commercial policy. It has not only supplemented the activities of the private sector and has rendered help to private trade in spheres in which the help was needed but it has enabled Government to deal effectively with the complex variety of trading problems which arise in the present world conditions." No better testimony could have been expected by the S.T.C. Mr. Kanungo, however, made no attempt to deal with any of the specific criticisms of its functioning; his resume of the Corporation's role was only intended to lead up to the announcement of the Government's decision on the Estimates Committee's recommendation last year that the S.T.C's functions should be clearly defined on the analogy of the Industrial Policy Resolution which demarcates the areas open to the private and public sectors.

DELHI LETTER

Many who were somewhat critical of the Corporation were then inclined to favour such definition in the hope that it would help to circumscribe its residual role and prevent encroachments into the field of private trade, internal and external. But it was fairly obvious even then that the Government would like to use the S.T.C. for a variety of purposes, few of which could be clearly visualised in advance and that any pressure for defining them would only result in very loose general statements of objects, leaving much latitude for its activities. This is exactly what has happened now. Mr. Kanungo has stated that the Objects clause in the Corporation's Memorandum of Association will be amended to include the following functions:

(*a*) to undertake trading generally with State trading countries as well as other countries in commodities entrusted to it;

(b) to explore new markets for traditional items of export and to develop exports of new items with a view to diversifying and expanding the export trade;

(*c*) to undertake, at the instance of Government, import and/or internal distribution of any commodities in short supply with a view to stabilising prices and rationalising distribution; and

(d) generally to implement such a special arrangements for import, export or internal distribution of particular commodities as Government may adopt in the public interest.

Useful Role

With such a flexible charter, the Corporation can do anything which it, or the Government, wishes to do, but Mr. Kanungo took great pains to point out that it has been always constructive in the operations it has undertaken. Mentioning in particular the "link deals" on an experimental basis, he assured the House that the S.T.C. exercises much care in ensuring that traditional markets are not neglected and that there is a net addition to exports. Particularly last year, the S.T.C. seems to have made up for its earlier setbacks in the export of manganese ore; as a result of the combined effect of barter deals, joint marketing arrangements and other measures, its exports of manganese have increased from 3.94 lakh tons in 1959-60 to 8.52 lakh tons in 1960-61. Mr. Kanungo claimed that increases in exports of woollen textiles, shoes and pulses were largely due to the efforts of the Corporation and that its success in these fields "affords promise of the usefulness of this organisation in developing markets for new commodities."

By evolving new techniques, the S.T.C. claims to have established trade with countries of Western Europe where difficulty was felt before. The overall trade under these arrangements with this area is expected to be of the order of Rs. 15 crores either way. The annual report of the Corporation which has now been presented shows that the total turnover in commodities directly handled by the Corporation has increased from Rs. 10 crores in 1956-57 to Rs. 66 crores in 1960-61; the exports of such commodities expanded from Rs. 5.79 crores to Rs. 36.59 crores in the same period. More important is the S.T.C's claim to have served the private sector through its indirect business, which increased from Rs. 19 crores in 1957-58 to Rs. 46 crores in 1960-61: it levied a service charge on only half of this business. It has a Trade Development Reserve of Rs. 2.15 crores (after adding Rs. 1 crore last year) and has set apart Rs. 30 lakhs for providing financial assistance by way of loans for the improvement of communications in mining areas and for other operational facilities in mines, rail-heads and ports, to add to ore exports.

Mr. Kanungo's statement emphasises that, besides such planned development of facilities, S.T.C's ore exports have also assured continuity of supplies to foreign steel mills and introduced some order in the internal trading conditions; hundreds of competing exporters from this country perhaps did not secure as good a price as the Corporation can by virtue of its leading position. This adds up to the credit side of its balance-sheet and it is not easy to dismiss it.

Cement Agency

On its very controversial cement agency functions, Mr. Kanungo said little, except that the Corporation had paid a surplus to the extent of Rs. 11.24 crores to the Government until March 1960. The annual report shows that thereafter the Corporation was in the red in this branch of activity. Its cement exports have declined due to competition in external markets and higher prices of Indian cement; on one lakh metric tons exported, the Corporation incurred a loss of Rs. 17 lakhs last year. Even on internal distribution, surpluses have ceased and there was a deficit of Rs. 1.25 crore last year; the new price scheme will presumably help it to avoid further losses. Though some critics point out that the S.T.C. has created pockets of scarcity in cement, it claims that it has eased the supply position in some areas through rationalisation of movement and coastal transhipment at some extra cost. It is now for the private sector to challenge Mr. Kanungo's assertion that, in "selecting commodities to be entrusted to S.T.C., Government always follow the principle that S.T.C. should enter only those fields of trade where the normal trading mechanism has been found to be inadequate or where the S.T.C. could usefully supplement the activities of the private trade.

Presently, the Corporation is directly handling exports of about 36 commodities and imports of about 33 commodities. Its balance-sheet, in spite of some doubtful deals and losses on certain items of exports, shows a gross profit of Rs. 4.96 crores, net profit of Rs. 1.44 crore and a dividend of 10 per cent was declared last year. If, in future, it is careful enough to avoid some of its earlier mistakes and is able to improve its administrative organisation, it can further enhance its prestige. As the *Economist* Intelligence Report pointed out, its virtues will remain prominent by the side of the shortcomings of the private sector in spite of its longer experience and established position in trade.

* * * *

Air Corporations Bill

The Air Corporations (Amendment) Bill marks a significant relaxation of the monopoly of scheduled air services enjoyed by the two nationalised corporations—I.A.C. and Air-India International. The proposed amendment of Section 18(1) of the Act will enable the Government to issue licences for scheduled air services which are not provided by the two corporations or their associates. This, of course, is far from introducing any element of competition in the air which has been recognised to be necessary in Britain where the Air Transport Licensing Board has approved applications of private airlines for 18 international and 4 internal routes, following an amendment of the law which came into force earlier this year. In the development of feeder services in India to supplement the I.A.C's operations, there has till now been no evidence of a fresh approach; as in the case of other public sector schemes, there might have been reluctance to introduce private enterprise in areas which the public sector may later on claim for itself. There have been rumours that the Government intends to favour a particular operator —the Kalinga group—because of party influences, but this has now been denied officially. Whatever be the actual inspiration for the present step, the measure should be commended in principle.

Its actual effect in opening up new routes and catering to the potential traffic will, however, depend upon the number of aircraft which private companies can muster without detriment to the non-scheduled services they are now providing on several routes. If there is merely a diversion, there will be no net gain; seven companies and 17 flying clubs holding permits for such services now carry about one-tenth of the passengers and almost as much as the cargo lifted by I.A.C. Perhaps, some of these companies can utilise the available capacity more intensively if some feeder routes are thrown open to them; they may also be able to augment their fleet with moderate foreign exchange or even through collaboration arrangements or supplies on credit. For such expansion, they should be able to take a long-term view of their business and, if the I.A.C., like some State Road Transport authorities, interferes with licensing policy or seeks to reserve routes which it may later on like to enter, the purpose may be defeated.

It is well known that I.A.C. has not taken sufficient interest in developing feeder routes. No survey has yet been made of the traffic potential which is considered to be very large. Instead of using Herons on shorter routes, it employed them on main routes and discarded them soon, whereas, in other countries, they have been giving very good service. Vikings have also been wasted by the I.A.C.; it demurred when Super-Constellations were available from A.I.I., though it is using them now on internal routes on charter from A.I.I. I.A.C.'s attempts to economise by using fewer pilots and taking more passengers in latest types of aircraft can be commended, if it had maximised its net income, but, from all accounts, the number of vacant seats on each flight when there are long waiting lists of passengers at all starting points shows that its operational planning is defective.

Not the least of the advantages of encouraging private enterprise on feeder routes is the increase of opportunities for employment of pilots who are being trained and wasted. Small aircraft, seating about 16 persons, would be adequate for short runs and more pilots can thus be absorbed. At one stage, I.A.C. overestimated its needs and there are now about 75 unemployed pilots; I.A.C. is able to absorb only about 10 per year, because of the larger aircraft it is now using. Commercial pilots are valuable in times of emergency, when supplies have to be airlifted and it is as well that all these other aspects of civil aviation are not left entirely to the two Corporations.

Some minor changes are also contained in the Bill. A.I.I. will henceforth be known as Air India, the name which is familiar abroad. The Air Transport Council, which has no work before it (and involves expenditure of Rs. 80,000 per year) will be dissolved and reconstituted only when necessary. The Corporations will also be empowered to make regulations for issue of passes free of cost.

* * * *

Common Market

Mr. Morarji Desai duly completed last week the formality of a report to Parliament, without adding much to the information available to the public. It was, however, significant for the reiteration of his earlier stand that the kind of arrangements under which Britain proposes to accommodate some members of the Commonwealth as associated countries with the European Common Market is obnoxious to the Government of India. Reports recently received from Brussels say that Britain desires to cut the Gordian knot of the Commonwealth problem by actively sponsoring this solution. The full text of Mr. Edward Heath's statement before the E.C.M. Council of Ministers on 10th October has now been communicated to all Commonwealth Governments, though the earlier secrecy about it has created misunderstanding (Canada asked for it and was refused a copy). There seems to be nothing seriously objectionable in it. Mr. Heath has only underlined the importance of the Commonwealth ties and the pattern of trade and Britain's reluctance to alter them to the disadvantage of all the members; it is intriguing why it was kept such a closely guarded secret till it leaked out, particularly when the *communiques* issued at the end of the talks which British Ministers had with Commonwealth Governments last July emphasised that there would be close and continuous consultations at all stages of the negotiations.

While the pro-Commonwealth sentiments expressed by Mr. Heath are commendable, the order in which he propounded certain possible solutions to the problem confirms India's suspicions that some countries may be specially recommended for associated status, with the result

(*Continued on page 1111*)

WATCH AND CLOCK INDUSTRY IN JAPAN

MODERNISATION PLANS MAKE HEADWAY

By A Correspondent in Japan

HUMAN beings used to depend on the sun or the hour-glass to know the progress of time. Today clocks and watches have become indispensable ingredients of modern living. The Japanese clock and watch industry thrived even in pre-war days. But during war-time, when watches were regarded as luxuries, it began to wane. The production of clocks in particular was suspended during the 1942-45 period when manufacturers were forced to switch their production to munitions industries. The output of watches and clocks dropped to a mere 70,000 pieces by 1945 from the 3,320,000 pieces in 1936.

The post-war recovery of the Japanese timepiece industry was rapid, except in the field of pocket watches. The production of clocks surpassed its pre-war peak in 1952 and watches in 1953. The development of the industry has been dependent mainly on fast-expanding domestic demands, but the industry holds out promising export prospects, as Japanese timepieces are winning a high reputation abroad in terms of quality.

The Japan Clock and Watch Association is the core of the Japanese timepiece industry. The Association embraces 37 watch and clock manufacturers throughout the country. Leading watch makers are Daini Seikosha Company, Citizen Watch and Takano Seimitsu. The principal clock and time-switch makers are K. Hattori & Co., Tokyo Tokei Seizo Kaisha, Rhythm Watch Company, Toyo Clock Industries Company, Takano Seimitsu Kogyo K.K., Meiji Clock Company, Aichi Tokei Denki K.K., etc. The centres of the watch and clock manufacturing industry are Tokyo and Nagoya.

Mass Production System

The Japanese watch and clock industry has made strenuous efforts for its modernisation, with special emphasis on the conveyor system. The mass-production system has been established and labour productivity has been honed considerably, as will be seen from the following figures:

(In thousand pieces)

	Watches (wrist, pocket)	*Alarm, table clocks*	*Wall, electric and other clocks*	*Total*
1956 ..	2,686	2,877	1,253	6,816
1957 ..	3,419	3,372	1,455	8,246
1958 ..	4,309	2,856	1,329	8,494
1959 ..	5,447	3,229	1,970	10,646
1960 ..	7,147	4,724	2,342	14,213

Japan ranks second in the world after Switzerland in the production of wrist watches. So far as the production of watches and clocks goes, it is the fourth largest producer in the world, following Switzerland, the United States and West Germany. Japanese watch makers, moreover, are confident of the quality of their products. A recent official testing over a stretch of six months showed that Japanese watches are qualitatively superior to most of the foreign products.

After the fashion of the time, Japanese watch manufacturers are turning out thin wrist watches. K. Hattori & Co. has recently come out with the world's thinnest wrist watch (only 2.9 mm. in thickness).

It might have to be admitted that the Japanese watch and clock industry is too busy meeting the domestic demand to export its products in real earnest. But recently, it gradually started showing its enthusiasm in cultivating overseas markets and long-term bulky export contracts have been signed with the United States and Canada. During 1960, the industry exported 1,340,000 pieces which were broken down to 800,000 alarm and table clocks, 250,000 wall clocks, 210,000 wrist and pocket watches, 60,000 time-switches and 20,000 electric clocks. The United States is one of the biggest export markets for the Japanese watch and clock industry.

Watch and Clock Exports from Japan

	Wrist, pocket watches	*Table, alarm clocks*	*Wall, electric clocks and others*
U.S.A.	15,201	391,110	19,534
Thailand	257	162,589	176,152
Formosa	3,054	219,810	41,888
India	2,574	205,575	32,851
Singapore	448	55,681	184,152
Canada	72,411	122,501	37,713
Communist China ..	206,788	16,421	..
Ceylon	..	..	154,295
Australia	1,105	133,552	..
Ryukyus	11,292	72,771	49,568
Malaya	..	21,438	101,967
South Korea ..	4,757	98,750	17,783
Hong Kong ..	11,967	62,196	36,955
Total ..	472,854	1,639,894	851,858

In exporting watches and clocks, the industry and the Government are taking joint steps to guarantee the quality of exports. Under the strict supervision of the Government, the Japan Watch and Clock Inspection Institute examines all clocks and watches prior to shipment. Any product without the label of quality approval can never go abroad.

What the industry is exporting are not only complete watches and clocks or movements. The Citizen Watch Company has concluded a contract with India to export a wrist watch plant. The Japanese watch maker will provide the necessary plant, machinery and equipment and also train Indian technicians in Japan. The projected watch factory, when completed in five years, will be capable of manufacturing 200,000 to 800,000 pieces a month. It will also assemble those parts which will be imported from Japan.

Trade Liberalisation

Should the importation of watches and clocks be freed, what will happen to the Japanese industry? Watch manufacturers do not seem over-worried about the challenge from their foreign counterparts. As a matter of fact, Japanese watches have become qualitatively competitive, and their prices are still attractive enough to the consuming public in Japan. Foreign watches are now subject to 30 to 40 per cent customs tariffs when they come into Japan. But the situation will not be the same with clock makers. The entrepreneural scales of these clock manufacturers are small and far less competitive. Since clocks do not require much manual work, the weight of labour costs is not large in the production of clocks. The biggest rival is West Germany. The table below shows the watch and clock imports into Japan:

(In thousand pieces)

	Wrist, pocket watches	*Table, alarm clocks*	*Wall, other clocks*
1955	226	1.8	4.6
1956	290	3.7	0.5
1957	329	0.4	0.2
1958	221	0.4	0.2
1959	193	0.5	0.2

Prospects

The Japanese watch and clock industry is well aware that the enhancement of labour productivity is the way to survive intensifying competition with foreign products. The industry, therefore, is striving hard at present to secure the domestic market and at the same time to expand its overseas markets. In the phase of exports, the U.S.—the largest client of the Japanese watch and clock industry—offers a vast market for low-priced timepieces. It is reported that the annual demand in the United States is roughly 20 million pieces. It is quite possible for the Japanese manufacturers to enjoy a far larger share of this lucrative market. The overseas demands for radio sets with clocks are also on the sharp increase. The watch and clock industry is, therefore, a hopeful export industry and is in need of redoubled efforts to expand its export.

On the domestic scene, the future prospects of the industry are also cheering. By 1965, the population above 15 years of age is expected to increase by as many as 2,500,000 persons over 1960. At this rate, the annual demand for watches and clocks will expand by at least 500,000 pieces. The current consumption-boom encourages the industry and business buoyancy is likely to stay on for the coming years.

The most opulent

taffeta of the season

...the one with Amcel acetate

The advantages of Amcel's Acetate for dress fabrics such as satins and brocades are already well-known. Amcel's Acetate also makes the finest taffeta. It can be finished in many luxurious ways and takes glowing colours.

Amcel's Acetate filament yarns are spun to meet your specific needs for each type of cloth. There is an Amcel yarn for luxuriously heavy to light satins, for all types of taffetas, lightweight to heavy faille, for tricot jerseys, sheer cloths, brocades or novelties such as suitings of sharkskin or tweed effect.

DUNCAN BROTHERS & CO., LTD. are pleased to announce their appointment by AMCEL CO., INC. as the exclusive sales agents in India for all Amcel products. Messrs. Mittersain Rupchand, 336 Kalbadevi Road, Bombay are sub-agents in the states of Maharashtra and Gujerat and Messrs. Sardesai Brothers Ltd., M-106 Radial Road, Connaught Place, New Delhi-1, sub-agents elsewhere in India.

FREE MARKET FOR SILVER IN THE U.S.

IMPLICATIONS OF PRESIDENT KENNEDY'S DECISION

*[A brief reference was made in our last issue to U.S. President Kennedy's action freeing silver in the U.S. to the status of any other commodity, but retaining its use for subsidiary coinage. We now publish on this page, by the courtesy of the First National City Bank of New York, a full account of the developments leading to President Kennedy's decision, and its implications to both the U.S. and the rest of the world, against a brief historical background. This account is an extract from the December (1961) issue of the Bank's Monthly Letter. It will be noted, on a perusal of the article, that there is a shortage of silver in the world, that consumption of silver for both coinage and industrial purposes in the free world outside the U.S. is tending to exceed production in countries outside the U.S., that, though there is a sizable shortage of silver in the U.S. itself, it is only a fraction of the vast quantity of silver held in reserve by the U.S. Treasury, and that the price of silver must inevitably rise, both in the U.S. and elsewhere, to a level which will attract larger supply from the hoarded stocks and through increase in production.—*ED.]

MUCH has been written about the $5.8 billion decline in the U.S. gold reserve over the past four years. Meanwhile, almost unnoticed by the general public, a drain on U.S. silver stocks has set in. Even though the current decline dates back only to the summer of 1959, and has been of far smaller magnitude than in the case of gold, a practical policy question was posed for the U.S. Treasury.

The problem is being resolved in a sensible way. On 29th November, at the direction of the President, the Treasury discontinued sales of silver for use in the arts and industry. To assure adequate supplies of the metal for subsidiary coinage—halves, quarters, and dimes—the President instructed the Treasury to reduce circulation of silver certificates, which tie up silver bullion as backing. He said that he would ask Congress next year to authorise the Federal Reserve Banks to issue $1 bills (practically all of which today are silver certificates) and also to repeal the Silver Purchase Acts. The programme as a whole "will permit the establishment [in the United States] of a broad market for trading in silver on a current and forward basis comparable to the markets in which other commodities are traded."

In the London free market, the initial reaction was a rise from the equivalent of 93.83 cents per ounce on 28th November to 99.40 cents on the 29th. In New York the market price advanced from 91⅛ cents to $1.00⅜.

U.S. Treasury officials have had the silver problem under close study for some time and have had meetings with representatives of producers and users. On 9th October, silver matters were transferred from the Bureau of the Mint to a new Office of Domestic Gold and Silver Operations under the direct supervision of Robert V. Roosa, Under-Secretary of the Treasury in charge of monetary affairs.

Drain on Stocks

The decision to discontinue sales was precipitated by threatened exhaustion of Treasury holdings of so-called free silver. U.S. silver stocks on 30th June, 1959 exceeded 3.4 billion fine ounces, the greatest aggregation of the white metal ever accumulated by any nation. However, all but 212 million ounces of this silver was tied up in coinage or as collateral behind silver certificates, which constitute about 7 per cent of our total paper currency circulation. Since June 1959, Treasury holdings of free silver have dropped from 212 million ounces to 22 million ounces.

Treasury free silver has not been going out in exports; it has been absorbed by constant growth in our silver currency circulation and sales for use here in the arts and industry. The discontinuance of Treasury sales theoretically could lead to an advance in price to $1.29 per fine ounce, the point at which redemption of silver certificates would be the cheapest way for users to get the metal.

The potentiality of retirement of silver certificates would put an automatic ceiling on the price of the metal for a long time to come. Few practical observers expect that the price of silver will rise to anything like $1.29, particularly since the Treasury will take care of its requirements for subsidiary silver coinage by retiring silver certificates. In the view of Mr. Simon D. Strauss of the American Smelting and Refining Company, as reported in the November issue of the *Engineering and Mining Journal*, a price of $1.10 would bring out quantities of hoarded silver and stimulate exploration and new production.

Historical Background

The silver problem today cannot be fully understood without recalling a few salient facts of monetary history. The original dollar was a silver dollar, though the emerging importance of gold led Congress, on the recommendation of Alexander Hamilton, to establish in 1792 a bimetallic gold and silver standard. This failed to work, because the relative values of the two metals did not stand still, and gold emerged as the dominant monetary base with silver playing a subsidiary role. The pound sterling, once a pound of silver, became the leading currency of the world after the Napoleonic wars as a gold sovereign. Other nations, save China, generally and gradually shifted to a gold or gold-exchange standard.

The decline of silver was powerfully resisted in the United States which, from about 1871 to 1900, was the world's biggest producer of the metal and also had a large agricultural population that attributed falling commodity prices to shortages of money. Since 1873, when the United States formally abandoned bimetallism, Congress at various times has passed laws requiring the Treasury to purchase silver not only for use in subsidiary coinage but also as backing for paper silver certificates. The United States has thus accumulated a hoard of some 1.8 billion ounces of silver to implement the rights of holders of $2 billion-odd silver certificates to redeem them.

The silver purchase laws in force are the Silver Purchase Acts of 1934 and 1946. A Presidential proclamation in December 1933, when the New York market price was 44 cents, prescribed that the Treasury should pay 64.64 cents per fine ounce for domestically mined silver. After several changes made by Presidential proclamations, the buying price became fixed by legislation—in 1939 at 71.11 cents and in 1946 at 90.5 cents, the level presently prevailing. Silver purchases were also conducted abroad, but abandoned in 1942 after they disrupted the world market and forced China off the silver standard.

Between 1942 and 1959, apart from Lend-Lease transactions in silver, U.S. silver stocks were further enlarged out of domestic production. The arts and industry, for the most part, could satisfy their needs from cheaper sources abroad. Since 1959, the world price has been above the Treasury's 90.5 cent buying price, with the result that the Treasury has been getting little silver.

While earlier silver legislation had particularly in mind assistance to producers and increase of money supply, the Silver Purchase Act of 1946 took account of the problems of silver users and authorised Treasury sales. The selling price, until discontinued on 29th November, was 91 cents per ounce at the San Francisco mint and somewhat higher in Denver and New York. Treasury selling, restricted to domestic users, held down the open market price in New York—quoted since 1959 at 91⅛ cents by Handy and Harman, leading fabricators of gold and silver in the United States. In London, which is now the principal free market for silver as well as for gold, the price over the past two years has been ranging between 92 and 94 cents. The higher London price, explained by enlarged demand for silver abroad, has been diverting supplies which used to go to the American market.

110 Million Ounce Annual Deficiency

Most silver production is concentrated in North America. In the twentieth century, the United States has been displaced by Mexico as the world's largest producer; Canada holds third place. Silver production in the United States—except in 1959, when output was depressed by strikes—has held near a level of 40 million fine ounces a year. Silver coinage alone has been taking somewhat more than this amount in recent years. With net usage in industry and the arts upwards of 100 million ounces a year, the U.S. silver deficiency has exceeded 110 million ounces annually since 1959. Although complete figures are lacking for a full accounting of supplies and uses, the following table shows the changing picture:

Silver in the United States

(In millions of fine ounces)

	1957	1958	1959	1960	1961
Output	38.7	36.8	23.0	36.8	40.0†
Uses:					
Industry and arts	95.4	85.5	101.0	102.0	104.0†
Coinage	52.0	38.2	41.4	46.0	48.0†
Total	147.4	123.7	142.4	148.0	152.0†
Excess of uses over output	108.7	86.9	119.4	111.2	112.0†
Imports:					
Commercial	110.3	62.6	24.1	45.0	35.0‡
Lend-Lease returns	80.8	103.4	45.0	15.7	n.a.
Exports	10.3	2.7	9.2	26.0	28.5‡

The deficiency of U.S. production has been covered by imports, including returns of silver lent to the United Kingdom, the Netherlands, India, Pakistan, and certain other countries during World War II under Lend-Lease legislation. But returns of Lend-Lease silver have dried up and regular commercial imports have been falling off with the rise in siver usage abroad.

According to estimates by Handy and Harman, consumption in the rest of the free world has reached the level of production, about 170 million fine ounces a year. Usage in the arts and industry abroad now takes three quarters of the new production. The United Kingdom, India, and Pakistan withdrew silver coins from circulation as a means of facilitating return of metal obtained under Lend-Lease during the War, thus adding to world silver supplies. But new silver coinage programmes in France and Italy are currently adding to needs for monetary silver abroad.

Thus, on the basis of figures for the past two years, the American shortage of some 110 million ounces is also a measure of Free World shortage. Offerings from Red China, for balance-of-payments reasons, have been reported in the Press as likely to reach 40 million ounces in 1961. These, believed to come from stocks of coins surrendered to the Government, have been supplementing supplies in Western Europe.

The natural effect of the silver shortage has been to firm up world prices and this tendency is strengthened now that the U.S. Treasury has dropped out as a seller. A rise in the price will stimulate production, though it must be borne in mind that most of the world's silver is produced from ores bearing copper, lead, zinc, and gold. Thus, prices of other metals have influences on silver production. There is, however, no doubt that a sustained advance in the price of the metal could produce a sizable increase in supply by stimulating exploration and new production as well as by inducing a melting down of silver coins—the kind of automatic demonetisation that has occurred so often over the world's history when hard money has become worth more as metal than as money.

3.3 Billion Ounce U.S. Stocks

Along with gold, silver coins and objects of art are often held in many parts of the world as stores of value. No one can say for sure what the aggregate amount might be or how much would be turned back into metal at any given price level. But it is possible to measure U.S. silver stocks in forms of coins, reserves against silver certificates, and Treasury free silver. These stocks aggregate more than 3.3 billion fine ounces, an amount that dwarfs the calculated annual shortage of 110 million ounces a year. Of this stock, about 1.2 billion ounces represent the content of subsidiary silver coins—dimes, quarters, and half dollars. These would not be worth more as silver than as money, unless the price of the metal rose above $1.38 per fine ounce. There is a somewhat limited circulation of standard silver dollars, which, technically, would be worth their weight in silver content if the price rose to $1.29. But the bulk of the U.S. silver stock consists of bars or bullion held in reserve for redemption of silver certificates. Since silver certificates are payable to the bearer on demand in silver, this silver bullion could be drawn upon and presumably would be, if the price of the metal got up much beyond $1.29.

WORLD WOOL OUTPUT AT PEAK LEVEL

MARKED RISE IN CONSUMPTION—PRICES HIGH

WOOL prices continue to rule at relatively pretty high levels of the world over. The latest available quotation for Dominion wool (64s) in the London market is 105d. per lb. (c.i.f. cost in Britain), as against just 81d. prevailing this time last year; the quotation had touched as high as 114d. early in May 1961. The distinct firmness of wool prices reflects the tight statistical position of this fibre. Stocks throughout the world are said to be very low. In the U.K. for instance, stocks of marine wool are at their lowest level since 1952, while consumption is running higher than in 1960. It is further said that the East European countries are buying large quantities of wool. "There are," to quote a report, "few sources of cheap wool available and, with top-makers low in supplies, demand from Bradford has become more active." The rise in wool prices would, perhaps, have been more marked but for the Japanese Government's decision to cut down Australian wool consumption from 30 to 15 per cent and reports suggesting a possible reduction of 10 per cent in the number of spindles operating in Japan.

The firmness of wool prices is likely to persist during the remaining months of the current wool season (July 1961-August 1962). It is true that the estimated world wool production in the season is higher than that in the 1960-61 season—5,660 million lbs. (greasy basis), as against 5,573 million lbs. But the rate of increase in output seems to be slower than the pace of rise in consumption. Further, this year's increased production, according to a recent review of the trends in world wool economy (by Mr. N. Cuthbert and Mr. W. Black) published in *The Times Review of Industry*, London, is coming on a market where stocks are rather low. The high prices ruling during the second half of the last season enabled the South American producers and the New Zealand and South African Wool Commissions to get rid of much of their accumulation. Total world availability in 1961-62 is, therefore, unlikely to be higher than in 1960-61. At the same time, stocks in consuming countries, though slightly above last year's, are not thought to be excessive.

Production Trend

The anticipated rise of 87 million lbs. in world wool output during 1961-62, as compared with the previous season, is accounted for by all the three sub-groups, merino, crossbred and others. The rise is particularly notable in the case of merino wool, the tentative estimate of output being higher by 55 million lbs. at 2,331 million lbs., as against 2,276 million lbs. The production of crossbred and others is estimated at 2,069 million lbs. and 2,041 million lbs., as against 2,041 million lbs. and 1,257 million lbs., respectively, in 1960-61. India's share in the total world wool output is negligible, being less than 1.3 per cent; the estimated production in 1960-61 is 72 million lbs. All the major producing countries, with the exception of Communist nations, have shared in the improvement in production as is evident from the following table:

(In million lbs.—greasy basis)

Country	1961-62 (provisional)	1960-61	1959-60	1934-38 (average)
Australia ..	1,679	1,632	1,680	995
New Zealand ..	599	588	577	299
Argentina ..	410	409	423	378
United States ..	325	324	319	470
South Africa ..	322	305	319	261
Uruguay	195	181	159	114
United Kingdom ..	125	120	124	111
Other free world countries ..	915	908	909	727
Soviet Union, China and Eastern Europe	1,090	1,106	1,102	435
World total ..	5,660	5,573	5,613	3,788
Of which:				
Merino	2,331	2,276	2,316	1,579
Crossbred ..	2,069	2,041	2,033	1,265
Others	1,260	1,257	1,264	944

Source: Commonwealth Economic Committee.

The world wool output of 5,660 million lbs., estimated for the current season, is an all-time peak which has never been seen before. The figure represents a rise of 50 per cent., as compared with the average production in the last five pre-war years (1934-38) and is a quarter greater than the average of the years 1951-52 to 1955-56. In Australia, where drought had reduced the weight of the wool clip by about 4 per cent last season, autumn and winter rains have produced more favourable conditions this year. Fleece weights and staple are both expected to show an improvement except in parts of New South Wales and Queensland where drought has again been serious. New Zealand estimates set the current season's output 2 per cent higher. Conditions have on the whole been suitable, though late snowstorms in South Island may adversely affect lambing. It may be noted here that Australia and New Zealand together account for about 40 per cent of the aggregate world wool production.

Elsewhere in the non-communist world, prospects seem to be good. A higher clip, greatly improved in quality, is expected in Uruguay, and reports of drought in the Southern part of Argentina must be offset against the much improved expectations in the North. The South African clip is expected to be brighter, healthier and more reliable, as a result of the breaking of drought. A slightly larger output is also expected in the U.S. In both quality and quantity, the U.K. output, it is said, should show a marked improvement. Pastoral conditions have been more suitable and fleece weights are up by about 5 per cent.

Sheep Numbers Growing Fast

It will be interesting to note here that the world sheep numbers are growing faster than the human race. Thus, the number of woolled sheep (other than the 63 million mutton breeds) has gone up in the past ten years by more than 30 per cent from 705 million to 917 million at present, while the total population of the world has risen by 16 per cent from 2,500 million to 2,900 million. Of the total world sheep population, Australia, the biggest wool producer in the world, alone accounts for as much as 155 million, nearly 15 sheep per person. In the U.S.S.R., the second largest producer, people outnumber woolled sheep, the ratio being 1.5: 1.0. New Zealand, the third biggest wool producer, has the highest ratio of sheep to humans—nearly 20 to 1. Next comes Argentine which has more than two sheep per person, followed by the U.S. and South Africa, the ratio being one to six and 2½ to one, respectively.

An analysis of the materials used by wool industry in the world's twelve largest wool consumers shows that fibres other than wool formed about the same proportion of the total in 1960 as in 1959. The proportion of man-made fibres rose from 13.2 per cent to 13.6 per cent, an increase which occurred at the expense of other non-wool fibres. For these countries taken as a whole but excluding the U.S., the percentage of virgin wool appears to have been fairly stable (at about 10) in the past ten years, while it declined in the U.S. from an average of 60 during the years 1952-56 to 50 in 1958, though it rose subsequently to 54. The aggregate consumption of wool in the twelve countries increased by 35 per cent between 1950 and 1960. The consumption of yarns used in the blanket, carpet and hosiery trades and for hand-knitting rose faster than that of yarns used in apparel weaving. The output of worsted fabrics appears to have increased relative to woollens. The temporary contraction in raw wool consumption witnessed in the early part of 1960 has now been reversed. The figures for the last quarter of the 1960-61 season (that is, April-June 1961) disclose higher consumption in a number of countries, the actual percentage rise being 15 in the U.S., 8 in France and Australia, and 6 in the U.K. and Belgium.

Wool Research

The continuously rising trend of wool consumption the world over, despite the competition from man-made fibres must be attributed to the intensive research activity in recent years, not to speak of the traditional qualities of wool such as moth-proofing, shrinkage resistance, minimum ironing, permanent pleating and creasing, water and oil repellency and easy washability. Nevertheless, there is still a wide gap between the point where the scientist completes his work on a new process in the laboratory and the much later stage when a smoothly-running commercial process is introduced in mills. In order to speed up the development of new processes and to promote them actively among the mills, the International Wool Secretariat recently decided to augment its scientific and technical staff. Seven technical liaison officers have already been appointed—with one more to follow in Japan—attached to in the Secretariat's headquarters in Britain and to branch offices in the U.S., France, West Germany, Italy, Scandinavia and Belgium. These officers will have the use of research and developmental facilities at a particular research institute or university in their own countries. The world-wide promotional and research activity of the International Wool Secretariat is commendable. Indeed, there is no exaggeration in the claim that the Secretariat has "never regarded wool research and promotion as separate fields," and that "its present promotional and advertising campaigns, concentrated on easy-care finishes, aim at giving wool a modern, youthful image—the fibre for today and tomorrow."

PUBLIC DEPARTMENT 1082

RECORD OUTPUT OF MAN-MADE FIBRES

CLOTH IMPORTS STILL LARGE

From Our Special Correspondent

MANCHESTER, *28th November*

UNION leaders of 175,000 Lancashire cotton workers have decided in Manchester not to take any further action for the time being on their rejected demand for a 10 per cent wage increase throughout the spinning and weaving industry. When the claim was turned down in September, there was talk in some quarters of strike action. The executives of all the unions involved were told that the employers have agreed to further joint talks at the end of January, although they have in no way committed themselves. An eight-man union panel which has been framing wages policy has been told that trading conditions in the industry have deteriorated since the claim was presented and that nothing can be done at this stage which could be construed as a promise for the future.

MANCHESTER LETTER

After a recommendation that the executives should await the outcome of the January meeting had been accepted, Sir Alfred Roberts, the unions' spokesman, said: "Whatever the situation then, we cannot allow the living standards of cotton textile workers to continue falling behind those of other industrial workers."

The meeting also discussed the question of compensation for redundant workers. It was decided to refer the matter to individual unions for consideration before a further combined meeting in the near future.

Man-made Fibres

Man-made fibre output of 52,750,000 lbs. last month was the second highest figure on record according to statistics issued by the British Man-Made Fibres Federation in Manchester today (Monday). A total of 29,800,000 lbs. of staple fibre was produced during October, as compared with 25,420,000 lbs. in September and 27,070,000 lbs. in October last year. Large orders from abroad are believed to have caused this higher level of production, as demand at home from the largest consuming area, the cotton spinning trade, has been only moderate.

Filament yarn output of 22,950,000 lbs. was 190,000 lbs. down on last year's total, but an increase on September when output reached 19,970,000 lbs. The very strong demand for acetate and tricel filament yarns continued during the month, says the report and, in nylon and terylene, there was good turnover. Filament rayon found steady outlets in apparel linings and tyrecord. About 467,750,000 lbs. of man-made fibres have been produced in the first ten months of the year—a drop of 26,140,000 lbs. on the same period last year, but considerably higher than the 1959 figure of 415,900,000 lbs.

Not in Such Bad Shape

Many leading figures in the textile trade in the past have issued warnings to the rank and file of the Lancashire industry to avoid "talking down" its prospects. At the recent Cotton Board conference, Lord Rochdale was particularly emphatic that those who spoke or wrote about the trade's affairs should avoid taking too pessimistic a view. Now Sir William Palmer, Chairman of the British Man-Made Fibres Federation, has followed suit.

"The future is always uncertain, but there seems no ground for taking a gloomy view," Sir William told the annual meeting. The internal economy of the country as a whole has a marked bearing on the activity of consumer industries covering the whole range of textiles, but he said there was no reason to think that this was in a bad shape, or even in decline, whatever some critics might suggest. "Employment is still good and until recently there were more vacancies than unemployed. Total employment is at a record level, as are average earnings and incomes. National production and consumption have continued to rise until recently. It all looks more like indigestion than a decline," he declared.

As regards the various fibres, one of the largest outlets, clothing, continued to expand, Sir William added. In 1960, expenditure on apparel was about 33 per cent above the 1955 level and, for each month during the present year, further increases over 1960 had been recorded.

Although the textile trade is stable enough at its retailing end, it is undoubtedly sensitive in the earlier stages of production. As Sir William said, even a decline in the rate of increase in sales much less an actual decline in sales, might start the impression that a slump is in sight. This leads to a reduction in supplies and stocks, and so builds up backwards all along the line, resulting finally in shortages and the beginning of another scramble for what is available. This, perhaps, is just another way of describing the three-year trade cycle in less statistical terms, but it represents a straightforward view of a situation which all engaged in the textile industry would like to see ironed out.

"An Ill Wind" in Imports

Overseas trade trends, particularly the volume of imports, generally bear a marked relationship to the state of activity in the domestic industry. Since conditions in Lancashire have deteriorated after the initial quarter of 1961, there has been some narrowing of the gap between shipments and arrivals of cotton goods. The October returns have re-emphasised this movement, although it is extremely unlikely that any equality will be regained under existing circumstances.

The much smaller quantity of grey cloth now being secured from foreign sources has resulted in the ten-month total of arrivals being only 17 million yards more than in the same period last year, though imports have already reached the very substantial volume of 507,527,000 yards. In October, the figure of 37,186,000 yards was the smallest in any month for more than two years back. In contrast, however, purchases of finished cloth from abroad so far this year have exceeded the 1960 level by over 26 million yards at 130,300,000 yards. Whereas grey cloth arrivals last month were nearly 13 million yards lower than in October 1960, imports of finished fabrics were some 200,000 yards up.

Another significant factor about this year's arrivals of grey cloth is that all the three participants in the Commonwealth ceiling arrangements have sent smaller quantities of goods to Britain. Although the least affected by volume, Pakistan has been the major sufferer, as arrivals from that country have been almost halved at 17,557,000 yards. Reduced shipments from India have brought the total down to 157,687,000 yards, as against 194,249,000 yards, while consignments from Hong Kong have declined from 85,727,000 yards to 76,653,000 yards.

"The Rest" Gain

What these countries have lost, however, has been made up in other directions, notably the undesignated areas not shown separately in the Board of Trade figures. Other Commonwealth countries, outside the "big three," have despatched 19,711,000 yards of grey cloth to the United Kingdom, as against only 8,264,000 yards; imports from France have nearly doubled at 11,542,000 yards; China has sent an extra 2 million yards at 23,646,000 yards and arrivals from Japan have increased from 40,607,000 yards to 55,405,000 yards. In addition, "other foreign countries" have supplied 136,097,000 yards, as against 92,167,000 yards.

Limited though they are, Lancashire's exports of cotton cloth last month showed a slight revival and at 23,808,000 yards were the highest since April. For the ten months they aggregated 244,272,000 yards, as against 270,688,000 yards in the same period last year. The average price per square yard of cotton cloth exported so far in 1961 has been 34.24d., a rise of 2d. per yard on last year's level.

On the yarn side, spinners are still facing comparatively large inroads from foreign mills. In the ten months imports amounted to 37,577,000 lbs., as against 32,156,000 lbs. in the same period of 1960. Exports, although creeping past the one-million-lb. mark in October, after three months of abysmally low figures, only accounted for 12,582,000 lbs. in the ten-month period, as against 17,962,000 lbs. last year. The average price obtained for cotton yarn exported this year has so far been 95.07d., as against 96.98d. in 1960.—*All Rights Reserved.*

ANNOUNCEMENT

THE STATE BANK OF INDIA

have pleasure in announcing the introduction from the 1st January 1962 of

special credit transfer system

whereby any customer having a personal account with the Bank, will be enabled to use any office of the Bank for transfer of money paid in cash, for credit to his account to the extent of Rs. 1,000 in any one instance FREE OF CHARGE.

• • •

A deposit relationship with the Bank will entitle the use of the services of any of its 900 and over offices throughout the country for the free SPECIAL CREDIT TRANSFER FACILITY.

For details,

JUTE GOODS EXPORTS MOVE DOWNWARD

ENERGETIC STEPS TO MEET COMPETITION FROM PAKISTAN URGED

IT is common knowledge that the persistently growing world demand for packaging materials resulting from improvement in the economy of the majority of countries has not benefited the Indian jute industry. It is true that quite a bit of the actual world requirements of these materials continues to be met by the industry, but the performance has turned out to be rather disquieting in recent years. Thus, as against the actual shipment of over 864,000 tons of jute goods in 1959, the exports in 1960 amounted to 771,500 tons. Exports in the current year are running at an annual rate of no more than 690,000 tons. The distressing trend of sales abroad is very unfortunate, especially as the jute industry is primarily an export industry and its fortunes depend to a great extent on its performance in the field of export. The factors responsible for this trend and the steps that should be taken to reverse it constituted the main theme of the speech which Dr. B. P. Kedia, President of the Gunny Trades Association, delivered at the annual meeting of the Association held at Calcutta last week.

At the outset, Dr. Kedia warned that to ignore the forces of competition faced by Indian jute products in world markets would be suicidal for the industry. In particular, he drew attention to the competition offered by Pakistan and the inroads made by alternative packaging media such as paper and bulk-handling methods. His survey of the jute economy in Pakistan reveals that the industry there has numerous cost advantages (over its Indian counterpart) which include abundant supply of cheap and better quality jute, relatively low wages and, by far the most important, the export bonus scheme which alone gives the industry a cost benefit of Rs. 140 per ton. The Pakistan industry has been successful in capturing a large volume of business in our traditional markets, including, among others, Australia, Cuba, Africa and Burma. The competition is bound to be more intense in the coming years, what with the 8,000 looms in Pakistan operating double and some even treble shifts and the proposed installation of an additional 6,000 looms (of these, 5,000 will produce sacking alone) which are scheduled to go into production by 1965.

Paper and Bulk Handling

An idea of the ground lost by jute goods in favour of paper and bulk-handling methods was given by Dr. Kedia. According to him, most of the increase in packaging demand in the U.S., which is the most important market for hessian bags, has gone to paper and bulk-handling methods. Whereas production of paper in that country for making sacks and bags in 1959 had risen by about 340 per cent from the production level in 1939, there has virtually been no change in the figures for burlap consumption in that country from the pre-war position; consumption in 1959 was 897 million yards, as against 712 million yards in 1939. In the U.K., France and West Germany, too, there has been growing demand for paper sacks in place of jute bags. Paper has already displaced jute for transporting fertilisers in the U.K. It has also displaced gunny bags for packing cement in Europe and America. Bulk-handling methods are also coming into the markets for all types of packaging. It is a quick, convenient and labour-saving process, although, due to the heavy initial costs, there are little prospects for it to make large-scale entrance into the markets of the less developed countries of Asia and Africa. These methods have, nevertheless, captured the packaging demand in the grain trade to such an extent that about 90 per cent of the grain in the world markets is bulk-handled at the ports. While the problem of substitutes is serious for all the jute manufacturing countries, it is particularly alarming for India, where jute industry ranks as the top dollar earner.

The foregoing brief account of Dr. Kedia clearly underlines the imperative need to enhance the competitive capacity of Indian jute goods in world markets. Dr. Kedia urged that, inasmuch as the various measures now being adopted as part of export promotion were in themselves not adequate to meet the new challenge, they would have to be supplemented with "more sound and effective steps." The essential prerequisite, in his opinion, is that the export prices of jute goods must remain at competitive levels. This is possible only if, as Dr. Kedia suggested, the manufacturing cost of the jute industry is reduced and the industry is placed on a most sound and efficient basis by eliminating all wasteful drags on its economy. In this connection, he mentioned the following few pertinent points:

A regular and adequate supply of jute at reasonably cheap and stable prices must be ensured. The average per-acre yield of jute in India, which is only 2.5 bales, as against the yield of 4.0 bales in Pakistan, should be stepped up. It has been established by research that the yield can be increased by 50 per cent if better seeds, larger supply of fertilisers and improved agricultural practices are adopted.

The rail freight on jute despatched from distant places—as, for instance, in Bihar—to Calcutta should be lowered suitably.

Wages of jute mill workers must be linked to productivity, with due emphasis on the need for adopting modern machines and techniques of production.

Wide and irksome fluctuations in jute goods prices must be completely eliminated through stringent curbs on speculative activity.

Raw Jute Prices

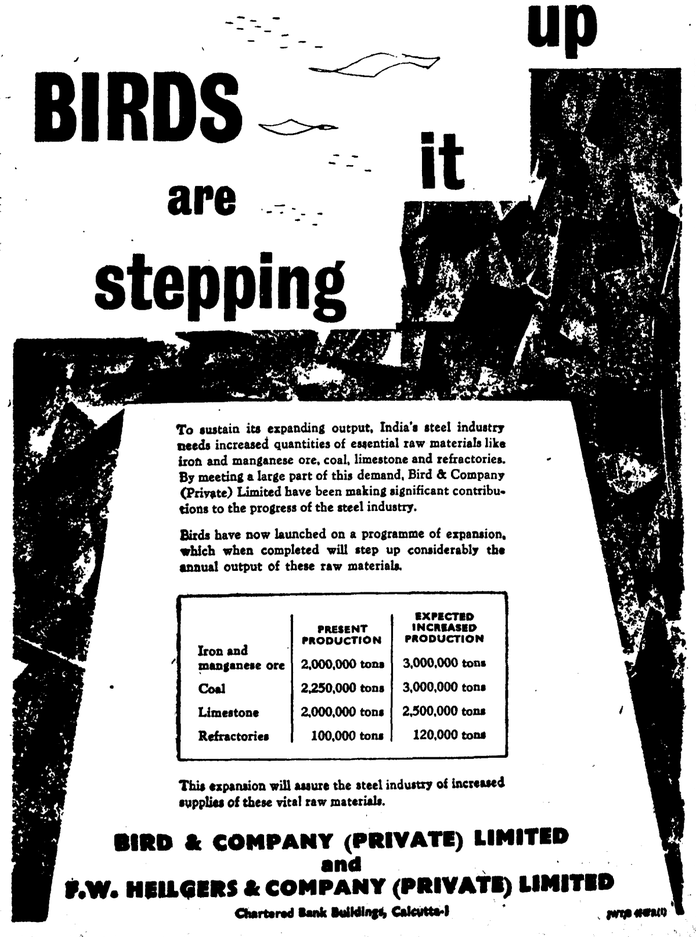
There is, of course, nothing new or novel in these points. But, by dwelling at some length on them, Dr. Kedia has only sought to indicate that no worthwhile progress has yet been achieved in the direction of export promotion. He has also done well to strike a note of warning on the issue of raw jute prices. He said: "While the determination of a minimum price for jute is necessary in the interest of both the growers and the industry, any attempt to influence decision in this regard on considerations other than economic or any attempt to maintain jute prices at unrealistically high levels under political expediencies is bound to defeat the objective of the entire scheme." This warning is certainly wholesome and timely. Dr. Kedia's plea for the appointment of an expert committee to make a thorough study of the cost structure of jute cultivation, so that the level of minimum prices might be fairly fixed before the sowing of the next jute crop commenced, represents a rational solution.

Export Subsidy

Dr. Kedia commended for acceptance the grant of a subsidy on jute goods exports and said:

". . . . The Export Bonus Scheme now operating in Pakistan decisively puts the jute industry there in a very favourable position and no action here, along the lines suggested above, can effectively offset this advantage. It is, therefore, imperative that our Government should seriously consider this aspect and apply their mind to evolve some method by which the Indian industry does not remain exposed to this vulnerable position for long. The idea of export subsidy is not new altogether for our country. Already such schemes are in operation in the exports of cloth and sugar. When in the case of sugar the Government can afford to lose about Rs. 6 crores for earning a foreign exchange of Rs. 12 crores, there is no reason why it should not subsidise the jute industry for safeguarding a foreign exchange income of about Rs. 55 crores which the industry earns every year."

May be, the case for an export subsidy is pretty strong, in view of the distinct cost advantage, estimated at about Rs. 300 per ton, enjoyed by the jute industry in Pakistan over India. And may be, the plea is also morally justified, considering the enormous amount of money paid by the Indian industry in the form of export duty during the early fifties. Nevertheless, one has to concede the fact that incentives such as grant of export subsidy constitute only a short-term remedy to be tried during extremely difficult periods and cannot be relied upon as the panacea for the basic problems of the jute industry. The real solution lies in the course of action suggested by Dr. Kedia earlier.



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

EXC-G

THE MYSORE TOBACCO COMPANY LIMITED

CHAIRMAN, MR. B. S. HANUMAN, URGES DEVELOPMENT OF HIGHER GRADES OF TOBACCO

OUTLOOK FOR 1961-62 ENCOURAGING

THE need for promoting the cultivation of superior varieties of tobacco was stressed by Mr. B. S. Hanuman, Chairman of the Mysore Tobacco Company, Ltd., in his address to the Twenty-fourth Annual General Meeting of the Company, held at Bangalore on 29th November 1961. He added that, while there was a good demand for mature and ripe tobacco, that for green grades was "very much less." Mr. Hanuman, of course, emphasised that, in order to produce higher grades of tobacco, more attention must be given to the proper application of fertilisers, besides improving the techniques of harvesting and curing. Giving an instance of adverse effects of indiscriminate application of fertilisers, he observed that, in the Gowribidnur area, the increased use of ammonium sulphate as straight fertilisers had resulted in excessive nitrogen in soils, which was injurious to the development of high grade tobacco. On the outlook for the Company, he anticipated better performance in 1961-62, unlike in 1960-61 when profit declined, mainly as a result of unfavourable weather conditions for tobacco.

The following is the full text of Mr. Hanuman's speech:

"LADIES AND GENTLEMEN,

"I have great pleasure in extending a cordial welcome to you to this twenty-fourth annual general meeting of the shareholders.

"The report of the Directors and the audited accounts of the Company for the year ended 31st March 1961 have already been in your hands for some time, and with your permission, I shall take them as read.

"I wish to bring to your kind notice that, subsequent to our last annual meeting held on 17th December 1960, there have since been two changes in the office of the Chairman of this Company, Mr. M. Mallaraj Urs, Director of Agriculture in Mysore, who presided over the last meeting, was succeeded by Mr. N. V. Siddalingappa, Joint Director of Industries and Commerce, who held the chairmanship of this Company from 5th January 1961 to 11th November 1961. I took over the chairmanship of this Company on 11th November 1961. Your Directors have placed on record the valuable services rendered by my two predecessors in office, Mr. M. Mallaraj Urs, and Mr. N. V. Siddalingappa, to this Company.

Lower Profits

"It could be seen from the published accounts that the results for the year ended 31st March 1961 have not been quite satisfactory and the fall in profits has resulted from a combination of lower production, poorer quality and higher operational expenditure.

"During the year under report, the Company has felt the full impact of the continuous unfavourable seasonal conditions for tobacco. Inadequate rainfall during planting time and continued drought thereafter, severely affected the area of planting and also the curings. The production of the higher quality grade of tobacco to offset loss in the fall in production was not possible, as the drought-affected leaf produced more of medium and lower grades. The spot disease on tobacco continued and no known satisfactory control methods could be adopted to reduce the incidence of this disease.

Fertilisers

"In the Chairman's speech delivered in past years, the problems of the Gowribidnur area, the principal tobacco-growing region, have been dealt with. However, I would like to inform you, once again, that, in recent times, there has been an increased use of ammonium sulphate as straight fertilisers for all the crops, and its indiscriminate use has built up excessive nitrogen in the soils. In the prevailing paddy-tobacco rotation, this has proved highly injurious to the production of high grade tobacco. The ill-effect of excessive nitrogen in the soil is however not noticeable, during the season of good and adequate rainfall. But even a short spell of drought adversely affects the quality of the leaf. The seasonal conditions in this region, year after year, have continued to be most unsatisfactory, and this has affected the interests of the Company.

"The adjudication of the Industrial Tribunal in respect of the grievances of the employees giving retrospective benefit, resulted in an increased payment of Rs. 68,500 over the previous year. The Compay also had to revise the rates of dearness allowance of the employees with effect from 1st January 1960. This resulted in an extra expenditure of Rs. 15,000 during the year.

Minimum Wage

"The rate of minimum wage for tobacco industry was raised from Re. 1 to Rs. 1.37 nP which resulted in increased payment to the labour.

"Your Company had to borrow from the State Bank of Mysore for working expenses and we had to pay a sum of Rs. 28,999 by way of interest as against Rs. 18,093 paid during last year. We did not receive any relief from Government on the levy of octroi on greenleaf by the municipalities.

"All our resources in the form of development rebate, depreciation and other reserves have been plouged back to capital assets. Your Directors have, therefore, felt that it would not be in the interest of the Company to draw again from the dividend equalisation fund. I am sure, you will appreciate that, for reasons stated above, the profits for the year under review have shrunk and it has not been possible to recommend the payment of any dividend.

Good Outlook

"I am glad to inform our esteemed shareholders that in the year 1961-62, due to favourable seasonal conditions, the production and sales have been very promising. Although the operations are still in progress, from the present indications, it is expected that our performance will be better than the previous year.

"In general, the demand from customers is for more mature and ripe tobacco, while the demand for the green grades is very much less. To produce higher grades of tobacco, greater attention is required for the proper application of fertilisers and improvement in the techniques of harvesting and curing. In Mysore, we have tried some new varieties supplied by our friends, Messrs. Indian Leaf Tobacco Development Company, Limited, Calcutta, and they have given us some hope of further improving the quality of tobacco. From the present trends, I am confident that the change towards new varieties will significantly improve the prospects of the Company. Our attempts to introduce the cultivation of tobacco to areas of more congenial climate and soil is gaining strength, and I expect good returns during the coming year.

"During this year, we were able to secure increased quantities of tobacco for processing at Whitefield from which we were able to increase our net realisation over the previous year. This year also we exported 117,024 kgms. of tobacco to foreign countries and maintained our previous record of export.

"I would be failing in my duty, if I do not acknowledge with gratitude the assistance rendered by our esteemed customers, Messrs. Imperial Tobacco Company of India Ltd., Bangalore and Messrs. Indian Leaf Tobacco Development Company Ltd., Calcutta. Our relationship is continuing on the most cordial terms and their assistance has been most valuable in all the fields of our activity. I shall endeavour to further strengthen this relationship during the coming years.

Research

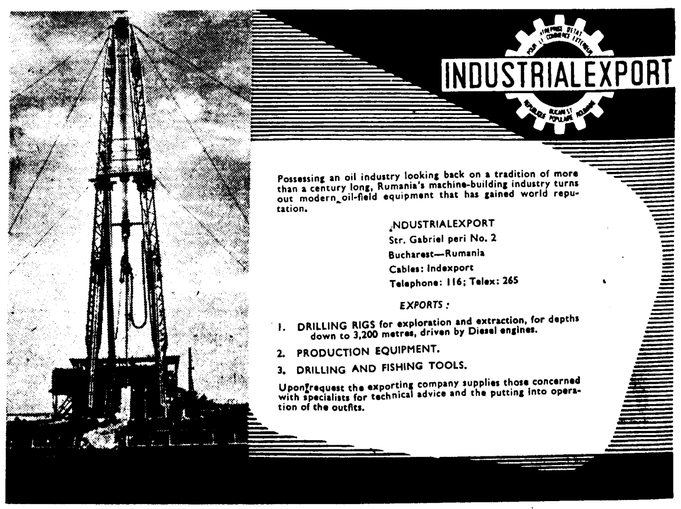
"I wish to place on record the assistance received from the Tobacco Research Station, Hunsur, in overcoming some of our field problems.

"I am proud to inform you that, in spite of all the adverse factors, the growers of tobacco and the private curers have continued to assist our Company and have maintained very cordial relationship with us.

"In conclusion, I wish to acknowledge with gratitude the continued assistance and encouragement given to our Company by the Government of Mysore. I also acknowledge with thanks the valuable advice, guidance and co-operation received from my esteemed colleagues on the Board. The employees and the officers of the Company have put in hard work and they deserve particular mention for their loyal services.

"I now move that the Directors' report and the audited accounts for the year ended 31st March 1961 with the auditors' report thereon, be adopted."

Note. *This does not purport to be a record of the proceedings of the annual general meeting.*



INDUSTRIALEXPORT

Possessing an oil industry looking back on a tradition of more than a century long, Rumania's machine-building industry turns out modern oil-field equipment that has gained world reputation.

INDUSTRIALEXPORT
Str. Gabriel peri No. 2

DECCAN SUGAR AND ABKHARI COMPANY LTD.

MR. C. R. SRINIVASAN URGES NEED FOR STEPPING UP SUGAR CONSUMPTION

LINKING CANE PRICE TO QUALITY AND LOWER EXCISE DUTY IMPERATIVE

A WARNING that the crisis in the sugar industry cannot be met by exports since exports can only be made at a substantial loss which the industry cannot afford to bear, was given by Mr. C. R. Srinivasan, Chairman of the Deccan Sugar and Abkhari Company Limited, in the course of his speech at the Sixty-fifth Annual General Meeting of the Company held at Madras on Monday, 27th November 1961. The solution to the crisis, Mr. Srinivasan said, lay in increasing domestic consumption, and this could be done by paying for cane on the basis of quality and also by reducing the excise duty on sugar which would make sugar available at cheaper rates. He pointed out that, should consumption then rise faster than expected, the capacity was available and it "should be easy to match increased consumption with increased production." He reiterated his plea for a floor price which would cover growers' out-of-pocket expenses, the balance being paid on the basis of quality. This, he stated, was one of the most important aspects of the problem both to meet the immediate situation and to build up an industry which might stand a chance of competing in world markets in the future.

Before commencing the proceedings of the meeting, Mr. Srinivasan made the following statement and requested shareholders to observe two minutes' silence in memory of Mr. H. I. Wonfor, a past Chairman and Director of the Company:

"Before commencing the proceedings of the meeting, it is my melancholy duty to convey to you a most distressing piece of news. I refer to the untimely and altogether unexpected death of Mr. H. I. Wonfor on Friday morning. He arrived from England for consultations on many matters of business on Thursday noon. I found him in very good spirits and I was talking to him till 9 p.m. Next morning I heard the tragic news that he had died in his sleep. I believe all of you know him or heard of him as one of the prime architects of the new deal in the Parry Group of Companies. Personally, I have moved with him in close intimacy for the last 25 years and, with every passing year, our friendship has found fresh points of contact and concord. He was a friend of this country in the fullest sense of the word and had faith abundant in its destiny. It almost looks as though he came to die in the land of his adoption where he had spent the greater part of his fruitful life. May God rest his soul in peace. I will ask you to stand up and observe two minutes' silence in memory of a great Britisher who has served this country as well as any Indian could have, and in doing so, served his own country also."

In his review of the working of the Company, the Chairman said:

"It gives me pleasure to welcome you to the sixty-fifth annual general meeting of this Company.

Company's Working

"The accounts for the year ended 31st May 1961 and the report of the Directors thereon have been in your hands for the statutory period and, with your permission, I shall take them as read. The results contained therein reflect the position that was forecast in my statement at the last annual general meeting, namely, that stocks at our factories would build up due to the increase in the all-India sugar production. Releases of sugar for sale by Government were severely restricted and this accounts for the drop in turnover of not less than Rs. 86 lakhs as compared with the previous year.

"This is the major reason for the reduction of Rs. 8.50 lakhs in our net profit before taxation. I would mention that, although the Company received a bonus in the shape of a rebate of excise duty of some Rs. 4 lakhs for increased production, this was more than offset by the contributions of not less than Rs. 6.50 lakhs that had to be made towards sugar export losses.

"Thus, bearing in mind the need to conserve the resources of the Company, your Directors have been reluctantly forced to recommend a lower final dividend of 13½ per cent for the year under review as against 18½ per cent paid for the last year, thus making the total for the year 21 per cent, as against 25¾ cent last year. In other respects, I consider that the printed accounts and the notes thereon are self-explanatory and do not require further specific comment, but I shall, of course, welcome any questions thereon at the conclusion of my speech.

Record Production

"As you may have seen from the report before you, the quantity of cane crushed and sugar produced during the year at Samalkot and Pugalur constitute a record for both factories. While this achievement, by itself, is gratifying, the immediate benefit was, as I have just said, largely lost by reason of smaller releases of sugar from both factories. The policy of the Government of India is to release every month a fixed percentage of the production of each factory, the total quantity released being the estimated all-India consumption for the month, excluding exports for which special releases are made from time to time. The effect of this policy is to make available in the States of U.P. and Bihar a much larger quantity than can be consumed in those States. Under controlled conditions, much of this surplus was allotted to other States, including Madras and Kerala, in spite of the fact that the Southern region as a whole is self-sufficient and had no need to import anything like the quantities allotted by Government during the control period.

"Now that decontrol has come in the wake of overproduction, with uncertain prospects as to the size of exports, we are entering a period of unstable prices and selling pressure. Already prices have come down by about Rs. 20 per tonne. We can only hope that they will become stabilised at a level which would not have serious repercussions on all sugar manufacturers.

"The rehabilitation and consolidation of Samalkot Factory to which I referred in my speech last year is proceeding. The suppliers of the fourth mill are expecting shortly the licence to import the foreign components. All going well, it is hoped to install the mill in time for the 1963-64 season.

"I stated in my speech last year that orders had been placed for almost all the equipment required for the expansion of Pugalur Factory from 1,000 tons to 1,250 tons cane per day, at an estimated cost of between Rs. 25 lakhs and Rs. 30 lakhs. The advantages of expansion need no emphasis. A lower cost of manufacture from higher output enhances the ability of a unit to withstand competition in times of abundance of supplies, but, considering the position in which the industry is today, it would be wise to review decisions taken under somewhat different conditions a year or so ago. Your Directors, after careful consideration, have come to the conclusion that it would do no harm to go a little slow with the expansion scheme. Accordingly, the proposed extension originally scheduled to be completed before the 1962-63 season will be delayed probably by another year. These considerations, however, do not apply to the Samalkot Factory where the more urgent need is rehabilitation and not expansion.

Agreement With Seshasayee Paper

"An interesting development in connection with Pugalur Factory is an agreement made with Seshasayee Paper and Boards Limited whereby they will supply the factory with two oil-fired boilers and the necessary oil fuel to burn in them, and in return take all the bagasse produced in the factory for the manufacture of paper in their new factory near Erode. No capital expenditure will be incurred by the Company and, while no monetary remuneration will be received for the bagasse, it is hoped that the oil-fired boilers will provide steadier working conditions with a constant steam pressure, thus resulting in slightly reduced working costs. In the interests of the industrial development of the country, this is a welcome step and I am sure our co-operation will be appreciated. The present position is that an application for an import licence for the two boilers made by the Seshasayee Paper and Boards Limited is pending with the Government of India.

"The Tariff Commission's report on the Price Linking Formula is still under consideration of the Government of India. We continue to be in the unhappy position of not knowing the final price for cane for the years 1958-59, 1959-60 and 1960-61. Reasonable provision has been made in the accounts for these years, and some interim payments have been made to the growers.

"The distillery at Samalkot is not doing very well. Our main market is West Bengal where competition is keen. To add to our difficulties, the Government of India have fixed a very low ex-distillery price under the Ethyl Alcohol Price Control Order 1961. If we sold at this price, we would be making a considerable loss. Representations have been made to Government to consider the question of price for smaller distilleries after an examination of their actual costs. It is to be hoped that the Price Control Order will not be enforced in the meantime.

"Sales of carbonic acid gas were not unsatisfactory, but, here again, there is severe competition in a restricted field. Nevertheless, this section of the factory makes a useful contribution to overheads.

"Our relations with labour and staff during the course of the year have remained satisfactory. The Sugar Wage Board recommendations have been published and accepted by Government, and preliminary arrangements have now been made for negotiations with staff and labour, both at Samalkot and Pugalur, with a view to arriving at a long-term agreement on future terms of service. It is hoped we shall be able to conclude a settlement with the unions on suitable lines.

Future Prospects

"Now you will expect me to say something about future prospects. In my speech to you last year, I stressed that a state of overproduction was being reached and, in the event, the present position is worse than I envisaged at that time.

"The sugar year 1960-61 started with a carry-forward of 5½ lakh tons which is generous but not unduly so. Five lakh tons are generally considered the carry-forward required to take care of any unexpected shortfall in production. Production for the year 1960-61 reached the record figure of only just short of 30 lakh tons, as against which internal consumption has amounted to only 21 lakh tons and, in addition, 2.7 lakh tons have been, or are to be, exported by 31st December 1961.

"You will see, therefore, that we started the current sugar year 1961-62 with a stock of 11.8 lakh tons and, allowing for the buffer stock of 5 lakh tons, there is 6.8 lakh tons surplus. As you all know, Government is trying to adjust the position by stipulating that factories shall only produce 90 per cent of their highest production in the preceding two years; various exemptions, however, are being made in favour of new factories and those with a small output and which for various reasons did not reach a certain minimum production in 1959-60 and 1960-61. In the result, I, therefore, fear that we must look forward to a production of very nearly 30 lakh tons again during the current year. I sounded a note of warning last year when I said that the bulk of next year's sugar crop is already in the ground. It is very difficult to see how factories which have registered cane for their full requirements are going to deal with their excess production. In the case of our two factories, I am glad to say that, as production last year reached record figures, we are unlikely to exceed the 90 per cent target this year, and I, therefore, hope that the question of payment of the penal excise duty will not arise. Other factories are not so fortunately placed and there must be considerable hardship in those areas where there is no *jaggery* industry to take up the surplus, if factories refuse to crush all the cane offered. Even if the surplus cane is used to produce *jaggery*, or *khandsari* sugar, this is likely to be offered at giveaway prices which in turn will restrict the offtake of factory sugar.

Sugarcane Price

"Government have still not made any announcement regarding sugarcane prices for the 1962-63 season and, with all the earnestness I can command, I would urge Government to set at rest without delay the anxiety of growers and millers. Ministers have admitted in Parliament that the current sugarcane price is attractive as compared with the realisation from other crops and, if it were not, how is the increase of over 8 lakhs acres under sugarcane during the last two seasons, mostly in U.P., to be explained? The simplest and most efficacious way of reducing the production of sugar in the country to something approximately to the country's requirements is an adjustment of cane prices by an emphasis on payment for quality, and may I take this opportunity of pleading once again for a floor price which will cover growers' out-of-pocket expenses, the balance to be paid on the basis of quality. This I consider one of the most important aspects of the problem, both to meet the immediate situation and to build up an industry which may stand a chance of competing in the world markets in the future. As long as cane is paid for on the basis of weight irrespective of quality, I fear that India will be priced out of the export market.

"Other steps which might be taken to remedy the situation are to cancel a number of licences for additional factories already granted, but for which no effective steps have yet been taken. Government have announced that they will not license any further new factories, but this does not go far enough. There may be difficulties in the way of cancelling licences already granted, but is it fair to allow factories to go into production with little chance of operating profitably, to the detriment of the interests of shareholders? There is general agreement that the demand for sugar in the country must be stimulated to mop up the surplus production and there is no reason why this should not be done. The average annual consumption *per capita* of the population in India is 5.5 kg., as compared with 47 kg. in the U.S.A. and 55 kg. in the U.K. The significant fact is that the annual consumption in 1957 was 20 lakh tons and, in that year, the then Finance Minister doubled the excise duty on sugar with a view, as he said, to restricting consumption and to making sugar available for export. How well he succeeded in the first part of his intention is shown in the offtake for subsequent years:

1958	...	...	...	20.5 lakh tons
1959	...	...	...	20.7 „ „
1960	...	...	...	20.2 „ „
1961	(estimated)		...	21.0 „ „

"It is significant that offtake should have remained static over this period despite the increase in the population and, surely, this is evidence enough that the decision of 1957 should be reversed and the excise duty reduced by 50 per cent. Our people want sugar, but at a price they can afford to pay.

Exports

"There has been much talk about exporting our surplus production and earning valuable foreign exchange, but, even if the Government, the industry, and the growers are prepared to subsidise exports, such exports can only absorb a small part of India's surplus production. India has become a member of the International Sugar Agreement, a step which was necessary to enable her to take advantage of the American quota, and her rights under this Agreement are not likely to exceed 150,000 tons per annum. What our quota will be from America this year is anyone's guess, but we well know what happened to the initial quota of 225,000 tons which, overnight, was cut by 50,000 tons. It would be wise to realise that the U.S.A. has her own problems and we cannot expect her to accommodate us at all costs. Efforts are also being made for a quota for supply to Great Britain under the Commonwealth Sugar Agreement, but the latest information is that this is not likely to materialise. It is, therefore, unlikely that India's exports will reach 500,000 tons, and this, only at a loss of something on an average of Rs. 300 per ton after full rebate of excise duty, cane cess, etc. We doubtless need foreign exchange, but some may ask whether it cannot be bought at too high a price.

"Andhra State is already surplus in the production of sugar and Madras State is approaching that condition. As long as Government maintain the system of monthly releases adjusted to the approximate offtake of the markets, I think a price level can be held which will give a reasonable margin of profit, but I would be failing in my duty if I did not warn you that the industry is passing through a most difficult time and I wonder if we have seen the worst yet. Stocks are moving, but not as fast as they are accumulating, and this is a situation which cannot go on indefinitely. There are two difficulties to be faced—one, financial and the other physical. By the time our two factories stop crushing in April next, we expect to be holding stocks amounting to 23,000 tons and valued at Rs. 1.84 crores. That is a heavy enough burden to carry financially. Any further addition will be a severe strain. The purely physical problem needs no explanation from me. No company can go on building godowns indefinitely to store unwanted stocks, nor does sugar quality improve through storage. I, therefore, fear that a further and probably more drastic restriction of production may have to be enforced during the 1962-63 season.

Raising Internal Consumption

"In my opinion, the crisis in the industry, and it is a crisis although the Food Minister denied this at the last annual general meeting of the Indian Sugar Mills Association, cannot be met by exports. Exports can only be made at a substantial loss which the industry cannot afford to bear. The solution lies in increasing national consumption, and this can be done by paying for cane on the basis of quality, and also reducing the excise duty on sugar which will make sugar available at cheaper rates. Should consumption then rise faster than expected, the capacity is available, and it should be easy to match increased consumption with increased production.

"And now, may I strike a personal note before I close. I joined the Board of this Company in 1943 and have functioned as its Chairman from 1956. The Company is in fine fettle and, during the past few years in particular, shareholders have gathered a rich harvest in dividends. At the moment, the outlook may not be quite so promising, but there is no need to take a pessimistic view. I have indicated some of the correctives the situation calls for and I have no doubt Government will give serious thought to the problems posed, once the General Elections in the offing are over. The malaise affects the whole industry and not a particular unit and sugar represents too large an investment in our national economy to be ignored. We have been dealing with problems of sugar so far only in terms of internal and external consumption as edible sugar—sugar as a detergent is coming into the picture and, if expectations are not belied, quite a new outlet for sugar may perhaps enter our calculations. So let us wait and hope for the best; and in that confident hope let me bid you farewell. This is the last meeting of the general body that I shall preside over. A few weeks back when I had occasion to address the shareholders of Parrys Confectionery Limited, I told them that I have decided to retire from all active work and from the Boards of all companies I have been associated with, as soon as convenient, for reasons of health. I regret I have to say the same thing to you. I have carried a heavy burden on my shoulders these fifty years and need rest. I am sure you will not begrudge it. My best wishes are with the companies I have lived and worked for—God bless you."

The report and accounts for the year ended 31st May 1961 were adopted and a final dividend for that year at the rate of 13.5 per cent, subject to deduction of tax, on the Company's ordinary share capital was declared payable on 28th November 1961.

The retiring Directors, Sir T. S. Venkataraman and Kumararajah M. A. M. Muthiah Chettiar of Chettinad, were re-elected and the retiring Auditors, Messrs. Lovelock and Lewes, were re-appointed.

Mr. Noel-Tod's Tribute to Chairman

Mr. G. N. Noel-Tod, in proposing a vote of thanks to the Chairman, said:

"At this meeting, which Mr. Srinivasan has said is the last over which he will preside as Chairman, it is fitting that I, who have been associated with him on the Board since 1954, should propose a vote of thanks. It is difficult for me to realise that my association with Mr. Srinivasan in this Company will before long terminate. It has been a great experience for me to have worked for these years with, and under the guidance of, Mr. Srinivasan.

"Mr. Srinivasan has pointed out that of recent years shareholders have consistently enjoyed good dividends and I can assure you that the build-up of the Company to its present level of prosperity has been, in no small measure, due to Mr. Srinivasan's leadership as Chairman of the Board. It would be idle for me to attempt to disguise the fact that there have in the past been differences of opinion between the Board and certain shareholders. Such differences of opinion must inevitably arise from time to time and do, in fact, arise in other companies. Nor in this Company are they unique to the time of Mr. Srinivasan's chairmanship. I remember well the apprehensions of shareholders as to the conduct of the affairs of the Company by the Board and the Managing Agents in the early fifties when, due to disease in the cane, the Pugalur Factory had temporarily to be closed. Consistently, however, this Board has always had as its objective the achievement of maximum prosperity for the Company. Equally, I do not doubt that shareholders have the same objective, the differences of opinion relate only to the methods adopted to achieve this end.

"I would like on your behalf to thank Mr. Srinivasan for his services to the Company over the past eighteen years and to wish him many happy years in retirement."

On behalf of the shareholders, Mr. S. Srinivasa Iyer desired it to be recorded that the Company greatly appreciated the services of the Chairman and this was carried with acclamation.

N.B.—*This does not purport to be a report of the proceedings of the annual general meeting.*

GOVERNMENT-OWNED COMPANIES—I

BROAD TRENDS IN STRUCTURAL PATTERN

Dr. Raj K. Nigam, Ph.D. (Econ.) (London)

THE dynamism and the growth of the public sector are now too clear to be ignored or disputed by anyone in our country. Early doubts regarding the expansion of the public sector have receded into a remote background under the pressure of official assertions that the role of the public sector in the economic development of the country has to progressively increase from Plan to Plan. During the last ten years, the Central Government have, indeed, put in a massive and bold effort to establish a number of State enterprises in the industrial and commercial fields against heavy odds and disheartening forebodings that the Government's endeavours in this direction would finally end up in a fiasco. But, as against these initial misgivings and scepticism, the general public and the Government have now developed a robust optimism and confidence in the public sector. Public sector enterprises are expected to play the role of an accelerator in quickening the tempo of industrial development and that of an important means for the realisation of the objective of socialistic pattern of society to which our country and the Government are now so very firmly and decisively committed.

This fact is once again very succinctly emphasised in the Third Plan in the following words:

"As a direct consequence of the objective of working towards the realisation of socialistic pattern of society, there will be a large expansion of public sector in a wide range of activities, covering fields as varied as mining and manufacturing, generation and distribution of electric power, construction, transport and communication, irrigation, banking and insurance, trade, social services, etc."

In the same context, the third Plan also emphatically states that "the rapid expansion of the public sector materially would contribute to increasing public savings for investment, making it possible thereby to increase the rate of growth.... Increased profits, which, in the private sector, would create inequalities (and possibly conspicuous and wasteful consumption) can, in the public sector, be directly used for capital accumulation." Among the various reasons which have, from time to time, been put forward in favour of developing the public sector, an important one, on which great stress has come to be placed in recent years, is that the public sector helps to level up the disparities in incomes in the country. In this regard, the third Plan says that "by organising industries (where plants have to be large involving big investments) in the public sector, undue concentration of economic and industrial power in private hands can be prevented."

Policy Becomes Clearer

The Government's policy towards developing the public sector of which the first inkling was given in the Industrial Policy Resolution of 1948 became steadily more clear and firm from time to time since the first Plan was launched in 1951. At the time of the launching of the first Plan, hardly 10 per cent of the national income was generated in the industrial sector including electric power in the country, but, after the completion of the first and second Plans, the share of the industrial sector in the total national income touched the level of 30 per cent. Gigantic amounts of money have been invested in industries in the public and private sectors during the last ten momentous years of planning in our country. As compared with the investment at the beginning of the first Plan, investment in the public sector at the end of the second Plan totalled over 16 times and, at the end of the third Plan, it is expected to reach nearly 48 times. At the beginning of the first Plan, total investments in industrial establishments and enterprises, excluding power, in the public sector added up to a mere Rs. 50 crores. At the end of the first Plan, total investment in the public sector, in round figures, rose to Rs. 110 crores and later on it increased to around Rs. 860 crores in 1960. The third Plan envisages a further dose of investment of over Rs. 1,500 crores to be injected in the public sector and this would bring the level of investment in the public sector approximately to Rs. 2,400 crores at the end of 1961-66.

In comparison to this, private industrial sector at the beginning of the first Plan had an investment of Rs. 750 crores, estimated on the basis of the net fixed assets of the industrial enterprises. This investment at the end of the first Plan increased to around Rs. 1,100 crores and at the end of the second Plan to Rs. 2,000 crores; at the end of the third Plan, the private sector investment is to touch the level of Rs. 3,200 crores or so.

These statistics, which are cited from the speech of the Minister of Industries, Mr. Manubhai Shah, delivered in the Lok Sabha on 5th August, 1960 in the course of the debate on the non-official resolution calling for the appointment of a Parliamentary Committee to review the working of the Industrial Policy Resolution of 1956 moved in that House, show what marathon efforts have been made and are proposed to be put in, in the years to come, by the Government to develop the public sector speedily. The foregoing statistics also prove that the progress of the private sector in the industrial sphere has not been checked or impaired in any way. In the long run, however, the expanse and scope of the public sector will no doubt be greater than that of the private sector.

Industrial Minotaurs

During the last ten years, all the components of the public sector, namely, the departmental undertakings, Government companies, autonomous corporations, etc., have expanded. During this period, Government companies have emerged as an important limb of the public sector. From a nondescript body, these have acquired fantastic proportions and today among them we find such industrial minotaurs as the Hindustan Steel Company, Neyveli Lignite Corporation, Heavy Engineering Corporation, National Coal Development Corporation which neither figured in the industrial fiction nor did pass the imagination of business magnates in our country. Before the Companies Act, 1956, came into force, there were only a few industrial and commercial companies in which Government held a controlling stake. In fact, in the absence of a statutory recognition, they did not form a distinguishable class or group within the public sector and as such they did not come under the focus of public opinion and criticism in the country. The Companies Act, 1956, for the first time, statutorily recognised this class of companies and gave a criterion by which a Government company could be marked off from the non-Government companies. This statutory recognition of Government companies came as a logical corollary to the Government's decision to adopt company form of management for public enterprises to be formed for industrial and commercial businesses in the country, in preference to the other alternative forms available for adoption, namely, the departmental set-ups, statutory corporations, autonomous boards, etc.

According to Section 617 of the Companie Act, 1956, a company whose 51 per cent an more paid-up capital is held by the Government is to be regarded as a Government company fo purposes of administration of the Companie Act. As a direct sequel to the Government's de cision in favour of company form of manage ment for commercial and industrial enterprise and consequent statutory recognition accorde to the companies in which the Government hac a majority share from 1956 onwards, there ha been a phenomenal growth in the number anc size of the Government companies so much sc that, within a short span of five years, they have become an important component of the public sector and the scrutinising eyes of the public and various expert bodies in the country are constantly focussed on them. As evidence of the growing interest in the working of the Government companies in the country, an announcement has recently been made of the appointment of a standing Expert Committee of Parliament which would, quite apart from such parliamentary bodies as the Estimates Committee, Public Accounts Committee, review the work of the public sector companies and corporations in a comprehensive manner. This Parliamentary Committee is expected to come into being some time in the later half of 1962.

Purpose of These Articles

There has been a spate of literature in the form of seminar papers, articles and reports dealing with the various general questions relating to the structure, management pattern, pricing policies, etc., of the Government companies during the last two years in particular. But the discussion of various issues, as also the appreciation of the various problems against a proper statistical and factual facade, has not so far taken place, for the reason that comprehensive and adequate sets of statistics are lacking and carefully contrived indexes and indicators depicting the physical and financial trends of the working of the Government companies are still missing. But large clusters of facts are scattered over the official records such as the profit and loss accounts and balance-sheets of the Government companies, annual share capital summaries, statutory returns pertaining to managerial personnel field under the Companies Act, and other special returns rendered to the appropriate Government departments exercising administrative control over the companies, returns filed under the Industrial Statistics Act, and other Acts. Accordingly, all that is needed is collation of meaningful sets of data and processing them. However, two important agencies of the Government have started throwing up some statistical data relating to Government companies. These agencies are the Department of Company Law Administration which provides information on the number and paid-up capital of Government companies, on the composition of the board of directors and the Central Statistical Organisation which, for the last two years, has been bringing out a special brochure entitled *Principal Public Sector Undertakings in India*, giving physical and financial information on the working of 43 Government companies and 11 statutory corporations and departmental undertakings set up under the Acts of Parliament or operated by the Union Departments or Ministries. Here, within the compass of three articles we have attempted to provide statistical data of germinal significance which are as yet little known to the people and would help them in studying the structure-pattern, the management make-up and the financial health of the Government corporate bodies in the country.

Overall Position

Normally, the growth of Government companies is traced from 1956 onwards which coincides with the beginning of the second Plan as also with the year of statutory recognition given to this class of companies. We have in this article attempted to build a time series for

TABLE 1: *Growth of Government Companies in the Corporate Sector, 1951-61*

(Paid-up capital in crores of rupees)

Year ended 31st March	Government companies		Non-Government companies		All companies	
	No.	Paid-up capital	No.	Paid-up capital	No.	Paid-up capital
1951	36	26.3 (100)	28,496	749.1 (100)	28,532	775.4 (100)
1952	40	46.4 (176)	29,183	809.4 (108)	29,223	855.8 (110)
1953	45	49.8 (189)	29,267	847.8 (113)	29,312	897.6 (115)
1954	51	52.0 (198)	29,441	891.2 (119)	29,492	941.2 (121)
1955	54	54.7 (208)	29,571	914.9 (122)	29,625	969.6 (125)
1956	61	66.0 (251)	29,813	958.2 (128)	29,874	1,024.2 (132)
1957	74	72.6 (276)	29,283	1,005.0 (134)	29,357	1,077.6 (139)
1958	91	256.8 (977)	28,189	1,049.5 (140)	28,280	1,306.3 (168)
1959	103	424.2 (1,613)	27,376	1,085.6 (145)	27,479	1,509.8 (194)
1960*	125	468.4 (1,781)	26,796	1,124.7 (150)	26,921	1,593.1 (205)
1961†	140	545.2 (2,073)	25,971	1,179.4 (157)	26,108	1,724.6 (222)

* Provisional. † Provisional figures corrected with the help of data available after the 31st March, 196

[In this and the two articles that will follow, the author provides, very largely, a factual account of the broad trends pertaining to structural, financial and management pattern of Government-owned companies by bringing together the scattered statistical data on them within a proper framework. This is the first comprehensive attempt of its type to present a complete statistical background of the working of Government companies. The responsibility for the accuracy of data and for the views expressed is of the author and not of the Department of the Government to which he belongs.

The articles form part of the series entitled "The Contemporary Corporate Scene in India" published in this journal in August and September 1961.—ED.]

the number and paid-up capital of Government companies from the beginning of 1951 so as to provide a clear picture of the development of this important sector of the national economy from the beginning of the planning era in our country. Table 1 sets out the overall position of the number and paid-up capital of Government companies from year to year—from 1951 to 31st March 1961. In terms of number, Government companies have recorded a fourfold rise during the period 1951-61; the increase in number has been almost of equal proportion during each of the two Five-year Plan periods. In terms of paid-up capital, however, the Government corporate sector presents a more dynamic look; its paid-up capital investment during the decade ended the 31st March 1961 increased to over 20 times the total volume of capital investment in 1951, an overwhelming part of the increase having occurred during the second Plan period. It is seen that, during the first Plan, the paid-up capital of Government companies increased by nearly 150 per cent., but, in the subsequent five-year period, the increase in capital worked out to nearly 750 per cent.

With the phenomenal rise in the paid-up capital, the position of Government companies in the total paid-up capital investment of the corporate sector also underwent a sea-change. The share of Government companies in the total paid-up capital of the corporate bodies at work in 1951 worked out to around 3½ per cent and, at the end of the second Plan, this proportion swelled up approximately to 32 per cent. This increase in paid-up capital in absolute value for the Government companies amounted to nearly Rs. 520 crores during the decennium ended 31st March 1961, whereas that for the private sector companies aggregated Rs. 430 crores during the same period. These figures of growth of the public sector and the private sector companies show that the growth of the former has not inhibited the development of the other class of companies in any way.

State-wise Distribution

Looking at the record of the growth of Government companies from the geographical angle, in terms of number, the growth has been most spectacular in the State of Orissa, where, during the last five years, that is, the operative time-span of the second Plan, as many as 42 Government companies have been set up by the Orissa State Government. In the all-India total of Government companies, the Orissa State Government companies at the end of 1960-61, accounted for 33 per cent. But, in the total paid-up capital, their share accounted for merely 0.2 per cent, the absolute amount of total paid-up capital of the Orissa State Government companies being Rs. 1.16 crore in the all-India total of Rs. 545.2 crores in 1960-61. The other States having a large number of Government companies are those of Delhi, Maharashtra, Mysore and Kerala which have 17, 13, 12 and 10 Government companies, respectively, accounting for paid-up capital amounts aggregating Rs. 60.3 crores, Rs. 29.2 crores, Rs. 34.7 crores and Rs. 6.5 crores respectively. In number, the States of Madras, Madhya Pradesh and Bihar trail behind the five States named above, but, in paid-up capital value, they too are important; individually, these States accounted for 8 per cent, 5 per cent and 61 per cent. respectively, of the total paid-up capital of all Government companies, Bihar's share having been bolstered up by the Hindustan Steel Company whose registered office in that State was established after its transfer from Delhi. The detailed distribution of Government companies in the various States of the Indian Union are given in Table 2.

Table 3 gives the age distribution of Government companies registered and at work as on 31st March 1961 in each of the foregoing 15 States of the Indian Union. It will be seen that 28 Government companies have their dates of registration before independence and a great majority of these companies happened to be *de facto* Government companies, whereas a small number became Government companies much later upon acquisition of majority shares by the Government. During the first Plan period, 19 Government companies were set up, while 85 companies were promoted during the second Plan period.

At the time of the beginning of the first Plan, Central Government investments in the Government companies totalled around Rs. 14 crores only, which worked out to merely 3 per cent of the present level of the Union Government's stake in the Government companies. The total number of Central Government companies at the beginning of the first Plan was only 4 which increased to 29 at the end of the first Plan. This total includes both the exclusively and jointly-owned Central Government companies. During the first Plan period, the Central Government is credited with the flotation of such giant companies as the Hindustan Steel, Hindustan Machine Tools, Bharat Electronics, Hindustan Antibiotics, etc. At the end of the second Plan, the total number of Central Government companies increased to 54, of which 39 companies belonged exclusively to the Central Government. The total stake of the Central Government in the 54 Government companies is reckoned at Rs. 522.3 crores, whereas that of State Governments came to the order of Rs. 17.4 crores in 98 companies of which 86 are exclusively State Government promotions. The collaboration of private entrepreneurs in the Central Government companies is observed in 10 cases with an aggregate amount of Rs. 2.25 crores which is indeed a very negligible proportion in the total paid-up capital of the Government companies. It works out to merely 0.4 per cent.

Ownership Pattern

A study of the administrative control of the Central Government companies by the Union Government Departments or Ministries reveals that the Ministry of Commerce and Industry administratively looks after the largest number of Government companies, the number being 19 companies. The Ministry of Steel, Mines and Fuel supervises the working of 8 companies, Ministry of Transport and Communication 6 companies, Ministries of Finance and of Works, Housing and Supply 3 companies each, Ministries of Defence and Rehabilitation and the Department of Atomic Energy 2 companies each and Ministries of Scientific Research and Cultural Affairs, Irrigation and Power and Railways 1 company each.

Alongside the increase in the number of Government companies an important feature which became more and more prominent as we travelled from one Plan to another is that the number of giant-sized Government companies has steadily increased. The number of giant-sized companies having an authorised capital of Rs. 1 crore and more each, at the end of 1960-61 totalled 57 in the overall total of 140 Government companies. The total authorised and paid-up capital of these came to Rs. 845.0 crores and Rs. 539.7 crores, respectively, which came to 98 per cent of the total authorised and paid-up capital for all the Government companies. Of the 57 giant-sized companies, 16 companies have been incorporated with an authorised capital of Rs. 5 crores or more each. As against this, the number of companies with an authorised capital base of Rs. 1 crore was only 11 at the beginning of the first Plan period and at the beginning of the second Plan period they totalled 25. As a result of the greater emphasis now placed on the economical and efficient working of the State enterprises and the need to stop the proliferation of State enterprises of varied types so that better co-ordination might be effected among the various State industrial units working in the same fields and consequently price policies based on proper costing could be evolved and uniformly implemented, merger of some of the existing Government companies into giant-sized organisations and flotation of new giant-sized enterprises are expected in the near future. A clue to this new development is provided by the Government's decision to form the Fertiliser Corporation of India by merging the two fertiliser companies, namely, the Sindri Fertilizers and Chemicals and the Hindusthan Fertilisers, and to set up the Shipping Corporation of India by fusing the three shipping companies, namely, the Eastern Shipping Corporation, the Western Shipping Corporation and the Mogul Lines together. In this connection, the following observations occurring in the Third Plan are interesting and worthy of note:

"It has now been recognised that proliferation of special organisations of such number and variety so as to be unmanageable should be avoided and there should be a definite policy of consolidating these organisations so as to bring together enterprises functioning broadly in the same field. This would enable provision of common facilities to individual units, which otherwise might be well beyond their means and lead to overall economy and efficiency."

The position of giant-sized Government companies alongside the smaller ones is shown in Table 5.

TABLE 2: *State-wise Distribution of Government Companies 1960-61*

State	No.	Paid-up capital (in crores)	Paid-up capital as percentage of total paid-up capital
Andhra Pradesh ..	6	6.07	1.11

THIRD PLAN PROVISION FOR SHIPPING

MR. G. L. MEHTA'S PLEA AND DR. SUBBARAYAN'S ENCOURAGING REPLY

SOME of the problems of Indian shipping and shipbuilding industries came in for consideration—first at the tenth meeting of the National Shipping Board held at Madras last week-end and later at the Shipping and Shipbuilding Conference (1961) held at Bombay early this week. It was disclosed by Mr. G. L. Mehta, Chairman of the National Shipping Board and of the Hindustan Shipyard, that the question of financial allocation for shipping in the third Plan was considered at the meeting of the Board. The third Plan, it may be remembered, has provided only Rs. 55 crores for shipping, though the Board had asked for Rs. 104 crores. In view of certain developments in the coastal trade, such as the need to move an additional one million tons of coal by sea, the Board has now decided to review the position and address a communication to the Union Government. In this review, the priorities suggested earlier by the Board in respect of tanker, cargo and passenger vessels, for replacement and addition, might have to undergo alterations.

A noteworthy decision reached by the National Shipping Board at its Madras meeting was to accept the report of its sub-committee on sailing vessels and to forward it to the Government of India. This sub-committee, it is reported, has made two important recommendations. One of them is that loans at concessional rates of interest should be granted for construction of vessels and mechanisation of sailing vessels. And the other recommendation is that provision should be made for the addition of 25,000 g.r.t. to coastal shipping over and above what has been proposed under the third Plan. It may be recalled here that the third Plan has proposed 100,000 g.r.t. as 'replacement' and 32,500 g.r.t. as 'addition' in the sector of coastal shipping. As the coastal tonnage at the end of the second Plan was 292,000 g.r.t., the third Plan programme of addition would mean a gross tonnage of only 324,500 g.r.t. in that sector by the end of 1965-66. If the further addition of 25,000 g.r.t., which is reported to have been recommended by the sub-committee of the National Shipping Board, were made, the gross tonnage in coastal trade would be of the order of 350,000 g.r.t. by the end of the third Plan. This will still fall short of a total requirement of 450,000 g.r.t. which, in the opinion of this Journal (*vide* page 106 of *Commerce* dated 15th July 1961), would be necessary to serve as an adequate and efficient adjunct to the inland transportation system.

Sethusamudram Project

Two other questions—one relating to the participation of Indian shipping in the haulage of P.L. 480 foodgrains from the United States and the other relating to the Sethusamudram Project—were also considered at the Madras meeting of the National Shipping Board. The first question has been referred to a sub-committee of the Board for further examination. This sub-committee will also suggest steps for meeting any losses by vessels operating in essential trades and routes. The latest position regarding the Sethusamudram Project, as disclosed by the Director-General of Shipping after the Board's meeting, is that the Madras Government has agreed to undertake a pilot study and a hydrographic survey in connection with the final assessment of the cost of execution of the south approach canal of the project. If and when this project—which envisages the cutting of a channel near Pamban to connect the Gulf of Mannar and the Palk Bay—is successfully executed, it will enable deep sea ships from the west to the east of India to avoid the longer route round Ceylon. The National Shipping Board does not seem to have taken any definite decision on the project, presumably because the technical and financial aspects of the project have yet to be fully examined.

At the Shipping and Shipbuilding Conference (1961) held at Bombay on the 4th instant, the problems facing the two related industries were dealt with in greater detail. Mr. G. L. Mehta, who presided over the Conference, referred to the National Shipping Board's recommendation that a net addition of 500,000 g.r.t. should be made to Indian shipping during the third Plan period. Since the Government and the Planning Commission had not seen their way to accepting this recommendation, he wondered whether the current Plan would witness the desired expansion of Indian shipping. Although India's Merchant Shipping has expanded from barely 100,000 g.r.t. in 1947 to about a million g.r.t. now, it is still not sufficient to carry even 10 per cent of our overseas trade and to handle all the coastal trade. Mr. Mehta has, therefore, pleaded strongly for greater expansion and observed in his presidential address at the Bombay Conference:

"One basic difficulty in the way of further development of our shipping is the paucity of foreign exchange. Foreign exchange is now scarce and purchases are sought to be confined to only one or two countries. The number of ships which the Hindustan Shipyard can build could be only a small part of the total tonnage which would have to be acquired for expansion as well as replacement. It is true that shipping is one of the best foreign exchange earners, and, as I have already stated, from the economic point of view, this is the most important consideration for the expansion of our shipping tonnage. But before ships can begin to earn or save foreign exchange, they have to be purchased for substantial amounts of money which would all be in foreign exchange. The problem is to find the resources for this initial outlay which is heavy. Indeed, in regard to coastal shipping, the difficulties are, if anything, even more acute since foreign exchange is not earned in the coastal trade. I suggest that on a satisfactory solution of this question, namely, of making available the requisite foreign exchange, the future of Indian shipping primarily depends. If these resources are not made available, it would not be possible to expand shipping in the overseas trade and the tonnage on the coast would be depleted without replacement, let alone any addition. I trust the seriousness of this question will be fully recognised by all those concerned. What is needed is a clear assessment of this problem, a recognition of its importance to the national economy and a deliberate decision on the question of allocating adequate foreign exchange for the acquisition of overseas and coastal shipping tonnage."

Hindustan Shipyard

As Chairman of the Hindustan Shipyard, Mr. Mehta is also uniquely qualified to speak with authority on the problems of India's shipbuilding industry. Although, in his opinion, the Hindustan Shipyard is fairly well equipped, it is far from being a viable unit and the cost of construction and the period of delivery of ships do not compare favourably with those of shipyards in other countries. This state of affairs is the result of the Shipyard's dependence on other countries for the supply of bulk of materials and equipment. Emphasising the need for promoting ancillary industries in the country to meet the requirements of the Shipyard, Mr. Mehta particularly suggested that the Government of India should seek foreign collaboration and technical assistance for the setting up of a marine diesel engine factory—a proposal which has been accepted in principle but has not yet been implemented. His further observations on the steps necessary for improving shipbuilding methods would bear quoting *in extenso*:

"In the Hindustan Shipyard, as in shipbuilding all over the world, there has to be a balance between standardisation of ships and the requirements of the shipowners. Questions of price, delivery, quality and standard as well as credit are all important factors in developing this industry. I have heard it stated that what is basically new in shipping lies not so much in the designing of ships as in the way they are built. These changes are so far-reaching nowadays and the development in methods so continuous that shipbuilding has ceased to be a static technology. What is needed, therefore, is 'a spirit of technological enterprise.' Scientific methods have to be adopted in management and administration as well as in designing and construction so as to make possible a more accurate measurement of productivity, better production planning and more efficient materials handling. We are getting so used to the adventitious aid of import restrictions and interminable protection in various forms that we are under-rating the vital need of organisation, techniques and facilities for economic production. Above all, what is essential is a sense of common interest or purpose among workers by brain and by hand which could be provided by a leadership that functions as partnership."

Mr. Mehta's plea for a bigger allocation for shipping, it is gratifying to find, has not entirely fallen on deaf ears. As a matter of fact, the inaugural address delivered by Dr. P. Subbarayan, Union Minister for Transport and Communications, at the Bombay Conference has presented a more hopeful picture of possible shipping expansion during the third Plan period. The relevant observations made by the Minister are:

"We have every hope that, as shipping is a self-financing industry, it would be possible for us to finance purchase of ships from foreign countries on the basis of the foreign exchange earnings of these ships. We have several projects of this kind, and, thanks to the credits offered by Japan and Yugoslavia, it has been possible for us to place orders on the shipyards in these two countries. We are also likely to get some credit from some of the European countries and also deferred payment facilities at fairly reasonable rates of interest. The picture on the whole, therefore, is satisfactory, and one need not be discouraged at the fact that the provision in the third Plan is not as high as the one recommended by the National Shipping Board. . . . If the sum of Rs. 55 crores during the third Plan is utilised for purchasing ships on deferred payments spread over seven years or eight years, the tonnage which should be added would amount to 7/5 or 8/5, as the case may be, of the actual grant given to us under the third Plan. There are also other ways of augmenting our resources. For example, we have created a fund, called the Shipping Development Fund, which gives aid, in the shape of loans on a nominal interest of 3 per cent per annum, to both Governmental and non-Governmental Corporations for purchase of ships. This Fund will naturally be utilised to a greater extent than is shown by the figures, as the amounts which are received by the Fund by way of repayment of loan can also be loaned out again for financing the purchase of ships. In fact, many of the loans that have been sanctioned have become ripe for repayment and the instalments are being funded back to the Shipping Development Fund. Thus, I see no reason why, with the financial resources at our disposal, we cannot add tonnage in the third Plan costing about Rs. 75-80 crores. I am also sure that if we spend all the funds at our disposal within the next two or three years, we could go up again to the Planning Commission for more funds."

By far the best hope held out by Dr. Subbarayan is that, if the provision of Rs. 55 crores for shipping is used up in the first two or three years of the third Plan, the Transport Ministry will plead with the Planning Commission for an increase in the allotment. This is as good as an assurance. For the present, the shipping industry would, therefore, do well to heed the Minister's advice in regard to the "planning of purchase of ships", instead of exercising its mind over the "inadequacy" of the third Plan allotment for shipping. Dr. Subbarayan's advice is to the effect that the shipping companies should assess the trends in traffic as can be foreseen for the next 10 or 20 years and correlate the types of ships to be purchased to such trends in traffic. Given such advance planning in the matter of ship purchases, the industry would be in a better position to ensure its own expansion and prosperity.

FULL AUTOMATION IN BRITISH STEELWORKS UNDER CONSTRUCTION

The giant Spencer works, now being built at Llanwern, Monmouthshire, at a cost of £120 million, is described as the first steelworks in the world to be planned to have a fully automated system for control of production from beginning to end. A "hierarchy of control" has been evolved by Elliott-Automation in co-operation with Richard Thomas & Baldwins, for whom the plant is being built. The automation plan involves the use of electronic computers throughout the plant, which will be Europe's biggest steelworks.

A statement issued by Elliott-Automation says: "Hitherto, control in steel production has been concerned only with control of sections of the whole process. The Spencer works represents a major advance in that it combines localised controls into an integrated system while retaining the essential flexibility of the individual sections. The control system receives a constant flow of demands for a variety of end-products in varying quantities, qualities and delivery schedules, and converts them into instructions. These instructions are broken down and refined by computers in stages in such a way that at each level they can be acted upon. These control instructions are complemented by technical instructions at appropriate levels, so that the entire plant operates at optimum efficiency. This flow of control information in the downward direction is then paralleled by a return flow of information which is signalled at all levels in the process, reporting what has actually happened at each stage. This information is assembled and assimilated by the computers and compared with the original instructions given. This enables each level of control to modify its instructions in the light of actual performance."

NEW PRODUCTS AND PROCESSES

Automatic Control of Knitting Quality

A MOST important and far-reaching advance is about to take place in the art of knitting as a result of the introduction of scientific systems of "Positive Feed" for automatic control of the knitting process. This is the prediction of Mr. W. A. Dutton, Director of Research at the Hosiery and Allied Trades Research Association, who spoke on the subject recently to a group of industrial scientists in London. "Positive Feed" is the supply of a controlled amount of yarn to a knitting machine for each revolution or movement. Knitting variations are then virtually eliminated and this results in less wastage of manpower and materials. There will be benefits too for the consumer. The already high quality of British knitted garments such as stockings and jumpers will be further improved as more uniform characteristics lead to better fabric appearance, less risk of shrinkage, and more regular sizes. But the main advantages will be in manufacturing as a result of smoother throughputs, fewer rejects, and easier sampling methods. The control of loop length will bring certain economic advantages. At present, abnormally long or short articles within a batch may have to be sold as "imperfects" at a reduced price. A further point is that any "imperfects" made may upset the production schedule as they have to be replaced by satisfactory articles and in any case constant supervision is always necessary.

Automatic Paper Sorter

An automatic paper sorter for paper mills has been developed after years of extensive research by Simmons and Thomson (Automatic) Ltd., London. The machine is now complete and has been subjected to exhaustive and rigorous tests. The results of these tests suggest that this is one of the most significant developments in the paper industry for some years. The principal advantages of the automatic paper sorter are: (1) The necessity for gearing production to sorting capacity together with some bottlenecks is eliminated. (2) Exceptionally fine gradings can be consistently achieved by the machine resulting in economy in production. (3) Where the paper sorter is installed, valuable mill space can be spared which is normally required for the hand-sorting operation. An interesting feature of the sorter is the revolutionary "Jet-stream" feeder. This is an entirely new design and has been developed for use in conjunction with a rising feed pile. An entirely new conception in feed rate gives a normal working speed of 10,000 sheets an hour for sheets up to 45×70 in. (114×178 cm.) with trouble-free performance. Double feeding, together with other problems, has been entirely eliminated.

Automatic Forging of Steel

Completely automatic forging of steel by precalculated programme has just been successfully demonstrated in the experimental forge of the British Iron and Steel Research Association in Sheffield. The forging was carried out by a precision controlled 200-ton press interlocked with a fast, remote-controlled, experimental manipulator capable of longitudinal, rotational and lifting movements. Electric controls had been developed for both press and manipulator to ensure fast, accurate, operation and to synchronise the movements of the two machines. During the forging, the press and manipulator were controlled by a programme control unit on which every detail of the schedule of forging operations had been set up. In this schedule, the upper and lower limit of the squeeze for every pass were given, the manipulator feed between storkes was selected and the manipulation necessary between passes was also stored. The control unit signalled instructions to the press and manipulator in the appropriate sequence. As a consequence, the finished forging in some respect exceeded the best current industrial standards as regards dimensional precision, and even so the job was accomplished twice as fast as the best skilled forging crew would be capable of doing. Even faster working will shortly be practicable. The forging schedule was calculated in advance, from a theory of the change in shape during forging which had been worked out in the laboratory. This advance in forging technique comes when many firms are already planning to re-equip their forges. At the moment there are probably more forging presses on order in Britain than at any previous time.

New Diesel Engine

A new 1.5 litre diesel engine has been announced by the British Motor Corporation. This high-speed unit, which provides a good road performance with unparalleled fuel economy at a competitive price, is already in full production at B.M.C.'s Engines Branch at Coventry, and is available as an alternative power unit to the well proved "B" series (1489 c.c.) petrol engine in 10/12 cwt. and 16/18 cwt. Austin and Morris light commercial vehicles. The 1.5 diesel breaks new ground in being derived from the well proven 1.5-litre petrol engine with which it shares many component parts. This standardisation of parts and simplicity of design is reflected in the reasonable price of this engine, which is available at an extra cost of only £85 over the petrol engine. An important outcome of this "commonisation" between petrol and diesel units is the retention of the standard engine cylinders (and dimensions) which have been proved to give as long life as the more conventional removable wet cylinder lipers of other British diesel engines. Apart from the usual differences between the two types of power unit the '1.5' is similar in appearance and construction to the petrol engine, is of identical dimensions and weighs only 50 lbs. more!

Measuring Instrument

A new measuring instrument has been announced in which an electric pick-up is guided over a maximum length of 4-in. (100 mm.) to provide an assessment of form errors by reference to a straight datum surface contained within the instrument. Accuracy of movement is such that departure from the main straight line does not exceed 0.25 microns in 100 mm. The speed of traverse and shape of stylus are selected to allow study in graph form of the lower frequency surface errors without being masked by the smaller irregularities. The instrument (the Talylin) operates with the amplifier and recorder of the Model 3 'Talysurf' so that users of this instrument will find the new instrument to be a valuable addition to extend the range of surface measurements. A support plate enables the Talylin to be mounted on the Model 3 stand in place of the gearbox and pick-up, to measure components such as rollers, inner and outer race tracks, and large radius cam plates. An alternative support permits the instrument to be placed on, or adjacent to larger surfaces which cannot be accommodated on the stand. Such components as large rolls and machine slideways can be checked in this way.

Mechanical Pen

A British firm, Taylor, Taylor and Hobson, has developed a mechanical pen for the speedy and accurate drawing of instrument scales. It has been produced to overcome the many problems associated with the conventional method of drawing the scales by hand—including human error, fatigue, time consumption and the difficulty of obtaining the right calibre of worker. It was essential that any automatic method should provide a means of applying the pen to the scale face with a consistently even pressure, avoiding bending and breakage of all pen tips. Blobbing of ink and biting into the surface due to weight and rigidity also had to be avoided. It comprises a quill which incorporates a plunger unit, the weight of which is counter balanced by a coil spring. Each size of pen has its own cartridge, with the correct size of guide hole in the tip. This makes the pen interchangeable. It also maintains the accuracy when pens are interchanged. Not more than 1,000th of an inch error results between any two graduations of scale. The unit is mounted on the engraving machine in place of the cutter spindle. The unit is then fed down to the scale face by means of the screw or lever feed. It can be used in two ways: by employing a master copy of the scale face or by picking the calibrated markings previously sketched on the scale face.

Ventilated Suit

Experiments with a ventilated suit designed for men working in high temperatures are being carried out by Dr. R. F. Hellon and Mr. G. W. Crockford of the Department of Human Anatomy, South Park Road, Oxford. The suit has a system of perforated plastic pipes sewn into it and these, when connected to an external air supply, allow cool air to continually pass over the wearer's skin and prevent outside heat from penetrating the fabric. Air is also forced out across the exterior of the suit. Coverings for the head, hands and feet are provided and the suit has been designed for connection to the usual factory compressed air supply. A pressure of 80 lbs. per square inch would be required. It is stated that the suit is expected to be suitable for those working in temperatures up to 350 degrees F. for over an hour at a time and that it will have obvious advantages over the usual cumbersome type of protective clothing. Much of the present work is being carried out on behalf of the British Iron and Steel Research Association and it is hoped that the first suits will be commercially available by the end of next year.

Aluminium Sulphate from Coal Waste

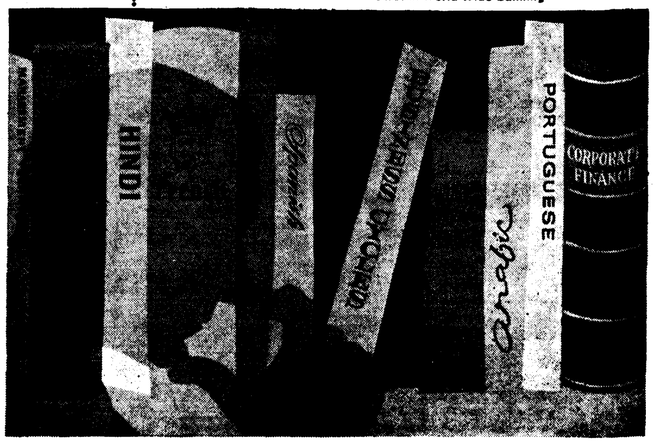
North American Coal Corporation is constructing a large plant to extract aluminium sulphate from coal wastes as the first step in a project to produce aluminium from domestic ores. The Company's announcement said that the plant, under construction at Wheeling, W. Va., would have an annual capacity of 40,000 tons of aluminium sulphate. The plant will use a new process developed jointly by North American and Strategic Materials Corporation. Part of the initial production is scheduled for study of the commercial feasibility of producing aluminium oxide from coal shale wastes and other materials such as high iron clays and bauxites.

Ultrasonic Welding

A process of welding stainless steel and aluminium by an ultrasonic process has been developed in Canada. The particular alloys in this development were required for a portable power plant that directly converts nuclear to electrical energy for space applications. Without ultrasonic welding it would have been impossible to produce the particular parts—in this case bellows made of stainless steel and aluminium that are strong and hermetically tight. Using the ultrasonic method, the assemblies were welded to withstand 30-40 p.s.i. gauge air pressure and 1 atm. helium pressure without leaking.

How many languages should your banker speak ?

The FIRST NATIONAL CITY BANK of New York
First in World Wide Banking



You'll enjoy a unique plus when you bring your CITIBANKER in on your financing deliberations. Naturally, your CITIBANKER is fluent in the language of your business. But also, because his everyday job has world-wide dimensions, he talks to international businessmen around the world, in THEIR OWN TONGUES about Commerce and Finance. When you plan to explore new markets or more imaginative financing, get the benefit of the broader perspective that First National City's world-wide organisation provides. Call your CITIBANKER in Bombay or Calcutta.

EMPLOYEES' PROVIDENT FUND SCHEME

COVERAGE OF INDUSTRIES EXTENDED

WITH the extension of the Employees' Provident Fund Act, 1952, to leather and leather products industry, effective from 31st August 1961, the Act now covers 59 industries, as against 47 industries at the end of December 1960 and six industries covered originally. The Act was amended last year to make it applicable to establishments employing 20 or more persons with effect from 31st December 1960. Till then it was applicable only to such establishments with 50 or more persons (20 in the case of newspaper establishments), if they had completed three years of existence. The lowering of the employment limit from 50 to 20 is expected to cover, in due course, an additional 200,000 employees in about 8,000 establishments. The Act applies to all the States and the Union Territories in India, except the State of Jammu and Kashmir.

Some of the industries brought under the purview of the Act during the year ended 31st March 1961 are mica factories and mines, plywood industry, automobile servicing and repairing industry, cane farms belonging to a sugar factory, rice, *dal* (pulses) and flour milling industries. Since April 1961, the Act has been further extended to starch industry, hotels, restaurants, petroleum or natural gas exploration, prospecting drilling or production, storage, transport or distribution, cinemas including preview theatres, film studios and leather and leather products industry. At the end of August 1961, according to the Annual Report of the Employees' Provident Fund Scheme for the year ended 31st March 1961, just released, 59 industries were covered under the Act. The number of subscribers at the end of March 1961 aggregated 2.93 million, as against 2.7 million at the end of March 1960.

Additional Units Covered

The lowering of the employment limit from 50 to 20 brought 40,000 additional establishments and 110,000 additional subscribers under the purview of the Act during the three-month period 1st January to 31st March 1961. By virtue of certain other amendments to the Act, (1) an establishment once covered under the Act will continue to be so covered, despite reduction in the employment strength below 20, except where the employment strength is reduced to less than 15 and remains so for a period of not less than one year; (2) provident fund has been made payable on retaining allowance paid usually in sugar factories and other seasonal establishments to an employee in off-season for retaining his service; (3) establishments employing 20 or more but less than 50 persons will not attract the provisions of the Act until the expiry of five years from the date of commencement of the manufacturing process.

An important amendment made in 1960-61 pertains to the loans that could be taken by members from the fund. The position till this amendment was that a member could get an advance to meet expenses in connection with his serious or prolonged illness or that of a member of his family and for financing his life insurance policy. With effect from 2nd April 1960, the scheme framed under the Act has been amended to enable a member to get non-refundable advance for the purchase of a dwelling house, or a dwelling site or for construction of a dwelling house or for allotment of a tenement constructed or to be constructed under the subsidised housing scheme for industrial workers.

Clarifications

Some of the clarifications issued by the Government regarding the liability for provident fund deductions and coverage of composite factories have removed much confusion in the administration of the Act. The Government has ruled that: (1) the production bonus as part of a contract of employment, either at flat rate or a rate linked to the quantum of work turned out, satisfies the definition of "basic wages" given in the Act, and as such would be liable to provident fund deductions; (2) in the matter of coverage of composite factories, the Act should be applied to an establishment which is a composite factory if it employs in all 50 (now 20) or more individuals and is engaged primarily in any of the notified industries; in other words, if the primary business of an establishment is the manufacture of goods coming under any of the covered industries and that establishment employs in all 50 (now 20) or more persons, the Act would be applied to the whole of the establishment, and (3) where road motor transport is an activity purely incidental to some other main activity of an employer, the case would not be covered under the Act irrespective of the persons employed in the incidental activity.

The number of unexempted establishments covered under the scheme and number of subscribers at the end of 31st March 1961, as compared with those at the end of the previous year, are as follows:

Year ended	*No. of unexempted establishments*	*No. of subscribers*
31st March 1961 ..	11,152	1,793,000
31st March 1960 ..	6,551	1,666,000

It may be noted here that, where an establishment has its own provident fund, gratuity or pension scheme and if the total quantum of benefits is not less than that under the statutory scheme, such an establishment can either apply for exemption from the provisions of the scheme or its employees, as a class, can opt out of the scheme. The following table shows the extent of coverage, number of employees and subscribers in exempted establishments:

Year ended	*No. of exempted establishments*	*No. of employees* (In millions)	*No. of subscribers* (In millions)	*% of membership*
31st March 1960.	822	1.96	1.035	87
31st March 1961.	941	1.317	1.136	86

The number of establishments voluntarily having provident fund facility in vocations covered by the Act rose from 95 to 115, the number of subscribers being about 8,000.

In view of the ever-increasing number of establishments being covered under the Act and the consequential enormous increase in work, the Board of Trustees of the Fund is considering whether, henceforth, exemptions should be granted more freely without, of course, relaxing in any way the conditions governing such exemptions.

Contribution

The minimum rate of contribution by members continued to be 6.25 per cent of basic wages, dearness allowance, retaining allowance and cash value of any food concessions, if any, with an equal contribution from employers. A member may, if he so desires, voluntarily contribute, as his own share, 8⅓ per cent. The contribution of the employer in such case remains restricted to 6.25 per cent. During the year under review, about 32,000 members were thus contributing voluntarily at a higher rate.

As is well known, the proposal to increase the rate of contribution from 6.25 per cent to 8⅓ per cent in respect of four of the six industries initially covered under the Act has been referred by the Government to a specially constituted technical committee, under the chairmanship of Mr. M. R. Meher, President, Industrial Court, Bombay, for investigation as to which of these industries are unable to bear the additional financial burden. The industries concerned are paper, cigarettes, electrical, mechanical or general engineering products and iron and steel. The Committee's report on these was submitted to the Government in June 1961 and it is still under the consideration of the Government.

Total contributions received during the year, including past accumulations, amounted to Rs. 21.2 crores (Rs. 20.3 crores in cash and Rs. 0.9 crore in securities) as against Rs. 16.36 crores during the previous year. Claims paid during the year amounted to Rs. 4.27 crores. The number of cases of final payment has naturally been increasing from year to year. During the year under review, 102,000 claims were settled. Some of the main difficulties encountered in the prompt settlement of the claims are (1) non-execution of valid nominations by members, (2) non-submission of statutory returns on the due dates, (3) discrepancies and defects in the claim form and statutory returns and belated transfer of the amount realised through recovery proceedings, etc.

Refund

Full accumulations with interest are refunded in the event of death, permanent disability, superannuation retrenchment or migration from India for permanent settlement abroad and leaving service for any reason after completion of 15 years' membership. In other cases, a member receives besides his own contribution and interest thereon, a proportion of the employers' share of contributions with interest thereon according to a graduated scale which stipulates a minimum of 25 per cent if the period of membership is less than 3 years and 85 per cent if the period is more than 10 years but less than 15 years and 100 per cent if 15 years and more. The Central Government has, however, authorised full refund of employers' contribution in the following contingencies also:

(*a*) where a factory is closed, the employees who are not retrenched but are transferred by the employer to other establishments not covered under the Act;

(*b*) when the office establishment is shifted with its employees from the factory premises;

(*c*) where a member is transferred from a covered establishment to another under the same employer but not covered under the Act; and

(*d*) where employees are discharged and are given retrenchment compensation under the Industrial Disputes Act.

As noted above, advances for payment of life insurance premium are permitted under the Act. This facility was availed of by 35,764 members during the year under review, as against 31,000 members last year and a sum of Rs. 22.4 lakhs, as against Rs. 18.74 lakhs, was thus advanced. A sum of Rs. 4.3 lakhs was paid by way of non-recoverable advances for purchase of dwelling site or construction of dwelling house privately or under subsidised housing scheme for industrial workers. Certain amendments to the rules, to enable a larger number of subscribers to avail themselves of this benefit, are under consideration. Loans aggregating Rs. 1.23 crore have been granted during the year towards covering medical expenses of members, as against Rs. 1.05 crore in the previous year.

As regards investments, a sum of Rs. 16.34 crores was invested in Central Government securities during the year in respect of non-exempted establishments, bringing the total in-

Note:—The following industries have been brought under the purview of the Act with effect from the dates given in brackets. Information regarding the number of subscribers in these industries is, however, not available. Starch industry (31-5-1961); hotels, restaurants, petroleum or natural gas exploration, prospecting, etc., petroleum or natural gas refining, storage, transport, or distribution of petroleum or natural gas (30-6-1961); cinemas, film studios, film production concerns, distribution concerns dealing with exposed films, film processing laboratories (31-7-1961) leather and leather products (31-8-1961).

INDIA'S TRADE WITH SOVIET BLOC EXPANDS

EXPORT OF NON-TRADITIONAL ITEMS, HOWEVER, FAILS TO INCREASE

TRADE delegations from some of the Soviet bloc countries are scheduled to arrive in India in the course of this month in order to finalise trade arrangements with this country for the year 1962. Russian and Polish delegations, it may be recalled, have already exchanged letters, within the framework of existing trade agreements, with Indian officials at New Delhi envisaging substantial increase in their trade with India next year. India's trade with the Soviet bloc, as is well known, is governed by bilateral trade agreements, providing for payment in non-convertible rupee. The object of this arrangement is primarily to ease pressure on foreign exchange resources and ensure automatic balancing of India's exports to, and imports from, the countries concerned. The bilateral agreement was also conceived as a means to promote exports of a wide range of new manufactures, in which India has developed an exportable surplus. India's total trade with the Soviet bloc (comprising Soviet Russia, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland and Rumania) has already gone up impressively during the last decade. From no more than Rs. 9 crores in 1952, India's foreign trade with these countries had gone up to as much as about Rs. 78 crores by 1960. Its exports alone increased from just Rs. 6 crores to about Rs. 45 crores during the period. Imports rose from a mere Rs. 3 crores to Rs. 33 crores. While the rate of increase has been marked, it should not be forgotten that the share of the Soviet bloc in India's total trade still continues to be very modest. In 1960, India's exports to these countries amounted to about 7 per cent of its total exports; the corresponding share in its imports was just over 3 per cent.

India's trade with the Soviet bloc, however, has not been an unmixed blessing. As had been pointed out earlier in *Commerce* (*vide* pages 118 dated 15th July 1961, and 756 dated 14th October 1961), the increasing volume of India's trade with these countries has resulted neither in any increase in exports of non-traditional commodities, as originally anticipated, nor in saving of much foreign exchange. The lion's share of India's exports to these countries continues to be composed of traditional commodities, such as coir yarn, tobacco, cotton and cotton waste, spices, shellac, cashewnuts, hides and skins, coffee, mica, manganese ore and iron ore. Apart from the virtual absence of manufactured goods in India's exports to these countries, even some of the traditional commodities, it is said, are imported from India only to be re-exported to some of the West European countries. If proper care is not taken to rectify this anomaly, it is possible that these exports to the Soviet bloc may ultimately lead to exhaustion of the traditional outlets for India's commodities. India's imports from these countries comprise mainly machinery, iron and steel manufactures, transport equipment and other manufactured goods such as fertilisers, chemicals and pharmaceuticals and newsprint. There have been several complaints that the price of imports from these countries have often been on the high side and that the quality of goods has not been of a high order.

Table I on this page shows India's exports to, and imports from, the Soviet bloc countries in Europe since 1952. Soviet Russia is, of course, India's leading customer among these countries. Among buyers of Indian goods, Soviet Russia was led by only the U.K., the U.S. and Japan as of 1960; and its purchases were, in fact, higher than those by Australia, West Germany and Canada. India's exports to Russia, which had been only Rs. 2 crores in 1952, rose gradually to Rs. 30 crores by 1959 and almost stayed at this level in 1960. Its imports from Russia rose from only Rs. 83 lakhs in 1952 to as much as about Rs. 23 crores by 1957, but since then there has been a decline, being only Rs. 13 crores in 1960. Since 1958, India had a favourable balance in its trade with Russia. But there is no room for complacency. Persistent efforts are necessary to boost exports, not only to pay back the aid being given by Russia, but also to cover larger imports of Russian petroleum products envisaged now. Since the beginning of 1961, the trade between the two countries has been running at a much higher level. The value of this trade is expected to rise to Rs. 60 crores during this year. Thus, during the first seven months of the current year, India's exports to Russia amounted to Rs. 17 crores and imports Rs. 11 crores.

Following the understanding reached between the representatives of the two countries last month, the total trade is expected to go up to Rs. 80 crores in 1962. It is learned that Indian officials informed the Soviet delegation about the need for ensuring a larger market in Russia for some of India's manufactured goods, such as light engineering goods, chemicals and textiles. The existing trade agreement, which came into force in 1959 and would be valid for five years, has listed several manufactures as exportable goods from India, particularly jute fabrics and sacks, footwear, woollen fabrics, coir goods, etc., apart from traditional items. But the offtake of these goods has not made any perceptible improvement. Major items of India's imports from Russia are various types of industrial equipment and plants, power and oil drilling equipments, coal mining machinery, machine tools, non-ferrous metals and fertilisers. These imports have been encouraged by Soviet collaboration in the development of several basic industries, particularly the Bhilai steel plant, the exploration for mineral oil in Gujarat and the oil refinery projects in Eastern India.

TABLE I

Trend of Trade with Soviet Bloc

(In lakhs of rupees)

	Imports	Exports	Balance of Trade
Soviet Russia			
1952	83	2,00	+ 1,17
1953	45	36	— 9

1961(January-July)	21	14	— 7

Poland is one of the leading East European countries with which India has established close commercial relations. Letters specifying schedule of goods for 1962, under the Indo-Polish agreement signed in 1959, were exchanged between the delegations of the two countries last month at New Delhi. The new arrangement seeks to expand the mutual trade considerably in 1962. India's exports rose from a mere Rs. 24 lakhs in 1952 to Rs. 359 lakhs by 1959, but fell to Rs. 335 lakhs in 1960. Its imports increased from Rs. 26 lakhs to Rs. 488 lakhs by 1957, but fluctuated thereafter. In 1960, they were lower at Rs. 299 lakhs. In view of the decline in imports, India attained a favourable balance in its trade with that country, for the first time in 1960. But this trend has once again been reversed, with imports going up at a rapid pace to Rs. 429 lakhs in the first seven months of 1961. Exports during the period were only Rs. 271 lakhs, leaving an adverse balance of Rs. 158 lakhs. The total value of trade is expected to go up to Rs. 12 crores in 1961. Under the new arrangement, it is proposed to increase annual value of trade to Rs. 10 crores each way. Poland is also expected to buy from India certain engineering items, textile machinery, steel products, collapsible tubes, handicrafts, coir goods, etc., in addition to traditional items like tea and spices.

Of all the East European countries, including Russia, Czechoslovakia is the only country which had a sizable quantum of trade with India even as early as in 1952. The volume of trade, of course, has expanded considerably since then. India's shipments to that country touched a record level of Rs. 600 lakhs in 1960, as against Rs. 290 lakhs in 1952. Its imports were higher at Rs. 715 lakhs, as against only Rs. 160 lakhs. India had an adverse balance of trade of Rs. 115 lakhs in 1960, as against a favourable balance of Rs. 43 lakhs in 1959, thanks to a larger increase in imports than in exports.

India exported goods worth Rs. 250 lakhs to East Germany in 1960, a record level. But its imports staged a spectacular increase resulting in an adverse balance of trade of Rs. 71 lakhs in 1960. It may be recalled that, a decade ago, the volume of trade between the two countries was insignificant. Indo-Hungarian trade, too, has been steadily expanding in size. India's shipments to that country aggregated Rs. 112 lakhs in 1960, as against Rs. 74 lakhs in 1959 and only Rs. 23 lakhs in 1952. Imports have been running at a higher level, being Rs. 197 lakhs in 1960, as against Rs. 242 lakhs and Rs. 27 lakhs. Owing to large imports, India has had a persistent unfavourable balance in its trade with that country, although it was lower in 1960 than in the previous year. India's trade with Rumania has made good progress during the last couple of years. It had a large adverse balance in its trade with that country in 1960, its imports being higher at Rs. 382 lakhs, as against exports of Rs. 114 lakhs. India's commercial relations with Bulgaria have not yet developed to any significant extent, but future prospects for increase in trade are good. A Bulgarian trade delegation is expected t visit India early next year. This delegation likely to discuss with Indian officials measu designed to increase Indo-Bulgarian trade.

CUSTOMS AND EXCISE REVENUE

The revenue realised from items on whic duties are levied and collected by the Centr Government in the first six months of the financ year 1961-62 amounted to Rs. 441.30 crores. T corresponding figure for the first six months 1960-61 was Rs. 367.77 crores. Following are d tails of the revenue realised under various heads:

(In lakhs of rupees)

	April to September	
	1961-62	1960-
Customs	96,99	77,
Union excise duties (excluding coal cess and salt cess)	229,62	193,8
Co-rporation tax	51,53	35,76
Income-tax	58,57	57,05
Estate duty	1,81	2,
Taxes on wealth	1,57*	1,47
Expenditure tax	12*	1,
Gift tax	2*	1
Railway passenger fare tax		5,
Opium	2,71	2
Total	441,30	327,

* Provisional.

RESULTS OF BHARAT BIJLEE ENCOURAGING

FRESH CAPITAL MAY BE RAISED

THANKS chiefly to the highly favourable conditions that now prevail in the industry in which it mainly operates, the sales and profit of the Bharat Bijlee Ltd. (Chairman: Mr. Prahlad C. Mehta, Bombay) for the year ended 30th June 1961, have not only fully recovered from the setback they had received during the preceding year but have also shown a sizable improvement. Sales of electric motors and transformers, which had declined to Rs. 44.61 lakhs in 1959-60 from the previous high of Rs. 52.42 lakhs, have now risen to Rs. 56.67 lakhs and the gross profit shows a corresponding increase of Rs. 2.17 lakhs to Rs. 5.60 lakhs, thus surpassing all previous figures. In the opinion of the Directors, the profit would have been even more attractive but for three main reasons. First, the cost of raw material and stores consumed has increased in proportion with higher production and sales and there has been a more than proportionate increase in the wage bill due to the increase in the number of employees. In absolute terms, the expense on these two major heads has gone up from Rs. 33.18 lakhs to Rs. 45.53 lakhs or roughly 37 per cent. Second, the service charges payable to Messrs. Siemens India (Pvt) Ltd. have become payable on the sales for the whole year whereas a similar charge for the previous year was applicable to the sales for a period of a little under three months. And, third, the professional charges paid to a firm of industrial consultant increased the expense on this account by Rs. 35,000. What the Directors have, however, failed to state is that there has been a sharp reduction in the selling commission, from Rs. 2.09 lakhs to Rs. 0.49 lakh, during the year and this has, in fact, led to the aforesaid satisfactory profit position.

The increased industrial activity of the Company has necessitated the maintenance of a higher depreciated block and this in its turn has resulted in a higher provision for depreciation of Rs. 1.85 lakh as against Rs. 1.52 lakh previously. The provision for taxation has also been raised by Rs. 0.75 lakh to Rs. 1.55 lakh owing to a higher taxable profit. As a result, the net profit has advanced only moderately by Rs. 1.09 lakh to Rs. 2.20 lakhs.

It will be recalled that, pursuant to resolutions passed in class meetings and an extraordinary general meeting, the Company converted its entire preference share capital into ordinary share capital after meeting the liability on account of arrears of preference dividend in full and that this change became effective from 1st July 1960. No preference dividends are thereby payable in respect of the year under review and the net profit, after minor additions and subtractions has become disposable amongst the ordinary shareholders alone. Accordingly, the Directors have proposed a dividend of Rs. 7.50 per share, subject to deduction of tax on the 'old' equity shares and a proportionate amount of Rs. 5.00 per share, also subject to deduction of tax, for the 'new' equity shares. The amount payable to new equity shareholder actually works out to Rs. 4.95 per share only but a higher rate has been recommended for the sake of convenience. The total dividend distribution claims Rs. 1.25 lakh and leaves Rs. 9.365 as a carry forward.

The results achieved by the Company during the past four years are presented below in the form of a comparative table:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sales less returns	56.67	44.61	52.42	41.03

* Subject to deduction of tax.
Preference dividends for the years 1958, 1959 and 1960 include those for earlier years also. During 1960-61 preference shares were converted.

With the aforesaid changes in its capital structure, the share capital of the Company, as on 30th June 1961, stands at Rs. 20.00 lakhs all in 20,000 equity shares of Rs. 100 each and is backed by Rs. 4.31 lakhs in reserves. The total of outstanding borrowings amounts to Rs. 13.07 lakhs in addition to current liabilities of Rs. 13.73 lakhs. The gross block is worth Rs. 25.85 lakhs and has been written down to Rs. 17.32 lakhs. Current assets, loans and advances altogether aggregate Rs. 33.61 lakhs, while miscellaneous expenditure pending a write off totals Rs. 18.138.

It will be recalled that the Company has entered into a technical collaboration agreement with Messrs. Siemens Engineering and Manufacturing Company of India Private Ltd., for the manufacture of their make of motors and transformers. The progress under this agreement, during the year, has been satisfactory. All transformers are now being made to Siemens' designs as also several sizes of motors. Market response to these goods has been encouraging.

During the course of the year, the Company took a very proper step towards increasing the efficiency of its workers. Acting on the advice and recommendations of a reputed firm of industrial consultants, it introduced a production incentive scheme for its workers. This has led to an increase in the efficiency of the organisation as a whole and this is expected to lead to a considerable rise in output during the current year. Figures for the first three months justify this hope.

As regards plans for expansion, it is well to reproduce here what the Directors themselves have to say on this subject. They state:

"During the year an expansion licence was received to raise the installed capacity of the transformer department from the existing 72,000 KVA per annum to a little over 2,00,000 KVA per annum. An application is also being made to the I.C.I.C.I. for a foreign exchange loan for importing the necessary equipment for the transformer department.

"An application has been made for a licence for a very considerable expansion in the capacity of the motor department also. It is proposed to undertake, in the near future, the manufacture of various types of special motors. A start has already been made, and this Company is amongst the very first to market flameproof motors.

"As a first step towards implementing these projects, the Company has contracted to purchase 95,000 sq. yds. of industrial land in the vicinity of Trombay. Heavy expenditure of a capital nature will have to be incurred and it will be necessary to seek additional capital."

The new ordinary shares of the Company, which were admitted for dealings on the Bombay Stock Exchange, are presently quoted at Rs. 175.00 *cum-div.* The net yield on an *ex-div* basis works out to about 2.0 per cent.

(*Concluded from next column*)

Messrs. Kimberlay Clark of Wisconsin, U.S.A., for carrying out its modernisation and expansion programmes, including the installation of the plant for the manufacture of special varieties of light weight papers up to a rated capacity of 950 tons per month under the development licence received in the previous year. The Company has received the consent of the Controller of Capital Issues to issue capital of Rs. 1,09,27,620, all in equity shares of Rs. 10 each, to be offered for cash at par. Out of this, shares of Rs. 54,63,810 will be offered to the American collaborators.

The paid-up capital of the Company at the end of the year under review is unchanged over the previous year's level of Rs. 289.48 lakhs. The reserves and surplus aggregate Rs. 73.10 lakhs. The gross block account, which increased during the year from Rs. 657.32 lakhs to Rs. 665.13 lakhs, has been written down at the end of the year to Rs. 425.00 lakhs, a level which is nearly Rs. 2 crores higher than the paid-up capital. This difference is met out of borrowings from banks and Andhra Government of as much as Rs. 210 39 lakhs. The fresh capital issue now proposed should help the Company reduce its reliance on heavy secured loans. In addition to this indebtedness, the Company has current liabilities and provisions of the order of Rs. 73.14 lakhs. The current assets, loans and advances amount to Rs. 190.46 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 17.25 *cum-div.*, and at their *ex-div.* value of Rs. 16.65, they offer a yield of 3.5 per cent per annum, free of tax.

SIRPUR PAPER JUST SCRAPES THROUGH

REAL NET PROFIT LOWER

RIGHT at the time when the paper industry as a whole in the country has suffered in its profitability due to the revised prices of paper, which came into force from 1st January 1960, the Sirpur Paper Mills Ltd. (Managing Agents: Messrs. Birla Brothers [Private] Ltd., Calcutta) has sprung a surprise by proposing a higher distribution on its equity capital for the year ended 30th June 1961, as compared with the amount paid in the previous year. The dividend has been stepped up from 65 nP to 85 nP, subject to deduction of tax, or from 45.5 nP net to 59.5 nP net, per share of Rs. 10.

Normally a higher ordinary dividend would mean better working during the year for which it pertains. In the case of the Sirpur Paper Mills Company, however, it is not so. It can be said that, at best, the Company has only been able to maintain the progress it attained in the previous year, though, in the context of the revised paper prices, which came into full play during the year under review, this in itself may be considered quite satisfactory. Although the trend of profit for the year under review may not justify the Directors' proposal to raise the dividend, it must be borne in mind that they had adopted a conservative policy last year while appropriating the profit for 1959-60 and that, despite the increase that has been effected now, the dividend is still at a modest level, being less than 6 per cent net.

While the gross profit during the year under report has gone up from Rs. 75.19 lakhs to Rs. 90.12 lakhs, it represents very largely an increase in income from other sources from Rs. 6.16 lakhs to Rs. 20.08 lakhs due to an adventitious receipt of Rs. 13.13 lakhs as a result of insurance money received against damages caused by fire to stores, raw materials, damage to machinery, etc. The Directors state that production during the year was nearly the same as in the previous year. This, however, is in no way disturbing, for, in the previous year, the Company had recorded a striking increase of over 70 per cent in output, from 17,600 tons to 30,000 tons. And, despite lower production and reduced selling prices, gross sale proceeds of Rs. 522.88 lakhs are almost maintained at the previous year's level of Rs. 523.10 lakhs, apparently owing to increased production of finer varieties of paper. Cost of power and fuel consumed has gone up from Rs. 67.71 lakhs to Rs. 78.75 lakhs, while the cost of raw materials consumed has gone down from Rs. 208.86 lakhs to Rs. 185.62 lakhs. The burden of excise duty has increased from Rs. 66.53 lakhs to Rs. 68.92 lakhs and so also manufacturing expenses from Rs. 120.15 lakhs to Rs. 122.63 lakhs. After providing depreciation with Rs. 52.81 lakhs (Rs. 46.82 lakhs) and Managing Agents' commission Rs. 2.97 lakhs (Rs. 2.88 lakhs), the net profit is higher at Rs. 34.34 lakhs as compared with Rs. 25.50 lakhs for the previous year. But it would have been actually lower but for the fire claim mentioned earlier. Dividends absorb Rs. 24.11 lakhs, as against Rs. 19.87 lakhs a year before. The Directors have transferred Rs. 9.54 lakhs to reserves against Rs. 6 lakhs previously. The carry forward is Rs. 1 lakh against Rs. 0.35 lakh brought in.

The salient features of the Company's working during recent years are brought out in the comparative table below:

(In lakhs of rupees)

	For the year ended 30th June

The Company has entered into a technical and financial collaboration agreement with

(*Continued in previous column*)

HIGHER SALES BY SPENCER & CO.

PROFIT ONLY MODERATE—DIVIDEND SAME

DIVERSIFICATION of business interests these days is fast becoming something of a fashion with many of our industrial concerns and has in fact already become a wonderful password that can explain away almost any error of judgment. The craze to explore new avenues has, indeed, led quite a few companies into strange places and produced headaches for the boards concerned. Nevertheless, there do exist concerns in the case of which branching out, leading naturally from the existing business activity, has proved highly profitable. A case in instance is Messrs. Spencer & Co. Ltd., Madras. This Company, it may be recalled, was established to carry on business as merchants, store-keepers and commission agents for a number of foreign suppliers. Changes in consumer preference, replacement of foreign goods by indigenous manufactures and the import restrictions in recent years, all compelled the Company to enter the manufacturing field and diversify its activities. Presently, its interests are spread over a wide range of products and covers such varied fields as general trading, hoteling and catering, house furnishing, refrigeration and air-conditioning, tea plantation, and the manufacture of drugs, pharmaceuticals, cigars, and aerated waters. A recent gainful addition to the list has been that of canning of fruits and vegetables. This extension of trading interest has, of course been gradual, but the Company's sales and profits have already begun to reflect the effect thereof, as will be evident from the comparative table given below:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sales and receipts	4,54.24	3,79.24	3,70.93	2,96.56

Dividends—				
Preference	4.17	4.63	4.65	3.17
Ordinary	7.20	7.20	7.20	6.00
	(18%)*	(18%)*	(18%)*	(15%)
Carry forward	9.57	7.56	5.51	9.13

* Subject to deduction of tax. Preference dividend for 1957-58 are shown after deduction of tax, those for 1958-59 and 1959-60 are gross and subject to taxation while those for 1960-61 are again exclusive of the tax but include Rs. 9,372 as additional dividends for the two half years ended 30th June 1961.

During the year ended 30th June 1961, sales from stocks and receipts from hotels, bakeries, laundry, catering, etc. have risen quite sharply by Rs. 75.00 lakhs to Rs. 454.24 lakhs. No explanation as regards this increase has, however, been provided in the Directors' report, which is sketchy to the point of obscurity, and in this event, the Chairman's speech will have to be awaited for further elucidation. An equally encouraging increase has been effected in other income owing chiefly to the receipt of Rs. 3.64 lakhs in the form of net dividends, for the years 1959 and 1960, from Messrs. Parke Davis (India) Ltd., in which the Company holds a substantial interest. The growing trading activity has perforce necessitated the holding of a much larger inventory of finished goods which, as on the last day of the year, stood at Rs. 111.23 lakhs, as against Rs. 94.90 lakhs a year before. There has, however, been a corresponding rise in the cost of raw materials, finished goods and stores consumed from Rs. 294.42 lakhs to Rs. 361.69 lakhs, in that of salaries and employee benefits from Rs. 53.01 lakhs to Rs. 58.05 lakhs, and in other expenses from Rs. 33.43 lakhs to Rs. 38.33 lakhs, so that the gross profit shows only a meagre improvement of Rs. 5.66 lakhs to Rs. 29.53 lakhs. An increase in essential provisions has also been found necessary, that for depreciation having been stepped up from Rs. 3.56 lakhs to Rs. 3.89 lakhs, and for taxation by Rs. 2.25 lakhs to Rs. 10.75 lakhs. After these adjustments, the net profit been better than that for the previous year by Rs. 3.08 lakhs. After taking credit for Rs. 0.74 lakh as provisions no longer required and transferring Rs. 2.25 lakh to various reserves and provisions, the Directors have set aside Rs. 4.17 lakhs towards preference dividends for the year and have recommended the maintenance of ordinary dividends at 18 per cent subject to deduction of tax. These, as during the previous two years, absorb Rs. 7.20 lakhs, leaving a higher carry forward of Rs. 9.57 lakhs against Rs. 7.56 lakhs brought in.

It will be seen from the foregoing account that, although sales went up by nearly Rs. 75 lakhs and other income by Rs. 6 lakhs, the gross profit improved by only Rs. 5.7 lakhs. This shows that the profit-margin is not high and that, during 1960-61, it did not improve at the same pace at which the turnover increased. Another notable point is that whatever increase there has been in profit has been fully utilised to strengthen the Company's finances; this suggests that the management wants to follow a policy which will be beneficial to shareholders in the long term.

For successful and profitable operations, a trading concern must maintain a highly satisfactory working capital position. A perusal of the Company's balance-sheet as at 30th June 1961 discloses that this has, in fact, been the case. The share capital of the Company, consisting of Rs. 60.00 lakhs in cumulative preference shares and Rs. 40.00 lakhs in ordinary shares, is supplemented by reserves and surplus amounting to Rs. 112.51 lakhs. Against this owned fund of Rs. 212.51 lakhs fixed assets at their written down value aggregate Rs. 79.96 lakhs, the gross block being shown at Rs. 159.18 lakhs. Loans and current liabilities are placed at Rs. 114.70 lakhs and are very decisively exceeded by the total of investments, current assets, and book debts aggregating Rs. 247.25 lakhs.

Currently, the Rs. 10 fully paid ordinary share of the Company is being quoted on the stock exchange at Madras at Rs. 23.41 *ex-div.* The net yield at this price works out to 5.4 per cent per annum.

CHRESTIEN MICA INDUSTRIES LTD.

The working of Chrestien Mica Industries Limited (Managing Agents: Agarwala and Bros., Calcutta) during the year ended 31st December 1960 has resulted in a small setback, as compared with the previous year. The setback can be traced to lower production as reflected in the slight fall in the consumption of raw materials from Rs. 74.39 lakhs to Rs. 71.59 lakhs and lower closing stocks at Rs. 22.95 lakhs as compared with Rs. 26.11 lakhs a year before. That production during the year had shrunk is also indicated in mining and manufacturing expenses which at Rs. 31.88 lakhs show only a minor increase of Rs. 0.15 lakh over Rs. 31.73 lakhs in the previous year. Consequently, gross profit has also declined from Rs. 34.47 lakhs to Rs. 32.18 lakhs, despite some relief in other expenses which have moved down from Rs. 34.72 lakhs to Rs. 34.19 lakhs.

The Directors have, however, maintained the dividends at the previous year's levels of 15 per cent on ordinary shares of Rs. 10 each and 25 per cent on deferred shares of Rs. 5 each, both being subject to deduction of tax. The net return is 10.5 per cent on the equity capital and 17.5 per cent on deferred shares. After providing Rs. 1.39 lakh for depreciation (Rs. 1.31 lakh), Rs. 12.48 lakhs for taxation (Rs. 13.01 lakhs) and Rs. 2.75 lakhs for Managing Agents' commission (Rs. 3.34 lakhs), the net profit amounts to Rs. 15.56 lakhs against Rs. 16.81 lakhs in the previous year. Dividends take away Rs. 9.72 lakhs and reserves get Rs. 6.26 lakhs against Rs. 8.20 lakhs previously. After making adjustments in respect of previous years, the balance of Rs. 0.86 lakh is carried forward against Rs. 1.58 lakh brought in.

The following comparative table gives a fair idea of the Company's working during the last four years:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds (gross)	1,61.72	1,68.51	1,49.66	1,42.69

* Subject to deduction of tax.

The issued capital of the Company is of Rs. 75 lakhs, comprising Rs. 30 lakhs in 5½ per cent taxable cumulative preference shares of Rs. 100 each, Rs. 30 lakhs in equity shares of Rs. 10 each, and Rs. 15 lakhs in deferred shares of Rs. 5 each. It is supplemented by reserves and surplus totalling Rs. 42.52 lakhs. Secured loans include Rs. 15 lakhs in 4½ per cent first mortgage debentures, Rs. 35.68 lakhs bank borrowings and Rs. 2 lakhs loans. Besides, there are unsecured loans of Rs. 9.78 lakhs. Thus, the borrowings by the Company are quite heavy, and the capital loans ratio of 7 : 6 is rather unhealthy. In addition, current liabilities and provisions amount to Rs. 114.46 lakhs. Current assets, loans and advances stand at Rs. 178.71 lakhs, being Rs. 1.78 lakhs in excess of the total indebtedness. Sale of some fixed assets has brought down the gross block account to Rs. 72.83 lakhs from Rs. 74.25 lakhs at the close of the previous year. It is written down to Rs. 40.95 lakhs. Investments at their book value are lower at Rs. 63.50 lakhs against Rs. 84.07 lakhs previously, and are shown at their market value of Rs. 72.17 lakhs (against Rs. 66.43 lakhs a year before). The book value of the quoted investments is Rs. 60.48 lakhs while their market value is only Rs. 49.15 lakhs. Provident fund investments amount to Rs. 2.60 lakhs against Rs. 1.58 lakhs previously. Contingent liabilities amounting to Rs. 17.17 lakhs are not provided for.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 10.19 *ex-div.* and at that price offer a yield of 14.7 per cent per annum, free of tax.

COMPANY MEETINGS AND DIVIDENDS

PHOSPHATE CO., LTD. Annual General Meeting, Calcutta, 18th December 1961. Dividend: Rs. 25.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 8th to 18th December 1961, both days inclusive.

INVESTMENT TRUST OF INDIA LTD. Annual General Meeting, Madras, 20th December 1961. Dividend: 6 per cent or Rs. 6.00 per share, subject to deduction of tax, payable on 21st December 1961. Transfer books will remain closed from 13th to 20th December 1961, both days inclusive.

SPENCER AND CO., LTD., Sixty-fourth Annual General Meeting, Madras, 20th December 1961. Dividend: 12 per cent or Re. 1.20 per ordinary share, final (making a total of 18 per cent or Re. 1.80 per share, for the year), subject to deduction of tax, for the year ended 30th June 1961. Transfer books will remain closed from 13th to 20th December 1961, both days inclusive.

GILLANDERS ARBUTHNOT & Co., LTD. Twenty-seventh Annual General Meeting, Calcutta, 21st December 1961. Dividend: 11 per cent or Re. 1.10 per ordinary share (subject to deduction of tax for non-resident shareholders) net, payable on or after 5th January 1962. Transfer books remain closed from 6th to 21st December 1961, both days inclusive.

BALLARPUR PAPER AND STRAW BOARD MILLS LTD. Annual General Meeting, Ballarpur, District Chanda, Maharashtra, 28th December 1961. Dividend: 14.50 per cent or Rs. 3.625 per ordinary share, subject to deduction of tax, for the year ended 30th June 1961. Transfer books will remain closed from 19th to 28th December 1961, both days inclusive.

MYSORE KIRLOSKAR LTD. Twentieth Annual General Meeting, Yantrapur P.O., Harihar, Mysore State, 29th December 1961. Dividend: 12 per cent or Rs. 12.00 per share, subject to deduction of tax. Transfer books will remain closed from 19th December to 2nd January 1962, both days inclusive.

CENTRAL INDIA SPINNING, WEAVING AND MANUFACTURING CO., LTD. Eighty-seventh Annual General Meeting, Bombay, 29th December 1961. Dividend: *Nil*. Transfer books remain closed from 30th November to 29th December 1961, both days inclusive.

BURRAKUR COAL CO., LTD. Annual General Meeting, Calcutta, 29th December 1961. Dividend: 13 per cent or Re. 1.30 per ordinary share, subject to deduction of tax, payable on or after 17th January 1962. Transfer books will remain closed from 14th to 29th December 1961, both days inclusive.

ASSOCIATED CEMENT COMPANIES LTD. Annual General Meeting, Bombay, 19th January 1962. Dividend: Rs. 12.00 per ordinary share, subject to deduction of tax, payable on and from 1st February 1962.

K.C.P. LTD. Taxable dividend of 15 per cent or Re. 1.50 per ordinary share, for the year ended 30th June 1961. Transfer books will remain closed from 16th to 27th December 1961, both days inclusive.

GUEST, KEEN, WILLIAMS LTD. Taxable interim dividend of Re. 0.60 per ordinary share, in respect of the 52 weeks ending 30th December 1961, payable on and after 15th January 1962. Transfer books will remain closed from 14th to 28th December 1961, both days inclusive.

CONSOLIDATED COFFEE ESTATES (1943) LTD. Taxable dividend of 20 per cent or Rs. 2.00 per ordinary share, for the year ended 30th June 1961. Transfer books will remain closed from 8th to 29th December 1961, both days inclusive.

COFFEE LANDS AND INDUSTRIES (MYSORE) LTD. Taxable dividend of 12 per cent or Re. 1.20 per ordinary share, for the year ended 30th June 1961. Transfer books remain closed from 8th to 29th December 1961, both days inclusive.

ANDHRA SCIENTIFIC CO., LTD. Taxable dividend of 20 per cent or Rs. 2.00 per ordinary share, for the year ended 30th June 1961. Transfer books will remain closed from 16th to 31st December 1961, both days inclusive.

STANES AMALGAMATED ESTATES LTD. Taxable dividend of 10 per cent or Re. 1.00 per ordinary share, for the year ended 30th June 1961. Transfer books will remain closed from 15th to 29th December 1961, both days inclusive.

JEYPORE SUGAR CO., LTD. Taxable dividend of 15 per cent or Re. 1.50 per ordinary share (I.F.C. permission received), for the year ended 30th June 1961. Transfer books will remain closed from 20th to 29th December 1961, both days inclusive.

TRAVANCORE CHEMICAL AND MANUFACTURING CO., LTD. Taxable interim dividend of 10 per cent or Re. 1.00 per ordinary share, for the year ending 31st March 1962.

SYNOPSES OF COMPANY REPORTS

National Newsprint and Paper Mills Ltd.

(Chairman: Sir A. Ramaswami Mudaliar.)

Managing Director: Mr. S. L. Visvanadhan.

Annual General Meeting—6th December.

Working Results:

N.B.—Adjustments represent the debit balance brought forward from the previous year.

Extracts from the Directors' report: Share Capital: The capital structure of the Company has changed during the year. Out of 127,860 equity shares standing forfeited as on 31st March 1960, the forfeiture of 29,820 equity shares has been annulled during the year. This annulment has increased the share capital of the Company from Rs. 4,93,24,877.50 as on 31st March 1960 to Rs. 4,94,51,427.50 as on 31st March 1961.

Outstanding loan to the Union Government: During the year under review the entire outstanding interest bearing loan from Union Government amounting to Rs. 25,00,000.00 has been paid in full along with interest.

Interest-free loan payable to Government of M.P.: The interest-free loan payable to Government of Madhya Pradesh amounted to Rs. 99,00,000 on 31st March 1960. The second instalment of Rs. 11 lakhs was paid during the year leaving a balance of Rs. 88,00,000 on 31st March 1961, payable in 8 instalments.

Progress of work: During the year 23,029 (22,411 tons in 1959-60) tons of newsprint was produced registering an increase of 618 tons over that of the previous year. A Dynopulper Unit was commissioned for processing imported pulp to improve the strength and quality of the newsprint.

Sales: During the year 23,101.60 (22,139 in 1959-60) tons of paper was sold bringing in a revenue of Rs. 2,46,73,924 (Rs. 2,35,25,412 last year).

Accounts in brief as at 31st March 1961 are as under:—

§ Net dividend.

Extracts from the Directors' report: Since the end of the financial year, the Company has increased its investments in equity shares of its managed and subsidiary companies by Rs. 6,51,126 and is committed to invest Rs. 3 lakhs in equity shares of The Indian Tack and Nail Company, Ltd., and Rs. 51,000 in equity shares of Adequate Weighers (India) Ltd.

Extracts from the Chairman's review: *New Projects*: Last year reference was made to the formation of a new company under the style of Adequate Weighers (India) Ltd. for the manufacture of a special type of automatic weighing machine. It was hoped that this Company would go into production during 1961, but difficulties in connection with the issue of import licences have delayed the commencement. The necessary licences have now been issued and production should start early in 1962.

The Indian Tack and Nail Company, Ltd., a new Company, in collaboration with British United Shoe Machinery Company, Ltd., of Leicester has been formed to manufacture shoe tacks and grindery. The factory at Konnagar is now almost complete and shipment of the machinery from England has commenced. Several Indian technicians have been under training in Leicester for the past six months. The Company is expected to start manufacturing early in the new year.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	90,00,000	Gross block	31,81,679
Reserves and surplus..	47,04,144	—Depreciation ..	17,23,900
Other liabilities ..	2,40,10,618	Net block	14,57,779
		Goodwill	19,00,000

		Investments	1,22,20,268
		Cash	13,29,735
	Rs. 3,77,14,762		Rs. 3,77,14,762

* Paid-up capital consists of 6,50,000 ordinary shares of Rs. 10 each fully paid up and 25,000 redeemable preference shares of Rs. 100 each (6 per cent, cumulative subject to deduction of Indian income-tax) fully paid up. Out of the ordinary shares, 3,50,000 shares of Rs. 10 each are held by the Holding Company—Messrs. Ogilvy Gillanders & Co., Ltd., London.

Seshasayee Paper and Board Ltd.

(Managing Agents: Seshasayee, Parsons & Whittemore Private Ltd., Tiruchirapalli.)

First Annual General Meeting—20th December.

Extracts from the Directors' report:

This Company was incorporated on 22nd June 1960 for the purpose of setting up a 20,000 ton pulp and paper plant at Pallipalayam (Salem District) near Erode, by virtue of the licence granted by the Government of India under the Industries (Development and Regulation Act 1951.

With the approval of the general body of shareholders given at their extraordinary meeting held on 14th July 1960 and with the approval of the Government of India, Messrs. Seshasayee, Parsons and Whittemore Private Limited, 1, Alexandra Road, Tiruchirapalli were appointed the managing agents of the Company for a term of ten years commencing on 18th September 1960. The firm of Messrs. Seshasayee, Parsons and Whittemore Private Limited represent a combination of Indian and American business interest that were responsible for promoting this Company.

The capital structure of the Company is made up of Rs. 3.5 crores face value divided into 35.00,000 shares of Rs. 10 each. Out of this the Madras Industrial Investment Corporation Ltd., hold Rs. 1 crore and Messrs. Parsons and Whittemore South Asia Co. Inc., hold Rs. 75 lakhs The balance after deducting the amounts subscribed by signatories to the Memorandum, directors and friends was issued through the publication of a prospectus to the public. The issue was over-subscribed nearly three times. The allotments were completed on 15th November 1960 and the total number of shareholders as on date are 14,501 reflecting one of the largest spreads of share holding among companies in South India. The shares are all now fully paid up, and are listed on the Stock Exchanges of Madras, Bombay and Calcutta.

The balance of resources required over the share capital is being advanced by the Export-Import Bank of Washington from the P.L. 480 (Cooley Amendment) Funds to the extent of Rs. 2 crores and by the Industrial Credit and Investment Corporation of India Ltd., Bombay, to the extent of Rs. 50 lakhs. These loans will be availed of fully before December 1961 to meet the expenses of factory and plant erection.

Land Acquisition: The Government of Madras, who have taken sustained interest in this scheme were pleased to acquire for the Company the necessary land in Tiruchengode Taluk in Salem District, opposite the Cauvery Railway Station on the Madras Coimbatore Main Broad Gauge Line of the Southern Railway and on the banks of the River Cauvery for the construction of the factory, its staff and labour quarters.

On the basis of detailed plans and drawings furnished by Messrs. Parsons and Wittemore South Asia Co. Inc., New York, who have undertaken the complete planning and supply of plant and erection of this mill, contracts have been awarded for the construction of the factory buildings, and water works.

Plant and Machinery: Messrs. Parsons and Whittemore South Asia Co. Inc., in terms of their contract have already shipped nearly 60 per cent of the plant and machinery required for the project and they will complete shipping the balance before end of this year and enter on plant erection immediately thereafter.

Local plant procurement comprising mainly of electrical equipment, handling conveyors etc., and steel fabrications have all been ordered with deliveries to match imports.

With the above time schedule of deliveries the plant erection should show good progress by April 1962 and is likely to be completed by June 1962 thus bringing the plant ready for trial operation immediately thereafter.

Raw Materials: The Government of Madras have also assured the Company that they would deliver the requisite quantity of bamboo from the State's Reserve Forests. Arrangements have been concluded with Messrs. Parry & Co. Limited for delivery of bagasse from the Sugar Factory of The Deccan Sugar and Abkhari Company Ltd., Pugalur, near Karur, this being the second primary raw material for the production of paper in this mill.

The Company has earned a small net income of Rs. 32,042, mainly from interest on its deposits and current accounts, after marking adequate provision for depreciation and income-tax. This amount is being carried forward to the next year's account.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,78,23,348	Gross block	60,400
Reserves and surplus..	32,042	—Depreciation ..	5,840
Other liabilities ..	1,81,667	Net block	54,560
		Current assets ..	1,33,02,860
		Cash	35,41,946
		Miscellaneous expenditure	14,42,691
	Rs. 1,80,42,057		Rs. 1,80,42,057

* Paid-up capital consists of 35,00,000 equity shares of Rs. 10 each—Rs. 7.50 called up. Calls unpaid amount to Rs. 84,21,652.50. At present the shares are fully paid up to the extent of Rs. 10 and the paid-up capital stands at Rs. 3,50,000.

Gangapur Sugar Mills Ltd.

(Chairman: Mr. Pallonji S. Mistry, Bombay.)

Sixth Annual General Meeting—27th December.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales of sugar—gross	77,84	45,90
Closing stock	64,50	31,88
Gross loss without providing for depreciation ..	(—) 4,36	(—) 5,87
Adjustments	(—) 9,63	(—) 3,96
Carried forward—debit balance	(—)13,99	(—) 9,63

N.B.—Adjustments represent the debit balance brought forward from the previous year.

Extracts from the Directors' report: When the present management took over the Company at the end of August, 1960 it was found that very little work had been done by way of overhauling and reconditioning the machinery and as there was insufficient time for some of the major work to be completed before the crushing season started, the plant had to be re-assembled without having had all the attention that could have been desired. Despite this, however, the factory crushed about 50 per cent more cane than in the previous season. Crushing commenced on 6th December, 1960 and ended on 30th April, 1961 during which period 1,16,370 metric tonnes of cane were crushed, making 1,15,684 bags of sugar. The figures in the previous season were 75,657 long tons of cane and 75,921 bags of sugar (of 2¾ maunds each), respectively.

During the season several major and minor stoppages occurred due to machinery breakdowns but since crushing was stopped for the year, much has been done to put the plant into better condition for the coming seasons. The recovery percentage of sugar from cane was not satisfactory, being below 10 per cent but this was because of the very poor quality of the cane supplied to the Company by the cultivators. Efforts are being made to obtain better qualities of cane by more careful selection for the coming season. The high price which the Company had to pay for very low quality cane, the increased wages bill due to recommendations of the Wage Board and the loss on exports have all been adverse factors during the year and it has not been possible to avoid the loss on the year's working. A further point which the directors wish to bring to the notice of shareholders is that a sum of Rs. 2,45,575 credited to the accounts last year as being due to the Company by way of excise rebate for the year 1959-60, has been debited back in the accounts, as the claim was rejected by the Collector and is now the subject of an appeal lying with the Central Board of Revenue.

Consequent upon the formalities having been completed for the transfer of 25,780 equity shares of the Company purchased by the Belapur Company Limited, the Company became a subsidiary of the Belapur Company Limited with effect from 15th July 1961.

At the Annual General Meeting held on 8th March 1961, the shareholders approved the Secretaries and Treasurers Agreement to be entered into between the Company and W. H. Brady & Co., Ltd., upon the terms and conditions contained in the draft thereof placed before the meeting with such modifications thereto as may be desired by the Central Government. The Company has now received the consent of the Central Government subject to the following modifications: (a) The tenure of Office to be reduced from 10 years to 5 years, and (b) The remuneration to be fixed on a sliding scale the maximum being 7½ per cent on the net profits of the Company.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	60,37,500	Gross block	1,96,95,417
Share application and allotment money ..	1,875	—Depreciation ..	1,30,947
Other liabilities ..	2,01,68,772	Net block	1,65,64,469
		Current assets ..	79,27,144
		Cash	2,54,781
		Preliminary expenses..	99,115
		P. & L. a/c deficit ..	13,99,108
	Rs. 2,62,52,647		Rs. 2,62,52,647

* Paid-up capital consists of 14,000 six per cent. cumulative preference shares of Rs. 100 each fully called up and 47,129 ordinary shares of Rs. 100 each fully called up. Calls unpaid amount to Rs. 94,260. Of the above shares 4,984 preference shares and 84,500 ordinary shares are allotted as fully paid up pursuant to a contract without payment being received in cash.

Notices

THE SIRPUR PAPER MILLS LIMITED

Registered Office:
'ALI VILLA,' 6-3-655, Somajiguda, Post Box No. 16, HYDERABAD-4, A.P.

1. To consider the Directors' Report and Audited Accounts of the Company for the year ended 30th June, 1961.
2. To declare dividends on Preference and Ordinary Shares.
3. To appoint Directors in place of Rai Bahadur Srikishen Sookdeve Malani and Shri Bankatlal Gopikison, who retire under Article 122 of the Articles of Association of the Company and are eligible for re-appointment.
4. To appoint Auditors for the current year and fix their remuneration.

   The present Auditors, Messrs. S. B. Billimoria & Co., Chartered Accountants, Hyderabad, Auditors of the Company, retire and are eligible for re-appointment.

AS SPECIAL BUSINESS

5. To consider and if thought fit to pass with or without modifications the following Special Resolution to re-appoint the Purchasing Agents in U.K.

WHEREAS the East Indian Produce Company, Ltd., an associate of Messrs. Birla Brothers Private Ltd., the Managing Agents of the Company, maintain an office at London in the United Kingdom and whereas the said Company carry on business of acting as agents in the United Kindom for purchase and sale of goods including plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United Kingdom, and the Continent and other countries and their operations are on a very large-scale and whereas their expenses of maintaining their office, amount approximately to £65,000 per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services rendered through the said Company in relation to its total turnover in each year and whereas the said East Indian Produce Company, Ltd., have been acting as such agents for and on behalf of the Company for purchase of plant, machinery and stores and rendering services such as recruitment of technical personnel, etc., and are paid commission at various rates. Now it is hereby RESOLVED that the East Indian Produce Company, Ltd., continued to act as agents of the Company for a period of 3 years from 30th June, 1962 on the following terms as to commission and expenses and that the payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company.

(a) for purchase of stores etc., 5% of the invoice price;
(b) for purchase of machinery, 2½% of the invoice price;
(c) for employing technical personnel for and on behalf of the Company and for attending to enquires, expenses incurred by East Indian Produce Company, Ltd., apportionable to such work in each particular case;
(d) for rendering any other special service, such remuneration as may be agreed upon between Directors of the Company, and the East Indian Produce Company, Ltd.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be, the same will not be done unless such permission is obtained.

6. To consider and if thought fit to pass with or without modifications the following Special Resolution to re-appoint the Purchasing Agents in U.S.A.

WHEREAS the American East India Corporation, an associate of Messrs. Birla Brothers Private Ltd., the Managing Agents of the Company, maintain an office at New York in the United States of America and whereas the said Company carry on business of acting as agents in the United States of America for the purchase and sale of goods including Stores, Plant and Machinery and rendering of services such as recruitment of technical personnel etc., and also have dealings and business connections with parties all over the United States of America and their operations are on a very large-scale and whereas their expenses of maintaining their office, amount approximately to $60,000 per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services requisitioned through the said Company in relation to its total turnover in each year, and whereas the said American East India Corporation have been acting as such agents for and on behalf of the Company pursuant to Shareholder's resolution dated 8th June, 1959. Now it is hereby RESOLVED that the American East India Corporation continue to act as agents of the Company for a period of 3 years from 1st July, 1962, and the commission and expenses as mentioned below be paid by the Company to the agents, i.e. American East India Corporation in the manner sanctioned by the Directors of the Company.

(a) for purchase of stores etc., 5% of the invoice price;
(b) for purchase of machinery, 2½% of the invoice price;
(c) for employing technical personnel for and on behalf of the Company and for attending to enquires, expenses incurred by the American East India Corporation, apportionable to such work in each particular case;
(d) for rendering any other special service, such remuneration as may be agreed upon between Directors of the Company, and the American East India Corporation.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be, the same will not be done unless such permission is obtained.

By Order of the Board,
For THE SIRPUR PAPER MILLS LIMITED,
P. L. BHANDARI,
Secretary.

25th October 1961.

Note: 1. The Share Registers of the Company will remain closed from 21st November, 1961 to 5th December, 1961, both days inclusive.

2. A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

3. The Dividends, when sanctioned, will be paid on or after 1st February, 1962 to those Shareholders whose names appear in the Register of Members of the Company on 5th day of December, 1961.

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1961.
2. To declare dividends.
3. To appoint a Director in place of Shri Tulsidas Kanoria who retires by rotation and is eligible for re-election.
4. To appoint Auditors and fix their remuneration.

As Special business:

5. To consider and if thought fit to pass with or without modification the following resolutions as Special Resolutions:

(*a*) "Whereas the East Indian Produce Co. Ltd., an associate of The Cotton Agents Private Limited, the Managing Agents of the Company, maintain an office at London in the United Kingdom and whereas the said Company carry on business of acting as agents in the United Kingdom for purchase and sale of goods including plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United Kingdom, and the Continent and other countries and their operations are on a very large scale and whereas their expenses of maintaining their office, amount approximately to £65,000 per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services rendered through the said Company in relation to its total turnover in each year and whereas the said East Indian Produce Company Ltd., have been acting as such agents for and on behalf of the Company for purchase of plant, machinery and stores and rendering services such as recruitment of technical personnel, etc., and are paid commission at various rates, Now it is hereby RESOLVED that the East Indian Produce Co., Ltd. continue to act as agents of the Company for a period of 3 years from 1st July, 1962 on the following terms as to commission and expenses and that the payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company.

(*a*) for purchase of stores etc., 5% of the invoice price;

(*b*) for purchase of machinery, 2½% of the invoice price;

(*c*) for employing technical personnel for and on behalf of the Company and for attending to enquiries, expenses incurred by the East Indian Produce Co., Ltd., apportionable to such work in each particular case;

(*d*) for rendering any other special service, such remuneration as may be agreed upon between Directors of the Company, and the East Indian Produce Company Limited.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be, the same will not be done unless such permission is obtained."

(*b*) "Whereas the American East India Corporation, an associate of The Cotton Agents Private Limited, the Managing Agents of the Company, maintain an office at New York in the United States of America and whereas the said Company carry on business of acting as agents in the United States of America for the purchase and sale of goods including stores, plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealing and business connection with parties all over the United States of America and their operations are on a very large scale and whereas their expenses of maintaining their office, amount approximately to $60,000 per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchase effected and services rendered through the said Company in relation to its total turnover in each year, and whereas the said American East India Corporation have been acting as such agents for and on behalf of the Company for purchase of plant, machinery and stores and rendering services such as recruitment of technical personnel, etc., and are paid commission at various rates, Now it is hereby RESOLVED that the American East India Corporation continue to act as agents of the Company for a period of 3 years from 1st July, 1962 on the following terms as to commission and expenses and that the payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company.

(*a*) for purchase of stores etc., 5% of the invoice price;

(*b*) for purchase of machinery, 2½% of the invoice price;

(*c*) for employing technical personnel for and on behalf of the Company and for attending to enquiries, expenses incurred by the American East India Corporation, apportionable to such work in each particular case;

(*d*) for rendering any other special service, such remuneration as may be agreed upon between Directors of the Company, and the American East India Corporation.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be, the same will not be done unless such permission is obtained."

By Order of the Board,
S. N. GUPTA,
Secretary.

CALCUTTA, *the 30th November*, 1961.

Notes:—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

UPPER GANGES SUGAR MILLS LIMITED

Registered Office:

14, Radha Bazar Lane, CALCUTTA-1

NOTICE IS HEREBY GIVEN THAT THE Twenty-ninth Annual General Meeting of Upper Ganges Sugar Mills Limited will be held at 8 India Exchange Place, Calcutta on Friday, the 29th December, 1961, at 2-15 p.m., for the following purposes:—

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1961.
2. To declare dividends.
3. To appoint a Director in place of Shri B. T. Thakur who retires by rotation as well as under Section 280 of the Companies Act, 1956.

   In this connection the Company has received a special notice pursuant to Section 281 of the Companies Act, 1956 from a shareholder of the Company and special notice is hereby given that the following resolution will be moved at the meeting:

   "Resolved that Shri B. T. Thakur who retires by rotation and who has attained the age of 69 years be and is hereby re-elected as a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

   Shri B. T. Thakur has vast experience in finance and it is considered advisable in the interest of the Company to re-elect him on the Board to continue to avail of his valuable advice.
4. To appoint Auditors and fix their remuneration.

As Special business:

5. To consider and if thought fit to pass with or without modification the following resolutions as Special Resolutions:

(*a*) "Whereas the East Indian Produce Co. Ltd., an associate of The Cotton Agents Private Limited, the Managing Agents of the Company, maintain an office at London in the United Kingdom and whereas the said Company carry on business of acting as agents in the United Kingdom for purchase and sale of goods including plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United Kingdom, and the Continent and other countries and their operations are on a very large scale and whereas their expenses of maintaining their office, amount approximately to £65,000 per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services rendered through the said Company in relation to its total turnover in each year and whereas the said East Indian Produce Company Ltd., have been acting as such agents for and on behalf of the Company for purchase of plant, machinery and stores and rendering services such as recruitment of technical personnel, etc., and are paid commission at various rates, Now it is hereby RESOLVED that the East Indian Produce Co., Ltd. continue to act as agents of the Company for a period of 3 years from 1st July, 1962 on the following terms as to commission and expenses and that the payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company.

(*a*) for purchase of stores etc., 5% of the invoice price;

(*b*) for purchase of machinery, 2½% of the invoice price;

(*c*) for employing technical personnel for and on behalf of the Company and for attending to enquiries, expenses incurred by the East Indian Produce Co., Ltd., apportionable to such work in each particular case;

(*d*) for rendering any other special service, such remuneration as may be agreed upon between Directors of the Company, and the American East India Corporation, apportionable to such work in each particular case;

(*d*) for rendering any other special service, such remuneration as may be agreed upon between Directors of the Company, and the American East India Corporation.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be, the same will not be done unless such permission is obtained."

By Order of the Board,
S. N. GUPTA,
Secretary.

CALCUTTA, *the 2nd December*, 1961.

Notes:—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

2. Shareholders are requested to notify any change of address failing which the dividend warrants will be posted to their addresses as registered with the Company.

3. The Register of Members of the Company will remain closed from the 20th December, 1961 to 29th December, 1961, both days inclusive.

FORT, BOMBAY 1.

ORISSA MINING CORPORATION

The Government of India has agreed to allow the Orissa State Government to acquire the interests of the Centre in the Orissa Mining Corporation. The Corporation was set up in May 1956 as a joint venture of the Central and Orissa State Governments with an authorised capital of Rs. 50 lakhs, held in equal proportion between the two Governments. The Corporation is at present working three iron ore mines—Maharajpur and Khandadera in Mayurbhanj district and Sakradihi in Keonjhar district. It has also acquired mining leases and prospecting licences over additional areas for iron ore, manganese and chromite.

A programme of development by the Corporation during the third Plan period has been drawn up, involving a capital investment of Rs. 86 lakhs and envisaging a production of 800,000 tons of iron ore, 25,000 tons of chromite and 20,000 tons of manganese by the end of the Plan. There are also possibilities of acquiring more leases and raising the targeted production.

NO CHANGE IN MONEY

(From Our Own Correspondent)

BOMBAY, *6th December*

There have been no new developments in the short-term money market this week. Supply of funds has been plentiful enough easily to meet the demand in the inter-bank section. Some of the small banks were in need of accommodation and this they could get without having to pay anything higher than the general rate of 3½ per cent for day-to-day money. Advices from Calcutta showed that the demand for funds there had picked up, with the inter-bank call money rate spurting to 3¾ to 4 per cent from 1½ to 2 per cent a week ago.

No change has been reported in the rates for short-term deposits quoted by banks for their clients. These are:

Notice money:	Per cent
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

A noteworthy feature of the Treasury Bill results is the substantial demand for intermediate Bills (of 91 days' duration). Their sales amounted to no less than Rs. 145.50 lakhs, as against a mere Rs. 22 lakhs in the previous week. Sales under the weekly tender system showed nothing new. The amount invited, offered and accepted was all Rs. 2 crores and the average rate at 2.5 per cent was the same as before. Sales of Intermediate Bills, as well as those under the tender system, are being continued in the coming week.

A rise of Rs. 5.74 crores in notes in circulaltion and a fall of Rs. 6.06 crores in notes held in the Banking Department are disclosed by the Reserve Bank's statement for the week ended 1st December, 1961. The net variation in the total notes issued is a decline of Rs. 32 lakhs which has been offset on the assets side of the Issue Department by a corresponding fall in rupee coin.

No change has taken place in foreign securities held in the Issue Department. But balances held abroad in the Banking Department have registered a fractional fall of Rs. 16 lakhs and the total of foreign assets are down by that amount at Rs. 145.68 crores.

Among the other changes in the Banking Department of the Reserve Bank, mention may be made of a fall of Rs. 7 crores in deposits of "other Governments" and of Rs. 5.95 crores in deposits of banks. Central Government's deposits are higher by Rs. 4.03 crores. Investments have gone up by Rs. 9.44 crores and other loans and advances by Rs. 1.45 crore. There has been a further fall of Rs. 5 lakhs in the advances to scheduled banks against usance bills which now stand at the meagre level of Rs. 20 lakhs.

The scheduled banks' statement for the week ended 24th November 1961 reveals a rise of Rs. 8.14 crores in total deposits and of Rs. 4.96 crores in inter-bank borrowings. Bank credit has contracted by Rs. 3.19 crores. Investments, however, have jumped up by Rs. 11.52 crores and total cash has improved by Rs. 1.28 crore.

The State Bank of India's statement for the same week disclosed a rise of Rs. 12.01 crores in investments and a fall of Rs. 1.29 crore in advances. Cash balances have declined by Rs. 4.12 crores. On the liabilities side, deposits have staged a small rise of Rs. 1.40 crore.

The gilt-edged market continues to be quiet. The turnover is small, owing to paucity of buyers. Among Central loans, there has been a drop of 10 nP in 4 per cent 1973 to Rs. 100.10 and of a similar fall in 3 per cent 1963-65 to Rs.98.65. Sellers predominated in State loans which closed easier all round, registering losses ranging from 5 to 15 nP.

Following a slight fall in the value of £ sterling *vis-a-vis* the U.S. dollar, the banks' selling rate for ready T.T. on New York has risen from Rs. 475.50 to Rs. 476 per 100 dollars. Their buying rate, too, has been correspondingly marked up to Rs. 472.50. In the New York foreign exchange market, the rate for spot sterling has dropped by 0.24 cent over the week to 281.250-281.280 cents per £. At one time during the week, the rate had actually gone below 281 cents—280.880-280.920 cents to be precise. Three months' forward had declined from 279.730 to 278.930, before closing at 279.400-279.430 cents.

MODERATE CLEARANCE IN SKIPS

(From Our Own Correspondent)

MADRAS, *4th December*

Arrivals of E.I. tanned hides were on the usual scale, while those of calves were restricted. Clearance was moderate but slow. Prices remained unchanged. Export trading was meagre, but inland demand was good. Due to the buying interest from importers in the U.K. and the U.S.A., market for tanned buff-calf remained firm.

Demand for tanned sheep skins all tannages was poor and prices ruled weaker than last week. Continental interest in light weight goat skins continued, while other weights seemed neglected, probably on account of prices quoted. It is expected that buying will be resumed with some more shading in price levels at origin.

In the German tanned skins auctions held last week, clearance of sheep skins was nil and of goat skins poor prices paid were 6d. to 12d. below c.i.f. levels.

The next London public auctions will take place on the 4th inst., when 150,000 goat skins and 110,000 sheep skins will be offered for sale. In view of the present state of trading, shippers expect poor results in the sales.

BULLION QUIET

(From Our Own Correspondent)

BOMBAY, *6th December*

Gold and silver depicted a contrary trend during the major part of the week under review, the former suffering a setback in value and the latter recording an improvement. The decline in gold followed selling pressure from spot houses on rumours of large-scale arrivals of contraband metal and poor offtake. There were also fresh offerings by some upcountry operators. Arrivals of gold continued to be quite large, the daily average being 6,200 tolas (as against 6,600 tolas in the previous week), while average offtake was poor, at 3,200 tolas per day (as against 5,200 tolas). Silver, however, ruled distinctly firm, thanks to highly bullish advices from world markets which witnessed a sharp rally in prices. A leading Calcutta trader sold sizable parcels, but the offerings were well absorbed. The daily average offtake of silver was slightly better at five bars, as against four bars in the previous week, whereas arrivals were lower at 19 bars, as against 21 bars. Today, both gold and silver drifted downward. The disquieting reports about Chinese aggression in Ladakh and N.E.F.A. and tension in Goa borders had, surprisingly enough, no bullish impact on both the metals.

Adjustment rates fixed today were Rs. 119 per 10 grams of gold and Rs. 211 per kilogram of silver. The corresponding rates for Wednesday last week were Rs. 121.90 and Rs. 211.30, respectively.

In gold, the *Margashir* (December) settlement began the week at Rs. 123.20, as against the previous close of Rs. 123, and moved down to touch a low of Rs. 121.20 today before finishing at Rs. 121.25. The net loss over the week was Re. 1.75.

Ready gold continued to be quoted at a discount under the forward throughout the week. In fact the actual discount increased from just 85 nP last week-end to as much as Rs. 2 today. The spot rate, which had risen from Rs. 122.15 to Rs. 122.60 on the opening day (that is Thursday, 30th November), receded thereafter to Rs. 120.10 yesterday and further to Rs. 119.20 today, before closing at Rs. 119.25.

The *Margashir* settlement in silver climbed up from Rs. 212.60 on Wednesday last week to as high as Rs. 213.90 yesterday. At this level, profit-taking set in and the settlement eased to Rs. 213.35. After declining further to Rs. 212.20 today, it finished at Rs. 212.25.

Ready silver met with renewed support and advanced from Rs. 211.30 to Rs. 212.90. After easing to Rs. 210.95 today, it recovered to finish at Rs. 211. At this level, the discount under the forward was Re. 1.25, as against 70 nP at the close of last week.

Silver in the London bullion market forged ahead on Thursday, 30th November, immediately after the U.S. President announced suspension of silver sales by the Treasury and stoppage of use of silver for coinage purposes. Ready rate was marked up from 80d. to 84½d. and forward rate from 80¾d. to 85d. The quotations improved further to 85½d. and 86d. respectively on Friday the 1st. The upward trend was somewhat halted on the following day when, on account of profit-taking by speculative holders, ready silver declined to 84d. and forward to 84½d. Subsequently, however, there was a distinct recovery, the latest available rates being 85½d. for ready silver and 86¼d. for forward. Silver in New York, which had remained unchanged at 91.375 cents per fine ounce for many months now, spurted to 100.75 cents due to the President's move referred to earlier. The world price of gold in the London market improved from $35.14⅞ to $35.15⅜ per fine ounce. The sterling price, too, rose from 249s. 8½d. to 250s. owing to the easiness of the pound sterling *vis-a-vis* the U.S. dollar.

The following table shows the trend of prices during the week under review:

	6-12-61 (closing)	High	Low	29-11-61 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	119.25	122.60	119.20	122.15
Forward: Margashir* ..	121.25	123.35	121.25	123.00
Sovereign	98.50	—	—	98.25
SILVER				
Ready (.999 fine)	211.00	212.90	210.95	211.80
Forward: Margashir† ..	212.25	213.90	212.20	212.60
London—				
Silver Ready	85¼d.	86d.	84d.	86d.
Silver Forward	86¼d.	86¼d.	84¼d.	86¼d.
Gold	250s.	250s. 2¼d.	249s. 9½d.	249s. 8¼d.
New York—				
Silver	100.75 cents	—	—	91.375 cents

* 26th December settlement. † 26th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

LINSEED EASIER

(Messrs. A. Bradley and Co.)

CALCUTTA, *4th December*

The linseed market was rather lifeless during the week. Prices showed a slight decline in sympathy with oil markets, though sellers for forward delivery were sitting on the fence. Small arrivals were coming in from the centres against previous sales.

The oil market was slightly easier, due to drop in prices of other vegetable oils. Business was done during the week on a very small scale for ready delivery.

The oilcake market was unchanged, only small ready business reported during the week.

Ready/December was quoted at Rs. 31.25 per maund.

COTTON FUTURES SPURT

(From Our Own Correspondent)

BOMBAY, *6th December*

Firm conditions prevailed in the cotton futures market during the week. Although the market remained officially open throughout the week, except Monday when it was closed on account of the death of a prominent cotton trader, no trading was done on Friday and Saturday. This was because jobbers and brokers refrained from doing business as a protest against the recent imposition of stringent margins on cotton futures by the Forward Markets Commission which had resulted in a sharp decline in business. They pointed out that they were forced to have recourse to this extreme step because appeals and representations made by them had failed to produce any result. Futures prices ruled fully steady on Thursday, the 30th inst., prior to the suspension of trading, on support induced by encouraging spot advices. When the market reopened on Tuesday, after having remained officially closed on Monday, prices depicted a firm trend. The Jarilla March contract, which was hovering round the second marginal level of Rs. 665.50 for the past few weeks, pierced the level to quote at Rs. 665.75. Sentiment was mainly influenced by the news of a further reduction in crop estimate from 4.9 million bales a month ago to 4.65 million bales at present and reports that the prospects for imports of any substantial quantity of cotton from the U.S. was bleak. This level could not be sustained for long. Follow-up support was lacking because of the heavy margin of Rs. 120 per bale payable at this level. The contract receded to Rs. 664.50 at the close of the session. The volume of business was, however, small because most of the jobbers and brokers kept off the ring after 2-30 p.m. The market ruled firm today on local and upcountry support. The Jarilla March contract spurted Rs. 677 although the finish was one rupee lower at Rs. 676.

The East India Cotton Association, Bombay, is reported to have sought the permission of the Forward Markets Commission for opening a new contract in cotton. No further details are available at the time of writing.

In the spot section, there was sustained mill demand for all popuar varieties of cotton. Although the volume of business was limited, due to lack of offerings, keen interest was noted in 197/3, L.147 Moglai, CO2. Prices of most varieties ruled near or above the ceilings.

Export interest in Bengal *Deshi* was good. Prices of Bengal *Deshi* moved up on sustained short-covering by shippers against their sales to buyers abroad. Shippers are looking forward with much interest to the announcement about the balance of 25,000 bales which has been kept in reserve out of the quota of 150,000 bales for Bengal *Deshi* announced on 22nd September 1961. Some quarters are inclined to expect that this balance quantity may be issued for Bengal superfine and above, taking into account the fact that this particular grade of cotton is presently neglected completely by domestic spinners and, consequently, it is depreciating in value.

Moderate demand was reported for foreign cotton. African and Sudan higher grades attracted buyers. Ready lots of U.S. cotton evoked inquiries and some sizable business was put through in this variety.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri:

Bengal *Deshi* 090; Wagad 785; CO2 1,050; Khandesh 965; B.P. 52 (new) 1,300; Busoga 1,300; Sudan G4L 1,420; XG3S 1,814.

Cotton futures in Karachi staged a smart rally during the week as a natural reaction to last week's fall. Better export interest and improved domestic spinner inquiries imparted strength to the market. N.T.R.G. January firmed up from Rs. 76.65 last week-end to Rs. 77.70. The March contract too attracted good buying support and hardened by 70 nP from Rs. 75.55 to Rs. 76.25.

Firm conditions prevailed in the Liverpool cotton futures market during the week. Commission House support and strong local spinner demand initiated a general buying movement which resulted in a rally in prices. Both the American and American type contracts advanced. Towards the close of the week, however, prices tended to recede, thanks to profit-taking and selling prompted by lower New York advices. Nevertheless, the closing quotations are, on balance, higher than last week-end rates. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton mixed growth contract: December 24.20; March 24.70; May 25.20; July 25.35.

American cotton mixed growth contract: December 24.55; March 25.10; May 25.60; July 25.75.

Sudan: January 32.25; March 32.25; May 32.25.

Cotton futures in New York suffered a set back during the week. Scattered hedge selling and Commission House liquidation led to a decline in values. Reports of a slackening of entry into the loan programme and deterioration of the quality of crop in Memphis imparted further weakness to the market. The decline in values would have been more marked but for the encouraging spot advices.

Good ready demand was reported for current ginnings in most active harvesting areas. Both mills' and shippers' representatives were active in upcountry markets. The medium and lower grades remained in best demand. These qualities comprised a larger proportion of current ginnings. Farmers were offering freely when prices were substantially above loan levels. A large volume of cotton, most of which middling and higher, continued to enter the loan programme.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

(In cents per lb.)

	6-12-61	28-11-61	21-11-61
New York spot ...	35.60	35.60	35.60
December	33.90	34.08	34.25
March	34.86	34.90	34.99
May	35.39	35.40	35.34

YARNS EASY

(From Our Own Correspondent)

BOMBAY, *6th December*

Distinctly easy conditions prevailed in the yarn market during the week. Prices declined sharply on persistent selling. Disturbing news from the northern borders and reports of cancellations of railway bookings induced nervousness among bulls who rushed to liquidate. Rumours that the S.T.C. was planning to import yarn worth Rs. 4 crores adversely affected sentiment. The fall in the premium rates of art silk yarn import licence, indicating lack of buyers, and lower spot advices also induced selling. Consequently, price of all varieties of yarns receded.

Details of the distributions of indigenous art silk yarn for the quarter ending March 1962 have been notified. Allocation cards for indigenous art silk yarn will be issued by the Indigenous Art Silk Yarn Distribution Committee, Bombay. All actual users of art silk yarn are required to submit their applications for allocation of indigenous art silk yarn to the Committee. Allocation of indigenous art silk yarn to the art silk handloom industry in the States of Andhra Pradesh, Gujarat, Madras, Orissa, Punjab and West Bengal, will, however, be made directly by the respective States handloom authorities. In the case of handloom industry situated in States other than the above, applications may be submitted to the Distribution Committee. Allocation of indigenous art silk yarn to ancillary industry and doubling units in Madras State will be made by the Director of Handlooms, Madras.

Amilan (20 x 1) December contract encountered heavy selling and declined from Rs. 3,335 last week-end to Rs. 3,210. The February contract eased from Rs. 3,425 to Rs. 3,305. Among imported art silk yarns, 150 Japan declined from Rs. 1,984 to Rs. 1,929. 120 Japan, however, met with limited support and improved from Rs. 1,818 to Rs. 1,874. 120 Italys were quoted lower at Rs. 1,846, as against Rs. 1,874 last week-end.

Staple fibres too lacked buyers. Prices receded. Staple fibre yarn (40 x 1) December settlement succumbed to selling and slumped from Rs. 826 last week-end to Rs. 729. The February contracts shed Rs. 27 to Rs. 819. Spot Centurys receded by 20 nP to Rs. 9.77.

In the cotton yarn section, prices, barring a few exceptions, generally declined. 80s Modern shed 50 nP to Rs. 69. 60s Finlays were done 25 nP lower at Rs. 63.25. 40s Maduras changed hands 50 nP lower at Rs. 32.50.

The following table gives the prices of rayon staple fibre and cotton yarns, today, as compared with those prevailing a week ago:

	6-12-1961	29-11-1961
	Rs.	Rs.
Art silk yarn—		
20/1 Amilan (100 kg.)—		
December	3,210.00	3,335.00
February	3,305.00	3,425.00
150 Japan (per 100 kg.)	1,874.00	1,818.00
150 Japan (per 100 kg.)	1,929.00	1,984.00
120 Italy (per 100 kg.)	1,846.00	1,874.00
Nat. Ray. 150 Bt. I	13.80	13.07
Staple fibre yarn (40 x 2)—		
December	729.00	826.00
February	819.00	846.00
Century (per kg.)	9.77	9.97
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.25	17.25
20s Gokak	—	22.60
30s New Great	26.50	26.50
40s Madura	32.50	33.00
60s Finlay	63.25	63.50
80s Modern	69.00	69.50

GROUNDNUTS PIERCE CEILINGS

(From Our Own Correspondent)

BOMBAY, *6th December*

The highlight of this week's trading on the oilseeds exchange was the renewed buoyancy in groundnuts. Thus, groundnuts January 1962 contract turned distinctly bullish on hectic short-covering and pierced the ceiling level of Rs. 215) fixed by the Forward Markets Commission, only about a month back. Groundnut oil futures contract, too, touched the ceiling level, namely, Rs. 17.65 per 10 kgs. Consequently, official trading in these contracts have come to a close. Unofficially, the groundnut contract is quoted at Rs. 217 and in oil contract nearer Rs. 18. The firmness was engendered mainly by the tight supply position and the consequent strength in the ready section. Arrivals have been meagre, for a long time. But now the situation is further aggravated by reports that Railways are not booking consignments, following troop movements in connection with Goa border issue. *Vanaspati* manufacturers and crushers continued to lend support even at higher levels, in view of their depleted stocks. Saurashtra interests were also covering their position in H.P.S., in order to meet their previous commitments for exports. A welcome news to the trade this week was the announcement by Messrs. Forbes Forbes Campbell and Co., which represents Ellerman and Bucknall Steamship Co., a reduction in the freight rate for H.P.S. groundnut kernel from 167s. 6d. to 153s. for 1,000 tons. This concession was granted in response to representations made by local trade interests.

The firmness in groundnuts touched off a boom in other seeds and oils. Castorseeds firmed up on persistent bear covering. Although the U.S. had not been buying Indian castor oil of late, a section of the trade anticipated a turn for the better in the near future, following the upward revision of castor oil prices in Brazil. It is reported that the price for the first pressure castor oil for December-January shipment in Brazil has been raised from 13.25 cents to 14 cents per lb. Linseeds moved up on reports of continued strength in mustardseed in North Indian markets. In sympathy with the other major oilseeds, as also the raw cotton market, cotton seeds, too, forged ahead.

Groundnut January 1962 contract, which had closed last week at Rs. 210.75, rose to touch the ceiling level of Rs. 205 by Friday. Khandesh quality firmed up by Rs. 4.13 to Rs. 48.75. Nizam bold spurted by Rs. 3.75 to Rs. 48.25. Oil railway receipts moved up by 55 nP to Rs. 20.15 and ex-mill by 45 nP to Rs. 20.25.

Castorseed March 1962 contract was marked up by Rs. 7.62 to Rs. 166.87. Madras small rose by Re. 1.37 to Rs. 33.87. Oil commercial closed higher at Rs. 14.25, as against Rs. 13.60.

Linseed March 1962 moved up from Rs. 38.81 to Rs. 39.81, before closing at Rs. 39.62. Bold ready put on 25 nP to Rs. 44. Linseed oil hardened by 10 nP to Rs. 18.30.

Cottonseed January 1962 contract rose by Rs. 2.75 to Rs. 106.50. Both Berars and whites picked up 50 nP to Rs. 20.

The following table shows the closing prices of oilseeds and oils on Wednesday, 6th December, as compared with those of the two previous weeks:

	6-12-1961	29-11-1961	22-11-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	—	210.75	211.12

Kardi seed	24.00	23.00	23.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

PLAIN TEAS DECLINE

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *28th November*

Offerings aggregated 586,000 kgs. in export sale No. 48 held today. Quality was generally slightly inferior to last. There was only a fair demand at lower rates which slackened as the sale progressed. Low medium and medium brokens were a weak feature and the majority had to be withdrawn; where sold, there was a drop of 40/60 nP per kilo. Similar fannings, however, sold readily but were easier by 20/40 nP. Plain teas declined by fully 30 nP per kilo. Good mediums met useful support although following the easier trend of the market. Their brokens generally realised better prices than equivalent fannings. Highgrowns were again keenly competed for although at generally lower rates following the decline in quality. Black leaf teas met useful demand although they too followed the easier trend. Whole leaf grades sold readily and quite well. Unorthodox brokens were a weak feature but more enquiry was seen for fannings grades in these categories.

The quotations (per kg.) were:

	1961	1960
	Rs.	Rs.
Low mediums	3.00/3.30	4.60/4.95
Mediums	3.25/3.80	4.95/5.35
Good mediums	4.00/4.50	5.35/5.75
Nilgiri B.O.P.	5.00	7.60

The average price realised in sale No. 48 was Rs. 4.05 per kilo, as compared with Rs. 4.14 a week ago and Rs. 5.28 in the corresponding sale last year.

Offerings amounted to 342,000 kgs. in dust sale No. 48 held on Thursday, 30th inst. The market opened to a fair demand but again it slackened towards the close. Medium and low mediums descriptions opened at about last week's closing rates but as the sale progressed, prices registered a considerable decline and at the close many of these teas had to be withdrawn without bid. Better mediums, if of a clean appearance, sold readily and though a little easier at the opening, at the later stages declined by 20/30 nP. Residuals met only limited inquiry and generally followed a lower trend. Highgrowns were the one strong feature, meeting active demand and selling at fully firm rates. Unorthodox types met less demand and were lower by 30 nP per kilo.

The average price realised in dust sale No. 48 was Rs. 3.68 per kilo, as compared with Rs. 3.78 a week ago and Rs. 4.85 in the corresponding sale last year.

Colombo: Approximately 6½ million pounds were offered this week. The market opened to a fair general demand although prices for mediums and the plainer highgrowns were lower by 10/20 cents per lb. Useful highgrowns, however, were fully firm whilst the best sold at dearer rates. Lowgrowns were irregular but about steady.

London: North Indian and other growths: In Monday's sale, demand was selective and prices were generally lower following quality. Thin, plain descriptions were the weakest feature and often withdrawn. Plain broken pekoe is quoted 3d. to 1d.

Ceylon and South Indians: In Tuesday's sale a total of 21,553 packages was on offer of which 6,382 originated from South India. Of the Ceylons on offer all the better liquoring high and mediums varieties were fully firm. Plain liquoring descriptions were however ½d. to 2d. lower. Useful liquoring South Indians were about steady but others were irregular and generally lower.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. wire as follows:

"*Sale* 49: 549,000 kgs. offered. Better general demand. Plain and low medium brokens irregularly, 20 to 25 nP lower. Similar fannings 30 to 40 nP, mediums and good mediums firm. Highgrowns steady. Unorthodox, better demand at improved prices. Plainest weakest feature."

TEAS IMPROVE

(From Our Own Correspondent)

CALCUTTA, *5th December*

There was fair general demand for tea during the export sale held yesterday as well in the internal auctions held last week. Good quality teas realised higher prices. A remarkable event of the week was the celebration of the centenary of the Calcutta tea auction in the presence of the Prime Minister on Saturday. Altogether seven lots of donated tea were auctioned, and the entire proceeds were given to the Prime Minister's National Relief Fund. Each of the successful bidders received a silver replica of a tea chest from Mr. Nehru. The first lot of six chests of Assam tea, broken orange pekoe fetched Rs. 5,000. Bids soon followed, and the winning bid was for Rs. 35,000. Each of the seven lots contained six chests, and the bids—painless as the Prime Minister subsequently explained—were completed within 20 minutes, the total collections mounting to the high figure of Rs. 1,38,000. The trade's target of the donation is Rs. 3,00,000, and it is proposed to raise the balance of Rs. 1,62,000 from a special charity auction scheduled to take place on the 18th inst.

Welcoming the Prime Minister, Mr. G. A. Whitaker, Chairman of the Calcutta Tea Traders Association, said that it was his pride to record that the industry in India had over the years become not only the largest producer and exporter of tea in the world but also one of the largest earners of foreign exchange in the country. Mr. Nehru was throughout in an exceptionally jubilant mood, and he said that, although to his mind there was no authentic historical account of the discovery of tea, the romance of tea was as fascinating as civilisation itself. He thought that it was one Marco Polo who introduced tea in Europe from China.

Dusts on offer in the internal sale held last week amounted to 25,169 packages. There was strong demand, and prices improved. C.T.Cs were a strong feature and prices gained 20 to 30 nP over previous rates. Fibrous teas were also firm. Non-wither legg-cut teas were in better demand and, therefore, dearer. The plainer teas were, however, irregular. Plain orthodox teas eased by 10 nP, while better liquoring teas were fully firm. The quotations per 1 kg. inclusive of of excise duty were: good Assam C.T.C. dust Rs. 6.30 to Rs. 6.70; medium Assam C.T.C. Rs. 5.70 to Rs. 6.00; legg-cut dust Rs. 4.30 to Rs. 4.70; medium Assam dust Rs. 4.00 to Rs. 4.20; and plain orthodox dust Rs. 3.70 to Rs. 4.00.

Leaf on offer amounting to 380 chests were irregular.

Offerings during yesterday's export sale amounted to 71,957 packages. Increased demand was in evidence for all varieties, barring the plainest and more fibrous orthodox teas. Legg-cut Dooars gained 10 nP. Firm prices were realised by best liquoring C.T.Cs, the medium C.T.Cs being dearer. Among the medium C.T.Cs, fannings met with keener competition than brokens. An irregular trend was recorded by off-grade C.T.Cs, but those possessing useful liquors were steadier. Plain brokens were also irregular and the decline ranged between 10 and 20 nP, while similar fannings recorded small gains. Darjeelings were on larger demand, but the rates were irregular with the best lots being dearer. Tippy teas met with ready buyers. Orthodox Assam brokens eased. However, similar fannings met with competition. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 5.00 to Rs. 5.50; best Assam C.T.C. B.P. Rs. 5.00 to Rs. 5.40; medium Assam C.T.C. fannings Rs. 4.40 to Rs. 4.70; medium Assam C.T.C. B.P. Rs. 4.30 to Rs. 4.60; plain fannings Rs. 3.45 to Rs. 3.65; clean plain pekoe Rs. 3.65 to Rs. 3.75; and plain B.P. Rs. 3.40 to Rs. 3.50.

METALS QUIET

(From Our Own Correspondent)

CALCUTTA, *5th December*

Quiet conditions were in evidence in the local metal market during the week under review. The rapid fall in the price of tin on the London Metal Exchange in recent weeks raised posers if actually tin was in short supply in relation to world demand as was believed in recent months when tin shot up to a high level within a short spell of time. Stocks in official warehouses in the United Kingdom continue to be lower, as compared to this time

of last year. In the face of this factor, the only explanation that market circles could put forward for the fall in the London quotation was the fall in consumption in the U.K. and U.S. It was at the same time reported that stocks with the industry in the U.S. had risen. The lack of response to recent offers of the Government Services Administration in the U.S. was also cited as one of the causes for the fall in the world quotation. Tin in London opened at £952 a ton, as against the closing of the previous week at £960, and rapidly declined to £947 to recover to £955. The recovery followed buying support at the lower level. Locally, stocks were tight, and the price was unchanged but firm at Rs. 1,505.75 per 100 kgs. Forward metal commanded a premium. In London, copper opened at £228½ a ton and, after easing to £227½ on the reappearance of the contango, recovered to close at £228. Although demand for copper scrap in Calcutta was lower, shortage forced up the price of utensil scrap from Rs. 450.00 per 100 kgs. to Rs. 464. Berry scrap was, however, a few points lower at Rs. 511.75. Market circles noted with enthusiasm the report of the possibility of a fresh U.S. loan to India of $50 to $75 million to finance purchase of non-ferrous metals abroad. Virgin lead was unchanged at Rs. 128 per 100 kgs. Demand was slack. In London, lead closed lower on balance, at £60¼ a ton after opening at £61¼. Electrolytic zinc opened at Rs. 257.75 per 100 kgs. and eased to Rs. 250 to recover to Rs. 254. Demand was poor, and consumers were bidding for time. In London, the quotation closed at £70½ a ton after opening at £71.

GOOD EXPORT DEMAND FOR JUTE GOODS

(From Our Own Correspondent)

CALCUTTA, *5th December*

Following greater interest shown by mills during the week under review, fibre prices were maintained at what are now considered the minimum prices, that is, Rs. 30 a maund basis Assam bottoms, while there were reports from mofussil districts that prices realised were lower than the minimum rates. Agency business and jetty deals were also lower than the minimum levels. Alarmistic reports of desperate sales by cultivators at far below these rates were also received and, according to one report, the price realised in one of the largest jute growing areas of Tripura, namely, Kalyanpur, was Rs. 9 a maund. Apprehending a general fall, both the Indian Jute Mills Association and the East India Jute and Hessian Exchange took prompt measures with a view to maintaining the minimum prices. That these levels were maintained in Calcutta despite the aforesaid alarmistic reports from mofussil areas, perhaps greatly exaggerated, should be attributed to the steps taken by these two bodies. In accordance with the recommendations of the Forward Markets Commission, the E.I.J.H.E., by an order dated 24th November, fixed minimum prices for T.S.D. as well as hedge contracts, basis Rs. 30 a maund Assam bottoms.

The step taken by the I.J.M.A. was the reconstitution of the Jute Quota Sub-committee in order to lay down minimum quotas of jute to be purchased by mills. Hitherto, the Committee had prescribed maximum quotas during the period of shortage. This measure, which is meant to accelerate purchases by mills, clearly shows that the I.J.M.A. stands by its assurance given to the Government of India that it would not allow fibre prices to fall below the minimum levels. The Association hopes that the non-member mills will also increase their purchases. The mills are hard-pressed for finance, as the losses incurred in recent months have been considerable. Trade circles agree with the I.J.M.A. that, in order to enable mills to build fibre stocks, larger credit facilities should be made available to mills from banks.

Fibre arrivals showed rapid increase during the week, though quality left much to be desired. Good quality fibre commanded a premium. Trade circles pointed out that, if only purchases were done more rapidly than at present, cultivators would be encouraged to grow as much fibre in the next season as the present. Quality must be improved, and it should be noted that high prices in the last year led to indifference to quality.

In the goods market, prices registered a smart recovery. Greater interest was shown by export buyers. It is essential that prices of goods should not also be allowed to fall. For, at current levels of prices for fibre and goods, simultaneous business is showing a small profit. The I.J.M.A., in taking action to ensure increased fibre purchases by mills, had stressed that, when simultaneous business would lead to losses, the Association would take prompt and effective action. Reports of U.S. interest in hessian pushed up prices. Earlier in the week, there was the news that burlap consumption in the U.S. during October at 65 million yards was one million yards higher than in the previous month. However, it was noted that this figure constituted a new low for October. September consumption was also a new low for that month. The monthly average so far is only 64 million yards, as against 71 million yards in the comparative previous ten months. The fact that U.S. consumption has failed to rise in spite of increased industrial activity shows that bulk handling methods have come to stay. Burlap stocks at the end of October in the U.S. rose by 3 million yards to 206 million yards and they fell by 26 million yards as compared with the stocks a year ago.

There was the realisation in market circles that, if the bumper crop were to be absorbed by mills in their entirety, mills should increase production further. This could only follow greater purchases for export. In this connection, attention was drawn to Mr. Stenhouse's presidential address at the annual meeting of the Associated Chambers of Commerce and Industry held here on Saturday last. For Mr. Stenhouse said that, by the very nature of conditions for jute goods in world markets, any scope for expansion of exports must be limited. But he stressed that it was essential that India maintained the present markets for goods, and that this could be done only if the jute industry were helped and encouraged to modernise.

On Tuesday last, ready hessian 40" 10 oz. hardened from Rs. 50.00 to Rs. 51.00. This preceded fair business done with the U.S. There was covering business in both sacking and hessian and, in the futures market, February B. twills jumped from Rs. 118.80 to Rs. 120.60. Ready B. twills at Rs. 134.50 gained Rs. 2. This was followed on Wednesday by deals with Australia in woolpacks against shipment in February and May. This led ready B. twills to rise to Rs. 138. In sympathy, hessian 40" 10 oz. rose to Rs. 51.75. There was again covering business on Thursday in ready delivery goods. This resulted in B. twills being pushed up to Rs. 140 and hessian 40" 10 oz. to Rs. 52. Although covering business on Friday was limited, hessian 40" 10 oz. scored to Rs. 53. This was due to the premium commanded by good quality fibre fit for hessian manufacture. On the other hand, B. twills eased to Rs. 139. Over the week-end, there was greater covering business done, and also activity in the futures market was keen. As a result, ready B. twills gained to Rs. 140.50 and hessian 40" 10 oz. to Rs. 53.25. Although earlier yesterday conditions were easier, prices recovered subsequently, following keener activity in the futures market, with hessian 40" 10 oz. finding its move upto Rs. 54.50. Covering business was done on a fair scale. B. twills, however, closed lower at Rs. 139.00.

Mills accorded greater support to the fibre market, and prices were maintained throughout at Rs. 30 per maund for Assam bottoms, at Rs. 32 for daissee bottoms and at Rs. 29.50 for northern bottoms, all November-December delivery. Mesta commanded a premium of 50 nP over the minimum price. Increased support from bulls pushed up the above rates by 50 nP per maund.

TATA CHEMICALS TO ACQUIRE BOMBAY MINERAL SUPPLY CO., LTD.

The Tata Chemicals Ltd. is negotiating for purchase of the Bombay Mineral Supply Company which owns extensive bauxite deposits in Saurashtra. This was disclosed by Mr. J. R. D. Tata, Chairman of Tata Chemicals, in his speech at the annual meeting of the Company held at Bombay on the 1st inst. The proposal provides for the acquisition of this Company in exchange for 520,000 Tata Chemicals' shares to be issued at par to the owners of that Company. This is subject to the management of Tata Chemicals satisfying itself with regard to the quantity and quality of bauxite available in the deposits and also to ensuring that these deposits are capable of being profitably exploited.

Mr. Tata also mentioned that tentative and exploratory discussions had taken place between Tata Chemicals and the Bombay Burmah Trading Corporation regarding the formation of a partnership between the two companies for the acquisition of the Bombay Mineral Supply Company and the industrial exploitation of its bauxite deposits. Further consideration of this matter has been deferred until the deposits have been proved and the Tata Chemicals has secured a preliminary technical-cum-economic survey of the industrial potentialities of the project. These are expected to be available in two to three months.

FRESH CAPITAL ISSUES SANCTIONED

The following companies have been granted consent for issue of capital by the Controller of Capital Issues:

ACC-Vickers-Babcock (Bombay)

Issue of debentures of the total value of Rs. 6.65 crores in units of Rs. 10 lakhs each for cash at par. The First and Second Mortgage debentures of Rs. 3.30 crores (redeemable after 10 years) and Rs. 1.33 crore (redeemable between 7-10 years) will bear a rate of interest of 6 per cent per annum, while the third series of the value of Rs. 2.02 crores will carry a rate of 7 per cent per annum and will be redeemable after 20 years. The proceeds will be utilised for the Company's project of manufacturing cement-making, coal-mining and other general machinery and complete range of steam raising plant.

Heavy Electricals Ltd. (Bhopal)

Issue further capital of Rs. 1.67 crore in equity shares of Rs. 1,000 each, for cash at par.

Hindustan Photo Films (Madras)

Wholly owned by the Central Government engaged in the manufacture of raw films for cinema industry, X-ray and roll films and photographic paper. Issue capital of Rs. 45 lakhs in equity shares of Rs. 1,000 each to be subscribed by the Central Government for cash at par.

Bolani Ores (Calcutta)

The Company is engaged in the business of raising and supplying iron ore and other allied minerals to the Steel Works sponsored by the Government of India. Issue of capital of Rs. 30 lakhs in 30,000 equity shares of Rs. 100 each for cash at par. The share capital is held by Government of India and the Orissa Mineral Development Company Limited. The existing paid-up capital is Rs. 70 lakhs.

LABOUR

(Concluded from page 1099)

vestments under the head, as at the end of March 1961, to Rs. 90.71 crores, including securities worth Rs. 13.57 crores received as past accumulations from covered establishments. The percentage yield from the total investments worked out to 3.81 per cent per annum. Investment in Central Government securities by exempted establishments amounted to Rs. 17.80 crores during the year, bringing the total investment under this head, as at the end of March 1961, to Rs. 110.82 crores. Besides this, the Fund had Rs. 2.92 crores in other securities and Rs. 0.57 crore invested elsewhere.

Thus, the total provident fund investments in respect of exempted and unexempted establishments covered by the Act aggregated Rs. 201.53 crores. The report does not give data regarding coverage, membership or investments of provident funds in establishments which, though not required under law to have provident fund schemes, have voluntarily framed schemes for the benefit of employees. Banks, insurance companies and other commercial concerns are among the foremost establishments having such provident fund schemes. The contributions of such establishments to the total provident fund investments in Government securities must surely be considerable. If data regarding provident fund collections and investments of all these establishments also are gathered and included in the annual report of the Central Provident Fund Commissioner, one will get an idea of the contributions that all provident funds make to the total savings in the country. The Commissioner has, of course, no power now to collect such information. But there is no reason why he should not be given the necessary power, in the interest of filling up a serious gap in a branch of vital economic statistics.

DELHI LETTER

(Concluded from page 1082)

that the same commodity may be treated differently under the common external tariff of the Six according to its origin. Mr. Heath has canvassed two solutions: (1) association for certain countries, especially the less developed members of the Commonwealth and dependent territories, on the same terms as those now offered to the associated overseas countries of the Six; and (2) duty-free entry into the U.K. market alone for others, following the precedent established by the Six in respect of Morocco and Surinam. He has placed solutions on a commodity-wise basis last in his list, though this may be the one most favoured by India. Except for this reverse order of priority, there seems nothing wrong with his approach. It is, however, believed that the Six favour the commodity-wise approach, so that this priority may be less harmful than it appears at first sight and the prospects are not altogether dim.

India is mainly concerned with the treatment accorded to tropical products and manufactures. For the first, Mr. Heath has pleaded for duty-free entry into the U.K. market alone, with other arrangements in the rest of the Common Market to safeguard Commonwealth interests along with those of the associated territories, or in the alternative, a very low or zero duties in the common external tariff of the Six. This will apply to India's tea (and Ghana's cocoa). With regard to manufactures, he had nothing specific to suggest except to point out that the developing countries would be affected by the loss of preferences or the reverse preferences in favour of European manufacturers; but he added significantly that indefinite and unlimited continuation of free entry over the whole field might be incompatible with the development of the Common Market and that the method of reconciling the two considerations depended on how far manufactures could be dealt with under the Common Market arrangements for "association." This makes it quite clear that the advantage may go entirely to those who are willing to be associated and that those keeping out like India may suffer.

G.A.T.T.

It follows that India will have to take separate measures to safeguard her exports of manufactures to the extent possible. Though the Government has deputed Mr. K. B. Lall to Brussels for this purpose, the battle has to be fought also in Geneva in the G.A.T.T. forum. Mr. K. C. Reddy has complained that reciprocal reductions under G.A.T.T. are affecting the developing countries, pointing out that tariff concessions to industrial countries on their manufactures in exchange for reductions of duties on primary products is acting unfairly. He has also repeated the old plea for the reduction or abolition of fiscal levies on tropical products like tea. But, if more of new "associated" territories are to come into being under the ægis of the Common Market, enjoying new preferences prohibited by G.A.T.T., it is time to strengthen this line of attack. While regional customs unions and common markets may be justifiable forms of economic integration, they come in the way of world-wide multilateral trade when association, however tenuous, becomes the ground for practising discrimination.

The E.E.C. offer made some time ago in G.A.T.T. that all industrial countries should cut their tariffs by 20 per cent each year is promising; it is possible that, as development proceeds, the Common Market countries will realise that they may have to sacrifice some old industries now sheltered by tariffs, in order to divert capital and, more important, scarce labour, to other newer lines. In this view, the position regarding textiles may not in the long run be as bad as it now appears. However, in seeking such concessions, the developing countries may be required to forgo some of the taxes they levy on their exports of primary products; purely altruistic motives may be hard to find during such negotiations. Even the Herter-Clayton report to the U.S. Government calls for a 5 per cent cut in tariffs by the underdeveloped countries in exchange for abolition of tariffs on raw materials and a 10 per cent reduction on other imports by the developed countries.

The present situation calls for a vigilant watch on trends abroad and timely steps by the Government of India. Its ways of functioning, however, leave much to be desired; so far, there have been no indications of the special measures for export promotion which were reported to be under study; the current session of Parliament will be ending soon without transacting the business originally scheduled and there is little likelihood of the introduction of special legislation to promote exports indicated earlier. A committee appointed to study the scope for tax incentives has made a report but another committee is engaged in scrutinising it. Much time is lost in this process; nor have decisions been announced as a result of another study, commodity by commodity, of the chances of export promotion mentioned by the Commerce Minister at the last meeting of the Export Council.

BANKING

(Concluded from page 1084)

The simplest way for the Treasury to save on silver is gradually to withdraw silver certificates, freeing silver bullion for use in subsidiary coinage. Under present law, certificates in denominations of $5 and higher can be replaced in circulation by Federal Reserve notes. Further huge amounts of silver are tied up behind $1 bills. These can be replaced by Federal Reserve notes if Congress accepts the President's recommendation and authorises the Federal Reserve Banks to issue notes in the $1 denomination.

With all our silver treasure, there is no need to follow the example of some other countries which have totally demonetised silver and swung over to cheaper metals for all coins. We can afford to keep silver in subsidiary coinage.

It is clear, from the most competent estimates available, that the world's silver production can be fully absorbed by industry and the arts. It should be clear, also, that satisfaction of these growing needs should have a prior claim on new supplies. Gold has the primary function of serving as a reserve behind currencies. Silver, long ago displaced from this position, has earned a critically important place as an industrial commodity, with its rare properties of non-corrosiveness and conductivity. People may not realise that they are consuming silver, in nitrate form, when they take pictures. Applications in electricity, electronics, and missiles are essential and growing.

Silver purchase legislation in the United States has had purposes of enlarging the money supply and raising prices for the benefit of producers. Whatever could be said for the programmes in generations past, they are assuredly inappropriate in a world that wants price stability rather than price inflation. The opportune moment arrived when, with a minimum impact on silver prices, the Treasury was able to drop out and let the free market do the job of equating supply and demand.

Bills have been repeatedly introduced in Congress—though never before with the endorsement of the Administration—to repeal the existing silver purchase legislation, including the special 50 per cent tax on profits from market transactions in silver imposed under the Silver Purchase Act of 1934 to discourage speculation in the metal. This tax, which has never brought in any significant revenue, will have to be abolished if we want to have a market for silver comparable in efficiency to those for other commodities.

As Mr. F. H. Wemple, Treasurer of Handy and Harman, noted in a recent address:

"It is, of course, quite natural that consumers want lower prices while producers want higher prices for silver. This is true of all commodities, not just silver. The best place to resolve these differences of opinion is the market place, not the Government. We have seen again and again in the past the unhappy results of Government interference into the workings of commodity markets. Policies undertaken in an effort to aid one segment of our economy are usually damaging to other segments, and frequently fail to provide lasting help to those for whose benefit they are designed.

"I have read in the Press and have been told directly that many producer interests are in favour of a free market for silver. We also advocate a free market. Therefore, it seems to me that it is time for all of us to cast our vote for a truly free market for silver...."

WORLD BANK LOAN FOR JAPANESE EXPRESSWAY

The World Bank has granted a loan equivalent to $40 million to assist in financing the completion of the express highway being built between Kobe and Nagoya in Japan. A Bank loan of $40 million was made in March 1960 for a 45-mile section of the Expressway and the latest loan will be used to complete the Expressway over its entire planned length of 115 miles. The Bank loan is for a term of 23 years and bears interest of 5¾ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin in January 1965. The loan is guaranteed by the Government of Japan.

MARKET GOSSIP

(Concluded from page 1075)

crucial importance. Both in principle and on paper, this type of automatic margins appears to be sound. It is, however, possible that, in actual working, it may reveal some drawbacks. But they can be rectified after a period of trial. The most important thing is to bring it into operation first. And this has been done now.

Cotton Futures Near Ceiling

The sharp spurt in cotton futures on Wednesday, by as much as Rs. 14 per three quintals, illustrates the futility of margins to curb rise in prices in the context of a tight supply position. The Jarilla March contract, which was hovering round Rs. 665.50, beyond which it attracts margin at the rate of Rs. 120 per bale, was pushed up yesterday to a high of Rs. 677. Neither the stringent margin nor reports of requisitioning of cotton in many areas could prevent the onward march of the contract. The latest crop estimates show that the crop will be much lower than earlier assessments; thus the size of the crop is now placed at 4.65 million bales, as against 4.90 million bales anticipated a month ago. This development, coupled with keen mill demand for ready cotton and reports that the prospects for large-scale imports of foreign cotton were not bright because of foreign exchange difficulties, on the one hand, and shortage of supplies abroad, especially in the U.S., on the other, gave a bullish twist to the market. The Jarilla March contract firmed up by as much as Rs. 14 from the opening level of Rs. 663 to Rs. 677, the highest level touched so far and only Rs. 16 below the statutory ceiling of Rs. 693. The contract is fast heading towards the ceiling and, if there is no further intervention by the authorities, it is a safe bet that it will advance past the ceiling. The fact that futures prices have nearly reached the ceiling in less than four months after the commencement of the season underlines the disturbing position in respect of cotton supplies. Unless, therefore, immediate steps are taken to make good the deficiency in domestic supplies by imports, a repetition of the 1959-60 experience would become unavoidable.

The suggestion, now being actively canvassed in some quarters, to commence trading in August (1962) settlement should, therefore, be examined in the light of the prevailing circumstances. Although the Forward Markets Commission has not yet been approached for official permission, the Board of the East India Cotton Association, Bombay, is reported to be considering the question. It is suggested in some quarters that, in view of the tight supply position, the May (1962) settlement may be skipped and trading be started in August (1962) settlement. One of the reasons advanced in support of the plea for permitting trading in such a distant settlement is that the presence of a second contract will ease the pressure on the current settlement by facilitating transfers to that settlement. But many wonder whether, with the supply position being what it is, it is advisable to introduce another contract when the fate of the present one itself is uncertain. It is, however, sheer waste of time to wonder at all, for there is simply no need for a hedge market in cotton.

U.S. APPROACH TO COMMON MARKET

THERE is no comparison between India and the U.S. in terms of their respective economic strength. So vast is the gap between the two. Yet, it will be instructive to study the U.S. approach to the economic integration of Western Europe which, as readers are aware, is now well under way following Britain's keen desire to be a member of the Common Market and the concerned possibility of liquidation of the E.F.T.A. Norway, Denmark and Ireland, it may be noted, have also decided to join the Common Market directly, while Sweden, Switzerland and Austria wish to be associate members; their reluctance to be full-fledged members stems from their anxiety to preserve their political neutrality. The U.S. is not perturbed by this "stunning evolution of West European economic unity," to quote President Kennedy's phrase, which may ultimately result in the birth of the United States of Europe. On the contrary, it is happy that its foresight and initiative to foster unity in Europe, as reflected in Marshall Aid in the initial years after the Second World War, have been fully rewarded and that a strong bulwark against international communism has come into being. We in India who are also interested in the preservation of democracy as a way of life all over the world should equally be gratified at this favourable turn in the history of mankind. There can be no doubt that developments that help democracy anywhere in the world have favourable implications to democratic India, too.

It is, however, from the economic angle that we have reasons for misgivings about the net result of the larger trade grouping now taking place in free Europe. Even here there have been some encouraging developments of late. Britain, as the leader of the Commonwealth, has repeatedly assured the rest of the Commonwealth members that it would do its best to ensure the safety of their interests. The full text of Mr. Edward Heath's speech at the Paris meeting in October last has helped remove doubts about the sincerity of this assurance. The U.S. also has extended a helping hand to India and the other underdeveloped countries in their efforts to secure reasonable safeguards for their export trade with Europe. It was principally responsible for getting a resolution passed at the recent G.A.T.T. Ministerial Conference for protecting the interests of underdeveloped countries. By accepting this resolution, the Commerce Ministers of Common Market countries have committed themselves to effect a satisfactory reconciliation of the interests of Commonwealth countries with those of their associated overseas territories in terms of G.A.T.T. principles and to provide greater opportunities for trade. This, however, does not mean that India has no problems left on this score or that it can relax its vigilance. On the contrary, there is still good need for quiet diplomacy and tactful persuasion by India for seeing that the acceptance of general principles is translated into action at an early date. All that it means is that this country need not suffer from the disquieting assumption that the move to extend the frontiers of Common Market to include the other West European nations is a retrograde step. There is further evidence for this conclusion in the speeches of U.S. President Kennedy last week to the National Association of Manufacturers at New York and the Convention of A.F.L.-C.I.O. at Florida.

The United States' economic stake in Europe is vast. One-third of its foreign trade is generally with Western Europe. Besides being the best market for its manufactures, Western Europe buys some $2,000 million worth of its agricultural commodities. The stage when the U.S. economy's dependence on foreign trade was only of modest proportion has been passed long ago. Today, with its gold reserves at well below the pre-war level and with a gap of about $4,000 million in its balance of payments position, mainly on account of its defence commitments and export of capital for investment abroad, the need for increasing its exports is as vital as it is to India. Further, the U.S., as the leader of the free world, "has obligations" to other countries, such as Japan and numerous underdeveloped nations like India whose bargaining powers with Western Europe are limited. The U.S. is thus vitally interested in making sure that the new "House of Europe" which it has helped to build does not become a closed market for outsiders and that the common tariff wall which its members propose to construct is not raised to such heights as to deter commerce from without. There is enough determination in the present U.S. Administration to see that this does not happen, for failure in its attempts will be disastrous to the free world as a whole.

How does the U.S. Administration propose to carry out this job? In the first place, it has welcomed Britain's move to join the Common Market and the consequence thereof to the E.F.T.A. It regards European economic unity as necessary for its own self-interest and progress. "With the accession of the U.K. and other European nations to quote President Kennedy, "the Common Market will have almost twice as many people as we (the U.S.) do—it will cover nations whose economies have been growing twice as fast as ours—and it will represent an area with a purchasing power which some day will rival our own. It could be—it should be—our biggest, our most reliable, our most profitable customer. Its consumer demands are growing—particularly for the type of goods we produce best—for American goods not previously sold and sometimes not even known in European markets today. It is a historic meeting of need and opportunity; at the very time we urgently need to increase our exports, to protect our balance of payments and pay for our troops abroad, a vast new market is rising across the Atlantic." Secondly, the U.S. Government proposes to enter into negotiations with the European countries for bulk tariff reduction through mutual agreement among all the industrial countries. Thirdly, the U.S. Government realises the need for offering incentives to the Common Market to reduce its external tariffs. The best incentive the U.S. can offer is to lower its own tariff wall further. Accordingly, Mr. Kennedy has proposed that the Reciprocal Trade Agreement Act of 1934 which has been kept alive by periodical renewals by the U.S. Congress and which is due to expire on 30th June 1962 should be replaced with a more flexible instrument of trade policy. Under this Act, which has been renewed eleven times, the U.S. Government has power to bargain with foreign Governments for lower tariffs. The renewal made in 1958 enabled the President to reduce tariffs only by 5 per cent a year for four years and that too by negotiating only item by item. Mr. Kennedy is of the view that "the approach and procedures provided for in that Act are totally irrelevant to the problems and opportunities" confronting the U.S. and that "its vitality is gone." Emphasising that a fresh approach is essential to keep pace with changing patterns in world trade, he asserts that "we can no longer haggle over item by item reductions with our principal trading partners." Defining more exactly his idea of a new trade policy for the U.S., he says:

"Let me make it clear that I am not proposing a unilateral lowering of our trade barriers. What I am proposing is a joint step on both sides of the Atlantic, aimed at benefiting not only the exporters of the countries concerned but the economies of all the countries of the free world. Led by the two great common markets of the Atlantic, trade barriers in all the industrial nations must be brought down. Surely, it will be said that the bold vision which produced the E.E.C. will fall short, if it merely transfers European protectionism from the national to the continental level."

Mr. Kennedy is conscious of the hurdles in the way of his proposal, what with the fact that 1962 is a Congressional election year. He will meet with stiff opposition from the protectionists who are still a big force to reckon with. But he is confident of winning the support of the Congress by educating the American public and has already launched a country-wide campaign. (Meanwhile, according to the latest report from New York, his officials are said to have been successful in reaching a tentative understanding with all the industrial countries, under the auspices of the G.A.T.T., for a 20 per cent reduction in tariffs on an "across-the-board basis." If this is true, it is an encouraging development, indeed.)

Finally, realising that the efficiency of American factories, services and farms should be of a high order in order to face increased competition, the U.S. President proposes to render appropriate help to all these sectors. A new export drive has already been launched. He intends to give as much incentive as possible to facilitate reinvestment in plant and machinery. He is appealing, impressively and passionately, to businessmen and workers in his country to refrain from pursuing policies and practices that will lead to inflation. He, for his part, has promised to present a balanced budget next month. It will thus be seen that the U.S. approach to the unprecedented integration movement in Europe is commendably realistic and constructive. If one can draw a lesson from it for India it is this. It is better to proceed on the assumption that the movement in Europe is inevitable and that it can do more good than harm. No purpose will be served by decrying it or by promoting competitive trade blocs. The assurances given by the leaders of Western countries should be accepted in good faith and efforts should be made to get them implemented by working with the U.S. and Britain. Unlike the U.S., India has not much room for offering tariff concessions, at least for some years to come. But prompt steps must be taken to remedy the defects in our economic policies—about which a lot has been said by this journal and others from time to time—and to improve the competitive capacity of its agricultural commodities and manufactured goods.

INVESTMENT IN EDUCATION

THE U.S. Ambassador, John Kenneth Galbraith's address at the Rajasthan University's Convocation held on the 9th instant had three distinct merits which are usually not found in convocation addresses in India. Its first and greatest merit was brevity —quite appropriate to a convocation audience which, in Mr. Galbraith's own words, is not a "rewarding audience" from the point of view of undivided attention. Its second merit was the happy avoidance of philosophising and sermonising. And its third merit was the thought-stimulating manner in which a practical subject in everybody's mind was dealt with. With such merits, it is inconceivable that Mr. Galbraith's address could have been in vain even at the Convocation—like blowing with a conch into a deaf man's ears, to adapt a Tamil saying. In any case, it should have fallen on receptive ears in Government and planning circles. For Mr. Galbraith's theme which dealt with "the relation of education to economic development" was all too appropriate to the Indian context. As India, according to his studied observation, "has held, on the whole, to the lesson of the nineteenth century which is that education, or education abetted by honest and orderly government, comes first," its planners should have found his reasoning agreeable as well as flattering to them. He said:

"The fact is that education is of high importance both as an object of immediate consumption and as a form of investment for future production. It is neither consumption nor investment but both. To look at education as a form of consumption, given the importance that the developing country attaches to investment, is to risk assigning it an unduly low priority. Some new countries have almost certainly done so. They have regarded their steel mills, dams and fertiliser factories the tangible manifestation of such development. . . . However, I have a feeling that this mistake is by way of being corrected—and I hasten to say that it has never been nearly so serious an error in India as in the less developed lands."

But it would be a mistake for planners in this country to take this as an unqualified testimony to their sense of priorities, for Mr. Galbraith has finally doubted whether "any country has yet accepted *all* the implications of education as a form of development investment." Since, in his view, neither university students nor faculties have yet seen the full significance of their claim as a form of investment of scarce development resources, Mr. Galbraith has put the whole thing in its proper perspective. The notion of consumer sovereignty, if applied to education, would mean that the student has the right to study or not to study even as the consumer has the right to consume or not to consume. It might also mean that he has the right to pursue the curriculum of his choice—either humanities or sciences. But this notion of consumer sovereignty in its application to education would distort development in the less-developed countries where, instead, the student should be "the privileged object of the investment of scarce resources." Mr. Galbraith's emphatic view may well be quoted here:

> "Society has given him (the student) some of its savings. Surely he has a clear obligation to return to society the increased production that society expects and for which it has spent its scarce substance. The more scarce the resources, the greater this obligation. . . . If education is a form of investment, then planning of educational output becomes desirable and even imperative. Attention must be accorded to the distribution of talent between engineering, science, medicine, agriculture and other needed specialities."

Mr. Galbraith's reference to studies by Theodore Schultz in the United States is an additional confirmation of the practical wisdom of his approach to education. These studies have recently shown that outlays on education may bring large increases in production and that a dollar invested in the intellectual improvement of human beings will often bring a greater increase in national income than a dollar devoted to railways, dams, machine tools or other tangible capital goods. In agriculture, too, education becomes a highly productive form of investment, for, as Mr. Galbraith has so happily put it, nowhere in the world is there an illiterate peasantry that is progressive and nowhere is there a literate peasantry that is not. A developing country may, therefore, rightly regard its outlays for education as an investment. When so regarded, it becomes as purposeful as any other form of outlay of scarce capital resources. This is true particularly of democratic countries, for, as Thomas Jefferson once said, "if you expect a country to be ignorant and free, you expect what never was and never will be." It logically follows that such an investment must be judiciously allocated as between general education and technical education, between the arts and the sciences. What is specifically required in India is a curb on the general tendency to take arts degrees which are needlessly preferred even for clerical and relatively small administrative jobs in the public and private sectors. If the emphasis is shifted to the science courses in colleges and facilities and resources are allocated accordingly, more students are bound to take to them. They will then constitute a bigger reservoir of talent for still higher scientific and technical education. As of today, this country cannot claim to have adopted any rational planning of educational output in relation to economic development—the kind of planning preferred by Mr. Galbraith. Nor can it claim to have been wholly in the right by treating education all along as belonging to the third category of "social services," as distinct from the second category of "development services" and the first category of "security services."

TUBEWELL IRRIGATION

INDIA had known tubewell irrigation even before the first Plan started. But this mode of irrigation was not extensively in vogue, for, as many as 2,300 out of the 2,500 tubewells which were in operation prior to 1951 were concentrated in Uttar Pradesh. But the area—about a million acres—irrigated by all the tubewells was not inconsiderable, accounting as it did for about 2 per cent of the entire irrigated acreage in the country at that time. As the potentialities of this relatively minor system of irrigation were rated higher at the beginning of the first Plan, provision was made in that Plan for the construction of 2,650 tubewells under the Indo-U.S. Technical Co-operation Programme, 700 under the "grow-more-food" programme and 2,480 in the development plans of four States, namely, Bihar, Uttar Pradesh, Punjab (including P.E.P.S.U.) and Bombay. Actual performance under this programme was fairly good—with 2,286 tubewells completed under the Indo-US. Technical Co-operation Scheme, which was expanded in 1955 to include 350 additional tubewells, 93 under the grow-more-food schemes and 2,046 under the State Plans by the end of the first Plan, all at an estimated cost of about Rs. 24 crores. But only 3,525 newly constructed tubewells had been energised, that is, provided with electrical energy for their operation, till 1955-56. And the area irrigated from the new tubewells during the first Plan period also fell short of the original expectation of irrigation for 2 million acres.

The second Plan gave a further impetus to the tubewell programme. It was laid down in that Plan that a total outlay of about Rs. 20 crores be made for the construction of 3,580 new tubewells which could irrigate 900,000 acres on full development. Fairly satisfactory progress was registered in tubewell construction during that Plan period also. First, the first Plan's Indo-U.S. project was successfully completed and almost all the 3,000 tubewells under that project, involving an outlay of $18.7 million by way of dollar cost and Rs. 12.7 crores by way of rupee contribution by the Government of India, were energised by 1960-61. Secondly, out of the 350 tubewells of the 1954 G.M.F. Project to be constructed in U.P. and Punjab, 270 had been energised by 1960. Thirdly, the first Plan programme for U.P. was completed and the 1954 G.M.F. Project for the construction of 400 tubewells in Gujarat was nearly completed with the energisation of 366 of them. Fourthly, the second Plan's tubewell programme covering 1,500 tubewells in Uttar Pradesh alone also made substantial progress with the energisation of 630 units upto the end of 1960. Progress in other States, however, was much slower in so far as the second Plan's tubewell programme was concerned.

By far the most important fact relating to the tubewell programme during the first and second Plan periods is that, as of 1960, Uttar Pradesh had claimed the lion's share (two-thirds) of new tubewell construction. By that year, as many as 6,048 tubewells were in operation, as compared with 2,300 prior to 1951, in that State. Since Uttar Pradesh has had a much earlier start in this field and the ground water conditions in it have been extensively studied, it is not surprising that this State maintains its leading position, accounting for three-fourths of all the tubewells (about 8,100) currently in operation throughout the country. And it is, therefore, appropriate that State tubewells in Uttar Pradesh should have been recently studied by the Committee on Plan Projects.

The relevant report, just published by the Committee, is notable for its objective findings and constructive recommendations. The general findings of the report show that the 6,048 tubewells which were in operation in 1959-60 irrigated 1.9 million acres and recorded 14.2 million running hours in all. The area irrigated by an average well, involving an outlay of about Rs. 50,000, was 314 acres; the average running hours per well were 2,350. The specific findings pertaining to administration and management, financial aspects, construction and operation, irrigation performance and agricultural aspects make rather disquieting reading. The organisational set-up relating to the maintenance of tubewells and distribution of water is not what it should be, for there is not enough co-ordination among the officials of the Engineering Department and the Agriculture Department and the cultivators who need guidance in regard to crop patterns and efficient utilisation of tubewell water.

The most disquieting finding pertains to financial returns to the State Government from tubewells. Ever since 1946-47, there has been a continuous annual loss. The latest available figures are for 1958-59 and these are as under:

(Rs. lakhs)

Gross receipts Rs. 171; total working expenses Rs. 287; net revenue —Rs. 115; *simple interest* Rs. 101; and loss Rs. 217.

Even in respect of the older tubewells, numbering 2,256 which have been in operation since 1947, the cumulative return on capital has worked out to only 3.37 per cent. On the total investment of Rs. 27.8 crores upto the end of 1957-58 on all tubewells working then, there was, however, a *minus* return of 7.8 per cent. Rebate of 3 annas per rupee in the usual irrigation charges calculated on the basis of 16,000 gallons per rupee, higher electricity rates and accumulated interest charges on capital are some of the reasons adduced by the State authorities for this unsatisfactory financial performance. This state of affairs, according to the report, means continuance of an average annual subsidy of Rs. 3,736 per tubewell or Rs. 13.07 per acre irrigated. But the authors of the report feel that this state of affairs is not beyond improvement. The possible ways in which this can be effected are reduction in the operation cost of tubewells, realisation of greater revenues from the beneficiaries, increased production by better agricultural management so that the beneficiaries could contribute more towards revenues, and removal of other extraneous influences affecting the operational efficiency of tubewells. In this connection, the report contains several concrete recommendations relating to existing as well as projected tubewells. These recommendations, which have been realistically made in the light of the actual unsatisfactory conditions, are *prima facie* worthy of consderation. Incidentally, they constitute an eye-opener, in that they show that the mere construction of irrigation works is not *all*. The adjustments and readjustments required for irrigated farming, which is also intensive in character, are many and varied. As the possibility of exploiting the surface water resources in Uttar Pradesh is stated to be very little, the importance of tubewell irrigation is bound to increase. But this will call for greater co-operation and understanding between the cultivators and the Government departments concerned, for increasing the returns to the farmer and the exchequer alike. The cost of irrigation by tubewells is generally higher than that of irrigation by gravity canals, though the capital cost of an average tubewell irrigating, say, 40 acres is only about Rs. 150 per acre. The high cost of tubewell irrigation underlines the need for maximisation of agricultural production in the areas served by it.

MARKET GOSSIP

SENTIMENT in share markets has slightly improved. The imposition of margin system, which affects bulls and bears equally, depending upon the trend of the market, has restrained short-sales. The fear of Portuguese military indiscretions against India following the Government of India's firm stand on Goa has receded, due to reports that some friendly countries are trying to bring about a peaceful settlement. Bear covering and some replacement buying have led to a modest recovery in equities from the low levels touched last week. Most operators, however, are still inclined to be cautious. With the year-end drawing to a close, with Christmas and New Year holidays not far away and with the political issues that had rudely shaken the market last week still in the forefront, this is only as it should be.

State Bank Gives The Lead

As a first and novel attempt, the special credit transfer system, announced by the State Bank of India this week, is welcome. It is, of course, not a new concept in banking service, nor does it represent an improvement on the credit transfer facilities available in countries like the U.K. and U.S. with well developed banking service. Its importance lies in the fact that it adds a new dimension to the facilities available to the banking public in this country. What is significant is not that the largest commercial bank in the country has pioneered a new scheme as that a public sector undertaking has taken the initiative to give a lead to its competitors in the private sector. It may be taken as a sign of healthy competition that exists in the banking field.

The credit transfer system, which is being introduced on an experimental basis with effect from 1st January 1962, will enable any customer having a personal account with the State Bank to use any of the nine hundred and odd branches of the Bank for transfer of money paid in cash to his account at any other branch free of charge. This facility is, however, subject to the following conditions: (*a*) credit transfer is possible only in respect of personal savings or current account; (*b*) the remittance must be made in person by the account-holder; (c) it should not exceed Rs. 1,000 per account per day; and (*d*) inter-branch remittances are not covered under the scheme.

These conditions obviously limit the scope of the scheme. First, businessmen, who run accounts not in their personal names but in the names of their firms and who largely make use of the transfer facility, will not stand to benefit. Secondly, the stipulation that the remittance should be made personally by the account-holder considerably reduces the appeal of the scheme, because not many will bother to make a trip to the Bank in order to avail themselves of the free remittance. Thirdly, exclusion of inter-branch remittance from the scope of the scheme means that those who have accounts at two branches will get no benefit. This surely amounts to discrimination between a person having accounts at two branches and seeking transfers between them and another having account at only one branch. This discrimination is, perhaps, deliberate because the free credit transfer system is aimed at attracting new depositors by giving them an additional facility. Apparently, the Bank expects that the remittance charges it has to forgo under the scheme will be more than made up by the new deposits that might result from it. The fixation of the maximum limit at Rs. 1,000 indicates that the scheme is designed to attract individual small and medium depositors. Similarly, remittance from a place where a depositor has an account to a place where he does not have one but where he wishes to make payment is also not possible under the system. But, if a person wants to make remittance regularly to a particular place, he can open an account with the State Bank there. He, however, should not have an account with the Bank in the centre from where he chooses to remit funds. In other words, the scheme will benefit only an account-holder who goes out of his town and wants to send remittances home.

Thus, it will be seen that the scheme is too limited in scope and hedged in with too many restrictions to be of much use. It is, however, an experiment and we are told that its working will be evaluated after the first six months of its working. It is to be hoped that, after this probationary period for the scheme, the Bank will find itself in a position to remove some of the restrictions placed on the scheme and broaden its scope.

As mentioned at the outset, the scheme, though novel as far as India is concerned, is not unknown in the West. It is true that it was introduced in a more refined and advanced form only lately even in Britain. But there many banks have introduced it and consequently a general credit clearing was instituted last year to streamline inter-bank credit payment. Such inter-bank clearing of credit transfers is, of course, a far cry from the State Bank's experimental scheme, but, if other banks too follow the lead given by the State Bank, it may materialise sooner than visualised at present.

Unsealing of Jute Looms

The persistent accusation by a section of jute growers and traders that the jute mills are deliberately keeping off the market with a view to depressing raw jute prices is, indeed, a deliberate misrepresentation of facts for the ostensible political purpose of gaining farmers' votes at the expense of jute millowners. The fact is that mills are endeavouring their best to help growers not only by maintaining as high a level of jute goods production as possible but also by buying raw jute on the basis of sizable minimum quotas allotted by the recently reconstituted Jute Quota Sub-committee of Indian Jute Mills Association. If, in certain areas, prices of raw jute have suffered an appreciable fall, such is mainly due to lack of transport facilities for which the jute mills cannot be blamed. An appreciable amount of road transport has been diverted to movement of coal and the available river transport has been inadequate to cope with the bumper crops. If any one is to be held responsible for this state of affairs, it is the State Government.

The jute mills, it will be recalled, had resumed the 48-hour per week working as from 16th October 1961 and unsealed 2½ per cent (of the 12 per cent loomage remaining sealed) with effect from 13th November. The additional unsealing of 2½ per cent was to have been in force only upto the end of this month, but the I.J.M.A. Committee has now announced that it should be extended for a further period of one month, that is, up to the end of January 1962. The level of jute goods output after January, we are told, will be determined on the basis of the stock position at the end of the current month and the matter will be reviewed when the stock figures are available next month.

If circumstances are favourable, one may be sure, the I.J.M.A. will not miss the opportunity to reduce further the mills' balances of accumulated loom-hours. After all, which industry will wantonly keep capacity idle when adequate supplies of raw material are available at reasonable prices and there is a market for its production? The current season's jute and mesta crop is estimated at 6.50 million bales, as against 5.18 million bales in 1960-61. The raw jute prices, too, are ruling low; the latest available quotation for Assam bottoms at Calcutta is Rs. 30 per maund, as against Rs. 61 a few months ago. What is more, the industry has been assured of the requisite power supply by the Calcutta Electric Supply Corporation.

That the jute industry is making earnest efforts to maximise production is clearly evident from the statistics for the month of November 1961. They reveal that the quantity of jute goods produced in the past month was substantially higher at 92,200 tons, which compares favourably with 76,500 tons in October 1961 (and 85,900 tons in November last year); the number of hours worked being 208, as against 178.5 hours in the previous month. As against such a marked rise of 15,700 tons in output, the total overall stocks lying unsold with mills increased by only 1,800 tons to 56,500 tons. It, therefore, follows that the offtake of jute goods for internal consumption and exports must have registered a notable improvement, from 73,400 tons in October to 90,200 tons in November. The trend of offtake and the level of stocks are quite important considerations that are always taken into account by the jute industry in deciding the quantum of output.

Cotton—Prospects For Import

The latest downward session of crop estimate (private) from 4.8 million bales to 4.65 million bales of 400 lbs.) have increased the country's dependence on imports for its cotton requirement during the current season to an extent which not many had anticipated a few months ago. That the crop during the season would be lower than last season's production of 5.4 million bales was clear enough even a couple of months ago. But the decline of as much as 750,000 bales, according to the present estimate, has come as a disappointing surprise. In fact, on present reckoning, the supply-demand relationship during the season is such that the trend of cotton prices hinges almost entirely on imports, assuming, of course, that the demand side will not be cut by the Government by asking the mills to work short time. This situation imparts an added urgency to the current efforts to get a substantial allocation of U.S. cotton under P.L. 480. Foreign exchange shortage precludes the country from turning to sources other than the U.S. for cotton. The availability of cotton in the U.S. is, therefore, a matter of vital interest to India.

Present indications are that, with a smaller crop and lower carryover stocks, supply in the U.S. during the current season (1961-62) would be down by 600,000 bales at 21.4 million bales (of 478 lbs. each), as against 22 million bales in 1960-61. According to the sixth and final estimate published on the 8th inst., the 1961-62 U.S. cotton crop will be 14,304 million bales (of 500 lbs. gross), as against 14.538 million bales forecast a month ago and the 1960-61 crop of 14,272 million bales. The fall in production is due mainly to lower yield. The yield per acre has been further reduced to 438 lbs., 8 lbs. below that forecast a month ago and the 1960-61 yield and 23 lbs. below the 1959-60 record yield of 461 lbs.

Production of cotton in the free world outside the U.S. is also expected to be lower during the current (1961-62) season. The International Cotton Advisory Committee, Washington, anticipates, in its latest (November) review of the world cotton situation, that total free world production would probably decline, despite an increase of about 2 million acres in the total area planted to cotton. The Committee estimates production in the free world during the current season at 33.3 million bales, as against 33.5 million bales last season. It may be noted that the Committee's estimate of total production is based on the November U.S. crop forecast. Since the December estimate places the crop 200,000 bales lower, total production will be around 33.1 million bales. The main reason for the probable decline in production, according to the Committee, is the sharply lower output yields in Egypt and India where a decline in production of the order of one million bales is anticipated. The Mexican crop is also expected to be lower by 10 per cent as compared with last season.

The probable decline in total production during the season will, however, be more than offset, according to the I.C.A.C., by the increase in stocks at the beginning of the season by about 700,000 bales, so that total supply would be the highest since 1956-57. The only difference, and this is important from the point of view of India, will be that all this increase will be outside the U.S. And the U.S. Government is not keen on increasing the sale of its cotton under P.L. 480. India is thus going to be faced with a serious problem of raw material for its clothing industry.

The table below indicates the supply position of cotton in the free world during the current season as compared with the past two seasons:

(In million bales)

	1958-59	1959-60	1960-61	1961-62
Stocks, 1st August :				
United States	8.7	8.9	7.6	7.2
Other net exporters	4.0	3.5	3.2	3.5
Net importers	6.1	5.3	6.0	6.8
Total ..	18.8	17.7	16.8	17.5
Production :				
United States	11.5	14.6	14.4	14.3*
Elsewhere	17.6	16.7	19.1	18.8†
Total ..	29.1	31.3	33.5	33.1
Supply :				
United States	20.2	23.5	22.0	21.4
Elsewhere	27.7	25.5	28.3	29.6
Total ..	47.9	49.0	50.3	51.0

* December estimate. † Latest available estimate.

Total disappearance in the free world last season amounted to 33 million bales. In the opinion of the I.C.A.C., there is likely to be little change in total consumption in the current season and a continued high level of trade with Communist countries is indicated. The I.C.A.C., therefore, expects that production and disappearance would be roughly in balance in 1961-62, with only minor change in stocks at the end of the season.

From the point of view of countries that have to import cotton, total supply is not as important as export availability. This, as mentioned at the outset, is expected to be lower in the U.S. In the free world as a whole, cotton exports are expected to decline significantly by comparison with either of the past two seasons. The main impact of any reduction in cotton trade will, in the Committee's opinion, be felt by the U.S. where, though actual exports thus far are running ahead of a year ago, registrations under the present export programme are over a million bales less than what they were at this time last year. The U.S. Department of Agriculture estimates that exports in the current season would amount to 5.5 million bales, as against 6.6 million bales in 1960-61.

Elsewhere in the free world, export potential is about the same as in the previous season. The marked reduction in production is expected to affect materially exports from Mexico and Egypt. The much smaller crop in India makes the maintenance of imports at a relatively high level imperative. With record crops in Central America, Turkey, Syria, Greece and possibly Sudan and Brazil and higher stocks in some of these countries, export availabilities may, however, increase. But this country does not stand to benefit much from this, because its purchases from them have perforce to be limited, thanks to foreign exchange shortage.

Our Next Issue

With this issue of "Commerce," we conclude our regular issues for 1961, as, in the next two weeks, we will be preoccupied with our customary Annual Number which will be 216 pages of our usual size. Our next regular issue will be the one dated 6th January 1962.

As in previous years, the Annual Number will contain some forty feature articles on a variety of subjects, the most notable among them being the exclusive article by Mr. Eugene R. Black, President of the World Bank. In addition, the Number will carry our customary annual review of all the aspects of Indian economy, major industries and the principal markets.

The Number will be free to subscribers and will be published on 2nd January 1962. A limited number of copies will also be available for sale at Rs. 10 per copy.

We take this opportunity of wishing all our readers a Merry Christmas and a Happy and Prosperous New Year.

(From Our Own Correspondents)

BOMBAY, *14th December*

THE share market, after a hesitant start on Friday (last day of the previous settlement), began the new account on Monday, with an all-round rise in values, notwithstanding high contango charges at the last settlement. The rise followed bear covering and modest bull support. This, however, proved short-lived, as the market suffered a mild setback on Tuesday on account of selling prompted by the continued tension in the Goa borders and apprehensions of power curbs in the Bombay-Poona region adversely affecting corporate results. The market, however, picked up strength again yesterday, on fresh buying enquiries and selective support by the L.I.C. Modest gains were noted on a wide front. The upward trend gathered momentum today, thanks to renewed short-covering and speculative support. Indeed, the session finished at around the best levels of the day.

Steel shares recovered a part of the losses suffered last week. Tata Steels opened the week unchanged at Rs. 139 and, after receding to Rs. 138.25, improved steadily to touch Rs. 141.50 today before finishing at Rs. 141. The net gain over the week is Rs. 2. Indian Irons commenced the week's trading 24 nP lower at Rs. 23.80 and rose to Rs. 24.16 on Monday. Subsequently, they receded to Rs. 23.72 but recovered to Rs. 24.40 today. The closing was a shade easy at Rs. 24.32. Mukand Irons followed the same pattern. Opening at Rs. 27, as against the previous close of Rs. 27.10, the scrip eased to Rs. 26.75 on Tuesday, but improved to Rs. 27.50 today before finishing at Rs. 27.40, showing a net gain of 30 nP over the week.

Textile shares were well favoured. Standards, after last week's slump, moved up from Rs. 1,030 to Rs. 1,055. Morarjees firmed up by Rs. 10 to Rs. 380. Khataus advanced by Rs. 7.50 to Rs. 475. Kohinoors, which had receded from Rs. 297.50 to Rs. 293.50 early in the week, firmed up in subsequent sessions to touch a peak of Rs. 305.50 today, following support extended by the L.I.C. The closing was Rs. 1.50 lower. The net gain over the week is Rs. 6.50. Centurys gathered Rs. 6 to Rs. 576 though they had touched a low of Rs. 560 at one time on Tuesday. Podars put on Rs. 4 to Rs. 145. Shreenivas gathered Rs. 3 to Rs. 287. Svadeshis improved by Rs. 2.25 to Rs. 278.75 and Tata Mills by Re. 1.20 to Rs. 272.20. Most of the other scrips in the textile section were firm. Simplex, however, shed Re. 1 to Rs. 161 and Osmans 50 nP to Rs. 69.50.

Barring Belapurs which were easy, sugar shares tended to move up. Walchandnagars hardened by Re. 1.50 to Rs. 166. Phaltans put on 50 nP to Rs. 126.50. Belapurs began at Rs. 265, Rs. 2 lower than the previous close, and declined to Rs. 261 the same day. They, however, recovered subsequently to Rs. 265 today, showing a net loss of Rs. 2 over the week. Operators noted the decline of Rs. 5.87 lakhs to Rs. 79.76 lakhs in the gross profits of the Belapur Company during the year ended September 1961, despite the increase of Rs. 11 lakhs to Rs. 238 lakhs in sales.

Cement shares ruled quiet. A.C.Cs opened lower at Rs. 160.50 and, after fluctuating narrowly, finished at Rs. 161, the same as the previous close. Digvijays put on a rupee to Rs. 196, while Orissa Cements shed 10 nP to Rs. 15.44.

In the shipping group, Scindias and Great Easterns lost 4 nP each to Rs. 12.72 and Rs. 12.88, respectively. The settlement of the labour dispute imparted strength to Hindustan Motors in the automobile group which firmed up by 92 nP to Rs. 20.60. Premier Automobiles were done a rupee higher at Rs. 155.50.

Rayon shares regained a part of last week's losses. National Rayons opened the week lower at Rs. 543.50, as against the previous close of Rs. 547.50, and, after receding to Rs. 536.50 yesterday, improved to Rs. 554.50 today before finishing at Rs. 551. Baroda Rayons changed hands Rs. 2.50 higher at Rs. 155. Gwalior Rayons gained Re. 1.90 to Rs. 48. South India Viscoses strengthened by Rs. 2 to Rs. 174.

A mixed pattern was in evidence in chemicals Colour Chems firmed up by Rs. 17.50 to Rs. 427.50. Synthetics spurted Rs. 13 to Rs. 235. Indian Dyestuffs hardened by Rs. 5 to Rs. 445 and Poly Chems were Re. 1.25 higher at Rs. 201.25. Amar Dyes, on the other hand, receded by Rs. 6.25 to Rs. 288.75 and Dhrangadhras by Rs. 7.50 to Rs. 125.

The engineering section also shared in the general recovery. T. Maneklals spurted by as much as Rs. 140 to Rs. 840 on the news that the dividend for the year ended 31st May 1961 had been stepped up to Rs. 27, subject to tax, as against Rs. 18.50 distributed in the previous year. Telcos attracted good support and rallied from Rs. 343 to Rs. 355.50 today. The finish was, however, a rupee lower at Rs. 354.40, showing a net gain over the week of Rs. 10.50. Alcock Ashdowns improved by Rs. 6 to Rs. 310. New Standard Engineerings hardened by Rs. 2 to Rs. 192. Larsen and Toubros improved by Re. 1 to Rs. 37.50. Premier Constructions rose by a like amount to Rs. 187. Texmacos gained 48 nP to Rs. 21.24. Cooper Engineerings were, however, a shade lower at Rs. 179.25, as against Rs. 180 last week-end.

In the miscellaneous section, Bombay Burmahs commenced the week at Rs. 626, as against the previous close of Rs. 628 and, after rising to Rs. 629 on Monday, receded to Rs. 617 the next day but improved again to Rs. 640 today. The net gain over the week is Rs. 12. Voltas attracted support and gathered Rs. 4.50 to Rs. 297.50. Hindustan Levers hardened by Re. 1.80 to Rs. 57. Wimcos gained Rs. 3 to Rs. 301.50. Tata Oils found buyers Rs. 2 higher at Rs. 72.50. Anil Hard Boards strengthened by Rs. 8 to Rs. 278.

Calcutta Stock Exchange

CALCUTTA, *13th December*

Although selling pressure abated considerably earlier in the week on the Stock Exchange, following the swift action taken by the exchange authorities, namely, cancellation of the margin of Rs. 2 a share on purchase of Orient Paper and Dunlop Rubber, and the imposition of fresh margins on all clearing shares, the recovery failed to gather momentum. Mr. Nehru's latest analysis of the Goan situation and his hint of concrete action soon led to heavy selling and widespread losses on Monday and Tuesday. Buying support dwindled and there were no indications as to when the trend would get reversed. Jutes became sellers over as foreign demand for goods had not yet revived up to the expectations necessitated by the bumper fibre crop. Coals were dull, as so far no concrete plan to utilise the World Bank loan of $35 million has been evolved. Engineerings were lower on profit-taking, induced by an overbought position. Many miscellaneous industrials closed lower on balance.

Cotton mills shares did not share the general trend. Bowreahs at Rs. 36.37 were better by Re. 1. J.K. Rayons opened at Rs. 18.44 and, after rising to Rs. 19.12, closed higher on balance at Rs. 18.87. Coals were, however, depressed in the absence of buyers. East Indians were fractionally lower at Rs. 32.87, while Amalgamateds, after hardening from Rs. 22.50 to Rs. 22.62, eased to Rs. 22.25. At Rs. 351, Bengals accounted for a loss of Rs. 6. Raneegunges were quiet at Rs. 15.25. South Karanpuras were pushed down from Rs. 8.69 to Rs. 8.44, while Burrakurs staged a small recovery from Rs. 17.81 to Rs. 18.25 to recede to Rs. 18. Jutes searched lower levels. After being lower at Rs. 19.75, Howrahs recovered to Rs. 20.37, while New Centrals receded from Rs. 16.34 to Rs. 16.25. Megnas after being higher at Rs. 12.44 closed at Rs. 12.37. Ganges recovered from Rs. 11.75 to Rs. 12.34. Engineerings slumped to lower levels. Indian Irons were as low as Rs. 23.62 earlier and after recovering to Rs. 24.26 slumped to Rs. 23.94. Texmacos, after being lower at Rs. 19.85, recovered to Rs. 21.75 to give way to Rs. 21.20. Indian Standards were 2 points lower at Rs. 115. Among miscellaneous industrials, Dunlop Rubbers, after rising to Rs. 39.91 from the earlier lower level of Rs. 37.94, recovered to Rs. 38.56. B.I. Corporations met with strong support to rise to Rs. 10.62, from Rs. 9.50. Rallis had buyers aiding to push the rate from Rs. 146.50 to Rs. 152. At Rs. 39.90 Orient Papers were Rs. 2 higher on balance, thus making good last week's loss in its entirety. Indian Oxygens had buyers at Rs. 39.50, as against Rs. 39.12 previously, while Sirpur Papers eased from Rs. 16.87 to Rs. 16.31. Indian Cables after recovering from Rs. 34.87 to Rs. 35.50 receded to Rs. 35.12. Indian Aluminiums closed at Rs. 37.06, after moving up to Rs. 37.75 from Rs. 36.37.

Madras Stock Exchange

MADRAS, *13th December*

Equities on the Madras Stock Exchange encountered persistent selling during the week under review, while buying support continued to be at a low ebb. Operators were greatly concerned over the persistent disquieting situation in the North Eastern region and Goa borders. Textiles were subjected to stale liquidation. Coimbatore Cottons were marked down by Rs. 9 to Rs. 204. Premiers gave way from Rs. 305 to Rs. 297. Lakshmis and Buckinghams fell by Rs. 5.50 each to Rs. 164 and Rs. 254, respectively. Travancore Rayons and Madurais, however, advanced by 70 nP, the former to Rs. 42.20 and the latter to Rs. 40.20. Teas lacked support, on reports suggesting reduced exports of tea. Kil Kotagiris lost 30 nP to Rs. 4.90. Peermades receded by 25 nP to Rs. 22.75. Periakaramalais softened by 20 nP to Rs. 3.45. Coffees moved down in sympathy, Consolidateds declining by 75 nP to Rs. 19.35 and Coffee Lands by 50 nP to Rs. 16.50. Rubbers were dull. Cochin Malabars shed 28 nP to Rs. 7.15 and Midlands 22 nP to Rs. 10.73. Among miscellaneous industrials, cements and chemicals were particularly subdued.

You are cordially Invited to BAJAJ ELECTRICALS PAVILION at THE INDIAN INDUSTRIES FAIR New Delhi.

Visit our pavilion at The Indian Industries Fair, where A Complete Range of KAYCEE ELECTRICAL PRODUCTS is on display....

NEWS IN BRIEF

THE Punjab Government has set up a separate directorate for the marketing of agricultural produce.

The Andhra Government has decided to exempt rice, fried Bengal gram, meat and potatoes from sales tax.

A four-member French delegation has commenced negotiations with the officials of the Government of India on avoidance of double taxation.

The Lok Sabha has passed a Bill seeking to continue tariff protection beyond 1961 for the soda ash, caustic soda, calcium carbide, titanium dioxide and electric motor industries.

The Rs. 7-crore Dugda Coal Washery has been commissioned. The washery, which will supply beneficiated coal to Bhilai and Rourkela steel plants, has a capacity to handle 2.4 million tons of raw coal, yielding 1.8 million tons of washed coal per year.

A three-member delegation sponsored by the Government of India to negotiate imports of newsprint from Russia, Finland and the Scandinavian countries on a long-term basis, has left New Delhi for Moscow. The delegation will explore the possibilities of securing newsprint under special payment arrangements from these countries.

The Planning Commission has decided to raise the outlay on oil development programmes in the Third Plan by Rs. 67 crores to Rs. 202 crores. The revised programme will involve a foreign exchange component of over Rs. 70 crores, as against Rs. 53 crores envisaged earlier. The Commission has agreed to make available to the Oil and Natural Gas Commission about 90 per cent of the foreign exchange requirements.

The State Trading Corporation has decided to buy about 700 maunds of seedlac IB grade and 4,300 maunds of IIB variety, to begin with. Under a scheme devised by the Government of India, the Corporation has been entrusted with the work of undertaking buffer-stock operations in lac. It proposes to make further purchases of lac (grades I B, II B and fine *Byakhi*) in Bihar, West Bengal and Maharashtra as soon as the next *Katki* crop of seedlac is ready.

India's exports aggregated Rs. 57.01 crores in October 1961, as against Rs. 59.29 crores in the previous month, and Rs. 55.54 crores in the corresponding month last year. Imports at Rs. 79.60 crores were distinctly higher, as compared with Rs. 76.56 crores in September 1961 and Rs. 72.82 crores in October 1960. India had thus a larger adverse balance amounting to Rs. 22.59 crores in its merchandise trade in October 1961, as against Rs. 17.27 crores and Rs. 17.28 crores, respectively, in September 1961 and in October 1960.

The Indian railways are revising the existing rules and conditions governing the packing of commodities to be accepted for carriage at railway risk. This follows the enactment of the Indian Railways (Amendment) Act, 1961, by Parliament recently. Under the Act, which will come into force from 1st January 1962, the railways will assume greater responsibility for loss, destruction, damage and deterioration of goods tendered to them for carriage. Simultaneously with the coming into force of the Act, new packing conditions will also be enforced.

When a newly floated company wants to reserve a block of shares for private allotment to promotors, directors, their friends and associates, an assurance is usually obtained that the shares thus reserved will be allotted to persons who are genuinely interested in the long-term investment in the company and will not dispose off the shares for the sake of immediate capital gains for the specified period, which usually ranges from two to three years. Revealing this, the Union Deputy Minister for Finance informed the Rajya Sabha that in cases in which the entire issue was thus sought to be reserved, the period was five years.

From Abroad

The Government of Finland proposes to frame legislation seeking to introduce a "new Finnmark" currency, each equivalent to 100 existing marks.

The British Aircraft Corporation has secured a contract from Communist China for the sale of six Vickers Viscount series—800 turbo-prop airliners.

Tanganyika in East Africa, which attained independence this week, has been admitted as a Contracting Party to the General Agreement on Tariffs and Trade (G.A.T.T.).

A new air service, with a frequency of one flight a fortnight, will be commenced by the Ghana Airways between Accra and Moscow from Tuesday next.

The Government of Ceylon has decided to provide credit facilities upto about Rs. 135 lakhs to Egypt for purchase of Ceylonese tea. Ceylon will also increase its imports of Egyptian cement and rice.

A trade protocol for 1962 is expected to be signed between Afghanistan and Russia. For this purpose, a Russian delegation, led by Mr. Nikolai Smelyakov, Deputy Minister for Foreign Trade, has arrived at Kabul.

Italy and Albania have signed a new trade agreement which provides for an increase of 50 per cent in the value of mutual trade during the year 1962. Trade in each direction is expected to touch 5,000 million lire (about £2.86 million) next year.

Pakistan has raised the export quota for tea from 10.0 million lbs. to 12.5 million lbs., following the comfortable supply position. The output is expected to go up from 42 million lbs. in 1960-61 to 59 million lbs. in 1961-62, a record crop. About 25 per cent of the export quota on two million lbs., or whichever is less, will be allowed to be withdrawn from export auctions for consignment sales in London.

The European Common Market Commission has conceded that the rate of growth of industrial production has begun to slow down since last August. The weakness is most marked in West Germany and Holland, where there was a record rate of expansion in 1959 and 1960. It is also said that overall demand has tended to flag in West Germany, Belgium and France, particularly for the products of mining, automobile and textile industries. In Italy, however, industrial expansion is still taking place at a rapid pace.

The first aluminium rolling mill in West Africa will be put up by the Alcan Aluminium of Nigeria at Port Harcourt. The majority of the share capital of the Alcan Aluminium will be subscribed by the British Company. Aluminium Limited, with two Nigerian development financing houses (Investment Co. of Nigeria and the Industrial and Agricultural Company) contributing equally to the balance. The plant, which will have an initial capacity of 5,000 tons annually, and go into production by January 1963, is expected to cost £1.5 million.

The Pakistan Government has set a compulsory export target of 80 million yards for cotton textiles in 1962. The all-Pakistan Textile Mills Association, which has given an undertaking to fulfil the quota, will distribute among its members the quantity fixed by the Government on a *pro rata* basis in accordance with their respective loomage. Simultaneously, an incentive scheme for textile exports has been announced. Under the scheme, a rebate of customs duty upto specified limits will be made on imports of certain raw materials used for manufacturing exportable articles.

PERSONAL

DR. R. N. Poduval, Economic and Statistical Adviser in the Union Ministry of Food and Agriculture, has been appointed Agricultural Planning Economist for the Sudan under the F.A.O. Technical Assistance Programme. Dr. Poduval left for Khartoum on Wednesday this week.

Mr. Hilary Marquand, a former British Minister of Health and Pensions and one of the Labour Party's leading spokesmen on Commonwealth affairs, has been appointed Director of the International Labour Organisation (I.L.O.) at Geneva.

Professor W. W. Rostow, a distinguished economist, who was until recently an adviser to President Kennedy in the White House, has been appointed Counsellor of the U.S. State Department.

Mr. Geoffrey M. Wilson, until recently Financial Attache at the U.K. Embassy in Washington, has been appointed Director of Operations for South Asia and Middle East of the World Bank, *vice* Mr. Joseph Rucinsky, who will resign from this job, with effect from the 31st inst. Mr. Rucinsky will join the Kaiser Industries Corporation, California, as a Vice-President.

Mr. Shriyans Prasad Jain, Vice-President of the Federation of Indian Chambers of Commerce and Industry, has been elected President of the Afro-Asian Organisation for Economic Co-operation for a period of two years. Mr. Gul Mohammed of the Pakistan Federation of Chambers of Commerce and Industry, and Mr. Dossolo Traore, Speaker of the Parliament of Mali, have been elected Vice-Presidents.

Mr. Govind Narain has taken over as the Managing Director of State Trading Corporation from Mr. S. N. Bilgrami, who has been appointed Chairman of the Inter-State Transport Commission.

MACHINE TOOL INDUSTRY

THE aggregate demand for machine tools during the five-year period of the third Plan has been estimated by the Planning Commission to be of the order of Rs. 220 crores in terms of value. Of this, the demand in the last year of the Plan is placed at Rs. 65 crores, and the indigenous machine tool industry in both the sectors—public and private—is expected to manufacture at least Rs. 35 crores worth of machine tools. If the industry is to attain that level of production, it will have to register a five-fold expansion, for the estimated production of graded machine tools in 1961 (broadly corresponding to the first year of the third Plan) is just under Rs. 7 crores, in terms of value, in both the public and private sectors. The pace of progress of the industry during the second Plan period, as revealed by the following figures, would appear to suggest that the planned expansion during the third Plan period is a feasible proposition:

(In 000 rupees)

Year	*Value of indigenous production*	*Value of annual imports*
1955	6,788	52,897
1956	10,818	83,728
1957	23,478	1,46,434
1958	35,540	1,44,200
1959	41,630	1,63,277
1960	58,603	2,09,350

But what is feasible can be attained only if the industry's expectations, as expressed in Mr. S. L. Kirloskar's presidential address at the fifteenth annual general meeting of the Indian Machine Tool Manufacturers' Association held at New Delhi on the 9th inst., are fulfilled at an early date. These expectations relate to incentives and encouragement from the Government, with particular reference to quicker disposal of the industry's applications. While it is true that the Government has licensed as many as 41 additional units to manufacture machine tools in the first nine months of 1960-61, as compared with 42 licences granted in the whole of 1959-60, there is still a lot of scope, according to Mr. Kirloskar, for new entrepreneurs in this field. Since, in his view, it would not be possible for the existing units to meet the enormous demand for machine tools expected over the third Plan period, it would be absolutely necessary for the Government to encourage prospective entrepreneurs to take up the manufacture of different types and ranges of machine tools. At the same time, the Government's present realisation that capital investment required for the machine tool industry is much larger and the profits in it are comparatively lower than in many other industries should logically lead to greater loan assistance from the National Industrial Development Corporation and other financial corporations at a nominal rate of interest. While pleading for this facility, Mr. Kirloskar has done well to advise the industry not to depend entirely on Governmental assistance or to go on complaining about the shortage of raw materials and foreign exchange. Human ingenuity, according to him, should be concerned more with devising ways and means of overcoming the shortcomings caused by shortages. One of the ways suggested by Mr. Kirloskar in this connection is foreign technical collaboration. Such collaboration with reputed foreign machine tool manufacturers would be necessary even otherwise for the manufacture of precision and more advanced types of machine tools which are yet to be produced in the country.

Two other suggestions made by Mr. Kirloskar could also be usefully considered by the Government for possible adoption. One is that the Government should not issue licences for the import of such machine tools as could be supplied by indigenous manufacturers within a period of 18 to 24 months from the date of placing an order, as opposed to the present 12 months which represents the normal period of delivery taken by foreign machine tool manufacturers. And the other suggestion is that, in view of the pressing need for competent designers at all levels in the present phase of development of the machine tool industry, special facilities should be given for the import of foreign designers. To make for a greater degree of continuity, it would be necessary to provide to foreign designers the added incentive of a tax-free existence of five years, as opposed to the current three-year limitation. Both these suggestions seem to be reasonable. As the Government is wisely determined to develop the vital machine tool industry in both the public and private sectors and as an adequate supply of high class machine tools is an essential prerequisite for success in establishing heavy and light engineering industries, it should not hesitate to meet the minimum requirements and reasonable expectations of the industry.

INVESTMENT INSURANCE

The International Chamber of Commerce has announced that, in collaboration with the World Bank, it is conducting an inquiry into the need for, and the feasibility of, insuring risks of a non-commercial character that investors have to face in foreign countries. The object is to ascertain whether an international investment insurance scheme would really encourage overseas investment and to find out the extent to which potential overseas investors are in fact deterred by non-commercial risks. The inquiry is part of the study undertaken by the Chamber of the conditions affecting the flow of private capital between nations, especially between developed and underdeveloped countries. It is based on a questionnaire drawn up jointly by the Chamber and the World Bank and distributed among industrial, business and financial institutions in countries where the Chamber has national committees. It is for the first time that such a comprehensive and searching inquiry has been organised on this subject.

The present inquiry is the outcome of the realisation on the part of the Chamber that measures to protect foreign investment from non-commercial risks can do much to help create the necessary climate of confidence. These risks can be classified under three broad heads, namely, political risks such as expropriation, nationalisation, etc., transfer risks such as inability to transfer profits and repatriate capital, and calamity risks, such as war, revolution, insurrection, etc. Investors in three countries, namely, the U.S., Japan and West Germany, can at present obtain insurance against certain risks under a national scheme. Unlike the scheme in force in these three countries, the proposed international scheme would be multilateral in character with membership drawn from both capital-importing and capital-exporting countries.

Investment conditions, in the Chamber's opinion, have undoubtedly improved in the past few years and many of the impediments to a continuous and expanding flow of capital between countries have been removed or reduced. Whether some more formal arrangements are required to ensure the necessary security will become apparent when those actually responsible for foreign investment operations have indicated the importance they attach to insurance coverage against non-commercial risks. The International Chamber of Commerce is rendering a very valuable service in having initiated the study under reference. Its findings will naturally be awaited with interest all over the free world.

BHAKRA-NANGAL POWER SYSTEM

With the formal inauguration, by Prime Minister Nehru on the 10th inst., of the third generating set in the Ganguwal Power House, the third set in the Kotla Power House and the fourth and fifth sets in the Left Bank Power House at Bhakra, the big power system forming part of the present Bhakra-Nangal Project attained the stage of completion after eight or nine years of construction by stages. The total installed capacity of this system now is 604,000 kw.—450,000 kw. at the Bhakra Left Bank Power House and 77,000 kw. each at the Ganguwal and Kotla Power Houses which are located on the Nangal Hydel Channel. With so much generating capacity, the Bhakra Power System has acquired the distinction of being the largest of its kind in South-East Asia. What, however, detracts somewhat from its bigness is the estimate that each Bhakra unit will generate only 53,000 kw. at minimum head and that, if one of the five units is treated as a standby, the total primary power available from the Left Bank Power House will be no more than 212,000 kw. It may be assumed that the effective capacity of the Ganguwal and Kotla Power Houses and the older Jogindernagar Power Station would be of the order of 150,000 kw., as against their installed capacity of about 200,000 kw. It is, therefore, rather doubtful if the estimated load demand of 400,000 kw. on the Punjab Power System (comprising the older Jogindernagar Power Station with its installed capacity of 48,000 kw. and the three power-houses of the Bhakra-Nangal system) at present can be fully met.

If the total load demand in the Punjab is now 20 times greater than in 1947, it is due to the rapid industrial growth in that State. This growth is continuing and there is, therefore, a gap between power generation and load demand. How to keep pace with the rising load curve is the present question. New power schemes, involving an expenditure of Rs. 53 crores in the third Plan period and costing ultimately Rs. 173 crores in all, are being taken up for execution, but these, too, may provide only a partial answer to the question. Since the Punjab is too far away from coalfields, the possibilities of installing thermal power stations seem to be limited; in fact the proposed thermal plant at Delhi will be the only major undertaking of the Punjab Government in the field of thermal power generation. By far the greatest reliance in the Punjab will be on hydro power during the third and fourth Plan periods. But the possibilities here, too, are not unlimited. It would thus appear that a supplemental source of energy in the form of atomic power may be required in that region. Actually, a proposal to establish an atomic power station in the Punjab has been under consideration for some time. If this project is finally approved, it may bring some relief sometime in the fourth Plan period. For some time longer, the innumerable power-using small industries in the Punjab will have to depend almost entirely on hydro power. Since *per capita* power demand in that State is expected to rise from the 30 units actually consumed in 1961 to 100 units by the end of the third Plan, such major power schemes as the Bhakra Right Bank Project and the Dehar Power House would have to be executed in quicker time and as a matter of higher priority.

GOVERNMENT'S PURCHASE POLICY

The business community has a vital stake in the Government's stores purchase policy. This is so, not only because the Government constitutes a bulk buyer of a wide range of goods, but also because its volume of purchases has been expanding at a rapid rate. The figures show that the value of Government's purchases from indigenous sources made through the Directorate General of Supplies and Disposals has risen from Rs. 120 crores in 1955-56 to Rs. 222 crores by 1960-61. At the same time, the proportion of indigenous goods in the aggregate supplies has gone up considerably, as a result of a marked reduction in imports. During the third Plan period, the total value of purchases of indigenous goods by the D.G.S. and D. is expected to touch the level of Rs. 350 crores annually. It is, however, a moot point whether the Government has expanded and toned up its purchasing machinery adequately to tackle the increasing demands made on it. There have been several complaints from industrialists and traders of delays in the finalisation of tenders and payment of contractors' bills. It may be recalled here that, only a few days ago, the Associated Chambers of Commerce, at its annual general meeting, discussed the grievances of the business community in this respect and made certain useful suggestions to eliminate the present difficulties (*vide* page 1078 of the last issue of *Commerce*.)

It was, therefore, appropriate that Dr. Gopala Reddi, Union Minister for Works, Housing and Supply, should have devoted some attention to the criticisms of trade and industry regarding delays in payment and other procedural difficulties, while inaugurating the four-day "service-to-indentors" Seminar organised by the D.G.S. and D. at New Delhi, on the 6th inst. According to Dr. Reddi, adequate instructions, no doubt, existed for the avoidance of such delays, but he conceded that there was "a certain amount of laxity in their implementation." He was at pains to explain that the Government itself was the loser in case of delays. For, delays in the finalisation of tenders, according to Dr. Reddi, compelled contractors to provide "a cushion in their quotations" and delays in payment might prompt them to provide "safeguards against all loss of interest." While this may be true in some cases, it should not be forgotten that the Government, being a large monopoly buyer, generally leaves little room to suppliers for either effective bargaining or normal commercial manœuvres.

The so-called "cushions" and "safeguards" thus seem to be exaggerations. On the contrary, the business community complains that delays in payments block up their capital. It is, however, only of academic interest to locate the actual loser. It is possible that the interests of both suppliers and recipients of goods are equally affected. Since the authorities feel that the Government is also a loser, it is all the more important that immediate steps be taken to rectify the "laxity" shown by the rank and file in implementing Government policies and to ensure expeditious settlement of purchasing deals. Dr. Reddi's suggestion, in this connection, that procedures for purchases should be further streamlined is, of course, a good one. But one feels that such a move would be fruitful only if, as suggested by Mr. N. E. S. Rahgavachari, Director-General of Supplies and Disposals, effective measures are devised to ensure greater delegation of powers and to strengthen the inspection staff of the Directorate.

ZONAL CURBS ON RICE

A plea to remove the existing zonal restrictions on the movement of rice was made by Mr. M. H. Hasham Premji, President of the Federation of All-India Foodgrains Dealers' Associations, in Bombay this week. He felt that the supply position of rice in India had now reached a stage which no longer warranted any irksome curbs on its movement. The present restrictions, he contended, only worked against the interests of consumers and producers alike. One of the undesirable effects of zonal restrictions, he said, was that they perpetuated price differentials in the country. Elaborating the adverse effects of the present curbs, Mr. Hasham Premji observed: "The superior varieties of rice grown in the South do not fetch an economic price for the farmers. The consumers of cheaper varieties of rice in this region have to pay a higher price comparatively for the kind of rice which could have been bought in Bihar and Orissa where prices continue to be low. Superior varieties of rice in the Punjab and U.P. are not allowed to be moved to other parts of the country, especially Bombay, Calcutta and Ahmedabad."

Mr. Hasham Premji's appeal is quite timely. For the supply and demand position has completely changed during the last two years, partly because of larger output, imports and stocks lying with both the Government and the distributive trade. The 1960-61 rice crop touched a record, being 33.7 million tons, as compared with 31 million tons in 1959-60 and 30 million tons in 1958-59. According to Mr. Hasham Premji, the output of rice will exceed this level during the current season. In view of the improvement in supply, it is essential to reorientate the policies on distribution. The Government has, of course, been responsive to the new trends, as witness the elimination of zonal restrictions on the movement of wheat in April last. The market mechanism has worked well in wheat after the removal of restrictions. It may be noted here that Mr. S. K. Patil, Union Minister for Food and Agriculture, observed in the Lok Sabha a few days ago that the restrictions on the movement of rice also were in the process of being removed. What Mr. Hasham Premji emphasised was that the present was the opportune moment to do away with these restrictions. Delay would do nobody any good.

Besides the removal of zonal curbs, the Federation has also urged the Government to evolve a more co-ordinated policy in regard to the whole gamut of distribution. Its plea is to the effect that the Government should rationalise imports and distribution of foodgrains, particularly those procured under P.L. 480, and also maintain buffer reserves and ensure their rotation in a scientific manner, in consultation with the trade.

PLANNING FOR MORE PROSPERITY

AID TO DEVELOPING COUNTRIES WILL GROW

IN Paris last month, Ministers from 20 Western countries took a decision that could have far-reaching implications. Assembled for the first ministerial meeting of the newly constituted Organisation for Economic Co-operation and Development, they accepted an American proposal to fix a target rate for economic growth over the next ten years. This collective decision is symptomatic of the extent to which modern governments, even in the free enterprise countries of the West, have come to accept responsibility for planning national economic development. Its implications for the international oil industry are abundantly clear when it is recalled that the 20 countries in question account for rather more than four-fifths of the free world's consumption of petroleum products.

What was agreed in Paris was that the O.E.C.D. countries should aim at a combined gross national product of $1,300 billion (thousand million) in 1970. This would represent an increase of 50 per cent in ten years, or of 4.2 per cent annually. (In the form originally proposed by the U.S. representative, the annual increase would have been 4.6 per cent.) This implies a considerably larger annual increase in industrial production, since the gross national product also includes more static elements, such as transport and personal services. That production will inevitably fluctuate from year to year and that individual countries may exceed or fall short of the target rate was, of course, recognised in Paris. But the acceptance of the proposal implies some recognition by individual governments that their economic policies must be geared to this long-term objective.

In part the decision may be regarded as a riposte to Mr. Khrushchev's deliberate challenge. He reckons that Russia's national income, at present about half that of the U.S.A., can be increased fivefold by 1980 (an annual increase of over 8 per cent), and that it will overtake that of the U.S.A. by 1970. Nevertheless, the Ministers in Paris accepted the proposed growth rate as an objective highly desirable in itself. If achieved, it will certainly help to strengthen the oil industry's own expectation that it will have to supply most of the additional energy required, and that European oil consumption will be 130-140 per cent higher by 1975; this imposes an obligation on the oil industry to invest some $25 billion over the next 15 years, to provide an additional 250 million tons of oil a year for Europe alone by 1975.

The O.E.C.D. objective does not appear over-ambitious, judged by past performance. In the 10 years to 1960, the 20 countries in question achieved a 45 per cent increase in their combined gross national product; this is equivalent to 3.8 per cent a year, against the projected 4.2 per cent. Past performance embraced, of course, a great deal of post-war reconstruction and modernisation, the scope for which is now much less. However, the most striking thing about the past achievements of these countries is their extraordinary diversity. As the accompanying table shows, the 10-year increase in the gross national product of the O.E.E.C. countries as a whole was 56 per cent, while that for the U.S.A. was no more than 38 per cent. And among the O.E.E.C. countries the increases ranged all the way from 15 per cent for Ireland to 106 per cent for the German Federal Republic.

Success will not, however, come automatically. It will depend on the fulfilment of a number of conditions. There must, so far as possible, be effective utilisation of each country's entire productive resources—an aim which the U.S.A., for example, has not succeeded in fulfilling during the post-war years: despite the latest upswing of general business activity, that country still has about 4 million unemployed, equal to almost 7 per cent of the labour force. Unemployment of labour is much less evident in the U.K., though the country's resources of both labour and equipment are almost certainly considerably under-utilised.

Nor can it be said that productive resources are utilised to the best effect, if a country indulges in practices which tend to encourage the less efficient use of land, capital or labour: these may include outdated protective duties or quotas, subsidies to inefficient firms or industries, restrictive practices of one kind or another, and some forms of taxation. The elimination of some of these inefficiencies and rigidities is, of course, one of the major objectives of the Common Market, though success cannot be guaranteed. If Britain's application for membership is accepted, this country will certainly be exposed increasingly to the winds of competition. The effect, though painful for some of the country's more heavily protected industries, is expected to be salutary: industrial efficiency will be improved and the growth rate probably accelerated.

A third prerequisite of maximum economic growth, as the oil industry is very well aware, is continued large-scale capital investment. There may be a conflict between this objective and the claims of national defence or of the workers for immediate wage increases. Many economists argue, for instance, that too large a share of Britain's output has been devoted to immediate consumption and national defence and too little to capital investment. The conflict can be resolved in Communist countries by enforced restrictions on the standard of living. In free countries, less Draconian measures must be employed, including perhaps tax adjustments and other incentives capital investment.

Overhanging all the discussions is the problem how to combine full employment and maximum economic growth with reasonable financial stability and freedom from balance of payments crises. The O.E.C.D. Ministers were fully aware of this problem, which presses particularly upon the American and British Governments, since the dollar and pound are so widely used in international financial transactions. The problem is especially intractable for the U.K., which must always increase its imports in advance of any expansion of production because it is so poorly endowed with raw materials. Fortunately, there appears to be a growing awareness among O.E.C.D. Ministers that balance of payments difficulties impose obligations on the creditor nations as well as on the debtors.

Assuming that the Atlantic Community succeeds in its objective, will this mean that the rich nations will grow richer and the poor poorer? There is no necessary reason why this should be so—and concern was expressed at the Paris meeting that the plan for more rapid growth should be linked with the desire to aid the development of the poorer nations. In 1960 alone, the members of the O.E.C.D., together with Japan, provided $7,500 million to less advanced countries, equivalent to 95 per cent of the aid received by those countries from all sources. Beginning next year, the O.E.C.D. is to make an annual review of the aid efforts and policies of its members. As the members' national incomes increase, they will be in a position, if they so resolve, to step up their assistance to less developed countries. They will in any case be spending more on the exports of those countries—including crude oil and products.

Thus the funds potentially available to help the Asian and African nations, which account at present for only about one-seventh of the free world's oil consumption, will steadily grow. And Western governments will doubtless continue to think responsibly about the uses to which these funds should be put. Equally, the governments of the underdeveloped countries have a responsibility, not only for the wise expenditure of their growing revenues, but also for the avoidance of policies and attitudes of mind which tend to discourage investment from abroad. Given the recognition of these responsibilities on both sides, the fruits of Western prosperity can be spread far and wide.—*By Special Arrangement with the Petroleum Press Service.*

IMPACT OF EUROPEAN TRADE GROUPING ON AFRO-ASIAN REGION

STUDY ON INCIDENCE OF INDIRECT TAXATION

From Our Special Correspondent

NEW DELHI, 12*th December*

TWO months ago, a conference of Asian Economic Planners in New Delhi, organised under the auspices of the E.C.A.F.E., harped on the theme of regional economic co-operation in Asia, although in cautious terms. The conference of the Afro-Asian Organisation for Economic Co-operation, meeting here this week, has again stressed the need for strengthening economic relations over a still wider area now represented by 23 delegates and observers from six countries. Mr. Mohammed Rouchdy, President of the Conference, who conveyed the greetings of President Nasser, referred to the trend towards a division of the world into integrated economic blocs and its impact on the economies of the Afro-Asian region and suggested that the latter should not allow itself to be left behind, even though there were many obstacles in the way of its closer integration. Mr. Shriyans Prasad Jain, Vice-President of the Federation of Indian Chambers of Commerce and Industry, echoed these sentiments and, while pleading for maximisation of intra-regional trade as a starting point, pointed out that regional tariff preferences and a common market in specific commodities should be considered.

DELHI LETTER

While there have always been vague aspirations for regional co-operation, they were hitherto restrained by a recognition of some of the realities of international economic relations such as the traditional lines of world trade and need for aid from the advanced countries. There have been many complaints that the Government of India has not taken an active interest in schemes for forging closer commercial links with other underdeveloped countries and is too preoccupied with the problems of its own growth. This attitude, however, could be easily explained by the greater awareness in New Delhi of the fact that, excepting Japan, the economies of the region are not complementary. Even after the formation of the European Common Market and similar moves in Latin America, there was no sign of great nervousness. The British proposal to join the Common Market has apparently disturbed this complacency; with the rejection of "associate status" for India (even if that were to be accepted by the Six), India, like the other countries of the region, is faced with the possibility of further divisions which may alter trade patterns and introduce more uncertainty. Reliance on G.A.T.T. alone to redress unequal trading conditions may no longer be considered sufficient and there may be a greater inclination to examine the scope for co-operative efforts to promote trade and mutual assistance in the region—if these two vast Continents can be so described.

Official Support

This view of a change in attitude is supported by Mr. Nehru's address in which he welcomed the moves towards integration with manifest enthusiasm. While recognising that all the countries had the same needs and have to depend on capital goods from outside, he said, it had become imperative for them to come closer together; their efforts just now would have to be in the nature of preparing for the future than for the present. This was not merely an expression of an idealistic mood of the Prime Minister. Mr. K. C. Reddy, Minister for Industry and Commerce, followed up this theme in his speech before the Trade Talks session of the Conference and emphasised that India was definitely in favour of taking active steps for increasing intra-regional trade and co-operation, though the main object was that it should not be restrictive in its effects.

With such encouragement at the official level, the Conference has decided to devote two days exclusively bilateral and multilateral trade negotiations among the delegates, so as to facilitate conclusion of specific agreements. Mr. Reddy pointed out that India imported Rs. 272 crores worth of goods from the Afro-Asian countries in 1960, out of total imports of Rs. 1,075 crores and exported Rs. 179 crores worth of goods out of a total of Rs. 634 crores. The Federation of Indian Chambers which has taken an active interest in jointly sponsoring this gathering of private businessmen from Afro-Asian countries has brought out a study of the existing trade between India and the countries of the region; 20.5 per cent of India's imports came from Asia and 7.5 per cent from Africa, while the percentages for their respective shares of India's exports were almost similar.

As Mr. Reddy appropriately pointed out, the G.A.T.T. Declaration on promotion of trade of less developed countries stresses the importance of greater trade among the underdeveloped countries in the following terms:

"Finally, it is recognised that there are important possibilities for encouraging sound economic development in the less developed countries through increased trade among themselves and that these countries should keep this in mind in formulating their tariff, commercial and economic policy measures. Lest the development of this important trade potential be prevented or unduly delayed, they should strive to attain and preserve liberal access to one another's markets in the same manner, as they now seek to secure improved access to the markets of the economically advanced countries."

This trend in thinking in official circles has to be welcomed and encouraged; if the assembled delegates are able to conclude some deals which increase the volume of trade, the private sector in India may be able to regain some of the prestige and initiative it has lost to the State Trading Corporation, besides promoting regional co-operation. One of the working papers prepared for the Conference draws attention to the role played by the E.P.U. in European integration and suggests that mutual credit arrangements may be necessary and that adequate measures have to be taken to solve the problem of liquidity which is essential for expansion of trade. Tentative lists have also been drawn up to indicate the items in which both intra-African and Afro-Asian trade may be expected to expand; an attempt has also been made to assess the effects of the European groupings on these countries but these studies lack focus and precision.

* * * *

Indirect Taxation

The Tax Research Unit of the Department of Economic Affairs of the Government of India has brought out a study of the incidence of indirect taxation in the country which tries to estimate the money burden of such taxes among different spending groups in urban and rural areas. The results cannot be taken as precise measurements of incidence, since they depend very much on the National Sample Survey data, but they are put forward for their value in indicating the trends in the distribution of the tax burden during the period from 1953-54 to 1958-59 when indirect taxation was stepped up from Rs. 431 crores to Rs. 968 crores. A basis for comparability has been devised by adopting the estimates made by the Taxation Enquiry Commission in respect of expenditure groups and the national income estimates for the aggregate of consumer expenditure. Since the survey does not take into account incomes, only indirect taxes falling on domestic consumers is covered; some of them like stamp duties, registration fees, electricity duties, terminal taxes, etc., are excluded. But, in the case of excise and import duties not directly levied on consumers, the final incidence on consumers at the last stage has been taken into account.

The main conclusion of the survey is that indirect taxes have fallen on the various spending groups in a progressive manner. Indirect taxes formed 3.6 per cent of consumer expenditure of all households in 1953-54; five years later, they formed 5.7 per cent, mainly under excise duties and sales taxes. In the case of rural households, it increased from 2.9 per cent to 4.4 per cent and for urban households from 5.9 per cent to 9.3 per cent, sales taxes being a major additional factor in the case of urban households (which had to bear twice the proportion of consumer expenditure). For different income groups also, there was an element of progression in both rural and urban areas, because of three factors: (1) the higher proportion of home-made goods consumed by the lower spending groups; (2) higher rates on luxury and semi-luxury items; and (3) exemption of essential and near-essential articles of consumption like foodgrains. Whereas the higher spending groups paid twice the proportion of consumer expenditure paid by the lower groups in 1953-54, in 1958-59 it rose to three times. The smaller increase in cash purchases of the lower groups accounts for the lower incidence of the taxes on them.

This is a timely answer to those who may in the heat of the electoral struggle point to the heavy taxation imposed by the Congress Governments at the Centre and in the States on the poorer sections. The Study also emphasises that, if the benefits of Government expenditure are taken into account, the picture may be different, since social services have helped the less privileged sections. Perhaps, a truly impartial assessment of indirect taxation should also include the incidence of deficit financing which represented a draft on the savings of the community to the extent it increased prices, but there is no evidence in the study that this aspect has been considered. It is, perhaps, natural that it should be overlooked, but when the study goes out of the way to emphasise the negative taxation (namely, benefits), its authors need to be reminded of this omission.

THE ROSE-COLOURED DECIMAL

(From Our Own Correspondent)

LONDON, 9*th December*

TALK about the Common Market is getting more and more on to the popular level. At the same time, the Export Council for Europe has been studying the prospects for British-European trade when the U.K. does go in. Contrary to the fears of many industrialists and shared by the Government, the picture that emerges is relatively rosy. A survey has just been made of the views of several thousand Industrial Companies in France, Germany, Italy, Holland, Belgium and Sweden. The firms were two-thirds concerned with capital goods and one-third with consumer goods. They were asked whether their purchases from the U.K. were likely to go up, down, or stay the same after the U.K. had come in.

LONDON LETTER

Nearly half of these European companies estimated that their purchases would increase; rather fewer thought they would stay the same, the balance did not know but the percentage saying they expected a decrease was extremely small. But on the other hand, nearly 80 per cent of these Continental companies expected that their exports to the U.K. would increase. The U.K. is, therefore, going to face a Continental export drive as well as having to stimulate its own overseas business: but, after all, is not the purpose of the Common Market to increase the trade both ways?

Another point in this inquiry is also interesting: the U.K.'s alleged cost disadvantage seems to be dwindling in relation to its sharpest competitor, Germany. Moreover, it does not seem true that British delivery dates are unsatisfactory. Three-quarters of the companies asked said that the U.K. was the same as everybody else, and of the remaining quarter one out of every three thought that the U.K. was better even though two out of every three thought it was worse. Finally the supremacy of English as the chief Continental lingua franca is unchallenged—78 per cent favour English—13 per cent German and 9 per cent French.

But the U.K. will probably also have to adjust itself to the Continent in its techniques of calculation. Continental businessmen consider that the prospects for the U.K. trade would be much better, if only we used the decimal system and the same measuring units. This may, indeed, come sooner than has been considered hitherto; and a private Bill is to be introduced proposing the conversion of the British currency into a decimal system in which the penny would become a cent and the main unit of account would be the ten shilling note of a hundred pennies (instead of 120, as at present). If the decimal system can be introduced for currency, it can more easily be introduced for weights and measures. That, then, is the direction in which the U.K. will ultimately go.

FINANCIAL TRENDS IN BRITAIN

MARKET MISUNDERSTANDINGS

By W. T. C. King

EDITOR OF *THE BANKER*, LONDON

THE London financial markets have had to contend with a most unlucky sequence of adverse psychological factors in the past month (November 1961), including some rather regrettable misunderstandings about the future of the official policy. This has caused some sharp fluctuations, without a definite change of trend in stock markets, both in gilt-edged securities and in equities; but, in the foreign exchange markets, sterling has presented an impressively firm front in the face of uncertainties and rumours that in other circumstances might have been damaging.

During most of the month, the sterling-dollar rate had been held at very near the peak reached in October, in spite of the fact that the exchange equalisation account was obviously still purchasing large quantities of foreign exchange; it was only at the very end that the mood of the market changed—carrying the dollar rate back from $2.81-9/16 to around (and at one time just under) $2.81 within a few days, and apparently involving the authorities in some release of exchange.

Helping the Dollar

The monthly statement of reserves of gold and convertible currencies, issued just as this letter is being written, shows, however, that the flow of funds towards London during most of the period must have been comparable to that experienced in August and September, though substantially below the extraordinary spate of October. Following the precedent set a few weeks previously, the British authorities decided during the month to employ a large part of the accretion to the reserves in making a further advance repayment to the International Monetary Fund of the very large exchange drawing made to buttress sterling last August. This second repayment amounted to £50,000,000; yet the month-end statement showed that the reserves had risen by a further £9,000,000, to £1,270 million.

The "true" accretion during the month thus amounted to just under £60,000,000, as compared with, perhaps, twice that amount in October, bringing the aggregate "true" gain since end-July (before allowing for repayments of the "Basle" credits from European central banks) to not far short of £300,000,000. One half of this very large sum has been returned to the I.M.F. in advance repayments—as a conscious act of international co-operation designed to replenish the pool of international liquidity as quickly as possible and to ease so far as possible the repercussions upon the dollar of the massive flow of money to London. Had the British authorities not followed this course, there would almost certainly have been a bigger drain on the gold stocks of the U.S. Treasury.

Because sterling is an international reserve currency and because the reserves held in London represent the central reserves of the whole sterling area, the exchange account authorities have always taken the view that the bulk of those reserves should be carried in gold rather than in foreign exchange. In pursuance of this policy, gold to the value of $300,000,000 was recently purchased from the U.S. authorities—obviously by way of conversion of dollars acquired in London as a result of the summer's influx of funds. Had it not been for the advance repayments to the I.M.F., further substantial quantities of dollars would sooner or later have been turned into gold in New York—though it should be noted that the second repayment of £50,000,000, unlike the initial £100,000,000, included D-marks and French francs as well as dollars.

Bank Rate Cuts and Credit Policy

The fact that Britain has been able thus rapidly to repay more than one-quarter of the £535,000,000 borrowed from the I.M.F. does not mean, of course, that there has been, in this short space of time, any corresponding strengthening of the underlying condition of its balance of payments. As I have pointed out in my previous letters, the rebound in the reserves has been almost wholly due to the reversal of the speculative factors, including the leads and lags in current payments and of the movement of short-term funds. To the extent that the accretion reflects an inflow of arbitrage or speculative moneys (as distinct from a rebuilding of necessary working balances or longer-term investment in Britain), it makes no net contribution to a strengthening of the underlying position and does, indeed, make sterling the more vulnerable to future strain. For that reason, it is the avowed policy of the authorities to discourage that sort of short-term borrowing so far as that can be done without any undue or premature softening of domestic economic policy. In fact, as the latest gold figures show, the second reduction in Bank Rate (the early November cut from 6½ to 6 per cent which I recorded last month), apparently, did have much greater success than the first in causing some slackening in the rate of inflow. Any such slackening has also to be welcomed for a technical domestic reason; when the inflow was at its peak, the purchases of foreign exchange by the authorities were sharply increasing the flow of Treasury Bills to the banking system, thereby creating a potential threat to the desired tautness of the credit squeeze.

No Weakening

Thus it could even be argued that, in the circumstances of recent months, the Bank Rate reductions were needed in order to keep up a due tension in the domestic credit policy. A high-falutin paradox of this kind is not, however, calculated to make much impression on the markets. Though most people accepted, at the outset, the official explanations that the Bank Rate cuts did not portend any easing of the policy of restraint at home, many observers became all the more vigilant in looking for possible signs of such an easing. In retrospect, it can now be seen that the psychological atmosphere thus created has been partly to blame for some of the misunderstandings of the past few weeks. Two, if not three, happenings have been construed—almost certainly wrongly construed—as indicating a weakening.

The first of these was a speech from the Chancellor of the Exchequer, Mr. Selwyn Lloyd, emphasising the expansive forces that would still be at work in the home economy next year, which was widely taken to mean that the Chancellor was more concerned to see the economy kept at fever-heat than to get its temperature down to a safe normal; and that, accordingly, there was an increasing chance of relaxation of the restraining measures imposed at end-July. There is now no doubt that the impression Mr. Lloyd intended to convey was the very opposite of this. The index of industrial production seasonally adjusted had shown a slight downturn in August from the peak reached in July, and the provisional index for September had shown a sharper fall. At the same time, the value of retail sales had likewise dipped from its peak—falling both in September and October. And, in recent months, unemployment has risen more than seasonally, while unfilled vacancies have fallen more than seasonally. On these grounds, plus the fact that the flow of new home orders for capital goods and the value of new factory plans approved have both been declining, there has been a good deal of talk about the softening of the economy that is in prospect for 1962. In some quarters, a greatly exaggerated view of these trends has led to talk of a coming "recession"—coupled with an appeal for a relaxation of policy to prevent this happening.

It is now clear that the first of Mr. Lloyd's misunderstood speeches was designed simply to destroy this unreal argument and to show that there was no case for the suggested relaxations. What he then failed to bring out is that, although he expected a further growth in aggregate demand within the economy (allowing for a hoped-for substantial expansion in exports), this growth in demand, and thus in output, would not keep pace with the expected growth in productive capacity—so that the economy would still be, as the present policy intends it to be, more "disinflated" than it is now.

The second misunderstanding, likewise, arose from a speech from the Chancellor. After tracing his hopes of a strong growth in exports next year, he observed that there was likely to be a "favourable opportunity for us to be moving on from emergency or crisis steps to the shaping and development of longer-term policies." In fact, this was intended as a reiteration of former statements of policy—namely, that Britain could not afford to encourage a renewed expansion of demand, until expansion was actually started by the sheer force of production to meet export demands. Exports, in short, must be the "growth-leader." But stock market circles, unfortunately, construed this passage as foreshadowing relaxations—and perhaps especially foreshadowing the end of the "pause" in increases in wages and salaries.

Wage "Pause"

By a further mischance, this misunderstanding occurred on the very eve of a third happening which for several days shook public confidence more seriously in the firmness of the policy. This was the unexpected announcement of an agreement by the nationalised electricity supply industry to concede wage increases to some 120,000 manual workers on terms that looked rather generous and, moreover, with effect from 28th January—which is a date fully two months earlier than might have been regarded as consistent with the principles of the "pause." It should be emphasised that the Government has no statutory power to direct the Electricity Council to follow any prescribed policy in dealing with a wages claim. It can enforce the "pause" only for its own direct employees; for the rest, it can merely exhort others to follow example. But, in spite of this, the fact that a major industry of the public sector could act in a manner different from the Government's view of what constituted the national interest, inevitably came as a great shock. Not unnaturally, the first public response was that this action must, in any event, spell the end of the policy of the "pause." The Government has since vigorously denied that this will happen and has made it clear that it was embarrassed by the action of the Electricity Council. This rejoinder seems on the whole to have succeeded in disposing of the doubts that had been aroused, but only time will show whether the electricity decision has impaired the chances that the "pause" will be much longer observed in the private sector. There, however, the fact of a falling trend of profits should be a powerful deterrent to the granting of undue wage increases in any case. And, in the two most important public sector industries from which wage claims will come to a head soon—the railways and coal—the Government possesses a lever, because it is financing their operating deficits.

I.M.F.'S STANDBY CREDITS

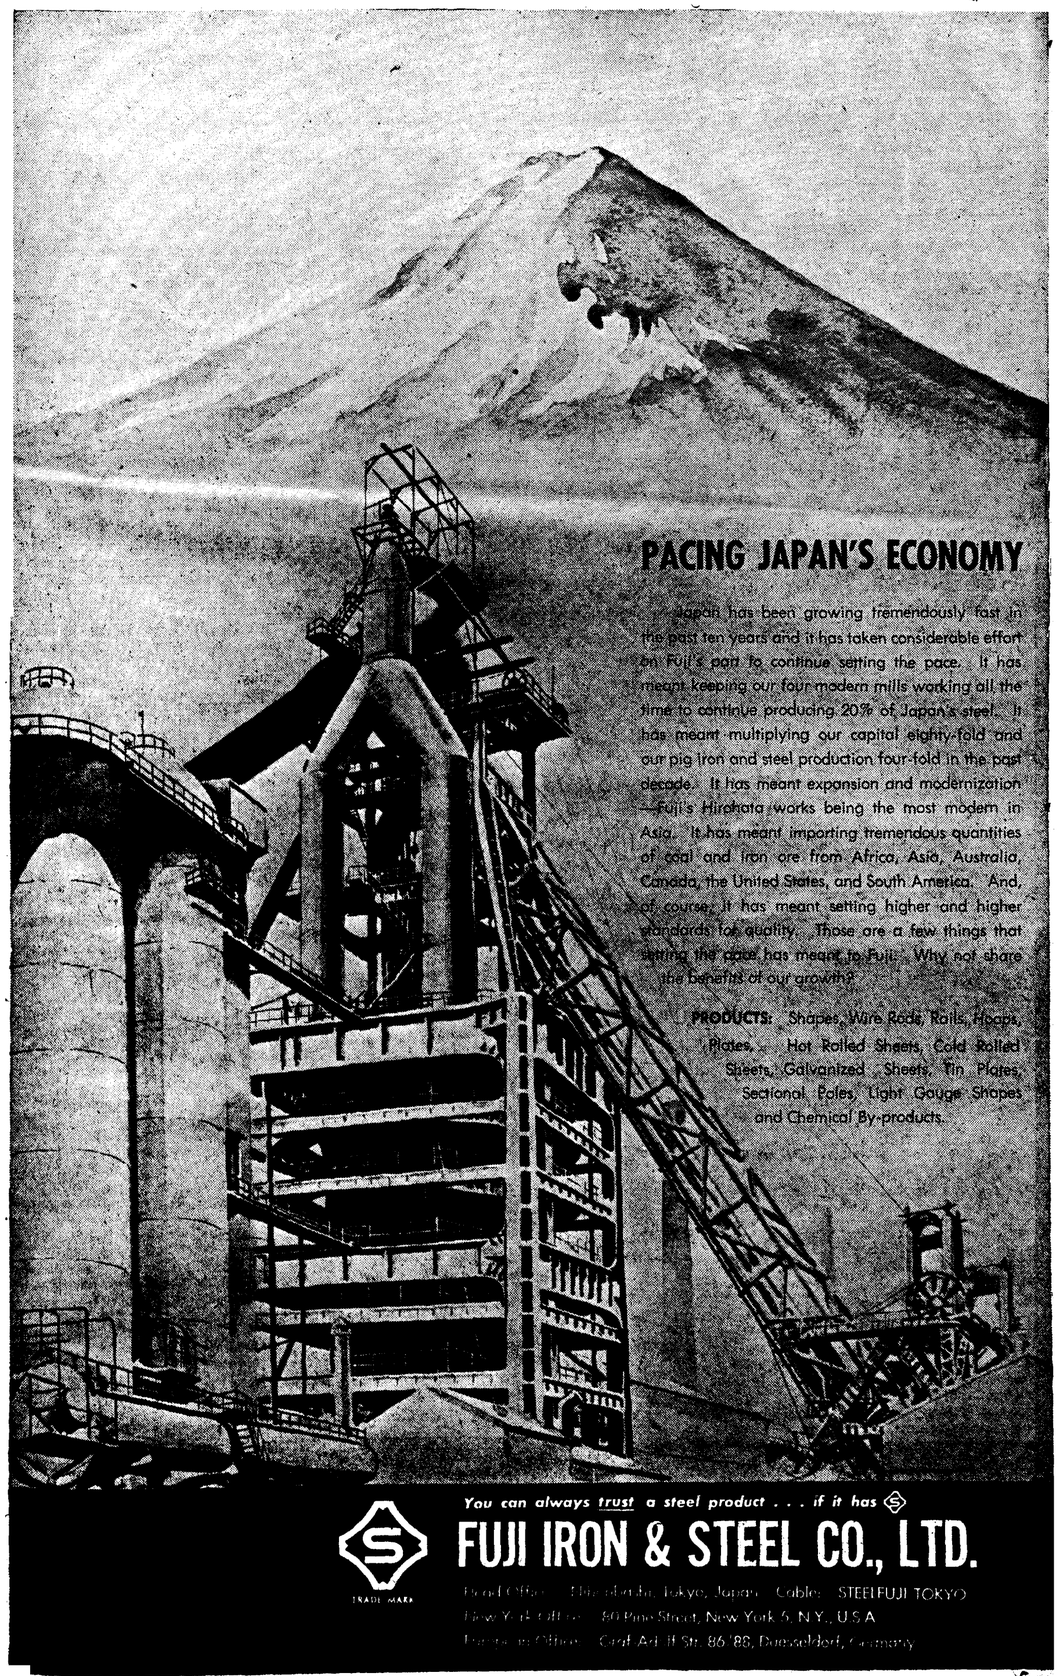
The International Monetary Fund has entered into a new standby arrangement which authorises drawing up to $5 million over the next twelve months by the Government of Paraguay. The new agreement follows an earlier arrangement for $3.5 million which expired on 9th October 1961. Paraguay drew $1 million under this arrangement and its drawings on the Fund now amount to $3.75 million. During the past year, Paraguay's exports have increased, its reserve position has improved and immediate prospects are encouraging. The Government sees a continuing need, however, for cautious monetary and fiscal policies, supported by standby assistance from the Fund.

The Government of Argentina has arranged a new standby arrangement with the International Monetary Fund which authorises drawings up to $100 million over the next twelve months in currencies held by the Fund. The new arrangement replaces an existing agreement in the same amount that expires on 11th December 1961. The new standby arrangement assures continued support for the Argentine reserve position during a period in which the Government will maintain its stabilisation programme. Argentina's net use of the Fund for such purposes amounts to $227 million.

WORLD BANK LOAN TO S. AFRICA

The World Bank has announced two loans aggregating $25 million for the improvement and expansion of electric power facilities and railways in South Africa. A loan of $11 million to the Government will provide part of the foreign exchange required for the programme being carried out by the South African Railways and Harbours Administration. The second loan of $14 million to the Electricity Supply Commission will assist the expansion of the generating and transmission system which serves the country's most heavily industrialised and mining areas. Both the loans are for a term of 10 years and bear interest of 5¾ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation of the loans will begin in December 1963. The loan to the Electricity Supply Commission is guaranteed by the Republic of South Africa.

The Sterling Area's central gold and convertible currency reserves rose by £9 million to £1,270 million during the month of November 1961. The rise occurred despite the repayment of £50 million by Britain to the International Monetary Fund. Without this repayment, there would have been a rise of £59 million in the reserves—an unusually high figure for November or indeed, for any month. It is clear that the revival of confidence in sterling which, following the July measures of the Chancellor of the Exchequer, was maintained throughout November.



PROBLEMS OF COTTON INDUSTRY

MILLS FEDERATION ON PRICE CONTROL

HAD only the Government of India adopted a less doctrinaire attitude with regard to the cotton mill industry by allowing it to expand its weaving capacity, modernise equipment and rationalise the production processes, there would not have been any need for the Tariff Commission to spend much time and energy on the question of fixing fair ex-mill prices for cotton textiles. The imposition of controls on prices and/or production and distribution of textiles may, of course, be necessary in times of emergency such as war, but not during normal periods when it is not difficult to raise the supply to meet the demand. The experience of statutory price controls both during and after war years has taught us that price controls are no remedy for meeting the rising pressure of demand for cloth which can be satisfied only by giving all possible assistance and encouragement to the mill sector to step up production. In fact, in the long run, price controls do more harm than good and the worst sufferer is the consumer. For all that controls can do is, as the Indian Cotton Mills' Federation rightly points out, in the course of its memorandum to the Tariff Commission, to (*a*) limit to the stipulated level the invoice price of a mill company without bringing any relief to the consumer, (*b*) result in tax evasion, and (*c*) bring about "demoralisation and a reduction of quality standards to the lowest common denominator."

The Federation has done well to recall that, even in the case of commodities like steel and cement where the number of distributors and consumers is limited and the variety of product in demand restricted, the experience of maintaining prices within controls has not been very happy. The extremely complicated nature of conditions for enforcing controls in respect of cotton textiles and their adverse consequences are evident in the following extract from the memorandum:

"At the moment, 33 per cent of the supply available for internal consumption comes from the decentralised sector which is not amenable to any control. If we also add to this mill grey cloth which is processed by other processors before sale, this proportion goes up to nearly 50 per cent of the internal supply. It is impossible to make any control effective when half the supplies are free from control and are largely indistinguishable from those under control.

"The demand for a variety waxes and wanes according to changing consumer tastes and other factors, and the fall in the demand for one variety is likely to be compensated by a rise in the demand for another. In normal times, the spread between the mill cost and the consumer price for different varieties exhibits a varying pattern within which mutual adjustments are necessary and possible. Under price control, it is hardly possible to make a provision for this kind of adjustment and this can lead to malpractices.

"A factor of very great importance is the deterioration in quality and in the standards of trading practices, which will be brought about by linking prices to constructional particulars, without any regard to the individual mill's reputation with the trade and the public on account of its individual quality standards and trading practices. It will be extremely difficult to repair the damage done by the demoralisation that will be set in motion by controls."

In any case, now that the Tariff Commission has been charged with the task of evolving a formula for fixing prices, the Federation's suggestion to the Commission is that it should lay down upper and lower limits within which prices may be allowed to fluctuate without any interference. This plea is based on two important grounds. In the first place, the fortunes of the cotton mill industry fluctuate very widely, with periods of depression alternating with periods of prosperity. Apart from that, consumer tastes play a very large part and, even in the best of times, some varieties have to be sold at losses or at nominal profits. When the industry is faced with depression, it will have no alternative but to sell its products at low prices and, unless the industry is permitted to make up these losses in good times, the fair rate of return fixed by the Tariff Commission will prove to be a ceiling to be reached sometime by a few varieties, the actual average return over a period being far less. Secondly, there is the question of giving incentive to quality producers for their high quality standards and trading practices. Further, the Federation has urged exemption from price control in respect of industrial fabrics and yarns such as tyre canvas, tyre-cord, filter cloth etc.

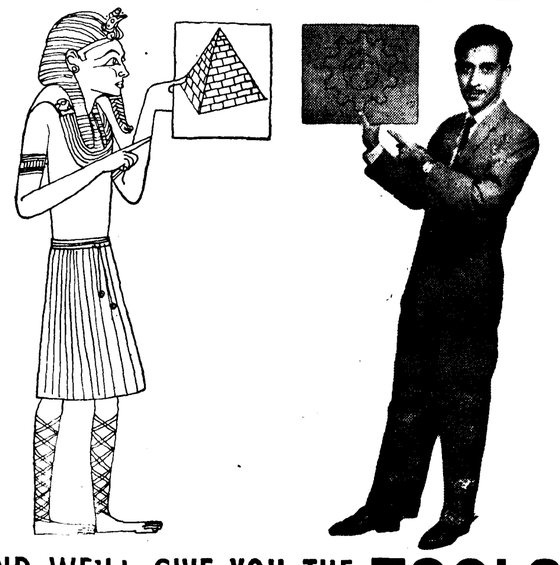
A very pertinent point stressed by the Federation is that the mill industry ought to be allowed a return which will attract capital and will enable the average unit to distribute a reasonable dividend, after paying interest on loans taken for modernisation and after making due provision for enabling the mills to repay the loans. In support of this plea, the Federation observes:

"As it is, we are somehow trying to hold our position in the export market by providing incentives under the Export Promotion Scheme. The experience, however, has been that the incentives have had to be continuously increased to bridge the ever-widening gulf between ourselves and our competitors in regard to quality and quotations. It is obvious that a continuous increase in the incentives cannot solve the problem on a long-term basis and all-out efforts are necessary for improvement in quality and reduction in costs by speedy modernisation, if we are not to be left behind in the race for the shrinking international market. Starting almost from scratch after the Second World War, the Japanese industry has reached the foremost position in the international textiles trade by speedy modernisation. The U.K., on the other hand, has been converted from the world's foremost exporter to a net importer of cotton textiles, due principally to the conservatism of her cotton industry. Even the recent national programme of reorganisation with a substantial subsidy from the exchequer has still not succeeded in lifting the industry from the morass in which it has been bogged. India cannot afford to be slow in learning the lesson from the contrast in the fortunes of the two leading cotton industries of the world.

"The Working Group for the Cotton Textile Industry appointed by the N.I.D.C. have estimated that, for a modest programme of modernisation, an amount of Rs. 180 crores will be required in the period ending 31st March 1966. They have assessed that the industry may be in a position to gather about Rs. 60 crores which, with sustained effort, might go up to Rs. 80 crores. The balance has to be found by way of loans from N.I.D.C., Industrial Finance Corporation and similar bodies. The Working Group have also pointed out that, even if the N.I.D.C. and other financing institutions adopt a liberal policy, looking to the slender returns which the industry gets on its investment, mills will not be eager to borrow, as the interest on loans will prove a millstone on their finances. The Working Group have pointed out that, as compared to other important industries, the return on investment in the textile industry is low and, unless the expectations of profitability of the textile industry improve materially, capital on the required scale would not be forthcoming for investment in this industry. They have, therefore, recommended that all authorities having to deal with questions relating to the mill finance, profit margins, etc., should adopt a liberal and realistic attitude in regard to the performance of the industry and the service it renders to national economy at large."

In the considered opinion of the Federation, the cotton mill industry's problem is fourfold: (1) supply of quality goods to consumers (domestic and foreign) at reasonable prices; (2) pay higher wages to labour; (3) contribute bigger revenues to Government; and (4) give a fair deal to the investor. The solution to this problem lies, according to it, in gearing the textile economy to the medium of production on modern machines. Incidentally, the Federation has urged, again, the immediate removal of the fetters placed on the growth and development of the cotton mill industry and the various restrictions on production. This plea is fully justified. With 85 per cent of its output being sold in the internal market where conditions are not conducive to ensure for the consumer the benefit of competition, the mill industry is finding it difficult to succeed in selling some 15 per cent of its production in the export market where it is exposed to the full blast of powerful competitors equipped with most modern machinery. Surely, if there is scope for healthy competitive conditions in the home market, the industry will get hardened to face the competition abroad with strength and equanimity.

TELL US YOUR JOB—



AND WE'LL GIVE YOU THE TOOLS

The size, shape or complexity of a project doesn't overawe us. We have the tools to help build it with a minimum of time, labour and cost. For nearly 70 years, BATLIBOI have supplied Industry and Trade in India with goods ranging from complete power plants to hacksaw blades. We represent internationally known manufacturers from the United Kingdom, U.S.A. Czechoslovakia, France, Germany, Japan and many other countries. BATLIBOI also represent some of India's leading manufacturers of Machine Tools, Diesel Engines and various other types of machinery. Industry and Trade are vitally connected with the economic growth of any country, and BATLIBOI are vitally connected with Industry and Trade in India.

TEXTILE IMPORTS FROM SPAIN SUBJECTED TO CEILING

WORKERS AGREE TO TEMPORARY "PAY PAUSE"

From Our Special Correspondent

MANCHESTER LETTER

MANCHESTER, 5th December

A VOLUNTARY arrangement between the Spanish cotton industry and the Cotton Board to limit imports of cotton yarn and piecegoods into the United Kingdom has been reached. Announcing this at Manchester, the Cotton Board said that the level of exports from Spain would be 30 per cent below the quantity shipped in 1960.

The plan is backdated from the beginning of October and will continue to the end of September 1962. Any further arrangements will be determined by future international long-term programmes fixed up during talks due to take place at Geneva within the next few months. This is the first pact on these lines undertaken by any country outside the Commonwealth in conjunction with the Lancashire cotton industry.

In contrast to the Commonwealth arrangements, there is a major variation in the agreed terms. Hong Kong insisted on more favourable facilities for shipping goods to Britain when the pact was extended, and India and Pakistan followed suit. Spain, however, has undertaken to restrict her exports to the United Kingdom to an annual level 30 per cent below the rate of arrivals in 1960.

Spain has emerged as a major exporter only in the past few years, and Britain has been an important customer for her mills. From only 600,000 yards of imports in 1958, shipments from Spain rose to 10 million yards in the following year and to 64 million yards in 1960. Of this quantity, nearly 58 million yards was grey cloth last year and, in the first half of 1961, the rate of arrivals of grey cloth was fully maintained, being 29 million yards.

The negotiations being conducted in Geneva on an international basis obviously have a big bearing on the future of such individual arrangements as those reached between Lancashire and other countries. The official statement announcing the agreement indicates that any extension of the Anglo-Spanish understanding will be determined at a later date in the light of any future long-term agreement established on a much wider scale.

"Pay Pause"

Union leaders of 175,000 Lancashire cotton spinning and weaving workers have agreed in Manchester to a "pay pause"—at least until the end of January—before taking any further action over their rejected demand for an all-round wage increase of 10 per cent. The executives of all the unions concerned had been called to a special meeting to consider the recommendations of a panel of eight appointed to consider the wages issue. It was announced that the employers had agreed to a further joint meeting at the end of January, although they had stressed that it would not be "practicable or right" to enter at this stage into any commitment which could be construed as a promise for the future. They had also indicated that trading conditions in the industry had worsened since the unions' application was tabled in the late summer.

After the meeting, Sir Alfred Roberts, the unions' spokesman, said that it had been agreed to await these further discussions with the employers. "Whatever the situation then we cannot allow the living standards of cotton textile workers to continue falling behind those of other industrial workers," added Sir Alfred.

The Lancashire cotton trade unions are to have separate discussions on the question of compensation for workers who are made redundant by the closing down of mills due to the present state of trade in the industry. The reorganisation scheme for the Lancashire cotton industry, which had Government backing and cost £30 million, was accused by a trade leader of being partly responsible for the heavy flow of cloth imports into Britain.

Mr. C. B. Sunderland, Chairman of the Household Textiles Association, told the annual meeting in Manchester that it had been a disappointment to firms making up cloth into household textiles. From the outset it had created shortages of supplies and these, combined with a rise in prices, compelled users to go out into other markets to find suitable materials. "From that point, cloth poured into the country from the most unlikely sources and has caused a great deal of havoc. We cannot help feeling that had the redundancy scheme been planned a little more carefully and proceeded at an orderly but more gentle pace, then the tremendous influx of cloth—at least from Continental sources, need never have developed."

Mr. Sunderland said that the British Government had a responsibility to make sure that the imports of cloth to fill gaps in the domestic production did not get out of hand. It was certainly not too late for the Government to take action against dumping of subsidised textile imports.

Some Supporters Still

Lancashire often lacks a champion to fight her cause against the "slings and arrows" aimed by the outside world in the shape of so-called "financial authorities." In Sir John Lomax, a writer whose long experience in the diplomatic service, coupled with his textile antecedents, seems to have given rare insight, the Lancashire trade has, indeed, a doughty supporter. Sir John has hastened to the defence of the industry, restating once again many of the reasons why millowners have had to endure the double affliction of losing not only export markets but now a substantial proportion of the home market too.

A point which has perhaps not been sufficiently hammered home is the fact that users of cotton in this country have to buy their raw material at price-supported rates, whereas fuel, finance and other services can only be secured at well-protected home market prices. Sir John observes: "The manufacturer is left to sell his product in the field of world competition to highly protected foreign and Empire markets but at home he must face a free-for-all flood of goods from every low-wage, low-taxed Empire and foreign competitor."

Who Would Survive?

Sir John Lomax reminds Lancashire's critics that the fate already being suffered by Britain's cotton industry may well follow in the case of other trades long protected by customs duties, fiscal means and exchange control. "How many would survive if we could all trade in the cheapest markets?", he asks. "Where would labour stand if every employer were free to contract Asiatics? Who would go to the corner bank if he could borrow from a 2 per cent bank-rate foreign banker? Should we buy none but Japanese ships?"

Admitting that there might be some justification for supporting genuine Commonwealth interests, he believes that the burden should still be shared. "To help India and Pakistan, let some other industry take a share of the strain which has for too long been laid upon the cotton industry, the last free trade victim in a totally restricted trading world," he declares.

As for Hong Kong, Sir John states bluntly what many people have been saying for some time past about the future of this colony. "It is hard to accept Hong Kong as a worthwhile long-term investment in Commonwealth prosperity," he observes, and adds: "The place has no territorial expansion, no natural resources to build upon and British enterprise has no future there, because all of it, including the supermodern industries we are siting there, must be handed over to China in a few years—unless the communists have already seized it, which they could do at any moment."—*All Rights Reserved.*

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; Lebanon; Libya; Morocco and Tunisia; these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

SHARP FALL IN COFFEE OUTPUT LIKELY

PRICES RULE LOW—GROWERS IN DISTRESS

ALTHOUGH five months have elapsed since the current coffee season (August 1961-July 1962) began, no official statistics as to the size of the crop are yet available. One has, therefore, to rely only on private estimates. If these estimates prove correct, the season will witness a sharp setback in coffee crop. Not more than 48,000 tonnes of seeds are expected to be gathered, a quantity which is substantially lower than the previous season's record harvest of 67,000 tonnes. This is not surprising, for, in the case of coffee, Nature behaves in such a way that a bumper crop is usually followed by a lean one. Such a sizable fall in crop may mean considerable relief to the organisation entrusted with the task of marketing the crop which is now greatly concerned with the problem of disposing of the large surplus of the past season. But it is a source of worry to coffee producers, in view of the continuously rising trend of production cost, persistently low level of prices in world markets, and the none too encouraging picture of the domestic market. The net result will be a further fall in the profit-margin and a deterioration in the financial position of coffee estates, especially those which are marginal.

The coffee producers have already suffered greatly as a result of the low prices realised in both internal and export sales, owing to unfavourable market conditions. Payment for the 1960-61 season's crop is expected to be just Re. 1.95 per point—some put the price lower still at Re. 1.90—as against Rs. 2.24 received by the growers in 1959-60, Rs. 2.45 in 1958-59 and Rs. 2.51 in 1957-58. What is more, the anticipated return of Re. 1.95 per point is 16 nP below the cost of production of Rs. 2.11 per point, according to the Coffee Board's own calculations. On top of it, there is an excise duty on coffee, which is 55 nP per kilo for Arabica grade and 41 nP for Robusta variety. In view of such low prices, the total realisation from coffee by the estates has declined considerably, leading to a cut in their profit-margin. The Blue Mountain Estates Limited, for instance, realised just Rs. 17.80 lakhs from its coffee sales during the year ended 30th June 1961, as compared with Rs. 36.95 lakhs in the previous year. And it may receive much less in the current year.

Rise in Production Cost

How the coffee industry has been caught between increase in the cost of production, on the one side, and reduction in the price realised, on the other, is illustrated in the following table which pertains to the above Company:

	Year ended 30th June			
	1961	1960	1959	1958
Crop harvested (kilos)	584,094	988,124	579,338	726,643
Cost of production* (Rs. per kilo)	2.96	2.12	2.85	2.50
Price realised (Rs. per kilo) ..	2.89†	3.21	3.82	3.73

* All-in-cost.
† Calculated at an estimated price of Rs. 1.95 per point.

As already stated, the prospects for the current year point to a further deterioration in this respect. Some may be inclined to blame the Coffee Board for this state of affairs, but it is not clear what exactly the Board, which is only an intermediary and does not make any profit for itself, can do to improve the position in favour of the estates. Its marketing policy has no doubt been a controversial subject. But it was being criticised hitherto on the score that it sought to keep the prices of coffee at an artificially high level, thereby creating a factor that tended to inhibit the pace of domestic consumption. This point, however, is not quite relevant in the present context when some planters say that it is rather unfortunate that the Coffee Board continues to hold down prices. Comment of this nature is not quite convincing, for an increase in the selling price of coffee is not the right solution in the context of a surfeit of coffee. There are only two ways in which coffee production can be made profitable in the short-term: one, a reduction in the tax on consumption and, two, cutting down costs. But neither is within the power of the planter. As readers are aware, only Government can lower the excise duty. As for costs, the major component is the wage bill which is constantly going up and is beyond the control of the growers. Then comes the cost of materials such as agricultural implements and insecticides over which also the growers have no control. The nitrogenous fertilisers are handled by the State and their prices, too, are rising.

The problems of the Indian coffee industry have also to be viewed against the world background, because of the growing importance attached to the need for earning as much foreign exchange as possible from coffee exports. A huge surplus hangs on the world market. It is true that, despite this surplus, India was able to export 30,000 tons of coffee during 1960-61, but the price realised was markedly lower, resulting in reduced overall return to the planter. Drawing attention to this aspect in his latest annual statement, Mr. D. C. Kothari, Chairman of the Blue Mountain Estates Ltd., observes:

"The world coffee situation is still obscure and it is difficult to forecast the future. It must be remembered that coffee prices have now fallen so low that any further lowering of prices is unlikely. I feel that, in course of time, the price must either stabilise around the present level or show some improvement. In fact, the Coffee Board is making vigorous attempts to establish markets for Indian coffees on the Continent and elsewhere and it is hoped that, as a result of these efforts, there will be considerable interest created in the overseas markets for Indian coffee."

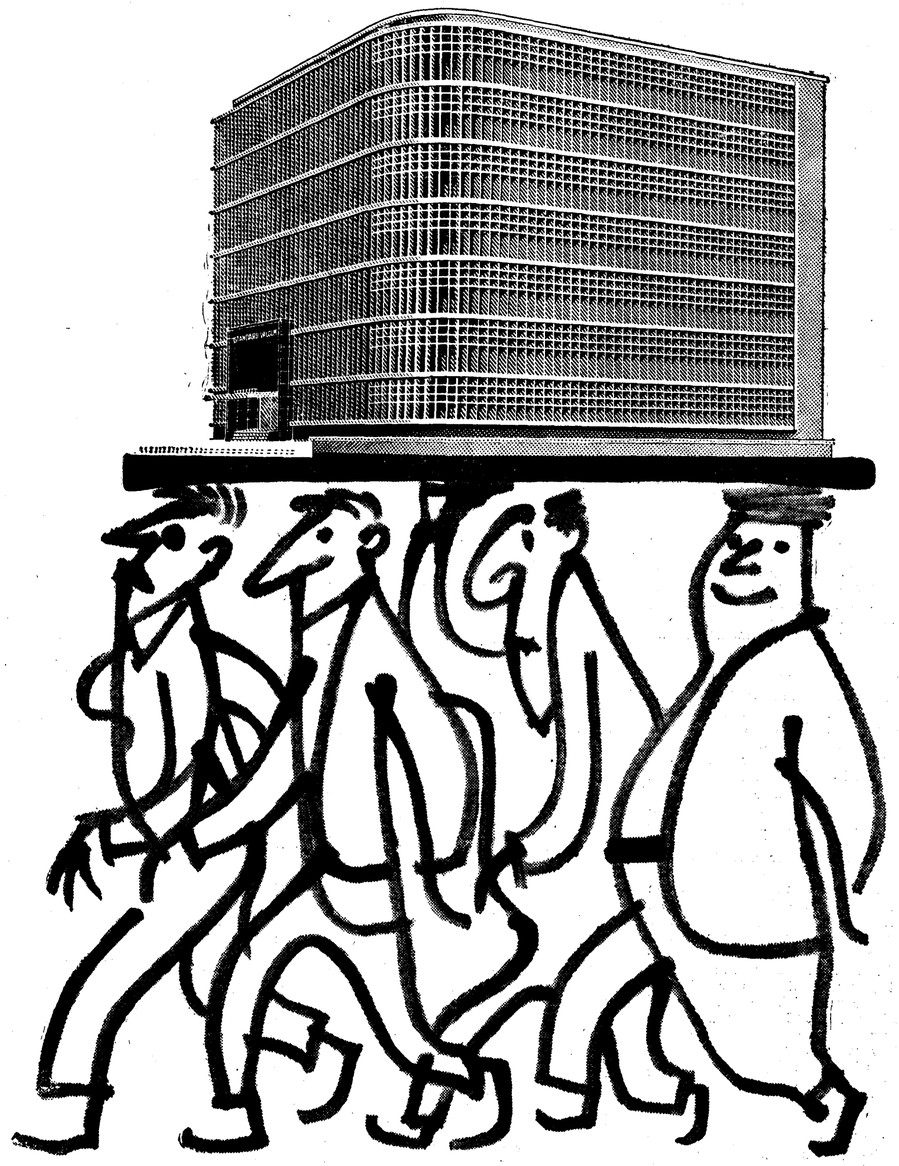
Incidentally, it may be noted that, as against an internal market price of about Rs. 135 per 50 kilos of Robusta coffee, the price realised on export is only Rs. 68.

Domestic Consumption

While the need for boosting coffee exports is urgent, the interest of domestic consumers, too, cannot be ignored. Indeed, a high level of internal offtake is essential for stepping up exports, for, the larger the domestic consumption, the smaller will be the incidence of loss on exports per kilo of coffee consumed in India. Stressing the importance of internal consumption, Mr. Kothari has made the following pertinent remarks:

"... coffee consumption in this country is steadily increasing. It is a matter of regret that the Coffee Board should have thought fit to discontinue the Coffee Houses which were doing valuable propaganda work within the country. I only hope that the Government of India will not slacken their efforts to increase the consumption of coffee in this country, because there seems to be an impression in the minds of our people that any increase in the local consumption of coffee may be at the expense of our export earnings. This really is not the position, as we are likely to have a considerable amount of coffee for export in the next few years. If the Indian planter or the grower is to get a reasonable return on his investment, he must have the cushion of a good internal market to offset any loss he may incur in exports. When dealing with this and many other complex and difficult problems of the coffee industry, I am glad to say that we have the sympathy and understanding of the Coffee Board and its Chairman. Recently the United Planters' Association of Southern India submitted a memorandum to the Ministry of Commerce and Industry on the subject of marketing policy and we have been assured of sympathetic consideration both by the Ministry and the Board."

To revert to exports of coffee, The outlook for exports is linked to the attempts now being made by the International Coffee Agreement Secretariat to evolve a long-term stabilisation plan, bringing leading consuming countries into it. Such a plan is expected to tighten up the quota scheme and make its influence felt on the world market. Meanwhile, the coffee producing countries in Latin and Central Americas are reported to be planning to reduce their coffee acreages and to increase yields per acre through intensive cultivation. The Inter-African Coffee Organisation, a regional body representing the coffee growers in the whole of Africa, has begun functioning at Paris. At a meeting held recently, the Organisation decided to plead for a larger Continental quota. It may be noted here that the African countries exported 22,800 more bags coffee during the first half of 1961 than in the corresponding period last year.



We like to carry the load...

...the responsibility of air conditioning your office. Modesty forbids or we'd tell you all about us. About the buildings we've air conditioned. Like Stanvac in Bombay. And many climate control and refrigeration jobs all over the country. Our morale is as fine as our service. Thanks to the nice things our clients say: "Carrier equipment is so reliable. Voltas service, first-rate. When we install Carrier air conditioning, staff efficiency improves, turnover shows a welcome increase."

As we said: We like to carry the load. May we carry yours too?

GOVERNMENT-OWNED COMPANIES—II

INDUSTRY-WISE DISTRIBUTION—FINANCIAL RESULTS

By Dr. Raj K. Nigam, Ph.D. (Econ.) (London)

A STUDY of the industrial complex of the Government companies presents fascinating reading. The activities of the Government companies are spread over as many as 63 industrial and commercial groups. Two Government companies (paid-up capital Rs. 12.5 lakhs) are engaged in agricultural activities, 11 companies (paid-up capital Rs. 73.2 crores) in mining operations, 54 companies (paid-up capital Rs. 14.7 crores) in the light and consumer goods industries and 41 companies (paid-up capital Rs. 424.5 crores) in the heavy and basic industries including machinery manufactures, chemicals and fertilisers, etc. Besides these, seven companies have been formed for transportation and communications business, whereas 25 companies are carrying on trading and financial business and for rendering services of all kinds. Our analysis reveals that, in the case of the Central Government undertakings, emphasis has clearly been on heavy capital goods, chemicals and fertilisers, mining, foreign trade, etc. In contrast to this, there is a preponderance of companies belonging to the light and consumer goods among the companies set up by the State Governments. Of the 86 State Government companies, 49 companies are engaged in the manufacture of consumer goods and light products, while two companies are engaged in trade, finance and miscellaneous businesses and 22 companies in the heavy and basic industries and mining.

No Cause for Apprehension

Further study of the industrial pattern of Government companies in the light of the Industrial Policy Resolution of 1956 reveals that, out of the 54 Central Government companies, 22 companies, accounting for 85 per cent of the total paid-up capital of all Central Government companies, have been formed to engage in the industries listed in Schedule A of the Resolution, that is, the industrial fields reserved exclusively for the State only, whereas six companies, representing 12 per cent of the total paid-up capital, are to engage in Schedule B industries, that is, those industries which can be developed both by the State and private entrepreneurs. The remaining 20 companies, with Rs. 20 crores representing 3 per cent of the total paid-up capital of the Central Government companies, are seen to operate in the fields left open to the private entrepreneurs. On the other hand, in the case of State Governments' companies, it is seen that 26 companies accounting for 44 per cent of the total paid-up capital of all State Governments' companies, are found to be engaged in Schedules A and B industries, while 60 companies, representing 56 per cent of the total paid-up capital, operate in the "free" industrial and commercial areas.

The entry of the State into the "free sector" in the States has largely been occasioned by the general apathy and lack of initiative shown by private entrepreneurs in the relatively backward parts of the country. Also some companies engaging in the "free" group of industries are the legacies of the past, as, before the State policy on industrial development was formulated for the first time in 1948, some of the State Governments, e.g., those of Hyderabad, Mysore, Travancore and Cochin, held majority interests in certain companies which they did not subsequently divest themselves of and consequently these companies came to be defined as Government companies upon the passing of the Companies Act in 1956. Another reason for the taking of active interest by the State Governments in the "free" group of industries is that some State Governments, for instance the Government of Orissa, assumed the role of leader-entrepreneur to show and pave the way for other private industrialists to take active interest in the industrialisation of this backward State. Thus, the States' interest in the "free" industrial fields is not to be viewed with any feeling of apprehension that the State wants to narrow down or encroach upon the spheres of activities of private enterprise as indicated in the Industrial Policy Resolution. Nor should it be construed as a breach of the spirit of the Resolution of 1956. Table 6 gives a comprehensive picture of industrial distribution of Government companies so as to allow the readers to make a more detailed study of industrial interests of the Union and State Governments.

Factual information on the finances of Government companies is much less than what we have on the structure-pattern of these companies, as we shall see in the next article of the current series. Statistical data with regard to the management pattern of these companies are even more scarce. The limited information now available on the finances of Government companies is only from 1956-57 onwards. The two agencies analysing the finances of Government companies have probably synchronised the beginning of the series of financial data with the year of the statutory recognition of the Government companies in our country. The performance, therefore, of the Government companies during the first Five-year Plan period is not known to us.

Total	54	530,97,58	86	14,23,59	140	545,21,12

Another interesting feature noticed is that borrowings of these companies, an overwhelming proportion of which was obtained from Government sources, came to a substantial figure, accounting for nearly 50 per cent of the total paid-up capital in 1956-57 and 30 per cent in 1958-59, the proportion having gone down as the result of a tremendous increase in the paid-up capital of one company, the Hindustan Steel Ltd. The total quantum of borrowed funds increased from Rs. 45 crores in 1956-57 to Rs. 54 crores in 1957-58 and to Rs. 122 crores in 1958-59, showing increases of nearly 20 per cent and 170 per cent in the latter two years over 1956-57. Table 7 on the next page gives the relevant facts on the basis of which the growth of finances of Central Government companies has been studied.

Some data on the finances of Central Government companies are given in the publication *Corporate Sector in India*, published by the Department of Company Law Administration. Consolidated financial position of two sets of Central Government companies are given from that source. The consolidated balance-sheet position for the three years 1956-57, 1957-58 and 1958-59 is given for 30 Central Government companies, of which 11 companies had not commenced functioning, whereas the financial and profits position for the same three-year period is given separately for the 19 companies which have gone into operation. These 19 Government companies are:

The Bharat Electronics Ltd., Eastern Shipping Corporation Ltd., Hindustan Antibiotics Ltd., Hindustan Cables Ltd., Hindustan Housing Factory Ltd., Hindustan Insecticides Ltd., Hindustan Machine Tools Ltd., Nahan Foundry Ltd., National Coal Development Corporation Ltd., State Trading Corporation Ltd., Sindri Fertilisers and Chemicals Ltd., Western Shipping Corporation Ltd., Hindustan Aircraft Ltd., Indian Rare Earths Ltd., Kulu Valley Transport Ltd., Orissa Road Transport Ltd., Hindustan Shipyard Ltd., Sultania Cotton Mills Ltd. and Indian Telephone Industries Ltd.

The following are the eleven companies which had not commenced production in the period under review:

The Government Telephones Board Ltd., Heavy Electricals Ltd., Hindustan Steel Ltd., Hindustan Chemicals and Fertilisers Ltd., National Industrial Development Corporation Ltd., National Research Development Corporation of India Ltd., National Small Industries Corporation Ltd., Neyveli Lignite Corporation Ltd., Orissa Mining Corporation Ltd., Ashoka Hotels Ltd. and Rehabilitation Housing Corporation Ltd.

The financial position of all the 30 Central Government companies under reference shows that their paid-up capital, with 1956-57 as base, increased by 200 per cent in 1957-58 and by 400 per cent in 1958-59. The free reserves position of these companies was strengthened by about 30 per cent and 85 per cent during 1957-58 and 1958-59, respectively, over 1956-57. The gross fixed assets of these companies increased by about 170 per cent in 1957-58 and by nearly 400 per cent in 1958-59 over the year 1956-57. After allowing for depreciation on the fixed assets, the growth in net fixed assets came to 200 per cent and nearly 500 per cent in the two years 1957-58 and 1958-59 over 1956-57. The total net assets of these companies recorded an increase of about 130 per cent in 1957-58 and 300 per cent in 1958-59 over 1956-57. Thus, it will be seen that the growth of resources as well as the assets of the 30 Central Government companies has proceeded with an increasing acceleration.

Borrowings More

The financial position of Central Government companies which were actually in operation presents a less spectacular picture of growth. As will be seen from the names of 19 companies given above, they do not include companies belonging to the top strata of the public sector. The strength of these 19 companies is, however, steadily growing. And this is reflected in the figures of paid-up capital, net worth, gross and net fixed assets, etc., which is fully corroborated by the increase recorded in their total sales and profits. The total paid-up capital of these companies increased by 25 per cent in 1958-59 over 1956-57 and their net worth nearly 32 per cent during the same period. On the assets side, it is noticed that both the gross and net fixed assets increased by 45 per cent during the same period. As a result of the steady increase in the net earnings of these companies, the quantum of free reserves and surpluses recorded

an increase of 103 per cent in 1958-59 over 1956-57, whereas the profits before and after taxation registered increases to the tune of 59 per cent and 95 per cent, respectively. The level of distributed profits of these companies, however, remained steady over the period, recording only a modest increase of 10 per cent. The quantum of ploughed back profits, however, increased by 140 per cent during the period under review. Thus the principal profit indicators display steady progress in the earning capacity of these companies.

Profits

A study of the ratios of sales and profits to capital employed and paid-up capital, etc. has not been attempted, as it is likely to lead to erroneous or mistaken conclusions. A better method of studying these ratios will be to make a detailed micro-analysis of the profits position of the individual Government companies in the context of the price policies followed by them. However, notwithstanding a detailed ratio-analysis of the return on capital employed, etc., an important purpose served by the foregoing indicators is that they establish the fact that the public sector companies are becoming steadily more and more economical and commercially viable and profitable and should, in course of time, yield some substantial amount of internal savings and surpluses, which have been named as an important source of finance in the third Plan. It is seen from the foregoing analysis that the 19 Central Government companies whose total paid-up capital aggregated Rs. 77 crores, accounting for nearly 14 per cent of the total capital investment in all Central Government companies, yielded a total net surplus (taking depreciation and retained profits together) of Rs. 29.1 crores, of which Rs. 3.8 crores were the retained profits. Further, since in all these companies, the Central Government happened to be the sole owner, another Rs. 1.14 crore came from the companies as distributed profits. Thus, taking these together, the total surplus yielded by the 19 Central Government companies amounted to Rs. 30 crores in 1958-59 as against Rs. 24.3 crores in 1957-58 and Rs. 19.5 crores in 1956-57, the percentage increase over the period 1956-57 to 1958-59 being of the order of 55 per cent. The details are given in Table 8 on this page.

The position of finances of Central Government companies can be studied for one more recent year, namely, 1959-60, with the help of the Central Statistical Organisation's publication, *Principal Public Sector Undertakings in India*, which contains factual information on 56 Central Government undertakings of which 40 are Government companies. The aggregate results for the 19 Central Government companies which are reported to be in full operation for the two comparable periods, 1958-59 and 1959-60, disclose further rises of 16 per cent to 18 per cent in paid-up capital, free reserves and net worth of these companies. The total net assets of these companies are reported to have also increased around 16 per cent and the gross fixed assets to the extent of 27 per cent. The total internal savings of these companies as represented by depreciation provisions and ploughed-back profits during the year are found to have increased by nearly 70 per cent in 1959-60 over 1958-59. Thus, these facts provide further evidence of the growing vigour of the Central Government companies.

State Government Companies

As compared to the time and efforts given to the study of the affairs and finances of the Central Government companies, public interest in the State Governments' companies appears to be nominal. The study of finances of the State Government undertakings is rendered somewhat difficult by the wide dispersal of these enterprises over the different States of the country and by the absence of a central co-ordinating body overseeing the performance of these companies within the broad frame of the public sector as a whole, and in relation to the objectives for which they have been set up. Financial accounts of these companies are also not easily available at one place. Notwithstanding these difficulties, factual materials relating to the finances of 20 State Government companies which are in full operation out of the 86 State Government companies are available for study for the three years 1956-57, 1957-58 and 1958-59 in the publication entitled *Corporate Sector in India*. These 20 State Government companies covered are:

The Bhavnagar Public Dairy Ltd., The Fertilisers and Chemicals Travancore Ltd., Forest Industries Ltd., Ganganagar Sugar Co. Ltd., Gondal Public Dairy Ltd., Dondwana Paints and Minerals Co. Ltd., Hutti Gold Mines Ltd., Indian Bobbin Co. Ltd., Indian Turpentine and Rosin Co. Ltd., Mayurbhanj Textiles Ltd., Mysore Lac and Paints Works Ltd., Mysore Sugar Co. Ltd., Nizam Sugar Co. Ltd., Radio and Electricals Ltd., Singareni Collieries Ltd., Travancore Electricals Ltd., Travancore Titanium Co. Ltd., Travancore Chemicals Ltd., United Electrical Industries Ltd. and Zalawad Public Dairy Ltd.

The total paid-up capital of these companies accounts for nearly 65 per cent of the total paid-up capital of all the State Government companies at work in the country.

The total paid-up capital of the 20 State Government companies covered in this article remained practically steady during the three-year period 1956-59, but the free reserves and surpluses recorded an increase of about 37 per cent. The gross and net fixed assets of these companies registered an increase of 23 per cent to 28 per cent, whereas the total net assets went up by 14 per cent. During the same period, the sales or main income increased by 31 per cent and the net profits before and after taxation showed improvements of the order of 51 per cent and 54 per cent, respectively. As a result of the increased quantum of net profits, a larger amount of profits was distributed as dividends. The total surplus retained in the companies by way of depreciation and ploughed-back profits showed a rise of 17 per cent.

From the foregoing set of figures, it will be clear that, in terms of growth of resources, of capital investment in fixed assets and of profit-earning capacity, there has been a progressive improvement in the State Government companies also, though the various indicators of progress did not show the same marked improvement as seen in the Central Government companies discussed earlier. The reasons for the relatively slow rate of progress will require a careful looking into the financial accounts of the individual companies. Table 9 on this page represents the financial data on which the foregoing observations relating to the finances of the State Government companies have been made.

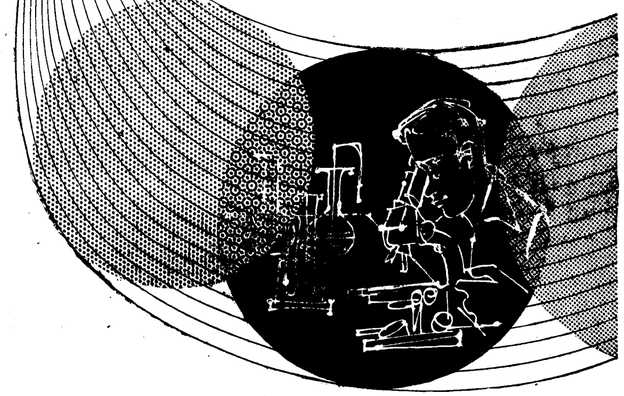
Dyestuffs The Key to Industrial Prosperity



Dyes play a key role in the manufacture of textiles, paints, plastics, paper and ink—all necessities of day-to-day life. Until Independence, India depended on imported dyes.

AMAR DYE started manufacturing dyes in 1956. Today, by dint of intensive research we can offer dyes comparable in quality to the imported products... and at the most competitive prices.

The rising tempo of industrial activity will generate an overwhelming demand for Dyestuffs. We shall ensure that this demand is fully satisfied.

THE TRANSPORT BOTTLENECK

DISCUSSIONS AT THE ASSOCHAM. MEETING

THE gap between actual supplies of transport available to the general public and the rapidly increasing demands for it has widened during the last one year, and this has been a subject of anxious debate throughout the country. Some idea of the magnitude of the gap is provided by a non-official estimate, according to which about 20 million tons of various kinds of originating traffic in 1961—representing almost 11 per cent of the total traffic offering—has not been able to find carrying capacity. To some extent, it has been contended, many industrial consumers of transport, who now press for additional carrying capacity, had not planned adequately for the future and intimated their full requirements, in good time, to the Government's Planning and Transport agencies. There is some truth in this contention, according to Mr. F. C. Badhwar, representative of Punjab and Delhi Chamber of Commerce, who proposed the resolution on transport shortage at the recent annual meeting of the Associated Chambers of Commerce at Calcutta. But, at the same time, it is true that shortfalls in transport availability have been constantly pointed out by industrial representatives during the last three years. Whichever side has been responsible for the underestimation of transport requirements, the serious dimensions of the transport crisis are not open to dispute.

How and where transport requirements have been underestimated is an interesting line of enquiry. According to Mr. Badhwar, insufficient account has been taken by planners, first, of many secondary and other consequential movements which, together, may well approximate to almost a quarter of the main primary movements usually associated with the carriage of raw materials to factories and of finished or semi-processed products to customers. Secondly, finishing and further processing, sometimes in distant workshops, has often to be undertaken for semi-processed articles, and resales of finished goods to a second or even a third batch of buyers is not an infrequent occurrence for some commodities; all this involves additional transportation, for which no provision seems to have been made so far in official estimates. Thirdly, many articles and fabricated goods have certain end-uses (including reclamation), and appreciable movements, sometimes in bulk, are often required in such connections. Fourthly, many movements are caused by regional scarcities, variable price factors and emergent exports and imports, and there is no evidence that any additional carrying capacity has ever been provided for such purposes. These, then, are the instances of underestimation in the matter of transport requirements. No wonder, therefore, that the Neogy Committee itself has had to remark that present estimates of the carrying capacity required for industry appear to have an uncertain basis.

In the light of their analysis of the transport situation, Mr. Badhwar and Mr. H. Mackay Tallack (of the Bengal Chamber of Commerce and Industry) have advanced the following suggestions:

(1) The Railways' target to move about 240 million tons of originating traffic by 1966, as against 160 million tons at present, should be increased by 50 per cent. (Here Mr. Badhwar has not worked out the financial implications of his suggestion).

(2) Coastal shipping and inland water transport, between them, should have steamer tonnage of about a million tons displacement by 1966. According to Mr. Badhwar, these two agencies could, together, provide carrying capacity for 25 million tons of goods in 1966.

(3) The authorities in India should move much more rapidly in developing modern roads for the regular use of heavy duty trucks and trailers. The costs of providing and maintaining modern roadways, with separate lanes for fast, medium and slow traffic and suitable by-passes, are still appreciably lower than the costs of new broad-gauge railway lines.

(4) There should be better co-ordination between the industrial planners and the transport planners; between the various forms of transport so that they and the financial resources which support them are deployed to the best advantage; and between transport and such facilities as ports and roads which serve transport.

At the meeting of the Associated Chambers, Mr. Stenhouse, their President, also put in a plea specifically for improving and expanding railway transport from the point of view of coal movement. His estimate of the situation was that there was room for improved efficiency in the running of the railways and that wagons could be moved faster between loading and unloading points. Since other transport systems continued to be much more expensive for bulk movement of commodities like coal, the inadequacy of railway transport naturally received greater attention at the hands of speakers on the resolutions passed by the Associated Chambers in regard to transport and coal. Mr. K. M. Wilcox of the Upper India Chamber of Commerce, who proposed the resolution on coal, gave some disturbing details of the damage caused by the transport bottleneck to the coal industry as well as to consuming industries. Unmoved coal stocks lying at the collieries in recent months were estimated by him at 6 million tons, involving the collieries in the immobilisation of about Rs. 10 crores of their working capital. At the consuming end, a recent survey covering 246 units of industry showed that 47 per cent of these units had to slow down production for periods ranging from one day to nine months and that 19 per cent had to suspend production, in most cases completely. This state of paralysis was solely due to shortage of coal to the extent of 25 per cent to 30 per cent of the sanctioned quantities which, too, were usually below the actual requirements. Mr. Wilcox continued that closures of industrial units would have been more numerous had not some of the units switched over to alternative and often more expensive fuels like wood, charcoal, bagasse, furnace oil, or even groundnut husks. Since the coal shortage was the result of transport shortage, Mr. Wilcox had the following to say on the "vexed" problem of coal movement:

"Apart from the tangible evidence provided by the heavy accumulations of stocks of coal at the collieries, we all have personal experience of the chronic disparity between the number of wagons of coal expected and those received, month after month, by practically every industrial unit in the country. It is true that certain palliative measures have recently been adopted to remedy the situation, including an increase of 200 wagons per day in the rail capacity for up-country consumers of coal above Moghulsarai. There are also proposals to move an additional million tons of coal per annum, above the normal one million tons, by the rail-cum-sea route to the Southern and Western parts of the country, and to divert to road transport the movement of coal from neighbouring coalfields to nearby consumers in Bihar and West Bengal.

"While it remains to be seen whether the necessary additional coastal shipping will be available, the Government had offered to subsidise the additional cost of freight by the coastal shipping of coal from the additional excise duty recently imposed on all coal leaving the collieries. No such consideration, however, has been shown to those consumers who are now obliged to transport their coal by road instead of by rail, although, as is well known, the transportation of coal by road is three times costlier than by rail. This means that the bulk of the Indian jute, engineering and paper industries, which were intentionally situated in West Bengal and the Calcutta district because of their proximity to the collieries of West Bengal and Bihar, are now being penalised because of that very proximity. These industries of West Bengal play a major role, both in the country's export trade and in supplying domestic needs, and their ability to compete in the world markets has to some degree depended on the availability of cheap coal from neighbouring collieries. It is easy to appreciate, therefore, the implications of the burden placed upon them, by the increased cost of transportation of coal, because of the transition from rail to road. This is a serious handicap to their capacity to continue successfully to compete in the markets of the world. It can also throw out of balance important sections of the economy of the country.

"Far be it from me to veto the road transportation of coal, but I wish to stress that, unless the cost of road transport is brought within the reach of the consumer, no real diminution of the demands on the railways can be expected. Nor can the change-over of the transportation of coal from the railways to the roads be effective unless considerable leeway is made up in the development of the road system and the provision of suitable heavy trucks. Till these long-term aims are achieved, the road transportation of coal should, in fairness, be subsidised, just as sea transportation is being subsidised."

The Associated Chambers, in their resolution on coal, have understandably highlighted "the high cost of movement of coal by road" and urged that the highest priority be given to the increase of transport facilities by rail. If the capacity of the railways for movement of coal and other bulk commodities were increased, if more intensive efforts were made to expand road transport, coastal shipping and inland water and air transport systems and if roads and ports also were simultaneously developed, there would be fewer transport crises during the third Plan period. In this connection, the Associated Chambers resolution on transport and communications has done well to emphasise the need for improving the efficiency of the various administrations connected with transport through a more effective delegation of authority, among others.

HEAVY ENGINEERING CORPORATION

The second annual report of the Heavy Engineering Corporation, which is responsible for developing the manufacture of heavy capital equipment through a heavy machine building project, a foundry forge project, a heavy machine tool building project, and a coal-mining machinery project, has just been published by the Government of India. The report covers the financial year 1960-61 and reviews the progress of preparatory work on the four projects.

The first three plants mentioned above are being set up at Hatia near Ranchi and the fourth at Durgapur. The levelling and dressing of the plant sites have been completed. To ensure a regular flow of technical personnel, artisans, skilled and semi-skilled workers, a comprehensive programme of training in India as well as in the U.S.S.R. and Czechoslovakia, has been drawn up and is being implemented. The report continues that contracts for the import of machinery for the initial stages of heavy machine building, coal-mining machinery and the foundry forge plants have been executed and that plant and machinery worth about Rs. 127 lakhs have already arrived at the plant site from the U.S.S.R. and Czechoslovakia. Contracts for some of the major civil works, fabrication and supply and erection of steel works, water supply and sewerage and residential buildings have also been awarded.

The Heavy Machine Building Project is being designed for a capacity of 80,000 tons of machinery per annum. It is intended to produce machinery and equipment primarily for the iron and steel industry, besides possessing adequate capacity to meet the requirements to mineral oil industry, coal mining industry and manufacture of general engineering items like heavy cranes, excavators, oil drilling rigs, crushing and grinding equipment, press and forging equipment, etc.

The Foundry Forge Project will serve as a metallurgical base to the Heavy Machine Building Plant and provide the necessary castings, forgings, rough machined components and finished rolls of different sizes, piece weights and specifications.

The Heavy Machine Tool Building Project, which has Czech collaboration, is being designed to produce annually 10,000 tons of certain diverse types of machine tools in sizes and types different from those which have so far been produced by any other agency in India. According to the preliminary production programme, this plant is expected to manufacture seven different groups of machine tools in 22 different sizes and capacities. The requirements of castings and forgings of this plant will be fully met from the Foundry Forge Project which is also located at Ranchi.

The Coal Mining Machinery Project is intended to manufacture 45,000 tons of coal mining machinery per annum. The principal items to be manufactured at this plant are coal cutters, loaders, conveyors, electrical winders, booster fans, pumps, automatic cage keps, safety hooks, etc.

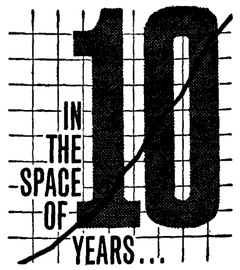
The Corporation has estimated that the total capital cost of the four projects, including the township in the final stage, would be of the order of Rs. 200 crores. The authorised capital of the Company is Rs. 50 crores. Its subscribed capital, as on 31st March 1961, is Rs. 6.6 crores.

UNION GOVERNMENT'S CIVIL WORKS PROGRAMME

The Government of India is to construct a number of office and residential buildings in Delhi, Calcutta, Bombay and Madras during the third Plan period. An official Press release this week has given fuller details of the Government's civil works programme, covering a carpet area of about 2 million sq. ft. for office purposes and over 10,000 houses for residential purposes.

The construction programme in Delhi envisages four multi-storeyed office buildings in the general pool with a carpet area of about 1.45 million sq. ft. In addition, there is a proposal to construct more multi-storeyed office buildings on plots behind the South Block Secretariat and the Indraprastha Estate. It is also proposed to construct office accommodation at Faridabad. Of 9,000 houses, mostly for lower category staff drawing a salary of about Rs. 500 per month, will also be constructed in Delhi. The Construction of some of these houses is either in progress or will be taken up shortly.

As far as the metropolitan towns of Bombay and Madras are concerned, the Government's programme of construction of offices and employees is fairly substantial. In Calcutta, the office building at Chowringhee is nearing completion, will provide 100,000 sq. ft. accommodation; a proposal to construct a multi-storeyed office building, with a carpet area of 180,000 sq. ft. in the premises of the New Secretariat is also under consideration. In Bombay, plans for the construction of an office building with a carpet area of 123,000 sq. ft. at Marine Lines have been sanctioned; additional office accommodation is likely to be constructed on the land at Kalbadevi. In Madras, it is proposed to construct an office building with a carpet area of 130,000 sq. ft. at Haddows Road. In these three towns, just over 1,000 houses will be newly constructed for Central Government employees.



the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140—*100 more than existed ten years ago.*

MEDICINE MAN MR. AL FOIL F.G.S.P.P. ...

"... Fellow of the Grand Society for the Protection of Pills" said Mr. Foil, greatly impressing the awed Chemist who had never heard of the degree before. "That is just one of many honours conferred on me", continued Mr. Foil modestly, "by Pharmacists for having rendered valuable packaging service to the medicine manufacturing industry. Whatever the pharmaceutical product, be it pills or potions, aluminium foil wrapping safely seals in the prophylactic and curative properties for long periods and effectively protects them from contamination, moisture and dirt ... And that," finished Mr. Foil, "is just what the doctor ordered."

Long and extensive experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionery, Tea and many other industries

NEW PRODUCTS AND PROCESSES

Slot-machine for Dispensing Fuel

A SLOT-MACHINE which dispenses a predetermined quantity of 2-stroke engine fuel (gasoline plus lubricating oil) is being manufactured by a Netherlands firm. Drivers of 2-stroke machines can select any desired blending ratio of the mixture between 1:14 and 1:31, or from a different range of ratios. There are two types in production; one for wall or frame mounting and the other for installation on the ground. In both cases the gasoline is supplied from a tank underground. The oil tanks are built inside the slot-machines themselves. Each slot-machine has two built-in suction pumps, driven by ¼ h.p. electric motors, which supply the oil and gasoline. The pump for the oil is suitable for all kinds of oil. There is a light fitted behind the transparent glass blending column, which makes it possible to follow the entire mixing process. When drawing off the fuel, it is possible to see when the glass is empty. The electrical works of the slot-machine is connected to the mains. To allow for possible future price changes the quantity of fluid to be dispensed can be adjusted to suit the value of the coin inserted. An indicator, also adjustable, shows how much fuel is supplied for a given coin or coins. A counting device is incorporated for checking coins. It also indicates how much gasoline has been pumped up from the tank in the ground. There are safeguards against counterfeit coins and excessively low oil level in the tank. Self-service for the customer is extremely simple.

Latex-based Wall Paint

A Dutch paint manufacturer has produced a latex-based wall paint specially developed for use in places where the walls have been or can be expected to be attacked by mildew. The paint checks the growth of bacteria and is thus bacteriostatic. These two properties, which are of particular importance where the paint is used in hospitals and other buildings housing a large number of people, were confirmed by investigations laboratory. Moreover, the wall paint is not toxic and hence not poisonous to warmblooded beings. It is therefore suitable for use in places where provisions are handled, such as dairies, canning factories, pickling works, cheese warehouses, breweries, slaughter houses, etc. The paint spreads easily and is simple to apply with brush or roller. Surfaces painted with this paint can be cleaned with normal detergents. The wall paint is resistant to condensation water and the fungicidal agent in it does not evaporate. It can be supplied in a variety of pastel shades.

Shaping Plastics

An Italian concern has announced a method of preparing shaped articles from a thermoplastic resin consisting mainly of solid highly crystaline polypropylene, which has a higher mechanical strength than the usual thermoplastic resins. This means the thickness of the sheet can be reduced, resulting in a saving of material. It is known that thermoplastic sheet can be obtained from other resins, but the heat used during the process causes the new propylene polymers to undulate. This leads to non-uniform heating and subsequent stretching and perforation during moulding operations. It is now found that if a polypropylene sheet is subjected to a preliminary heat treatment at a temperature of 130-140 degrees Centigrade before being fixed in the mould it can then be shaped in the usual way. It is further claimed that the exceptional gloss of articles made from the new material could widen the range of its uses.

Silicone Varnish

A new impregnating insulation varnish has been produced for electrical equipment by Imperial Chemical Industries. This varnish is based on silicones, which are organic molecules n which the chief element is silicon instead of carbon. In the form of silicone rubber, water-repellent polish, etc., silicones are now well known. The new varnish has the great advantage that it is an insulator that will work satisfactory at fairly high temperatures. It can be applied by the hot or cold dip method, vacuum impregnation, or by spray or brush. Its uses are chiefly for motor and generator components, aircraft transformers and coils, and electronic equipment likely to be subjected to high ambient temperatures. The varnish has good penetrating and wetting characteristics. It is highly resistant to moisture and corrosion. It gives a longer life to organic insulating materials.

New Photo-conductive Cell

N. V. Philips of Holland has produced a new subminiature cadmium-sulphide, photoconductive cell, housed in a hermetically sealed envelope. The cell is eminently suitable for use in the small probes of flame-control apparatus. The necessary current amplification required to energise the relay can be obtained in this case by using a cold-cathode tube. The maximum permissible supply voltage of 1000 Volts ensures that no short-circuit can occur between the electrodes of the photoconductive cell as a result of a peak in the grid supply voltage. The maximum permissible dissipation of 100 mW at 25°C guarantees outstanding stability, since in practice only a fraction of the dissipation is needed to disturb the amplifier tube.

Electrically Conductive Ceramics

Ceramic materials which will resist high temperatures but which will also conduct electricity are now being made by a Netherlands concern. This unusual combination is achieved by applying a layer of powdered silver or plantinum to the edges of a small section of the ceramic and then joining two or more sections together under the action of heat and pressure. The seals are stated to be quite secure.

Telephone Messages That Travel on Light Beams

Scientists of the Bell Telephone Company, U.S., recently sent spoken messages for the first time in history on a beam of so-called "coherent" light. To do this they used their new optical MASER—a revolutionary device which may some day make coherent light beams a widely used medium for telephone, television and other communications. Light waves vibrate tens of millions of times faster than ordinary radio waves. Because of these high frequencies, light beams have great possibilities for handling large numbers of messages. Ordinary light waves move like an unruly and jostling mob. But the so-called coherent light waves created by the use of a MASER move like disciplined ranks of soldiers. This makes it possible to use narrow beams of such light for the simultaneous transmission of vast numbers of telephone calls, television shows, and data messages. The latest optical masers transmit the narrowest beams of light ever achieved. The name MASER stands for "microwave amplification by stimulated emission of radiation."

New Road-paving Material

A road-paving material that can be driven on an hour after it is poured is being used to repair streets in Glen Cove, New York. The material, resembling ordinary asphalt blacktop, has proved to be cleaner, easier to apply and cheaper than conventional resurging materials. It is a mixture of kerosene, lime, oil, sand, and limestone screenings. Used last year in a test of 10 miles of road, it lasted throughout the winter in perfect shape, whereas the rest of the city's streets were pocked and pitted.

New Protective Coating for Timber

Freshly felled timber can now be protected from insect and fungoid attack with the latest British resin coating developed by Imperial Chemical Industries. The product, known as "Mouldrite," is composed of resin and hardener, and was first used to protect fish boxes—considered particularly prone to the destructive influences of water, climate, and chemicals. The coating costs under 1s. a pound in Britain. It is spread with a paintbrush over the exposed ends of the timber being cut. The logs are left for two hours to enable the coating to harden, after which the timber will withstand considerable mechanical handling without the coating becoming dislodged. It is of great advantage in tropical and subtropical areas, where green timber rapidly deteriorates if left exposed.

New Use for Nylon

An entirely new use of nylon—in the manufacture of lighter, cheaper, more comfortable and long-wearing fashion heels for ladies' shoes—has been announced by a British firm, Strode Components, Wiltshire, England. Manufacture has started with an output of 5,000 pairs a week and plans are in hand to double production within the next six months. The heels are made of stacked layers of leather board, in the normal way, but it is in the bonding of them that the new technique is used. Aiming for lightness the firm used to bond the layers with two wooden dowels lengthwise, instead of long metal nails. Since nylon is much stronger, more pliable and tougher, the firm experimented by introducing nylon instead of wood. Nylon is injected through the leatherboard layers, making a firmer and better bond and providing a longer-wearing heel which is more comfortable and durable. The nylon also moulds the top piece direct to the heel at the same time. The heels varying from one-and-a-half to two-and-a-half inches, have been subjected to the most rigorous tests, both mechanically and by customers. Another side-line which is being rapidly developed by the firm and finding an increasing demand is the manufacture of shoe trimmings in leather which can be bonded to p.v.c. materials. This is aimed at producing a cheaper shoe.

Rebuilding this ancient land of ours

RAZA BULAND SUGAR CO. LTD.
Rampur (U.P.)

Where we make the finest quality white crystal sugar made anywhere in India !

ORISSA CEMENT LTD.
Rajgangpur (Orissa)

Where the most up-to-date equipment and the latest production methods make possible a large output of highgrade refractories, to meet the needs of all types of furnaces in the Steel, Cement, Glass and large number of other industries.

Weighing the world up . . .

. . . even just from a financial point of view, is a pretty big operation. It requires a very extensive knowledge and understanding of business conditions. It requires an organisation like The Hongkong and Shanghai Banking Corporation. The biggest bank established by the Far East for the Far East provides a banking service not only in South and East Asia—which is our primary concern—but has offices in Europe and America as well, surveying the whole of the business world, considering, weighing up.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

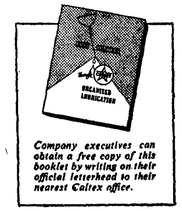
His costs will go up this month...

Because he has had a machine breakdown and has had to replace costly parts which were ruined by faulty lubrication. This didn't have to happen—a Caltex Lubrication Survey could have spotted the trouble—solved the problem.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

This service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.



Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

THE NATIONAL NEWSPRINT AND PAPER MILLS LIMITED

DR. A. RAMASWAMI MUDALIAR'S SPEECH AT ANNUAL MEETING

FINANCIAL POSITION DISTINCTLY SATISFACTORY

THE Fourteenth Annual General Meeting of the National Newsprint and Paper Mills Limited was held at Nepanagar, Madhya Pradesh, on Wednesday, 6th December 1961. As Dr. A. Ramaswami Mudaliar, Chairman of the Company, could not be present at the meeting **for personal reasons**, the speech prepared by him was read out by Mr. S. N. Mehta, I.C.S., a Director of the Company, who was elected Chairman of the meeting. In the course of the speech, Dr. Ramaswami Mudaliar stated that the general financial picture of the Company could be regarded as distinctly satisfactory. Efforts continued to be made, he added, to reach the production target of more than 100 tons a day. He revealed that there was a proposal for doubling the production capacity during the third Plan period.

The following is the full text of the speech of Dr. Ramaswami Mudaliar:

"GENTLEMEN,

"I have great pleasure in extending to you a cordial welcome to the fourteenth annual general meeting of the shareholders of the National Newsprint and Paper Mills Limited.

"The Directors' report, the balance-sheet and the audited accounts for the year ended 31st March 1961, along with the comments of the Comptroller and Auditor General, have been in your hands for some time and, with your permission, I shall take them as read.

"As the balance-sheet and profit and loss account has disclosed to you, the past year may be considered to have been a reasonably satisfactory year. The output was 23,029 tons of newsprint, registering a slight increase over that of the previous year. The gross turnover amounted to Rs. 2,46,73,923.52 and the working results show a net profit of Rs. 32,94,035, after providing for depreciation and development rebate reserve. Despite an increase in the gross turnover, the profit during the year is less than last year, due to all-round increase in cost of chemicals and raw materials and increase in cost of power and steam. This profit has been utilised to reduce the debit balance at the beginning of the year which now stands at Rs. 65,67,818.00.

Company's Performance

"With the completion of this year, the second Five-year Plan came to a close and so I thought it fit to give in brief the performance of the Company during the last five years in a tabulated form:

	1956-57	1957-58	1958-59	1959-60	1960-61
	Rs.	Rs.	Rs.	Rs.	Rs.
Gross turnover	106,67,950	129,84,941	228,18,599	235,35,412	246,73,924
Depreciation	88,11,901	85,49,803	32,41,074	31,25,823	29,02,499
Repayment of loans	Nil	Nil	10,13,752	102,73,000 12,19,219	25,00,000 11,00,000
Provision for taxation	Nil	Nil	1,67,000	Nil	Nil
Net profit	114,90,670 (Loss)	33,38,114 (Loss)	96,82,758	37,76,279	32,94,035

"You will find how the financial position of the Company has been steadily improving. Adequate provision has been made for depreciation every year. The entire interest-bearing loans due to the Union and Madhya Pradesh Governments have been repaid and, out of the interest-free loan of Rs. 111.19 lakhs, two instalments have been paid, leaving a balance of Rs. 88 lakhs to be paid in eight equal annual instalments. I trust that the shareholders will agree that the general financial picture can be regarded as distinctly satisfactory.

"Due to various factors, we have still not been able to consistently attain the target of production of 100 tons per day, though on several occasions it has been possible to reach the target of production of more than 100 tons a day. Efforts continue to be made in this direction to step up the production.

"As I mentioned last year, we are still having difficulties in the procurement of chlorine supplies which have to come from distant places like Delhi, Bombay and Ahmedabad. Your Directors, therefore, decided to have our own plant for the manufacture of chlorine and caustic soda. We have obtained a licence for the installation of a chlorine caustic soda plant of 10 tons capacity. The scheme has been approved and orders for the requisite plant and machinery have been placed. The work will be taken up and completed as expeditiously as possible. There is a proposal for doubling the capacity of the plant to step up production to 200 tons per day during the third Five-year Plan. The availability of raw material has to be examined carefully before such a scheme can be launched. This is under active examination.

Newsprint Supply

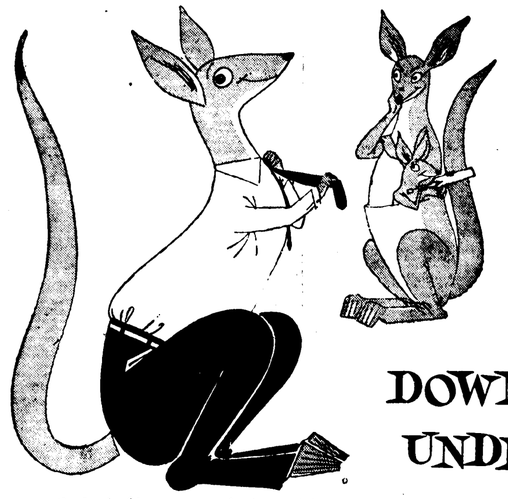
"The demand for newsprint has been increasing and the quantity supplied to newspapers is being gradually stepped up. During the year, 13,250 tons have been supplied to the newspapers, as against 9,375 tons supplied in the previous year, and, during the current year, a quantity of 10,646 tons has already been supplied upto 31st October 1961.

"Similarly, supply of newsprint to the printers and publishers of textbooks and books of general interest gets the next priority and the balance of production of nearly 8,841 tons was distributed as duty-paid goods to dealers through our various agents and distributors and to Government customers. I would like to thank all the newspapers, our agents and other customers who have put up with our shortcomings and have encouraged us by using our product.

Welfare of Staff

"The welfare of staff continues to be given attention by the Directors. 100 'F' type and 10 'C-2' type quarters have been completed and occupied. The Bachelors' Hostel has also been completed. An incentive award equal to a month's pay and allowances to all employees getting a basic pay of upto Rs. 500 subject to a maximum of Rs. 325 was given during the year. In addition, the dearness allowance was increased by Rs. 7, raising it from Rs. 50 to Rs. 57 to all the employees getting a basic wage not exceeding Rs. 250 with effect from 1st October 1960.

"There has been heavy migration of staff. Several senior and old technicians left and the burden has fallen on the others not very senior to take up their duties. They have all done well and I must take this opportunity to recognise the enthusiastic help and co-operation that has been extended by all the employees both on the factory side and in the administrative office, and I should like to convey warm thanks to all of them."



DOWN UNDER

AUSTRALIA, the land of kangaroos and cricketers, is one of the 50 countries importing BINNY'S textiles.

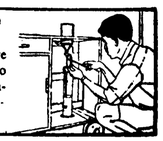
BINNY'S fabrics are made from yarns spun only from cotton of the best quality and are dyed with the fastest colours or so carefully bleached that the full strength of the cloth is preserved. Rigid Quality Control* ensures maximum durability and perfect finish.

*Quality Control:

Modern machines process yarn and cloth so fast that often defects, invisible to the naked eye, creep into the cloth. Quality Control is laboratory testing to eliminate defects at every stage of production. That's why BINNY'S fabrics stay smart so long.

Testing size mix to ensure strengthening of yarn

Viscosity and temperature of the size mix are tested to ensure uniform penetration, dressing and strengthening of yarn.



Buy your requirements of BINNY'S fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

BINNY - a great name in textiles

BINNY'S manufacture nearly 90 million yards of cloth every year. Here are some of the varieties they make:

Shirtings • Khaki Drills • Bleached & Dyed Drills • Towels Anticrease Suitings • Tussores • Union Fabrics • Silk Sarees etc etc.

THREE GOLDEN HORSES.... *consistency!*

Consistency is an important word in the production of yarns. A good rayon yarn offers, first and foremost, *consistency*: uniformity, dependability. The most modern of yarn-producing facilities, themselves marvels of operational consistency, produce THREE GOLDEN HORSES Rayon Yarn. And with great *consistency*, the uses for THREE GOLDEN HORSES are increasing. We think you'll agree when we suggest that *consistency* is really the healthy credo of all success, and is desirable in every department of manufacture.

SHARING OF INCOME-TAX BY CENTRE AND STATES—A HISTORICAL REVIEW

By Baidyanath Misra

UNLIKE in other federations, there is a constitutional provision in India for sharing income-tax for inter-governmental financial adjustment. In Canada and Australia, there are tax-agreements between the centre and the units for sharing income-tax. The basis of sharing is, therefore, compensation. In the case of the U.S.A., the Federal Government and the States have concurrent power of taxation over income. It is only in India that the Constitution contains a mandatory article which requires the Union to assign a percentage of Union income-tax on non-agricultural incomes to the States. The Constitution of India does not, however, lay down the principle of allocation or the precise sums that should be transferred to the States. The Finance Commission has been entrusted with this duty. That is why, at the time of each Finance Commission, there has been acute controversy regarding the principle of distribution. While States like Bombay (now Maharashtra and Gujarat) and West Bengal have emphasised collection as the right principle of distribution, other States have demanded that sharing of income-tax should be on the basis of population. A State like Orissa has claimed that, though population should be the right principle, there should be some weightage for *backward* population. Other States like Kerala point out that, along with population, *need* should be taken into account in allocating the income-tax among the States. The present article reviews the role of income-tax as a balancing factor in Indian finance and suggests the principle that should govern the allocation of shares among the States.

The sharing of income-tax actually started in India in the twenties. The 1919 Reforms had assigned expanding social and developmental functions to the provinces, but the resources at their disposal were inelastic. The resources of the Central Government were elastic and productive but their needs at that time were comparatively stationary. Moreover, in the distribution of revenues, agricultural provinces could get more benefit than industrial provinces, because land revenue was the important source of revenue for the provinces. The provinces had no right to impose taxes on trade or industry. That was why industrial provinces demanded a share from income-tax. After 1921 the provinces obtained a share in the growth of revenue from income-tax, but it was very nominal; according to the formula, each province was to receive 3 pies in each rupee of the amount by which the assessed income of any year exceeded that of the year 1920-21. This provision did not help the provinces. For example, the provincial share amounted to Rs. 0.04 crore in 1936-37 as against the Central share of Rs. 15.34 crores.

The Niemeyer Award

The real beginning of sharing of income-tax started from 1935. Under Section 138 of the Government of India Act, 1935, the provinces were given a share of the net proceeds of taxes on income, other than agricultural income. The corporation tax, as also any surcharge on the basic rates of income-tax, was exclusively assigned to the Central Government. The share of the provinces in the divisible part was fixed at 50 per cent by Sir Otto Niemeyer. But, for the first five years the provincial share was linked to the railway contribution. The provinces were entitled to their full share of the divisible pool ten years after the inauguration of Provincial Autonomy. However, due to improvement in railway finances the Centre was able to disburse, in the very first year of Provincial Autonomy, Rs. 1.25 crore as share of income-tax amongst the provinces.

Sir Otto fixed the shares of different provinces partly on residence and partly on population, paying to neither factor a rigidly pedantic deference. On the basis of his formula, the shares of different provinces were fixed as follows:—

	Per cent		Per cent
Bombay	20	Central Provinces.	5
Bengal	20	Assam	2
Madras	15	Orissa	2
U.P.	15	Sind	2
Bihar	10	N.W.F.P. ..	1
Punjab	8		

His recommendations were in the nature of an award and he did not state the actual formula he adopted in determining the share of each province. Bombay whose population was [illegible] the same share as Bengal whose population was 19.9 per cent of the total population of the country. Evidently, very little weightage was given to population. The Niemeyer Award tended, therefore, to magnify the disparity in the resources of the States.

This award, subject to a change made in 1940, continued to regulate the allocation of resources between the Centre and the units until the partition of the country in August 1947. War necessitated increasing expenditure on the part of the Centre and steps were taken to strengthen Central finances. It was, therefore, decided that for the duration of war, the Centre should be permitted to retain a fixed sum of Rs. 4.5 crores out of the provincial share of income-tax. The Order-in-Council was amended accordingly to secure this and the modified provision regulated the distribution of the tax from 1940-41 to 1945-46. In each of the next four years, the sum retained by the Centre from the provincial share was reduced by Rs. 75 lakhs a year over the previous year, and the full provincial share was restored to the provinces in 1950-51.

The Deshmukh Award

With the partition of the country in August 1947, it became necessary to revise the provincial shares. There was a revised allocation but as this caused dissatisfaction the Government of India called upon Mr. C. D. Deshmukh to give a binding award

Mr. Deshmukh did not make a comprehensive enquiry to redistribute the entire State's share, but re-allocated the released percentage, comprising 14.5 units (Bengal 7.5, Punjab 4, Sind 2 and N.W.F.P. 1) largely on the basis of population with some weightage in favour of the needy States. Only minor adjustments were made for rounding off the figures to the nearest half per cent. Mr. Deshmukh's Award, which fixed the percentage share of each province as below, was applicable from 1950-51 and was to remain in force till the Finance Commission made its recommendations:

Madras	17.5	Bihar	12.5
Bombay	21.0	Madhya Pradesh .	6.0
W. Bengal ..	13.5	Assam	3.0
U.P.	18.0	Orissa	3.0
Punjab	5.5		

However, as he did not undertake a fundamental revision of the Niemeyer Award, the problem of inter-State disparity remained unresolved. The Deshmukh Award gave decided advantage to the States of West Bengal and East Punjab whose shares were increased from 12 and 5 to 13.5 and 5.5 per cent respectively. The shares of Madras, U.P. and Bihar were reduced to make the additional percentage available to the divided States, whereas the share of Bombay, the most prosperous of all States, remained intact.

Part B States were not to participate in the divisible pool until two years after the full Indian rates were reached. Meanwhile, an *ad hoc* arrangement was made whereby it was decided to keep income-tax collections in each Part B State separately and to pay the State half the net collections. This share was to be set off against revenue gap payments, if any. Similar arrangements were applicable to areas merged in Part A States. It was left to the Finance Commission to formulate a uniform policy of allocating the income-tax share amongst all the States.

First Finance Commission

Under Article 270 of the Constitution, the first Finance Commission was required to make recommendations in regard to three matters: (1) the percentage of the net proceeds of income-tax which should be assigned to States, (2) the manner in which the share so assigned shall be distributed among the States, and (3) the percentage of the net proceeds attributable to Part C States. The First Finance Commission increased the States' share from 50 to 55 per cent. In regard to Part C States, it recommended an increase from 1 per cent to 2¾ per cent of the net proceeds of income-tax. This percentage has been arrived at by allocating to Part C States as a whole the share which would have accrued to them collectively on the principle adopted for Part A and B States.

After considering the various bases of distribution suggested, namely, collection, residence, origin, population, volume of industrial labour, relative *per capita* income, the needs of different States, etc., the Commission concluded that distribution should be based on (1) a general measure of needs as furnished by population, and (2) contribution as measured by collection in the absence of other definite indices, though it be an inadequate and partial index of contribution. The Commission considered it equitable and appropriate to recommend that 80 per cent of the States' share be distributed on the basis of population and 20 per cent on the basis of collection. On this basis, after taking into account the 1951 Census figures of population and the actual figures of collection for those years ending 1950-51 with suitable adjustments in the case of Part B States, fixed percentage shares were prescribed for Part A and B States as follows:

Part A States		*Part B States*	
Assam	2.25	Hydorabad ..	4.50
Bihar	9.75	Madhya Bharat	1.75
Bombay ..	17.50	Mysore	2.25
M.P.	5.25	PEPSU	0.75
Madras	15.25	Rajasthan ..	3.50
Orissa	3.50	Saurashtra ..	1.00
Uttar Pradesh ..	15.75	Travancore and	
West Bengal ..	11.25	Cochin.. ..	2.50

Under the scheme drawn up by the first Finance Commission, the distribution formula was applied uniformly to Part A States including merger territories and Part B States and there would be a common divisible pool of income-tax. Part B States were entitled to get their percentage shares of income-tax and Union excise duties fixed on the same formula as for Part A States or the "revenue gap grant" as guaranteed under the Federal Financial Scheme, whichever was higher. The Commission recommended the discontinuance, with effect from 1st April 1952, of the "revenue gap grants" payable to Bihar, Bombay, Madhya Pradesh and West Bengal, and "population" and "collection" in respect of "merged areas" in these States were taken into account while fixing their percentage shares.

Since the finance Commission accepted population as a broad measure of need, their recommendation went a long way in correcting the disparity in regard to distribution of income-tax between different States. The following table sets out the rates *per capita* allocation of income-tax to the backward States calculated in terms of allocation to Bombay:

	1944-45	1955-56
Assam: Bombay	1 : 1.23	1 : 1.95
Bihar : Bombay	1 : 2.52	1 : 2.00
Orissa: Bombay	1 : 4.36	1 : 1.92
M.P.: Bombay	1 : 2.64	1 : 1.98
U.P.: Bombay	1 : 2.60	1 : 1.95

The table shows that the poor States like Assam, Bihar, Orissa, etc. improved their position in respect of sharing of income-tax due to the recommendations of the first Finance Commission. However, since 20 per cent of the divisible pool was distributed on the basis of collection, prosperous States like Bombay and West Bengal received differential advantages.

Second Finance Commission

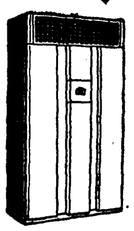
The second Finance Commission made further improvements in the distribution of income-tax. The percentage of net proceeds assigned to the States was raised from 55 to 60. Moreover, the Commission favoured population as the basis of distribution. According to the Commission, "twenty years ago when income-tax first came to be distributed, it could have been argued that the agricultural States had a substantial income from, and an expanding source in, land revenue, which had to be balanced by giving a larger share of income-tax to the industrial and commercial States. Land revenue has now become a comparatively less important source in all States." Secondly, "the growth of revenue from sales taxes, motor vehicles tax and other taxes like electricity duties and entertainment and passenger taxes, to which the urban population makes a proportionately larger contribution, has created a situation in which the States, which are more urbanised and industrially developed, are in a financially stronger position than those which are not so well developed or urbanised. The main justification for giving a larger share of income-tax to the industrial States has, therefore, ceased to exist." "Considering that, in this country, income-tax is paid by an infinitesimal portion of the population and that the bulk of the tax arises out of business incomes which, in the context of the economic integration of the country and the disappearance of barriers to inter-State trade, are derived from the country as a whole, the principle of collection can no longer be considered an equitable basis of distribution."

So the Commission felt that collection should be completely abandoned in favour of population as the basis of distribution. But as it did not desire to cause a sudden break in the continuity, it proposed that the distribution of States' share should be 10 per cent on the basis of collection and 90 per cent on the basis of population. But the Commission felt that in future the entire proceeds should be distributed on the basis of population.

On the basis of 1951 population, the Commission fixed the share of each State as follows:

State	*Per cent*	*State*	*Per cent*
Andhra	8.12	Mysore	5.14
Assam	2.44	Orissa	3.73
Bihar	9.94	Punjab	4.24
Bombay ..	15.97	Rajasthan ..	4.09
Kerala	3.64	Uttar Pradesh ..	16.36
Madhya Pradesh	6.72	West Bengal ..	10.08
Madras	8.40	Jammu and Kashmir	1.13

CUT
AIR CONDITIONING COSTS
CUT
with BLUE STAR-WORTHINGTON
Packaged Air Conditioners
5, 7½, 10 tons
Now made in India



Here's how BLUE STAR-WORTHINGTON Packaged Air Conditioners offer you a four-way saving in air conditioning costs.

CUT COSTS on tonnage. Single units range from 5 to 10 tons, operate independently.

CUT COSTS on installation. Units can operate without ductwork.

CUT COSTS on subsequent expansion. Single units connect up into multiple systems with minimum alterations.

CUT COSTS on operation and maintenance. Every unit is engineered, built and individually performance-tested in BLUE STAR'S own plant to WORTHINGTON specifications.

For a better air conditioning job, call in BLUE STAR

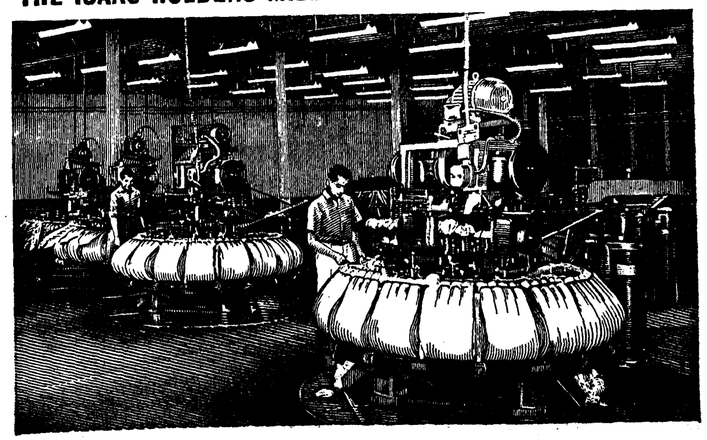
THE ISAAC HOLDENS MILL AT JAGATDAL, WEST BENGAL



LIGHTING BY PHILIPS

Isaac Holdens (India) Limited, India's commission woolcombers, are a Company of the Duncan Group and their mill, the only one of its kind in India, covers 114,000 sq. ft. . . . twice the size of a hockey field. Licenced to produce 10 million lbs. of woolstops per year, Holdens' workers are engaged in the wool sorting, scouring, carding and combing — operations that require a high and even level of illumination.

Naturally, the mill management specified Philips lighting.

Philips' modern, streamlined fittings provide the right amount of illumination and thereby contribute towards the overall efficiency and high productivity achieved in this mill.

Philips' exclusive lighting — consisting of lamps, fittings and accessories — ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of research and development aimed to meet the ever-growing demand for better lighting. And hand-in-hand with Philips' unrivalled quality comes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need — whether it is industrial, commercial or any other specialised application — consult Philips Lighting Service Bureau.*

PHILIPS quality lighting for ultimate economy

PHILIPS INDIA LIMITED

The recommendations of the Second Finance Commission have further improved the position of poor States *vis-a-vis* rich States in the distribution of income-tax. *Per capita* distribution of income-tax for the year 1960-61 shows that except in the case of Gujarat, Maharashtra, West Bengal, Madras and Jammu and Kashmir, there is almost no disparity in *per capita* distribution between other States. Since 10 per cent has been distributed on the basis of collection, these States have received some preferential advantages.

Third Finance Commission

It seems now desirable that the Third Commission should follow the recommendations of the Second and distribute the entire sum on the basis of population. The principle of collection is now an anachronism. Of the total collections of Union taxes in Part A States, 39.6 per cent and 35.8 per cent were collected in Bombay and West Bengal respectively in 1950-51. And of these collections about three-quarters were made in the cities of Bombay and Calcutta. Since these two cities were the business centres of different States, more taxes were collected there. Therefore, collection is a mere accident and the bases of income creation are, as the first Finance Commission rightly suggested, far more diversified and widely spread over the country than the facts of collection would seem to suggest.

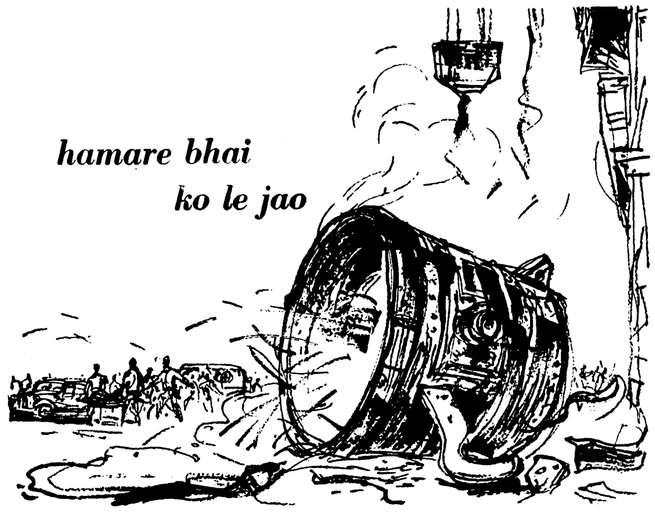
Some States argue that sharing of income-tax should be on the basis of need. That does not seem to be justifiable. Grants under Articles 275(1) and 282 can take care of the needs of different States. As a matter of fact, grants are now increasing. The Planning Commission, which is trying to bring about a certain amount of equalisation in social services in different States, is giving more aid to the poorer States. During the last ten years, the Planning Commission grants under Article 282 have emerged as a powerful instrument for bringing about financial adjustment in the State finances. There is a need to improve Planning Commission grants and remove the matching grant clause in order to provide better assistance to poor States. Similarly, more grants under Article 275(1) can be given to needy States. These grants should be given purely on the basis of fiscal needs of different States and fiscal needs should be calculated on the basis of *per capita* income and consumption of different States. The wide disparity that now prevails in different States in regard to *per capita* income and consumption should be solved by means of grants. But tax sharing should be automatic in character. The only method to make it automatic is population. Distribution on the basis of population will not only minimise Federal-State controversy, it will also secure some degree of fiscal independence and ensure budgetary certainty.

SAFETY ASHTRAY

An ashtray designed to prevent forgetful smokers from burning holes in table-tops—or worse—is on the German market. An abandoned cigarette, left smouldering on the ashtray's cigarette rest, will be tipped into the tray at the moment when it would normally overbalance and fall out. This is done by attaching the rest to the rim of the tray by a hinge and fitting a bi-metal spring. The spring tilts the rest in the right direction once the heat of a burning cigarette reaches the critical point.

WANTED

BELGIAN MANUFACTURER'S AGENT located in Brussels wishes to meet in Benelux, West Germany or France Indian businessmen to help them making proper contacts and after their departure, follow and check the selling or buying negotiations they may have started. Write to Box No. 988, C/o "Commerce," Brady House, Veer Nariman Road, Fort, Bombay.



It happened some years ago in the steel melting shops at the Jamshedpur works. A large ladle, carrying 75 tons of molten iron, suddenly crashed to the ground with a deafening noise from an overhead crane. The spattering sparks and red-hot metal seriously injured a number of brick-layers working at what seemed to be a safe distance. The air was rent with the frenzied shouts of the men and the hissing of steam

The first ambulance could remove only five of the injured to the hospital. General Manager Keenan could take only three more in his car. He chose the three who had a better chance of survival than the rest. One of these men, a Hindu worker, however, refused to go. "Do not take me away", he said. Disregarding his own agony, he feebly nodded towards a half-burnt Muslim colleague, and said: "*Hamare bhai ko le jao.*" As Keenan recalls, "The Hindu who was in pain and danger of death remembered, not that the Mohammedan was of a different faith, but that he was his brother."

This feeling of comradeship, born of the common bond of labour, is the spirit that characterises Jamshedpur, where industry is not merely a source of livelihood but a way of life.

PAPER FOR THE PLANS

Paper means progress—to us it also means business.
The throbbing pulse of India's industrialization can be felt as the country races towards the "take-off" stage. The Third Plan is the threshold that offers this exciting view of vital economic activity.
We at West Coast Paper Mills, with new expansion plans in hand, endeavour to keep in pace with the country's progress.
From our plant at Dandeli, during the year 1960-61, we manufactured 17,084 tons of writing and printing and 8,583 tons of Kraft paper resulting in a net saving in exchange of Rupees 4 crores to the National Exchequer.

When camels were customary

The year—1903. Remington opened their first office in India to sell typewriters and sometimes had to deliver them by camel.

However, you cannot keep back progress. Sales grew—so did Remington. Today, there are 30 fully staffed Remington Rand branches in strategic positions throughout India.

In 1952, the Company first started the indigenous manufacture of typewriters and record systems at their factory in Calcutta. Still sales increased, and to meet the demand Remington Rand in 1960 opened the largest factory of this kind in Asia at Howrah.

Now 85% of the components of Remington typewriters are manufactured in India—with Indian raw materials—by Indian Staff.

Remington Rand, pioneers of the typewriter in India, have plans afoot to expand even further. Negotiations are under way to once more double production—a move which will offer employment to many hundreds more skilled and unskilled personnel—and enable the Company to meet the ever increasing demands of this growing Nation.

BONUS COMMISSION SET UP

PERSONNEL AND TERMS OF REFERENCE

AT long last the personnel of the Bonus Commission has been finalised. A copy of the Government resolution constituting the Commission was placed on the table of the Rajya Sabha by Mr. Abid Ali, Deputy Minister for Labour, on the 7th inst. The Commission consists of seven members. Besides the Chairman, Mr. M. R. Meher, there are six members, two each representing workers and employers and two independent members. Mr. N. Dandekar and Mr. D. Sandilya are the representatives of employers, the former representing employers in the private sector and the latter employers in the public sector. Workers are represented by Mr. S. R. Vasavada (I.N.T.U.C.) and Mr. S. A. Dange (A.I.T.U.C.). The two independent members are Mr. M. Govinda Reddy, M.P., and Dr. B. N. Ganguly, Director, Delhi School of Economics.

Thus, while employers in the public and private sectors and workers in the private sector have been represented on the Commission, workers in the public sector have been significantly omitted. Since the principle of separate representation has obviously been recognised, this omission cannot but be regarded as a discrimination against workers in the public sector. If the Government's explanation for this is that it did not want to treat workers of the public sector undertakings differently from those of the private sector, it raises the counter-argument that it has not applied the same principle so far as representation to employers in the public and private sectors is concerned. Perhaps, the Government did not want to increase the number of representatives of workers to three, as against two for employers. But all this is quibbling in logic. For the workers in the public sector do not stand to lose from having no representation, for the representatives of the I.N.T.U.C. and A.I.T.U.C., under which they are largely organised, can be expected to plead for them. In actual effect, therefore, it is the employers in the private sector who have suffered, for the representative of employers in the public sector is unlikely to support his counterpart from the private sector on all the issues.

With the finalisation of the personnel of the Commission, the controversy regarding the composition of the Commission has ended. It may be noted that it is now almost a year since the Government's decision to appoint a Bonus Commission was announced. It was in December 1960 that Mr. G. L. Nanda, Union Minister for Labour, announced that Mr. M. R. Meher would be the Chairman of the Bonus Commission. Employers were quick to react to the announcement by expressing their strong disapproval of the selection of Mr. Meher as the Chairman. They contended that Mr. Meher, as President of the Industrial Court, Bombay, had dealt with a number of bonus disputes and was hence not a suitable person to head the Commission, because, howsoever competent and independent he might be, he was bound to be obsessed by the various decisions and awards given by him. They wanted no less a person than a judge of the Supreme Court, sitting or retired, to preside over the high power Commission, with two independent persons as members to ensure strict impartiality.

The Government was not prepared to change its mind on this subject and it appeared, at one stage, that employers would boycott the Commission or non-co-operate with it. The Government stuck to its choice of the Chairman but agreed to the original suggestion of the Standing Labour Committee to make the Commission tripartite in character, giving equal representation to workers and employers. The tie between the I.N.T.U.C. and A.I.T.U.C. for representation forced the Government to give representation to both. An equal number of representatives had to be allowed for employers too. Originally, the suggestion was that both the employers' representatives should be from the private sector. The proposal for giving representation to the public sector was only made later and it has been accepted.

Surprisingly enough, the terms of reference of the Commission did not excite as much controversy as the personnel, though the final terms, drawn up at a tripartite meeting held in New Delhi last month, was substantially different from the draft terms prepared by the Union Ministry of Labour. The terms of reference, in their final form, are the following:

(1) To define the concept of bonus and to consider, in relation to industrial employments, the question of payment of bonus based on profits and recommend principles for computation of such bonus and methods of payment.

The term "industrial employments" will include employment in the private sector and in establishments in the public sector not departmentally run and which compete with establishments in the private sector.

(2) To determine the extent to which the quantum of bonus should be influenced by the prevailing level of remuneration.

(3) (a) To determine what the prior charge should be in different circumstances and how they should be calculated.

(b) To determine conditions under which bonus payments should be made unit-wise, industry-wise and industry-cum-region-wise.

(4) To consider whether the bonus due to workers, beyond a specified amount, should be paid in the form of National Savings Certificates or in any other form.

(5) To consider whether there should be lower limits irrespective of losses in particular establishments, and upper limits for distribution in one year and, if so, the manner of carrying forward profits and losses over a prescribed period.

(6) To suggest an appropriate machinery and method for the settlement of bonus disputes.

(7) To make such other recommendations regarding matters concerning bonus that might be placed before the Commission on an agreed basis by the employers' (including the public sector) and the workers' representatives.

The first term of reference is the most important. It sets down the task of the Commission, that is, to define the concept of bonus and recommend principles for its computation and payment. Terms of reference (2) to (5) give certain specific directions to the Commission regarding the lines along which investigations may be made. The sixth term of reference requires the Commission to suggest appropriate machinery for the settlement of bonus disputes. The last term of reference gives the Commission discretionary powers to examine such matters regarding bonus as are mutually agreed to buy employers' and workers' representatives.

As the Commission has now been officially constituted, employers and labour unions should wholeheartedly co-operate with it to expedite its work. Meanwhile, it would be desirable that they should wholeheartedly co-operate with it to existing disputes should be settled according to the principles and practices now prevailing.

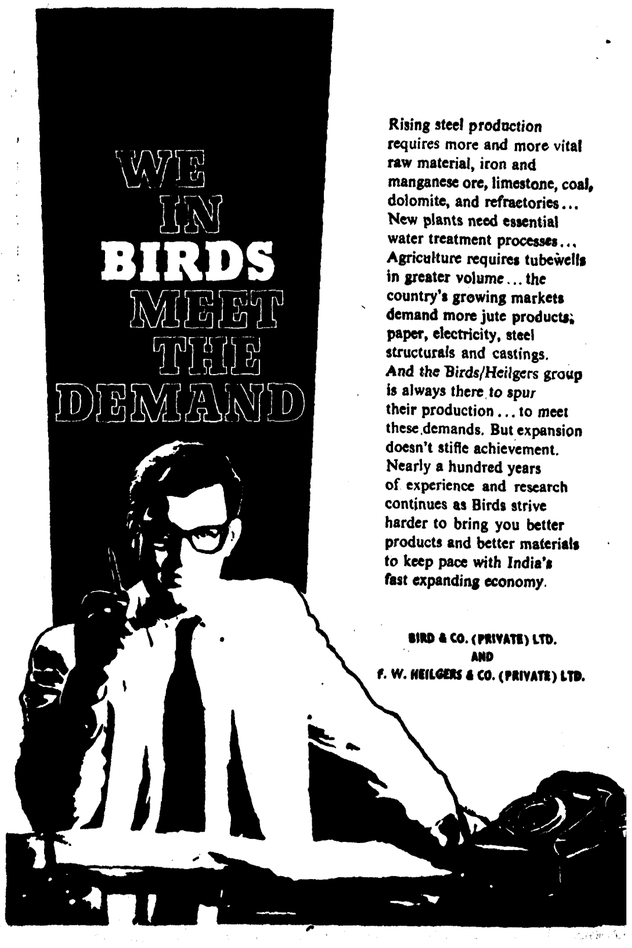
GORAKHPURI LABOUR

The Government of India has reorganised the set-up relating to recruitment and employment of Gorakhpuri labour engaged in coal mining industry. The aim is to remove all forms of control, regulation and regimentation exercised so far over Gorakhpuri labour.

Under the reorganised system there would now be no distinction between Gorakhpuri labour and other workers in the coal-mining industry. Facilities previously enjoyed by the Gorakhpuri labour under the Coalfields Recruitment Organisation will now be available to all workers. All recruitment would be channelised either through the local employment exchange or the Labour Depot at Gorakhpur. Continuity of employment would be ensured to all workers, local as well as Gorakhpuri. The reorganisation of the Gorakhpuri labour in coal-mining industry has been made on the recommendations of the Committee of Members of Parliament on Gorakhpuri Labour and in consultation with the representatives of colliery owners' and workers' organisations.

SAFETY AWARDS

The Union Ministry of Labour and Employment has drawn up two schemes, one for giving national safety awards and the other for rewards on safety suggestions in industrial undertakings. Under the scheme for national safety awards, those industrial undertakings, which work at least one million man-hours per year and achieve the largest percentage reduction in accidents during a calendar year, as compared with the previous year, will receive the award. The scheme for rewards on safety suggestions provides for granting prizes for workers for suggestions on accident prevention.



Rising steel production requires more and more vital raw material, iron and manganese ore, limestone, coal, dolomite, and refractories... New plants need essential water treatment processes... Agriculture requires tubewells in greater volume... the country's growing markets demand more jute products, paper, electricity, steel structurals and castings. And the Birds/Heilgers group is always there to spur their production... to meet these demands. But expansion doesn't stifle achievement. Nearly a hundred years of experience and research continues as Birds strive harder to bring you better products and better materials to keep pace with India's fast expanding economy.

G.A.T.T. CALLS FOR CUT IN TARIFF BARRIERS

INDIA OPPOSES PRINCIPLE OF RECIPROCITY

A NOTABLE outcome of the G.A.T.T. Ministerial Conference, full details of which have been made available just this week, was the assurance given by the representatives of developed countries to ease restrictions on imports into their countries of goods from the less-developed countries. Special mention deserves to be made of the U.S. representatives, but for whose unambiguous support for the demands of less-developed countries, the Conference would have ended in the usual tame manner. In effect, the U.S. gave a signal lead to the other developed countries to moderate their protectionist policies. The U.S. stand might have been prompted by the strong case built up by countries like India and Brazil for a revision of the existing import policies and other restrictions in developed countries. Mr. K. C. Reddy, India's Minister for Commerce and Industry, made a powerful plea to reduce tariff barriers and remove other restrictions on imports imposed by industrially developed countries.

Mr. Reddy made a pointed reference to the fact that the developed countries had not been adequately responsive to the needs of developing countries. Adverting, in particular, to India's negotiations with the European Economic Community (Common Market) in regard to their common tariff, he pointed out that "we have not had an outcome which is satisfactory to us from the point of view of increasing the volume of our trade with the Community." Nor did it appear to him likely that "important new benefits" would accrue to India's trade as a result of the Dillon tariff negotiations currently being held under the auspices of the G.A.T.T. separately. He was particularly critical of the principle of reciprocity demanded by industrialised countries in any concessions which they granted. He appealed to the developed countries to grant "one-way free trade facilities" to the less-developed countries, both in regard to primary products and semi-processed and processed goods. In a cogent analysis of the situation confronting less-developed countries like India, Mr. Reddy observed as follows:

"Both in the course of the negotiations with the Community and with other industrialised countries, for example, the United States, we have been greatly handicapped by the currently applied principle of reciprocity. At each successive tariff negotiation so far, the less-developed countries have had to make large concessions in regard to tariffs on imports, generally of manufactured goods, in return for concessions on their exports which consisted largely of primary products. The concessions granted to primary products by industrialised countries would, in any case, have helped the industries in these countries by reducing production costs and increasing the opportunities for the sale of processed and manufactured articles both within their own borders and in the field of exports. The less-developed countries, however, by being compelled to reduce tariffs on manufactured products, have been inhibited from establishing industries and diversifying their economies to the extent which their natural resources, their man-power and other favourable economic factors would justify. In more recent times, their Governments have also been inhibited from raising revenues which they badly need for the development of the infra-structure within their borders. In these circumstances, India and, I am sure, other less-developed countries have little room for manœuvre and cannot offer reciprocal concessions for tariff reductions granted by the industrialised countries. It is only by offering what may be called one-way free trade facilities to the less-developed countries both in regard to primary products and in regard to semi-processed and processed goods and the simpler manufactures that the less-developed countries can be assisted to earn foreign exchange which they could use for development and growth."

Another impediment in the way of promoting exports to developed countries is the fiscal duties levied by them on products originating in developing countries. Mr. Reddy pointed out that "the incidence of protective tariff duty and of an internal fiscal duty, together, greatly reduces the value to the exporting countries of locational and other advantages and deprives them of the natural competitive advantage which is the essence of the enlargement of international trade through a sound and rational international division of labour." Fiscal duties in those countries were, of course, sought to be justified by the need for revenue. But this argument, according to Mr. Reddy, would not stand scrutiny. Giving the instance of duty on tea, in this connection, he stated that "the proportion of the revenue derived from fiscal duties on tea to total revenue is 0.13 per cent in West Germany and 0.01 per cent in France." The loss of this modest revenue, he added, would certainly "not break the back of these increasingly prosperous and powerful industrial countries."

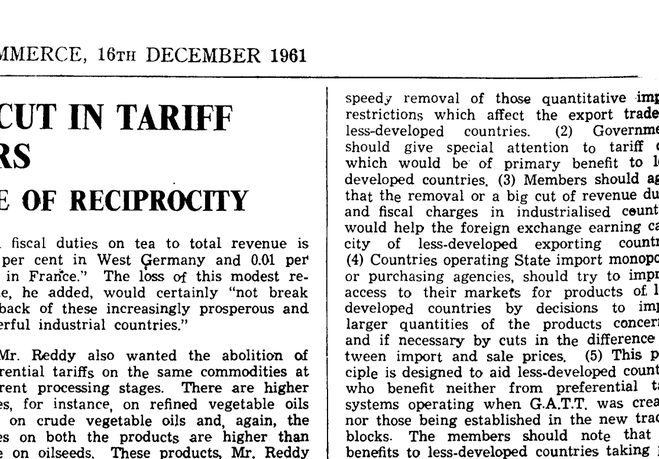
Mr. Reddy also wanted the abolition of differential tariffs on the same commodities at different processing stages. There are higher duties, for instance, on refined vegetable oils than on crude vegetable oils and, again, the duties on both the products are higher than those on oilseeds. These products, Mr. Reddy observed, belonged to the category of the simpler processed goods and manufactures "which the countries growing oilseeds have a natural advantage for producing." Since the prohibitive duties on processed goods will only hamper the attempt of developing countries to diversify their industrial structure and pattern of their exports, Mr. Reddy's plea is quite sound.

The three-point programme outlined at the conference by the U.S. went a long way towards assuaging developing countries. The U.S. programme calls for (1) the gradual opening in industrialised countries of markets for manufactured goods from underdeveloped countries, (2) price stabilisation for primary products and (3) gradual elimination of preferential tariffs granted to certain countries, for instance, those enjoyed by the associated territories in the Common Market. The U.S. approach to the problem is elaborated in the seven-point declaration submitted to the G.A.T.T. This declaration was accepted by all the members. The declaration contains the following suggestions: (1) Governments should give immediate and special attention to the speedy removal of those quantitative import restrictions which affect the export trade of less-developed countries. (2) Governments should give special attention to tariff cuts which would be of primary benefit to less-developed countries. (3) Members should agree that the removal or a big cut of revenue duties and fiscal charges in industrialised countries would help the foreign exchange earning capacity of less-developed exporting countries. (4) Countries operating State import monopolies or purchasing agencies, should try to improve access to their markets for products of less-developed countries by decisions to import larger quantities of the products concerned, and if necessary by cuts in the difference between import and sale prices. (5) This principle is designed to aid less-developed countries who benefit neither from preferential tariff systems operating when G.A.T.T. was created, nor those being established in the new trading blocks. The members should note that the benefits to less-developed countries taking part may include not only tariff preferences but also other forms of assurances in the marketing of the products concerned. (6) The subsidisation of either the production or export of primary products may restrict the market opportunities of less-developed countries. Where that is so, the Governments concerned should seek to limit the use of the subsidies to avoid injury to the export earnings of less-developed countries, and (7) Governments, disposing of commodity surpluses should bear in mind that the products concerned are generally important in the export trade of one or more of the less-developed countries.

If this declaration, now accepted by the G.A.T.T. signatories, is put into practice by all the developed countries, it will certainly help the growth of developing countries, and enable the world to move further in the direction of establishing a multilateral trading system. The outcome of the current negotiations relating to Britain's entry into the Common Market will show to what extent the interests of less-developed countries in the Commonwealth have been recognised and the spirit of the G.A.T.T declaration has been fulfilled.

TOOLING UP?

We are probably known to you by name, but you may not know the scope of our activities. We would therefore invite enquiries on any of the following:



• standard machine tools • transfer machinery • automatic production machinery • hydraulic machinery and steel mill plant and specialized equipment • small tools • cutting tools (including 'Wimet' tungsten carbide tools) • engineers' tools • measuring instruments • portable electric • pneumatic and flexible shaft tools • welding plant and wood-working machinery • foundry plant • inspection equipment • paint spraying plant • washing and degreasing plant and split roller bearings.

To
Sales Manager,
M/s Ashok Leyland Ltd.,
Ennore, Madras

Dear Sir,

Our Ashok Leyland Comet 203" wheelbase passenger bus has covered over 400,000 miles with the original engine.

It is remarkable that this extremely satisfactory performance has been achieved despite the difficult journeys the vehicle has done all these years. It has carried tourists from Bangalore to Ootacamund making over 460 trips to the hill station, averaging 15 miles per gallon of diesel oil. The majesty of its run over the winding ghat sections has won the admiration of not only the passengers but also of other motor operators.

It is a pleasure to own a Leyland bus, to experience its economy, its great strength and its smooth run over all types of roads. It is a pleasure too to talk about it to others.

Yours faithfully
for S R M S

BALLARPUR PAPER'S PROFIT DOWN

FINANCIAL POSITION SOUND

HOW exactly the revised selling prices for paper and paper products, which came into effect from 1st January 1960, have been unremunerative can be gauged from the working results of the Ballarpur Paper and Straw Board Mills Limited [Managing Agents: Messrs. Karam Chand Thapar and Bros. (Private) Limited, Calcutta] for the year ended 30th June 1961, when their full effects were felt. During the year under review, both production and sales of paper registered further increases, the former from 11,858.64 tons to 12,924.531 tons, and the latter from 11,494.41 tons to 12,400.63 tons. The quality of the paper was also maintained. Nevertheless, the financial turnover went up only modestly from Rs. 235.88 lakhs to Rs. 240.37 lakhs and, although income from other sources increased from Rs. 8.16 lakhs to Rs. 11.85 lakhs, the gross profit has suffered a considerable setback from Rs. 81.15 lakhs to Rs. 73.70 lakhs. In the year ended 30th June, 1958, with a production of 9,910 tons and sales of 9,896 tons, the Company had earned a gross profit of Rs. 63.62 lakhs. Indeed, the Directors rightly point out that the impact of the revised selling prices is very much more than what the working results reflect, as the adverse effects of the price reduction have very largely been offset by increased production, maximum economy all round and better operating efficiency.

The manufacturing and operating costs were higher. The cost of raw materials consumed rose rather sharply from Rs. 17.95 lakhs to Rs. 26.54 lakhs, thus reversing the downward curve noticed in the previous year, when the cost was lower as compared with Rs. 22.73 lakhs in the year 1958-59. Prices of chemicals and other stores continued to rise. The total cost of stores and spares consumed during the year, however, declined from Rs. 56.89 lakhs to Rs. 50.78 lakhs, presumably due to the economy and efficiency adopted during the year. Power and fuel cost the Company Rs. 14.64 lakhs, against Rs. 12.32 lakhs in the previous year, and the burden of excise duty went up from Rs. 27.50 lakhs to Rs. 31.81 lakhs. Operating costs rose from Rs. 48.23 lakhs to Rs. 54.75 lakhs. After providing Rs. 7.38 lakhs (Rs. 12.94 lakhs) for depreciation, Rs. 25 lakhs (Rs. 27 lakhs) for taxation and Rs. 4.91 lakhs (Rs. 6.82 lakhs) for Managing Agents' commission the net profit is Rs. 36.41 lakhs against Rs. 34.39 lakhs previously. There is a small increase in the dividend on ordinary shares of Rs. 25 each from 14.30 per cent to 14.50 per cent, both being subject to deduction of tax. The net return per share is higher at 10.15 per cent, as compared with 10.01 per cent previously. The taxable preference dividend of 9 per cent against 7.14 per cent on the 5 per cent, tax-free, cumulative shares of Rs. 100 each is now made more realistic. Reserves get Rs. 26.10 lakhs against Rs. 24.26 lakhs previously. Dividends take away Rs. 11.33 lakhs (Rs. 9.47 lakhs) and leave Rs. 2.28 lakhs to be carried forward against Rs. 3.31 lakhs brought in.

The Company's performance over the past four years is compared in the table below:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale of paper, stationery and stores	2,40.37	2,35.88	2,18.81	1,94.13
Other income	11.85	8.16	4.78	1.59
Closing stocks	4.84	7.52	3.04	2.80
Cost of raw materials consumed	26.54	17.95	22.73	20.86
Cost of stores and spares consumed	50.78	56.89	43.55	39.15
Power and fuel	14.64	12.82	10.52	10.06
Excise duty	31.81	27.50	25.62	23.60
Other expenses	54.75	48.23	39.89	38.43
Gross profit	73.70	81.15	81.28	63.62

Provisions written back	..	..	9.37	..
Transfer to reserves	26.10	24.26	13.29	1.30
Dividends—				
5 per cent. tax-free cumulative preference	1.63*	1.29*	10.16†	..
Ordinary	9.70 (14.50 %)*	8.18 (14.30 %)*	5.72 (10%)*	..
Carry forward (+) credit (—) debit	+2.28	+3.31	+2.53	—8.67

* Subject to deduction of tax.
† Includes Rs. 9.87 lakhs paid at 5 per cent., free of tax, up to 30th June 1958. The balance of Rs. 1.29 lakhs is subject to deduction of tax.

The Directors state that the expansion programme, envisaged in the previous year, is getting under way. The Company proposes to set up a pulp mill, with a capacity of 70 tons of finished paper per day. With the bamboo preparation equipment, however, the mill will have a capacity sufficient for 85 tons of pulp per day. It is proposed to set up another pulp mill to turn out 15 tons of finished paper per day. Firm orders for brown stock washing system, motors and starters have been placed with indigenous sources, and their deliveries would be in time to synchronise with the erection of the imported equipment, which is to be secured from Messrs. Klonne-Collin GmbH, Dortmund, West Germany, and Messrs. EMPACEL, Paris. Orders for foreign equipment were placed in May last year. The shipments are expected to start some time in April next year, and the first consignment would be at site around June or July 1962, and the last by March 1963.

The Company is gradually strengthening its reserve position. However, the sooner it is done the better. For, though reserves and surplus have been consolidated further from Rs. 46.45 lakhs to Rs. 71.52 lakhs, they are not even half of the subscribed share capital of Rs. 159.86 lakhs. While the liability on secured loans has declined from Rs. 103.71 lakhs to Rs. 95.88 lakhs, unsecured loans have gone up during the year from Rs. 1.31 lakh to Rs. 5.40 lakhs. Current liabilities and provisions amount to Rs. 95.41 lakhs, bringing the total indebtedness to Rs. 196.69 lakhs. As against these, there are current assets of the value of Rs. 319.43 lakhs, of which no less than Rs. 155.41 lakhs represent cash and bank balances. Contingent liabilities (not taken into account) include guarantees given by the Bank of Tokyo Ltd., Calcutta, for Rs. 311.51 lakhs, being the value of contracts to be executed on capital account of Rs. 323.00 lakhs and Rs. 1.67 lakh being a claim against the Company not acknowledged as debt. Investments have increased from Rs. 24.48 lakhs to Rs. 34.21 lakhs and command a market value of Rs. 34.77 lakhs (the quoted investments amount to Rs. 19.21 lakhs and the unquoted to Rs. 15.00 lakhs, with a respective market value of Rs. 19.27 lakhs and Rs. 15.50 lakhs). During the year, the gross block account increased from Rs. 276.44 lakhs to Rs. 284.97 lakhs and is very conservatively written down to Rs. 62.07 lakhs.

It will be seen from the foregoing account that the overall financial position of the Company is quite healthy.

The Rs. 25 fully paid ordinary shares of the Company are being quoted at Rs. 42.62 *cum-div.*, and at the *ex-div.* value of nearly Rs. 40, they offer a yield of 6.3 per cent per annum, free of tax.

SESHASAYEE WIRE ROPES LTD.

A public limited liability company under the name Seshasayee Wire Ropes Ltd. has just been registered in Kerala State, with an authorised share capital of Rs. 100 lakhs. Messrs. Seshasayee Brothers (Travancore) Private Ltd., who promoted Fertilisers and Chemicals (Travancore) Ltd., Aluminium Industries Ltd., Forest Industries (Travancore) Ltd. and Travancore Cochin Chemicals Ltd., are the promoters of this new Company. The Company has been licensed to manufacture 3,000 tons of steel wire ropes annually. The factory will be located on the outskirts of Alwaye town in the Ernakulam District. Suitable land for locating the factory and other buildings has been acquired. An office has been opened at Ernakulam from where the constructional activities will be directed. The Company will shortly be in the market for raising capital.

The Company has secured the technical and financial collaboration of the Japanese firms of Kokoku Kosensaku Co. Ltd. and Ataka & Co. Ltd. The former Company is well known in India in so far as wire ropes are concerned and this firm will design and engineer the factory, supervise the erection of equipment, and bring the factory to the production stage. Ataka and Company will supply the requisite machinery and equipment from Japan. These Japanese firms will invest Rs. 3½ lakhs each in the share capital of the Indian company. The factory is expected to commence operation towards the end of 1963. It will be the first to produce steel wire ropes in South India.

J.K. STEEL'S PROGRESS GRATIFYING

FURTHER RISE IN CAPITAL LIKELY

FROM Rs. 16.94 to Rs. 40.50 and back to Rs. 21.75 in less than twelve months is, indeed, a wide range of fluctuation for a Rs. 10 paid-up equity share. But, in the case of J.K. Steel shares, it is justified. For not only are these shares a must for every investor, but they are strongly fancied even by the small fry in the speculators' camp. And there is a reason for this. Astounding as are their movements, their strength is, indeed, inspiring. And, if despite this, the shares are currently dormant around Rs. 21.75 *cum-div.*, it is partly because the steel section as a whole in the share market is likewise and partly because those who have backed these shares are not quite happy with the bare maintenance of the dividend at 20 per cent gross for the year ended 30th June 1961. The 1960-61 annual report of J.K. Steel Ltd. provides ample proof to conclude that the hope for yet another modest increase in the dividend (it was stepped up only in the previous year from 12.5 per cent to 20 per cent, subject to deduction of tax) was not without sufficient basis. The managing agents of the Company, Messrs. J.K. Industries (Private) Ltd., Calcutta, have every reason to be proud of the great strides made by the Company since it attained the take-off stage in the year ended 30th June 1958. The salient features of this eventful progress are brought out in the comparative table below:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale proceeds	1,54.55	1,26.42	96.64	57.88
Other income	0.55	0.86	0.32	0.11
Commission paid on sales	2.55	2.12	1.69	1.61
Closing stocks	40.14	36.92	24.55	11.29
Cost of raw materials consumed	81.71	70.73	57.19	37.18
Cost of stores and spares consumed	10.81	6.96	5.27	2.79
Power and fuel	3.56	2.64	2.24	1.59
Other expenses	20.09	15.18	12.55	8.06

Note:—From 1960, the preference dividend has been adjusted to 9 per cent, taxable.

As will be evident from above table, gross sale proceeds during the year under review increased further, by Rs. 28.13 lakhs, to Rs. 154.55 lakhs, and are nearly three times as much as during the year 1957-58. Gross profit has correspondingly gone up by Rs. 6.74 lakhs to Rs. 36.37 lakhs and is six times that three years ago. The increase in gross profit during the year under review, however, is not in proportion with that in sales. It is so because the Company was faced, for the first time, with a substantial rise in both manufacturing and operating costs. Cost of raw materials was up from Rs. 70.73 lakhs to Rs. 81.71 lakhs and stores and spares consumed from Rs. 6.96 lakhs to Rs. 10.81 lakhs. The Company spent Rs. 3.56 lakhs on power and fuel against Rs. 2.64 lakhs previously. There was, however, a sharper rise in the operating costs from Rs. 15.18 lakhs to Rs. 20.09 lakhs largely due to a higher wage bill of Rs. 14.07 lakhs against Rs. 9.63 lakhs in the preceding year.

The Directors have increased the essential provisions: depreciation from Rs. 6.02 lakhs to Rs. 7.49 lakhs and taxation from Rs. 7.30 lakhs to Rs. 9.85 lakhs. Managing agency commission absorbs Rs. 2.76 lakhs against Rs. 2.36 lakhs previously. The net profit, therefore, shows only a modest improvement of Rs. 2.30 lakhs to Rs. 16.27 lakhs. In such conditions, it would have been inexpedient for the Directors to step up the dividend on equity capital. The amount transferred to reserves is also lower at Rs. 11.31 lakhs as compared with Rs. 14.48 lakhs in the previous year. The carry forward is Rs. 0.96 lakh against Rs. 0.91 lakh brought in.

The Directors report that the improved results for the year were achieved, despite some loss of production on account of unhappy labour situation. Billet supplies during the year were unsatisfactory and the hot rolling mill had to face shortage of the raw material from time to time. Sufficient progress, they say, has been made with regard to the project for the manufacture of chain blocks and electric hoists, and production is expected to start early next year.

The Company's plans for doubling the capacity of wire rope plant and installing an electric furnace for the manufacture of steel are being pursued, though there has been some delay on account of foreign exchange restrictions. The Company has also obtained a licence for the manufacture of seamless pipes.

On 17th July 1961, the Company received the consent of the Controller of Capital Issues to increase its share capital by Rs. 20 lakhs by the issue of further 2 lakh fully paid-up ordinary shares of Rs. 10 each as bonus shares. Accordingly, at its extraordinary meeting on 31st August 1961, the general body adopted a resolution proposing that the total subscribed and paid-up capital of the Company be increased from Rs. 30 lakhs to Rs. 50 lakhs. By another resolution, adopted at the same meeting, Rs. 20 lakhs out of Rs. 30 lakhs of the undivided profits of the Company lying to the credit of the general reserve were capitalised and applied towards payment in full of the 2 lakh ordinary shares of Rs. 10 each, ranking in all respects *pari passu* with the existing ordinary shares, except that the dividend on them would be due only out of the profits of the Company for the year commencing from 1st July, 1961. These ordinary shares have been allotted to the holders of the existing ordinary shares, whose names appeared in the Company's books on 31st August 1961, in the ratio of one for one. Since the Company's original authorised capital of Rs. 50 lakhs has thus been fully issued and subscribed, the Directors have now recommended that the authorised capital be raised to Rs. 1.5 crores by the creation of further 20,000 cumulative redeemable preference shares of Rs. 100 each and 800,000 ordinary shares of Rs. 10 each. The matter will be considered by the general body at its ensuing annual meeting.

The changes in the capital structure already undertaken and those proposed now are intended to provide additional finance to the Company for undertaking the expansion schemes on hand. This is more in line with the sound policy of increasing dependence on the owned funds rather than on borrowings, which, as at the end of the year under review, have been decisively kept low at Rs. 24.11 lakhs, and are lower as compared with Rs. 26.50 lakhs at the previous year-end. The borrowings represent loans from the Government of West Bengal against mortgage of fixed assets. The gross block account as at 30th June 1961 is of the value of Rs. 81.63 lakhs and shows an addition of Rs. 3.79 lakhs during the year. This has been written down to Rs. 56.22 lakhs. Reserves and surplus make a total of Rs. 50.27 lakhs against Rs. 40.94 lakhs in the previous year. With current liabilities and provisions at Rs. 51.26 lakhs the total indebtedness to outsiders is Rs. 76.11 lakhs which are more than fully covered by current assets, loans and advances aggregating Rs. 90.36 lakhs. In addition, there are investments which have increased during the year from Rs. 8.28 lakhs to Rs. 9.82 lakhs, of which those quoted are shown at Rs. 8.68 lakhs against a market value of Rs. 8.55 lakhs.

The Rs. 10 fully paid ordinary shares of the Company are currently quoted at Rs. 21.75 *cum-div.*, and, on an *ex-div.* basis, offer an attractive yield of 6.8 per cent per annum, free of tax.

For those you leave behind

DO you realise that you expose those who depend on you to grave risks, by failing to make immediate arrangements for their welfare, when you are no longer there to look after them yourself?

If you haven't yet done so, please make a will — or execute a Trust in their favour — *now!*

The administration of estates is a highly complicated matter these days, and it would be difficult to find a better Executor or Trustee than a bank which is always accessible, and which can be depended on to act with prudence, sympathy and impartiality. A bank is human — but it never dies.

The State Bank of India accepts appointment as Executor and Trustee, solely or jointly with any other person — and its services are at *your* disposal.

Why not call on your nearest Bank Agent or send for a copy of the Bank's Booklet on Executor and Trustee business?

CONSOLIDATED COFFEE AND COFFEE LANDS FARE BETTER

PREVIOUS REVERSES MADE GOOD

THE coffee plantations owned by the Consolidated Coffee Estates (1943) Ltd. (Managing Director: C. I. Machia, Pollibetta) and Coffee Lands and Industries (Mysore) Ltd., for which the former Company acts as secretaries and treasurers, have come out none the worse for the heavy and unprecedented rains which afflicted them during the year ended 30th June 1961. Damage due to flooding was, fortunately, restricted to some low-lying areas but conditions in even these are now fast on their way to improvement. Notwithstanding these adversities, the actual production of coffee, in either case, was substantially higher than earlier estimates and this naturally paved the way for larger sales.

In the case of the Consolidated Coffee Estates, for example, a total of 4,218.10 tonnes of coffee was sold, as against 2,449.16 tonnes during 1959-60, and, though the price secured was lower at Re. 1.90 per point, as against Rs. 2.20 per point previously, the value of sales has increased by Rs. 32.27 lakhs to Rs. 104.27 lakhs. There has, on the other hand, been a slight decline (*a*) in sale of pepper and minor produce, from Rs. 10.16 lakhs to Rs. 7.90 lakhs, (*b*) in the profit from sale of previous years stocks from Rs. 4.28 lakhs to Rs. 2.33 lakhs, and (*c*) in other income, from Rs. 30.89 lakhs to Rs. 29.92 lakhs, so that total receipts for the year show a rise of only Rs. 27.09 lakhs to Rs. 144.42 lakhs. All the same, the gross profit is substantially higher at Rs. 42.95 lakhs, as against Rs. 27.22 lakhs a year ago. Side by side with an increased profit, essential provisions have also been stepped up, that for the managing agents' remuneration from Rs. 0.48 lakh to Rs. 0.60 lakh, for depreciation from Rs. 5.06 lakhs to Rs. 5.02 lakhs, and for taxation, quite naturally, from Rs. 8.60 lakhs to Rs. 15.40 lakhs. Even then, the net profit shows a rise of Rs. 8.85 lakhs to Rs. 21.93 lakhs. Of this, Rs. 4.75 lakhs have been transferred to the general reserve and, after setting aside Rs. 1.21 lakh from the balance to meet the liability for preferred dividends for the year, the Directors have proposed to maintain the ordinary dividend at 20 per cent, subject to deduction of tax. These, as during the previous year, claim Rs. 14.31 lakhs, leaving a higher carry forward of Rs. 2.27 lakhs, as against Rs. 0.61 lakh brought in.

Owing to a vastly improved sale of 1,087.75 tonnes of coffee, as against 677.41 tonnes during the previous year, Coffee Lands and Industries has, more or less, recouped the setback it had suffered during the previous year. Sales of coffee recovered from Rs. 22.08 lakhs during 1959-60 to Rs. 29.66 lakhs during the year under review and, though a decline is witnessed in other income by Rs. 4.38 lakhs to Rs. 34.24 lakhs, the gross profit has virtually doubled from Rs. 5.54 lakhs to Rs. 10.99 lakhs. From this, provision for depreciation takes away Rs. 2.00 lakhs as against Rs. 1.89 lakh and that for taxation Rs. 3.24 lakhs as compared with Rs. 1.59 lakh. Even so, the net profit stands improved by Rs. 3.69 lakhs at Rs. 5.73 lakhs. Transfer to the general reserve has been raised by Rs. 0.98 lakh to Rs. 1.51 lakh, whereas preference dividends, inclusive of the additional amount payable for the previous year, claim Rs. 0.58 lakh as against Rs. 0.52 lakh. Despite this somewhat higher appropriation, a larger sum is now available for distribution as ordinary dividends and this has prompted the Directors to restore partially the cut in dividends administered during the previous year. Thus, against 60 nP per share, subject to deduction of tax paid for the year 1959-60, the ordinary shareholders stand to get this year Re. 1.20 per share, subject to deduction of tax.

The financial position of both the companies, as reflected in their respective balance-sheets, as at 30th June 1961, is strong. In each case, the share capital is supported by a substantial reserve position, the written down value of the fixed assets bears a healthy relationship with the capital funds invested in the business, and current liabilities are very decisively exceeded by the total of current assets, loans and advances, and investments. These facts will be apparent from the synopsis of balance-sheets, given below:

(Rupees in lakhs)

	Consolidated Coffee	Coffee Lands
LIABILITIES		
Share capital:		
Preference	18.75	10.41
Ordinary	71.55	22.50
Total	90.30	32.91
Reserves and surplus	72.97	34.48
Capital funds	163.27	67.39
Current liabilities	55.99	13.79
Total	219.26	81.18
ASSETS		
Fixed assets: Gross	165.01	55.51
Less: Depreciation	45.79	15.14
Net block	119.22	40.37
Current assets, loans and advances, and investments	100.04	40.81
Total	219.26	81.18

Presently the Rs. 10 fully-paid ordinary share of the Consolidated Coffee Estates is quoted at Rs. 19.40 *cum-div.* and fetches, on an *ex-div.* basis, a net return of 7.8 per cent. Current market quotation for the Rs. 10 fully-paid ordinary share of Coffee Lands is Rs. 16.50 *cum-div.* The net yield, on an *ex-div.* basis, in this case works out to 7.2 per cent.

(Concluded from next column)

of the order of Rs. 240.55 lakhs and these two together give the total short-term liabilities remaining outstanding as on the date of the balance-sheet at Rs. 487.43 lakhs. Against these, current assets, loans and advances, and investments aggregate only Rs. 377.57 lakhs. The reserves and surplus are no doubt substantial and the management has been strengthening them year after year by adding a sizable amount from the profit. But it will have to continue this policy for some more years. This, together with the writing down of fixed assets by provision for depreciation, should go a long way towards reducing the imbalance in the financial position of the Company. Only, the ordinary shareholders will have to wait patiently all these years, before they can expect any significant rise in their dividend level.

As referred to earlier, the working of the various departments of the Company has been highly satisfactory. The sugar factory commenced crushing on 24th November 1960 and closed on 1st May 1961 and turned out 29,848 tonnes of sugar were produced, as against 22,354 tonnes. The recovery of sugar for the season was, however, lower at 8.97 per cent, as against 9.56 per cent previously.

The Rs. 10 fully paid share of the K.C.P. is currently quoted at Rs. 22.95 *ex-div.* and fetches a net return of 4.5 per cent.

K. C. P. REPORTS ENCOURAGING RESULTS

RESERVES ENHANCED

WHEN many of the sugar companies in the country have recently been compelled to restrict their dividend distributions for want of sufficient profits, it is really heartening to note that the K.C.P. Ltd. (Managing Agents: Messrs. V. Ramkrishna Sons Private Ltd., Madras) has been able to maintain, quite comfortably, for the year ended 30th June 1961, its previous rate of ordinary dividend even on a large number of shares and despite a heavy plough-back of profits. A twenty per cent rise in sales and a slightly bigger improvement in the gross profit have been the factors responsible in the main. The secret of this success lies in the fact that the departments other than sugar worked so well as to more than offset the adverse trading conditions in sugar.

Sale proceeds of widely varied products have gone up from Rs. 378.79 lakhs during 1959-60 to Rs. 445.34 lakhs during the year under review. Chief contributions to this increase have come from the sale of cement, which has risen from Rs. 66.47 lakhs to Rs. 71.79 lakhs, and from that of machinery and materials which, including internal transfers, has staged a smart rise from Rs. 46.61 lakhs to Rs. 120.09 lakhs. The Company's performance would have been better still had it not been for the fact that the sales of sugar remained subdued owing to the fall in demand for the commodity.

The higher level of production achieved by practically every department has naturally resulted in widening the profit-margin and this has, in its turn, brought about an improvement of Rs. 13.36 lakhs to Rs. 70.66 lakhs in the gross profit. Provision for Managing Agents' commission, which had claimed Rs. 3.90 lakhs during the previous year, now gets Rs. 3.50 lakhs, while that for depreciation has been stepped up by Rs. 5.86 lakhs to Rs. 21.42 lakhs. Despite a larger taxable profit, the provision for taxation has been sharply brought down to Rs. 10.50 lakhs from Rs. 24.75 lakhs a year ago. The net result of these various adjustments has been that the net profit shows a rise of Rs. 22.15 lakhs to Rs. 35.24 lakhs. To this is to be added Rs. 0.24 lakh brought forward from the previous accounting period and Rs. 10.17 lakhs as a transfer from reserves and provisions. The amount available for appropriation thus stands at Rs. 45.65 lakhs. Of this, as much as Rs. 31.35 lakhs, or nearly 69 per cent, have been credited to various reserves and provisions. Although the rate of ordinary dividends has, once again, been maintained at 15 per cent, subject to deduction of tax, such has become payable on a larger number of shares than last year.

The following comparative table clearly brings out the progress made by the Company during the last four years:

(In lakhs of rupees)

	For the year ended 30th June			
	1961	1960	1959	1958
Sale proceeds (including internal transfers)	4,45.34	3,78.70	3,72.62	3,19.75
Other income	4.96	5.64	4.38	5.90
Closing stocks and work-in-progress	1,62.08	1,08.88	77.47	1,11.62
Cess on sugarcane	16.58	11.57	11.60	13.66
Excise duty	74.63	76.76	80.22	66.17
Other expenses	3,41.83	2,70.21	2,05.30	2,13.40
Gross profit	70.66	57.30	36.64	32.74
Managing Agents' remuneration	3.50	3.90	2.34	2.00
Provision for—				
Depreciation	21.42	15.56	13.36	9.97
Taxation	10.50	24.75	..	20.77

Carry forward	0.17	0.24	0.92	0.88

* Subject to deduction of tax.

The rapid expansion and diversification effected during the past few years have naturally resulted in a certain amount of lopsidedness in the Company's balance-sheet. For example, the capital funds, as at 30th June 1961, totalling Rs. 288.95 lakhs (comprising Rs. 43.29 lakhs in preference shares, Rs. 67.70 lakhs in ordinary shares, Rs. 117.06 lakhs in reserves and surplus, and Rs. 60.90 lakhs as a long-term development loan from the Industrial Finance Corporation) are exceeded substantially—by Rs. 109.86 lakhs, to be precise—by the net value of the fixed assets standing at Rs. 398.81 lakhs. Bank loans, both secured as well as unsecured, amount to Rs. 246.88 lakhs, besides other current liabilities and provisions

STEEL PRODUCTION SOARS BY 425% AT MUKAND

We reckon our production in 1960-61 to be 69,552 tonnes of rolled products and 5,624 tonnes of castings. In other words a rise of 48% over the previous year.

In 1951-52 MUKAND employed 1,064; in April 1961—2,306. Over the past ten years production figures have soared—13,615 tonnes of rolled products and 704 tonnes of castings in 1951-52; and 425% more in 1960-61.

	57/58	58/59	59/60	60/61
	(Rs. in lacs)			
CAPITAL	51	51	71	61

Profits retained in business to date	25	35	45	57
Profit for the year	19	30	31	53
Dividend for the year	5	5	8	10

MUKAND manufactures high grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing flux of big orders—like the one placed by the Railways with MUKAND in October 1961 for 4,862 sets of Centre Buffer Couplers valued at Rs. 1,14,00,000.

MUKAND provides India's new and growing industries with the quality components that they must have.

SYNOPSES OF COMPANY REPORTS

Cauvery Sugars and Chemicals Ltd.

(*Secretaries and Treasurers*: Messrs. Parry and Co., Ltd., Madras.)

Annual General Meeting—27th December.

Working Results:

	For the year ended 30th June (In thousand rupees)	
	1961	1960
Sales (gross)	1,73,18	1,36,28
Gross profit	13,40	14,13
Transfer to taxation	3,68	21
Net profit	9,78	13,92
Adjustments	74	21
Appropriations:		
Total available balance	10,52	14,13
Transfer to taxation equalisation reserve	2,60	1,75
,, ,, development rebate reserve	21	6,05
To preliminary expenses written off	2,00	2,00
To interim dividend (taxable) preference	1,20	1,20
Proposed dividend (taxable) ordinary	3,20 (8%)	2,40 (6%)
Carried forward	1,41†	78†

N.B.—Adjustments include the balance brought forward from the previous year.

† Carried forward subject to payment of final dividend on preference share capital.

Extracts from the Directors' report: *Review of Operations*: The 1960 special season started on 27th July 1960 and ended on 15th November 1960. During this period 73,699 tonnes of cane were crushed and 6,697 tonnes of sugar produced at an average recovery of 9.09 per cent which compares with 47,753 tonnes cane crushed and 4,393 tonnes sugar produced at a recovery of 9.20 per cent during the comparable previous season. The lower recovery was mainly due to the larger tonnage crushed and the consequent longer duration of the special season.

The 1960-61 main season started on 20th December 1960 and finished on 20th June 1961. During this period 1,31,688 tonnes cane were crushed and 11,993 tonnes sugar were produced at an average recovery of 9.11 per cent which compares with 68,895 tonnes cane crushed and 6,411 tonnes sugar produced at a recovery of 9.31 per cent during the comparable previous season. The lower recovery was again mainly due to the extended period of the season. Both the quantity of cane crushed and the sugar produced during the year constitutes a record for the factory.

The liquid position of the Company has improved in so far as the excess of current assets over current liabilities, provisions etc. amounted to Rs. 21.15 lakhs as at 30th June 1961 as compared with Rs. 12.14 lakhs last year.

Under the provisions of the mortgage deed relating to the loan of Rs. 35,000 taken from the Industrial Finance Corporation of India against the security of the fixed assets and machinery sparse at the Pettaivaytalai Factory, the third instalment of Rs. 2,50,000 towards repayment of the Loan was made on 29th December 1960.

As at 30th June 1961 the amount owed by Kulittalai Cane Farms Private Limited for rent was Rs. 3,89,814 (1960—Rs. 3,99,694).

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	60,00,000	Gross block	93,66,481
Reserves and surplus	18,27,411	—Depreciation	14,38,244
Other liabilities	90,89,524		
		Net block	79,28,187
		Block in progress	1,29,606
		Current assets	82,95,580
		Cash	1,58,472
		Preliminary expenses	4,00,000
	Rs. 1,69,16,935		Rs. 1,69,16,935

* Paid-up capital consists of 20,000 six per cent. (free of income-tax) cumulative preference shares of Rs. 100 each and 40,000 ordinary shares of Rs. 100 each.

Kolhapur Sugar Mills Ltd.

(*Managing Agents*: The United Agencies Private Ltd., Kolhapur.)

Annual General Meeting—22nd December.

Working Results:

	For the year ended 30th June (In thousand rupees)

Appropriations:		
Total available balance	28,91	10,48
Transfer to general reserve	20,06	Nil
Proposed dividends (taxable) ordinary	7,12‡	7,22§
	(20%)	[(20%)
Carried forward	88	239

N.B.—Adjustments include the balance brought forward from the previous year and other credit items.

* Includes Rs. 13 lakhs transferred from provision for taxation.

† This includes Rs. 7,21,839 transferred from reserve (for distribution of dividends).

‡ Includes dividend at Rs. 604 per deferred share.

§ The dividends for 1960 were paid out of reserve (both ordinary and deferred dividends).

Extracts from the Directors' report: The Factory started crushing on the 16th of November 1960 and stopped on 13th April 1961. The directors have great pleasure in reporting that the Mills by crushing a record quantity of cane 2,51,850 metric tonnes, achieved a record production of 3,16,777 bags of sugar, making the Mills top the list of Sugar Mills in Maharashtra, also in the point of production. The average recovery this year was 12.57 per cent. The results of the Estate of the Mills are encouraging and have been the best since the inception of the Mills, being 46.9 bags per acre.

The extensions of the Distillery were completed and the new plant has gone into commission. The average daily production is 4,000 gallons. Together with the old plant the capacity is 6,000 gallons now. The Distillery has been regarded by Government as the Central Distillery for the Kolhapur region and molasses from the neighbouring factories have been allotted to the Company.

The new project for the production of *Acetic Acid, Butyl Alcohol* and *Butyl Acetate*, is well on the way. The plant and machinery, order for which was placed with Messrs. A. B. Chematur of Stockholm, Sweden, are due to arrive in 1962. Plans for the building for housing the plant are being finalised.

The directors had hoped to achieve a target of producing about 4,00,000 bags of sugar during the season 1961-62. But, as members may be aware, the recent Ordinance of the Central Government imposing a cut of 10 per cent in the production of the season 1960-61 and limiting the production of the season 1961-62 to the reduced quantity, the target cannot now be reached.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	28,56,765	Gross block	2,78,44,950
Reserves and surplus	1,06,12,419	—Depreciation	90,44,966

N.B.—Adjustments include the balance brought forward from the previous year.

* This amount includes Rs. 11,983 being refund of income-tax in respect of assessment year 1944-45 and 1946-47.

Accounts in brief as at 30th June 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	4,08,560	Gross block	3,31,891
Reserves and surplus	2,59,416	—Depreciation	94,852
Other liabilities	3,18,059		
		Net block	2,37,039
		Current assets	2,60,417
		Investments	15,000
		Cash	4,79,579
	Rs. 9,86,035		Rs. 9,86,035

* Paid-up capital consists of 2,04,280 ordinary shares of Rs. 2 each fully paid up. Of the above 25,535 shares are allotted as fully paid up pursuant to a contract without payment being received in cash and 1,78,745 shares are allotted as fully paid up by way of bonus shares through capitalisation of reserves.

(Concluded from next column)

early next year. The malt extract plant is also exepcted to be pressed into service in the near future. Work on the other projects such as distillery, ice factory and factory for the manufacture of yeast is said to be at an advanced stage.

The financial position of the Company is sound. The paid-up capital of Rs. 28.68 lakhs, of which Rs. 8.10 lakhs represent capitalisation of reserves, is supplemented by reserves and surplus of Rs. 176.43 lakhs. This strong reserve position is proving useful to finance the capital expenditure on hand. Against *nil* in the previous year, bank borrowings are shown at Rs. 25.43 lakhs. In addition, there are other current liabilities and provisions amounting to Rs. 82.65 lakhs and both are adequately covered by current assets, loans and advances aggregating Rs. 184.83 lakhs. Investments, which are not included in this total, have gone down during the year from Rs. 4.25 lakhs to Rs. 3.72 lakhs; the decline being in the quoted investments from Rs. 2.15 lakhs to Rs. 1.26 lakh. The market value of the quoted investments is nearly the same as the book value. The unquoted investments, on the other hand, have increased from Rs. 2.11 lakhs to Rs. 2.45 lakhs. Fixed assets increased during the year from Rs. 59.73 lakhs to Rs. 86 lakhs, and are written down to Rs. 58.28 lakhs. At the close of the year, capital works in progress and capital stores at site stood at Rs. 73.71 lakhs.

The Rs. 5 fully paid ordinary shares of the Company are currently quoted at Rs. 42.37 *ex-div.*, at which rate the yield on them works out to 2.4 per cent per annum free of tax.

DYER MEAKIN'S GROWTH IMPRESSIVE

LARGE EXPANSION UNDER WAY

EXCELLENT are the results of Dyer Meakin Breweries Limited (Managing Director: Mr. N. N. Mohan) for the year ended 31st March 1961. Sales turnover has improved from Rs. 316.17 lakhs to Rs. 382.02 lakhs and, despite a substantial rise in manufacturing costs, gross profit has gone up from Rs. 89.51 lakhs to Rs. 114.01 lakhs. The dividend on ordinary shares of Rs. 5 each has been stepped up from 25 per cent to 30 per cent, both subject to deduction of tax. The net return works out to 21 per cent against 17.5 per cent in the previous year, and is the highest paid by the Company in recent years. The Directors state that they have not considered it expedient to enhance the dividend further, because of the Company's heavy commitments on capital expenditure.

Raw materials consumed during the year cost the Company Rs. 26.49 lakhs, against Rs. 16.74 lakhs in the previous year. The cost of stores, power and fuel also increased from Rs. 60.69 lakhs to Rs. 73.24 lakhs. The burden of excise duty was as heavy as Rs. 114.76 lakhs and showed an increase of Rs. 14.76 lakhs over the previous year. Other expenses were also higher at Rs. 61.60 lakhs as compared with Rs. 50.78 lakhs previously. After providing for depreciation of Rs. 4.15 lakhs (Rs. 3.06 lakhs), taxation of Rs. 45.25 lakhs (Rs. 35.40 lakhs) and Managing Director's commission of Rs. 6.35 lakhs (Rs. 4.86 lakhs), the net profit works out to Rs. 58.26 lakhs against Rs. 46.19 lakhs a year ago. Credit has been taken for unclaimed surcharge on beer bottles of Rs. 10.87 lakhs. Provision for bonus has been stepped up from Rs. 2.50 lakhs to Rs. 3 lakhs. Dividend takes away Rs. 8.51 lakhs against Rs. 5.06 lakhs previously. A very large size of the distributable profit, precisely Rs. 55.15 lakhs against Rs. 37.05 lakhs in the previous year, has been ploughed back by the Directors to reserves.

The salient features of the Company's progress in the last four years are brought out in the table below:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	3,82.02	3,16.17	2,61.12	2,04.67

* Excluding Directors' fees, but including salary and other allowances.

† Subject to deduction of tax.

The Directors report that sales have been "most encouraging." The new brands introduced last year have become so immensely popular that the Company is said to be finding it difficult to cope with demand. The Directors add that the Company's products enjoy a reputation "unsurpassed" by any other comparable indigenous products and, with the stress on the improvement of their quality, they compare "very favourably with the best among the imported brands of a like nature." However, they caution, the threat of prohibition continues "to hang on our heads." The Company has been exploring export markets and is said to be doing all it can to promote sales abroad.

Among the Mohan Nagar projects, the fruit juice section and the cold storage section have already started functioning, but, because of the delay in the shipment of certain plant and machinery from abroad, it has not been possible for the brewery section to go into production. By October this year, however, the outstanding items of plant and machinery have arrived and are in process of being installed. If all goes according to schedule, the brewery would start functioning either by the end of this year or

Notices

THE BELAPUR COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Forty-second Annual General Meeting of The Belapur Company, Limited, will be held on Friday, the 12th day of January, 1962, at 4-00 p.m., at the Registered Office of the Company, Brady House, 12/14, Veer Nariman Road, Bombay, to transact the following business:

1. To adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September, 1961.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. Bhagvandas C. Mehta who retires by rotation in accordance with Article 156 of the Articles of Association of the Company and being eligible, offers himself for re-election and to consider, and if thought fit, to pass the following Resolution as a Special Resolution in respect of which a Special Notice as required by Sections 190 and 261 of the Companies Act 1956, has been received by the Company:

   "RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Mr. Bhagvandas C. Mehta, who is an associate of Messrs. W. H. Brady & Company Limited, the Managing Agents of the Company (which Managing Agents are authorised by the Articles of Association and the Managing Agency Agreement to appoint two Directors to the Board) be and he is hereby re-appointed a Director of the Company liable to retire by rotation."
4. To elect a Director in place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation but offers himself for re-election.
5. To appoint a Director in place of Mr. Neville N. Wadia who was appointed an Additional Director of the Company by the Board of Directors on 26th June 1961 under Article 161 and whose term of office expires at this Annual General Meeting, and who is eligible for re-appointment and in respect of whom the Company has received a notice in writing from some Members proposing his candidature for the Office of Director.
6. To appoint Auditors for the current year and to fix their remuneration.
7. To consider and if thought fit to pass the following Resolution as a Special Resolution:

   "RESOLVED that pursuant to the provisions of Section 360 of the Companies Act 1956, as amended by the Companies (Amendment) Act 1960, the Company hereby accords its approval to the Company entering into contract with its Managing Agents, Messrs. W. H. Brady & Company Limited, for the sale and supply to them and for the purchase from them of all movable properties, goods and materials, owned, stocked, dealt-in or manufactured by either of them and required by the other of them for the purpose of its business in terms of the draft placed before the meeting and for the sake of identification initialled by the Chairman to be operative as from the 12th day of January, 1962, until it is determined by either party by one month's previous notice in writing to the other of them subject to the conditions that all payments to be made by either of them to the other of them for any such properties, goods and materials, sold, supplied and purchased shall be made within one month from the date of the transaction and that the prices or amounts charged to the Company shall be such as are not less favourable to the Company than the market rates or which are otherwise reasonable."

   To consider and if thought fit to pass the following Resolution as a Special Resolution:

   "RESOLVED that pursuant to the provisions of Section 360 of the Companies Act 1956, as amended by the Companies (Amendment) Act 1960, the Company hereby accords its approval to Contracts being entered into between the Company and each of the following Companies, namely:

   1. The Empire Dyeing & Manufacturing Company Limited;
   2. G. Claridge & Company Limited;
   3. The Brady Engineering Company Limited

   AND

   4. Morris & Brady Limited.

   who are associates of Messrs. W. H. Brady & Company Limited, the Managing Agents of the Company, for the sale and supply by the Company to each of them and for the purchase by the Company from each of them of all movable properties, goods and materials, owned, stocked, dealt-in or manufactured by the Company and The Empire Dyeing & Manufacturing Company Limited, Messrs. G. Claridge & Company Limited, The Brady Engineering Company Limited and Messrs. Morris & Brady Limited and required by the Company from The Empire Dyeing & Manufacturing Company Limited, Messrs. G. Claridge & Company Limited, The Brady Engineering Company Limited and Messrs. Morris & Brady Limited or any of them or required by The Empire Dyeing & Manufacturing Company Limited, Messrs. G. Claridge & Company Limited, The Brady Engineering Company Limited and Messrs. Morris & Brady Limited or any of them from the Company for the purposes of their respective business in terms of the drafts placed before the meeting and for the sake of identification initialled by the Chairman, to be operative from the 12th day of January, 1962, and to remain in force until they are determined by either party thereto respectively by one month's previous notice in writing to the other of them, subject to the conditions that all payments to be made to the Company by the Empire Dyeing & Manufacturing Company Limited, Messrs. G. Claridge & Company Limited, The Brady Engineering Company Limited and Messrs. Morris & Brady Limited, or any of them for any such properties, goods and materials sold and supplied by the Company to them or any of them shall be made within one month from the date of the transaction and that the prices or amounts charged to the Company by The Empire Dyeing & Manufacturing Company Limited, Messrs. G. Claridge & Company Limited, The Brady Engineering Company Limited and Messrs. Morris & Brady Limited, or any of them in respect of the movable properties, goods and materials sold and supplied by them or any of them to the Company shall be such as are not less favourable to the Company than the market rates or which are otherwise reasonable."
9. To consider and if thought fit to pass the following Resolution as a Special Resolution:

   "RESOLVED that pursuant to the provisions of Section 360 of the Companies Act 1956, as amended by the Companies (Amendment) Act 1960, the Company hereby accords its approval to a contract being entered into between the Company and "Commerce" (1935) Limited, an associate of Messrs. W. H. Brady & Company Limited, the Managing Agents of the Company, for publication in *Commerce*, a journal of "Commerce" (1935) Limited, the advertisements of the Company's products and the Company's notices and other advertisement matters, in terms of the draft placed before the meeting and for the sake of identification initialled by the Chairman, to be operative from the 12th day of January, 1962, and to remain in force until it is determined by either party by one month's previous notice to the other subject to the conditions that the rates charged to the Company for such advertisements shall be the current rates charged by "Commerce" (1935) Limited to their other clients or which are otherwise reasonable."
10. To consider and if thought fit to pass the following Resolution as a Special Resolution:

    "RESOLVED that (*a*) Messrs. W. H. Brady & Company Limited, the Managing Agents of the Company, be appointed as Buying Agents for this Company for a further period of three years from the 1st April, 1962, in respect of Machinery and Stores to be purchased by the Company outside India through the Manchester Branch of Messrs. W. H. Brady & Company Limited, which is being maintained not only for the purpose of transacting business on behalf of this Company or any other Company managed by Messrs. W. H. Brady & Company Limited, but also for its own business not connected with the business of the Company and (*b*) that Messrs. W. H. Brady & Company Limited as such Buying Agents be reimbursed such part of the expenses of maintaining their Manchester Branch in any year as is reasonably attributable to the purchases made on behalf of the Company, not exceeding 2½ per cent of the total amount of the purchases effected by that Branch for the Company in that year."
11. To consider and if thought fit to pass the following Resolution as an Ordinary Resolution:

    "RESOLVED that pursuant to the provisions of Section 359 of the Companies Act 1956, the Company hereby authorises Messrs. W. H. Brady & Company Limited, the Managing Agents of the Company, to retain all commissions or other remuneration earned or to be earned by them as Agents of Home Insurance Company, at any time during the period they continue to act as Managing Agents of the Company in respect of services rendered by them in regard to all contracts of Insurance which have been or which may at any time hereafter during such period be entered into by Home Insurance Company with the Company, provided always that the amounts charged to this Company in respect of such insurances are at rates which are not less favourable than the market rates or which are otherwise reasonable."

By Order of the Board of Directors,

W. H. BRADY & COMPANY LIMITED,

V. MATHALONE,
Secretary,
Managing Agents.

Registered Office:

BHARAT SUGAR MILLS LIMITED

Registered Office:

14, Radha Bazar Lane, CALCUTTA-1

NOTICE IS HEREBY GIVEN THAT THE Thirtieth Annual General Meeting of Bharat Sugar Mills Limited will be held at 8, India Exchange Place, Calcutta on Friday, the 29th December, 1961 at 2-30 p.m., for the following purposes:—

1. To receive and consider the Report of the Directors and to adopt the Audited Accounts of the Company for the year ended 30th June, 1961.
2. To declare dividends.
3. To appoint a director in place of Shri R. K. Bhuwalka who retires by rotation and is eligible for re-election.
4. To appoint Auditors and fix their remuneration.

As Special business:

5. To consider and if thought fit to pass with or without modification the following resolutions as Special Resolutions:

(*a*) "Whereas the East Indian Produce Co., Ltd., an associate of The Cotton Agents Private Limited, the Managing Agents of the Company maintain an office at London in the United Kingdom and whereas the said Company carry on business of acting as agents in the United Kingdom for purchase and sale of goods including plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings and business connections with parties all over the United Kingdom, and the Continent and other Countries and their operations are on a very large scale and whereas their expenses of maintaining their office, amount approximately to £65,000 per annum and whereas expenses, which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services rendered through the said Company in relation to its total turnover in each year and whereas the said East Indian Produce Company Ltd., have been acting as such agents for and on behalf of the Company for purchase of plant, machinery and stores and rendering services such as recruitment of technical personnel, etc., and are paid commission at various rates, Now it is hereby RESOLVED that the East Indian Produce Co., Ltd. continue to act as agents of the Company for a period of 3 years from 1st July, 1962 on the following terms as to commission and expenses and that the payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company

(*a*) for purchase of stores etc. 5% of the invoice price;

(*b*) for purchase of machinery 2½% of the invoice price;

(*c*) for employing technical personnel for and on behalf of the company and for attending to enquiries, expenses incurred by the East Indian Produce Co., Ltd., apportionable to such work in each particular case;

(*d*) for rendering any other special service, such remuneration as may be agreed upon between Directors of the Company and the East Indian Produce Company Limited.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be, the same will not be done unless such permission is obtained."

(*b*) "Whereas the American East India Corporation, an associate of The Cotton Agents Private Ltd., the Managing Agents of the Company maintain an office at New York in the United States of America and whereas the said Company carry on business of acting as agents in the United States of America for the purchase and sale of goods including stores, plant and machinery and rendering of services such as recruitment of technical personnel etc., and also have dealing and business connection with parties all over the United States of America and their operations are on a very large scale and whereas their expenses of maintaining their office, amount approximately to $60,000 per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchase effected and services rendered through the said Company in relation to its total turnover in each year, and whereas the said American East India Corporation have been acting as such agents for and on behalf of the Company for purchase of plant, machinery and stores and rendering services such as recruitment of technical personnel, etc., and are paid commission at various rates, Now it is hereby RESOLVED that the American East India Corporation continue to act as agents of the Company for a period of 3 years from 1st July, 1962 on the following terms as to commission and expenses and that the payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company

(*a*) for purchase of stores etc. 5% of the invoice price;

(*b*) for purchase of machinery 2½% of the invoice price;

(*c*) for employing technical personnel for and on behalf of the company and for attending to enquiries, expenses incurred by the American East India Corporation, apportionable to such work in each particular case;

(*d*) for rendering any other special service, such remuneration as may be agreed upon between Directors of the Company and the American East India Corporation.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India as the case may be, the same will not be done unless such permission is obtained."

THE BURDWAN CUTWA RAILWAY COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-fifth Annual General Meeting of the Members of THE BURDWAN CUTWA RAILWAY COMPANY, LIMITED, will be held at "McLeod House," No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 3rd day of January, 1962, at 4-05 o'clock in the afternoon and not on Wednesday, the 27th day of December, 1961, as previously notified.

The Share Transfer Books of the Company will be closed from 21st December, 1961 to 3rd January, 1962, both days inclusive.

By Order of the Board,
MCLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Secretaries & Treasurers.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *7th December* 1961.

THE AHMADPUR KATWA RAILWAY COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Fifty-fourth Annual General Meeting of the Members of THE AHMADPUR KATWA RAILWAY COMPANY, LIMITED, will be held at "McLeod House," No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 3rd day of January, 1962, at 4-10 o'clock in the afternoon and not on Wednesday, the 27th day of December, 1961, as previously notified.

The Share Transfer Books of the Company will be closed from 21st December, 1961 to 3rd January, 1962, both days inclusive.

By Order of the Board,
MCLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Secretaries & Treasurers.

3, NETAJI SUBHAS ROAD,
CALCUTTA, *27th December* 1961.

GENERAL TYRES LTD.

PROSPECTS FOR AUTOMOBILE TYRE INDUSTRY BRIGHT

CHAIRMAN, DR. RAMASWAMI MUDALIAR'S SPEECH

THE progress of the automobile industry in the recent past and its prospects for the future were briefly reviewed by Dr. A. Ramaswami Mudaliar, Chairman of the General Tyres Ltd., at the First Annual Meeting of the Company held at Calcutta on the 11th inst. The automobile tyre industry, he said, had fully kept pace with the expansion in motor transport during the first and second Plans and, in view of the great pressure that was bound to come on railways during the third Plan, there was plenty of scope for expansion of road transport and, consequently, of the tyre industry. He, however, felt that, in the interest of healthy growth of the tyre industry, the Government's licensing policy should be so framed as to enable new enterprises to stabilise themselves by achieving economic production.

The following is the full text of Dr. Ramaswami Mudaliar's speech:

"GENTLEMEN,

"I have great pleasure in welcoming you to the first annual general meeting of your Company. The Directors' report and audited accounts for the period upto 30th June 1961 have been in your hands for sometime now and, with your permission, I take them as read.

"You will have observed from the audited accounts that there has been a net loss of Rs. 1,05,203 during the period under review which has been carried forward. The loss is really due to necessary expenditure incurred during the course of construction of the factory. In this context, the provision of Rs. 8,000 for income-tax may appear to be paradoxical, but, according to existing tax law, this had to be done in respect of the interest on bank deposits earned during the period to the extent of Rs. 15,000.

Public Support

"If the structure of shareholdings may be taken as an index, your Company has been favoured by a wide degree of public support. Subscriptions were widely distributed on a regional basis and also according to the size of applications.

"I think it is desirable to review briefly the progress of the automobile tyre industry in the recent past and its prospects for the future in the light of road transport development in the country before referring to the progress made by your Company. Since the beginning of the first Plan period there has been remarkable expansion of motor transport in India and both road mileage and the number of motor vehicles have recorded substantial increase. During the decade covered by the first and second Plans total road mileage in India increased from 148,500 to 394,000 and the number of commercial vehicles on the road from 116,000 to 210,000. The automobile tyre industry fully kept pace with this development, production of tyres having increased from 900,000 Nos. in 1950-51 to 1,350,000 Nos. in 1960-61 representing a rise of 50 per cent. In fact, the performance of the tyre industry compares very favourably with the trend of overall industrial growth in the country; taking 1951 as the base, the indices of production of tyres and tubes in July 1961 were 298.1 and 259.8 respectively, as against the general index of 174.2.

"In view of the great pressure on railway transport and the need for co-ordinated development of various forms of transport as anticipated for the third Plan period, there is substantial scope for expansion of road transport and consequently the tyre industry. According to the third Plan, the number of road vehicles (including passenger cars, commercial vehicles, jeeps and station wagons, motor cycles and scooters) is expected to be 365,000 in 1965-66, representing an increase of about 75 per cent over that in 1960-61. The target for the production of automobile tyres to be achieved by 1965-66 has been fixed at 3 million Nos. (against an installed capacity of 3.7 million numbers), constituting a rise of more than 120 per cent over the production in 1960-61. It is understood that the Government of India are considering a further upward revision of the aforesaid target capacity.

"The Government of India have issued licenses to a number of industrial undertakings for expansion of capcity and/or setting up of new units for the production of automobile tyres and tubes within the Plan target. At present, there are ten units licensed for the manufacture of automobile tyres and tubes out of which six are in operation, as against only two in 1950-51. In the genuine interest of a healthy growth of the industry as a whole, the Government would, I am certain, consider the desirability of regulating their licensing policy in such a manner as to enable the new enterprises sanctioned to achieve economic production and establish themselves on a sound footing.

"Your Company represents one of the undertakings licensed for establishing a new tyre plant in West Bengal with a capacity of 15,000 numbers each of tyres and tubes per month. You will have got an idea about the progress of this Company from the Directors' report already circulated to you. Construction of the main factory building, stores and offices is fast nearing completion. Out of the import licence for plant and machinery worth Rs. 80 lakhs obtained by the Company, a major portion has already been received at the factory site and further shipments are on the way. It is expected that delivery of all plant and machinery to be imported from Czechoslovakia will be completed by early 1962. According to arrangements with the technical collaborators, a team of erectors is expected to be at the factory site shortly to supervise the erection of plant and machinery. The technical personnel deputed by the Company to Czechoslovakia for training and finalisation of the project report have returned to India. If there is no serious hold-up in the present programme the plant at the factory will be commissioned for trial production by the middle of next year, which should be accepted as a good performance.

Expansion

"In order that your Company may play its proper role in the growing tyre manufacturing industry in the country, your Directors have decided to expand the scope of its activities and, accordingly, an application has been made to the Government of India for permission to expand and diversify the Company's operations by installing further and/or fresh capacity for the manufacture of tyres and tubes for cars, trucks and buses, motor cycles and scooters, etc.

"As regards raw materials, the cost of the principal raw material for the tyre industry, i.e., Indian rubber has increased since April 1961 due to the levy of a substantially higher rate of cess, the increase being from approximately 13 nP per kg. to 30 nP per kg. The supply of Indian rubber has been lagging behind the requirements of the tyre and general rubber industry, being about 25,000 tons, as against the consumption of about 58,000 tons during the 12 months ending September 1961. It has been necessary to meet this gap by import of natural and synthetic rubber; estimated imports thereof during 1961 would be 21,000 tons and 8,450 tons, respectively.

Raw Materials

"In regard to other important raw materials also, namely, tyre cord, bead wire, valves, carbon black, the country is yet largely dependent on imports. It is, however, gratifying to note that steps are being taken to arrange for production of these items in India and it is hoped that, by the end of the third Plan period, the tyre and rubber products manufacturing industry in India will be substantially self-sufficient in this regard as certain projects are likely to be implemented by that time, namely, the 20,000 tons synthetic rubber plant at Bareilly, the three units licensed with a total capacity of 34 million lbs. of rayon cord, the unit licensed for manufacture of automobile tyre valves, the carbon black plant being set up at Durgapur with a capacity of about 15,000 tons per annum and the rubber chemicals plant near Calcutta. Grant of licence for the setting up of a bead wire factory is also reported to be under the active consideration of the Government of India. When all these plants licensed or to be licensed hereafter go into full production not only will there be a substantial saving in foreign exchange, now being spent on import of the materials, but also the tyre industry will be saved a good deal of uncertainty and delay in the matter of such imports.

"Before I conclude, you will, I am sure, wish to join me in expressing our warm appreciation of the co-operation and assistance received from the Technical Collaborators, Messrs. Technoexport Foreign Trade Corporation of Czechoslovakia, the services rendered by the Managing Agents of the Company, Messrs. National Rubber Manufacturers Ltd., and also of the loyal and devoted work of the officers, staff and workers of the Company."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

Wanted

ASSISTANT SECRETARY

APPLICATIONS ARE INVITED FOR THE post of Assistant Secretary in the office of the Institute of Chartered Accountants of India, New Delhi, in the scale of pay of Rs. 850-50-1,250. (In addition, the officer will be entitled to Compensatory and House Rent Allowances but not to any Dearness Allowance. Detailed particulars may be obtained on application).

A higher starting salary in the grade may be given to a deserving candidate.

The officer will be entitled to contribute to the Provident Fund as per the Rules and to avail of Medical facilities as per the Rules.

Qualification: A Chartered Accountant possessing administrative and secretarial experience.

The Council may however waive this condition in the case of a candidate possessing qualifications otherwise considered suitable for the post.

The Age limit: 35 to 40 years.

The selected candidate will be on probation for a period of one year.

Apply to the Secretary, Institute of Chartered Accountants of India, Post Box 268, New Delhi-1, before 10th January, 1962.

STRINGENCY ROUND THE CORNER

(From Our Own Correspondent)

BOMBAY, 13th *December*

If the inter-bank call money rate is any indication of the state of affairs in the short-term money market, conditions are still easy and comfortable, despite the fact that we are in mid-December, by which time the seasonal demand for funds usually brings about a perceptible stringency. At 3½ per cent per annum, the inter-bank call money rate is the same as in the preceding weeks. At this rate borrowers have been able to get all their requirements without any difficulty. But there are enough signs at the time of writing this report which show that the customary stringency is just round the corner and may set in any time now. In the first place, reports from Calcutta, Madras and other upcountry centres suggest that the demand for bank credit is picking up. In Calcutta, the inter-bank call rate is now ¼ per cent higher than in Bombay; a fortnight ago, it was 1½ to 1¾ per cent below Bombay. Secondly, *shroffs* (that is, *multani* moneylenders) are saying that the banks have curtailed the credit facilities given to them. Thirdly, in the fortnightly settlement in the share market put through last week (on Friday the 8th inst.), the *badli* rate hardened further mainly due to non-availability of funds. Further, some banks have already started their preparations for "window-dressing" their balance-sheets as at the end of the year. And, finally, banks in general are complaining that they are not able to accept all the requests for accommodation from trade and industry and that they have actually to turn down some first class business.

The rates of interest on short-term deposits are unchanged at the maximum levels permitted under the inter-bank agreement. But there is keen bidding for deposits and more and more banks are said to be offering other inducements to attract deposit accounts.

An important development of the week is the readiness of the Reserve Bank to extend credit facilities to scheduled banks at a specially low rate of interest in order to encourage them to lend more freely to small-scale industries and co-operatives. In a communication to scheduled banks on the 11th inst., the Reserve Bank says that, with effect from 1st January 1962, it has decided to enlarge the permissible amount of borrowings by banks at the Bank rate to the extent of the excess of the credit given by the banks to these two sectors in the first half of 1961 over that given in the first half of 1960, provided the excess is Rs. 1 lakh or more. In other words, the Reserve Bank is prepared to let the scheduled banks have more rediscounting facilities in the first half of 1962 at the lowest rate under the three-tier bank rate system, namely, 4 per cent in order to enable them to assist the small-scale industries and the co-operative sector. Thus, the relaxation is for a specific purpose and is applicable only if the assistance rendered is in excess of a specified limit and only to that excess amount. As the banks are not substantial lenders to these two sectors, they are unlikely to derive much relief from this relaxation. It may be noted here that, of the total scheduled bank credit as at 30th June 1961, the share of advances to small-scale industries was of the order of Rs. 27 crores or 2.50 per cent and that of advances to the co-operatives was Rs. 9 crores, or less than one per cent. Even of these amounts, the bulk must have been the share of the State Bank of India.

To return to the trend of the money market during the week. The Treasury Bill results are again colourless. Under the weekly tender system for 91 days' Bills, tenders for Rs. 2 crores were invited, Rs. two crores were offered and the entire offerings were accepted at the self-same average rate of 2.5 per cent per annum. For the second week in succession, a sizable amount of intermediate Treasury Bills was sold, the exact sum thus collected being Rs. 138.25 lakhs, as against Rs. 145.50 lakhs in the previous week. Sales of both the types of 91 days' Bills will be continued in the coming week also.

It is common knowledge that, in the first one or two weeks of each month, notes in circulation always go up on account of large payments by both the public and private sectors. In keeping with this trend, the week ended 8th December 1961 has witnessed a sharp rise of Rs. 39.47 crores in notes in circulation. There has also been a rise of about Rs. 3 crores in notes held in the Banking Department. Consequently, total notes issued have gone up by Rs. 42.47 crores. It may be recalled, in this connection, that, in the week ended 10th November 1961, the total notes issued had gone up by Rs. 47.25 crores, of which notes in circulation accounted for Rs. 42.26 crores. The increase in the total notes issued during the week under review has been covered on the assets side of the Issue Department of the Reserve Bank by an addition of Rs. 45 crores in rupee securities and a reduction of Rs. 2.52 crores in rupee coin.

The foreign assets held by the Reserve Bank are a shade higher by Rs. 1.11 crore at Rs. 146.79 crores. The whole of this increase has occurred in balances held abroad which now stand at Rs. 30 crores.

A variation of some interest (in the Banking Department of the Reserve Bank's statement) to those who study the trend of the money market is a fall of Rs. 3.83 crores in the deposits of banks and of a rise of Rs. 1.33 crore in other loans and advances; of this small increase, the usance bills account for Rs. 50 lakhs, the total of advances from the Reserve Bank to scheduled banks under this head being Rs. 70 lakhs.

Very minor variations are disclosed by the scheduled banks' statement for the week ended 1st December 1961, which is the latest available at the time of writing this report. The only noteworthy feature of this statement is an increase of Rs. 5.11 crores in bank credit, taking the total to Rs. 1,227.84 crores. More than half of this increase is on account of the State Bank of India, its exact share being Rs. 2.93 crores. The total of bank credit by the State Bank of India is Rs. 243.83 crores, as against Rs. 213.90 crores a year before.

The gilt-edged market continues to be dull and drab, with very limited turnover; whatever business is done is mostly on account of provident funds. A small increase of 5 nP over the week is noted in some of the short and medium-dated loans of the Central Government. Among State loans, there is a big drop of Re. 1.90 in 4¼ per cent 1972 Maharashtra which now stands at Rs. 98. A fall of 25 nP has taken place in 4 per cent 1963 Madras and U.P. and of 35 nP in 4 per cent 1963 Kerala.

In the foreign exchange market, there has been a slight weakening of the rupee in terms of U.S. dollar, the Banks' buying and selling rates having gone up by 25 nP to Rs. 472 and Rs. 476.25, respectively. This trend is in keeping with the trend of the £ sterling which, in the New York market, has fallen from 281.250-281.218 cents per £ for spot to 281.040-281.070 cents. Three months' forward has also declined by 0.32 cents to stand at 279.080-279.110 cents per £. The sterling has been soft on the Continental markets also. London on Paris rate has declined from 13.79 francs per £ to 13.77 francs. Similarly, London on Zurich has come down from 12.14 Swiss francs per £ to 12.13.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, 13th *December*

The bullion market ruled firm in the first two sessions of the week under review, but developed a sagging tendency on Saturday the 9th inst. which persisted practically till the close today. The initial firmness was engendered by active professional support and encouraging advices from upcountry centres. Operators thought that the floating stocks of gold and silver would dwindle in the coming weeks due to the reduced pace of contraband inflow, owing to persistent tension in North-East India and Goa borders. Consequently, prices recorded and improvement. The upward trend was, however, halted on Monday when the market experienced a shake-out following selling pressure from Calcutta and Jodhpur sides. The decline gathered further momentum in the subsequent two sessions, too, as fresh buying support was lacking. The undertone of the market at the time of writing was distinctly easy.

Arrivals of both gold and silver were larger than in the previous week, the daily average being 6,400 tolas and 21 bars, as against 6,200 tolas and 19 bars, respectively. The daily average offtake was 5,600 tolas of gold (3,200 tolas last week) and 9 bars of silver (5 bars).

A notable event of the week was the commencement of business in *Phalgun* (March) settlement in both gold and silver.

The *Margashir* (December) settlement in gold evoked good buying enquiries early in the week and moved up from Rs. 121.25 to Rs. 122.65 on Saturday the 9th inst. The settlement declined thereafter and touched a low of Rs. 120.30 today before finishing at Rs. 120.45. The net loss over the week was 80 nP. The *Phalgun* settlement commenced at Rs. 121.95 today and, after rising to Rs. 122.05, closed easy at Rs. 121.65. The rate for transferring commitments from the *Margashir* to *Phalgun* settlement was against bulls to the extent of Re. 1.20.

Ready gold continued to be quoted at a discount under the forward throughout the week, though the actual discount declined from as much as Rs. 2 last week-end to 95 nP today. The spot rate advanced from Rs. 119.25 to Rs. 121.80 on Friday and, after easing to Rs. 119.35, finished at Rs. 119.50.

In silver, the *Margashir* settlement was subjected to selling by tired bulls, the quotation receding from Rs. 212.25 to Rs. 209.80 on Monday the 11th inst. At this level, some support was in evidence and the settlement improved to Rs. 211.10 yesterday. But today again, the settlement came in for selling and eased to Rs. 210.20. The net loss over the week was Rs. 2.05. The *Phalgun* settlement began today at Rs. 212.15 and, after rising to Rs. 212.30, finished at Rs. 211.55. The *badli* payable by bulls to get the commitments transferred from the *Margashir* to *Phalgun* settlement was Re. 1.35.

The world price of gold in the London bullion market eased from $35.15⅞ to $35.15¼ per fine ounce, while the sterling price improved by 1d. to 250s. 1d. Both ready and forward silver surged upward, the former from 85¼d. to 86⅜d. and the latter from 86⅜d. to 87¼d. Silver in New York also advanced from 100.75 cents to 102.75 cents.

The following table shows the trend of prices during the week under review:

	13-12-61 (closing)	High	Low	6-12-61 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine) ..	119 50	121.80	119.35	119.95
Forward: Margashir* ..	120 45	122.65	120.30	121.25
Sovereign	99.50	99.75	98.50	98.50
SILVER				
Ready (.996 fine) ..	209.60	211 45	200.50	211.00
Forward: Margashir† ..	210.20	212 55	209.80	212.25
London—				
Silver Ready ..	86¼d.	86¾d.	85¼d.	85¼d.
Silver Forward ..	87¼d.	87¾d.	86¼d.	86¼d.
Gold	250s.1d.	250s. 2d.	250s.	250s.
New York—				
Silver	102.75 cents	102.75 cents	100.75 cents	100.75 cents

* 25th December settlement. † 26th December settlement.

N.B.—The quotation for gold is per 10 grams (about 0.86 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

COTTON FUTURES RECEDE

(From Our Own Correspondent)

BOMBAY, 13th *December*

After a hectic rise in price on the opening day of the week (Thursday), the cotton futures market turned easy on Friday before recovering in the following two sessions. Futures prices again tended to look down on Tuesday. The declining trend persisted today also. Thursday's spurt in price was so sharp that the Jarilla March contract flared up from the previous day's finish of Rs. 676 to Rs. 684.25, only Rs. 8.75 below the statutory ceiling of Rs. 693 and thereby attracted a special clearing. Under the bye-laws of the E.I.C.A., a special clearing should be ordered whenever prices exceed the previous clearing rate by Rs. 24 per three quintals. The rise in price followed a wave of selling touched off by the latest reduction in crop estimate from 4.8 million bales to 4.65 million bales and the apprehension that imports sufficient to make good the deficiency would not be possible. However, rumours that the Forward Markets Commission had ordered the E.I.C.A. not to pay the difference arising out of the weekly clearing to bulls broke the morale of the market which slumped to Rs. 668.50 the next day, a fall of as much as Rs. 14.50 in one day. The failure of the rumours to materialise and reports that the E.I.C.A. had decided to seek legal opinion on the question of removing or reducing the penalty required to be paid for non-delivery induced a recovery and the Jarilla March contract improved to Rs. 672.50 at close. The recovery gathered further momentum on Saturday and Monday, thanks to short-covering and the absence of sellers. The continued firmness of the spot market imparted strength to the market. Lack of follow-up support and profit-taking, however, led to a decline in values yesterday. The downward trend was accelerated by bull liquidation and lower up-country advices today. The March contract consequently receded from Rs. 676 yesterday to Rs. 673 although the finish was slightly higher at Rs. 675, as against the last week-end close of Rs. 676.

Sustained mill demand was reported from the spot market. Almost all varieties of coton attracted buyers. Prices continued to rule at and, in some cases, above the ceiling. Such varieties as Kalyan, Wagad, Digvijay, Surti, CO2, 197/3, and Kalyan were much sought after by spinners. However, the Textile Commissioner's order that, in view of the small crop of Vidarbha, M.P. 197/3, and Khandesh Virnar 197/3 cottons, mills should not buy in the current season more than 55 per cent of their aggregate consumption of these varieties during last season curbed business in these varieties, the fear of possible freezing of stocks and requisitioning of cotton also had a restraining influence.

Demand for foreign cotton was well maintained. Good buying was evidenced in East African cotton for prompt and January/February shipment. In view of scarcity of offers, price tended to harden. Spinners were also interested in selected styles of Sudan cotton.

Bengal *Deshi* continued to evoke good export inquiries. Exporters are worried at the delay in releasing the 25,000 bales kept in reserve out of the quota of 150,000 bales announced in September last. Some even doubt whether the Government will at all licence the balance quantity. Knowledgeable quarters point out that the size of the *Deshi* crop this year is such as to justify release of not less than 250,000 bales.

The following are the latest available quotations—in rupees per candy of 784 lbs.—from the spot markets at Sewri: Khandesh 953; Digvijay 1,080; Kalyan 875; Khamgaon 915; Wagad 795; B.P.52 1,300; Busoga (U.N.U.G.) 1,295; Sudan XG2L 1,485; G3S 1,635.

The upward trend of prices noted last in the cotton futures market gathered further momentum during the week under review. Good domestic mill demand and renewed export interest imparted strength to the market. N.T.R.G. January firmed up from Rs. 77.70 to Rs. 78.85 and the March contract from Rs. 76.25 to Rs. 76.65. Spot market too ruled firm. *Deshi* prices hardened by Re. 1.50 to Rs. 2 per maund, over the week.

The second estimate puts acreage under cotton in Pakistan at 3.27 million acres (2.82 million acres under American seed cotton and 450,000 acres under *Deshi* cotton), as against 3.27 million acres (2.8 million acres American seed and 470,000 acres *Deshi*) reported in the corresponding estimate of last season.

The Egyptian Ministry of Agriculture, in its second estimate put the 1961-62 crop (less Scarto) at 929,179 bales (of 730 lbs. each), as against the first estimate of 933,562 bales and the 1960-61 final output of 1.43 million bales. Staple lengthwise break-down is as under:

(In bales of 730 lbs.)

	1961-62 (Second estimate)	1960-61 (Final estimate)
Cotton over 1⅛" Staple	413,014	691,096
" 1" "	239,315	323,288
" 1" "	276,850	...
	929,179	1,430,274

Cotton futures in Liverpool recorded modest gains during the week, thanks to commission house support and trade covering. Both the American and American type contracts edged higher on moderate support. Net gains over the week averaged five points. Sudan cotton contracts were subdued and nominally unchanged. The lower U.S. crop forecast failed to have any perceptible influence on the Liverpool market because a smaller crop was anticipated.

The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: December 24.30; March 24.75; May 25.65; July 25.35.

American cotton mixed growth contract: December 24.65; March 25.15; May 25.65; July 25.75.

Sudan: January, March, May 32.25.

The most important development of the week as far as New York cotton futures market is concerned was the publication, on the 8th inst., of the sixth and final crop forecast for the 1961-62 season. The crop, as of 1st December 1961, is estimated at 14,304,000 bales (of 500 lbs. each), as against 14,538,000 bales forecast a month ago and last season's output of 14,272,000 bales. The yield per acre is put at 438 lbs., as against 447 lbs. last month and 446 lbs. last season.

In spite of the lower crop forecast, cotton futures in New York declined on selling prompted by reports suggesting the possibility of a reduction in next year's loan rate. The lower loan entries revealed by latest statistics also imparted weakness to the market because it was taken as indicating that ready cotton was selling more freely in the open market. Observers noted the reduction in crop estimate which was expected in view of the poor progress of harvesting in recent weeks.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago.

OILSEEDS SUBDUED

(From Our Own Correspondent)

BOMBAY, 13th *December*

The buoyancy noted in the oilseeds market last week virtually fizzled out during the week under review, thanks to stale bull liquidation. There was a perceptible improvement in the tempo of arrivals of new crop, following the commencement of bookings by railways. Such heavy arrivals imparted weakness to the spot section which, in turn, brought down forward deliveries. Groundnuts lost considerable ground, due to better supply position and unencouraging advices from Calcutta. The futures contracts developed a sagging tendency, though they continued to be above the ceiling levels. In view of the difficulties caused to shippers by the interruption of railway traffic, following troop movements to the Goa borders, the Oilseeds Exchange has sent a telegram to the Union Ministry of Commerce and Industry urging extension of the validity period for shipment of H.P.S. groundnut kernels and expeller cake (under the export quotas already released) from the 31st of this month upto March 1962.

Castorseeds were depressed in the absence of follow-up support. Castor oil, however, was well supported, reflecting the operators' anticipation that the upward revision of Brazilian rates for castor oil would strengthen India's prospects for exports. Linseed and cottonseeds ruled easy on profit-taking.

Groundnut January 1962 contract, which was unofficially quoted at Rs. 217 last week, declined to Rs. 215.12, that is, 12 nP above the ceiling rate of Rs. 215. Nizam bold lost Rs. 2.25 to Rs. 46.60. Khandesh quality shed a like amount to Rs. 46.50. Oil January 1962 contract fell from Rs. 18 (unofficial quotation) to the ceiling level of Rs. 17.65. Oil ex-mill closed lower at Rs. 19.20, as against Rs. 20.25.

Castorseed March 1962 contract dropped 62 nP to Rs. 166.25. Ready Madras eased by 12 nP to Rs. 33.75. Oil commercial, however, improved by 25 nP to Rs. 14.50 and B.S.S. by 10 nP to Rs. 15.

Linseed March 1962 contract declined by 18 nP to Rs. 38.81. Bold ready softened by 20 nP to Rs. 18.10. Linseed oil lost a like amount to Rs. 18.10.

Cottonseed January 1962 contract fell by Rs. 3.50 to Rs. 103. Berars, whites and non-whites, were featureless at Rs. 20.

The following table shows the closing prices of oilseeds and oils on Wednesday, 13th December, as compared with those of the two previous weeks:

	13-12-1961	6-12-1961	29-11-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	215.00	—	210.75
Nizam bold	46.00	48.25	44.50
Khandesh quality	46.50	48.75	44.62
Oil ex-mill ready*	19.20	20.25	18.50
Railway receipts*	19.10	20.15	18.60
Oil January 1962	17.65	—	17.50
Castorseed			
March 1962	166.25	166.87	159.25
Ready Madras	33.75	33.87	33.50
Ready Kanpur	32.50	32.75	31.37
Oil B.S.S.†	15.00	14.90	14.10
Oil commercial†	14.50	14.25	13.60
Linseed			
March 1962	38.81	39.62	38.81
Bold ready	18.75	44.00	49.75
Oil ready†	18.10	18.30	18.30
Cottonseed			
January 1962	103.00	106.50	103.75
Niger seed	39.00	40.00	38.50
Kardi seed	23.25	24.00	23.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 10 kilograms and oil per 10 kilograms.

LINSEED STEADY

(Messrs. A. Bradley and Co.)

CALCUTTA, 11th *December*

In sympathy with the advancing trend of other oilseeds markets locally and at the main centres, linseed continued to rule steady and sellers were reserved. Crushers were not showing much interest for forward deliveries at higher prices, as the offtake of oil was rather slow.

The oil market remained steady in sympathy with seeds. Small local business was reported for early deliveries. Crushers were not inclined to do forward business at prevailing rates. Stocks were limited.

The oilcake market was steady, owing to good local demand. Ready-December was quoted at Rs. 31.50 per maund.

BETTER DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 5th *December*

In sale No. 49 held today, 549,000 kgs. were on offer. There was a slightly better all-round demand. Quality was about maintained except for plain teas. Plain and low medium brokens were some 20 to 25 nP easier, with similar fannings selling at rates which were 30 to 40 nP lower. Mediums and good mediums met with better demand and an occasional invoice sold at prices higher than the previous week. Highgrowns sold at irregular rates but were occasionally dearer following quality. Well-made black leaf teas sold readily but at easier rates. Whole leaf grades came to a weaker market than of late. Unorthodox types met with better demand and prices showed some improvement. The weakest feature of the sale were the plainest teas.

The quotations per kg. were:

	1961	1960
	Rs.	Rs.
Low mediums	2.90/3.15	4.60/4.95
Mediums	3.20/3.70	4.95/5.25
Good mediums	4.00/4.50	5.25/5.80
Nilgiri B.O.P.	5.00	7.80

The average price realised in sale No. 49 was Rs. 3.82 per kilo, as compared with Rs. 4.05 a week ago, and Rs. 5.14 in the corresponding sale last year.

A total of 313,000 kgs. were offered in dust sale No. 49 held on Thursday the 7th inst. The market met a better general demand but prices were generally lower than last. Plainest were easier by 10 to 20 nP. Mediums and good mediums met with better support and were steady and sometimes sold at lower rates. Best liquoring teas met with good competition and sold at around last rates. There was useful inquiry for unorthodox descriptions at steady rates. Fibrous and stalky kinds were the weakest feature of the sale.

The average price realised in dust sale No. 49 was Rs. 3.49 per kilo, as compared with Rs. 3.68 a week ago and Rs. 4.83 in the corresponding sale last year.

Colombo: In the export sale, there was a fair general demand. Useful teas from western districts were well competed for and were strong. Thin liquoring types, however, met with less support and were easier. Brighter uvas were well competed for and advanced in price. Mediums were dearer by 5 cents whilst lowgrowns were steady. Middle East descriptions eased by 5 to 10 cents. There was a good demand at the off-grade and dust sale and prices were

generally dearer except for stalky broken *mixeds*. Dusts were irregularly easier.

London: *North Indian and other growths*: There was a better tone in Monday's sale than last week. Buyers showed keen interest for good Assams which were firm to dearer. Plain teas however were irregularly easier.

Ceylon and South Indians: Offerings in Tuesday's sale amounted to 18,604 packages, of which 7,091 packages were from South India. There was a good demand. Best liquoring teas tended dearer. Coloury lowgrowns were steady whilst thin liquoring teas were sometimes easier. There was better support for South Indian teas but price were generally lower.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire as follows:

"*Sale No.* 50: 700,000 kgs. offered. Good general demand. Plain and low mediums irregularly 10 to 15 nP dearer. Mediums and good mediums fully firm to dearer, with quality highgrowns irregular. Unorthodox barely steady."

TANNED HIDES WEAK

(From Our Own Correspondent)

MADRAS, 11th December

There was no change in the kip market during the week under review. Demand for tanned buffalo hides and lower grades cow hides for inland trade was good, and this kept prices steady. Export trading was difficult, as there was a gap of 1d. to 2d. in the price levels of buyers and sellers.

In the tanned goat and sheep section, shipment business was negligible and the market ruled weaker. Export inquiries were small and the prices offered by importers in the U.K. and the Continent were 5 per cent and in the U.S. 10 per cent below sellers' ideas.

In the tanned skins London auctions held last week, clearance was poor and the prices obtained for parcels where sold were 6*d.* to 12*d.* down on goat skins and 1*s.* to 2*s.* per lb. on sheep as compared with Madras levels.

Shipments during November were 2,171 bales tanned cow hides, 256 cow calf, 49 buff-hides, 235 buff-calf, 407 goat and 314 sheep skins to U.K. ports; 9 cow calf, 4 buff-calf, 68 goat and 257 sheep to the Continent; 9 cow calf, 110 buff-hides, 93 buff-calf and 212 goat to the U.S.A.; and five goat and 94 sheepskins to Japan.

MIXED TREND IN FOODGRAINS

(From Our Own Correspondent)

HAPUR, 11th December

Mixed trend was witnessed in foodgrain prices during the week. While wheat prices improved further, coarse grains ruled quiet. Wheat prices here recorded gains of about 50 nP a maund during the week to be quoted on Monday at Rs. 16.25 a maund for average quality and upto Rs. 16 for farm produce. Daily arrivals were poor at an average of 75 maunds and local stock with trade is put at 20,000 maunds. *Rabi* sowings were progressing under favourable weather conditions after early reports of good germination but crop prospects depend mainly on winter rains. First watering of wheat crop has begun. Coarse rice prices registered further fall during the week, thanks to increased arrivals of new produce in markets. Seasonal demand too was slack, with week-end prices quoted at: rice *mainpuri sela* Rs. 19.50, *gadda kutchu* new Rs. 18 to Rs. 18.50, *ramajwayan sela* Rs. 21, *raimunia sela* Rs. 22, *basmati sela Rs. 26* to Rs. 28, superior Rs. 31 to Rs. 34, paddy new Rs. 10 to Rs. 11.50 a maund.

After early slight improvement to Rs. 15.25 a maund for Punjab variety, gram prices eased to Rs. 15 a maund, thanks to comfortable local stocks at 22,000 maunds and quiet advices from Punjab. Barley prices were steady at Rs. 11.50 a maund and *bejhar* continued to be quoted at Rs. 11 a maund for inferior quality and Rs. 11.50 for *mongia* variety. Stocks of these coarse grains were now small at about 2,500 and 1,500 maunds, respectively. Demand too is slack. Maize was still reaching here from nearby east U.P. districts at an average of 1,000 maunds daily which is being lifted by small stockists and consumers at Rs. 12.75 to Rs. 13.25 per maund and the local stocks have improved to 25,000 maunds. New *bajra* reaching here in small quantity is being purchased by consumers higher upto Rs. 14.75 per maund. *Jawar* and *guwar* prices improved on good seasonal demand to be quoted at Rs. 12.00 and Rs. 15.00 per maund respectively on Monday. *Methi* prices were steady at Rs. 27.00 to Rs. 28.00 per maund and oats at Rs. 12.00 per maund.

In pulses, want of loading facilities accounted for quiet conditions in peas and *arhar* prices and local stocks were still heavy at peas 37,000 maunds and *arhar* 25,000 maunds. *Massoor dal* continued to attract good seasonal demand. Week-end prices were peas *dara* Rs. 12.50 to Rs. 13.25; peas *dal* Rs. 14.00; *arhar* Rs. 14.00; *dal* Rs. 17.50; *gram dal* Rs. 17.00; *urd* Rs. 20.00 to Rs. 23.00; *dal* Rs. 25.00 to Rs. 26.00; *moong* Rs. 19.00; dal Rs. 21.50; *massoor* Rs. 14.00 to Rs. 16.50; *dal* Rs. 18.50; *moth* Rs. 17.00; *dal* 20.00. Loading continued restricted for most part of the week on the Central and Western Railways.

SUGAR QUIET

(From Our Own Correspondent)

HAPUR, 11th December

Sugar prices in general ruled quiet, thanks to release of monthly quota of two lakh tons for free sale. But bold superior crystal was traded at a premium of about Re. 1 than the former controlled prices, while inferior small crystal was not in demand even at lower price levels. Most of the factories here in West U.P. have commenced their crushing season and were attracting good cane supplies at Government-fixed rates upto Re. 1.50 to Re. 1.62 a maund, as against Re. 1.00 to Re. 1.12 per maund, being paid by units manufacturing *khandsari*, and even at 87 nP per maund by those manufacturing *gur*. Week-end prices were: spot delivery per bag Rs. 106.75, mill delivery per maund, Simbhaoli D29 Rs. 105.87; Bhulandshahr Rs. 105.37 per maund. E29 Rs. 36.62; Amroha D29 Rs. 36.75; Bijnore D29 Rs. 36.25; Seohara D29 Rs. 36.94.

In Muzaffarnagar sugar market, prices showed upward tendency following brisk demand from Punjab, Gujarat and Saurashtra. Bold crystal prices rose by 6 nP to 20 nP per maund and the inferior grains also advanced in sympathy. Week-end prices for the bold crystals of different mills were: Deoband B29 Rs. 39.78; Iqbalpur AA29 Rs. 40.28; Khatauli C29 Rs. 38.72; Shamli C29 special Rs. 38.80 and Lhaksar A29 Rs. 39.60.

Khandsari prices suffered heavy losses during the week due to the increase in daily arrivals coupled with lack of demand at higher price. Besides Rajasthan and the Punjab, Eastern U.P., Gujarat and Madhya Pradesh showed interest in the commodity. Prices during the week declined by 50 nP to Rs. 2 per maund. While non-crystal variety was quoted higher at Rs. 34.00 a maund, as against Rs. 32.00 at the close of the week. Crystal variety prices ranged from Rs. 29.00 to Rs. 34.00 a maund. *Khandsari boora* was quoted at Rs. 35.00 to Rs. 36.00 a maund. Crystal *boora* was transacted at Rs. 38.75 to Rs. 39.00 a maund.

Gur, after early appreciable losses of about Rs. 2 per maund at Rs. 12.75 for best *Pansera* quality, due to complete loading restrictions on Western and Central Railways, made up part of the losses in the week-end to be quoted on Monday at Rs. 13.25 for *Pansera* and upto Rs. 14.00 per maund for the *Balti* quality. Loading remained opened for Bengal side only and despatches on that route aggregated 20 wagonloads in the week. Daily arrivals also dropped to an average of 5,000 to 6,000 maunds as factories were now attracting good cane supplies. Stockists were building up *kotha* stocks expecting early revival of loading facilities. Most of the crushers having now reverted to *khandsari* manufacture, *gur* arrivals declined. Latest prices were: *Pansera* superior Rs. 13.37, medium Rs. 13.00, *Balti* Rs. 14.00 and *shakkar* Rs. 13.50 per maund.

In *Muzaffarnagar* market, *gur* prices suffered a fall by 37 nP to Re. 1 per maund under pressure of arrivals coupled with lack of booking facilities. Gujarat, Punjab, Madhya Pradesh showed interest in *Chaku* variety, while *Pansera gur* was despatched to Punjab, Rajasthan, Madhya Pradesh and Maharashtra. Daily arrivals averaged 14,500 maunds and the prices at the close of the week were: *Chaku* Rs. 13.75 to Rs. 14.50, *Pansera* Rs. 13.25 to Rs. 13.75; Ladoo Rs. 13.50 to Rs. 14.00 and Rusket Khurpa Rs. 6.00 to Rs. 8.00 a maund.

Gur futures were distinctly firm during the week on continued bull support, influenced by tense political situation. *Gur fagun* opened at Rs. 12.66 on Monday last and then improved in subsequent sessions to the highest of the week, Rs. 13.38, on Friday. Prices, however, declined to Rs. 13.22 due to profit-realisation.

Note :—Outstandings relate to end of period and do not include Ind-a Union's share of pre-partition liabilities: repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from June 1, 1955. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 16, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not inclusive. J—Commenced from 2nd January 1959. N.B.—Five-year pice bonds were issued from 1st April 1960 and the total outstandings at the end of July 1961 amount to 16.95 crores of rupees.

STOCK & SHARE QUOTATIONS

Abbreviations:—D.—Deferred shares. P.O.—Preferred Ordinary shares. Y.—Accounts published yearly. H.—Accounts published half-yearly. P.—Company has Preference shares. T.—Company has Debentures. N.—Nominal quotations. x.d.—Ex. Dividend. c.d.—Cum. Dividend. I.—Interim Dividend. f—Dividend for first half of the year.

Shares:—If a company has different classes of shares—as for example, 'A' shares and 'B' shares—these are indicated by the same letters 'A' and 'B' under the columns 'Paid-up Ordinary Capital' and 'Paid-up per share.'

Accounts:—Figures in the "Accounts Closed" column represent the months of the year in which the respective companies close their accounts, 6 and 12, for instance, indicate the months of June and December, respectively. Reserves include general and other reserves and all other funds which a company may have excluding depreciation fund, reserves for tax liability and provident fund. Block represents actual cost of land, buildings, machinery and all other items on which depreciation is allowed, less value, if any, and stands for the gross figures except where otherwise indicated.

Dividends:—Dividends or completed years are shown as amount per share per annum, but where quoted for portion of a year they represent the proportionate dividend for that period. In the case of those companies which close their accounts yearly dividends shown are for their financial year.

AMERICAN LETTER

EMPLOYMENT IN U.S. RISES
HIGHER BUDGET DEFICIT EXPECTED

From Our Special Correspondent

NEW YORK, *9th December*

THE previous lull in the economy of the United States has been replaced by renewed vigour. Hence, optimism abounds and holiday retail trade has been good so far.

There is also some pointing with pride to the latest Government statistics which show that the percentage of unemployment to the total labour force has dropped appreciably. It should be pointed out, however, that temporary employment at this time of the year always goes up and more importantly that the Government has been an employment-stimulating influence. This has little, if anything, to do with stimulating basic economic productivity.

The call of reservists back to the armed forces has naturally made room for civilians to take their place among the gainfully employed in business and industry. Also, the civilian payroll of Washington departments and agencies is increasing continually as has been pointed out in previous dispatches. President Kennedy's "New Frontier" programme at home and abroad is calling many new recruits into the ranks of temporary or permanent civil servants.

One thing which must be said in all fairness is that there is a lot of initiative emanating from the White House these days. It is an Administration which tries to do something, or at least gives the appearance of endeavouring to do so. This was not always the case in the previous Administration.

President's Appeal to Business

Another thing which must also be said is that with all the activity and *pronunciamenti* from Government spokesmen, the precise course which this Administration will follow is still not clear. As the old saying goes, the President seems to be carrying water on both shoulders.

A good illustration is to be found in Mr. Kennedy's statements to the Congress of American Industry here in New York and his speech a day later in Florida to a Labour convention. The President's appearance before industrial leaders was obviously designed to lessen widespread impressions that the Administration is "anti-business." It was a frank speech in which he said that most of the audience probably did not vote for him, but that his heart was in the right spot and he was trying to do the best he could.

This particular audience, as was to expected, is not wholly receptive to the free trade policies advocated at Washington. Many manufacturers are fearful of foreign competition which is aggravated by the rising wage structure and other costs here. Besides, no one in the Administration has spelled out precisely what the New Frontier's free trade policy envisages.

The only specific recommendation, so far, is reduction of tariffs and closer liaison with the Common Market in Europe and other regional trade areas. Mr. Kennedy pleaded for understanding from business. In Florida, he pleaded for understanding from labour unions and urged restraint in their demands for higher wages and fringe benefits which, he said, were necessary in order that the U.S. may keep its place in world trade. He asked, in effect, for endorsement from labour of his new free trade policy which is going to be submitted to the Congress next month.

Mr. Kennedy's position is understandable. He shares the concern of his advisers and that of bankers and economists about the outflow of gold stocks which are now below $17,000 million. It is obviously important to stem this movement. But the question is whether the trend can be arrested by freer trade and by co-operation by business and labour, both of which are enmeshed in a complex of self-interests.

Labour's Clamour

In the camp of the trade unions, membership [illegible] have been declining over a period of [illegible] is partly due to automation, partly [illegible] to employment and retirement [illegible] benefits plus a little work [illegible] and an income from savings. Hence, in view of shrinking contributions from membership and in order to protect their own jobs, labour leaders think they have to clamour for higher wages, for greater benefits and so on, regardless of the national interest which many of them do not understand too well anyway.

Among businessmen, there is a similarly selfish motive in maintaining the *status quo*. They have a payroll to meet every week. They may or may not have been losing markets owing to foreign competition. It also boils down to self-preservation first and the national interest second—because to the naked eye of either labour or management there is no national emergency at present which would supersede the motive for self-preservation.

Neither management nor labour in the U.S. has been exposed to acute hardships—with exceptions, of course—nor do they understand the facts of present-day international life of ruthlessness with which other peoples have become so familiar. And despite all the mechanical marvels of contemporary means of communication, minds have not been able to grasp what is at stake. The daily routine blurs the image of the printed word, of the spoken word and of pictures.

In contrast with that, if I may be permitted to transgress, was a talk with U.S. Ambassador Arthur Dean a day before he left for the disarmament talks at Geneva. He made no bones about the dog-eat-dog facts of life. Russia, he said, had been preparing for four months before resuming their latest series of atomic tests. Their largest explosion was in the neighbourhood of 58 megatons. Under no circumstances would the U.S. relinquish its right to test without an international control machinery, and a ban was out of the question.

This, he said, referred to the series of detectable tests. Low power tests, underground and otherwise, frequently are not detectable and nations which practise them belong to the "Atomics Anonymous Club," he added. A different world, a different thinking, but also very closely related to self-preservation, regionally though not individually.

The collective impact of this thinking, governmental and private, creates economic repercussions. There has been a steep increase in the Federal spending curve. The Government's Budget, eleven months ago, called for cash outlays of $101,800 million. Cash expenditures are now up by $9,300 million over the original proposal. If anticipated revenues do not come up to expectations, the deficit for the current fiscal year ending 30th June next may be higher than the projected $8,400 million.

Private capital spending, on the other hand, has shown only a moderate increase because of apprehensions over the outlook. According to a survey made, business plans spending for 1961 plant and equipment in 1962 about $35 billion, or 4 per cent more than this year. Much of the rise is attributable to improved equipment to enhance efficiency, rather than for expansion. In addition to uncertainty over the outlook, pressure on profit margins is also a matter of urgent consideration.

United Nations News

Prime Minister Nehru's remarks at New Delhi about Red Chinese aggression into territories of India were widely quoted and many comments were made, mostly upholding his views. The main topic of discussion, though, remains the Congo. The fact of the matter is that the United Nations finds itself in a rather untenable position. It is doubtful whether sufficient force can be expended to bring Katanga to surrender, particularly in view of the British position which is supported in other quarters as well.

Then, there is the ticklish question of armed intervention by an organisation dedicated to peace, namely, the U.N., which spends money and human lives which it can ill-afford to spend since a good many member-nations refuse to contribute either money or men for this particular cause.

The pressure of commercial interests in Katanga is, perhaps, more apparent than in the case of Ethiopia at the time of Mussolini's invasion of that country by Italy. But there is a plausible parallel. Ethiopia's pleadings before the League of Nations turned out to be of no avail. The net result was, coupled with other factors, that the back of the League of Nations was broken. The pattern of "L'affair Congo" in the U.N. is uncomfortably close to Ethiopia and the League of Nations.

* * * *

U.S. ECONOMY REGAINS MOMENTUM

As anticipated, what began as a year of recession is ending as a year of brisk economic advance for the U.S. That advance has been under way since the early months of 1961, and most of the experts, both Government and private, confidently expect the U.S. economy to continue its vigorous expansion through 1962. Probably the best and most comprehensive measurement of the U.S. economy's 1961 performance is the gross national product (GNP), or total output of goods and services. For 1961 as a whole, the GNP is currently estimated at about $520,000 million. This represents a solid three per cent gain over the 1960 level.

This yearly comparison, however, is not entirely representative of the basic trend or of the magnitude of the change that has taken place in the economy. The fact is that the G.N.P. rose by some five per cent from the first to the third quarters of 1961, and the rise is expected to exceed seven per cent in the fourth quarter. This would bring the total output of goods and services to a year-end annual rate of $540,000 million or more. The improvement in the economy has been fully reflected in the incomes of American consumers and businessmen. From January to September, the personal income of all Americans rose at an annual rate of more than four per cent—or about $[illegible] after taxes for every man, woman and child in the U.S. Indicative of the continuing expansion, this income rise picked up even more strength in October, reaching an annual rate of $425,000 million, nearly $4,000 million above the September rate. Business earnings, always much smaller than consumer income, also have picked up. In the third quarter, corporate profits after taxes were up 20 per cent from the $20,000 million annual rate of the first quarter.

Along with these income gains have come significant employment increases. While the labour force was gaining two million people from January to October, the number of people employed rose by 3.4 million to a new October high of [illegible] million. Unemployment in October was down by 3.9 million from January's 5.4 million. On the production side, the physical volume of industrial output has increased by more than 10 per cent during 1961, to 113 per cent of the 1957 average. Construction, a key industry, is expected to hit a new annual high, with new building valued at $56,700 million. These gains in production, income and employment have been accompanied by marked stability in price levels. Wholesale prices actually fell by one per cent between January and September, while consumer prices have risen only seven-tenths of one per cent.

Looking ahead, Government experts anticipate that the vigorous and essentially non-inflationary economic advance will continue, with the G.N.P. reaching an annual rate of $585,000 million to $570,000 million by the middle of 1962. Most private economists tend to agree with this view. By and large, a comfortable expansion in general business activity is foreseen, with the majority of experts anticipating that the G.N.P. will average out at about $560,000 million for 1962 as a whole—which would represent a gain of seven per cent over the estimated 1961 level.

Notice

THE BRITANNIA BISCUIT CO. LTD.

THE BOARD OF DIRECTORS AT THEIR meeting held on the 8th December, 1961 have sanctioned payment of an Interim Dividend of 6 per cent on the Ordinary Shares subject to deduction of tax, and 5.20 per cent on the Preference Shares (being the Dividend at the rate of 4 per cent increased by 30 per cent thereof pursuant to the provisions of the Preference Shares (Regulation of Dividends Act, 1960) subject to deduction of tax, for the year ending 31st March, 1962.

The Dividend will be payable to those Shareholders whose names appear on the Register of Members on the 19th January, 1962. Warrants will be posted on or after that date to the addresses or in accordance with the instructions recorded in the Company's books.

The Register of Members of the Company will remain closed from the 2nd January, 1962 to the 19th January, 1962, both days inclusive.

By Order of the Board,

A. P. CHANDA,
Secretary.

Agricultural Situation In India

A monthly journal presenting a factual and integrated picture of the agricultural and food situation in India, against an appropriate background.

This journal, issued by the Directorate of Economics and Statistics, Union Ministry of Food and Agriculture, have as its regular features:

- A monthly newsletter surveying the latest development in the field.
- Authoritative special articles on topics of current interest.
- Extensive information on events and trends in India and abroad.
- Reviews of production and prices of various commodities.
- A comprehensive statistical section.

Commanding a wide and influential readership in India and abroad, *Agricultural Situation in India* is an invaluable guide to students of agricultural economics, business executives and administrators.

Annual subscription .. .. Rs. 24.00 or 37 sh.

Available from:

1. The Manager of Publications, Civil Lines, Delhi-8.
2. The Secretary to the High Commissioner for India, "India House," Aldwych, London, W.C.2.

INDIAN LABOUR JOURNAL

Issued monthly by the Government of India, Ministry of Labour and Employment, Labour Bureau, Simla, contains up-to-date information relating to labour in India, e.g., summaries of reports and enquiries; Labour legislation, summaries of important awards, legal decisions and collective agreements, labour news from States covering labour welfare and living conditions, statistics of industrial disputes, absenteeism, employment—service, wages and earnings, cost of living, retail and wholesale prices, trade unions, etc. In addition to these, the quarterly issues of the journal contain special articles on subjects of labour interest.

Rates of Subscription: { Rs. 24 per annum and Rs. 2 per copy.
