"Since the close of the year, there have been fresh tax impositions and these should have resulted in increases of most cigarette prices. Our major competitor has seen it fit not to pass on to the smoker the tax increase on the particular category in which the major part of our business lies and we have had no alternative but to follow them. Whereas they are able to offset this absorption by the relatively higher margins of profit in the medium price grade, your Company does not have a satisfactory foothold in this selling group. The impact of reduced margins of profit may be expected to affect our earnings in the current year."

The current market price of the Company's ordinary shares, listed on the Calcutta Stock Exchange is Rs. 21.50 *cum-dividend*. Reducing this to an *ex-dividend* basis, the net return works out to 5.50 per cent per annum.

COMPANY MEETINGS AND DIVIDENDS

BELVEDERE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 31st July 1961. Dividend: Rs. 5.00 per ordinary share, subject to deduction of tax. Transfer books remain closed from 17th to 31st July 1961, both days inclusive.

BOMBAY SUBURBAN ELECTRIC SUPPLY CO., LTD. Annual General Meeting, Bombay, 9th August 1961. Dividend: 8½ per cent or Rs. 8.50 per share (includes interim dividend of Rs. 3.00 per share), subject to deduction of tax. The final dividend will be payable on and after 11th August 1961. Transfer books will remain closed from 21st July to 9th August 1961, both days inclusive.

RANEEGUNGE COAL ASSOCIATION LTD. Interim dividend of Re. 1.70 per ordinary share, for the year ended 31st March 1961, subject to deduction of tax. (This dividend although termed 'interim' will in fact be the final dividend for the year 1961).

COCHIN STATE POWER AND LIGHT CORPORATION LTD. Annual General Meeting, Ernakulam, Kerala State, 28th August 1961. Dividend: 12½ per cent or Re. 1.25 per share, subject to deduction of tax, payable on or after 30th August 1961. Transfer books will remain closed from 21st to 28th August 1961, both days inclusive.

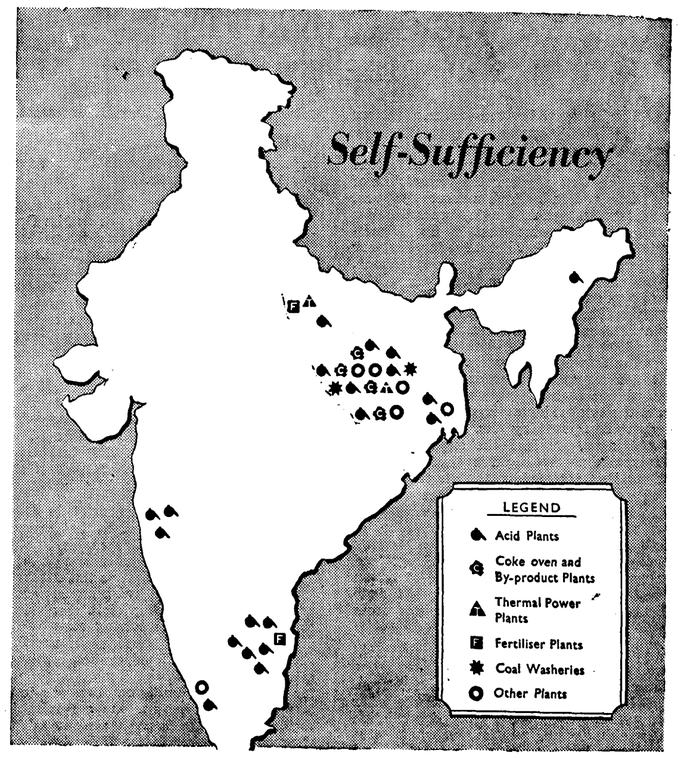
SOUTH MADRAS ELECTRIC SUPPLY CORPORATION LTD. Annual General Meeting, Madras, 30th August 1961. Dividend: 9 per cent or Re. 0.90 per ordinary share (includes interim dividend of 4½ per cent or Re. 0.45 per share), subject to deduction of tax. The final dividend will be payable on and after 30th August 1961. Transfer books will remain closed from 5th to 30th August 1961, both days inclusive.

INDIAN RAYON CORPORATION LTD. Annual General Meeting, Bombay, 14th August 1961. Dividend: *Nil*. Transfer books will remain closed from 2nd to 14th August 1961, both days inclusive.

CHOONABHUTTI TEA CO., LTD. Annual General Meeting, Calcutta, 10th August 1961. Dividend: Rs. 32.50 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 3rd to 10th August 1961, both days inclusive.

CAUVERY SPINNING AND WEAVING MILLS LTD. Annual General Meeting, Madras, 31st July 1961. Dividend: 15 per cent or Re. 1.50 per share, subject to deduction of tax, payable on and from 8th August 1961. Transfer books remain closed from 21st to 31st July 1961, both days inclusive.

KESORAM COTTON MILLS LTD. Annual General Meeting, Calcutta, 14th August 1961. Dividend: Re. 1.20 per ordinary share, subject to deduction of tax, for the year ended 31st March 1961.



Industrial growth of a country depends on its ability to manufacture products for its requirements. And products require plants to manufacture them.

To this end, Simon-Carves' contribution is truly impressive. The above map shows only some of the plants designed and engineered by Simon-Carves. The total capacity of coke oven plants installed by Simon-Carves is approximately two-thirds of the entire carbonisation capacity of the country. Likewise the total capacity of sulphuric acid plants built to Simon-Carves design is about half the entire acid production of the country. Apart from the specialities, some of which are shown on the map, Simon-Carves engineers and builds plants based on clients' know-how.

At any industrial centre in India, be it Jamshedpur, Burnpur, Durgapur or Ennore, to mention only a few, Simon-Carves is there—helping India attain self-sufficiency.

ANGLO-FRENCH TEXTILES' PROFIT IMPROVES

RESERVES STRENGTHENED—DIVIDEND RAISED

NOTWITHSTANDING some adverse factors affecting the Company's exports, such as the introduction of a quota system in the U.K. to regulate the imports of cotton fabrics into that country and the virtual loss of West African and Indo-China markets for yarn, the financial results of the Anglo-French Textiles Ltd. (Managing Agents: Best & Co. (Pondicherry) Private Ltd., Pondicherry) for the year ended 31st December 1960 are quite gratifying. Thus, the production of yarn increased to 10.99 million pounds from 10.65 million pounds in 1959 and 9.29 million pounds in 1958 and that of cloth to 28.95 million yards from 23.95 million yards in 1959 and 19.42 million yards in 1958. Its gross sales went up by Rs. 14.41 lakhs to Rs. 267.22 lakhs in the year under review. In spite of the increased competition in overseas markets, the total value of export sales of cloth and yarn improved by Rs. 2.27 lakhs to Rs. 152.34 lakhs. In fact, the export of cloth alone increased perceptibly from Rs. 146.54 lakhs in 1959 to Rs. 151.88 lakhs, though the export sales of yarn declined sharply from Rs. 3.53 lakhs to Rs. 46,330. The sales in the domestic market showed a considerable expansion of Rs. 11.73 lakhs to Rs. 112.33 lakhs. Reflecting the increase in the output of cloth and yarn and higher raw material costs, the value of cotton consumed rose from Rs. 132.12 lakhs in 1959 to Rs. 158.14 lakhs and other expenses from Rs. 103.74 lakhs to Rs. 116.75 lakhs.

The gross profit, too, shows an appreciable improvement of Rs. 15.96 lakhs to Rs. 36.59 lakhs And the net profit has more than doubled, from Rs. 11.62 lakhs for 1959 to Rs. 23.53 lakhs, after providing Rs. 7.64 lakhs for depreciation (Rs. 6.25 lakhs, in the previous year), Rs. 3.34 lakhs for taxation (Rs. 1.73 lakh in 1959) and Rs. 2.08 lakhs for managing agency commission (Rs. 1.03 lakh in 1959). But a large portion of this profit has been absorbed by the provision of bonus to staff, the exact amount being Rs. 10.40 lakhs, as against Rs. 3.90 lakhs in the preceding year. The Directors have thought it necessary to strengthen the general reserve and modernisation loan redemption reserve for securing an early repayment of the Company's bank borrowings as well as for providing the funds needed for progressive modernisation of its machinery and equipment. They have, therefore, transferred Rs. 5 lakhs to the general reserves and Rs. 2.50 lakhs to the loan redemption reserve, as compared with the total conservation of Rs. 2.25 lakhs last year. The dividend has been stepped up from 11 per cent to 15 per cent free of French Indian income-tax. This takes up Rs. 4.50 lakhs, as against Rs. 3.30 lakhs last year. The preference dividend requires Rs. 1.08 lakh. The balance of Rs. 21,000 has been carried forward, as against Rs. 17,000 brought in.

A bird's eye-view of the Company's progress in the last four years can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales (gross)	2,67.22	2,52.81	2,13.78	2,07.10

* Free of French Indian income tax.

During the year under review, the Company made substantial progress with the programme of modernisation of plant and machinery, the exact expenditure incurred being of the order of Rs. 23.86 lakhs, as against Rs. 3.56 lakhs in 1959 and Rs. 7.06 lakhs in 1958. The principal items of modernisation so far completed include the conversion of the mill to all electric drive and installation of ventilation and humidification arrangement. The weaving shed has been fully modernised but the modernisation of spinning shed has fallen considerably behind schedule chiefly because of delayed deliveries of ring spinning frames and intermediate frames. With the change-over to all electric drive an appreciable saving in power cost was anticipated, but industrial load rates have not yet been made applicable to the mills.

The financial position of the Company, as disclosed by the balance-sheet as on 31st December 1960, is satisfactory. As against the paid-up capital of Rs. 48 lakhs, comprising Rs. 18 lakhs in 18,000 six per cent cumulative preference shares of Rs. 100 each and Rs. 30 lakhs in 30,000 equity shares of Rs. 100 each, the reserves are of the order of Rs. 22.08 lakhs. Thanks to the heavy borrowing for financing the modernisation programme, the secured loan has increased from Rs. 9.14 lakhs to Rs. 40.59 lakhs. The other current liabilities stand at Rs. 116.14 lakhs, bringing the total debts payable to Rs. 156.78 lakhs. As against these, there are current assets of the magnitude of Rs. 175.24 lakhs. The gross block of the value of Rs. 71.01 lakhs has been well written down to Rs. 51.84 lakhs, the depreciation provided being Rs. 19.17 lakhs.

According to the statement of the Chairman, Mr. R. M. King, appended to the Directors' report, the position regarding exports in the current year is once again causing concern to the Directors of the Company, as the offtake to the U.K. has been reduced by an adjustment of importers' quotas of Indian cloth made necessary as a result of quotas having exceeded in the previous year. The importers in the U.K. are also exercising additional caution until progress over the renewal of the Hong Kong agreement for the voluntary limitation of exports to Britain is more clearly known. As a result of these factors, there has been a serious fall in the Company's exports to the U.K. This will also entail a severe contraction in earnings from export incentive premium. The Directors are, however, fully conscious of the importance of diversifying the Company's production and markets and they consider the successful implementation of the modernisation programme as an essential prerequisite for this purpose. The Company's sales in the domestic market are already expanding.

The Rs. 100 fully paid shares of the Company are currently quoted on the Madras Stock Exchange at Rs. 148 cum-div. On an ex-div. basis, the shares provide a yield of 11.27 per cent per annum, free of French Indian income-tax.

(Concluded from next column)

recovery. Besides this, orders have been placed with Messrs. Walmsleys (Bury) Limited of England for a new paper machine of the latest design; the shipment of this plant is expected to commence in the second half of 1962. Negotiations for the purchase of machinery from the U.S. for which an import licence has already been received are also in advanced stage and orders will be finalised as soon as the approval of the Development Loan Fund (U.S.) is received to the Dollar Loan application made through and sanctioned by the Industrial Finance Corporation of India.

In view of the expansion in fixed assets which has necessitated increased borrowings from banks, the Directors have decided to increase the capital by offering new shares. At present the difference in authorised and paid-up capital is only Rs. 29 lakhs. If the contemplated increase is confined only to this amount, then the ratio of the right issue may be one new share for every two old shares.

The current market quotation of Rs. 25 paid-up ordinary shares is Rs. 89.50, at which rate the net yield is 6.2 per cent.

BENGAL PAPER'S PROFIT LOWER

RIGHT ISSUE IN THE OFFING

THE most important event for the Bengal Paper Mill Co., Ltd. (one of the oldest producers of paper) during the year ended 31st December 1960 was the termination of the agreement with the Secretaries and Treasurers, Messrs. Balmer Lawrie and Company Limited with effect from 28th April 1960. Since then, the affairs of the Company are being looked after by the Board of Directors. The working of the Company during the year ended 31st December 1960 was smooth. The production of paper went up by 13.6 per cent from 15,927 tons to 18,105 tons.

The sale proceeds also increased, albeit at a slower pace, from Rs. 307.50 lakhs to Rs. 316.78 lakhs. Despite such sharp increase in production and higher sales realisation, the gross profit has dropped from Rs. 52.61 lakhs to Rs. 51.91 lakhs. This adverse trend of profit is the result of the recommendations of the Tariff Commission on ex-factory prices of paper which came into force from 1st January 1960. The setback would have been more marked but for the increase in production. The prices fixed by the Tariff Commission were inadequate to cover the increase in cost of production. The Government has not yet responded to the Indian Paper Makers' Association's representation pleading for an upward revision of the prices. Since the Tariff Commission's formula was announced and implemented, there have been further levies of excise on chemicals used by paper industry, the railway freight rate has been enhanced and the prices of raw materials and stores have gone up. If the Government does not make adequate allowance for all these cost increases while fixing the ex-factory price of paper, the profit-margin of paper industry will remain unremunerative, hampering modernisation and expansion of industry.

The net profit has suffered a more perceptible decline than the gross profit, the reason for it being a heavier allocation than last year for depreciation due to the increase in fixed assets. It has, however, been sufficient to maintain the dividend at the 1959 level of 32 per cent taxable as well as to strengthen the reserves further by nearly Rs. 7 lakhs. The proposed dividend is equal to a net return of Rs. 5.60 per share of Rs. 25 each. Fuller details of the Company's financial results and appropriations can be had from the comparative table of progress given below:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sale proceeds	3,16.78	3,07.50	2,63.31	2,07.80

* Subject to deduction of tax.

The gross block of the Company has increased from Rs. 234.14 lakhs to Rs. 256.25 lakhs. Besides this, there is capital expenditure of Rs. 11.48 lakhs on fixed assets under construction. The net block stands at Rs. 78.45 lakhs, the depreciation so far provided being Rs. 177.79 lakhs. The total of current assets at Rs. 141.93 lakhs are well above the current liabilities of Rs. 102.15 lakhs, of which secured loans account for Rs. 44.05 lakhs. The paid-up capital of Rs. 71 lakhs is made up of Rs. 26 lakhs in preference shares and of Rs. 45 lakhs in ordinary shares of Rs. 25 each. The reserves and surplus amount to Rs. 58.70 lakhs.

The expansion and modernisation scheme of the Company to increase the productive capacity to 100 tons per day is said to be making satisfactory progress. The Brown Stock Washing Plant was put into commission during the year under review, while Recausticising Plant, a Water Clarification Plant and other machines started functioning in the current year. These plants which have been installed at an approximate cost of Rs. 36 lakhs have resulted in reducing the loss in washing and better caustic

(Continued in previous column)

RESULTS OF INDIAN COPPER QUITE GOOD

RESERVES STRENGTHENED FURTHER

LARGER production, continued with higher realisation, has enabled the Indian Copper Corporation Ltd. (Managing Agents: Gillanders Arbuthnot and Co. Ltd., Calcutta) to report gratifying financial results for the year ended 31st December 1960. The gross and net profits alike are higher. The provision for depreciation has been maintained. Taxation has absorbed a clear half million £. The transfer to reserves has been markedly stepped up. The dividend has been comfortably maintained at 27 per cent, taxable, per annum. The surplus to be carried forward is higher than the amount brought in.

The average selling prices realised by the Company were higher for all the products as can be seen from the following figures:

	(Per metric tonne)	
	1960	1959
	£	£
Copper ingots	266.60	250.61
Rolled brass	277.56	271.36
Yellow metal circles ..	304.30	298.00
Rolled Copper	356.64	356.26

The products despatched for sale were also higher at 11,192.44 metric tonnes, including 1,107.72 metric tonnes of copper ingots, as compared with 11,041 metric tonnes including 1,717 metric tonnes of copper ingots during the previous year.

The net sale proceeds, after adjustment of stocks, are the highest on record at £3,718,000, as against £3,342,000 in the previous year showing an increase of 11.2 per cent over the year. The other income which had dropped in the previous year from £81,000 to £57,000 rose during the year to £74,000. The gross profit for the year was better at £1,403,000, as compared with £1,289,000 for the previous year and £1,070,000 for 1958. The increase in profit of the order of 8.8 per cent would have been higher still but for the sharp increase in expenses from £2,110,000 to £2,389,000, an inflation of 13.2 per cent. The overall operating cost to produce one long ton of copper again increased, though slightly. The labour and material costs are also steadily increasing.

After fully maintaining the provision for depreciation at £175,000 and stepping the transfer to taxation reserve from £440,000 to £500,000, the net profit works out to £633,000, a rise of nearly 10 per cent.

A notable feature of the appropriations of the profit this year is the marked increase in the transfer to general reserve from £125,000 to £200,000. This is in addition to the £50,625 credited to development rebate reserve which had received last year £56,250.

The progress of the Company since 1957 will be clearly visible from the following comparative table:

(In thousands of £ sterling)

	For the year ended 31st December			
	1960	1959	1958	1957
Net sale proceeds after adjustment of stocks ..	3,718	3,342	2,958	3,018

* Subject to deduction of tax.

Reflecting the judicious policy followed by the management in the matter of appropriation of profits, the financial position of the Company is quite healthy. As against the paid-up capital of £1,371,300, all in stock units of 2 shillings each, the reserves and surplus stand at £2,562,976. Further, as against the current liabilities of £2,440,267, current assets are nearly double at £4,841,500. The gross block of the Company amounting to £3,540,747 has been written down by nearly two-thirds to £1,533,043.

The Directors' report also throws more light on the improved working of the Company in 1960. The total ore reserves for all mines show an increase of 88,695 short tons to 4,292,242 short tons. Although there has been a total overall increase in the net ore reserves of all mines, there has been a further decrease of 35,633 short tons in the ore reserves of Badia Section to 500,263 short tons.

The ore milled increased from 434,282 short tons to 480,306 short tons, but the copper content was lower at 2.083 per cent as against 2.162 per cent in the previous year. The higher figure of ore milled constitutes a record, but it was achieved because the annual shut down, normally undertaken in January, was completed in December 1959, that is, in the last month of the previous year.

The production of refined copper was 1,216 long tons more at 8,769.30 long tons, which too is a record. The overall recovery from ore to refined copper was 92.876 per cent as against 92.923 per cent in 1959. The output of rolled products, including 364 metric tonnes of copper sheets and strips, was 10,923 metric tonnes, as compared with 9,419 metric tonnes in the previous year. A good market for brass sheets and strips continued, but the output was restricted again in accordance with the availability of zinc against import licences.

The sales of Kyanite increased by 5,096 tons to 21,317 tons. The Company's appeal to the Supreme Court against the judgment of the Patna High Court in the two civil suits with the Bihar Government still remains subjudice. The exact amount of contingent liability in connection with the mining of Kyanite from 1st February 1955, the date from which the Bihar Government did not accept the continuance of the terms of the former lease, cannot yet be determined.

There is a wide difference in the market value of the shares of the Company quoted on the Indian and London stock exchanges. The current quotation in London is equal to Rs. 4.50, whereas the quotation in India is Rs. 5.56. This is due chiefly to the higher interest rates in Britain and the limitations placed on investors in Britain in selling their holdings to Indian investors. At the current market rate in India, the net yield works out to 4.5 per cent per annum.

(Concluded from next column)

working. The need for additional capital is all the more pressing, in view of the Company's fresh expansion plans.

The Company has been experiencing a shortage of gas for its baking furnaces particularly in Factory No. 2. In order to relieve this shortage, a third gas generator has been ordered and is expected sometime in the beginning of the next year. This will enable the Company to increase production to the full-rated capacity of its new factory.

The Company has signed a technical collaboration agreement for the increased manufacture of high and low tension insulators with a German firm for a period of ten years, starting from 1st January 1961. The necessary equipment has been ordered and expected to be received by the end of this year.

The current market quotation for the Company's Rs. 2.50 fully paid ordinary shares is Rs. 7.06, on which basis the net return per annum works out to 4.9 per cent per annum.

The Board of Directors of the Raneegunge Coal Association Ltd. has decided to increase the paid-up capital of the Company from Rs. 23.99 lakhs to Rs. 33.59 lakhs by issuing 95,980 right equity shares of Rs. 10 each at par to those shareholders whose names appear in the register of the Company as on 5th August 1961 in the proportion of two new shares for every five held. The right shares shall rank *pari passu* in all respects with existing ordinary shares.

BENGAL POTTERIES DOING WELL

DIVIDEND SLIGHTLY BETTERED

SPEAKING to the shareholders of the Bengal Potteries Ltd. (Managing Agents: Messrs. Bharat Ram Bhagat and Company, Calcutta) at the annual general meeting last year, the Chairman, Lala Shree Ram had remarked that, in view of the Company's policy of continued expansion, the increasing demand for its manufacture, better utilisation of the productive capacities, and sustained distribution efforts, he had reasons to believe that better results would be achieved in 1960 in spite of certain handicaps. It is, therefore, gratifying to note that the financial results disclosed by the Company's annual report for the year ended 31st December 1960 have fully lived upto these expectations. Sales of the Company's well diversified line of ceramic products have increased by Rs. 27.08 lakhs to Rs. 193.37 lakhs, showing an improvement of about 16 per cent over the sales in the year 1959. The steady increase in production in the Company's two factories has been responsible for this happy outturn, despite a shortage of gas. As could be anticipated, however, there has been more than a proportionate increase in the cost of production due to higher incidence of the cost of raw materials, services, and expenses. Consequently the gross profit shows an increase of only Rs. 4.48 lakhs to Rs. 38.39 lakhs or a little over 13 per cent. Owing to this higher profit, the provision for the Managing Agents' commission has been increased slightly to Rs. 2.71 lakhs from Rs. 2.64 lakhs a year ago, while that for taxation has gone up by as much as Rs. 4.87 lakhs to Rs. 12.03 lakhs. This amount is, however, inclusive of Rs. 1.35 lakh being the shortfall in the previous year's provision. The provision for depreciation is also up, being Rs. 11.22 lakhs as against Rs. 10.67 lakhs a year ago. The increase is on account of the modifications in the mode of computation introduced by the Companies (Amendment) Act 1960. As a result of these substantially higher provisions, the net profit has actually gone down by about Rs. 1 lakh to Rs. 12.43 lakhs.

With the virtual completion of the Company's schemes for expansion, transfer to the statutory development rebate reserve has been sharply reduced to Rs. 48,070 from Rs. 3.40 lakhs during the previous year, while a larger amount of Rs. 3.80 lakhs, as against Rs. 2 lakhs in 1959, has been credited to the general reserve account. With a slightly larger balance thus available for distribution to shareholders, the rate of ordinary dividend has been fractionally stepped up, from 14.29 per cent to 15 per cent, subject to deduction of tax, absorbing Rs. 8.28 lakhs.

The rapid progress made by the Bengal Potteries during the past four years is presented synoptically in the table that follows:

(In lakhs of rupees)

	For the year ended 31st December			
	1960	1959	1958	1957
Sales	193.37	166.29	120.66	106.23

* Subject to deduction of tax.

Save for an addition of Rs. 4.15 lakhs to the reserves and surplus account, there has been no change during the year in the Company's own funds. The share capital, which consists entirely of equity shares with a face value of Rs. 2.50 each, stands unchanged, as at 31st December 1960, at Rs. 55.23 lakhs with a supplement of Rs. 19.79 lakhs in reserve and surplus. Loans and current liabilities aggregate as much as Rs. 142.43 lakhs. The written down value of the block also is out of line with the capital base and amounts to Rs. 98.03 lakhs exceeding the total capital funds by as much as Rs. 23.01 lakhs. The current assets, inclusive of loans and advances, at Rs. 119.42 lakhs, are also less than the current liabilities. All these factors point to one conclusion, namely, that the Company is decidedly under capitalised. It will, therefore, do well to issue additional share capital not only to strengthen its capital base but to relieve its reliance on borrowed capital to finance its

(Continued in previous column)

SYNOPSES OF COMPANY REPORTS

Minerva Mills Ltd.

(*Managing Agents*: Messrs. N. Sirur & Co. Private Ltd., Bombay.)

Annual General Meeting—31st July.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales (yarn, cloth and waste)	1,28,10	1,34,58

Transfer to Managing Agents' remuneration	40	40
" " depreciation	6,37	4
" " provision for gratuity	1,15	1,07
Net profit (+) or net loss (+)	(+) 40	(—) 14
Adjustments	1,76	7,99*
Appropriations:		
Total available balance	2,25	7,99
To provision for arrears of octroi duty and cess on cotton	2,16	..
To provision for arrears of bonus to clerical staff for 1959	9	..
To adjustment of loss	..	7,88†
To tax re-imbursed to Managing Agents on commission foregone for 1959	..	11
To dividends	Nil	Nil
Carried forward	Nil	Nil

N.B.—Adjustments include refund of income-tax for previous years; refunds of insurance premia if any; the amount transferred from general reserve and the amount drawn from investment reserve.

* Includes Rs. 59,723 being the refunds of insurance premia and Rs. 7,39,082 transferred from general reserve.

† Includes adjustments of loss of Rs. 14,285 for the year 1959 and Rs. 7,73,251 brought forward from 1958 accounts.

Extracts from the Directors' report: From the capital profit realised on the sale of the Company's Bleach and Dye House Block, amounting to Rs. 5,56,575 appropriations have been made, as under:—Provision for Capital Gains Tax on the capital profits Rs. 37,000; to wipe off the loss incurred on sale of the Company's investments during the year Rs. 54,504; to write off, in entire, debenture issue expenses and debenture underwriting commission, not written off in the previous year, aggregating to Rs. 91,737 and to transfer the balance of Rs. 3,73,333 to capital reserve.

Steps taken to improve the working of the Mills by changing the pattern of production and by initiating a scheme of modernisation and rationalisation, are yielding results. In pursuance of the continued programme of rationalisation, an *ex-gratia* compensation of Rs. 1,28,495 was paid during the year under report to workers who, on being rendered surplus, submitted voluntary resignations. This amount together with similar compensation of Rs. 45,418 paid during the previous year, aggregated to Rs. 1,73,913. As the benefit of such rationalisation would be felt over a period of years, the directors considered that it would not be appropriate to charge off the entire compensation to the profits of the year under report, and, therefore, decided to spread it over 3 years. Accordingly, one-third of such compensation which works out to Rs. 57,971 has been debited to the profit and loss account of the year under report.

Although there was a distinct improvement in the working results of the Company, and the year ended with a profit, the directors very much regret that the dividend has again to be passed over. The reason is that under the provisions of the Companies Act, 1956, as amended by the Companies (Amendment) Act, 1960, full depreciation amounting to Rs. 6,37,068 had to be charged off to the trading profits of the year. Further, as a result of the Supreme Court's Judgment in the Octroi Duty and the Cotton Cess cases which were decided against the Company, a sum of Rs. 2,16,017 in respect of arrears had to be provided for in addition to Rs. 1,02,790. As the general reserve, already depleted, was partly drawn upon for making provisions for payment of octroi duty, cotton cess etc., the directors did not consider it prudent to recommend payment of dividend from out of the general reserve, particularly because all the available funds of the Company have to be conserved for implementation of the scheme of renovation and modernisation upon which the Company has already embarked.

Since the close of the financial year under review, the following material changes and commitments affecting the financial position of the Company, have been made, viz:—

The National Industrial Development Corporation Ltd., after going into the merits of the scheme for implementation of the second phase of the Company's programme of renovation and modernisation, has decided in February 1961 to sanction a loan up to Rs. 45 lakhs to the Company on the basis of a first charge ranking *pari passu* with the existing charge of the Debenture Holders, on the standard terms and conditions of the said N.I.D.C., and subject to a further special condition that the loan of Rs. 45 lakhs should be utilised for purchasing the new items of machinery included in the Company's scheme of rehabilitation and modernisation, it being understood that the balance of Rs. 7.48 lakhs which would be required to fully implement the said scheme would be brought in by the Company from its own resources, in addition to the Company's defraying all incidental expenses towards installing the approved items of machinery under the said scheme. The amount of the loan is repayable in not more than 15 equal annual instalments, the first of such instalments being payable latest by 18 months from the date on which the loan is drawn, rate of interest to be charged on the loan being 7 per cent per annum.

With the unanimous approval of the shareholders of the respective Companies in general meeting, and with the consent of the Company's debenture trustees, a vacant piece of land divided into nine sites belonging to the Company and which was surplus to its requirements, has been agreed to be sold to this Company's sister Company, The Mysore Spg. & Mfg. Co. Ltd., for a price mutually agreed upon, viz. Rs. 1,07,300 which will bring in a profit to this Company.

In October 1960 the Board had resolved to increase the issued capital of the Company by Rs. 9,86,500 by the issue of 9,865—8½ per cent taxable, redeemable cumulative preference shares of Rs. 100 each which were offered in January 1961, at par, in the first instance to the ordinary shareholders of the Company with such rights and on such terms and conditions as were set out in the letters of offer dated 31st October 1960 addressed to the shareholders. Applications are being received for the shares and the first allotment was made on 17-2-1961. Allotments are being made from time to time as and when applications are received, and the shares allotted up to the date of this report are 3,250 of the total face value of Rs. 3,25,000. That leaves a balance of 6,615 shares of the face value of Rs. 6,61,500 still to be applied for. The last date for receiving applications was extended up to 30th June 1961 which has now been further extended up to 31st August 1961.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	10,80,000	Gross block	96,03,727
Reserves and surplus	34,50,333	—Depreciation	58,00,178

		Investments	76,500
		Cash	37,597
	Rs. 1,19,64,258		Rs. 1,19,64,258

Bhartia Electric Steel Co., Ltd.

(*Secretary*: Mr. M. L. Sharma, Calcutta.)

Annual General Meeting—31st July.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	74,74	2,89,44
Closing stock	25,63	19,99
Gross profit	5,94	29,68
Transfer to Managing Agents' commission	..	1,44*
" " depreciation	3,49	6,00
" " taxation	..	9,00
" " development rebate reserve	2,05	2,67
Net profit	40	10,57
Adjustments	4,60	53
Appropriations:		
Total available balance	5,00	11,10
Proposed dividend (taxable)	5,00 (10%)	7,50 (15%)
Carried forward	14	3,60

N.B.—Adjustments include the balances brought forward from the previous year and the amount transferred from general reserve.

* Managing Agents' commission on profits (upto 10th August 1959 on time basis).

† Only a small amount of Rs. 496.

Extracts from the Directors' report: The operation of the works was not satisfactory during the year. As stated in the directors' last report the order position of steel castings was not good and this remained so upto end-October. This resulted in low production and consequently the working has been badly affected. However, the directors are pleased to state that the order position for steel castings has much improved now and at present is fully booked upto the end of 1962. The management has also taken into account the increased costs while accepting fresh orders.

In the context of third Five-year Plan and developing economy of the country the demand for all types of steel castings is likely to go up. The Company also received repeat orders for old C.R. Type wagon parts. These have been the Company's main items of production since many years and were discontinued by the Railway Ministry in 1959-60 due to change in wagon designs. But the demand for these types wagons have again been revived and the Company has booked orders for large quantity.

The manufacture of *Centre Buffer Automatic Couplers* and *Draft Gears* have been finalised and the delivery has already commenced although in a restricted scale. The mass production of these items is likely to take a few months more. During this period two highly skilled American engineers from this Company's collaborators Messrs. American Steel Foundries Inc. visited the Company and helped and trained the staff and labour in manufacturing these difficult and intricate steel castings for which the Company hold a large order and which are likely to be the main items of manufacture for years to come.

The directors are fully alive to the urgent necessity of modernisation and replacement of plant and machinery and steps are being taken to that effect. Heavy and costly machineries have been installed in the machine shop for the machining of *Roller Bearing Axle Boxes* and this is now a regular item of the Company's manufacture. The Company hold large orders for this also and hope that in future this will be also a regular item of manufacture. Similarly new moulding, heat treatment and other machineries have been installed in the Steel foundry division and some more are in the process of installation. The directors have finalised the order for one new self-charging latest design 3-ton electric furnace the delivery of which will be made at end of 1962 provided the requisite foreign exchange is available. It is needless to say that old furnaces require replacement very badly.

During this period of modernisation of plant and machinery some hindrance to production is inevitable but on completion of the programme this Company may look forward with confidence to the future.

The directors wish to record a note of caution also. As shareholders are aware the supply of electricity has been drastically cut from February to April 1961 due to breakdowns at the plants of Calcutta Electric Supply Co. Ltd. and D.V.C. projects. This has also adversely affected the production at the Company's workshop.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	50,00,000	Gross block	1,01,45,489
Reserves and surplus	30,54,717	—Depreciation	45,43,025
Other liabilities	57,51,722		
		Net block	55,88,464
		Block in progress	50,744
		Current assets	99,56,901
		Investments	86,025
		Cash	1,59,275
	Rs. 1,38,06,439		Rs. 1,38,06,439

Katras Jherriah Coal Co., Ltd.

(*Managing Agents*: Messrs. Andrew Yule and Co., Ltd., Calcutta.)

Annual General Meeting—29th July.

Working Results:

	For the year ended 31st January (In thousand rupees)	
	1961	1960
Sales	83,85	79,77
Closing stock	3,15	1,33
Gross profit	14,71	13,85
Transfer to Managing Agents' commission	1,31	1,25
" " depreciation	1,39	1,24
" " taxation	6,01	5,53
" " development rebate reserve	57	22
Net profit	5,43	5,62
Adjustments	2,16	2,15
Appropriations:		
Total available balance	7,59	7,77
Transfer to reserves	22	1,70
Proposed dividend (taxable)	5,06*	4,75†
	(40%)	(95%)
Carry forward	1,39	1,32

N.B.—Adjustments include the balance brought forward from the previous year; the amount drawn from taxation reserve: excess provisions for taxation written back and other credit items.

* This represents the dividend at 40 per cent or Rs. 4.00 per share (taxable) on the present paid up ordinary capital of Rs. 14,86,480.

† The dividend for 1960 was 95 per cent or Rs. 9.50 per share (taxable) and this was on a paid-up ordinary capital of Rs. 5,00,000.

Extracts from the Directors' report: Raisings for the year were 3,50,536 tonnes compared with 3,42,468 tonnes in the previous year. Despatches, which included purchased coal, amounted to 3,60,222 tonnes as against 3,52,525 tonnes.

Raisings at Seebpore Colliery continued to show a decrease, but there was an increase in the raisings of Selected 'A' grade coking coal at Laikdih Deep Colliery, which amounted to 2,04,560 tonnes during the year under review. The tonnage of sand stowed at this colliery totalled 2,95,733 tonnes, and the Company had to bear a loss of Rs. 1,09,000, representing the difference between the cost of sand stowed and the quantum of assistance received from the Coal Board.

During the year the Company received from its investment in the wholly owned subsidiary of The Kalapahari Coal Co., Ltd., dividends totalling Rs. 87,500, being the final dividend for the year ended 31st January 1960, and an interim dividend in respect of the year ending 31st January 1961. The sinking to the Nega Seam at Damra Colliery continued satisfactorily.

Accounts in brief as at 31st January 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	14,86,480	Gross block	59,54,892
Reserves and surplus	16,48,855	—Depreciation	41,77,254

		Net block	17,77,638
		Current assets	26,98,084
		Investments	7,16,064
		Cash	1,67,976
	Rs. 53,54,393		Rs. 53,54,393

Notices

BOMBAY SUBURBAN ELECTRIC SUPPLY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting within the meaning of the Companies Act, 1956 (being the Thirty-second Ordinary General Meeting) of BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED, will be held on Wednesday, the 9th August, 1961, at 4-15 p.m. at the Registered Office of the Company, Killick House, Home Street, Fort, Bombay, to transact the following business:—

1. To adopt the Directors' Report and Audited Statement of Accounts made upto 31st March, 1961.
2. To declare a Dividend.
3. To elect a Director in the place of Mr. Dominic J. Ferreira who retires by rotation but who offers himself for re-election and to consider and if thought fit, to pass the following ordinary resolution of which special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company:—

   "THAT Mr. Dominic J. Ferreira who has attained the age of 92 years and who retires by rotation be, and is hereby, re-elected a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."
4. To appoint a Director in the place of Mr. Ambalal Kilachand who holds office as a Director of the Company only upto 9th August 1961, i.e., the date of the Thirty-second Ordinary General Meeting of the Company. The Company has received notice under Section 257 of the Companies Act, 1956 from a shareholder of his intention of moving the following resolution:—

   "THAT Mr. Ambalal Kilachand be and is hereby appointed a Director of the Company."
5. To appoint a Director in the place of Mr. N. C. Javeri who holds office as a Director of the Company only upto 9th August, 1961, i.e., the date of the Thirty-second Ordinary General Meeting of the Company. The Company has received notice under Section 257 of the Companies Act 1956, from a shareholder of his intention of moving the following resolution:—

   "THAT Mr. N. C. Javeri be and is hereby appointed a Director of the Company."
6. To appoint Auditors until the conclusion of the next Annual General Meeting and to fix their remuneration.
7. To consider and, if thought fit, to pass with or without amendment as may be permissible the following as a Special Resolution:—

   "THAT, as required by the provisions of Section 360 of the Companies Act, 1956 as amended by the Companies (Amendment) Act, 1960, and subject to the approval of the Central Government and to such modification or modifications as the Central Government may require and which the Board of Directors are hereby authorised to agree to, the Company hereby approves of a contract or arrangement (in terms of the draft initialled by the Chairman for the purpose of identification and produced before the meeting for inspection of the shareholders) being entered into with Killick Nixon and Co., Ltd., which Company is or may be deemed to be an Associate of Killick Industries Ltd., the Managing Agents of the Company, for the sale, purchase or supply of any property or goods by one to the other including motor cars, motor lorries, motor car accessories, petrol, or such other goods as may be required from time to time in the ordinary course of business and for the supply or rendering of any services incidental to the business of the Company commencing from the 10th day of August, 1961 and terminable by either party by one month's notice in writing given to the other upon the terms following:—

   (a) that the prices or amounts charged to or to be received by the Company shall be such as are not less favourable to the Company than the market rates or rates which are otherwise reasonable;

   (b) that the other terms and conditions of such sale, purchase or supply of property or goods or for the supply or rendering any services shall be generally the same as those on which the Company can sell, purchase or supply such property or goods or receive such services elsewhere;

   (c) that for any property or goods sold or supplied by the Company, payment shall be made to the Company within one month from the date of sale or supply of such property or goods."
8. To consider and, if thought fit, to pass with or without amendment as may be permissible the following as a Special Resolution:—

   "THAT, as required by the provisions of Section 360 of the Companies Act, 1956 as amended by the Companies (Amendment) Act, 1960, the Company hereby approves of a contract or arrangement (in terms of the draft initialled by the Chairman for the purpose of identification and produced before the meeting for inspection of the shareholders) being entered into with Stamco Industries Ltd., which Company is or may be deemed to be an Associate of Killick Industries Ltd., the Managing Agents of the Company, for the sale, purchase or supply of any property or goods by one to the other as may be required from time to time in the ordinary course of business commencing from the 10th day of August, 1961, and terminable by either party by one month's notice in writing given to the other upon the terms following:—

   (a) that the prices or amounts charged to or to be received by the Company shall be such as are not less favourable to the Company than the market rates or rates which are otherwise reasonable;

   (b) that the other terms and conditions of such sale, purchase or supply of property or goods shall be generally the same as those on which the Company can sell, purchase or supply such property or goods or receive such services elsewhere;

   (c) that for any property or goods sold or supplied by the Company, payment shall be made to the Company within one month from the date of sale or supply of such property or goods."
9. To consider and, if thought fit, to pass with or without amendment as may be permissible the following as a Special Resolution:—

   "THAT, as required by the provisions of Section 360 of the Companies Act, 1956 as amended by the Companies (Amendment) Act, 1960, and subject to the approval of the Central Government and to such modification or modifications as the Central Government may require and which the Board of Directors are hereby authorised to agree to, the Company hereby approves of a contract or arrangement (in terms of the draft initialled by the Chairman for the purpose of identification and produced before the meeting for inspection of the shareholders) being entered into with Bombay Garage Private Ltd., which Company is or may be deemed to be an Associate of Killick Industries Ltd., the Managing Agents of the Company for the sale, purchase or supply of any property or goods by one to the other including motor cars, motor lorries, motor car accessories, petrol, or such other goods as may be required from time to time in the ordinary course of business commencing from the 10th day of August, 1961 and terminable by either party by one month's notice in writing given to the other upon the terms following:—

   (a) that the prices or amounts charged to or to be received by the Company shall be such as are not less favourable to the Company than the market rates or rates which are otherwise reasonable;

   (b) that the other terms and conditions of such sale, purchase or supply of the aforesaid property or goods or for the supply or rendering of any services shall be generally the same as those on which the Company can sell, purchase or supply such property or goods or receive such services elsewhere;

   (c) that for any property or goods sold or supplied by the Company, payment shall be made to the Company within one month from the date of sale or supply of such property or goods."
10. To consider and, if thought fit, to pass the following as a Special Resolution:—

    "THAT, as required by the provisions of Section 360 of the Companies Act, 1956 as amended by the Companies (Amendment) Act, 1960, the Company hereby approves of a contract or arrangement (in terms of the draft initialled by the Chairman for the purpose of identification and produced before the meeting for inspection of the shareholders) being entered into with Snowcem India Ltd., which Company is or may be deemed to be an Associate of Killick Industries Ltd., the Managing Agents of the Company for the sale, purchase or supply of any property or goods by one to the other as may be required from time to time in the ordinary course of business commencing from the 10th day of August, 1961, and terminable by either party by one month's notice in writing given to the other upon the terms following:—

    (a) that the prices or amounts charged to or to be received by the Company shall be such as are not less favourable to the Company than the market rates or rates which are otherwise reasonable;

    (b) that the other terms and conditions of such sale, purchase or supply of property or goods shall be generally the same as those on which the Company can sell, purchase or supply such property or goods elsewhere;

    (c) that for any property or goods sold or supplied by the Company, payment shall be made to the Company within one month from the date of sale or supply of such property or goods."

By Order of the Board,

FOR BOMBAY SUBURBAN ELECTRIC SUPPLY, LIMITED,
KILLICK INDUSTRIES LIMITED,

A. N. HAKSAR,
Managing Director,
Managing Agents.

BOMBAY, 6*th July* 1961.

N.B.—(*a*) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member. Under Article 96 of the Company's Articles of Association, the instrument appointing a proxy and the power of attorney or other authority (if any) under which it is signed or a notarially certified copy of that power or authority, shall be deposited at the Registered Office of the Company not later than forty-eight hours before the time of holding the Meeting at which the person named in the instrument proposes to vote and in default the instrument of proxy shall not be treated as valid.

(*b*) The Transfer Books of the Company will be closed from Friday, the 21st July, 1961, to Wednesday, the 9th August, 1961, both days inclusive.

(*c*) The Dividends when declared will be made payable at the Chartered Bank, Bombay, on and after the 11th August, 1961, to those Shareholders, whose names stand on the Register on the 9th day of August, 1961, to whom Dividend Warrants will be posted.

(*d*) Explanatory Statements as required Section 173(2) of the Companies Act, 1956, respect of item Nos. 4, 5 and 7 to 10, includ have been forwarded to the members of Company.

THE RELIANCE JUTE MILLS COMPANY, LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Fourth Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta, at 11-30 a.m. on Wednesday, 23rd August, 1961 for the following purposes:

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1961 and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To appoint a Director in place of one retiring and in this connection to consider the following resolution which will be proposed as a special resolution:

"That Mr. John Valentine Jardine Paterson, an Associate of the Managing Agent of the Company, be and is hereby appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation."

Special notice of the intention to move this resolution as a special resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956 indicating that Mr. J. V. Jardine Paterson is an associate of the Managing Agent by reason of his being a Director of the Managing Agent's Company, has been received by the Company.

(3) To appoint Auditors and to fix their remuneration.

(4) (*As special business.*) To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution, viz.:—

"(a) That the action of the Board in having agreed on 29th May 1961 to dispose of, under the Working Time Agreement of the Indian Jute Mills Association, 6,417½ current loom hours per week to Howrah Mills Co., Ltd., 16,235 current loom hours per week to Kamarhatty Co., Ltd., 23,630 current loom hours per week to Kanknarrah Co. Ltd., and 1,445 current loom hours per week to the Barnagore Jute Factory Co. Ltd., in each case on payment by the Company of 25 naye Paise per current loom hour, for a period of 17 weeks ending on 30th September 1961 be and the same is hereby approved and confirmed.

(b) That the Board be and is hereby authorised to extend the foregoing arrangement for a further period not exceeding 14 weeks from the date of its expiry, viz. 30th September 1961, provided that the sum of the compensation to be paid by the Company shall not exceed the amount of lay-off compensation estimated to be payable to the Company's workpeople in respect of that period if the loom hours are not worked.

(c) That the authority previously conferred on the Board by special resolution adopted by the Company in general meeting on 4th July 1958, whereby the Board was empowered to sell current loom hours to Howrah Mills Company, Limited, Kamarhatty Company, Limited and Kanknarrah Company, Limited pursuant to the Working Time Agreement of the Indian Jute Mills Association on the basis set out in the said special resolution be and the same is hereby confirmed and further that the Board be and is hereby authorised similarly to sell current loom hours to The Barnagore Jute Factory Company, Limited on the same terms and conditions."

NOTICE is also given that the Share Transfer Books of the Company will be closed from 9th August to the 23rd August, 1961, both days inclusive.

A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA-1, *7th July*, 1961.

Note:—Explanatory statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all Members.

THE BRITANNIA BISCUIT COMPANY LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the 70th Ordinary General Meeting) of the Shareholders of the Britannia Biscuit Company Limited, will be held at the registered office of the Company, 15, Taratola Road, Calcutta-27, on Friday the 18th August, 1961, at 10.30 a.m., for the following purposes:—

1. To receive and consider the report of the Directors with Statement of Account and Balance Sheet, and to read the report of the Auditors thereon.
2. To declare Dividends.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.
5. *As Special Business*—To consider and if thought fit, to pass, with or without modification, the following Resolutions:

(I) (*As a Special Resolution.*) "RESOLVED that with effect from 1st April, 1961, the members of the Company consent to the Exchange Stores of 13, Alipur Road, Delhi-8, being a firm in which Mr. A. C. Khanna is a partner and relatives of the said Mr. A. C. Khanna are partners, holding and continuing to hold an office or place of profit under the Company as sole selling agents and also distributors in the Delhi area of bread manufactured by the Company for a period of five years on the terms and conditions as set out in the draft letter of appointment produced at this Meeting and initialled by the Chairman for purposes of identification."

(II) (*As an Ordinary Resolution.*) "That approval be and is hereby accorded to the termination by mutual consent of the appointment with effect from 31st May, 1961 of Messrs. Parry & Co., Ltd., as the Sole Selling Agents of the Company for biscuits and that approval be and is hereby accorded to the appointment of Messrs. East India Distilleries & Sugar Factories Ltd. of Dare House, Madras, as the Sole Selling Agents of the Company for India including Pondicherry and the Andaman and Nicobar Islands but excluding Bombay City and its suburbs in respect of biscuits manufactured by the Company for a period of five years, with effect from 1st June, 1961, on the terms and conditions as set out in the draft letter of appointment produced at this Meeting and initialled by the Chairman, for purposes of identification."

(III) (*As an Ordinary Resolution.*) "That the authorised capital of the Company be increased from Rs. 50,00,000 to Rs. 1,00,00,000 by the creation of 5,00,000 Ordinary Shares of Rs. 10 each."

The Share Transfer Books of the Company will be closed from the 11th August to 18th August 1961, both days inclusive, and warrants for such Dividends as may be declared will be issued directly to the Registered Shareholders or their Mandatees, whose names appear in the Company's Books on the 18th August, 1961.

By Order of the Board,
A. P. CHANDA,
Secretary.

15, TARATOLA ROAD,
CALCUTTA, *11th July*, 1961.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

An Explanatory Statement as required under the Companies Act, 1956 has been forwarded to the members of the Company.

OIL IN UNDERDEVELOPED COUNTRIES

(*Concluded from page 177*)

concluded an agreement worth about £14 million with the U.S.S.R. which made provision for the despatch of Russian experts to study development projects. Mali (formerly French Sudan) signed an agreement last March which promised assistance in the search for oil, gold and diamonds, in the construction of a cement works and in the improvement of navigation on the Niger. On the other hand, Ethiopia, which had earlier accepted a Russian offer to build a refinery at Assab on the Red Sea coast to operate on Soviet crude oil, has now changed its mind in this respect. But the country has received substantial credits from the U.S.S.R. for other purposes.

These examples by no means exhaust the catalogue of Communist economic penetration. Besides the countries mentioned, Indonesia, Ceylon, Nepal, Yemen and Tunisia figure as recipients of financial aid. In New Delhi last March, the Soviet Foreign Minister, Mr. Poushkin, claimed that his country was assisting 14 Asian and African States; and that total Soviet assistance (a term not precisely defined) to these countries over an unspecified period reached more than 2,000 million new roubles. This would be equivalent to just under £800 million at the official rate.

The figure lines up reasonably well with an independent estimate that the credits for industrial development, raw materials, etc., granted by the Communist bloc between 1953 and mid-1960, add up to rather more than £1,000 million; this includes about £850 million from Russia, £80 million from Czechoslovakia, £30 million from Poland and £50 million from Communist China. It is reckoned, however, that only about one-third of this total has been drawn upon so far. On the other hand, the total excludes military equipment valued at rather more than £250 million. Mr. Poushkin said that Russia was prepared to offer economic and technical assistance to all E.C.A.F.E. countries. Against these figures, one may set the total of nearly £5,000 million of assistance contributed during 1956-1959 by Western countries to underdeveloped areas—where, in addition, investment of private capital from the Western countries amounted to well over £4,000 million in the same period.—By special arrangement with *Petroleum Press Service*.

MANCHESTER LETTER

(*Concluded from page 168*)

output of tyre fabrics, synthetic fibre fabrics and spun materials and the very marked expansion in the output of filament rayon fabrics. The industry's labour force, according to the report, has declined continuously since last November and this rate has accelerated more recently, the net loss of workers between the end of January and the end of April being about 5,000. About half of these were in the finishing section where works were closed as a result of the reorganisation scheme.

The expansion in the rate of cotton yarn output in the non-Communist world generally clearly reached and passed a peak some time last year, the survey adds. In the first quarter this year, production was about 3 per cent lower than in the same months of 1960, although the 12 per cent drop in yarn output in the United States was more than enough by itself to account for this decline. World trade in cotton piecegoods in the first quarter of the year was much the same in total as in the same period of 1960. Exports from Japan, Italy, Spain and probably Hong Kong were greater than a year earlier, but shipments from the United Kingdom, India, Pakistan and Switzerland were smaller.—*All Rights Reserved.*

SHARP DROP IN CALL RATE

(From Our Own Correspondent)

BOMBAY, *19th July*

Thanks to plentiful supply of liquid funds with banks, combined with only moderate demand on account of the slack season, the short-term money market turned distinctly better in favour of borrowers during the week under review. In the inter-bank call section, business in both renewals and fresh money was done today at as low a rate as 2½ per cent. Stray transactions took place even at the lower rate of 2¼ per cent. Thus, over the week, the rate has declined very precipitately by 1¼ per cent from 4 per cent at which level it ruled a week ago. In other words, for want of borrowers, the call money rate has been falling at the rate of ¼ per cent a day. There has, however, been no change in the rates of interest on short-term deposits. For purposes of record they are given below:

	Per cent
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3¼
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91 days' Treasury Bills of the Government of India sold through weekly tenders clearly reflected the impact of the easy money conditions. As against the invitation for Rs. 2 crores, the amount offered was Rs. 2.02 crores. The amount actually accepted was of the order of Rs. 2 crores. The average rate of accepted tenders declined from 2.650 per cent per annum to 2.500 per cent per annum. 91 days' intermediate Treasury Bills sold from 12th inst. to 15th inst. amounted to Rs. 12 lakhs. Their sales will be continued from the 19th inst. to the 29th inst.

The statement of the Reserve Bank of India for the week ended 14th July 1961 discloses a contraction of Rs. 11.29 crores in notes in circulation as compared with the previous week. As the notes held in the Banking Department have fallen by Rs. 7.61 crores, the total notes issued show a decline of as much as Rs. 18.90 crores. Foreign securities have remained unchanged at Rs. 93.01 crores, but, as balances held abroad went down by Rs. 6.65 crores, total foreign assets are lower by that amount at Rs. 102.90 crores. Deposits of banks with the Reserve Bank have improved by Rs. 4.39 crores to Rs. 96.08 crores.

A contraction of Rs. 5.39 crores in demand deposits and an expansion of Rs. 5.06 crores in time deposits are disclosed by the statement of affairs of the Scheduled banks for the week ended 7th July 1961. Deposits of the State Bank of India alone showed a rise of Rs. 2.12 crores. Borrowings of the Scheduled banks from the Reserve Bank of India declined by Rs. 6.25 crores, of which Rs. 3.96 crores was against usance bills. The borrowings from the State Bank, however, increased by Rs. 1.81 crore in demand variety and by Rs. 67 lakhs in time variety. Advances and bill discounted, that is, bank credit, contracted by Rs. 3.62 crores to Rs. 1,267.94 crores; a year ago, they aggregated Rs. 1,141.43 crores. The advances of the State Bank went up, albeit slightly, by Rs. 76 lakhs. Investments of Scheduled banks, as a whole declined by Rs. 1.46 crore, but when allowance is made for the fact that the investments of the State Bank of India declined by as much as Rs. 2.13 crores during the week, it is clear that the investments of other Scheduled banks must have improved by Rs. 67 lakhs.

The major event for the gilt-edged market during the week under review was the announcement by the Government of India of the issue of a further tranche of the existing 3½ per cent Bond 1969 at Rs. 98.40 per Rs. 100 (nominal) and a new loan—4 per cent 1981—at Rs. 98.50 per Rs. 100 (nominal). It will be recalled that the Government of India had already collected a sum of Rs. 93.57 crores last month by conversion. Subscriptions to the new loans can be in both cash and securities of 2½ per cent 1961 loan and/or 3 per cent Hyderabad loan 1951-61. The subscriptions will be received from the 24th inst. to the 26th inst. The Government has also reserved the right to retain subscriptions upto ten per cent in excess of the notified amount. The 3½ per cent 1969 Bonds offer a running yield of 3.56 per cent and a redemption yield of 3.73 per cent at the issue price of Rs. 98.40. The 4 per cent loan 1981 gives a running yield of 4.06 per cent and a redemption yield of 4.11 at the issue price of Rs. 98.50.

The gilt-edged continued to remain dull. Only some near-dated issues in the Central section were in demand. 3½ per cent 1964 National Plan Loan gathered 5 nP to Rs. 100, but 3½ per cent 1965, 3½ per cent 1968 and 4 per cent 1979 lost 5 nP each to Rs. 99.90, Rs. 98.75 and Rs. 100. 3½ per cent 1969 shed 15 nP to Rs. 98.50, as the new tranche of this loan is being offered at Rs. 98.40. The Conversion loan was lower by 25 nP at Rs. 72.50, but surprising enough the 4 per cent 1980 remained unchanged at Rs. 99.90, even though the proposed 4 per cent 1981 (new loan) is being offered at Rs. 98.50. The State loans section remained neglected, with prices remaining unchanged.

In the foreign exchange section, the rupee showed only a slight improvement in relation to the U.S. dollar in sympathy with the pound sterling. Banks' selling and buying rates for ready T.T. on New York were Rs. 480.50 and Rs. 477 respectively, as against Rs. 480.75 and Rs. 477.25 a week ago. In the New York market, the pound sterling recovered some ground *vis-a-vis* the dollar. The latest available rates are: 278.550-278.580 cents per £ for spot and 276.320-276.350 cents per £ for three months' forward. Over the week, the pound gained 0.11 cent in the spot and 0.90 cents in the forward.

BULLION EASY

(From Our Own Correspondent)

BOMBAY, *19th July*

The upward trend of prices noted in the bullion market towards the close of last week and early this week abated in the subsequent sessions. In fact, the market put on a distinctly easy appearance. This was due to selling by spot houses on reports of large contraband arrivals. It is true that the Central customs authorities were said to have confiscated 1,400 tolas of smuggled gold at Bombay and about 640 tolas at Calcutta. But, since the general assumption in market circles is that what is caught by the Customs is only a fraction of the quantity that is smuggled into the country, such reports are usually regarded as a confirmation of larger arrivals of contraband gold. Besides, buyers were scarce, as offtake at several centres continued to be restricted. Consequently, both gold and silver suffered a setback. The closing rates today were below those prevailing a week ago.

The average daily arrivals of gold and silver were higher than in the previous week; they amounted to 4,600 tolas and 41 bars. The offtake of gold was lower at 3,800 tolas, as against 4,000 tolas, while that of silver was better at 9 bars, as against 7 bars. The floating stocks are estimated at 27,000 tolas of gold and 600 bars of silver.

Adjustment rates fixed today were Rs. 119.15 per 10 grams of gold and Rs. 200.00 per kilogram of silver. The corresponding rates for Wednesday last week were Rs. 120.00 and Rs. 200.15, respectively.

A call to the Bombay Bullion Association to make a study of the pattern of demand for gold and silver, so that it could provide some guidance for regulating forward trading in bullion, was made by the Chairman of the Forward Markets Commission in his speech at a function organised by the Association on Friday the 14th inst. Apropos the Association President's plea for either all-India control or complete relaxation of control in the Bombay market, the F.M.C. Chairman stated that the Commission had an open mind and that it would like to see as to how control on all-India basis could be imposed. In this connection, he recalled the relaxation of margin requirements effected while giving approval to the three-monthly contracts in bullion.

The *Bhadrapad* (25th September) settlement in gold began the week at Rs. 119.60, as against the previous close of Rs. 119.70, and, after rising to Rs. 120.10 on the 15th inst., receded gradually to touch Rs. 119.25 today before finishing at Rs. 119.35. The net loss over the week was 35 nP.

Ready gold was somewhat well favoured in the earlier sessions, the quotation improving from Rs. 120.25 to Rs. 120.70 on Saturday. Thereafter, it was subjected to selling and declined to Rs. 119.30. The closing was a shade better at Rs. 119.40. At this rate, the premium over the forward was just 5 nP, as against 55 nP a week ago and Re. 1.70 a fortnight ago.

In silver, the *Bhadrapad* (26th September) settlement encountered selling and retreated from Rs. 201.15 to Rs. 200.50 yesterday. At this level, some support ensued and the settlement recovered to Rs. 200.90 today before closing at Rs. 200.60.

Ready silver continued to be quoted at a discount under the forward, though the actual discount declined from Re. 1 last week-end to 60 nP today. The spot rate, which had gone up from Rs. 200.15 to Rs. 200.60 in the first three sessions, drifted downward and touched Rs. 199.80 yesterday. After recovering to Rs. 200.30 today, it finished lower at Rs. 200.

The world price of gold in the London bullion market moved up further during the week, from $35.09⅜ to $35.11¼ per fine ounce. But ready gold eased from 252s. ½d. to 251s. 11½d. Forward silver improved by ½d. to 80*d*. The ready rate was firm at 79¾d. Silver in New York continued unchanged at 91.375 cents.

The following table shows the trend of prices during the week under review:

	10-7-1961 (closing)	High	Low	12-7-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.995 fine)	119.40	120.70	119.80	120.25
Forward: Bhadrapad* ..	119.85	120.10	119.25	119.70
Sovereign	94.00	94.25	94.00	94.25
SILVER				
Ready (.995 fine)	200.00	200.60	199.80	200.15
Forward: Bhadrapad† ..	200.60	201.35	200.50	201.15
London—	18-7-1961			11-7-1961
Silver Ready	79¾d.	—	—	79¾d.
Silver Forward	80d.	80d.	79½	79¾d.
Gold	251s.11¾d.	252s. 2d.	251s.11¼d.	252s.0¼d.
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.35 tola) and that for silver is per kilogram (35.7 tolas .London and New York quotations are per ounce.

KIPS DULL

(From Our Own Correspondent)

MADRAS, *17th July*

The hides and skins market remained dull during the week. Importers' inquiries were selective and small. Locally traders were hesitant, and stocks did not move freely. U.K. buying was restricted to light weights in cow-hides under selected well-known marks in small quantities. Cowcalf and buffcalf were dull, while buff-hides ruled steady.

There was some demand for common class tanned sheep skins. Otherwise, the market for sheep and goat skins was weak, as export orders were negligible.

TRADING IN NEW COTTON CONTRACT BEGINS

(From Our Own Correspondent)

BOMBAY, *19th July*

The notable event of the week in cotton market was the commencement of hedge trading in the new (1961-62) crop contract on Thursday the 13th inst. Trading is confined to only one delivery, that is, March 1962, the basis being the same as in the current season, namely, Moglai Jarilla Fine 25/32". The contract began distinctly firm at Rs. 604.25, a premium of Rs. 23.25 over the August 1961 contract. The firmness was engendered partly by hopes of relaxation of cotton controls, early announcement of export quota and enlarged mill demand and partly by the bullish features of the new contract itself. The terms and conditions governing this contract were referred to in these columns last week. The premium, however, declined thereafter and stood at Rs. 17 today when the closing rate was Rs. 595.50, as the contract encountered selling due to delay in the release of export quota and reports of favourable weather in cotton growing tracts.

While the new contract tended to ease thus, the current season's contract, I.C.C. Jarilla August, ruled steadier on account of short-covering induced by proximity of delivery period and indications of poor tenders due to the risk involved in delivering inferior cotton the supply of which is larger than that of quality cotton. Towards the close yesterday as well as today, the contract, of course, drifted downward, thanks to fears of large tenders of unsold Karnatak and Punjab stocks. Nevertheless, the closing rate today was higher as compared with the price prevailing a week ago. The following is the trend of the futures market during the week:

(In Rs. per candy of 784 lbs.)

	19-7-61	*High*	*Low*	12-7-61
I.C.C. August 1961	578.50	584.25	577.50	579.00
I.C.C. March 1962	595.50	696.50	595.25	604.25*

*On 13-7-61

Activity in the spot section was restricted with values generally drifting downward. Some mills, however, evinced interest in Kalyan, Surti, Vijay, Khandesh Digvijay, CO2, L.147 and 197/3. Laxmi cotton attracted scattered support. Some quantities of Berar and Kala-Wagad were also lifted up by certain mills. Induced by hopes of an early release of export quota, Bengal *deshi* evoked support from shippers early in the week, but it developed a sagging tendency later on reports that the visit of a cotton delegation to New Delhi with the object of impressing upon the officials the need for an early export quota had been held up. The highlight of trading in import section this week was the large purchase of Pima grade cotton made by a mill. Transactions were also put through in the Sudan and African cottons. Cotton circles noted reports that the United Arab Republic Economy Minister would be visiting New Delhi shortly to discuss and negotiate, among others, a new agreement covering the trade between the two countries.

The latest available rates—in rupees per candy of 784 lbs.—for a few popular varieties quoted in the spot market are given below, the figures in brackets giving the rates prevailing a week ago:

Hubli Laxmi 930 (940); Amravati 1,000 (1,010); Moglai Zoda 450 (450); Digvijay 949 (960); Gadag Laxmi 925 (935); Dhulia Zoda 450 (450); Kalyan 825 (830); Surti 945 (960); Moglai Jarilla 770 (780).

A joint meeting of the East India Cotton Association, the Cotton Buyers Association, and the Cotton Merchants and *Muccadams* Association was held in the city on Friday the 14th inst. The subjects discussed at the meeting and the decisions taken thereat have been dealt with elsewhere in this issue (*vide* page 187). Cotton circles noted with special interest the assurance given by the E.I.C.A. President at the meeting that steps would be taken to make the E.I.C.A. an all-India body on lines similar to the Indian Cotton Mills Federation.

The Textile Commissioner has warned the holders of A and B class licences issued under the Cotton Control Order of 1955 that he would be constrained to take action in case of failure to submit regularly fortnightly returns showing their stocks, sales, etc. In the course of a Press note dated the 14th inst., he says: "This information is required for the purpose of ascertaining, among others things, the stocks in the possession of the dealers with a view to assisting decisions on exports and imports. It is, therefore, in the interest of the trade itself that its members submit this information to the Textile Commissioner regularly in accordance with the provisions of the aforesaid notification dated 30th August 1960."

The current cotton season (September 1960-August 1961) is expected to close with a total stock of 2.30 million bales with both mills and traders, as against 1.39 million bales a year before. The stocks comprise 1,878,000 bales of Indian cotton and 423,000 bales of foreign cotton; the corresponding figures for 1959-60 were 980,000 bales and 413,000 bales, respectively. The stocks of 2.30 million bales are estimated on the basis of a total available supply of 7,861,000 bales (opening stocks of 1,393,000 bales *plus* domestic crop 5,375,000 bales *plus* imports 1,093,000 bales), mill consumption of 5.3 million bales, consumption of 50,000 bales by Ambar Charkha and other factories, and 210,000 bales exported abroad.

Distinctly easy conditions continued to prevail in the Karachi cotton market, thanks to stale liquidation by bulls, slow mill offtake in spot section, and absence of encouraging export enquiries. The January 1962 contract, which had risen from Rs. 72.95 to Rs. 73.30 initially, moved down consequently to touch a low of Rs. 72.55. The July contract was subdued at Rs. [illegible] following the latest available quotations [illegible] rupees per maund of 82 lbs.—for [illegible]

cotton prevailing at Karachi, the figures in brackets being last week's closing rates:

Sind *deshi* 81 (85); Punjab *deshi* 79 (83); 4F Punjab Roller 76 (76.95); S.G. 80 (80.95); L.S.S. Punjab Roller 78 (78.95).

Price movements in the Liverpool cotton market were confined to a narrow groove. While the maturing contracts encountered selling due to fears of heavy tenders against them, the distant positions met with moderate support. The October 1961 position improved from 24.40d. 24.50d. per lb. The July 1961 position was quiet at 23.65d., as also July Sudan 1961 at 31.75d.

In Alexandria, forward trading in cotton continued to be suspended. The United Arab Republic Government announced this week the prices for the various types of cotton in the 1961-62 season. Egyptian Cotton Committee has decided to purchase cotton at the stipulated prices and has also decided to publish every Sunday export prices of cotton for the following week. Meanwhile, it is reported that the U.A.R. Government has entered into an agreement with a British Company, Messrs. Emerson Associates, under which the latter will buy Egyptian raw cotton worth £2.5 million. In return, the U.A.R. Government will buy British capital goods worth £5 million, the repayment of the balance of £2.5 being arranged over a five-year period.

Reports from Sudan indicate the Gezira Board is considering the possibility of revising its marketing policy for the next season, presumably in a bid to compete effectively in world markets with Egypt, which has thoroughly revised its marketing policy and has imposed State control over overseas cotton trade. The changes in marketing policy, which will affect only the crop grown by the Gezira Board, is expected to include elimination of exporting firms in Sudan and setting up of selling organisation in the importing country. The cotton crop from private estates will, however, continue to be sold through auctions as before.

Cotton futures at New York maintained a firm front during the week under review, induced mainly by enlarged support from commission houses. Trading in new crop December 1961 contract commenced this week, while the July 1961 contract went off the board. Operators felt that the current season's crop would be lower, not only because of smaller acreage sown, but also because of reports of increased insect activity in several cotton growing areas in Texas. Exports of cotton (all types) from the U.S. during the first ten months (August-May) of the current season aggregated 6,084,000 bales. Although exports thus far this season are larger than in the same period last season, shipments in the remaining two months of 1960-61 are likely to decline. Total exports this season are thus expected to be about 6.5 million running bales, as compared with 7.2 million last season and an annual average of 5.1 million during the past five seasons.

The following are the latest available quotation from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	18-7-61	11-7-61	3-7-61
New York Spot ...	34.85	34.70	34.60
New Orleans Spot ...	32.50	32.25	32.25
October	34.44	34.25	34.17
December	34.97	—	—

YARNS RECEDE

(From Our Own Correspondent)

BOMBAY, 19th July

The yarn market was depressed during the week under review, with an all-round drop in values. Art silk yarn was particularly weak, thanks to nervous liquidation by some bulls on rumours regarding the release of about Rs. 55 lakhs worth of imported yarn for distribution among weaving mills. There were also fears that the Government might concede the plea of weaving interests for an immediate issue of advance import licences to the tune of Rs. 2 crores. Values, as a result, suffered a setback. In sympathy with art silk yarn and following slack demand from consuming centres as well as fears of official controls on prices and distribution, staple fibre yarn also drifted lower. The cotton yarn section continued to be dull.

The ancillary industries and doubling units consuming art silk yarn have been asked by the Textile Commissioner to submit, along with their applications for indigenous yarn supply, duplicate copies of essentiality certificates issued to them in the October 1960-March 1961 licensing period. This step has been taken in view of the difficulties experienced by these industries in promptly obtaining necessary essentiality certificates from the Director of Industries of the State concerned.

Cupressa Bemberg yarn (60 x 1) August delivery was subjected to selling and moved down from Rs. 2.880 to Rs. 2.835. Spot cupressa dropped Rs. 13 to Rs. 2.866. (40 x 1) J.P. August contract fell by Rs. 48 to Rs. 3.180. October position suffered a loss of Rs. 38 to Rs. 3.205. Among imported art silk yarns, 150 Japan declined by Rs. 37 to Rs. 2.041. 120 Japan was dull at Rs. 2.010. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade receded from Rs. 17.80 to Rs. 16.43 and 120 Bt. cones 1st grade from Rs. 20.55 to Rs. 19.32.

Staple fibre yarn (40 x 2) August contract were hammered down from Rs. 1.012 to Rs. 959. Spot Citys eased by 26 nP to Rs. 11.55. Hinds fell by 36 nP to Rs. 10.71.

In the cotton yarn section, 10 counts Podars were dull at Rs. 17.37. Twenty counts New Greats were also dull at Rs. 21.25, while Gokaks picked up 43 nP to Rs. 22.87 on special support. Thirty counts Simplex were done at Rs. 27, same as last week. Forty counts Maduras gathered 12 nP to Rs. 32.62. Sixty counts Finlays retreated from Rs. 66 to Rs. 63.63. Eighty counts Finlays shed 13 nP to Rs. 81.62. Moderns were neglected at Rs. 69.25.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	19-7-1961	12-7-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
August	2,835.00	2,880.00
Spot	2,866.00	2,879.00
40 × 1 JP		
August	3,180.00	3,228.00
October	3,205.00	3,243.00
120 Japan (per 100 kg.) ...	2,041.00	2,010.00
150 Japan (per 100 kg.) ...	2,041.00	2,204.00
120 Italy	—	1,899.00
150 Italy	—	1,845.00
Staple fibre yarn (40 × 2)—		
August (per 90.72 kg.)	959.0	1,012.00
City (per kg.)	11.55	11.81
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.37	17.37
20s New Great	21.25	21.25
30s New Great	27.00	27.00
40s Madura	32.62	32.50
60s Finlay	63.63	65.00
80s Moderna	69.25	69.25

LINSEEDS FIRM

(From Our Own Correspondent)

BOMBAY, 19th July

Barring linseed which depicted a distinctly firm trend, oilseeds moved rather indecisively during the week under review. The firmness of linseed was due partly to absence of arrivals from upcountry centres and partly to tight supply in ready and nearby deliveries. Another bullish factor was the U.S. Agriculture Department's first estimate of U.S. linseed crop 1961, which placed the total yield lower at 19.35 million bushels, as against 30.41 million bushels in 1960; the estimated output was said to be the lowest level touched in the last twenty-three years. The output of soyabean, however, is expected to be higher, since the acreage under this crop is believed to have gone up from 23.5 million acres to 27.1 million acres. Groundnuts were well maintained on reports that the sowings of new crop had been affected in certain parts of Madras and Maharashtra. Further strength was imparted by sustained enquiries for oilcakes from the U.K. The spot section, however, was featureless owing to slackness in demand from *vanaspati* manufacturers and crushers who were reported to be holding reasonably sufficient stocks for the time being. Cottonseeds were steady, despite the prospects of larger cotton crop next season. Castorseed gave way, thanks mainly to the protracted absence of U.S. and U.K. enquiries for castor oil. The export performance so far this year has been unsatisfactory, the actual shipments from Bombay in the first half of 1961 being no more than half of what they were in the corresponding period last year. Reports of continuing pressure of Brazilian supplies further dampened the enthusiasm of bulls. There were, of course, some small enquiries from Communist countries, but they had no perceptible effect on the market. Besides, operators expected a larger castor crop this season on reports of favourable rains in the major castor-growing areas. Sesame was subdued as a result of pronounced weakness in both Calcutta and Madras markets.

Linseed March 1962 contract advanced by 37 nP to Rs. 38.37. September 1961 contract rose by 25 nP to Rs. 40.37. Bold ready spurted by 62 nP to Rs. 40.12. Linseed oil was fully maintained at Rs. 17.

Among groundnuts, January 1962 contract moved up by a rupee to Rs. 222.50. Oil railway receipts put on 30 nP to Rs. 22.80 and oil ex-mill 20 nP to Rs. 22.95. Groundnut oil January 1962 contract, however, lost 20 nP to Rs. 18.75. Nizam bold shed 50 nP to Rs. 55. Coromandels eased by 25 nP to Rs. 55.25.

Cottonseed January 1962 contract gathered 75 nP to Rs. 93.25. The September contract hardened by 25 nP to Rs. 95.25. The spot section ruled easy. White shed 50 nP to Rs. 19.75. Both Berars and non-whites declined by 63 nP to Rs. 19.12.

Castorseeds September 1961 contract fell by 63 nP to Rs. 174.37. Madras small declined by 25 nP to Rs. 34.87. Oil B.S.S. eased by 30 nP to Rs. 15.80. Oil commercial gave way from Rs. 14.75 to Rs. 14.55. Castorseed March 1962 contract, however, picked up 13 nP to Rs. 174.

Sesame bold was quiet at Rs. 370. Sesame oil dropped 63 nP to Rs. 27.37.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	19-7-1961	12-7-1961	5-7-1961
Groundnut	Rs.	Rs.	Rs.
January 1962	222.50	221.50	—
Nizam bold	55.00	55.50	54.50
Coromandel ready ...	55.25	55.50	54.50
Khandesh quality ...	55.25	55.50	54.50
Oil ex-mill ready* ...	22.95	22.75	23.00
Railway receipts* ...	22.80	22.50	22.75
Castorseed			
September 1961	174.37	175.00	178.75
March 1962	174.00	173.87	—
Ready Madras	34.87	35.12	35.50
Ready Kanpur	33.62	33.75	33.87
Oil B.S.S.†	15.80	16.10	16.20
Oil commercial†	14.55	14.75	14.90
Linseed			
September 1961	40.37	40.12	40.12
March 1962	38.37	38.00	—
Bold ready	40.12	39.50	39.50
Oil ready†	17.00	17.00	16.90
Cottonseed			
September 1961	98.25	95.00	95.50
January 1962	98.25	92.50	—
Kheri seed	41.62	42.00	42.50
Kardi seed	27.50	27.00	27.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEA HARDENS

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 11th July

Offerings in Sale No. 28 held on the 11th inst. amounted to 580,000 kilograms. Quality showed little change from last week with a few Nilgiri invoices showing improvement. There was strong general demand and prices were dearer for most descriptions. Plain and low mediums were in keen competition and were dearer by 10 to 15 nP with buyers emphasising more on B.O.P. grades. Mediums and good mediums were also well supported and advanced by about 10 nP and in some cases more where quality showed improvement. There was good support for highgrowns which were generally dearer following quality. Black leaf descriptions continued strong and were dearer. C.T.C. and legg-cut types sold readily at rates, above last. Whole leaf grades were well sought after and were often dearer. Quotations were:

	1961 Rs.	1960 Rs.
Low mediums	4.45-4.60	3.40-3.65
Mediums	4.60-4.70	3.65-3.85
Good mediums	4.70-5.00	3.95-4.20
Nilgiri B.O.P.	Rs.	4.65-5.90

The average price realised in Sale No. 28 was Rs. 4.67 per kilo, as against Rs. 4.55 a week ago and Rs. 3.77 in the corresponding sale last year.

Dust Sale No. 28: A total quantity of 290,000 kilograms was offered in Dust Sale No. 28 held on the 13th inst. A useful selection of dusts was on offer. The market opened with strong demand which continued throughout the sale. There was keen competition for residuals and low mediums which were dearer by 15 to 20 nP and were strongest feature of the sale. Mediums and good mediums were also well supported and advanced by 10 to 15 nP. Highgrowns met with useful support but these were irregular and sometimes slightly easier. C.T.C., C.T.C. types and legg-cut types continued in demand and sold at rates above last.

The average price realised in Dust Sale No. 28 was Rs. 4.62 per kilo, as compared with Rs. 4.50 in the previous week and Rs. 3.50 in the corresponding sale last year.

Export Quota: The market remains rather quiet with large sellers at 2¼ nP per kilo.

Colombo: Approximately 7 million pounds were offered. There was strong demand. Teas from the Western districts were generally dearer. Uvas also advanced in price and quality mediums were dearer by 5 to 8 cents. Lowgrowns however were easier by 3 to 5 cents. At the offgrade sale there was a strong market and prices were fully firm to dearer for dusts and offgrades.

London: North Indian and other growths: There was good general demand. Plain teas were fully firm to dearer whilst others were irregular. Teas from Dooars were occasionally easier by a penny to 2d.

Ceylon and South Indians: In Tuesday's sale 34,079 packages were on offer of which 7,024 packages came from South India. There was good demand from Ceylons which were firm to dearer whilst there was slightly easier tendency for South Indians.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd. Wire:—

"Sale 29: 5,90,000 kilograms. Fair demand. Plain and low medium brokens about steady. Similar fannings slightly easier. Black leaf strong and dearer mediums and good medium improved quality fully firm to slightly dearer. Similar fannings steady. Highgrowns irregularly dearer with quality unorthodox types fully firm to dearer."

TEA STEADIER

(From Our Own Correspondent)

CALCUTTA, 18th July

Following strong general demand, steadier conditions were again in evidence at the export sales held yesterday. Similar conditions prevailed during last week's internal sales, too. Fresh arrivals showed a visible improvement during the week, but anxiety centred around floods in Assam, as they might affect transport. Loading of tea in liners for the United Kingdom was very satisfactory in relation to quantity.

As expected, tea output in North East India in June was higher. At 68.2 million lbs. the increase was by 4.4 million lbs. as compared to June 1960. With this, the total production in this season has come to 118.1 million lbs. representing an increase of 16.7 million lbs. Trade circles refused to consider the increase in production with alarm, since they stated that comparison of the figures with those of last year when production had declined considerably on account of drought, did not serve any useful purpose.

That buyers were also reluctant to slow down their purchases in anticipation of a decline in prices on a possible glut in supplies was indicated in the good measure of support which both export as well as internal auctions had been eliciting. Foreign countries, especially the United Kingdom have since the new auctions began bought a very modest quantity. The U.S.S.R. had also been active.

However, trade circles anticipated that as the new season progressed the prices of common teas might fall but that the superior teas would continue to be bought at hardening rates.

Production in other countries also has tended to rise. Trade circles would suggest that the Tea Board should consider to place before the International Tea Convention scheduled to be held in Calcutta in November under the auspices of the Board the question of revival of international regulations.

Dusts on offer at the internal sales held in their last week totalled 9,458 packages. There was strong general demand. Flavoury Darjeelings were fully steady. Keen competition was offered

to legg-cut Dooars dust, and in the result prices gained impressively. Orthodox teas were firm, with the bright liquoring teas being a strong feature. Among C.T.Cs, the better lines added to prices but medium C.T.Cs eased by 20 nP. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.60 to Rs. 7.10, medium Assam C.T.C. dust Rs. 6.10 to Rs. 6.40, legg-cut dust Rs. 4.75 to Rs. 5.30, medium Assam dust Rs. 4.60 to Rs. 5.30, and plain orthodox dust Rs. 4.45 to Rs. 4.60.

Leaf on offer amounting to 86 chests were irregular.

Offerings during yesterday's export sales totalled 29,422 chests. There was good demand for all descriptions, and keen competition was a feature. Orthodox teas gained markedly in accordance with quality. B.O.Ps were fully steady. Stylish whole leaf grades and tippy teas appreciated in prices. Among Darjeelings, the few flavouring lots were sold at higher rates, but the remainder of the offerings were irregular with quality. Legg-cut teas were about firm. Better liquoring C.T.Cs eased slightly, but the poorer fibrous kinds met with good support. The rates per kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 7.50 to Rs. 8.20, best Assam C.T.C. B.P. Rs. 7.50 to Rs. 7.80, medium Assam C.T.C. fannings Rs. 6.50 to Rs. 7.00, medium Assam C.T.C. B.P. Rs. 6.40 to Rs. 6.80, plain B.P. Rs. 4.85 to Rs. 4.95, clean plain Pekoe Rs. 5.25 to Rs. 5.35, and plain fannings Rs. 4.70 to Rs. 4.80.

JUTES MOVE UP

(From Our Own Correspondent)

CALCUTTA, 18th July

Price movements in jute goods and fibre were subjected to wide fluctuations during the week under review. Although higher levels yielded to profit-taking, quotations were at no time lower than the opening rates, which were themselves considered to be very high. Another feature was that the closing levels for hessian constructions were substantially higher on balance. There is no doubt that demand for goods is at present running higher than production and the effect is an increase in prices, speculative manipulations adding to the hardening trend. Since stocks of old fibre in the bazar have almost exhausted and raw jute arrivals are yet infinitesimal, fibre prices are moving faster than prices of goods. May-end stocks of goods with mills were 92,000 tons and, adding production in June amounting to 66,200 tons, the total availability in the month was 158,300 tons. June-end stocks being 76,700 tons, demand was 81,500 tons, that is, 15,300 tons higher than production. The drop in production as a result of one week's closure was 12,100 tons and, taking this into consideration, demand was higher by 3,200 tons. These figures were encouragingly noted in market circles, and the upward trend in prices was a natural result of the application of the law of demand and supply. It was pointed out that the proportion of the decline in output to that of hours worked was less and this was attributed to the piece-rate system and workers' anxiety to mitigate the loss in their earnings.

However, the result has been that the mills have utilised more fibre than provisioned for and, if this trend continued this month also—mills would close again for one week later in this month —they would be obliged to close down not only for one week in August but one week in September also. The representatives of the Indian Jute Mills Association are scheduled to be at New Delhi early next week when the raw jute position would be discussed with the officials of the Union Commerce and Industry Ministry. In the meantime, the reluctance of the West Bengal Government to agree even for a closure in August has added to the anxiety of mills. Trade circles, after studying the position of arrivals, would appear to agree with mills in their proposal for closure for one week each in August and September also. True, this would reduce stocks of goods with mills greatly, with a possible rise in prices of fibre and goods. But, when there is insufficiency of fibre, the alternative to closure is adding to losses of mills.

It is good news that the Government of India has allowed imports of 100,000 bales of Pakistan cuttings. This is the first allotment for this season. It is stated on behalf of mills that these anticipated imports would not alter the situation substantially but would only help mills from asking for a longer period of closure than at present planned for. Considering that most early arrivals would be taken up by Pakistani mills, it is apprehended that the completion of the present quota of 100,000 bales would take a longer time. However, as and when Pakistan crop movements become larger, the Government of India would allow further quotas in accordance with the policy of permitting liberal imports from Pakistan. Although trade circles would postpone a final assessment of the new crop, it can be said that movements in larger quantities are not expected before the end of September.

Moderate rains occurred during the week and water levels in retting tanks has shown a satisfactory improvement. River levels in Assam are moving up and this has caused some anxiety, since, in the event of floods, not only would the movement be delayed but the standing crop might be affected. Pest invasions have been reported from certain West Bengal districts, but, as the spraying of insecticides by the Agricultural Department has been prompt, loss of crop is not expected to be significant.

In view of the hardening trend in fibre prices, any possibility of mills being enabled to do simultaneous business in goods and fibre at a profit continue to be as remote as before. Considering the the price trend of fibre, it must be said that the satisfactory stock position of goods with mills has checked the upward movement in prices of goods. The question as to how long the mills would be content to produce at a loss is difficult to answer. During the week, covering business done in hessian was a feature. Further, anticipated Russian buying led to greater local demand.

On Tuesday last, the goods market opened on easier conditions, but the recession was arrested following good business, although the quotations were lower on balance. Ready B. twills were thus at Rs. 164.00, as against Rs. 166.50 on the previous day, and ready hessian 40" 10 oz. at Rs. 53.00, as against Rs. 53.75. On Wednesday, there was selling pressure which reversed the steadier conditions that had developed when the news of the proposal to close for one week in August also spread widely. B. twills closed at Rs. 163, and hessian 40" 10 oz. at Rs. 53.50. At this time, reports of easier conditions from the New York burlap market were received, followed by the reversal of the trend. Spot 40" 7½ oz. hessian gained from 10.10 cents to 10.20 cents a yard duty paid, and the heavier construction from 13.20 cents to 13.35 cents. This factor was reflected in Calcutta where ready hessian 40" 10 oz. hardened to Rs. 53.75 on Thursday. However, ready B. twills eased to Rs. 162, following wide fluctuations in the futures market. On Friday, business in ready goods was reported with both the U.K. and the U.S. in hessian. This was followed by covering business pushing up hessian 40" 10 oz. to Rs. 56.00. In sympathy, ready B. twills rose to Rs. 166.50. The assurance of Mr. Peter Thorneycroft, the British Aviation Minister, that India's trade interests with the U.K. would be kept in mind in any negotiations the U.K. would undertake with the E.C.M. was noted by trade circles with satisfaction. Over the week-end, conditions were easier on reports of lower consumption of burlap in the U.S. during June, and an increase in burlap stocks. Hessian 40" 10 oz. eased to Rs. 55.50 and B. twills to Rs. 165.50. During the week, in the futures market, November B. twills touched a high of Rs. 144.00, as against a low of Rs. 139.25, and November 40" 10 oz. hessian a high of Rs. 37.76 and low of Rs. 36.22. December Assam bottoms touched a high of Rs. 37.76 and a low of Rs. 35.90. These high levels were recorded on Wednesday last. Over the week-end, demand became keener. In hessian, interest from Argentina was considered imminent; covering business was done. In sympathy, sacking also improved. Yesterday, ready B. twills closed higher at Rs. 167.00 and hessian 40" 10 oz. at Rs. 56.50.

Steadier conditions were in evidence in the fibre market. More new crop business took place, but sellers of ready jute were reserved. The opening and closing quotations of the old crop for delivery within a fortnight were:

(In Rs. per maund)

	Opening	Closing
Daissee bottoms	56.50	56.50
Northern bottoms	54.50	54.00
Assam bottoms	55.00	54.50

METALS EASY

(From Our Own Correspondent)

CALCUTTA, 18th July

Although conditions in foreign markets were steady during the week under review, quotations for metals in India tended to be lower as demand was not forthcoming at higher levels. Tin opened here at Rs. 1,673.50 per quintal and declined to close at Rs. 1,655.50. Demand was lower as the flood situation slowed down consumption. On the London Metal Exchange, tin opened at £917 a ton and after hardening to £918 declined to £914 recovering to close at £915. The price in Singapore hardened after an initial fall. In London, electrolytic copper closed lower on balance at £229 a ton against opening of £229½. In mid-week, the price had hardened to £231¼. Here, utensil copper scrap hardened from Rs. 428.75 to Rs. 431.25 and berry quality scrap from Rs. 447.50 to Rs. 455.50. Electrolytic zinc closed at Rs. 318.00 per 100 kgs. revealing a decline of Rs. 6.75 over the week. Demand was poor. In London, the price closed fractionally higher on balance at £77¼ a ton. At Rs. 135.75 per 100 kgs. lead eased by one point.

FOODGRAINS ARRIVALS DECLINE

(From Our Own Correspondent)

HAPUR, 17th July

Quietly steady conditions were witnessed in the foodgrains market during the week. Daily arrivals fell considerably, thanks to good rains which, however, brightened *kharif* crop prospects and further enabled large-scale sowings. Wheat at Hapur recorded modest gains to be quoted on Monday at Rs. 14.50 to Rs. 15.12 a maund for average quality and Rs. 15.50 to Rs. 16.25 for better farm produce. Daily arrivals were poor at an average of 100 maunds due partly to rains and due mostly to the fact that the producers were withholding stocks from the beginning of the season expecting better prices in off season. Local wheat stock was put at 25,000 maunds.

Medium quality rice prices also recorded some gains during the week on good demand in the face of poor stocks now put at 8,000 maunds. The week-end prices were:—*mainpuri sela* Rs. 23; *gainda kutcha* Rs. 22; *raimunia sela* Rs. 25.50; *ramajwayan sela* Rs. 24.50; *basmati sela* Rs. 29 to Rs. 31; superior Rs. 33 to Rs. 39 per maund.

Gram recorded fractional gains on firm Punjab advices and poor arrivals mostly from Punjab at an average of 100 maunds daily. Local stock continued to be estimated at 50,000 maunds, with prices quoted at Rs. 13.75 to Rs. 14 a maund for Punjab variety and Rs. 13.37 for local inferior produce. Barley ruled steady at Rs. 11 to Rs. 11.25 a maund, while *bejhar* inferior was quoted at Rs. 10.75 and superior *moongia* variety at Rs. 11.50 a maund. Arrivals of these coarse grains were still small. Old maize was quoted at Rs. 11 to Rs. 12 a maund and *bajra* at Rs. 15 to Rs. 16 a maund. The standing crops of these cereals, as well as *juwar* and *guwar* as fodder crop, are progressing satisfactorily, thanks to timely rains. Methi advanced further to Rs. 28 to Rs. 28.50 a maund on good demand from Rajasthan and Bengal. *Juwar* and *guwar* were quiet at Rs. 13-15 and Rs. 15-17 per maund, respectively, as demand for sowing purposes subsided.

Among pulses, peas improved further on good demand against poor arrivals at an average of 100 maunds. Arrivals were being picked up by grinders for *dal*. Loading facilities to needy areas of Madras side were not available and only some despatches of *dal* were made to east U.P. and Bihar. Local peas stocks were put at 84,500 maunds. Demand for *arhar* was flat and prices were almost stationary. Gram *dal* improved in line with grains and *massoor dal* also attracted good buying support. The week-end prices (in rupees per maund) were: peas *dara* 11.25 to 11.37; farm 11.75 to 12.75; peas *dal* 13; gram *dal* 16; *arhar* 12.37 to 13; *arhar dal* 15.75; *urd* 21 to 22; *urd dal* 24; *moong* 20 to 25; *moong dal* 24.50 to 27.50; *massoor* 13.25 to 15; *massoor dal* 16.50.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 17th July

Sugar prices were depressed during the week under review, as supplies were easy, following the release of the monthly quota of 200,000 tons earlier this month. Although no open sales were contemplated in the U.P., the State Government was authorised to sell its unsold quota in the open market, where sugar was quoted at Rs. 106.50 per bag (2 maunds 30 *seers*), the controlled price being Rs. 107.69. In retail, the commodity was available at 97 nP per *seer*. In the Muzaffarnagar market, thanks to very satisfactory supply position and slack demand due to heavy rains, sugar sought lower levels. Dry sugar of 1960-61 season was quoted at Rs. 107.25 per bag and retail Re. 1 per *seer*. Old damaged quality prices declined further to Rs. 99 to Rs. 101 per bag and D-29 of 1960-61 season of Mansurpur is reported to have been sold at Rs. 106 per bag. Sugar prices were also depressed at Kanpur where sugar was reaching from this side and supply position was said to be satisfactory.

Sugar production in the country up to 15th June is reported to be 29.37 lakh tons and stocks with factories stood at 21.55 lakh tons as on this date. The Government is trying to export a maximum quantity and the Union Food Minister, Mr. S. K. Patil, is hopeful that the U.S.A. would buy more sugar in the near future and despatches to Pakistan are being expedited.

Khandsari advanced by 25 nP per maund during the week, as demand was reported from the Punjab and Rajasthan was interested only in inferior quality. Week-end prices were: *desi khandsari* Rs. 32 to Rs. 37.50; *crystal* Rs. 35.50 to Rs. 38.50; *galawat* Rs. 27 to Rs. 31.50 per maund.

Ready *gur* was fully steady during the week. The stocks left were small at about 18,000 maunds. Loading position, however, was far from satisfactory, as railway loading from here was not available. The sugar crop prospects had brightened, thanks to timely fairly heavy rains in the last fortnight. Week-end prices were: selected *kotha dry* Rs. 17.25; *dry-wet* Rs. 15.50; *wet* Rs. 14.75; *shakker* Rs. 17 to Rs. 18 per maund.

Gur prices registered modest gains at Muzaffarnagar during the week. Demand for *chaku* was received from the Punjab, Gujarat and M.P. Arrivals from rural areas were almost *nil* due partly to rains, but stocks there were reported to have been exhausted. Prevailing prices were: *dry Chaku* Rs. 18.25 to Rs. 19.75; *rusket* Rs. 6 to Rs. 9; *shakker* Rs. 18 to Rs. 23.

Trading in *gur ashad* was sparse due to early delivery date and sellers offered delivery of 85 *bejaks* of *ashad* delivery out of which a little was as yet accepted. Trading in *jagun* was fairly heavy and the quotations on Monday was Rs. 14.14, as against the week's opening Rs. 14.05, *Ashad* was quoted at Rs. 14.50, as against the week's opening of Rs. 14.62.

Notice

THE INDIA UNITED MILLS LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of The India United Mills, Limited will be closed from Saturday, the 5th August, 1961 to Wednesday, the 30th August, 1961, both days inclusive.

By Order of the Board,

C. N. BENGALI

BOMBAY, 10th July

BRITAIN AND COMMON MARKET

MISTAKEN DIPLOMACY

(From Our Own Correspondent)

LONDON, *15th July*

LONDON LETTER

THE joint communique of Mr. Sandys (the U.K.) and Mr. Menzies (Australia) is about the last document calculated to further Britain's entry into the Common Market. Not because of what it says, or because what it says is both sensible and valuable and needed to be said between Ministers anyway, but because of the manner of saying it. In itself alone it has ruined the value of Mr. Sandys journey to the British Government. For the British Minister went out to get the blessings of the Commonwealth countries to his negotiations with the E.E.C. and even without the blessing of Australia it should have been possible to agree on a communique that ended at the third paragraph, by saying: "in the course of several meetings, the political and economic implications of such a step were fully discussed," followed by the statement that account would be taken of all the points made at any negotiations with the E.E.C.

But Mr. Menzies has an election coming along and wants to show all Australia how much he has the interests of her citizens at heart. Therefore, all the possible difficulties had to be spelt out and the withholding of a blessing carefully underlined—even though no curses were meted out! Thus, Australia does not oppose British negotiations to enter the Common Market; she is, in reality, merely concerned that consideration should be given to her interests. But, as a result, the communique becomes a rallying ground for all the opposition both abroad and at home to the Government's aspirations and Mr. Menzies has become canonised in some quarters and his caveats will be carried about in pilgrimage against Mr. Macmillan like so many holy relics.

The British Premier is now faced with fighting battles that need never have taken place, within his Party and within the Commonwealth—while the Opposition gently fans the flames to give the general impression to British farmers and industrialists that they have the British weal at heart far better than the Government. The bankruptcy of the Government's policy has alarmed even its warmest supporters. How much more sensible it would have been if, in the past months, the Government had been doing what everyone assumed they had been—that is, exploring with the Common Market just how the very real problems of British entry could be tackled. Then they would have had facts instead of supposition to put to Commonwealth Ministers.

Take, for example, the agricultural issue: in the Common Market farmers get high prices and consumers pay them thanks to protection. In the U.K., farmers get high prices while consumers get cheap food and pay high taxes for subsidies. Is it beyond the wit of economists and statesmen (assisted with a little business horse-sense) to maintain these broad general effects while binding closer the U.K. and Western Europe politically? Not so many years ago, most continental cities had their local customs, levying tolls on country produce and yet survied within the rule of national governments. Europe, like Rome, is not to be built in a day and all the economic difficulties can be resolved if Britain decides, as did the Six, that the future belongs to the united and strong.

Take the matter of Commonwealth preferences: their effect is to enable the shipper to sell dearer, because his tax will be less, or to undercut and sell more. But he can be charged more tax and have it repaid as subsidy, with no change in the effects. It is not important to change here and now the pattern of world or of Commonwealth or of European trade. Ultimately, Europe will become a Customs Union, but all sorts of arrangements can exist—as do already and will continue to between the Six themselves—to help those producers which each region desires to assist for the time being. There is nothing novel in principle here at all—all the Common Market countries have their individual problems and they are having plenty of difficulty in resolving them, but the will is there. The same remarks apply to industrial and to labour integration and mobility as to agricultural and Commonwealth problems—tiding over arrangements are practicable if the breadth of vision to see the longer term advantages is there.

The nub of the problem is, therefore, emerging more clearly as political. It is the ultimate political integration of Britain and Europe that so many fear—at home and abroad. What of the British Monarchy, cry some, if a European Parliament is to rule? As if the Commonwealth had never had its princes ruling under the Imperial law! This matter of political integration is, of course, a problem requiring careful negotiation and general goodwill. Australia is right to point out that Britain's entry into Europe should not be accomplished at the cost of division within the Commonwealth. And the British Government is right in believing that a closer association of Britain with the Continent might well be an added source of strength not only to Britain but to the whole Commonwealth. The essence of the matter is that union must *add* to trade, production and well being as well as to security. Every negotiation on every individual point of difficulty (and we are long past the time when a consideration of generalities served any purpose) must be lubricated with that thought—not to take advantages away from anyone who was prepared to be associated with the general plan for unity, but to seek always to build up the advantages for all the parties concerned. And it will be to the advantage of Europe and of the Commonwealth countries to have the latter associated as fully as possible (it must be a slowly growing relationship) with an integrated Europe.—*All Rights Reserved.*

MORE STEEL FROM CHEAPER PROCESS OF USING COAL

Britain's National Coal Board is helping the steel industry in a plan to introduce a more economical method of using coal in blast furnaces, according to Lord Robens, Chairman of the Board. The new process, never before tried in the United Kingdom, could eventually replace at least 30 per cent of the coke used in furnaces, and would have the advantages both of being cheaper and of making possible an increased output of steel. The new technique is to be tried out at the Stanton Ironworks, Nottingham, toward the end of this year. This process will mean that the steel industry will use not more coal but less.

ALIND Covered Aluminium Conductors

ALIND ALL-WEATHER
Weather-proof wire
Manufactured to BS 2791: 1956 (aluminium conductors, BS 1557:1954 for polythene insulation and BS 7:1953 for taping, braiding and weatherproof-compounding.

ALIND KER-AL-LITE
Building Wire
Manufactured to BS 2791: 1956 for aluminium conductors and BS 1557:1954 for polythene insulation and PVC-sheathing *(in place of conventional CTS and TRS wires).*

ALIND AL-VINYL
All purpose wire
Manufactured to BS 2791:1956 for aluminium conductors and BS 2004:1955 (IS 694:1955) for PVC insulation *(an ideal alternative to VIR for conduit or cowgland-capping wiring)*

Approved by the Insurance Association of India, Bombay, Regional Council (Fire Sectional Committee) and D G S & D, also by various State Project Authorities, Electricity Boards and Private Undertakings.

THE ALUMINIUM INDUSTRIES LIMITED
India's largest manufacturers of aluminium conductors and accessories
Registered Office & Plant No. 1: Kundara (Kerala). Plant No. 2: Kayamkulam (Kerala).
Managing Agents:
SESHASAYEE BROS. (TRAV.) LIMITED

BRIDGE BUILDERS

SURVEY

(*Concluded from page 159*)

in the U.S. and other advanced countries. Conditions in India are different. Indian industries are facing rapid increases in cost of production, partly as a result of wage increases and also as a result of various kinds of shortages, particularly of raw materials, fuels, transport facilities, etc.—shortages which are aggravated by the strict control on imports, inevitable as it is in the present juncture. India has, therefore, a limited choice in regard to purchase of its requirements, unlike certain industrialised countries which have a saturated market. Thus, on account of the slow responses from the economy, the impact of purchasing techniques on cost of production is bound to be only marginal in developing countries like India for some time to come. Secondly, even if allowance is made for dissimilarities in the economic structure of India and the highly industrialised countries, it is doubtful whether the purchasing techniques can be successfully employed in the forseeable future by the thousands of agencies, official, private or co-operative, engaged in purchasing stores for the third Plan projects. Most of the purchasing tools, such as value-analysis and marketing research, even if they are undertaken in right earnest, will be fruitful only in the long-run, and cannot be put into operation on a wide scale all of a sudden, as the enthusiasts of purchasing seem to suggest.

These observations are, however, made not to minimise the immense potential value of judicious purchasing and material management for reducing cost and improving the profit margin, but to indicate the difficulties in the way. Even if at least a hundred large-scale units find it convenient to set apart some resources to streamline their purchasing departments on modern lines during the next five years, it should be considered as a satisfactory development, though overall results may not be spectacular. Besides, the Government is a bulk buyer of several goods, both imported and indigenous, and their volume is rapidly increasing. The Directorate-General of Supplies and Disposals also would, therefore, do well to acquaint itself with the various innovations taking place in purchasing techniques, with a view to toning up its operational machinery, which will ensure maximum return on its outlay on stores purchasing.

BANKING

(*Concluded from page 165*)

1970-75, which was Rs. 91.56 in 1951-52, is now Rs. 91.00; its yield, which was 3.52 per cent in 1951-52, is 3.81 per cent today. Thus, there has hardly been any significant change at all in the last few years. What a wonderful achievement as compared with the ups and downs that one notices in the prices of Government securities in England! The economic or even the financial forces during the last decade seem to have had no effect whatever on the terms and conditions on which our Government is able to borrow. In the last five years, especially in the latter half of it, our general price level has been going up at the rate of five to six per cent per annum. We have embarked on hundreds of schemes, involving thousands of crores of real capital. We are an underdeveloped country and we have not even a fraction of the real capital that countries like Britain possess; yet, the rates of our securities and therefore their yields remain just the same. It is very difficult to assess the actual implications of this policy of the Reserve Bank to the future of the rupee, although every one knows that it has made things pretty difficult for the banks and also for those who invest in Government securities.

This week, however, the Reserve Bank of India has made history, though in an entirely different way, by announcing the terms of the second instalment of the Central Government's borrowing programme. It appears to have reversed, albeit a little, its policy for Government borrowing by offering a slightly higher rate of interest than the yield on an existing loan with corresponding maturity. In other words, the Bank has now made a slight departure from the policy that it has followed in the last few years in favour of lenders. This has already resulted in a modest drop in the prices of Government securities and a slightly higher yield.

The significance of this development lies in the realisation on the part of the Reserve Bank that its policy of keeping up the prices of Government securities by artificial means is neither fair nor just and that a change in its policy is, therefore, called for. If this policy is continued for some time, it will considerably help those who are compelled by law to invest in Government securities. In the transitory stage, the policy of higher interest rates is bound to make matters difficult for most of them, as the prices of existing securities will have to come down appreciably; but, if this policy is pursued vigorously enough, it is bound to improve matters in course of time, because the Government will also be borrowing on more realistic lines and the investors in its obligations will get a better return.

The same sort of thing can be said about our small savings movement also. There, too, our Government has been making history by being able to borrow considerable amounts at the present uneconomic rates by adopting all sorts of means and methods. In some of the States, especially in Maharashtra, the Government has succeeded in breaking records. Still the total amount borrowed by the Government from small savings is negligible by any standard. If the Indian Government were to follow a more realistic policy by offering comparatively higher rates to small savers also, it would definitely see better response than it has been getting hitherto. For obvious reasons, it may not be able to hit targets comparable with those of the British Government, but it will definitely meet with very much better response than is the case now. In that case, the time may come when the Government of India also may find it unnecessary to come to the market every now and then to pump out money which is so badly required by the private sector. If the terms of Central loans announced by the Reserve Bank this week indicate a wind of change, it is quite a welcome event. One has to be thankful for even small mercies.

MARKET GOSSIP

(*Concluded from page 155*)

Administration Enquiry Committee (Chairman: Mr. Mahavir Tyagi) which disposed of the unjust impact of 23A Section on corporate sector in rather cavalier fashion, without taking into account even the retarding effect of the provision on the growth of smaller companies. The small companies deserve to be encouraged to conserve their profits at least as part of the Government's desire to prevent concentration of economic power. It may be recalled that the National Council of Applied Economic Research observed, in one of its recent studies, that Section 23A was in a way contradictory to the Government's policy of broadening the base of *entrepreneurship* by assigning a special role to small industry.

In conclusion, the Chamber has put forward the following two specific suggestions:

1. The rebate scheme for substantial concession in super-tax on companies should be extended to all companies, public or private, with incomes not exceeding Rs. 25,000 and, if necessary, with a limitation on the paid-up capital.

2. Small private limited companies and others attracting Section 23A of the Income-tax Act should be exempted from the obligations of the Section until the capital and free reserves of such a company accumulate to Rs. 10 lakhs.

The foregoing suggestions are eminently reasonable and there should be no difficulty in Government accepting them, especially when they are in keeping with its avowed policy of encouraging small enterprises and *entrepreneurs*.

New Horizons of Services

THE

BANK OF MAHARASHTRA

LIMITED

Now with its network of 77 Branches is encouraging expansion of Business and Industry

The Maharashtra Bank, due to the merger of the three Banks in the last three months has started the following new branches at the following places. The public should utilize their services :—

POONA - -	- Laxmi Road and Camp.
POONA DISTRICT	- Lonavala, Khopoli, Baramati.
NASIK DISTRICT	- Ozar—Tambat.
KONKAN - -	- Malwan, Sawantwadi, Banda, Kudal and Phonda.
VIDHARBHA -	- Arvi, Chanda, Dhamangaon, Gondiya, Hinganghat, Nagpur (Dharampeth, Itwari), Pulgaon, Wani, Wardha, Warora.
MADHYA PRADESH -	Durg, Rajnandgaon.

It would be beneficial for the people to do their Banking transactions through this rapidly progressing Bank.

3% Increased Rate of Interest.

*** Special Savings Deposit Scheme.**

New Attractive facilities.

For all banking facilities please enquire at any of the Bank's 77 Branches or at the Head Office.

Reg. Office:—1177 Budhwar, Poona 2.

C. V. JOAG,

General Manager.

Who else must sweat and toil and gain but scanty fare."
William Blake.

VOL. CIII. No. 2625 BOMBAY, 29th JULY 1961 PRICE Rs. 2

BRITAIN'S PREDICAMENT

LAST year, it was the U.S. dollar that was in trouble. This year, it is the turn of the pound sterling. It looks as though the owners of hot money have a knack for exposing the weakness of these international currencies from time to time. And financial commentators are always there to help them by highlighting the difficulties of the currency involved. When the dollar was under pressure, numerous critics in Britain and the Continent used to contend that the U.S. balance of payments position reflected such a fundamental imbalance in its economy that the only effective cure for it was a devaluation of the dollar. Almost the same sort of thing is now being said of the pound sterling. The only difference, a refreshing one at that, is that those who speak of inevitability of a devaluation of the pound sterling are not Americans, but the Continentals, especially the French, and to a minor extent the Britishers themselves. While it remains to be seen to what extent the ten-point austerity programme announced by the British Chancellor of the Exchequer, Mr. Selwyn Lloyd, on Tuesday this week will restore the confidence of holders of sterling balances in the future of the pound, there is a lesson to be learned by these countries. It is that those who live in glass houses should not throw stones at others. The demand made in Britain that the D. mark be revalued ultimately led to a revaluation and this has recoiled on Britain to some extent. The aggravation of the scare against the U.S. dollar led to a West-ward flight of capital from the U.S., of which the U.K. was one of the principal beneficiaries, but, as events have shown, this benefit has only been illusory, now that the speculative capital has taken to wings again, going either East-ward, or further West. Where are those British commentators now who had said not many months ago that the 5 per cent revaluation of D. mark was not enough and that the gold price of dollar should be raised?

Today, the French seem to be gloating over Britain's predicament, but it may be their turn next. Who knows? No country in the free world is in a position to claim that its economy is in perfect balance. Some French writers are said to be contending that Britain can be taken as a member of the Common Market only if it devalues its currency at least by 10 per cent. This contention is hard to understand, unless it is an outburst of national pride. Surely, a devaluation of sterling will quickly react on many countries, not excluding France. Even the measures which Britain has taken this week may have a perceptible effect on the Continental countries, because their success will be reflected in a reduction in British imports, a part of which emanates from Western Europe, and a rise in exports, a part of which will have to be at the expense of the Continental countries. Just as the U.S. said towards the close of last year and early this year, so is Britain saying now that a part of its defence expenditure abroad and a larger share of economic aid to underdeveloped countries should be borne by countries that are more well off than itself. This means that France and Italy, not to speak of West Germany and Japan, must carry a bigger burden of international responsibility. So the baby is being passed on, though not without justification. Since, in recent years, these four developed countries have accumulated more fat than the largest and oldest democracies of the West, they have to assume, in fairness to humanity as a whole, greater responsibility than hitherto. This is, however, more easily said than done. Experience so far clearly shows that these countries do not readily yield and, even when they do, their terms of aid are far too stiff to be comfortably borne by the recipients. The underdeveloped countries will, therefore, do well to develop a larger degree of self-reliance than they have already, they may be let down by the developed countries in some respect or other. They may, for instance, suddenly find that the cost of aid has gone up or they are not able to export to these countries as much as they had hoped.

Britain's international account has been out of balance for over 18 months now, but this was masked by the strain on the dollar and the immense criticism directed against West Germany for piling up vast foreign exchange reserves. In fact, the run on sterling has been taking place at a time when the adverse balance of trade of Britain is appreciably smaller than that in 1960. Thus, in 1958, Britain had a substantial surplus of £291 million. This declined to £51 million in 1959. In the following year, the surplus yielded place to a massive deficit of £344 million and, from the figures available for the first half of this year, it would appear that the deficit in the current year will be less than £200 million. Why then this lack of confidence in the pound sterling, as evidenced by the flight of funds from London in recent months? In the second quarter of 1961, Britain's foreign exchange reserves dropped by £160 million. The fall would have been very much higher but for the support given to sterling by the European Central banks. It is not known how much sterling these banks are holding. Perhaps, the secrecy over this figure is itself one of the causes for the setback in confidence, though it cannot be said to be the major factor. It would appear that an impression has gained ground that the future for British export trade is not bright enough to cover even the reduced size of deficit, if it persisted. In fine, the major factor responsible for the pressure on sterling is lack of confidence in Britain's ability to earn enough export surplus in the coming years to take care of its international commitments, including aid to underdeveloped countries. The Britishers themselves—the party-in-power and the Opposition, together with their respective supporters in the Press and on platforms—are largely responsible for this feeling. The way in which the British Government has been rushing round the world in order to prepare the way for joining the Common Market and the case presented by the protagonists of Britain's entry into the C.M. have created the impression that Britain cannot hold its own, if it relies only on its present relationship with Commonwealth and the E.F.T.A. The whole approach to this question has not been from a position of strength; on the contrary, they seem to hold the panicky view that, unless Britain decided to join the Common Market here and now, it would miss the bus. This kind of attitude has caused a feeling of superiority complex in the Common Market countries *vis-a-vis* Britain and, as a corollary, a setback to the prestige of sterling there.

Again, grave doubts have been raised by critics in Britain itself about the competitive capacity of British industries. Their voices were echoed by Mr. Hugh Gaitskell, Leader of the Opposition, when he said in the House of Commons on Tuesday, the 18th inst., thus: "There is now conclusive evidence, which even the Government cannot ignore, that, in comparison with other industrial nations, we are doing exceedingly badly in the expansion of our production and our exports. . . . We have been spending more than we have been earning; we have the worst export record in the last ten years or so of any industrial country in the world; we have a steadily declining share of world trade; we have almost the worst production record; and we have almost the highest rise in prices. . . . Our invisible exports have dwindled from £400 million a few years ago to practically nothing today." The basic facts behind this oratory were not questioned by the spokesmen of the Treasury, though they differed from Mr. Gaitskell in the matter of emphasis. Analysing the balance of payments crisis of Britain, a British economist stated in the *Financial Times* a few days ago that high incomes, as well as high profits, were predominantly responsible for the high level of imports and largely responsible for the inadequate level of exports, and finally came to this pessimistic conclusion: "There is every sign now that our rapid rise in costs will continue. Even if the Government is able to take some measures to cut back demand, there is a huge gap in our balance of payments to fill and there is little prospect of our costs being brought into line with those of other countries. We are sliding, not quietly, but rapidly, towards the next devaluation of the pound." In the face of such statements and writings, is it to be wondered that confidence in pound sterling has suffered a setback?

The problem confronting Britain is essentially a long-term one, but the remedies now prescribed are only palliatives. The "little budget" presented by the Chancellor, within three months of the presentation of the main budget, reflects grave miscalculation of the situation by him. The increase in the Bank rate from 5 per cent. to 7 per cent., enhancement of the purchase tax, customs and excise duties by 10 per cent. through the levy of a surcharge, an increase of one per cent. in the liquidity ratio of banks, a clear directive to banks to be severe on requests for loans relating to personal consumption, including hire purchase and property development, refusal to allow the proposed increase in the salaries of teachers, suspension of aid to promote housing, etc.—all these are aimed at restraining domestic consumption and making available more goods for export. The increase in the Bank rate will serve the additional purposes of encouraging foreigners to leave their funds in London, besides attracting fresh capital from abroad, and discouraging imports. The proposal to reduce defence expenditure abroad will lead to a sizable reduction in the balance of payments deficit. The proposal to introduce a tax on speculative profits is apparently meant to placate labour. The decision to curtail subsidy to farmers from the next fiscal year onwards will help Government to reduce its expenditure. But some of these measures may also result in higher costs and strengthen the demand for more wages; it is resisted by the Government, as it is bound

to be, strikes may follow, with all their adverse effects on production and exports. This, however, is a risk which has to be taken. As Mr. Reginald Maudling, President of the Board of Trade, said in reply to the debate on the economic situation, "the fundamental problem of how a free society can work effectively in conditions of full employment" is yet to be solved.

The fundamental weakness of British economy is that the people are having a standard of living which is higher than its national and international obligations permit. The Labour Party is as much responsible for this as the Conservatives are, because neither is prepared to face the unpleasant prospect of telling the workers the truth. Domestic consumption in Britain has to be curtailed sharply, so that savings can be increased and diverted to investments that will promote exports and external aid alike. There are quite a few old cows in British industry which are being undeservingly maintained at the cost of taxpayers. They should no longer be protected. Unless the British workers and investors appreciate this necessity and are willing to make sacrifices, there is no certainty that the present economic crisis—the sixth in the post-war period—will not repeat itself again. It is the responsibility of British leaders to drive home this point to their electorates. But this solution is too ideal to work smoothly in a democratic set up, which is dominated by party-politics. Accordingly, the only alternative is to wade through the muddle somehow and that is what Mr. Selwyn Lloyd is trying to do.

IRRIGATION AND BETTER SEEDS—I

IT has been rightly said that irrigation, fertilisers and improved seeds go together. These three inter-related factors, which make for intensive cultivation, are, therefore, of crucial importance in the 'intensive agricultural districts programme' now under way with the assistance of the Ford Foundation in India. The confident expectation here is that the concentration of resources in fertilisers and improved seeds in irrigated tracts will yield optimum results, thereby maximising food production in particular. There can be no two opinions on the underlying assumptions of the programme; that the results expected of it will be ultimately achieved may also be postulated with a degree of certainty. But these results will not follow as a matter of course, for the actual implementation of the programme may be beset with practical difficulties at the local level. The administrators of the programme, with its integrated approach covering the three inter-related factors, may have some useful and timely lessons to draw from two painstaking studies just published by the Programme Evaluation Organisation of the Planning Commission.

These related evaluation studies—one on the minor irrigation programme and the other on the improved seeds programme—have the merit of analysing the operation and impact of the relevant programme on the basis of field data collected at different levels—block, village and cultivating household. The objectives of the first study were, *inter alia*, to find out the extent of construction of new minor irrigation works in the rural areas during the second Plan, to assess the nature and extent of maintenance of the older works and to assess the impact of the minor irrigation programme on the cropping pattern during the last four years. And the objectives of the second study were, *inter alia*, to assess the progress achieved in the multiplication, distribution and extension of improved seeds in the second Plan period and to derive conclusions bearing on directions of improvement of the programme. For the purpose of field enquiry under the first study, from each of the major States except Jammu and Kashmir, one or more districts were selected according to the number of sources of minor irrigation deemed important. One district was thus selected from each of these States—Assam, Gujarat, Kerala, Madras, Maharashtra, Mysore, Orissa and the Punjab; two districts were selected from each of these States—Andhra, Bihar, Rajasthan, U.P. and West Bengal; and three districts from Madhya Pradesh. A total of 42 blocks was then selected from the 14 States; a total of 126 sample villages was drawn from the 42 blocks; and 1,255 cultivating households and 702 knowledgeable persons figured in the final sample. For the purpose of the field enquiry under the second study, 32 districts in all were selected from the 14 States—21 to represent the typical areas in each State in respect of the most important source of minor irrigation in it and 11 to represent areas under the command of ten of the recently completed major irrigation [illegible] the rationale for restricting the universe [illegible] mainly to areas enjoying irrigation facilities [illegible] the expectation that these areas would show a concentration of the programme for improved seeds. A total of 61 blocks was then selected from the 32 districts; a total of 183 sample villages was drawn from the 61 blocks; and 1,830 cultivating households and 1,050 knowledgeable persons figured in the final sample. It would appear from these sampling procedures that the two enquiries were fairly representative in character—representative of the irrigated areas in the country. Their conclusions, therefore, should be deemed broadly valid for the purpose of improving the respective programmes in the light of experience.

Some of the findings of the study on minor irrigation are quite interesting. The finding in respect of the coverage of irrigation works is that the number of *kutcha* and *pucca* wells comes to about 1.4 per 100 acres of net cultivated area in the sample villages, while tanks and other sources are numerically smaller. But a tank irrigates, on an average, 31.3 acres of land, whereas a *pucca* well covers 6.1 acres and a *kutcha* well only 1.4 acre. Another finding is that, between 1955-56 and 1960-61, the number of tanks in the sample areas has increased by 2.4 per cent, *pucca* wells by about 28 per cent and tube-wells by about 29 per cent. The pumpsets alone have increased nearly three and one-third times. Of the 3,856 minor irrigation works existing in 1960-61 in the sample villages, as many as 3,193 (representing 88 per cent of the total) have been in use. A revealing finding is that, while in the sample area as a whole about 29 per cent of the net cultivated area *could* be covered by the minor irrigation works and 40 per cent by all works (major and minor) existing in the villages as on the date of enquiry, the proportion of net area irrigated from all sources to net cultivated area has increased from 23.7 per cent in 1955-56 to only 23.8 per cent in 1959-60, according to village records. Here the household data show that the relevant proportion in 1959-60 is 27.2 per cent. The study, therefore, comes to the conclusion that the village level data may be said to under-estimate the extent of irrigation and its probable increase.

Such under-estimation for the country as a whole, as far as can be judged or generalised from the sample, would mean that the statistics of area irrigated by minor irrigation works—statistics maintained by the Directorate of Economics and Statistics of the Union Ministry of Food and Agriculture—are not dependable. For instance, these statistics show that, in 1950-51 (the year immediately preceding the inauguration of the first Plan), the net area irrigated by minor sources (wells, tanks, private canals and others) in the country as a whole was 33.8 million acres, representing 60 per cent of the then total net area irrigated from all sources (major and minor). And they also show that, in 1955-56 (the end-year of the first Plan), the net area irrigated by minor sources was only 36.4 million acres, representing 65 per cent of the then total net area irrigated from all sources, whereas the Planning Commission's estimate of 9.5 million acres of *additional* area brought under minor irrigation during the first Plan period would mean that the aggregate net area irrigated by minor sources in the country as a whole should have been 43.3 million acres in the last year of that Plan. If it is true that the statistics of the Food and Agriculture Ministry, based though they are on the village returns, continue to underestimate the area irrigated from minor sources, the latest available figure of 36.8 million acres under minor irrigation in 1957-58 cannot be taken to represent the real state of affairs in the second year of the second Plan. As it has been confidently expected by the Planning Commission that an *additional* area of 9 million acres would benefit by the second Plan's minor irrigation programme, it may well be claimed that the net cultivated area under minor irrigation in 1960-61 (the end-year of the second Plan) should have been of the order of 52 million acres. It is, however, extremely doubtful whether this figure will be confirmed by the Directorate of Economics and Statistics of the Food and Agriculture Ministry.

The greater relevancy of the P.E.O. study consists in its findings regarding the problems of utilisation of minor irrigation facilities. The finding that nearly 52 per cent of the tanks were under-utilised in 1959-60 is, indeed, disquieting. They were under-utilised, because their irrigable capacity had gone down as a result of silting and poor maintenance. Some of the minor works within the command of some major projects like Malampuzha (Kerala), Matatila (U.P.) and Barwala Branch of Bhakra-Nangal have gone out of use. The policy of some State Governments to suspend the minor irrigation extension programmes within the command areas of the major projects has resulted in the neglect of the works, even though the cultivators there have a marked desire for irrigation from them. On the other hand, in the command areas of some other major projects, minor works are being used to supplement canal water for irrigating sugarcane, banana, etc., and vegetables in seasons when canal water is not available or is inadequate. The complementary nature of minor works in the areas of Kakrapar project (Gujarat) and Gangapur project (Maharashtra) is indicated by the fact that, though water rates are charged by the Government if new wells and tanks are constructed within 200 yards of the Government water course, the cultivators are willing to pay these water rates and sink new wells.

It would thus appear that minor irrigation—either as the principal source in some areas or as a supplemental source in some others—will continue to play a major role, covering not less than 60 per cent of all irrigated area. If it is a question of poor maintenance of minor works now, it would be prudent to heed the study's finding that the scope for increasing the supply of irrigation water from the minor sources was visualised by cultivators much more in terms of repair, renovation and reconstruction of the existing works than of construction of new works. Where the cost per acre of extension of minor irrigation is not expected to exceed Rs. 150 (the actual figure in the second Plan), the extension of the programme in most areas would be *prima facie* justified, although in some areas, according to the study, the scope for such extension is tending to become narrower and/or more costly. In any case—whether the accent in the minor irrigation programme should henceforward be on repair, renovation and proper maintenance of the existing works which are certainly numerous or it should be on the construction of new works—there is need for a systematic survey of minor irrigation possibilities in all the States. Although some States have done something in this field of investigation, by and large a survey of this type has yet to be either taken up or completed in most of the States. As minor irrigation has absorbed a substantial outlay of funds—about Rs. 85 crores in the first Plan and nearly Rs. 90 crores in the second Plan—and will involve an outlay of not less than Rs. 100 crores in the third Plan, its economics and possibilities certainly call for comprehensive examination.

Already the budget provision (as of 1960-61) for minor irrigation accounts for anything from two-thirds to four-fifths of the budget provision for agriculture, minor irrigation and land improvement together in most States. But even such generous provision does not seem to be sufficient for the proper maintenance of minor works, because the practice of allocating funds for maintenance as a proportion of the original cost of the works often results in inadequacy of funds on account of the rise in the level of costs and prices in the intervening years. In view of the major role played by minor irrigation in India's agriculture, the State Governments would be well advised to impose a maintenance levy on land irrigated by minor works undertaken and maintained by them. At the same time, the existing arrangements for achieving administrative co-ordination in the field of execution, improvement, restoration and maintenance of minor irrigation works would need to be reviewed. As a number of departments—those of irrigation, agriculture, revenue, public works and community development—are in the picture, the present state of administrative co-ordination leaves much to be desired. It is a matter for serious consideration whether a single agency cannot be entrusted with the field responsibility for the entire minor irrigation programme, in the first instance at least in the districts selected for the intensive agricultural production programme. As secure and dependable supplies of irrigation water in the right quantities and at the right times are basically important for ensuring optimum results from the use of fertilisers and improved seeds, any shortcomings here will prejudice the success of the "intensive districts programme" itself.

"FIXATION OF EX-FACTORY PRICES"

In the second leading article carrying the above title in our last issue, the 17th line, in first column on page 154, reading "culation, however, was that, on the basis of a re-" was inadvertently inserted by our printers. When this line is replaced by the one that had been omitted, the relevant sentence will read as follows:

"Actually, in the case of sugar industry, the return to equity shareholders was estimated at 3.86 per cent, in the case of cement industry at 3.82 per cent, and in the case of [illegible] as low as 2.42 per cent."

MARKET GOSSIP

THE crisis Budget of Britain, including the increase in the Bank rate from 5 per cent to 7 per cent, is likely to hit India in many indirect ways. It is true that there will be no cut in the quantum of aid that has already been promised, but the cost of such aid as is used—and India will have to use it to the last farthing as and when it is made available, since its foreign exchange reserves are small—will be more. The crisis Bank rate may last for quite some time, perhaps for a year, contrary to expectations in this country that it will only be a shortlived affair. As the basic aim of British measures is to cut down its imports, India's export trade will also suffer to some extent. A large number of wholly-owned British companies may decide to take Home a larger share of their profits. Companies with majority British capital participation may defer their plans to expand their activities in this country, as money in London will cost substantially more than their earlier assumptions. New arrangements for getting either British capital participation or credit accommodation will become difficult. It may be noted, in this connection, that private capital from the U.K. has been playing a significant role in the industrial progress of this country.

Central Loans

The response to the Central Government's two new issues—3½ per cent 1969 and 4 per cent 1981—has been lukewarm, as was generally anticipated. The lists remained open on all the three days. The total amount offered was Rs. 108.57 crores, as against the invitation for Rs. 100 crores. This does not mean that the loans were oversubscribed, as the Reserve Bank is reported to have contributed nearly 50 per cent of this total. The most optimistic estimate of public subscriptions, including those from the L.I.C. and the State Bank which are under the control of the Government, is no more than Rs. 55 crores. Out of an outstanding of Rs. 45 crores of the two maturing loans, conversions amounted to only Rs. 3.72 crores; so that, when they fall due next month, the Government will have to pay nearly Rs. 42 crores in cash. A good part of this amount will, however, find its way into the State loans.

All subscribers will receive full allotment. Of the total of Rs. 108.57 crores, the shares of medium and long-dated issues are Rs. 42.94 crores and Rs. 65.63 crores, respectively. The L.I.C. must have been the largest supporter, followed by the State Bank of India and provident funds. The Reserve Bank itself must have invested a large amount in the long-dated issue, so, that it can meet the provident funds' requirements, as and when they arise in the course of the year.

Non-Diversion Agreement

One of the most far-reaching developments that have taken place during the year in the field of general insurance in India is the Non-Diversion and Mutual Assistance agreement voluntarily entered into among seventeen leading Indian insurance companies and brought into force on 1st July. In view of its importance, it is natural that this development should have figured in the speech delivered by Mr. A. D. Shroff, Chairman of the New India Assurance Company Ltd., at the annual meeting of the shareholders of the Company held at Bombay on the 26th inst. Mr. Shroff not only commended the agreement, of which his own Company is a signatory, but also cleared what he called the "misunderstandings and false notions" held about it in some quarters. He referred to two misgivings. One was that the scheme was designed to help insurers to switch over their business from higher to normal commission terms without the fear of those who have subscribed to the scheme diverting such business by the offer of higher than normal terms. The other was that it aimed at helping the big insurers to protect their portfolios. Both these fears, Mr. Shroff said, were false.

The main purpose of the scheme, he maintained, was to put the insurance industry on a correct and sound footing. It was absolutely erroneous, Mr. Shroff declared, to argue that the scheme helped one against the other—it helped all. Mr. Shroff no doubt conceded that the scheme did involve sacrifices for some insurers, but he argued that, on the whole, it was beneficial to the insurance industry. The biggest bane of insurance in India, he remarked, was the evil of rebating and the consequent frittering away of the resources of insurers. He was confident that, once the companies began to work in an atmosphere of trust and amity, it would pave the way for group working "so essential in the present times of rationalisation and integration." He hoped that the agreement would help general insurance to bridge up the present unfortunate position of distrust and confusion and to grow on sound and healthy lines.

The scheme, in so far as it aims at eradicating the evil of unhealthy competition in the industry, deserves the serious support of all insurers. Mr. Shroff's clarifications should leave no doubt as to the primary objects which the sponsors of the agreement have in mind. They are, as every one will concede, unexceptionable in principle. While the success of the scheme depends on the spirit in which it will be worked, its merits will naturally be judged by the results obtained. If the scheme results in eliminating or minimising unhealthy competition in the industry, it will certainly have achieved something substantial. Care should, however, be taken to see that it does not lead to the curbing of healthy competition or to the encouragement of restrictive trade practices the harmful effects of which have been amply borne out by the recent experience of other countries.

R. B. Governor on Price Policy

One cannot be particularly happy when one finds the Governor of the Reserve Bank of India yielding to the temptation to cite general opinions of foreign experts in defence of this country's domestic economic and fiscal policies. One would think it is a last weapon of defence that comes in handy for Ministers faced with an angry opposition in Parliament. Mr. H. V. R. Iengar did just that, in his Madon Memorial Lecture delivered in Bombay on the 26th inst., though in a slightly different way. He deplored what he called "the attempt on the part of some of our own people to decry the value of what we are doing" when distinguished foreigners and great institution like the World Bank were all praise for it. No one will deny that frequent denigration of the country's rate of progress is bad. But is it wrong to express dissatisfaction at what has been achieved or to suggest that, if certain policies or programmes had been modified or altered, better results would have been obtained? While foreign visitors have without exception patted this country on its back for its overall achievement, there have also been criticisms, fundamental criticisms at that, from eminent experts and reputed institutions.

Having regard to the difficulties the country faced and the low level of savings, the rate of growth of national income in India during the last ten years, estimated at an average of 3.5 per cent per annum, Mr. Iengar pointed out, could not have been really better. Moreover, this growth had been achieved, he claimed, with reasonable stability, though some strains had emerged in the last five years which required correction.

One such strain, he went on to observe, was the price level. He did not see any reason for alarm and despondency in a price increase of two to three per cent per annum, provided it was possible to keep the price level steady for a time and possibly to secure some reduction in it at times, particularly in respect of certain essential commodities. During the last five years, however, the Governor pointed out, there had been a continuous increase in the price level at the rate of about 6 per cent per year. At no point during the second Plan period had the rise been punctuated by a reduction in the price level, except for temporary seasonal fluctuations of minor consequence. It was this inability of the economy to halt and, if possible, to reverse the course of the price level, in Mr. Iengar's opinion, that was really a matter for concern and not the absolute increase that had taken place in the past ten years. The latter increase, in the context of what had been happening even in the most advanced countries, was not only not large but was in fact satisfactory. In his view, as a guide to practical policy, it was important that the process of rise should be halted for a time and if possible reversed. This need to reverse the upward trend in price level should form the focal point of policy for the immediate future.

The question is whether the fiscal, monetary and general economic policies will be geared to this end. Take, for instance, the Government's policy in regard to prices of agricultural commodities which have a decisive influence on the general price level. The fact is that the Government has no price policy for agricultural products. A sound price policy would involve the Government stepping in to stabilise prices by buying crops from farmers and stocking them when prices tend to fall below the desired level and releasing the stocks when prices tend to rise beyond it. It would also mean that, in a year when the crops are large enough to correct the upward trend that had taken place in the immediately preceding years, the Government should allow that to happen and not interfere with the market trend for political reasons even before the necessary correction has taken place. Unfortunately, this is what the Government does not do and it succumbs to political pressure even before a modest fall in prices occurs. Further, an important point that must be borne in mind, while discussing price levels, is that there is hardly any Indian commodity or manufactured article which is able to compete in world markets today without some sort of artificial prop. If this is borne in mind, the lack of realism in Mr. Iengar's analysis of the problem will be apparent.

Oil-based Industries

Oil-based industries, such as soaps and *vanaspati*, have been adversely affected by the pronounced rise in prices of vegetable oils in the past few years. The prices of all commodities have no doubt gone up, but the increase has been disproportionately large in the case of major vegetable oils, particularly groundnut oil and copra. The wholesale prices of copra and groundnut oil in 1960-61 were higher by as much as 60 per cent and 32 per cent, respectively, as compared with the first year of the second Plan. At the same time, the corresponding increase in the price of raw cotton was only one per cent and that of sugarcane 12 per cent. What is more, the steep and progressive rise in the prices of vegetable oils has led to a widening disparity between domestic prices and those in world markets. While the average price of indigenous copra, for instance, is higher at Rs. 1,530, the price of this commodity in Ceylon is about Rs. 620, or less than half the value of Indian copra. Bringing out these facts in his annual statement to the shareholders of the Tata Oil Mills Ltd., Mr. J.R.D. Tata, Chairman of the Company, rightly observes that increases of such magnitude not only impair the competitive capacity of Indian industry [illegible] serious burdens on the other sectors [illegible] as well.

While Mr. Tata concedes the need for ensuring a "fair price" for growers of copra, he is equally emphatic that there is no justification for copra prices consistently soaring above the prices of other agricultural raw materials in the country. The major factor behind the apparently unwarranted increase in oil prices is the failure of domestic production to catch up with the steadily expanding demand for both industrial and edible purposes. While it is essential to devote greater attention to expand production, it must be recognised that this is only a long-term measure. Until production is stepped up, oil-based industries have certainly a justifiable claim for import licences for a part of their requirements of oil. It is, therefore, a pity that the Government of India has not accepted a proposal, put forward by soap manufacturers, for the import of cheaper types of oils like palm oil, even after agreeing to export a similar quantum of groundnut oil, thereby avoiding any loss of foreign exchange.

Sugar Exports

The hopes of India earning a little foreign exchange from exports of sugar to Pakistan and Iran even at a fairly heavy loss of rupee resources have been belied. For both these countries have cancelled the deals with India for the purchase of sugar, amounting to 25,000 tons by Pakistan and 50,000 tons by Iran. The total foreign exchange that would have been earned had the deals with these countries materialised is about Rs. 2.37 crores (Rs. 77 lakhs from Pakistan at Rs. 307 or £23 per ton and Rs. 160 lakhs from Iran at Rs. 320 or £24 per ton).

The reason given by Pakistan for cancelling the deal is that the State Trading Corporation of India had failed to make despatches of sugar from the 15th of this month as stipulated in the contract. But the S.T.C. has not disputed this contention, though it has thrown the whole blame on Pakistan. It has, of course, not issued any statement to the Press, unlike the Pakistan Government which has come out with an official release explaining the decision. The S.T.C.'s explanation has been made known only through unofficial reports appearing in the daily Press. Whatever be the reasoning behind the explanation, one fails to understand why the S.T.C. could not expedite delivery of just 25,000 tons to Pakistan, though the agreement was reached as far back as 25th May 1961. The question as to who should share and in what proportion the rupee loss on this deal is an internal affair and could have been settled leisurely between the Government and the industry. The delay on the part of the S.T.C. enabled Pakistan to finalise arrangements for import of 25,000 tons from West Germany. Further, it is reported that Cuban sugar is currently being sold by a Pakistan firm at £22-15 per ton at the port of Karachi, that is, at 5 shillings less than that quoted by India. If the deal had been struck by a private firm, the entire quantity of sugar would, perhaps, have been delivered. Herein lies the difference between the ways of conducting trade by a Government agency and a private party.

The position in regard to the Indo-Iranian sugar deal is, however, different. The termination of the deal has been due not to any delay on the part of India or any unilateral cancellation of deal by Iran but to the price factor. Iran wanted India to supply sugar at Rs. 320 (£24) per ton (c. and f.) Bunder Shapur (Port), that is, the rate quoted for Cuban sugar in Iran. The Union Finance Ministry is believed to have rejected this price on the ground that such a low price would entail heavy Government subsidy. It is somewhat surprising that the Finance Ministry had not objected to the rate of £23 per ton agreed to for supply to Pakistan, though this rate was lower than that quoted by Iran.

The 75,000 tons of sugar involved in the sugar deals with Pakistan and Iran represented more than half of the total 150,000 tons allocated to the S.T.C. for exports to countries other than the U.S. during the current calendar year. It will be interesting to know to which countries the S.T.C. will sell this quantity. The prospects of such sales are by no means bright, what with the reported distress sales of Cuban sugar at low prices by China, East Germany and Rumania. In view of such distress sales and following heavy offerings of beet sugar by some of the European countries, especially West Germany, the world sugar prices have suffered a sharp decline lately. The latest available rate at London is no more than £25-15 (Rs. 343) per ton, as against £27-5 a week ago and the highest level of £30-10 touched a few weeks ago. West German traders are said to be offering considerable quantities of Cuban sugar at a discount of almost £2 a ton under the official selling price of £27-15 in Cuba. Sugar circles in London feel that, even after allowing for export quotas fixed under the International Sugar Agreement, there may not be sufficient outlets for all the available supplies of sugar this year. It is pointed out that, in view of the currently low level of demand for "free" market sugar, on the one hand, and the continued sales of heavy stocks now lying unsold with several producers in Europe and generally good prospects for the next European beet harvest (beginning in September), on the other, sugar prices will remain relatively depressed for, quite some time to come.

World Textiles

In the course of our comments on conflict in world textile trade last week, we had referred to a report suggesting that the G.A.T.T. World Textile Conference at Geneva would be prolonged till the 28th inst. This report, however, did not prove correct, inasmuch as the Conference, which ended Friday the 21st inst., as was originally [illegible] though the decisions reached at the [illegible] were published only on Wednesday [illegible]

(Continued [illegible])

EQUITIES DRIFT LOWER

BANKS FAVOURED AGAIN

(From Our Own Correspondents)

BOMBAY, *27th July*

EQUITIES on the Bombay Stock Exchange suffered a sharp setback in values during the week under review. The working results of the T.I.S.Co. and the announcement of higher dividend by the I.I.S.Co. (Re. 1.60 per share taxable for 1960-61, as against Re. 1.50 for the previous year) failed to inspire market sentiment, as they were below expectations. The other dampers were revival of fears regarding official intervention to check unhealthy speculation in shares, reports of devastation caused by floods in various parts of the country and deterioration in Indo-Pakistan relations, particularly over the issue of Kashmir. The increase in Bank rate in Britain also imparted weakness, as it had an adverse psychological effect on the operators. The cumulative effect of all these factors was that the majority of scrips encountered selling and drifted downwards. The trend persisted till today, when there was a slight recovery in values following some support at lower levels. But the recovery was not marked enough to make up for the earlier losses, so that the closing rates were generally below those prevailing on Thursday last week.

The preliminary working results of the Tata Iron and Steel Co. for the year ended 31st March 1961 now available show a higher gross profit of Rs. 19.59 crores, as against Rs. 14.15 crores for 1959-60. Induced by the encouraging profit figure, the shares of the Company opened at Rs. 160, as against the previous close of Rs. 158.75, but eased in subsequent sessions and finished at Rs. 157.25 today. The net loss over the week was Re. 1.50. The increase in the dividend of Indian Irons by just 10 nP to Re. 1.60 per share greatly disappointed the operators. Reflecting this disappointment, the scrip receded from Rs. 28 on Friday to Rs. 26.90 today. Mukand Irons slipped by 60 nP to Rs. 27.40.

The textiles section ruled easy, with losses on a wide front. Centurys, after rising from Rs. 686.50 to Rs. 690 on Friday, were subjected to nervous bull liquidation thereafter and declined to touch Rs. 675 today. The net loss was Rs. 12. Mafatlals dropped Rs. 27.50 to Rs. 822.50. Kohinoors opened at Rs. 297, as against the previous close of Rs. 296, but gradually eased in subsequent sessions and finished at Rs. 290.50, shedding as much as Rs. 5.50 over the week. Morarjees slipped from Rs. 422 to Rs. 412. Bombay Dyeings lost 30 nP to Rs. 67.60. Central Indias were marked down by Rs. 4.50 to Rs. 122. Mysores receded by Rs. 2 to Rs. 69. Svadeshis sagged from Rs. 270 to Rs. 267.50. Simplex, J.K. Cotton and Elphinstones shed a rupee each to Rs. 197, Rs. 20 and Rs. 78, respectively. Khataus decreased by Rs. 1.25 to Rs. 575. New Kaisers declined by a like amount to Rs. 61. Tata Mills eased by 70 nP to Rs. 67.80. Finlays were neglected at Rs. 320. Gokaks at Rs. 186, Indores at Rs. 158, Podars at Rs. 143, Ahmedabad Advances at Rs. 191.50 and Laxmis at Rs. 665. A few scrips, however, registered gains. New Greats were keenly bid and spurted by Rs. 7.50 to Rs. 222. Standards gathered Rs. 2 to Rs. 1.330. Shree Nivas put on a rupee to Rs. 258. Phoenix rose by 50 nP to Rs. 155.

Bank shares met with sustained buying support during this week and recorded a further rise in values. Denas advanced by Rs. 2.90 to Rs. 61.50 *ex-div.* United Commercials picked up Re. 1.50 to Rs. 93. Centrals rose from Rs. 63 to Rs. 63.80. Unions gathered 32 nP to Rs. 7.16. Barodas and Bank of India were firm, the former at Rs. 104 and the latter at Rs. 133. But Punjab Nationals dropped 52 nP to Rs. 24.

In the sugar section, renewed investment support lifted up the values of some shares. Belapurs evinced keen enquiry in the two sessions and improved from Rs. 250 to Rs. 257. Thereafter, there was tired bull liquidation and the scrip drifted down to Rs. 250.50 today. Phaltans gathered a rupee to Rs. 128. Oudh Sugars advanced by Rs. 3.50 to Rs. 192. Maharashtras spurted by Rs. 3 to Rs. 169. But Walchandnagars softened by Rs. 2 to Rs. 166.

Among cements, Associated Cements opened at Rs. 162.25, as against the last week's closing rate of Rs. 162.75 and drifted downward to touch Rs. 160.50 today. The net loss over the week was Rs. 2.50. Digvijays, however, evinced some support and hardened by Re. 1.50 to Rs. 156.50 Orissas gained 28 nP to Rs. 14.88.

In the shipping section, Scindias climbed down from Rs. 14.08 to Rs. 13.72 today before finishing at Rs. 13.80. Great Easterns and Bharat Lines were quiet at Rs. 13.88 and Rs. 5, respectively. Automobiles shares failed to attract support. Premier Automobiles were marked down by Rs. 4 to Rs. 159.50. Hindustan Motors receded by 68 nP to Rs. 21.64.

Rayons shares suffered a setback to values. National Rayons opened at Rs. 546.50 and gathered Rs. 2 on Friday Subsequently, they fell to Rs. 540.50. Over the week, the scrip lost Rs. 5.50. Baroda Rayons fell by Rs. 4 to Rs. 136.50. South India Viscose encountered selling and slipped by Rs. 2.50 to Rs. 184.50. Gwalior dropped 80 nP to Rs. 51.20. Indian Rayons were quoted at Rs. 74, as against Rs. 60 last week. It may be noted here that the latest quotation is on a paid-up value of Rs. 75.

The chemicals and dyes section displayed an irregular trend. Adarshas fell by Rs. 8 to Rs. 93. Alembics by Rs. 5 to Rs. 237.50 and Polychems by Rs. 2.50 to Rs. 212.50. Citrics and Ultra Marines lost a rupee each to Rs. 50.50 and Rs. 106 respectively. Dhrangadhras were dull at Rs. 129, Dharamsis at Rs. 280, Amar Dyes at Rs. 350 and Kemps at Rs. 305. But Colour Chems received good support and spurted by Rs. 12.50 to Rs. 342.50. Indian Dyestuffs gathered Rs. 2.50 to Rs. 465.

In the engineering section, T.E.L.Co. attracted some support on the opening day and improved from Rs. 366.50 to Rs. 368. Subsequently however, due to lack of follow up support, the scrip receded and touched Rs. 364.50 today, showing a net loss of Rs. 2. T. Manekials fell by Rs. 27.50 to Rs. 565. Alcocks moved down from Rs. 272 to Rs. 270. Larsen and Toubros shed 50 nP to Rs. 176. In the cash section, Investa Machines fell by Rs. 5.50 to Rs. 142.50. Fit Tights slipped by Re. 1.50 to Rs. 55.50. New Standard Engineerings shed an equal amount to Rs. 184.50. Mahindras lost 48 nP to Rs. 69.12. But Kirloskar Pneumatics jumped up by Rs. 50 to Rs. 250 on the news of a handsome maiden distribution of 12½ per cent for the year ended March 1961. Kirloskar Oils moved up by Rs. 7.24 to Rs. 30.24, following the announcement of a higher dividend of 16 per cent for the year ended March 1961 as against 14.30 per cent paid in the previous year. Hindustan Electricals and Jyotis were keenly bid, the former higher by Rs. 4 at Rs. 109 and the latter by Rs. 2.50 at Rs. 177.50.

In the miscellaneous section, Bombay Burmahs were a weak feature. They opened at Rs. 595, same as last week, and declined gradually to finish at Rs. 589 today, showing a loss of Rs. 6. Ceat Tyres encountered some selling pressure and dropped Rs. 7.50 to Rs. 210. Voltas fell by Rs. 4.50 to Rs. 288.50. Tata Oils shed a rupee to Rs. 74. New India Fisheries were marked down by Rs. 11.25 to Rs. 381.25. Permanent Magnets declined by Rs. 4 to Rs. 84. Bombay Oxygens shed Rs. 2 to Rs. 57. Isaac Holdens eased by Re. 1.12 to Rs. 17.88. Philips Carbons lost 16 nP to Rs. 19.60. Killicks and Indian Hume Pipes lost 50 nP each to Rs. 98.50 and Rs. 177.50, respectively.

* * * *

Calcutta Stock Exchange

CALCUTTA, *26th July*

With fresh incentives lacking and a modest decline of interest in speculative issues, price movements on the Calcutta Stock Exchange were narrow during the week under review. The remote possibility of the Government announcing new retention prices for I.I.S.Co. before the announcement of dividend for the year ended March 1961 chilled sentiment, and market circles considered that there was little substance in the hope of higher dividend, as, considering the huge sums being spent on expansion, the Government would insist on ploughing back more profits rather than increasing the yield to shareholders. This explains the earlier shake-out in Indian Irons, but a small recovery subsequently set in. Since the higher dividend for T.I.S.Co. was made possible as a result of substantial tax refunds, market circles considered it unlikely that a higher dividend for I.I.S.Co. would be allowed. Against this background, the announcement of increased dividend (Re. 1.60 a share against Re. 1.50 both taxable) last night should have caused ordinarily cheer, but the insignificant increase could not enthuse tired bulls. Several features were recorded among miscellaneous industrials, as the I.M.F.'s stand-by credit to India would ensure maintenance of essential imports to industry. Further, increased production and good corporate news showed that increased cost of production had not affected yields.

Coals were lower on balance. Burrakurs were pushed down from Rs. 20.19 to Rs. 19.62. At Rs. 30.62, Equitables lost Re. 1.50, while expansion prospects made Western Bengals firmer at Rs. 10.44 before easing to Rs. 10.12. New Beerbhooms were quiet at Rs. 23.87, as were Central Indias at Rs. 13.44. Bengals changed hands at Rs. 390 earlier, as against Rs. 388 previously. Katras Jherriahs being steadier at Rs. 50.

Jutes were featureless, with sellers predominating. At Rs. 26.81, Birlas lost nearly a point, with Kelvins being lower at Rs. 150, as against Rs. 151. Bamagores, after losing to Rs. 123, recovered to Rs. 127. Anglo-Indias receded from Rs. 189 to Rs. 183, while Champdanies were put through at Rs. 117, as against Rs. 110 previously. As Rs. 25.06, Fort Williams recorded an insignificant gain. Budge Budges were unchanged at Rs. 124.

J.K. Steels were a prominent feature in engineerings on improved prospects. At Rs. 40, the rate recorded a new high. The opening rate was Rs. 35.50. Binani Metals were steady at Rs. 12.56. Braithwaites were pushed up from Rs. 35 to Rs. 36.12. A good report caused Burn and Cos. to rise from Rs. 522 to Rs. 531. Indian Irons were quiet at Rs. 27.48, as were Texmacos at Rs. 18.85. Expansion prospects held Indian Oxygens firm at Rs. 39.12.

Although reports from tea auctions continued to be encouraging, the general trend affected teas and the volume of transactions diminished. Methonis gave way from Rs. 18.56 to Rs. 16.81, while Hasimaras were fractionally better at Rs. 25.62. At Rs. 163, Patrakolas put on Rs. 2, but Teesta Valleys eased from Rs. 15.75 to Rs. 15.31. Dhunseris changed hands at Rs. 16.44, as against Rs. 16.25 previously, while Sooms at Rs. 45 put on Re. 1.

Miscellaneous industrials rose on interested buying, but subsequently profit-taking reduced gains. Thus Dunlop Rubbers, after being higher at Rs. 52.56, closed lower at Rs. 51.12. Expansion prospects maintained Alkali and Chemicals firm at Rs. 40.12. At Rs. 28.50, National Pipes and Tubes were fully steady. Goodyears were maintained at Rs. 38.62. On publication of good results and the announcement of increased taxable dividend of 30 per cent, as against 25 per cent previously, Britannia Biscuits at Rs. 60.50 recorded the handsome gain of Rs. 5.50.

* * * *

Madras Stock Exchange

MADRAS, *26th July*

In the absence of fresh investment support, equities were subdued during the week under review. The persistent decline in India's foreign balances, rise in Bank rate in both Britain and Japan, and the uncertain international political situation chilled the enthusiasm of operators. Sugars ruled easy chiefly due to bleak export prospects, following the cancellation of sugar deals by Pakistan and Iran. Textiles were generally weak, notwithstanding the general impression that the agreement arrived at the G.A.T.T. world textile conference at Geneva was beneficial to Indian exports. The decision of the State Electricity Board to extend power-supply in such a way as to enable all the 130 textile mills in the Madras State to work third shift, though it was widely welcomed, had no effect on the market. Tea shares lacked support, because it was feared that the recent thunder-showers and floods in several areas had caused much damage to the tea crop. It was for the same reason that coffees were dull, though the trend of exports so far in the current year had been satisfactory. Rubbers were depressed. Miscellaneous industrials, particularly cement shares, encountered selling pressure.

Among sugars, East India Distilleries suffered a setback of Rs. 2 to Rs. 39.25. Cauverys dropped a like amount to Rs. 125. Deccans rose initially from Rs. 13.80 to Rs. 13.81, but came in for selling subsequently and wound up the week at Rs. 13.75. United Breweries were dull at Rs. 104, as also Indias at Rs. 12.20 and Mysores at Rs. 57.75. Travancores, however, put on 10 nP to Rs. 10.40.

In the tea group, Highlands declined by 20 nP to Rs. 14. Halleybirias shed 10 nP to Rs. 14.75. Blue Mountains and Periakaramalais eased by 5 nP each, the former to Rs. 3.12 and the latter to Rs. 3.90. Nonsuchs were neglected at Rs. 28.20, Parksides at Rs. 29.37 and Devasholas at Rs. 30.25. But Neelamalais put on 10 nP to Rs. 4.05. Chembras and Kil Kotagiris improved by one naya paisa each to Rs. 3.93 and Rs. 4.75, respectively.

Among coffees, Consolidated Coffees receded by 25 nP to Rs. 21.10. Coffee Lands eased by 20 nP to Rs. 18.40. Ouchterlony Valleys shed 7 nP to Rs. 3.65. Puthuthottams lost 5 nP to Rs. 2.45, reflecting disappointment of operators over the lower dividend of 7.50 per cent for the year ended March 1961, as against 12 per cent distributed in the previous year. Anaparais dropped 5 nP to Rs. 3.95. Rajendras were neglected at Rs. 12.12 and Balanoors at Rs. 16.30. Attikhans were dull at Rs. 3.05, despite announcement of a maiden dividend of 12 per cent for the year ended March 1961.

Rubber lacked support. Malankaras fell by 75 nP to Rs. 17.75. Cochin Malabars declined by 25 nP to Rs. 7.50. Midlands receded by 10 nP to Rs. 11.70. Pullangodes shed 6 nP to Re. 1.77, notwithstanding the announcement of a dividend of 6 per cent for the year ended March 1961, which compares with 5 per cent paid in the previous year. But Travancores rose by 52 nP to Rs. 11.10. T.R. and Ts. scored a gain of 5 nP to Rs. 9.65.

Among textiles, Lakshmis were subjected to selling and moved down by Rs. 3 to Rs. 169. South India Viscoses fell by Rs. 2.50 to Rs. 185.50. Cannanores decreased by Re. 1.70 to Rs. 160. Coimbatore Spinnings declined by 50 nP to Rs. 53. Madurais fell from Rs. 37.25 to Rs. 37 before closing at Rs. 37.10, with a net loss of 15 nP. Radhakrishnas lost 5 nP to Rs. 31.75. Travancore Rayons rose initially from Rs. 38.10 to Rs. 38.25. Kotharis were lower by 10 nP at Rs. 12.50. Coimbatore Pioneers were dull at Rs. 265.87. Metturs at Rs. 382 and Premiers at Rs. 287. Krishnarajendras were unchanged at Rs. 72. The Directors of the Company have declared a dividend of 11 per cent for the year ended March 1961, same as that distributed in the previous year. Bangalore Woollens were well sought after, the quotation advancing by Rs. 2 to Rs. 207. Coimbatore Cottons gathered a rupee to Rs. 185. Buckinghams picked up 50 nP to Rs. 53.

In the miscellaneous section, Textools eased by Rs. 2 to Rs. 181. Among cements, Dalmias shed 10 nP to Rs. 11.10, Andhras 8 nP to Rs. 9.87 and Indias 3 nP to Rs. 6.62. Orissas, however, spurted by 35 nP to Rs. 14.75, following the announcement that the Company had raised the dividend for the year 1960 to 15 per cent, from only 11 per cent in 1959. In the chemicals group, Mettur Chemicals were neglected at Rs. 14.60, Mysore Chemicals at Rs. 24, and Mysore Fertilisers at Rs. 11.67. F.A.C.Ts, which had risen from Rs. 10.45 to Rs. 10.62 earlier in the week, retreated to Rs. 10.47 towards the close. Among others, Aluminium Industries softened by 25 nP to Rs. 23.30. Enfields suffered a loss of 20 nP to Rs. 13, although the Company has maintained the dividend for 1960 at 5 per cent, that is, at the same level as in 1959. Ashok Leylands declined from Rs. 9.02 to Rs. 9; the quotation had touched Rs. 9.07 earlier in the week. Western India Plywoods, however, were firm at Rs. 223.50. The Directors of the Company have raised the dividend from 10 per cent in 1959-60 to 12 per cent in 1960-61. The increase in dividend has been possible as a result of the notable rise in profit from Rs. 3.07 lakhs to Rs. 5.76 lakhs.

NEWS IN BRIEF

THE benefit of compulsory contributory provident fund will be extended to leather and leather products industry with effect from 31st August 1961.

The side strip mill of the Rourkela steel plant went into production last week-end. The mill, the first of its kind in India, will turn out 170,000 tons of high quality cold roll sheets annually.

Oil has been struck at a depth of 1,240 metres in well No. 14 in the Umarwada village, near Ankleshwar, Gujarat. This is the eleventh oil-bearing well discovered in this region.

The Geological Survey of India proposes to give cash rewards, ranging between Rs. 100 and Rs. 10,000, to persons who supply information leading to the discovery of any new mineral deposits.

The third generating unit of the left bank Power House of Bhakra Dam, along with the 22 kw. step-up sub-station, was switched on last week by Sardar Gian Singh Rarewala, Punjab Minister for Irrigation and Power.

India will export about 1,000 heads of Purnea draught cattle to East Pakistan. The deal is expected to cost Rs. 5 lakhs to Pakistan. India, in turn, may import about 55 red Sindhi and Sahiwal cattle from Pakistan.

A loan of Rs. 17.5 lakhs has been sanctioned by the Government of India to the Rajasthan Government for financing the Rajasthan canal project during 1961-62. Including this amount, the total of loans advanced by the Centre for the project since 1957-58 comes to Rs. 14.70 crores.

A bill to regulate training of apprentices in industry and another on slum clearance are among the sixteen new official bills which will be presented in the next session of the Lok Sabha beginning on 7th August. The third Plan document will also be placed before the House.

An industrial assistance Centre has been set up at Nagpur by the Government of Maharashtra, to serve mainly as an information centre for entrepreneurs who want to set up new industries or seek Government aid. The Centre also makes available publications of the Industries Department for both sale and reference.

Output of wheat touched an all-time high of 10.65 million tons in 1960-61, an increase of 5.5 per cent, as compared with the revised estimate of 10.09 million tons in 1959-60, according to official final estimate. The yield per acre rose by 8.2 per cent, that is, from 694 to 751 lbs., thereby making good the decline in the area under the crop from 32.54 million acres to 31.75 million acres, or 2.4 per cent.

An Indian delegation is expected to visit Tokyo in the middle of next month for negotiations regarding the utilisation of the $80-million credit Japan has offered for the third Plan. The delegation will discuss with the representatives of the Japanese Government the terms of credit and the projects on which it is to be spent. Meanwhile, a delegation of U.S. Development Loan Fund officials is expected to arrive in New Delhi shortly to discuss details of the U.S. offer of the one-billion dollar credit.

The Government of India and the Polish organisation, Cekop, have signed an agreement, under which the latter will prepare a project report for the construction of a 50,000-ton silo (grain elevator) either in Bombay or in Madras. There are at present two silos with a capacity of 10,000 tons each, one at Hapur (U.P.), and the other at Calcutta. Both these silos were constructed with aid received from the U.S. Technical Co-operation Mission. Silos are modern scientific devices for prolonged storage of foodgrains.

The Customs and Central Excise Advisory Council (Chairman: Mr. B. R. Bhagat, Union Deputy Minister for Finance), set up on an experimental basis in 1959, has been put on a permanent footing. The function of the Council, which consists of both officials and representatives of industry and trade, is to advise the Government on the general problems of procedure relating to clearance of goods and passengers in so far as they concern the customs and central excise laws, tariffs and other rules.

The Oil Prices Enquiry Committee (Chairman: Mr. K. R. Damle, I.C.S.) set up by the Union Government to suggest a suitable basis for fixing prices of petroleum products has submitted its report to the Government of India. The Committee, it is believed, has recommended that the prices of petroleum products should be fixed on the basis of a reasonable discount on the import prices, which, in turn, are to be determined by the "posted prices" in the Middle East. The Committee has not, however, specified any quantum of discount, which will have to be arrived at after consultations between oil companies and the Government. The Committee would appear to have not accepted the Government's view that prices should be fixed on the basis of "cost plus reasonable profit."

The Colliery Voluntary Amalgamation Committee, set up by the Union Government in 1958, has so far approved of thirty-one proposals for amalgamation and adjustment of boundaries of small collieries in West Bengal and Bihar coalfields. Amalgamation is said to have actually taken place in seventeen places. The committee has at present over thirty-five cases under consideration, while it has rejected ninety-three proposals on various grounds. The terms of the compromise include invitation of proposals for voluntary adjustment of boundaries to avoid coal being locked up in barriers and quotation to extraction.

and voluntary amalgamation of collieries which between them have a total minimum production of 6,000 tons per month, provided that, in the course of a year, the output of each amalgamated unit can be stepped up to 10,000 tons per month.

The next session of Parliament will commence on 7th August 1961. One of the several subjects to be discussed during the session relates to the third Five-year Plan. Sixteen official Bills are expected to be introduced. These include a Bill seeking to define the duties and powers of the Comptroller and Auditor-General of India, Indian Railways (Second Amendment) Bill, Sugarcane Cess (Validation) Bill, a bill to regulate the programme of training for apprentices in industry, another to extend the Industries (Development and Regulation) Act to the State of Jammu and Kashmir, Slum Areas (Improvement and Clearance) Amendment Bill 1961, a bill which replaces the existing Atomic Energy Act, 1948, Deposit Insurance Corporation Bill, and a bill seeking to extend the life of the Newspapers (Price and Page) Act 1956 for a further period.

From Abroad

The Japanese Bank rate has been raised from 6.57 per cent to 6.90 per cent, with effect from the 21st inst.

The U.S. Senate Foreign Relations Committee has approved of President Kennedy's Foreign Aid Bill which seeks to provide long-term development assistance by borrowing from the U.S. Treasury about $7,300 million over a period of five years.

A statement on Britain's future relations with the countries of the European Common Market is expected to be made by the British Prime Minister, Mr. Harold Macmillan, on the 31st inst. This would be followed within a week by a one-day debate in the House.

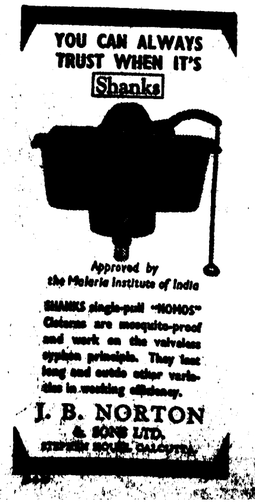
The volume of world's oil tanker fleet had touched 67.7 million dw. tons by the end of June 1961, representing a net increase of only 815,000 tons over the first half of 1961. This is the smallest rise during the last ten years, and compares with a net addition of 1.3 million tons in the first half of 1960.

A leading Japanese steel manufacturing concern is currently negotiating for the import of 50,000 tons of pig iron annually from South Africa over a period of ten years. Recently, South Africa decided to import 8,600 *Datsun* pick-up truck engines and chassis from Japan for local assembly. But it is not known whether the two transactions are in the nature of a barter deal.

The Government of Iraq is considering the possibility of establishing a national oil company. The Government already operates an oilfield in Khanaquin area, which was returned by the British Petroleum some years ago. It may be recalled that the Government set up an Oil Board earlier this year. It is also making arrangements to recruit a small number of technicians from the Italian E.N.I. oil organisation.

The formation of a South-east Asia Common Market, with Australia as a key member, will offset the adverse effects of the British entry into the European Common Market. This view has been expressed in Sydney by a visiting Hong Kong Government trade mission. The members of the proposed common market will be Australia, New Zealand, Hong Kong, Japan, the Philippines, Malaya, Indonesia, Singapore and Thailand.

The United Arab Republic Government has nationalised 348 concerns in Egypt and Syria, including banks, insurance companies, and manufacturing firms. While 98 firms, such as public works, tramways and bus companies have been wholly nationalised, the Government will hold at least 50 per cent of the capital in another group of 91 companies, engaged particularly in consumer goods industries. In respect of several other firms, the Government will take over individual share holdings exceeding £10,000 per person. Compensation will be paid in all cases in the form of Government



PERSONAL

DR. S. Radhakrishnan, Vice-President of the Indian Union, has assumed the duties and responsibilities of the President, with effect from the 25th inst., and will carry out this additional function until Dr. Rajendra Prasad is well enough to resume office.

Mr. M. Ct. Muthiah, Chairman of the Indian Overseas Bank Ltd., left Bombay on a business tour of Europe and the U.S.

Mr. Karnail Singh, Chairman of the Railway Board, who was due to retire this week, has been granted an extension of service for another year.

Dr. Rama Varma has relinquished charge of his post of Secretary to the Tariff Commission to take up his new assignment as the Chairman of the Rubber Board, Kottayam.

Mr. B. K. Nehru, Commissioner-General for Economic Affairs, has been appointed Ambassador of India to the U.S. *vice* Mr. M. C. Chagla, who recently relinquished the post.

Mr. Frank M. Dana, Executive Vice-President of the Bank of America, who is on an inspection tour of the Bank's overseas branches, was on a short visit to Delhi this week.

Mr. S. Bhoothalingam, until recently Secretary in the Department of Steel, Union Ministry of Steel, Mines and Fuel, has assumed charge as the Secretary in the Department of Expenditure, Union Ministry of Finance.

Mr. G. L. Mehta, Chairman of the Industrial Credit and Investment Corporation Ltd., and Mr. N. R. Patel, have been elected President and Chairman, respectively, of the Commerce Graduates' Association, Bombay, for 1961-62.

Mr. Louis Rasminsky, Deputy Governor of the Bank of Canada, has been named Governor of the Bank *vice* Mr. James Coyne, who has resigned, following the Senate's rejection of a Government Bill to dismiss him for alleged "misconduct" in office.

Mr. Shivram Nair, the senior-most Indian executive of Messrs. J. Walter Thompson Company (Private) Ltd., Bombay, has been elected a Director of the Company. Mr. Nair, who joined the Company about twenty-three years ago as an assistant, was the first Indian to be appointed an executive of the Company.

Mr. C. M. Ghorpade, Joint Director of Export Promotion in Bombay, has been appointed Joint Chief Controller of Imports and Exports, Bombay. Mr. N. H. Nagarwala, Deputy Chief Controller of Imports and Exports, succeeds Mr. Ghorpade as Director of Export Promotion.

bonds, yielding 4 per cent interest annually and repayable after fifteen years.

The Government of Ceylon has decided to appoint a three-man Ministerial sub-committee to advise it on the policy to be adopted for the future development of Ceylon's air service. The Air Ceylon, a State-owned Corporation, now operates in partnership with the Dutch airlines, the K.L.M. The latter has requested the Ceylon Government to bear a greater share of the financial responsibilities of the working of international air services. Since 1955, when Air Ceylon entered into collaboration with the K.L.M., it has been making moderate profits, reversing the previous trend of losses when it was operated with the aid of Australian National Airways.

A West German firm, the Industriewerke Company, is undertaking the production of an amphibian car. This vehicle, the "amphicar," resembles an ordinary car with four wheels and four seats. It is powered by a 1,200 c.c.m. four-stroke engine with four cylinders. On the road, its speed is 75 miles per hour. It can be driven straight into any river or lake, switching the engine over to a couple of plastic propellers in the rear. The car is then converted into a boat. In water, its speed is six to seven miles per hour; still, it is a car which can be used as a motor-boat, which no longer depends on bridges.

The U.S. House Ways and Means Committee has tentatively approved of tax credits amounting to $1,100 million, with a view to stimulating investment spending. The proposed scheme seeks to provide industrialists with credits equal to 8 per cent of their spending on income-producing equipment. This is a modified version of the original tax plan of President Kennedy. The original plan was for a tax credit of $1,700 million, envisaging the recovery of a similar amount through a tightening up of expense allowances, withholding tax on unearned income and ending various privileges, including the present $50 *plus* 4 per cent exemption on dividend income.

Six African countries, namely, the United Arab Republic, Morocco, Ghana, Guinea and Mali, along with the Algerian provisional Government, have decided to form a Common Market. A meeting of the economic experts of these countries was held at Conakry last week. A *communique* issued after the meeting pointed out that the six nations would lift trade ceilings and wipe out customs duties among them by stages over five years, beginning next January. Experts also decided to create an African Bank for Economic Development, an African Payment Union and a multilateral clearing agency to facilitate the inter-exchange procedure. They also called for the creation of telephone and telegraph communication between the participating countries by 1963, and establishment of an African Shipping Company, an African Navigation Company, an African Tele-communication, and an

GALBRAITH'S APPROACH TO DEVELOPMENT

ELSEWHERE in this issue are published the two thought-provoking addresses recently delivered by the U.S. Ambassador to India, Prof. John Kenneth Galbraith—one at the University of Madras and the other at the University of Calcutta. The larger part of these addresses is in the nature of an elucidation of the former Harvard Professor's approach, outlined in the April, 1961, issue of *Foreign Affairs*, to economic development and to aid therefor. Briefly stated, his approach is to think of economic development as a continuous process calling for policies suitable to each stage of development; this means that a policy appropriate for advance in one country at a particular stage of development may not be appropriate for another country. In assailing the familiar belief that all underdeveloped countries, measured by their low levels of *per capita* incomes, are more or less alike, Prof. Galbraith has propounded the thesis that these countries are really in different stages of advance and so require different things at different stages for further advance. There can accordingly be no common formula for economic development—a prescription, as it were, which the advanced countries can lay down for the underdeveloped countries as a whole. On the contrary, there is need for recognising that each country has something to offer. This is the essence of a multilateral approach to economic development and aid—an approach that is in fact sought to be fostered by the United Nations and its affiliated agencies. Although there is not much that is fundamentally new in what Prof. Galbraith has said, there is certainly something original in the manner in which he has elucidated the approach. The passages quoted below from his address at the Calcutta University are the most relevant in this context:

"To see the countries of the world, not as divided between the developed and the underdeveloped, but as spaced along a line representing various stages of development is important for obtaining on accurate view of the problem of assistance. For, when development is so regarded, we see that no group of countries is uniquely qualified to extend assistance with another group condemned by position to the role of recipient. Rather each country has something to gain from those that, economically speaking, are ahead. And it has something to offer those that follow. The provision of economic aid is seen, as it should be, as a co-operative endeavour in which all countries can have a share.

"And while there will be differences in what is given and what is received as we pass along the line, I am not sure that the contribution of the less developed countries is necessarily less. For the more developed countries the provision of capital is an obvious form of assistance. But as countries such as India work out their problems of popular education, village development, family planning and land consolidation, this experience will be exceedingly valuable to those that follow along the line. I venture to think that India will be a better teacher here than the United States. You have been much closer to the practical problem.

"But let me stress the principle. To divide the world as between the aiding and the aided is both wrong and psychologically damaging. Development is a task in which many need help and as many have something to offer. This, henceforth, is how we must regard the task."

If that is the task, it is a multilateral one embodying the kind of approach that is typified by the U.N. Expanded Programme of Technical Assistance, albeit on a very small scale. But multilateral aid, on a very large scale, for economic development does not seem to be a feasible proposition in the near future. It is bilateral aid that will be of continuing importance, and so Prof. Galbraith's treatment of the question of borrowing capital, technology and organisation from the more advanced countries is of immediate relevance to India. This country certainly needs long-term aid on concessional terms, but such borrowing should not be thought of as a substitute for earning from exports; it needs the borrowing of advanced technology, but it has to be discriminating in the choice of labour-saving machinery and equipment so as not to add to unemployment; and it certainly needs better organisation in the sense of administrative, educational and welfare services, but it should not uncritically imitate the organisation and services (of the more advanced country) which are usually not the cause of its development but the result. In thus bringing out the rewards and dangers associated with the borrowing of capital, technology and organisation, Prof. Galbraith has given some very balanced and wholesome advice to this country. It is bound to be appreciated as such in some quarters, although it may come in for criticism in some others.

The powers-that-be in this country would, however, do well to learn from experience, that is, from their mistakes and take seriously to heart some of the lessons drawn by Prof. Galbraith. Since India, according to him, is reaching the stage, when the problem of increasing the size of the capital plant will be no more important than to increase the efficiency of its use, the public sector projects (steel plants, for instance) should, by their efficiency and earnings, seek to provide the wherewithal to reproduce themselves. This is true to industries in the private sector also, on the efficient performance of which depends the future of India's export trade. Fuller utilisation of capacity can make for low-cost production, but such optimum utilisation, in its turn, would call for the early removal of critical or crucial shortages of coal, oil, power, transport facilities, industrial raw materials and spares and technical manpower—shortages for which the private sector has not been primarily responsible. If anything, most of these shortages, as in the case of coal, oil, power and transport, have flowed from the Government's failure to give greater encouragement and allot a bigger role to the private sector in the relevant fields. Prof. Galbraith's advice that industries should use their capital assets more efficiently and build up the internal resources for expansion implies adoption of more congenial official policies.

INDIA'S ECONOMIC GROWTH

Despite the implementation of two Five-year Plans, the rate of economic growth in India has been lower than in most of the underdeveloped countries and economically advanced nations. The average annual percentage rate of growth over the past decade has been of the order of 3, as against 11 in Israel, 9 in Iraq, 6 in Brazil, Philippines and Burma, 5 in some South African countries, 4 in Thailand, Indonesia, etc., 9 in Japan, 7.5 in West Germany and 5.7 in Italy, according to the *U.N. World Economic Survey 1960*. The slow growth must be attributed largely to the pursuit of economic policies based on ideological considerations. In view of such slow growth, it is somewhat doubtful whether the planners' target of doubling the national income and *per capita* income in 20-25 years will be fulfilled. Mr. Shanti Prasad Jain, President of the Indian Chamber of Commerce, Calcutta, did well, therefore, to emphasise, in his speech at a meeting of the Chamber last week, that it was necessary carefully to assess whether, through the policies pursued, plan of investments and regulation of economic activity, the co-ordinate development of all the available resources "is finding fulfilment to achieve the anticipated rate of economic growth." He pointed to the prospects of better agricultural crops, abundant reserves of foodgrains obtained under P.L. 480, assurance of foreign aid by friendly countries and availability of vast human resources and said: "If, in such favourable circumstances, we cannot push up our economic activities to a level necessary to utilise the large human recources and millions of people remain without work as well as opportunity for work, it can only be assumed that there is something wrong somewhere."

The problem of external resources figured prominently in the speech of Mr. Jain. He was certainly voicing the opinion of the private sector as a whole when he declared that the available foreign exchange resources should be distributed appropriately in various fields so as to derive the maximum rate of development. To quote him: "Along with the essential services which are the responsibility of the Government, it should be possible for the private sector also to get its requirements (of foreign exchange) on the same basis." Evidently, he has been prompted by the continued uncertainty regarding the basis on which scarce foreign exchange resources will be allocated between the public and private sectors. The issue is of vital significance to the industrialists who have launched upon ambitious projects of development and expansion.

In this connection, Mr. Jain was at some pains to refute the frequent allegation regarding concentration of economic power. He did not, of course, enter into any discussion about the validity of such a thesis and its effects on people's prosperity. But he did stress that the fact, as studied, denied the existence of any economic concentration or any adverse efforts thereof. During the last several years, he said, many new entrepreneurs had entered industry and many young industrialists had been able to build up big-size industries. He was one with the policy of supporting the development of a large number of entrepreneurs. Since there is immense scope for such entrepreneurs, no unnecessary restrictions should be placed by the authorities in the way of development of big enterprises, which possess the distinct advantages of entrepreneurship, better managership, better experience and skill. Undue concentration of vast economic power in the hands of a few individuals and/or firms is no doubt undesirable, but what is even more undesirable is retarding the pace of economic growth in the name of this social goal.

CHEMICAL INDUSTRY

The chemical industry has made rapid strides during the last decade, not only by expanding output and diversifying production lines, but also by improving the quality of its products to some extent. The index of production of chemicals and chemical products touched a new high of 255.6 in 1960 (Base: 1951=100), as compared with 227.5 in 1959 and only 117.9 in 1952. The progress of the industry has been particularly striking in respect of such chemicals as sulphuric acid, caustic soda, soda ash, liquid chlorine and bleaching powder. And, in the years immediately ahead, this progress is expected to be even more rapid. The output of sulphuric acid, for instance, may well touch the level of 400,000 tons in 1961, as against only 109,000 tons a decade back. During the third Plan, it will be stepped up further, the production target being 1.5 million tons. Several other chemicals will also expand sizably during the current Plan period, the production targets being 150,000 tons for liquid chlorine, 15,000 tons for bleaching powder, 8,000 tons for hydrogen peroxide, 120,000 tons for alum and aluminium sulphate, 105,000 tons for ammonium chloride and 6,000 tons for copper sulphate. The total effective capacity for nitrogenous fertilisers has now reached 250,000 tons N per year, with the establishment of the ammonium phosphate sulphate plant of the F.A.C.T., Alwaye, and the commencement of production of nitro-chalk by the Nangal Fertilisers. By the end of the third Plan, the capacity for nitrogenous fertilisers is proposed to be stepped up to one million tons of N per year.

While the trends in production and prospects for expansion of chemical industry are satisfactory, it is high time that the industry was made self-reliant in respect of its major raw materials. Mr. Manubhai Shah, Union Minister for Industry, particularly stressed, while inaugurating the first meeting of the Development Council for Inorganic Chemical Industries at New Delhi last week-end, the need for reducing dependence on imported raw materials. The alkali (soda ash and caustic soda) industry is, of course, fortunate in this respect, in that its chief raw materials, salt and also limestone and coke, are available in adequate quantities from domestic sources. But, as Mr. Shah pointed out, there are several other chemicals the raw materials for which are being imported. The sulphuric acid, to take an instance, had been dependent on imported sulphur, the expenditure on which amounts to Rs. 3 crores annually. Referring to the measures taken to develop indigenous sources of sulphur, Mr. Shah stated that the Pyrites and Chemicals Development Corporation, set up recently, would undertake large-scale mining of pyrites in Amjor (in Bihar), where the reserves were estimated at 80 million tons. The Corporation, he disclosed, had been carrying out investigations, in collaboration with a Norwegian firm, for the establishment of a smelter at Amjor, with a capacity of 400 tons per day, for the recovery of sulphur. The Corporation was also planning to set up sulphuric acid units, with a daily capacity of 400-500 tons each, at places near fertiliser factories at Durgapur and elsewhere.

Apart from raw materials, another problem facing the industry is the difficulties in the way of getting plant and equipments on account of import restrictions. Mr. Shah observed, in this connection, that chemical manufacturers themselves should come forward individually and jointly to take up fabrication of plant and equipments required by them. While this is a good suggestion, it is doubtful if the chemical units, except a few large-scale ones, will be able to raise the necessary resources in terms of capital and technical know-how for undertaking the task of designing and fabricating plants. But, if they make a co-operative effort, there may be good prospects for such a scheme. But the difficulty here, too, is that there is no agency at present to pool their resources and implement the scheme. Perhaps, the Development Council can take the initiative.

Another important aspect to which Mr. Shah drew particular attention was exports. He wanted the new Council to draw up an export promotion programme designed to ensure foreign exchange earnings of at least Rs. 1 crore in the first year of its activity. In this connection, he suggested, for the Council's consideration, measures such as formation of export corporations and levy of voluntary cess. No doubt, there is surplus capacity in several chemicals, such as bichromates, hydrogen peroxide, aluminium chloride, bleaching powder and chlorine, which have a good demand in some of the neighbouring countries. But some of the Indian chemicals are not competitive in respect of prices in overseas markets. The reason for this is to be found mainly in the higher cost of raw materials and also excise duties borne by the domestic chemical industry.

COAL TRANSPORT CRISIS

The inadequate railway capacity for coal haulage has been held *primarily* responsible for the shortage of coal supplies in several parts of the country in recent months. This is still true, for, while the daily loading is of the order of 4,700 coal wagons, the demand is for 5,500 wagons. Again, out of the 1,900 coal wagons (lately stepped up to 2,100) that move daily beyond Mughalsarai, only 1,100 go to consumers in U.P., Delhi and Punjab, where the coal scarcity is most acutely felt. But it is also true that the railways are not *wholly* responsible for this state of affairs, for mining in the public sector collieries has been stepped up in a manner not foreseen or deemed advisable by the railways. By rapidly increasing the output of the easily workable Bengal-Bihar coalfields in the closing months of the second Plan, despite a warning from the railways, and by neglecting the development of Korba and other Central Indian collieries, the National Coal Development Corporation has only added to the transport difficulties. If the present pithead stocks of more than 5 million tons are unusual for this time of the year—the normal pithead accumulation of upto 2.5 million tons takes place only in the November-May period when there is a rush of other traffic—the N.C.D.C. must be held *partly* responsible for the transport crisis in the Bihar-Bengal area. If only the N.C.D.C. had carried on its activities in collaboration with the railway authorities, instead of concentrating its attention on the attainment of production target, the problem of excessive pithead stocks would have been of a relatively smaller magnitude.

The transport bottleneck, it is stated, is now causing a serious coal shortage in the industrial areas of Calcutta itself. The Coal Controller's new policy of re-allocation of wagons for industrial coal is forcing the Calcutta industries to meet the shortage by road transport. At the moment, about 50 per cent of the industrial coal—amounting to about 130,000 tons—is being transported by road to Calcutta from the coalfields. Although, according to the rule framed by the Coal Controller, only industries within a radius of 25 miles from the coalfields are to take their coal by road transport, even industries within 100 miles of the coalfields are now actually being forced to depend on road haulage. But the cost of such road transport works out to Rs. 28 per ton, as compared with Rs. 10 per ton in the case of rail transport of coal to Calcutta, Rs. 23 in the case of haulage by coastal shipping or by rail to Bombay and Rs. 23 or 24 in the case of rail transport to the Punjab. Apart from the higher cost of road transport, the Calcutta industrial area is also handicapped by the bad condition of the G.T. Road and the inadequate capacity of its feeder-roads from the collieries.

By all accounts, the coal transport situation is critical in the Bihar-Bengal area. But there is no immediate prospect of increased wagon availability, as the railways are in arrears to the tune of 15,000 wagons and the current year's production programme for the manufacture of 20,000 wagons is being seriously affected by the power-shortage in West Bengal—a shortage which has slowed down production in many other industries in the Calcutta area. If the crisis in coal transport can be ultimately overcome only by adequate wagon-building, the power bottleneck should be removed first, so that the engineering industries in the Calcutta area can step up their production.

EXPORT CREDIT

How far could liberalisation of export credit terms help increase exports? Although it is true that better credit terms offered to overseas buyers will enable a country to strengthen its competitive position, it cannot be said that these will automatically boost exports. Recent British experience proves this. In spite of the substantial liberalisation of the terms offered by the British Export Credit Guarantee Department to British exporters, the business of the Department did not show any marked increase. Thus, during the second quarter of the current year, the face value of the short-term policies outstanding with the Department increased, but from £760 million to £777 million only, while the volume of medium-term business transacted and outstanding declined sharply. Two interpretation can be given to this: either, that the facilities previously offered by the E.C.G.D. were not so inadequate as was complained about by British exporters or that export demand is not so responsive to changes in credit terms.

It is obvious that attractive credit facilities are only one of the factors that determine the competitive capacity of a country. It is not for want of export credit terms nor of competitive prices, according to Mr. Maudling, President of the Board of Trade, that British exports are not making any headway. British prices, according to him, are not out of line with those of its competitors generally. The performance of British exporters in the U.S. amply proves that Britain can stand up to competition from other countries. It is on account of some of the seemingly less important, but really decisive, factors that Britain's exports suffer, says Mr. Maudling. The industry's failure to keep delivery date caused by strikes particularly in the transport industry has a very harmful effect on exports. In fact, according to him, it is impossible to exaggerate the lasting harm that could be done to British export programme by these constant hold-ups in delivery.

Lack of adequate sales effort is said to be another factor adversely affecting Britain's exports. Mr. Maudling concedes that the best British businessmen are able to sell as effectively as any others in the world, but he feels that more consistent sales effort and follow up, better after-sales service and more deliberate study of the needs of the customer are essential if Britain is to maximise its export effort.

Mr. Maudling's diagnosis of the malady affecting Britain's export trade has a lesson for India too which is in the process of building up its exports. It is that prompt delivery, vigorous sales efforts and after-sales service are as important, if not more, for promoting export trade as quality of products, competitive prices and adequate credit facility.

U.N. TECHNICAL ASSISTANCE

The U.N. Technical Assistance Board, operating the Expanded Programme of Technical Assistance (E.P.T.A.), has become a unique agency for multilateral co-operation, particularly benefiting the underdeveloped countries. Taking part in the E.P.T.A. programme are nine specialised agencies, covering the entire gamut of economic, social and scientific activity. These agencies are the U.N. Technical Assistance (U.N.T.A.), I.L.O., F.A.O., U.N.E.S.CO., International Civil Aviation Organisation (I.C.A.O.), W.H.O., International Telecommunication Union (I.T.U.), World Meteorological Organisation (W.M.O.) and International Atomic Energy Agency (I.A.E.A.). The growing popularity of the E.P.T.A. is evident from the increasing trend of contributions by member-countries towards financing its projects. According to the annual report of the Technical Assistance Board for 1960, pledged contributions for the E.P.T.A. in the year reached a new peak at $34.17 million, in marked contrast to the previous year, when they were lower by $1.65 million at $29.66 million, as compared with 1958. What is more, the contributions already pledged for 1961 show a further expansion to $41.38 million, or an increase of 21 per cent over 1960. Assistance under the E.P.T.A. was provided directly to 103 countries and territories. Another twenty-three participated in the Programme by sending fellows to regional training projects. Expert assignments aggregate 2,208; the experts were drawn from fifty-seven countries, well over half of these being themselves recipients of technical assistance under the E.P.T.A. In all, 2,107 fellowships were awarded to nationals of 113 countries and territories, who were placed in eighty-two countries and territories to carry out their study programmes. These measures of technical assistance have been a virtual boon to the developing countries, where the critical shortage of technical manpower is holding up the tempo of development.

It is, however, a little disappointing to note that, in the aggregate, expenditure on the various projects under the Expanded Programme showed a further decline in 1960, as in the previous year. The total project costs, which had touched a record level of $29.93 million in 1958, fell to $28.67 million in 1959 and further to $27.9 million in 1960. The decline in 1960, the Report points out, was due partly to difficulties in currency utilisation and partly also to a rather substantial difference between the year-end carry-over of funds (on account of equipment and supplies ordered, but not delivered) of 1959 and 1960. The report claims that, if these factors were taken into account, the total cost of the programme would be slightly larger than in the previous year. The year 1960 was, however, not without its highlights. As pointed out by Mr. David Owen, Executive Chairman of the T.A.B., at the recent session of the U.N. Economic and Social Council at Geneva, the Programme in 1960 showed its adaptability to respond flexibly and swiftly to new situations, including new political developments as in Africa, or emergency situations like the one arising from an extensive earthquake in Chile last summer.

Thanks to the emphasis laid by the Programme on imparting technical assistance to developing countries, several nations in Africa, Asia, and Latin America received substantial technical facilities under the E.P.T.A. India, of course, continued to be the major beneficiary of the Programme in 1960 also. The total cost of projects in India under the E.P.T.A. stood at $2.15 million. This, however, compares unfavourably with $2.49 million in 1959 and the record level of $2.73 million in 1958. The decline was accounted for by smaller outlays on Indian projects of the I.L.O., U.N.E.S.CO., I.C.A.O. and I.T.U. At the same time, there was some increase in the project cost of other agencies in India, such as U.N.T.A., F.A.O., W.H.O. and I.A.T.A. The expenditure under the E.P.T.A. excludes regular technical assistance granted to India by the various U.N. agencies, as part of their general operation, the value of which aggregated $815,000 in 1960, as against $733,000 in 1959. Besides, India received the services of 145 experts under the Expanded Programme (as against 150 in 1959) and 61 under the regular programme (54 in 1959).

The Expanded Programme is based on the principle of give and take. Accordingly, India has played an important role in expanding the resources of the E.P.T.A., for it has been the leading contributor among the countries of Asia and the Far East. Its contribution to the Expanded Programme was raised from $525,000 in 1959 to $750,000 in 1960. The number of Indian experts working under the Expanded Programme was 99 (as against 112 in 1959) and under regular programmes 42 (40 in 1959).

The outlook for international technical assistance, according to the report, has never been as promising as it is today. The number and volume of requests for such help, particularly from developing nations, continue to grow. Governments, we are told, are increasingly aware of the need to clarify their requests and to establish central co-ordinating machinery to decide priorities on an orderly basis. Meanwhile, the network of T.A.B. overseas representatives, now greatly extended and strengthened, is in a position to play an increasingly effective role in local technical assistance and co-ordination with other programmes. Procedures are being improved and simplified, and the possibility of flexible and speedy action further extended. The main problems still outstanding are recruitment and currency management, which are receiving greater attention of the T.A.B., although much remains to be done with regard to both. The T.A.B. review has confidently concluded that there will be no difficulty about putting to very good use the additional $8 million a year which would bring the annual resources of the E.P.T.A. to the unofficial target level of $50 million. The year-to-year variations in project outlays are relatively insignificant, when viewed against the total assistance rendered during period of the sixties as a whole.

Coal Supply To South India

THERE is acute shortage of coal in the southern region which is causing great anxiety to all industries established there. The Madras Government is reported to have represented to the centre that the talk of industrialisation in the south will be unreal so long as the region is not ensured of a regular supply of this basic commodity *at an economic price*. The main bottleneck is in the shortage of wagons in which there has been no improvement, despite the assurance of the Commerce and Industry Ministry that the Railways, the Ministry of Steel, Mines and Fuel, and the Coal Controller have promised to render all assistance in this regard. The four Southern States of Madras, Kerala, Andhra and Mysore have all been badly hit, and are reported to be contemplating a vigorous joint representation at the ensuing meeting of the Southern Zonal Council.

In August last year, the Madras Government had suggested that a uniform price should be fixed for coal throughout India, smoothing out the disparities that resulted from freight charges. The Government of India appears to have replied that it was neither feasible nor desirable to introduce a pool system of freight rate for coal for the main reason that, apart from other objections (?), it would violently upset the economics of the industries which had already developed in the areas nearer the coal fields. Before arriving at this decision, the Government of India is reported to have considered the "views of commercial interests, actual bulk consumers of coal, the various State Governments and *other factors involved*." I have no doubt that all these views emanated from the region near to the coal fields; the consultations were, therefore, superfluous, as the views were bound to be against pooling. Government, however, feel that, *in the long run*, the difficulties will be reduced through the development of outlying coal fields, the development of Neyveli Lignite and the development of scientific methods of using low grade coal. They seem to have forgotten to mention another soother, the erection of an Atomic Power Station!

In my column dated 4th March last, I referred to the question of uniform price for coal which had been opposed by the President of the Associated Chambers of Commerce in Calcutta as being an "artificial corrective." He expressed the view that "where the investor had the foresight to plan his production in the most suitable area, he should be allowed to continue to enjoy the benefits of his foresight and initiative." I then stated that the stand taken by him cut across all ideas of zonal distribution of heavy industries, that it was based on the theory of perpetuation of vested interests, that exclusive privileges should not be claimed in regard to basic commodities like cement, steel and coal, and that nature's bounties should be shared and shared alike. I repeat now that, in the context of the imperative need for "emotional integration" in the country, a separatist tendency in regard to coal is unsustainable when it has been given up in regard to cement and steel. It will be futile to establish heavy industries south of the Vindhyas if all of them have to depend for supply of coal only from Singareni which is not of high grade. Integrated industrial development of the country with a fair measure of zonal distribution has been considered necessary to satisfy not merely the economic needs of the different areas, but also for the emotional satisfaction of the people living in them. If a sense of belonging to the whole country is to be developed, there is no better way of doing so than by resorting to artificial correctives for the removal of imbalances in the supply of essential commodities. Instead of referring to the distant prospect of improvement through development of 'outlying coalfields' or scientific methods of using lowgrade coal, it would have been more sensible to refer to a possible increase in competitive coastal shipping and resultant reduction in freight charges. In any case, the need for rationalising the transport of coal is of urgent importance to remove the emotional distress generated in the minds of industrialists in the southern region to which the respective State Governments cannot afford to be impervious for long. The talk of "emotional integration" is utterly meaningless, if acquisitive instincts override all sense of fair distribution, and preclude all possibility of even marginal sacrifice being made, and if distant tracts which are ill-endowed with nature's bounties are forced to put up not merely with uneven supplies of basic materials but also with heavily loaded transport charges.

Playing With Words

Mr. Lyndon Johnson, the Vice-President of the U.S., is reported to have introduced President Ayub Khan to the Texas Legislature as "the strong voice in the chorus of human freedom." As an outstanding example of equivocation, these words of praise are hard to beat. It is an elementary axiom in political philosophy that democracy is the opposite of dictatorship, and that the most satisfactory form of ensuring freedom is through democracy. Obviously, therefore, there is some subtle quibbling when the dictator of Pakistan was equated with the strong voice in the chorus of human freedom. May be, the emphasis was on the word 'chorus,' if we recall that President Ayub Khan was singing lustily against communism while he was touring the U.S., and warning its leaders off and on that, if he was not admired and feted and liberally assisted for his 'strong voice,' his country might move into the communist fold. And the 'magnificent obsession' of the United States Administration against the communist bloc could be the only reason for such very obvious equivocations on issues so dear to the hearts of its citizens as is brought out by the public pronouncements in praise of the Pakistan Dictator.

The subject of arms aid by the U.S. to Pakistan has resulted in frayed nerves and bad tempers everywhere, and Ambassador Galbraith had to answer a series of questions on the subject during his Press Conference in Madras. His stock answer was that the aid was given to Pakistan solely for the purpose of defending itself from external aggression and the understanding was that it will not be misused. The difficulty, however, is that no one in India is sure that Pakistan is completely free from sinister designs, and almost everyone is annoyed that the U.S. has agreed to give 'extended aid' to that country by way of arms. Efforts were made by the Ambassador to explain away this phrase as meaning only a continuance, not increase, of aid, but the general feeling is that it is a very loose expression which can lend itself to quibbling and play with words.

All things considered, the extension of arms aid to Pakistan is not an act of mature wisdom or diplomacy. Firearms have a nasty habit of going off in wrong directions and at wrong times. The military personnel in Pakistan to whom the arms will be distributed will not have copies of the joint *communique* issued by the Presidents of the U.S. and Pakistan in their pockets for reference every time they feel the urge to use them. And the urge is endemic in a country whose leaders have been sabre rattling for ever so long, in season and out of season.

The S.T.C. Sugar Deal

To those of us who have bought textiles in Moolji Jaitha Market or Mangaldas Market in Bombay, the manner in which Pakistan jilted the S.T.C. over the sugar deal at the last moment, ostensibly on flimsy procedural grounds, but obviously for a five shilling per ton cheaper price, will not appear strange. If individuals can do what they do in the textile shops, why should not States copy them, especially if they are itching to defy? I have seen retail deals in the above mentioned markets exactly similar to Pakistan's sugar purchase from the Cuban "floating market." Clever buyers do not usually go single to these markets in Bombay; they go with a couple of scouts and distribute themselves in two or three shops. While the principal is bargaining for the purchase of a particular variety and reaches a figure, the scouts go to the neighbouring shops and bargain for a lower figure, and when the rock bottom is eventually reached, word is passed to the principal to drop further negotiation and move to the cheaper place. That is the way that bargaining is pushed to the utmost, and unless the first shopkeeper is prepared to depress his price to the lowest, the deal is off. I presume that Pakistan's sugar deal with the S.T.C. was cancelled under similar circumstances.

One feels sorry for the S.T.C., though, it should not have tried to do big business with a jealous neighbour who has been consistently grudging us our surplus production of sugar, although we know how inconvenient it is to us at present. Secondly, the S.T.C. should have known better to delay the finalisation of the arrangement by even those fateful ten days which it took to draft the trade agreement. Thirdly, it should have steam-rolled the transaction before the Pakistanis had time to have second thoughts on the subject. However, we have learnt a lesson. We should now know what precautions to take when dealing with Pakistan in trade. The latest we hear is that Pakistan will sell us 30,000 tons of cement at "more or less on par with current cement rates in India." (I have a hunch that it is more likely to be more than par.) If the S.T.C. is putting through the deal, it should know how to tie up all the loose ends. Once bitten, they should be twice shy!

February 1962

Just because Capricorn in the zodiac is represented as a horned goat or monster, should we get frightened about the summit meeting there of eight planets between 3rd and 5th February? The full meet consisting of Sun, Moon, Mars, Mercury, Jupiter, Venus, Saturn and Dragon Head (Rahu) will be for just over 48 hours; one of them will then leave Capricorn, and the other seven will stay on for fourteen days, that is, till 19th February. Astrologers seem to think that our earth will suffer great calamities, but astrologers have always been forecasters of evil and have taken morbid pleasure in predicting calamities almost every year. The last time the world should have come to an end (according to a group of Italian mystics) was at 1.45 P.M. (G.M.T.) on 14th July 1960. Nothing occurred, not even a minor tidal wave. The kill-joys who now predict great evil in February 1962 will, I hope, suffer similar disappointment. Indeed, they should, for it cannot be that eight planets would undertake a sojourn to Capricorn only to turn malefic, all of them, and plot evil against our world; in trying to destroy us, they might destroy themselves. The meet seems to be very much on the Geneva pattern, with a plenary session to start with, one person leaving immediately after it, and the rest having discussions and, perhaps, working parties to settle the various issues and arrived at agreed solutions. For, according to data available, it is several thousands of years ago that an assembly of similar strength took place in Capricorn, and there is no information available to establish that evil came out of it. An important subject on the agenda might be to discuss our attempts to reach the Moon and Mars. Soviet Russia and the United States should sit up and do something about this; they should at least issue a joint declaration that their endeavours are entirely pacifist. The rest of us are so helpless that no purpose will be served by getting jittery over these recurring forecasts of 'Doomsday'.

Notice

THE PUNJAB NATIONAL BANK LIMITED

Registered Office:
Parliament Street, New Delhi

THE DIRECTORS OF THE PUNJAB National Bank Limited have decided to issue 7,50,000 shares of Rs. 10 each at a premium of Re. 1 per share in the proportion of 3 shares for every 5 shares held for which consent of the Controller of Capital Issues has been received. They have also decided to pay an Interim Dividend for the current year at Re. 1 gross per share, to its shareholders whose names appear in the books of the Bank as on 2nd September 1961. The Share Transfer Books will be closed from 18th August to 2nd September 1961, both days inclusive, for both the purposes.

The Interim Dividend will be payable at the registered office of the Bank at New Delhi on or after 11th September 1961.

By Order of the General Board of Directors,
A. M. WALKER,
General Manager.

CAPITAL DEPARTMENT,
PARLIAMENT STREET,
NEW DELHI,
July 24, 1961/Sravan 2, 1883 (Saka).

Note: Shareholders are requested to intimate change of addresses, if any, to the Bank immediately.

NO CONCENTRATED THINKING ON ECONOMIC ISSUES AHEAD

From Our Special Correspondent

NEW DELHI, *26th July*

DELHI LETTER

AFTER the brief interlude of excitement over Britain's entry into the Common Market, New Delhi has returned to its now normal state of apparent unconcern about economic affairs—except for the continuous essay-writing on developmental problems in which the Planning Commission excels. The Commission's throes of composition are almost over and the coming session of Parliament will debate the third Plan; but neither the final version nor the debate on it will make any difference to the problems that keep piling up, as a result of insufficient attention, if not inaction. Because of the timely help of the I.M.F., the fall in the reserves did not lead to a crisis and enough untied aid for maintenance requirements will soon be forthcoming to tide over payments difficulties for the rest of the year. But, beyond this measure of safeguarding India's credit abroad, there is very little evidence of concentrated thinking on the economic issues ahead.

Data on the current state of the Indian economy are very hard to secure even after a decade of planning; unconfirmed figures for April showed a decline in industrial production and there have been no great changes since then to encourage expectations of an improvement in the situation. For the second time, there has been a block closure of jute mills and a third closure is still a possibility. There is a shortage of cement all over the country and wagon-building for the railways has suffered a serious setback mainly because of a shortage of steel and delay in ordering supplies from abroad. No estimates are yet available of the effects of the power crisis in Calcutta on production but they may be considerable. Above all there is the continuing uncertainty regarding the future of coal supplies to Indian industry in both the sectors; the position is already acute in some areas and, unless fresh and vigorous attempts are made to find a solution, a setback to production in 1961 may become inevitable.

It is clear that a deep-rooted malady is affecting the Railway administration. The promise of 2,100 wagons a day for coal loading above Moghulsarai has not materialised this month and there are no indications that it will in the near future. Some time ago, the Railway authorities had made much of the idea that, if only coal consumers agreed to co-operate with them in moving coal during the slack season, the transport problem could become manageable. But pithead stocks have been accumulating—recent estimates place them at nearly 5 million tons—and the rainy season is hardly the proper time for speeding up movement of goods traffic.

Coal Movement

The arrangements for moving larger quantities of coal by sea from Calcutta to the port towns in the South have not proceeded according to plan, because the number of ships has proved insufficient. While shipping companies have complaint of uneconomic freight rates, consumers served by this method of transport have protested against the unduly high prices they have to pay, amounting in some cases to as much as Rs. 40 per ton. It is obvious that, in spite of all the talk about regional balance in industrialisation, the southern and western areas of the country have to pay a heavy price for their basic raw material, namely, coal. Even if the demand from these areas for a pooled price for coal is not acceptable for the reason that it would place a heavy burden on transport and deprive some of the advantages of location near coal sites, some element of subsidy will have to be accepted by the Government and provided for in order to reduce the differential in prices caused by larger movements of coal by sea in the coming years. Here again policy has not yet crystallised.

Mr. Jagjivan Ram's recent speech at Dhanbad underlines the extreme seriousness of the transport situation and the complete helplessness of the Railways. Though there was a shortage of about 8,000 wagons in the target fixed for the second Plan (that is, about 8 per cent), it need not have affected the carrying capacity of the railways to the extent it has actually done. The Minister was clutching at all available excuses (like the Jabalpur riots) for non-fulfilment, but the confession of inability stood out conspicuously in the address to the representatives of the coal industry. Transport by road within a radius of about 200 miles as suggested in some quarters may be another method of relieving the strain on the Railways which will have to be tried out soon. The new coupon system which has taken effect replaces the permits which were formerly necessary for despatching coal by road; it is a concession to necessity and one should hope that such alternative measures will not be taken piecemeal manner. The Railways were responsible for throwing the question of road transport and road-rail co-ordination into a state of confusion and the Neogy Committee further confounded it. Events have rebutted the Railways' case more eloquently than the Committee's report.

Only Silver Lining

Among the numerous troubles facing the Rourkela Steel unit is the prospective shortage of coal to the extent of about 500 tons a day or nearly one-sixth of its daily requirements; there is also the problem of the low quality of coal which Rourkela will share along with other undertakings requiring superior grades. The precarious coal supplies to the South is bound to revive complaints of neglect of the development of this region, however legitimate may be the reasons of the Government of India for not doing more to relieve the shortage. The only silver lining to this dark picture is the satisfactory progress of the lignite project, according to members of the Planning Commission who visited it recently.

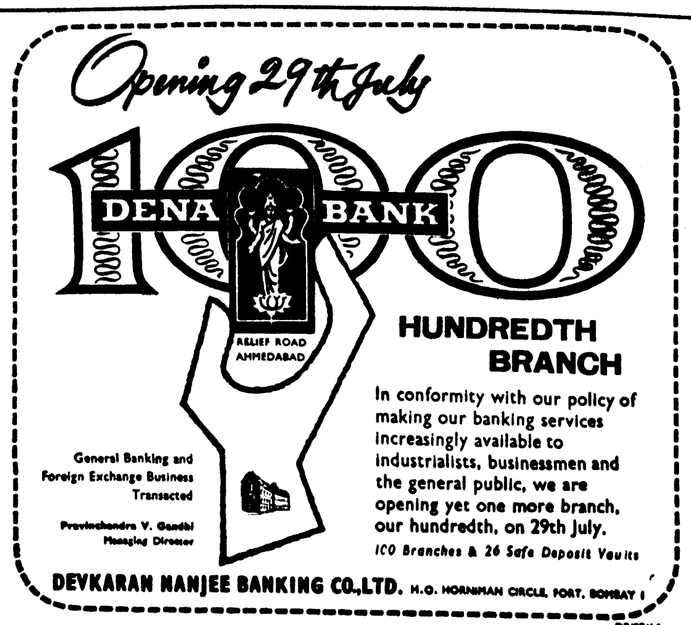
Although this time it is not production but movement which is causing anxiety and has hampered the economy, it is necessary that the coal production programme also should be reviewed with a view to avoiding some of the more serious bottlenecks now caused in distribution. If most of the new fields to be opened up by the public sector for its additional output of 20 million tons are to be located in the Bengal-Bihar area, the difficulties of the remote areas of the country will steadily get worse. The Railway Board has been far-sighted enough to urge that, unless some new fields are opened up in Central India, the pressure on rail traffic will become worse. For the public sector, however, the problem is one of finding high grade coal for metallurgical purposes for steel industries and it is doubtful whether it will worry about anything else so long as its capacity to implement a still larger programme is limited and the resources for investment, especially of foreign exchange, will be hard to find.

The capital investment for an additional production of 20 million tons in the public sector is estimated at Rs. 103 crores (as against Rs. 60 crores for the private sector for an additional output of 17 million tons, about half of it in foreign exchange). Except for the expansion of the Singareni collieries, the bulk of the additional output of the public sector will have to be found by opening new mines in virgin areas and new projects are hardly ready for commencement of work on them. The period of gestation will be long, thus introducing further uncertainty. Whether the coal target will be revised downwards later on or whether any portion of it will be re-allotted to the private sector cannot be predicted, but a belated re-allotment is unlikely to serve the main purpose of achieving the output target.

Price Level

This ambiguous state of coal production and transport is the leading example of the lack of a sense of urgency about repairing the weaker sectors of the economy and maintaining production. The only hopeful feature at the present time is the prospect of larger jute and cotton crops in the coming season which will be sufficient to meet the needs of industry. This is also an encouraging factor in regard to the problem of holding the price level, on which again there has been a total absence of policy, though a separate sub-committee of the National Development Council is supposed to be seized of the question. Nothing tangible has come out of its deliberations and State Governments continue to plead before the Centre that it must do something about prices, which is understandable before the elections. The index of wholesale prices at the end of June was 3.3 per cent above that of a year ago and 1.4 per cent above that of May. The food group, which has been showing a decline in prices in recent months under the influence of a larger cereal output, has again shown a spurt. It may be another month or two before industrial raw materials show a decline reflecting the improved fibre position, but even then it is doubtful whether manufactures (which are 5 per cent costlier, as compared with the position a year ago) will respond to bring the price level down.

The mid-year indicators of economic activity do not show the buoyancy which was marked at this time of the year in 1960. One exception is the high level of Central Revenue collections, which have shown an increase of Rs. 17 crores for the first two months of the current financial year over the corresponding period last year. It is difficult to compare the volume of bank advances at this time with the levels last year when drastic restrictions were in force; but the comparative easiness in money market conditions perhaps reinforces the conclusion that there has been some levelling off of business activity in some sectors. And considering the enlarged scope for investment in the private sector in the third Plan, new private investment has not expanded at a sufficiently fast rate. In New Delhi, these larger issues are now quite subsidiary to the perpetual problem of deciding the location of new projects amidst competing claims from States; this is an all-absorbing occupation.



CONTROLLING PUBLIC EXPENDITURE

REPORT OF PLOWDEN COMMITTEE

From Our Own Correspondent

LONDON, *22nd July*

LONDON LETTER

ALTHOUGH the City is as jittery as ever this week with the threat of what the Chancellor's worst can be next Tuesday (the 25th inst.), the only comment one can make at this moment is on the growing tendency to ask what the crisis is all about, anyway. The question is prompted by the latest trade returns which show that the balance of payments is improving, taking the half-year as a whole. Over this period, the adverse balance of trade account (f.o.b. values) is about £13 million a month, which should be well within the capacity of being covered by invisible income. The higher level of production attained in April has been sustained in May; the pound is tending to improve; and, since the Chancellor will not be able to engineer a wage freeze, it becomes increasingly likely that whatever he decides to do will seem unnecessary! But the true lesson of the present crisis is surely that, when a Chancellor feels unpleasant action should be taken, he should take it, instead of talking about it for a fortnight beforehand.

In the midst of the general uncertainty, the Chancellor has had published the report of a Government Committee set up two years ago—the Plowden Committee—to report on the control of Government expenditure. The Treasury have always regarded the increasing and reducing of the rate of public expenditure as one of their most effective means of influencing the economy. The Chancellor must surely feel tempted, if he wishes to combat inflation, to cut Government expenditure. Yet here is this Report telling him bluntly that "short-term economy campaigns and 'stop-and-go' are damaging to the real effectiveness of control of public expenditure."

The Report has three main themes: surveying expenditure as a whole over a period of years in relation to prospective resources; the need for greater attention to be given to the systematic improvement of management throughout the public service; and the opportunity for constructive Parliamentary control. The Committee regard these three themes as the fundamentals for the conduct of all kinds of public expenditure and their Report is worthy of reading by all administrations other than those which already have planned economies.

It emphasises that public expenditure should not be the plaything of financial policy. Its range is so great over the whole field of the national economy that it ought to be planned in relation to the prospective resources of the country over a period of years. First, it should be possible to plan what the country can afford to spend in the public sector; and, secondly, the orders of priority. May be that, in such planning, it would be concluded that the public sector should spend more and then financial policy would be directed over a period of years to a relative restriction of private spending against public.

The point is well made that the problem of the control of public expenditure is common to all Governments, regardless of party. The essence of the matter is that public spending should conform broadly to the same principles as private spending in the interests of economy. The chopping and changing in Government expenditure policy are found to be frustrating to efficiency and economy in the running of public services. The Report says: "It impairs cost consciousness and financial discipline at all levels. It is difficult to engender these in any large organisation, and they are of fundamental importance."

The Report, therefore, recommends (1) that regular surveys should be made on public expenditure as a whole over a period of years ahead; it does not recommend that publicity should be given to the general plan since certain assumptions about national resources have to be taken and the Committee doubt whether any Government would be prepared to explain all their assumptions; (2) that there should be the greatest practical stability on decisions taken, so that long-term economy and efficiency have the best possible opportunity to develop; (3) that improvements should be made in the technique for handling public expenditure problems principally inside the machinery of the Treasury; and, finally, (4) that there should be more effective machinery for the taking of collective decisions and the bearing of collective responsibility by Ministers on matters of public expenditure.

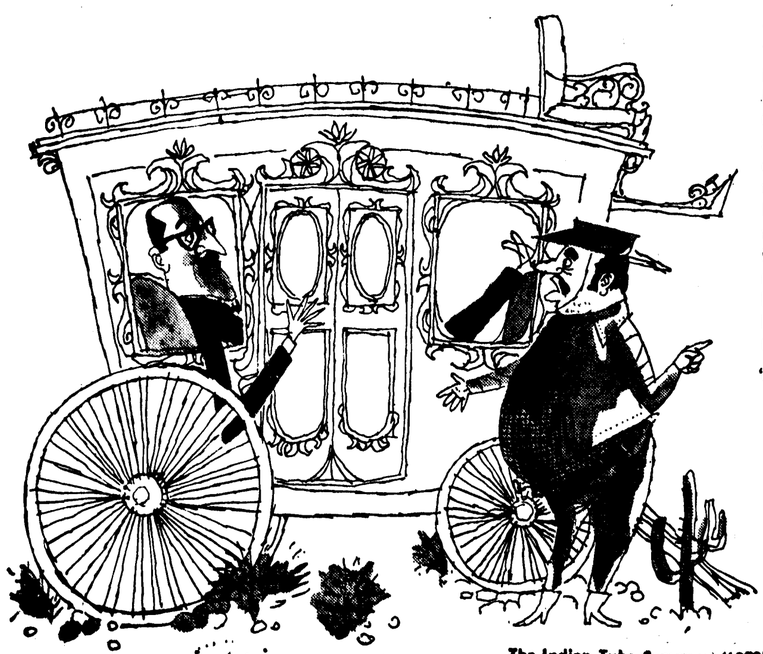
All this means that the Treasury and the Chancellor or Finance Minister must work in matters of public expenditure more with their colleagues as a team and that, once a broad programme within the country's estimated capacity is laid down, the keeper of the purse should not abuse his functions by interfering with the operations which will have been set in motion. In other words, there must be more planning of public spending and the balance should not be interfered with by Chancellors happy to wield such an easy weapon.—*All Rights Reserved.*

A survey into the effects of electricity on farming carried out in the West Country of England shows that, with electrically operated equipment, farmers save not only money, but 500 man-hours a year. The survey, believed to be the first of its kind in the U.K., was conducted by the Bristol University's department of agricultural economics in collaboration with the South-Western Electricity Board. It was carried out on four farms, and a direct comparison was made of running costs and labour needs before and after electrification. The other findings are that privately-generated electricity is more costly than power from the mains and that a farmer who changes from a petrol engine to an electric motor for milking reduces running costs by upto £50 a year. Savings were also found in the electrification of water-heating and steam-raising, water-pumping, milling, mixing and crop drying.

The need for taking further steps to expand trade between the U.K. and Soviet Russia has been stressed in a joint *communique* issued at London, following discussions between Mr. R. Maudling, President of the Board of Trade, and Mr. Patolichev, Soviet Minister for Trade. It has been agreed that the negotiations for an Anglo-Soviet Treaty of Commerce and Navigation should be resumed in London before the end of 1961 or early next year.

The U.K. will grant a loan of £3.6 million to Yugoslavia, under an agreement signed at London last week. This loan is the U.K.'s contribution to the financial aid being granted to Yugoslavia jointly by the I.M.F., the U.S. and a number of West European countries. The loan is to be repaid between June 1964 and December 1968.

TRAVEL TALK IN TUBELESS TIMES



'A tube, a tube, my kingdom for a tube', quoted Time-Master Tubophile getting his Shakespeare all mixed up.

'Listen', said the coachman. 'You ain't got a kingdom to give and we ain't got a 'tube' to travel in...so now we walk, see!'

'Zounds, Sir', thundered Time-Master Tubophile, still Shakespearean, 'you don't have to remind me that this is a tubeless land in tubeless times. Full well do I, Chairman, Tube Time Inc., know it. Not a car, train or plane for conveyance...not even a bicycle to take the ache out of travelling. Nothing to take you from here to there save a horse...and that too run away. Such is tubeless travelling. Comforting, though, to think, there is my tubular time machine to take me back to my own well-tubed time. And back I'll go after I have seen more of these tubeless times.'

'Coachman! forward—Ho!'

The Indian Tube Company (1953) Ltd. A Tata-Stewarts & Lloyds Enterprise

RANDOM THOUGHTS ON BANKING

ROLE OF BANK RATE AS TRAFFIC REGULATOR

By "Kuber"

FOR the last few days, the bankers have been freely mentioning the rumour that the Reserve Bank is likely to change the Bank rate in the not distant future. But to my great surprise they do not seem to be too much bothered about it. As every one knows, there is no Bank rate as such in India; instead, there are bank rates, or what is called the three-tier bank rate, by which the banks can borrow only a certain nominal amount at 4 per cent, a little more at 5 per cent, and the balance at 6 per cent per annum. In the recent past, most of their borrowings have been, at 6 per cent. The official Bank rate, according to the Reserve Bank at any rate, if not according to bankers, is still deemed to be at 4 per cent. The bankers are not quite clear which of these rates is going to be changed. Whether the Bank rate actually does change is, however, immaterial; what I am concerned with in this column is why and how people are so indifferent about it.

Now, why this apathy at a change in the Bank rate? Any one who has ever worked in the city of London will at once recollect what a great excitement there usually is when the notice is put up in the Bank of England, announcing the change. Hundreds of "runners" or bank clerks and others are seen rushing around, tearing away to reach their offices with this important news. Huge headlines are splashed in all the daily papers and countless articles are written by experts showing how different classes of people will be affected thereby. The reason is obvious; the Bank rate is regarded there as the most important instrument of Central banking policy and it does therefore produce very important and far-reaching changes in the London money market. If the Bank rate goes up by about 1 per cent, the various rates of interest of the joint-stock banks also move up correspondingly, though there is nothing obligatory about it. The banks pay higher rates for their time deposits and they also charge higher rates on their loans and advances. As the joint-stock banks are about the most important source of supply of credit, the lending rates of semi-banking and financial institutions also usually follow suit. The industrialists and businessmen have, therefore, to pay higher rates all over the country, reducing their margin of profit. What is, however, equally important is that the rate at which Government borrows money also moves up. Usually, even before the Bank rate is raised, the Treasury Bill rate firms up either in anticipation or because it, more or less, gives an indication of the tightness of the money market. Once the Bank rate goes up, the value of all Government loans are immediately marked down, unless they had been marked down earlier in anticipation of such a change. Naturally, banks and investors are very vitally affected by it, as the values of their securities come down by 5 to 10 per cent, if not more. Such changes, of course, are less pronounced if people think that the rise in the Bank rate is only temporary; on the other hand, if they anticipate that the rise in the Bank rate will persist for a considerable time, owing to the stringency in the money market, the various rates of interest may change even more violently. Anticipation thus also plays a very important part in the movement of various rates.

I remember a very interesting incident which will illustrate the way things happen in England. Once while looking around for "digs" in London, I settled, though not in writing, with a landlady for a couple of rooms at £2-0-0 a week. The next day when I shifted, the landlady would not allow me to occupy the rooms, unless I agreed to pay her £2-10-0 per week, notwithstanding her earlier oral agreement at a lower rate, the reason being that, in the meantime, the Bank rate had gone up from 5 to 6 per cent. When I argued with her as to how she was affected thereby, she at once replied, more or less, repeating the headlines of the papers, usually read by the landladies in the *Daily Mail*, in some such terms:

"You see the Old Lady (as the Bank of England is usually called) has embarked on a dear money policy which will mean that there are difficult times ahead; and the 'Old Lady' knows her job and her policy, therefore, tells us how the wind is blowing." Of course, I got the better of her in the end, being myself a student of monetary theory, by making her agree that, if she had increased her charges by £0-10-0 because of the rise of one per cent in the Bank rate, she would have also to reduce her charges correspondingly if the Bank rate went down. I very well knew that the rise was a temporary affair and the Bank rate would ultimately come down to about 4 per cent, if not less, in 2 or 3 months' time. The Bank rate did come down to 4 per cent in a few months and I paid my landlady 30 shillings only for the next two years. What is important to note is, however, how the whole money market and the people react to the changes in the Bank rate, because "the Old Lady knows her job and the changes in the Bank rate indicate which way the wind is blowing." In short, the Bank rate acts either as a beacon light or also sometimes as a danger signal to the business world, in general, and the money market, in particular.

Nothing like that happens in India and even bankers, let alone the man in the street, view such changes indifferently, if not philosophically. The rates on time deposits with the banks do not necessarily change, unless the Reserve Bank issues directions to that effect which it does even when it does not change the Bank rate. The businessmen continue to get advances at the old rate and, even when the Bank rate is increased officially, they somehow get over it and succeed in borrowing at the old rate. The Treasury Bill rates also very rarely change either preceding the change in the Bank rate or immediately after it. In fact, the Treasury Bill rates hardly ever change at all: the Reserve Bank statistics show that, during the last several years, the Treasury Bill rates have been pegged by the Reserve Bank at around 2.75 per cent, although, during all these years, the country's economy has seen so much of stress and strain. The Reserve Bank's statistics also show that Government security prices have also similarly not varied very much in the last several years. To put it differently, the Government of India has been borrowing during the last few years, covered by the first Plan and the second Plan, at practically the same rates even though, in the meantime, the business people have had to borrow lately at nearly twice the rate that they were paying before.

What is the reason for things happening this way in India? Has the Reserve Bank found some secret or hidden methods of monetary management unknown to other Central banking institutions? In my opinion, that is not so and the answer is simple. Everything about the Government finance appears to be outside the purview of the central banking institution in this country. Or, to put it in a phrase popularised by Prof. Galbraith, everything about the Government finance, in general, and other financial operations of the Reserve Bank, in particular, appear to be "contrived." The Government securities prices are kept up, although nobody appears to want them, because the banks, in general, and the L.I.C., the State Bank and the Provident Funds, in particular, are made to buy them. The rates at which the banks obtain their deposits, or lend to trade and industry are also, to a large extent, "contrived" rates. Hence, the three-tier Bank rate. The official Bank rate, generally speaking, is continued at the present level of 4 per cent in the interest of maintaining the Government securities at the present level; to some extent, the banks are able to borrow against the official Bank rate and also at 5 per cent., mostly against Government securities. The real Bank rate for the banks is 6 per cent; that is the rate at which the banks are able to borrow for their seasonal requirements. This, however, is an old story which every banker knows to his cost. What is generally not sufficiently appreciated, however, is that the Reserve Bank has never made use of the Bank rate for the purpose for which it was forged by central banking evolution during the last 100 years, that is, as the main regulator of the money market.

Let us see what the Reserve Bank of India has to say about it. The Bank does admit that the Bank rate is regarded as a warning signal to the banking system, in particular, and to other financial institutions, in general, regarding the state of the economy and the direction of official thinking, so that the financial institutions might suitably modify their lending policies. But it argues that things in this country are a little different from most of the free countries in the world, since the major part of capital investments under the Five-year Plans is undertaken in the public sector. While it is no doubt true that an upward adjustment in the Bank rate would, sooner or later, raise the cost of Government borrowing, it does not necessarily follow, says the Reserve Bank, that the increased cost of funds for the Government would tend to reduce public investments, for the simple reason that this is governed primarily by the larger planning strategy implicit in the acceptance of certain objectives relating to growth. The capital investments in the private sector, too, is not very much influenced directly by the change in the Bank rate, though probably the effect is more pronounced here than in the case of public sector investments. The usefulness of the Bank rate under Indian conditions, it is further argued, is, perhaps, of greater significance in its impact on inventory accumulation as a not inconsiderable amount of bank credit is utilised for that purpose.

From these premises, the Reserve Bank has, therefore, arrived at the following conclusions:

> "In these circumstances, our attitude has been neither to discard the Bank rate instrument nor to use it as frequently as some of the developed countries of the West have done in recent years. In the 26 years since the Bank was set up, there have been only two changes in the Bank rate, one in November 1951 from 3 to 3½ per cent and the other in May 1957 from 3½ to 4 per cent."

There are many fallacies in the aforesaid line of argument, but to mention only two of them. In the first place, let us take the last reason given by the Reserve Bank. It is amazing that, as its own statistics will show, that, while the prices of raw materials and intermediate products have been rising at the rate of about 13 per cent a year, the Bank rate is maintained at 4 per cent. Naturally, the businessmen's heavy demand for loans and advances can be easily understood, for, by borrowing at or around the Bank rate, they make a clear 8 to 9 per cent profit by keeping up the "inventory accumulation". In fact, under such conditions, the real rate of interest obviously becomes negative. Secondly, it is not only in India that large investments are made by the public sector; the same thing obtains all over the world, including Britain and yet the Bank of England has been embarking on a policy of frequent changes in the Bank rate as and when required.

I do not agree with the Reserve Bank's view that, in Indian conditions, the Bank rate can not perform the same functions as it does elsewhere. Let the Reserve Bank increase its present Bank rate to 5 per cent for all, and let it also not intervene in the demand for Government securities. It can then find out for itself whether its views are correct. The securities will go toppling down to a more realistic level and the Bank rate will have the same importance as in other countries as the main regulator of the money market.

Let us see what are the views of the Governor of the Bank of England on this subject. "If we are to keep the economy running with a high level of activity, employment and development and, at the same time, to keep the pound stable at home (and these are surely the things we all do want)," he said not long ago, "then credit policy or any other economic regulator must be used sometimes in one direction and sometimes in the other. If the alternative is either to go too slow all the time or to go hell for leather and not mind what is at the other end of the road, I prefer a bit of traffic regulation."

In India, if there is any traffic regulation at all, it is in one direction only and, that is, in the direction of keeping the Government securities stable. Everything else is forgotten. The value of the rupee, even according to the present Governor of the Reserve Bank, has been depreciating by about 6 per cent per annum, in the last five years. The banks are finding it difficult either to get enough deposits or to find sufficient money to lend. No one seems to know how the credit requirements of the third Plan are going to be met. Perhaps, a further increase in deficit financing will be necessary to make up for the poor growth of bank deposits, as was implied by the Governor of the Reserve Bank in his speech at Ahmedabad last week. The object of the monetary policy in India is thus nothing else but to take care of the hangovers of the fiscal policy of the Governments. The monetary policy in India does not have to bother itself with the traffic regulation at all, nor with what is at the other end of the road.

U.S. AND FOREIGN AID

President Kennedy's projected five-year $26,000 million foreign aid programme is designed to accomplish three major ends: to help build a "decent world order," to save freedom-loving nations from communism's "limitless imperialistic ambitions," and to protect the security of the free world. This is how the letter to each of the 100 members of the Senate and to the 437 members of

COTTON TEXTILE EXPORTS FROM INDIA

DATA FOR 1960 ANALYSED

AN analysis of India's export trade in cotton textiles, against the background of world trends in recent years, was made in these columns last week. The analysis clearly brought out the point that competition in world markets is tending to become so acute that, unless effective steps are taken to improve the competitive capacity of Indian textiles, it will be difficult for this country to maintain, let alone expand, its existing share in world trade in cotton manufactures. In view of the importance of this issue to our economy, it is proposed to study in detail the performance on the textile export front during the year 1960, in particular, for which full figures are now available.

Shipments of cotton piecegoods suffered a distinct setback during 1960, the actual extent of the fall as compared with the previous year being as much as 128 million yards or nearly 15 per cent, with total exports at no more than 722 million yards. The decline was accounted for chiefly by mill cloth the exports of which declined from 815 million yards in 1959 to 695 million yards in 1960. Handloom cloth exports receded from 35 million yards to 27 million yards. One of the principal reasons for this low offtake of Indian textiles, according to the Cotton Textile Export Promotion Council, "has been the low level of international prices as compared with prices of Indian textiles, this in turn being mainly due to the shortage of raw cotton and fuel experienced by the industry, as also the extremely high profit margins in the local market." In effect this means that, unless India produces enough cotton and cotton textiles to take care of the needs of domestic market, it will not be possible for it to maintain its exports of cotton textiles. This further implies that self-sufficiency in cloth at home should be sought more in terms of mill-made cloth than in those of handloom or powerloom cloth.

Competition from Japan

The performance of Indian textile exports fared in the most important markets in recent years, as compared with Japan and the U.K., is indicated in the statement at the bottom of the page. It will be seen from this table that Indian textiles are losing ground in quite a number of its traditional markets, especially Sudan, British East Africa, Ethiopia, Aden, Burma and Malaya (Singapore). Japan is steadily stealing a march over India in markets such as British West Africa, Australia, Malaya (Singapore), Sudan and Indonesia. The primary factor which has enabled Japan to expand its textile exports further in the face of severe international competition is said to be regional diversification and uniform distribution of markets for piecegoods. The position of Japan *vis-a-vis* India is explained in the Supplement to *Texprocil Bulletin*, published by the Cotton Textile Export Promotion Council, thus: "In the case of both India and Japan, the Asian markets constitute 40 per cent of the major consumers of their respective textiles. Of the remaining markets, Indian cotton piecegoods are routed in a large measure to the African markets, while Japanese cotton piecegoods are routed more or less uniformly to the African, European and American markets. Among the Oceanic markets, both Australia and New Zealand appear as major consumers of Indian as well as Japanese cotton piecegoods."

The decline in the offtake of Indian cotton piecegoods was the steepest in respect of the African markets, from 298.20 million yards in 1959 to 182.96 million yards in 1960. This was due to the severe competition from Japan which sold 214.33 million yards, as against 142.18 million yards. Besides Japanese competition, uncertain political situation, cut in imports of certain quantities manufactured locally and shift in consumer preference from traditional greys to processed goods were also responsible for the reduction in exports from India to the African zone. The Asian markets also took less of Indian cloth in 1960 than in 1959—171.11 million yards, as against 211.64 million yards. The conditions obtaining in these markets lately are described in the aforesaid publication as under:

"The requirements of Burma have been steadily shifting in the direction of processed fabrics, especially of the printed variety in 36" width, in which India still finds herself priced out. The general uncompetitiveness of Indian textiles, especially during the latter half of the year, and the entry of suppliers like China into the Burmese market were other factors which contributed towards the low offtake. Other markets which took significantly less of Indian cotton piecegoods during the year were Aden, Thailand and Malaya and Singapore. In both Aden and Malaya (and Singapore), India has been holding her own in the supply of grey cotton piecegoods in the face of severe competition from China, Hongkong and Japan; however, the shift in consumer preference in the direction of processed cotton fabrics and the tendency for rayons to replace cottons have both been instrumental in a poor showing by India in these markets. Japan has been the major supplier of cotton textiles to Thailand. The position was largely retrieved by substantially improved offtakes in respect of Ceylon and to a lesser extent by Afghanistan. Offtake of Indian cotton piecegoods by Iraq, Indonesia, Persian Gulf ports and Saudi Arabia declined slightly. The high level of prices of Indian textiles, especially in respect of the bleached varieties popular in Indonesia, acted as a damper. This situation was fully exploited by Japan. The general overstocking of the Iraq market and the uncertainty of the import policy of the Government created dull conditions in the market, especially during the latter part of the year. Earlier during the year, Chinese and Czechoslovakian textiles accounted for a fair share of the market."

Path of Least Resistance

An important point that emerges from the aforesaid quotation is that the time has come for Indian cotton mills to concentrate on exports of processed goods rather than on greys and simple bleached pieces. For obvious reason, the value of foreign exchange earned by exports of processed and neatly finished piecegoods will be greater than through exports of bleached and unbleached varieties. *Commerce* has stressed this point on many occasions in the past and it is a sad commentary on the managements of cotton textile mills in this country that they still follow the path of least resistance, allowing prospects of immediate gains to cloud their distant vision.

The decline in cotton piecegoods from India to the African and Asian zones was made up to some extent by improved exports to the European zone, from a total of 181.40 million yards in 1959 to 218.04 million yards in 1960. Exports to all the major markets in the zone registered an improvement, the most impressive rise being in respect of the U.K., to the extent of 32 million yards. Shipments to the American and Oceanic zones were maintained almost at the previous year's levels, namely, 58.17 million yards and 64.55 million yards, respectively. Cloth exports to the U.S., it is said, would have been better but for the fact that prices of textiles in that market were ruling "extremely low," especially in the last quarter of 1960. India has been able to maintain its share in the Australian market, notwithstanding the growing stiff competition from Japan since this country was accorded most-favoured-nation treatment. It is significant to note that, in spite of Britain being granted preferential treatment in Australia, its share has dwindled from 64 million square yards in 1958 to 44 million square yards in 1960. The credit for this performance goes mainly to the Bombay Dyeing and Manufacturing Company Ltd., under the enlightened leadership of Mr. Neville N. Wadia. If India could have a few more mills of this type, its share in world trade in cotton textiles would be significantly higher.

The overseas offtake of most varieties of Indian cloth suffered a decline during 1960, with the exception of yarn-dyed drill, dyed coating, bleached sheetings, printed longcloth, and bleached and printed *saris* and *dhotis*. Nearly 60 per cent of the total exports consisted of grey cloth routed to all the zones but principally the European and African markets. Bleached piecegoods accounted for 17 per cent of the total exports, the principal customers being Asian, African and Oceanic markets. The percentage share of other varieties is 4 for printed cloth (Asian and African markets), 11 for dyed cloth (Asian, African and Oceanic markets) and 5 for yarn-dyed piecegoods (all zones). The table below indicates the trend of exports of the varieties classified according to processing sorts during 1960 as compared with 1959 and 1958:

(In million yards)

	1960	1959	1958
Drill	50.94	57.38	43.68
Shirting	41.89	58.77	41.85
Longcloth	45.89	53.52	51.91
Chintz	4.28	4.96	3.32
Coating	9.91	12.43	10.98
Domestics	29.12	37.07	34.30
Voiles and muslins	47.80	69.80	88.28
Sheeting	358.28	307.51	210.21
Saris, dhotis, etc.	7.59	6.15	3.86
Others	195.90	202.68	134.20
Canvas	0.92	0.68	0.69
Mixed fabrics	2.36	3.85	5.09
Grand Total	694.83	814.60	587.22

The list of major consumers (arranged in order of offtake) of various varieties during 1960 is given below:

(In million yards)

Grey drill	U.K. (14.05); Br. E. Africa (6.87); Ethiopia (3.44).
Piece-dyed drill	Afghanistan (4.95).
Grey shirting	U.K. (10.14).
Bleached shirting	Burma (10.08); Malaya and Singapore (8.45).
Bleached longcloth	Malaya and Singapore (7.20); Indonesia (6.03); Aden (4.49); Br. W. Africa (3.87).
Grey domestics	Br. W. Africa (3.95).
Yarn-dyed domestics	Australia (3.48).
Bleached voiles and muls.	Afghanistan (5.52); Sudan (4.76).
Piece-dyed voiles and muls.	Arabia (4.86).
Printed voiles and muls	Arabia (5.49).
Grey sheeting	U.K. (116.06); Sudan (89.74); Br. E. Africa (19.77); U.S.A. (16.31); Aden (9.86); Australia (6.81); Canada (5.51); Br. W. Africa (5.41); Arabia (3.71); Ethiopia (3.52); Netherlands (3.44).
Bleached sheeting	Australia (3.96).

Despite the marked fall of 128 million yards in the quantity of cotton piecegoods exported during 1960, the foreign exchange earned from them was lower by only just Rs. 2 lakhs at Rs. 54.70 crores, that for 1959 being Rs. 54.72 crores. This phenomenon was due to the notable increase in the average value per yard of cloth exported, from 67 nP to 79 nP. The foreign exchange earned from exports of cotton manufactures other than cloth was, however, appreciably lower at Rs. 9.90 crores, as against Rs. 11.16 crores, so that the total earnings from "cotton textiles" as a whole during 1960 amounted to Rs. 64.61 crores, as against Rs. 65.83 crores.

The actual exports of "other" cotton manufactures in terms of value (Rs. lakhs) during 1960 are: *Yarn etc.*: yarn 370.4; hard waste 51.9; sewing thread 36.6; twine thread 36.0; rope and twine 2.8—total 497.7; *Apparel*: shirts 3.0; outer garments (women and girls) 0.8; uniforms and accoutrements 2.0—total 5.8; *Bed pillow, table covers, etc.*: handkerchiefs 3.5; laces and lace fabrics 1.8; bed covers 29.7; bedsheets 18.8; bedspreads 33.7; counterpanes 23.8; pillow cases 1.3; pillow slips 3.2; table cloth 2.2; table covers 1.2—total 113.9; *Floor coverings*: blankets 0.7; cotton waste blankets 62.7; carpets, carpeting and mats 76.0; linoleum 9.6—total 85.6; *hosiery*: knitted piecegoods 4.0; knitted outerwear 12.3; stocking and hose 2.1; knitted U and N wears 3.2—total 21.6; *Towels and napkins*: mosquito netting 15.5; towels in the piece 168.5; napkins 0.6—total 169.1; *Miscellaneous*: belting 1.1; braids and trimmings 1.1; duster cloth and glass cloth 0.3; imitation leather cloth 4.2; lamp wicks 0.6; cotton linters 0.7; cotton socks 4.5—total 12.5. Grand total: 990.4. India also exported by way of post parcel last year Rs. 18.94 lakhs worth of mixed hosiery goods (Rs. 31.29 lakhs in 1958); the bulk of which, to the extent of Rs. 12.34 lakhs, was accounted for by cardigans, jerseys and pullovers.

RE-EQUIPMENT GRANTS FOR TEXTILE FINISHERS

DETAILS OF SCHEME ANNOUNCED

From Our Special Correspondent

MANCHESTER, *18th July*

CONFLICTING views reported from Hong Kong may well confuse still further those members of the public who are following the course of the protracted and complicated negotiations over the import situation. Opposition, as was to be expected, has come from the trade associations representing spinners and weavers and the British plea for a continuation of the existing scheme, with modifications, for another eleven months to the end of 1962 was at first rejected.

MANCHESTER LETTER

Almost before the ink was dry on the letter notifying the Hong Kong Government of this decision, the Colony's Chamber of Commerce took issue with the textile industrialists, urging them to be realistic in their approach to the problem. "Any refusal to negotiate is likely to damage the textile industry and the Colony," the official statement declared. At the same time, the Hong Kong Chamber of Commerce is equally concerned about the British Government's attitude towards textile imports into the United Kingdom from countries outside the Commonwealth. This, indeed, is a crucial point in any future negotiations and one on which the Board of Trade has been singularly silent.

Control by Statute?

Whatever the rights or wrongs of Hong Kong's attitude, exporters there have an apparently legitimate excuse for feeling aggrieved at the continuation of ceilings on their shipments, while those from certain European countries continue to grow to massive proportions. That these Continental imports have to surmount duties which the Commonwealth arrivals avoid is only one factor in the complex pattern of international trade. It is now being openly suggested, however, that statutory import controls may be introduced on purchases from Hong Kong, if the millowners in the Colony persist in their rejection of the latest terms. Such a decision would violate some strongly held beliefs in British Government circles, but the threat of deadlock needs to be overcome as soon as possible, if the present stagnation in the market is to be relieved.

Whether representatives of Hong Kong would be directly involved in the Geneva talks now in progress was at one time in doubt, but the presence of the Financial Secretary means that the case of the Colony will be presented. As a result of discussions before the conference, however, the millowners were left in no doubt that the prospect of imposed quotas was looming large unless they were prepared to adopt a less belligerent attitude.

The position of Hong Kong as a world supplier of textile fabrics is, nevertheless, a key point in the international discussions. Lancashire's anxiety to keep some restraint on arrivals from Eastern Commonwealth countries is self-evident and, in addition, the United States is keen to ensure that the entry of goods into American ports from such sources is kept within reasonable bounds.

Almost inevitably, the disclosure that the British Government is willing to negotiate fresh terms on which the Hong Kong pact can be extended has brought a response from the other two countries concerned in these voluntary undertakings to limit cotton textile shipments to Britain. India and Pakistan have taken the opportunity to submit their case for supplementary quotas beyond the already established limits imposed on their export trade to this country.

Grants for Finishers

Firms in the cotton textile finishing industry have now received details of the procedure to be adopted in applying for re-equipment grants. These follow a similar pattern to those already laid down in the producing branches. The subsidy is on the same basis, offering firms which re-equip 25 per cent of the cost from their own funds. [illegible] can be secured involve considered schemes for re-equipping or modernising a production unit; to justify their claim applicants will be favourably situated if evidence can be given that a substantial increase in productive efficiency will result from the expenditure.

Applications must be submitted not later than 8th July next year, relating to expenditure incurred or to be incurred not earlier than 24th April 1959, and not later than 8th July 1963. This covers the purchase and installation of new machinery or equipment or the modernisation of machinery or equipment in use in the business before 24th April 1959, the day on which the overall reorganisation plan for the cotton industry was launched.

A Year to Reflect

The installation of the re-equipment or modernisation contemplated must be completed not later than 8th July 1964, giving the finishers twelve months longer than the producers in which to finalise their reorganisation projects. The extension is fair enough, in view of the delay in launching their scheme and will enable the processors to adapt their re-equipment in line with the measures taken by the spinning and weaving sections to modernise their plant. The minimum eligible expenditure to qualify for the subsidy is £2,500. Under the terms of the 1959 Cotton Industry Act, no machinery or equipment on which the grant has been paid may be sold within ten years without the consent of the Board of Trade.

In the case of the finishing sections, certain other items will be eligible for consideration under the grant over and above the normal equipment used in yarn processing and woven cloth finishing. These include testing equipment, electric motors and other power plant, steam-raising equipment, air conditioning plant, air-cleaning and ventilation plant, trade effluent plant, water treatment plant, electrical installations, lifts and mechanical conveyors and sprinkler and fire fighting equipment.

Traditional Barriers Being Broken

Sir Raymond Streat, former Chairman of the Cotton Board, has said in Manchester that traditional barriers in the U.K. textile industry are being broken down in the quest to achieve lower costs. Sir Raymond, speaking as Chairman of Shirley Developments—the Company set up to speed the introduction in the mills of new machines and ideas developed at the Lancashire textile industry's Shirley Institute research centre—said that he was most impressed by the tendency everywhere to break through the sectional barriers, traditionally erected between the various fibres.

Sir Raymond told the annual meeting: "This is very evident in Lancashire, but it is also true elsewhere as everyone realises more and more clearly that the low cost of production of a textile fabric for a particular use is more important than the location of machinery in a particular place, or the use of a particular fibre." The flexibility inherent in this new approach, he added, was a good sign for the future. It was clear that the only kind of industry able to meet the demands put upon it by ever-increasing competition was an industry which was continually on the move. Sir Raymond stated that, looking back through history, there were many examples of how lack of adaptability had been the death knell of companies and whole societies.

Labour Survey

Almost a decade has passed since the cotton and allied industries in Lancashire reached their peak post-war manpower figure of just over 320,000. In the ensuing ten years the number of those available for employment in the producing sections of the trade has shrunk to little more than half its former level. The fundamental reasons for this decline are sufficiently well-known to need no further exposition, but as has recently been pointed out by one of the trade union leaders, the facts should not be obscured by uninformed comment.

The build-up of recruitment in the immediate post-war period enabled considerable gains to be effected, so that the Working Party, which forecast a probable available labour force of 250,000, was at one time thought to have underestimated the capacity of the trade to provide jobs. That their assessment of the situation was, in fact, too optimistic has been confirmed by later developments. The sharp recession in 1952 was the start of the ebbing tide. The revival in the following year was not sustained and by the time the big reorganisation scheme was launched just over two years ago, the number of those available for employment had been reduced to barely 200,000.

During the process of weeding out the unwanted plant under the redundancy programme there was a further fall of nearly 10,000 in the labour force, but the threat of unemployment was in no way commensurate with the fears expressed in trade union circles when the scheme was first put forward. Recent history has borne out the contentions of those who believed that there would be jobs for all. During last year, in fact, there was a limited improvement in the total available figures, but since the end of November a uniform reduction in manpower has taken place from month to month.

In ratio, the drop in the labour force in the main departments of spinning and weaving has been roughly parallel. Although the manufacturing branch was responsible for the overall improvement in the labour force during 1960 it will be observed that the weaving figure is still some 1,600 higher than in March last year, whereas the manpower in spinning has shown a steady decline. The most severely hit section has been doubling, where the employment figure has been more than halved compared with the 1951 peak, but waste spinning operatives still number more than were available after the 1952 setback.—*All Rights Reserved.*

I.L.O. REVIEWS PROBLEMS OF LABOUR THE WORLD OVER

NORMS FOR WORKERS' HOUSING LAID DOWN

THE forty-fifth session of the International Labour Conference held at Geneva last month was attended, for the first time, by over 1,000 delegates from the member-countries of the I.L.O. The membership of the I.L.O. has been expanding steadily, especially since the last World War and its compass has now been extended to cover most of the peoples of Asia, the Near and Middle East and Africa. The inclusion of the new nations and the re-entry of the Soviet Union followed by the countries of Eastern Europe have also brought within the I.L.O. a variety of social, economic and political systems. But the fundamental problem facing it remains the same, namely, improvement of the conditions of life of two-thirds, or perhaps more, of mankind who are still sunk in poverty. In view of the magnitude of this problem, the I.L.O. should, as Mr. David A. Morse, Director-General, rightly suggested, stand apart from competing ideologies and concentrate on the practical aspects of its job.

The aforesaid session of the general Conference had a particularly heavy agenda which was more than usually directed against the foremost issues in the world of work. Employment, training and labour relations are a trilogy of related problems in the dynamics of economic growth and the Conference reviewed, among other things, the I.L.O.'s action to solve them.

The question of employment problems and policies was considered by the Conference in a tripartite committee. A resolution concerning employment policy drafted by the committee and unanimously adopted by the Conference called upon Governments of all countries to adopt, as a major goal of social and economic policy, the objective of full, productive and freely chosen employment. This goal has been defined in such a way as to include higher standards of living. The resolution also urged the Governments to recognise that, if the desired results were to be achieved, there must be a continuous process of adjustment in the employment market, a watchful adaptation of national and international employment policy measures guided by the assessment of the current situation and the forecasting of future developments. The resolution listed a series of general measures which governments were asked to take in promoting full, productive employment. The resolution asked the Director-General to prepare for consideration by the Governing Body a programme of I.L.O. action in the field of employment, including research and practical operations with social reference to the needs and problems of developing countries.

Education and Training

In the matter of training, the Conference adopted the report of the Committee on Vocational Training and thus opened the way for the final discussion and possible adoption next year of a specific Recommendation on the subject. It was recognised that, in both the newly developing and industrialised countries today, there was an urgent need to re-examine manpower development in its broader context. As a result, more stress was being laid on the planning of education and training and this was affecting the I.L.O. activities. For instance, a new Documentation and Research Centre on training was recently set up in Geneva by the I.L.O. in conjunction with the Council of Europe. A proposal for a similar regional centre for the Americas emerged from a conference at Buenos Aires.

Labour relations formed the main theme of this year's report by the Director-General which was discussed and debated by the Conference. Several points emerged from the discussion on which there was a broad measure of agreement in the Conference. One was the importance of workers' education. It was clear from the demands made by a number of delegates that the I.L.O. must step up its workers' education activities and push ahead vigorously with its management development programme recently started. In addition, it was considered necessary to help Governments strengthen their labour administration and the services for conciliation and arbitration and the promotion of better labour-management relations. The key role of supervisors and foremen was also pointed out and the need for taking full account of this in extending training facilities for these categories stressed.

Another point on which there was consensus of opinion was the desirability of associating trade unions and employers' organisations with the process of programming economic and social development. This was considered as particularly significant in the developing countries, where the participation of these organised social forces in decisions affecting economic development might be as important as their role in collective bargaining. Further, the sharing of responsibility by them in decisions of public policy might be a means of strengthening these organisations, particularly the trade unions, in their own functions.

Housing

Since better housing constitutes one of the principal means of improving the living conditions of workers, which is a major objective of the I.L.O., it is only natural that the Conference should have devoted considerable attention to I.L.O.'s work in this field. Particularly significant was the recommendation, unanimously adopted by the Conference, concerning the housing of manual and non-manual workers, including those who are self-employed and aged, retired or physically handicapped persons. The recommendation urges that national housing policy should promote the construction of housing and related community facilities, so as to make adequate and decent housing accommodation and a suitable living environment available to all workers and their families. Attention should also be given to the upkeep, improvement and modernisation of existing housing and related community facilities.

In the matter of financing housing, the recommendation lays down the principle that the rent or payment towards purchases by the worker for adequate and decent housing should not cost him more than a reasonable proportion of his income. It further says that workers' housing construction programmes should provide adequate scope for private, co-operative and public enterprise. Another point made by the resolution is that housing policy should be co-ordinated with general social and economic policy, so that workers housing may be given a degree of priority which takes into account both the need therefor and the requirements of balanced development.

While it is recognised that it is generally not desirable that employers should provide housing for their workers, the I.L.O. recommendation says that, where they do so, certain safeguards for the worker-tenants are necessary. It also urges the establishment of minimum housing standards and adoption of measures to promote efficiency in the building industry, and to speed up construction of workers housing in slack periods.

The Conference also adopted a resolution pertaining to international, as opposed to national, action in the field of workers' housing. This resolution appeals to Governments of economically developed countries and international organisations to include, as a part of their technical co-operation programme, assistance to developing countries for workers' housing in accordance with the provisions of the recommendation. It has suggested that the cost of providing adequate housing for workers be considered as an integral part of the cost of establishing large-scale industrial undertaking far away from normal centres of population. It has requested the Governing Body of the International Labour Conference to find ways and means for enabling the I.L.O. to increase practical assistance to developing countries in solving their housing problems with respect to those fields in which the I.L.O. has special competence.

Come to

The International Household Goods and Hardware Fair

COLOGNE

8th to 10th September 1961

OVER 1300 manufacturers from 15 countries are exhibiting their products in this year's Fair. You get first-hand knowledge of the world market, and can learn of the latest technical developments to improve your turnover...increase your sales!

From doorlocks to refrigerators, from stoves and ovens to washing machines, from simple tools to the most modern multipurpose electrical appliances, the Fair offers you everything.

COLOGNE IS WAITING TO WELCOME YOU!

ARTIST'S IMPRESSION of the industrial site of ACC-VICKERS-BABCOCK LTD. in Durgapur

AVB at Durgapur...

All construction in the final stages

Railway link with national network established

Construction of the vitally important AVB industrial plant at Durgapur is almost complete... a truly remarkable achievement, for only 18 months ago this 600-acre site was a mass of tangled jungle! Already, AVB has its own railway link with the national network. Now can be seen large workshops designed on modern lines for which over 3,500 tons of structural steel were required.

Already, the large electrical overhead cranes are in position. These cranes have a lifting capacity of 70 tons each. Up-to-date machine tools are being installed; they include a 3,000-ton hydraulic press capable of bending steel plates up to 5" thick. Boring and milling machines have been supplied from the United Kingdom, and a 22-foot vertical borer will be one of the largest of its kind in India.

This rapid construction progress at AVB is an outstanding example of industry and planning.

These tremendous efforts have been applied not merely to the erection of the industrial plant; equal importance has been attached to the building of the AVB housing colony which will be completely self-contained, with its own dispensary, shops, parks and playgrounds. The workers' houses have already been completed, and are ready for occupation. Even the lowest grade workers will live in two-room houses with all modern conveniences.

Here, in this garden city, will live the workers of the AVB group—from the man on the shop floor to the skilled engineers and technicians, a team that will keep a close watch on the vital AVB plant which will harness a powerful new force to Indian Industry.

NORTH INDIAN TEA OUTPUT AND EXPORTS RISE

POSITION IN SOUTH, HOWEVER, QUITE DIFFERENT

THE latest tea crop reports from the different regions suggest that the North Indian output may record an improvement in the current calendar year as compared with the previous year, while the South Indian production is expected to suffer a distinct setback. The total quantity of tea actually plucked from the gardens of North India from the beginning of the year up to the middle of June 1961 amounted to 82.8 million lbs. (37.6 million kg.), as against 72.4 million lbs. (32.8 million kg.) in the corresponding period of 1960. In South India, the production of tea during the first five months of 1961 was about 70.3 million lbs. (31.9 million kg.), that for the same period last year being 80.5 million lbs. (36.6 million kg.). The downward trend in output is believed to have gathered further momentum since the beginning of June, following the considerable damage caused to the crop by thunder-showers and floods.

The production performance of North East and South Indian teas in 1961, it may be noted here, is a reversal of the position witnessed last year. The North Indian tea output in 1960 was lower at 527.8 million lbs., as against 559.3 million lbs. in 1959, whereas the production in South India was higher at 167.3 million lbs., as against 154.6 million lbs. Including the 4.5 million lbs. produced in the Punjab, Uttar Pradesh and Himachal Pradesh, the aggregate tea output in India for the whole of 1960 was 699.6 million lbs., a fall of 19.0 million lbs. as compared with the 718.6 million lbs. plucked in 1959. This fall was wholly due to the drop in North Indian tea production.

Tea Output Elsewhere

Among the other major tea-producing countries, the trend of output in 1961 would appear to be upward in Pakistan, Ceylon and Mozambique, but downward in British East Africa and Indonesia, as will be seen from the following comparative table:

(In million lbs.)

	1961	1960	Whole of 1960	Whole of 1959
North-East India (up to June)	118.1	101.4	527.8	559.3
South India (up to May)	70.3	80.5	167.3	154.6
Pakistan (up to May)	9.3	9.4	41.9	57.2
Ceylon (up to April)	160.8	157.9	434.7	418.1
Br. E. Africa (up to April)	31.0	34.5	77.1	71.1
Mozambique (up to April)	13.1	12.8	19.9	18.0
Indonesia (up to February)	15.7	15.9	100.2	97.5

It is in consonance with the trend of production that the exports of North-East Indian tea during the current year have registered an increase. The quantity actually shipped during the first half of the year amounted to 103.6 million lbs., as compared with 92.2 million lbs. in the corresponding period of 1960. Of these, exports to the U.K. have risen from 45.1 million lbs. to 55.7 million lbs. The U.K., as readers are aware, is the biggest customer for Indian tea, accounting as it does for over 50 per cent of the total exports. Shipments of North-East Indian tea to countries other than the U.K., however, declined, from 47.1 million lbs. in January-June 1960 to 43.9 million lbs. in the same period this year. Outstanding among the importing countries the exports to which have receded are the U.S., Canada and the United Arab Republic. The actual exports—in million lbs.— to these countries, as well as to a few others during the first six months of 1961, with the figures in brackets relating to the corresponding period of 1960, are as follows:

U.S.—4.62 (5.28); Canada and rest of America 5.52 (3.96); United Arab Republic 12.32 (16.72); Irish Republic 4.62 (4.18); U.S.S.R. 3.96 (1.98); East of Europe 4.62 (5.28); Iran 3.30 (2.64); Sudan 2.06 (1.32); Rest of Middle East 4.84 (5.28); others 1.32 (0.44).

In contrast to the increase in North-East Indian tea exports, shipments of South Indian tea have tended to fall. The total shipments during the five months ended May 1961 were of the order of 30.80 million lbs., as against about 42.34 million lbs. in January-May 1960.

Prices

The prices currently being fetched by North Indian tea do not bear any definite relationship with those prevailing at this time last year, inasmuch as some varieties have recorded a rise, while others have staged a fall. In the case of South Indian tea, however, the trend has been distinctly upward. The following are the quotations from Calcutta and Cochin:

(Per lb.)

	Latest available	A year ago
	Rs.	Rs.
CALCUTTA*:		
For export—		
Best Assam C.T.C. Fannings	7.50—8.20	8.50—9.00
Plain B.P.	4.25—4.95	4.60—4.70
Clean Plain Pekoe	5.25—5.35	5.30—5.50
For internal consumption—		
Best Assam C.T.C. dust	6.60—7.10	6.10—6.50
Medium Assam	4.50—4.90	4.60—5.20
COCHIN†:		
Low mediums	4.45—4.60	3.40—3.65
Mediums	4.60—4.70	3.85—3.95
Good mediums	4.70—5.00	3.95—4.20

* Rates are inclusive of excise duty.
† Rates are exclusive of excise duty.

The high level of tea prices must be attributed to the rigid cost structure from which most of the plantations are suffering, thanks largely to the heavy incidence of taxation. This aspect has to be specially stressed in the context of the severe competition that is developing in world tea markets. Indian tea has already lost much ground it had gained a few years ago. Over the period 1956 to 1960, exports of tea from India have dropped quite perceptibly by as much as 100 million lbs., from 528 million lbs. to 426 million lbs., whereas the exports from other countries have gone up, as will be seen from the figures given below:

(In million lbs.)

	1960	1959	1958	1956
India	425.72	471.06	505.96	527.89
Ceylon	409.78	383.49	410.77	348.13
Pakistan	4.04	12.90	12.69	23.52
Indonesia	79.67	71.30	88.18	80.52
Kenya	26.58	23.37	20.19	16.66
Uganda	8.78	7.47	6.07	5.45
Tanganyika	7.36	6.81	5.53	4.75
Nyasaland—S. Rhodesia	24.58	22.45	20.85	19.66
Mozambique	17.98	17.61	15.23	13.83
China	105.00	102.00	99.00	88.00
Formosa	31.69*	26.29	26.44	23.51

* 1959.

The steadily declining trend of Indian tea exports must be arrested before it is too late. What is wanted is a reduction in prices. The competitive position of Indian tea can certainly be enhanced by a substantial cut in export duty on tea and more effective propaganda financed from the tea cess raised by the industry. Given these, there is no doubt that Indian tea will fare much better in overseas markets. Indian tea is well known for its quality and endurance and, it would, as has been rightly pointed out by some, "be rational to expect that demand for these teas in world markets would increase with the tea-habit itself growing on a global basis." It is to be hoped that the International Tea Convention, proposed to be held at Calcutta in November next under the auspices of the Indian Tea Board, will provide a clear short-term and long-term assessment of the world supply demand position, and that the authorities would take suitable measures to give a boost to export trade in tea.

TEA IN THE COMMONWEALTH

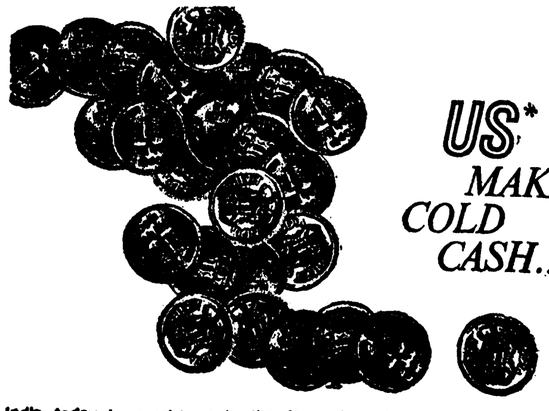
Both the tea exporters in India and other Commonwealth countries and the consumers of this beverage in Britain would be at a great disadvantage, if the U.K. were to join the European Common Market without securing adequate safeguards. For tea is one of the staple earners of foreign exchange for many Commonwealth nations, on the one side, and a principal item of consumption in Britain, on the other. Indeed, tea has, as Mr. David Stevens, a British writer pertinently remarks, helped to forge a link between Britain and other Commonwealth countries. Mr. Stevens has cited the following interesting statistics to highlight the important part played by tea in the economy of Commonwealth countries:

"About three-quarters of free world output is grown in the Commonwealth countries. Indian tea accounts for nearly half of this and gives employment to about 1,000,000 workers; it also provides a fifth of India's foreign exchange earnings. Ceylon produces about a quarter of the world's tea. Other Commonwealth producing-countries include Pakistan, the Federation of Malaya, Kenya and Nyasaland. The tea auctions at Mincing Lane, London, and at Calcutta and Colombo, handle about 80 per cent of world trade in tea.

"The people of Britain are the greatest tea-drinkers in the world; they get through about 10 lbs. of tea per head of population each year and this represents about five per cent of the total national expenditure on food."

Mr. Stevens points out that every tea drinker has his own ideas about how to make tea: some go in for the ritual of warming the pot, letting the tea brew before pouring, putting the milk in the cup first; others claim that tea tastes better from an earthenware pot than a metal one, even a silver one. Some like a strong, full-bodied drink, others a pale, delicately flavoured blend. China tea has its devotees, though they probably do not make up more than one per cent of the market. But tea is more than a pleasant thirst quencher. What other beverage, Mr. David Stevens asks, can so justly lay claim to have made political and commercial history? Elucidating this point, he observes:

"The 'Boston Tea Party' was one of a chain of events that culminated in the birth of the United States of America—and perhaps helped to make them into a nation of coffee drinkers. British shipbuilding in the first half of the nineteenth century owes some of its advance to tea. The American clippers that took tea to Britain from China were much faster than the British merchantmen on the same run and, to meet this competition, British shipbuilders put clippers of their own into service. American competition waned, but rivalry between the British owners increased; a premium offered on the London market for the first clipper to reach home spurred crews to tremendous efforts. The arrival in the Channel of such famous vessels as the *Taeping* and the *Cutty Sark* was one of the highlights of the year. Tea has helped to forge a link between Britain and other Commonwealth countries. Colonists introduced tea into Australia and New Zealand in the nineteenth century, and these countries are major tea importers today. Similarly, the Hudson Bay Company sent tea to its posts in Canada, where it rapidly became a favourite drink. Britain and Dutch settlers introduced a taste for tea into South Africa."



US* MAKE COLD CASH...

India today is caught up in the feverish activity of industrial advancement. Projects are planned...dams are being built...all through the night we hear the ceaseless hum of men and machines at work. In the world of today, the economic development of a nation is gauged by her machines...and the STEEL consumed by them. In dams and bridges, in the railway and automobile industry, in the manufacture of the thousands of consumer goods, STEEL is necessary—absolutely necessary! And so steel has come to be indicative of the economic development of a country... indicative of what a country is worth in cold hard cash.

UNITED STEEL COMPANIES (INDIA) PRIVATE LTD.

Now Ready—An indispensable book.

GUIDE TO
COMPANIES ACT
As Amended by Act LXV of 1960
SECOND EDITION
(Revised and Enlarged)
BY A. RAMAIYA (*Advocate*)

Though the book is called a Guide it is really a comprehensive book dealing fully with all the sections of the Companies Act giving the relevant case-law and useful and practical notes to the various sections. A detailed study of the changes introduced by the Companies Act I of 1956 and the Amendment Act LXV of 1960 is made in the Introduction. Useful Appendices and all prescribed Rules and Forms as amended up-to-date are included.

So many changes have been made affecting even the day-to-day administration that a thorough knowledge of the various provisions is necessary for every person connected with the administration of companies.

Order for a copy immediately.

Printed on foreign printing paper and attractively got up.

Price Rs. 20. Postage extra.

Pre-publication offer of Rs. 17.50.

Open till the end of August, 1961 only.

The Seal of Security

However much money you have to invest, you seek Security as well as a good return. Lombard Banking offers both. 6% interest per Annum is coupled with the finest Security as well as availability.
A Lombard Banking Deposit Account brings you Interest payable twice yearly.

6%

ASSETS EXCEED £100,000,000
Interest paid without deduction of United Kingdom income tax
Write today to the General Manager for your copy of "Bank Deposit Account" Booklet No. A.O. 91.

INSTALMENT PURCHASE OF CONSUMER DURABLES

A NEW APPROACH SUGGESTED

By Charles F. Alvares

IT is well known that, in the U.S., the system of instalment purchase of consumer durables, like radios, television sets, refrigerators and so on, is more widely prevalent than in any other country. This system, while enabling working class and middle class families to purchase such goods on easy credit terms, has also helped expand greatly the market for such goods. In our country, too, instalment purchase has been slowly—but much too slowly—coming into vogue. In Bombay, for instance, some dealers in radios and fans are operating instalment purchase schemes, under which the rate of interest varies, according to the terms of payment, an initial payment has to be made and the balance is to be amortised in monthly instalments. The simple interest rates, therefore, vary, depending on the outlay of the principal and the duration of the loan after the initial payment is made, and the actual rate depends on declining balances outstanding after each instalment is paid. The following tables indicate some of the terms of payment:

Terms set by a dealer in Philips Radios

Total price	*1st payment*	*10 monthly instalments*
Rs.	Rs.	Rs.
214–50	80	16
337–50	133	26
484–00	182	35
654–50	240	48
874.50	322	64

Terms set by a dealer in Usha Fans

Price for full cash payment	*Price for instalment purchase*	*Initial payment*	*Monthly payment*	*Number of months to pay*
Rs.	Rs.	Rs.	Rs.	
185 ..	225	75	15	10
175 ..	213	63	15	10
165 ..	202	62	14	10
117 ..	160	56	13	8
105 ..	145	49	12	8
345 ..	404	104	30	10
65 ..	88	24	8	8

It is evident from the above figures that the rates vary according to the amount and the number of instalments to be paid.

Misleading Average

The dealer in radios explains it to the customer that it works out to 1 per cent per month. Here he calculates as follows:

	Rs.
Ten instalments at Rs. 35 each ..	350
Initial payment	182
Total ..	532
Actual cost ..	484
Excess paid ..	48

He, therefore, argues that the payment of Rs. 48 is done over a spread of 10 months on Rs. 484, that is, the 10 per cent excess is spread over 10 months and hence the rate is 1 per cent per month.

In the case of fans, the dealer calculates as follows:

	Rs.
Payable	225
Initial payment	75
Balance ..	150

The balance is payable at Rs. 15 per month, that is 10 per cent over a spread of 10 months and hence, it is argued, the rate is 1 per cent per month.

The Myth Exploded

The fallacy in the above calculations and arguments should be evident. Percentages are erroneously called interest rates and an average instalment payment is unnecessarily divided twice to make the rate appear lower. Interest rates which are computed on the amount of outlay of funds (principal) and the time factor (period) offer totally different results.

Where a buyer purchases a radio of Rs. 214.50 by paying Rs. 80 as initial payment, the outstanding balance is Rs. 134.50 (Rs. 214.50 *less* Rs. 80). There are 10 instalments of Rs. 16 each, aggregating Rs. 160. Therefore, the excess paid is Rs. 160 *less* Rs. 134.50=Rs. 25.50. Percentagewise, it represents a premium of 18.96 per cent which is like a commission earned on the outstanding amount of Rs. 134.50. Interest rate is higher, as the 18.96 per cent has been earned in 10 months, as against the usual 12 months, which is the basis for calculating interest rates. Interest rate computed proportionately on 12 months' basis works out to 22.75 per cent per annum which is the simple rate of interest.

As the instalments are paid, the outstanding balance goes on declining and, as the instalments are of equal amounts, the rate will have to be computed on the average balance invested at any one time in the course of the loan. It is the percentage rate of return (yield or carrying charge) on this average balance that is the real factor for consideration. The average invested balance is Rs. 88 (see footnote) and the rate of earning on this balance is 29 per cent. The results when tabulated for the radio group, then, appear as follows:

Premium earned	*Simple rate of interest*	*Rate of earning or average balance invested*
(Per cent.)	(Per cent.)	(Per cent.)
18.96	22.75	29.00
15.81	18.97	24.80
15.90	19.10	24.90
15.80	18.96	24.80
15.84	19.01	24.90

In the case of fans, different rates have been quoted for full cash payment and instalment payments. The instalments are even and no excess is collected on these, but the premium is obtained on the excess price quoted, which is collected on the initial down payment itself.

Two of the leading banks in Bombay—Indian Overseas Bank and Dena Bank—have started a consumer loan scheme. They offer loans for about 75 per cent of the value of the article and ask for repayment in monthly instalments. The Dena Bank quotes the following illustration:

Suppose a loan is sanctioned for one year at 5½ per cent discount, which works out to Rs. 26.40. The Bank gives out Rs. 453.60 and asks to repay the original amount of Rs. 480 in twelve equal instalments of Rs. 40 each.

In reality, the rate of 5½ per cent is deceptive, as the average balance invested is Rs. 260 and the amount received for this is Rs. 26.40. The yield, therefore, really works out to 10.1 per cent.

A New Scheme Outlined

The above analysis shows that the factor of declining balances sets the yield rate in motion. Other banks have, of course, the choice of setting their rates and number of instalments and falling in line with the practices of Dena Bank and Indian Overseas Bank. But, perhaps, their fund position may not permit or their conservative outlook may forbid.

Another course open to banks is to try a novel scheme which is self-generating. It is self-explanatory that any money put forth, either from their own resources or borrowed from the market, would boost the sales of that particular product towards which those funds are directed. With the wide machinery of the various departments at their disposal, they may take the position of guarantors in the transaction. They would only have to ask the leading manufacturers, say Philips, to defer their receipts to, say, four instalments in the year and they in turn could give the buyer *Free Credit*.

Take, for example, a radio costing Rs. 500. The Bank accepts a recurring guarantee from the employer of the purchaser for a period of three months, for Rs. 125 or one month recurring guarantee for 12 months for Rs. 125 ÷ 3, that is, about Rs. 41.66. The Bank then issues its own guarantee to Philips for Rs. 500 repayable in four equal instalments of Rs. 125 each. On the strength of the Bank guarantee (which is surely a safe thing to accept), Philips delivers the radio to the purchaser and the buyer repays the bank at Rs. 41.66 per month. The position then appears as follows:

Radio worth	Rs. 500
Bank's contingent liability due to guarantee given to Philips.	Rs. 500 payable in 4 equal instalments of Rs. 125 each.
Bank's security ..	Recurring guarantee of the employer of the purchaser for Rs. 125 per quarter or Rs. 41.66 per month and personal signature of the purchaser.
Interest rate	Nil (only the cost of preparing the guarantee and some nominal service charge—say Rs. 20 in all).
Benefit to Philips ..	Boost of sales.
Benefit to purchaser ..	Able to get the radio in advance and through his own cumulative savings, without paying any premiums or interest rates.
Benefit to bank ..	(a) Utilisation of the cumulative savings. (b) If possible, a small margin (1 per cent. or 3 per cent.) offered by Philips. (c) Small service charge.

The fund position of the Bank works out as follows:

Bank receives	Rs.	Rs.	*Bank pays* Rs.	
1st January ..	41.66 (41.67)			
1st February ..	41.66 (41.67)	}	125	125 (on 31st March or 1st April)
1st March ..	41.66			
1st April ..	41.66 (41.67)			
1st May ..	41.66 (41.67)	}	125	125 (on 30th June or 1st July)
1st June ..	41.66			
1st July ..	41.66 (41.67)			
1st August ..	41.66 (41.67)	}	125	125 (on 30th September or 1st October)
1st September ..	41.66			
1st October ..	41.66 (41.67)			
1st November ..	41.66 (41.67)	}	125	125 (on 31st December)
1st December ..	41.66			
		Rs.	500	500

In lieu of a guarantee, a bank may also substitute it by a banker's acceptance. Philips would draw a bill on the Bank for 90 days and the Bank would accept it. Should Philips need money before maturity, it could always discount it, or the bank could advance money to Philips on assignment of the book debts in relation to the transactions done through it.

Whatever arrangements are to be done between the Bank and Philips, it is obvious that the Bank gets primarily the cumulative deposits for three months. In addition, it may be noted that the Bank receives the first payment at the time it gives out its guarantee but the money is not due to Philips until the end of the month and thus the bank can utilise the funds for a month without any immediate obligation.

Merits Claimed

Under this type of arrangement, we have a procedure which is self-generating in funds and which will encourage savings, and this will be anti-inflationary. It is progressive, inasmuch as it sets production in motion on a graduated tempo. It is remunerative to the Bank for having the deposits at no price (no brokerage or interest to be paid); to the purchaser for having the purchasing potential on 1/12th of his cumulative savings; to the manufacturer and the dealer for boosting up their sales. The probability of default in payment is too remote, as it would involve the buyer to abandon his job and residence with the loss of his bonus and other dues—too high a price to be paid for defaulting the maximum of 11/12th value of single purchase, say, a radio or a fan or a frigidaire.

The plan is simple and maintains the principle of equity. It offers every possibility for raising the living standards of middle class, destroys the Shylock and imparts in the peopl the so-much desired confidence in their banks

A scheme of the kind suggested in thi article could be enlarged to cover refrigerator sewing machines and furniture, avoiding thos items that are in short supply. The city office of the Banks which adopt the scheme coul soon share their experience with their branc offices in smaller places. The only effort th banks would have to put forth is to negotiat with the manufacturer and the dealer to thei mutual advantage without causing [illegible] the purchaser in the process.

Note:

		Rs.
During	1st month	160
,,	2nd month	144
,,	3rd month	128
,,	4th month	112
,,	5th month	96
,,	6th month	80
,,	7th month	64
,,	8th month	48
,,	9th month	32

COPPER, LEAD AND ZINC IN E.C.A.F.E. REGION

DEFICIENCY IN ORE RESOURCES ATTRIBUTED TO INADEQUATE PROSPECTING

THE Economic Commission for Asia and the Far East, recently released a report (priced at $2) on copper, lead and zinc ore resources of the region. This report is of some topical interest to India because of the greater accent that is proposed to be placed on the development of non-ferrous metals in the third Plan period. Although Asia is about the least important continent of the world in so far as the production of copper, lead and zinc ores is concerned, at least three countries—Japan and the Philippines currently and India potentially—are substantial producers of copper; Japan, Iran and Burma are the main lead ore producers; and Japan and Burma are the leading zinc ore producers.

Japan is the main copper ore producer in Asia at the present time with a normal annual output of 75,000 tons (metal content). Production of copper ore in the Philippines has shown a steady increase since the end of the Second World War, and reached over 46,000 tons (metal content) in 1958. India ranks third in the production of this ore, accounting for about 8,000 tons a year in terms of metal content. Iran and South Korea come next with annual outputs of 5,000 tons and 1,000 tons in terms of metal content, respectively. Copper smelting facilities, however, exist in only four countries, namely, Japan, India, Formosa and South Korea. Japan's smelter production has been ranging round 125,000 tons a year—that is, much more than its ore production (metal content); it has, therefore, to import a substantial amount of copper ore, mostly from the Philippines, to meet its smelting requirements. India is second in the matter of smelter production, though much behind with an annual production of copper metal of less than 8,000 tons. Formosa produces about 1,500 tons of metallic copper annually and South Korea less than 1,000 tons.

As for lead ore production, the figures for 1957 show that Japan accounted for about 36,000 tons, Iran for 30,000 tons and Burma for 27,000 tons. Japan, again, is the leading producer of lead metal, its smelter production being round 50,000 tons annually. India produces some lead metal (about 3,400 tons a year).

Zinc ore is produced on a comparatively large scale in Japan, its annual output ranging round 135,000 tons. Burma's production is only about 17,000 tons a year now, as compared with 60,000 tons in 1937. India's zinc ore production is small, being just 4,000 tons a year. As for zinc smelter production, the only producer is Japan; its output of zinc metal is about 145,000 tons a year.

As world production of copper metal now is a little more than 3 million tons, that of lead metal about 2 million tons and that of zinc metal round 2.5 million tons, the E.C.A.F.E. region as a whole will have to go a long way before it can become self-sufficient in its non-ferrous metal resources. The very low level of smelter production in the region is due to the deficiency in its ore reserves of the three metals. However, according to the E.C.A.F.E. report, the present apparent lack of large reserves of copper, lead and zinc in most countries of the region must, in part, be attributed to the inadequate geological survey and mineral prospecting undertaken so far. For example, the Bawdwin mine in Burma is one of the largest deposits of its kind in the world, yet the lead and zinc ore reserves in that deposit have not been evaluated since 1941. The increasing efforts now being made in many countries of the region for systematic geological mapping and prospecting by modern methods and techniques will undoubtedly throw light on the copper, lead and zinc ore situation of the region. In this regard, the introduction of geochemical prospecting for copper deposits in British Borneo, for instance, is worthy of note. As deposits of copper, lead and zinc ore are seldom visible at the surface under tropical conditions, any techniques, which permit rapid testing for concealed deposits, would be of importance to the countries of south-east Asia.

The country studies included in the E.C.A.F.E. report indicate possibilities of discovery of new deposits as well as for improvement of the copper, lead and zinc industries in at least some countries of the region. In Burma, the urgent task seems to be the development of low-grade reserves in the Bawdwin area. The Lough Keng deposit is reported to contain nearly one million tons of ore with a high zinc content. Zinc in the form of ore and concentrates has been exported from Burma; by so doing, the country loses such valuable minerals as cadmium, galena, sulphur and rare metals which are contained in these ores and concentrates. The Government of Burma has, therefore, under consideration the possible establishment of an electrolytic zinc plant.

The most active work, both in prospecting for new reserves and in improving the copper, lead and zinc industries, has been carried out in Japan, the leading copper, lead and zinc producer. As domestic copper ore production in Japan is not sufficient to satisfy demand, the Japanese copper industry has made long-term contracts with overseas ore producers, formed joint ventures with them and assisted them in locating new ore deposits.

In South Korea, there are a large number of copper, lead and zinc deposits, some of which have been investigated with encouraging results.

In the Philippines, the reserves of the operating copper mines are now estimated to be larger than the quantity (22 million tons of 1.4 per cent Cu) estimated in 1954. Prospecting work has since prepared the way for further development of the copper industry. At present, copper ores and concentrates are exported to Japan and the United States. According to the E.C.A.F.E. report, the possibility of establishing a copper smelting and refining plant in the country merits consideration.

In India, present production of copper and lead meets only 20 per cent and 10 per cent respectively, of its requirements. No zinc metal is produced and the concentrates produced amount to about 7,400 tons which, in terms of metal content, represents about 5 per cent of the present consumption of this metal. The Singhbhum copper belt of Bihar, which is 128 Km. in length and which has been partly worked by the Indian Copper Corporation Ltd., has been studied as a whole by the Geological Survey of India. This belt is generally believed to hold the greatest promise. An electrolytic copper refining plant, with an installed capacity of 8,500 tons, is to be set up at Chatshila Bihar by the Indian Copper Corporation. The Government of India has a proposal for the establishment, before 1963, of an electrolytic copper refinery near Khetri in Rajasthan, where it is expected that 10,000 tons of electrolytic copper and copper scrap will be produced annually. The Khetri ore reserves have been provisionally estimated at 28 million tons, with 0.8 per cent Cu, as compared with 2.15 per cent Cu in the four million tons of established reserves in the mines operated by the Indian Copper Corporation Ltd. in Bihar.

Relevant figures regarding India's production of lead and zinc concentrates, lead metal, copper ore, copper metal and imports of lead, zinc and copper given in the publication under reference are extracted in the following table:

	1954		1958	
	Quantity in tons	Value in 1,000 rupees	Quantity in tons	Value in 1,000 rupees
Production of lead concentrates	2,894	..	5,341	1,937
Production of zinc concentrates	4,038	1,081	7,391	2,049
Production of lead metal	1,791	..	3,387	..
Production of copper ore	348,000	18,723	411,000	22,668
Production of copper metal	7,275	22,947	7,966	22,948
Imports of lead metal	16,313*	27,887*	21,844	22,872
Imports of zinc metal	37,797*	56,673*	60,655	61,304
Imports of copper metal	..	..	49,581	126,347

* Figures are as of 1956.

India's only important lead and zinc ore deposits known at present are located at Zawar, Rajasthan. This mine is owned by the Metal Corporation of India Ltd. The lead concentrates recovered from it are smelted in the Company's smelter at Tundu, Bihar, and the zinc concentrates are sent to Japan for recovery of metal. In order to meet the increasing demand for these metals, production of the Zawar mine is being expanded. The establishment of a zinc smelter plant at Udaipur by the Metal Corporation of India at a cost of Rs. 7 crores and with an annual capacity of 10,000 tons has been under consideration. This plant is to be established with the financial and technical assistance of a French firm. It will be the only zinc smelting plant in the country and will save about Rs. 2.1 crores in foreign exchange by obviating the need for further imports of zinc metal. The Zawar mines are rich and there is ample scope for further development.

The E.C.A.F.E. report is also interesting for its treatment of the current copper, lead and zinc situation in the world as a whole. It is estimated therein that the present rate of consumption of copper in the world would result in complete exhaustion of known reserves in about 45 years. Current opinion seems to be that the great copper deposits in most parts of the world have already been found; whether Asia will prove to be an exception to this general assumption will depend on the results of geological, geophysical and geochemical investigation and mineral exploration which have not been adequately undertaken in most countries of the region. As for lead, the long-term outlook for its consumption appears to be somewhat uncertain. While new uses for lead have been found in ceramics, atomics, electronics and thermo-electrics, its consumption has been adversely affected by substitution and by economies in existing uses. In particular, lead has lost ground in the production of batteries (to cadmium and nickel) and of cables (to aluminium and plastics). The outlook for zinc consumption, however, seems to be more favourable than for lead. There are also possibilities of new applications, as in the case of lead. In addition, the long-term trend in the demand for die-castings is likely to be upward, and a significant part of the demand for zinc is for this purpose.

LOCKHEED TO BUILD MONORAIL IN JAPAN

Mr. M. J. Kenneth Hull, President of the Lockheed Aircraft International, has just announced that a newly-incorporated Japanese firm called "The Nihon-Lockheed Monorail Co. Ltd." will be soon be building a Lockheed-designed two-car train which will be electrically powered. Lockheed will be making a substantial investment in the new company which has been organised to design, develop and construct, on a world-wide basis, the supported-type monorail system developed by Lockheed's California Division. Lockheed engineers will assist in the development of the specific monorail systems to be built in Japan and to be offered to the world. The present plans of the company call for construction, within one year, of a two-unit monorail train, a one-mile test track and a simulated station platform.

The Lockheed supported-type monorail, unlike the more expensive suspended system, rides atop a single rail. Combined with lightweight cars, utilising aircraft-type construction, this approach permits use of smaller and shorter single-column supports which will mean lower construction costs, maximum utilisation of existing rights-of-way and minimum requirements for additional rights-of-way. It can be installed on highway centre lines, over river beds and along existing railways without disrupting normal surface traffic.

THE TAYLOR INSTRUMENTATION COURSE

The three-week Taylor course on Industrial Instrumentation, organised at Calcutta by Messrs. Air Conditioning Corporation Limited, was completed early this month. It was intended to train engineers and scientists on the various aspects concerning engineering, application, installation, maintenance and service of industrial instruments, the the demand for which would amount to Rs. 15 to Rs. 20 crores every year on the completion of the third Plan. Over 50 engineers and scientists representing some of the major industrial organisations in the public and private sectors attended the course which covered theoretical and practical instructions on engineering, application, installation and service of industrial instruments in the broad range, including temperature, humidity and flow, indicators and recorders. The latter part of the instructions covered advanced instrument applications including electronic equipment and Analog system. The course was inaugurated by Mr. J. C. Kapur, General Manager of the Corporation, and was conducted by Mr. J. S. Detwiler, one of the senior executives of the Taylor Instrument Companies, U.S.A.

ECONOMICAL METHOD OF OPERATING RAIL LOCOMOTIVES

According to the Globe Press, Mr. John C. Aydelott, an engineer of the General Electric (U.S.) Locomotive and Car Equipment Department has been awarded $1,000 for suggesting a more economical method of operating railway locomotives. His paper, the result of ten years of research, has suggested that locomotive wheel-slip on rails need be controlled by correction only when the wheels actually pass over a slippery section of rail. The older theory was that the weight of the train be limited to the amount that could be handled on the worst sections of trackage; in practice, this meant that total train weight was being needlessly restricted and less goods and passengers were being moved. Mr. Aydelott's theory is that train weight could be limited by average conditions, thus increasing the amount of tonnage a locomotive can haul and reduce cost of operation.

NEW PRODUCTS AND PROCESSES

Versatile Woollen Textiles

A NEW finish to improve the versatility of wool textiles has been developed in U.K. The new finish, Perrottell, is a completely new method of sensitising wool or worsted fabrics so that it is possible to put in creases, where desired, of exceptional durability. It gives wool much the same properties as synthetic fibres from a crease retention point of view. Once the durable crease is introduced in the recommended way it will become the natural position for the wool fabric. Wear will naturally tend to reduce the sharpness of the crease but when the garment is hung up in the normal way the sharpness of the crease is regained as the live wool fabric reasserts itself. Normal dry cleaning will not remove this durable crease and therefore it is necessary to re-press along the same fold. The danger of forming durable creases where they are not required is negligible because normal methods used during tailoring will not fix the wool fibre in the permanent position. The method of forming the durable crease is simple, requiring no special plant or apparatus at all and only taking a few seconds.

Fire-proofing Wood

Various products are available for giving fire-retarding properties to wood and among the latest is a Norwegian chemical which includes ammonium phosphates and certain organic compounds. It is said to be particularly suitable for protecting wood and fibre board. The material is sprayed on to the wood at 400 grammes to the square metre and is then rapidly dried by heating. When the treated wood is subjected to excessive heat, the layer of fire-retarding material foams up and provides a thick non-combustible covering that protects the board from damage.

Better Insulation Material

An electrical insulation material, developed by a French organisation, is said to have remarkably constant properties even when used at high temperatures. A resin, in the form of a paste, is put in position around the electrical apparatus and then hardened by high-temperature treatment. When used at high temperatures the material loses a small amount of weight and there is a corresponding reduction in volume but, says the Company, mechanical and electrical properties remain unaltered.

Tougher Bearings

Bearings which are claimed to be resistant to corrosion and wear and to operate satisfactorily without lubrication even though water or steam may be present have recently manufactured in Canada. They are made from zirconium metal which is oxidised to produce an ultra-thin layer of blue-black zirconium dioxide on the surface. According to the maker, the secret of success lies in ensuring that the oxidisation process is not carried too far and that zirconium dioxide with the correct crystal structure is obtained.

Plastic Cable-connecting Compound

For some time past a wire and cable factory at Amsterdam, Holland, has been manufacturing plastic cable-connecting sleeves and terminals for through connections and branches of electric cables with plastic, natural or synthetic rubber (e.g. neoprene) or lead sheatings. The sleeve consists of a hard p.v.c. tube one side of which is straight-cut over its whole length and provided with a pouring groove in the direction of the saw-cut. The two ends of the tube are sealed by glued-in foam plastic (polyurethane) plugs with a hole in the centre for passing the cable. When the cable sheathing has been roughened on either side of the connection or branch the sleeve is bent open and positioned round the connection, whereupon the whole space between connection and sleeve is filled with a twin-component resin. The components are marketed in two tins, namely, a large tin containing the resin and a small one containing the curing agent. The two tins are supplied in a single packet. The quantities of resin and curing agent are inter-related, so that no weighing is necessary. The components are applied in the following manner: The curing agent is poured from the small tin into the large tin which is tilted for about five minutes to ensure thorough mixing. This causes a chemical reaction as a result of which the mixture becomes hot and highly fluid so that it can penetrate into the smallest corners. At an ambient temperature of 20°C the compound cures in about an hour. The resulting covering of the wire connections in the cable is hard, compact and of high quality both electrically and mechanically.

Converting Marshes into Pastures

Useless marshes have been successfully reclaimed to form rich pasture land in the United Kingdom by means of fuel ash from a power-station. The cementing properties of pulverized fuel ash from power-stations have already been established. The ash is used in a number of ways, including construction material for dams, highway embankments, power-station foundations, and as a "filler" for roads. One of the latest examples of its versatility is in Flintshire, Wales, where a fertile field has been created from the marshes by means of ash from the nearby Connah Quay power-station, which produces some 70,000 tons of fine ash each year. A mixture of water and ash was directed into a lagoon. The water was drained away through filters into the river, and the ash, when it reached the rim of the lagoon, was ready for levelling, sowing, and cultivation. The first experimental 40 acres have been used for arable and grazing purposes with conspicuous success. Grass and clover have grown richly, and sheep and lambs have thrived on the pasturage. Now cattle are to be introduced. The ground has also yielded good root crops, though so far cereals have not come up to standard.

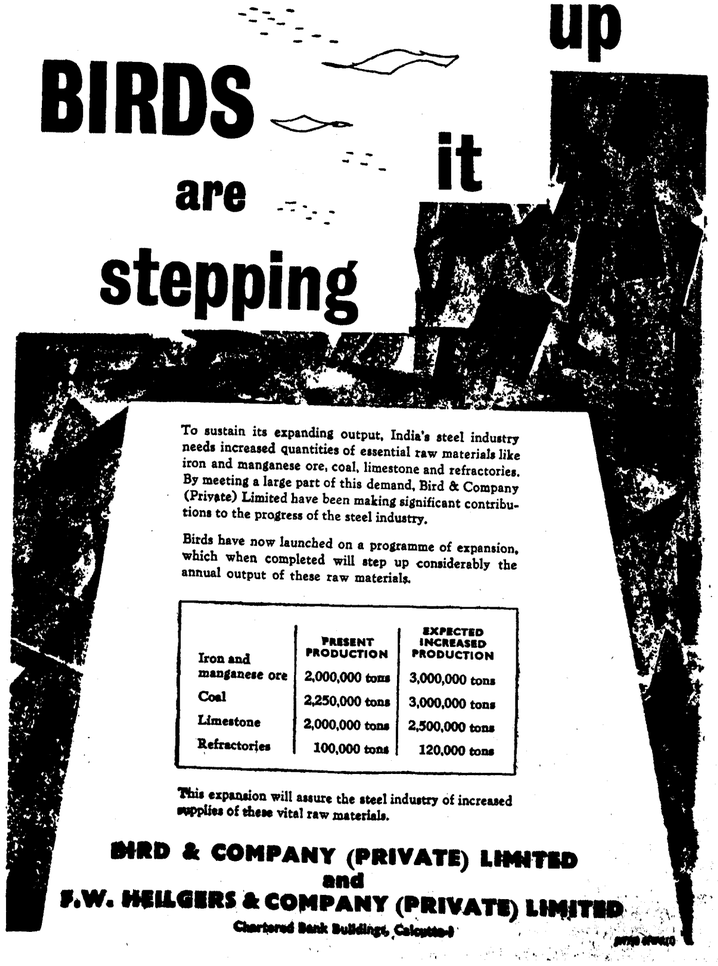
BIRDS are stepping it up



To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

ECONOMIC DEVELOPMENT IN PERSPECTIVE

TEXT OF MR. JOHN KENNETH GALBRAITH'S ADDRESSES AT MADRAS AND CALCUTTA

CAUTION AGAINST INDISCRIMINATE BORROWING—INDIA AS A TEACHER

[The U.S. Ambassador to India, Mr. John Kenneth Galbraith, a former Harvard Professor and a well-known economist, delivered two thought-provoking addresses in the past week, one at Madras and another at Calcutta on planning for development in underdeveloped countries, with particular reference to India. He did so more as an economist than as an ambassador. The texts of his addresses are published on these pages, as they deserve a wider audience in view of their topical importance to this country. Part I was delivered at the Madras University Senate Hall and Part II at the Calcutta University—ED.]

PART I

FOR almost three years, India has been represented in the United States by one of its most distinguished jurists, Mr. M. C. Chagla. Not long before leaving for India, I met him at the Harvard Law School where he was delivering the last of a series of lectures on comparative constitutional law which he has given during his term as ambassador. I told him that I hoped that I might follow his example while in India and speak occasionally on economics. He urged that I do so and we agreed that diplomacy between civilised states should now become a form of educational exchange. In my remarks today I thought I might revert to a subject which has long interested me as a social scientist, that of the process of economic development. And, in particular, I would like to reflect on our current ideas on this subject as compared with those of the great period of English, Western European and American advance which we now think of as having begun two centuries ago and which we call the Industrial Revolution. On later occasions I hope to pursue the discussion.

In the years since World War II, in all parts of the literate world, we have had an exceedingly active discussion of economic development. Although one should always be wary of comparisons, this discussion can be compared in vigour with that which got under way after the publication of Smith's inquiry into *The Nature and Causes of the Wealth of Nations* in 1776 and to which in the following 60 or 70 years Bentham, Malthus and Mill, among others, made their notable contribution. The occasion is the same. Of late, as then, nations are in the beginning stages of national development. The new countries of Asia and Africa are now concerned, as were those of Western Europe in the latter eighteenth and early nineteenth centuries, to understand the processes on which progress depends. In these last years, scholars in the economically more advanced countries have joined, and on occasion have led, the discussion. I am both impressed and made proud by the intensity of the interest in the economics of development in the United States.

Economic Development Imperative

Both in the new states and the old states it has been recognised that economic development is an imperative. Indeed, this has been a distinguishing feature of the recent as compared with the earlier discussion. At least, until the time of Marx, the problem of economic progress was explored with a measure of philosophical detachment. In the years since World War II, it has been characterised by a note of high urgency. The nineteenth century discussion was in a world that, on the whole, was rather proud of what was happening. The 20th century discussion is in a world where there is a strong feeling that a great deal more must happen and very soon.

The recent discussion of development has also differed from the earlier in being remarkably more sophisticated. We now have growth models—hypotheses as to the nature of the process of economic growth—some of considerable mathematical refinement and a few that are wholly incomprehensible. Capital-output ratios and marginal capital-output ratios are now calculated more or less on a mass production basis for the various components of five, seven and 10-year plans and for perspective plans beyond. Missions pass through the underdeveloped countries, avoiding each other only by adhering to closely planned schedules and accumulating new information or joyously rediscovering the already known. There is now a considerable sociology and a sizable anthropology of backwardness. We are told that Mill by the age of seven was the master of the Greek and Latin classics. Were he now to reappear some 90 years after his death he might well decide, after seeing how intricate are the matters on which he once wrote, to stay with Ovid and Cicero.

Yet it would be a mistake to identify complexity with completeness and sophistication with wisdom. There are some serious shortcomings in the modern discussion. And these become evident as we compare it with the earlier debate.

Recent Discussion of Development Factors

It is our pride that the recent discussion of development has been scientific—that terms and concepts have been rigorously defined and so employed that scholars working on different aspects of the problem can communicate with each other with some certainty, can correct each other as necessary and each by adding his piece of knowledge to the common stock can thus add to the total wisdom. The earlier discussion was less precise but more grand. Smith, Malthus, Bentham and Marx were builders of systems; they concerned themselves with the aggregate requirement of progress. The principles of good Government, the inducements to individual performance, the role of popular enlightenment, the foundations of thrift, the effect of competition and of monopoly, the relation between social classes, the reasons why some people, notably the English, worked hard and others, notably the Irish, worked not so hard were among the many questions which were grist for their mill. Indeed, anything that was deemed to have a bearing on economic advance was considered. The only test was broad relevance to the questions: What made for economic progress? Or, on the other hand, what led to stagnation—to the much-discussed stationary state?

The 19th century debate was conducted by a rather small number of men. By its nature, it was confined to those who could grasp and articulate the great issues. Only great men could thus participate—we have often heard it said that each generation produces but one philosopher. Fortunately, for those of us who essay to speak on the subject, the modern discussion has been much more democratic. That is because it has been concerned with the parts of the problem rather than the whole. Men with a usefully cosmic view of society may be scarce. Many can contribute to knowledge of bits and pieces. It may not be easy to elucidate the relation of a philosophical or religious idea to economic change. But almost anyone can come up with some useful ideas on the priority to be attributed to machine tools in the next Five-year Plan.

Here it seems to me lie the weakness and even the dangers of the current discussion of economic development. We have been enthusiastically and quite capably discussing the parts of the problem; we have paused all too infrequently to inquire whether they fit into a viable whole. We have looked at the things which contribute to economic development; we have given too little attention to inquiring whether they are being employed in a context that is favourable to development. As a result, we have probably wasted a good deal of time and effort doing things that were right in themselves but which made little or no contribution to progress, for they were done in an environment which was inconsistent with advance.

Diagnosis of Causes of Underdevelopment

Let me be more specific. In the years since World War II, in the absence of any overall consideration of the conditions of economic advance of the kind that was offered a century earlier, we have made a series of assumptions. These are:

1. That the world is divided between developed and underdeveloped countries. In the developed countries economic progress is more or less automatic—or in any case it is easily within the powers of the country itself if it follows an intelligent economic policy. Development is possible in any underdeveloped country. But it will occur only when certain barriers to development are overcome.

2. These barriers, on which there is a good deal of agreement, are a shortage of modern technical knowledge or know-how, a shortage of capital, a shortage of specially trained manpower and an absence of a sound plan for using capital, manpower and technical knowledge. If these are provided, there will be progress.

The standard prescription for economic development proceeds directly from this diagnosis. Technical assistance is obtained from abroad. Steps are taken to increase the supply of domestic savings and of capital from both domestic and foreign sources. Men are sent abroad for training. A five-year or seven-year or 10-year plan is devised. These steps will, indeed, be sound, if the diagnosis of the development problem is sound. If that diagnosis is unsound, we will be having a good deal of waste motion in the world. It is my unhappy feeling that the diagnosis leaves a great deal to be desired. That it is more nearly valid for India than for most other countries can be of only limited comfort. Even here, in India for the task of overcoming poverty and privation is one that lies on the conscience of all mankind. Let us look more at the present diagnosis in the context of some practical situations.

Need for Efficient Public Administration

We have said that capital and technical knowledge are the missing elements. But, in many of the newer African states, national Government is still in its beginning stages and in parts of Latin America it has never been brought to a minimal level of efficiency. In these circumstances, investment, whether public or private, is subject to the risks, uncertainties and accentricities of poor public administration. It is idle to imagine that good development plans can be created or carried out without a good government to do so. And neither technical assistance nor trained technicians do well, or are even much needed, where administration is indifferent or bad. The best agricultural scientist cannot make much headway as adviser to a non-existent ministry. The finest tax authority goes to waste if the Minister doesn't believe in collecting taxes. The first task is not to get capital or technicians, but, where these are lacking, to build competent organs of public administration.

In the last century nothing occupied a more prominent place among the requirements for economic and social advance than public education and popular enlightenment. In the new states today, or the older ones without developed systems of popular education, one wonders if school books should not come before machine tools. Popular education releases the energies not of the few but of the many. And it opens the way to technical knowledge. Literate people will see the need for getting machines. It is not so clear that machines will see the need for getting literate people to manage them. So under some circumstances at least popular education will have a priority over the dams, factories and other furniture of capital development.

Finally, in many countries, any serious look at the larger system must soon come to focus on the shortcomings of the social order—on arrangements under which wealth and political power are a monopoly of a small minority of the population and the masses, accordingly, are excluded from all incentives to improvement. Even the most eloquent agricultural extension expert cannot explain the advantage of growing two grains of wheat where but one flourished before if the peasant knows full well that both grains will go to his landlord. The best-considered forms of agricultural investment or the most sophisticated techniques of agricultural extension are worthless if the cultivator knows that none of the gains will accrue to him.

In short, on even the most preliminary view of the problem effective Government, education, and social justice emerge as critically important. In many countries, in diagnosing the barriers to advance, it is lack of these that is of critical importance. And it follows that, until these barriers are removed, little will come from capital investment and technical assistance. And, while there may be plans, they will be big on paper and small in practical result.

India's Assets

I have said that the present diagnosis of the causes of underdevelopment with its stress on capital, technical assistance and planning does not fit India too badly. India has an effective Government; there is a substantial measure of literacy; she has a backlog of administrative and entrepreneurial talent; there is a solid commitment to the goals of social justice and social progress. At the same time, the propensity to consume is high and the rate of saving is low and the problem of capital supply is especially serious for that part which must be obtained from abroad. Under these circumstances, attention has naturally been focussed above all on the question of financial support to investment.

We have here an important reason for our misapprehension of the problem of development. India is by far the largest and most populous of the underdeveloped countries, China apart. Her development has attracted more attention than that of any other country, partly because it has the most competent planners, and the most articulate journalists. Despite their shortcomings, India also has the best statistics and, as we economists know, it is difficult to mount much of a discussion of development of a country where even imaginary gross national product data are unavailable. As a result, the world has come, in far greater degree than has been realised, to identify development as a whole with the experience of India. Since capital and technically trained manpower are the limiting factors in India, they are assumed to be the limiting factor everywhere. Since competent planning is possible in India, it is assumed to be possible everywhere.

I think, however, that we in the United States have been responsible for some of the over-emphasis on capital and technical know-how and talent. As a nation, we have a healthy respect for money and its uses. And, in the United States, economic accomplishment depends not on the changing will of the Government, not on finding literate workers, for these are taken for granted. Accomplishment depends on finding the capital and recruiting the engineers, scientists and technicians. The world in short has generalised from the Indian experience and we have generalised from our own. Those who praise the co-operation between our two countries should observe that it extends even to misleading students of economic development.

Different Stages of Development

What is the lesson? It is not that capital or technical assistance or technical training are unimportant or that planning is a waste of time. India, where these are vitally important, is competent proof to the contrary. The lesson is that we can no longer have one diagnosis of the causes of underdevelopment. Rather we must have the particular diagnosis which fits the particular country. And in few cases will the causes of backwardness or the requirements of progress be quite the same.

More specifically, we must recognise that economic development is a process—one that extends in range from new nations of Africa but slightly removed from their tribal structure to the elaborate economic and social apparatus of Western nations. (Although the stages inevitably invite debate, Professor Rostow's signal contribution has been in putting the problem of development in such form.) At each stage along this continuum there is an appropriate policy for further advance. What is appropriate at one stage is wrong at another.

In the early stages, it undoubtedly involves the building of organs of public administration and the provision of an educated minority. Then comes the task of popular enlightenment. As one proceeds along the line, other requirements enter and, depending on population and resource endowment, these will be different in different countries. Capital becomes the touchstone of development only in countries that are well along the line. At all stages, the social structure must be favourable for development. Development is a democratic task. It will proceed only if the masses are enlisted and they can be enlisted only if they are rewarded. The world offers a number of striking examples of nations rich in minerals or oil and where as a result capital is in adequate supply but where the social structure remains a barrier to advance.

Because the requirements for development will be radically different, depending on the stage, any effort to offer a common prescription for development will be productive only of waste, frustration and disappointment. And so, likewise, will be generalisation from the experience of a country in one stage of development to the needs of a country in another stage. To generalise from the experience of the United States to the needs of India will be productive of error but so, equally, will generalisation from the case of India to that of Dahomey or Chad.

I venture also to suggest that, as a country such as India moves along the line of development, its diagnosis of its development problem will change. It would be a misfortune were habit and doctrine, those ever present enemies of thought, to keep the diagnosis from accommodating itself to advance. Thus, in the years ahead, technical assistance from abroad will be far less important than in the recent past. Increasingly, India will be able to import the technology without the technicians.

While capital will continue to be central to India's requirements, I venture to think that you are reaching the stage where the problem of increasing the size of the capital plant will be no more important than to increase the efficiency of its use. In building a steel industry, the first stage is to get the blast furnaces, open hearths and converters, and rolling mills. Nothing else is so important. But, at the next stage, it becomes important that these provide steel at low cost to consumers at home and to nurture exports abroad. And it is even more important that, by their efficiency and earnings, the plants provide the wherewithal to reproduce themselves. To look at development as a movement along a line is to protect one's self from a stereotyped diagnosis even within the country.

It would be much easier were there a common formula for economic development and were it to remain constant for the country. But it were better that we face our difficulties including the shortage of handbooks on the ways to create good organs of public administration in nations which are unlearned in the arts of self-government or blueprints on how to have the right kind of social revolution without the wrong kind of voilence. This may be a more difficult and pessimistic view of the problem than is commonly offered in our day. But we can remind ourselves of Voltaire's observation that "Optimism is the madness of maintaining that everything is right when it is wrong."

* * * *

PART II

The Developing and the Developed

In the last 15 years, in nearly all of the major university centres of the world, we have had an exceedingly active discussion of economic development. I have thought that I might use a few of the public occasions which are part of the inevitable and by no means unpleasant ritual of my present position to reflect on this discussion.

As I do so, however, I find myself in certain difficulties. What one says on this subject on one occasion proceeds in certain measure from what one has said before. By an amiable, if highly dubious, convention, a university teacher is allowed to place upon his audience the responsibility for knowing what he has said before. "As you will recall from my last lecture..." is the most commonplace of academic salutations and one that goes unremarked even by those who recall absolutely nothing. But I would be straining matters a bit were I to ask you to recall what I said day before yesterday at the University of Madras. Although the only scholar more to be deplored than the man who repeats others is the man who repeats himself, I think I must be allowed to summarise in a word or two the general thrust of the argument on which my comments this afternoon depend.

Greatest Disservice

The greatest disservice that has been done to the discussion of economic development in recent times has been the introduction of the distinction, now such a commonplace that we use it indispensably and without thought, between developed and underdeveloped countries.* This has caused us to conclude that all underdeveloped countries are more or less alike. And it has enabled us to imagine that their development in all countries would respond to much the same prescription and, in particular, to a planned development of resources aided by an infusion of capital and technical knowledge from the developed countries.

In fact, development is a process and countries which we call underdeveloped are in radically different stages of advance. At different stages, different things are important for further advance. In the very early stages, the creation of a minimally effective system of public administration is most important. After a tour of duty in Africa, Professor Arthur Lewis appropriately made the development of an effective civil service the first requirement of development. At this stage, it is equally urgent that a country obtain an educated nucleus of people who can build the system of public administration and, for that matter, everything else.

In the next stage, popular education becomes important. This enables the masses of the people to participate in economic activity. And it opens men's minds, as they can be opened in no other way, to new methods and new techniques. Apart from its cultural role, popular literacy is a highly efficient thing. Needless to say it is also the mainspring of popular aspiration. As such it adds strongly to the desire for development.

If development is to depend on popular participation, then there must be a system of popular rewards. There can be no effective advance if the masses of the people do not participate; man is not so constituted that he will bend his best energies for the enrichment of someone else. As literacy is economically efficient, so is social justice.

Only as these earlier stages of development are traversed does capital become the limiting factor. Indeed, there is a distinct possibility that capital provided to countries in the earliest stages of development will be wasted. Only in a relatively sophisticated stage of development can it be well and wisely used in any considerable quantity.

At the last stop along this line are the so-called developed countries. In these—the United States, the United Kingdom, the U.S.S.R., Germany, France—capital ceases to be the limiting factor. Development becomes dependent on a complex of forces—scientific and technical skills and imagination, quality of working force, ability to make full use of available resources, clarity of national goals—which need not concern us here.

Various Stages of Development

To see the process of development as a line along which the nations of the world are spaced, in their various stages of development, is to see both the process of, and the policy for, development with considerably enhanced clarity.

Thus, it goes without saying that we can no longer speak of a common prescription for development. Instead, there will be a plan appropriate to the particular stage. In the early stages, the development plans will not be very elaborate or complex; they will be concerned with the first essentials of administrative structure and with education and social reconstruction. In these early stages, also, development encounters the appalling problems of the closed circle. How does a country without effective organs of public administration develop them, for bad government is not self-correcting but self-perpetuating? How does a country without and educated elite create one since to extend education takes educated people? How bring about social reform when the class structure places political power in the hands of those who are likely to resist it? These are intensely difficult questions although perhaps not quite as difficult as they sound. Other countries have broken out of the circle. And the drive for development, in our day, is a force of great independent power and it is not kind to those who, in defence of vested interest, stand in its way. In any case, those who are concerned with development will not remove these obstacles by pretending they do not exist.

---

*As a number of students have observed, there are serious technical difficulties with the distinction. The term underdeveloped is evidently taken to mean a low level of exploitation of land and other natural resources and this is taken to be a cause of a low level of *per capita* income. For this reason, underdeveloped countries are poor countries. Yet, by ordinary economic tests, the resources of India or Pakistan are not less fully exploited than those of the United States, the United Kingdom or the Soviet Union. A dollar additionally invested in the development of the natural resources of the United States almost certainly returns a bigger real revenue than a dollar invested in the Asian sub-continent. This suggests a greater unexploited opportunity in the United States or a greater opportunity for further development. The United States turns out, by this test, to be the underdeveloped country. In fact, we all use the word underdeveloped more or less synonymously with low *per capita* income. A country, in this sense, is more or less underdeveloped in accordance with its greater or less task in achieving an adequate living standard.

As I have said, in countries that have conquered these first problems, capital and technical knowledge become the limiting factors. India's present need for capital is based not on a low level of development. It is the result, as compared with the other new nations, of a relatively high level of development that enables her to use capital effectively. It is only at this stage, where consideration must be given to how scarce investment funds can be most effectively used and when different uses of capital must be horizontally integrated and phased over time that planning becomes very complex. We could make no more serious mistake than to imagine that the kind of planning that is done by India or Pakistan is essential for nations in all stages of development. In earlier stages it is neither necessary nor possible. I hope, at some later date, to return to the theory of development planning. It is sufficient for the moment to say that its character is closely related to the position of the country along the development line.

Advantage of Being First in the Line

There was considerable advantage in being one of the countries that was first along the development line. The nations that led the way—Britain, France, the United States—could take their achievements at their face value. Whatever they accomplished could be regarded with satisfaction. None did better. It has often been observed that an exuberant pride in accomplishment was the mood of Nineteenth Century Britain. It is still in considerable measure the mood of Twentieth Century America. The countries that came late, by contrast, have high and difficult standards not of their own making. They are faced always with comparisons—comparisons with the American or Soviet productive plant, comparisons with American or British living standards.

There is another troublesome matter. In a very poor arrangement of human affairs, development becomes easier the farther it proceeds. That is because each step in this process invariably makes the next one easier. Given no competent organs of public administration, it is hard to develop any. But given a few, they can be extended. Given no teachers, it is hard to launch an educational system. Given a few, they can train others. Given many, the training process becomes easy and almost automatic. Saving and capital accumulation are exceedingly painful in a poor country where the pressure of current need is very great. In a more affluent community, saving is much easier. In a rich country, savings may, on occasion, be excessive.

The consequence of this arrangement of matters is that the more developed countries are constantly widening their advantage over those that follow behind. On occasion, they blame those that follow for their poor performance. And to those that follow progress must often seem disappointing. It would be well were we all to realise that if the pace of less favourably situated countries is slow it is not necessarily because their efforts are less. It may be because their task is so much greater.

Each Country Has Something to Offer

To see the countries of the world, not as divided between the developed and the underdeveloped, but as spaced along a line representing various stages of development is important for obtaining an accurate view of the problem of assistance. For, when development is so regarded, we see that no group of countries is uniquely qualified to extend assistance with another group condemned by position to the role of recipient. Rather each country has something to gain from those that, economically speaking, are ahead. And it has something to offer those that follow. The provision of economic aid is seen, as it should be, as a co-operative endeavour in which all countries can have a share.

And, while there will be differences in what is given and what is received as we pass along the line, I am not sure that the contribution of the less developed countries is necessarily less. For the more developed countries the provision of capital is an obvious form of assistance. But, as countries such as India work out their problems of popular education, village development, family planning and land consolidation, their experience will be exceedingly valuable to those that follow along the line. I venture to think that India will be a better teacher here than the United States. You have been much closer to the practical problem.

But let me stress the principle. To divide the world as between the aiding and the aided is both wrong and psychologically damaging. Development is a task in which many need help and as many have something to offer. This, henceforth, is how we must regard the task.

Now let me say a more specific word about borrowing and lending of resources and experience as between countries differently positioned along the development line. Given the different stages of development, nothing is more natural than that countries should look for guidance to the experience of those that have gone before. And nothing is more desirable than that those who have gone first should make both experience and tangible assistance available to those who come later. In the years since World War II, such borrowing and lending of experience and resources has become a commonplace. It is a matter on which the United States has taken a strong lead. It will, I have always thought, be our best remembered contribution to the comity of nations.

Need for Judgment, Discrimination

Borrowing and lending as between countries differently positioned along the development line are, however, a matter which calls for great judgment and great discrimination. The wrong things as well as the right things can be given or received. The experience of others can be wisely adapted and great good can come from it. And it can be unwisely adapted so as to do positive harm. Despite these difficulties and dangers, much of the borrowing and lending, especially of experience, that has gone on between developing countries since World War II has been exceedingly casual, as though no problem were involved. Again, let me specify.

There are three things which are possessed by the more advanced country which can be borrowed by those following it along the line. There are both rewards and dangers associated with each. They are:

(1) Capital
(2) Technology
(3) Organisation

The transmission of each of these between countries in different stages of development involves certain dangers.

It is hard to imagine any of the less developed lands being damaged by an excess of capital. And, as I have noted, countries in the higher stages of development accumulate capital far more easily than those in the less-advanced stages. This is one reason why lending between advanced and less-advanced countries on concessional terms—at low or zero rates of interest and for long terms of repayment—should be considered normal and natural. No one should be excessively impressed by economic aid which is in the form of ten-year loans at six and a half per cent. Few countries in any stage of development can safely pay the price of purely commercial credits.

Dangers in Borrowing

But even loans at low or zero rates or forthright grants of capital have their dangers. As I have sufficiently emphasised, the ability to use capital in any considerable volume is itself the result of development. If it is available before the conditions for its use are available, it will be ineffectively employed or possibly wasted. The provision of power and transportation to trained, literate and socially emanciated people is bound to be productive. The productivity is far less certain if these things are provided to people who are still enslaved by ignorance or a backward social system.

But even in a country such as India, which has reached the stage where it can use capital in quantity, there are dangers. Borrowing from abroad can be a substitute for earning from abroad. Earnings depend on efficient and low-cost production that takes advantage of the tendency for nations in the more advanced stages to become what Keynes once called "high-cost, high-living" countries. I venture to think that any friend of India will view with some concern, the rather uninspiring behaviour of Indian exports in the last five years. At a roughly similar stage in her industrialisation, Japan had no alternative but to force her products on to the markets of the world. This was not a formula which made for universal popularity. But it did provide the earnings for investment which insured her further growth. It is doubtful if aid, however generous, can ever be a substitute for such earnings and for the independence and self-confidence that they accord.

Borrowing Technology Also a Subtle Issue

The borrowing of technology is also a subtle matter. In principle, it is highly desirable. One advantage of being second in line is that the country so placed can take advantage of what has been worked out, often with great labour and cost, by those who have gone before. It is important, however, to know why the thing has been worked out. Is it a step forward in process or product of universal application? Or is it an adaptation to the requirements of economic development itself? High-yielding maize hybrids, improved technique of rice cultivation, improved fertiliser use, the L-D process of steel production are of the first sort. They economise all resources. Hence, they are as appropriate and important for the less as for the more developed country. But much of the technology of the more advanced countries represents an accommodation to labour shortages or reflects the other special requirements of the more advanced economy. The cotton picker or the modern heavy farm tractor are innovations of this sort. On the farms in the United States they reflect the fact that hired labour is exceedingly scarce. This is the technology which should not be taken over by countries in the earlier stages of development. To do so is to waste scarce resources and handicap development and, more than incidentally, add to unemployment.

Thus, it is a mark of wise development planning to copy from the countries in the more advanced stages. And it is also a mark of wise planning not to do so. The distinction which I have just made between innovations of universal application and those which are merely adaptations to higher stages of development is not an easy one. But it is more likely to be made if it is clearly seen. Not long ago, in a neighbouring Asian country, where there is much unemployment and where wages are low, I saw expensive automatic gates imported from abroad being installed at the railroad crossing. These are necessary in countries where no one is any longer available for the reflective life of the railway gateman. I could not help thinking that, if the distinction I am making were in mind, considerable money would have been saved and the gatemen would have remained gratefully at their posts.

But, where imitation is called for, it should be unabashed and unashamed. This will not be applauded by the more advanced countries; they have always felt that imitation by the newcomer is not quite sporting. The British in the last century spoke most disrespectfully of the imitative tendencies of the Germans; no sooner did Sheffield have something that was good than Solingen had the same thing in a cheaper model. More recently, the Japanese and the Soviets have been criticised. It is sound strategy, nonetheless, for those who come later to take advantage of the paths that were broken by those who went first. The advantages of late arrival are all too few. Those that exist should be exploited.

Organisation Should Fit State of Development

The greatest danger in borrowing as between the stages concerns organisation, a term I use broadly to include Government and its services, and educational, welfare and economic organisation. In the past, it has too often been assumed that, because a particular organisation or service—a government department, educational institution or agricultural or industrial service—exists in a more advanced country, it makes an important contribution to development. Therefore, it should be recreated in the countries that are in the less-advanced stages. It will aid their development too.

This line of reasoning, if such it may be called, is false and damaging. Often, and I think usually, the organisation and services of the more advanced country are not the cause of its development but the result. They reflect an accommodation to the needs of more advanced development or are made possible by that level of development. Injudicious and ill-considered borrowing and lending of such organisation will thus not help development but will hinder it. The Government of India is a complex and multifarious thing which reflects the great variety of tasks undertaken by India in her stage of development. An equally complex organisation would be a misfortune for one of the newer African states, with, for the foreseeable future, a far simpler range of tasks. A great many features of the governmental, educational, agricultural and industrial organisation of the United States are not important for American development. They exist because a relatively advanced stage of development makes them necessary or, on occasion, because we can afford the unimportant. If luxuries of the educational curriculum, esoteric educational institutions, refined agricultural services and a wide range of public services are transferred before their time

RESULTS OF INDIAN TRADE AND GENERAL INSURANCE

FIRE DEPARTMENT PROVIDES THE CREAM

THE same set of factors which adversely affected the working results of the Indian Trade and General Insurance Co., Ltd., (General Manager: Mr. T. M. Telang, Calcutta) in 1959 continued to plague the business of the Company during the year 1960 also. Thus, on the one hand, there was the voluntary surrender of several unprofitable incoming marine treaties and, on the other there were the larger claims arising out of the more numerous "general average" and "total losses" and unsatisfactory claims experience both in India and abroad. In addition to this, during 1960, the Company had, along with other general insurers, to cope with the prospect of a decline in fire insurance premium consequent on the reduction in the fire premium rate with effect from 1st January 1960. In spite of all these, the Company was able to show the same net profit in 1960 as in 1959 and to maintain the dividend without having to draw upon the reserves. This was due largely to the good results in the fire department, which, in spite of a reduction in premium rate, yielded a profit of over Rs. 8.5 lakhs, thanks to the better claims experience and lower expense ratio. However, the unsatisfactory experience in other departments, especially in the miscellaneous department, has resulted in the net profit being reduced to the previous year's figure of Rs. 1.25 lakhs. The dividend has been maintained at Rs. 2 per share of Rs. 40 paid-up, subject to deduction of tax.

The following table summarises the working results of the Company during the year ended 31st December 1960 as compared with those for 1959 and 1958:

(In lakhs of rupees)

	Year ended 31st December		
	1960	1959	1958
Fire:			
Net premium	38.07	37.44	31.53
Claims	15.17	15.67	14.59
Commission, expenses, etc.	14.69	14.73	12.76
Fire fund	19.08	18.72	15.77
Marine:			
Net premium	20.67	24.32	28.26
Claims	17.11	18.98	17.45
Commission, expenses, etc.	5.96	5.20	8.80
Marine fund	20.67	23.66	22.34
Miscellaneous:			
Net premium	35.04	29.93	28.86
Claims	29.06	21.88	16.38
Commission, expenses, etc.	13.66	10.79	10.66
Miscellaneous fund	17.52	14.96	14.18
Net profit	1.25	1.25	1.18
Provision for taxation	..	..	0.35
Dividend	1.20	1.20	0.80
	5%*	5%*	2.5%
Carry forward	0.34	0.28	0.23

* Subject to deduction of tax.

Contrary to the fear that the reduction in fire premium rate last year would result in a drop of about 10 per cent in the premium income, the premium income in the fire department rose from Rs. 37.44 lakhs in 1959 to Rs. 38.07 lakhs in 1960. This increase was apparently due to the acquisition of enough new business. The claims ratio registered a welcome decline from 41.8 per cent in 1959 to 39.9 per cent in 1960. Expenses (including commission) also showed a downward trend, being 38.6 per cent of premium, as against 39.3 per cent in 1959.

In the marine department, though there was a further increase in the direct business, the premium income declined from Rs. 24.32 lakhs in 1959 to Rs. 20.67 lakhs in 1960, thanks to the impact of the various unprofitable incoming treaties which had been cancelled. The drop in premium income resulted in the overall expense ratio in this department rising by 7 per cent. The claims ratio, too, was higher at 82.8 per cent, as against 78.1 per cent in 1959. Nevertheless, there was an underwriting profit, in this department, of Rs. 1.60 lakh after maintaining the reserves for unexpired risks at 100 per cent of the premium income.

Bad Overseas Experience

The accident department continued to reflect the unsettled political and economic conditions prevailing in Africa where the Company has substantial business interests and the adverse claims experience in India. The results in respect of motor and burglary insurance was particularly bad. Although the premium income in the miscellaneous department rose from Rs. 29.93 lakhs in 1959 to Rs. 35.04 lakhs in 1960, it was more than offset by the rise in claims ratio from 73.1 per cent to 82.9 per cent. This deterioration in claims is solely accounted for by the Company's African business. Corrective measures are being taken and it is hoped that, before long, this portfolio would begin to yield good results.

After crediting the various receipts and debiting expenses and closing the departmental accounts, a sum of Rs. 1.25 lakh has been transferred to the profit and loss account which, along with Rs. 28,760 brought in, makes available for distribution Rs. 1.54 lakhs. The dividend will absorb Rs. 1.20 lakh, leaving a balance of Rs. 33,746 to be carried forward.

The essential features of the Company's financial position as at 31st December 1960 are given below:

(Rs. in lakhs)

Capital paid-up	24.00
Underwriting reserves	57.22
Other reserves	5.12

The total assets of the Company amounted to Rs. 143.70 lakhs as against Rs. 132.75 lakhs a year before.

Problems of Insurers

In his statement to the shareholders, circulated along with the Directors' report and accounts, Mr. Karam Chand Thapar, Chairman of the Company, reviewed some of the major developments that took place in the insurance trade during 1960. Particularly significant are his observations regarding the conversion of the "Indian Guarantee" into a purely reinsurance company and the Government's policy in respect of overseas business of Indian insurers, as will be evident from the following quotation:

"The recent past has also seen the entry in the Indian Insurance industry of a new reinsurance corporation and I understand that the equivalent of 20 per cent of each company's gross direct Indian business now has to be compulsorily reinsured with the two Indian professional reinsurers. The object of these steps is apparently to reduce the foreign exchange drain on account of reinsurances placed overseas and, while I hope that this objective will be quickly achieved, I must request the authorities concerned to remember that, undue emphasis on local reinsurance arrangements will prevent Indian companies from developing balanced portfolios based upon a wide spread of risk. At the same time, no such local arrangements should be allowed to operate to the detriment of insurance companies and I hope steps are already being considered whereby reinsurance commissions and profit commissions on business placed with the Indian professional reinsurers will be comparable in every way with the corresponding commissions which each company can obtain overseas.

"During the last one year or so, the industry has also confronted with a singular indecision on the part of the Government regarding development of overseas business. A modicum of caution is understandable with a view to preserving a good name for Indian insurers operating abroad, but it is unfortunate that there is apparently no clearly defined policy on this subject, as a result of which administrative delays occur and prejudice carefully developed opportunities which rarely come the way of Indian insurers. I regret to say that there is no proper appreciation by Government of the difficulties and problems of Indian insurers in developing foreign business, or of the contribution which the Indian insurers can make towards promotion of exports. In the circumstances, I must urge the authorities to make up their minds whether they wish to encourage development of foreign insurance business or not, and then ensure that efforts of insurers are not nullified by administrative delays and red tape."

It is to be hoped that these words have not fallen on deaf ears.

BOMBAY FIRE AND GENERAL INSURANCE COMPANY LIMITED

A sizable increase in premium income and an appreciable improvement in the claims experience are reflected in the audited accounts of the Bombay Fire and General Insurance Co., Ltd. (Manager: Mr. K. K. Dastur, Bombay) for the year ended 31st December 1960. The combined net premium from the fire, marine and miscellaneous departments rose from Rs. 22.13 lakhs in 1959 to Rs. 29.23 lakhs in 1960. Total net claims paid and outstanding in all the three departments, at Rs. 10.87 lakhs, represented 37.18 per cent of premium, as compared with 46.30 per cent (Rs. 10.24 lakhs) in the previous year. The improvement in claims and premium income was, however, offset by the rise in expenses of management and commissions paid which were higher at Rs. 14.79 lakhs, being 50.50 per cent of premium, as compared with Rs. 10.40 lakhs or 47.01 per cent in the previous year. Consequently, the net profit showed a decline from Rs. 1.35 lakh in 1959 to Rs. 1.25 lakh during the year under review. Nevertheless, the dividend has been maintained at Rs. 7.25 per share on the Rs. 40 paid-up shares and Rs. 1.81 on the Rs. 10 paid-up shares, both subject to deduction of tax. This has been done by reducing the carry forward from Rs. 87,621 in 1959 to Rs. 36,646 in the year under review.

The following table summarises the working results of the Company in 1960, as compared with those for the previous two years:

(In lakhs of rupees)

	Year ended 31st December		
	1960	1959	1958
Fire:			
Net premium	14.60	11.98	11.53
Claims	4.65	4.42	3.13
Commission, expenses, etc.	8.38	6.60	6.72
Fire Fund	7.46	6.15	5.08
Marine:			
Net premium	5.23	5.50	5.08
Claims	2.91	3.39	2.85
Commission, expenses, etc.	4.87	1.75	1.62
Marine fund	5.23	5.50	5.08
Miscellaneous:			
Net premium	9.40	4.65	3.87
Claims	3.31	2.53	2.01
Commission, expenses, etc.	1.59	2.06	2.06
Miscellaneous fund	4.71	2.34	1.95
Net profit	1.25	1.35	1.78
Dividend	0.76	0.76	0.76
Provision for taxation	0.50	0.50	1.50
Transfer to staff gratuity A/C	0.50	0.50	..
Carried forward	0.37	0.88	1.28

As is evident from the above table, the fire and miscellaneous departments accounted for the bulk of the rise in premium income. Claims in the fire department showed a welcome decline from 36.91 per cent in 1959 to 31.87 per cent during the year under review. Commission, expenses of management, etc., were, however, slightly higher at 57.04 per cent as compared with 55.06 per cent in the previous year. After providing for a reserve for unexpired risk of Rs. 7.46 lakhs the account shows a surplus of Rs. 59,604.

Claims experience in the miscellaneous department was very much better as compared with the previous year. At Rs. 3.31 lakhs, total claims represented only 35.21 per cent of premium, as compared with 54.39 per cent in 1959. Commission and expenses, on the other hand, registered a sharp rise from 44.65 per cent to 51.80 per cent. Consequently, the underwriting results showed a bigger loss of Rs. 1,00,650 in 1960 as against only Rs. 27,985 in 1959.

Net premium in the marine department amounted to Rs. 5.23 lakhs. The claims ratio showed an appreciable decline from 59.92 per cent in 1959 to 55.52 per cent during the year under review. Commission and expenses, too, were slightly lower at 30.42 per cent, as compared with 31.45 per cent in 1959. After maintaining the reserve for unexpired risks at 100 per cent of premium, the account shows a surplus of Rs. 1.22 lakhs.

The net departmental contribution to the profit and loss account is a credit balance of Rs. 81,200 which, together with incomes from interest and dividends, makes Rs. 1.25 lakh. To this has been added Rs. 87,620 brought in from the previous year's account making available for distribution Rs. 2.13 lakhs. This amount has been appropriated as under: provision for taxation Rs. 50,000; staff gratuity account Rs. 50,000; dividend Rs. 76,040. The balance of Rs. 36,646 has been carried forward.

Notice

INTEGRAL COACH FACTORY
MADRAS-23

Tender No. ICF/P6/45 For Steel Items

SEALED TENDERS WILL BE RECEIVED BY the Chief Administrative Officer, Integral Coach Factory, Madras-23 for the supply of 3,704 tonnes (approximate) of steel materials such as Plates, Sheets, Flats, Rounds, etc. upto 10-30 a.m. on 6-9-1961 and opened at 11-00 a.m. on the same day. Tender Documents can be had from the Office of the undersigned upto 3 p.m. on any working day on or after the 28th of this month, on payment of Rupees ten being the cost of the Tender Schedule either in cash or money order which amount is not refundable. Postal Orders or remittances in any other way will not be accepted. While requisitioning for the tender schedule, reference to tender No. etc. along with the firm's full postal address should invariably be furnished in the Money Order coupons. The Tender Schedule will be available for sale upto 3 days prior to the opening date. Tender documents may also be obtained from the Director General, India Store Department, Government Buildings, Bromyard Avenue, Acton, London, W.3 and the Director, India Supply Mission, 2536, Massachusetts Avenue, N.W. Washington 8 D.C.

DY. CONTROLLER OF STORES.

ALL-ROUND PROGRESS OF T.E.L.CO.

TAKE OFF STAGE REACHED

EXCELLENT results are shown by the Tata Locomotive and Engineering Company Ltd. (Director-in-Charge: Mr. S. Moolgaokar, Bombay) for the twelve months ended 31st March 1961. This is primarily due to the sustained efforts made by the management to secure highest standard of quality and performance and the expanding demand for the Company's products, resulting from rapid progress of industrialisation in the country. Revenue by way of sale of products and services has jumped up from Rs. 28.25 crores in 1959-60 to Rs. 37.55 crores in the year under review, representing an increase of more than 32 per cent. The other income, which is chiefly derived from interest on investments and hire purchase contracts, has also risen perceptibly, from Rs. 60.15 lakhs to Rs. 75.55 lakhs. On the expenditure side, the value of raw materials and stores consumed has gone up from Rs. 15.98 crores to Rs. 19.12 crores and payments to and provisions for employees from Rs. 364.51 lakhs to Rs. 448.80 lakhs. The manufacturing expenses, excluding excise duty, stand at Rs. 562.95 lakhs, an increase of over Rs. 151.14 lakhs over the previous year. The highest increase has occurred under excise duty from Rs. 22.87 lakhs in 1959-60 to Rs. 330.34 lakhs in the year under review. Only the other expenses, which include interest paid on bank borrowings and debentures have declined from Rs. 112.46 lakhs to Rs. 74.63 lakhs.

The gross profit has recorded a very substantial improvement of Rs. 109.03 lakhs to Rs. 517.13 lakhs, showing an increase of 26.7 per cent over the previous year. After providing Rs. 23.82 lakhs for managing agents remuneration, Rs. 180.63 lakhs for depreciation and Rs. 122.23 lakhs for taxation, as against Rs. 25.24 lakhs, Rs. 161.30 lakhs and Rs. 93.30 lakhs, respectively, in the previous year, the net profit amounts to Rs. 190.45 lakhs. This shows a rise of 48.4 per cent over the net profit of Rs. 128.26 lakhs for 1959-60. The sum actually available for distribution is of the order of Rs. 203.24 lakhs, as the net profit is supplemented by Rs. 10.55 lakhs, being the amount withdrawn from Section 15C tax-free profits of past years and the sum of Rs. 2.24 lakhs brought in from the previous year. The Directors have followed a judicious policy of ploughing back a sizable portion of the profit. The deferred taxation reserve has been credited with Rs. 8.40 lakhs, as against Rs. 6 lakhs in 1959-60. The general reserves No. 1 and 2 have received Rs. 20.99 lakhs and Rs. 75,000, respectively, as against nothing in the previous year. In addition, as much as Rs. 44.88 lakhs have been set aside for the development rebate reserve. Making allowance for the withdrawal of tax-free profits of previous years amounting to Rs. 10.55 lakhs, the aggregate sum conserved during the year under review is of the order of Rs. 64.47 lakhs, or a little less than one-third of the net profit for the year.

As readers are already aware, the Directors have stepped up the dividend on ordinary shares from 12.5 per cent taxable to 14.5 per cent taxable, giving a net dividend of 10.15 per cent. But, as a part of the dividends is paid out of the tax-free profits of previous year, and the whole 15C profits earned in 1960-61, the tax on dividends borne by the shareholders will be reduced from 30 per cent to approximately 22 per cent, subject to finalisation by the income-tax authorities. If this factor is taken into account, the net dividend is 11.31 per cent per annum.

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale of products and services	37,55.00	28,25.29	26,44.80	26,04.37

Iron castings (tons)	4,987	5,344	688	..

* Includes excise duty.
† Subject to deduction of tax.

A clear idea of the progress of the Company in the past four years can be had from the comparative table in column one. It will be evident from the above table that while the production of boilers, locomotives and steel ingots and pig iron has declined the production of diesel automobiles (commercial vehicles) shows a rise of 2,135 units (or 25.3 per cent) to 10,435. The production of steel castings has gone up from 3,764 tons to 4,941 tons and of iron castings from 3,344 to 4,987 tons.

In our review last year it was stated that the Tata Locomotive and Engineering Company was rapidly becoming an engineering and automobile manufacturing company and that the locomotive manufacturing activity was assuming secondary status. This is clearly vindicated by the fact that the operations of the Automobile Division produced the bulk of the revenue and profits for the year under review. The expansion programme of this division to raise the output to 12,000 vehicles per annum has been completed according to schedule. The output is now at the rate of 1,000 vehicles per month with an indigenous content of 78.8 per cent per vehicle. Despite this substantial increase in output of Tata-Mercedes-Benz vehicles during 1960-61, the gap between the rapidly expanding demand and available supplies has increased further. This underlines the need for implementing the expansion programme as early as possible. The Company is also making improvements to its vehicles by including a heavier front axle assembly, improved front and rear springs together with more powerful brakes.

The Locomotive Division delivered 100 locomotives during the year, each with an indigenous content of 98 per cent. The 16-year agreement between the Company and the Railway Board for the manufacture of steam locomotives and boilers came to an end on the 31st May 1961. The Railway Board has, however, placed with the Company *ad hoc* orders for 325 metre-gauge locomotives to be delivered during the five-year period ending 31st March 1966.

The scheme for the manufacture of P and H Excavators and allied equipment got off to a late start. The Government of India has only recently sanctioned the import licences and foreign exchange for materials and components required for the initial production of excavators. The manufacture is now in full swing and the first units are expected to be ready for delivery by December 1961.

The Company has commenced the production of industrial shunters of its own design, utilising the diesel engines manufactured by it. There are good possibilities of exporting these industrial shunters.

In accordance with the agreement between the Company and Messrs. A. Johnson and Company, Sweden, an Indian Company by the name of Tata-Johnson Ltd. was incorporated on 7th June 1960 to undertake selling and project engineering for the paper and pulp making machinery to be manufactured by the T.E.L.Co. The first substantial order for paper and pulp making machinery is expected to be received during the course of the next few months. Meanwhile, work is in progress for the manufacture of transport pumps, chippers, chipper discs and other similar equipment.

The output of the Company's steel foundry continued to rise steadily and the high quality of its products has been maintained. The output of the Alloy Iron Foundry is to be increased substantially to meet the increased offtake from the Automobile Division when the latter expands the production to 24,000 vehicles per year. The Company has already made an extensive survey of export markets in the neighbouring countries and is giving careful attention to the possibilities of exporting various types of engineering and automobile products.

In his statement appended to the Directors' report, Mr. J. R. D. Tata, Chairman of the Company, has made a special reference to the efforts which are being made by the T.E.L.Co. to manufacture special machine tools, materials handling equipment, presses, furnaces, cranes, etc., required for the use of the Company itself. This development will encourage design talent, enable the expansion activities to be better co-ordinated and reduce the foreign exchange requirements of the Company. He has also made the important point that the Company has reached the ability to pay its way and the capacity for self-sustained growth. He is confident that the Company can hold its own among its confreres in the country and has sufficient reasons for viewing the future with sober optimism.

The financial position of the Company is indicated in the following summary of its balance-sheet as at 31st March 1961, against the background of that three years before:

(In lakhs of rupees)

Liabilities:	31-3-1961	31-3-1958
Paid-up capital	999.99	700.00
Reserves and surplus ...	2,41.05	67.29
Loans	12,63.03	15,50.86
Other current liabilities and provisions ...	11,94.95	8,66.90
Total ...	36,99.02	31,85.05
Assets:		
Gross block	24,50.95	16,75.33
Less—depreciation ...	11,17.31	6,68.33
Net block	14,75.47*	10,07.00
Current assets	22,12.65	21,74.94
Cash	10.90	3.11
Total ...	36,99.02	31,85.05

*Includes expenditure of Rs. 59.94 lakhs on capital works in progress.

The financial position reflects the strains and stresses of the rapid programme of expansion which the Company has undertaken. It is against this background that one must judge the fact that reserves are only of the order of Rs. 241.05 lakhs, as against the paid-up capital of Rs. 999.99 lakhs and that the current assets at Rs. 22,12.65 lakhs are less than the total of loans and current liabilities of Rs. 24,57.98 lakhs. The latter include a debenture liability of Rs. 300 lakhs. The Company has received permission to issue further debentures to the tune of Rs. 500 lakhs at 5 per cent per annum. The issue price will be par. This is part of the financial arrangements the Company is making for implementing its heavy expansion programme under which the production capacity of diesel trucks will be doubled to 24,000 vehicles per annum.

The Rs. 100 paid-up shares of the Company are highly fancied by investors and speculators alike and command a premium of Rs. 265 at the time of writing. On an *ex-div.* basis and at the current rate of dividend, the net yield on them works out to 2.8 per cent per annum. The low level of yield reflects the investors' expectation that the Company will, sooner or later, announce a right issue and that, in course of time, it will be in a position to declare much higher dividends.

As at the end of March last, the Company had as many as 15,139 shareholders, which is nearly twice as many as at the beginning of the second Five-year Plan. This growth shows that there has been a large dispersal in the ownership of the Company. It is also an index of the popularity of the Company's shares among investors. Another noteworthy feature is that as much as 61 per cent of the Company's capital is held by small investors, each having one to 10 shares. There are nearly 5,000 shareholders possessing one to five shares. Only 468 shareholders have more than 100 shares in the Company.

CALCUTTA OXYGEN COMPANY

The Calcutta Oxygen Company Limited Calcutta, a new company, has been granted consent to the issue of capital of Rs. 25 lakhs in 2.50,000 equity shares of Rs. 10 each. The Company has been granted a licence for undertaking manufacture of oxygen gas for industrial purposes at Liloooah. The total capital cost of the scheme is estimated at Rs. 48 lakhs, which will be met by issue of capital and loan from financial institutions. The consent is valid for 12 months.

LAKSHMI MILLS' RESULTS EXCELLENT

COMMENDABLE EFFORTS AT MODERNISATION AND DEVELOPMENT

THE year ended 31st March 1961, which coincided with the Golden Jubilee of the Lakshmi Mills Company, Ltd. (Managing Agents: Messrs. G. Kuppuswamy Naidu & Co., Coimbatore) has proved to be quite a prosperous one for the Company. The excellent results achieved by the mills during the twelve months ended 31st March 1961 fully justified the payment of a special jubilee dividend of 10 per cent in addition to the dividend of 20 per cent both subject to taxation. This represents an increase of 50 per cent over the taxable dividend of 20 per cent declared in the previous year. Both the distributions are comfortably covered by the profit for the year under review. It has not, therefore, been necessary for the Company to draw on the reserves built out of past year's profits to present a gift to the shareholders in commemoration of its Golden Jubilee. It is interesting to note that a gift was given to every worker employed by the Company in the form of a gold coin weighing half a sovereign with the idol of Goddess Lakshmi inscribed on it. In terms of cash, this present must have roughly cost the Company Rs. 49 per worker.

The sale proceeds rose to Rs. 440.03 lakhs from Rs. 392.13 lakhs in 1959-60 and Rs. 329.87 lakhs in 1958-59. The closing stocks of finished goods and goods-in-process stood at Rs. 15.89 lakhs, as against Rs. 15.07 lakhs a year ago and Rs. 6.12 lakhs on 31st March 1959. On the expenditure side, the value of raw materials and stores consumed went up by Rs. 6.56 lakhs to Rs. 252.17 lakhs and the other expenses, which include payment of wages and salaries to the workers and staff, by Rs. 24.75 lakhs to Rs. 110.32 lakhs. The wage bill alone was up by nearly Rs. 6 lakhs, which is as much as the rise in the cost of raw materials consumed.

The gross profit shows a substantial improvement of Rs. 23.46 lakhs to Rs. 95.50 lakhs, representing an increase of more than 32 per cent over that for the previous year. Considering that the past year was marked by a substantial reduction in the prices of cloth and yarn under Government pressure, that the price of cotton ruled higher due to a marked shortfall in production and that the workers had to be paid a higher level of wages under the terms of the Wage Board, this improvement in profit is quite striking and must be attributed to efficient management. The past four years' results are presented in the table below to facilitate comparison by the readers themselves:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	440.03	392.13	329.87	334.64
Closing stocks of finished goods and goods-in-process ..	15.89	15.07	6.12	6.62
Raw materials and stores consumed	252.17	245.61	211.96	228.51
Other expenses	110.32	85.57	77.76	69.77
Gross profit	95.50	72.04	53.20	43.94
Managing Agents' commission ..	5.35	5.49	3.98	3.88

Donations	1.38	1.04	1.03	0.75
Dividend	31.06* (20% + 10%)†	21.80 (20%)*	13.78 (12%)	13.78 (12%)
Carry forward	0.19	0.18	1.55	0.86

* This includes Rs. 10.65 lakhs for paying Golden Jubilee dividend of 10 per cent.

† Subject to deduction of tax.

It will be noted that both depreciation and taxation have received larger allocations and that, in spite of the net profit being substantially higher by over one-third, the managing agents' commission has taken up a slightly lower amount. Two-thirds of the net profit have been utilised to remunerate the share capital and about 18 per cent of it has been ploughed back, the bulk of the amount conserved going to general reserve.

The Company which began as an ordinary ginning factory in 1910 has now a total installed capacity of 132,688 spindles in the three units at Coimbatore, Kovilpatti and Palladam. The Coimbatore unit is a composite unit and has 300 looms. The Company's modernisation programme is making good progress. In one of the units of the Coimbatore mill, the entire drafting system is being changed to GX2 Casablancas for 49 ring frames at a cost of Rs. 6.50 lakhs. To feed these frames the preparatory machinery is being replaced by American Withins high-speed drawing frames, super lap machines, combers and roving frames, involving an outlay of Rs. 23.50 lakhs. The Company is also modernising its carding machines at a cost of Rs. 2.60 lakhs. Further, the entire unit is being humidified at an estimated cost of Rs. 2.25 lakhs. In the B Mills, 15,200 spindles of Toyoda make will be modernised with the latest super-high draft Japanese drafting system on new Textool ring frames. This programme will cost Rs. 25.22 lakhs. Here also cards will be provided with individual drive, instead of group drive. As part of its modernisation programme, the Company intends to replace the existing 200 ordinary looms with automatic looms. This will be in addition to 96 automatic looms, which it expects to install by the end of 1962 at a cost of Rs. 16.20 lakhs as part of its development programme. Under the latter programme, the construction of a staple fibre spinning unit, with 24,000 spindles, has been started at Palladam and permission has been obtained to establish a waste spinning unit also. When all these modernisation and development projects are fully implemented, the Company's mills will be one of the most up-to-date units in the East. Their ability to compete effectively both in India and abroad will be of a high order.

The Company's financial position as disclosed by the balance-sheet as on 31st March 1961 is quite satisfactory. The reserves and surplus stand at Rs. 85.09 lakhs, which are equal to 80 per cent of the paid-up capital all in equity shares of Rs. 106.50 lakhs, of which Rs. 41.64 lakhs represent capitalisation of reserves in the past. Thanks to the policy of expansion in the past few years the Company's gross block has increased from Rs. 287.35 lakhs as at the end of 1958-59 to Rs. 323.03 lakhs as at 31st March 1961. This has been well written down to Rs. 146.15 lakhs, the depreciation provided being of the order of Rs. 176.88 lakhs. The secured and unsecured loans aggregate to Rs. 72.60 lakhs and other current liabilities and provisions at Rs. 138.21 lakhs, or a total of Rs. 210.81 lakhs. These are well covered by floating assets of the order of Rs. 256.25 lakhs. A feature of these assets is that they include investments amounting to Rs. 49.41 lakhs, of which Rs. 42.70 lakhs (at issue price) are in the equities of South India Viscose, the shares of which are quoted (at the time of writing) at a premium of about 85 per cent. The Directors are confident that this investment "will assuredly bring in good dividends in due course." It will be interesting to note here that this promising investment itself is equal to about 48 per cent of the Company's paid-up capital.

The Rs. 50 fully paid-up shares of the Company are being currently quoted at Rs. 171 *cum-div.* and the Rs. 25 fully paid-up shares at Rs. 84.50 *cum-div.* On an *ex-div.* basis and at the proposed rate of dividend, the yield on the two classes of shares works out to 6.54 per cent and 6.62 per cent per annum, free of income-tax, respectively. If, however, it is assumed that the Jubilee bonus will not be repeated for the current year either in the form of ordinary bonus or by a straight addition to the dividend, the net yield on these shares is of the order of 4.40 per cent per annum. This is not too low a yield for a Company which is taking energetic steps to maintain its productive assets at a high pitch of efficiency as as well as to expand its operations.

(*Concluded from next column*)

During the year, 23 new sub-stations were added (making a total of 249) and the transformer capacity of 19 existing sub-stations were increased. All round development has taken place in the Company's area of supply and enquiries for large blocks of power for industrial purposes continued to be received.

The present market quotation for the Company's ordinary shares is Rs. 95.50 *cum-div.* The net yield per annum works out to 6.5 per cent per annum.

BOMBAY SUBURBAN MAKES FURTHER PROGRESS

DIVIDEND RAISED AGAIN

THE Bombay Suburban Electric Supply Ltd. (Managing Agents: Killick Industries Ltd., Bombay), as the name implies, is enfranchised to supply electrical energy to the suburban areas of metropolitan Bombay and a part of the adjoining Thana District. The rapid urbanisation and spread of industrial activity which this region has witnessed during recent years have been effective in increasing the consumption of energy at rates much faster than the average. It will be noted from the table attached to this review that the number of consumers served by the Company had increased from 58,466 in 1957-58 to 80,399 in 1959-60, while the sales of energy in millions of Kw.h improved at an average rate of 20 per cent per annum from 83.56 in 1957-58 to 121.27 in 1959-60. During the year ended 31st March 1961, the latest year for which accounts have now been published, there was a further improvement in this direction, the sales of energy having risen by as much as Rs. 21.92 lakhs to Rs. 144.26 lakhs. With an overall regulation of earnings of electrical undertakings it is not surprising to note that the net profit (after managing agents' commission, taxation and depreciation) could increase only in line with the sales by Rs. 4.58 lakhs to Rs. 26.11 lakhs. To this amount has been added a small sum of Rs. 1,957 brought forward from the previous accounting period and a further sum of Rs. 1.46 lakhs transferred from the consumers benefit account being adjustments for the previous years. The balance available for appropriation stands at Rs. 27.59 lakhs. Of this, Rs. 10,208 have been utilised towards writing off certain preliminary and promotional expenses as during the previous years and Rs. 12.58 lakhs (Rs. 14.28 lakhs in 1959-60) have been transferred to the various reserves required by the statute. An interim dividend at Rs. 3 per share subject to deduction of tax was already paid for the half-year ended 30th September 1960 absorbing Rs. 5.25 lakhs. With the somewhat larger balance now available, the Directors have proposed the payment of dividend for the half-year ended 31st March 1960 at a slightly higher rate of Rs. 5.50 per share, subject to deduction of tax, requiring Rs. 9.62 lakhs. The total dividend for the year thus amounts to Rs. 8.50 per share, as against Rs. 8 declared for the previous year, both subject to the deduction of tax. This is the second year in succession to witness a rise in dividend.

The steady progress made by the Company during the past four years and to which some reference has already been made is fully reflected in the following figures:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale of energy	144.26	122.34	101.43	86.91

* Provision for wealth tax only.

† Subject to deduction of tax.

A striking feature of the Company's financial position is its heavy dependence on borrowed funds. Its balance-sheet as at 31st March 1961, shows the paid-up capital at Rs. 175 lakhs, all in equity shares of Rs. 100 each, backed by Rs. 99.13 lakhs in various reserves, as required by the Electricity Act of 1948, and the surplus account. Secured loans from banks amount to Rs. 54.77 lakhs, in addition to current liabilities totalling Rs. 108.49 lakhs. The total indebtedness thus works out to Rs. 163.26 lakhs. On the assets side, the net depreciated block stands at Rs. 349.06 lakhs as against the book value of Rs. 461.04 lakhs. To this is to be added Rs. 13.41 lakhs being the cost of capital work-in-progress giving thereby a total net block of Rs. 362.47 lakhs. Investments against the contingency reserve are carried in the books at Rs. 19.66 lakhs, while current assets, inclusive of loans and advances, are shown at Rs. 64.22 lakhs.

(*Continued in previous column*)

PROGRESS OF KESORAM COTTON REMARKABLE

DIVIDEND SUBSTANTIALLY RAISED

THE substantial rise in the market value of Rs. 10 paid-up ordinary shares of the Kesoram Cotton Mills Ltd. (Managing Agents: Birla Brothers Private Limited, Calcutta) to Rs. 37.37 from Rs. 26.81 in the beginning of January 1961 has been fully justified by the encouraging results for the year ended 31st March 1961. The better performance was due to full production being achieved in the rayon factory which commenced working in December 1959. The proceeds from sales increased by 45.1 per cent to Rs. 911.80 lakhs from Rs. 628.18 lakhs in the previous year, Rs. 548.60 lakhs in 1958-59 and Rs. 486.30 lakhs in 1957-58. The gross profit has jumped up from Rs. 49.78 lakhs to Rs. 183.74 lakhs. Thus, in nearly sixteen months' working of the rayon unit, the whole complexion of the Company has changed.

The better profit has enabled the Directors to transfer a substantial amount to reserves. As much as Rs. 62.37 lakhs have been credited to general and other reserves, as against nothing in the previous year. In addition, Rs. 3.47 lakhs have been credited to development rebate reserve, as compared with Rs. 47.20 lakhs last year. Besides, higher profit has naturally meant bigger provisions for primary accounts. The transfer to managing agents' commission account has increased from a mere Rs. 50,000 to as much as Rs. 8.92 lakhs. The provision for depreciation has advanced from Rs. 2.17 lakhs to Rs. 71.51 lakhs and that for taxation from *nil* to Rs. 6.67 lakhs in the previous year. The dividend to ordinary shareholders has been stepped up from 5 per cent subject to deduction of tax, to 12 per cent, subject to deduction of tax. The net dividend which works out to Rs. 0.84 per share, gives a net return of 2.2 per cent at the current market value of Rs. 37.37.

The following comparative table vividly brings out the Company's progress in the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds	911.80	628.18	548.60	486.30
Closing stocks	200.80	152.25	140.88	130.79
Raw materials, stores and spares consumed	468.58	326.88	340.80	326.66

Carry forward	2.65	0.68	0.77	0.06

* Subject to deduction of tax.

The growing development in the Company's activities has prompted the Directors to issue 400,000 new equity shares of Rs. 10 each at par in the proportion of one right share for four existing ordinary shares to those shareholders whose names appear in the Register as at 22nd July 1961.

The paid-up capital as at 31st March 1961 is Rs. 279.93 lakhs consisting of Rs. 160 lakhs in ordinary shares, Rs. 119.93 lakhs in 10 per cent and 7.85 per cent perference shares of Rs. 100 each. The reserves and surplus at Rs. 301.39 lakhs have crossed the paid-up capital by a comfortable margin, but these include Rs. 144.26 lakhs created out of revaluation of assets in 1950 and as such is only a book entry. The secured and unsecured loans have remained almost stationary at Rs. 258.51 lakhs. The current liabilities and provisions stand at Rs. 192.40 lakhs. Current assets, inclusive of investments, are Rs. 375.68 lakhs. The block account of the Company consists of three sections, cotton textiles, rayon and transparent paper, the position of each of them being as follows:

(Rs. in lakhs)

	Gross block	*Depeciation*	*Net block*
Cotton textile section	454.60	157.73	296.87
Rayon section ...	377.59	56.97	320.62
Transparent paper section	39.06	—	39.06
Total ...	871.25	214.70	656.55

The investments of the Company, the book value of which is Rs. 45.18 lakhs, show good capital appreciation. These are made up of Rs. 19.56 lakhs in unquoted investments and Rs. 25.62 lakhs in quoted investments. The market value of the latter alone is as high as Rs. 70.67 lakhs.

During the year under review, the results of the textile section showed a substantial improvement. The plant and machinery were modernised further. The equipments installed during the year were 10 cards, 6 combers, 4 ring frames, 116 looms (for replacement) and one Famatex stentering-cum-finishing machinery. Besides, orders have been placed for new boilers, spinning preparatory machine, Barber Colman winding and warping machinery, mercerising machine, sanforizing machine, automatic looms, etc. These are expected to be installed in the next 18 months.

The production in the rayon plant is being steadily maintained at about 7 tons per day. The quality of yarn produced has also improved. The expansion scheme that is now being implemented will yield results in the current year. Sixty per cent of the increased duty of 60 nP per kilogram levied on rayon yarn in the last budget is to be borne by the industry. This, coupled with the increase in the prices of raw materials and stores, roughly estimated around Rs. 12 lakhs per annum, will adversely affect the profits of the rayon section in the current year. Erection of the first transparent paper casting machine has been completed and trial production was started on 8th June 1961. The second machine is also likely to go into production during the current year.

The Company has on hand steel-tubes and spun-pipe projects and efforts are being made to secure the necessary import licence for plant and machinery.

As for the outlook for the Company, the following extracts from the Directors' report will be read with interest:

"The textile section, with 75,040 spindles and 1,991 looms, is being gradually modernised. By the end of the current financial year of the Company, the rayon section will have 48 spinning machines, with an installed capacity of about 11½ tons per day based on 120 deniers of yarn, and the transparent paper section will have 2 casting machines, with an installed capacity of about 7½ tons per day. Efforts are being made to diversify and enlarge the Company's activities. The Directors are examining some other proposals also. The spinning plant of Bharat Kala Bhandar Ltd., a 100 per cent subsidiary of the Company, is expected to go into production before the middle of 1962. In view of the efficient and satisfactory working of the present units and the new proposals mentioned above, the Directors feel that the shareholders can look forward to the future with optimism."

ECONOMIC DEVELOPMENT IN PERSPECTIVE

(*Concluded from page 222*)

they will draw resources and energies from the tasks that are strategically vital for development. This is not beneficial; it is harmful. Let me press the point.

A hundred years ago, the development of the trans-Mississippi plains in the United States called above all else for a land policy which would get the land settled and ploughed and a transportation system which would get the products to market. To this end the Government surveyed the land, gave 160 acres to anyone who had proven his good intentions by farming it for a few months and subsidised the building of railways. These essentials being provided, development proceeded with unexampled speed. It was our unquestioned good fortune that community education experts, grain marketing analysts, home advisers, vocational counsellors, communications specialists, public safety counsellors or end-use observers had not been invented. (I am not entirely clear as to what an end-use observer is, but candour compels me to confess that, until recently, one of our missions to a neighbouring country included two end-use officers and one end-use observer.) Had these existed, attention would have been drawn from the strategically central tasks of getting the farms settled and the railways built. And they would have been a burden on the backs of people who could ill afford such luxuries.

Today, in the United States, these more elaborate services can easily be afforded. And, in the present stage of our development, they may be needed. Transferred to Africa, or I venture to say India, they may be as redundant and even damaging as they would have been in the United States in its comparable stage of economic development.

I have dwelt on what I believe to be important misconceptions of the development problem when viewed from the perspective of different nations—misconceptions which experience now allows us to correct. We should not be surprised that there have been errors. To mount a major attack on privation and backwardness is an enormously complex task. It was necessary that we simplify; and it was inevitable, perhaps, that oversimplification would lead to mistakes. It would have been a far greater error to postpone action and await a perfect view of the problem. For we would not be wiser now had we not learned from the experience of these past years. And experience is a considerable teacher, even though, as Woodrow Wilson once observed, it is also the name we give to our mistakes.

Students of economic development must be especially grateful to India. For, from having attempted the most, she has been our best teacher.

BUMPER RESULTS FOR BRITANNIA BISCUITS

PROSPECTS OF BONUS ISSUE

ON 31st March 1961, the Britannia Biscuit Company Ltd. (Chairman, Mr. A. C. Khanna, Calcutta) successfully completed yet another year of continued progress. Sales of the Company's superior quality biscuits and bakery products, which have consistently been increasing over the past number of years, expanded further by Rs. 57.92 lakhs to Rs. 329.49 lakhs, surpassing thereby all previous records, despite the prevalence of competitive conditions within the industry which the Directors rightly hold in their opinion as "challenging rather than depressing." Although prices of ingredients and raw materials continued to rise, these have been absorbed by additional sales and improved production methods. The gross profit has staged a rise of Rs. 15.44 lakhs to reach the impressive all-time high of Rs. 62.39 lakhs. Higher profit has naturally meant larger provision for taxation which has taken up Rs. 24 lakhs as compared with Rs. 19.40 lakhs a year ago. Provision for depreciation has also been raised from Rs. 5.65 lakhs to Rs. 6.71 lakhs, following the large-scale additions made to block account during the course of the year. After these essential adjustments, the net profit shows an improvement of as much as Rs. 9.78 lakhs to Rs. 31.68 lakhs.

Over the years, the Company has followed a conservative policy of retaining a substantial portion of the net profit in the business to finance its capital projects and to supplement the working capital required by its growing trade. The year under review is no exception. A sum of Rs. 17.16 lakhs has been transferred to reserves, as against Rs. 10.42 lakhs last year. It will be noted that more than 50 per cent of net profit has been conserved. The general reserves receives Rs. 12.70 lakhs, the debenture redemption reserve Rs. 1.50 lakh and the statutory development rebate reserve gets Rs. 2.96 lakhs. These appropriations leave a balance of Rs. 16.66 lakhs for distribution to shareholders including Rs. 2.14 lakhs brought forward from the previous year. In view of a larger amount thus available and the overall comfortable financial position, the Directors have recommended the payment of a dividend of 25 per cent *plus* a bonus of 5 per cent, making a total of 30 per cent, subject to deduction of tax, on ordinary shares. The amount left to be carried forward is Rs. 2.84 lakhs, which is more than the amount brought in.

The following table presents the progress made by the Company during the four-year period 1958-1961:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	329.49	271.57	204.85	184.64
Other income	0.03	0.53	0.70	0.14

The financial position of the Company, as reflected in its balance sheet as at 31st March 1961, is impressive. The share capital of Rs. 46.12 lakhs is supported by Rs. 76.54 lakhs in the reserves. Secured loans in the form of 5½ per cent debenture stock stand at Rs. 10.50 lakhs and there are current liabilities and provisions amounting to Rs. 75.02 lakhs. Inclusive of the addition of Rs. 26.13 lakhs made during the year, the gross block is carried in the Company's books at Rs. 148.47 lakhs and has been well written down to Rs. 88.89 lakhs. Current assets, inclusive of loans and advances are worth Rs. 119.29 lakhs, exceeding all debts due by Rs. 33.77 lakhs.

A few years ago, the Directors had decided to implement the second phase of a plant re-placement and modernisation programme. As stated earlier, the Company has spent during the year Rs. 26.13 lakhs on new plant, machinery and buildings and it is gratifying to note that this development has been financed from its internal resources. The capital commitments, as on 31st March 1961 amount to Rs. 20.41 lakhs and provide a striking evidence of the Company's policy of improving the production facilities in all its three factories.

The Directors say that, while the Company is trying to arrange, as far as possible, for the manufacture of buscuit-making equipment in India itself in order to save foreign exchange, it would nevertheless be necessary to import such machinery as are not made in this country if the third Plan target were to be hit. It is encouraging to hear from the Directors that the Company has been able to absorb the rise in cost of production through larger turnover and improved production methods.

A perusal of the balance sheet will convince the reader that the share capital of the Company is out of line with its investments in fixed assets and is inadequate when its expansion schemes are taken into account. The Directors report that they have been considering this factor and have reached the conclusion that, having regard to the overall position, it is desirable that the share capital should be increased. As a first and logical step towards this end, the Directors expect to place before the shareholders a special resolution intending to raise the authorised share capital to Rs. 1 crore from Rs. 50 lakhs at present. In view of the large reserves accumulated out of taxed profits of previous years, it is reasonable to infer that a part of these reserves may be capitalised. The Company can easily give one share for every two shares, as its general reserve alone is no less than Rs. 35 lakhs.

The current market quotation of the Company's ordinary shares is Rs. 60.50, against the face value of Rs. 10 fully paid. The price is *cum-div.* and the net yield on an *ex-div.* basis works out to 3.7 per cent per annum. A year ago, they were standing in the neighbourhood of Rs. 40.

CAUVERY SPINNING REPORTS SATISFACTORY PROGRESS

An increase in sales and profit of the Cauvery Spinning and Weaving Mills Ltd., Madras (Managing Agents: United Industries Pudukkottai Private Ltd.), accompanied by a higher return to shareholders, is disclosed by the statement of accounts for the year ended 31st March, 1961. Sales have increased from Rs. 92.72 lakhs to Rs. 110.11 lakhs, the improvement being 18.7 per cent as against 12.2 per cent in the previous year. The closing stocks are also higher at Rs. 23.59 lakhs, as compared with Rs. 13.20 lakhs a year before, indicating increased production.

The gross profit has improved from Rs. 10.30 lakhs to Rs. 11.50 lakhs, but ratio of profit to sales is lower at 10.4 per cent, as against 11.1 per cent in the previous year, as the cost of production increased markedly. While the price of cotton was pretty high and the workers had to be paid increased wages, the selling prices of yarn had to be lowered under circumstances which are well known to our readers. The dividend on ordinary shares has been raised from 13 per cent, subject to tax, to 15 per cent, subject to tax.

The following comparative table shows at a glance the working results of the Company since 1957-58:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958

* Subject to deduction of tax.

Having regard to the fact that the Company is less than 15 years' old, its financial position must be regarded as satisfactory. The gross block of Rs. 69.48 lakhs has been written down by more than 50 per cent to Rs. 32.10 lakhs. Since the paid-up capital is small at Rs. 15.93 lakhs (Rs. 9.37 lakhs in ordinary shares of Rs. 10 each and the balance in cumulative preference shares of Rs. 100 each carrying interest at 8.93 per cent taxable), the Company is heavily dependent on secured loans and debentures amounting to Rs. 22.57 lakhs. In addition, its other liabilities and provisions amount to Rs. 17.64 lakhs. There are current assets of the order of Rs. 31.60 lakhs. Reserves and surplus stand at Rs. 7.54 lakhs.

Three combers and two high speed drawing frames for which orders have been placed may have been received by now and are due to be commissioned before the end of August. These will enable the Company to produce combed yarn of superfine counts which is in good demand. The Company has also embarked upon a renovation programme of the old unit and an order for 8 ring frames has already been placed for delivery next year. The mill is working as usual three shifts.

The current quotation of the Rs. 10 ordinary shares is Rs. 14.87 and at this rate this scrip gives a net yield of 7.0 per cent per annum.

COMPANY MEETINGS AND DIVIDENDS

CLIVE BUILDINGS (CALCUTTA) LTD. Annual General Meeting, Calcutta, 11th August 1961. Dividend: Rs. 10 per share, on shares of Rs. 150 each and Rs. 10 per share on shares of Rs. 15 each, both subject to deduction of tax.

BIRPARA TEA CO., LTD. Annual General Meeting, Calcutta, 11th August 1961. Dividend: Rs. 17.50 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 1st to 11th August 1961, both days inclusive.

PEAR CYCLE INDUSTRIES LTD. Annual General Meeting, New Delhi, 12th August 1961. Transfer books remain closed from 28th July to 12th August 1961, both days inclusive.

POLYCHEM LTD. Annual General Meeting, Bombay, 17th August 1961. Transfer books will remain closed from 1st to 21st August 1961, both days inclusive.

COLOUR-CHEM LTD. Annual General Meeting, Bombay, 17th August 1961. Dividend: Rs. 8.00 per share (being maiden dividend). Transfer books remain closed from 25th July to 19th August 1961, both days inclusive.

BRITTANIA BISCUIT CO., LTD. Annual General Meeting, Calcutta 18th August 1961. Dividend: 30 per cent or Rs. 3.00 per ordinary share (includes interim dividend of 6 per cent or Re. 0.60 per share), subject to deduction of tax. This dividend also includes a special bonus of 5 per cent or Re. 0.50 per share. Transfer books will remain closed from 11th to 18th August 1961, both days inclusive.

TEZPORE TEA CO., LTD. Annual General Meeting, Calcutta, 18th August 1961. Transfer books will remain closed from 10th to 18th August 1961, both days inclusive.

PAPER MILL PLANT AND MACHINERY MANUFACTURERS LTD. Annual General Meeting, Bombay, 21st August 1961. Transfer books will remain closed from 7th to 21st August 1961, both days inclusive.

BIRLA JUTE MANUFACTURING CO., LTD. Annual General Meeting, Calcutta, 23rd August 1961. Dividend: Re. 1.50 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 9th to 23rd August 1961, both days inclusive.

RELIANCE JUTE MILLS CO., LTD. Annual General Meeting, Calcutta, 23rd August 1961. Dividend. *Nil*. Transfer books will remain closed from 9th to 23rd August 1961, both days inclusive.

HOWRAH MILLS CO., LTD. Annual General Meeting, Calcutta, 23rd August 1961. Dividend: Re. 1.00 per ordinary share, subject to deduction of tax, payable on and after 30th August 1961. Transfer books will remain closed from 9th to 23rd August 1961, both days inclusive.

PUTHUTOTAM ESTATES LTD. Annual General Meeting, Pollachi, 23rd September 1961. Dividend: 7½ per cent or Re. 0.15 per share, subject to deduction of tax. Transfer books will remain closed from 1st to 23rd September 1961, both days inclusive.

HONGKONG AND SHANGHAI BANKING CORPORATION LTD. Interim dividend of 5s. per share, for the year 1961, payable on 14th August 1961. Transfer books remain closed from 28th July to 12th August 1961, both days inclusive.

BALANOOR TEA AND RUBBER CO., LTD. Taxable dividend of 12 per cent or Re. 1.20 per ordinary share, subject to deduction of tax, for the year ended 31st March 1961. Transfer books remain closed from 24th to 27th July 1961, both days inclusive.

DEVON TEA AND PRODUCE CO., LTD. Taxable dividend of 12 per cent or Re. 1.20 per ordinary share, subject to deduction of tax, for the year ended 31st March 1961. Transfer books remain closed from 24th to 27th July 1961, both days inclusive.

PREMIER MILLS (C.B.E.) LTD. Taxable dividend of 24 per cent or Rs. 24.00 per share, for the year ended 31st March 1961. Transfer books will remain closed from 5th to 18th August 1961, both days inclusive.

RAJAPALAYAM MILLS LTD. Taxable dividend of 16 per cent or Rs. 16.00 per share, for the year ended 31st March 1961. Transfer books will remain closed from 24th August to 6th September 1961, both days inclusive.

KAILAS RUBBER CO., LTD. Taxable final dividend of 15 per cent or Re. 0.30 per share (making a total of 25 per cent or Re. 0.50 per share for the year), for the year ended 28th February 1961. Transfer books will remain closed from 8th to 19th August 1961, both days inclusive.

MYSORE STONEWARE PIPES AND POTTERIES LTD. Taxable dividend of 12 per cent or Re. 1.20 per share, for the year ended 31st March 1961. Transfer books will remain closed from 26th August to 8th September 1961, both days inclusive.

GENERAL INVESTMENT AND TRUST CO., LTD. Dividend of 5 per cent or Rs. 3.75 per ordinary share, subject to deduction of tax, for the year ended 28th February 1961.

INVESTMENT AND FINANCE CO., LTD. Dividend of 7½ per cent or Rs. 7.50 per ordinary share, subject to deduction of tax, for the year ended 28th February 1961.

SYNOPSES OF COMPANY REPORTS

Indian Rayon Corporation Ltd.

(*Managing Agents*: Veraval Rayon Industries (Private) Ltd., Bombay.)

Annual General Meeting—14th August.

Working Results:

	For the year ended 15th February (In thousand rupees)	
	1961	1960
Sales	34	22
Gross profit (+) or loss (—)	(—) 37*	(—) 77
Adjustments	(—) 81	..
Carried forward (total debit)	(—) 1,18	(—) 77

N.B.—Adjustments include the loss brought forward from the previous year and taxation for previous years.

* This represents loss after providing Rs. 40,000 for taxation.

Extracts from the Directors' report: During the year, the Company was able to cover part of the current expenses, out of the income derived from interest and other sources resulting in a shortfall of only Rs. 37,179. After capitalising a sum of Rs. 2,94,875 on plant and machinery and Rs. 1,16,069 on building out of the expenses incurred during the year under report, the total outlay on fixed assets amounted to Rs. 49,92,779.

Plant and Machinery: During the last few months, large consignments of plant and machinery have arrived at Veraval Plant Site. The total amount spent on the plant and machinery as upto the date of this Report is Rs. 1,27,62,570, including the advance payment of Rs. 49,27,242. All the spinning machines required for the original plant capacity of 5.2 tons of rayon yarn per day and a large portion of the preparatory and workshop machinery have already been received. Further consignments are on the way and it is expected that all the machinery for the first phase will be received by the end of this year.

The Company made an issue of 1,05,000 equity right shares of Rs. 100 each on 29th April 1961.

Building Construction: The textile building has been largely completed. A number of machine foundations in the spinning room have also been constructed. The construction of the Chemical and Preparatory blocks as per the revised plans to accommodate the 10 tons per day plant, as also the structures for *carbon-bisulphide* plant have reached an advanced stage. The workshop, where a large part of the tanks, vessels and structural steel work will be fabricated and prepared for erection, has been constructed. The administrative building and the residential quarters for the technical staff are due to be completed very shortly. The construction work is being carried out inspite of the present acute shortage of cement and the consequent difficulties in its procurement. The construction of the expanded spinning building (including its basement) to house the larger number of spinning machines required for the 10 tons capacity has also been undertaken.

Expansion Plans and Pulp Plant: As mentioned in the last report, the directors had decided to install a *Cotton Linters Pulp Plant* with a capacity of 15 tons per day and to expand the production capacity to 10 tons of rayon yarn per day. It also includes the plants for the manufacture of 25 tons of *Sulphuric Acid* and 5 tons of *Carbon-bi-Sulphide* and 10 tons of *Sodium Sulphate Anhydrous* per day. The investment involved in installing this additional plant capacity will be Rs. 4.20 crores in addition to the initial capital expenditure of Rs. 3.32 crores. In this manner, this Company will have an investment of Rs. 7,52,00,000 with a comparatively small equity capital of Rs. 2,90,00,000. The shareholders are fully aware of the profitability-potential of the rayon Industry by itself, even when the manufacture of rayon grade pulp is not undertaken. In the case of this Company, however, it will be an integrated plant which will produce the pulp, rayon yarn and chemicals, all of which will contribute towards the profitability of the plant.

Electric Power and Water Supply: The Gujarat State Electricity Board is setting up a Diesel Generating Station at Veraval to supply the normal frequency power required for the Company's plant. The high frequency power required for the plant will be generated by the Company in its own power house equipped with *Back Pressure Steam Turbines* and *Generators*, enabling utilisation of the low pressure steam for process purposes. When the extension of the Shapur power house (under erection) in completed, more power will be available for future expansion. Arrangements with the Government of Gujarat and the Veraval Municipality have been finalised for building a cut-off wall and weir on the river Hiran to provide enough water to the town as also to the Company's plant. A Pumping station on the river bank and five-mile long pipe line are being laid from the river to the plant site by the Company. The Government of Gujarat have kindly agreed to the nominal charge of Rs. 101 per year for water drawn for the factory for the first five years.

In addition to the fresh water supply a large volume of water will be drawn from the sea to provide all the cooling water required for the plant. The Government of Gujarat have also approved of the arrangements for a Pump House to be located in the Veraval port area and a pipe line from there to the Company's plant is being laid by the Company for this purpose.

Start of Production: In the light of all these arrangements, the directors feel confident that subject to any unforeseen circumstances, production of rayon yarn under the first phase will commence in the second quarter of 1962 with a spinning capacity of 5.2 metric tons per day and with an installed expanded preparatory capacity for *Viscose* production and ancillary chemicals. The second stage of rayon production including the pulp plant for the full 10 tons capacity is expected to be reached in 1963.

Offer of Shares: Out of 1,45,000 new equity shares under the right issue, only 1,05,000 equity shares have been offered to the existing resident shareholders in India. The balance of 40,000 shares are being reserved for the Company's foreign collaborators. 30,000 new preference shares will also be offered to the existing holders of preference shares, as the necessary permission has been received from the Controller of Capital Issues.

Accounts in brief as at 15th February 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	1,33,52,725	Block	49,92,779
Other liabilities	8,99,357	Current assets	49,92,888

Transfer to special reserve	8,11‡	..
,, ,, general reserve	9,00	..
,, ,, dividend equalisation reserve	2,00	..
Proposed dividend (equity)	8,00	..
	(8%)	..
To adjustment of loss brought forward	40	..
Carried forward	30	(—) 40

N.B.—Adjustments include the balance brought forward from previous year.

* Includes Rs. 2,03,865 being depreciation in respect of previous year.

† This represents only the excess provision of development rebate reserve during 1959-60.

‡ Out of this special reserve—profits exempt under section 15C of the Indian Income-tax Act; the directors have transferred Rs. 8,00,000 for payment of dividend at the rate of 8 per cent or Rs. 8.00 per share. (The paid-up value of the share is Rs. 100.)

Extracts from the Directors' report: Out of the profits of the year, the directors are advised that, Rs. 8,11,351 are expected to be exempt from tax under section 15C of the Indian Income-tax Act. The directors have transferred this amount to a separate reserve styled as "Special Reserve—Profits exempt under Section 15C," and it is proposed to pay the dividend for the year out of this special reserve. Application is being made to the Income-tax authorities under section 18 (3F) of the Indian Income-tax Act to certify the figure for exemption.

Production: Production has been quite satisfactory during the year. The Company has added some more *Pigments* to its range; also, *Pigments* suitable for the Rubber and Plastic Industries have been manufactured. Production since the end of the year of account till the date of this report is also quite satisfactory and the demand for the Company's products is steadily growing. However, production may be affected in future by paucity of raw materials. During the last licensing period the Company's raw materials import licence was cut by 18 per cent and now again a further cut is expected. To meet this situation, efforts are being made to secure some materials through the State Trading Corporation on Rupee payment basis.

Central Excise Duty: Since 1st of March this year, Government has levied Central Excise Duty at the rate of 15 per cent *ad valorem* on *Coal Tar Dyes*. Although the Company's other products are not covered by this levy, the Central Excise authorities have brought *Pigment Emulsions* within its purview. The Company is contesting this levy and has already appealed against it to the Collector of Central Excise. Foreign manufactured *pigment emulsions* at the time of importation are not classified as *Coal Tar Dyes* and countervailing excise duty at the rate of 15 per cent *ad valorem* is not charged on them. The levy has given rise to an anomalous position whereby the indigenous products are put at a disadvantage in competition to foreign goods. The Company hopes that this hardship will be remedied by the authorities at an early date.

Cost of raw materials: The levy of Central Excise Duty on *Coal Tar Dyes* has increased the cost of some raw materials. In effect this levy has become multipoint and facilities given to other industries like Paint, Electrical Goods and Mineral Oils to avoid double taxation, have not been extended to the Dyestuff Industry. The Company has represented to Government to extend these facilities to the Dyestuff Industry. The Company has also requested Government to reduce the tariff values of a few imported *Coal Tar Dyes* used as raw materials for the reason that their present tariff values are very high and bear no relation to their c.i.f. price. At present, on account of the high tariff value fixed by Government, the import duty charged in some cases is more than 150 per cent of the c.i.f. price of the materials.

Phthalocyanine Blue Scheme: The implementation of the Phthalocyanine Blue Scheme has already been taken in hand. To finance the same, a fresh issue of capital amounting to Rs. 25 lakhs to the existing shareholders has been resolved upon and steps are being taken to issue the same.

New lines of manufacture: The Company has planned to undertake manufacture of *Leomine K*, a cationic softening agent and *Modified Urea Formaldehyde Resins*. A manufacturing licence for these items has been granted by Government. In addition, the manufacture of some major intermediates which are being imported at present is also proposed to be undertaken. This will help to ease the shortage of raw materials, resulting from the abovementioned cut in the Company's import licence.

The Government of Maharashtra has very kindly agreed to acquire further land for the Company admeasuring approximately 27 acres. Notice under Section 4 of the Land Acquisition Act of 1894, has already been gazetted and formalities are being completed to get possession of this land.

The Company has already spent over Rs. 3¼ lakhs in providing to the staff residential accommodation adjacent to the factory. It is proposed to incur further expenditure of Rs. 9.25 lakhs for this purpose during the coming four years.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,00,00,000	Gross block	1,06,12,335

N.B.—Adjustments include the balance brought forward from the previous year; excess provision for wealth tax written back; unclaimed dividends forfeited; profit on sale of block assets and the amount transferred from contingencies reserve.

* Preference dividend calculated in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960 This works out at 9.1 per cent.

† On a paid-up ordinary capital of Rs. 15,95,000. On amalgamation of Orient Jute Mills Co., Ltd., with this Company (effective from 31st July 1960) the present paid-up ordinary capital is Rs. 38,56,250.

Extracts from the Directors' report: Members are aware that the amalgamation of Orient Jute Mills Co., Ltd., with this Company was sanctioned by the Calcutta High Court and took effect on 31st July 1960, on which date the assets and liabilities of Orient were transferred to the Company. The excess of the book value of the Orient assets and liabilities at 31st July, 1960, over the face value of the shares issued to the Orient shareholders has been shown as capital reserve and amounts to Rs. 26,46,932.

The profit and loss account for the year ended 30th November, 1960, covers the working at Cheviot Mill only. Orient Mill was closed down at the date of amalgamation and the productive capacity transferred to Cheviot which, since 1st August 1960, has been working double shift. The trading of the Orient Mill up to 31st July, 1960, resulted in a loss of Rs. 39,434.

Although the transfer to Cheviot Mill was effected very smoothly, the subsequent working of the Mill has been below the desired level of efficiency and is only now beginning to settle down. A period of such unsettlement had been expected in view of the major upheaval involved, but the termination of the independent working of two small and, in modern conditions, uneconomic units will in the long run more than compensate for the temporary setback.

Since the end of the year, the Orient Mill and land, except for a small area of 5.49 acres, have been sold to the Government of India, Ministry of Food and Agriculture, for the sum of Rs. 34 lakhs with the proviso that the Company shall carry out certain repairs to a cost not exceeding Rs. 50,000. The finances of the Company have been substantially strengthened by this sale.

Trading conditions were difficult during the year. Prices of raw jute fluctuated widely and by the end of the period were 100 per cent higher than they had been at the beginning. Unfortunately, prices of manufactured goods generally failed to keep in parity with the price of the raw material, and profitable simultaneous business was rarely possible.

Since then the danger of an acute scarcity of raw jute has become even more evident and, in order to achieve an equilibrium between consumption and supply, the Indian Jute Mills Association, with the agreement of the Central and State Governments, has recommended a block closure of mills for one week from 25th June, 1961, and for a further week from 23rd July, 1961. Although new crop prospects at present are encouraging, the effect of a greater availability of raw jute in the coming season will probably not be felt until the latter part of this year, when it is hoped that raw jute and manufactured jute goods prices will return to more profitable levels than at present.

In these circumstances trading prospects for the current year are poor. Substantial economies will be effected by the process of rationalisation and modernisation, but these will be partly offset by the inevitable increase in costs ensuing from the lower level of production caused by restrictions in working and the payment of lay-off compensation to the labour under the terms of the Industrial Disputes Act on account of the block

closures. In addition, production for some weeks was further upset by frequent interruptions of power supply, and working schedules had to be adjusted to minimise this difficulty.

Accounts in brief as at 30th November 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	48,56,250	Gross block ..	.. 1,22,29,034
Reserves and surplus..	50,49,127	—Depreciation	.. 62,15,516
Other liabilities ..	23,24,426		
		Net block ..	.. 60,13,518
		Current assets ..	.. 59,97,743
		Investments ..	.. 2,35,092
		Cash	10,583
		Miscellaneous expenditure	72,837
	Rs. 1,23,29,803		Rs. 1,23,29,803

New City of Bombay Manufacturing Co., Ltd.

(*Chairman*: Mr. Himatlal V. Gandhi, Bombay.)

Annual General Meeting—27th June.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	1,25,10	1,40,49
Closing stock	36,53	12,22

To bonus for 1958	75	..
,, compensation to workers for idle hours during 1-11-1951 to 13-7-1952	1,23	..
Carried forward	2,45	§

N.B.—Adjustments include the amount of unclaimed wages no longer required and the amount transferred from general reserve if any.

§ Loss of Rs. 11,98,634 adjusted by transfer of a like amount from general reserve.

Extracts from the Directors' report: Although since the introduction of the rationalisation programme, the working of the Mills has shown slight improvement, the position remains still far from satisfactory but it is hoped that with the co-operation of the workers, full results will be achieved soon.

The Comber Unit which was ordered out was received and installed in the month of November 1960 and the Mill is now manufacturing combed superfine yarn and cloth upto 100 counts.

On 1st June 1960 the Mill introduced 4-loom system in the Weaving Shed and simultaneously started third shift also. However, there was a strong opposition from some section of the labour to the introduction of the 4-loom working and this led to the complete closure of the Mills from 27th June 1960 to 19th July 1960. Ultimately, the Management succeeded in the introduction of the 4-loom system and this should show good working results during the coming years.

Since January last the superfine section of the Spinning Department has been started on four sides and the third shift was introduced in spinning. Barber-Colman Machine which was ordered has been received and is under clearance.

Further orders have been placed for one more Comber Unit and four modern *High Draft Roving Frames* which will be received during the course of this year. In order to further rationalise and improve the economical working in the Spinning Department, 13-double (26) new modern *Ring Frames* have been ordered to be supplied by Messrs. National Machinery Manufacturers Ltd., the delivery of which will commence from July 1961.

The Managing Agents of the Company, Messrs. W. H. Brady & Co., Ltd., resigned their office with effect from the 28th February 1961. The Company is now being managed by its Board of Directors.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	94,00,000	Gross block ..	.. 91,26,187
Reserves and surplus..	15,04,663	—Depreciation	.. 48,70,078
Other liabilities ..	74,85,661		
		Net block ..	.. 42,56,109
		Current assets ..	.. 71,05,028
		Investments ..	.. 7,500
		Cash	21,687
	Rs. 1,13,90,324		Rs. 1,13,90,324

Port Shipping Co., Ltd.

(*Secretaries & Treasurers*: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—10th August.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Freight earned	29,77	27,98
Gross profit	4,27	1,96
Transfer to Managing Agents' commission ..	12	20
,, ,, Secretaries' and Treasurers' commission	8	..
,, depreciation	1,66	1,76
Net profit (+) or loss (—)	(+) 2,41	(—) 1,21
Adjustments	(—) 4,99	(—) 3,68
Appropriations:		
Total available balance	(—) 2,58*	(—) 4,99
To dividends	Nil	Nil
Carried forward	(—) 2,58	(—) 4,99

N.B.—Adjustments include only the debit balance brought forward from the previous year.

* After adjusting the profit of Rs. 2,41,270 against the loss brought forward from 1959.

Extracts from the Directors' report: Freight earned from the carriage of jute and gunnies was higher than in 1959. In addition, the Company's new contract with the Tata Engineering and Locomotive Co., Ltd., contributed to the improvement in gross freight receipts.

The Company again participated in a contract between the Calcutta Port Commissioners and the Calcutta River Transport Association whereby the Association provided lighters for foodgrain ships discharging at Haldia during the winter months.

The amendment to the Companies Act, 1956, which took effect from 28th December 1960, and consequently affects the Company's accounts for 1960, would have had the effect of increasing the depreciation charge for the year to approximately two and a half times the charge for the year 1959. As the assets in use during 1960 were basically the same as those in use in 1959 and earlier years, the enhanced depreciation charge for 1960 would have resulted in the profit and loss account not showing a true and fair view of the results of the trading for the year. In the circumstances, the Board decided to utilise Rs. 20 lakhs out of the Company's free reserves to write down the book value of the Company's block. It will be recalled that in 1948 excess depreciation of Rs. 18,50,000 was written back to the appropriation account and Rs. 17,90,000 was transferred to the Company's reserves.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	14,08,220	Gross block ..	.. 28,80,281
Reserves and surplus..	1,85,348	—Depreciation	.. 13,96,885

To brokerage and commission on debenture issue	25	..
Transfer to reserve for obsolete stores ..	..	20
Transfer to general reserve	10	..
Proposed dividend (taxable)	1,25	75
	(6.25%)	(3.75%)
Carried forward	3	9

N.B.—Adjustments include the balance brought forward from the previous year; sales tax refund relating to previous years if any; and amounts transferred from reserves if any.

Extracts from the Directors' report: The year under review started with a very bright outlook and this facilitated simultaneous business being carried on till the end of November 1959. Thereafter due to forecasting of smaller crop than what was anticipated at the beginning of the year led to a rise in jute prices disproportionate to the prices of finished products with the result that simultaneous business was rarely possible. Entrance of Russia and China in the finished goods market and the fact or reasonable stable American offtake of *Hessian* accelerated the price of gunny at a considerable high level throughout the year.

In accordance with the working time agreement of the I.J.M.A. the Mill worked with the 14 per cent of their looms sealed up to 21st June 1959. This was reduced to 12½ per cent for the period from 22nd June 1959 to 23rd August 1959 and from 24th August 1959 till the 1st May 1960 the Mill was working with 10 per cent looms sealed and from 2nd May 1960 the Mill worked with 9 per cent of the looms sealed. During the said period the Mill worked 48 hours per week. On and from 6th June 1960 the Mill was working with 9 per cent looms sealed in addition to voluntary sealing of 76 looms upto 18th June 1960. Since 5th December 1960 the Mill worked with 17 per cent looms sealed with 48 working hours per week. Thereafter on and from 26th December 1960 the Mill worked 45 hours per week with 12 per cent looms sealed. From 30th January 1961, the Mill is working with 12 per cent looms sealed and 42½ hours per week.

Accounts in brief as at 31st October 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	20,00,000	Gross block ..	.. 86,57,072
6½% debentures ..	12,00,000	—Depreciation	.. 57,68,449
Reserves and surplus..	11,85,675

Transfer to reserves	25	25
To dividends forfeited (now paid)	2	..
Proposed dividend (taxable)	87	1,74
	(10%)	(20%)
Carried forward	60	76

N.B.—Adjustments include the balance brought forward from the previous year and excess tax provision in previous years written back.

Extracts from the Directors' report: The gardens were seriously affected by the exceptionally severe droughts which occurred in the Jorhat area of Assam. There was no rain at all for three months during the cold weather of 1959-60 and thereafter rainfall was inadequate and badly distributed. As a result of these droughts the crop for the year amounted to only 4,635 quintals (12,772 maunds) compared with 5,305 quintals (14,619 maunds) secured in 1959. However, the crop sold at an average price of Rs. 5.65 per kg. compared with an average price of Rs. 5.40 per kg. for the 1959 crop.

Estimates for the current season have been framed for a crop of 5,765 quintals (15,886 maunds).

Capital expenditure during the year, amounting to Rs. 5,47,563, includes the cost of C.T.C. machinery for Hoolungooree division, labour and staff quarters and a new hospital.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	8,70,000	Gross block ..	.. 38,08,281
Reserves and surplus..	14,84,367	—Depreciation	.. 15,65,910

,, ,, ,, 4½% Cumulative Preference ..	54‡	40
,, ,, ,, Ordinary ..	4,40	2,80
	(11%)	(8%)
To supplemental dividends on Pref. shares ..	74§	396
Carried forward	2,13	2,04

N.B.—Adjustments include the balance brought forward from the previous year; and amounts transferred from reserves.

* Includes Rs. 5,00,000 transferred from equalisation of dividend reserve and Rs. 6,00,000 transferred from investment's reserve.

† Includes additional dividends payable on 5½ per cent preference shares for 1959 at the rate of Re. 0.484 per share.

‡ Includes additional dividend on 4½ per cent preference shares for 1959 at the rate of Re. 1.20 per share.

§ Supplemental dividends payable in the event of the proposed amendment of the Articles of Association to vary the dividend rights of the preference shareholders being approved.

Extracts from the Directors' report: The Company held 1,022 preference shares and 30,100 ordinary shares of Joonktollee Tea Co. Ltd., and 823 ordinary shares of Mothola Company Ltd., the subsidiaries, as at the close of the last financial year ended 31st December 1960.

The net aggregate amount of profits in Joonktollee Tea Co., Ltd., and Mothola Co., Ltd. for the last financial year with which the shareholders are concerned as the members of holding Company are Rs. 6,12,042 and Rs. 61,163 respectively. Neither these amounts nor any part of these amounts have been included in the accounts of this Company as the holding Company.

The net aggregate amount of profits of Joonktollee Tea Co., Ltd., and Mothola Co., Ltd., for the previous years since these became subsidiaries are Rs. 11,73,527 and Rs. 6,90,900 respectively. Out of these sums, Rs. 2,76,172 has been received by the holding Company by way of dividend on its investments in the subsidiary companies and has been included in the accounts of the holding Company.

Considering that the provisions laid down in Preference Shares (Regulation of Dividends) Act, 1960, for grossing up of dividends on preference shares will not fully compensate for the loss caused to them due to deduction of tax at source, the directors have decided to recommend to the shareholders the alteration of Article 5 of the Articles of Association of the Company so as to make the first and second preference shares 5.35 per cent and 5.70 per cent both subject to deduction of any sum on account of tax payable thereon by the holders thereof as required under the Indian Income-tax Act, with effect from 1st January, 1960. Accordingly Rs. 9,320 and Rs. 5,000 have been provided during the year in respect of first and second preference shares respectively over and above the amount required to be paid in accordance with the Preference Shares (Regulation of Dividends) Act, 1960. This supplemental amount is payable to the preference shareholders subject to the necessary changes in the Articles of Association of the Company being effected in accordance with Section 106 of the Companies Act, 1956 and Article 66 of the Articles of Association of the Company for which necessary action is being taken.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital ..	70,00,000	Gross block ..	.. 2,32,144
Reserves and surplus..	89,96,446	—Depreciation	.. 1,94,214

	Rs. 1,65,97,776		Rs. 1,66,97,776

Notices

HOWRAH MILLS COMPANY LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE IS HEREBY GIVEN THAT THE One Hundred and Thirty-sixth Annual General Meeting of Members will be held at the Registered Office of the Company, 4, Clive Row, Calcutta at 12 o'clock noon on Wednesday, 23rd August, 1961 for the following purposes:

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1961 and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.

(2) To declare dividends.

(3) To appoint a Director in place of one retiring.

(4) To appoint Auditors and to fix their remuneration.

(5) (*As Special Business*): To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution, viz:

"That pursuant to the provisions of Section 370 of the Companies Act, 1956 approval be and is hereby given to the making of such contributions which the Company has made or may make towards partnership capital in the firm styled 'Jardines Mills Agencies'; provided always that the net balance of partnership capital as contributed by the Company shall not at any time exceed Rupees thirty lakhs."

(6) (*As Special Business*): To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a special resolution, viz:

"(*a*) That the action of the Board in having undertaken on 29th May, 1961 to work under the Working Time Agreement of the Indian Jute Mills Association 6,417⅓ current loom hours per week on behalf of The Reliance Jute Mills Co., Ltd., (Managing Agents: Jardine Henderson, Ltd.) in consideration of a payment to be made by the said The Reliance Jute Mills Co. Ltd. on the basis of 25 Naye Paise per current loom hour, payment of which to be received by the Company within one month of the first working day of the week to which the hours worked relate, for a period of 17 weeks ending on 30th September, 1961 be and the same is hereby approved and confirmed.

(*b*) That the Board be and is hereby authorised to extend the foregoing arrangement for a further period not exceeding 14 weeks from the date of its expiry, viz. 30th September, 1961, provided that the rate of compensation to be received by the Company will provide a sum which is not less than any loss or, as the case may be, any additional loss which in the opinion of the Directors is likely to be incurred by the Company as a result of working the additional loom hours which are the subject of the said arrangement.

(*c*) That the authority previously conferred on the Board by special resolution adopted by the Company in general meeting on 4th July, 1958, whereby the Board was empowered to purchase current loom hours from The Reliance Jute Mills Company Limited pursuant to the Working Time Agreement of the Indian Jute Mills Association on the basis set out in the said special resolution be and the same is hereby confirmed."

Notice is also given that the Share Transfer Books of the Company will be closed from the 9th August to the 23rd August, 1961 both days inclusive.

A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. FORDWOOD,
Secretary,
Managing Agents.

4, CLIVE ROW,
CALCUTTA, 1, *7th July*, 1961.

Note:—Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all Members.

THE PULLANGODE RUBBER AND PRODUCE COMPANY LIMITED

(*Incorporated in India*)

NOTICE IS HEREBY GIVEN THAT THE Eighteenth Annual General Meeting of the Shareholders will be held at 11 a.m. on Monday, the 28th August, 1961 at the Registered Office of the Company at Calvetty, Fort Cochin, to transact the following business:—

1. To receive and adopt the audited Balance Sheet and Accounts for the year ended 31st March 1961 and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To elect a Director.
4. To appoint Auditors.
5. To transact the following special business, namely:

To consider and if thought fit to pass the following resolution with or without modification:—

"Resolved that with effect from 1st April 1961 until otherwise decided by the Company in General Meeting, every Director shall be paid, subject to a maximum sitting fee of Rs. 1,000 per year, a sitting fee of Rs. 200 per meeting of the Board or any Committee of the Board attended by him; and further that all out-of-pocket expenses incurred for attending meetings of the Board or Committee shall be reimbursed to the Directors."

The explanatory Statement relating to item No. 5 above in terms of Section 173 of the Companies Act, 1956 has been forwarded to the members of the Company along with the Notice.

The Transfer Books and Register of Members of the Company will remain closed from 12th August, 1961 to 30th August, 1961 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to attend and vote instead of himself, subject to the provisions of Section 176 of the Companies Act, 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

By Order of the Board,
THE PULLANGODE RUBBER & PRODUCE CO. LTD.,
per Pro. ASPINWALL & CO., LTD.,
V. P. THOMAS,
Managing Agents.

FORT COCHIN, *28th July*, 1961.

Note: The dividend, if declared, will be paid on or after the 15th September, 1961 to those shareholders whose names appear in the Company's books on the 30th August 1961 or to their Mandatees.

THE NEW INDIA ASSURANCE COMPANY LIMITED, BOMBAY

CHAIRMAN'S SPEECH—A SUMMARY

PRESIDING over the Forty-second Annual General Meeting of the Shareholders of the "New India," the Chairman, Mr. A. D. Shroff, stated that the year 1960 continued to be a difficult year for general insurers. He expressed the hope that 1961 would be a turning point.

Commenting on the recent legislation requiring insurers in India to make fixed obligatory cessions upto a maximum of 30 per cent, to approved reinsurers in India with effect from 1st April, 1961, Mr. Shroff said that it was not likely to fulfil its objectives of correcting the foreign exchange drain and of broad-basing the reinsurance market in India. Its only effect will be to impose a levy upon insurers in India by diverting a part of their profits to the Government-controlled unit, without benefiting either the national economy or the Insurance Industry. Further, it was bound to weaken the medium-sized and smaller units.

Mr. Shroff outlined the circumstances which compelled the "New India" to withdraw from the revised Aviation Insurance Scheme with effect from 1st April 1960.

He stated that the biggest bane of insurance in India was the evil of rebating and the consequent frittering away of resources by insurers. In this connection, Mr. Shroff referred to the Scheme of Non-Diversion and Mutual Assistance evolved by a sizable group of Indian Insurers, including "New India," for a period of three years, to begin with. This Scheme was meant to provide a bridge-up from the present unfortunate position of distrust and confusion and to help insurers in practising correct standards of conduct, and putting the industry on a sound and healthy basis. He appealed to all Indian insurance companies to join this laudable Scheme. He appealed to those who could not do so, for some reason or other, at least to observe the spirit of the Non-Diversion Scheme. He hoped that this would lead, ultimately, to group working, so very essential in these days of rationalisation and integration. He stressed that the Non-Diversion Agreement was meant to help insurers to switch over their business from higher commission terms to normal without the fear of any insurer who had subscribed to the Scheme diverting such business by the offer of higher than normal terms. He emphasised that it was erroneous to argue that the Scheme helped one against the other—it helped all.

Referring to fire rates, Mr. Shroff expressed gratification over the fact that the important question of suitable adjustment of rates, region-wise and industry-wise, was under the active consideration of the Tariff Committee. He said that rates charged should be equated with the actual experience, and that relief be given where it was warranted. He referred to the rapidly growing market for motor insurance, and made a pointed reference to the high claims ratio in this branch. Mr. Shroff, once again, referred to the rough handling of cargo and the very high incidence of theft and pilferage at various ports and railway stations and Government's indifferent attitude to the same.

(*This does not purport to be a record of the proceedings of the meeting.*)

THE MYSORE PAPER MILLS, LIMITED

BANGALORE-9.

NOTICE

NOTICE IS HEREBY GIVEN THAT IN connection with the Twenty-sixth Ordinary General Meeting of the Shareholders of the Company to be held on Friday the 29th September 1961 and also in connection with the issue of 10 lakhs additional shares of Rs. 10 each with a premium of Rs. 2 per share to the existing shareholders, the Share Transfer Books of the Company will be closed from 1st September to 29th September 1961 (both days inclusive). Offer of additional shares will be made to those shareholders only whose names appear on the Register of Members on 31st August 1961.

By Order of the Board,

BANGALORE-9.

MONEY AGAIN COMFORTABLE

(From Our Own Correspondent)

BOMBAY, *26th July*

After a brief spell of tightness which lasted for two days—Monday and Tuesday the 24th and 25th inst.—following the opening of the list for the Central Government's new loans, conditions in the short-term money market in Bombay turned distinctly comfortable today. As a result of the heavy fall in surplus funds with the banks occasioned by the withdrawal of short-notice deposits by the L.I.C. and other investors for investment in the new loans, the inter-bank call money rate had spurted to 4 per cent from 1½ per cent at which level it stood on Saturday the 22nd inst. Today, the market opened on an easy note and renewals were done at 3¾ per cent. The rate gradually declined to 3 per cent at the time of closing, with tenders over. Other money rates have remained unchanged as under:

	Per cent
Notice money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

No tenders for 91 days' Government of India Treasury Bills were invited during the week under review, apparently to facilitate the subscription to the new Central loans. The sale of these Treasury Bills will be resumed on 31st July. 91-day intermediate Treasury Bills sold from the 19th inst. to the 22nd inst. aggregated Rs. 150 lakhs.

A contraction of Rs. 26.03 crores in notes in circulation is disclosed by the statement of the Reserve Bank of India for the week-ended 21st July 1961, as compared with the previous week. As the notes held in the Banking Department also have gone down by Rs. 1.80 crore, the total notes issued have dwindled by Rs. 27.83 crores. Foreign assets are unchanged at Rs. 93.01 crores, but as the balances held abroad, have receded by Rs. 1.42 crore, the total foreign assets are lower by that amount at Rs. 101.48 crores. Deposits of banks with the Reserve Bank have risen by Rs. 7.38 crores to Rs. 103.46 crores. Deposits of other Governments as well as of Central Government have gone up by Rs. 17.99 crores and Rs. 3.18 crores respectively. There is a big rise of Rs. 35.43 crores in investments held on the assets side of the Banking Department. Other loans and advances have fallen by Rs. 3.91 crores, of which Rs. 2.41 crores represent repayment of loans against usance bills by banks. The outstanding of such loans are now no more than Rs. 1 crore.

The statement of affairs of the Scheduled Banks for the week-ended 14th July 1961 shows a drop of Rs. 6.79 crores in demand deposits and a rise of Rs. 12.05 in time deposits. The deposits of the State Bank of India improved, albeit slightly, by Rs. 51 lakhs to Rs. 532.35 crores. The borrowings of banks from the Reserve Bank of India fell by Rs. 4.59 crores, of which Rs. 3.12 crores were against usance bills. Their borrowings from the State Bank, however, went up by Rs. 1.00 crore in demand variety and Rs. 50 lakhs in time variety. Advances and bill discounted (bank credit) have shrunk by Rs. 9.36 crores to Rs. 1,258.58 crores; a year ago they were of the order of Rs. 1,123.59 crores. The advances of the State Bank also declined by Rs. 1.82 crore. Investment of the Scheduled Banks, as a whole, improved by Rs. 3.51 crores, of which the share of the State Bank was Rs. 2.05 crores.

In subscription lists for the Government of India loans, namely, a further tranche of the existing 3¾ per cent. Bond 1969 at Rs. 98.40 per Rs. 100 (nominal) and 4 per cent 1981 at Rs. 98.50 per Rs. 100 (nominal) were opened on Monday the 24th inst. These issues, it is stated, had a good response from institutional investors and the list was closed today at 12-30 p.m. A Press *communique* issued by the Reserve Bank today merely said that the lists were closed "as the notified amount has been fully subscribed." No details were available at the time of writing.

The impact of the flotation of new loans was clearly felt by the gilt-edged market. The prices of several securities in the Central loans section went down. Thus, the 3 per cent Conversion loan was marked down by 50 nP to Rs. 72. 4 per cent 1979 slipped by 50 nP to Rs. 99.50. 4 per cent 1980 by 40 nP to Rs. 99.50. 4 per cent 1973 eased by 15 nP to Rs. 100.25. 3¾ per cent loans also sought lower levels. 3¾ per cent 1968 5th National Plan Bonds declined by 20 nP to Rs. 100.30, 3¾ per cent 1974, 1967 and 1969 each lost 10 nP to stand at Rs. 99.60, Rs. 100.40 and Rs. 98.40. 3 per cent 1970-75 first Development loan receded by 10 nP to Rs. 90.95. Some Central loans, however, were marked up. For example, 3 per cent 1966-68 Funding loan gathered 20 nP to Rs. 96.20; 2¾ per cent 1962 put on 10 nP to Rs. 99 and 3 per cent 1963-65 gained 5 nP to Rs. 98.75. All these loans, it will be noted, are short-dated. The prices of some of the short-dated issues in the States section also showed improvement.

In the foreign exchange section, the rupee improved further in relation to the U.S. dollar largely in sympathy with the pound sterling. Banks' selling and buying rates for ready T.T. on New York were Rs. 480 and Rs. 476.50, respectively, as compared with Rs. 480.50 and Rs. 477 a week ago. In the New York market, the pound sterling recovered some ground with spot market but slipped in the forward section in relation to the dollar. The latest available rates are: 276.920-276.950 cents per £ for spot and 276.170-276.200 for three months' forward. As compared with the previous week, the pound gained 0.37 cent in the spot, but lost 0.15 cent in the forward.

BULLION FIRM

(From Our Own Correspondent)

BOMBAY, *26th July*

The bullion market ruled firm during the major part of the week under review. The firmness was engendered principally by good buying support from Calcutta where forward trading in both gold and silver remained suspended following the issue of an *ad-interim* injunction by the High Court against the activities of the Calcutta Bullion Association. There was also buying by spot houses. Consequently, prices registered an improvement. The net rise over the week would have been more marked but for intermittent profit-taking at higher levels.

The average daily offtake of gold during the week was higher than in the previous week, being 4,350 tolas, as against 3,800 tolas, while arrivals were lower at 3,000 tolas, as against 4,600 tolas. The reverse was the position in silver; the daily average offtake was slightly lower at 8 bars (9 bars last week), whereas arrivals were larger at 55 bars (41 bars). The floating stocks are reported to be around 23,000 tolas of gold and 900 bars of silver.

Adjustment rates fixed today were Rs. 119.70 per 10 grams of gold and Rs. 200.85 per kilogram of silver. The corresponding rates for Wednesday last week were Rs. 119.15 and Rs. 200.00, respectively.

A plea for import of gold was put forward by Mr. Chandulal Kasturchand, President of the Bombay Bullion Association, in the course of his speech at the twelfth annual general meeting of the Association held on Thursday the 20th inst. Mr. Kasturchand suggested that such imports might be subjected to some regulation or imposition of heavy duty. He also wanted the Government to sell in the market the gold obtained from the Mysore gold mines. He drew attention to the increase in the demand for gold as a result of plans and the consequent inflationary spiral which made the people consider gold and silver as the safest hedge against it. Further, Mr. Kasturchand urged for the removal of restrictions on futures trading in bullion. In support of this plea, he said:

"Because of unilateral control on forward bullion trading in Bombay only and the existence of free markets in other centres in the country, the volume of business has increased in these centres to the detriment of the Bombay market. Owing to these artificial bounds, business in the local market has gone down. It is not necessary to have additional measures, since the by-laws of the Association are adequate to curb any unhealthy trends in speculation. Besides, the official measures have not been able to stop the upward tendency in bullion values, inasmuch as prices are moving up because of the forces of supply and demand."

Whatever be the force of contention of Mr. Kasturchand, there are some in this country who feel that there is no need at all for any futures trading in gold and silver either in Bombay or elsewhere.

The West Bengal High Court, as already stated, has issued an *ad-interim* injunction temporarily suspending the operations of the Calcutta Bullion Association with effect from the 24th inst. The issue of injunction followed an application by a member of the Association, challenging the proceedings of the extraordinary meeting held on 20th July. At this meeting, the Association adopted certain amendments providing for deposit of margins. It was contended by the member that, since the Association's by-laws could not oblige any seller to give deliveries and since transactions were often squared up by payment of differences in the price, the futures market was highly speculative to that extent.

In gold, the *Bhadrapad* (25th September) settlement evoked very good enquiries and moved up from Rs. 119.35 to Rs. 120.10 on Saturday. At this level, profit-taking set in and the settlement declined to Rs. 119.70 on Monday. It recovered again to Rs. 119.90 today before finishing at Rs. 119.85. The net rise over the week was 45 nP.

Ready gold continued to command a premium over the forward throughout the week, the actual premium rising from 5 nP last week-end to 15 nP today. The closing rate for the metal was Rs. 119.95, as against Rs. 119.40, the highest level touched being Rs. 120.70 on the 22nd inst.

The silver *Bhadrapad* (26th September) settlement began the week at Rs. 200.50, as against the previous close of Rs. 200.60, and advanced to touch Rs. 201.90 on Monday the 24th inst. After easing to Rs. 200.90 yesterday, the settlement recovered to Rs. 201.30 today before closing at Rs. 201.20. The net rise was 60 nP.

Ready silver was well supported and improved in the course of the week from Rs. 200 to Rs. 200.85; it had touched as high as Rs. 201.40 yesterday and the day preceding it. Today, the ready rate was below that for forward to the extent of 35 nP, as against the discount of 60 nP last week-end.

The world price of gold in the London bullion market rose further during the week, from $35.11½ to $35.13½ per fine ounce. Ready gold also increased from 251*s.* 11½*d.* to 252*s.* 2½*d.* Spot and forward silver, too, moved up, the former from 79½*d.* to 79¾*d.* and the latter from 80*d.* to 80⅛*d.* Silver in New York, however, continued unchanged at 91.375 cents.

LINSEED FIRM

(Messrs. A. Bradley and Co.)

CALCUTTA, *24th July*

Firm tone prevailed in the linseed market throughout the past week, but business was very restricted with both buyers and sellers pausing. Arrivals from upcountry were still meagre.

The oil market was dull with little activity from buyers, while sellers were generally reserved.

Ready July delivery was quoted at Rs. 30 per maund.

COTTON FUTURES EASY

(From Our Own Correspondent)

BOMBAY, *26th July*

Easy conditions prevailed in the cotton futures market during the week under review. Barring a slight improvement in the quotation for the maturing August contract following the fixations of the rates of tendering differences by a special committee appointed by the E.I.C.A. on the 24th inst., futures values generally declined. Reports of favourable weather and the news that mills carried a record stock of 1.52 million bales as the end of May, touched off a wave of selling which resulted in a sharp break in futures prices. The August contract, however, recovered partially towards the close of the week, thanks to buying prompted by the tendering differences which were bullishly interpreted. The March 1962 contract continued to be depressed. The following table indicates the trend of price of the contracts during the week:

(In rupees per three quintals)

	26-7-61	*High*	*Low*	19-7-61
I.C.C. August ...	578.50	580.50	570	578.50
I.C.C. March ...	591.50	592.50	588.25	595.50

Weather and crop conditions are reported to be satisfactory so far. The crop in the Punjab is said to be progressing well. Sowings in Khandesh, Vijay, Cutch and North Gujerat areas are satisfactory. The easiness of the future market also affected activity in the spot market where business was restricted. However, mills showed some interest in such popular varieties is Vijay, Digvijay, Surti, L. 147, Co2, Laxmi, Kalyan and Khandesh. Efforts to pursuade the Government to issue an export quota for Bengal *Deshi* and ½" cotton continue and operators are not without hope that the quota might materialise before the close of the current season.

Demand for foreign cotton was subdued. Early in the week some interest was evinced for East African cotton but that too tapered off towards the close of the week.

The following is are the latest available spot quotations (in rupees per candy of 784 lbs.) from Sewri: Hubli Laxmi 930; Amaravati 1,000; Digvijay 930; Gadag Laxmi 910; Kalyan 810; Surti 940 and Moglai Jarilla 760.

In the Karachi cotton futures market, the July 1961 contract, which was of late neglected, attracted support and spurted from Rs. 58 last week-end to Rs. 73.90 prior to expiry on the 25th inst. The January contract recorded a sympathetic rise from Rs. 72.55 to Rs. 73.30.

Futures trading in cotton continued to be suspended in Alexandria during the week under review also. It has been announced that the Egyptian Cotton Commission will henceforth fix the official export selling price of the 1961-62 and also of the balance of the 1960-61 seasons every Sunday. These prices, which will be in force during the week, will be calculated after taking into account processing charges and all expenses to convert to c.i.f. terms without any commission or profit to exporters. Sales to East European countries, will be limited to 60 per cent of the total sales.

All qualities for export in future, as from the new regulations, have to be bought from E.C.C. at prices fixed every week; but shippers will have the choice to buy in the spot market. If the cotton is bought at a premium, it must be immediately sold to the E.C.C. at the official buying price and bought back at the export selling price. In respect of spot market purchases by shippers, the latter have to sell to the E.C.C. 25 per cent more cotton than what they intend to purchase from it for export. This extra 25 per cent has to be sold to the Commission within two months for all contract running through November. For contracts booked for December and onwards only one month will be allowed to make good the extra 25 per cent. The extra cotton has to be of about the same quality as the original purchases.

The changes that have been made in the Egyptian cotton policy are reported to be having wide repercussions in Sudan, traditionally a close competitor of Egypt, which had hitherto left its cotton trade in comparative freedom. Growing concern is being expressed by the Sudanese authorities at the developments in Alexandria and they are said to be considering switch over to a system of direct sales, by passing the existing private channels of exports.

Barring the July contract of both the American and American type contracts which improved as a reaction to last week's fall, Liverpool cotton futures market ruled subdued during the week. Trading was mainly characterised by inter-month switchings. Fresh business was negligible. Sudan cotton futures in Alexandria were subdued, thanks to lower advises from Khartoum. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: July 23.60; October 24.30; December 24.70; March 25.15.

American cotton mixed growth contract: July 24.00; October 24.75; December 25.10; March 25.55.

Sudan: July, September, November 31.25.

Small turnover and narrow price movements characterised trading in the New York cotton futures market during the week under review. Both domestic mill interest and foreign export demand were limited. Futures values ruled steady. Present indications are that the coming crop will be a good one. Weather has been favourable in most of the cotton growing areas. Insect damages is said to be comparatively less than in previous years. If the present conditions were to continue a crop of 14.5 million bales is expected. Of these, not more than 6 million bales are likely to enter the loan because the loan rate is not considered attractive.

The following are the latest available quotation from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	25-7-61	18-7-61	11-7-61
New York Spot ...	35.00	34.85	34.70
New Orleans Spot ...	32.75	32.50	32.25
October	34.48	34.44	34.25
December	34.90	34.97	—

YARNS DULL

(From Our Own Correspondent)

BOMBAY, *26th July*

Dull conditions prevailed in the yarn market during the week under review. Operators were not inclined to extend their commitments either way, pending the emergence of a clear picture regarding offtake from consuming centres, as well as arrivals of imported art silk yarn. Business put through was, therefore, restricted, with values moving narrowly. It was reported that about Rs. 50 lakhs worth of art silk yarn imported from Italy by the State Trading Corporation had arrived in the country which would shortly be distributed to powerlooms by the Rayon Mills' Commercial Corporation, appointed the authorised distributors of yarn. It was also reported that the S.T.C. had completed negotiations with Italian suppliers for a further quantity worth Rs. 50 lakhs for early shipment and that orders for a still further quantity valued at Rs. 1 crore would be placed later. These reports did not have much effect. Nor were the assurances reported to have been given to the art silk weaving interests by the Textile Commissioner of any avail. The assurances are:

Avoidable procedural delays would be eliminated to expedite the issue of import licences for art silk yarn under the export promotion scheme.

The grant of quota of indigenous art silk yarn against the surrender of 30 per cent of import licences for pulp would be finalised soon.

Apropos the weavers' suggestion to make available staple fibre yarn at controlled rates, the Textile Commissioner is understood to have suggested that the weavers should, through their association, approach the Indian Cotton Mills Federation in the first instance and ask the Federation to deliver to it the material at controlled rates and then distribute it among the members. This would avoid the need for statutory distribution control.

Cupressa Bemberg yarn (60 x 1) August delivery encountered selling and moved down from Rs. 2.835 to Rs. 2.820. Spot Cupressa was dull at Rs. 2.866. 40 x 2 JP August contract receded from Rs. 3.180 to Rs. 3.155. Among imported art silk yarns, 120 Japan dropped Rs. 2 to Rs. 2.030. 150 Japan, however, met with special support and gained Rs. 8 to Rs. 2.149. Staple fibre yarn (40 x 2) August delivery was well favoured and improved by Rs. 8 to Rs. 967. Cotton yarns were more or less maintained at the last week's levels.

SEEDS EASY

(From Our Own Correspondent)

BOMBAY, *26th July*

Oilseeds ruled distinctly easy during the week under review. The easiness was due to heavy bull liquidation on reports of favourable weather conditions in several oilseeds growing regions. There was, no doubt, some recovery towards the close, but the recovery was not marked enough to make up for the earlier losses, so that today's closing rates were much lower than those prevailing at the end of the last week. Groundnuts suffered a pronounced setback as operators feared that the current season's crop would be a bumper one, in view of larger acreage sown to the crop, particularly in the Saurashtra area. *Vanaspati* manufacturers and crushers already holding sufficient stocks showed very little interest in fresh business, as they expected a further decline in prices. Groundnut oilcakes, which were firm last week, also turned quiet, as a result of reduced U.K. purchases. Castorseeds were subjected to heavy selling thanks to bleak prospects of immediate revival of castor oil exports to the U.S., the U.K. and Communist countries, following the renewed Brazilian competition. The fear of heavy tenders against the maturing contract was another bearish factor. Linseeds tended to move down, owing to profit-taking at high levels touched in the recent past. Better arrivals from upcountry centres and easy advices from North Indian rapeseed markets also acted as dampers. Cottonseed futures were subdued in sympathy, though staged a recovery towards the close. Spot cottonseeds attracted some buying. Sesame ruled listless in the absence of fresh support.

Groundnuts January 1962 contract fell from Rs. 222.50 to Rs. 220.10 before closing at Rs. 221.75. The net loss over the week was 75 nP. Nizam bold lost a rupee to Rs. 54. Both Coromandels and Khandesh quality shed a like amount to Rs. 54.25. Oil ex-mill dropped 45 nP to Rs. 22.50 and oil ex-mill 30 nP to Rs. 22.50. Oil January 1962 contract eased by 25 nP to Rs. 18.55.

Castorseed March 1962 contract was marked down by Rs. 3.38 to Rs. 170.62. September 1961 contract receded by Rs. 3.25 to Rs. 171.12. Ready Madras declined by 62 nP to Rs. 34.25. Oil B.S.S. was subdued at Rs. 15.60, as against Rs. 15.80. Oil commercial shed 5 nP to Rs. 14.55.

Among linseeds, September 1961 contract softened by 18 nP to Rs. 40.19. March 1962 contract lost 7 nP to Rs. 38.31. Bold ready declined by 50 nP to Rs. 39.62. Linseed oil eased by 10 nP to Rs. 16.90.

Among cottonseeds, January 1962 contract lost 50 nP to Rs. 92.75. September contract, however, put on 25 nP to Rs. 95.75. Both Berars and Nonwhites picked up 18 nP to Rs. 19.30.

Sesame bold were hammered down from Rs. 370 to Rs. 350 (per 250 kgs.). Sesame oil declined by Re. 1.37 to Rs. 26.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	26-7-1961	19-7-1961	12-7-1961
	Rs.	Rs.	Rs.
Groundnut			
January 1962	221.75	222.50	221.50
Nizam bold	54.00	55.00	55.50
Coromandel ready	54.25	55.25	55.50
Khandesh quality	54.25	55.25	55.50
Oil ex-mill ready*	22.50	22.95	22.75
Railway receipts*	22.50	22.80	22.50
Oil January 1962	18.55	18.75	18.95
Castorseed			
September 1961	171.12	174.87	175.00
March 1962	170.62	174.00	175.87
Ready Madras	34.25	34.87	35.12
Ready Kanpur	33.25	33.62	33.75
Oil B.S.S.†	15.80	15.80	16.10
Oil commercial†	14.50	14.55	14.75
Linseed			
September 1961	40.19	40.37	40.12
March 1962	38.31	38.37	38.00
Bold ready	39.62	40.12	39.50
Oil ready†	16.90	17.00	17.00
Cottonseed			
September 1961	95.75	95.25	95.00
January 1962	92.75	93.25	92.50
Niger seed	42.00	41.62	42.00
Kardi seed	28.75	27.50	27.00

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

QUALITY TEAS FIRM

(From Our Own Correspondent)

CALCUTTA, *25th July*

With the U.K. buyers keenly bidding, steadier conditions were in evidence in the export sales held yesterday. Arrivals of new teas increased further during the week, and, if the fair weather continues, shipments would be maintained at an increasing level. During the week, teas claimed a good portion of the liner space offering, and the shipments to the United Kingdom were the largest of all destinations. Within a short time of opening of booking, several U.K. liners were declared fully booked.

The offerings during the export sales held yesterday totalled 31,565 chests. On strong demand, steadier conditions were in evidence. Prices of quality teas added handsome gains. Keen competition was offered to all orthodox descriptions, and the medium and plainer teas met with special attention. The highest gain in price was recorded by B.O.Ps B.Ps of the same category were full firm, but fannings recorded a sagging tendency. Legg-cut teas were in demand at higher rates. Stylish whole leaf grades were firm, but the poorer sorts eased. Tippy teas shared the general trend and gained in prices. Flavoury Darjeelings were in keener demand, while other sorts in this category eased, leading to withdrawals. Better and medium C.T.Cs met with good demand at lower rates, but the poorer teas were about steady. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 7.30 to Rs. 8.20, best Assam C.T.C. B.P. Rs. 7.40 to Rs. 7.60, medium Assam C.T.C. fannings Rs. 6.40 to Rs. 6.80, medium Assam C.T.C. B.P. Rs. 6.20 to Rs. 6.60, clean black pekoe Rs. 5.25 to Rs. 5.35, plain B.P. Rs. 4.85 to Rs. 4.95, and plain fannings Rs. 4.65 to Rs. 4.75.

In the internal sale held last week, dusts on offer amounted to 13,095 packages, which met with strong and general demand. Medium C.T.Cs were the strongest of all features, and, although the opening showed an irregular trend, bidding became keener as the sales progressed and a gain of 30 to 40 nP on balance was struck. Despite the irregular trend in the good C.T.Cs, the smaller varieties were steady. Keen competition was in evidence for the orthodox teas, and the smaller and brighter teas in this category were pushed to the forefront. Although the few thin plain teas were irregular, legg-cut teas registered some advance, as quality was better. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.80 to Rs. 7.20, medium Assam C.T.C. dust Rs. 6.40 to Rs. 6.70, legg-cut dust Rs. 4.80 to Rs. 5.50, medium Assam dust Rs. 4.60 to Rs. 5.30, and plain orthodox dust Rs. 4.45 to Rs. 4.70.

Leaf on offer amounting to 67 packages exhibited an irregular trend.

NEW JUTE CROP ARRIVALS INSIGNIFICANT

(From Our Own Correspondent)

CALCUTTA, *25th July*

Thanks to reluctance of buyers to support higher levels, both jute goods and raw jute recorded a small decline as the week progressed. Earlier, however, fair business was done in goods in general and hessians in particular. Exporters evinced keen interest in sacking goods also for a time. This was the cause for the earlier rise in prices. In accordance with the previous arrangements, the member-mills of the Indian Jute Mills' Association have closed down for one week commencing from the 24th inst. A week's closure in the coming month is now certain. In the course of discussions with officials at New Delhi, the representatives of the I.J.M.A. have explained the present critical position in fibre justifying their proposal to close down for a week in August also. However, no final decision has been taken, but this would be done when the I.J.M.A. representatives would meet the Union Labour Minister here shortly. It is expected that the reduction in production in August would be brought about by either block closure for one week or by sealing of more looms. Mr. G. L. Nanda, Union Labour Minister, stated here last week that there must be a definite evidence of fibre shortage before the Government agreed for a third closure. He also said that, if there was no raw material, machines could not move and that, in such circumstances, workers gained nothing by resisting closure. He, however, hoped that a closure could be avoided, as new fibre had started moving now. Trade circles said that, although new crop movements had commenced, quantities were still insignificant. It was on account of this factor that the I.J.M.A. issued only small quotas of the new crop fibre. Otherwise, prices would have risen on covering demand by mills.

Old crop offers were also insignificant. Buyers could meet with offers for small lots only. A difficulty with regard to movement of raw jute continues to be inadequate cargo and steamship companies are naturally disinclined to move the barges not fully loaded. If these companies can only pool all the cargo, movement can be expedited, as it is reported that there are several half-loaded barges awaiting more cargo. Meanwhile, it is good news that movement of new Pakistan fibre has increased. Arrivals for baling in Narayanganj are now about 30,000 maunds a day, as against 25,000 maunds a day a week ago. However, prices were firm for a time at higher levels, but, as the week progressed, there was an easing tendency. Export lightnings were quoting at Rs. 320 per bale a week ago but they have since moved down to Rs. 315. It is reported that, encouraged by the high prices realised in the last season, Pakistan cultivators are showing great propensity to stock their produce. They can afford to do this, since their financial resources have improved. Trade circles consider it significant that the Pakistan Government has now revised the forecast of the new crop to 7 million bales, as against 7.4 million bales originally estimated. The trade estimate of the Pakistan crop is even lower at 6.5 million bales. These are factors which give steadiness to the Pakistan market, despite easiness in the supply position. With the rise in Pakistan prices, the moisture content of new arrivals has also increased. Considering the course of prices in both India and Pakistan, it is apparent that an outright decline in fibre prices and any possibility of fibre changing hands at price levels of this time last year are ruled out.

The rapidly falling trend in burlap consumption in the United States confirms the belief that bulk handling methods in that country have received an impetus, thanks to high prices here. Consumption in June was as low as 55 million yards, and it was noted that, in the last six months, the consumption graph had progressively moved down month after month. Consumption in January was 73 million yards. The figure was unchanged in February. In March, it moved down 70 million yards, in April to 59 million yards, in May to 57 million yards and in June to 55 million yards. With the result, the monthly average has been 65 million yards, as compared with 74 million yards for the corresponding previous period. U.S. burlap stocks at the end of June increased by 2 million yards to 220 million yards. Note was taken that piecegoods delivered during June declined by 11 million yards and bag cut-up declined by 5 million yards as compared with a year ago. Based on this trend, trade circles questioned a report according to which good business in hessian had been done with the U.S. in the last week. The fact was that only small genuine business took place, but good business was done in the non-standard makes. Usually, at this time of the year, U.S. buyers begin increasing their purchases for replenishment of their stocks. On expectation that prices in the wake of the forecast of a bumper crop in fibre would decline, they have postponed entering into large commitments. However, judging from current trends, it seems unlikly that prices would show a marked decline in the near future. Induced by this expectation, speculative business is running high, and this is also one of the reasons for the present hardening trend. It should, however, be noted that prices of goods in all manufacturing countries have risen, and there is no point in emphasising that Calcutta prices should alone move down. A lot depends on the price trend of the Pakistan fibre, and it appears that a marked decline in fibre prices in Pakistan is difficult. Expectations that Argentina would enter the market for covering against its requirements for the next three months also encouraged business in the local bazar. The possibility that mills would close down for one week each in August and September, too, contributed to bullishness.

In the goods section, a firm trend was maintained on Tuesday last, and covering business in near and ready delivery goods was a feature. Shipper inquiries could not be finalised, in view of the wide fluctuation in prices and uncertainty regarding forward rates. At higher levels, bulls preferred to book profit, and thus ready B. twills closed at Rs. 167.00 which was the same as the over-night closing. Ready hessian 40" 10 oz. was subjected to wide fluctuation, the price closing at Rs. 56.25, as against Rs. 56.50 on the previous day. On Tuesday, the feature was Australian interest in cornsacks and subsequently business was done for 1,500 bales against August shipment. Further, there was keener activity in the futures market, and prices fluctuated widely. B. twills ready closed firm at Rs. 166.50 and ready hessian 40" 10 oz. at Rs. 55.50. Burlap prices in New York were reported firm at this stage, and sellers there put to good use the Calcutta report that mills were seeking block closure in August and September also. The 7½ oz. hessian spot hardened to 10.70 cents a yard and the 10 oz. hessian to 13.70 cents. However, on Thursday, business passing at higher levels was little and this caused B. twills to ease to Rs. 164 and hessian 40" 10 oz. to Rs. 52.25. With no business taking place, conditions were easier on Friday, when B. twills fell to Rs. 161 and hessian 40" 10 oz. to Rs. 54.25. Over the week-end, quiet conditions were in evidence, and B. twills eased to Rs. 160.50 and hessian 40" 10 oz. to Rs. 52.90. Earlier yesterday, prices gained, but selling

pressure in the futures market caused prices to fall. Thus ready hessian 40" 10 oz. closed at Rs. 53.00 and ready B. twills at Rs. 162.00.

During the week, there had been more offers of new crop, although the quota was insignificant. This caused a decline in prices for old crop as would be evident from the following table of opening and closing quotations:

(In Rs. per maund, for delivery within 15 days)

	Opening	Closing	Decline
Daisee bottoms	56.50	53.00	3.50
Northern bottoms	54.00	51.00	3.00
Assam bottoms	54.50	51.50	3.00

METALS EASY

(From Our Own Correspondent)

CALCUTTA, 25th July

Although after initial dullness prices on the London Metal Exchange gained and closed higher on balance during the week under review, the local metal market exhibited signs of easiness attributed to lack of support. The news that the International Monetary Fund had granted a standby credit foreign exchange to India was encouragingly noted, as this would ensure the essential imports, including non-ferrous metals, for the rest of the current calendar year. Spot copper opened at £228¼ a ton in London and, after sagging to £227½, closed higher on balance at £230¼. The earlier easiness was due to expectations that the troubled labour situation in Kennecott would not lead to loss of production. Also, demand from the Continent was slack, due to summer holidays there. Locally, tightness in the copper scrap market was more acute, and that accounted for berry scrap rising from Rs. 455.50 to Rs. 460.75 per 100 kgs. and utensil scrap from Rs. 431.25 to Rs. 434.00.

In London, tin opened at £908 a ton and soon eased to £904, in consonance with Singapore advices. The Singapore price recovered, and the London value was pushed up to £914. The political developments in Singapore and its Chief Minister's allegation against Britain assisted the recovery. Paucity of demand explained the fall in the Calcutta rate from Rs. 1,648.75 to Rs. 1,639.75 per quintal. Virgin lead was unchanged here at Rs. 135.75. In London, the price eased from £65½ to £65¼ a ton. Local demand for electrolytic zinc was slack and the price, therefore, eased from Rs. 1,648.75 to Rs. 1,639.75. In London, zinc opened at £77¼ a ton and, after being lower at £77½, recovered to £77¾.

'KHARIF' CROP PROSPECTS BRIGHT

(From Our Own Correspondent)

HAPUR, 24th July

Steady conditions were witnessed in the foodgrains market during the week under review. Arrivals of *rabi* grains were small; the entire arrivals were being lifted by consumers and petty stockists. *Kharif* crop prospects were bright, thanks to timely rains and clear weather later, but rains were now needed. According to Government Statistics, wheat production in the country has been an all-time record in 1960-61. The area covered by wheat and the production of this cereal were 31,751,000 acres and 10,648,000 tons, respectively.

Wheat at Hapur ruled quietly steady to be quoted on Monday at Rs. 14.75 to Rs. 15 a maund for average quality and Rs. 15.50 to Rs. 16.25 for better farm produce. Daily arrivals were poor at an average of 200 maunds and local stock was almost stationary around 25,000 maunds. Poor arrivals of wheat were due partly to rainy season but mostly to the tendency on the part of the producers to retain produce from the beginning of the season.

Coarse rice also recorded modest gains during the week on good demand in the face of poor arrivals. Week-end prices were:—*mainpuri sela* Rs. 23; *gainda kutcha* Rs. 22; *ramajwayan sela* Rs. 24.50; *rainunia sela* Rs. 25.50; *basmati sela* Rs. 29 to Rs. 31; superior Rs. 35 to Rs. 38 per maund.

Gram improved fractionally during the week on firm advices from the Punjab. Daily arrivals were poor, at an average of about 200 maunds and, due to good demand, local stocks ran down to 44,000 maunds. Barley was quiet, while *bejhar* superior registered a modest fall due to poor buying support. *Kharif* crops—maize and *bajra*, as well as fodder crops of *juwar* and *guwar*—were progressing under healthy conditions. But after one week's clear weather rains were now needed. *Juwar* and *guwar* declined further, as demand was dormant. Week-end prices (in rupees per maund) were:—gram Punjab 14 to 14.12; local 13.75; barley 10.75 to 11; *bejhar* 10.50 to 11.25; *juwar* 11 to 13; *guwar* 13 to 16; *bajra* 15; *maize* 11 to 12; *methi* 27 to 28; oats 12.25.

In pulses, peas continued to rule steady on good demand for *dal* from Madras side, but loading was not available. Arrivals were poor at an average of 200 maunds and local peas stock was put at 84,000 maunds. *Arhar dal* was also in request and arrivals at an average of 100 maunds were being lifted by grinders for *dal* and prices ruled quiet. Other pulses were almost stationary and week-end prices (in rupees per maund) were: Peas *dara* 11.50; *farm* 12 to 13.50; peas *dal* 13.25; gram *dal* 16.50; *arhar* 12.50 to 13; *arhar dal* 16.25; *urd* 21 to 22; *urd dal* 25; *moong* 20 to 25; *dal* 25 to 28; *massoor* 13.25 to 15; *massoor dal* 16.50.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, 24th July

Sugar ruled quietly depressed during the week, following cancellation of the sugar deal with Pakistan, coupled with slack demand due to rainy weather and satisfactory supply position. Exports of sugar to the U.S., however, were expected to commence soon. Week-end prices were Rs. 106.50 per bag and retail 97 nP per seer in open market, the controlled prices being Rs. 107.69 per bag and retail Re. 1.01 per seer.

Sugar was also depressed in the Muzaffarnagar market. It was reported that the factories had sold some new produce sugar at below controlled prices.

Erratic trend prevailed in the Kanpur market during the week. The trend was bearish in week-end, as new allotment sugar had reached local market. The latest price is Rs. 107.75 per bag.

Khandsari ruled steady during the week, as stocks with producers and traders were poor. Production from *galawat* was being continued and week-end prices were: *galawat* Rs. 27 to Rs. 31.50; non-crystal medium Rs. 32.50 to Rs. 33.50; superior Rs. 33.50 to Rs. 35.50; crystal Rs. 35.50 to Rs. 38.50; *boora* Rs. 35 to Rs. 37; *boora* from crystal Rs. 39 per maund.

Ready *gur* was steadier, thanks to good demand from consuming areas. Week-end offtake was three wagonloads to Rajasthan. Loading facilities to other areas were not available. Stocks left with trade were now poor at about 18,000 maunds. *Shakker* was in good demand, improved fractionally. Cane crop in fields had improved due to rains, but more rains are now badly needed. Week-end prices were:—selected dry *kotha* Rs. 17.25; *wet-dry* Rs. 15.50; *wet* Rs. 14.87; *shakker* Rs. 17.50 to Rs. 18.25 a maund.

Ready *gur* also improved fractionally in the Muzaffarnagar, thanks to brisk buying support from the consuming areas of Gujarat, Rajasthan, Madhya Pradesh and other areas of South. Week-end prices were:—*kotha* dry Rs. 19.50 to Rs. 20, *kotha* medium Rs. 18.25 to Rs. 19.50, *kotha* wet Rs. 14.50 to Rs. 15, *rusket* Rs. 6 to Rs. 8; *shakker dara* Rs. 17.75 to Rs. 19.75; *masala* Rs. 21.25 to Rs. 23.25.

In the futures section, trading in *gur ashad* came to a standstill in view of the proximity of delivery date. In all, 92 deliveries were offered by sellers against this delivery, of which some were settled at a penalty of 37 to 50 nP per maund and the rest would be taken by purchasers delivery date. *Fagun* delivery moved both ways earlier but eased sharply on the reported cancellation of sugar deal with Pakistan. It was quoted at Rs. 14.01, as against the week's opening of Rs. 14.14 and the lowest touched on Saturday was Rs. 13.95.

GOOD DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, 18th July

Sale No. 29: Approximately 590,000 kilograms were offered in Sale No. 29 held on Tuesday, the 18th inst. Quality from the Nilgiris showed a general improvement. A few lines from the lower elevations offered cleaner leaf but on the whole the standard was maintained. There was good general demand. Highgrowns offering improved quality were taken up at dearer rates whilst the remainder were irregular and generally sold around last rates. Mediums and good mediums were readily absorbed at about firm rates with the few improved teas selling well. Plain and low mediums were irregular and generally slightly easier. C.T.C. and C.T.C. types came, in for strong support at dearer rates. Black Leaf teas were strong and dearer. Whole leaf grades sold well with emphasis on Orange Pekoes.

Quotations were :	1961	1960
	Rs.	Rs.
Low mediums	4.45-4.60	3.53-3.75
Mediums	4.60-4.70	3.75-3.97
Good mediums	4.70-5.10	4.08-4.30
Nilgiri B.O.P.	Rs.	4.55-5.95

The average price realised in sale No. 29 was Rs. 4.68 per kilo, as against Rs. 4.67 a week ago and Rs. 3.85 in the corresponding sale last year.

Dust Sale No. 29: Offerings amounted to 178,000 kilograms in Dust Sale No. 29 held on Thursday, the 20th inst. Quality was fully maintained. There was good general demand. Useful highgrowns sold well at dearer rates whilst the lesser sorts came to an irregular market. Good mediums and mediums continued to sell well at last levels. Low mediums and plainest types were fully firm with those offering cleaner appearance attracting more attention. C.T.C. and legg-cut teas came to a dearer market and registered gains of 5.15 nP per kilo.

The average price realised in dust Sale No. 29 was Rs. 4.64 per kilo, as compared with Rs. 4.62 a week ago and Rs. 3.70 in the corresponding sale last year.

Export Quota: The market is still nominally quoted at 2½ nP per kilo, at which rate there are sellers. There is, however, no quotation for buyers at present.

Colombo: 6¾ million pounds were offered this week. The market opened to less demand and prices were often lower despite improved quality. Best South-West Highgrowns were about steady but the lesser sorts and mediums were up to 10 cents easier, except where quality was much improved. Lowgrowns declined 3.5 cents per lb.

London: North Indian and other growths: There was good general demand with prices generally firm at last rates.

Ceylon and South Indians: In Tuesday's sale there were 33,199 packages on offer, of which 8,281 packages came from South India. There was good demand but the market continued irregular and tended easier.

As we to to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No. 30:* 308,000 kilograms. Fair demand. Low mediums and mediums about steady. Good mediums slightly easier except where quality improved. High growns dearer following quality."

CLEARANCE IN KIPS SMALL

(From Our Own Correspondent)

MADRAS, 24th July

Arrivals of E.I. tanned hides and calves were of moderate volume and clearances small during the week under review. Export trading was slow and overseas dressers were keeping out of the market, buying selectively and in small quantities. A few sales of tanned cow calf were reported for shipment to the U.K. and the Continent. Buff calf was neglected, but buff hides ruled steady. Demand for inferior grade cow hides was slack, especially for light weights.

Market for tanned goat skins was dull and prices were easy. Prime sheep skins ruled steady and other classes unchanged.

BANKING

(Concluded from page 208)

the House of Representatives, written jointly by Secretary of State Rusk and Secretary of Treasury Dillon. The letter said:

"Continuance of economic and military assistance on the scale proposed by the President is compelled by our commitment to our own freedom and to the building of a decent world order. With respect to economic assistance, nations old and new are struggling along the path from formal independence to nationhood and are determined to have the benefits of modern civilization. If the democratic world does not help them, the Communists will leap abroad this great revolution of freedom, seize it, direct it to their own ends and make it the instrument of their limitless imperialistic ambitions."

Mr. Rusk and Mr. Dillon point out that "we will be false both to our own national interest and to our obligations to others if we allow this to happen." With respect to the need for military assistance, the two secretaries observe: "The Communists continue to use internal subversion, para-military action and the shadowing threat of military attack to bring other peoples under their domination. In this way they threaten the peace of the world and the security of our own nation. Under these circumstances, we must continue our military assistance programme. Minimum levels of safety require the sums requested." Pleading for foreign aid on a long-range basis, instead of using the past pattern of voting funds each year, they say:

"If the U.S. is to be of substantial help in the less-developed nations in their efforts to meet the demands of their people for economic growth, it will be imperative in many cases to provide assurances that our loan aid will be forthcoming in known amounts over a period of several years—that is, to make long-term commitments. Such assurances are vital in helping the recipient countries to make the hard political decisions involved in self-help measure and internal reforms necessary to economic and social progress. Moreover, our ability to pledge aid in advance will be a significant factor in obtaining assurances of contributions from other industrialised nations."

The U.S. "overall objective" in the coming decade is to assist the less developed countries of the free world to make genuine progress in their social as well as economic development, according to Mr. Henry R. Labouisse, Director of the U.S. International Co-operation Administration. Speaking at a regional briefing conference on foreign policy attended by West Coast editors and reporters, sponsored by the World Affairs Council of Northern California and the Department of State, held recently, Mr. Labouisse said:

"Foreign aid now is a most powerful and constructive element of U.S. foreign policy and such a programme of assistance has both national security and humanitarian overtones. Means must be found for giving the great mass of the people of Asia, Africa and South America the hope that they will truly share in the benefits of economic progress, and that the gap between the top and the bottom stratas of their societies can and will be narrowed without too much delay."

Noting that the Soviet Union had offered aid to developing countries, although on a much smaller scale than the U.S., Mr. Labouisse stressed that the communist objective in such aid was almost exactly opposite to America's. "We do not attempt to take indirect—or any sort of—control of the nations whom we are helping," the I.C.A. Official said and added, "Our aim is to demonstrate, on the contrary, that the transition from backwardness to modernisation is feasible within free societies. The paramount goal of the new programme would be to foster long-range social and economic development which should ultimately enable the recipient nations to continue to grow without extraordinary outside assistance. Drawing attention to the new emphasis on "self-help" measures by recipient countries, Mr. Labouisse observed: "Every effort will be made to encourage recipient nations in the mobilisation of their human and material resources, in the adoption of measures to effect, where necessary, internal reform in such fields as land tenure and distribution, taxation, foreign exchange controls, and currency stabilisation."

Notice

THE COORLA SPINNING AND WEAVING COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Share Transfer Books of the above Company will be closed from Saturday, the 19th August 1961 to Monday the 11th September 1961, both days inclusive.

MARKET GOSSIP

(*Concluded from page 199*)

is, five days after the Conference finished its deliberations. Even these decisions, it is said, are in the nature of proposals which have been submitted for the approval of individual countries. The proposals are rather vague and do not provide any clear-cut solution to the problem of international trade in cotton textiles, as will be evident from the gist of the *communique*, issued by the Conference, given below:

The major cotton textile importing and exporting countries have agreed on plans for orderly development of trade with reasonable safeguards for the importing nations. The participating countries would agree to adopt the following short-term arrangement for the twelve-month period beginning from 1st October 1961:

If unrestricted imports of cotton textiles are causing or threatening to cause disruption in the domestic market of any participating country, that country may request any other party to the agreement to restrain its exports to a certain level which shall not be lower than that prevailing for the year ended 30th June 1961. If the exporting country refuses, then the requesting country may decline to accept imports at a level higher than the one specified. Participating countries, which at present have quantitative restrictions on cotton textile imports, will, from 1st January next, significantly increase access to their markets by countries the imports from which are now restricted. A specific statement of the new access will be forthcoming.

Under the long-term arrangement, the participating countries agreed to set up a committee, called the Provisional Cotton Textile Committee, to (*a*) work out a long-term solution, (*b*) collect all useful data for the purpose and (*c*) make recommendations for a long-term solution before 30th April 1962. The Committee will meet on 9th October next to begin its work.

The aforesaid arrangements are not considered to be unsatisfactory from the point of view of India. Indeed, Mr. T. Swaminathan, I.C.S., India's Commissioner-General for Economic Affairs, who represented this country at the Geneva Conference, claims that the arrangements will help maintain India's export trade in textiles. A preamble to the agreement, he says, recognises that the action should be "designed to facilitate the economic expansion and in particular to promote the development of less developed countries by providing increased access for their exports of manufactured goods." This forecast may or may not be borne out by actual events. But the apprehensions regarding the imposition of restrictions by importing countries on Indian textile exports have been largely removed at any rate for the time being. And Mr. Swaminathan must be congratulated for having sought to remove Western misconceptions about the alleged low wage element in the cost of production of Indian textiles. He is reported to have emphasised in his speech at the Conference: "Because of low productivity per man-hour and various other reasons, the Indian cost per unit is not so very low as compared with that of the developed countries. Nor can India fairly be lumped together with Hong Kong, Japan or Pakistan, because conditions in these countries are quite different. India is a large producer of cotton goods and, for some years, it has been the third largest textile exporter in the world."

Incidentally, it may be noted that Mr. Swaminathan was the sole official delegate of India at the Geneva Conference. No millowner or trade representative attended the meeting, unlike in the case of most other countries which were represented by the spokesmen of the industry, besides the officials. It is learned that Mr. Swaminathan wrote to the Government of India suggesting the desirability of some cotton mill industry representatives attending the Conference. But for reasons not known, the suggestion did not find favour with the Government.

Be that as it may, the chief outcome of the Geneva Conference seems to be the recognition of the need to introduce some sort of regulation in world cotton textile trade. Few would object to any scheme of regulation which is designed to eliminate such commercial practices and manipulations as may lead to a distortion of competition in world textile markets. There is, however, no gainsaying the fact that the developed nations should so adapt their pattern of trade and industrial structure as to facilitate increased imports of cotton textiles and other manufactured goods from the developing countries which are struggling to raise the depressingly low living standards of their teeming millions.

Bank Profits

Judged by the results announced so far, the first half of 1961 has proved to be quite prosperous for several bigger scheduled banks in India. This is, of course, not surprising when viewed against the background of the trends in their principal portfolios. The data pertaining to the changes in deposits, advances, etc., tabulated below clearly show that the deposits and advances of scheduled banks, excluding the State Bank of India, went up sizably by Rs. 78.78 crores and Rs. 72.28 crores, respectively, as against a rise of Rs. 68.47 crores in deposits and of Rs. 101.24 crores in advances in the first half of 1960. The investments of scheduled banks other than the State Bank of India, however, receded by Rs. 17.63 crores in the first half of the year under review.

Changes in main portfolios of Banks
(Rupees in crores)

	Scheduled Banks other than State Bank first half		State Bank first half	
	1961	1960	1961	1960
Deposits	+ 78.78	+ 68.47	— 43.56	+ 56.19
Advances	+ 72.28	+101.24	+ 28.61	+ 49.76
Investments	— 17.63	— 35.19	— 67.12	+ 15.87

N.B.—Deposits here include inter-bank accounts also.

This means that the banks had more resources with them and they were also able to utilise their resources more intensively and more profitably. It may be remembered that the rates of interest on bank advances ruled higher than in the corresponding period of 1960. Although the deposits, too, cost more, the differential between the borrowing and lending rates were wider. All the five banks, the results of which are given below, have reported a handsome improvement in their profits. Three of them, namely, the Central Bank of India, the Bank of India and the Devkaran Nanjee Bank have actually raised their interim dividends and the two have maintained them as will be evident from the following table:

VACILLATION IN SUGAR

NEITHER Mr. D. D. Puri, President of the Indian Sugar Mills Association, nor Mr. S. K. Patil, Union Minister for Food and Agriculture, had anything to offer by way of concrete solution to the immediate problem of huge sugar surplus in their speeches at the annual meeting of the Association held at New Delhi on Monday this week. All that Mr. Puri did was to underline the magnitude of the problem which he described as "the deep crisis of surplus" and to warn that, unless a sizable quantity of the surplus stocks was taken off the factories "through further exports, etc.," the survival of the industry would be in serious jeopardy. On his part, Mr. Patil merely said that the situation arising from surplus sugar production should not be regarded as a crisis and that too as an insurmountable one. The situation, he confidently added, could be overcome by increasing internal consumption and maximising exports. Such broad statements are not reassuring and betray lack of realism. For there are serious limitations to securing an immediate increase in internal consumption and exports of the magnitude necessary to bring down the stocks to manageable proportions.

The problem pertaining to sugar stocks is urgent and serious to a degree. The total closing stocks of sugar with mills as on 30th June 1961 amounted to 2,065,000 tons, as against 1,219,000 tons on the corresponding date last year. After excluding the estimated consumption of 800,000 tons during the months of July, August, September and October and the quantity of 350,000 tons earmarked for export, the coming season will begin on 1st November next with an opening stock of as much as 915,000 tons, as against a normal carryover of about 200,000-300,000 tons. The carrying of such huge stocks not only imposes a severe strain on financial and storage resources but also implies certain other serious consequences. Unless the stocks move out of the mills' godowns, the mills will withhold a part of payment due to canegrowers for supply of cane who in turn will be unable to pay land revenues and other Government dues. As it is, the position, particularly in Uttar Pradesh, is said to be rather precarious, the canegrowers being much agitated over non-payment of sugarcane price by several mills.

Even before the current sugar season commenced, it was abundantly clear that (*a*) the opening stocks with mills were rather heavy (nearly 600,000 tons), (*b*) the output would touch a fresh record high of three million tons, (*c*) the domestic consumption might not show any significant rise, and (*d*) the prospects of large-scale exports were not bright. But the Governments—Central and State—sat quiet; they did nothing. Mr. Patil could have either withdrawn the special scheme of incentive providing for enhanced cane price and remission of excise duty on excess output, or at least reduced the quantum of incentive. If he had done so, the supply of cane to sugar mills would have been lower and the mills also would have slowed down crushing operations. After all, the scheme had been introduced purely as a temporary measure applicable to the 1959-60 season and Mr. Patil had made it clear that it would be withdrawn any time if circumstances warranted it. Simultaneously, measures should have been taken at the beginning of the season itself to give a boost to domestic consumption of sugar through reduction in excise duty and removal of all restrictions at least on movement and distribution, if not on prices.

Perhaps, Mr. Patil and his colleagues had thought that a high level of sugar output and continuance of controls were necessary for the purpose of export. They had also genuinely felt that removal of controls would harm the interests of both the mills and sugarcane growers. The high hopes they had pitched up about large-scale exports, especially to the U.S., have been belied and now comes Mr. Patil with the statement that emphasis should be shifted from export of sugar to increase in internal consumption and that ways and means should be devised to induce the average Indian to buy more sugar. But increase in consumption cannot be achieved overnight. Two things are required. One, the price of sugar must be substantially reduced and sugar-based industries must be given all possible encouragement to increase their production and sales so that they could lift a large load off the market. Two, there must be reasonable scope for the operation of supply and demand forces in markets, so that uneconomic and inefficient producers may be weeded out.

The high price of sugar, as is well known, has been due to the high price of sugarcane and heavy incidence of multiple taxes on production and consumption. Thanks to the defective official policy of fixing high minimum prices for cane without any regard for quality, the cane price alone accounts for as much as 60 per cent of the cost of sugar production. Similarly, the taxes—Central and State—heaped on sugar account for 33-34 per cent of the retail

IS THERE ANY NEED FOR A PRIVATE INDUSTRIAL BANK?

By "Kuber"

RECENTLY, an important business magnate of Bombay, connected with a State Financial Corporation, has taken the initiative in mooting a plan for starting a private industrial bank. In sending feelers to, and seeking the support of, the big banks, he has tried to make out a case for such a bank on the ground that the existing facilities provided by the Industrial Finance Corporation of India, the Industrial Credit and Investment Corporation of India, and the State Financial Corporations are not sufficient to meet the ever-growing credit needs of trade and industry during the third Plan period. According to him, the time has come for the big banks to sponsor a separate industrial bank to deal exclusively with, and cater to, the requirements of long- and medium-term finance of such industries on the lines of Finance Corporation for Industries and Industrial and Commercial Financial Corporation in the U.K., which, as readers are aware, are being actively supported by the banks in that country. He considers that there is ample scope for such a bank, as the stringency in the capital market is likely to continue for a long time and there is enough room for one more long-term lender in addition to and apart from the finance provided by the existing institutions.

From such information as is available it appears that the proposed institution will be called the Industrial Bank of India Ltd., that, to begin with, it will have a small capital structure (Rs. 50 lakhs authorised and Rs. 15 lakhs paid-up), that the entire capital is to be held by scheduled banks, that the promoting bank should guarantee repayment of the capital, that the latter are to provide the working funds in the form of five-year deposits to the tune of Rs. 3 crores, carrying interest at the rate of 4½ per cent, that these funds are to be supplemented by time deposits of one year and over from the public as well as sale of debentures to the public, that the promoting banks are also to provide additional deposits up to a maximum of Rs. 50 crores at a slightly higher rate of interest than that allowed on the basic deposits, that the Bank will lend for three to ten-year periods, that the idea of low level of capital is to minimise the dividend burden, and that the active association of commercial banks with the proposed venture will bring the necessary know-how and impart to it a large degree of efficiency inherent in any well-managed private enterprise.

Such in brief is the scheme prepared by the author mentioned at the outset. If such a bank had been sponsored, say, ten or fifteen years ago, it would have been welcomed with open arms. At that time, there was a tremendous public opinion in favour of an institution of this type, particularly as India was then embarking on a planned economy and industrialists would have been only too happy to have to deal with an institution of that type in the private sector. The money conditions were also easy and there would have been no difficulty in getting the required share capital, as also working capital by way of long-term deposits. But a great deal has happened in the meantime. Besides the specialised institutions mentioned earlier, there are also the National Industrial Development Corporation, the Refinance Corporation and the Small Finance Corporation, though they all owe their existence mostly to the initiative of the Government and the Reserve Bank. What is more, not all these institutions have succeeded in using their funds to the fullest capacity. Most of the State Financial Corporations, as will be seen from a review of the working of the majority of them appearing on pages 256 and 258 of this issue, as well as the Refinance Corporation have still to show the results expected of them. The State Bank has also lately taken up the task of providing finance for the small-scale industries. There would thus appear to be no dearth of agencies for supplying long- and medium-term finance to small-scale, medium-scale and big industries. On the contrary, so it seems to us, there has been a great deal of criticism that some, if not most, industrialists have been getting finance rather too easily, with the result that they have been leaning rather heavily on bank finance instead of strengthening their capital base. In fact, some of them have been openly arguing as to why they should raise additional capital when they find it much more profitable and cheaper to carry on with the help of bank finance. Indeed, it is no exaggeration to say that they have been having a good time for the last several years at the cost of banks. It is apparently for this reason that the Industrial Finance Corporation of India has recently proposed to grant loans on some sort of profit-sharing basis. May be, it wants to curb the ever-growing demand for loans from the "big business."

In fairness to the author of the proposed scheme, one may concede that, if an industrial bank is started in the private sector, it is likely to work in a more businesslike manner than has been the case with some of the existing agencies, particularly the State Financial Corporations. But the best solution for this defect would be to make them mend their ways, rather than start one more new institution. Even assuming that a privately-owned industrial bank, particularly if it is sponsored by the big commercial banks, has a future in the context of present economic conditions, how is it to get the required funds? The assumption that the promoting banks and others will provide deposits in large amounts is a facile one, if not wishful thinking, as banks do not have funds of that magnitude to spare. If the present trend of deposits is any indication, the position will continue to be the same for quite a few years to come. The proposed industrial bank will, therefore, have to attract long-term or medium-term deposits from the public. Surely, it cannot borrow short and lend long. Even so, it will have to compete with the commercial banks for deposits. In that case, will it not lead to further scramble for deposits? The commercial banks themselves are finding it ever so difficult to attract appreciable deposits even at the higher rates which they have been offering for several months now and only very recently they have been able to breathe a little freely. In the last busy season, they had to pay 6 per cent to the Reserve Bank and 5 per cent in the inter-bank call money market to be able to meet their day-to-day requirements. There is every reason to believe that this state of affairs will repeat itself in the next busy season and several seasons following it.

Further, the banks have not been particularly successful in getting sufficient deposits on long-term basis. The bulk of their time deposits are from one to three years, for which they are paying anything upto 5 per cent even in the slack season. Only one big bank has tried to get ten-year deposits and, as the reports go, the response has been very poor. A new industrial bank is unlikely to fare better. This is not surprising. Why should the public go in for such long-term deposits when the difference between the rates of interest on long-term and short-term deposits is insignificant? The bank concerned may feel that its experiment will be a paying proposition, because the general trend of deposits is upwards. But so do the investors feel—at any rate those who have sufficient funds to invest—that the rates of interest are bound to go up, as the demand for capital is continuously increasing. Why should any investor commit himself to long-term deposits, say, for ten years, at 5 per cent, when, in case of need, he will have to pay 2 per cent more on loans against them. Besides, he will be bound to the bank for 10 years and there will be no escape. It would be a better proposition for him to invest in National Savings Deposits on which he can get about the same return, with the added advantage of being able to get out of the contract at any time if conditions in the capital market provided opportunities for better investments. In the present conditions, and so long as they continue, it would, therefore, be an impossible job to get appreciable amounts of long-term deposits at the existing rates. And it may not suit them to pay still higher rates of interest. The commercial banks would naturally not be interested in a scheme which seeks to compete with them for deposits by offering higher rates of interest, as it would make their tasks even more difficult than at present.

Apart from this important aspect, the proposed bank will be up against a technical hurdle. Will it function as a scheduled bank? If that is so, it will also have to lock up a considerable part of its funds in Government securities at unattractive rates of return. If it is to compete with the existing scheduled banks, it will not find sufficient margin of profit. If it is to be modelled on an industrial finance corporation, it may not be able to attract sufficient deposits. In any case, it will have to approach the Government for a suitable amendment to the Banking Companies Act to be able to function as a provider of long-term industrial credit. So the problem is not so simple as the sponsors of the scheme have made out. The only way out that one can see is that the proposed scheme will have to work within the present framework, in which case it will have to be a scheduled bank, though with this difference that, while relying on deposits like other commercial banks, it will lend *primarily* on long- and medium-term basis by utilising the facilities of the Refinance Corporation. Even in that case, it is bound to clash with the existing agencies, if not with the commercial banks. No wonder then that the commercial banks are somewhat lukewarm in their support to the scheme; in fact, some of them appear to be positively hostile to the scheme. Generally speaking, therefore, the proposed scheme is not likely to succeed, if it proposes to invoke the blessings and support of the commercial banks. The move is, as already stated, about 15 years too late.

What is wanted at the present time is not another bank, but something that will not attract the deposits away from the banks. It is a well known fact that substantial deposits are finding their way to the so-called unorganised sector, in quest of higher return—a return which the commercial banks are obviously unable to offer. The deposits that the banks get are naturally short-term deposits which people want to keep that way. But there are other kinds of savings on which people want higher returns, say, from 6 to 8 per cent per annum, in view of the continuously rising level of prices; the rate of increase in the past five years has been at 6 per cent. In Britain, for instance, there are countless semi-financial institutions, such as the hire-purchase companies and building societies which are offering 7 to 8 per cent. Many of them have resources which are far above those of the biggest Indian banks. They are able to earn very much more than the banks, because they are not handicapped by all sorts of legal impediments such as liquidity reserve requirements. Some such semi-banking institution would appear to be urgently called for in the present economic and financial set up of India, too, provided, of course, it is started on a sufficiently large-scale and proper lines.

India needs an institution which will provide not only a safe and lucrative return on people's savings but also offer at the same time a hedge against inflation. As the general price level is rising, people want a corresponding increase in the value of their investments, so that, in real terms, their savings do not depreciate. In the U.K. and elsewhere in Europe, investment trusts do provide this facility and hence their popularity. Not long ago, the Reserve Bank published an article in its *Monthly Bulletin* on this subject. An investment trust will thus go a long way towards attracting the savings of people to an appreciable extent—savings which are not being attracted by the banks and which, in any case, cannot be attracted, as they are very expensive. Such savings are now being absorbed partly by the industries directly and partly in real estate and in the unorganised monetary sector. It is these savings that require harnessing. By capturing such savings, investment trusts of the type mentioned above can perform yeomen service to the country. They can channel savings into industries by buying their equities. Incidentally, they will also enable several of the existing industries to strengthen their capital base which is what is wanted. The banks, too, will be well advised to welcome such a scheme, as their deposits will not be tampered with and as anything that assists the industries in their long-term requirements will make them more creditworthy. The end in view in the case of both the proposals is just the same, namely, long-term finance for industries. But there is a lot of difference in the implications. The idea of a separate industrial bank in the private sector is outmoded, whereas that of an investment trust is modern. There are plenty of institutions to provide industrial finance, but there are no investment trusts of the type mentioned here, an institution that combines two roles in one, namely, provision of long-term and medium-term industrial finance and investments to investors who wish to have a fairly decent return as well as a hedge against inflation.

MARKET GOSSIP

Equities Still High

THE downward trend in equities which was conspicuous during the past two weeks has been arrested. It is quite likely there may even be a sizable advance in the next few days as a result of short-covering. But this does not necessarily mean that the worst is over, for equity values, in general, are still high and the yields on first class shares are so low that they are unattractive. Here and there one may find scope for bargain hunting, a task that can be well performed only by informed operators and investors who know which company is doing what. Almost all the well known growth scrips such as Union Carbide, Metal Box, Dunlop Rubber, T.E.L.Co., Larsen and Toubro, Gwalior Rayon, South India Viscose, Century, Calico, Alkali Chemical, Atul Products and Indian Aluminium, to mention only a few, are, however, still standing at levels at which the return seems to be poor, even though they are perceptibly below the highest level at the peak of the boom a few weeks ago. There is considerable reluctance among investors to book their profit in these scrips, for a number of reasons: (1) They are not quite sure that the scope for further appreciation in the value of these scrips has been exhausted. This may be wishful thinking, but it is there. (2) Most of them are seeing such a large profit on paper that the very idea of having to pay a part of it to the Government, if it is realised, discourages them from selling. And (3) there is the difficulty of finding comparable scrips for reinvesting the sale proceeds.

But what is the scope for further capital appreciation in scrips of the aforesaid type in the near future? This is the question that must be examined before one decides to make fresh investments in these scrips at the current level of prices, because the yield consideration in their case is only of secondary importance now, as the return is already very low. To be worthwhile, the capital appreciation in these scrips must be sufficiently large to offset the loss of interest an investor has to incur over the number of years he has to wait for the companies concerned to raise the dividends and other benefits to levels that would justify the present expectations of the market, let alone its future expectations. If adequate allowance were made to this aspect, one would find that the present levels of most of the growth scrips are not tempting enough. The list of new issues, however, may disclose attractive bargains, if a careful search is made.

But there are many imponderables, political and economic alike, that warrant caution. Prime Minister Nehru has already told the committee drafting the election manifesto of the Congress Party that the socialist pattern of society must be clearly defined and specific goals outlined. He is also believed to have recast the first chapter of the third Plan report drafted by the Planning Commission experts. It is bound to have some statements on private enterprise, profit motive, etc., that may be regarded as disturbing by the share markets. And the report is expected to be published early next week, soon after Parliament assembles. A few weeks thereafter, there will be the A.I.C.C. meeting at Madura which may also provide some shocks. Then, there is, of course, the arms race between India and Pakistan. There are persistent reports of violation of cease-fire agreement by Pakistan on the Kashmir front. The international political situation is also tense.

In the economic sphere, a further rise in interest rates and credit squeeze during the ensuing busy season are quite on the cards. The foreign exchange situation is disquieting from the view-point of maintenance imports, the need for which seems to be expanding with more and more of new industries reaching production stage. No satisfactory solution has yet been found to shortages of fuel, transport and raw materials. Even the Union Carbide's expensive new plant at Trombay is reported to be working only three days a week. The destruction wrought by floods in many parts of India has only aggravated the position in this respect. Abroad in the world, too, disturbing developments are taking place. The pound sterling has, of course, staged a substantial recovery following the stern measures taken by the British Government last week and its application to the I.M.F. for a large credit. But there is nothing to be surprised about this recovery, for it is chiefly the result of liquidation of the bear position in sterling that had been built up earlier. The stepping up of defence expenditure by the U.S. and Russia by huge amounts has also raised hopes of a significant expansion in world trade in the coming months. Nevertheless, the fact remains that, basically, Britain's position is still vulnerable and so also that of the U.S. The fear of devaluation of some currency or other may reappear again.

The Government of India has not given up its intention to introduce certain new measures designed to curtail speculation in share markets. Talks are still going on with the stock exchange authorities. Apparently, the Government wants to carry the governing boards of stock exchanges with it rather than force its decisions on them. Hence the delay, we understand, in announcing the solutions the Government has in view. It would appear that the Government is not satisfied with the explanation that, as equity values are now well below the highest levels touched earlier, there is no need to proceed with the imposition of new restrictions on buying and selling of shares.

What does all this amount to? It means that the chances of a further fall in equity values during the coming weeks are greater than the chances of a rise.

Britain and Common Market

The U.K. Government has at last taken a momentous decision to make a formal application under Article 237 of the Treaty of Rome for negotiations with a view to joining the European Economic Community. This decision, announced by the Prime Minister, Mr. Harold Macmillan, in the House of Commons on 31st July 1961, does not, however, commit the British Government to anything, for the final decision to join the E.E.C. would depend on the outcome of the next stage of bargaining. Mr. Macmillan has referred specifically, in this connection, to the need for making satisfactory arrangements to meet the special needs of British agriculture, of the Commonwealth and of the European Free Trade Association (E.F.T.A.) of which the U.K. is a member. The negotiations for reaching a satisfactory agreement on the three issues, according to him, "must inevitably be of a detailed and technical character, covering a very large number of the most delicate and difficult matters" and "they may, therefore, be protracted and there can, of course, be no guarantee of success."

But the will to succeed seems to be there, for Mr. Macmillan himself has made it clear that the risks and danger of failure are very great. Since the United Kingdom is wedded to the goal of European integration, it cannot contemplate with equanimity the danger of a permanent rift in Europe—a danger inherent in a possible failure to reach a satisfactory agreement with the E.E.C. It looks as if neither the issue bearing on the special interests of British agriculture nor the E.F.T.A. issue is likely to present any insuperable difficulty. It is already considered possible that the British farmers can be convinced of the likelihood of their agriculture gaining from Britain's entry into the Common Market. In any case, it is said that British agriculture cannot justifiably expect precise guarantees, while the Common Market Six have not so far evolved a common agricultural policy for themselves. The E.F.T.A. issue, too, seems to be easily negotiable, as is evident from the declaration, made on 31st July 1961, of the Ministerial Council of the E.F.T.A. According to this declaration, the E.F.T.A. Governments consider that the decision of the United Kingdom Government to take the initiative announced by the Prime Minister, which was followed by a similar statement by the Danish Government, provides an opportunity to find an appropriate solution for all E.F.T.A. countries and thus to promote the solidarity and cohesion of Europe. The E.F.T.A. declaration continues:

> "The members of E.F.T.A. consider that it is the duty of all concerned not to miss this new opportunity. E.F.T.A., for its part, will, on the lines set out in the London *communique*, do everything in its power to seize it. All member States of E.F.T.A. declare their intention to examine with the European Economic Community ways and means by which all members of E.F.T.A. could take part together in a single market embracing some 300,000,000 people."

It would appear that all the E.F.T.A. countries are anxious to join the E.E.C., with a view to achieving economic and, possibly, political integration in Europe to meet the Soviet challenge. That the good offices of the United States, which is very much interested in such integration, will be available to bring the Six and the Seven to merge on mutually satisfactory terms, is also as good as certain.

But the third issue bearing on the special interests of the Commonwealth is bound to present greater difficulty. It remains to be seen whether the Six will appreciate Mr. Macmillan's view that "the Commonwealth is a great source of stability and strength both to Western Europe and to the world as a whole." If the Common Market is to become an outward-looking low-tariff group of countries, the Governments of Commonwealth countries as well as those of others, notably the U.S., will have to think alike on the issue and stand together for safeguarding their trading interests. It is to be hoped that the special Commonwealth Premiers' Conference that may be convened at some stage or other to consider the issue will take an agreed line and present a united front.

Monsoon Madness in Ceylon

In an effort to cover an anticipated deficit of Rs. 701 million in Ceylon's budget for 1961-62, Mr. Felix Dias Bandarnaike, the Finance Minister, has proposed a series of new tax measures which are bound to have adverse reactions on the economic development of that Island. Of the new tax levies suggested by the Finance Minister, the one which is capable of causing the maximum damage to Ceylon's economy is the proposal for imposing a ceiling on incomes. Under his proposal, a single person without dependents would be left with a net income of not more than Rs. 37,000 per annum. For persons with dependents, the ceiling would vary between Rs. 40,000 and Rs. 54,000. The only redeeming feature of the proposal is that half of the excess income would be restored to tax-payer in the form of development bonds giving about 5 per cent tax-free interest. The bonds would be encashable for investment in approved industrial project. What of what use will this investment be if the income from such investments is then taxed at the penal rate, so that an assessed total net income may not exceed the specified ceiling?

The proposal to abolish the exemption of first slab of Rs. 2 lakhs in calculating the liability on wealth tax will also affect the same class of persons as would be hit by the ceiling on incomes. As a result of this change, wealth tax liability would increase by half per cent on Rs. 2 lakhs or Rs. 1,000 to be precise. Further, every individual earning more than Rs. 300 will also be liable to pay a development tax at the rate of 4 per cent. Furthermore, self-employed persons in professions, trade or business, who are Ceylonese nationals, would be charged a registration tax varying from Rs. 50 to Rs. 350 per annum on a graduated scale. The non-nationals are already being forced to pay Rs. 1,000 per year by way of registration tax.

It is not very difficult to see that the cumulative effect of all these measures would be to destroy the incentives for savings, investment, and hard work which alone can ensure rapid economic development of the Island. The new levies will further scare away the foreign investor who has already been sufficiently frightened by the Trotskyist-dominated trade unions and the constant threat of nationalisation of foreign owned plantations. It is common knowledge that foreign capital has been trickling out of the Island ever since independence. Mr. Bandarnaike can now take credit for creating an appropriate climate for its quicker and more substantial outflow.

The Ceylon Government is certainly setting a bad example for the underdeveloped countries in Asia and elsewhere. Its latest fiscal policy will act as a damper to the movement of private foreign capital to these countries as a whole, as they will have an adverse psychological effect. They may give rise to the fear that, if the Ceylon Government were to behave in this manner, other Asian Governments also might be tempted to do so. This consideration apart, the new taxes are clearly suicidal from the point of view of Ceylon itself, when it is borne in mind that its economy has not yet made much progress in industrialisation. Most of the Government enterprises established in the past have been notable for their high cost and inefficiency of management. Ceylon has also little experience of industry and is singularly poor in skilled labour. Many of the industries to be established there will necessarily have a very high import content in the early stage of development. Thus the Island's dependence on foreign capital and technical as well as managerial personnel, is bound to remain very heavy in any programme for quickening the pace of industrialisation. It is needless to add that only the Communist countries will feel happy over the latest fiscal onslaught of the Ceylon Government.

As if the aforesaid tax proposals were not sufficiently harmful, Mr. Bandarnaike also announced a number of restrictions on foreign banks working in Ceylon. Under the proposed legislation, the Ceylonese nationals and Ceylonese corporate bodies will be prevented from opening new accounts with the 10 foreign banks operating in Ceylon. Of these 10, four (including the State Bank) are Indian Banks, one belongs to Pakistan and the remaining five are British exchange banks. Mr. Bandarnaike has not clarified whether these banks would also be prevented from extending loans to Ceylonese enterprises. But the restrictions on the collection of deposits by them will themselves surely affect their lending capacity. It is a crude way of pushing out foreign banks in order to protect indigenous banks and the worst sufferers will be the Indian banks, as they do not have surplus funds to be transferred to Ceylon for continuing their business. That apart, this kind of restriction on foreign banks will also arrest the inflow of foreign private capital.

Distribution Controls on Cotton

Now that the supply position of cotton has considerably improved, thanks to the good crop last season and the liberal imports, the question of a return to normal methods of distribution of cotton, instead of the present system of mill quotas and compulsory surveys, has come to the fore. It was broached by the East India Cotton Association when its members met Mr. K. C. Reddy, Union Minister for Commerce and Industry, this week in the City. The Minister assured traders that the mill quotas and compulsory surveys would not be retained for a day longer than was absolutely necessary. Although he conceded that the supply position of cotton had very much improved now, as compared with the previous season, he made it clear that a decision to abolish the quota and survey systems would depend on the size of the crop in the coming season (1961-62). According to him, the Government was not in a position to take a decision now, because it was too early to assess the size of the crop. Warning against any haste in the matter, he pointed out that the 1959-60 crop ultimately turned out to be hardly 3.85 million bales, although it had been estimated at five million bales even as late as October 1959. It was easier, in his opinion, to relax controls than to reintroduce them once they were abolished. The Minister, therefore, counselled patience and pleaded for caution in dealing with the question of relaxing controls on cotton.

The cotton trade bases its case for abolition of the quota system and compulsory surveys on an analysis of the supply position. The carryover of Indian cotton on 1st September 1960, it points out, was of the order of 991,000 bales. The crop during the current (that is, 1960-61) season has aggregated 5.22 million bales, giving a total supply of Indian cotton of 6.21 million bales. Foreign cotton supplies amount to 1.26 million bales, comprising a stock of 459,000 bales and imports of about 800,000 bales. Total supply of Indian and foreign cotton combined, during the season, therefore, works

(Continued on page 250)

EQUITIES RECOVER

GOOD SUPPORT FOR CEMENTS

(From Our Own Correspondents)

BOMBAY, *3rd August*

THE Stock Exchange had only four working sessions during the week under review, as it remained closed on Saturday 29th July (succeeding day of the account ending period) and Tuesday the 1st inst. (Tilak *Punyatithi*). In the first two sessions, that is, on Friday and Monday, the market ruled distinctly easy, with values of most counters drifting downward, for offerings of scrips were fairly large, while fresh buying support was lacking due to lack of new incentives. Bull operators felt that, since the current settlement period was three-week long—the last day for business is fixed for Friday the 18th inst.—*badla* charges might be higher. They were, therefore, inclined to liquidate their holdings and book profits. The sentiment of the market, however, improved on Wednesday, thanks chiefly to the British Prime Minister's assurance that the interests of Commonwealth countries would be taken into consideration in case the U.K. joined the European Common Market. There were, besides, reports suggesting the possibility of a number of important counters receiving institutional support. It was stated that the Investment Committee of the L.I.C. was meeting on Thursday the 3rd inst., presumably to consider buying of some scrips. Another helpful factor was provided by encouraging advices from Calcutta which was evidently impressed by Indian Iron's production of 65,720 tons of steel in July, as against 50,089 tons in June. As a result of all these factors, equities staged a recovery on Wednesday which gathered further momentum today.

The market received good corporate news. The Victoria Mills has sought official permission to capitalise reserves to the tune of Rs. 4.40 lakhs to issue bonus shares in the ratio of one equity share for every four shares held. The shares of the Company spurted in the course of the week from Rs. 461.25 to Rs. 487.50, showing a net gain of Rs. 26.25. The Gwalior Rayons has stepped up the dividend from Rs. 2 per share to Rs. 2.25 per share. As, however, the market circles had expected a larger distribution, the shares actually declined by Re. 1.20 to Rs. 50. Another Company to announce higher dividend during the week was Greaves Cotton whose profits for the year ended 31st March 1961 are higher at Rs. 50.63 lakhs, as against Rs. 46.32 lakhs in the preceding year. The Company has raised the distribution on the ordinary shares from Rs. 11 to Rs. 13 per share subject to tax. Reflecting satisfaction of operators over the performance, the scrip rallied from Rs. 178.50 to Rs. 188.50. Jiyajeerao Cotton has returned to the dividend list with a modest distribution of 3 per cent (subject to deduction of tax) for the year ended 31st March 1961. The scrip was firm at Rs. 12.

In the steel section, Tata Steels opened at Rs. 157 as against the previous closing of Rs. 157.25, and eased to Rs. 155.50 on Monday. In the subsequent two sessions, however, they received good support and recovered to Rs. 156.50. Over the week the scrip lost 75 nP. Indian Irons displayed a similar trend. They opened lower at Rs. 26.80, as against Rs. 26.90, and declined further on offerings from both local and Calcutta interests to Rs. 26.50 on Monday. Thereafter they recovered to touch at Rs. 26.70, the net loss over the week being 20 nP. Mukand Irons fell from Rs. 27.40 to Rs. 26.65.

Textiles showed an irregular trend. Some of the speculative counters suffered a setback to values, notably Centurys, Simplex, Kohinoors, Khataus and Standards. But Dawns, Davangeres, Mafatlals, Phoenix and Victorias recorded gains. Centurys opened lower at Rs. 674 and drifted lower on selling pressure to Rs. 665 on Monday. On the subsequent two sessions they met with speculative support and short covering which lifted up the quotation to Rs. 670.50. The loss over the week was as much as Rs. 4.50. Simplex eased from Rs. 197 to Rs. 194 on Monday. Thereafter, they moved both ways in a narrow groove before closing at Rs. 194, showing a loss of Rs. 3. Kohinoors shed Re. 1.50 to Rs. 289. Bombay Dyeings receded from Rs. 67.60 to Rs. 66.40 on Monday. They, however, recovered subsequently and touched Rs. 68.10 today. Towards the close, they were easy again at Rs. 67.40.

In refreshing contrast to the previous week's performance, cement shares registered a rise in values. Associated Cements opened at Rs. 160 as against the previous close of Rs. 160.50 and after receding on account of stale bull liquidation to Rs. 158 on Monday, elicited fresh buying support thereafter and recovered to Rs. 161. Digvijays also evinced keen support and went up by Rs. 9 to Rs. 165.50. Orissas put on 28 nP to Rs. 15.16.

Shipping shares continued to be neglected. Scindias opened at Rs. 13.80, same as the closing rate for the previous week, and eased in subsequent session to Rs. 13.72 today. The net loss was 8 nP. Great Easterns shed 36 nP to Rs. 13.52. Among automobiles, Premier Automobiles were unaltered at Rs. 159.50. Hindustan Motors dropped 16 nP to Rs. 21.48.

Sugar shares ruled firm. Belapurs, which had declined from Rs. 250.50 to Rs. 248 on Monday, recovered subsequently on bull support and short covering to Rs. 252 showing a net gain of Re. 1.50 over the week. Phaltans gathered Rs. 2 to Rs. 130. Bhopals put on 24 nP to Rs. 24.76. But Walchandnagars encountered selling and dropped Rs. 3 to Rs. 163.

In the engineering section, T.E.L.Cos. opened at Rs. 363.25, as against the previous closing of Rs. 364.50. They moved down to Rs. 355.50 on Monday but recovered thereafter to Rs. 361 today. Larsen and Toubros eased by 50 nP to Rs. 38. Bradys lost Rs. 9.50 to Rs. 80.50 and T. Maneklals Rs. 2.50 to Rs. 562.50. But Cooper Engineerings received good support and hardened by Rs. 6 to Rs. 182. Alcocks gained Rs. 2 to Rs. 272.

In the chemical section, Tata Chemicals declined from Rs. 18.88 to Rs. 17.88. Alembics fell by Rs. 5 to Rs. 232.50. Polychems suffered a loss of Re. 1.25 to Rs. 211.25. Adarshas shed a rupee to Rs. 92. Amar Dyes were quiet at Rs. 350 and Ultra Marines at Rs. 106. But Colour Chems gained Rs. 2.50 to Rs. 345. Indian Dyestuffs evinced keen enquiry and spurted from Rs. 465 to Rs. 470.

Rayon shares met with selective support. National Rayons opened lower at Rs. 539, as against the previous closing of Rs. 540.50 and declined to Rs. 531 yesterday. At this level support ensued and the scrip moved up to Rs. 535 today. The net fall over the week was Rs. 5.50. Baroda Rayons gained Rs. 3.50 to Rs. 140. South India Viscose gathered Rs. 2 to Rs. 186. But Indian Rayons were fully steady at Rs. 74.

In the miscellaneous section, Voltas eased by Re. 1.50 to Rs. 287. Bombay Burmahs opened at Rs. 589 and gained a rupee in initial deals. Later on selling pressure took down the rate to Rs. 581 on Monday. The scrip moved up again in subsequent sessions and touched Rs. 587.50 today. Laxmi Starchs fell by Rs. 6.25 to Rs. 203.75. Indian Hume Pipes shed 25 nP to Rs. 177.25. Escorts lost an equal amount to Rs. 23.76. Premier Tyres declined by Rs. 2.50 to Rs. 123.50 and General Tyres by 28 nP to Rs. 6.20, while Ceat Tyres picked up Rs. 3.75 to Rs. 213.75. But Killicks were steady at Rs. 98.50. Permanent Magnets gained a rupee to Rs. 85. B. Oxygens spurted by Rs. 2.50 to Rs. 59.50. Isaac Holdens gained 12 nP to Rs. 18 and Ogales 36 nP to Rs. 5.88. Tata Oils improved by a rupee to Rs. 75 and Wimcos by 50 nP to Rs. 269.

Madras Stock Exchange

MADRAS, *2nd August*

Equities continued to encounter selling pressure, with values drifting lower on a wide front. The decision of the U.K. to apply for membership of the European Common Market led to fears that exports of textiles, tea, coffee and several other goods would be affected greatly. Further, advices from Bombay and Calcutta were non-too-encouraging. Sugars ruled distinctly easy, in view of heavy accumulations of stocks with several mills. Even the Union Food and Agriculture Minister's statement at the annual meeting of the Indian Sugar Mills' Association that the Government was considering measures, such as reduction in excise duty and liberalisation of controls on distribution, in order to step up domestic consumption failed to have any effect. Teas were subdued, notwithstanding reports that the total imports of tea by Britain, during the first five months of 1961 were higher by 19 million lbs. as compared with the corresponding period last year, with India accounting for almost the entire additional supply. Coffees were depressed on account of reports that several major coffee-growing areas had suffered severe damages from heavy rains and floods. The latest move of the Coffee Board to give a fillip to exports through replacement of closed tenders by open auctions, revised scheme of allocation to different markets, more intensive propaganda abroad and appointment of an expert foreign "cup taster" was welcomed, but operators were not enthused to extend their commitments, as they considered the prices received by growers to be uneconomic. Expectations of a larger Brazilian coffee crop during the 1961-62 season also acted as a damper. Rubbers were listless. Textiles gave way, with the exception of a few popular scrips which elicited special support. Miscellaneous shares ruled dull.

Among teas, Kil Kotagiris softened by 9 nP to Rs. 4.67, Chembras declined by 8 nP to Rs. 3.85. Blue Mountains rose initially from Rs. 3.12 to Rs. 3.14, but eased later to Rs. 3.07. Neelamalais dropped 5 nP to Rs. 4.10 and Waterfalls 3 nP to Rs. 2.95. Pernakaramalais shed 2 nP to Rs. 3.88; they had touched Rs. 3.92 earlier in the week. Nonsuchs were dull at Rs. 28.20, Highlands at Rs. 14 and Devasholas at Rs. 30.25.

In the Coffee group, Balanoors retreated from Rs. 16.30 to Rs. 15.60. Coffee Lands lost 15 nP to Rs. 18.25. Cowcoodys shed 10 nP at Rs. 4.65. Consolidated Coffees, which had hardened from Rs. 21.10 to Rs. 21.15 initially, fell back to the last week-end level at the close. Ouchterlony Valleys were neglected at Rs. 3.65. Rajendras changed hands at Rs. 12.12, same as last week, and Anaparais at Rs. 3.95. Amalgamated Coffees were maintained at Rs. 12.50.

Price movements in rubbers were narrow. Cochin Malabars fell from Rs. 7.50 to Rs. 7.20. T.R. and Ts declined by 15 nP to Rs. 9.50 and Midlands by 10 nP to Rs. 11.60. Malankaras and Vaikundams were subdued, the former at Rs. 17.75 and the latter at Rs. 31.25. Velimalais were dull at Rs. 5.85. The Directors of the Company have recommended a lower dividend of 10 per cent (taxable) for 1959-60, as against 12 per cent for 1960-61.

Textiles generally lacked support. South India Viscose were marked down by Rs. 3.50 to Rs. 182. Anglo-French lost a rupee to Rs. 129.50. Lakshmis fell from Rs. 169 to Rs. 166.75 before recovering to Rs. 167. Madurals receded by 15 nP to Rs. 36.95. Radhakrishnas shed 5 nP to Rs. 31.70 and Kotharis 2 nP to Rs. 12.48. Coimbatore Pioneers were dull at Rs. 205.87. Coimbatore Spinnings at Rs. 53. Mettturs at Rs. 382 and Premiers at Rs. 287. Buckinghams, however, were well favoured and spurted by Rs. 5 to Rs. 238.

Among miscellaneous industrials, Tube Investments declined by Rs. 3 to Rs. 260. F.A.C.Ts eased by 47 nP to Rs. 10. Mysore Chemicals were quiet at Rs. 24, as also Mysore Fertilisers at Rs. 11.67 and Travancore Chemicals at Rs. 18.75. But Mettur Chemicals rose by 10 nP to Rs. 14.70 in anticipation of a higher dividend. Andhras Cements decreased by 22 nP to Rs. 9.65. Travancores shed 17 nP to Rs. 7.50. Indias dropped 4 nP to Rs. 6.58. Mysore Papers eased by 60 nP to Rs. 21, despite the proposed issue of one million shares of Rs. 10 each at a premium of Rs. 2 each to shareholders as on 31st August 1961. Ashok Leylands were unchanged at Rs. 9, Textools at Rs. 181 and Western India Plywoods at Rs. 223.50.

The net profit of the Indian Overseas Bank Ltd., for the half year ended 30th June 1961, subject to audit, including the sum of Rs. 1,92,434.52 brought forward from the last year's account, amounts to Rs. 19,97,365.95.

NEWS IN BRIEF

THE Union Labour Ministry proposes to extend the scheme of workers' participation in the management to all public sector undertakings.

The total number of persons eligible for voting in the next general elections is estimated at 210 million, as against 193 million in the 1957 elections.

The second machine tools plant of the Hindustan Machine Tools, Bangalore, was inaugurated by Prime Minister Nehru on Friday last week.

The first batch of 800 watches, produced at the new watch factory of the Hindustan Machine Tools, Bangalore, in collaboration with a Japanese firm was released by Prime Minister Nehru on 28th July.

The West Bengal Government proposes to establish shortly a factory at Madhughat, near Malida town, to produce raw silk of international quality with 100 basins. The proposed factory will have an annual capacity of 25,000 lbs.

The Highways Research Station at Madras has designed a new equipment for testing the bearing capacity of the soil prior to determining the type of pavements and the thickness of the road crust. This is claimed to be the first of its kind in India.

A committee, with Mr. B. P. Patel, I.C.S., Adviser to the Planning Commission, as Chairman, has been set up by the Government of India to examine the possibility of routing *taccavi* loans to farmers through co-operative societies.

The Supreme Court has granted special leave to a Director of the Palai Central Bank, Mr. Joseph Kuruvilla Vellukunnel, to appeal against the judgment of the Kerala High Court, dismissing his petition against the winding up of the Bank.

The quantum of water available from the Bhakra dam for power generation and irrigation this year will be 2 million acre-feet, which is more than five times the storage last year. The dam will thus attain one-third of its live storage capacity of about six million acre-feet.

A proposal for the establishment of a telephone assembling plant at Guindy in Madras State as a branch of the Indian Telephone Industries, Bangalore, is being considered by the Government of India. The Guindy plant will form part of the expansion programme of the Indian Telephones.

The first crop insurance claim in India, amounting to Rs. 2,140, has been paid by the Union Co-operative Insurance Society, Ahmedabad, to a cotton cultivator, who had insured his cotton crop with the Society. The Society has indemnified the farmer by making good the loss he had suffered owing to low production, under the scheme of crop insurance put into operation last year.

A particular kind of soap suitable for use with sea water has been developed by the Naval Chemical and Metallurgical Laboratory, attached to the Naval Dockyard, Bombay. The Laboratory has also developed paints, which are anti-corrosive and suitable for use against marine borer attack of wooden craft, as well as a portable kit for petroleum and fuel oil for use in ships.

The Oil and Natural Gas Commission proposes to commence test drilling for oil at Shahjehanpur in U.P. in September. This is one of the two sites selected by the Commission in the Ganga Valley where aeromagnetic surveys have indicated sediments of the order of 8,000-10,000 metres in thickness. Work on the other site, near Budaun (in western U.P.), will also be started in a few months.

The heavy water plant, now being constructed with West German collaboration at Bhakra Nangal, will go into production by the end of this year. The plant, estimated to cost Rs. 1.15 crores, is designed to produce annually 14.5 tons of heavy water, which is a basic material for producing nuclear energy. About half of this will be consumed by the Atomic Energy Commission, and the other half is meant for exports initially.

The Government-controlled Institute for Industrial Reconstruction in Italy is willing to collaborate with Indian industrialists for the establishment of industries, such as heavy and electrical machinery, machine tools, marine engines and compressors, according to the report submitted to the Government of India by an official mission which toured Italy during April-May. In this report the mission has suggested that the matter should be pursued at government level.

The Reviewing Sub-Committee of the Central Advisory Council on Industries has been reconstituted, with Dr. H. N. Kunzru, M.P., as Chairman. The functions of the Committee are to advise the Government in the matter of issuing licences for new undertakings or for expansion of existing units and also to review all industrial licences issued, rejected applications or those amended or revoked, from time to time.

A proposal for the establishment of a separate financial corporation for hotels for granting loan on easy terms to prospective hoteliers is understood to have been considered by the Central Tourist Development Council at its meeting on the 4th inst. held at Chandigarh. It is estimated that there are now only 7,500 hotel rooms available in the whole of India for foreign tourists, this number falls short of demand. There is need for increasing hotel facilities by 50 per cent immediately and doubling its present accommodation in the next ten years.

The Oil (India) Private Ltd. has been granted rights for further oil prospecting in an area of about 1,800 sq. miles in the north-eastern part of Assam, under an agreement signed at New Delhi last week between the Government of India, the Burmah Oil Company, the Assam Oil Company and the Oil (India) Private Ltd. Under the agreement, the Government and the Burmah Oil Company will each hold 50 per cent of the shares in Oil India Ltd. and will be equal partners in the enterprise. The foreign exchange required for the project will be met by the Burmah Oil Company.

The Coal Controller, Government of India, has introduced a coupon system for movement of coal, except in Assam and Andhra, where grading of coal has not yet been made. The coupon system, which replaces the system of road permits and passes, is applicable to collieries raising Grade II coal and below. Soft-coke will also be covered by the new scheme. The collieries will be allowed to despatch coal to consumers by road or river upto a maximum of "the monthly average quota," which is based on 75 per cent of the monthly average output and 50 per cent of month-end stocks.

A four-member delegation, led by Mr. Sanjoy Sen, President, Indian Leather Technologists' Association, is leaving for the U.S. to attend the seventh Convention of the International Leather Chemists Societies at Washington. At this convention, Mr. Sen, Chairman of the National Tannery Co., Ltd., and a member of the Leather Development Council, Government of India, and Dr. Nayudamma, Director of the Central Leather Research Institute, will present technical papers. The delegation will have an opportunity to study the possibilities of increasing Indian leather export to the U.S.

The jute crop position during the 1961-62 season is considered to be encouraging by the Central supervisory body for jute which met at Calcutta recently. The meeting was attended by the Jute Development Commissioner and by representatives of Planning Commission, Central Government and also Governments of jute-growing States. It considered proposals for building a buffer-stock and fixing a floor price for raw jute. Meanwhile, the Indian Jute Mills Association has submitted to the Government a plan for the creation of a buffer stock of raw jute.

A five-year programme for economic development of Bhutan, involving an outlay of about Rs. 17.5 crores, has been accepted by the Government of India and the Government of Bhutan. An important feature of the programme is the building of roads and establishing a system of road transport which, together, are expected to involve an outlay of Rs. 12 crores during the five-year period. Agricultural programmes, including forests, will entail an expenditure of approximately Rs. 1 crore. Development of power resources in the form of micro-hydel projects may cost Rs. 7.32 crores, education, medical, public health and social welfare Rs. 2.65 crores, and miscellaneous schemes Rs. 23 lakhs.

Processes for the commercial production of bimetals from indigenous metals and alloys have been developed at the National Metallurgical Laboratory at Jamshedpur. These bimetal compositions are suitable for a wide range of uses, including a general purpose type for use at temperatures up to 200 degrees C. Bimetals find several uses in industry, such as circuit-breakers and overload protection devices in electric instruments, for starting certain mechanisms and for controlling, regulating and indicating temperatures. Among other bimetal compositions developed at the National Metallurgical Laboratory is one of a high temperature type for use up to 300 degrees C. and another special purpose type having very high thermal and electrical sensitivity.

From Abroad

A new Planning Commission, with President Ayub Khan as Chairman, has been set up in Pakistan to supersede the existing commission.

Spain will import 4,665 tons of cotton from the United Arab Republic and 200 tons from Brazil, under bilateral trade agreements entered into with these countries.

The Malayan Bank rate has been raised from six to seven per cent, with effect from 28th July. The interest rate on fixed deposits was also raised from four to five per cent.

Malaya, the Philippines and Thailand have set up a joint organisation, called Association of South-East Asia (A.S.A.), to promote closer economic and cultural co-operation among these countries.

Soviet Russia has agreed in principle to grant credit and technical aid to Sudan for establishing new industries. A Soviet delegation is expected to go to Khartoum to select the sectors in which aid should be given.

New Zealand's trade deficit was higher at £57.6 million during the year ended June 1961, as compared with £15 million in 1959-60. While the surplus with Common Market countries was reduced from £41.4 million to £27.8 million, the deficit with the U.K., the principal source of imports, rose from £7.9 million to £43.3 million.

The seven signatories of Montevideo Treaty, which seeks to set up a free trade association in Latin America, began final talks at Montevideo last week. The countries concerned are Argentina, Brazil, Chile, Mexico, Paraguay, Peru and Uruguay. Bolivia, Ecuador, Columbia and Venezuela are also expected to join the bloc in due course.

The U.K. Government proposes to announce a decision on the adoption of decimal coinage by the end of this year. This was disclosed in the House of Commons last week by Mr. Anthony Barber, Economic Secretary, while rejecting suggestions by Members for the adoption of a small crown and plastic coins. Any such change, he said, would not be considered until a decision on the decimal system was taken.

The Government of France has decided to raise the controlled price of wheat from NF40 a quintal (100 kilos) to NF41.60. Last year, French wheat output was 100 million quintals, and the Government has had to spend NF540 million on subsidies to enable farmers to export at world prices. Wheat crop this year is expected to be lower at only 68 million quintals, owing to adverse weather conditions.

The British Motor Corporation has launched a vigorous sales drive for promoting exports of vehicles to other European countries. The Company plans to spend £1 million for the project, half of which will be spent for strengthening sales and service organisations and the balance for publicity and promotional aids. This step is designed to compete effectively in the Common Market with Continental producers and the U.S. Companies established there.

A new cargo dock, extending over a mile, will be constructed by the Port of London Authority at Tilbury, on the Thames estuary, at a cost of £20 million. It will be one of the most important British dock improvements since the turn of the century, and is expected to be of immense benefit in speeding the passage of import and export of cargoes through the Port of London. Four new berths will be built initially, then eight more, to give a total dock space of about 6,000 ft. by 600 ft.

Employment in West Germany reached a new high by the end of June with a total of 20.76 million manual and office workers gainfully employed. As compared with June last year, the number of persons employed is higher by 490,000, of which the majority are either newly hired foreign workers or German refugees from the Communist Soviet Zone. Unemployment has dwindled to 99,000 (about 0.4 per cent of the labour force), and there are almost six openings to each registered unemployed at present.

The production of foodgrains by major producers in the non-communist world may be somewhat smaller in 1961-62 season, as compared with the previous year, according to the Commonwealth Economic Committee's latest bulletin. The output of wheat is expected to be lower in North America on account of dry conditions and also in Western Europe, following a decline in area under cultivation there during this season. Production of barley and oats will also be lower in North America. Maize production is likely to fall as a result of withdrawal of large areas from cultivation in the U.S. under the feed grain programme.

PERSONAL

MR. B. K. Nehru, the newly-appointed Indian Ambassador to the U.S., has left New Delhi for Washington.

Mr. Agha Hilaly, at present Pakistan's Ambassador to Moscow, has been appointed Pakistan's Ambassador to India *vice* Mr. A. K. Brohi.

General K. S. Thimayya, a former Chief of the Army Staff, has been appointed Vice-President of the United Planters' Association, Coonoor.

Mr. G. K. Singhania and Mr. V. Calloway have been elected Chairman and Vice-Chairman, respectively, of the Federation of Woollen Manufacturers in India for 1961-62.

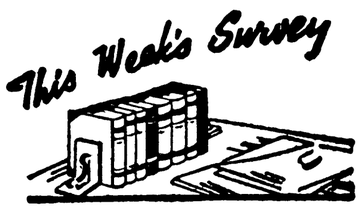
Mr. B. D. Sud, until recently the General Manager of the Post and Telegraphs Workshop at Calcutta, has taken over charge as the General Manager of Bombay Telephones.

Dr. Anwar Iqbal Qureshi, Executive Director of the Economic and Business Consultants, Karachi, has been appointed Economic Adviser to the Government of Pakistan in the Ministry of Finance.

Mr. M. J. Jamel Moideen Sahib, M.L.A., and Mr. A. Nagappa Chettiar have been elected Chairman and Vice-Chairman, respectively, of the Leather Export Promotion Council (Madras) for 1961-62.

Mr. M. N. Sambamurti, at present Accountant Member, Income-Tax Appellate Tribunal, has been appointed President of the Tribunal in place of Mr. S. C. Manchanda, who has become a permanent Judge of the Allahabad High Court.

Mr. J. J. Anjaria, Chief Economic Adviser to the Union Ministry of Finance till recently, has left for Washington to assume charge of his new assignment as India's Executive Director in the International Monetary Fund. Dr. I. G. Patel, at present the Alternate Executive Director in the I.M.F., will succeed Mr. Anjaria as Chief Economic Adviser.



ROAD TRANSPORT

THE expansion that has taken place in India's road transport industry since 1948-49 has been substantial, but by no means phenomenal. The growth in the number of goods vehicles from 83,000 in 1948-49 to about 1,60,000 in 1960-61 and in the number of stage carriages from 27,275 in the former year to 50,000 in the latter can only be described as normal or as having kept pace with road development during the period. Although, at the end of the second Plan period, the mileage of metalled roads in the country was over 144,000 and that of unmetalled roads well over 250,000, as compared with 97,000 and 147,000 respectively, in 1950-51, the road network remained deficient in several respects. Firstly, about 60 per cent of the total mileage consisted of earth-roads only. Secondly, only about 15,000 miles were covered by National Highways and, out of these, only 2,250 miles had a two-lane carriageway. And, thirdly there were numerous missing bridges on the arterial routes. On the National Highways alone, 80 major bridges remained to be provided at the end of the second Plan. It would appear from these figures pertaining to road development that the expansion in the road transport industry might have been still greater if it had been possible to metal a larger proportion of roads, provide the missing bridges and strengthen the bridges to bear a larger load.

This limiting factor, namely, the mileage of metalled roads, may continue to operate in the third Plan period when only about 25,000 miles of metalled roads are expected to be added to the second Plan's end-year total of 144,000 miles under that category. If thus the increase in the mileage of metalled roads in the third Plan is going to be at the same rate (about 25,000 miles) as in the first Plan and in the second, will it be possible for the road transport industry to increase the number of goods vehicles to 285,000 and the number of buses to 80,000 by the end of the third Plan? The answer would be in the negative, unless, of course, the first (1961-66) stage of the 20-year road plan, drawn up by the Chief Engineers of the State and Central Governments, is implemented in its entirety. As things stand, the third Plan outlay for road development is envisaged at about Rs. 350 crores (including the I.D.A. credit of Rs. 29 crores), as against Rs. 590 crores proposed for the 1961-66 period in the 20-year Plan. If the transport bottleneck that is currently slowing down the movement of coal and vital raw materials and, thereby, the tempo of industrial production itself has any lesson, it is that road transport would have to be encouraged to develop at a faster pace. The Union Transport Ministry, whose reasonable demands for outlays for road development, inland water transport, etc. in the third Plan have been met only partially by the Planning Commission, seems to have reconciled itself to the situation. In fact, there is no expression of dissatisfaction over the relevant third Plan allocations in the recent address of Mr. Raj Bahadur, Minister of State for Transport and Communications, at the third session of the Road and Inland Water Transport Advisory Committee. It looks as though his Ministry has lost all hope of any upward revision in the third Plan allocations for roads (Rs. 320 crores as against Rs. 590 crores originally expected) and for inland water transport (only Rs. 6 crores, as against Rs. 40 crores originally recommended).

Mr. Raj Bahadur's address is otherwise notable for its understanding attitude towards the road transport industry and is awareness of the handicaps under which it functions. The most crushing handicap is the taxation on motor vehicles, on which the Minister had the following to say:

> "It is well known that the Government of India have been very keen that the multiplicity of taxes on motor vehicles should be avoided and that there should be only one consolidated tax, which will not only be easy to collect but will also cause the least inconvenience to the operators. For various reasons the States have not been able to follow this policy till now . . . but no useful purpose is likely to be served by putting it off indefinitely."

But the State Governments have not only failed to respond so far to the repeated appeals of the Government of India in regard to consolidation of taxes on motor vehicles but some of them like Madras and Andhra are not also inclined to give up the extra levy of one-sixth on permits for vehicles plying on inter-State routes. The State Governments have no doubt generally accepted, in principle, the Union Transport Ministry's advice regarding consolidation of taxes on motor vehicles and tax collection through a single agency, but they continue to harp on the practical difficulties in the way of giving effect to that policy. To meet some of their practical objections, the Road and Inland Water Transport Advisory Committee, at its latest session, has recommended that wherever octroi cannot be merged with the motor vehicles tax, octroi on goods and tax on goods should be merged. If the State Governments feel their way to implement at least this recommendation, it will be a useful first step in the direction of consolidation and rationalisation of motor vehicles taxation which, with its present cumulative incidence, eats heavily into the industry's resources for expansion.

DEVELOPMENT OF CALCUTTA

It is scarcely to be expected that the crushing civic problems of Calcutta—a teeming metropolis of six million people including a million-and-a-half refugees from Pakistan—will be solved, even with the best will in the world, in a few years' time. No such expectation is in fact entertained in political and industrial circles which have been deeply concerned over the utterly miserable conditions of living in the city. Some idea of these conditions can be had from the results of the social surveys recently carried out there. According to them, 17 per cent of people in the city have no living accommodation; 30 per cent have living accommodation at the rate of one room for every three families, 6 per cent at the rate of one room for every two families and 33 per cent at the rate of one room per family. The figures for families enjoying the use of lavatories are: No lavatories —12 per cent; one lavatory for 100 families and above—4 per cent; one lavatory for 50 to 99 families—11 per cent; one lavatory for 10 to 49 families—59 per cent; one lavatory for 1 to 9 families—5 per cent, and one lavatory for one family—9 per cent.

It will be seen from these figures that families having two or more living rooms each represent only 14 per cent and families with one lavatory each 9 per cent of the city's population. The immensity of Calcutta's housing, hygienic and sanitary problems can also be figured out from the finding that 28 per cent of the city's households, representing about 27 per cent of its population, live in bustees, that is, in mud houses or houses built partly of mud and partly of bricks. At least a partial remedy can be found for these intolerable conditions, if the project (which has been canvassed for some time now) for water supply, sewage disposal, drainage and slum clearance comes to be implemented energetically in the near future.

But this project alone, estimated to cost Rs. 200 crores in all, will involve planning of the utmost complexity in an area of 270 square miles covering the administrative zones of Calcutta and 32 other suburban municipalities. The Government of West Bengal has already taken the first step of establishing, under the Chief Minister's control, the Calcutta Metropolitan Planning Organisation (C.M.P.O.) which is charged with the responsibility of evolving, through its own studies and by revising the partial plans of other public agencies, a comprehensive development plan. The task of planning, as distinct from executing a plan, is itself so difficult in the case of Calcutta that the new organisation will require technical assistance at every stage. It is this expert assistance that is now sought to be provided by the Ford Foundation which has just announced two related grants of the aggregate value of $1.4 million ($800,000 under one grant and $600,000 under the other) for the purpose of assisting the Calcutta planning agency in its difficult task.

The first grant of $800,000 is offered directly to finance a team of foreign technical consultants as required in each of C.M.P.O.'s major divisions—land planning, community design and housing, transportation, engineering and sanitation, economic and social research, and fiscal planning and administration. The other grant of $600,000 will go to the Institute of Public Administration in the United States for a programme of comparative urban research and training, based primarily on the Calcutta project. With the help of this grant, the Institute will conduct research on housing and industrial design, urban community planning, utilisation of regional resources, and other fields, as requested by the Foundation's consultants in Calcutta. With the announcement of the Foundation's twin grants, the second major step of drawing up a master plan for Calcutta is being taken in right earnest. But how long will it take to evolve and publish a draft Master Plan for the City? According to one view, it is a long way off, because it will be no easy job to secure the support and co-operation of the Calcutta Corporation and the 32 suburban municipalities, most of which are not enthusiastic about the Master Plan. This is a great pity, for the drainage, water supply and sanitation problems of Calcutta cry out for immediate solution. Surely, the obstructive attitude of existing municipal agencies should not be allowed to stand in the way of preparing a Master Plan quickly. It would be for the benefit of everyone, if the Chief Minister of West Bengal, believed to be an autocrat by nature, were to assume a certain amount of authoritarian powers for solving this humanitarian problem expeditiously and making Calcutta a place worth living in.

GOVERNMENT'S BUYING OF STORES

The Central and State Governments are bulk buyers of a wide variety of stores and equipments, ranging from consumer goods, such as food materials and textiles, to machinery and automobiles. In 1958-59, the latest year for which the report of the Directorate-General of Supplies and Disposals is available, the total value of orders for stores placed by all Government Departments aggregated about Rs. 372 crores, comprising Rs. 186 crores on account of imported stores and Rs. 186 crores on account of stores procured from indigenous sources. In view of the proposed massive investment programme in the public sector during the third Plan period, the total volume of stores and equipments is bound to go up at a rapid pace. The purchasing policy of the Government, therefore, assumes special significance. While the general policy in this respect has been in the right direction, there is still room for improvement in the nature of Government's buying operations, including uniformity and simplification of procedures, centralisation of functions and, above all, substitution of imported stores by indigenous products to the maximum extent possible.

Dr. B. Gopala Reddy, Union Minister for Works, Housing and Supply, pointed out at the ninth annual meeting of the Central Purchase Advisory Council held at New Delhi last week, that the declared policy of the Government was to use domestic sources of supply to the maximum extent possible, and to resort to imports only where they were inescapable. This policy is admittedly commendable. While imports cannot be dispensed with in respect of several items, particularly certain capital goods, for some time to come, a close analysis of the Government's purchases shows that imports of several other items can still be replaced by indigenous products. This will be possible only if a close watch is kept on the trends in the development of new industries and also expansion of existing ones within the country. The D.G.S. and D. has, of course, been making some efforts in this direction and its total purchases from indigenous sources have been progressively stepped up from a mere Rs. 41.84 crores in 1953-54 to Rs. 161.32 crores in 1958-59 and still further to Rs. 180.48 crores in 1960-61. The D.G.S. and D., according to Dr. Reddy, has taken six important steps towards encouraging indigenous industry. These include rationalisation and standardisation of specifications, consolidation of requirements of various Government Departments and long-term agreements with industry, granting of technical aid to producers, and assistance in procuring raw materials for manufacturers. If all the Government Departments, instead of buying directly, make it a point to procure their requirements as far as possible through such a centralised agency as the D.G.S. and D., which is entrusted with this specialised task, the results in terms of purchases of indigenous stores are bound to be more encouraging. This, of course, implies that the D.G.S. and D. will promptly attend to their orders and make sure that there is no delay in the Departments concerned getting their requirements. At present, their is a lot of complaint on this score.

Dr. Reddy referred in his speech to another important aspect of stores purchasing, namely, the question of prices. He observed that it had come to the Government's notice that, in respect of stores for which there was limited indigenous capacity, manufacturers tried to take advantage of the sheltered market and quoted "unreasonably high prices." The established importers of certain goods were also blamed for charging exorbitant prices. This may be true, but there seems to be an element of exaggeration in the Minister's view, for, it should not be forgotten that the Government itself is a monopoly buyer, thereby giving hardly any room for bargaining advantages to suppliers. Another fact that should not be overlooked here is that, in recent years, there has been a sharp increase in the price of all goods, in general. In the case of certain commodities like jute, the increase in prices has been due, to some extent to the partial failure of Government's agricultural policy to step up production and, thereby, ease the supply position. The Government, although it has a monopoly over its buying operations, cannot always escape the impact of the forces of supply and demand.

The suppliers of stores to Government have actually been put to great difficulties on account of delays in payment and complicated procedures. It is to be hoped that the sixteen-man committee, set up by the Government last week, will make a thorough study of these difficulties and suggest solutions designed to increase efficiency in purchasing. The Committee, headed by Mr. N. E. S. Raghavachari, Director-General of Supplies and Disposals, will have on it representatives of trade and industry, State Governments and public undertakings. It has been asked to study the purchase practices of various Government agencies and evolve, as far as possible, uniform terms and conditions of contracts, keeping in view the specialised nature of purchases made by certain public sector undertakings. The Committee will also examine the variety of Government purchases, and recommend a list of goods which should be purchased through the D.G.S. and D. and those by the purchasing agencies direct. The report will be completed by October, and will come in for discussion at the next conference of State and Central purchasing agencies scheduled to be held in December next. Any step which it may recommend towards increasing efficiency in purchasing operations and prompt settlement of bills will be naturally beneficial to Government no less than to suppliers.

WOOLLEN INDUSTRY

Under the third Five-year Plan, the woollen industry is expected to achieve a notable rise in output of both yarn and fabrics, the former from 28 million lbs. in 1960 to 45 million lbs. by 1965-66 and the latter form a little over 15 million yards to 30 million yards. It is true that the capacity of the industry as it exists at present itself is much higher than what is actually required to secure the targeted output—67 million lbs. of yarn and 48 million yards of cloth, on the basis of two shifts and 300 working days. Notwithstanding this fact, the attainment of this production target is considered to be doubtful, in view of several disquieting problems confronting the industry. What these problems are and how they can be solved were impressively highlighted by Mr. V. Calloway, the retiring Chairman of the Federation of Woollen Manufacturers in India, when he addressed the Federation's annual general meeting in Bombay last week-end.

In just one sentence, Mr. Calloway summed up the whole position: "The difficulties of the industry as a whole are attributable more to production pattern control than to any other factor, except the inadequacy of foreign exchange allocations for the import of raw materials." The control order fixing a high percentage of hosiery and knitting yarn production, it will be recalled, has been prompted by the Government's anxiety to protect the interests of the small-scale sector in woollen industry. As a result of the control order, we are told, there has been a glut of hosiery yarn in the market, leading to much hardship to mills in the form of low prices. Mr. Calloway was not at all exaggerating when he declared: "Chaos has resulted, but Government does not appear to be unduly perturbed. . . . We are gravely concerned at the measures which the Government is taking to limit the activities of the organised sector and further the objectives of the small-scale processors and operators."

If the woollen industry is to meet a part of the expanding domestic and export requirements of textiles in the coming years, it must enjoy a certain amount of freedom in the production sphere, as well as active encouragement and assistance from the Government. The assistance is needed especially for the purpose of rehabilitation and modernisation. The Working Group on Woollen Industry has clearly warned that, unless the country keeps pace with the many-sided technological developments, the progress so far achieved in the expansion of the industry will not be of much avail. The Group has also suggested grant of financial aid by the National Industrial Development Corporation to meet 25 per cent of the rehabilitation cost. It is disturbing to hear from Mr. Calloway that, while the industry is prepared to provide 75 per cent of the capital for rehabilitation and modernisation plans, the Government has not accepted the plea for N.I.D.C. loan assistance for the balance of 25 per cent amounting to Rs. 2 crores.

May be, the cotton textile and jute industries are having a priority on the limited funds available, but the authorities must consider favourably at least Mr. Calloway's suggestion for providing funds from the various credit schemes negotiated with foreign Governments. Two other suggestions put forward by Mr. Calloway also deserve consideration. One, an additional foreign exchange of Rs. 1.5 to Rs. 2 crores must be made available to the industry as early as possible for the purchase of raw materials, especially wool and wool tops. Two, the industry must be allowed to import sufficient spare parts, dyes and chemicals. The Working Group, it may be noted here, has recommended top-most priority for import of spare parts. Since the Government has already accepted this recommendation, it is somewhat surprising to hear that the mills continue to experience great hardship, as their applications for imports are being rejected on the plea of foreign exchange shortage.

SOVIET ECONOMIC CHALLENGE

The new policy programme of the Soviet Communist Party, published in Moscow on 29th July, is considered as a historic document of great significance. It spells out a programme which will, in twenty years' time, establish, according to its authors, the material basis for the

(Continued on page 288)

ON THE ARENA

By "Archer"

Increasing Tempo of Arms Race

THE projected increase in armaments which Soviet Russia and the U.S. have embarked upon is terrifying. It seems obvious that the heads of both States wish to impress on each other and on the rest of the world that a public display of their determination to face a head-on clash must be made in no uncertain terms. Mr. Khrushchev has announced that he was going back on his proposal to reduce Russian armed forces by 1.2 million men, and would, instead, increase the strength to 3.6 million, and the defence expenditure to the equivalent of about Rs. 6,500 crores. President Kennedy has answered this threat and challenge by ordering an increase in American armed strength by 226,000 men and raise defence expenditure in the current fiscal year to the equivalent of Rs. 21,600 crores. To us, in India, these monetary figures are staggering, for our target of outlay on the entire third Five-year Plan is of the order of Rs. 11,500 crores. With faith and confidence, walking 'humbly in the sight of God', we propose to invest this amount for the economic development of our country and the social uplift of our people. In a rising tempo of angry discord, the two thermonuclear powers have decided to throw a colossal quantity of their resources down the drain merely to establish that neither of them is faint-hearted. They say that they do not want to precipitate an atomic war, but the preparations which they have decided to make look like pushing them relentlessly to that monstrous eventuality. The road to disaster is being built with roubles and dollars only to be piled up, later, with the bodies of the young and middle-aged among mankind.

It was hoped that the advent of the Kennedy Administration in the U.S. would result in world tensions being eased, and the conduct of international affairs being carried on with moderation, through logic and persuasion. These hopes are being shattered. The United States and the Soviet Union find themselves inextricably caught in snares of their own creation. These two proud and angry giants who are perpetually obsessed with the need for demonstrating the superiority of their individual social systems and way of life are inexorably dragging the rest of the world into orbits of combat where a single spark may be ignited, through the slightest miscalculation, into a destructive conflagration enveloping the whole world. In the light of their declared objectives, the melancholy thought arises that it is the uncommitted nations which have a vital stake in the maintenance of peace. It is they that have to keep their pathetic faith in the conventional wisdom which asks: "Of what use is it if a man gains the whole world, but loses his own soul?"

• • • •

Elementary Wisdom

The Central Road and Inland Water Transport Advisory Committee has recommended that it is essential to retain the English script on number plates of motor vehicles from the point of view of public safety. The Committee has also stated that, if it is decided to use the Devanagari script, this should be in addition to the English script. The first portion of the recommendation is evidence of elementary wisdom, the latter portion is evidence of vacillatory pampering of linguistic fanatics. Tinkering with numerous can be only a concession to narrow prejudice and pride. Motor vehicles, whether they are privately owned or used for public transport, must be identifiable at a glance, and can be so identified only if the commonest system of marking is adopted. The English numeral is, for the present, most widely read and understood. Any other script restricts the utility of the marking. The local policeman may be able to read it, but not every man in the street, and certainly not a foreigner to the locality, even one from another part of the country. On the top of this absurdity, if vehicle owners are to be encouraged to carry two numbers on one plate it will only add to the confusion and clutter up the identification plate. The locality where such a system will prevail will be a paradise for hit and run motorists, the numbers of whom are on the increase everywhere.

The futility of using a script which is not widely understood was demonstrated on one occasion in an emporium in Bombay which had for sale a wide variety of articles essentially attractive to foreign tourists. All the price tags were in Gujarati script and no English equivalents were attached. A party of American tourists went round the showroom and were greatly interested in many of the items, for one or two of which they asked the prices, and the rest they merely examined; they found it a nuisance asking for the translation of every price tag, and the showroom assistants were also somewhat supercilious in response. Not a single purchase was made, and the assistants in the emporium were, of course, scornful. How much good custom was lost in this haughty demonstration of national pride (?) was known only at the end of the visit when the leader of the group told the manager at the counter, with withering contempt, "Look, feller, we were told that this was a good place to buy, and we were ready to spend a couple of thousand dollars here; but we see that you are running a museum, not a sales emporium. Your price tags are in Egyptian or Chinese and we are not so versatile as to read them. We can't be wasting time asking for the price of every item. Maybe we would have taken many things because the prices were attractive, but if you want to keep the prices secret, you are welcome; you keep your goods and we keep our dollars."

A second item evidencing elementary wisdom, very belated though, is another recommendation of the Central R. and I.W.T.A. Committee that a system of licensing should be instituted for country boats carrying passengers across waterways, so as to prevent boat disasters. This is a thing which should have been done years ago, and, even now, licensing will deal only with water-worthiness, not the curse of overloading. Even bullock carts and *hath gadis* (hand carts) are registered and have to pay a license fee, not because their soundness is thereby ensured, but municipalities and local boards gather sizable revenue from them. But country boats, often plying in remote areas far removed from urban centres, are not subject to any kind of inspection for their being water-worthy. Invariably, they provide the only available mode of communication and transport in interior villages which are not served by roads and are separated from the mainland by rivers and channels. The boat tragedies in recent years in the Godavari and Krishna where unregulated boat transport has been in existence for years and widely used by several hundreds of people at a time during floods and festivals, have been much discussed in the legislatures, but the obscurity of the victims has perhaps been the cause of the absence of positive follow-up action. The recent boat disaster at Delhi appears to have provoked some urgent thinking on the subject. If out of evil cometh forth good, let us hope that no country boat in the country will be left unturned for proper inspection, or, should I say, that no stone is left unturned for finding a solution to stop these recurring tragedies?

The Ten-Year Rule

It is going to be good fun watching the course of events relating to the choice of Congress candidates for the next elections. Old stagers who were very confident of everything in the past, confident of being selected, confident of being elected, and confident of being admitted into the inner group—whatever it meant—are not so sure of anything now. The ten-year rule suggested by the Congress President is taken to be only a suggestion by some, and as a directive by others. Whatever was the intention of the President, the rule is being freely quoted by the younger and aspiring set, and is likely to serve as a convenient weapon in the hands of selection committees. Invitations have been sent out calling for applications before the end of July from all intending candidates for State Assemblies and the Lok Sabha. Fees have to be paid, and they are not returnable. Deposits are required to be made, and they will be returned to those who are not selected. The younger aspirants are found to be keen and eager for contests, but the older ones are hesitant. The financial commitments are calculated to be somewhat excessive and the electioneering work extremely arduous, especially as it still entails contacting voters individually and endless rounds of campaigning.

There is no doubt that the ten-year rule will be waived in a number of cases, as its rule-of-thumb application might result in pushing out many of the stalwarts whose services may be considered indispensable. Selective application of the rule will result in recriminations and defections. Not all the old stagers are senile or in dotage, at any rate not to the extent of remaining docile if not selected. Unfortunately, several of them can be cloth-heads steeped in outmoded ideologies, with conceited notions of their indispensability and superior wisdom. Not all of them realise that the aura of patriarchal omnipotence which surrounds them is essentially ephemeral and will vanish as soon as they are dethroned. It is such people who should be spotted and gracefully pushed out to give place to other men with good promise and credentials. Far too long we have been conferring preferments on the old guard as reward for suffering imprisonment and martyrdom. It is time there was a change, and the change should be effected in such a way as to bring into the Legislatures and Parliament persons with resilient minds, deep understanding and capacity for sustained legislative activity, who will eschew the pomp of having acquired a new status but develop the ambition to climb to positions of responsibility through hard work and merit, not by lobbying. If the ten-year rule is used effectively for weeding out fossils and recruiting live wires, the country will be the better for its imposition.

• • • •

There is a Limit to Climbing Stairs

Quite a few reported cases have come to light in Bombay of middle aged men climbing four flights of stairs and collapsing at the top step through heart failure, although they were not known to have had any evidence of cardiac trouble before. Failure of the electric lift forced them to trudge the stairs to reach their flats at the doors of which they were laid flat. Cases have also come to light of eccentric lifts that stopped between floors, lifts that started moving up or down even with grill doors open, lifts that shook as if overtaken by rigour and lifts that dived into the receptacle below the ground level and stopped with a thud and bang. Lifts are blessings when they behave and curses when they do not. In any case, a lift is a must for every building with more than three floors; the third is about the limit of human endurance on the law of averages.

One should, therefore, deeply sympathise with the employees of the Income-Tax Department in Calcutta who, it is reported, have refused to occupy the fine nine-storeyed building erected there for the department, beyond the fourth floor, because there is no lift to it. Indeed, one should have some praise for their willingness to climb even four floors. The sad story of this multi-storeyed building is that it was completed three years behind schedule, but not planned effectively enough to ensure the installation of a lift to synchronise with the completion of the structure. It is stated that the Income-Tax Department in Calcutta which is now housed in a number of scattered rented buildings at a rental of Rs. 50,000 per month is unable to move into this composite structure without a lift, and that hopes of acquiring a lift from abroad are slender for the next two years.

In this context, it is very heartening to hear that the Maharashtra Government has proposed to make it compulsory for all landlords in the State to install lifts in buildings with more than two floors and *keep them open round the clock*. This requirement, (italics mine) is refreshing and elevating, for there are several utterly mean landlords who own blocks of flats where lifts cease to function for four or five hours during the day and after 8 or 9 p.m. Those who own expensive flats with elevators are not all of them very elevated in outlook; they try to save in current by imposing uncurrent modes of life on their tenants.

NO CHANGES IN COMMERCE AND INDUSTRY MINISTRY?

ISSUE OF DEPUTY LEADERSHIP MAY COME TO THE FORE AGAIN

From Our Special Correspondent

NEW DELHI, 1st *August*

DELHI LETTER

AT long last, the importance of launching a new export promotion drive seems to have got the recognition that it had so sadly lacked all these days in New Delhi; but the actual manner in which such recognition was accorded to the subject recently by the Prime Minister has led to a controversy within the Government (in which the Press also has, it seems unwisely, participated) and the chances are that it will end in nothing. The Prime Minister's proposal to entrust Mr. Manubhai Shah, Minister for Industry, with the Foreign Trade portfolio was intrinsically a sound move. Mr. Shah has shown great dynamism in the administration of his present portfolio and has acquired a thorough knowledge of the working of industry and trade which should be of great help in framing policies that are best suited to promotion of exports. One of the major difficulties in this matter has been the tendency of business interests to regard departmental schemes and Ministerial exhortations as amateurish, since they often lacked flexibility and practical knowledge of foreign trading conditions. A Minister like Mr. Shah can easily disprove this charge by displaying his superior knowledge and by making his departments avoid their usual mistakes.

Trade Promotion

Trade promotion in any country has become a complicated affair in the post-war period, as anyone who has followed G.A.T.T. negotiations can testify. For India, which has suffered a fairly long period of stagnation of exports and will be facing new threats (like the consequences of the European Common Market), the problems are even more complex. With an obligation to earn more and more in future years to meet the bare maintenance needs of the economy, let alone the repayment of debts, the urgency of the task of expanding exports is not in doubt. Indian officials are not lacking in competence for tackling the issues, but they cannot be expected to show great powers of initiative and have lacked the necessary political support and direction for implementing bold policies. After Mr. T. T. Krishnamachari left the Ministry of Commerce and Industry in 1956, there have been few Ministers—except Mr. Manubhai Shah—who have shown a clear grasp of the problems, though they are generally wise men and pragmatic in their approach. Mr. Nehru had an opportunity recently to discover and appoint an energetic and competent Minister when Mr. Lal Bahadur Shastri took over the Home Ministry, but it was missed because of a reluctance to take a decision on the promotion of a Minister to a Cabinet post, or for the appointment of an outsider to it, within a year of the General Elections. But the routine manner in which the vacancy was filled hardly did justice to the importance of the duties attached to the post when the expansion of both trade and industry had to be planned on radically new lines and the Planning Commission had little to offer beyond vague generalities.

Apparently, the talks in New Delhi on Britain's entry into the Common Market acted as an eye-opener to the Prime Minister who normally has little time and perhaps less inclination for such details. To wait till after the elections for the changes needed in the Ministry of Commerce would have meant continuation of the present state of neglect during a period in which much preliminary work could be done; even after the elections, a much wider choice among Ministerial candidates may not be available as an alternative to Mr. Shah who has proved to be alert and active. All these were sound and important considerations in the move to make him Minister for Foreign Trade. But another side to this story has been revealed to explain Mr. Shah's reluctance to take up this charge and of others also inside the Ministry to exchange theirs with his. Mr. Shah, it is said, contends that the task of export promotion is too big to be tackled successfully between now and the General Elections and there is not time enough for him to make any impression. This is not a serious objection and can in any case be met by the argument that an early beginning has to be made; but behind it there seems to be a suspicion that the change is prompted by the pressure of Leftist groups inside the Congress Party which feel that the industrial policy as at present pursued does not sufficiently reflect the "socialist pattern" and that a more unquestioning and dogmatic follower of the Policy Resolution should be in charge. If this were true, the pressure should certainly be resisted, if only for the reason that any policy that is eventually adopted must be deemed to be that of the Government as a whole and not that of any individual Minister. Even if the Prime Minister had been convinced that there was any substance in this complaint and if this were the real cause for the initiative taken by him, he could well have waited till the elections for making changes. This is what is most likely to happen now, as a result of this episode, if Mr. Shah insists on making an issue of it, as he is reported to have done. The Prime Minister may reconsider the matter and possibly realise the inadvisability of pursuing it at this stage.

It is, however, deplorable that purely personal considerations should have eventually prevailed to shelve a matter of great national interest. Incidentally, it is interesting to hear that among Mr. Shah's objections was the need for continued watchful care over the public sector units now under his supervision; to this, the P.M. appears to have yielded so far as to permit their continuance under his supervision (there was an earlier precedent for this in the continuance of the Ministry of Steel under Mr. T. T. Krishnamachari) though it should have been clear that Mr. Shah would be continuing to function within the same Ministry and would always be available for consultation and may even legitimately exercise the right of offering advice. These are curious personal loyalties which should not be allowed to stand in the way of mobility of talented men who have to take up progressively higher responsibilities.

• • • •

Ten-year Rule

Another issue in which principle has been allowed to be dominated and obscured by personal considerations is the now famous but dying ten-year rule. There has never been any case for any rigid ceiling on the holding of office by Congress Ministers in the States or at the Centre, when talent is all too scarce for the increasing number of posts involving heavy responsibility. But, when quite a number of mediocres tend to hold posts for long periods, giving their betters or equals no chance for exercising power and patronage, much jealousy is caused and the Congress President, Mr. Sanjiva Reddy's suggestion (it was nothing more when it was made) for a ceiling on office was quite warmly received in many quarters, including those outside the Congress who had hoped for a change of faces, if not of calibre.

But the enthusiasm with which politicians of Gujarat hugged the idea to their bosom has surprised many outside that State who did not realise its implications. It was rather unfortunate that the Finance Minister Mr. Morarji Desai, who generally keeps aloof in such matters, should have so warmly supported the ten-year rule. Except where office-holders responded voluntarily, the rule would have proved difficult of enforcement and graceful voluntary retirements may not be the ones which the Congress Party could easily afford since they would involve the most self-less workers. Events have proved Mr. Sanjiva Reddy's idea to be a very superficial one; uncharitable critics may even call it a stunt, but few will regret its withdrawal now.

Deputy Leader—Who?

The upshot of the controversy that has raged over this question is that wrong men have taken hold of it for achieving ends which the rule was intended to prevent. Seeing the turn it had taken, the Congress President was quick to proclaim the rule to be dead, but Gujarat politicians were reluctant to forgo an important weapon and have consequently ignored this declaration. Their wrangles have been conducted in the full view of the Congress High Command in New Delhi and the compromise now reached is a very odd one. The parties have decided to leave it to the Election Committee to process applications for tickets according to the rules—which will not obviously include a non-existent or defunct ten-year rule. This is a reverse for the supporters of the rule (including the Union Finance Minister), though they may hope to revive it by the backdoor through influencing Selection Committees. These exciting developments illustrate the truth behind the frequent complaint that the General Election is affecting the work and concentration of leaders responsible for important policies. In a few days, Parliament will reassemble to transact a modest programme of legislative and other work including a debate on the third Plan, but here again, interest will shift to the long-drawn-out controversy about the Deputy leadership. After the elucidation by the Prime Minister at the last session of the implications of the election of a Deputy Leader, the end may appear tame, but there are still possibilities of an exciting finish.

• • • •

Plain Speaking

The leading economic event of the week is the blunt-speaking by Mr. S. K. Patil at the annual meeting of the Sugar Mills Association. While he was obviously in error in blaming the industry for not taking steps to reduce consumer prices to improve sales when most of the price-components are determined by the State and Central Governments, he was apparently thinking of the margin provided by the rebate in excise duty on additional production which the industry has not fully utilised to stimulate higher consumption. Until the industry shows initiative in offering such inducements, it will not be on strong ground in pressing for reductions in excise duties to clear off accumulated stocks. Mr. S. K. Patil has been a good friend of the sugar industry all along; he has not only helped to increase production through incentives but also assisted in finding a market for the surplus in the U.S. By not yielding to some of its unwise demands like complete decontrol and higher prices, Mr. Patil has also saved the industry from a worse crisis; but he has indicated his sympathy for the more reasonable demands for relaxation of distribution controls by State Governments. An important point he has now made is that, in view of the International Sugar Agreement, there was no question of selling any amount of sugar to anybody regardless of price (although the original deal with Pakistan at £23 per ton seemed to indicate some such intention). Mr. Patil has assured the industry that he would be the last person to deprive it of the incentives and concessions offered in the last two years; among these numerous proofs of his interest and sympathy, however, one fails to find a convincing answer to the problem of accumulation of stocks. Perhaps he is still looking to the Finance Minister for a helping hand.

AMERICAN LETTER

U.S. UNDERTAKES PARTIAL MOBILISATION

LIMITED WAR ON BERLIN ISSUE A DISTINCT POSSIBILITY

From Our Special Correspondent

NEW YORK, *29th July*

THE upward movement in business continues along the lines outlined in my previous despatch, but unemployment remains more or less stationary at a relatively high level. This, however, is hardly on the public's mind, particularly since President Kennedy's television speech on all American television networks and since his subsequent messages to Congress calling for accelerated and additional expenditures for greater armed strength.

The President's speech was not a hastily written document. It took about a week to compose and to revise with the help of key men among Mr. Kennedy's advisors in the White House, State Department and others close to him, such as his brother Robert Kennedy, Attorney General. It represented, therefore, a cross-section of official Washington's opinion as to what should and what should not be said.

The economic undertones of the statements were strong. Because of the partial mobilisation now undertaken, the Federal Budget will, of course, be considerably larger than was anticipated just a few weeks and months ago. An increase in taxes was postponed, however, because the Treasury banks on higher revenue from corporate and personal taxes to lessen the impact of higher spending.

There were two glaring omissions in the speech. One was Cuba, which has just hi-jacked an Eastern Air Lines passenger plane at pistol point in flight. American opinion is incensed over this and the previous confiscation of American property on the island. Yet, the President said nothing about it—perhaps, for fear of antagonising other Latin American feelings. Yet, the reaction in the Kremlin must be, if the U.S. does not do anything about Cuba, it will not do anything about Berlin.

Such a possible Russian miscalculation could be logical to the Soviets, too, in view of the fact that the Allied garrisons in West Berlin are outnumbered by Russian troops and could not possibly expect to hold the city against a massive onslaught. France has her troubles in North Africa and Britain is involved in a new austerity programme.

Real Warning

Yet, President Kennedy's warning that the West intends to stay at Berlin even at the risk of war is quite real. It is comparable only to the guarantee of the British Government for the integrity of Poland which precipitated the last war. Mr. Khrushchev's domestic troubles would also seem to be an invitation rather than a deterrent to go to war which he could win easily in a limited sort of way.

The second omission in the speech was that the U.S. will propose shortly a plebiscite in both East and West Germany which would be supervised by all 52 Allied nations which helped win the last war. This was not mentioned for fear of interfering even remotely in the forthcoming elections in West Germany, at least for the time being.

The combination of circumstances, as they appear to me at present, is that a limited war over Berlin is a distinct possibility, especially after the U.S. ineffectiveness in dealing with the Cuban and Laos situations. That Washington is now inalterably committed in Berlin was explained to the Soviet Ambassador at a private luncheon at the Russian Embassy by Mr. Robert Kennedy. The next move is now up to Moscow, which has a wide range of choices. The answer may come in August, long before the Khrushchev-proclaimed deadline of the year-end, according to private information from West Berlin. Events have been moving too fast to stem the chain reaction which seems almost inevitable.

Whether this is going to be a hot cold war, or an undeclared shooting was in which atomic weapons may or may not be used, is immaterial. The economic consequences of even a partial mobilisation are all too familiar. Unemployment will vanish into thin air as there are job openings for those called into the armed services. Payrolls will be provided out of Government contracts, for guns, airplanes, ammunition, uniforms and food and all that goes with it. There is already talk of possible credit controls and other emergency measures as were in force during the last war.

More dollars of dubious value will be in everyone's pocketbook. The extent of the national emergency will dictate Government expenditures, the debt limit, taxes and will influence everyone's life and behaviour.

Gloom in Wall Street

Wall Street has already taken the cue. There has been considerable strength in defence issues, although stock trading, generally, has been subdued and depressed by the disclosure that quite a few brokers abandoned the permissible path of ethics and have strayed. An appreciable number of indictments have been handed out by Grand Juries and, it seems, many of them are so well founded that some houses will have to suspend operations and the culprits will land in jail. No wonder there is gloom in Wall Street and at the headquarters of both the New York and the American Stock Exchanges which are now under investigation regarding their own policing of trading.

In the meantime, manufacturers' inventories, sales and new orders have been rising. Inventories are now slightly above the year ago level, except in the oil and rubber industries. Sales have been rising and new orders have been increasing over a period of several months. They are also ahead of 1960 levels.

The upward trend in personal and family income continued. The pre-tax earnings of 56 million families averaged $6,900 last year, up 4 per cent since 1959. This was offset partially by higher prices, so that purchasing power rose only 2.5 per cent, but this compares with a 1.9 per cent average annual rate increase since 1947.

Many families have been moving into higher income brackets. In 1929, only 20 per cent of all families earned $5,000, or more, after adjustment for price changes. Last year, 57 per cent of all families earned that much. About 17 per cent of families earned $10,000, or more last year, as compared with only 5 per cent in 1929. Wages and salaries constitute by far the primary sources of consumer income, accountable for about 70 per cent of the total.

Yet, trade union pressure on management for still more money or benefits continues to dominate the industrial scene. The Automobile Workers of America, in their current demands from industry, are suggesting more pay, more benefits with the eventual aim at salaries rather than hourly pay, a 36-hour week and that every fifth year be considered "sabbatical." Such requests are particularly absurd in the case of such corporations as Chrysler which has been losing money. They might well lead to bankruptcy and the loss of many jobs in which trade union leaders, presumably, are interested—or at least to which they pay lip-service. It is pertinent to recall, in this connection, that Premier Leon Blum's labour policy, under which France suffered incessant strikes, paralysed French industry shortly before the Nazi invasion.

United Nations News

Slow motion friction characterised several emergency sessions of the United Nations Security Council. Paris is upset over U.N. intervention in its dispute with Tunisia and official Portugal resented being criticised over its policies in Angola. What the U.N. will do in the Berlin dilemma remains to be seen.

The International Monetary Fund has entered into a stand-by arrangement under which the Government of Bolivia may draw up to $7.5 million during the next twelve months in currencies held by the Fund.

The Bolivian Government has stated its intention of continuing the basic programme of fiscal, credit and foreign exchange reforms that was undertaken with financial support from the Fund in 1956. Close consultation will be maintained between Bolivia and the Fund while the new stand-by arrangement is in effect.

The Government of the United Arab Republic (Egyptian Region) has drawn the equivalent of $10 million from the I.M.F.. half in deutsche mark and half in Italian lire. The U.A.R. (Egyptian Region) recently experienced a loss of convertible currency reserves, due in part to difficulties in the marketing of cotton. The request for a drawing from the Fund is to assist in meeting this loss, while providing more time for adjustments of policy to meet the situation.

TACKLING THE CRISIS

CHANCELLOR WITHOUT A FRIEND

From Our Own Correspondent

LONDON, *26th July*

LONDON LETTER

THIS was Mr. Selwyn Lloyd's second budget this year. It was hopelessly prejudiced by the first which was based on an assumption of an expanding and prosperous economy. Now the Chancellor has told the nation that it is faced "with a critical external situation." It is a sterling crisis, says the Chancellor, although the cessation of the outflow of hot money and better balance of payments figures than we have had for some time have made it improbable that there is any immediate emergency. The measures the Chancellor took were to raise the Bank rate by 2 per cent; to restrict credit by calling up more special deposits from the banks and by exhorting them to be tight on their customers; and to reduce consumer spending to the tune of about £200 million a year by increases in customs and excise duties. In addition, he has opened an attack on wages, although the only blow that he has given has been at the teachers whose salaries are under direct Government control. This last was a bad political, as well as educational, move. There is a shortage of teachers in the country, the Government has been trying to induce more to come into the profession, and the Government Committee which sits to advise on rates of pay had recommended an increase. The Chancellor is slapping down his own Committee.

As regards immediate blows to the consumer, the Chancellor has surpassed all expectations. He has been more vicious than anyone expected. But, in so doing, he has made the whole country ask what all this has got to do with the long-term problem of Britain's balance of payments.

A look at Fleet Street this morning is revealing. Says the *Financial Times*: "As a short-term device to bolster up foreign confidence in sterling, the package may do the trick. But... this is not the first time that a sterling crisis has induced Governments to restrict demand without achieving useful long-term results." The Chancellor's analysis of the long-term action necessary is approved—in brief it is that the growth of income must be related more sensibly to the growth of productivity. Restrictive practices in industry both by employers and workers must be opposed. Public expenditure must be planned in the long-term, and measures taken to encourage Britain's export trade. But the *Financial Times* concludes: "Nothing has yet been *done* about these desirable long-term objectives." And, finally, it says kindly: "Judgement must be reserved. Sterling is probably safe for the moment.... So far as long-term measures are concerned, deeds have yet to take the place of words."

The *Manchester Guardian* applauds the Chancellor for "his good intentions," but goes on to ask: "Do his actions measure up to his intentions?"; and concludes that the unexpected severity of his measures may well create a recession which will end up with the country worse off than before. "On the wages front, Mr. Lloyd has failed most signally... substantial tax concessions for the wealthy (in the first Budget) followed by tax increases and other burdens which fall on the less wealthy. To expect any wage restraint after such a combination of measures is astonishing. The Chancellor's call for dividend restraint will fool no-one."

The *Daily Mail* describes the budget as "the mixture as before," and of the long-term measures comments that these "... distant projects and vague aspirations are put off till next year—or the Greek Kalends... the nation was keyed up for the 'unexpected' which had been promised but has not been produced... here is the familiar deflationary recipe designed to restrict credit, damp down spending and perhaps raise unemployment... this is not the required approach to the problem of chronic economic crises" and, in its most scathing phrase, denounced the long-term measures as claiming the title merely because they are not to operate at once! "Thus, the proposal to tax Stock Exchange speculation is for 1962: the cut in BOAR costs is for discussion with NATO: the possible planning of parts of the economy is to be talked over with industry: agricultural

(*Continued on page 285*)

STATE FINANCIAL CORPORATIONS

PROGRESS MADE NOT STRIKING

THE State Financial Corporations which have been established in the course of the last eight years in the various States of the Indian Union play an important role in providing medium term and long-term finance to small and medium-scale industries operating within the respective States. In all, eight Corporations have sent their annual reports for the year 1960-61 to us, of which the working of the Gujarat Financial Corporation has already been reviewed, *vide* page 1077 of *Commerce*, dated 10th June 1961. In this article, the financial results of the remaining seven Corporations are analysed. A comparative study of these Corporations clearly reveals that the Corporations are rendering a valuable service to small and medium-scale industries, though there may be room for doubting whether they have proved themselves to be as useful as had been hoped. The total loans sanctioned by the seven Corporations, the results of which have been tabulated in the comparative table at bottom of the page, have registered a modest rise from Rs. 3.32 crores in 1959-60 to Rs. 5.51 crores in 1960-61. The loans disbursed have also gone up substantially from Rs. 1.16 crore to Rs. 2.73 crores.

Of course, some of the Corporations, notably Andhra Pradesh, Madhya Pradesh and Mysore, have idle resources with them and they will have to take appropriate steps to use their loanable funds more intensively even by going out of their way to meet the financial needs of industries. Further, the procedure for granting loans needs to be clarified to the applicants, so that the interval between the receipt of an application and the actual date of sanction may be reduced to the minimum. The Corporations should also strengthen the technical staff at their disposal, in order to ensure expeditious and efficient handling of the applications. To avoid wastage of funds, the potential earning capacity of the projects submitted for financial accommodation has to be properly assessed. Some of the Corporations are entrusting this work to some banks. But it is also desirable to have competent technical personnel on their staff to perform this function.

Another notable feature of the working of these Corporations is that they have not yet reached the stage of meeting the dividend liability from their own income. Excepting the Bombay State Financial Corporation, all the other Corporations under review have been compelled to request their respective State Governments to grant them a subvention for paying the guaranteed dividend. It is needless to add that only when the loans operations reach higher levels, would it be possible for the Corporations to become self-sufficient. But this would imply not only an intensive utilisation of the resources which they already have but also raising more funds.

Bombay

A notable feature of the working of the Bombay State Financial Corporation during the year under review, is that in refreshing contrast with the experience of other Corporations, it has been able to meet its entire dividend liability of Rs. 7 lakhs from its own resources. The Directors have succeeded in this on account of the improvement of Rs. 42,000 in profit. Further they have kept the tax liability at the minimum—the exact amount being Rs. 2.07 lakhs, as against Rs. 3.89 lakhs in 1959-60 and have transferred Rs. 51,000 to statutory reserve, as compared with Rs. 1.86 lakh last year. This left a surplus of Rs. 6.31 lakhs for distribution. Instead of requesting the State Government to grant a subvention of Rs. 69,000, the Directors have thought it prudent to draw this amount from the accumulated reserves of previous years. This, of course, means that the Corporation has not yet reached the stage of self-sufficiency and it will take some more years before its surplus crosses the Rs. 7 lakh limit. For this the advances of the Corporation must exceed Rs. 4 crores, as against the amount of Rs. 1.96 crore at which they stood as at the end of March last.

The loans operations of the Corporation in 1960-61 recorded a substantial expansion. The Corporation sanctioned 126 applications for financial assistance aggregating Rs. 176.18 lakhs, as against 38 applications for Rs. 90.43 lakhs in 1959-60. The loans actually disbursed were also larger, having gone up from Rs. 20.52 lakhs to Rs. 82.95 lakhs. It is interesting to note that, as many as 37 loans sanctioned in 1960-61, were granted to new concerns, of which 13 have already started production. Another notable feature of the loan operations of the Corporation is that it has sanctioned a loan for a textile mill which had remained closed for six months due to financial difficulties.

Inclusive of the figures for 1960-61, the loans sanctioned by the Corporation since its inception in 1953 is of the order of Rs. 650.21 lakhs. Of this amount, Rs. 113.88 lakhs are on account of 172 small-scale concerns and Rs. 532.58 lakhs for 173 medium-scale units. The balance of Rs. 3.75 lakhs represents subscription to the debenture issue of one concern. Total disbursement till 31st March 1961 aggregated Rs. 327.39 lakhs. The total pending commitment is, however, only of the order of Rs. 178.18 lakhs, as sanctions of the value of Rs. 144.65 lakhs have lapsed. As against the pending commitment of Rs. 178.18 lakhs, the liquid resources at the disposal of the Corporation as cash with banks and in Government securities amounted to Rs. 119.70 lakhs as on 31st March 1961 and it would appear that the Corporation may have to approach the capital market in the near future for additional funds.

The break up of income during 1960-61 shows that interest on Government securities and deposits with banks was of the order of Rs. 5.34 lakhs, as against Rs. 6.43 lakhs in the previous year. The interest earned on loans to industrial concerns and debentures held by the Corporation aggregated Rs. 10.51 lakhs, as compared with Rs. 9.41 lakhs in 1959-60. This shows that a large part of the loanable funds of the Corporation is being utilised for the purposes for which they were meant.

Since the inception, the Bombay State Financial Corporation has disbursed a total amount of Rs. 327.39 lakhs, out of which a sum of Rs. 127.60 lakhs has been recovered. This shows that recoveries are fairly regular. It is said that while the majority of small and medium-scale industrial units have been able to meet their commitments regularly, some 16 concerns have failed to pay their loan instalments. The Corporation has taken legal proceedings against some of them.

The rate of interest on loans continues to be 6-1/2 per cent per annum. A commitment charge of 3/4 per cent per annum continues to be levied on all the loans sanctioned but not availed of, after due consideration of each case.

Assam

During the year under review, the Assam State Financial Corporation made steady progress. The Corporation received 44 loan applications for an aggregate amount of Rs. 115.98 lakhs and 23 applications were pending with it at the end of March 1960. Out of these 67 applications involving an amount of Rs. 187.38 lakhs, the Corporation sanctioned 22 applications of the value of Rs. 68.40 lakhs, as against Rs. 51.72 lakhs in 1959-60. The loans actually disbursed by the Corporation were also larger, being Rs. 55.69 lakhs, as compared with Rs. 40.43 lakhs in the preceding year. During the seven years of its working, the Corporation has sanctioned loans aggregating Rs. 273.87 lakhs, of which loans amounting to Rs. 26.85 lakhs were either declined by the parties or subsequently cancelled by the Board. Out of the net amount of Rs. 247.02 lakhs, loans involving an amount of Rs. 13.80 lakhs were repaid in full. Thus, the effective amount of sanctioned loans as on 31st March 1961 was of the order of Rs. 233.27 lakhs. Since the establishment of the Corporation, the total amount actually disbursed aggregated Rs. 192.01 lakhs, of which Rs. 39.92 lakhs have been received back from the borrowing concerns towards repayment of principal. The balance of principal amount realisable from the borrowers as at 31st March 1961 stood at Rs. 152.09 lakhs. The total amount of instalment of principal in default was only Rs. 1.77 lakh but the amount of interest in default was as high as Rs. 1.76 lakh. The Directors are of the view that these arrears are due to temporary difficulties.

The year under review has proved to be a more profitable one to the Assam Corporation, as compared with the previous year. Thus, the Corporation's profit increased by Rs. 1.10 lakh to Rs. 6.03 lakhs and the surplus available for the distribution stood at Rs. 3 lakhs in 1960-61, as against only Rs. 1.88 lakh in the previous year. The Corporation has, therefore, succeeded in reducing the quantum of subvention from Rs. 1.62 lakh to a mere Rs. 50,000. Its income has risen sharply from Rs. 6.93 lakhs in 1959-60 to Rs. 9.39 lakhs in 1960-61. Of this, the income by way of interest on loans and advances, and on deposits and investments stood at Rs. 9.36 lakhs. As the Corporation has utilised bulk of its resources for granting loans and advances, interest received from this source amounted to Rs. 8.57 lakhs, as against the interest income of Rs. 78,485 from investment and deposits.

The rate of interest charged by the Corporation remained unchanged at 7 per cent per annum, with a rebate of 1/2 per cent for punctual payment. The Corporation had raised Rs. 55 lakhs in October 1959 by the issue of 4½ per cent bonds, with a view to replenish its resources. As there was heavy pressure on its resources from applicants seeking accommodation, the Corporation decided to raise a further sum of Rs. 50 lakhs by issuing bonds bearing an interest of 4-1/2 per cent. The subscription list was opened on 26th April 1961 and the issue was fully subscribed.

Andhra Pradesh

The annual report of the Andhra Pradesh Corporation for 1960-61 reveals a decline, albeit small, in profit from Rs. 6.95 lakhs (for 1959-60) to Rs. 6.48 lakhs. The balance available for distribution, after providing Rs. 2.63 lakhs for taxation and Rs. 65,000 for reserves, amounted to Rs. 3.20 lakhs. The Corporation had to request the State Government to give a subvention of Rs. 2.05 lakhs in order to pay a guaranteed annual dividend at 3½ per cent.

During the year under review, the business handled by the Corporation showed steady progress. The Corporation received as many as 248 applications for loans amounting to Rs. 213.23 lakhs. Out of this, 72 applications involving Rs. 55.90 lakhs were sanctioned, as compared with 34 applications requiring Rs. 42 lakhs, sanctioned in 1959-60. This brings the total sanctions since the inception of the Corporation to Rs. 240.29 lakhs, and the total effective sanctions to Rs. 168.16 lakhs. The amount actually disbursed during 1960-61 was of the order of Rs. 27.50 lakhs, which shows a marked

BRITISH OVERSEAS AIRWAYS CORPORATION IN ASSOCIATION WITH AIR-INDIA AND QANTAS

improvement of Rs. 16.07 lakhs over the previous year. A sum of Rs. 1.37 lakh by way of instalments of principal and Rs. 10,213 by way of interest remained in arrears as at 31st March 1961.

The aggregate effective sanctions of the Corporation at Rs. 168.16 lakhs are in excess of its paid-up capital of Rs. 1.50 lakhs. The Corporation, therefore, thought it prudent to issue bonds for expanding its investible resources. It entered the capital market in May 1961 and its issue was heavily oversubscribed. As a result, the Corporation has been able to augment its resources by Rs. 54.99 lakhs.

But, even before this amount was raised, the liquid resources of the Corporation, that is, those kept as balances with banks and in approved securities, were together as high as Rs. 64.76 lakhs. The interest income derived from these funds was Rs. 2.49 lakhs as compared with Rs. 4.78 lakhs earned by way of interest on advances and loans. A feature of this institution is the high percentage of rejected applications. In 1960-61 the Corporation had rejected as many as 176 applications seeking a total accommodation of the magnitude of Rs. 157.33 lakhs. The report does not throw any light on the causes for such large rejections.

Madhya Pradesh

The results of working of the Madhya Pradesh Financial Corporation during 1960-61 disclose also a fall in profit from Rs. 4.10 lakhs to Rs. 3.90 lakhs. This was primarily due to the premature repayment of a big loan in the beginning of the year. Out of the reduced profit, the Directors have provided Rs. 1.75 lakhs for taxation. As the market value of the securities have depreciated, the Directors have thought it prudent to set aside Rs. 7,000 for the investment Reserve Fund. Further, Rs. 20,000 have been transferred to the statutory reserve fund. This leaves Rs. 1.88 lakh for distribution and necessitates a subvention of Rs. 1.62 lakhs from the State Government, as against only Rs. 1.25 lakh in 1959-60.

The Corporation's turnover increased steadily during the year under review. It received as many as 54 applications seeking accommodation of the order of Rs. 89.34 lakhs. Besides, 18 applications involving loans of the value of Rs. 30.23 lakhs were pending with the Board at the commencement of the year. Out of the total of 72 applications, 32 applications for an amount of Rs. 37.48 lakhs as against Rs. 32 lakhs in 1959-60 and Rs. 18.75 lakhs in 1958-59, were sanctioned. This takes up the aggregate loans sanctioned to Rs. 160.13 lakhs covering 72 applicants. The amount actually disbursed during 1960-61 was, however, lower at Rs. 7.23 lakhs, as against Rs. 11.87 lakhs in 1959-60 and Rs. 7.29 lakhs in 1958-59. This was mainly due to administrative difficulties arising from the delay caused in appointing the Managing Director. Another factor affecting the disbursements was that a large number of loan applications was sanctioned only during the closing period of the year and borrowing concerns were unable to draw the amounts before 31st March 1961, as they could not complete the necessary formalities in time.

The Corporation has reduced the minimum amount of each loan from Rs. 20,000 to Rs. 10,000 in order to be of help to a larger number of of small units. Another commendable effort of the Corporation pertains to a reduction in the period taken for processing loan applications and sanctioning them. In order to facilitate speedy disposal of loan applications, the Corporation has decided to appoint the Punjab National Bank as its agent for receiving applications in various parts of Madhya Pradesh. The Bank will make preliminary enquiries and pass them on to the Corporation. It will also disburse the sanctioned amounts to the parties concerned. This is quite a practical approach and deserves to be emulated by other State Financial Corporations, too. Further, the Corporation is paying particular attention to the proper utilisation by borrowers of the loans sanctioned by it. With this objective, periodical inspections of the borrowing concerns are being carried out by the officers of the Corporation. Such a check is necessary to make sure that the funds are being utilised for the purposes for which they had been lent. Besides, it will also facilitate repayment of loans according to schedule.

Kerala

The profit earned by the Kerala Financial Corporation during the year under review at Rs. 5.32 lakhs was also a shade lower than the sum of Rs. 5.51 lakhs earned in the previous year. This fall is mainly attributable to three factors, namely, (1) the reduction in the rate of interest by banks in which the Corporation's surplus funds are invested, (2) loss of interest on advances to defaulting borrowers and (2) reduction in the total amount of loans on account of the unsettled conditions created by the Kerala agrarian reform. Out of the reduced profit, the Directors have set aside 10 per cent, or Rs. 53,000, to a special reserve, which has been constituted to provide for contingencies of possible losses which may arise as a result of the Kerala Agrarian Relations Act. The provision for statutory reserve has been reduced to Rs. 13,000. The balance left for distribution, after allocating Rs. 2.21 lakhs for taxation, is Rs. 2.45 lakhs, requiring a subvention of Rs. 1.05 lakh from the Kerala Government to pay the guaranteed dividend. To supplement the loanable funds at its disposal, the Corporation decided to raise additional funds through five-year fixed deposits under Section 8 of the State Financial Corporations Act. The initial response was encouraging and fixed deposits of the value of Rs. 3 lakhs were received. But, subsequently, the banking crisis in the State had an adverse effect on the flow of fresh funds. The Directors feel that more funds can be attracted from the public, if the Corporation is authorised to receive deposits for periods less than five years. In order to expedite the work of sanctioning applications, this Corporation also has decided to utilise the services of some of the scheduled banks. The general terms and conditions on which the Corporation made advances to industrial concerns continued without any material change during the year under review. But the Corporation had to adopt an entirely different attitude to the question of acceptance of landed properties as security on account of legislative changes. Landed properties in excess of the ceiling limits will not now be accepted as security for loans. This has seriously affected the lending operations of the Corporation, as only certain categories of land which are specifically exempted from the ceiling legislation are acceptable as collateral. Further, the land legislation is having serious repercussions on securities already accepted for loans granted in the past. The Corporation is considering whether a reassessment of the existing securities would not become necessary.

The Kerala Corporation sanctioned during 1960-61 loans involving an amount of Rs. 41.67 crores, raising the total amount sanctioned so far to Rs. 215.35 lakhs. The amount actually disbursed during 1960-61 was Rs. 22.53 lakhs. Since its inception, the Corporation has disbursed loans of Rs. 172.97 lakhs. The total amount of equated instalments which fell due during the year aggregated Rs. 20.67 lakhs, out of which Rs. 17.20 lakhs were received, leaving a balance of Rs. 3.47 lakhs unpaid as at 31st March 1961. The Directors, however, say that they are very vigilant about the defaults and legal proceedings have been initiated in a few cases. Most of the chronic defaulters are small-scale entrepreneurs. As some of them were relying for securing working funds from banks, the declaration of moratorium in the case of some of the Kerala commercial banks affected their business.

Interest on advances and loans constitute the major source of the Corporation's income, the exact amount earned under this head in 1960-61 being Rs. 7.81 lakhs, as against Rs. 7.84 lakhs in 1959-60. The interest realised on investments and deposits in banks was only Rs. 1.18 lakh.

At the instance of the Central Government, the Kerala State Government raised the question whether the Corporation will be able to finance plantation industries like tea, coffee, rubber and cardamom estates. The Board carefully considered the proposal, but deferred its decision, as it thought that this would involve the Corporation in heavy financial commitments.

The Corporation has strengthened its inspection staff by the appointment of one more inspector. It carried out 96 inspections in 1960-61, as against 50 in the preceding year. It found that most of its borrowers were working satisfactorily and took prompt action, wherever necessary, to get the defects rectified.

Punjab

The Punjab Financial Corporation was able to maintain in 1960-61 the satisfactory progress it had made in the previous years. Its income from interest, commission, etc. rose by Rs. 1.38 lakh to Rs. 12.47 lakhs and the profit (before taxation) from Rs. 4.12 lakhs in 1959-60 to Rs. 5.30 lakhs in the year under review. After the essential provisions for taxation and reserves, the balance available for distribution to shareholders amounted to Rs. 2.46 lakhs; this required a subvention of Rs. 54,000, but this help was smaller than the sum of Rs. 78,000 that had to be obtained in the previous year. The influx of loan applications showed a marked improvement; the number rising from 76 in 1959-60 to 107 in 1960-61. The total amount of loan applied for went up from Rs. 147.06 lakhs to Rs. 223.35 lakhs. The applications received covered a variety of industries such as, woollen, yarn spinning, cold storage, paper, paper products, electric goods, steel re-rolling, *khandsari*, surgical instruments, chemicals, automobile parts and general engineering.

The Corporation sanctioned loans of the value of Rs. 128.37 lakhs during the year, as against Rs. 66.95 lakhs in 1959-60. The total disbursements were also higher at Rs. 56.65 lakhs, as compared with Rs. 51.97 lakhs in the previous year.

As a result of a rapid rate of disbursement, the Corporation had consumed its entire liquid resources by the end of December 1960. It, therefore, sought the permission of the Reserve Bank to raise additional funds. The Reserve Bank offered to lend against Government securities and sanctioned a limit of Rs. 19.50 lakhs. Out of this, the Corporation has availed of a sum of Rs. 10 lakhs.

The recoveries of the Corporation are progressing satisfactorily. Thus, out of the amount of Rs. 57.05 lakhs due to the Corporation since its inception, a sum of Rs. 56.16 lakhs has already been received, the amount in default being no more than Rs. 89,000.

Mysore

The Mysore Financial Corporation was formed only in April 1959. But, within this short period of two years, it has made good progress. During the year ended 31st March 1961, the Corporation received six applications for financial assistance of Rs. 86.46 lakhs, as against 52 for an amount of Rs. 84.90 lakhs received in 1959-60. In all 91 applications, including the pending applications of the previous years were dealt with, of which 21 received sanction for Rs. 43.52 lakhs. This takes up the total sanctions made by the Corporation since its establishment to Rs. 71.52 lakhs. The sum actually disbursed in 1960-61 amounted to Rs. 20.72 lakhs, as against Rs. 13.01 lakhs last year. The Corporation has at its disposal ample funds, the exact amount of cash balances alone being Rs. 51.76 lakhs. In addition, it has Government securities of the value of Rs. 15.25 lakhs.

As regards the disposal of applications, the Chairman of the Corporation, Mr. H. V. Koujalgi, has complained in his speech to the shareholders, that a number of applicants do not furnish the appropriate information necessary for scrutinising the applications. This results in elaborate correspondence and avoidable delay. The Corporation has, therefore, been making efforts to acquaint the industrialists in the State with the manner in which applications for loans should be made by issuing a brochure explaining the conditions under which loans are sanctioned.

The working of the Mysore Corporation during the year under review resulted in a profit of Rs. 3.52 lakhs, as against Rs. 2.45 lakhs in 1959-60. After providing Rs. 1.55 lakh for tax alone and Rs. 18,000 for reserve, the surplus available for distribution amounted to Rs. 1.79 lakh. As the Corporation has to give a guaranteed annual dividend at the rate of 4 per cent, it has requested the State Government to give a subvention of Rs. 2.21 lakhs.

WORLD BANK LOAN TO PHILIPPINES

The World Bank has given a loan equivalent to $8.5 million to the Republic of the Philippines to finance equipment needed for a programme of dredging and maintaining harbours and ports at depths satisfactory for ocean-going and inter-island shipping. The island-economy of the Philippines is heavily dependent on efficient sea communications in its foreign and domestic trade. The new equipment will make possible the additional dredging needed for the safe navigation and ready manœuvring of ships using the country's public ports.

Seven private banks are participating in the loan, without the World Bank's guarantee, for a total amount of $920,000 representing the first five maturities which fall due between 15th September 1963 and 15th September 1965. The participating banks are the New York Agency of the Chartered Bank, the New York Agency of the Hongkong and Shanghai Banking Corporation, the Bank of America National Trust and Savings Association, the Chase Manhattan Bank, the First National City Bank of New York, the Manufacturers Trust Company and the National Bank of Commerce of Seattle.

The loan is for a term of 17 years and bears interest at the rate of 5¼ per cent per annum, including the 1 per cent commission which is allocated to the Bank's special reserve. Amortisation will begin from 15th September 1963.

GENEVA TEXTILE CONFERENCE

START MADE TOWARDS ESTABLISHING A SYSTEM OF ORDERLY MARKETING

From Our Special Correspondent

MANCHESTER, *25th July*

UNIONS in the Lancashire cotton industry have initiated a new wage campaign with a demand for an extra 10 per cent for 180,000 spinning and weaving workers. On the basis of the most recently-published figures of average earnings, this is equivalent to an extra 25s. a week for men and 15s. for women.

MANCHESTER LETTER

The claim comes sixteen months after the last settlement, when spinning and weaving workers got 7½ per cent more. So far no date has been fixed with the employers for negotiations on the new claim. The unions will base their case on dearer living costs and, according to one union leader, "the fact that industry generally has been leaving us behind in wage increases."

Further Action Needed

Hong Kong's suggestion for extending the textile import agreement with Lancashire for 11 months cannot be regarded as satisfactory unless the Government plans to take further action next year, Sir Alfred Roberts, General Secretary of the Cardroom Amalgamation, one of the three big Lancashire cotton unions, has said in Manchester. In a report to the union he described it as "nothing more than a holding operation."

The proposal, according to information from Hong Kong, was to extend the agreement to bring it into line with Lancashire's pacts with India and Pakistan and to increase the quota from the present 164 million yards a year to 185 million yards. Of this, 100 million yards would be in the form of piecegoods and 65 million yards in garments, leaving 20 million yards to be used at the discretion of the Hong Kong industry. Sir Alfred said:

"It proposes an increased allocation of almost 13 per cent and gives a breathing space for the negotiations of new agreements. This cannot be regarded as satisfactory unless the Government proposes to take further action in 1962, instead of again leaving these matters to be resolved by the representatives of the various cotton industries with the cards stacked against us in this country."

From Chaos Into Order

The conclusion of the Geneva talks on the exporting and importing of cotton goods on a world basis—however inconclusive the results—was the best that could be expected in the circumstances. Only an incorrigible optimist could anticipate any tangible outcome, with a "cut-and-dried" scheme of quotas, quantitative and qualitative, under which each country would agree to dispose of its surplus products within fixed limits over specified periods. The millenium is not yet with us.

Nevertheless, there are reasons for believing that at least a start has been made towards establishing a system of orderly marketing. Although the conference was entirely composed of representatives of Governments, with industrialists only on the outer fringe, the sixteen nations attending agreed to restrict the amount of arrivals into the traditional manufacturing areas to the same level as in the twelve months from July 1960 to June 1961. Support is to be given to those countries which take action to curtail imports from low-wage areas even to the extent of imposing quotas, if these shippers fail to honour their undertakings. In the meantime, another conference, to be held in October, will attempt the superhuman task of drafting detailed proposals on a long-term basis.

Home Market Bedevilled

From the viewpoint of both British and American textile manufacturers, this meeting may have lengthy and important repercussions in the future. In each case, their home markets have been bedevilled by the growing inroads made by their rivals in the developing regions and universal acceptance of the spirit of "give-and-take" in subsequent negotiations would encourage confidence and create a more favourable working climate.

For the moment, the standstill order over imports would have little effect on conditions in several of the European Common Market countries which have always put up big barriers against imports from the East. On the other hand, the "elaborate long-term arrangements for the orderly development of trade in cotton textile products," mentioned in the *communique*, suggest that the intention is "to increase progressively the export possibilities of less-developed countries and of Japan, while at the same time avoiding disruptive conditions in import markets." In this way the burden shouldered for so long by Lancashire, and lately shared to some extent by America, may well become part of a recognised system of world trading in which all of the older-established industries will play a part. Although it is obvious that the instigators of the scheme have a long way to go before they and their supporters can claim even initial successes in regularising international trade in textiles, the groundwork has been done.

Britain's links with the Commonwealth place this country not only in a special, but often in a difficult position. Quotas against imports of cotton goods are imposed only in the case of Japan and China. In the latter instance, there is unlikely to be any variation in the system, but it is significant that Japan was among those nations represented at Geneva which made reservations about the terms of the agreement.

It will perhaps be possible to draw deeper conclusions about the prospects after the formal text of the agreement is published. This apparently falls into three parts, the first dealing with the one-year standstill order, the second with the mechanism for a long-term solution of the import problem, and the third with the pact under which those countries which are at present restricting their imports would raise their quotas from the beginning of 1962.

Rivalry Multiplies

Traders in cotton goods are having to contend at the moment not only with the internal economic crisis affecting all industries, but are involved in their own particular problems of imports and exports which have been ventilated by the representatives of numerous Governments in Geneva. Many of the delegates appreciated that, although textiles may form the basis of this test case, before long other industries whose traditional manufacturers are being threatened by competition from developing areas will be equally concerned. Harking back to the annual meeting of the International Cotton Federation in Osaka, American reports show that many of those who attended the discussions returned with what has been described as "a shift in fears."

European delegates, in particular, arrived in Japan full of preconceived notions about the competitive ability of the Japanese industry based on cheap labour. They apparently found that the threat from Japan, although still effective, was far more dangerous from other sources, notably China and Hong Kong. Other rapidly emerging countries in the East also began to make their impression as producers with a surplus of supplies which joined the ever-growing abundance of exportable textile products in an already overcrowded world market.

Wholesale Sales Decline

The crux of the matter, according to delegates at this earlier congress, was how subsequent negotiations would establish any truly orderly system of marketing on a global scale when one-third of the world's industry chooses to keep outside the possibility of restraints such as the remaining two-thirds of the textile world would like to see in practice. That, indeed, was the fundamental issue dealt with in Geneva at Government level. How far official guidance can have an effect on the attitude of industrialists is a major factor and future trading relationships must be governed by the very important talks which are still to come.

Meanwhile, nothing is happening to encourage operators in Lancashire to take a less dismal view of the immediate prospects. The movement of supplies in the home market has continued to decline and, in May, there was a contraction in sales of 6.7 per cent compared with the same month in 1960.

Stocks held by wholesalers were 12½ per cent higher at the end of May than twelve months previously, but as yet no real accumulation of supplies is evident within the producing and processing sectors of the trade. As always, there are individual departments where activity is more apparent than others and numerous firms are still booked up well into the autumn. The slowing down in the rate of ordering, however, has made sellers less independent in their outlook and quite a number are now searching for additional business.—*All Rights Reserved.*

AUSTRALIA'S LARGEST COMMERCIAL BANK CAN HELP YOU TO PROMOTE TWO-WAY

TRADE WITH AUSTRALIA, NEW ZEALAND, AND FIJI

Want to sell? Want to buy? Want market information? The International Division of the Bank of New South Wales can tell you about the opportunities for trade offering with these countries.

The Bank's complete banking service includes such specialized facilities as trade introductions to buyers and sellers, industrial enquiries, economic and market information, and a complete travel service. The Bank is closely and constantly in touch with industry, business, and agriculture in the areas it serves through more than 1,100 branches and agencies.

WORLD TRADE IN COTTON TEXTILES

DETAILS OF ARRANGEMENTS DRAWN UP AT G.A.T.T. CONFERENCE

SINCE our reference to the G.A.T.T. World Textile Conference in the market gossip columns last week, the full text of the arrangements regarding international trade in cotton textiles drawn up at the Conference has been made available. The Conference was held at Geneva from 17th to 21st July under the chairmanship of Mr. Eric Wyndham White, Executive Secretary of the G.A.T.T. The decision to convene the meeting, it will be recalled, was taken by the G.A.T.T. Council when it met, at the request of the U.S., on 16th June 1961. The seventeen participating countries which concluded an agreement for submission to Governments were India, Australia, Austria, Canada, Japan, Pakistan, Portugal, Spain, Sweden, the U.K., the U.S. and the six member-States of the European Common Market (West Germany, France, Italy, Belgium, Netherlands and Luxemburg). The Commission of the Common Market also participated. The Secretary-General of the O.E.E.C.-O.E.C.D. who had been invited to participate and collaborate, too, was represented. There were, besides, observers from Brazil, Czechoslovakia, Denmark, Finland, Greece, Mexico, Norway, Switzerland, Turkey and United Arab Republic.

The preamble to the agreement reached at Geneva sets out certain guiding principles. The participating countries, for instance, recognise the need to take co-operative and constructive action with a view to promoting the development of world trade, and it is urged that such action should be designed to facilitate economic expansion, particularly to promote the development of the less-developed nations by providing increased access for their exports of manufactured goods. At the same time, they also take note of the fact that, "in some countries, situations have arisen which, in view of these countries, cause or threaten to cause disruption of the market for cotton textiles." In using the expression "disruption," the countries concerned have in mind situations of the kind described in the Decision of the Contracting Parties of 19th November 1960 the relevant extract from which is given below:

"These situations (market disruption) generally contain the following elements in combination:

1. a sharp and substantial increase or potential increase of imports of particular products from particular sources;

2. these products are offered at prices which are substantially below those prevailing for similar goods of comparable quality in the market of the importing country;

3. there is serious damage to domestic producers or threat thereof;

4. the price differentials referred to in paragraph 2 above do not arise from Governmental intervention in the fixing or formation of prices or from dumping practices.

"In some situations, other elements are also present and the enumeration above is not, therefore, intended as an exhaustive definition of market disruption."

Short-term Arrangement

At the Geneva Conference, the participating countries desired to deal with these problems in such a way as to provide growing opportunities for the exports of these products, "provided that the development of this trade proceeds in a reasonable and orderly manner so as to avoid disruptive effects in individual markets and on individual lines of production." Pending a long-term solution, the countries agreed to deal with immediate problems relating to cotton textiles through international action designed at the same time to (a) increase significantly access to markets where imports are at present subjected to restriction, (b) maintain orderly access to markets where restrictions are not currently maintained, and (c) secure from exporting countries, where necessary, a measure of restraint in their export policy so as to avoid disruptive effects in import markets. Accordingly, the countries agreed to adopt a short-term arrangement for the twelve-month period beginning on 1st October next. The arrangement is as follows:

A participating country, if unrestricted imports of cotton textiles are causing or threatening to cause disruption of its domestic market, may request any participating country to restrain, at a specified level not lower than the level prevailing for the twelve-month period ended 30th June 1961, its total exports of any category of cotton textiles causing or threatening to cause such disruption and, failing agreement within thirty days, the requesting country may decline to accept imports at a level higher than the specified level. In critical circumstances, action may be taken provisionally by either country involved while the request is under discussion. Nothing in this arrangement shall prevent the negotiation of mutually acceptable bilateral arrangements on other terms. It is intended by the participating countries that this procedure will be used sparingly, with full support for their agreed objective of attaining and safeguarding maximum freedom of trade, and only to avoid disruption of domestic industry resulting from an abnormal increase in imports.

A country requested to restrain its exports to a specified level may exceed the specified level for any category by 5 per cent, provided that its total exports to the requesting country of the categories of products subject to restraint do not exceed the aggregate for all the categories.

If a requesting country determines that a shift in the pattern of imports within any category is producing undue concentration of imports of any particular item and that such concentration is causing or threatening disruption, the requesting country may, under the procedure set forth above, request the producing country to restrain its total exports of the said item during the 12 months beginning on 1st October 1961 to a prescribed level not lower than that which prevailed during the year ended 30th June 1961.

Participants agree to take action to prevent circumvention or frustration of this short-term arrangement by non-participants, or by trans-shipment, or by substitution of directly competitive textiles. In particular, if the purposes of this arrangement are being frustrated or are in danger of being frustrated through the substitution of directly competitive textiles, the provisions of the first paragraph above shall apply to such goods, to the extent necessary to present such frustration.

Participating countries presently maintaining quantitative restrictions on cotton textile imports shall, as from 1st January 1962, significantly increase access to their markets by countries the imports from which are now restricted. A specific statement of the new access will be forthcoming. The provisions of this section shall enter into force not later than 1st January 1962.

In accordance with G.A.T.T. provisions for joint consultations, the parties to this arrangement shall meet as necessary to consider any problems arising out of the application of this agreement. Such consultations could, in particular, take place in the event that a country, the exports of which are under restraint as a result of action taken considers that experience shows that the level of restraint is inequitable.

Reference to Canada

A special reference is made in the text of the agreement to Canada which does not have any legislation whereby imports may be limited in a precise quantitative manner as envisaged above. The provision available for limiting imports in order to avoid injury or a threat of injury to a domestic industry is contained in Section 40A(7) (C) of the Customs Act which authorises the application of special values for duty purposes. These special values cannot be used to achieve a precise level of imports. Accordingly, the participating countries recognised that, if Canada were to find it necessary to take action to limit imports pursuant to the arrangement, it would not be in a position to ensure that imports would not fall below the minimum level as defined earlier.

The short-term arrangement covers sixty-four categories of cotton textiles—yarns of different kinds, a wide range of piecegoods, apparel, bed, pillow and table covers, etc., hosiery, towels and napkins, and all other cotton textile items. It is made clear that, to whatever extent this list of categories present questions in the light of established listing practices of any participating country, such questions "shall" be resolved by consultation between the countries concerned or by the process of joint consultation as provided for in the arrangement.

Long-term Solution

As for a long-term arrangement, the participating countries agreed to create a Provisional Cotton Textile Committee and to request the G.A.T.T. Contracting Parties to confirm the establishment of the Committee at their nineteenth session. The proposed Committee will "undertake work looking forward to a long-term solution on the basis of the guiding principles set out in the preamble," collect all useful data for the purpose and make at an early date, not later than 30th April 1962, recommendations for such long-term solution. The discussions and consultations to be undertaken by the Committee will be of the kind provided for by the Market Disruption Committee at the seventeenth session of the G.A.T.T. Contracting Parties. The Committee will be required to report from time to time to the Disruption Committee as well as to Committee III of the Expansion of Trade Programme on the progress made and its findings. It will meet on 9th October next to initiate consideration of the long-term problem.

The arrangements agreed to at the Geneva Conference are a mere endorsement of the scheme outlined by Mr. George Ball, U.S. Under-Secretary of State for Economic Affairs, leader of the American delegation. As a result of these arrangements, India and other Asian textile supplying countries may be benefited by a possible increase in imports into some countries, especially in Western Europe. Indeed, it is reported that the Common Market countries are contemplating to enhance cotton textile import quotas by 60 per cent. But from the long-term point of view, the impact of the Geneva agreement is bound to be severe, especially because of the acceptance of the scheme for voluntary limitation of exports now in vogue between the U.K., on the one side, and India, Pakistan and Hong Kong, on the other. Even before the Conference began, a powerful section of enlightened public opinion in the West had clearly warned its leaders against taking any hasty, ill-advised decision. Here is what our London contemporary, *The Economist* said in the issue dated 15th July:

"Cotton textiles are a major test of the practicability of free trade in manufactures between the two halves of the free world. Wool and other textiles are already lined up for the same treatment. Once hope of free trade founders in cottons, many other industries in the white West will want to shelter under the same umbrella. Before Japan has been integrated into the Western trading area, a host of equally intractable problems are arising. Any agreement arrived at as a consequence of the next week's meeting at Geneva must recognise the dangers of dividing the free world's trade into white and non-white camps through a rapid dismemberment of Commonwealth trade or a hasty construction of trade blocks. The prospect of a liberal outcome at Geneva does not look good.... In effect, the developing countries are asking for trade, not aid. Unfortunately, some industries in the West want things exactly the other way round."

It is unfortunate that those assembled at the G.A.T.T. Conference did not ponder these timely observations. It is, however, to be hoped that the Provisional Cotton Textile Committee will give a dispassionate consideration to the whole issue and offer a solution which will facilitate a larger exports of cotton textiles and other manufactured goods from the developing countries to the developed countries in the West.

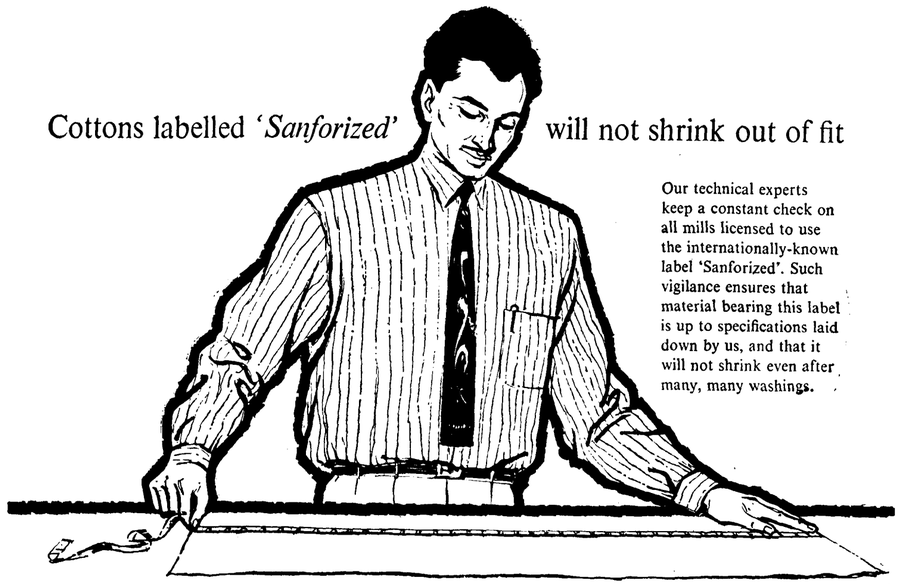
COTTON MILLS' EXPANSION

In the matter of allocating new cotton spindles during the third Plan period, preference must be given to the existing mills to expand their capacity, instead of allowing the establishment of new units. This was the recommendation made by the Cotton Textile Consultative Board at its meeting held in the city on Monday this week. The meeting was presided over by Mr. Nityanand Kanungo, Minister for Commerce. Mr. K. C. Reddy, Union Minister for Commerce and Industry, also attended the meeting. The Board agreed that, out of the four million additional spindles required to reach the cotton yarn production target of 2.250 million lbs. fixed for 1965-66, one million spindles should be reserved for existing mills for purposes of balancing and expanding uneconomic mills to an economic size, as well as against scrapped and revoked capacity. It also agreed to the licensing of two million additional spindles in the first two years of the third Plan. The balance of one million spindles is to be kept in reserve to meet any readjustment that may be necessary at a later date. The Board is believed to have endorsed the following tentative decision of the Union Government in regard to the actual allotment of new spindles.

The major portion of the additional spindles will be allotted to the deficit areas, particularly Andhra Pradesh and Rajasthan, and to some extent Uttar Pradesh. Spindles will not be allotted for further expansion in States where the textile industry is well established, namely, Maharashtra, Gujarat and Madras, except for meeting replacement requirements. Co-operatives in these areas, however, will be allotted spindles. Preference will be given to units selected to produce cloth for exports.

The Board considered the question of allocating the additional 25,000 looms on the basis of the cloth production target of 9,300 millions, but no decision would appear to have been taken. It is understood that the official spokesmen stated that the need for exports and protection of handloom industry were the chief considerations which would be taken into account in deciding the basis of allotment. The Board reviewed the means of stepping up output. It was pointed out that the chief obstacle to increased production was shortage of power and coal, particularly in the Saurashtra region.

Cottons labelled *'Sanforized'* will not shrink out of fit



Our technical experts keep a constant check on all mills licensed to use the internationally-known label 'Sanforized'. Such vigilance ensures that material bearing this label is up to specifications laid down by us, and that it will not shrink even after many, many washings.

Month after month and throughout the year, these experts visit the licencees, carefully examining fabrics both from the warehouses as well as off the processing machine

From each mill, they take an extensive random sampling of various fabrics. Each must be a quality fabric before it can be stamped with the label 'Sanforized'

These samples are catalogued; measured and submitted to rigorous wash and minimum shrinkage tests both here and in the U.S.A. in fully equipped technical laboratories

The catalogued samples are then re-examined and re-measured. The results of our experts' findings are recorded, each mill having its own dossier

A copy of these reports, together with their samples, are sent to the home office in New York. This multiple checking ensures that all cottons marked 'Sanforized' will not shrink out of fit

Make certain you get the full measure of value of the material you buy—

Look for 'SANFORIZED' REG. TRADE MARK *on the label and your clothes will never shrink out of fit!*

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

COTTON MILLS ASKED TO GO COARSER

DUBIOUS SUGGESTION FOR RAISING YARDAGE

FIGURES relating to consumption of raw cotton by mills during the first nine months of the current cotton season, that is, from 1st September 1960 to 31st May 1961, reflect the impact of the sharp decline in production during the previous season on the consumption pattern of mills. Consumption of Indian cotton during the nine-month period was lower at 3.07 million bales, as compared with 3.39 million bales in the corresponding period of the previous season, while that of foreign cotton was more than double at 866,000 bales, as against 427,000 bales. It is no doubt true that the higher production during the current season and the improvement in the supply position have already begun to show themselves in the trend of consumption, though it might be some time before it returns to normal.

One result of the scarcity of indigenous cotton and their substitution by foreign cotton has been an automatic increase in the average counts of cloth produced by mills. In view of the present shortage of cloth and the high prices, an increase in production, through lowering of the average counts of cloth manufactured, has been suggested by the Office of the Textile Commissioner. In a note on the subject, prepared for the consideration of mills, the experts of the Textile Commissioner's Office argue that it is possible to increase cloth production by four to five per cent by going coarse. According to the note, as a result of financial incentives given by the Government in the latter part of 1956 in the form of reduction in excise duty to individual mills producing more cloth than their normal production, total cloth production in the organised mill sector had touched a peak of over 5,300 million yards per annum during the year 1956-57, using average count of 23s, against the present average count of 25s. The experts, therefore, argue that it should not be difficult for the mill industry to step up cloth production by switching over to the pattern of production on the coarser side by lowering the counts by about two to three.

The average count of cloth manufactured during the period October 1956 to December 1957 was 23s as against the average count of 25s during November 1960, the latest month for which figures are available. The cloth produced under the coarse category during the aforesaid period constituted 22 per cent of the total cloth, as against 15 per cent at present.

A comparison of productivity of looms during each of the individual month during the period October 1956 to December 1957 indicated that the highest level of production was achieved in the month of January 1957, when production per loom per shift (8 hours) was 45.81 yards. The latest figure (for the month of November 1960) is 42.0 yards. This shows that the present gross productivity is less by 8 per cent, as compared with the figure for January 1957.

Pattern of Production

The present fall in production, according to the experts, is due, to some extent, to the fact that the pattern of production has shifted towards the finer side. The following table, which gives the quality-wise break down of production in November 1960, as compared with January 1957, indicates the extent of the shift.

(In million yards)

	Coarse	Medium	Fine	S. fine	Total
January 1957	103	320	36	25	484
Per cent	21.15	66.19	7.45	5.21	100
November 1960 ..	66	319	19	23	427
Per cent	15.54	74.66	4.32	5.48	100

An objection raised against the suggestion for going coarser to increase production has been that the type of cloth produced during October 1956 to December 1957 was of a quality which was not saleable and hence resort to that pattern of production would be inadvisable. The experts of the Textile Commissioner's Office do not fully agree with this contention, although they concede that there is some force behind it. Their argument is as under:

"The cloth which is currently being manufactured has an average count of 25s (that is 2 counts finer) and weighs 4.35 yards to a pound. Had the quality that is being currently manufactured been as poor as that was produced in 1957, because of average counts having shifted from 23s to 25s, the weight of cloth would have been 4.47 yards to a pound, as against the actual 4.35 yards. This shows that there has been a general trend to manufacture superior qualities. Hence, if the quality that is produced today is to be maintained even after bringing down to an average counts coarser by two, the increase in cloth production may not be achieved to the level of production in 1957. If the cover factor is maintained as it is today, the increase would be to the extent of only 200 million yards (on the basis of current quantum of production being 5,000 million yards with an average count of 25s). Thus, by resorting to coarser counts by 2, the production could be stepped up by about 4 per cent without deteriorating the quality aspects."

Availability of Cotton

The note then goes on to examine the availability of cotton for this switchover. The consumption of foreign cotton during the present season (as the nine months figures quoted above shows) has gone up considerably, as compared with that in 1957, thanks mainly to the inadequate supply of Indian cotton. Since it is on account of the supply position of raw cotton that the average counts have gone finer during the past two years, there should not be any difficulty, according to the note, in switching over to coarser counts now that the availability of adequate supplies of Indian cotton is assured. It might not be possible for all mills to switch over to lower counts, having regard to the present average counts of production of various mills and their export commitments. Nevertheless, it should not be difficult, the experts say, for a change over to a lower average count by altering the weaving programme and reallocating looms under different sorts without affecting the day-to-day working of the mill. Such a changeover, in their opinion, will not take more than three to six months and will involve no additional requirement of coal or power.

At the instance of the Indian Cotton Mills' Federation, the Millowners' Association, Bombay, has advised its member mills to explore the suggestion made by the Textile Commissioner and do what they can in the light of individual circumstances. The very fact that the Federation and the Association have not positively recommended the adoption of the suggestion put forward by the Textile Commissioner's experts shows that, in their opinion, it is of doubtful value. The mills should produce the cloth which consumers want and the consumers preference is increasingly for better quality cloth of higher counts. The kind of short-cuts advocated by the Textile Commissioner's Office for showing increased production is unworthy of adoption, as it will carry the country backward. Besides, it will mean defrauding the public. The poor quality of cloth produced in 1956-57 was one of the causes for the depression that followed. We have no doubt that no wise millowner will be impressed by the tip given by the Textile Commissioner's Office for increasing his production.

COTTON GROWERS DEMAND HIGHER CEILING PRICES

In a memorandum prepared for submission to Mr. K. C. Reddy, Union Minister for Commerce and Industry, the Gujarat Co-operative Union and the Gujarat *Niyantri Bazar Sangh*, have demanded that the ceiling prices of cotton should be raised by 15 per cent unless this is done, the memorandum says, it would not be possible to achieve the third Plan target of 7.2 million bales.

While welcoming the Government's decision to raise the floor price by Rs. 105 per candy during 1961-62, the memorandum states that this increase was not sufficient, in the context of the prices during the last 10 years. Cotton prices had not dropped below Rs. 600 in the last 10 years, except in 1954-55, and no situation was likely to arise in the near future, in which the Government would have to buy cotton at floor prices. If the difference between the maximum and minimum prices was kept as small as possible, the memorandum adds it would prove advantageous to the grower.

A tale of Twenty-two Cities

From Tunis to Bombay, from Aden to Iraq are the Cities, twenty-two of them—in fifteen states. They all have this in common: every one is in an area where a dramatic transformation is taking place, a transformation from a traditional past to modern statehood. Every one, too, contains a branch of The British Bank of the Middle East, a Bank dating back to 1889 and closely associated with the rapid development taking place today.

India; Aden; Dubai; Sharjah and Abu Dhabi, Muscat; Qatar; Bahrain; Kuwait; Saudi Arabia; Jordan; Iraq; The United Arab Republic (Syrian Region); Lebanon; Libya, and Tunisia: these are territories where The British Bank of the Middle East operates. It has intimate knowledge and experience of their political, economic and financial affairs. If you are interested in new markets and the limitless possibilities of development in this vast area, The British Bank of the Middle East can give you the reliable help and advice you need.

THE BRITISH BANK OF THE MIDDLE EAST

Incorporated in England by Royal Charter 1889 with Limited Liability.
HEAD OFFICE: 7 King William Street, London E.C. 4.
BOMBAY OFFICE: 314 Dr. Dadabhai Navroji Road, Fort, Bombay.

FORWARD MARKETS BULLETIN
(Monthly)
Published by Forward Markets Commission
Government of India, Bombay

REGULAR FEATURES

- A 'General Review' presenting an assessment of trading conditions in the futures markets during the month
- Special articles on technical aspect of forward trading
- Extensive information relating to developments in futures markets
- Detailed commodity market reviews
- Comprehensive and up-to-date statistical supplement relating to crop estimates, production and consumption trends, price movements, trading against futures contracts, etc.
- About 200 pages in print in crown ¼ size
- Attractive get-up

Annual subscription		Single copy	
In India ..	Rs. 24.00	In India ..	Rs. 2.50
Abroad ..	Rs. 40.00	Abroad ..	Rs. 4.00

REVISION OF COFFEE SALES POLICY

ACCENT ON EXPORTS—OPEN AUCTIONS IN PLACE OF SEALED TENDERS

THE current coffee season, which began on the 1st of this month, is expected to witness a distinct improvement in both production and exports of coffee. The latest estimate of the crop places the total output at 67,000 metric tons, as against the 52,100 tons gathered in the previous season (1st August 1960-31st July 1961). Out of this anticipated crop, as much as 51 per cent, 34,000 tons, to be precise, would be exported, if the forecast of the Coffee Board were to prove correct. This quantity represents a rise of 12,000 tons as compared with the actual shipment of 22,000 tons in 1960-61 and of 23,000 tons as compared with 1959-60 when exports amounted to only 11,000 tons.

Where are the chances of such an appreciable increase in exports of coffee? In a world confronted with a marked surplus and with international prices still well below India's selling price, there are no good reasons to feel that outlook is promising. But the Coffee Board is optimistic, perhaps because of certain changes made in its marketing policy. A new feature, for instance, has been introduced in export promotion, namely, allocation of 60 per cent of export quota to non-bilateral countries like the U.K. and Germany, while 30 per cent will go to bilateral nations, the balance of 10 per cent being left to the Chairman's option to offer to countries in either group depending on the needs. This step, it is claimed, will enable Indian coffee to reach traditional and new markets. At the same time, the Board has introduced Indian Robusta coffee in Italy on a much bigger scale than hitherto.

The Board has taken two more notable decisions: One, the Board will conduct open auctions for exports, as against the system of sealed tenders. Two, an organisational wing will be set up shortly at Hamburg (West Germany), the nerve centre of international coffee trade, with the objective of conducting a three-pronged export drive—propaganda, sales and market promotion. This wing will enable foreign importers of Indian coffee to have easy access to information about quality and other details. Further, the Board has obtained the services of a cup taster of world reputation who will have his office at Bangalore; he will train Indians in cup testing in order to enable Indian coffee to be classified, graded and bulked for the international market.

A Welcome Step

The decision of the Coffee Board to replace the system of sealed tenders for exports by open auctions, though belated, is a welcome step. The system of sealed tenders, it will be recalled, was highly defective. For, in making up lots for sale under this system, coffees of the same type and grade of equivalent quality were bulked together and offered as separate district growths, but there was no guarantee that, each year, any lot of a particular district offered comprised coffee from the same two or three estates of the district. In any case, the importer in foreign countries knew only that he was being offered the bulk of a particular district growth and was, therefore, not in a position to enter the market or interest himself on grounds of selective buying. No other country in the world is selling coffee by this system and it is gratifying that the Coffee Board has given it up in favour of public auctions. Such auctions, it has, however, to be mentioned, must be held at short intervals, preferably once a week, so that the overseas importers would be in a position to cover their requirements quickly if they failed to do so in a previous auction. It is also important that the time lag between auction sale and actual shipment should be reduced to the minimum.

While the aforesaid measures do give a fillip to export trade in coffee, the point is whether the growers of this product will be benefited at all. For the world prices of coffee continue to remain depressed and the prospects of a marked recovery in the forseeable future do not appear to be encouraging. The export price of Indian Robusta coffee is lower than the internal ruling price by as much as 50 per cent, though that of Plantation coffee is lower by only 10 per cent. But, in the world markets, Robusta is more popular than plantation variety and actually fetches a slightly higher price than the comparable variety exported by other countries. It is, therefore, desirable to step up the production of Robusta in this country. Efforts made in this direction are already beginning to bear fruit, as is borne out by the notable rise in output, from the annual average of 6,004 tons during the four years ended 1949-50 to 21,600 tons (actual) in 1960-61. The actual area under Robusta coffee is not known. The latest period for which data are available is 31st July 1958. As on that date, the area stood at 104,257 acres, as against 164,215 acres under Arabica, the total area under coffee being 268,472 acres and the number of estates 48,015.

The Chairman of the Coffee Board disclosed at Coimbatore recently that the Board would soon introduce hypothecation loans for small growers, in addition to the various incentives now in vogue for coffee development. He further disclosed that the Board would provide incentives for the production of Parchment Robusta, as it was popular in both international and internal markets. Robusta, he said, gave a very good taste and its prices were also lower, thus attracting the lower income groups.

Internal Sales

Another welcome decision of the Coffee Board pertains to internal sales. The Board has announced that no internal sale quota will be allotted to coffee growers in the season 1961-62. This decision applies to all estates, including estates below five acres in extent, barring certain areas, namely, Maharashtra, Orissa, Assam, Kolli Hills in Madras State, and Vishakapatnam in Andhra, until a further notification is made in this behalf. The entire coffee crop is, therefore, required to be delivered to the Pool at its different centres by all growers, irrespective of the extent of their acreages, except the quantity that may be allowed by the Chairman of the Board to the owner of any estate to be retained with himself for purposes of consumption by his family and for purposes of seed. All estates have been warned that retention of coffee for domestic consumption or seed purposes without a permit is illegal and that failure to deliver coffee to the Pool will entail prosecution under Section 38(A) of the Coffee Act.

It is thus evident that, in the internal market, coffee will henceforth be released only through pool auctions, and expedients such as local auctions and releases through co-operative societies have been abolished. This decision is a sequel to the widespread criticism by planters about the multi-channelled system of marketing coffee in India for internal consumption.

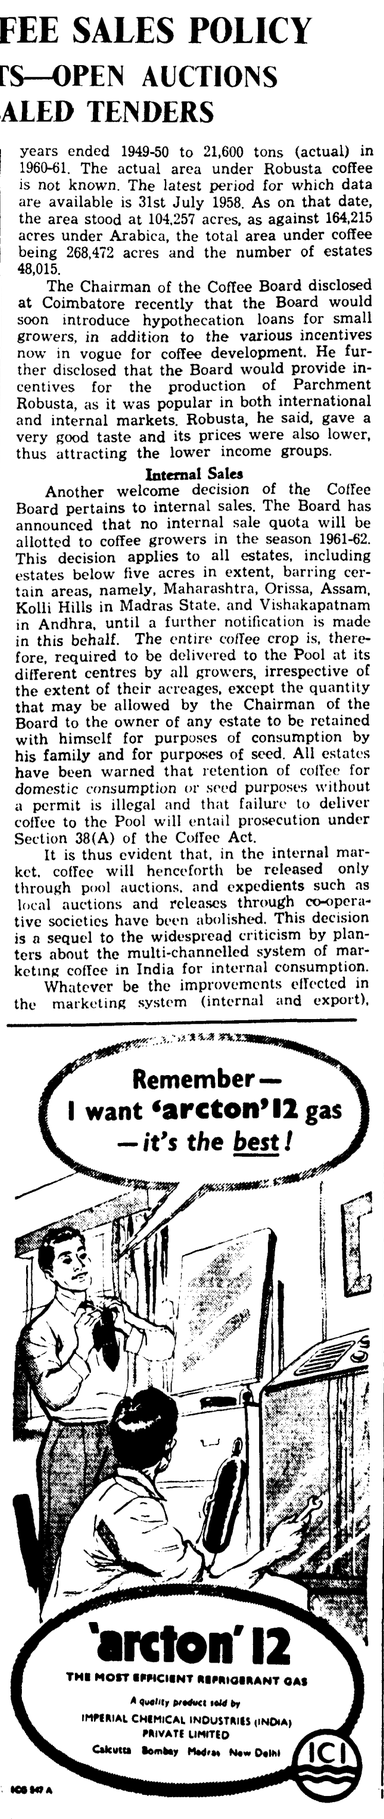
Whatever be the improvements effected in the marketing system (internal and export), they will not be of much avail if they do not ensure for coffee growers a reasonable return. In many cases, the price received by growers from the Coffee Board is said to be below cost of production. In any case, it is markedly lower than the price paid by the domestic consumer, being 80 nP per lb. of Robusta seed, as against the retail price of Rs. 2.73. Even after making allowance for the excise duty and sales tax together amounting to 31 nP, the difference between the two prices comes to Rs. 1.62 per pound. The reasons for such a wide difference apart, the return to coffee growers is too low to cover adequately the enhanced production costs and, unless it is raised, one cannot expect the coffee growers to strive for a quantitative and qualitative improvement in production which is very essential, especially for export promotion.

Growing Home Market Wanted

It may be noted here that, since Indian coffee accounts for a bare 1.5 per cent of the aggregate world output (estimated at about 4.5 million tons) and less than 2 per cent of world exports, it cannot influence the world price. All that India can, therefore, do is, as Mr. M. S. P. Rajes, Chairman of the Shevaroy Planters Association, rightly stressed recently, to turn out a good product and place it on the world markets as efficiently as possible. The export prices of coffee, as already stated, are very low—Re. 1.76 per pound for Arabica Cherry and Re. 1 per pound for Robusta. Mr. Rajes pointed out that, with more than half the production exported at such low prices, it was no longer possible to subsidise the internal price as was done during the year from 1950 to 1958. The real safety of the coffee industry lies, according to him, in having a growing home market. To quote him:

"To my mind, the real solution lies in increasing production and supplying more for export as well as for the internal market. We can continue to export safely only at a certain level of prices and, if it is low, the reaction is bound to reduce our total production. This will defeat the Government's purpose and, therefore, the right thing to do is to produce more, as we have been doing, and make more coffee available for both markets. That would serve the Government's purpose as well as meet the growing internal market."

The meaning of the foregoing quotation is that coffee estates should strive hard to raise the yield per acre and that a stage has been reached when the domestic consumer of coffee will have to subsidise exports. The cost of such subsidy per lb. of coffee consumed in the country will be lower if domestic consumption is expanded. A larger home market is, therefore, a prerequisite for increasing exports of coffee. Fortunately, unlike most of the coffee exporting countries, India has a vast home market and, if adequate steps are taken to stimulate home consumption through appropriate sales promotional measures, a bigger domestic market is a certainty. The Coffee Board, therefore, should do three things. First, it should ensure that the estates get all the facilities necessary for stepping up production. Secondly, wherever estates are of uneconomically small size they should be helped to attain a viable size either through amalgamation or co-operation. And, thirdly, it should abandon its present stand that it is unnecessary to do active propaganda for spreading coffee habit in the country and launch instead a dynamic programme for drinking more coffee. If all this is to be done effectively, the complexion of the Coffee Board itself should undergo a change: it should be a non-official body in the real sense of the word. It is high time the Government left the job of coffee marketing to those who have a vital stake in the commodity. There is no longer any ground for fearing that the coffee producers will exploit the domestic consumer, for the commodity is not having a sellers' market now, nor is it likely to enjoy that status in the foreseable future. There is, of course, the need for earning foreign exchange through larger exports of coffee, but this need can be effectively instilled into that body without the Government itself having to exercise a physical control over it.



The demand for sponge rubber continues to increase, according to Mr. W. D Guppy. For the manufacture of sponge rubber, natural rubber is generally preferred to synthetic, he says, particularly for the softer and lighter density grades, owing to its greater strength in the invulcanised state and the consequent lesser tendency for the cells to rupture and collapse in the early stages of vulcanisation. Sponge rubber can be moulded into a great variety of intricate shapes and sizes. It is one of the standbys of the motor industry where it is used for weather seals around doors and luggage boots, gaskets, tool trays—every Rolls Royce has one—arm rests and safety padding on the dash board. More and more people are walking on sponge rubber now that its use as a carpet underlay is becoming widespread. It is used to soften the dentist's chairside mat and the parson's kneeler. The strip of sponge rubber inside a crash helmet has saved many lives and many surgical and foot appliances make use of sponge rubber to ease the patient's suffering.

NEW PRODUCTS AND PROCESSES

New Material Marks Considerable Advance in Building Technology

A SIGNIFICANT advance in building technology has now been achieved through the development of a new type of bearing support pad made of synthetic rubber. As a result, building engineers are said to have finally found the answer to some of the most difficult problems in their field. The new pads, made of neoprene synthetic rubber, withstand the normal expansion and contraction of concrete and metal structures and stand up to the stresses and strains arising from vibrations, shocks and tremors, thus eliminating ugly gaps and cracks in the buildings. This has not been possible before with other materials. In addition, these synthetic rubber pads are easy to install and maintain, cost less and last much longer than materials used previously.

One of the first important buildings in Europe to adopt neoprene pads is the Centre International Rogier in Brussels, Belgium. They were first installed in this commercial centre three years ago under the main girders. Subsequently, they were also placed under the facade girders above the second floor. Reports on their performance indicate that there is no sign of deterioration and that the maintenance engineers expect them to last the life of the building without the need for any maintenance, repair or replacement. In addition, the reports state that no gaps have appeared anywhere in this building. The pads used at the Centre International Rogier are "Freyssinet"-type pads made in Belgium by Laboratoire de Cinématique, rue de l'Autonomie 24, in Brussels. They are in the form of prefabricated layers of neoprene, about 2.5 cm. thick, adhered between two plates of sheet metal. These plates are protected by a slip and corrosion resistant paint. The dimensions of the pads and the number of pads required to form a complete bearing, varied with the weight of the loads and the range of calculated displacements. In this building, 135 bearings of various sizes were used. The installation of the pads, in contrast to other methods normally used, did not require any specialised labour. The surface area was levelled off by applying a thin layer of mortar. The neoprene pads were then placed between the concrete slabs. Each bearing was installed in less than half an hour.

The support pads are the result of many years of research and development by Du Pont scientists and building engineers in the United States. They are now being used extensively in that country for bridge construction and are expected to last the life of the bridges. Experts now consider that synthetic rubber pads will be equally successful in general building construction. These flat, molded elastomeric bearing pads have no movable parts. The thermal expansion and contraction as well as the girder rotation of the building are absorbed by the ability of the neoprene to "give and take." A further advantage is that unlike the mechanical bearing assemblies normally used for this process, neoprene pads require no lubrication, cleaning or maintenance and because of the absence of movable parts, they eliminate the risk of "corrosion freezing." They are also extremely economical. It is estimated that they cost approximately one quarter as much as the average mechanical bearing device. Neoprene, first developed by research scientists of the Du Pont Company, was the natural choice to answer this problem, which for years has baffled the best brains in the building industry.

Steel Cutter

Steel up to 55 ins. thick can now be cut in a fraction of the time previously taken by a new method adopted in the Huddersfield (Yorks) works of David Brown Industries. The method was used as the first step in the manufacture of a very large fabricated wheel. The steel forging from which the wheel was made was circular in section, five feet in diameter and three feet thick. The cutting of the centre boss by propane-oxygen flame took only 40 minutes, in which time a central 31-inch, four-ton core had been removed. Molten metal from the one-inch wide cut was poured into a specially prepared kit. The finished bore, which the company said had an exceptionally smooth surface in a good condition for subsequent machining, tapered less than three-sixteenths of an inch over the full three feet depth. In preparation for the job a 1¼-inch hole was drilled through the three-foot thick forging and the metal was pre-heated before actual cutting began.

Improved Insulation Material

An improved insulation material, specially designed for hot, cold and low-pressure steam pipes, is now being marketed by Semtex, of 19, Berners Street, London, W.1, a subsidiary of the Dunlop Rubber Company. Called Foamflex, it is lightweight, durable and flexible and can be fitted both quickly and easily, says the maker. The sections are supplied slit longitudinally and slipped over the pipe, the joints being sealed with a special adhesive. Unslit sections are also available.

Capping Bottles

Two high-speed screw-capping and sealing machines are being produced by Designs and Installations of Walnut Tree Close, Guildford, Surrey. The capper, called the Dicomulti, is a screw-capping machine for bottle sizes up to 4½ inches in diameter and 13 inches in height. It applies either metal or plastic caps at a maximum speed of 240 bottles per minute and can be used with any standard filler. Dicoseal, as the sealing machine is known, has been designed primarily for the pharmaceutical industry. It applies rubber sealing discs and aluminium caps to vials up to 2½ inches in diameter and 5 inches in height at a maximum speed of 400 per minute.

Portable Cut-off Machine

For use in the workshop or on site is a lightweight, portable cut-off machine called the Portacutta marketed by Pee-Cee Engineering Supplies, of 115-119, West Street, Bristol 3. Powered by a unit made by Black and Decker, who also provide servicing facilities, it will cut iron, steel, brass and bronze and weighs only 48 lbs. A folding floor stand can be supplied where the machine is required for use in the factory.

Flame Safeguard for Industrial Furnace

Claimed to be the first of its kind available in Britain is a flame-safeguard unit for industrial furnaces which checks its own completed circuit once every second. The unit has been introduced by Honeywell Controls of Greenford, Middlesex. A self-checking circuit disconnects the flame rod and checks all components every second. Such checking, says the company, has until now been incorporated in combustion safeguards during start-up or re-cycling only. The new type, known as the R 4075 Protectoglo, will cause immediate shut down and sound an alarm if the sensing signal, amplifier or related circuitry fails at any time while the burners are operating.

Textile Adhesive

Two adhesives developed by B.B. Chemical Company, of Leicester, will, it is claimed, not only satisfactorily bond fabrics to fabric or to flexible polyether and polyurethane foams but also withstand the dry-cleaning process. Both adhesives can be applied by spraying or with a roller and only light pressure is required to marry the two materials. The first, an aqueous adhesive will dry in 75 seconds at 200 degrees C. or within 60 minutes at room temperature. The second, a two-part, solvent-based synthetic rubber adhesive which requires dilution before spraying, produces a bond which can be safely handled after drying for 50 to 60 minutes at room temperature or after 10 minutes at 70 degrees C. After a curing time of four days at room temperature both provide full resistance to dry-cleaning fluids.

Emergency Light for Motorists

Latest product from the motor car lamp department of Philips Electrical is a small lamp which has two strong magnetic strips on three sides so that it can be attached in almost any position on a car body. The light beam can be directed as required and the driver has both hands free to deal with repairs to the car. Apart from its use when a motorist is in trouble, the lamp can also be used for night map-reading, as a parking light or for temporary replacement of out-of-order rear or side lights. A 16-foot length of flex with crocodile clips enables the lamp to be run off the car's battery. The lamp can also be used with an ordinary dry battery.

Portable 220/42 Volt Transformer

A wire and cable factory at Amsterdam, Holland, has put on the market a portable 220/42V transformer the interior of which is enclosed in a solid vulcanised neoprene housing. The primary and secondary cable connections are entirely incorporated in the transformer insulation and integrally vulcanised with the rubber housing. The cable for the primary connection to the 220 volt mains has a cross-section of 2 x 2.5 sq. mm. and a length of 3 m to a maximum of 10 m. According to requirements, this cable is provided with an integrally vulcanised contact plug rim-earthing model without earthing strips, or an integrally vulcanised bi-polar bayonet coupling contact plug, or finished wire ends. The cable for the secondary connection to the transformer consists of a flexible 42 volt sheating lead with a cross-section of 2 x 4 sq. mm. and a length of 2 m. to a maximum of 10 m. According to requirements, this cable is provided with an integrally vulcanised coupling contact plug rim-earthing model without earthing strips, or an integrally vulcanised bi-polar bayonet coupling contact plug with a protective cap, or finished wire-ends.

INDUSTRIAL **IBCON** CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

IN THE PLANT:— PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL
FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT
MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS

ON LABOUR:— METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES
TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION

IN OFFICES:— MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION : EXECUTIVE AND CLERICAL • WORK MEASUREMENT
INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT

AND:— THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT
MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES
TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

THE DYNAMICS OF FREE ENTERPRISE

COMPETITION IS A POWERFUL MAGNETIC FORCE

By Clarence B. Randall

[Mr. Clarence B. Randall has had a long and distinguished career in business and government service in the United States. A graduate of Harward University, Mr. Randall practised law until 1925, when he joined the Inland Steel Company as Assistant Vice-President. He was elected Chairman of the Board in 1953, but retired in 1956 to become Special Assistant to President Eisenhower in the area of Foreign Economic Policy. Honorary degrees have been conferred on Mr. Randall by a number of universities and he has received many awards from other institutions. He is the author of numerous articles and six books, including "A Creed for Free Enterprise" and "Freedom's Faith."]

BUSINESSMEN in the United States are being driven these days to take a hard second look at the philosophy and the practices of free enterprise. This system of accumulating private capital under single control and risking it for gain in response to no other directing force than individual initiative, has come to them as instinctively as the act of breathing the air about them. They have known no other way of life. In fact, until recently, some of them lacked even a rudimentary awareness that there were in the world other systems for the production and distribution of goods, and a few there are even yet who have studied those other methods with sufficient continuity and earnestness to warrant their undertaking critical comparative evaluations.

Searching the Soul

All this is changing. Thanks to the Russians, who, instead of concealing their strength until they could choose their time to strike, rather naively rang the alarm bell wildly by Sputnik and by putting the first man in space, the American businessman is now searching his soul, his heart filled with apprehension, which is precisely what he needed to do. He now knows that this way of life to which his entire effort is dedicated is under severe challenge nearly everywhere in the world, and that he must either justify it by his conduct, or face the grim prospect that his grandchildren may lose it. Lifting his eyes to the far horizons, he is staggered by the sudden realisation that free enterprise does not automatically export itself, and that new nations, when given an opportunity for a free choice, are apt to reject it, and knowingly accept the communist programme. A vigorous person that he is, he resents this incredible phenomenon, and a highly creditable determination to do something about it is seizing possession of him.

When he takes this hard second look at himself and his way of life, what does he find? What are the "truths" which he "holds to be self-evident," if one may borrow, without irreverence, the sacred words of the Preamble of the Constitution of the United States?

His first truth is that the principle of freedom, upon which our form of democracy must irrevocably be based, is a concept that is integral and indivisible. There are no separate freedoms that may be specifically allocated to particular groups or institutions. The right to make private decisions with respect to the production of goods is precisely the same right exercised by the professor at the university who insists upon teaching whatever economic doctrine he believes to be true. Each must fight to the death to protect the right of the other, or all will be betrayed together. Whatever restricts one restricts each, and all who believe in freedom must jointly resist limitation whenever it appears without immediate thought of self. We have reached a point where it must be all hands on deck all of the time if "life, liberty, and the pursuit of happiness," the national goals proclaimed in our Constitution, are to be preserved.

Rationale for Reward

It is this freedom applied in industry to the point of complete saturation which has given the American economy its enormous vitality and resiliency, and which the businessman is determined to see preserved at all cost. This is so because no other system of production has yet been conceived which so effectively releases the full creative effort of each individual involved. Our industrial way of life dignifies the worth of the individual, first by preserving to him full choice as to what calling he will embark upon, and, secondly, by rewarding him in direct ratio to the contribution which he makes to society. We believe that incentives created by monetary compensation are both effective and moral. We have proven by our long history that the sum total of all effort, when given freely, and with enthusiasm, in our form of society, is greater than the resultant of total effort that is brought forth by compulsion under collectivism. And we see not the slightest thing wrong in doing well by those who try, and little for those who do not. We believe that, in granting rewards that are proportionate to effort, we are merely giving recognition to the fact that, in a free society, the goals of the individual and those of society are not in conflict, but in parallel.

Powerful testimony in support of these truths is now coming from behind the Iron Curtain. Of all people, the communists are the most thoroughgoing of pragmatists. A thing has to work or it will be discarded. They boastfully began the reorientation of their industry on the starry-eyed theory that society would take from every man according to his ability, and grant him his share of the total production in strict accordance to his need, regardless of his effort. Now they know better. Quietly, they have dropped that will-o'-the-wisp, and now they employ a wide range of group bonuses, and of individual incentives accomplished both through salary and emoluments. In a land that has few automobiles, a limousine and chauffeur can create powerful motivation. Add a dacha on the Black Sea and the upward surge of production can be pronounced. In fact, incredible as it seems, the spread between the compensation of the manager of a steel plant in Russia, and that of the lowest paid worker is unquestionably greater than the comparable difference in the United States.

Power of Free Choices

We apply this principle of freedom that saturates not only to the production of goods but to their sale and distribution as well. We have no lonely commissar pontificating by himself as to what quantities and qualities of merchandise we should turn out. We vote all day every day as to what they should be. Every time a housewife goes into a supermarket and buys a package, she casts a ballot, as does her husband when he makes the down payment on an automobile. By totalling the resultant from an infinite number of such free choices, we arrive at consensus as to our goals.

In fact, the basic concept that underlies everything that we do is the idea that the wisdom of the many is at all times more to be trusted than the wisdom of the few. There is always the chance under communism that a commissar may display great genius, but there is a still greater chance that he may display colossal ignorance and stupidity, and only fools would knowingly take such risks.

We employ the same principle of freedom that saturates in the formulation and gathering of the capital required in the building and equipping of our industrial plant, and in the financing of our operations. We rely on no other force than the incentive of intelligent self-interest for the providing of our funds. No individuals is required to save. He may eat today and starve tomorrow, if he so elects. No part of that share of the product of his toil which has been allocated to him will ever be taken from him against his will in order that capital may be accumulated. But, being a rational being, he soon senses that there is a future and that, for him and his family, it will be a better future if he withdraws a part of his earnings from immediate consumption, and risks it for further gain by buying the common stock of the company for which he works, or that of another, if he prefers.

This broad diffusion of the ownership of the means of production does two things. First, it keeps management on its toes, for, unless industry fully measures up and gives full value in terms of return on investment, the flow of capital will stop. People will spend and not save. And, secondly, those who won, instinctively want to understand, and a means of communication is established by which people everywhere acquire insight into the problems of the economy.

The powerful magnetic force which keeps the compass of industry pointing toward the true north with respect to the welfare of society as a whole is competition. The rule of survival of the fittest, which is the counterpart of freedom of enterprise, sternly demands that each separate unit of production put forth its utmost effort at all times, and that is social gain of a high order. We speak of ours as a profit system, but actually it is a profit and loss system, and the two forces of hope and fear operate in parallel to eliminate those who in America we call the "free-riders."

When one businessman enters into a secret agreement with another businessman to restrict competition, he is either guilty of moral turpitude or is lacking in understanding of the enterprise system. The pegging of prices, the arbitrary dividing of territories, the withholding for a fixed period of advances in technology, and all similar devices which evil minds can think up to fatten profits at the expense of the consumer are a denial of our heritage. If persisted in, they will destroy the enterprise system. Such power over society cannot be lodged in private hands, and an angry public, when fully roused, will punish us all by withdrawing the privileges which it has bestowed in the field of private endeavour.

Being Right More Important

This, of course, raises the whole question of the importance of moral attitudes in the preservation of the enterprise system. It is actually more important that we be right than that we be effective. The very highest standards of ethics must henceforth govern the conduct of industrial leaders if society is not to turn against us, and we in the United States now comprehend this clearly.

Areas of Weaknesses

We still have areas of weakness, however. Take executive salaries, for example. It is urgent and right that men who bear great responsibility should be generously compensated, but when moderation yields to avarice, hostile social forces are swiftly set in motion. Here are some danger signs. When the top man takes twice the compensation of his second in command, something is surely wrong. When the top man has the highest salary in his industry, he may be justified, for someone has to be the high man, but he should be put upon great caution to be sure that he is right. And when the top man submits his proposed compensation to no one but an "inside board," namely, a group of directors all of whom work for him, he is clearly vulnerable.*

We have erred too with respect to expense accounts. Under our law, legitimate entertaining may be deducted as a cost for purposes of computing the corporate income-tax, but, when the company president gives a champagne party at a night club, or uses the company airplane to take his friends on a duck hunting trip, he steps far over the line of propriety. His conduct poses a threat to the survival of the entire private enterprise regime. His subversion differs from that of the Communist only in degree.

On the other hand, there have been great advances in general probity during the years of the present generation. In my day, for example, I have seen commercial bribery all but completely eliminated. Time was when one company would place an industrial spy in the research department of a competitor, or when a supplier would buy the favour of a purchasing agent, but those moral lapses have been cleaned up, and cleaned up by industry itself without the necessity for new laws.

In fact, the outstanding characteristic of the entire business community in the United States today, and the one which holds the greatest promise for the future, is its high sense of social responsibility. We now see clearly that the welfare of a particular enterprise and that of the area in which it is located are inseparably linked, and we see further that the welfare of industry as a whole and that of our country are likewise indivisible. It has taken a long time for this full sense of social mission to become the dominant philosophy of our industrial leadership, but such is now the unquestionable fact.

And it is very right that this should be so. It is merely the logical extrapolation of a principle which, once accepted, could lead to no other conclusion, which is this: for every privilege bestowed upon individuals in a democratic society, there is a corresponding obligation. Such is the essence of freedom. In the past, in our country, we have heard too much about our rights, and not enough about our responsibilities. All this is now undergoing a revolutionary change, and the businessman is assuming an important role in this significant transformation as he takes his hard second look at the enterprise system.

Nearly all of the leading American firms, for example, now set aside a part of their profits for philanthropy. Most of them do this by establishing a charitable foundation, which is administered by a special staff, and not by the board of directors. Through this medium they give support to hospitals, homes for the aged, child welfare institutions, health programmes, and a wide variety of social agencies. This is only the beginning, however, and in large corporations literally hundreds of worthy causes will be assisted. Education stands high on the list, and liberal arts colleges are supported in parity with those who turn out technically trained graduates. Above all, the motive behind the allocation of such funds is not to help the company, but solely to serve the community and the nation. That is industrial statesmanship of the highest sort. We had a little trouble with the lawyers on this at the start, but it is now entirely clear that, under our law, a corporation may use its funds for the common good, as, of course, it should

Serving the State

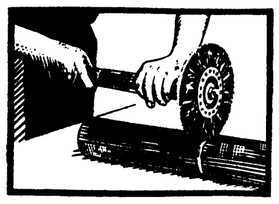
Moreover, businessmen in the United States, now give themselves in addition to their money. You will find them lending their management skill to community institutions by taking unpaid executive posts, or by serving on boards of trustees, and you will find them employing their promotional gifts in the leading of campaigns for the raising of funds for charitable purposes from the general public. They are establishing by their conduct the proposition that free enterprise not only receives from society, but gives full value in return.

You will find businessmen in our Government these days, too, at every level, carrying heavy responsibility at substantial financial sacrifice, and doing so with distinction. When unexpectedly a corporation officer is asked to close his desk for a term of years and go to Washington, or to his State capital, he does so in a high spirit of dedication. He knows that, in this world of crisis, the demand for talent in Government has greatly exceeded the supply, and he answers the call in the spirit of his new philosophy of social mission. Actually, the combination of the mature executive from business, paired with a career officer, makes a strong team. The professional provides the indispensable familiarity with the subject matter, and the knowledge of how Government operates, while the amateur brings awareness of the state of public opinion, and the courage to take a fresh approach, inasmuch as his own future is never at stake in anything he does. His greatest desire is to get the job done worthily, and go home.

Leaders in American industry are thus in many ways rising magnificently to the challenge of a world in torment and distress. They believe fervently that the forces of private initiative as released into the field of production in a free and democratic society bring greater good to more human beings than is possible under communism. But they also know that freedom brings responsibility, and that production as such is not a goal in itself. They are fully aware of their social obligations, and are determined to fulfil them abundantly.—*By the Courtesy of* THE I.P.A. REVIEW, *Melbourne.*

*The expression "inside board" means a board of directors entirely composed of full-time employees of the company.

"SCCO"



These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning and other tough scaling propositions and rough Castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

WORLD PRODUCTION OF OIL

GROWTH RATE MAINTAINED IN THE FIRST HALF OF 1961

[Reaching nearly 549 million metric tons in January-June, crude oil production in all countries was about 34 million tons or 6.7 per cent higher than in the same period of last year. The Middle East contributed 12 million tons to this increase, the U.S.S.R.—now the world's second largest producer—nine million tons, and the rapidly developing Saharan region about five million tons. In the U.S.A., production remained unchanged, while the increase in Venezuela was only 1½ million tons. Regular production in Libya will start towards the end of this year. For the world as a whole, the current percentage rate of expansion continues close to the annual average of about 7 per cent which occurred during the 1950s, when output doubled within the decade, but the corresponding annual increase in volume grows larger.]

WORLD production of crude oil continues to advance at virtually the same fast pace as in the '50s. Output in the past decade went up on average by about 7 per cent annually, being a doubling from 523 million metric tons in 1950 to about 1,051 million tons in 1960. Last year's actual increase (as compared with 978 million tons in 1959) was as high as 7.5 per cent, while, in the first half of this year, world production reached 549 million tons, being 34 million tons or 6.7 per cent more than in the same period last year. Assuming a similar rate of advance during July-December, this year's total production will be of the order of 1,120 million tons.

While the average percentage rate of annual increase remains more or less unchanged, the advances in terms of tonnage are now, of course, becoming progressively larger. And, with production in the U.S. virtually stationary, most of the additional production occurs in the exporting countries whence it has to be transported, often over considerable distances, to the areas of ultimate consumption. In January June this year, the free world outside the U.S. produced about 24 million tons (or 9.1 per cent) more than in the same period of the preceding year, the main contributions being made by the Middle East (12 million tons) and the Sahara (5 million tons). Also, production went up by over 2 million tons in Argentina, by nearly 2 million tons in Canada, but by only about 1½ million tons in Venezuela. The Communist world once again showed a sharp increase, of over 10 million tons (13.3 per cent), mostly in the U.S.S.R.

With some fluctuations, production in the U.S. has, for the past two years or so, been around 7,000,000 barrels daily, or about 346 million tons annually. Though still by far the largest producing country, its share in world output has declined from more than half in 1951 to less than one-third at present. Output is not expected to show any marked change. The Independent Petroleum Association forecasts only a slight increase in the second half of this year, and U.S. production for the whole of 1961 is expected to reach 7,104,000 b/d, or about 349 million tons, which would represent an increase of little more than 0.5 per cent compared with 1960. Inland demand, according to the Association, will rise this year by about 1.5 per cent, but, notwithstanding the cuts in crude oil imports during the second half of this year, there will be a rise in the year's crude and products imports by an estimated 2.2 per cent to 1,860,000 b/d. This will be accompanied by a sharp decline in exports, larger supplies of natural gas liquids and a small reduction in stocks. In the early months of the year, demand was adversely affected both by the mild weather and by slack business conditions, the number of producing days in Texas (which still accounts for more than a third of the output) in January-June being only 52—the lowest for any comparable period since prorationing began in the 1930s.

In Canada, higher exports to the U.S. have enabled the oil industry to move towards the Government's goals of achieving an output of 31.5 million tons (640,000 b/d) in 1961 and 39.5 million tons (800,000 b/d) in 1963. Over 15 million tons were produced in January-June, and, with U.S. imports of Canadian oil still unrestricted, this year's target is likely to be achieved.

Latin America

Venezuela, though still by far the world's largest oil exporter, has now lost to the U.S.S.R. her place as the second largest crude oil producer. The Venezuelan Government's four-year plan foresaw oil production rising at an annual rate of about four per cent, and the recent World Bank mission to Venezuela assumed a similar growth. It rose by over five per cent in 1960, but the actual increase in January-June 1961, over January-June 1960, was somewhat over two per cent. There are, however, wide seasonal fluctuations in exports to the U.S. Production in January-March this year was relatively high, at about 3 million b/d, but it then declined to about 2.8 million b/d during the following three months. Apart from the import restrictions in the all-important U.S. market, there has been a continued shrinkage of the Argentine, and the complete loss of the Cuban market, while Venezuelan exporters are generally handicapped by the Government's opposition to heavy discounts off posted prices which are out of line with market realities. Also, the traditional geographical advantage enjoyed by Venezuelan exporters has been somewhat reduced by the incidence of low tanker freights, and the growing number of very large tankers in use.

In Mexico, imports (except, for geographical reasons, those into the north-west) have ceased, and with exports also diminishing, local production and demand are moving towards a balance. This is reflected in the continued steady expansion of output which is accompanied by the increased use of natural gas and natural gas liquids. In Argentina, the acceptance of foreign capital and technical skill in the last few years has brought about the most dynamic recent growth in oil production in the Western Hemisphere—from 5.1 million tons in 1958 to 9.1 million tons last year, and to a rate equivalent to around 12 million tons now. Production at present covers about nine-tenths of the country's oil demand, and the existing productive capacity could already ensure full self-sufficiency if the required inland transport facilities were available. Brazil's production, all from the Bahia fields, continues to expand rapidly, but on a scale that does not match up to the sharply expanding demand.

Middle East

The Middle East has, of course, been the mainstay of the rapid expansion of the free world's crude oil production during the past decade, output in the region having gone up from 88 million tons in 1950 to 265 million tons in 1960, and to an annual rate of 280 million tons in January-June 1961. In the Middle East, crude production is now approaching the level of that in the U.S. east of the Rockies, and is currently about 75 per cent higher than it is in the U.S.S.R., or 85 per cent higher than that in Venezuela. If there is no serious disturbance, production is destined to continue to rise, though not at the same high rate as in recent years. The European market, which has been absorbing most of the oil from the region, is expected to expand less rapidly in future, while there are now new supplies in the French Sahara and shortly in Libya too. The heavier shipments of Russian oil usually displace Middle East oil.

Kuwait, with an output now about half that of the U.S.S.R., continues to be the area's leading producer, followed by Saudi Arabia and then by Iran. The incidence of supply arrangements and of large contracts brings changes in the relative growth in the various countries, and the five per cent increase in production so far this year in Kuwait follows a 17 per cent rise in 1960. There continues to be substantial expansion in Saudi Arabia, and the same is true of Iran except for a short period early this year when exports of products were virtually suspended because of a dispute with Iraq over piloting and berthing in the Shatt-el-Arab. Outside the Consortium area in Iran, SIRIP (ENI and NIOC) has now started regular production from its off-shore field, and it hopes for an output of 300,000 tons in 1961, 800,000 tons in 1962, and 2,000,000 tons in 1963.

Thanks to the recent expansion in the capacity of the North Iraq pipeline system, Iraq—the fourth largest producer of the Middle East—has been able to produce, as from the beginning of 1960, at an annual rate of over 47 million tons, as compared with an output of nearly 42 million tons in 1959. Plans are now in hand for increasing the country's export capacity to about 70 million tons in 1962, by further improvements of the pipeline system, and by the

completion later this year of a new artificial deep-water terminal 25 miles south of Fao in southern Iraq. The onshore production in the Kuwait-Saudi Arabia Neutral Zone has also been gradually expanded and is now of the order of 8,000,000 tons a year—nearly the same as in Qatar. Regular cargoes of offshore oil from the Zone are now being made to Japan, which will become substantial when the projected shore terminal facilities are built.

North Africa

The main events in oil production, however, are those occurring in North Africa. Thanks to the opening of the pipeline to Skirra in Tunisia towards the end of last year, production in the French Sahara reached nearly eight million tons in January-June this year, compared with 8.5 million in the whole of 1960 and unless there is a prolonged interruption of the flow through the Skirra pipeline, there is every probability that the goal of 18 million tons for the whole of 1961 will be realised. It is also expected that regular commercial production in neighbouring Libya will begin by the end of this year; two pipelines of a combined capacity of 30 million tons a year are now being built but for some years output will be well below this figure.

In West Africa, Nigerian production, recently at a rate of about 1,000,000 tons a year, is to be gradually raised during the remainder of this year to reach a rate of 3,000,000 tons, the new terminal and other oil installations at the mouth of the Bonny river having now been completed. Production in the former French Equatorial Africa (Gabon/Congo) is encountering some disappointment, and will not be more than 800,000 tons this year, compared with last year's record of 861,000 tons.

(a) The number of days in January-June 1960 was 182, July-December 1960 184, and January-June 1961 181.
(b) There is also a very small production in Formosa, Thailand and New Zealand.
(c) Including oil from shales and coal.

The rising crude oil production of the European Economic Community reaching about 6,000,000 tons in January-June (excluding the Sahara), makes a useful though very small contribution towards the requirements of the world's largest importing region; Western Germany's production is expected to reach 6,355,000 tons in the whole of this year (15 per cent more than in 1960), with the Netherlands, France and Italy also rising and now producing at an approximate annual rate of around 2,000,000 tons each. Austria's production, however, has now been reduced to less than two-thirds of the 1956 rate of 3,665,000 tons, and some further decline is anticipated. Yugoslavia, with a planned output of 1,350,000 tons, has this year achieved virtual self-sufficiency in oil, and it is hoped to raise production further to over 2.1 million tons by 1965.

Far East

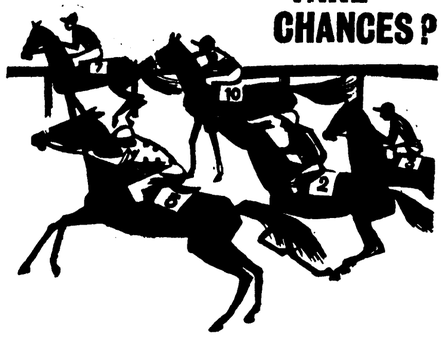
The Far Eastern countries produced just over 13 million tons in January-June 1961 (including 10 million tons from Indonesia), which was slightly less than in the two preceding half-years. During the 1950s, production in Indonesia increased sharply, thanks to the development of new fields, and helped by rising home demand. Expansion has now temporarily halted but Shell's Tandjung field in Kalimantan will start producing, at a rate of about 2 million tons a year, on the completion in a few months of the necessary pipeline facilities. British Borneo's crude comes mainly from the Seria field in Brunei, which has now passed its peak, and, in the absence of new discoveries, output is declining. The current rate of 4 million tons compares with a record of 5.7 million tons in 1956. In the other producing countries in the area, the small output remains steady, but that of India will be substantially raised to about 3 million tons on the completion, over the next few years, of the refining and pipeline facilities needed to handle the potential production from new fields in Assam.

Russia

The continued big rise in oil production in the U.S.S.R. is a measure of the economic progress she is making, especially as a big expansion in natural gas output is also under way. Oil output is expected to reach this year 164 million tons, or 11 per cent more than in 1960. This figure is officially stated to be nearly 8 million tons higher than the unpublished 1961 target under the current Seven-Year Plan. The aim stated in the Plan was to raise the country's output from 113 million tons in 1958 to between 230 and 240 million tons in 1965, and this can now be reached by annual rises of 10 per cent over the next four years. Most of the rise in production comes from the rich Ural-Volga area, but important finds have now also been made in various other parts of the U.S.S.R., notably in Siberia and Central Asia.

The other main oil-producing countries in the Communist world are Rumania, where production is now rising only very slowly and no big advance is foreseen, and China. Of the minor producers, Hungary hopes to reach next year, once again, a production of 1.6 million tons—which she had already attained in 1955, before the water encroachment in the Nagylengyel field—while Albania expects to go forward to a goal of 947,000 tons for 1965 involving a 57 per cent increase over last year's performance.—*By Special Arrangement with Petroleum Press Service.*

The United Nations Special Fund, the Government of Thailand and the World Bank have signed an agreement providing for a detailed study of the problem of siltation at the Port of Bangkok and for a study of the economic feasibility of building an alternative port at Sriracha. The project was approved by the Fund in December 1960, and the Fund has allocated $1,000,000 towards the cost. The remaining costs, equivalent to about $268,000 for the siltration study and a smaller sum yet to be determined for the alternative port study, will be borne by the Government of Thailand. The World Bank will act as Executing Agency for the studies, having general responsibility for execution of the project, including disbursement of the money made available by the Special Fund. The Government of Thailand has retained the services of the Netherlands Engineering Consultants to carry out the studies. The work will be completed in 1965.



WHY TAKE CHANCES?

In what you do every day, you are taking many chances. For example, take the things that you buy in the market. Are you always sure of their quality? Do you get good value for the money you spend?

And yet, you *can be sure* if you know that the goods you buy have been made to a given standard. Standardization benefits not only you, the consumer, but also the producer, the distributor and indeed, the country as a whole.

The Indian Standards Institution has prescribed standards for industrial as well as consumer goods. To manufacturers producing to relevant standards, ISI grants licences to apply on their goods its certification mark which is the guarantee of quality. The next time you buy anything, don't take a chance; look for the ISI mark.

ROURKELA STEEL PROJECT

SECOND PLAN STAGE COMPLETED

WITH the formal inauguration of the Cold Rolling Mill on 21st July, 1961, the first stage (under the second Plan) of construction of the Rourkela Steel Project in the public sector has been definitely completed. This Rourkela plant, which is an outstanding monument to Indo-German co-operation, was the first to be conceived by India's planners who were looking out for a suitable foreign partner. It is worth recalling that long before anybody else considered it feasible to help India in this field, two German companies—Krupp and Demag—came forward in 1952 with a proposal to erect a steel plant on a joint-partnership basis with the Government of India. The two German firms not only pioneered in offering technological and financial aid for the Rourkela Project but took upon themselves the toughest assignment in steel making. The assignment was a very difficult one, for the Rourkela plant was to be designed to produce exclusively flat products, whereas the other public sector plants in India were to produce only ordinary merchant steel. What India needed most was the technical know-how of producing flat products like plates, sheets and strips so very necessary for the development of such basic industries as shipbuilding, automobile manufacture, heavy machine building and even armaments. It is the manufacture of such flat products that constitutes the central feature of the Rourkela Project. Herein lies the importance of German collaboration in the development of India's steel industry.

L.D.-Process

The Rourkela Project, which adopts the Austrian-invented and patented L.D.-process for steel-making, also constitutes a revolution in steel-making in India. The L.D.-process offers a unique economic advantage inasmuch as both the capital and operating costs are lower due to higher productivity. It is estimated that L.D. steel will be cheaper (by Rs. 30 per ton), as compared with steel produced by conventional methods.

Another feature of the Rourkela plant is that its German-designed rolling mills are ultra-modern, keeping abreast of latest developments in world steel technology. The plant has been so designed as to ensure complete utilisation of available raw materials and recovery of industrial wastes, by-products and coal chemicals. From the basic chemicals that will be produced in this plant many products like dyestuffs, synthetic resins, insecticides and pharmaceuticals can be produced to form the nucleus of a thriving chemical industry based on coke.

Thanks to these unique characteristics, the Rourkela plant may well prove to be the most economical one in India, provided it is efficiently run and managed. It is expected that the prices of the end-products of this plant, on a ton-per-ton comparison, will fetch almost double the prices of the end-products of other steel plants in India. These end-products, which include plate for shipbuilding, wagon construction, bridges, cranes, containers, car bodies, etc. and tinplate for cans, apparatus and tanks of all descriptions, are to be manufactured in the following quantities:

	Tons per year
Heavy plate	200,000
Medium plate and wide strip (hot rolled)	300,000
Sheet and strip (cold rolled) ...	170,000
Tinplate	50,000

The different mills manufacturing these end-products merit description, howsoever brief, in this connection. In the heavy plate mill, the slabs are levelled into wide and heavy plates for use in shipbuilding, locomotives, goods trucks and boilers.

Wide Strip Mill

In the wide strip mill, by far the greater number of slabs from the blooming and slabbing mill is processed into strip. This mill has an annual capacity of upto one million tons; its operations are carried out automatically, and so only a few operators are needed to run the mill. Supplied by Demag the wide strip mill is claimed to be the most modern of its kind in the whole of Asia. It affords a variety of uses for the strip rolled on it; for instance, in a pipe-welding plant installed at Rourkela, strip from the mill is made into pipe. (The capacity of this pipe plant alone amounts to 100,000 tons of pipe per year). The strip issuing from the mill is either built up into coils weighing upto 12 tons with a width of 61.62 inches and a thickness of upto 0.39 inch or cut into sheets 16 to 32 feet long by means of a rotating shear. The finished coils are conveyed to the cold rolling mill or, depending on their further use, sold direct to the consumer.

In the Cold Rolling Mill which has just been commissioned, as mentioned at the outset, cold rolling of the strip is effected in two stands. One stand is used to roll car body sheet with an initial thickness of 0.078 to 0.16 inch to a final thickness of 0.0136 to 0.0614 inch. Tinplate with a final thickness of 0.00741 to 0.0195 inch is made on the other stand. Vigorous cold working in the Cold Rolling Mill makes the steel very hard and brittle, so that it is unsuitable for further processing. Its grain structure is, therefore, corrected by annealing. This is done in the Rs. 1½-crore annealing plant which has also been commissioned as part of the Cold Rolling Mill.

Cold Rolling Mill

The Cold Rolling Mill is, perhaps, the most important section of the Rourkela plant, for the production and consumption of thin products is considered to be one of the signs of industrial progress today. The use of thin flat products, such as sheets of considerable length has reduced the necessity of revetting and welding. Better finishing methods of materials have eased work involved in painting, enamelling and other surface finishing processes. Cold rolling has improved the malleability and non-corroding qualities of sheets. It has been estimated that the improvement in the quality itself has reduced the weight of steel used for all purposes by over 10 per cent. The ultimate lowering of costs through the perfection of strip manufacture has made possible the growth in the manufacture of durable consumer goods. The entire 200,000-ton output of the Cold Rolling Mill is earmarked for auto-body sheets. But the demand for cold-reduced sheets for the manufacture of appliances, furniture, refrigerators, etc. will increase enormously. In order to keep pace with this development, the third Plan envisages production of about 600,000 tons annually from the mill.

Another major feature which distinguishes Rourkela from all other iron and steel works is its fertiliser factory. Here the hydrogen which is separated from the coke-oven gas and the nitrogen arising in the oxygen plant are made into ammonia and nitro-chalk so as to produce 600,000 tons of nitro-limestone fertiliser per year. It is claimed that this factory is the largest of its type in the world, using the nitrogen arising as a by-product in the oxygen plant and the hydrogen from the coke-oven gas for the synthesis of fertiliser. The quantity of fertiliser produced by this factory will be sufficient for 6 million acres of land.

A few words in conclusion. The Rourkela Steel Project, with its distinctive characteristics described so far, is earmarked for expansion in the third Plan period. When expanded, the entire Plan will have an ultimate output capacity of 1.8 million tons per annum at the end of the third Plan. The financing of this expansion programme is guaranteed, for the German industry has already collected and handed over to the German Government the equivalent of Rs. 120 crores for the purpose of long-term credits under deferred payment arrangements. The second stage (as provided for in the third Plan), construction of the Rourkela Project, it is hoped, will also be completed to schedule. While the first stage itself has made the Rourkela plant complete in all particulars, the second stage will see the doubling of its production capacity. That will be a crowning achievement of the Indo-German partnership that has created Rourkela.

BRITISH INSULATED CALLENDER'S CABLES LTD.

It has been just announced by Messrs. British Insulated Callender's Cables Limited that they have been awarded a £1,000,000 contract from the Indian Railway Board for the supply and installation of overhead equipment for 25 kV 50 cycles A.C. railway electrification over 250 track miles of suburban railway in the Calcutta area. With this latest contract, the third of its type which the B.I.C.C. has received from the same source since December 1958, the Group will have been responsible for nearly 1,000 track miles of 25 kV 50 cycles A.C. electrification in India at a cost of some £4,500,000

The first contract, announced in December 1958, was for the electrification of a 400-mile section near Calcutta of the main line between Calcutta and Bombay on the South-Eastern Railway. This section, between Tatanagar and Rourkela, with a branch from Rajkharswan to Dongoaposi, links the iron ore fields in Bihar with steel plants at Tatanagar and Rourkela. Very rapid progress has been made on this contract, which was the first to be awarded in India for high voltage A.C. operation. A trial section was put into operation 12 months from the date of order, and the major portion of the scheme is already in commission.

Under the second contract awarded to the B.I.C.C. Group, which was announced in June 1960, some 300 miles of the Eastern Railway system between Delhi and Calcutta are being electrified. This section lies between Gaya and Moghalsarai, and includes the largest marshalling yards in Asia. Both this contract and the previous one were for freight service and intended primarily to provide the rail link that is essential for India's expanding steel programme. The new contract will facilitate the carriage of both freight and passengers to and from the developing suburban areas of Calcutta, particularly those to the North and North-East. South of the city, Sealdah station, which is embraced within the overhead electrification scheme, will eventually be able to handle a greatly increased volume of rail traffic. Sealdah is said to be one of the World's busiest major terminals still being operated by steam traction. These three orders, taken in conjunction, represent an important contribution by the B.I.C.C. Group towards the implementation of the Indian Railway Board's decision to standards the country's electric traction systems. The latest contract when complete, will constitute the first suburban railway section in India to be equipped for overhead high voltage A.C. operation.

BUILDERS HARDWARE INDUSTRY

The builders hardware industry, according to Mr. Ajoyendu Paul, Chairman of the Builders Hardware Association of India, is now well established and has attained self-sufficiency in almost all the items of builders hardware and fittings such as hinges, padlocks, padbolts and towerbolts. In his presidential speech at the seventh annual meeting of the Association held at Calcutta last week, Mr. Paul also made the point that "this remarkable success has been achieved without any assistance from foreign sources whether in the shape of raw materials or capital." There are now 60 factories producing builders hardware items and employing 15,000 workers. The production of steel hinges alone, as of 1960, is of the order of 2.2 million dozen pairs, as compared with 1.2 million dozen pairs in 1956. According to Mr. Paul, the capacity in the steel hinges industry is now under-utilised because of the shortage of raw materials. At present, the builders hardware factories get their quotas of steel either from the Development Wing of the Union Ministry of Commence and Industry or from the State Governments. The allotment, it is stated, is hardly sufficient to meet 50 per cent of the consuming capacity of the industry. It may be that the Rourkela Project will soon be in a position to supply more flat products to meet the industry's requirements. As the domestic cold rolled steel strips now available to the industry meet only 5 per cent of its requirements, its plea for actual user's licences to import them for some time seems to be reasonable. It may be advantageous to do this on the ground that the industry will earn some foreign exchange by exporting its products. It may be recalled in this connection that the industry's exports have ranged round Rs. 20 lakhs per annum since 1956. Many a mickle makes a muckle. The builders hardware industry, with its export potentialities, certainly deserves greater encouragement.

INDIAN SHIPPING'S SECOND PLAN TARGET

With the recent acquisition of a tanker of over 20,000 g.r.t. by the newly formed Indian shipping company, the Jayanti Shipping Company of Delhi, the tonnage target of 900,000 g.r.t. set for achievement under the second Plan has been slightly exceeded. The Indian tonnage, as on 31st March 1961, consisted of 172 vessels totalling 858,000 g.r.t. Since then, five vessels aggregating 51,000 g.r.t. have been added to the Indian fleet and one old vessel of 1,400 tons has been disposed of, bringing the strength of the Indian merchant fleet to 176 vessels totalling 908,000 g.r.t.

Of the total tonnage, 571,000 g.r.t. are employed in the overseas trade and 307,000 g.r.t. in the coastal (dry cargo) trade. There are also seven passenger vessels totalling about 6,000 g.r.t., five employed in the Konkan services and two by the Southern Railway in the Dhanushkodi—Telaimannar Service. Three coastal tankers, totalling 24,000 g.r.t. are on charter with the three oil refineries in India for transport of their products along the coast.

ROAD TUNNEL BENEATH THE KIEL CANAL

The mile-long road tunnel, 70 feet beneath the Kiel Canal connecting the North Sea and the Baltic, has been completed at a cost of DM 50 million on 25th July 1961. It is stated to be one of the boldest road building ventures in Europe. The tunnel has a capacity of 50,000 cars a day and provides a badly needed link for European highway No. 3, leading from the Scandinavian countries through the Federal Republic of Germany to Southern Europe. Some 3.5 million cars are expected to cross the tunnel a year. Traffic

SUGAR INDUSTRY AND ITS PROBLEMS

MR. D. D. PURI'S SPEECH AT I.S.M.A. ANNUAL GENERAL MEETING

INDUSTRY FACES SERIOUS DIFFICULTIES OF STORAGE AND FINANCE

A WARNING that the survival of sugar industry would be in serious jeopardy, unless a sizable portion of the huge stocks lying unsold with mills found an outlet and quickly was given by Mr. D. D. Puri, President of the Indian Sugar Mills Association, in the course of his speech at the Twenty-eighth Annual General Meeting of the Association held at New Delhi on Monday, 31st July 1961. The exportable surplus of 650,000 tons even after providing for a carryover of 500,000 tons, Mr. Puri declared, was a burden too big to be carried by the industry and was beyond its maximum financial and storage resources. Indeed, he said that the position was getting so serious that the industry might be forced to curtail production in the next season. In his opinion, such a development especially in the context of a bumper cane crop would cause grievous loss to the industry, as well as to millions of cane growers who had been increasing acreage under cane in the belief that there would be a readily available market for their produce, and would also "deal a blow to the developing economy of the country."

The following are extracts from Mr. Puri's speech:

Record Production and Crisis of Surplus

"On the sugar front, we are meeting under the shadow of deep crisis. Every day that passes deepens the shadow. We have moved far ahead of the times when scarcity of sugar was the order of the day. With the shift of emphasis in the Government policy from mere regulatory and distributive measures to maximising production, adopted last year, we have not only turned the corner so far as the availability of supplies is concerned, but, paradoxically enough, are now in the midst of what I have called a crisis of surplus.

"In the current season, production has almost reached the figure of 30 lakh tons. Here is the third Plan target in the bag, five years ahead of schedule.

Static Consumption Trend

"The consumption of sugar, on the other hand, has not shown the corresponding increase. In fact, contrary to the Plan premises, there was a slight fall last year. As against 20.66 lakh tons in 1958-59, consumption last year was only 20.24 lakh tons, showing a decrease of more than 40,000 tons from the previous year. It was expected that, this year with increased production and better availability, consumption would pick up. But these expectations have not materialised and the current rate of offtake is practically the same as last year. By the end of June, two-thirds of the current sugar season being over, the offtake from factories for internal consumption has been 13.31 lakh tons, as against 13.28 lakh tons for the corresponding period last year.

Huge Stocks Create Problems of Storage and Finance

"Increased production accompanied by lower consumption last year left the industry with a larger carryover stock of 5.5 lakh tons on 1st November last, as against only 153,000 tons a year earlier. Production this year has reached 29.5 lakh tons and, with a further addition of about 25,000 tons before the year comes to a close, it will have reached about 29.75 lakh tons. After accounting for the offtake during the remaining part of the year, I do not expect consumption this year to exceed 20.5 lakh tons. This will leave the industry with an unmanageable stock of 14.75 lakh tons (less the quantity exported) at the time when the next crushing operations start.

"Unless some satisfactory arrangement is made to solve this problem, the future prospects are, indeed, bleak. Obviously, at the moment, export is the only solution. Exports are possible only at a heavy loss, because the world free market prices are much below our cost of production. Exports can, therefore, be effected only if adequate compensation for the loss involved is provided and, without exports, I shudder to imagine the consequences.

"We are thankful to Government for having appreciated this position, as a consequence of which the Food Minister announced in the Lok Sabha in April last that the losses involved in further exports would not be borne by the industry. On our part, we have agreed to share a part of the loss on exports to the U.S.A. Earlier, we had to meet the total loss on the first one lakh tons already sold for exports. Besides, in response to the Government's appeal, the industry agreed to implement the Wage Board Award, even though both the export loss and increase in wages were not provided for in the controlled price of sugar.

Position Regarding Exports

"The actual exports that we have so far been able to contract for do not, however, give much cause for comfort. We have so far exported one lakh tons to Malaya and West Asian countries. On present indications, it may be possible to export another half a lakh tons this year, besides the U.S. quota of about 2 lakh tons, bringing the total to about 3.5 lakh tons at the outside. This will hardly touch the fringe of the problem. After providing for a carryover of 5 lakh tons, there will still be an exportable surplus of 6.5 lakh tons. This is a burden too big to be carried by the industry and is beyond its maximum financial and storage resources. Unless a sizable portion of it finds an outlet and quickly, the survival of the industry will be in serious jeopardy.

"The position is getting so serious that the industry may be forced to curtail production in the next season. The next crushing season is due to start in another three months. According to the reports now available, the sowings are even better than last year's, and, if the present favourable trend continues till harvest time, we will have a bumper cane crop to take care of. And, unless a sizable quantity of the surplus stocks is taken off from the factories through further exports, etc., it may not be possible for them to be ready to start crushing in time. Such a development will cause grievous loss to the industry as well as to millions of cane growers who have been increasing acreage under cane in the belief that there will be a readily available market for their produce. It will also deal a blow to the developing economy of the country.

Low *Per Capita* Consumption

"But while exports might help in reducing excessive stocks, as a long-term solution, something has to be done so that the consumption rate internally moves up. It is a well-known fact that our *per capita* consumption is among the lowest in the World. Against 48.6 kilos in the U.K. and 43.4 kilos in the U.S.A., our *per capita* consumption here does not exceed 13.9 kilos. This is far short of the level achieved in other countries and is also much less than the minimum of 20.5 kilos considered necessary for a well-balanced nutritive diet for an adult person in this country. There is, therefore, considerable scope for improving the present low rate of consumption here.

"While consumption did increase, though not to the estimated extent, till 1957-58, a contrary trend developed in the last two years to which I have already referred. This is due to the increase in the price of sugar occasioned by increase in the cost of cane and high taxation. That does not mean that the Indian consumer pays a higher price than is the position elsewhere. As a matter of fact, the price of sugar in India is lower than in many leading sugar producing countries. The Indian prices are also lower than in most of the neighbouring countries like Pakistan, Ceylon, U.A.R., Cambodia, Japan, Iran and Thailand. But the fact remains that the present prices have checked the rise in consumption and a time has come when it has become necessary to reduce taxation substantially to increase consumption. I venture to suggest that, if properly handled, a substantial reduction in excise duty would not result in loss of revenue to the extent as may appear at first sight. In a great measure, it would be offset by increase in internal consumption. I commend this suggestion for the immediate consideration of Government.

"Besides, there exist some irksome procedures and practices which tend to discourage consumption and create pockets of artificial scarcity in the country. The removal of these is already overdue. States are raising sizable revenues from sugar distribution. I would respectfully submit that the time for this is also over and this practice should be stopped forthwith. Another matter demanding attention is the transport bottleneck. I urge greater attention to these problems. These matters, if attended to, will improve consumption. But this will solve only a part of the problem.

Industry Needs Conditions of Stability

"Another factor of major importance to the industry is stability. Prices of sugar must never be allowed to fluctuate violently, for many reasons. The most notable is that cane prices must inevitably move up and down with prices of sugar, for cane is the predominant content of the sugar price. Violent fluctuations in cane prices and their effect on our rural economy are extremely undesirable. We must never forget that the cane grower has to plan his crop far ahead of its delivery to the factory. Once planted, cane yields more than one crop. So the grower, once he switches over to cane cultivation, is committed to it for a number of years. Any violent fluctuations in the cane price would seriously disturb his economy. Variations in cane price should be carefully planned and announced very much in advance.

"Another reason for steering clear of violent fluctuations is that the industry at present is carrying heavy stocks. If prices vary by Re. 1 per maund, it would mean a difference of about Rs. 6 crores on the present stocks alone. This may wipe out of existence many marginal factories especially those placed in geographically weak areas.

Backward State of Cane Cultivation

"With regard to cane price, this constitutes the highest single item of cost in the production of sugar. Much of its high incidence could be reduced if the present backward state of cane cultivation could be improved. Our average yield of 1.4 ton of sugar per acre makes a poor comparison with the yield of 5 to 8 tons of Hawaii, Java and Formosa. In fact, the yield in North India is about the lowest in the world, and yet covers the largest area in the country and, viewing it from the human angle, involves the largest number of cane growers. The low yields in the North can be rectified if cane development is undertaken on the requisite scale. We have urged repeatedly that the cane cess realised by the States should be spent entirely on cane development. We have been harping on this theme in season and out. We must state once again in clear and unequivocal terms that, if cane development is not undertaken seriously and with all resources at our command, the industry in the North will go down and with it the millions of cane growers who derive their sustenance from sugarcane.

Reassessment of Capacity Necessary

"Along with efforts to raise internal consumption, we must try to adjust our production in future to our needs so as to avoid repetition of the critical situation that the industry is presently facing. This would underline the need for reassessing the present capacity and the targets for the future. The potential of sugar production in the World today is much greater than its consumption and a vast majority of the exporting countries, and even some of the importers, have regulated and curtailed sugar production. The largest importer of sugar, the U.S., had till recently statutory restrictions on beet and cane acreages. As a matter of fact, practically every importing country plans for self-sufficiency in sugar.

"The second Five-year Plan estimated our consumption for the current year at 22.50 lakh tons, whereas, as I have already pointed out, it would hardly reach a level of 20.5 lakh tons. Statistics for the last three years show that our consumption is static. We are now in the first year of the third Plan, the Draft Outline of which mentioned a production target of 30 lakh tons. Subsequently, however, Government spokesmen stated that the target was being raised to 35 lakh tons. It came to us as a rude shock, as there have been no developments in respect of internal consumption which could justify a higher target. On the contrary, the trend of consumption would call for a lower target. This trend indicates that even 28 lakh tons consumption will not be achieved by the end of the third Plan period. It will be sound policy to let the consumption develop before expanding capacity, because capacity when once installed has to be kept going. We have enough stocks and are likely to have them over the next five years, to afford a safe cushion for a sudden spurt in consumption. Furthermore, capacity for manufacture of sugar machinery exists within the country. We could install additional capacity without undue delay or difficulty. There is, therefore, no need to install capacity in a rush.

Need for Rehabilitation Allowance

"In response to the request of the industry, Government made a reference of the price question to the Tariff Commission. The Tariff Commission determined regional cost schedules which were very rigid and based on the performance of sampled factories which were above average in all the regions. On top of that, the return allowed by the Commission provided, only, in the words of the Commission, 'sufficient funds for each unit to meet its commitments under bonus, gratuity, interest on borrowed capital and debentures, dividend on preference shares, managing agents' commission and income-tax, and finally leave a residue to a large majority of units in all the regions to declare reasonable dividends.' From this it is apparent that no margin was left to cover rehabilitation or to provide for reserves.

"I would confine my observations here only to rehabilitation. Rehabilitation is meant to cover the difference between depreciation which is allowed as an item of cost on the original historical costs of assets and the depreciation on the present-day replacement costs. After all, depreciation is allowed to enable replacement of assets on expiry of their useful life. The replacement costs have gone up many times and depreciation allowed is quite insufficient to replace useless assets. The difference between depreciation allowed and depreciation on present-day costs is a legitimate item of cost and should be recognised as such in determining the price of sugar.

"Rehabilitation was disallowed by the Tariff Commission on three short grounds:

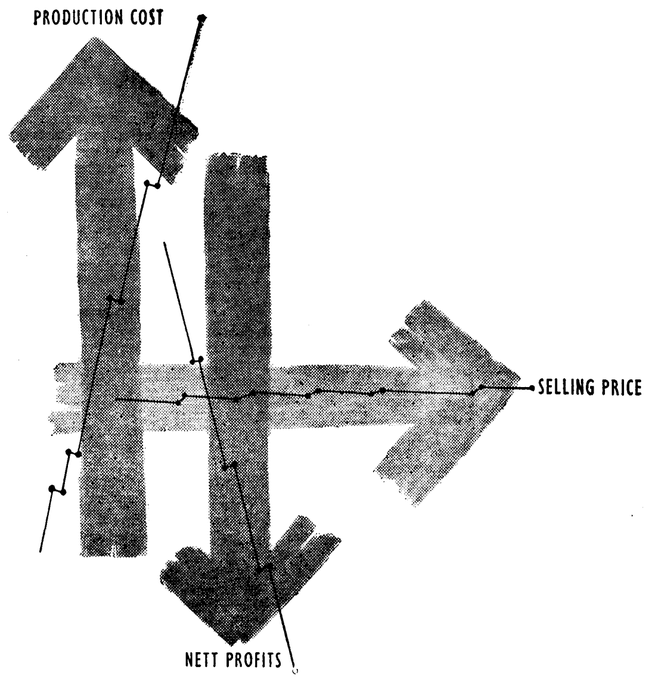
(a) The industry had employed all available funds in expanding capacity to earn more profits.

(b) It was socially unjust for the consumer to be burdened with rehabilitation.

(c) Rehabilitation cost could be met by borrowings.

"It was, however, not realised that reduction in costs achieved by expansion had been neutralised by the Commission working out the schedules with reference to actual costs in 1957-58 which included the economy effected on account of expansion. And then the benefit of reduced costs on utilisation of available funds on expansion went to the consumer alone and it would have been quite in keeping with considerations of social justice, if the consumer paid for the benefit enjoyed at the cost of industry. Thirdly, if rehabilitation had to be met by borrowings, some margin should have been allowed for servicing these loans and for their repayment. I may clarify here that interest on borrowed capital and debentures allowed by the Commission does not include any additional amount to cover interest on proposed borrowings for rehabilitation.

"As stated earlier, the Tariff Commission determined cost schedules on the basis of the relevant data for 1957-58. Since then there have been major increases in costs which have to be provided for while fixing fair price for sugar. Ours is essentially a controlled industry and a fair price for sugar, whether statutory or notional, has to be determined by Government. There is thus no escape from determination of cost of production and variations therein every now and again. Because of frequent fluctuations in costs, it would not be practical to entrust this determination to the Tariff Commission every time. The Commission prepared its report with reference to the cost for 1957-58 and it was already out of date when it was submitted in 1959. I would, therefore, recommend that there should be a standing body functioning all the time presided over by a person of the status of a Supreme Court Judge which should bring the cost of production data relating to sugar up-to-date. A standing body like this would ensure upto the minute availability of costs and other relevant data by an impartial body of the highest integrity and repute. This alone would meet the needs of the situation."



Ease out of that profit squeeze...

Decentralisation and lower profit margins make the profit-and-loss statement the real measure of each plant's efficiency. That's why it is increasingly important for management to study methods to ease out of the profit squeeze. Planned Lubrication gives management such an opportunity for savings.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

SCHEME OF NON-DIVERSION AND MUTUAL ASSISTANCE

MAIN PROVISIONS OUTLINED

THE scheme of non-diversion and mutual assistance, which came into force on 1st July 1961 as a result the agreement signed by seventeen leading Indian general insurance companies, has not received the critical attention it deserves considering its unique nature and far-reaching importance to general insurance trade as a whole. May be the provisions of the agreement and their practical implications are being examined by students of insurance. In that case, it will be some time before the various view points find clear-cut expression. The symposium, "why non-diversion," organised by the Bombay Insurance Institute in the city two weeks ago, served to focus public attention on the scheme. Such symposia and discussions should be organised at intervals in different parts of the country to explain the provisions of the scheme and to educate public opinion in favour of it. The medium of the Press could also be employed to put across to the general public the objects and reasons of the scheme and to stimulate public discussion of them. Only thus could the misunderstanding and apprehension in the minds of those who look upon the scheme with a certain amount of suspicion and distrust be dispelled and a wider measure of support, so essential for the success of the scheme, secured.

Objects

In view of the fact that the public is not yet fully familiar with the provisions of the agreement and their implications, we sketch below, in broad outline, the main objects and provisions of the agreement. The principal aim of the scheme of non-diversion and mutual assistance is to put general insurance on sound and healthy lines. Signatories to the agreement have undertaken to follow correct standards of conduct and to weed out ruthlessly all superfluous expenditure either on the development or administrative side. Every member-company agrees to examine dispassionately the existing set up of its business and to effect a drastic reduction in the remuneration paid to development or administrative personnel.

The underlying principle of the scheme is that no member shall attempt to obtain or encourage the transfer of any business from another member. It is incumbent upon every member to try and see that the business continues to remain on the books of the original member. In rare cases, when a business has to be accepted by another member, it shall be immediately reinsured to the extent of full 100 per cent, less statutory reinsurance cession, with the losing company, on tariff terms. Even where any business appears to be diverted to another member as a result of acquisition of financial control, such business shall be obligatorily reinsured with the losing company to the extent of full 100 per cent and on tariff terms. However, any member, who is forced to entertain such business, shall do so subject to the prior approval of the Committee.

Concept of 'Single Risk'

To ensure non-diversion of business, the concept of the 'single risk' has been invoked. Single risk is so defined as to make location the essence of a risk. According to this definition, any expansion of the original risk shall be deemed to be an indissoluble part thereof. The single risk concept can be illustrated as follows: suppose, for instance, that a factory is insured against fire with a member company A. Any allied risk in relation to the same risk, even in other departments, is to be treated as one risk. It is agreed, under the scheme, that no other member shall make any direct or indirect approach to the insured, even on the ground of rendering him service, through offering other types of covers. In cases where more than one member is sharing in a particular risk, it shall continue to be on the books of the members concerned more or less in the same proportion. It is, however, agreed that a member can accept an allied insurance on a risk already on the books of another member, provided the original holding member had an opportunity of "first refusal."

In the case of a risk being diverted to a company, which is not a member of the scheme, no member shall accept any reinsurance on that risk, and, if any reinsurance is accepted through oversight or any other reason, it shall be cancelled forthwith.

Non-diversion does not mean that the client as such is wedded to the insurer; it is the risk to which the principle of non-diversion apply. For instance, if a particular insured starts a new industry or branches out into something absolutely different, any other member-company shall be free to accept such fresh business. Further, if an insured puts up a new factory or starts a new industry, every member shall be free to accept such new risk. The agreement is to be operative for a period of three years. No member can and shall retire during the period of the agreement.

Pool Business

An important feature of the scheme, and one by which much store is set by the sponsors for its smooth functioning, is that it provides for assistance to those member companies which might suffer a loss of business by joining the scheme. This is sought to be rendered by the creation of a pool by contribution from members, which will be utilised to compensate those who suffer losses in business as a result of subscribing to the agreement. The contribution to the Pool shall be as under:

(1) A premium of Rs. 50 lakhs a year from the New India for a period not exceeding three years.

(2) Of the remaining members, those who have an increase of more than 10 per cent in their direct gross premium income in any year shall contribute a premium equivalent to 20 per cent of the increase above 10 per cent in any years.

These contributions shall be in the form of net premia out of the world-wide business of the members. Department-wise, it shall be in the same proportion as the net premium income in each department bears to the total net income for the year. Further, the cessions to the pool shall be subject to the original cost incurred by the insurer concerned.

In order to ensure that member companies register a steady and progressive growth year after year, any member, who fails to show an increase of 10 per cent in the direct gross Indian premium income in any year (base year 1960), will be entitled to claim a corresponding share in the pool business, that is, to the extent of the difference between the total gross direct premium written in India in a year and the total to which he is entitled, assuming an increase of 10 per cent on the corresponding 1960 figure. Any member, who achieves an increase of 10 per cent or above in the direct gross Indian premium, is precluded from claiming any share in the pool business. The "New India" will be the only company not entitled to claim any share in the pool business, even if there is an actual fall in its direct gross premium income in any year. Any surplus left with the pool, after the claims of the members are satisfied, shall go back to the ceding companies in the same proportion as the contributions made by them. No member shall, however, be entitled to claim a premium of more than Rs. 5 lakhs (in all departments combined) from the pool in any one year.

Executive Committee

The administration of the scheme is entrusted to a Committee consisting of four representatives of the member-companies unanimously chosen and broadly representing the group as a whole. The Committee is charged with the function of exercising constant supervision over the working of the agreement and is authorised to ask any or all members at any time to furnish any information which, in its opinion, is vital and relevant to the success of the agreement. In all matters pertaining to the agreement, either in point of interpretation or enforcement, all decisions of the Committee, if unanimous, shall be binding on all members. If otherwise, the matter shall be referred to a meeting of the members called for the purpose and the majority decision of any such meeting shall be binding on every one. When the Committee feels or is satisfied that a particular member is not acting in accordance with the letter or spirit of this agreement or is acting in a manner prejudicial to the interests of the group, it shall have the authority to ask the member to set things right at once. In order to further the interest of the group or the trade as a whole, the Committee is conferred with powers to negotiate with others outside the group. Admission of a new member requires the unanimous approval of all members.

Criticism of the scheme, by those who have shown reluctance to join it, does not concern with the objective the sponsors have in view. There is general agreement among insurers that reduction of procuration cost, in whatever way it is achieved, is very desirable. But they are sceptical whether the scheme, even assuming that it operates successfully, can lead to any substantial reduction in the procuration costs. For one thing, only 17 out of the 88 Indian companies and none of the 78 non-Indian companies that are directly doing business in India, are members of the agreement. The business of these 17 companies, though substantial in absolute terms, is too small a percentage of the total business. Hence, even assuming that these companies will be able to reduce their procuration costs, the reduction is not likely to produce any pronounced impact on the overall cost of the total business. This, of course, is not so much a criticism of the agreement as a statement of the fact that, if more companies do not join the agreement, its impact on overall cost of Indian business will not be substantial.

Another point made is that the optimistic hope of member-companies that the agreement would bring down procuration costs is not warranted, because those companies, who are not party to the agreement, might still try to divert the business by offering higher commission and rebates. The members will, therefore, have to pay the same price for the retention of their business as they used to. Only, they need not fear that their business would be diverted by the members who are party to the agreement. In any case, it is clear that the objects of the scheme are not easy of achievement. Nevertheless, the working and the results of the agreement will surely be watched with interest.

TEN MAJOR MANUFACTURING INDUSTRIES

TRENDS IN CAPITAL-OUTPUT RATIOS

THE Industrial Statistics Wing of the Central Statistical Organisation has just released a study containing exhaustive data on the important functional relationships among input factors and output in respect of ten major industries. Apart from being a guide for planning orderly development of industries, these data are of particular importance in assessing the degree of industrial efficiency. In order to measure, in economic terms, the overall industrial efficiency, the customary approach is to examine the relative efficiency with which human, physical and technical resources are employed for productive purposes. Barring entrepreneurial function, the quantitative measurement of which in relation to gross or net output is not possible, the functional relations of all other factors of production, namely, labour, capital and raw materials, to the gross or net output can be measured with the help of different ratios.

The ratios given in the publication include (1) productive capital to value added, (2) working capital to fixed capital, (3) value added to employment, (4) productive capital to employment, (5) value added to salaries, wages, etc. and (6) input to gross output. In addition to their usefulness for measuring efficiency, these ratios are expected to provide an insight into factor proportion variations among the different industries at a given point of time or over a period of time. An idea about regional variations within an industry or the relationship between the size of factories and ratios within an industry can also be gained from these data.

Coverage of Units

The industries selected for ratios are those the productive capital of which exceeds Rs. 15 crores. For each of the selected industries, the ratios have been worked out for five years from 1953 to 1957, separately for factories with different employment size groups. The source of information is mainly the annual 'Census of Indian Manufactures" (another publication of the C.S.O.), which, incidentally, covers only industries engaging twenty or more workers on any day and using power. The study under review does not, however, reveal the source of information for the data on small-scale units which employ less than twenty persons.

The object of the present study containing ratios would have been better served had the C.S.O. taken the trouble of supplementing the data with adequate explanations, which are intelligible to those who are not specialists in this branch of study. The subject is too exhaustive to be dealt with in a single article. What is attempted here is to give a brief account of two of the important ratios, namely, (1) productive capital to value added, and (2) working capital to fixed capital. The "value added" by manufacture represents that part of the product which is created in the factory and is computed by deducting from the gross ex-factory value of output the value at factory of fuels and materials used, work done for factory by other concerns and depreciation of fixed assets. The term 'productive capital' includes both fixed and working capital. By fixed capital is meant assets, including factory, land, buildings, plant, machinery and miscellaneous assets, such as furniture and fixture, fittings, railway sidings, automobiles, patents and trade marks, etc. Working capital comprises stocks of raw materials finished and semi-finished products, cash-in-hand and at the bank, excluding fixed deposits and current credits.

Table I on this page shows the functional relationship between the existing total stock of capital and total output, which is called the average capital output ratio. The table contains the trend of change in the ratio during the quinquennium 1953-57. Apart from the ratio for the industry as a whole, breakdown figures for representative employment size-groups are also given in the table. This ratio is a crude approximation to the marginal or incremental capital-output ratio. It provides a rough measure of investment requirements to expand output. Changes in this ratio over time provide both a measure of change in capital intensity and a rough indication of factor combinations.

Total Capital

The total productive capital of ten industries selected for detailed treatment rose from Rs. 633 crores in 1953 to Rs. 1,015 crores in 1957. The value added, too, rose from Rs. 297 crores to Rs. 411 crores during the same period. Thus, for the ten industries taken together, the capital-output ratio (the amount of capital needed to raise one unit of net product) was 2.50 in 1957, as against only 2.10 in 1953, thereby indicating that the overall productivity of capital tended to decline during this period. But the aggregate ratio is not that significant, considering the wide variation in the ratio among the constituent industries. Of all the industries, cotton textiles was the largest single industry, accounting, as it did, for Rs. 328 crores of productive capital in 1957, or about 32 per cent of the total. Value added by manufacture also was the largest in respect of cotton textiles.

As is shown in Table I, the average capital-output ratio declined during the period under review only in the case of general and electrical engineerings, aluminium, copper and brass, as well as vegetable oils. But, in all the other major industries, the proportion of capital needed for raising the additional output was relatively more. In the case of textiles, for instance, while total productive capital rose from Rs. 238 crores to Rs. 328 crores, the value added increased only at a slower pace, that is, from Rs. 133 crores to Rs. 153 crores, the ratio having gone up from 1.8 to 2.1. In 1957, the productivity of capital was the highest in engineerings and the lowest in vegetable oils.

Fixed and Working Capital

The relationship between working capital and fixed capital is useful in measuring roughly the extent of efficiency. In highly mechanised capital intensive industries, this ratio may move downward or upward, with the increasing or decreasing size of the factories, for factories in larger size groups secure greater technical efficiency and external and internal economies in production. This ratio can also be made use of for estimating the total capital requirements of an industry in connection with the development programme. Table II shows the ratio between working capital and fixed capital, and the pattern of its movement between 1953 and 1957. It may be seen from the table that, barring cement, paper and chemicals, where the quantum of working capital continued to be lower than the total fixed capital, in all the other major industries the proportion of working capital was more than fixed capital. Cotton textiles and sugar are important among the latter group, a substantial part of their capital being employed for raw materials.

The proportion of working capital requirement for a unit of fixed capital was highest in respect of sugar in 1957, the same level as in 1953. In 1953, sugar was second in this respect

(Continued on page 288)

Notices

THE SURAT ELECTRICITY COMPANY LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT AN ANNUAL GENERAL MEETING within the meaning of the Companies Act, 1956 (being the Forty-first Ordinary General Meeting) of THE SURAT ELECTRICITY COMPANY, LIMITED, will be held on Wednesday, the 23rd August, 1961, at 4-00 p.m. at the Registered Office of the Company, Killick House, Home Street, Fort, Bombay, to transact the following business:—

1. To adopt the Directors' Report and Audited Statement of Accounts for the year ended 31st March, 1961.
2. To declare a Dividend.
3. To elect a Director in the place of Mr. R. D. Munton who retires by rotation but offers himself for re-election.
4. To appoint a Director in the place of Mr. N. C. Javeri who holds office as a Director of the Company only upto 23rd August, 1961, i.e. the date of the Forty-first Ordinary General Meeting of the Company. The Company has received notice under Section 257 of the Companies Act, 1956, from a shareholder of his intention of moving the following resolution:—

   "THAT Mr. N. C. Javeri be and is hereby appointed a Director of the Company."

5. To appoint Auditors until the conclusion of the next Annual General Meeting and to fix their remuneration.
6. To consider and, if thought fit, to pass with or without amendment as may be permissible the following as a Special Resolution:—

   "THAT, as required by the provisions of Section 360 of the Companies Act, 1956 as amended by the Companies (Amendment) Act, 1960, the Company hereby approves of a contract or arrangement (in terms of the draft initialled by the Chairman for the purpose of identification and produced before the meeting for inspection of the shareholders) being entered into with Killick, Nixon and Co. Ltd., which Company is an Associate of Killick Industries Ltd., the Managing Agents of the Company, for the sale, purchase or supply of property or goods by one to the other as may be required from time to time in the ordinary course of business commencing from the 24th day of August, 1961, and terminable by either party by one month's notice in writing given to the other upon the terms following:—

   (a) that the prices or amounts charged to or to be received by the Company shall be such as are not less favourable to the Company than the market rates or rates which are otherwise reasonable;

   (b) that the other terms and conditions of such sale, purchase or supply of property or goods shall be generally the same as those on which the Company can sell, purchase or supply such property or goods elsewhere;

   (c) that for any property or goods sold or supplied by the Company, payment shall be made to the Company within one month from the date of sale or supply of such property or goods."

7. To consider and, if thought fit, to pass with or without amendment as may be permissible the following as a Special Resolution:—

   "THAT, as required by the provisions of Section 360 of the Companies Act, 1956 as amended by the Companies (Amendment) Act, 1960, the Company hereby approves of a contract or arrangement (in terms of the draft initialled by the Chairman for the purpose of identification and produced before the meeting for inspection of the shareholders) being entered into with Stamco Industries Ltd., which Company is an Associate of Killick Industries Ltd., the Managing Agents of the Company, for the sale, purchase or supply of any property or goods by one to the other as may be required from time to time in the ordinary course of business commencing from the 24th day of August, 1961, and terminable by either party by one month's notice in writing given to the other upon the terms following:—

   (a) that the prices or amounts charged to or to be received by the Company shall be such as are not less favourable to the Company than the market rates or rates which are otherwise reasonable;

   (b) that the other terms and conditions of such sale, purchase or supply of property or goods shall be generally the same as those on which the Company can sell, purchase or supply such property or goods elsewhere;

   (c) that for any property or goods sold or supplied by the Company, payment shall be made to the Company within one month from the date of sale or supply of such property or goods."

8. To consider and, if thought fit, to pass the following as a Special Resolution:—

   "THAT, as required by the provisions of Section 360 of the Companies Act, 1956 as amended by the Companies (Amendment) Act, 1960, the Company hereby approves of a contract or arrangement (in terms of the draft initialled by the Chairman for the purpose of identification and produced before the meeting for inspection of the shareholders) being entered into with Snowcem India Ltd., which Company is an Associate of Killick Industries Ltd., the Managing Agents of the Company, for the sale, purchase or supply of any property or goods by one to the other as may be required from time to time in the ordinary course of business commencing from the 24th day of August, 1961, and terminable by either party by one month's notice in writing given to the other upon the terms following:—

   (a) that the prices or amounts charged to or to be received by the Company shall be such as are not less favourable to the Company than the market rates or rates which are otherwise reasonable;

   (b) that the other terms and conditions of such sale, purchase or supply of property or goods shall be generally the same as those on which the Company can sell, purchase or supply such property or goods elsewhere;

   (c) that for any property or goods sold or supplied by the Company, payment shall be made to the Company within one month from the date of sale or supply of such property or goods."

9. To consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:—

   "THAT Killick Industries Limited, the Managing Agents of the Company, be and are hereby authorised to retain all commission or other remuneration to be earned by them at any time hereafter as Agents of the Hercules Insurance Company Ltd., in regard to any contracts for the purposes of effecting fire, marine, or miscellaneous insurance against all risks which may at any time hereafter be entered into between the Company and the said Hercules Insurance Company Ltd."

By Order of the Board,
FOR THE SURAT ELECTRICITY COMPANY, LIMITED,
KILLICK INDUSTRIES LIMITED,
A. N. HAKSAR,
Managing Director,
Managing Agents.

BOMBAY, 19th July, 1961.

N.B.—(a) A Member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a Member. Under Article 96 of the Company's Articles of Association, the instrument appointing a proxy and the power of attorney or other authority (if any) under which it is signed or a notarially certified copy of that power or authority, shall be deposited at the Registered Office of the Company not later than forty-eight hours before the time for holding the Meeting at which the person named in the instrument proposes to vote and in default the instrument of proxy shall not be treated as valid.

(b) The Transfer Books of the Company will be closed from Friday, the 4th August 1961, to Wednesday, the 23rd August 1961, both days inclusive.

(c) The Dividend when declared, will be made payable at the Chartered Bank, Bombay, on and after Tuesday, the 29th August 1961, to those Shareholders whose names stand on the Register on Wednesday, the 23rd August 1961, to whom Dividend Warrants will be posted.

(d) Explanatory Statements as required by Section 173(2) of the Companies Act, 1956, in respect of Item Nos. 4 and 6 to 9 inclusive, have been forwarded to the members of the Company.

THE KARANPURA COLLIERIES LIMITED

NOTICE IS HEREBY GIVEN THAT AN Annual General Meeting of THE KARANPURA COLLIERIES, LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta on Wednesday, the 30th August, 1961, at 10.30 a.m., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1961, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint Directors in place of retiring Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 16th August, 1961 to the 30th August, 1961, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries and Treasurers.

CALCUTTA, 27th July, 1961.

Notes:—(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 15th September, 1961, to those members so entitled whose names appear in the Company's books on the 30th August, 1961, or to their mandatees. No application for Dividend Warrants will be necessary.

Act:—

On Preference Shares at 10 per cent per annum.

On Ordinary Shares at Rs. 25 per share.

Per Pro BIRLA BROTHERS PRIVATE LTD.,
G. MAKHARIA,
Secretaries and Treasurers.

Registered Office:
8, INDIA EXCHANGE PLACE,
CALCUTTA, 22nd June 1961.

POLYCHEM TO ISSUE RIGHT SHARES

DIVIDEND STEPPED UP

THE Polychem Limited (Chairman: Mr. Ramdas Kilachand, Bombay) is the premier manufacturer in the country of polystyrene, which is the most widely used raw material in the plastics industry. The progress achieved by this infant Company in five years of its existence is really commendable. The Company's plant worked satisfactorily for the year ended 31st March 1961, during which sales and profits were well maintained at the previous year's level.

Sales which had advanced sharply in the previous year from Rs. 105.72 lakhs to Rs. 153.12 lakhs amounted to Rs. 153.07 lakhs during the year under review. The production was slightly higher, as can be seen from the increase in closing stocks of finished goods. The gross profit went up slightly from Rs. 48.20 lakhs to Rs. 48.69 lakhs, reflecting a modest increase in profitability (ratio of gross profit to sales from 31.4 per cent to 31.8 per cent). The equity dividend has been raised from 11 per cent to 15 per cent subject to deduction of tax.

The following comparative table reveals at a glance the working results of the Company for the past four years:

(In lakhs of rupees)

	For the year ended 31st March			15 months ended 31st Mar. 1958
	1961	1960	1959	
Sales	153.07	153.12	105.72	34.01
Other income	6.60	6.48	2.88	1.68
Closing stock of finished goods	13.23	11.15	5.92	25.92
Raw materials and stores consumed	89.60	92.32	48.25	47.88
Other expenses	28.45	23.99	15.24	7.25
Gross profit	48.69	48.20	24.77	7.94
Provision for—				
Depreciation	4.89	4.57	3.03	3.47
Taxation	17.50	17.50	5.75	0.47
Net profit	26.30	26.13	15.99	4.00
To reserves	15.47	18.53	7.21	0.12
Polymerisation technique and know-how formulae written off	..	5.00	1.00	..
Brokerage and under-writing commission	..	..	1.80	0.76*
Dividends—				
Preference	3.66†	3.00†	5.22	1.09
Ordinary	6.00†	4.40†	2.40	..
	(15%)†	(11%)†	(6%)	
Carry forward	1.55	0.26	0.16	2.71

* Preliminary expenses. † Subject to deduction of tax.

It will be noted from the table above that the provisions for depreciation and taxation have been well maintained. The reserves have been strengthened this year also by transferring a substantial sum of Rs. 15.47 lakhs, so that the increase in dividend has not been at the expense of conservation of profit. Even the proposed 15 per cent equity dividend is comfortably covered by over 3½ times.

The paid-up capital of the Company at Rs. 80 lakhs is equally divided between 7½ per cent taxable preference and ordinary shares both of Rs. 50 fully paid up. The improvement in working results since 1958-59 has resulted in a strengthening of the reserves, which together with surplus, now stand at Rs. 37.88 lakhs. The satisfactory financial position is evident from the absence of secured loans and from substantial cash and bank balances. The gross block of Rs. 65.80 lakhs stands depreciated at Rs. 48.97 lakhs after providing Rs. 16.83 lakhs for depreciation. The total of current assets at Rs. 126.34 lakhs is more than double the current liabilities of Rs. 57.55 lakhs. Of the current assets cash and bank balances alone which account for Rs. 32.85 lakhs is almost the same as in the previous year. Such a liquid position is a good augury for the expansion programme undertaken by the Company. Work has started on styrene monomer project, a licence for which was obtained last year.

The demand for 'Polystyrene' and 'Polynite Sheets' in the country is continuously growing. The import licences for raw materials continued to be granted on a restricted basis. The Government of India levied a Central excise duty of 20 per cent *ad valorem* on plastic powders, including Polystyrene from 28th February 1961.

The agreement regarding styrene monomer project with Messrs. Dow Chemie A.G., Switzerland has been finalised. The Company has awarded the contract for complete engineering, procurement and construction pertaining to this plant to Messrs. H. K. Ferguson Company who are well-known chemical plant engineers in the U.S.A. and who have made good progress with the work of designing and processing so far. The Company has finalised the arrangement for a U.S. dollar loan from the Industrial Finance Corporation of India and also for the additional rupee finance for setting up the styrene monomer plant.

The Controller of Capital Issues has given consent for the issue of 32,000 equity right shares of the face value of Rs. 50 each at a premium of Rs. 75 per share in the ratio of two shares for every five shares held. The right issue will increase the paid-up equity capital from Rs. 40 lakhs to Rs. 56 lakhs, besides bringing in Rs. 24 lakhs to the share premium account. The *ex-right* quotation of the Rs. 50 fully paid shares is Rs. 210 *cum-dividend*. At this rate, the net yield works out to about 2.5 per cent on a net dividend of Rs. 5.25 per share.

CANNANORE SPINNING'S DIVIDEND UP AGAIN

An increase in the dividend for the third year in succession is the main feature of the results of the Cannanore Spinning and Weaving Mills Ltd. (Managing Agents: Messrs. Damodaran & Co., Cannanore) for the year ended 31st March 1961. The dividend for that year is 20 per cent per annum taxable or a net of 14 per cent which favourably compares with 12½ per cent paid for 1957-58. It is, however, still well below 20 per cent for 1956-57 and 15 per cent for 1955-56, so that the dividend for the year under review is by no means a record. Sales of yarn and waste in 1960-61 increased sharply by 22.67 per cent to Rs. 96.02 lakhs. The demand for yarn and waste remained so high that the closing stocks of finished goods remained at no more than Rs. 1.22 lakh, which is the lowest for the last couple of years. The cost of raw materials, stores and spares consumed increased from Rs. 51.40 lakhs to Rs. 60.90 lakhs. As against the increase of 18.48 per cent in consumption of raw materials, stores and spares, the other expenses rose by only 4.2 per cent from Rs. 20.48 lakhs to Rs. 21.36 lakhs. The gross profit was substantially higher at Rs. 15.71 lakhs as compared to Rs. 10.85 lakhs for the previous year. The ratio of gross profit to sales has risen from 13.86 per cent in the preceding year to 16.36 per cent.

The dividend to shareholders has been progressively stepped up from 1957-58, as can be seen from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales of yarn and waste	96.02	78.27	73.77	68.09
Closing stocks of finished goods	1.22	3.04	3.14	4.41
Raw materials and stores consumed	60.90	51.40	47.65	48.82
Other expenses	21.36	20.48	21.45	17.27
Gross profit	15.71	10.85	7.91	7.58
Managing Agents' commission	0.86	0.51	0.37	0.35
Provision for—				
Depreciation	2.26	2.28	2.46	2.76
Taxation	5.00	3.60	3.00	1.80
Net profit	7.69	4.46	2.08	2.67
To reserves	0.86	0.13	0.05	..
bonus for workers	1.94	1.75	0.71	1.64
Dividends	3.00	2.56	2.25	1.87
	(20%)*	(17%)*	(15%)	(12½%)
Carry forward	1.99	0.19	0.16	1.06

* Subject to deduction of tax.

It will be noted that the transfer to taxation is markedly higher, that the provision for depreciation has been nearly maintained, that the works' bonus has taken a larger amount and that the addition to reserves has also been raised.

It is heartening to note that the gross block of Rs. 58.56 lakhs has been well written down, the net block being no more than Rs. 22.61 lakhs. The paid-up capital remains steady at Rs. 15 lakhs consisting of 15,000 equity shares of Rs. 100 each. Reserves and surplus which stand at Rs. 8.62 lakhs are well over half of the paid-up capital. The general reserve alone is of the order of Rs. 5.11 lakhs. The better working results have enabled the Directors to reduce the secured and unsecured loans from Rs. 12.69 lakhs to Rs. 8.04 lakhs. The current liabilities are at Rs. 9.42 lakhs, bringing the total indebtedness of the Company to Rs. 17.46 lakhs. This is well covered by the current assets amounting to Rs. 18.25 lakhs.

The current market quotation of the Rs. 100 fully paid-up ordinary shares is Rs. 160. At this rate, the net yield works out to 8.75 per cent on a net dividend of Rs. 14 per share.

(*Concluded from next column*)

lakhs, in addition there are current liabilities and provisions of Rs. 10.93 lakhs, as against which the current assets, including investments, are of the order of Rs. 25.95 lakhs. There is thus a clear surplus of current assets overall indebtedness. The total value of the block account at cost is Rs. 21.76 lakhs, which has been well written down to Rs. 14.02 lakhs, the aggregate depreciation provided being Rs. 7.74 lakhs.

During the current year, the Company has succeeded in fully repaying the entire loan from the Kerala Financial Corporation.

The Rs. 10 fully paid-up ordinary shares of the Company are quoted currently at Rs. 18.50 *cum* final dividend of 87½ nP. The net return on the shares on an *ex-div.* basis and at the proposed rate of dividend works out to 7.83 per cent per annum.

TRAVANCORE CHEMICAL FARES WELL

DIVIDEND RAISED ON HIGHER CAPITAL BASE

THE financial results of the Travancore Chemical and Manufacturing Company, Ltd. (Managing Director: Dr. P. Krishnamurti, M.A., D.Sc., Alwaye) for the year ended 31st March 1961 are quite encouraging. The sales of chemicals and fungicides have increased to Rs. 50.24 lakhs from Rs. 32.82 lakhs in 1959-60 and Rs. 21.15 lakhs in 1958-59. The closing stocks on the accounting day of 1960-61 are also considerably higher at Rs. 7.44 lakhs, as against Rs. 3.42 lakhs in the previous year. Reflecting the higher output in the main, the consumption of raw materials has gone up by Rs. 12.96 lakhs to Rs. 29.34 lakhs and other manufacturing expenses by Rs. 4.63 lakhs to Rs. 15.10 lakhs. Even so the gross profit stands at Rs. 9.85 lakhs as compared with Rs. 5.16 lakhs in the preceding year, representing a rise of more than 90.8 per cent.

A large portion of the gross earnings has, however, been absorbed by the provision for taxation at Rs. 3.35 lakhs, as against Rs. 1.40 lakh in 1959-60 and Rs. 60,000 in 1958-59. The depreciation is also higher by Rs. 71,000 at Rs. 1.73 lakh and the remuneration for Managing Director (salary plus commission) has risen from Rs. 32,000 to Rs. 52,000, following the higher profits earned by the Company. After making these essential provisions, the net profit works out to Rs. 4.25 lakhs, which is still considerably larger than the net profit of Rs. 2.42 lakhs for 1959-60. This is supplemented by (a) Rs. 7,000, being the excess provision of previous years no longer required written back and (b) Rs. 72,000, being the unallocated surplus of the preceding year brought forward, making available for distribution and appropriation a sum of Rs. 5.04 lakhs. The Directors have credited to a new reserve, namely, that for redemption of preference share capital, a sum of Rs. 1.50 lakh. Further, a sum of Rs. 41,000 (Rs. 38,000 in 1959-60) has been transferred to the development rebate reserve. Of the balance, an allocation of Rs. 27,000 at the gross rate of 8.93 per cent to yield a tax-free return of 6¼ per cent has been made to cover the liability on account of the preference share dividend. The dividend to ordinary shareholders has been stepped up from 15 per cent taxable for 1959-60 to 20 per cent taxable on the capital of Rs. 10 lakhs. In addition, dividend for a half-year on Rs. 3 lakhs new equity capital issued during the year has also been provided for. The net dividend works out to 14 per cent, as against 10.5 per cent for 1959-60 and 10 per cent for 1958-59.

An idea of the progress of the Company since 1958 can be had from the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	50.24	32.82	21.15	11.16
Closing stocks	7.44	3.42	4.35	2.10
Consumption of raw materials	29.34	16.38	11.51	6.02
Other expenses	15.10	10.47	7.14	3.58

Carry forward	0.56	0.72	0.23	0.06

* Of which Rs. 30,000 is on Rs. 3 lakhs of additional capital issued in 1960-61 for half year.

† Subject to deduction of tax.

The Company has taken up the manufacture of sodium aluminate, a chemical used in water purification. The Company was, however, unable to increase the production of potassium chlorate due to difficulties in securing the necessary electric power from the Kerala Electricity Board. This is expected to be received during the current year.

The financial position of the Company, as disclosed by its balance-sheet as at 31st March 1961 shows that the paid-up capital of Rs. 16 lakhs, comprising Rs. 13 lakhs in 130,000 fully paid-up ordinary shares of Rs. 10 each and Rs. 3 lakhs in 6¼ per cent 30,000 cumulative preference shares of Rs. 10 each, is supported by reserves and surplus amounting to Rs. 8.40 lakhs. The Company has yet to build up adequate reserves for meeting future contingencies. The secured and unsecured loans stand at Rs. 8.55

(Continued in previous column)

CALICO MILLS' PERFORMANCE IMPRESSIVE

RESERVES STRENGTHENED FURTHER

THE annual report of the Ahmedabad Manufacturing and Calico Printing Co., Ltd., popularly known as the Calico Mills (Managing Agents: Messrs. Karamchand Premchand Pvt. Ltd., Ahmedabad), for the year ended 31st March, 1961, makes heartening reading. Notwithstanding the frequent and drastic changes in the pattern and programme of production which became inevitable on account of the failure of the Indian cotton crop, and the voluntary price reductions, effected twice in 1960, following the recommendations of the Indian Cotton Mills Federation, the turnover has maintained its pace of growth and has improved by Rs. 83.65 lakhs to Rs. 10,83.16 lakhs. The gross profit has increased in consonance with the sales, having risen by Rs. 50.95 lakhs to Rs. 231.35 lakhs or 28 per cent over its previous year's level. Provision for the Managing Agents' commission is actually lower at Rs. 12.66 lakhs as against Rs. 15.37 lakhs a year ago while that for depreciation has been stepped up substantially by Rs. 28.77 lakhs to Rs. 54.43 lakhs. Following the betterment in the level of taxable profits, the provision for corporate taxation has been increased to Rs. 67.31 lakhs from Rs. 59.03 lakhs for 1959-60. The net profit, after making these essential provisions, has risen by Rs. 16.61 lakhs to Rs. 96.95 lakhs.

Inclusive of the large carry forward of Rs. 21.89 lakhs from the previous accounting period and Rs. 6.60 lakhs transferred from the tax exempt dividend reserve, the sum available for appropriation amounts to Rs. 125.44 lakhs. Of this Rs. 23.10 lakhs have already been utilised towards the payment of an interim dividends on ordinary shares at the rate of 11.2 per cent. Out of the balance now remaining, the Directors propose to transfer Rs. 51.81 lakhs to various reserves and, after setting aside Rs. 1.48 lakh to cover the preference dividends for the year, recommend a final dividend on ordinary shares at the rate of 16 per cent, subject to deduction of tax. This absorbs Rs. 33.00 lakhs, leaving a carry forward of Rs. 16.05 lakhs. The total dividend for the year under review is 27.1/5 per cent, which is a distinct improvement over that for the previous year and is better than even the tax-free dividend of 20 per cent for 1957-58.

An idea of the progress made by the Company during the past four years can be had from the comparative table that follows.

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales proceeds	10,83.16	9,99.51	9,15.65	8,49.67

Carry forward	16.05	21.89	3.14	9.26

* Subject to deduction of tax.

The financial position of the Company, as disclosed by its balance sheet as at 31st March, 1961, is impressive. The total share capital of Rs. 235.58 lakhs is backed by as much as Rs. 278.51 lakhs in the form of reserves. The substantial reserve position, in comparison with the ordinary share capital of Rs. 206.25 lakhs, coupled with the high rate of ordinary dividend; is clearly a reason for the current high price of Calico's ordinary shares. Secured loans amount to Rs. 403.81 lakhs, in addition to current liabilities of Rs. 280.14 lakhs.

During the year, the Company spent Rs. 144.37 lakhs on additions to its fixed assets besides Rs. 182 lakhs which were expended towards the cost of direct purchases and construction work in progress including machinery and materials at site. Inclusive of these items and excluding Rs. 70.93 lakhs already capitalised, the book value of the Company's block amounts to Rs. 986.80 lakhs. Against this, Rs. 384.97 lakhs have been provided as depreciation in the normal course of business. In order to equate, however, the written-down block to the written down value as per income-tax rules, Rs. 85.29 lakhs have been transferred from the rehabilitation and development reserve to depreciation account, with the result that the written down value of the block stands at Rs. 516.54 lakhs. Current assets and investments altogether amount to Rs. 681.50 lakhs and are more than adequate to cover the fully the current liabilities and the major portion of secured loans as well.

During the course of the year, the Company made further progress in its efforts at diversification and expansion of its activities. An agreement has been successfully concluded with a world famous textile finisher in Switzerland, under which the Company has acquired the exclusive rights of use in India of their entire range of special processes. This is expected to raise still higher the standard of excellence for the Company's products. The calcium carbide plant at Bombay was commissioned in February, 1961, while the erection of the P.V.C. plant is nearing completion and manufacture is expected to commence shortly. The Government has approved of the Company's application to treble the production of caustic soda and chlorine and double the capacity of P.V.C.

The present quotation of the Company's Rs. 125 fully paid share is Rs. 1,108 *cum-div.* The net yield, on *ex-div.* basis, works out to 2.3 per cent, much less than what one can earn by investing in gilt-edged securities.

TRAVANCORE RAYONS LIMITED

The Travancore Rayons Ltd. has received a Government licence to step up production of rayon yarn (120 deniers) from 6.88 tons per day to about 18.56 tons. Orders for plant and machinery have almost been finalised. The Company itself is producing important raw materials such as sulphuric acid and carbon-di-sulphide. Production of the latter will be increased by five tons per day by installing an electrical plant before the end of this year. The only remaining important raw material is rayon grade pulp. The Company has already received a licence for the manufacture of pulp from cotton linters. The initial capacity of the plant will be 10 tons per day. Production is scheduled to commence by the latter half of 1962.

The Company has announced that, in addition to Trayophane now being supplied in the form of rolls, sheets and bags—both plain and printed—it will now supply the film in two other forms also, namely, handy rolls with printed designs for domestic packaging and a special type called 'twist wrap printed film' which is made exclusively for the confectionery industry. In order to satisfy the packaging requirements of certain products, a laminating machine will be installed before the end of this year. One more bag making machine, a new type called the Simplex Automatic Heat Sealing Type, will be put up in the factory within a few days. The Company has recently erected a new printing machine capable of printing four different colours. With a view to meeting the increasing demand for Trayophane, the Company has plans to install a fourth cellulose film plant which will increase the daily production of Trayophane to 18 tons per day from the present production of 13 tons.

COCHIN MALABAR'S RESULTS EXCELLENT

THANKS, in the main, to the large rubber crop harvested (1,264,304 kilograms as against 978,827 kilograms in 1959-60 and 899,559 kilograms in 1958-59), the gross earnings of the Cochin Malabar Estates Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Kozhikode, Kerala) have jumped up from Rs. 14.25 lakhs in 1959-60 to Rs. 22.03 lakhs in the year ended 28th February 1961. This is in refreshing contrast to the downward trend of gross earnings in the preceding year when they had receded by Rs. 2.97 lakhs. Though the average sale price realised in 1960-61 was slightly lower at 392.21 cents per kilogram, as against 397.94 cents in 1959-60 the gross profit has registered a substantial improvement, as the increase in production brought about a fall in the cost of production per kilogram from 292.76 cents to 270.15 cents.

The sales proceeds stands at the impressive level of Rs. 66.92 lakhs, as against Rs. 49.10 lakhs in 1959-60 and Rs. 47.43 lakhs in 1958-59. The closing stocks have also declined markedly from Rs. 9.31 lakhs to Rs. 3.92 lakhs. Reflecting the higher output and larger labour charges, the manufacturing expenses have gone up by Rs. 4.74 lakhs to Rs. 39.91 lakhs.

The Directors have made a higher provision for taxation at Rs. 10.47 lakhs, as against Rs. 9.22 lakhs in the previous year. Depreciation has been stepped up from Rs. 1.36 lakh to Rs. 1.51 lakh. The remuneration to managing agents is also higher by Rs. 53,000 at Rs. 1.59 lakh. The net profit works out to Rs. 8.46 lakhs and is more than three and half times larger than that (Rs. 2.60 lakhs) for 1959-60.

A synoptic view of the progress made by the Company in the last four years can be had from the following comparative table:

(In rupees)

	For the year ended February			
	1961	1960	1959	1958
Sale proceeds	66,91,597	49,09,653	47,42,957	37,79,089

Average price realised (cents per kg.)	392.21	399.94	400.50	399.08

* Subject to deduction of tax.

Out of the profit of Rs. 9.06 lakhs available for distribution, the Directors have prudently conserved as much as Rs. 3.50 lakhs by transferring Rs. 2 lakhs to general reserve and Rs. 1.50 lakh to the rehabilitation reserve account created for the first time. Even the shareholders have not been created unjustly, the dividend on ordinary shares having been raised from 17½ per cent (taxable) for 1959-60 to 20 per cent (taxable), giving a net dividend of 14 per cent. This dividend is, however, a shade lower than the tax-free dividend of 15 per cent declared for 1958-59. The proposed dividend of 20 per cent is inclusive of an interim distribution of 9 per cent made earlier in the year.

The total area of the Company's properties has remained unchanged at 7,997.19 acres, of which 4,942.88 acres are under mature rubber and 3,054.31 acres under immature rubber. 81.25 acres were replanted during the year under review, as against 55 acres in 1959-60. 276.08 acres of immature rubber were brought into tapping, as against only 4.68 acres in 1959-60. 53.29 acres in 1958-59. 67.42 acres were newly planted.

The financial position of the Company, as disclosed by the balance-sheet as at 28th February 1961, is quite sound. The paid-up capital of Rs. 28.04 lakhs, comprising Rs. 26.91 lakhs in 897,093 ordinary shares of Rs. 3 each and Rs. 1.13 lakh in 2,266 7 per cent cumulative preference shares of Rs. 50 each, is supplemented by reserves and surplus amounting to Rs. 20.44 lakhs. Of this the general reserve alone accounts for Rs. 20 lakhs. The amount at credit in the rehabilitation reserve is only Rs. 33,511, as the replanting expenses of the order of Rs. 1.19 lakh incurred during the year have

(Continued in previous column)

(Concluded from next column)

been met from this reserve. It is a notable feature of the Company's financial position that it has no outstanding loans, secured or unsecured. The current liabilities and provisions, including the proposed dividends, at Rs. 22.69 lakhs are adequately covered by current assets amounting to Rs. 25.51 lakhs (stores, spares, tools, etc. Rs. 4.44 lakhs; stock-in-trade Rs. 3.92 lakhs, sundry debtors Rs. 1.77 lakh, cash Rs. 13.83 lakhs; loans and advances Rs. 1.55 lakh). The Company's gross block at Rs. 55.28 lakhs (Rs. 52.56 lakhs as at 29th February 1960) has been written down to Rs. 45.66 lakhs. The aggregate depreciation provided so far is of the magnitude of Rs. 9.62 lakhs.

The estimates for the current year indicate a crop of 1,141,396 kilograms to be harvested at an estate cost of 264.92 cents per kilogram and an all-in-cost of 293.91 cents per kilogram. The Directors expect to incur a capital expenditure of Rs. 5.47 lakhs in 1961-62, as against Rs. 3.17 lakhs in the year under review.

The Company's Rs. 3 fully paid-up shares are a popular scrip among the investors and are currently quoted on the Madras Stock Exchange at Rs. 7.50 *cum-final div.* This compares with a high of Rs. 8.80 touched in 1960 and of Rs. 8.05 in March 1961. On an *ex-div.* basis and at the proposed rate of dividend, they offer a net yield of 5.77 per cent per annum.

INDIAN DYESTUFF REPORTS STEADY PROGRESS

SHARE MARKET'S EXPECTATION, HOWEVER, TOO HIGH PREMATURE

THE overoptimism about the future of the Indian Dyestuff Industries Limited (Managing Agents: Messrs. Mafatlal Gagalbhai & Sons), the shares of which broke all records for rise in equity values in 1959-60, was distinctly premature, as is evident from the results of the Company for 1960-61. One advantage of this optimism was that the Company could raise a large amount of capital by issuing right shares at par in the high ratio of nine shares for every one held, that is, from Rs. 15 lakhs to Rs. 150 lakhs. In normal times, such a ratio would have depressed the market, but the mania for growth shares then was so high that the rate went up from Rs. 150 in January 1959 to Rs. 495 ex-right in December 1959, or a capital gain of Rs. 3,900 on an investment of Rs. 1,050. Thereafter, the ex-right quotation shot up further to touch a high of Rs. 865 in July 1960, so that the capital gain was Rs. 7,600. Today, the rate has come down to a little less than Rs. 470, thereby entirely wiping out the gain made after the scrip became ex-right. This retreat is no doubt a reaction to the earlier exaggerated notions about the outlook for the Company.

During the year ended 31st March 1961, the Company's sales improved by 24.2 per cent from Rs. 152.07 lakhs to Rs. 188.98 lakhs. The Company, which manufactures vat dyes and other intermediates, has doubled its sales in two years' time. The expansion in sales has naturally meant better profitability, with the gross profit rising to Rs. 60.75 lakhs, as compared with Rs. 54.24 lakhs for the previous year and Rs. 25.95 lakhs for 1958-59. The improved results in the last three years have not only enabled the Company to wipe off the loss carried forward and the accumulated preference dividends but also to pay a modest dividend on the increased capital and that, too, after transferring a sizable sum of over Rs. 39 lakhs to reserves.

The dividend on ordinary shares for the year under review is maintained at 6 per cent, subject to tax. This rate may appear to be too small for those who have paid high a price for the Company's share, but it must be borne in mind that the Company's new project, for financing which the large additional capital was raised, is yet to be completed. It will take some years for this project to yield a good dividend and, if one waits patiently till then, one may be amply rewarded.

As the Company is covered by Section 15(C) of the Income-tax Act, a part of the profit for the year under review is exempted from Income-tax. The Directors estimate this exemption at 17 per cent of the profit, subject to final determination by the Income-tax authorities. In view of the dividend also being similarly exempted, the dividend at Rs. 6 per share, subject to deduction of tax, is equivalent to about Rs. 4.50 per share net. At the current quotation of Rs. 468.75, the Rs. 100 paid-up ordinary share gives a net yield of 0.96 per cent, that is, not even one per cent.

The dividend on preference shares is proposed to be increased from 6 per cent tax free to 8.58 per cent, subject to deduction of tax. The increase in dividend on preference shares is pursuant to the special resolution passed at the special meeting of each class of shareholders held on 10th July 1961. This change would ensure for the preference shareholders the net rate of dividend they had been promised, even though the law has curtailed that right to some extent.

The balance-sheet as at 31st March 1961 reveals a sound financial position. The paid-up capital of the Company is Rs. 174.78 lakhs, consisting of Rs. 24.80 lakhs in 6 per cent cumulative preference shares of Rs. 100 each and Rs. 149.98 lakhs in ordinary shares of Rs. 100 each. The reserves and surplus have grown to Rs. 40.20 lakhs; two years before, they were no more than Rs. 5.95 lakhs. As against the current liabilities and provisions of Rs. 92.63 lakhs, the current assets stand at Rs. 249.26 lakhs, of which Rs. 117.95 lakhs are in cash and bank balances. The gross block of Rs 43.84 lakhs stands depreciated at Rs. 26.29 lakhs. Apart from this, a sum of Rs. 32.06 lakhs is shown as building and new factory under construction. The large cash balances only reflect the early stage of the Company's second unit, which is going to be its major productive asset in a few years' time.

The Company has an authorised capital of Rs. 262.50 lakhs, which, on the basis of the existing issued and paid-up capital, leaves a margin of Rs. 87.50 lakhs, Rs. 12.70 lakhs in preference shares and Rs. 75.00 lakhs in ordinary shares. The whole of this margin is earmarked to be allotted to the Company's Italian collaborators (Messrs. Aziende Colori Nazionali Affini—A.C.N.A. for short) and/or their nominees. The preference shares are in consideration of the technical know-how, engineering fees, and collaboration obtained from them, while the ordinary shares are for covering the cost of machinery and equipment to be supplied by them. It may be noted that, of the 24,800 preference shares already issued, the Italians hold 9,800 shares. Besides, they were issued 3,200 shares on 1st July 1961, bringing their total holding to 13,000 shares. These preference shares are redeemable after 10 years at the Company's option. In view of this position and the plenty of room the Company has for raising accommodation from banks—it had no secured loan at all as at the end of March 1961—it is reasonable to infer that the Company is unlikely to make any right issue in the near future.

The following comparative table vividly brings out the growth in the Company's working results for the last four years:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	1,88.98	1,52.07	91.64	28.20
Closing stock	25.10	20.60	12.47	8.17

* Includes Rs. 10.64 lakhs for previous years.
† Subject to deduction of tax.
‡ On increased capital.
§ Includes tax-free from 5-5-1954 to 31-3-1959.

The Company has already made considerable progress, in collaboration with A.C.N.A., in implementing its expansion scheme. The construction of buildings for housing the plant for the new dyes is well under way and the placing of orders for machinery both in India and abroad has been completed. Work on the plan for expanding production of sulphuric acid and oleums is, however, progressing rather slowly. A year ago, it was said that the plant for these products would be commissioned early in 1962, but now the Directors say that this is unlikely before the middle of 1963. They have received various proposals from indigenous manufacturers in this regard on which they have yet to take a decision.

At the current market price mentioned above, the ordinary shares of the Company appear to be more than fully priced. If it is assumed that an investor must have a net return of at least 4.5 per cent, the Company should pay a dividend of Rs. 26 per share taxable to justify even the present market value. It will not be long before the issued and paid-up ordinary capital is raised by Rs. 75 lakhs. Contracts for a capital expenditure of about Rs. 2.35 crores have already been concluded. To pay a dividend of Rs. 26 per share on the full equity capital of Rs. 2.25 crores, the Company will require a sum of Rs. 59.50 lakhs, after satisfying the preference dividend and after meeting all the essential allocations such as taxation, depreciation, development rebate, managing agents' commission and general reserve. It, therefore, seems to us that it will be quite a few years before the Company can reach the stage of paying such a handsome dividend as 26 per cent. It will be no exaggeration to say that the share market has discounted the prospects by five years in advance, if not more.

COMPANY MEETINGS AND DIVIDENDS

PEARL CYCLE INDUSTRIES LTD. Annual General Meeting, New Delhi, 12th August 1961. Dividend: *Nil*. Transfer books remain closed from 28th July to 12th August 1961, both days inclusive.

POLYCHEM LTD. Annual General Meeting, Bombay, 17th August 1961. Dividend: Rs. 7.50 per ordinary share, subject to deduction of tax, payable on and after 1st September 1961. Transfer books remain closed from 1st to 21st August 1961, both days inclusive.

HANTAPARA TEA CO., LTD. Annual General Meeting, Calcutta, 17th August 1961. Dividend: 15 per cent or Rs. 15.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 7th to 17th August 1961, both days inclusive.

TEZPORE TEA CO., LTD. Annual General Meeting, Calcutta, 18th August 1961. Dividend: 20 per cent or Rs. 2.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 10th to 18th August 1961, both days inclusive.

KAILAS RUBBER CO., LTD. Annual General Meeting, Kottayam, Kerala State, 19th August 1961. Dividend: 25 per cent or Re. 0.50 per share, subject to deduction of tax (includes interim dividend of 10 per cent Re. 0.20 per share). Transfer books will remain closed from 8th to 19th August 1961, both days inclusive.

COCHIN MALABAR ESTATES LTD. Annual General Meeting, Calicut, Kerala State, 21st August 1961. Dividend: 20 per cent or Re. 0.60 per ordinary share, subject to deduction of tax (includes interim dividend of 9 per cent or Re. 0.27 per share). Transfer books will remain closed from 8th to 21st August 1961, both days inclusive.

PAPER MILL PLANT AND MACHINERY MANUFACTURERS LTD. First Annual General Meeting, Bombay, 21st August 1961. Dividend: *Nil*. Transfer books will remain closed from 7th to 21st August 1961, both days inclusive.

AHMEDABAD MANUFACTURING AND CALICO PRINTING CO., LTD. (Calico Mills). Annual General Meeting, Ahmedabad, 21st August 1961. Dividend: Rs. 34.00 per ordinary share (includes interim dividend of Rs. 14.00 per share), subject to deduction of tax. Final dividend is payable from 28th August to 9th September 1961. Out of the final dividend of Rs. 20 per share Rs. 4 per share is free from income-tax.

PERIA KARAMALAI TEA AND PRODUCE CO., LTD. Annual General Meeting, Coimbatore, 22nd August 1961. Dividend: 20 per cent or Re. 0.40 per share, subject to deduction of tax. Transfer books will remain closed from 8th to 22nd August 1961, both days inclusive.

SURAT ELECTRICITY CO., LTD. Annual General Meeting, Bombay, 23rd August 1961. Dividend: 8 per cent or Rs. 8.00 per ordinary share (including the interim dividend), subject to deduction of tax. Final dividend of Rs. 5.50 per share is payable on and after 29th August 1961. Transfer books remain closed from 4th to 23rd August 1961, both days inclusive.

NEW DOOARS TEA CO., LTD. Annual General Meeting, Calcutta, 24th August 1961. Dividend: 35 per cent or Rs. 35.00 per ordinary share, subject to deduction of tax. Transfer books will remain closed from 14th to 24th August 1961, both days inclusive.

THAKURDASS SUREKHA IRON FOUNDRY LTD. Annual General Meeting, Salkia, Howrah, 25th August 1961. Transfer books will remain closed from 19th to 25th August 1961, both days inclusive.

DEVKARAN NANJEE INVESTMENT CO., LTD. Annual General Meeting, Bombay, 29th August 1961. Dividend: Re. 1.30 per share, subject to deduction of tax, payable on and after 30th August 1961. Transfer books will remain closed from 7th to 29th August 1961, both days inclusive.

INDIA UNITED MILLS LTD. Annual General Meeting, Bombay, 30th August 1961. Dividend: 8 per cent or Re. 0.80 per ordinary share and 13½ per cent or Re. 0.1325 per deferred ordinary share; both subject to deduction of tax, payable on and after 25th September 1961. Transfer books remain closed from 5th to 30th August 1961, both days inclusive.

INDIAN IRON AND STEEL CO., LTD. Annual General Meeting, Calcutta, 5th September 1961. Dividend: 16 per cent or Re. 1.60 per ordinary share, subject to deduction of tax, payable on or after 6th September 1961. Transfer books remain closed from 5th to 28th August 1961, both days inclusive.

ORISSA CEMENT LTD. Annual General Meeting, Rajgangpur, 21st September 1961. Transfer books will remain closed from 21st August to 9th September 1961, both days inclusive.

DISHERGARH POWER SUPPLY CO., LTD. Dividend of Rs. 10.00 per ordinary share, subject to deduction of tax, for the year ended 31st March 1961.

LAXMI STARCH FACTORY LTD. (Kundara-Kerala State). Taxable dividend of Rs. 13.00 per share, for the year ended 31st March 1961. Transfer books will remain closed from 18th August to 14th September 1961, both days inclusive.

JAIPUR METALS AND ELECTRICALS LTD. Taxable dividend of 9 per cent on the ordinary shares and 25 per cent on the deferred ordinary shares for the year 1960.

JIYAJEERAO COTTON MILLS LTD. Taxable dividend of Re. 0.30 per ordinary share, for the year ended 31st March 1961. Transfer books will remain closed from 13th to 31st August 1961, both days inclusive.

MYSORE STONEWARE PIPES AND POTTERIES LTD. Taxable dividend of 12 per cent or Re. 1.20 per share, for the year ended 31st March 1961. Transfer books will remain closed from 26th August to 8th September 1961, both days inclusive.

GENERAL INVESTMENT AND TRUST CO., LTD. Dividend of 5 per cent or Rs. 3.75 per ordinary share, subject to deduction of tax, for the year ended 28th February 1961.

INVESTMENT AND FINANCE CO., LTD. Dividend of 7½ per cent or Rs. 7.50 per ordinary share, subject to deduction of tax, for the year ended 28th February 1961.

SYNOPSES OF COMPANY REPORTS

Universal Cables Ltd.

(Formerly Hindusthan Woollen Mills Ltd.)

(Secretary: Mr. R. K. Chhaochharia, Calcutta.)

Annual General Meeting—9th August.

Proposed dividend (taxable)	1,75	87
	(5%)	(2½%)
Carried forward	26	3

N.B.—Adjustments include only the balance brought forward from the previous year.

Extracts from the Directors' report: As indicated in their last report, the directors have been applying their mind for some time for starting a new industry in this company, since they abandoned the original proposal of putting up a woollen and worsted mills. The directors are glad to report that the Company has now obtained a license from Government to start a factory for the manufacture of *Paper Insulated Lead Covered Power Cables*. The initial capacity of the plant will be 624 miles per annum and it will be located at Satna in Madhya Pradesh. Technical assistance and know-how for this project have been arranged from the U.K. concern of Messrs. British Insulated Callender's Cables Ltd. Preliminary steps have been taken for the purchase of land and for the arrangement of power, water and other facilities, and it is hoped to commission the cable plant by early 1963.

In view of this new scheme being undertaken, the name of the Company has been changed, with the approval of the Central Government, from Hindusthan Woollen Mills Ltd. to Universal Cables Limited effective from the 15th May 1961. Certain consequential alterations have also been made in the Objects clause of the Memorandum of Association of the Company. All these changes were approved by the shareholders at their extraordinary general meeting held on the 22nd March 1961. At this meeting, the authorised capital of the Company was also increased from Rs. 2 crores to Rs. 5 crores.

Since the present resources of the Company will not be sufficient for undertaking this new project, the directors have also decided to raise the subscribed capital of the Company by issuing at par 7,00,000 new equity shares of Rs. 10 each. Consent of the Controller of Capital Issues has been obtained for this and as approved by the shareholders at their extraordinary general meeting held on the 10th May, 1961, 3,49,725 shares out of the above are being offered to the existing shareholders and the balance 3,50,275 shares to the public generally together with such shares as are not taken up by the shareholders. The Company has also applied to the Industrial Credit & Investment Corporation of India Ltd. and to the Commonwealth Development Finance Corpn. Ltd., London for foreign exchange loans of Rs. 80 lakhs in all, to meet the cost of imported machinery. The directors expect that these loans will be sanctioned at an early date.

On account of this new venture being undertaken by the Company and for arranging finances as and when required, the directors have thought it desirable to appoint Messrs. Birla Gwalior Private Limited as managing agents of the Company with effect from the 1st of April 1961. Accordingly, an application has been made to the Central Government for their approval in this matter.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital	34,98,625	Investments	5,71,275
Reserves and surplus	2,71,448	Current assets	1,15,599
Other liabilities	4,91,814	Cash	35,74,923
	Rs. 42,61,887		Rs. 42,61,887

Khandelwal Ferro Alloys Ltd.

(Managing Agents: Khandelwal Industries Private Ltd., Bombay.)

Annual General Meeting—5th August.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales (raw materials, vegetables and fruits)	13	Nil
Closing stock (finished products)	10,68	Nil
Gross loss (—)	(—) 3,51*	(—) 7
To Managing Agents' remuneration	†	Nil
,, depreciation	5,79	Nil
Net loss (—)	(—) 3,51	(—) 7
Adjustments	(—) 12	(—) 5
Appropriations	Nil	Nil
Total debit balance carried forward	(—) 9,63	(—) 12

N.B.—Adjustments include only the debit balance brought forward from the previous year.

* Loss after providing for depreciation and Managing Agents' remuneration.

† Only Rs. 888.

Extracts from the Directors' report: Development rebate at 25 per cent on the value of plant and machinery installed is allowable under the Income-tax Act. No reserve for development rebate has been created as there are no profits available after providing depreciation.

Progress of work: The first furnace was commissioned on the 11th November, 1960. After the initial heating and trial period, regular production commenced from the last week of November 1960. As regards the second furnace the construction work has been completed and it will be commissioned as soon as electric power is made available by the Maharashtra State Electricity Board. All the civil and structural engineering works have now been completed with the exception of the following jobs: *Railway Siding*: Although the railway siding is ready and is in use, the loop line will only be ready by the end of this month. The construction of the extended raw material yard was held up due to the non-availability of cement, but the work is now progressing satisfactorily and the same is expected to be completed in about six weeks' time, as soon as the required quantity of cement is procured. Drainage for the furnace building has already been constructed, but for the remaining buildings inside the factory, work is being taken in hand and it would be ready before the ensuing monsoon.

Production Report: By the end of December 1960, a quantity of 1,510 metric tons of *Ferro Manganese was produced*. For the period from 1st January 1961 to 30th April, 1961, the production was 4,210 metric tons, thus bringing the total production upto 30th April, 1961, to 5,720 metric tons. The entire production excepting some quantity of non-standard material produced during the initial period so far is being tendered to the State Trading Corporation of India Ltd., against the Indo-U.S. Barter.

Manganese Ore: The Company has purchased *Manganese Ore* from various parties but recently, it was successful in entering into a contract with the Central Provinces *Manganese Ore* Co., Ltd., for the supply of its entire requirements of *Manganese Ore*. However, the Company is encountering shortage of railway wagons, with the result it has so far received from C.P.M.O. only 5,500 tons against an estimated arrival of 15,000 tons for the 2 months of March and April 1961. The question of short supply of wagons was taken up with the Railway Authorities and the Government at various levels, and the directors have succeeded in upgrading the movement of *Manganese Ore* from category (*e*) to (d) which they hope will ease the position considerably.

Limestone: The full requirements of *Limestone* are being met by the Rajur Mines which are worked by this Company departmentally and there is sufficient stocks both at the plant site as well as at the mine-head.

Dolomite: Arrangements have been made with the owner of a Mine which is situated about 15 miles away from the Company's plant site for the regular supply of Dolomite requirements.

Coke: The supply position of *Coke* is not very satisfactory on account of wagon shortage. However, efforts are being made at various Government levels to overcome this difficulty.

Owing to supply of power on contingent basis, there were very frequent power restrictions but since March 1961, this has improved on account of the commissioning of the Paras Power Station. In all other aspects, the plant is running very smoothly.

Tube Mill Projects: The new Company under the name of Phœnix Tubes Ltd. was promoted as a subsidiary of Khandelwal Ferro Alloys Ltd. Application has been made to the Controller of Capital Issues for the issue of necessary capital. Out of the 163 equity shares of Rs. 100 each fully paid-up issued by Phœnix Tubes Ltd., Khandelwal Ferro Alloys Ltd., the holding Company is holding 100 Equity Shares of Rs. 100 each fully paid-up.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	97,90,875	Gross block	1,14,21,419
Other liabilities	1,10,72,019	—Depreciation	5,78,568
		Net block	1,08,48,151

		Miscellaneous expenditure	4,05,385
		P. & L. a/c (deficit)	3,83,515
	Rs. 2,08,62,894		Rs. 2,08,62,894

* Paid-up capital consists of 50,000—7½ per cent. tax-free redeemable cumulative preference shares of Rs. 100 each fully paid-up and 1,00,000 equity shares of Rs. 100 each (Rs. 50 per share called up). Calls unpaid on equity shares amount to Rs. 2,09,125.

Clive Row Investment Holding Co., Ltd.

(Secretaries: Messrs. Andrew Yule and Co., Ltd., Calcutta.)

Annual General Meeting—11th August.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959*
Gross income	18,00	16,44
Gross profit	16,87	15,26
Transfer to Secretaries' remuneration	90	68
,, ,, taxation	5,51	5,35
Net profit	10,46	9,23
Adjustments	3,16†	3,34
Appropriations:		
Total available balance	13,62	12,57
To dividend (taxable)	11,10	10,41
	(8%)	(7½%)
Carry forward	2,52	2,16

N.B.—Adjustments include the balance brought forward from the previous year.

* The accounts for 1959 cover a period of nine months from 1st April to 31st December 1959. Accounting year changed from March to December in 1959.

† Includes Rs. 1,00,000 being taxation over provided in previous years.

Extracts from the Directors' report: A net gain on realisation of investments during the year amounting to Rs. 59,320 has been credited to capital reserve which has been debited with tax of Rs. 26,694 estimated to be payable on this account.

The Company's portfolio during the year under review was substantially unchanged from 1959. Since 1st January 1961, several changes have taken place as follows:—

The Bengal Coal Co., Ltd., made an offer of rights shares in the ratio of one for five at a premium of Rs. 100 per share; the Company took up and was allotted its entitlement.

The New Beerbhoom Coal Co., Ltd., made an offer of rights shares in the ratio of four for five at a premium of Rs. 4 per share; the Company took up and was allotted its entitlement.

Port Engineering Works, Ltd. (a Subsidiary) which had made an offer of rights shares in 1960 which the Company did not take up, made a further offer of rights shares in the ratio of one for four; the Company took up and was allotted its entitlements in this offer. Port Engineering Works, Ltd. remained a subsidiary throughout 1960.

Rajgarh Tea Co., Ltd. (a Subsidiary) has proposed to make a bonus issue in the ratio of one for one and has also made an offer of rights shares in the same ratio at par. If the bonus issue is approved the Company will receive 10,034 bonus shares. It is the Board's intention to take up the Company's entitlement of rights shares.

Basmatia Tea Co., Ltd. (a Subsidiary) has proposed to make a bonus issue in the ratio of one for two. If the bonus issue is approved the Company will receive 12,922 shares.

Whilst reduced dividends were received during the year under review from Jute Companies, dividends from Coal, Tea and Miscellaneous Companies were maintained at a satisfactory level. The Jute Industry is passing through a difficult period and dividends during the current year are expected to show a decrease; it is expected that dividends from Coal, Tea and Miscellaneous Companies will be maintained. The Company has benefited to the extent of approximately Rs. 65,000 because of the lower rate of tax applicable to dividends from subsidiaries.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	1,38,80,000	Investments	1,88,75,787
Reserves and surplus	17,29,306	Current assets	5,48,857
Other liabilities	88,27,669	Cash	12,881
	Rs. 1,04,36,975		Rs. 1,94,86,975

* The paid-up capital consists of 13,88,000 equity shares of Rs. 10 each.

Choonabhutti Tea Co., Ltd.

(Secretaries & Treasurers: Messrs. Andrew Yule & Co., Ltd., Calcutta.)

Annual General Meeting—10th August.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	26,87	25,78
Closing stock	8,81	8,18
Gross profit	7,70	6,99
Transfer to Managing Agents' commission	41	63
,, ,, Secretaries' and Treasurers' commission	19	Nil
,, ,, depreciation	1,02	74
,, ,, taxation	2,42	2,36
,, ,, development rebate reserve	11	3
Net profit	3,55	3,23
Adjustments	99	1,14
Appropriations:		
Total available balance	4,54	4,37
Transfer to reserves	50	50
Proposed dividends (taxable) Preference	15	15
,, ,, Ordinary	2,93	2,70
	(324%)	(30%)
Carried forward	96	99

N.B.—Adjustments include the balance brought forward from the previous year and excess wealth tax provision for previous years written back.

Extracts from the Directors' report: The dividend of 7.36 per cent recommended on the preference shares for the year ended 31st December, 1960, is calculated in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, which became law on the 28th December 1960.

A crop of 5,333 quintals (14,698 maunds) was secured and sold at an average price of Rs. 5.15 per kg. This compares with a crop of 4,994 quintals (13,761 maunds) in 1959 which sold at an average price of Rs. 4.83 per kg. Favourable climatic conditions and an improvement in the tea market are reflected in the increase in crop and the average price secured. Rainfall for the year amounted to 430 cms. (169 inches), compared with an average of 418 cms. (164 inches) for the previous 10 years.

Estimates for the current season have been framed for a crop of 5,260 quintals (14,500 maunds).

Capital expenditure during the year, amounting to Rs. 4,61,243, includes the cost of withering equipment, oil firing equipment for dryers, and labour and staff quarters.

Messrs. Andrew Yule & Co., Ltd., ceased to act as managing agents of the Company on 15th August 1960, and at an extraordinary general meeting of the Company held on 16th August 1960, they were appointed secretaries and treasurers of the Company with effect from 16th August, 1960.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	11,00,000	Gross block	22,96,834
Reserves and surplus	15,44,881	—Depreciation	11,19,335
Other liabilities	17,77,591	Net block	11,77,499
		Current assets	14,37,452
		Investments	4,00,807
		Cash	5,07,091
	Rs. 44,21,962		Rs. 44,21,962

* Paid-up capital consists of 9,000 ordinary shares of Rs. 100 each fully paid up and 2,000—6½ per cent tax-free cumulative preference shares of Rs. 100 each fully paid up.

Notices

THE INDIAN IRON AND STEEL COMPANY LIMITED

NOTICE

AT A MEETING OF THE BOARD OF DIRECTORS held today the Directors have recommended payment of a gross dividend for the year ended 31st March 1961, of 16 per cent, or Re. 1.60 per share, on the Ordinary Share Capital, subject to deduction of tax at the appropriate rates. This dividend awaits sanction by the shareholders at the Annual General Meeting to be held on Tuesday the 5th September, 1961.

The net profit after provision of Rs. 2,96,46,835 for depreciation, Rs. 1,66,00,000 for taxation and net transfer of Rs. 3,11,13,302 to Reserves is Rs. 2,22,68,363. For the previous year the net profit was Rs. 2,04,23,465 after provision of Rs. 3,00,00,000 for depreciation, Rs. 64,28,000 for taxation and net transfer of Rs. 2,92,92,880 to Reserves.

The Ordinary Share Register and Transfer Books of the Company, as already announced will be closed from the 5th August, 1961, to 28th August, 1961, both dates inclusive, and the dividend if sanctioned will be paid on or after the 6th September, 1961, to those shareholders whose names appear on the Register of Members on the 28th August, 1961.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Registered Office:
12 MISSION ROW, CALCUTTA-1.
25th July, 1961.

RAJGANGPUR

NOTICE IS HEREBY GIVEN THAT THE ELEVENTH ANNUAL GENERAL MEETING OF THE MEMBERS OF THE COMPANY will be held at the REGISTERED OFFICE OF THE COMPANY AT RAJGANGPUR, on Thursday the 21st September, 1961 at 2.30 p.m. to transact the following business:—

1. To receive and consider the audited Balance Sheet and Profit and Loss Account for the year 1960 and the report of the Directors and Auditors.
2. To declare Dividend.
3. To elect a Director in place of retiring Director Shri V. H. Dalmia.
4. To elect a Director in place of retiring Director Shri N. C. Roy.
5. To appoint Auditors for the accounting year 1961 and to fix their remuneration.
6. To consider and pass the following as Special Resolution with or without modification as thought fit:

"RESOLVED by way of Special Resolution that approval be and is hereby given to residential accommodation being made available to any Director or Officer of Dalmia Agencies Private Limited, Managing Agents of the Company who may be required to be stationed at Rajgangpur as and when requested on payment by the Managing Agents or the person concerned of the rent and other charges payable in respect of the accommodation on the scale as may be prescribed by the Board of Directors from time to time provided that payment of the rent and charges shall be made to the Company within one month of the expiry of the month for which the same are payable."

To consider and pass the following Special Resolution with or without modification as thought fit:

"RESOLVED by way of Special Resolution that Article 10 of the Articles of Association of the Company be amended to read as follows:

'10. If at any time the share capital of the Company is divided into different classes of shares, the Company is authorised to vary the rights attached to any class (unless otherwise provided by the terms of issue of the shares of that class) with the consent of the holders of not less than three-fourths of the issued shares of that class or with the sanction of a Special Resolution passed at a separate meeting of the holders of the issued shares of that class'."

8. To consider and pass the following as Special Resolution with or without modification as thought fit:

"RESOLVED by way of Special Resolution, in partial modification of the Special Resolution passed on 28th September, 1957, that authority be and is hereby given to the Board of Directors to have a mutual loan arrangement with Dalmia Cement (Bharat) Ltd., a Company under the same management, subject to the condition that the amount due to either Company on the loan account together with any moneys outstanding in respect of any current transactions pertaining to the supply of services, spare parts or equipment etc. shall not at any time exceed Rupees Forty Lakhs and the Board of Directors be and is hereby authorised to determine, from time to time, the rate of interest payable on such outstanding amount due to either Company in the loan account."

Explanatory Statements for items 6, 7 and 8 of the agenda as required under Section 173 of the Companies Act, 1956, are being forwarded to the Members of the Company by post along with the Notice of the Meeting.

The Share Transfer Books of the Company will remain closed for 20 days from Monday the 21st August to Saturday the 9th September, 1961, both days inclusive.

Every Shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a Shareholder. The proxies should, however, be deposited at the Registered Office of the Company not later than 42 hours before the commencement of the Meeting.

Dividend Warrants are expected to be all posted within three or four days after declaration of the dividend at the Annual General Meeting and would be payable on or after 25th September upto 31st October, 1961.

By Order of the Board,
For ORISSA CEMENT LIMITED,
For DALMIA AGENCIES PRIVATE LIMITED,
J. DALMIA,
Director,
Managing Agents.

THE PULLANGODE RUBBER AND PRODUCE COMPANY, LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN THAT THE Eighteenth Annual General Meeting of the Shareholders will be held at 11 a.m. on Monday, the 28th August, 1961 at the Registered Office of the Company at Calvetty, Fort Cochin, to transact the following business:—

1. To receive and adopt the audited Balance Sheet and Accounts for the year ended 31st March 1961 and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect a Director.
4. To appoint Auditors.
5. To consider and if thought fit to pass the following resolution with or without modification:—

"RESOLVED that with effect from 1st April 1961 until otherwise decided by the Company in General Meeting, every Director shall be paid, subject to a maximum sitting fee of Rs. 1,000 per year, a sitting fee of Rs. 200 per meeting of the Board or any Committee of the Board attended by him; and further that all out-of-pocket expenses incurred for attending meetings of the Board or Committee shall be reimbursed to the Directors."

6. To consider and if thought fit to pass the following Special Resolution which will be proposed as a special resolution:—

"RESOLVED that the Articles 11, 12, 21, 23 and 24 of the Articles of Association of this Company be and are hereby substituted by the following Articles, 11, 12, 21, 23 and 24 respectively:—

11. Every member shall be entitled to one or more certificates for the shares registered in his name. Such certificate or certificates shall be issued under the common seal of the Company, which shall be affixed in the presence of two directors or persons acting on behalf of the directors under a duly registered power of attorney; and counter-signed by the Managing Agents, specifying the share or shares held by the member and the amount paid up thereon. If two or more persons are registered as joint holders of any share the certificate of any such share shall be delivered to the person first named upon the register.

12. No certificate of any share or shares shall be issued either in exchange for those which are subdivided or consolidated or in replacement of those which are defaced, torn or old, decrepit, worn-out or where the cages on the reverse for recording transfers have been duly utilised, unless the certificate in lieu of which it is issued is surrendered to the Company; provided that the Company may charge such fee, if any, not exceeding Rs. 2 per certificate issued on splitting or consolidation of share certificates or in replacement of share certificates that are defaced or torn, as the Board thinks fit.

21. The Directors may in their absolute discretion decline to register any transfer of shares without assigning any reason therefor.

23. (*a*) There shall be paid to Company in respect of the transfer or transmission of any number of shares between any two parties at any one time the sum of one rupee per certificate, or such other sum as the directors may from time to time prescribe.

(*b*). Certified transfer deeds will be issued on request accompanied by deposit of scrip at a cost of one rupee and twenty-five naye paise per certified transfer deed, or such other sum as the Directors may from time to time prescribe. The Company will take all ordinary care of scrip so deposited but such deposit shall not amount to safe custody by the Company who will not be responsible for loss or destruction of scrip so deposited.

24. The Transfer Book and Register of Members shall, after advertisement as required by Section 154 of the Companies Act 1956, be closed for any period or periods not exceeding in the aggregate forty-five days in each year, but not exceeding thirty-days at any one time.

The Explanatory Statement relating to Item No. 5 and 6 above in terms of Section 173 of the Companies Act 1956, has been forwarded to the members of the Company along with the notice.

The Transfer Books and Register of Members of the Company will remain closed from 12th August, 1961 to 30th August 1961 (both days inclusive).

Any shareholder unable to attend personally is entitled to appoint any person (whether a member or not) as his proxy to attend and vote instead of himself, subject to the provisions of Section 176 of the Companies Act, 1956. Such proxy should reach the Registered Office of the Company at least 48 hours before the time fixed for the meeting.

This notice cancels and supersedes the notice dated 28th July, 1961 issued by this Company.

By Order of the Board,
THE PULLANGODE RUBBER & PRODUCE CO. LTD.,
Per pro. ASPINWALL & COMPANY LIMITED,
V. P. THOMAS,
Managing Agents.

FORT COCHIN, *31st July*, 1961.

THE AUCKLAND JUTE COMPANY LIMITED

FINAL DIVIDENDS FOR THE YEAR ENDED 31ST MARCH 1961

AT A MEETING OF THE DIRECTORS HELD on 29th July, 1961, the following Dividends were recommended subject to deduction of Tax under Section 18(3D) of the Indian Income Tax Act.

On Cumulative Preference Shares at 3.575 per cent making a total of 7.15 per cent per annum.

On Redeemable Cumulative Preference Shares at 2.925 per cent making a total of 5.85 per cent per annum.

On Ordinary Shares at Rs. 5 per share making a total of Rs. 12 per share per annum.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

FURTHER DECLINE IN CALL MONEY RATE

(From Our Own Correspondent)

BOMBAY, *2nd August*

Thanks to plentiful supply of funds and limited demand for accommodation, conditions in the short-term money market turned distinctly comfortable during the week under review. Funds continued to return to banks from mofussil centres and the borrowers had no difficulty in obtaining their requirements in full. The inter-bank call money rate among exchange and larger Indian banks eased from 3 per cent to 2 per cent. Other money rates remained unaltered. For purposes of ready reference they are given below:

	Per cent
Notice Money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3½
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3½
(v) 12 months	4

The results of the 91-days Treasury Bills of the Government of India, sales of which were resumed this week after remaining suspended last week, clearly showed the impact of the comfortable money conditions. Thus, as against the invitation for Rs. 2 crores, the actual amount offered was of the order of Rs. 3.49 crores. Tenders at Rs. 99.410 and above were accepted in full and those at Rs. 99.400 allotted approximately 96 per cent and lower tenders were rejected. Total amount accepted aggregated Rs. 2 crores. The average rate accepted tenders was appreciably lower at 2.398 per cent per annum, as against 2.5 per cent per annum a fortnight ago and 2.650 per cent per annum the week before that. 91 days' intermediate Treasury Bills sold from 24th July to 29th July amounted to Rs. 1.26 crore. Their sales are being continued from 1st August to 5th August.

The statement of affairs of the Reserve Bank of India for the week ended 28th July 1961 shows a decline of Rs. 21.19 crores in notes in circulation. As the notes held in the Banking Department have gone up by Rs. 13.11 crores, the total notes have receded by Rs. 8.08 crores. Foreign assets have remained unchanged at Rs. 93.01 crores, but as balances held abroad shown in the Banking Department have dwindled by Rs. 3.45 crores, the total foreign assets have shrunk further to stand at Rs. 98.04 crores. Deposits of banks with the Reserve Bank of India have fallen by Rs. 21.75 crores to Rs. 81.71 crores. Deposits of other Governments have also been marked down by Rs. 10.80 crores to Rs. 20.56 crores, but those of the Central Government have improved by Rs. 24.07 crores to Rs. 77.09 crores. Investments held on the assets side of the Banking Department have declined by Rs. 7.76 crores. Other loans and advances have improved by Rs. 1.20 crore, but those advanced to scheduled banks against usance bills have gone down by Rs. 9.50 lakhs.

The statement of the scheduled banks for the week ended 21st July 1961 discloses a decline of Rs. 3.06 crores in demand deposits and an expansion of Rs. 11.82 crores in time deposits. The total deposits of the State Bank of India have, however, dwindled by Rs. 1.04 crore to Rs. 531.31 crores. The borrowings of the scheduled banks from the Reserve Bank of India show a recession of Rs. 2.93 crores, of which the usance bills accounted for Rs. 2.41 crores. Their borrowings from the State Bank of demand variety have also shrunk by Rs. 23.77 lakhs. But those of time variety from the same source improved by Rs. 1.60 lakh. Advances and bills (Bank discounted credit) have suffered a setback of Rs. 12.45 crores to Rs. 1,246.14 crores. The advances of the State Bank of India also came down by Rs. 4.84 crores. Investments of the Scheduled Banks as a whole improved by Rs. 23.01 crores, of which the share of the State Bank alone was as much as Rs. 18.04 crores.

The gilt-edged market was dull. Only short-dated securities attracted buyers and showed a slight improvement. In the Central loan section 2½ per cent 1962 gathered 10 nP to Rs. 99.10. 3 per cent 1963-65, 3 per cent 1966-68 funding loan and 3½ per cent 1963 gained 5 nP each to Rs. 98.80, Rs. 96.25 and Rs. 100.05 respectively. The impact of the flotation of new loans on long-dated securities has not yet fully exhausted itself and the downward adjustment in the prices of existing securities continued during the week under review. Thus 4 per cent 1972 lost 20 nP to Rs. 100.30 and 4 per cent. 1979 and 1980 were both marked down by 25 nP to Rs. 99.25. In the States' loan section, 4 per cent 1963, 1964, and 1969 received some institutional support. Thus 4 per cent 1964 Maharashtra, 4 per cent 1963 West Bengal, 4 per cent 1963 and 1969 Madras, 4 per cent 1963 U.P. loans put on 10 nP each. 4 per cent 1969 U.P. went up by 20 nP to Rs. 98.90. 4 per cent Bihar, Kerala and Madhya Pradesh loans gained 50 nP each to Rs. 99.50.

In the foreign exchange section, the rupee improved further in relation to the U.S. dollar largely in sympathy with the pound sterling. The latter appears to have gained in strength following the measures announced by the U.K. Chancellor of the Exchequer to rectify the balance of payments position of Great Britain. Banks selling and buying rates for ready T.T. on New York were Rs. 478.75 and Rs. 475.25, respectively, as compared with Rs. 480 and Rs. 476.50. In the New York exchange market, the pound sterling was quoted at 279.680-279.710 cents per £ for spot and 277.080-277.110 for three months' forward. As compared with the previous week, the pound put on 0.76 cent in the spot and 0.91 cent in the forward.

BULLION FIRM AGAIN

(From Our Own Correspondent)

BOMBAY, *2nd August*

The bullion market continued to rule firm during the week under review also. Advices from upcountry centres were quite encouraging. Spot houses evinced keen buying interest on reports that the inflow of contraband gold had thinned considerably, in view of strict customs vigilance and heavy monsoon seas which make it difficult for the smugglers to bring the metal by boats from the Persian Gulf ports. Further, offerings were limited, as the daily average arrivals were on a small scale—3,800 tolas of gold and 22 bars of silver, as against 3,000 tolas and 55 bars, respectively, in the previous week. Business put through was, as a consequence, restricted, though prices tended to move up. The daily average offtake was lower at 3,000 tolas and 5 bars, as against 4,350 tolas and 8 bars. The floating stocks are reported to be around 30,000 tolas of gold and 800 bars of silver.

Adjustment rates fixed today were Rs. 120.20 per 10 grams of gold and Rs. 201.05 per kilogram of silver. The corresponding rates for Wednesday last week were Rs. 119.70 and Rs. 200.85, respectively.

The *Bhadrapad* (25th September) settlement in gold began the week distinctly firm at Rs. 120.25, as against the previous close of Rs. 119.80, and advanced to touch a high of Rs. 120.85 on Saturday, 29th July. At this level, profit-taking set in and the settlement declined to Rs. 120.35 yesterday. It, however, moved up again to Rs. 120.90 today before finishing at Rs. 120.70. The net gain over the week was 90 nP.

Ready gold was well supported in the earlier sessions, the quotation rising from Rs. 119.95 to Rs. 121.20 on 29th July. After easing to Rs. 120.25 yesterday, it recovered to Rs. 120.85 today, though it closed lower at Rs. 120.45. The ready metal commanded a premium over the forward till yesterday when it gave way to a discount of 10 nP and the discount increased to 25 nP today. At one time on Friday, 28th July, the premium was as high as 50 nP.

In silver, the *Bhadrapad* (26th September) settlement moved up from Rs. 201.20 to Rs. 202.50 on Saturday. Subsequently, the settlement softened and touched Rs. 201.40 on Monday, 31st July. Buying support ensued thereafter and the settlement recovered to Rs. 202.65 today before finishing at Rs. 202.30.

Ready silver was quoted at a discount under the forward throughout the week, the actual discount widening markedly from 35 nP last week-end to Re. 1.25 today. The closing rate for the metal was Rs. 201.05, as against Rs. 200.85, the highest level touched being Rs. 201.40 today.

The world price of gold in the London bullion market improved further during the week from $35.13⅛ to $35.14¼ per fine ounce. Ready gold, however, eased from 252*s.* 2¼*d.* to 251*s.* 5½*d.* Forward silver rose from 80⅝*d.* to 80¾*d.*, while ready silver was unchanged at 79⅜*d.* Silver in New York continued unaltered at 91.375 cents.

The following table shows the trend of prices during the week under review:

	2-8-1961 (closing)	High	Low	26-7-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	120.45	121.20	120.20	119.95
Forward: Bhadrapad* ..	120.70	120.90	120.00	119.80
Sovereign	93.75	94.00	93.75	94.00
SILVER				
Ready (.996 fine)	201.05	201.40	200.05	200.85
Forward: Bhadrapad† ..	202.30	202.65	200.95	201.20
London—				
Silver Ready	79⅜d.	—	—	79⅜d.
Silver Forward	80¼d.	—	—	80¼d.
Gold	251*s.* 5½*d.*	252*s.* 2¼*d.*	251*s.* 5½*d.*	252*s.* 2¼*d.*
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

BASE METALS FIRM

(From Our Own Correspondent)

CALCUTTA, 1*st August*

Following an improvement in demand, base metals ruled firm during the week under review, whereas, on the London Metal Exchange, all principal metals excepting tin eased. Tin recorded a modest addition. Copper in London opened at £231½ a ton and eased to £229¼. The cause was stated to be the increase in Bank rate. Also warehouse stocks were higher. In the local market, the supply position of copper scrap was tight. Berry quality at Rs. 456.67 per 100 kgs. and utensil scrap at Rs. 433.05 per 100 kgs. were maintained firm. Tin in London closed higher on balance at £918 a ton, as against the opening of £911. The rise reflected poor statistical position. Singapore prices, too, moved forward. Locally, tin at Rs. 1,649.50 per 100 kgs. recorded a rise of Rs. 20, and the gains were stabilised at each stage of the hardening trend. Electrolytic zinc at £78½ a ton in London closed fractionally lower on balance. The easiness was due to fall in demand. The Calcutta price, after being higher at Rs. 326.75 per 100 kgs., as against the opening of Rs. 325.75 and eased to Rs. 321.75. Virgin lead unchanged here at Rs. 135.75. The price in London was also quiet at £64¼ a ton.

COTTON FUTURES DEPRESSED

(From Our Own Correspondent)

BOMBAY, *2nd August*

Two developments of considerable importance to the cotton trade took place during the week under review. The first was the opportunity the traders had to acquaint the Minister for Commerce and Industry, Mr. K. C. Reddy, with some of the problems of cotton trade. The Minister gave a patient hearing to their representations at a reception in his honour arranged at Bombay by the East India Cotton Association and assured that the Government would do what it could about them. He stated that, in view of the improvement in the supply position, thanks to the good crop last season, it would be possible to abolish the compulsory survey system at an early date. He also gave the assurance that the system of mill quotas would not be continued even a day longer than was absolutely necessary and that, ordinarily, the Government would not interfere with futures trading after trading in a contract had commenced if prices moved within the floors and ceilings.

If the next season's crop turns out to be good, it would be possible, according to him, to discard the quota system altogether. As regards exports, the Minister indicated that, if the crop turned out to be normal, a sizable export quota would be announced and that the practice of linking exports to sale of cotton to mills would be discontinued as soon as conditions warranted it. The scope for trade participation in cotton imports was limited in the opinion of the Minister because of the existence of the export incentive scheme under which cotton was directly allotted to mills. Nevertheless, he expressed his willingness to examine any scheme, which would enable the trade to partrapate directly in imports without in any way effecting the incentive scheme.

The second development of the week was the announcement, on Thursday 27th July, of an export quota of 60,000 bales of cotton comprising Bengal *Deshi* and ¾" staple and below cottons. Although the quota was welcome, it failed to enthuse the trade, because it had come a little too late when there was very little demand from abroad.

Trading in the futures market was practically unaffected by these developments. Attentions of the traders would appear to be concentrated on weather and crop developments, for it is the size of the next season's crop, more than anything else, that would determine the cotton policy during the 1961-62 season. Up-country reports indicated favourable weather and provided satisfactory crop news. This discouraged support for the new crop contract. The August contract suffered a set back. This was attributed to selling induced by the fear that there might be more tenders against the contract in view of the revised basis for Laxmi 'A' and Cambodia 'B' and 'C'. The contract receded from Rs. 578.50 last week-end to Rs. 568.45 at close today. The following table indicates the trend of the market during the week:

(In rupees per three quintals)

	2-8-61	*High*	*Low*	20-7-61
I.C.C. August ...	568.25	579	567	578.50
I.C.C. March ...	591.25	592.50	588	591.50

Activity in the ready section was dull. Mill buyers were inclined to defer purchases till the size of tenders on the first notice day came to be known. Consequently, prices declined by Rs. 5 to Rs. 10 per candy. Moderate demand, especially from Southern mills, was however, noted for such popular varieties as Vijay, Digvijay, Surti and Kalyan. Mills are opposed to be abolition of the quota system for distribution of cotton. The Committee of the Indian Cotton Mills' Federation has, accordingly, decided to request the Government to continue the quota system during the 1961-62 season also.

In spite of the export quota, there was little interest in Bengal *Deshi* and ¾" cotton, because foreign demand for these varieties is not brisk. Japan seemed to have already covered most of its requirements of short staples from elsewhere and it is not therefore very much interested in Indian growths. Even so, exporters are optimistic that they could find buyers for the cotton now released. Interest in foreign cotton was confined to stray lots of selected Sudanese growths and East African B.P. 52.

The following are the latest available quotations—in rupees per candy of 784 lbs. from Sewri the figures in brackets bring last week-end quotations:

Moglai Jarilla: 750 (760), Kalyan 810 (810), Surti 930 (940), Vijay 940 and Bengal *Deshi* 650.

Steady conditions prevailed in the Karachi cotton futures market during the week under review. The January contract attracted some support following the expiry of the July contract. Although reports indicate satisfactory weather, mill and local trade support imparted strength to the market. The January contract improved from Rs. 73.30 to Rs. 73.60. The March contract was priced Rs. 73.30. Pakistan is reported to have contracted to import 10,000 bales of long-stable American-Egyptian cotton under P.L. 480. This quantity has already been allotted to mills. Negotiations for import of U.S. upland cotton is also said to be underway.

Futures trading in Alexandria continued to be suspended. Reports from Alexandria state that the Egyptian Cotton Commission has expressed its willingness to accept from this month applications to purchase cotton for local consumption and for export during the 1961-62 season on the basis of selling prices published by it weekly. These applications will be considered from the

stocks available with the Commission from re-purchase of cotton taken from the spot market.

Cotton futures in Liverpool recorded modest gains during the week. There were good local trade buying and Commission House support. Advances from New York also helped sentiment. Consequently, both the American and American type contracts received good support. The July deliveries went off the Board on 31st July at 23.65 tallaris (American cotton contract), 24.00 tallaris (American type contracts) and 31.25 tallaris (Sudan). The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 24.30; December 24.75; March 25.20.

American cotton mixed growth contract: October 24.75; December 25.15; March 25.60.

Sudan: September, November 31.25.

Listless conditions continued to prevail in the New York cotton future market during the week. Offerings continued to be limited and demand sluggish. Futures values were practically unchanged. In ready section, demand from domestic spinners was good but export interest was slack.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	31-7-61	25-7-61	18-7-61
New York Spot ...	35.00	35.00	34.85
New Orleans Spot ...	32.90	32.75	32.50
October	34.48	34.48	34.44
December	34.97	34.90	34.97

YARNS DECLINE

(From Our Own Correspondent)

BOMBAY, *2nd August*

Barring Japanese art silk yarns (120 and 150 deniers) which attracted good support at higher levels, the yarn market depicted a distinctly easy trend during the week under review. The easiness was due principally to rumours regarding an early sale of a sizable quantity of art silk yarn by the State Trading Corporation. The rumours led to liquidation by some stockists, while fresh buying enquiries were lacking in view of poor demand from consuming centres. In sympathy with art silk yarn and on account of low offtake by weavers, as well as reports that staple fibre allotment to spinning units had been raised by 10 per cent, staple fibre yarn drifted downward. Cotton yarns continued to rule dull, as buyers preferred to await a declining tendency in prices following possibilities of enlarged supply from the South, as a result of better power supply for working third shift there.

Cupressa Bemberg yarn (60 x 1) August delivery dropped Rs. 20 to Rs. 2,800. October position was quiet at Rs. 2,810. Spot Cupressa fell by Rs. 55 to Rs. 2,811. JP yarn (40 x 1) August contract shed Rs. 6 to Rs. 3,149. October contract was quiet at Rs. 3,163. 120 Japan, as stated at the outset, moved up from Rs. 2,039 to Rs. 2,053 and 150 Japan from Rs. 2,149 to Rs. 2,205. 150 Italy was firm at Rs. 1,874. Among indigenous yarns, National Rayons 150 Bt. cones 1st grade was quoted at Rs. 16.02 and 120 Bt. cones 1st grade at Rs. 18.22.

Staple fibre yarn (40 x 2) August contract encountered selling and receded by Rs. 27 to Rs. 940. October contract was done at Rs. 945. Spot Citys were dull at Rs. 11, as also Kohinoors at Rs. 11.55 and Hinds at Rs. 10.60.

Cotton yarn prices were more or less maintained at the last week's levels.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	2-8-1961	26-7-1961
	Rs.	Rs.
Art silkyarn—		
60/1 Cupressa Bembers (100 kg.)—		
August	2,800.00	2,820.00
October	2,810.00	—
Spot	2,811.00	2,866.00
40 x 1 JP		
August	3,149.00	3,155.00
October	3,163.00	3,169.00
120 Japan (per 100 kg.)	2,053.00	2,039.00
150 Japan (per 100 kg.)	2,205.00	2,149.00
150 Italy	1,874.00	—
Staple fibre yarn (40 x 2)—		
August (per 90.72 kg.)	940.00	967.00
October	945.00	—
City (per kg.)	11.00	—
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.25	17.25

30s New Great	27.00	27.00
40s Medium	32.25	32.40
60s Finlay	63.63	63.63
80s Moderns	99.00	99.25

SEEDS AND OILS RECEDE

(From Our Own Correspondent)

BOMBAY, *2nd August*

Oilseeds and oils suffered a further setback to values during the week under review thanks to nervous bull liquidation, which followed reports suggesting larger outputs in the 1961-62 season. In particular, groundnuts were weak. It was reported that a larger area had been sown to the crop in Kathaiwad and Nizam areas and that rains were favourable for cultivation. The offtake by vanaspati manufacturers and crushers was only moderate. There were, of course, some U.K. enquiries for groundnut extractions, but these had no visible effect on other sections. Castorseeds were easy as operators felt that castor oil exports to the U.K. would be adversely affected if the U.K. joined the Common Market without any safeguards for Commonwealth trade. The immediate outlook for castor oil was also not encouraging with buyers in world markets turning to Brazilian supplies offered at relatively lower prices. Linseeds too came in for selling in view of bleak outlook for linseed oil exports. Upcountry interests were sellers, but local crushers were reluctant to lend support at prevailing prices in anticipation of a further decline in prices. Cotton seeds were listless in sympathy with the easiness of raw cotton. Sesame ruled quiet.

Groundnut January 1962 contract fell by Rs. 2.63 to Rs. 219.12. Nizam bold lost 75 nP to Rs. 53.25. Both Khandesh quality and Coromandels declined by 50 nP to Rs. 23.75. Groundnut oil January 1962 contract cased by 30 nP to Rs. 18.25. Oil railway receipts dropped 60 nP to Rs. 21.90 and ex-mill 25 nP to Rs. 22.25.

Castorseed September 1961 shed a rupee to Rs. 170.12, partly on account of fears of large tenders against it. Kanpur bold softened by 25 nP to Rs. 33. Madras small was quiet at Rs. 34.25. Oil commercial declined by 30 nP to Rs. 14.20. Oil B.S.S. shed 10 nP to Rs. 15.50. Castorseed March 1962, however, attracted some support and gathered 13 nP to Rs. 170.75.

Among linseeds, September 1961 contract gave way from Rs. 40.19 to Rs. 39.75. March 1962 contract declined by 31 nP to Rs. 38. Bold ready was lower by 37 nP at Rs. 39.25. Linseed oil sagged by 10 nP to Rs. 16.80.

Cottonseed January 1962 contract lost 25 nP to Rs. 92.50. Whites were neglected at Rs. 20.25, as also non-whites and berars at Rs. 19.30.

In the sesame section, seeds were subdued at Rs. 350 and sesame oil at Rs. 26.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	2-8-1961	26-7-1961	19-7-1961
Groundnut	Rs.	Rs.	Rs.
January 1962	219.12	221.75	222.50
Nizam bold	53.25	54.00	55.00
Coromandel ready	53.75	54.25	55.25
Khandesh quality	53.75	54.25	55.25
Oil ex-mill ready*	22.25	22.50	23.05
Railway receipts*	21.90	22.50	23.80
Oil January 1962	18.25	18.55	18.75
Castorseed			
September 1961	170.12	171.12	174.87
March 1962	170.75	170.62	174.00
Ready Madras	34.25	34.25	34.87
Ready Kanpur	33.00	33.25	33.62

Kardi seed	26.00	26.75	27.50

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except Rapeseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

TEAS IRREGULAR

[*Messrs. Forbes, Ewart and Figgis (Private) Ltd.*]

COCHIN, *2nd August*

A much lesser quantity of 308,000 kilograms was offered in Sale No. 30 which was held on Tuesday, 25th July 1961. Quality of Nilgiris teas showed a distinct improvement whilst there was little change from the other districts. The market met with useful demand particularly from highgrowns which sold at dearer rates following quality. Low mediums and mediums opened slightly easier at the beginning of the sale but eased further as the sale progressed and at the close these were irregularly easier by 5 to 10 nP. Improved good mediums met with good support and were dearer whilst others in this category declined by 5 to 10 nP. There was useful enquiry for black leaf descriptions although these sold at slightly lower rates than last. Whole leaf grades were in good demand and are quoted firm.

Quotations were:

	1961 Rs.	1960 Rs.
Low mediums	4.45-4.55	3.50-3.85
Mediums	4.55-4.60	3.85-4.05
Good mediums	4.60-5.15	4.05-4.40
Nilgiri B.O.P.	4.75	5.70

The average price realised in Sale No. 30 was Rs. 4.64 per kilo, as against Rs. 4.68 in the previous week and Rs. 4.05 in the corresponding sale last year.

Dust Sale No. 30: 1,65,000 kilograms were offered in Dust Sale No. 30 on 27th July 1961. A useful selection of dusts was on offer. The market met with good demand with the exception of residual grades which sold at earlier rates than last. There was useful support for low mediums and mediums which were fully firm and sometimes dearer. Highgrowns continued in demand and sold well—those with improved quality advanced in price. There was good enquiry for C.T.Cs with C.T.C. types and legg-cut types selling at dearer rates.

The average price realised in Dust Sale No. 30 was Rs. 4.67 per kilo as compared with Rs. 4.64 a week ago and Rs. 4.18 in the corresponding sale last year.

Export Quota: There is no change in the market and at the time of writing there are still sellers at 2½ nP per kilo.

Colombo: There was a strong demand. Highgrown brokens were dearer by 5 to 15 cents. Mediums brokens advanced by 3 to 5 cents. Corresponding Fannings were slightly easier. Lowgrowns were firm to dearer.

London: North Indian and other growths: There was a good general demand at steady rates. New season's dooars however were easier by 1*d.* to 2*d.*

Ceylon and South Indians: In Tuesday's sale 30,812 packages were on offer. Of this quantity 8,892 packages were from South India. The market met with a better tone and prices in a number of cases were slightly dearer.

As we go to press, Messrs. Forbes. Ewart and Figgis (Private) Ltd., wire:

"*Sale No.* 31: 3,80,000 kilograms. Good demand. Nilgiris dearer with quality. Low mediums barely steady. Good mediums fully firm to slightly dearer. Whole leaf easier."

GOOD EXPORT DEMAND FOR TEA

(From Our Own Correspondent)

CALCUTTA, *1st August*

There was strong general demand at the export sales held yesterday, and at the internal sales held last week. Tea shipments to the United Kingdom were large during the week, and there was no difficulty for liners to get tea for shipment. Even so, the season's shipments have not yet touched the peak.

In the internal sales held on Wednesday last, dusts on offer amounted to 14,659 packages, which met with good demand. Among C.T.Cs, the brighter descriptions realised higher prices, others recording an irregular trend. Plain orthodox teas eased by 10 nP, but prices of bright liquoring Assams recorded modest additions, with the small types showing the highest rise. Legg-cut teas were steady, with the small bright liquorings hardening. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.80 to Rs. 7.20, medium Assam C.T.C. dust Rs. 6.40 to Rs. 6.70, legg-cut dust Rs. 4.70 to Rs. 5.50, medium Assam dust Rs. 4.60 to Rs. 5.40, and plain orthodox dust Rs. 4.40 to Rs. 4.65.

Leaf on offer amounting to 24 chests were irregular.

During yesterday's export sales offerings aggregated 33,877 packages the quality teas of which realised higher prices. Keen competition was offered to the orthodox teas on offer. The best broken grades were sold at higher rates in accordance with quality, while plainer teas and fannings eased. Legg-cut teas eased. Among Darjeelings, the best teas met with good demand, but the medium and poorer teas eased leading to a number of withdrawals. An irregular trend was recorded in stylish whole leaf and tippy teas. An irregular trend was also recorded in the C.T.C. teas. The best in this category were firm, but those lots revealing a seasonal decline in quality eased. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 7.50 to Rs. 8.00, best Assam C.T.C. B.P. Rs. 7.20 to Rs. 7.40, medium Assam C.T.C. fannings Rs. 6.20 to Rs. 6.60, medium Assam C.T.C. B.P. Rs. 6.00 to Rs. 6.40, plain fannings Rs. 4.55 to Rs. 4.65, plain B.P. Rs. 4.80 to Rs. 4.90, and clean plain pekoe Rs. 5.15 to Rs. 5.25.

NO FURTHER SEALING OF JUTE LOOMS

(From Our Own Correspondent)

CALCUTTA, *1st August*

Opening firm, prices of jute fibre and goods eased in the absence of follow-up support, but, as the week progressed, a recovery set in. The firmer trend earlier in the week followed the proposal by the Indian Jute Mills' Association for a block closure in August also, and, although market circles realised that, in the present situation of acute fibre shortage, a cut in production was inevitable, speculation was rife as to the extent and method of cut contemplated. The mills had originally proposed block closure for one week, but, subsequently, they preferred to propose sealing looms instead of a complete closure. Accordingly, the I.J.M.A. represented to the West Bengal Government the position resulting from poor crop arrivals and sought the Government's approval to seal 18 per cent of looms as at 1st August 1961. No timelimit for the sealing was given, but it was proposed to review the position every week, and unseal the looms sealed either in part or in full in accordance with any improvement in the rate of new crop arrivals. The firm trend in the goods market followed the move to seal looms, but soon it was known that the Government was opposed to the same. The State Labour Minister, Mr. Abdus Sattar, said that he could approve the scheme only if the present level of employment was maintained. The I.J.M.A. has now requested the State Government to reconsider its stand, but it is understood that there is very little chance of the Government agreeing to the proposal to seal looms. The West Bengal Government's stand is reported to have had the concurrence of the Union Government.

All trade unions strongly opposed any further attempt to curtail production either by block closure or sealing of looms. It would be remembered that, in accordance with the policy of voluntary sealing of looms, the mills had sealed 14 per cent of their looms as at October last, and, by the end of December, this had been raised to 19 per cent. Subsequently, this was replaced by a compulsory sealing of 7 per cent, thus leaving 12 per cent as being voluntarily sealed. At the same time, working hours were reduced from 48 to 45 a week. In February, working hours were reduced further to 42½ a week. In June and in July, the mills closed for a week each. These measures had cut down production and the workers' unions represented that workers had suffered greatly and that they should not be asked to undergo any further suffering. The unions suggested fixation of a floor price for fibre, and put it as their view that there was no justification whatsoever for a further reduction in production. One union has gone even to the extent of threatening that, if there were to be closure in August, there would be a forcible seizure and running of mills! Incidentally it may be noted that, following strike by the workers of the largest power generating plant at Mulajore belonging to the Calcutta Electric Supply Corporation, production in several factories served by the Mulajore station remained suspended for about two days; this did not, of course, prove to be a blessing in disguise to jute mills, since the mills were already closed throughout last week as announced earlier.

During mid-week, it was known that the State Government was opposed to any attempt at a further curtailment of production leading to reduction in employment. Mr. Abdus Sattar stated that he had secured the concurrence of the Union Labour Minister to reject the proposal of mills. He said that already 12 per cent of the looms was sealed and, if another 18 per cent was sealed, it would amount to a total sealing of 30 per cent; this would affect one-fifth of the workers as at present employed in the jute industry. His statement that workers had already suffered much and that they should not be asked to bear any more strain no doubt deserves much praise, but trade circles question the Minister's assertion that raw jute is flowing into the market and that it will not be difficult to get raw jute supply for mills. Arrivals are yet in driblets and they are not expected to show any improvement for some time. Harvesting has been affected by adverse weather in several areas. There is heavy moisture content even in the small arrivals and, due to shortage of water in tanks, the new arrivals exhibit poor retting. However, it should be noted that the outlook for the crop remains satisfactory, and nothing has happened to look with pessimism earlier estimates of a bumper crop. With the increase in water in tanks, retting is expected to improve. The crop would be later than expected and, if mills are now to reduce production, it can be increased when once the season has got into full swing. Market circles would plead with the Government to review the position in an attempt to mitigate the loss of mills resulting from working with little fibre. If the fibre supplies are not increased in the near future and if mills are compelled to maintain the present working hours and the existing number of looms in production, a crisis within the near future forcing mills to declare lock-outs for want of fibre would present itself. As such, it would be better to spread the existing shortage over the entire industry either by reducing working hours or by sealing more looms.

On Tuesday last, wide fluctuations in prices as a result of activities in the futures market was a feature in goods. Genuine business passing was insignificant, and, without follow-up support, prices closed lower on balance. Thus ready B. twills eased to Rs. 161.00 from Rs. 162.00 and ready hessian 40" 10 oz. to Rs. 52.75 from Rs. 53.00. It was realised that, if mills curtailed production further either by reducing working hours or by sealing off more looms, a squeeze in ready goods could not be avoided and that prices were bound to move up. Already, stocks of goods with mills were low. Such a line of argument encouraged greater buying in the bazar, but, on Wednesday, it was indicated that the Government was opposed to any further move to reduce production. Profit-taking followed and ready B. twills gave way to Rs. 158. The declining trend in hessian was arrested on interest from the U.S. and the closing level of 40" 10 oz. hessian at Rs. 52.50 revealed only a fractional loss. On the following day, that is Thursday, there was more business done in hessian with U.S. buyers and hessian 40" 10 oz. hardened to Rs. 52.25. In sympathy, B. twills recovered to Rs. 160. Indications that interest from Argentina in hessian could not be delayed any longer encouraged more bazar-buying. This resulted in the price of hessian 40" 10 oz. being pushed up to Rs. 52.50. On the other hand, with no business following, ready B. twills sagged to Rs. 159.00. These rates were maintained over the week-end. A steadier tendency was in evidence during yesterday in hessian constructions, the 40" 10 oz. of which recovered to Rs. 53.00 However, ready B. twills gave way further to Rs. 158.50.

This week's decline in fibre prices was accounted for by paltry interest being shown by mills which were closed. Arrivals of new crop continued to be insignificant. That ready jute was commanding a premium should be taken as adding to the significance of the current fibre shortage. The week's movement in prices for old ready delivery jute is exhibited in the following table:

(In Rs. per maund)

	Opened at	Declined to	Closed at
Northern bottoms ...	50.50	49.00	50.50
Daissee bottoms ...	52.50	51.00	52.50
Assam bottoms ...	51.00	49.50	50.50

On 29th July, the I.J.M.A. announced that, with immediate effect, the maximum prices fixed by the Committee for members' raw jute purchases had been reduced further and were now based on Rs. 52 per maund for Assam Bottoms in place of Rs. 56 per maund. The same differentials as before would apply (*vide* the attachment to the Association's Circular No. 127-D dated 20th May 1961).

FOODGRAINS STEADIER

(From Our Own Correspondent)

HAPUR, *31st July*

Steadier conditions were witnessed in the foodgrains market during the week. *Rabi* grain arrivals in markets were small. Fairly heavy rains in week-end over wide area, however, have brightened *kharif* crop prospects. Wheat at Hapur was steady to be quoted on Monday at Rs. 14.50 to Rs. 15 a maund for average quality and Rs. 15.50 to Rs. 16.25 a maund for better farm produce. Daily arrivals were modest, at an average of 200 maunds and, as entire arrivals were being lifted by consumers and small despatches were also made to Rajasthan, local wheat stock was almost stationary around 25,000 maunds. Losses to crop in many States due to floods were reported but the overall food position was considered to be satisfactory by the Government.

Rice also ruled steady during the week, as local stocks were small. The week-end prices were rice *mainpuri sela* Rs. 23; *gainda kutcha* Rs. 22.25; *ramajwayan sela* Rs. 24.50; *raimunia sela* Rs. 25.50; *basmati sela* Rs. 29 to Rs. 31; superior quality Rs. 35 to Rs. 38 a maund.

Gram recorded fractional gains during the week on firm advices from the Punjab. Local arrivals were small at an average of 200 maunds daily from the Punjab and, due to good buying support, local gram stock ran down to 40,000 maunds. The week-end prices were Rs. 14.25 to Rs. 14.37 a maund for Punjab variety and Rs. 14.12 a maund for local inferior produce. Barley continued steady at Rs. 11 to Rs. 11.25 a maund, while *bejhar* inferior was quoted at Rs. 10.75, superior *moongia* variety was being lifted at Rs. 11.75 a maund. *Juwar* and *guwar* ran down further, as demand was dormant. The week-end prices were Rs. 10 to Rs. 12 and Rs. 14.25 per maund, respectively. Maize, *bajra* and fodder—*juwar* and *guwar*—crops were progressing satisfactorily, thanks to latest fairly heavy rains. Other sections were quiet at:—old maize Rs. 11 to Rs. 12; *bajra* Rs. 15; oats Rs. 12.25, *methi* Rs. 28 per maund.

In pulses, peas were steady on good support from Madras side and traders were purchasing stocks expecting early loading facilities. Daily arrivals were poor at 200 maunds and local stock was put at 77,000 maunds. The stocks of *arhar* at 45,000 maunds were lying flat, as demand was sparse. Other sections were quietly steady and week-end prices (in rupees per maund) were: peas *dara* 11.50 to 11.75; farm white 12.50 to 13.25; *arhar* 12.50 to 13; *arhar dal* 16; peas *dal* 13.25; gram *dal* 16.25; *urd* 21 to 22; *urd dal* 25; *moong* 20 to 25; *moong dal* 24 to 28; *massor* 13.25 to 15; *massor dal* 16.50; *moth* 20; *moth dal* 23.

LINSEED ARRIVALS SCARCE

(Messrs. A. Bradley and Co.)

CALCUTTA, *31st July*

The linseed market continues to be firmly held and sellers are reserved. The local stock position is very poor, with arrivals scarce. Very few crushers working on linseed at present.

The oil market is keeping fairly steady. Business, however, is only on a very small scale, owing to limited stocks with millers.

The oilcake market is stagnant, small business being done daily at prevailing rates. Ready/August delivery is quoted at Rs. 30.25 per maund.

SUGAR WEAK

(From Our Own Correspondent)

HAPUR, *31st July*

Sugar ruled depressed during the week, to be quoted at Rs. 105.75 per bag and in retail at 97 nP per *seer*, thanks to comfortable supply position. The final estimate of sugarcane records an all-time record of acreage and production for 1960-61. The area under sugarcane during 1960-61 was 5,734,000 acres or an increase of 9.8 per cent over the figure for previous year. The production during 1960-61 was 85,045,000 tons in terms of cane (or 8,690,000 tons in terms of raw sugar *gur*). This accounts for an increase of 13.1 per cent in production. The increase in acreage has been reported mainly in U.P., the premier sugarcane growing State, Punjab, Rajasthan, West Bengal, Maharashtra and Bihar.

Sugar remained weak during the week in the Kanpur market, as demand was subdued on account of rainy season. Inferior varieties slipped down to Rs. 107.25 a bag and average qualities were quoted at Rs. 108 a bag.

Easier trend continued in the Muzaffarnagar sugar market, due to easy supply position following bulk allotment to sugar licensees of this district. There was all-round selling pressure from the allottees and, as traders were not willing to purchase bulk quantities, prices were quoted below controlled rates at Rs. 106.50 to Rs. 105.75 per bag for C-29 grade. The trade had been making representations to Centre to remove inter-State movement restrictions from sugar. This alone would raise the consumption of sugar and would help lessen stocks at mill centres.

Khandsari ruled quiet during the week, as demand was slack from Punjab and Rajasthan. The buyers were reluctant to enter into fresh commitments expecting that the Government might allow free movement of sugar in the country. *Khandsari* stocks were now poor and at Muzaffarnagar were put at 15,500 maunds, as against 48,000 maunds on the corresponding date of last year. Prices were quoted fractionally lower at:—*desi* inferior Rs. 30 to Rs. 33; superior Rs. 34 to Rs. 37; crystal Rs. 35 to Rs. 38.25; *boora* Rs. 36 to Rs. 39.

Ready *gur* ruled steady during the week. The stocks left with trade were now small, at about 15,000 maunds here. The week's offtake was three wagonloads each to Rajasthan and Gujarat, but loading is now completely stopped. Cane crop prospects were slightly better, thanks to fairly heavy rains in week-end and latest prices here were:—dry selected Rs. 17.25; dry-wet Rs. 15 to Rs. 15.50; wet Rs. 14.75. *Shakker* was very much in demand and, due to poor stocks, prices improved further to Rs. 18.25 a maund.

Gur ruled steady on good demand from Gujarat for superior quality in the Muzaffarnagar market, but stocks were now poor. Eastern U.P. was in request for wet *Chaku* quality and week-end prices were:—*Chaku kotha* Rs. 19.50 to Rs. 20; dry-wet mixed Rs. 18.25 to Rs. 19.50; wet Rs. 15; *shakker* Rs. 17.75 to Rs. 19.75; *Masala* Rs. 23 to Rs. 25 per maund.

After early advance, *gur* features ran down sharply to be quoted on Monday at the worst level of session at Rs. 13.86 on continued bear pressure. Opening at Rs. 14.01 last Monday, the price improved to Rs. 14.13 on Wednesday which was the highest level of session and then declined to Rs. 13.86 quoted today. Ashad delivery was settled at Rs. 14.68 under orders of the local Chamber.

KIPS OFFTAKE SLOW

(From Our Own Correspondent)

MADRAS, 31*st July*

There was no appreciable change in the kip market during the week under review. Arrivals were on the usual scale and offtake was slow. Importers seemed to be sounding Madras levels rather than actually wishing to book orders; they were offering lower prices without booking business. A small quantity of cow calf and buff calf was placed for shipment, which lent a steadier tone to this section. Buff hides ruled firm.

Demand for tanned goat skins was patchy and sales were selective. Light weights were difficult of sale. Tanned sheep skins remained steady except for the lower ends of Middle class sheep which were neglected.

The next tanned skins Public Auctions in Germany will take place on the 14th inst. when 914,000 goat skins and 572,000 sheep skins will be offered for sale.

LONDON LETTER

(*Concluded from page* 255)

costs are to be 'looked at critically' during next year."

The *Daily Herald*, although his political opponent, is more moderate than the Chancellor's own friends in denouncing him, confining itself to the scathing phrase "His emergency Budget is a disgrace. He has wholly mistaken the tone and temper of this country." Like the rest of the Press, it is seizing on the point that Britain's real problem is not speculation in sterling with which Mr. Lloyd's measure will deal adequately, it is "our balance of payments, our slow industrial growth and so our inability to export competitively. For this, the Budget does nothing; in fact it is harmful."

The *Daily Telegraph*, which is usually the Government's friend, says of the Chancellor's retrenchment measures that they are "no more than a measure of the miscalculations made at Budget time... long-term cures are found by long-term wisdom, and we must not expect too much of emergency measures prepared in haste ... the searcher after permanent cures is left with a feeling of emptiness." The paper goes on to criticise the Chancellor for expecting to get away with wage restraint after putting on a 10 per cent surcharge on customs and excise duties which will cause a rise of 1½ per cent in the cost-of-living index. If nothing more can be done for British exports than the Chancellor has indicated, "we may soon be in a position where nothing short of direct export bounties will get the minimum exports that are needed."

The *Daily Mirror* can usually be relied upon to attack the Government, but it could find nothing very different to say from the rest of Fleet Street. "Selwyn Lloyd's emergency steps will do *nothing* to increase Britain's productivity and help us to sell more abroad... gave absolutely no sign of a resolute long-term plan which would end Britain's plunges from inflation into stagnation."

The *Daily Express* describes Mr. Lloyd's measures as "about as useful as an aspirin tablet." It does not think that the nation will have much use for "a financial statement composed of vague proposals, pious hopes, a continuing vast expenditure abroad, no fiscal measures against rich speculators—and an attack upon two weak sections in the community."

Finally, the *Times* says: "This is at least the sixth economic crisis a British Government has had to deal with since the war. What was there in anything that was said yesterday to give any promise that there will not be a seventh?" And the *Times*' conclusion was that "Mr. Lloyd has not settled anything."

The U.K. balance of trade—the difference between imports (valued c.i.f.) and exports (valued f.o.b.)—improved in the second quarter of this year. On a seasonally adjusted basis, this balance improved from a deficit of £64 million a month in the first quarter to one of £43 million a month in the second quarter. The improvement resulted mainly from a further fall in imports.

MARKET GOSSIP

(Concluded from page 247)

to 7.47 million bales. As against this, mill consumption of Indian cotton during the season is not expected to exceed 4.4 million bales and of foreign cotton 900,000 bales. Exports are expected to be of the order of 225,000 bales. The total disappearance is thus placed at 5.52 million bales. This would leave a balance of 1,950,000 bales on 31st August next, which is 500,000 bales more than the stocks at the beginning of the season and, on the basis of the current season's offtake, represents three months consumption, which the trade says is normal stock. In view of this, it is argued that it is unnecessary to continue the kind of controls which could be justified only in abnormal conditions.

The move for the abolition of the quota system has, however, been opposed by millowners. The Committee of the Indian Cotton Mills Federation, at its meeting held on 31st July, discussed the question and decided to request the Government to continue the quota system of distribution of Indian cotton to mills during the coming season also. The Committee obviously thinks that, in spite of its limitations, the quota system has ensured an equitable distribution of available cotton to all mills in a period of acute shortage and that its abolition, at a time when crop prospects are still uncertain, is unwise, because, should the crop fail again, its reintroduction will become imperative. It is pointed out by traders in answer to this contention that the uncertainty about the crop is not a new or an unusual phenomenon and that it could, therefore, not be cited as a reason for continuing the restrictions. In case the crop turns out to be small this season also, the quota system could, they say, be reintroduced without much difficulty, now that both the Government and the mills have had considerable experience of working it.

The point to be borne in mind in considering the question of abolition or even relaxation of the quota system is how far either course will affect the distribution of cotton. If the abolition of the quota will make it difficult for mills to get their supplies, certainly such a course would be unwise. And as long as mills fear that they would not be able to get sufficient cotton at reasonable prices for their requirements without the quota system, they would naturally want it to be continued. Since so much depends on the size of the crop, it is not inadvisible to defer the decision till such time as a precise idea of the crop becomes available. In case we err, let us err on the safer side.

SURVEY

(Concluded from page 251)

proper communist distribution on the principle "from each according to his ability, to each according to his needs." Although the "promised land," the millennium for the sake of which the Soviet people have been asked to make untold sacrifices, will not be achieved in full by 1980, the Party has promised a taste of it by that time when the country's 200 million people will get free supply of gas, electricity, transport and other public utility services. During the interim period, according to the programme, taxes would be abolished, retail prices reduced and education, medical treatment and child care would be made free.

An impressive programme, which envisage a 400 per cent increase in national income and 250 per cent rise in real income per capita, forms the economic content of the 185-page document which will be presented for adoption by Mr. Khrushchev to the 22nd Congress of the Soviet Communist Party in October 1961. The programme aims at an increase in industrial output of 150 per cent within the next 10 years to exceed the contemporary level of the U.S. industrial output and a rise of not less than 500 per cent in the next twenty years' time. Agriculture production is planned to rise by 150 per cent in 10 years and 250 per cent in twenty years. During the next ten years, according to the programme, the Soviet Union will outstrip the U.S. in the output of key agricultural products per head of population.

Electrification of the whole country would be completed during the second ten years of the programme. The annual output of electricity will be raised to 900,000-1,000,000 million kilowatt hours by 1970 and 2,700,000-3,000,000 million kw. hours by the end of 1980. Non-ferrous production is programmed to increase to 250 million tons a year in twenty years' time.

These impressive performances, planned to be achieved in the next 20 years, will be coupled, we are told, with a progressive improvement in the wages and conditions of work of the Soviet people. The disparity between the salaries of highly paid and low-paid workers would be reduced. The working week will be reduced to 34-36 hours with a two-day week-end holiday, as compared with the present 41 hours and one day off. Free communal meals would be provided in factories, institutions and collective farms. Medicines will also be supplied free. A network of 'well-built' old people's homes, to be given free to anybody in need of it, will be established. In fact, by 1980, more than half the income of the population should, according to the authors of the Plan, be in the form of free goods and services.

This ambitious 20-year programme is aimed at creating the material base for a full-fledged communist society where the principle of distribution, according to effort will be replaced by that based on needs. Will the Soviet Union be able to fulfil these promises? Whether it will or will not, which time alone can prove, there is no doubt that the Soviet Government and the Communist Party will try its best to achieve these aims and utilise them, as well as the efforts made towards their fulfilment, as instruments of propaganda for spreading communism all over the world. The underdeveloped countries will be particularly vulnerable to such propaganda, because, apart from the temptation for comparing the rate of growth under communism and under free enterprise, the shortcomings and failures in the domestic economic sphere will increasingly tend to be attributed to the defect of the democratic path to development. Countries like India will, therefore, have to be more efficient in their efforts for raising the living standards of their people and should scrupulously eschew those socialist doctrinaire attitudes that hamper the attainment of their optimum rate of growth. From the point of view of the advanced countries of the free world, the challenge is not so much to show that they too can deliver the goods (in fact, workers in most of these countries already enjoy many of the privileges which the Soviet workers have now been told to expect 10 years hence and that in a form superior to the one available under communism, because, by enabling the workers to earn more and by ensuring adequate supply of a wide variety of all types of consumer goods, these countries have given their workers the freedom of choice) as to demonstrate to the underdeveloped parts of the free world that it is possible to attain higher standards of living by democratic planning as speedily as by employing totalitarian methods. The Soviet 20-year programme is, therefore, an additional challenge to the Western nations to help the underdeveloped countries develop faster.

Meanwhile, let not the people of this country be gullible enough to believe that there could at anytime be a free supply of all the things that Mr. Khrushchev has now promised or that a Government could be carried on without taxes. Such a state of affairs will not be possible under any system of government. As goods and services have to be produced before they can be shared, everybody will have to work for them. Similarly, the cost of administration and defence has to be paid for and that has to be collected from the people in some form or other. The statement of Soviet leaders that 10 or 20 years hence their people will have this and that free of charge is, therefore, mere bunkum.

COMMERCE AND INDUSTRY

(Concluded from page 274)

to cotton textiles. The ratio for cotton textiles was 1.9 in 1953, but it fell to 1.5 by 1957, reflecting perhaps the increasing tempo of replacement and modernisation, although, as is well known, the progress made in this respect is only moderate. The ratio of working capital to fixed capital for vegetable oils rose from only 1 in 1953 to 1.5 in 1957, with the growth in fixed capital being only fractional. This may be attributed to some extent to the rise in oilseed prices, the industry's major raw material, during the period. In respect of iron and steel, the ratio fell from 1.2 to 0.5. This decline, however, may have been due to the fact that the construction of the public sector steel plants had just commenced in the closing years of the period under review, involving much more outlay on fixed assets than on working capital.

"Industry in the Service of Man" will be the theme of the U.S. Government's exhibition at the Indian Industries Fair in New Delhi schedule to be held from 14th November 1961 to 1st January 1962. The exhibition will provide a sampling of American technological know-how, ranging from a solar generator using the sun's energy, to power pumps, and an "aeromobile" which flies a few inches above the ground at speeds up to 60 miles an hour on a cushion of air created by its own multi-bladed fan. "The American exhibition will have more machines and people working in it than a medium-sized factory," according to Mr. L. Edward Scriven, Director of the U.S. Department of Commerce's Office of International Trade Fairs, which is producing the government-industry exhibition. Other displays planned include a complete working tool and die shop, a model paper-producing machine and a printing plant producing a multi-coloured guide book for visitors, demonstrations of electronic teaching devices and weather forecasting using unmanned polar stations, and models of two large dams now under construction in India with American assistance.

VOL. CIII. No 2627 BOMBAY, 12th AUGUST 1961 PRICE Rs. 1

ACCEPT THE CHALLENGE

AS an essay on India's aspirations and ambitions, the final version of the third Five-year Plan, presented to Parliament on Monday, 7th August 1961, is an excellent effort. But it cannot claim to be a blue-print, because the Plan has too many loose ends. Again, the third Plan is not a five-year Plan even as the second Plan was not, for more than five years may be needed to reach most of the goals fixed therein. It looks as though it will take at least another two years to complete the second Plan targets in regard to steel, cement, coal, transport, electric power and irrigation and most agricultural crops. The attainment of targets laid down in the third Plan may take even longer than the time taken in the case of second Plan, for the simple reason that the magnitude of tasks included in the third Plan is equal to that contained in the first two Plans. The country is no doubt better prepared to tackle a bigger plan than in the past ten years. Nevertheless, there are so many impediments in the way that it would be nothing short of a miracle if all the targets were hit in time and the expected increase in *per capita* income were realised. The authors of the Plan are fully aware of this state of affairs. They, however, call it a challenge and test to the people's willingness to make sacrifices and work hard, so that the country could get over the barrier of poverty and swiftly move forward to the plateau of prosperity. They are perfectly right. India has the lowest *per capita* income in the world. Its population is jumping up at the rate of 9-10 million per year. The ranks of unemployed are fast swelling; the additions to labour force in the next five years will be 17 million and the unemployed at the end of the third Plan period will be 12 million, if not more. The masses are no longer ignorant, though the majority of them are illiterate. They are conscious of their rights and are being roused by the politicians. It is, therefore, necessary to aim high and to fix targets the attainment of which will strain the resources of the people to the maximum. There is no escape from hard work for the people of this country, not at least for one generation.

The third Plan indicates the minimum economic progress the country should achieve in the next five years and the sacrifices the people should make for reaching the goals. Its authors say, though not in as many words: "Let us strive as best as we can towards that end. If we succeed 100 per cent, well and good. But, if we succeed only to the extent of 70 or 80 per cent, that will be something better than nothing. We will at least have the satisfaction of having tried." None who realises the numerous pressures to which this country is being subjected can quarrel with this spirit of approach. Even the socialist philosophy of the Plan now evokes less opposition than before, just as the powers-that-be have now come to realise that they should be realistic even in pursuing their doctrinairism. Both the planners and the critics have doubtless become a little more mature in their thinking than during first and second Plans—a good augury for the third Plan.

The differences of opinion centre mostly over details. And details are more important than broad generalisations, because results have to be quick and solid. Is the Plan such as to ensure the optimum rate of economic growth which the country in its present position can have? The answer, to be precise, is "NO," though it must be conceded that, in this respect, the latest Plan is an improvement, to some extent, over its predecessor. There is still a number of defects in the selection of priorities, in the allocation of responsibilities between the public and private sectors and in the division of spheres between large-scale and decentralised units. Prompt removal of these defects will certainly lead to a larger rate of economic growth than is now likely, economy in the use of foreign exchange and better prospects of price stability. In the sphere of both solid and liquid fuels, for instance, the planners could have given a larger responsibility to the private sector than they have done. Socialist doctrinairism and outmoded beliefs are the only reasons for their continued favouritism to the public sector. In the matter of power generation and distribution, too, the private sector could have been given greater scope. Shipping and road transport ought to have been accorded a higher priority in the allocation of resources; both are quick earners and their services are badly needed. The cotton mills should have been allotted more room for expansion, instead of the handlooms or the powerlooms. Expansion of existing industrial units wherever possible rather than establishment of new ones will bring about quicker progress at a lower cost. This consideration is recognised in principle, but not in practice, because of the fear (quite unwarranted in our view) of concentration of economic power in a few hands and monopoly of private capitalism. Another reason given for ignoring this important consideration is the need for ensuring regional distribution of industries. Exceptions have been made, of course, but they are all in the public sector and hardly any in the private sector.

Agriculture is the Achilles' heel of Indian economy. A substantial increase in agricultural production, including plantation crops, automatically strengthens India's balance of payments position. The reverse happens when crops decline. Half the battle for economic prosperity will have been won if the productivity of Indian agriculture is raised even by 50 per cent. There is a clear recognition of this fact in the third Plan. A sum of Rs. 1,068 crores has been earmarked for the development of agriculture and community development. Although this investment represents only 14 per cent of the total public sector outlay of Rs. 7,500 crores, investments on irrigation, power, fertilisers, transport, and iron and steel will also go to strengthen agriculture. No longer can one say, as it used to be said in the initial years of the second Plan, that the planners have not given adequate attention to agriculture. They have done their duty. It now remains for the administrators to carry out the Plan. Here comes the crucial role of State Governments. The success or failure of third Plan, therefore, depends, to a very considerable extent, on the efficiency and earnestness with which the State Governments discharge their functions. It is gratifying to find that this point has been clearly stressed in the third Plan report, as will be seen from the following extract:

"In the Third Plan, as in the Second, the plans of States have great importance for the rapid development of the national economy. Important national objectives, as in agriculture, education and other social services, and in the utilisation of rural manpower, can be realised only in the measure in which the plans of States are carried out successfully. They bear closely on the welfare of the people as a whole and, to a large extent, it is through them that a rise in the levels of living for the weaker sections of the community and for the less developed areas can be secured."

The performance of most State Governments so far in many of the aforesaid matters, in general, and in agriculture, in particular, has not been sufficiently encouraging to warrant the hope that they will come up to expectations in the next four or five years. Now that reorganisation of States is over and the major portion of land reforms has been put through, the State Governments ought to be able to show impressive results in agricultural production by securing an increase in the per acre yields. Even so, the leisurely manner in which the problem of productivity in agriculture is being tackled in the States raises grave doubts whether the goals specified will be reached. Much has been said about the merits and demerits of State-sponsored co-operative farming. While it remains to be seen to what extent this revolutionary reform will mar or improve the picture, it does add an element of uncertainty, as it will tend to curb the enterprise of efficient farmers.

The second Plan suffered a lot because the foreign exchange requirements were not properly assessed and no timely efforts were made to secure adequate foreign assistance. That the third Plan has been safeguarded in this important respect is common knowledge now. There are, however, still lingering doubts, as an underestimation of the foreign exchange cost of the projects is feared. Even if it is assumed that this fear is baseless, the foreign exchange aspect is a source of considerable concern for two reasons: (*a*) the need for maintenance imports may turn out to be larger than has been assumed by planners, and (b) the export drive is up against formidable difficulties. Apart from possible changes in the international set up, such as the disappearance of Commonwealth preferences and formation of more trade blocs, the domestic cost structure is increasingly getting out of parity with world markets and there is nothing in the Plan to suggest that this trend is likely to be reversed in the coming years. If anything, the indications are to the contrary. The thesis that the chief problem is one of finding surpluses for export and that this could be done by restraining domestic consumption through physical controls and heavier excise duties has been given undue importance in the Plan. In fact, this solution may well turn out to be a boomerang, as it will tend to aggravate the inflationary forces, especially when it is tried in combination with special export incentive schemes for non-essential goods, the cost of which also falls on domestic consumers.

The estimates of internal resources are well within practicability, if the experience in the last two years of second Plan is any guide and if

...public sector enterprises are worked as efficiently as the Hindustan Machine Tools; this is a big assumption, of course. But the more important points here are two: whether the cost of the physical plan has been realistically worked out and whether adequate resources will be available for the private sector, especially as great stress has been laid by the planners on the need for a strict check over the growth of bank credit. Here, again, past experience makes the planners' estimates suspect, their candid admission of failures and errors in the first two Plan periods notwithstanding.

It is easy to find fault with the third Plan in this strain. This time, the planners themselves have had the humility to admit the existence of several gaps in their estimates. They have made no claim to perfection, though they have continued to stick to their major ideological predilections. Despite all the imperfections in the Plan, the people have no alternative to supporting it. If every one, from the leaders down to workers, tries to perform his duty with devotion and efficiency and refrains from indulging in activities that are harmful to discipline and national unity, even this imperfect Plan will yield satisfactory results. The authors of the Plan strike the most appropriate note when they say, in the introduction, "that the great stress in the Plan has to be on implementation, on speed and thoroughness in seeking practical results and on creating conditions for the maximum production and employment and the development of human resources." In fine, efficient and straightforward administration (which in turn depends on the quality of leadership) is the first pre-requisite for the success of the Plan.

THE DECADE'S BALANCE SHEET

THE final report of the third Plan has provided a succinct account of the achievements of the earlier two Five-year Plans which, it is claimed, "have helped strengthen the foundations of economic and social life and stimulated industrial and economic growth and scientific and technological advance." There is no exaggeration in this statement; if any thing, as a general claim, it is, on the whole, a modest one. It cannot be otherwise, for the real income of an average Indian or, in other words, the *per capita* income at constant (1960-61) prices has increased from Rs. 284 in the year immediately preceding the inauguration of the first Plan to Rs. 330 in the end-year of the second Plan, that is, by just 16 per cent. As *per capita* real income is a telling indicator of economic growth, the rather modest increase in it broadly reflects the relatively small advance in the standard of living of an average Indian. But, at the same time, there is no need to be unduly apologetic about this modest growth, for the fact of the matter is that this increase of 16 per cent in *per capita* real income has taken place over a period during which population has increased by as much as 21 per cent. But for this phenomenal growth of population, the 42 per cent increase in real national income, that is, national income at constant (1960-61) prices, would have meant a somewhat greater increase in *per capita* real income. However, it does matter a great deal that the national economy as a whole has reached, as of 1960-61, a stage at which its aggregate output of goods and services is 42 per cent more than the aggregate of Rs. 10,240 crores in 1950-51. It is this substantial, though not phenomenal, increase in national production that constitutes the foundation for further growth—a foundation representing the potential for larger national savings and investment in the third Plan period.

In more specific terms, the increase in real national income (brought about by aggregate investment outlays of Rs. 5,210 crores in the public sector and Rs. 4,900 crores in the private sector) over the last decade has resulted from increases in agricultural, industrial and other production. In agriculture, the growth of production has been relatively limited, the increase being just 41 per cent. But in the industrial sector, the growth of production has been much more impressive, the increase being as much as 94 per cent or, probably, more than 100 per cent, if credit is given for the production of newer industries which have no weightage in the index of industrial production based on 1950-51. In the transport sector, the railways have carried, as of 1960-61, 66 per cent more freight than they did in 1950-51. And, in the power sector, the increase in electricity generation over the period has been of the order of 150 per cent. These indications of growth are by no means exhaustive, neither do they reveal the shortfalls in achievements as compared with the physical targets in the Plan. While the decade as a whole has witnessed overall progress as broadly indicated by the growth of national income, it is still not a picture of uniform progress under all the heads and sub-heads of development.

The breakdown picture is, therefore, more relevant from the point of view of appraising actual physical performance in various lines and drawing suitable lessons from past mistakes, of which there have been many. For instance, in the basic and crucial sector of agricultural production, there were many glaring failures or shortfalls in achievement, with the result that a relative shortage of foodgrains turned out to be the major factor accounting for price rises in the early stages of the second Plan and a similar shortage of agricultural raw materials became the leading factor in the upward trend of prices in the later parts of that Plan. Foodgrains production in 1960-61, it is estimated, has been at least 4 million tons less than the second Plan's revised end-year target of about 80 million tons. Two most glaring failures have happened in the sphere of fibre production, the cotton crop of 5.1 million bales in 1960-61 being substantially less than the target of 5.5 million bales and the jute crop of about 4.0 million bales in that year being very much less than the target of 5.0 million bales. Performance in the sector of irrigation was even more disappointing; here the net area estimated to have been irrigated in 1960-61 was only 70 million acres—a figure probably on the high side—as against the target of 88 million acres. As irrigation is a major factor contributing to higher productivity, it is obvious that the rather poor performance in this field has set severe limits to the growth of agricultural production in general. There were also shortfalls in achievement, as compared with targets, in fertiliser consumption (which in 1960-61 amounted to 230,000 tons in terms of N and 70,000 tons in terms of P_2O_5) and in the coverage of villages and population covered by the Community Development programme.

Even in the 'core' (coal, power, steel and transport) projects of the second Plan, there were critical shortfalls in achievements. In the sphere of electric power, the actual installed capacity in 1960-61 was only 5.7 million kw., as compared with the target of 6.9 million kw. In the sphere of coal production, the actual production in 1960-61 fell short of the target (60 million tons) by 5.5 million tons. The actual output of finished steel in the year was only 2.2 million tons, as against the target of 4.3 million tons. In the sector of transport, the railways are estimated to have carried only 154 million tons of cargo, as against the target of 162 million tons. Apart from steel, the following industries which, according to the Planning Commission, are of crucial importance, have performed rather badly:

Industry	Unit	Production target 1960-61	Actual production 1960-61
Nitrogenous fertilisers (in terms of N) ..	000 tons	290.0	110.0
Phosphatic fertilisers (in terms of P_2O_5) ..	..	120.0	55.0
Textile machinery ..	Rs. crores	17.0	9.0
Cement machinery ..	..	2.0	0.6
Aluminium	000 tons	25.0	18.5
Newsprint	..	60.0	25.0
Soda ash	..	230.0	145.0
Caustic soda	..	135.0	100.0
Dyestuffs	Million lbs.	22.0	11.5
Cement	Million tons	13.0*	8.5

* Revised to 10–11 million tons in May, 1958.

In spotlighting the failures and shortfalls in achievement during the last decade of planning, it is not our intention to belittle the considerable progress achieved in every branch of national life, from agriculture to culture. The achievements which correspond, more or less, to physical targets in respect of commercial crops like sugarcane, oilseeds and tea, co-operative credit, iron ore mining, cloth, sugar, paper, chemical and several other industries, railways, road development, automobile transport, postal communications and telephone, small-scale industries, shipping, port development, education, health and employment in general—these are too many to be covered here. Suffice it to say, in the words of the third Plan report, that, "in every direction, new ground has been broken and valuable experience gained." But the same report frankly admits that "doubtless, there have been failures and errors that might have been avoided."

What the planners themselves have said on their "failures and errors" are of greater relevance here, for they seem to be drawing some lessons from the hard school of experience. Whether or not they succeed in applying these lessons in all the relevant situations in the third Plan period, there is at least the hope that, thanks to their own self-criticism, they may not endlessly repeat the same errors. That they are earnestly striving to profit by experience could be inferred from some of their observations while dealing with the financial resources. For instance, it is admitted that the estimation of needs of resources in financial terms has its limitations, for "each project authority is apt to make its estimate of the financial resources required on the assumption that it can secure whatever real resources it needs at current prices, irrespective of what the demands from other project authorities or the economy as a whole are likely to be." When the planners say further that "this is where the financial and physical possibilities have to be assessed together" and that "the question ultimately is whether there are physical resources corresponding to the financial outlays," they come close to admitting that they had laid in the past disproportionate emphasis on financial targets and expenditure—the kind of emphasis that led them to commit two serious mistakes, one being excessive additional taxation which had the effect of limiting self-financing in the private industrial sector and the other being the continuance of deficit financing even after it became clear that the persistent rise in prices was at least partly due to it. While it is good to see the planners drawing the lesson that the rise in prices that has occurred, despite the offset provided by the drawing down of foreign exchange reserves, "indicates that the scope for further deficit financing in the coming years is limited," they seem to be rather overoptimistic when they say that "the scope for taxation may, in fact, be larger than is foreseen at this stage." In making this observation they have doubtless been encouraged by the buoyancy of tax revenue in recent years, but they appear to have overlooked the applicability to the private sector investments, of their own dictum in respect of public sector investments, namely, that "development has in due course to become self-financing, (for) the surpluses from past investments constitute the source for further development."

Among the other notable admissions of past mistakes made by the planners are the ones relating to the under-estimation of the direct foreign exchange requirements of the second Plan, the failure to take into account sufficiently the growing import needs of a developing economy, the failure to recognise in time that the degree to which the prices could be kept relatively steady depended vitally on how far the production of foodgrains as well as agricultural raw materials could be increased, the rather tardy recognition that competitive export capacity depended largely on relatively stable internal prices and the failure to take up technical manpower planning and training early in the first Plan period itself for the larger needs of the second Plan. There were, of course, other mistakes which the planners have frankly admitted. These pertain to the organisation and management of public enterprises and to the administrative shortcomings in plan implementation—subjects dealt with at some length in the Delhi Letter elsewhere in this issue. How substantial economies could have been, but were not, achieved in construction costs has also been admitted by the planners. The failure to ensure better utilisation of the irrigation potential newly created, to give adequate attention to the proper maintenance of older irrigation works and channels and to control soil erosion in hilly areas and denuded forests and the failure to minimise the use of machinery (involving foreign exchange expenditure) in the construction of certain irrigation projects in areas of surplus manpower are also admitted. The power shortage that has come about, it is conceded, was caused by the failure to co-ordinate power programmes with industrial programmes, in spite of the knowledge that industries consumed two-thirds of the power generated. These, then, are the more significant failures and errors in the first decade of planning. To admit them is one thing, to apply the lessons drawn from them quite another. If the planners also learn that they cannot justifiably lay claim to a monopoly of wisdom and that their well-meaning critics, of which this journal is one, have been abundantly vindicated, it would be the first major step in the application of lessons drawn from past mistakes in diverse fields and situations.

MARKET GOSSIP

The Plan And The Market

THE fears of some that the third Plan final report might give a serious jolt to share markets have been belied. The Plan, of course, provides for a bigger additional tax burden than that envisaged in the Draft Outline—Rs. 1,710 crores, as against Rs. 1,650 crores—and also emphasises the need for mopping up speculative profits and excessive capital gains, besides minimising the scope for speculation itself. At the same time, the Plan concedes, albeit guardedly, that there is not much room for raising direct taxation, except perhaps in certain slabs of income.

The prospect of further heavy taxation in the third Plan period has had only a short-lived adverse effect on equities. It has, however, turned out to be one more factor against the bulls and engendered a considerable amount of caution. It is obvious that the next budgets of Centre and States (for the fiscal year 1962-63) will have to contain a bigger load of taxation than their predecessors; otherwise, the resources estimates of the Planning Commission will remain only on paper.

There is nothing fundamentally new in the final report of the third Plan so far as the share markets are concerned. The Plan confirms the determination of India to press forward with its projects for economic advancement, with the result that the considerations of growth, which have been one of the factors responsible for the high level of equities, remain unaltered. It is, however, clear from the third Plan report that the existing industries dependent on imports of raw materials, stores and spares, plant and machinery, etc., may have a difficult time, unless, of course, either the quantum of foreign aid for maintenance imports is increased or exports stage a spectacular rise, neither of which is likely.

It is the steel shares that have suffered most this week. The reason for their setback is the publication of T.I.S.Co.'s annual report and Mr. J. R. D. Tata's statement to shareholders. Both have exploded the facile overoptimistic expectations roused by speculators to fill their own pockets at the expense of investors most of whom are lay people. It may be true that the L.I.C. has invested in the T.I.S.Co.'s ordinary shares even at higher levels. But a price level that may appear good for the L.I.C. need not necessarily be so for all individual investors. The L.I.C. is a long-term institutional investor who can afford to wait, unperturbed by wide fluctuations in equity values. Besides, the average cost of its investments in the T.I.S.Co. shares may still be substantially lower. The significant point that emerges from the Directors' report and Chairman's statement of the T.I.S.Co. is that it will take a couple of years more for obtaining the full benefits of expansion to two-million tons capacity and that, for some years to come, there could be no spectacular rise in its dividends. But all this was evident last year itself, if not earlier.

Jute Mills In Distress

It is somewhat surprising that the West Bengal Government has turned down the Indian Jute Mills Association's plea for sealing 18 per cent of looms with effect from the first of this month, in addition to the 12 per cent sealing already in force. Explaining the decision, the State's Labour Minister says: "Raw jute is in sight and it is flowing in the market. So, on the grounds of shortage, no proposal of the I.J.M.A. can be approved which will create hardship to jute workers." The Minister has appealed to the I.J.M.A. "to co-operate with the Government in all possible ways in offsetting any crisis in the jute industry." This decision is reported to have had the concurrence of the Union Government.

The fact that any attempts to curtail production either by a further sealing of looms or by a third block closure will have serious repercussions especially on labour cannot be disputed. The jute industry itself is fully aware of it. But the industry is faced with the critical problem of securing regular and adequate supplies of raw jute. In the course of a statement issued to the Press, the I.J.M.A. observes:

"For the past nine months, the I.J.M.A. has been pressing on the Government its view that, based on the official estimate of the jute crop, which has had from time to time to be revised downwards, a phased programme of jute conservation would be essential, if chaotic conditions within the industry were to be averted. The jute shortage, eventually admitted by the Government to be serious enough to warrant a block closure of the industry for a week in June and another week in July, has persisted, despite these closures, the earlier reductions in working hours and the jute purchase quota system which the Association has been operating since last October."

The fibre stock position with individual mills is so grave that a lock-out in several mills is considered necessary. What the I.J.M.A. wanted to do was to spread over the shortage of supplies over the industry as a whole either by cutting down the working period for the current month or by sealing off an additional 18 per cent looms. The latter course was preferred, as it afforded an opportunity for a periodic review of the fibre-arrival position, in order that the sealed looms might be unsealed entirely or in stages as the situation would warrant. Which jute mill, or, for that matter, any unit in other industries, will voluntarily propose to curtail production operations, if the raw material supply position is comfortable? Does not such curtailment eat into the earnings of the mill also? After all, it must be remembered that it is more expensive for mills to curtail output than to continue production. It is a pity that the jute mills have not been allowed to adjust production.

The reasons adduced by the I.J.M.A. in support of its plea for a further sealing of looms appear to be convincing. Arrivals of old crop, we are told, have ceased and supplies of new crop jute in reasonably substantial quantities have been delayed by unusually dry weather and the consequent shortage of retting water. What is worse, there is a serious imbalance in regard to quality-wise distribution. How can the mills be expected to work down to the last bale of jute in their stocks? For long before such a position is reached, the manufacturing process will be seriously interfered with by a lack of suitable qualities of fibre for mixing purposes. Drawing attention to this fact, the I.J.M.A. observes: "The industry has a responsibility towards its consumers, and the mills cannot be expected to lower the standard of their batch and thereby produce sub-standard goods for the export markets."

The West Bengal Government may be of the view that a further sealing of looms will depress raw jute prices and thus adversely affect the growers. This fear seems to be rather exaggerated. The I.J.M.A. itself has submitted to the Government a draft scheme which envisages fixation of a floor price for raw jute and collective buying on behalf of the industry should such measures be necessary to prevent jute prices from falling to uneconomic levels.

In the opinion of the I.J.M.A., the position in which the industry now finds itself can only be rectified by individual mills making further cuts in production consistent with their actual stocks of jute. "Action on these lines," to quote it "should be taken by mills individually in the near future. The extent to which mills may have to resort to this course cannot at present be known, but it is feared that, in many cases, the curtailment of production may have to be substantial. Should such steps have to be taken, then lay-off compensation will be paid to the affected workers strictly in accordance with the provisions of law."

Meanwhile, there are reports that, although the arrival of new crop has been delayed, the size of the crop itself is substantially higher than in the previous season, when it amounted to 4.03 million bales of 400 lbs. each (excluding mesta amounting to 1.15 million bales). The percentage rise in the area sown to the crop is said to be 100 in Uttar Pradesh, 66 in Tripura, 50 in Bihar, 30 in Orissa, and 25 in West Bengal and Assam. The yield per acre is expected to be better than last year. In fact, the West Bengal Government is somewhat worried about the possibility of a bumper jute crop, inasmuch as it feels that the prices of the material may go down. It has accordingly urged the Centre to fix a minimum price for raw jute, in order to ensure an economic price to the growers. No one will dispute the need for a minimum price for raw jute if conditions really warrant. But a minimum price should not turn out to be a maximum price as in the case of sugarcane. Any floor price for jute must be in parity with the price for jute goods. It must be remembered, in this connection, that the jute industry, which is predominantly export-based, has to sell in world markets in highly competitive conditions. In particular, the comparative costs of the jute industry in Pakistan and the increasing inroads made by plastics and other substitutes in the markets for packaging materials will have to be borne in mind. But, in urging these considerations, we do not underrate the importance of a buffer-stock scheme for raw jute. On the contrary, we would strongly urge the Central Government to initiate such a scheme this season, as circumstances for doing so appear to be highly favourable.

U.S. Cotton Crop

Curiously enough, the first production estimate of the U.S. cotton crop in the 1961-62 season, published on the 8th inst., failed to have any perceptible effect on the cotton market either in the U.S. or outside. Pending the publication of the crop report and in anticipation of a smaller crop this season, the New York cotton futures market had ruled steady. After the report was released, futures price rose by only 2 to 3 points. Spot values at both New York and New Orleans were, however, unaffected by the news. This is due largely to the fact that the crop estimate was in keeping with earlier trade estimates. Moreover, the traders' interest in the crop estimates is diminishing, because production does not exercise as decisive an influence on prices as the Government's cotton policy. Nevertheless, to the extent the size of the crop determines the total supply of cotton available during any particular season, it is of vital interest to traders and mills alike.

The Department of Agriculture put the season's crop at 13.92 million bales (of 500 lbs. each), as against 14.47 million bales at this time last year, the final output of 14.37 million bales and the ten-year (1949-58) average of 13.71 million bales. The yield per acre is estimated lower at 427 lbs., as compared with 447 lbs. at this time last year and the ten-year (1949-58) average of 344 lbs. The yield last year on the basis of final estimate was 446 lbs. The fall in the yield per acre thus explains the decline in production, in spite of the increase in area, to 15.65 million acres from 15.31 million acres last season and the ten-year average of 19.97 million acres.

Past experience has shown that, barring fractional variations, the final estimate of output closely approximates the first forecast. Last year, for instance, the first estimate put the crop at 14.47 million bales and actual crop fell short of the estimate by a very small margin. The first estimate for the 1959-60 season was 14.81 million bales and actual production aggregated 14.55 million bales. This surprising degree of accuracy in forecasting a crop so sensitive to weather conditions as cotton redounds to the credit of the U.S. technique of crop estimation. In contrast, this country has a hit and miss method of official crop estimation and the forecasts seldom come anywhere near the actual outturn. It is true that cotton is grown in India under more diverse conditions and that the sowing and harvesting times vary more widely so that it is difficult, at a point of time, to make a comprehensive and precise estimate of the crop. But the fact that trade estimates are usually much nearer the mark than official estimates (which are invariably published too late to be of any practical use to the cotton trade or the mills) shows that the intransigence of weather and widely differing crop conditions alone cannot explain the estimate being very wide of the actual outturn.

I.M.F. Helps Britain

All speculations regarding a possible devaluation of the pound sterling have now been happily scotched, thanks to the massive support for Britain announced by the International Monetary Fund on Friday the 4th inst., just ten days after the Chancellor of the Exchequer unfolded his ten-point austerity programme on 25th July. The support is in the form of a credit amounting to as much as $2,000 million for helping Britain to tide over the overseas payments crisis. Of this amount, the U.K. will make an immediate drawing of the equivalent of $1,500 million and, under a standby arrangement, it will have the right to make additional drawings to the tune of $500 million in the next twelve months.

There are two striking features of the I.M.F.'s assistance to Britain. One, the credit is the largest ever granted by the Fund to any country since its establishment fifteen years ago. It may be noted here that the previous largest credit ($1,300 million) was also made available to the U.K. in December 1956, that is, at the time of the Suez crisis. Two, the "immediate" drawing is to be spread over nine currencies—$450 million in U.S. dollars, $270 million each in deutsche marks and French francs, $120 million each in Italian lire and Netherlands guilders, $90 million in Belgian francs, $75 million each in Japanese yen and Canadian dollars, and $30 million in Swedish kronor. The chief objective of the multi-currency credit, which is in line with the Fund's recent practice as exhibited in the Australian and Indian drawings, is the avoidance of too great a stress on the U.S. dollar. The U.S. authorities were believed to have informed the I.M.F. that the U.K.'s drawing should not be entirely in dollars in view of the changed U.S. balance of payments and reserves situation.

The drawing on the Fund, as the I.M.F. Press release says, will place at the disposal of the U.K. substantial amounts of foreign exchange, while the series of fiscal and monetary measures and certain other policies, all of which are designed to restore a strong balance of payments position at the existing exchange rate and without imposing restrictions on trade and current payments, are taking effect. What is more, the standby arrangement will give a specific guarantee of further support for the U.K.'s efforts to maintain the strength of sterling and thus promote exchange stability generally. Already the pound sterling has firmed up to a significant extent. The latest available exchange rate against the U.S. dollar in London is $2.80.3/16, as against $2.78¼ on 24th July. This is the highest level since 13th February last, though it is still ¾ cent below the level prevailing a year ago. It is said in London that the rate would have easily touched the ceiling of $2.82, but for considerable selling of sterling by the Bank of England against dollars.

Ferro-Manganese Industry

A cogent plea for bringing down the cost of production of ferro-manganese with a view to stimulating its export was made by Dr. Ramaswami Mudaliar, in his address to the shareholders of the Khandelwal Ferro Alloys Limited in Bombay on the 5th inst. Dr. Ramaswami Mudaliar, who is the Chairman of the Company, pointed out, at the outset, that the ferro-manganese industry was essentially an export industry. At present, only 25 per cent of the output of the industry is being utilised by our steel mills. For marketing the bulk of its output, the industry has, therefore, to rely on the foreign consumers. Dr. Ramaswami Mudaliar considered it as a fortunate circumstance for the industry that, in 1960-61 the Government of India concluded a barter agreement with the U.S. Government under which India's ferro-manganese was exchanged for U.S. wheat. The terms of this barter arrangement were also favourable to Indian producers, although all of them were unable to participate adequately in the barter deal mainly on account of the high costs of production. Dr. Ramaswami Mudaliar emphasised that, in the interests of establishing the industry on a firm footing, it was extremely urgent to secure the export of ferro-manganese at a price fair to Indian producers. He, therefore, fully appreciated the efforts of the Government of India in securing another barter deal with the United States. He also disclosed to the shareholders that the Directors of Khandelwal Ferro Alloys Ltd. were promoting a few more barters and seeking the approval of the State Trading Corporation. He said that the terms of the barter agreements negotiated by the Government

EQUITIES FINISH LOWER

TEXTILES WELL FAVOURED

(From Our Own Correspondents)

BOMBAY, *10th August*

THE Stock Exchange presented a firm trend in the first three sessions of the week under review and, after a setback on Tuesday the 8th inst., staged a recovery yesterday. The recovery was shortlived, for there was a general setback to values today. The initial firmness was engendered by scarcity of offerings, a fair amount of covering purchases and scattered bull support which all lifted up the values of a number of scrips. The upward trend was halted on Tuesday when the market turned distinctly bearish following the release of the final draft of the third Five-year Plan, which envisages a much *heavier dose of taxation (Rs. 1,710 crores) than* that provided for in the Draft Outline, namely, Rs. 1,650 crores. The possibilities of increase in capital gains tax and curbs on speculation acted as a damper. There was also disappointment over the working results of the Tata Iron and Steel Company for the year 1960-61 which indicated that the profits attributable to the Company's normal operations were very poor. Consequently, equities moved down. On Wednesday, the market was once again in a buoyant mood, reflecting optimism on the part of operators regarding the outlook for industries during the third Plan period. Several counters attracted good support and registered a rise in values. But the upward trend was halted today when the market developed a sagging tendency, with most equities moving down.

The market received mixed corporate news during the week. The New Standard Engineering Company has cut down the dividend for the year ended 31st March 1961 to 9 per cent from 12 per cent distributed in the previous year. The outlook for the future is, of course, quite bright, as the order book of the Company for the current year is satisfactory and the Company has entered into a new collaboration arrangement with Forni Elettrici of Italy for the manufacture of electric furnaces and receivers. For carrying out the expansion programme, the Company is likely to enter the market in the near future. The detailed results of the Simplex Mills for the year ended March 1961 disclose a substantial improvement, the Company earned a net profit of Rs. 18.21 lakhs, in contrast to a small loss suffered in the preceding year. The Kirloskar Oil Engines Company will shortly come out with the second instalment of its preference issue to finance its expansion schemes. The shares will be entitled to a minimum dividend of 8 per cent. The investors in Kohinoor Mills have some encouraging news. The Directors have decided to raise the interim dividend from Rs. 5 to Rs. 6, subject to tax. Evidently, the steps taken by the Company to improve the productive facilities and to stimulate its exports have proved fruitful. The Asian Cables, it is learned, has practically completed erection of plant and machinery and trial runs are expected to commence in the next few weeks. The Company has also secured an industrial licence for the manufacture of 800 miles of high tension power cables. The Chairman of Bombay Suburban Electric Company has thrown a hint that the Company will have to raise additional finance before the end of the current financial year. The report that the Indian Copper Corporation is not issuing any bonus shares dampened market sentiment. The Company is reluctant to spend 12.5 per cent as tax on bonus shares. The question of rights issue is also believed to have been shelved for the moment at least.

In the steel section, Tata Steels opened at Rs. 156.25, as against the previous close of Rs. 156.50, and spurted to Rs. 157.25 on Monday the 7th inst. In the subsequent sessions, however, they declined on bull liquidation and touched a low of Rs. 154 today. Indian Irons encountered selling from both local and Calcutta interests and eased from Rs. 26.70 to Rs. 26. Mukand Irons lost 40 nP to Rs. 26.25.

Textiles were generally well favoured. Centurys received good buying support throughout the week and recorded a handsome gain of Rs. 17.50 to Rs. 688. Kohinoors improved from Rs. 289 to Rs. 298.50 on account of the higher interim dividend announced by the Company. Bombay Dyeings open at Rs. 67.10 as against the previous close of Rs. 67.40 and advanced on scattered bull support and bear covering to touch Rs. 69.10 on Monday the 7th inst. After declining to Rs. 67.80 subsequently, they recovered to Rs. 68.70 today before finishing at Rs. 68. The net gain over the week was 60 nP. Standards spurted from Rs. 1,322 to Rs. 1,380. Elphinstones gained Rs. 7 to Rs. 87. Osmanshahis gathered Rs. 5 to Rs. 68. New Greats put on a like amount to Rs. 225. Svadeshis improved by Rs. 3 to Rs. 254.50. Swans rose by Rs. 2.50 to Rs. 612.50.

Among cement shares, Associated Cements opened at Rs. 160.50 as against the last week's closing rate of Rs. 161 and rallied to Rs. 162.75 on Saturday. After receding to Rs. 160 yesterday, they recovered to Rs. 161.25 today, before closing at Rs. 160.50. Orissas were done at Rs 15.12, as against Rs. 15.16 last week. Digvijays were keenly bid and gained Rs. 2.50 to Rs. 168. Jaipur Udyogs gathered 8 nP to Rs. 11.20.

In the shipping group, Scindias rose from Rs. 13.72 to Rs. 13.92 on Monday, following speculative-cum-investment support. At this level profit-taking set in and the scrip eased to Rs. 13.60 today. Great Easterns gained 24 nP to Rs. 13.76. Among automobiles, Premier Automobiles shed a rupee to Rs. 158.50. Hindustan Motors dropped 24 nP to Rs. 21.24.

Sugar shares displayed a mixed trend. Belapurs were well supported in the earlier sessions, in keeping with the general trend of the market and rose to Rs. 254 on Saturday the 5th inst. After receding to Rs. 251.50 today, they swiftly recovered to Rs. 254.50 but finished easy at Rs. 252, same as the last week's closing rate. Changdeos shed Re. 1.33 to Rs. 23.92. Maharashtra Sugars lost Rs. 3.50 to Rs. 166. Phaltans picked up Rs. 4.25 to Rs. 134.25 and Walchandnagars Rs. 2 to Rs. 165

In the engineering section, T.E.L.Cos received consistent bull support and rallied from Rs. 359.50 to Rs. 368.75. After declining to Rs. 363 on the 8th inst., they moved up again to touch Rs. 369.50 today, though towards the close they were lower at Rs. 368. The net gain over the week was Rs. 7. Mysore Kirloskars strengthened by Rs. 12.50 to Rs. 172.50. New Standard Engineerings firmed up by Rs. 8.50 to Rs. 188. Asian Cables gained Rs. 5.50 to Rs. 104. Brady Engineerings put on Rs. 3 to Rs. 83.50. Alcocks rose by a like amount to Rs. 275. Jyotis gathered Rs. 2 to Rs. 177. But T. Maneklals were subjected to selling pressure and moved down by Rs. 35 to Rs. 527.50. Cooper Engineerings lost Rs. 3 to Rs. 179. Greaves Cottons shed Rs. 2 to Rs. 186.50.

The chemical section ruled generally depressed. Poly Chems and Colour-Chems dropped Rs. 5 each to Rs. 206.25 and Rs. 340, respectively. Dharamsies lost Rs. 2.50 to Rs. 278.75. Dhrangadhras (new) eased by a rupee to Rs. 109.50. Kemps fell by Rs. 7 to Rs. 298. But Amar Dyes hardened by Re. 1.25 to Rs. 351.25. Ultra Marines put on a rupee to Rs. 107. Indian Dyestuffs were steady at Rs. 470 and Adarshars at Rs. 92.

Rayon shares met with selective support. National Rayons were a bright feature on the first three days, the quotation spurting from Rs. 533.50 to Rs. 547.50 on Monday. In the subsequent session profit-taking brought down the value to Rs. 537 yesterday. After recovering to Rs. 543 today, they finished at Rs. 538.50. The net rise over the week Rs. 3.50. South India Viscoses evinced good enquiries and jumped up by Rs. 3.50 to Rs. 190. Baroda Rayons put on Rs. 2 to Rs. 142. But Gwaliors shed 50 nP to Rs. 49.50. Indian Rayons lost a like amount to Rs. 73.50.

In the miscellaneous section, Voltas gained Rs. 2.50 to Rs. 289. Bombay Burmas opened at Rs. 585, as against the previous close of Rs. 587.50 and rallied to touch a high of Rs. 606 on Tuesday the 8th inst. In the subsequent two sessions, they were subjected to bull liquidation and moved down to Rs. 594.50 today. Shivrajpurs gained Rs. 3.50 to Rs. 95. Wimcos gathered Rs. 2.50 to Rs. 271.50. Permanent Magnets hardened by Rs. 11 to Rs. 96 and New India Fisheries by Rs. 8.75 to Rs. 388.75. Tata Oils put on a rupee to Rs. 76. Premier Tyres picked up Rs. 2 to Rs. 125.50, while Ceat Tyres dropped Rs. 2.50 to Rs. 211.25. Bombay Oxygens were firm at Rs. 59.50, as also Synthetics at Rs. 195.

• • • •

Madras Stock Exchange

MADRAS, *9th August*

Equities staged a smart recovery during the week under review, with the exception of sugars which came in for persistent selling. By and large, the third Five-year Plan report did not contain any surprises for the market. The initial reaction of operators to the Plan seemed to be that the tempo of industrial development would be greatly accelerated, although some concern was expressed over the heavy load of additional taxation amounting to Rs. 1,700 crores, as against Rs. 1,650 crores originally envisaged in the Draft Outline. Textiles put on a cheerful appearance, following enlarged enquiries from upcountry interests. Tea shares were well favoured, thanks to encouraging trend of exports to the U.K. Coffees elicited better support on hopes that Government efforts to promote internal consumption and exports would bear fruit. Operators also noted the assurance given by the Coffee Board that it would extend financial assistance to the coffee growers in Kerala and Mysore who had been affected by floods. Rubbers moved up in sympathy. There were good enquiries for miscellaneous industrials in general.

Among textiles, South India Viscoses met with speculative buying and advanced from Rs. 182 to Rs. 195 before closing at Rs. 193. Coimbatore Pioneers spurted by Rs. 4.13 to Rs. 270. Coimbatore Spinnings gathered Rs. 3.50 to Rs. 56.50. Lakshmis rose initially from Rs. 167 to Rs. 171, but subsequently came down to Rs. 170. Buckinghams moved up by Rs. 3 to Rs. 241. Krishna Rajendras gained a like amount on reports of larger profit earned by the Company during the year 1960-61. Coimbatore Cottons strengthened by Rs. 2 to Rs. 188. Travancore Rayons increased from Rs. 38.50 to Rs. 39.40; at one time the quotation had touched Rs. 39.50. Maduras improved by 80 nP to Rs. 37.75. Radhakrishnas put on 67 nP to Rs. 32.37. Bangalore Woollens scored a gain of 50 nP to Rs. 208. Loyals gained a like amount to Rs. 44.

In the tea group, Peermades improved by 15 nP to Rs. 22.85. Periakaramalais hardened by 9 nP to Rs. 3.97. Blue Mountains rose from Rs. 3.07 to Rs. 3.17 before finishing at Rs. 3.15. Neelamalais picked up 8 nP to Rs. 4.18 and Nonsuchs 5 nP to Rs. 28.25. Kil Kotagiris were a shade higher at Rs. 4.68. Devasholas were fully steady at Rs. 30.25. Haileyburias at Rs. 13.70 and Highlands at Rs. 14. Kalasas, however, shed 5 nP to Rs. 5.55, notwithstanding the higher dividend of 25 per cent (taxable) proposed for the year ended March 1961, as against 20 per cent distributed in the previous year. The Company proposes to issue bonus shares at the rate of one for two shares held, subject to Government's approval.

Among coffees, Wartyhullys spurted by 20 nP to Rs. 2.75 and Ossoors by 18 nP to Rs. 2.75. Both the Companies have declared final dividends of 10 per cent (taxable), thereby maintaining the total dividends for the year ended March 1961 at the previous year's level of 15 per cent. Consolidated Coffees rose by 15 nP to Rs. 21.25. Ouchterlony Valleys picked up 10 nP to Rs. 3.75. Lingapur's rose by 5 nP to Rs. 5.10. A final dividend of 15 per cent (taxable), making a total of 25 per cent for the year ended March 1961 (same as in the previous year), has been announced by the Company.

Among rubbers, Cochin Malabars attracted buyers and strengthened by 30 nP to Rs. 7.50. Malankaras gathered 25 nP to Rs. 18 and T.R. and Ts 12 nP to Rs. 9.62. Vaikundams were fully maintained at Rs. 31.25, as also Travancore Rubbers at Rs. 11.25. Midlands, however, sagged by 5 nP to Rs. 11.55.

In the sugar section, Cauverys suffered a loss of Re. 1 to Rs. 122. United Breweries eased by 50 nP to Rs. 103.50. Deccans shed 13 nP to Rs. 13.32 and Travancores 5 nP to Rs. 10.35. Indias changed hands at Rs. 12.05 and Mysores Rs. 57.75.

Among miscellaneous industrials, Tube Investments rose by Rs. 2 to Rs. 262. In the cement group, Indias went up from Rs. 6.58 to Rs. 6.62 and Andhras from Rs. 9.65 to Rs. 9.67. Orissas were firm at Rs. 15.15, as also Dalmias at Rs. 11.10 and Travancores at Rs. 7.50. Among chemicals Travancores gained 50 nP to Rs. 19.25. Mysore Chemicals were fully maintained at Rs. 24 and Mysore Fertilisers at Rs. 11.67. Mettur Chemicals, however, dropped 3 nP to Rs. 14.67, despite the announcement of a final dividend of 6¼ per cent (taxable), making a total of 12½ per cent for the year ended March 1961, as against only 8.8 per cent distributed in 1959-60. Central Scientifics were maintained at Rs. 6.75. The taxable dividend for the year ended March 1961 has been maintained at the previous year's level of 15 per cent. Western India Plywoods, however, fell by 50 nP to Rs. 223. Aluminium Industries shed 10 nP to Rs. 23.35 and Ashok Leylands 2 nP to Rs. 9.67.

(Concluded from previous page)

of India, the Company's agreement with the Continental Ore Corporation of New York for the sale of the entire output of the Company with a minimum guaranteed price for a period of 10 years has become inoperative.

Referring to the problems confronting the industry, in general, Dr. Mudaliar analysed the factors which were affecting the cost of production of ferro-manganese and made a number of valuable suggestions for reducing it. The non-availability of full power requirements, the prohibitive costs of electric power, the high cost of good quality manganese ore and the high railway freight rates were the main reasons, he said, for the high cost of production of ferro-manganese.

The incidence of railway freight rate is also said to be inordinately high. The Khandelwal Ferro Alloys is currently paying about Rs. 52 per metric ton as rail freight for carrying its products from the factory at Kanhan to Bombay, while it has to pay only Rs. 45 per ton as ocean freight from Bombay to the U.S. Dr. Ramaswami Mudaliar, therefore, suggested that, in the interests of stabilising the ferro-manganese industry, the railway freight rates should be suitably revised.

The Chairman of the Khandelwal Ferro Alloys quoted facts and figures to show that the cost of electric power to ferro-alloy manufacturers in India is very much higher than that to the ferro-alloys industry in other countries competing with Indian production in the international market. In this country, the ferro-manganese producers have to pay electric charges ranging from Rs. 125 to Rs. 200 per 3,200 kilowatt of power, required for producing one ton of ferro-manganese, whereas producers in foreign countries have to pay for an equivalent load of power as follows: Rs. 42 in Norway, Rs. 51 in Canada, Rs. 54 in the U.S. and Rs. 89 in West Germany. Dr. Ramaswami Mudaliar, therefore, called upon the Government of India to lay down a special power tariff applicable to heavy electric smelting industries, such as the ferro-alloys. He observed that a uniform tariff, without any regard to the particular needs of industries, the quantum of power consumed and the paying capacity of the industry concerned, would not be conducive to industrial growth, and also to a fair dispersal of industries all over the country.

Despite all the facts mentioned above, Dr. Ramaswami Mudaliar struck a note of optimism so far as the outlook for his Company was concerned. Thus, he said:

"The ferro-alloys industry is a basic industry; though smaller in magnitude than the steel industry, it is certainly as essential to the economic growth of the country, as the steel industry. I have no doubt that, with Government's awareness of the problems facing us and with their active co-operation, the industry will be established on a firm and solid foundation, and will have its rightful place in the economy of the country."

He also disclosed that the Company had decided to embark on an expansion programme and that it had been granted a licence for setting up a steel tube mill of a capacity of 48,000 tons per year for the manufacture of pipes, both galvanised and black, of a diameter varying from ½" to 4". These pipes are said to be in great demand in the country and their manufacture is considered to be a profitable line. The Company will shortly be raising additional capital to finance this new venture.

HOPES AND FEARS ON THE EUROPEAN ECONOMIC COMMUNITY

From Our Own Correspondent

LONDON, *5th August*

IT is, of course, clear that the Government are determined to get Britain into the European Economic Community, even though the terms of the motion carried by the House use the formula "to initiate negotiations to see if satisfactory arrangements can be made." The Lord Privy Seal, who is charged with the conduct of the negotiations on behalf of the Government, has said: "We are determined to try to make a success of them . . . we must try to achieve this wider partnership in Europe. We must not be dominated by fears and anxieties. We must have faith that we can deal with these new developments. . . ." The slogan is, therefore, Faith Without Fear and Anxiety!

LONDON LETTER

The Opposition is not resisting the Government's negotiations and the three conditions that they laid down for entry into the Common Market differed from those of the Government only in emphasis—all are agreed that the House of Commons must approve entry; that the special interests of the European Free Trade Association countries should be looked after, and that the special interests of the Commonwealth countries are also respected. It is on this last point that the Labour Party is firmer than the Government. The Government are prepared to go in "after full consultation with other Commonwealth countries," but the Opposition wants the specific approval of the Commonwealth countries first. But the Government will certainly not wish to come before the House seeking its approval in the face of the direct opposition of any important member of the Commonwealth.

Faith in Future

It now transpires that the Government's determination to press on towards entry into the Common Market has been based upon more back room examination of the problems than they have hitherto been prepared to admit. We are now told that "there is confidence between the countries of the Six and the countries of the Seven about the future. . . there is now faith in the future in trying to get an agreement"; that with the Commonwealth "we have been able to create a greater understanding of each others problems," and even Mr. Harold Wilson, speaking for the Opposition, recognised that the problem of Commonwealth preferences could be resolved by long-term contracts to buy the basic exports. This would revive the arrangements familiar during and after the war for commodities such as butter, wheat, wool and other raw materials. Of course, such contracts are more easily reconciled with the philosophy of a Labour Government than with that of a Conservative one. But the Government admit that they have "explored different ways and means by which these technical problems can be settled. . . and cannot decide which are the most suitable until we get into the business of negotiation."

But the strongest arguments which the Government put forward were that the European Community was in a formative period, the difficult problems of the international agricultural communities and the problems of deferring social legislation were all about to be worked out. This was, therefore, the time for Britain to be in and exercise her influence. The Prime Minister also was on good ground when he said that it was recognised that the development of the Common Market would mean competition from the Continent and that that competition would be there whether Britain were out or in.

The principal doubt on the part of the Government supporters concerned the possibility of a weakening of British sovereignty through involvement in political ties. These fears were not stilled when the Government said that the formulation of machinery for political consultation was now being developed by the Common Market countries and that Britain should be involved in this too at this stage.

Sterling and Reserves

But, from an economic point of view, and after all the Common Market is called a European *Economic* Community, the Opposition put their finger on the trickiest and least understood part of the whole matter of association. What would association mean in terms of control over financial policy and capital movements? This week a loss of £114 million of gold has been announced for the month of July. To meet this drain and to compensate in part for the loss of £400 million since the beginning of this year, the International Monetary Fund is making available £714 million.

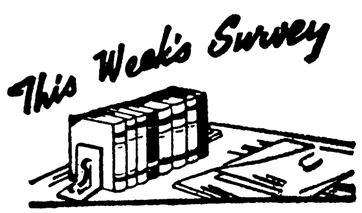
What would be the position of sterling and reserves in the Common Market? Would capital movements freely take place between this country and the Continent with the possibility of vast drains on the reserves beyond the capacity of the I.M.F. to meet? Would a European monetary policy develop which, while in the interest of the Economic Community as a whole, might be very damaging to the U.K. and to the sterling area? All that has been said on the Government side so far is that there was no common financial policy contemplated, and yet the question of capital movements is under consideration between the member-countries and Britain must face up to association with a common policy. However, these are surely hurdles to be taken much later in the progress along the course of economic association. Britain cannot avoid the problems of capital flows between the U.K. and the Continent or the effect of Continental fiscal policy on the position of sterling. Yet it is clear that, on all these matters, Britain will not have to accept at this stage any conditions which would directly hamper her in the control over the general climate of her financial policies.—*All Rights Reserved.*

RISE IN U.K.'S GROSS DOMESTIC PRODUCT

The United Kingdom's gross domestic product (that is, the total amount produced at home) rose in the first quarter of this year to a level 1¼ per cent above that of a year earlier, according to estimates published by the Treasury. This increase is on a seasonally adjusted basis, and valued at 1954 prices. At current prices, it was 6¼ per cent higher than a year earlier. According to Treasury estimates, the rise in fixed investment in the United Kingdom—that is, in plant, buildings, and machinery—which began about the middle of 1959, probably continued until the first quarter of this year. During 1960, most of the rise was in investment by the private sector. Manufacturing industry was responsible for most of the increase, showing a rise of 24 per cent, at current prices, between the first quarters of 1960 and 1961.

These are the latest estimates of British national income and expenditure, and London observers note that they bring out in particular the continued rise in fixed investment and the sharp increase in personal incomes which occurred during this period. The rise in investment—which had been going on throughout 1960—has, at long last, produced some upward movement in the level of industrial production, as shown in the second-quarter results. The rise in personal disposable income by over 3 per cent, seasonally adjusted, between the fourth quarter of 1960 and the first quarter of this year has undoubtedly added to the pressure of excess demand in the British economy, which was one of the factors leading to the counter-inflationary measures just announced by the Chancellor of the Exchequer.

THE UNITED STATES OF AMERICA HAS FROM JANUARY TO JUNE 1961 PURCHASED 590000 PAIRS OF FOOTWEAR FROM Bata INDIA



T.I.S.CO'S PROBLEMS

IT is customary for business and industrial circles in the country to look forward to the annual general meeting of the shareholders of the Tata Iron and Steel Company with eager anticipation. For they are used to hearing from the distinguished Chairman of the Company, Mr. J. R. D. Tata, his views and comments not only on the affairs of the largest and most important joint-stock enterprise in the private sector, but also on the major economic problems facing the country. Last year, a new departure was made by him, in order to save time at the annual meeting, which, as any one who has attended it knows, usually lasts for several hours. The Chairman's comments on the affairs of the Company were circulated to shareholders along with the Director's report and audited accounts, while his observations on general economic problems were reserved for the annual meeting. This practice has been continued this year also.

The performance of the T.I.S.Co. on the production front and the Company's prospects for the immediate and foreseeable future are two points which have been commented upon by Mr. J. R. D. Tata in his statement this year. As regards the first, the Chairman admits frankly that the full production of two million tons of ingots or one and a half million tons of finished steel is not likely to be achieved in the next two years. The simple and inescapable fact, he declares, is that, as things are today, it is not possible to get the required production of coke, pig iron and steel, until the required quantities of improved raw materials are fed to the plant. The main obstacle, which equally affects the operation of other major steel plants in the country in both the private and public sectors, continues to the high ash content of coal. For every one per cent increase in ash content of coal, the production of iron at the blast furnace declines by 5 per cent or more while the consumption of coke and limestone increases by 5 per cent. The steel manufacturers are thus doubly penalised. Higher consumption of coke, in the absence of spare coking capacity, means that the coke has to be purchased from outside sources. The delay in the completion of the Government Coal Washery at Bhojudih has adversely affected the supply of coal of the requisite quality which, in turn, has been having deleterious effect on the output and cost. Mr. Tata, however, is confident that the two-million ton output will be reached when this and other handicaps are removed. In order to remove the other handicaps, there has to be an improvement in rail transport, larger provision of ore beneficiation and blending facilities and the addition of an oxygen plant to the furnaces of the Company's steel melting shop No. 3.

The need to build an oxygen plant, which involves an additional capital expenditure of one crore of rupees, has been forced on the Company by the refusal of the Government to permit the Indian Oxygen Company to put up a plant for supplying oxygen on the ground that that Company has already a monopoly in oxygen production. The Government wanted the oxygen plant to be put up either by T.I.S.Co. itself or by another company in collaboration with a different foreign firm. As the latter suggestion would have involved a lot of delay, the Company had to take up on itself the responsibility of putting up the plant, a job which would, in all probability, have been done better and at cheaper cost by the Indian Oxygen. Here is an instance where the Government overlooks economic considerations in favour of ideology.

Commenting on the prospects for the Company, Mr. Tata observes that they are largely dependent on the retention prices for steel fixed by the Government. The question is still under the consideration of the Tariff Commission which is expected to make its recommendation some time during the current financial year. Mr. Tata feels that a more flexible approach to the problem of fixing retention prices than has hitherto been adopted, is called for. With five major steel plants now in operation, the old system of fixing prices on the basis of meticulous estimates of output, productmix," costs and overheads applicable to a period of years is no longer a workable one. In the fast changing and largely unpredictable conditions prevailing in the past decade and likely to prevail in future, it is well nigh impossible, according to Mr. Tata, to make accurate forecasts, years in advance, of all the main elements that enter into costs. Hence any rigid and complicated system of fixing retention prices will lead, as it has in the case of T.I.S.Co., to results different from those planned, notwithstanding all the care taken by the Tariff Commission on their determination. In the case of T.I.S.Co., it has led not only to lower profits than intended over the last five-year price period and consequently to the failure to earn the surplus of Rs. 14 crores which were expected to accumulate from profits to finance a part of the two-million ton programme but also to certain anomalies such as lower profit on more advanced and costly products requiring more specialised techniques and more work and skill than on simple and cheaper products. If therefore an all-embracing system of control over production, distribution and price is to remain in force, prices, Mr. Tata contends, should at least be fixed on the basis of broad principles and assumptions with reasonable margins built into them. This is a perfectly logical and justifiable conclusion.

COIR INDUSTRY

Coir is a hard fibre extracted from the husk of coconuts. Although the Philippines, India, Ceylon, Indonesia and Malaya are the main producers of coconut, the manufacture of coir on a commercial scale is undertaken only in India and Ceylon. India is the largest producer of coir yarn, mats, mattings and carpets, while Ceylon has specialised in the production of coir bristle and mattress fibres. The present output of coir fibre in India is estimated at 150,000 tons per year, as against 130,000 tons five years back. This industry has an important place in India's export trade, with the foreign exchange earnings derived from its products amounting to about Rs. 9 crores annually. It is concentrated in the coastal regions of Kerala and the Kanyakumari district of Madras State—areas where the backwaters provide excellent facilities for 'retting', that is, keeping the husk immersed in water before the extraction of fibre. The Coir Board (set-up in 1953) has been making efforts to extend the manufacture of coir to the other coconut producing States, but the results have been poor so far. An important feature of the industry is that it has continued to function as a cottage industry ever since 1859, when a simple method of coir spinning and weaving was devised by an American of Irish origin. It has not attracted any new scientific innovations in production and processing techniques. Fibre is extracted from the retted husk by beating with wooden mallets, and yarn is spun either on ordinary wheels or even by hand. The methods of production of coir manufactures, too, are simple and antiquated.

It is precisely these outmoded techniques of production that have hindered the progress of the industry and resulted in stagnation of exports. Currently, coir goods are getting accumulated in Kerala, without any immediate prospect of securing adequate overseas orders. This is a dismal picture, considering the fact that the industry is particularly dependent on overseas markets, with well over half of its products being meant for export. During the last five years, total exports of coir products have been more or less unchanged at about 75,000 tons. Among exports, coir yarn is the major item and is bought by many European countries, such as Holland and West Germany, which turn out manufactured goods like mattings out of it in modern factories. Needless to say that India's hand-made coir goods can hardly withstand competition from these countries under the present set up. Apart from the growing supplies from other countries, coir goods have had to face stiff competition from substitutable fibres, such as sisal, manila, hemp and henequin. Unless, therefore, the industry modernises its very structure and organisation, it will not be able to face the growing competition.

It is gratifying to hear, in this context, that a meeting of all the representatives of coir trade, industry and labour and also Central and Kerala Governments, held at New Delhi last week, decided in favour of introducing mechanisation in this industry. If this proposed measure is carried out in right earnest, there is every reason to believe that the industry will step up its efficiency and improve the quality of its products, thereby recovering the lost markets abroad. A word of caution is, however, necessary. Mechanisation will lead to the retrenchment of a sizable proportion of the existing labour force. It should not be forgotten that labour in this industry in Kerala is already well-organised and is thus in a position to exert pressure through political channels. It may be noted that about 500,000—600,000 persons, 75 per cent. of them women and child-workers, are employed in the processing and production of coir now, with a large number of families exclusively dependent on this avocation for a meagre living. In the aforesaid meeting, it was suggested that the State Government and the industry should ensure that retrenched workers would get alternative employment. With the co-operation of the Centre and the industrialists in Kerala and elsewhere, it should be possible to launch industrial enterprises which could absorb the workers displaced from the coir industry.

Apart from modernising the means of production, there is need for studying consumer preferences for coir in foreign countries. The Coir Board has now decided to undertake a market survey in Sweden and Switzerland, with a view to finding out the consumer preference as well as the causes of resistance to coir products in those countries. This survey, of course, is not the first one, for such studies have been made previously, but their major findings have not been acted upon seriously. For instance, a coir team, which visited Europe and the U.S. in 1959, and also the last Export Promotion Committee (1957) had recommended, in unambiguous terms, the mechanisation of the coir industry. But no action on their suggestion has so far been taken. Market surveys should, no doubt, be conducted, but equal emphasis should be given to implementation of their recommendations. Otherwise, the market surveys will only be of academic importance.

DA-61-381

COAL MOVEMENT PROBLEMS

It is recognised in the final report of the third Plan published this week that concentration of coal production in the Bengal-Bihar coalfields poses serious problems of transport, because coal has to move to consumers distributed all over the country. But, at the same time, it is also recognised that even increased production in outlying coalfields cannot offer a complete solution of the problem, as the better grade coals are not found in abundance outside the Bihar-Bengal area, particularly the Raniganj field. The expected greater pressure on the railways for moving coal in the third Plan period is proposed to be partly relieved by three measures, namely, an increase in the wagon capacity of the railways, movement of coal by road to consumers situated near coalfields and an increase in the quantity of coal moved by the rail-cum-sea route to consumers in southern and western India. While already some steps have been taken to implement the three measures, the progress registered so far seems to be far from satisfactory. How the first two measures have fared in the face of practical difficulties was dealt with in a note in these columns very recently (vide page 203 of *Commerce*, dated 29th July 1961). It may be that the two measures—increasing wagon capacity and moving coal by road to nearby consumers—will be more satisfactorily implemented in due course. But, as of today, the fact is that no appreciable relief to coal consumers has flowed from either measure.

The third measure, namely, movement of coal by sea does not also seem to be working well, for there are already complaints on that score from South India as well as from Bombay. Mr. A. Zaman, Central Coal Controller, has just thrown some light on the situation. According to him, the Indian Coastal Conference has made available only 37 ships, as against the 42 ships required for moving two million tons of coal in all in a year from Calcutta port to other coastal ports. The Government of India is, therefore, proposing to charter five ships from abroad for augmenting the coastal fleet earmarked for coal haulage. If this is done immediately, there will be no need to decrease the number of ships carrying coal to Madras and other southern ports while increasing the number from four to five a month in the case of Bombay.

The Coal Controller's view, in this connection, is that modern facilities for discharging coal rapidly are not available in South India and hence the rate of discharge is lower at 500 tons per day per ship (as against the normal rate of 750 tons). But this statement is questioned in the South. It is stated, for instance, that the Madras Port Trust has installed, within the last one year, three cranes of eight tons capacity each and also commissioned a new coal berth, while the Tuticorin and Cuddalore ports, too, have been performing as well as, if not better than, Madras in the matter of discharging coal. Since both Madras and Bombay are in need of adequate coal supplies, the authorities should see to it that the industries in either region are accorded equal treatment in terms of the officially-determined priorities themselves. The present priority classification, incidentally, is that railways, power stations, steel plants, municipal water works and gas plants should get their full supply of coal, while industries like cement and chemicals could get coal supplies on the basis of their actual consumption in the six-month period from November, 1959 to April, 1960. The Coal Controller, who is directly concerned with the scheme of coal movement by sea, is rightly expected to administer it in such a manner as to give equal satisfaction to both Madras and Bombay.

AUTOMOBILE TRANSPORT

Thanks to an aggregate outlay of about Rs. 389 crores on roads and road transport in the first and second Plans together, the capacity of the road transport industry has more than doubled. The volume of goods traffic carried by road transport in the end-year of the second Plan is estimated to have been 10,600 million ton miles and that of passenger traffic 30,000 million passenger miles, as compared with 54,700 million ton miles of goods traffic and 48,600 million passenger miles of passenger traffic carried by the railways in the same year. According to the preliminary report of the Neogy Committee, the increase in freight traffic by road is expected to be of the order of 120 per cent over the third Plan period, that is, from about 10,600 million ton miles in 1960-61 to 23,350 million ton miles in 1965-66. According to the final report of the third Plan, the expansion of commercial road transport in the next five years will depend largely on the manufacturing capacity of the indigenous automobile industry and the total number of goods vehicles is expected to increase over the period from about 160,000 to 285,000, representing a rise of about 78 per cent. Two questions arise in this connection—one being whether the expected 78 per cent increase in the number of goods vehicles would be sufficient to handle the estimated 120 per cent increase in freight traffic and the other being whether the actual pressure on road transport would not be greater than is estimated.

As far as the first question is concerned, the answer seems to be that there will be an adequate increase in the capacity of goods vehicles over the period. It may be that this will be possible only if imports of components and spares for the vehicles in commission are more liberally permitted. Here the suggestion made by Mr. B. P. Poddar in his Presidential Address at the thirty-fourth annual general meeting of Motor Industries Association held at Calcutta on 2nd August, 1961, would need to be seriously considered—the suggestion that "a sizable portion of the aid for India can be spent on the import of components and spare parts." If some of the existing vehicles on the road go out of use earlier for want of imported components and spares, the expected increase in capacity will not materialise. It is, therefore, of the utmost importance that a part of the 'untied' credits which are to be provided by the United States under the Aid-India Consortium's programme should be made available for financing the maintenance imports of the automobile transport industry.

As for the question whether the actual pressure on road transport would not be greater than is estimated, the answer can only be in the nature of an intelligent guess. Mr. Poddar's view is that the goods traffic offerings over the third Plan period may well be more than the current estimates on the basis of certain assumptions regarding utilisation of vehicles. This is also supported by the third Plan report's finding that "the demand for transport (in the last ten years) has risen at a substantially faster rate than the increase in national income or the growth of production in any major sector of the economy over the period" and that "this trend may well be expected to continue in the period of the next few Plans." It is extremely doubtful whether an outlay of Rs. 297 crores on roads and road transport by the public sector in the third Plan period, as compared with Rs. 242 crores in the second Plan, will be sufficient to meet the ever increasing demand for this means of transport. As the revenue from excise duties on motor spirit, tyres and tubes, motor vehicles, etc. and the import duties on them will aggregate not less than Rs. 625 crores during the five-year period and as most of this revenue will be paid by road users, they have the right to expect a greater benefit by way of improvement of roads. That roads, which represent a service not only for automobile transport development but for all forms of development, should have a higher priority cannot be overemphasised. It should be possible to plan for a bigger road development programme now, for surplus local manpower can be mobilised on a larger scale and steam and diesel road rollers, asphaltic bitumen, etc. are available from indigenous sources. There is still some hope that the road programmes which are yet to be finally formulated by the State Governments will be so framed as to add substantially more than 25,000 miles of surfaced roads in the third Plan period.

MONEY SUPPLY

The primary objectives of the third Five-year Plan, as enunciated by the Planning Commission, are to secure self-sufficiency in foodgrains, double the rate of growth in agriculture, build up capital and producer goods industries at a faster pace, and create not less than 14 million additional jobs. These are no doubt quite laudable objectives, the fulfilment of which will raise the living standards of the masses to not an insignificant extent. But much will depend on the question whether 'timely and energetic measures will be taken to prevent an undue increase in price level following the massive investment programme involving Rs. 11,600 crores. Money supply, as readers are aware, is one of the major ingredients of inflationary forces, though 'monetary expansion' by itself does not necessarily indicate or generate inflation. While the data relating to money supply have been published in a fairly comprehensive manner for a number of years now, there has so far been no systematic analysis of the concept of money supply and the mechanics of its variations. This gap has been filled now by an interesting analysis of money supply in India during the first and second Plan periods, prepared by a Working Group of four economists of the Reserve Bank (Messrs. S. L. N. Simha, V. V. Bhat, A. G. Chandavarkar and D. R. Khatkhate) and published in the latest issue of the *Reserve Bank of India Bulletin*.

The object of the study is threefold: (1) to discuss the concept of money supply as used in India, (2) to examine the mechanics of money supply variations, (3) and to analyse the various factors affecting money supply in the ten years ended 1960-61. Money supply in India is defined as consisting of currency notes and coins with the public (excluding Government balances held at treasuries and cash on hand of banks; demand deposits of banks, and other deposits with the Reserve Bank (excluding Account No. 1 of the I.M.F.). The constituent items of supply are mostly the liabilities of the banking system as a whole, as well as to a limited extent of the Government, to the public. The analysis divides the economy into two sectors, that is, the Government sector (Central and State) and the private sector (rest of the domestic sector and foreign sector). It would certainly have been more meaningful if the transactions of the foreign sector (that is, non-resident individuals and institutions) had been segregated.

The study of the actual money supply variations in India during the period from 1951-52 to 1960-61 is in terms of the impact on money supply of each of the three sectors, namely, bank credit to the Government and private sectors, net variations in foreign exchange assets, and changes in other net non-monetary liabilities of the banking sector. The study reveals that the total money supply expanded by as much as

Rs. 722.4 crores in the second Plan period, as against a rise of just Rs. 198.7 crores in the first Plan period. Such a marked expansion occurred despite the sharp fall of Rs. 664.6 crores in net foreign assets (Rs. 95.8 crores in first Plan) and of Rs. 63.3 crores in net non-monetary liabilities of the banking sector (Rs. 56.8 crores in first Plan). For these declines were more than made good by the appreciable rise of Rs. 1,400.5 crores in money supply on account of Government sector and Rs. 49.7 crores on that of the private sector; the corresponding figures for the first Plan were Rs. 245.2 crores and Rs. 106.0 crores, respectively.

No precise or direct data are available with regard to the net purchases/sales of foreign exchange by the Government sector from/to the banking sector. It is, however, estimated on the basis of available data that the Government sector was responsible for a decline in the banking sector's net foreign exchange assets to the extent of Rs. 329 crores on its own account of Government sector (— Rs. 559 crores in first Plan) and Rs. 336 crores on account of private sector (+ Rs. 463 crores in the first Plan). Making allowance for this sector and taking into account the P.L. 480 deposits of about Rs. 200 crores with the State Bank (which can be regarded as the Government sector deposits), the Government sector was responsible for an expansion of Rs. 872 crores in money supply (— Rs. 314 crores in first Plan), while the private sector accounted for a fall of Rs. 86 crores (+ Rs. 569 crores) in first Plan. The following table indicates the money supply variations, as well as the trend of bank credit, during the first and second Plan periods:

(Rs. in crores)

	Outstanding as on 31st March		
	1961	1956	1951
Money supply with public ..	2,901.7	2,184.4	1,975.7
Of which:			
Currency	2,026.9	1,505.2	1,329.0
Other deposits with R.B. ..	19.0	12.0	26.0
Bank money	855.8	667.2	620.7
Net bank credit	3,066.1	1,621.0	1,259.8
Of which:			
Government sector	2,623.6	1,228.2	973.1
Private sector	442.5	392.8	286.7
Net foreign exchange assets of banking sector	99.6	764.2	860.0
Non-identifiable net non-monetary liabilities of banking sector ..	220.8	157.5	100.9

The above table shows that the total net bank credit to the private sector increased by just Rs. 49.7 crores over the second Plan period, as against Rs. 106.0 crores in the first Plan period. For the substantial credit of Rs. 103.4 crores in 1956-57 and Rs. 294.4 crores in 1960-61 was offset to a significant extent by the negative figures for the intervening three years. The net bank credit to the private sector does not represent the total impact of this sector on money supply, as its transactions with regard to purchases/sales of foreign exchange from/to the banking sector are not taken into account. Since no separate data regarding such transactions are readily available, they are merged with the similar transactions of other sectors. It is, however, estimated that the banking sector's foreign exchange assets, as already noted, increased by Rs. 463 crores in the first Plan period but declined by Rs. 336 crores in the second Plan period, as a result of its transactions with the private sector. If account is taken of this factor, the net bank credit to the private sector would, as mentioned earlier again, be higher by about Rs. 463 crores in first Plan and lower by Rs. 336 crores in second Plan. The amount of Rs. 336 crores is understated to the extent of Rs. 200 crores, because of the extraordinary increase in U.S. Embassy's P.L. 480 time deposits with the State Bank.

The transactions in respect of purchases/sales of foreign exchange of the Government and private sectors with the banking sector are reflected in the variations in foreign exchange assets (gold holdings, foreign assets of Reserve Bank and foreign assets of banks) and in non-monetary foreign exchange liabilities of the banking sector (Reserve Bank's non-monetary liablity to the I.M.F. and borrowings from abroad of banks), particularly of the Reserve Bank, as, due to exchange control, the variations in these items of banks are not very significant. The variations in the net foreign exchange assets of banks may not, however, be accurate for two reasons. In the first place, reliance on balance of payments data, which may not completely tally with those normally figuring in banks' returns, may have introduced some error in the calculation of banks' assets. Secondly, the non-monetary foreign exchange liabilities other than those identified are not taken into account due to lack of data; these liabilities are merged with the other non-identifiable net non-monetary liabilities of the banking sector.

ON THE ARENA

By "Archer"

The Small Car Project

THE news from Delhi regarding the small car project is still full of bits and pieces of speculation, very much like two or three sets of jigsaw puzzles jumbled together. The main difficulties are, of course, broadly, visible. Although the foreign collaborators have agreed to make a special contribution towards the entire foreign exchange component of Rs. 5½ crores, their offer is not wholly acceptable as the amount may have to come out of the total aid offered by the French Government, and, if it is not so, it will reduce the credit offered by the other members of the Consortium. In such circumstances, the question of priority for the project has to be considered. The Planning Commission, it is reported, is not willing to rate the project high from the point of view of both priority and viability. On an annual production of 50,000 cars, the *ex*-factory price is estimated at Rs. 5,100, and the fair selling price at Rs. 6,600 which will include only excise duty and dealers' commission but not sales tax, freight, etc. On an annual production of 20,000 cars, the comparable prices will be Rs. 6,200 and Rs. 7,800 respectively. It is very doubtful, if the internal demand will be even as much as 20,000 per annum. To keep prices low, a large export of cars must take place, but there is no evidence of India's traditional markets in the Middle East and Far East waiting to welcome an Indian small car. The "car of the people, by the people, for the people" will remain entirely *for the people* of this country, and not for people in any other part of the world. The small Indian car will remain, like Indian sugar, very much surplus to our requirements and unsaleable in the export market for a long time to come.

On the question of priority, the Planning Commission is reported to feel that it will amount to misdirection of scarce resources, if the project comes into being in this period. It has also discovered much merit in an observation of the Tariff Commission in its Report (1956) on the Automobile Industry to the effect that, should a large demand for small cars arise in this country, it would only represent an avoidable, and therefore, wasteful use of savings on the part of the class of consumers for whom they are meant. In the meantime, Ambassador Galbraith has come out with an analysis of the theory of consumption in development planning, for the benefit of planners in general. (*Vide* his address to the University of Bombay on 31st July.) I am tempted to use the relevant extracts from his address *in extenso* for the very good reason that it almost looks as though Mr. Galbraith was stating the problem with special reference to India, though he would like it to be known (in conformity with diplomatic propriety) that he was not.

"What kind of consumption should be planned? Should it take the consumption of the more highly developed countries as a model? Should it be guided by whatever market demand exists, which, in most underdeveloped countries, will reflect a considerable inequality of income, with the result that production will be heavily influenced by the wants of the well-to-do minority? Or, should production be tailored, above all, to serving as cheaply as possible, the recognisable needs and desires of the average low-income consumer? If these questions are not faced deliberately, they may be answered without thought. In particular, there is danger that the consumption patterns of the more developed countries will be followed as a matter of course. The theory of consumption must, I think, be more democratic than this. Prime attention must be accorded to goods that are within the range of the moderate income. The burden of proof is on the rest. Cheap bicycles are more important than cheap automobiles. An inexpensive electric lighting system for the villages is better than a high capacity system which runs equipment which the people cannot afford. Inexpensive radio sets are important; television belongs to another day. Above all nothing is so important as abundant and efficiently produced food, clothing and shelter, for these are the most universal of requirements."

In my column dated 28th January last, I referred to Dr. Thomas Balogh, Fellow of Balliol College, Oxford, who completed a two-month study of planning in India and stated, before leaving this country, that the idea of producing a low cost peoples' car in India was "absolute madness." I also ended my note by saying that it will be more in consonance with modern concept of social justice, and will fulfil a greater social purpose if we established production of cheap electric motors, fans, refrigerators, electric pulverisers and similar durable consumer goods for the monthly income group between Rs. 300 and Rs. 500, rather than of cheap cars. I now have occasion to flatter myself that I am in good and distinguished company. But that is about all that I can be happy about. As regards the small car project, it might still go through. Someone may undertake a fast unto death to have it included in the third Plan, and your guess is as good as mine as to what might happen.

Talking in Circles

The Indian Sugar Mills' Association has complained that the price schedule determined by the Tariff Commission for the sugar industry in 1959 is out of date as it related to costs in 1957-58 which had since become unrealistic. This is a new one on most of us, for everybody has been saying that the sanctioned price is much too high for export, and does inhibit consumption in the country, and yet the I.S.M.A. is angling for an upward revision. It wants a standing body for price fixation presided over by a person *of the status of* (italics mine) a Supreme Court Judge for bringing the cost of production data up-to-date. Mr. S. K. Patil, the Minister, agrees with the proposal and wishes to secure guidance to Government on agricultural price policy from time to time. This aggreeable exchange of ideas between the Minister and the I.S.M.A. does not clearly indicate what it is intended to secure. Greater objectivity, or day-to-day price fixation, or quick revisions? There are two alternative ways of securing the first two requirements. One is by raising *the status* of the Chairman of the Tariff Commission to that of a Judge of the Supreme Court, to which, I dare say, he would have no objection. The other is by having a standing bench in the Supreme Court for price fixation of Commodities, to which, I have no idea what the Chief Justice of India will say. In either case, how could quick and frequent revisions be obtained, and for what purpose? For Mr. Patil has also declared that the Government was correct in not increasing the consumer price of sugar when the industry asked for an increase in 1959 on various grounds, for such a step would have inhibited consumption. If, as he is correct with sugar, he intends to sanction an upward rise in the price of an agricultural commodity only if the consumer can bear it, what he needs is a market research organisation and not a standing body for price fixation.

Mr. Patil says that the Maharashtra Government had given a "solemn promise" to the Union Food Ministry that the application of the Land Ceilings Act to the sugarcane farms of the State's sugar factories would not result in lowering production from these farms. The "solemn promise" is very amusing. One can understand their expressing their "considered opinion" that fragmentation will not affect productivity and that the economic pundits who have predicted otherwise have been jargonising, but a "solemn promise" indicates that the Maharashtra Government is powerful enough, to stop the operation of the normal laws of economics! All that we can do is to wait and see how things happen in the long run. In the meantime, the solemn promise sounds very much like the complacency of a hotelier who accommodated two honeymooning couples in a single bed room with a partition between two ornate double bedsteads, and, bowing low, expressed his assurance that the "monsieurs and madams will be very comfortable."

The Importance of Being Hard

At the rate at which he is laying down new codes of conduct for Congress Legislators and Ministers, Mr. Sanjiva Reddy, the Congress President, is likely to become extremely unpopular —or am I wrong? The ten-year rule has upset a lot of venerable old people who are grinding their dentures. And now comes the announcement that Ministers and Deputy Ministers, who have been members of the Rajya Sabha or Vidhan Parishads for more than six years, should face the electorate during the next general elections. He would not like to make any exceptions. "The elections," he says, "would provide them with the opportunity of facing the general public and they should avail themselves of it." Hard words these, and many of them will think so. Mr. Reddy also stated that, as a rule, no Congress candidate would be allowed to stand for more than one constituency; there may, perhaps, be peculiar circumstances and very exceptional cases. Normally, however, one can have only one ticket and it should be a winner.

Mr. Reddy is of the view that the Congress session was becoming a very costly annual show, involving an expenditure of Rs. 20 lakhs, which, he says, we just cannot afford. He proposes to limit this year's session to four days and the expenditure to Rs. 10 lakhs. I am informed that even the A.I.C.C. sessions with fewer delegates cost about Rs. 2 lakhs and wonder whether the Congress President would be able to carry out his austerity drive to the extent of reducing the outlay on the annual show to as low as Rs. 10 lakhs. It is not as though Rs. 10 lakhs is in itself a small sum or something we can afford, but it will be good if some restraint is imposed for a beginning. Let us not forget that this money is only what the Congress organisation spends, and does not include moneys spent by the Railways, the Post and Telegraphs, the P.W.D., etc., to provide the additional facilities required by delegates and visitors.

I have a hunch that Mr. Reddy has been thinking aloud a little too early. The Bihar Pradesh Congress Committee which is in charge of the next session at Patna has drawn ambitious plans for beating the previous shows in pomp and grandeur. What will they say to cutting down the expenditure to a miserable Rs. 10 lakhs?

The Contest for Looks, Good and Bad

Every year we hear of beauty contests and of some young girl being chosen Miss America or Miss Europe but never of a Beauty Queen entering the contest for a second time and a winning again. So, it must be that they lose their looks within the year and fade. Occasionally, of course, we do hear of something that happened to a former beauty queen, but that is only as a padding to give some glamour to the news item. Having realised this, it looks as though an attempt is now being made to invest beauty contests with an international social purpose. The "stunning brown-eyed girl from Holland, nineteen-year-old Stanny van Baere" who won the recent Miss International title, is stated to have told the packed auditorium in Long Beach, California, that "she hoped that the main purpose of the International Beauty Congress was to further peace and friendship among the peoples of the world, and that her hope would be accomplished." What a hope!

And from Pinerolo in Italy comes the news that a jury of pretty girls has picked Mario Cendarin as winner of the contest for the town's ugliest man at Luserna San Giovanni, and given him the title of Mr. Bruto (1961). (Bruto means ugly in Italian). Cendarin was not too happy at winning the contest. He said glumly that, when he entered the contest, he sort of hoped to be defeated, for, though he knew he was not handsome, he did not think he was that ugly. What a hope!

Beauty sometimes fades, but is not entirely obliterated; traces remain for years and evoke mild admiration. But ugliness sticks, and grows worse as the years go by. That helped a drunken man to get away once in a parley of words with a very ugly society woman. She was very vain, highly be-jewelled and gaudily dressed, and was accosted one evening by the drunken connoisseur of looks as she was proceeding to a reception, with: "Madam, let me have a look at you, please." And when she stopped with much surprise, he said "Ah! Thank you madam. I have had a good look at the ugliest woman in creation." Stupefied at his insolence she shouted: "You, wretch, how dare you, with your drunken and soused face," to which came the reply, "Agreed madam, I am all that you say, but I'll be alright in the morning. But, alas, you'll remain what you are." Which, of course, proves that there are some things worse than being drunk and soused for which one gets derided on occasions.

The International Monetary Fund has entered into a stand-by arrangement under which the Government of Mexico may draw up to $90 million during the next twelve months in currencies held by the Fund. The arrangement with the Fund will help the Government of Mexico to continue the internal and external stability, and the convertibility of the Mexican peso. For this purpose, the Government of Mexico has taken and is taking appropriate measures in the fields of fiscal and credit policy.

COLOUR

Nature's Beauty Aid!

MAN has taken his lesson from Nature:..has employed many and varied processes from the brewing of dyes from herbs and leaves to the most modern scientific methods—to make his own life as colourful and gay as the variegated hues of Nature. Judging from the frescoes of Ajanta, 'colour-chemistry' in India has been an advanced science since ancient times.

Today, AMAR DYE are leaders in the indigenous manufacture of dyes—having established a name for the excellent quality of their Amarthols & Fast Bases. Intensive research and a rapid expansion programme will soon make India totally self-supporting in the requirements of coal tar dyes.

THIRD PLAN REPORT SHOWS MATURITY

DRAWBACKS REALISED, BUT NO EFFECTIVE SOLUTIONS EVOLVED

From Our Special Correspondent

NEW DELHI, 8th August

THE complete version of the third Plan presented to the Lok Sabha this week embodies all the ideas discussed since the Draft Outline was published a year ago. As a treatise on India's immediate problems of development, it has many virtues. While the second Plan document exuded confidence in its pages, the third Plan report shows maturity. It does not follow, however, that all ideological considerations have been eschewed, but they are now better integrated with the practical tasks ahead.

DELHI LETTER

The statements in the Plan will not set at rest doubts whether resources are feasible, outlays properly distributed and targets adequate in all cases. Two major factors have helped to increase confidence in the future; the prospects for foreign aid have encouraged the hope that "shortage of foreign exchange may not be a major impediment" and the buoyancy in revenues has raised expectations regarding internal resources also. As a result, the implementation of the Plan will depend more and more on how aid is promptly and effectively utilised and what procedures are adopted for raising internal resources, consistent with the need for incentives to greater effort and sufficient resources for the private sector which will have to draw on the same pool of savings.

Two Illuminating Paragraphs

Much more responsibility now rests on the administrative machinery than in the two earlier Plans and, though the planners are fully conscious of this, they seem to be no nearer to solutions. Two very illuminating paragraphs in the Plan summarise the shortcomings experienced so far:

"As the second Five-year Plan progressed from year to year, it was felt that, with greater anticipation and more accurate statistical and economic intelligence, some of the problems might have been dealt with differently. In the first phase of the Plan, the decline in foreign exchange reserves might have been spread over a longer period, and the consequent reductions in foreign exchange allocations might have been less drastic in relation to power development and production of fertilisers. The considerable lags which occurred in the utilisation of irrigation from large and medium irrigation projects could have been reduced. The shortages and imbalances recently reflected in the difficulties of coal transport could have been countered in advance to a greater extent. Finally, the intensity of fluctuations and the rise in prices during the past two years might have been moderated. These are instances of the inter-dependence between the balance of payments and internal price-levels, of the scheme of investments and the resulting outputs, and of developments in the related sectors of industry, transport and power. They point to the much larger dimensions of the problems of management, planning and implementation which are inherent in the design, structure and phasing of the third Five-year Plan.

"These problems arise not only at the national level and in the sectors of modern industry, transport and power, but are also reflected in turn in the greater responsibilities thrown upon the plans of States. In many sectors, the role of planning in the States is wholly complementary to that of planning at the national level, and problems at the State level also become more complex. The line of communication between planning for the country as a whole and for each district, block and village is a long one; to be able to preserve the broad national priorities while seeking to adapt the Plan in its myriad forms to the conditions and needs of each area and each community is no small objective. Against this background, a fresh view has to be taken of the ways in which the machinery and the process of planning at various levels may be improved, evaluation made more incisive, and planning equipped with better statistical and other tools. These are problems to be considered further in consultation with the Ministries at the Centre and the State Governments."

Some of the principal directions in which the existing schemes and organisation of planning may be strengthened are then briefly indicated. One of the basic difficulties in improving the administrative system is the decline of efficiency in proportion to the expansion of cadres; the following passage represents yet another confession of deficiencies:

"As large burdens are thrown on the administrative structure, it grows in size; as its size increases, it becomes slower in its functioning. Delays occur and affect operations at every stage and the expected outputs are further deferred. New tasks become difficult to accomplish if the management of those in hand is open to just criticism. In these circumstances, there is need for far-reaching changes in procedures and approach and for re-examination of prevalent methods and attitudes."

For some time now, it has been the habit of important political leaders to declare that the fault lies in procedures, many of which had been devised long ago and had no relevance to conditions today. There have, however, been no clear views on how these could be simplified without diminishing responsibility and accountability for public expenditure and performance. Now it is realised that procedural changes cannot go very far in removing causes of delay and that they will not transform attitudes of men who have no obligation to show initiative or efficiency; hence, greater emphasis is now laid on training of personnel, supervision, reporting and evaluation.

General Maxims

Some general maxims have been laid down in the Plan which are quite excellent as statements of what is desirable but unlikely to prove adequate in implementation. The first is the need to fix responsibility on the agency concerned and within it on particular individuals; obligations for consultation with others, it is felt, should not extend to details so as to impede effective action. Central Ministries and State Secretariats have taken on responsibility for an increasing amount of original work, thereby reducing the initiative of executive departments.

Another aspect on which stress has been laid is the avoidance of frequent transfers of officials; in any major assignment, a period of five to ten years is considered necessary to show results, but service transfers, depending on promotions and other factors, often ignore this consideration altogether; there is no reason why promotions should not be guaranteed to such persons without involving shifts from one post to another.

Not the least of the problems of administration is the insufficiency of experienced personnel; without answering the question whether available indigenous talent has been sought out and commissioned for major tasks, the Plan states that it would be desirable for a period to supplement Indian personnel by persons drawn from foreign countries, while middle grades of management personnel are developed to take over important roles eventually in both sectors. There is, however, no discussion in this connection of the adequacy of rewards under Indian conditions for such foreign personnel.

Since evaluation on the basis of results will be the chief method of fixing responsibility, the Planning Commission has decided to keep in touch with the working of large industrial and other enterprises; the Committee on Plan projects and the Programme Evaluation Organisation are two agencies which can be utilised for this purpose. It is now admitted that too frequently in the past "reports on progress have lacked focus and have not brought to light current weaknesses or helped to anticipate problems requiring action at different levels." But how could things have been otherwise so long as there was a political interest in asserting that the public sector had great and unsullied achievements to its credit?

Nebulous

There is a revealing sentence in this chapter which states that "for a considerable number of projects included in the third Plan, the information available even at this stage leaves much to be desired." Many of them were not worked out fully nor were they presented adequately. (It is of such stuff that the apparently irreducible physical plan of Rs. 8,300 crores is made!) This defect is attributed to the lack of technical personnel and the absence of arrangements for undertaking detailed studies well in advance of their inclusion in the Plan.

It is in respect of the organisation and management of public sector industrial undertakings that the question of efficiency assumes special importance in view of (1) the determination to expand the public sector relatively and absolutely, and (2) the assumption of substantial additional Plan resources by way of profits from them. There has been considerable public curiosity about the latter, because of the Plan estimate of Rs. 449 crores in the form of surpluses. But few details are vouchsafed even now as the data are incomplete. The estimates of unit costs, it is said, are not precise and the estimates of surpluses are "regarded as only rough indications" (italics mine).

Autonomy and Accountability

For a long time, the question of the proper method of providing autonomy consistent with accountability to public sector undertakings has been discussed at several levels and very few policy decisions have been forthcoming on the recommendations of the Krishna Menon Sub-Committee of the Congress Party or of those of the subsequent Cabinet Sub-Committee. The chapter in the Plan on Organisation of Public Enterprises presumably sums up Government's policy. While it does not elucidate all the issues, there is indication that a Committee of Parliament will be set up, so that it can keep itself informed of the working of public enterprises; membership of the Committee is expected to be fixed for a period of three years to ensure continuity and also provide opportunity to a sufficient number of members to study their progress.

Beyond this, there is little that is specific about the nature of the solutions offered; for example, the desirability of the company form of organisation, raised by the Estimates Committee, has not been discussed. While conceding that secretaries to the Ministries should not be appointed as Chairmen or Directors of these companies, it has been argued that it will be useful in the initial stages to appoint one or two directors from among Government officials dealing with the project in the administrative Ministry concerned, though instances are not wanting to prove that they can become instruments of interference by the Minister concerned.

The recent trend towards integration of public sector enterprises in a particular industry or under the control of a Ministry (as in oil, fertilisers and steel) is another aspect on which no clear guidance has been offered. Realising that such consolidation can lead to excessive centralisation of power in the hands of the Board, it is suggested that delegation of power from the Ministry to the Company should be accompanied by sufficient delegation of authority by the Company to the men on the spot, i.e., the General Managers of individual undertakings.

There are many fields in which the capacity of the administration will be severely tested during the third Plan. The savings drive, export promotion, housing and urban land development are other aspects of planning in which more imaginative and expeditious measures are required in future, but there may still be a time lag before the present awareness of the deficiencies leads to effective measures to remedy them.

The population in urban and rural areas is practically in the same proportion at present as it was ten years ago. In 1951, the percentage of urban population to the total count was 17.38 per cent (61,885,392 persons out of 359,216,905). In 1961, it is 17.84 per cent (77,839,900 persons out of 436,424,429). The rural population in 1951 was 82.62 per cent (294,085,667 persons), and now it is 82.16 per cent (258,584,529). The highest increase in urban population during the last ten years has been recorded in Assam, that is, by 116.69 per cent. Orissa comes next with 87.02 per cent, followed by Bihar, 49.06 per cent. Madhya Pradesh showed an increase of 47.76 per cent, while Kerala 42.44 per cent. In other States, the percentage increase in urban population is: Punjab 33.03; West Bengal 28.88; Madras 22.91; Maharashtra 19.59; Gujarat 19.25; Mysore 16.41; Andhra Pradesh 15.13; Rajasthan 9.40; and Uttar Pradesh 9.86. The figures for Jammu and Kashmir are not yet available.

BRANCH BANKING AND THE STATE BANK

By "Kuber"

NOWADAYS, several advertisements have been appearing in the Press by various banks, announcing their branch expansion programme. One of them, the Dena Bank, has just opened its 100th branch at Ahmedabad and another intends to open all at once three or four branches in the various suburbs of Bombay. One of the leading banks has also announced a branch expansion programme, under which it proposes to open 40 branches all over India. The programme of other banks is not yet known, but, in the next few years, hundreds of branches of Indian commercial banks are expected to be opened and one will be hearing more about them almost every day. It is generally felt that more the branches are opened by the commercial banks the better and that, therefore, a programme for vigorous branch expansion is all for the good. It helps them to mobilise the savings of society which otherwise may be hoarded and it also enables the banks to render banking service to areas where banking facilities may be inadequate. At times, banks also indulge in a bit of a theory of branch banking by which they seem to maintain, though not explicitly, that it is advantageous for them to have a large number of branches, as, thereby, they are in a position to mop up savings from predominantly non-business areas and utilise them in industrial areas where there is a great demand for bank credit. In theory, it would be difficult not to agree with this point of view and also with their branch expansion programme.

In practice, however, things are not so simple as they seem. I happen to be of the view that what appears to be a blessing in theory is a great disadvantage in practice. If one were to go a little deep into the matter and judge the position by the results one would find that, in most cases, if not all, the branch expansion programmes of Indian banks are confined chiefly to areas where there is already adequate banking facility. Indeed, many places are over-banked. In such cases, the new branches do not attract fresh savings. All that happens is that deposits of one branch are transferred to the other, and that amounts to a dog eating a dog, as it were. And at what price? If a small district town can only afford to put in, say, about Rs. 25 lakhs in various branches of banks by way of deposits and if there are about 5 of them, mostly near about one another, as is invariably the case now, each branch will have an average of Rs. 5 lakhs deposits. Naturally, they will all find it pretty difficult to make both ends meet. If on top of this state of affairs, five more branches appear on the scene, the result will be obvious. All the 10 of them will have to share the same amount of deposits. This is cut-throat competition.

I am not giving an imaginary example or exaggerating. Anyone who happens to pay a visit to one of the larger district towns will notice the state of affairs that I have just outlined. The same sort of thing is happening in almost every suburb of Bombay, such as Andheri, Matunga, Sion, Ghatkopar, etc. What kind of banking is this and where it is going to land us? Just imagine banks having to pay the present high rates of interest on deposits and incurring at the same time, the necessary expenses for the maintenance of their branches to attract these meagre deposits which are barely sufficient for one-third of the branches. I am refraining from making a mention of the initial expenses involved in opening such branches which in case of most of the banks will take years to write off; nor is it necessary for me to mention the fact that the object of opening these branches is merely to attract deposits and not to render the other important banking service, namely, granting of loans. It is all one-sided traffic. Surely, this race for deposits at any price has to stop one day.

Who is responsible for this state of affairs? Largely the banks themselves, as there is no co-ordination in their activities at all. If there are 10 branches in a town already and if a town is over-banked, the bank bent upon running the same race does not bother to pause as to whether it will be worth its while to open a branch there; it simply opens a branch and takes the consequences. Every bank for itself seems to be the motto of the day.

What about the Reserve Bank which has a special responsibility in the matter of banks opening branches indiscriminately? According to Section 23 of the Banking Companies Act, every bank opening a new branch has to obtain the prior permission of the Reserve Bank and the Bank has to be satisfied, if necessary, by the inspection under Section 35 or otherwise as to the financial condition, general character of the management, adequacy of the capital structure and earning prospects and even the history of the bank, before granting such permission. Besides, the Reserve Bank has also to satisfy itself that public interest will be served by the opening of a new branch bank. The Reserve Bank, before granting permission, may impose such conditions on the bank seeking permission as it thinks fit and, furthermore, even revoke the permission once granted, if, in its opinion, a banking company fails in any of the conditions imposed on it after a branch is opened. If that is so, one naturally presumes that, in all cases where branches have been permitted to open branches, the Reserve Bank has satisfied itself in all these respects and finds that the opening of a branch is in the public interest. Unfortunately, again, in practice, nothing like this has been observed and, therefore, the Reserve Bank is also equally to be blamed for the indiscriminate expansion in branch banking in certain parts of this country and by certain banks.

A closer look at Section 23 of the Banking Companies Act would show that it is one of the most important sections not only as regards branch banking, but also in many other ways. This section could easily have been utilised by the Bank as a lever to strengthen the entire banking system as such; in fact, that appears to have been the intention of the Section. The easiest way for the Reserve Bank to do so would have been to compel the bank concerned to increase its capital structure and also to improve its methods of management before granting permission to open any new branch. Why has the Reserve Bank permitted so many banks to open branches, even when they have inadequate capital structure? The Reserve Bank very well knows that initially it costs a lot of money, if not a fortune, to open branches. It looks rather strange that the Reserve Bank should have permitted comparatively weaker banks to open branches all over the place and then come out with proposals for increasing their capital structure.

In these circumstances, the report of the Karve Committee on branch expansion programme of the State Bank of India is a sort of a breath of fresh air, as it were. The details of the report are given on the following page. Out of 422 new branches opened by the State Bank till 30th September 1960, 332 branches were in places with a population of less than 50,000 and, out of these, as many as 274 were in places with a population of less than 25,000. The State Bank has mobilised deposits from these areas of over Rs. 29 crores as at the end of 1959 and they have been going up since then. It has also extended credit through these very branches to the tune of over Rs. 21 crores. In this case, therefore, expansion of branch banking has not been a question of one-sided traffic. In opening the branches, the State Bank incurred a net loss of Rs. 1.42 crores; fortunately, many of its new branches are of late paying their way and the loss is expected to be considerably reduced in the not-too-distant future; after a time, they are bound to be on a paying basis. At present, the State Bank has 917 branches and pay offices. Its subsidiaries have more than 65 branches and pay offices, making a total of 1,282. The State Bank and its subsidiaries, according to their present plan, will have opened 80 more branches during 1960-61 and a little over 200 branches are proposed to be opened in the next four years. In this task, however, the State Bank and its subsidiaries are very much hampered by lack of suitable personnel. But for this major handicap, their future programme of branch expansion could be bigger still. The most important thing to note is that, in the case of State Bank, the addition to their deposits from these branches consists, by and large, of fresh deposits and not at the expense of other banks and, what is more important, from the untapped sources of small towns. A crore of such deposits is, in my opinion, far better than 10 times this amount collected by some banks at the expense of others.

The commercial banks would naturally turn round and say: "But look at the advantages that the State Bank enjoys vis-a-vis the commercial banks! The State Bank not only gets some Government and public deposits straightaway, but also gets other assistance from the Government with regard to premises, etc., besides a special fund to which it can debit its losses. I am not denying this contention, though, to some extent, the advantages that accrue to the State Bank are a bit exaggerated. Even assuming that their argument is wholly correct, what is there to prevent the commercial banks from arriving at some sort of a gentleman's agreement among themselves by which they could eliminate the present cut-throat competition in opening branches? They may put forward, for instance, a plan to the Reserve Bank by which a bank venturing to open a branch in a semi-urban or rural area may be permitted freedom from competition from other banks for a minimum number of years, in which case the Reserve Bank may not permit other banks from going there. The banks themselves can, of their own volition, stop the rot, by refraining from opening branches in towns where there are already many banks. Some sort of planning on these lines is urgently called for. The time has come when the Indian banks will have to take stock of the situation on the problem of branch expansion, as, otherwise, they will land themselves in a situation from which they will find it difficult to extricate themselves in future. The only way in which the banks can afford to have the luxury of having more branches is through amalgamation among themselves. This is also the only solution I can think of by which commercial banks in the private sector can meet the growing competition from the State Bank.

STATE BANK'S BRANCH EXPANSION PROGRAMME

KARVE COMMITTEE FAVOURS SLOWER PACE

IT is a well-known fact that banking facilities in India have tended to concentrate in bigger cities and important commercial and industrial centres, with the result that rural and semi-urban areas have been relatively neglected. The question of extending banking to these areas has been examined several times in the past. Not satisfied with the branch expansion programme of the then Imperial Bank of India, the Committee of Direction of the All-India Rural Credit Survey specifically recommended the creation of one strong integrated State-sponsored institution with an effective machinery of branches spread over the whole country. The State Bank of India Act placed on the Bank a statutory obligation of opening 400 branches within a period of five years beginning from 1st July 1955, or such extended period as the Central Government may specify. It was also stipulated that the places where such branches were to be established should be determined in accordance with programmes drawn up by the Central Government from time to time. Following this statutory obligation, the State Bank had opened 416 branches within the specified time schedule. This brought to the fore the question of further extension of branch banking to areas which were not still served with banking facilities. Before examining this issue, it was necessary to study the results of expansion already undertaken. A Sub-Committee of the Central Board of the State Bank was, therefore, appointed last year to consider both the subjects. Prof. D. G. Karve was the Chairman of the Sub-Committee, its members being Mr. B. Venkatappiah, Mr. K. P. Mathrani, Prof. D. R. Gadgil and Mr. Hasham Premji. It was assisted by Mr. N. A. Krishnan, Secretary and Treasurer, and Mr. G. B. Kulkarni, Economic Adviser, of the State Bank. It may be noted that Mr. Venkatappiah and Prof. Gadgil were members of the All-India Rural Credit Survey Committee. The Sub-Committee was called upon to review *inter alia* the working of new branches opened by the Imperial Bank of India from 1951 onwards and by the State Bank in the first five years of its working as well as to examine the need for branches in different areas from the point of view of banking, remittance, treasury and other facilities in the quinquennium 1960-65.

Operational Results

Accordingly, the Sub-Committee made an intensive study of the operational results of the new branches opened by both the Imperial Bank and State Bank. Its findings show that the total deposits of 61 of the 63 new branches opened by the Imperial Bank rose from Rs. 20 lakhs as on 31st December 1951 to Rs. 8.57 crores at the end of 1955 and Rs. 12.57 crores at the end of 1959. The aggregate credit extended by these branches went up from Rs. 18 lakhs as on 31st December 1951 to Rs. 3.11 crores at the end of 1954 and Rs. 6.84 crores at the end of 1959. The remittance facilities provided by them also revealed satisfactory progress—the average remittances per branch rising from Rs. 49 lakhs in 1951 to Rs. 3.75 crores in 1959. Although some of the individual new branches of the Imperial Bank made losses, its branch expansion programme as a whole was in profit. The profit position experienced a marked improvement, especially after 1952. The net total profit of the new branches stood at Rs. 12.05 lakhs in 1956 as against Rs. 1.72 lakh in 1954. Subsequent to 1956, however, their profits tended to decline, mainly because of the withdrawal of the special concessionary rates on the turnover of the Government account.

State Bank's New Branches

A study of the expansion programme undertaken by the State Bank of India shows that the Bank opened in all 416 branches upto 30th June 1960, of which 79 branches were opened at district treasury centres, 305 at sub-treasury centres, and remaining 32 at places where there are no treasuries or sub-treasuries. The Rural Credit Survey Committee Report had stipulated the target that one out of every five non-banking sub-treasury centres should be covered by a branch of the State Bank. It is gratifying to note that, as a result of the opening of 416 branches by the State Bank, the number of new branches opened at the sub-treasury centres works out to about one branch for every three non-banking centres. All the non-banking district treasury centres, except 13 (which include a few newly created district headquarters after the reorganisation of States) have also been covered by the branch expansion programme. Out of the 422 new branches opened till 30th September 1960, 392 were in places with a population of less than 50,000 and out of these 274 were in places with a population of less than 25,000. The Karve Sub-Committee observes that, though the branch expansion programme has been quantitatively satisfactory, in matters of staffing and organisation, much yet remains to be done both to consolidate the present position and to prepare for a further programme of expansion.

The Sub-Committee's examination of the working results of the State Bank's new branches shows that their aggregate deposits increased substantially from Rs. 56 lakhs as at 31st December 1955 to Rs. 29.32 crores at the end of 1959. The total credit extended by the new branches also went up from Rs. 13 lakhs in 1955 to Rs. 21.47 crores in 1960. The rate of growth of the aggregate remittances issued and encashed was also quite rapid. The remittances stood at Rs. 567.43 crores in 1959 as against a bare Rs. 6.31 crores in the second half of 1955. The average amount of remittances per new branch went up from about Rs. 32 lakhs in the second half of 1955 to Rs. 1.58 crore in 1959.

The profitability of the operations of the new branches, however, is not very satisfactory as will be evident from the following table:

(Rupees in lakhs)

	Total profit of profit-making branches	Total losses of loss-making branches	Net loss*
1955 (July to December) ..	..	2.89	2.89
1956	0.51	9.13	8.87
1957	4.77	26.68	26.10
1958	11.78	53.03	47.96
1959	25.05	70.22	56.18
Total ..	43.01	163.95	142.09

* Allowance has been made for reduction in profits of neighbouring branches.

It will be clear from the table that the new branches incurred continuous losses, which rose from Rs. 2.89 lakhs for the second half of 1955 to Rs. 56.18 lakhs for 1959. This was primarily due to the very rapid rise in the number of loss making new branches which increased from 17 in 1956 to 222 in 1959. The number of profit-making branches also rose, but slowly, from 3 in 1956 to 38 in 1959.

The two major difficulties which the former Imperial Bank and the State Bank, as well as its subsidiaries have had to encounter in the matter of opening branches were shortage of suitable premises and dearth of experienced supervisory staff who could be entrusted with the charge of branches. The Sub-Committee states that it was for these reasons that the pace of expansion was rather slow in the beginning. The pace, however, gained momentum during the subsequent years when efforts were made to get over the difficulties.

Sub-Committee's Perspective

The Sub-Committee's approach to the branch expansion programme to be undertaken in future years is based partly on the experience gained in the past and partly on the needs of rural development in the third Plan period. The Sub-Committee states that the State Bank would normally expand where business immediately available in the form of deposits, advances, etc., would justify such a course. But, apart from this, there are certain other considerations of public interest which will have to be taken into account in determining the pace of expansion programme of the State Bank and its subsidiaries. The Sub-Committee is of the clear view that, in addition to the usual criteria, namely, population, turnover on Government account, adequacy or otherwise of banking facilities, etc. the following factors have to be taken into account:

1. extension of remittance facilities.
2. the need to establish branches of the State Bank of India at "sub-divisional" centres in the sense in which the term has been used in the rural Credit Survey Committee Report;
3. providing suitable banking services to co-operative marketing and processing societies;
4. offering financial services to small-scale industries; and
5. mobilisation of savings.

The need for ensuring adequate remittance facilities is acknowledged on all hands. We have already seen how the State Bank of India has provided larger remittance facilities through its branches. Establishment of currency chests and consequently the extension of remittance facilities obviate the need for physical transfer of cash from one centre to another. This process also helps commercial banks to go to centres where otherwise they would not have gone. The Sub-Committee has, therefore, rightly emphasised that the provision of cheap and adequate remittance facilities is one of the important considerations to be taken into account in determining the expansion programme of the State Bank and its subsidiaries.

Another consideration in opening branches is the need to cover the sub-treasury centres. The Rural Credit Survey Committee had recommended that one branch should be established at each of the sub-divisional centres. There are still a few sub-treasury centres in the former Part 'A' and 'C' States without a branch of the State Bank. The Sub-Committee has stressed the need for covering these centres as a part of the future expansion programme.

Needs of Co-operative Sector

The branch expansion programme should also take into account the expanding financial requirements of the co-operative marketing and processing societies. Their demand for funds are growing so rapidly that the central co-operative societies are unable to meet them. This is true especially in regard to their working capital needs. The Karve Committee has come to the conclusion that, as the number of co-operative borrowers, and the size and variety of their demand would go on increasing during the third Plan period, the State Bank would be called upon to make larger loans to co-operatives. The programme of branch banking to be chalked out for the next few years must, therefore, take into account this prospect. Obviously, the Sub-Committee thinks, that the existence of a branch of the State Bank within a reasonable distance from a centre of co-operative marketing and processing societies would assist their progress.

Needs of Small Units

Another criterion for determining the branch expansion programme in the coming years is the need for providing adequate financial resources to small-scale industries. Under the pilot scheme for assisting small-scale industries, which came into operation from April 1956, the State Bank has so far assisted 2,451 small industrial units, by sanctioning credit limits upto Rs. 7.82 crores, the amount outstanding at the end of December 1960 being of the order of Rs. 3.66 crores. In addition, its subsidiary banks have granted credit amounting to Rs. 2.67 crores to 384 units. During the third Plan period, it is proposed to set up 300 new industrial estates of varying sizes in small and medium-sized towns and selected rural areas. It is quite likely that in many of these places the industrial units will find it difficult to obtain the necessary banking and remittance facilities. Branches of the State Bank and its subsidiaries, the Sub-Committee states, must, therefore, continue to be opened wherever there is a reasonable prospect of their being useful to a sufficiently large number of industrial units.

Finally, the Karve Sub-Committee has laid stress on the need to facilitate the mobilisation of rural savings through the opening of branches of the State Bank. Its observation on this point is as under:

"The mobilisation of savings is an integral part of the formation of capital. As a result of the increase in the national wealth, there is, we believe, a larger capacity on the part of the community to save. If it is necessary, as a deliberate aim of the rural development policy, to encourage industrial growth in as many areas as possible, it is also essential that savings in the rural and semi-urban areas should be mopped up to the farthest extent possible and channelled into industries through the banking system. In the initiation and fulfilment of this effort, the State Bank and its subsidiaries through their branches must play an increasingly important part."

Target of 300 Branches

After taking into account the aforesaid factors, the Sub-Committee has recommended that, in all, 300 branches should be opened by the State Bank and its subsidiaries in the five-year period from 1st July 1960 to 30th June

(*Continued on page 326*)

RECONSTRUCTION OF BANKING STRUCTURE

GROWTH OF DEPOSITS IN THE FIRST HALF OF THIS YEAR A RECORD HIGH

AT the thirty-fourth annual general meeting of the Indian Institute of Bankers held on the 10th inst. Mr. H. V. R. Iengar, Governor of the Reserve Bank of India and President of the Institute, delivered an important speech on the immediate problems confronting the banks in this country. He dealt with three distinct aspects: (1) rationalisation and reconstruction of banking structure; (2) growth of deposits and the ratio of bank credit to deposits; and (3) the role of Bank rate. On the first, he favoured only one type of banks, namely, "licensed banks," instead of the present confusing pattern of scheduled licensed banks, scheduled unlicensed banks, non-scheduled licensed banks and non-scheduled unlicensed banks. He was also of the view that the time for decision had come on the question whether the reluctance of some small banks to face the consequences of reconstruction of the present banking structure should override the requirements of public interest which demand "that, within a short period, we should have a system of banking which the public find easy to understand and in which they have full confidence." On the second aspect, he disclosed that the adverse impact of the Palai Bank's failure on the confidence of depositors in the banking structure had been overcome and that the growth in deposits of banks in the first half of 1961 was the highest for any half-year on record. He advised the banks not to think in terms of high credit ratio and that the Japanese example of over 100 per cent of deposits was not an ideal one for India. On the third aspect, he said that the Bank rate in India had to fulfil a role which was substantially different from that in the U.K. or other advanced countries. "Unlike in many other economies," he said, "Bank rate changes in India are symptomatic of fundamental shifts in the pattern of interest rates and that is why changes are necessarily infrequent." He refuted the general impression that India had been a country of cheap money.

In view of the great importance of the three aspects discussed by Mr. Iengar not only to banks but also to business men, students of economics and politicians, the full text of his address, except the introductory paragraph, is reproduced on these pages:

I

Confusing Banking Structure

"Since I spoke last August, the question of the soundness of our banking structure and the measures necessary to enable banks efficiently to discharge their growing responsibilities has been very much in the public eye. From time to time, there are orders of moratorium issued by Government on the recommendation of the Reserve Bank; amalgamations are notified; and, in one case, recently, the Reserve Bank asked for an order of liquidation. These events make banking a subject of continuous topical interest. But the discussions that take place are not always well informed, largely, I expect, because the basic facts, though available in statistical publications, have nowhere been explained in an easily intelligible manner.

"When I spoke last year, there were 345 banks in India, of which 94 were scheduled and 251 non-scheduled. The difference between a scheduled and a non-scheduled bank was not clear to the public then and is certainly not clear today. To add to the confusion in the public mind, some scheduled banks were licensed and some not, and that was also the case with non-scheduled banks, although the vast majority of the non-scheduled banks were unlicensed. We had thus a strange conglomeration of scheduled licensed banks, scheduled banks without a licence, non-scheduled licensed banks and non-scheduled banks without a licence. This pattern arose from historical circumstances and is still in existence today. I do not propose, on this occasion, to explain the genesis of this pattern or the implications, either to a bank or its depositors of its being in one category or another, for I am hoping that a more simplified pattern will emerge fairly soon and the present confusion will then be of interest only to students of banking history. I would merely point out that one important difference between a scheduled and a non-scheduled bank is based on size, although this is not an infallible yardstick. As a general rule, a non-scheduled bank has capital and reserves of less than Rs. 5 lakhs, although some of them do have capital and reserves exceeding this amount, whereas a scheduled bank invariably has capital and reserves of over Rs. 5 lakhs. At the end of August 1960, of 251 non-scheduled banks, 69 had capital and reserves of less than Rs. 1 lakh, 144 capital and reserves of between Rs. 1 lakh and Rs. 5 lakhs, and 38 capital and reserves of Rs. 5 lakhs or over. Thus, purely from the point of view of numbers, the very small non-scheduled banks dominated the Indian banking scene. But, from the point of view of deposits, the position was quite different. About this time last year, non-scheduled banks held only 2.5 per cent of the total deposits and scheduled banks 97.5 per cent. As between licensed and unlicensed banks, the former had 94.7 per cent of the total deposits and the latter only 5.3 per cent. The question of the reconstruction of the banking system related, therefore, only to a small part of the deposits though to a large number of banking institutions.

Reserve Bank's Power

"The legal authority of the Reserve Bank in the matter of effecting a reconstruction of the banking structure was much more limited last August than now. The Bank had the right to inspect, to give directives and to appoint observers. But the operational responsibility for running the banks necessarily rested on the bank managements themselves. The only sanction in the hands of the Reserve Bank, in the case of recalcitrant institutions, was to force them into liquidation. This was a most drastic step; and the Reserve Bank did not feel that it could resort to it except where no other remedy was available to protect the interests of depositors. In the first flush of public criticism levelled at the Bank after the failure of the Palai Central Bank, the point was repeatedly made that the Reserve Bank should have asked for liquidation much earlier, instead of giving such a long rope to the institution. I have little doubt from the events of the last 12 months that, if this had been done, the criticism against the Reserve Bank would have been no less vociferous. However, in the light of the criticisms then made, it was decided that more vigorous steps should be taken to strengthen the banking structure by a process of reconstruction or amalgamation of the weaker units; and further powers were accordingly conferred on the Reserve Bank by an amendment of the law in September 1960. Previously, neither Government nor the Bank had any authority to use compulsion for the purpose of effecting mergers or reconstruction. The amending legislation conferred this authority; and, in order that the Bank may have adequate time to recommend what was the most appropriate step to take in any particular case, power was conferred to declare a moratorium. These powers, whether for declaring a moratorium or amalgamation, were to be exercised by the Central Government on the recommendation of the Reserve Bank.

"It was clearly necessary for the Reserve Bank to have a plan of operations in mind, in other words, to proceed on the basis of certain priorities. In the beginning, action was called for when there was a run on a bank which it was unable to sustain even with the aid of emergency advances from the Reserve Bank or when it was clear that a bank had suffered so large an erosion of its capital funds and deposits that its survival as a sound viable unit was in the highest degree unlikely. The earlier cases, where moratorium was declared and amalgamation effected, belonged to one or other of these categories and aroused little comment. Subsequently, the Reserve Bank moved into a region where the need for action was not equally manifest to the public mind, for example, when a bank had been limping along for years in an unsatisfactory manner and was unlikely to become a sound unit within a reasonable period of time, but was in no immediate danger of a run. A "sound" unit, in this context, may be defined in terms of the conditions prescribed in the Banking Companies Act for licensing a bank, that is to say, that "it is or will be in a position to pay its present or future depositors in full as their claims accrue" and "the affairs of the company are not being or are not likely to be conducted in a manner detrimental to the interests of its present or future depositors." The objective tests of soundness are the degree of erosion of reserves or capital or deposits, the liquidity position, the soundness of advances, and the care exercised in management generally. Naturally, although there may be a broad categorisation of banks, their quality varies from case to case and each case has to be judged individually. When action was initiated in a few cases where the situation was not immediately hopeless but where the Reserve Bank felt that there was no prospect of the bank satisfying the tests of soundness within a reasonable period, the Reserve Bank was accused by the affected banks and, in some cases, by other interests of being too quick on the draw. In other words, the Bank was criticised for having done the very thing which it had been asked to do after the Palai Central Bank crash.

Progress So Far

"In the last few months, action has been taken by Government on the advice of the Reserve Bank in regard to 35 banks. Of these, 9 had themselves asked for a moratorium and the position of 10 was considered irretrievable. The position of the remaining 16 banks was such that there were no chances of their becoming viable units in the near future. Fourteen of these banks have already been amalgamated with other banks and one has been provisionally ordered by the Court to be wound up. The schemes of amalgamation in respect of the remaining banks are in various stages of progress. The total deposits of the 35 banks amounted to Rs. 19 crores, or about 18 per cent of the deposits of all unlicensed banks as at the end of August 1960. It may be stated, therefore, that, in terms of deposits of unlicensed banks, between a fifth and a sixth of the problem is well on the way to being resolved. The question before the Reserve Bank and Government is how fast they should move in dealing with the rest of the problem.

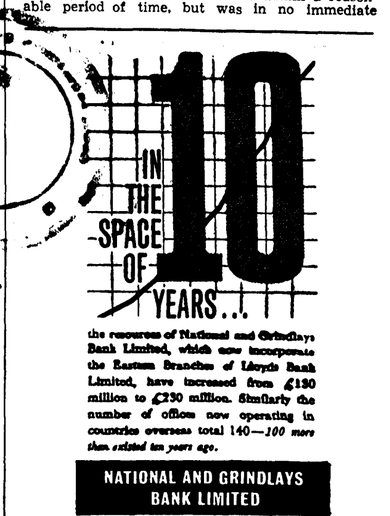
"The reconstruction of the banking structure involves in reality two somewhat different problems. First, there is the problem of banks which are run in a manner which has jeopardised or is likely to jeopardise the interests of the depositors, in other words, the sector which is unsound and which must, therefore, be dealt with if the whole structure is to be made strong and dependable. Secondly, there is the problem of institutions which, though not unsound in the sense that the depositors' interests are unsafe or likely to become unsafe, have merely acquired the respectability of the nomenclature of banks but which do not basically serve the banking needs of the community. There are certain institutions which were largely engaged in pawnbroking or money-lending and which converted themselves into banks largely for the purpose of evading the local legislation in regard to usurious rates of interest. The number of such institutions is not altogether insignificant. Moreover, even where they are engaged in legitimate banking business, their size is, in many cases, so small that there is no prospect of their ever becoming viable units.

"The view is often expressed that small banks are *per se* more worthy of encouragement than branches of banks on the ground that the managements of small banks, because of their direct and intimate touch with borrowers and local economic conditions, are in a better position to serve the banking needs of the community. On this ground, it has been suggested that the large number of small banks in our country should, if there is a prospect of their being reasonably well-run, continue and not be subjected to a process of amalgamation.

Unit Banking *versus* Branch Banking

"It is not really necessary, for the purpose of reaching a practical decision on our immediate problem, to discuss the relative merits of branch banking versus small unit banking. Unit banking is the pattern followed in the United States, whereas, in practically all other countries, branch banking is preferred. The reason why unit banking is preferred in the United States is largely historical. It is due to the fear of money trusts or of powerful business monopolies which has been one of the dominant influences on American political attitude to financial institutions. On the other hand, the U.K. runs an excellent service of banks dominated by a small number of powerful institutions with hundreds of branches all over the place. Whatever the theoretical justification may be in favour of a small unit bank as opposed to branch banking, the test in our country is whether unit banks have in fact done well or whether, on the contrary, they have failed to live up to their expectations. If a small bank, having a purely local coverage, has done well or is likely to do well, there is no reason why it should not be left alone merely because of academic views on the question of unit versus branch banking. I would merely say that, by and large, experience has shown that small unit banks have not been particularly successful in our country, although a few of them have done well and have, in fact, qualified for a licence.

"I do not think this is the right forum or the appropriate time for me to say what has been decided on the above issues. In the final analysis, the decision both about the extent of reconstruction of the banking structure and its pace rests with Government who have the ultimate statutory authority. I am here merely stating the nature and dimensions of the problem. But I think it will be generally agreed that a pattern which includes scheduled licensed banks, scheduled unlicensed banks, non-scheduled licensed banks and non-scheduled unlicensed banks is so conducive that it



the resources of National and Grindlays Bank Limited, which now incorporate the Eastern Branches of Lloyds Bank Limited, have increased from £130 million to £230 million. Similarly the number of offices now operating in countries overseas total 140—*100 more than existed ten years ago.*

Registered in London under the Companies Act of 1862 on 23rd March 1960 PA-I-C

ought not to survive. We ought to have just one type of banks, namely, licensed banks. Unfortunately, it happens that any process of reconstruction would involve the elimination of a number of the banks now operating without a license, for a certificate of soundness cannot be given in their case with any degree of assurance. Such a process of reconstruction may not be to the liking of the shareholders or the directors. But the question is whether their view, which can sometimes be quite vocal, should weigh more than the requirements of public interest which demand that, within a short period, we should have a system of banking which the public find easy to understand and in which they have full confidence.

"I spoke last year about the need for a deposit insurance scheme. It has taken some time to get the concurrence of banking interests, but I am glad that this has now been done and that legislation is shortly to be introduced for the setting up of a Deposit Insurance Fund. When this is done, I am pretty certain that the pace with which amalgamations and reconstructions can be carried out could be quickened and the difficulties caused to small depositors eliminated or greatly reduced.

II

Deposits and Bank Credit

"What I have been saying about the soundness of our banking structure and the need to proceed in the matter of reconstruction of weak units is liable to give the impression that there is something wrong with banking in India. The fact of the matter is, as I have said more than once, that, in terms of deposits, over 95 per cent is held by sound and well-run institutions and the problem is confined to only a small proportion of the deposits. Fortunately, the depositing public seems to be well aware of this, as is borne out by the pattern of deposit growth.

"In the second half of last year, after the Palai Central Bank crash, there was a stagnation of deposit growth, and the general impression was created that deposits had ceased to accrue to commercial banks in India. This view was, however, true only for a limited period; and, although loss of confidence in some areas was a contributory factor, the stagnation of deposits was largely the result of broader economic factors. In recent months, deposits have continued to accrue pretty vigorously. The confusion in the public mind is, I think, partly due to the fact that figures of bank deposits in the published statistics have been distorted by the inclusion of figures relating to P.L. 480 funds. These funds, which belong to a category quite different from normal bank deposits, inflated the rate of deposit growth for some time and, because of procedural changes in banking them, gave the impression that deposits were rapidly falling in 1960-61. For a correct appreciation of the growth of deposits, it is necessary to exclude the P.L. 480 figures. The total deposits of scheduled banks in the last 5 years, excluding the P.L. 480 figures, are as follows:

	(In crores of Rs.)
1956	1,047
1957	1,186
1958	1,318
1959	1,474
1960	1,566

"We have also the figures for the first half of the current year and it would be useful to compare this with those in the corresponding periods in each of the last five years. The figures are as follows, again excluding P.L. 480 deposits:

First half	*Increase of deposits* (In crores of Rs.)
1956	50
1957	92
1958	97
1959	91
1960	93
1961	98

"It is clear from the above figures that the growth of deposits in the first half of this year has been better than during any of the previous years, showing that confidence, which had been somewhat shaken, has been fully restored. It is to be remembered that deficit financing has been on a reduced scale recently and the pressure on our external reserves has been larger, both of these being factors which tend to reduce the growth of money supply including bank deposits. In this context, it is also refreshing to recall that a phase of stagnation of bank shares in recent years has also been followed during the last year by an impressive advance, the index of bank shares having risen over the year upto 15th July from 185.9 to 225.3 as against a modest increase in the general index of variable dividend securities from 176.4 to 182.6.

III

Credit Squeeze

"I now turn to a question which has been exercising the minds of a number of banks, namely, the so-called credit squeeze by the Reserve Bank. The impression has been created that the Reserve Bank has imposed a credit squeeze and, as a consequence, genuine productive enterprise is being affected. This was neither intended nor is it in fact the case, to the best of my knowledge.

"When people talk about a credit squeeze, they have in mind the directive issued by the Reserve Bank last year by which credit provided to the commercial banks is subjected to slab rates of interest rising from 4 per cent, which is the official Bank rate, to 6 per cent. The Reserve Bank undoubtedly intended, by the use of this technique, to impose some discipline in the money market in the sense of requiring people to be more circumspect in their demand for money than before. But, subject to this discipline imposed on the commercial banks and their customers, the Reserve Bank has been liberal in regard to the total quantum of credit that it is prepared to provide. Thus, under the Bill Market Scheme, the Bank fixed limits during the last busy season of Rs. 138 crores as against Rs. 54 crores in the previous year when all accommodation from the Reserve Bank was available at 4 per cent. In actual fact, however, the highest volume of accommodation taken by the banks during any particular week under this scheme was Rs. 46 crores. Thus, the greater part of the money that the Reserve Bank was prepared to lend to commercial banks was not utilised.

"It is, of course, true that, if all that had happened was a rise in the cost of Reserve Bank credit, the practical effect would have been the same as a direct credit squeeze, because banks would not have been able to lend money with the previous margin of profit and would have, therefore, been reluctant to borrow. But this is not all that happened. Simultaneously with imposing a slab rate of interest, the Reserve Bank issued a directive making it compulsory for banks to raise their rate of interest on advances by a minimum of ½ per cent. In fact, the increase made by banks in their advance rate was generally more than ½ per cent. The significant point to be remembered in this context is that, while the banks had to pay a higher rate of interest than in the past on the marginal amounts they borrowed from the Reserve Bank—marginal in the sense that such borrowings were a very small fraction of their total deposits—they were enabled to increase their rates on *all* advances. In this situation, if productive enterprise has in fact suffered for want of bank credit, for which I see no tangible evidence, this certainly cannot be attributed to what has been widely described as the policy of credit squeeze adopted by the Reserve Bank.

Credit Ratio

"There is, of course, one genuine difficulty which banks have had to face. The ratio of their advances to their deposits has been rising in recent years and during the last busy season it went up as high as 79, excluding P.L. 480 deposits. If banks had borrowed more from the Reserve Bank for lending to their customers, the deposit figures would have remained the same but the advance figures would have gone up, and the percentage of advances to deposits would have been even higher than the figures reached during the last busy season. The point is made that such high ratios would have attracted adverse comment.

"The ratio of advances to deposits has recently been very much higher than in the U.K. or the U.S.A. In these countries, the ratio does not normally go beyond 50 to 55. On the face of it, it would appear that the limits of safety adopted by the U.K. and the U.S.A. should not be exceeded in India where banking on modern lines has been much more recent and undeveloped. There is force in this view; and, as a general proposition, it would be the correct policy for banks not to get into a highly overloaned position, as was the tendency for many of them during the last busy season.

"On the other hand, some banks are in a real dilemma. They are very well-run and have first class clientele, but their deposits are not catching up with the increasing need for credit. What are they to do? It has been suggested that the conventional wisdom of the U.K. and U.S.A. banks has been over-ridden by the experience of Japan where the advances-deposit ratio has in recent years gone up to 100 per cent and often even more.

"The Japanese example undoubtedly deserves study. But I would consider it dangerous to follow it without fully understanding the particular situation in which the Japanese banks reached a highly 'overloaned' position. Traditionally, Japanese banking has been 'mixed' in the sense that the relations between Japanese banks and industry have been more close than they are in India and industry has had recourse to banks for financing capital equipment to a much larger extent than in our country. The capital market in Japan is much narrower than here. If the Japanese had stuck to conventional limits of safety, the spectacular course of industrial development that has taken place since the war would have been impossible. But the ability of the Japanese economy to stand the risks of unconventional practices in banking is the result of special factors—the fact that Japan has had no banking failure for many years and people have consequently full confidence in their banking structure and also the tremendous impulse to repair an economy shattered by the war and the discipline of the people. Now that the Japanese economy is well-established and has acquired momentum, Japanese banking experts have begun to feel that they should revert to more conventional limits of safety. The highly 'overloaned' position in Japanese banks is likely gradually to reach more moderate levels.

"In present conditions, it would be clearly unwise for us to follow the post-war Japanese example, though I can well see that there are individual banks with exceptional strength which can safely afford to be unconventional in the matter of the advance-deposit ratio. The long range solution for the problem of expanding credit is for banks to acquire more deposits. As a short-term measure, however, recourse to the Reserve Bank for financing the growing needs of industry is legitimate, but the total extent to which such accommodation can be given would depend on the economic situation at any point of time.

Rates of Interest

"On the question of rates of interest, I think the fact has to be recognised that organised enterprise in our country has been so long accustomed to relatively cheap rates for money that it has found some difficulty in adjusting itself to the idea of an increase in rates. Inasmuch as the rates in the organised sector are the more publicised internationally, the impression has grown abroad that India is a cheap money country and that this cheapness is artificial and represents only very inadequately the severe shortage of capital. Taking the economy as a whole, this is not true. The bulk of the credit that the agriculturist in our country gets is available to him only at very high rates of interest, often at unconscionable rates of interest. The small-scale trader or the small industrialist also has to pay high rates for his money. It is big organised business enterprise and Government that get money at relatively low rates. The point has often been discussed that the starting point for a rationalisation of a somewhat lopsided interest rate structure in our country is to raise the Bank rate.

"This is a very complex question. In my speech last year, I dealt at some length with various aspects of Bank rate as an instrument of monetary policy and it is not necessary for me to go over the same ground again. But I will briefly supplement what I said last year. The significance of the Bank rate varies from country to country. It is not generally known, for instance, that, in Australia, a very highly developed country making rapid strides in industry as well as in farming, sheep-raising and dairying, there is no published Bank rate at all. If a commercial bank approaches the Reserve Bank of Australia for accommodation, the matter of the quantum of accommodation to be given and the rate of interest is discussed very confidentially, in the same way as when a private customer goes to a commercial bank. No one, other than the Reserve Bank of Australia and the commercial bank concerned, knows what rate of interest has been charged. I believe that, in actual practice, such accommodation is very limited and infrequent; however, the Australians have got along very well without a published Bank rate. The Canadians have had, for some time, a fluctuating Bank rate which follows the market rather than leads it. In the U.K., a rise in the Bank rate, particularly if steep, can have very significant short-term effects, both in arresting internal monetary pressures and on the balance of payments, but little or no effect on long-term security yields if the high rate is expected to be temporary, as it generally is. In India, the significance of changes in the Bank rate can be evaluated, not in terms of any formula of general application, but only in the context of the special conditions of the monetary economy in India. Some of these I mentioned last year and I would like to make some further observations today.

"Unlike in many other economies, Bank rate changes in India are symptomatic of fundamental shifts in the pattern of interest rates and that is why changes are necessarily infrequent. It is particularly important in India to pay attention to the impact of such changes on the prices of Government securities which play a much more important role in the capital market than in advanced countries. In this context, it has to be remembered that several institutions such as banks, insurance companies and provident funds are under statutory compulsion to invest some of their funds in Government securities. On the one hand, because of this compulsion, it is necessary to fix a remunerative rate of interest. On the other, it is necessary to avoid taking action which would have the effect of causing significant losses in security values.

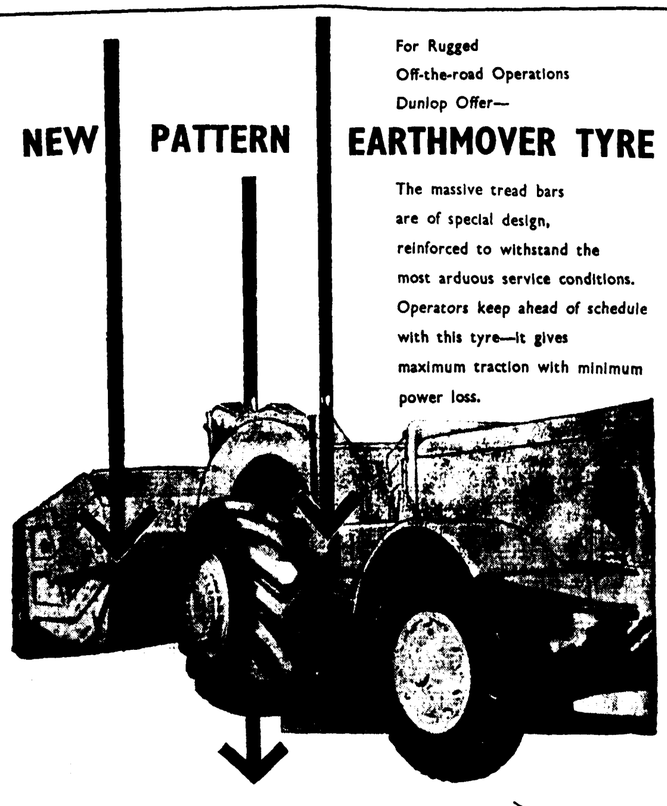
Public Debt Policy

"The evolution of public debt policy has, rightly in my opinion, been to effect changes that become necessary in such a manner as to minimise disturbances to the Government securities market. It is, perhaps, insufficiently recognised that, though there have been few and infrequent changes in the Bank rate in India during the last decade, the Reserve Bank's average lending rate has in fact, risen from about 3½ per cent towards the end of 1956 to about 5¼ per cent during the last busy season. Including the stamp duty of 0.20 per cent on usance bills, the cost of borrowing from the Reserve Bank was actually 5¼ per cent and there was a not insignificant amount of borrowing at the third slab rate of 6.2 per cent, including 0.20 per cent stamp duty. I venture to say that, by using the technique of slab rates, we have met with a considerable measure of success in bringing about suitable adjustments in the Reserve Bank's lending rates without disrupting the securities market. In this connection, I should re-iterate what I mentioned last year, that this is a subject on which no rigid policy is wise or even possible. The recent loan operations of Government suggest that they have a flexible and pragmatic policy in this matter. I am clear about one thing. Long-range policy must be so directed that the rates of interest paid by the small man must come down and this can only happen by a large-scale increase in institutional arrangements, such as banks. If, in the meanwhile, the rates of interest for organised enterprise go up, that would be part of the necessary process of having a more rational interest rate structure. The damage to the economy by a rise in interest rates would be insignificant, because in most cases the rise in costs could be absorbed by the profits of a highly protected economy.

IV

Conclusion

"There are a number of other subjects of importance on which I could make comments, but I do not want to overload this address. I will conclude with only two points. I think it should be possible, by a combination of firmness and understanding, to reorganise the banking structure within a relatively short period, say, a couple of years or thereabouts so that we will have one single type of bank in our country—both big and small, having a licence and coming within the purview of deposit insurance. But that will not, by any means, be the end of the story. Banks are a medium not only for collecting the savings of the community and for lending to people but for rendering a variety of other services in the field of commerce and industry; and they must continuously attempt an improvement in these services. This requires co-operation, in the letter and the spirit, between bank management and bank employees. I sincerely hope that when the National Tribunal has finished its labours, it will have laid the foundation for a new era unhampered by internal frustrations and conflicts which have for so many years bedevilled the functioning of our banks."



BREATHING SPACE FOR COTTON

NO FURTHER CAPITAL COMMITMENTS IN SPINNING SECTOR

From Our Special Correspondent

MANCHESTER, *1st August*

MANCHESTER LETTER

WHEREAS at one time the summer months were often called the "dog days," when nothing happened commercially or industrially, in recent years some of the most vital matters affecting the cotton trade have been formulated at the height of the holiday season. Foremost of all were the speedy negotiations which led to the reorganisation scheme when redundancy was a day-to-day topic in the summer of 1959. Two years later, outstanding events have occurred within a few days whose bearing on the future cannot yet be fully gauged. Agreement reached by nearly a score of nations in Geneva establishing a principle for trading between the developing and old-established textile industries of the world makes it clear that many countries outside Britain now recognise this to be an international problem. From that point, whatever subsequent developments occur, some gains must be made.

In such discussions, individual attitudes are often governed by the way in which suggested palliatives will affect each delegation. Hong Kong, for example, may protest that the 12-month basic period of standstill for shipments represented a lower rate of activity than a year or two earlier. Japan points to the fact that her exports to the United States have been voluntarily curbed and this action should be taken into account. Britain, on the other hand, has never before in her long history absorbed so much foreign cotton material.

Pattern of Planning

The standstill order, if accepted by all concerned, should provide the breathing space needed by the many negotiators involved to settle some pattern of international trade in the years ahead. Conditions change all too rapidly in these days, as Lancashire traders are fully aware, but long-term arrangements would enable producers and distributors to make their plans in the knowledge that a fresh flood of imports would not be encountered as a disrupting influence in the market.

It hardly seems to have been a coincidence that the result of the international talks came almost immediately before the Hong Kong textile interests reversed their former decision and announced their readiness to negotiate on the question of an extension of the present pact with Lancashire. It is doubtful, however, whether the Cotton Board will be prepared to sponsor the re-opening of discussions, as the Government took the initiative in launching the present plan. If any fresh meetings occur, they will probably be at Government level.

More to the point, there is increasing pressure from Lancashire for the imposition of anti-dumping measures on arrivals of cheap goods from Spain and other countries which can well be said to be disrupting business in the local market. Mr. W. T. Winterbottom was outspoken in his comment on this topic at the annual meeting of Fine Spinners and Doublers Ltd., when he said: "The Government possesses the measures to check this sort of thing and, in my opinion, they should use them or explain their reluctance to do so."

Modernisation Endangered

Like many others in the industry, Mr. Winterbottom fears that the re-equipment programme is in peril as a result of the lack of action taken to sweep away the obscure outlook on the import situation. The Fine Spinners Group, he said, had already applied a temporary brake on further capital commitments and it might be necessary to re-align their policy in the light of developments. The combine is certainly not the only one to be watching events closely and curtailing expenditure until future trading opportunities can be assessed. That the Government has subsequently refused to introduce anti-dumping regulations against the large supplies of Spanish corduroys entering the British market is a bitter pill for the industry.

Hong Kong's delaying tactics in attempting to turn the clock back to 1958 merely prolong the agony. The Colony, by claiming its right to one-third of the United Kingdom's grey cloth imports is, in fact, asking for a ceiling of 230 million yards a year, as against the current limit of 165 million yards and the Government's proposal for an extension to 185 million yards.

Imports Doubled in Three Years

Although imports and exports of cotton goods in the second quarter of 1961 were both lower than in the first three months of the year, the figures for the half-year provided a continuation of the trend which has been increasingly apparent since the quantity of cloth entering this country exceeded comparable exports. The gap between the two has now widened to such an extent that there is no point in re-emphasising the fact. The same adverse balance must be struck in the case of earnings. These amounted to less than £31,000,000 in the half-year, as against the cost of £40,300,000 incurred in purchasing cotton goods abroad. At the same stage last year, the value of exports was nearly £33,000,000, whereas arrivals had cost just under £32,000,000.

The following table gives the current export-import situation since the post-war shipment peak, with recent quarterly returns:

(Cloth in thousand sq. yards and yarn in million lbs.)

	Cotton cloth		Rayon, etc., cloth		Cotton yarn	
	Exports	Imports	Exports	Imports	Exports	Imports
1949 ..	903,578	348,800	160,708	51,000	82,061	1,960
1953 ..	709,905	98,640	170,828	44,400	41,920	3,360
1958 ..	384,078	386,763	84,491	47,171	26,747	14,637
1959 ..	342,837	537,145	69,722	57,764	22,921	21,522
1960 ..	327,090	727,707	64,355	58,419	21,113	38,648
1960						
1st Qtr.	87,238	180,600	14,892	13,937	5,931	8,988
2nd Qtr.	84,579	173,088	14,110	13,469	5,633	10,415
3rd Qtr.	73,858	178,393	12,912	14,641	4,954	9,853
4th Qtr.	81,415	194,781	12,442	16,372	4,595	9,514
1961						
1st Qtr.	82,891	225,207	13,019	18,137	4,606	11,781
2nd Qtr.	72,507	195,614	12,713	16,405	4,273	11,884

Reflecting to some extent the changed state of trading, imports of cloth in the second quarter were 30,000,000 yards smaller than in the first three months, but the half year's total of 420,913,000 square yards was 65,000,000 yards up on the corresponding figure twelve months previously. It is significant that the quantity of goods imported so far in 1961 is well in excess of total arrivals during the whole of 1958.

Grey cloth imports at nearly 335 million yards were 44 million yards in excess of the 1960 figure, most of which can be attributed to the much larger purchases from "other foreign countries," mainly in Europe. These increased from less than 50 million yards to 94 million yards, whereas there was no similar change in the imports from Eastern Commonwealth countries about which so much has been written in recent years.

India supplied 110 million yards, as against 129 million yards and purchases from Pakistan were more than halved at 10 million yards, as against 22 million yards. Hong Kong, despite its many protests, slightly improved shipments —from 44 million yards to 49 million yards. Other Commonwealth sources, however, supplied nearly 11 million yards, as against only 3 million yards.

In ratio, imports of finished fabrics from abroad showed a larger increase than grey cloth. The arrivals in the first half of the year reached 86 million yards, as against 64 million yards, of which the major proportion was printed and dyed fabrics.

The flow of cotton yarn into British ports continued on a substantial scale and, as in the case of cloth, well exceeded comparable exports. Imports aggregated 23,465,000 lbs., as against 19,281,000 lbs. in the first half of 1960. Doubled yarn was again the major factor in this trade, but the quantity arriving was 1 million lbs. lower than in the first half of last year. Meanwhile, much bigger purchases were made in single yarn, which reached 11,500,000 lbs., as against 6,700,000 lbs.

Further Fall in Exports

Exports of cotton cloth continued to slip away, being 154,708,000 square yards, as against 171,817,000 square yards in the first half of 1960. Australia, which for many years headed the list of buyers, has now fallen to third place after South Africa, which absorbed 19,350,000 square yards, and Nigeria with 17,397,000 square yards. Australia took 16,999,000 square yards, Ghana 13,169,000 square yards and New Zealand 12,502,000 square yards.

Cotton yarn exports were also very disappointing, being only 8,879,000 lbs. in the half-year, as against 11,563,000 lbs. in 1960. Australia, although leading consumer, took 1 million lbs. less than last year at 3,364,000 lbs. and the only other country to absorb more than 1 million lbs. was Canada with 1,164,000 lbs.

Battle for Margins

It would be easy to join the swelling chorus of disapproval which greeted Mr. Selwyn Lloyd's measures for coping with the nation's economic ills, as the cry of "Too little and too late" re-echoes once more through the national and specialist press. The absence of any direct incentive to exporters was, perhaps, the most depressing feature of the statement—more compelling even than the rise in taxation, which scarcely seems to be an effective palliative in the circumstances. That the cotton trade unions saw fit to announce their intention of compaigning for a 10 per cent increase in wages for the spinning and weaving operatives only 24 hours before the Chancellor's statement was sufficient illustration of the attitude of organised labour to the anticipated move to curb spending power. Nor are the proposals likely to discourage other approaches of a similar nature, however many requests or warnings are issued by the authorities.

Selling rates for yarn and cloth have been remarkably steady for some months past in the face of declining order lists and a running down in the rate of activity throughout practically the whole industry. During this period overheads have contnued to rise, stimulated by dearer transport charges and many other similar developments. Now that the cost of living has taken another substantial upward twist, there may well be a struggle between the buyer and seller of cotton textile products along the line of processes.—*All Rights Reserved.*

LINKING SUGARCANE PRICE TO QUALITY

SYSTEMS IN VOGUE IN OTHER COUNTRIES

By G. Ramchander

*[The question of setting up an administrative machinery to introduce and enforce a system of linking sugarcane price to quality is still being examined by a special sub-committee of the Development Council for Sugar Industry. The Committee has been asked to submit its report before the end of next month. The findings of the Committee and the Government of India's decisions thereon are naturally awaited with much interest. The Committee will doubtless make a thorough study of systems in vogue in other countries. The salient features of some of the systems have been explained in the article below by Mr. G. Ramchander, who was one of the members of the sugar industry productivity team 1960, sponsored by the National Productivity Team under T.C.M. aid, which visited the various sugar producing countries.—*ED.]

IN all the countries visited, there is in vogue some system or other for payment of cane on quality basis and not simply the flat payment on weight basis. How far the various systems are perfect and satisfying to cane growers and factories is another matter. There is, however, a constant continuous attempt to perfect the systems.

Philippines

In the Philippines, the growers raise the cane and take it to the sugar Central for processing into sugar. There is, so to say, no purchase of cane by the Central. The Central retains towards its services 35 to 45 per cent of the recoverable sugar contained in the supplies made by the grower. This percentage distribution is decided by a milling contract between the miller and the grower of the area or each mill district as it is called. There is bargaining between the two parties and the share depends upon the strength of the party. The growers in the Philippines are all big landlords and are educated and very much advanced. Since this contract is there, what is required is to assess the available or recoverable sugar from the supplies made by individual growers in order to arrive at the amount of sugar to be distributed to the growers. This is done by the following formula I based on the analysis of first expressed juice of individual consignment, the Java ratio, sucrose extraction and the boiling house recovery for the period:

$$\text{Factor} = \frac{JR \times E \times CF \times 15{\cdot}81027 \times BHR}{PS}.$$

JR = Sucrose Java ratio
E = Sucrose extraction
CF = Correction factor to offset filter cake and undetermined losses
15.81027 = Piouls per metric ton
BHR = Boiling house recovery using the S-J-M formula; where S = is the gravity purity of sugar manufactured. J = Purity of syrup assumed as one unit lower to the purity of first expressed juice. M = Gravity purity of final molasses assumed a constant 39.
PS = Polarisation of raw sugar manufactured.

Note: 1 Pioul is equal to 139.44 lbs.

The Pol. per cent first expressed juice of the individual cane consignment is multiplied by this factor to arrive at the percentage of recoverable sugar of the consignment. This is actually an available sugar formula used in conjunction with the Java ratio and the mill extraction to estimate the factor. In working out the boiling house recovery, a fixed gravity purity of 39 is assumed for molasses.

There is a second formula used by some Centrals worked on Walker's tables but modified by Eduardo R. de Luzuriaga and known locally as Luzuriaga's formula. He assumed 39 purity for final molasses when the first expressed juice purity is 86 but has introduced a variation in the final molasses purity according to the variation in the purity of the first expressed juice, by the following formula II: Final molasses purity $= 32 + \frac{100 - J}{2}$, where J is the purity of the first expressed juice.

This purity for final molasses is introduced in the SJM formula. He also assumes a distribution constant of 0.8 to cover losses in extraction, press cake and undetermined. His formula III is: Factor $= 0.8 \times 15.81027 \times BHR$. As in formula I, the Pol. of first expressed juice is multiplied by this factor to arrive at the recoverable sugar from the individual consignment. The boiling house recovery in this case is worked with the final molasses purity arrived at by formula II. It will thus be seen that both the formulæ adopted for arriving at the recoverable sugar depend upon the boiling house recovery of the particular factory. The recoverable sugar so calculated is distributed between the Central and the grower according to the terms of the milling contract.

It is recognised by both growers and millers that evolving a complete fool-proof system for determining the recoverable sugar for distribution is a very difficult problem; but what is being done seems to satisfy both the parties and the system is working fairly satisfactorily in the Philippines. It may be stated here that periodical stock taking will reveal any over distribution. We were informed that such cases rarely arise.

The main importance in this scheme is thus based on the sampling and analysis of the first expressed juice. There are found many methods and innovations for the former from hand sampling to automatic mechanical samplers. There is also the question of adequate supplies in one lot. Lots of anything less than 50 tons are discouraged. Again, the Centrals themselves transport cane from the fields to the factories. Cane sampling and analysis stations are situated close to the milling stations. A growers' chemist is often associated along with the Central's chemist for sampling and analysis.

We may mention here that the growers are allowed free storage upto 90 days their share of sugar in the factories' godowns after which they are charged rent for warehousing. The growers either themselves sell their sugar, or the factories, in some cases, undertake to sell the sugar belonging to growers. In this sugar distribution, the growers should naturally have a share in the molasses produced also. Upto 60 per cent of the molasses produced is also distributed to the growers. Those Centrals having their own distilleries buy up the growers molasses at the ruling prices.

There is strictly no payment for sugarcane in Hawaii, as the factories have their own plantations and there are practically no individual suppliers.

Louisiana

In Louisiana, we have the concept of a standard sugarcane. Sugarcane whose normal juice contains 12 per cent sucrose is classified as a standard sugarcane. A basic price for this standard sugarcane is statutorily fixed by the Secretary, United States Department of Agriculture, taking into account the ruling price of sugar in the New York market, which he normally pegs around 6 cents per lb. raw value. This basic price shall be $1.06 per ton of cane, if the raw sugar price is 1 cent per lb. Thus, when raw sugar sells at 6 cents per lb., the price per ton of standard sugarcane will be $1.06 × 6 or $6.36. The selling price of sugar is the weekly or the season's average selling price of sugar as adopted by factories from time to time with the approval of the Secretary of Agriculture. In arriving at the selling price, a freight difference of $0.03 cents per lb. is added or subtracted according to the zone where the factory is situated. The country is divided for this purpose into three zones. In one zone, there is no freight differential benefit. In the other two zones, there is an addition or a subtraction as indicated above.

A standard ton conversion table as shown in Table I on page 308 is published by the U.S.D.A. Agricultural Stabilisation and Conservation Committee and elaborate instructions are given for sampling, testing and reporting procedures to be followed under Sugar Act determinations.

The normal juice sucrose has to be determined to arrive at the standard cane sucrose factor. For this the crusher juice of the different consignments of cane are first analysed. The normal juice Brix is arrived at by multiplying the crusher juice Brix by factor 0.97, or this factor is determined by dry milling. The purity of the diluted juice is multiplied by the normal juice Brix to arrive at the normal juice sucrose. Against this normal juice sucrose is read the corresponding standard sugarcane quality factor from the above Schedule. The trash free net sugarcane weight is

MR. AL FOIL GIVES A LIGHT
"Delightfully fresh, my Lady Nicotine . . . just as I like her."
"Naturally," replied Mr. Foil with a knowing smile, "these are the virtues of the lady in question. Think of the protection she enjoys. Snugly wrapped in aluminium foil from tip to toe, the flavour of her tobacco, the freshness and fragrance are sealed within. Her foil wrap, as decorative as mink, protects her from dirt too. Sufficient reasons you'll agree, sir," finished Mr. Foil, "for the lady to insist on a foil wrap, whether she comes to you as a pipe smoke or a slender cigarette!"
Fifty seven years' experience as Manufacturers of Aluminium Foils for packaging goods in the Cigarette, Pharmaceutical, Confectionary, Tea and many other industries.

multiplied by this factor and, finally, this adjusted quantity is multiplied by the purity factor provided in the table shown in the determinations. This finally will be the total tons standard sugarcane to be paid for at the prevailing rates as already described above.

In these determinations, trash is to be accurately estimated and only trash free cane is taken as the net cane for multiplying by the quality factor. If the consignment of sugarcane is not big enough for sampling in the mill crusher, a sample laboratory mill could be used to determine the analysis of a small sample of the consignment. But correlation factors are to be worked out to convert the lab mill Brix to the crusher Brix.

An important aspect under the Sugar Act Determination in Louisiana is the deduction permitted for excess acidity resulting from freeze damaged cane as per Table II; this is not a deduction in weight but is a percentage deduction on the normal payment to be made.

Thus we find here that a cane with a higher sucrose in normal juice gets a premium over the standard cane and one with a lower sucrose content gets penalised. This will certainly give an incentive for better husbandry by planters. The penalties for the freeze affected cane is only to make the grower also share a portion of the losses on account of frosts, as this is an usual occurence in Louisiana during the crushing season. As a matter of fact, due to this, the growth period and the crushing season are both very short in Louisiana.

U.S.A.

Next we have in the U.S.A. a conditional payment to growers of sugarcane by the Government. This conditional payment has three objectives: (1) To help give growers adequate income from sugarcane and sugar beet production; (2) to assure growers and their field workers a fair share of the returns to the sugar industry; and (3) to prevent the employment of child labour in field work. This conditional payment is on a sliding scale system. The basic rate is 0.8 cents per lb. of raw sugar and is paid on the first 350 short tons produced. There is a progressive reduction in the rate as the volume of commercially recoverable sugar contained in the cane increases. This payment may be withheld if it is proved that the grower has violated the clauses of the Agricultural Act dealing mainly with the minimum wages and the non-employment of child labour.

The processor or the factory pays the grower an amount equal to the product 6.7 gallon times one half of the average price per gallon of molasses in excess of 6 cents for each ton of net sugarcane. Salvaged sugarcane and cane affected by general freeze are exempted from this molasses share.

Puerto Rico

Puerto Rico is an independent Republic in the Commonwealth of United States. It has close ties with the U.S.A. in both political and economic fields. Payment for sugarcane is, therefore, regulated by two administrative bodies—(1) The Sugar Board of Puerto Rico i.e. (S.R.) and (2) A body constituted by the Sugar Branch, Commodity Stabilisation Service of the U.S.D.A. (C.S.S.). Both bodies act together without any conflict. Generally the growers and processors or millers conform to the regulations of the two bodies.

A grower supplying cane can at his option receive his share of the sugar either in kind or its equivalent cash value. But he has to make his choice well in advance of the beginning of the season. Recoverable sugar is calculated from the analysis of the first expressed juice of the particular cane consignment. The formula used is as follows:

96 per cent. yield or recoverable sugar = (S—0.3B) F, where

S = Pol. of first expressed juice.
B = Brix. of first expressed juice.
F = Factor determined by substituting the average results for the liquidation period.

Where inferior or trashy cane is delivered, the above formula is modified as follows:

96 per cent. yield = T[(S—0.3 B) F', where

T = Trash correction factor which varies inversely with the amount of trash contained in cane, from 1.0 for cane which contains an amount of trash not in excess of 5 per cent. to 0.90075 for cane containing trash in excess of 16 per cent. on the gross weight of sugarcane.

I = Inferior sugarcane correction.

S, B and F are as above.

Table III is published as SD 877.11, Federal Register of 1/No./59—Commonwealth Law No. 426 of 1951.

Intermediate points in the above are to be interpolated to the nearest one-tenth point. For cane below 9.0 yield, the Commodity Stabilisation Service allows a minimum charge by the processor. But the Sugar Board prescribes a minimum share of 63.5 per cent to the grower. Accordingly, by referring to this table, the percentage distribution to the grower can be arrived at either according to the CSS or SB schedule, whichever the grower and the factory have agreed to adopt prior to the commencement of the season. There is only a slight difference between the two schedules. If the grower chooses to receive cash value for his sugar, the net price is determined on the average New York price for the 12 month period January to December less costs for transport and selling. We thus find in Puerto Rico the supplier of a better quality cane gets a premium. Costs of sampling trashy cane is charged to the grower either in whole or in part where the trash tolerance limit is exceeded.

Both the administrative bodies, the CSS and the SB, provide for cash payment to growers of 66 per cent of the net proceeds per gallon of molasses in excess of 5 cents per gallon times the gallons of final molasses per ton of cane. Expenses incurred in transport and selling are to be deducted in calculating the net proceeds.

It is thus seen that there is some form or other device for estimating the quality of cane supplied by growers for purposes of payment. The growers would certainly respond to proper incentives which directly affect their payments by better husbandry, provided these incentives reach them without being lost in procedural formalities. The feeling is that individual load identity is better than a few stalks for arriving at the quality. But any system of payment resorted to should aim at reduction of man-hours. It is estimated that it should not be more than 0.1 man-hour per ton (2,240 lbs.) per 24 hours.

Rising steel production requires more and more vital raw material, iron and manganese ore, limestone, coal, dolomite, and refractories... New plants need essential water treatment processes... Agriculture requires tubewells in greater volume... the country's growing markets demand more jute products; paper, electricity, steel structurals and castings. And the Birds/Heilgers group is always there to spur their production... to meet these demands. But expansion doesn't stifle achievement. Nearly a hundred years of experience and research continues as Birds strive harder to bring you better products and better materials to keep pace with India's fast expanding economy.

IRON AND STEEL PRODUCTION IN W. EUROPE

E.C.S.C.'S REPORT FOR 1960 HIGHLIGHTS TRENDS

THE European Coal and Steel Community (covering West Germany, Belgium, France, Italy, Netherlands and Luxembourg) established a number of records in 1960 in so far as the iron and steel industry was concerned. First, the Community's production of crude iron ore was 95.8 million metric tons in the year under review, as compared with 65.3 million tons in 1952 and its imports of ore from third countries was 25.4 million tons in that year, as compared with 12.6 million tons in 1954. Secondly, production of pig iron in the Community amounted to 54.3 million tons in 1960 (of which 50.8 million tons represented consumption by the steelworks themselves), as compared with 41.0 million tons in 1955; the 1960 production was obtained from 409 blast furnaces and a small number of electric furnaces and it represented a 95 per cent utilisation of capacity. Thirdly, the consumption of scrap by the Community's iron and steel industry in the year under review amounted to 32.6 million tons (of which 19.1 million tons represented steelworks' own raisings and 13.1 million tons recovery from the Common Market), as compared with 24.9 million tons in 1955. And, fourthly, the Community's production of crude steel in 1960 was 72.8 million tons, as compared with 52.6 million tons in 1955; the rate of utilisation of steel production capacities in the Community as a whole in the year under review was 98.1 per cent, as compared with 95.7 per cent in 1955. These figures pertaining to the performance of the iron and steel industry are contained in the Ninth General Report on the Activities of the Community covering the period 1st February 1960—31st January 1961.

The Report has also provided a world picture—but only in respect of crude steel production. According to it, the 1960 production of crude steel in the Community represented 21.3 per cent of that year's aggregate world production of 342 million tons. This compared with the Community's 1952 production which represented 19.7 per cent of that year's total world production of 212 million tons. Crude steel consumption per head of population in the Community is, however, still well below that in the United States. If we exclude indirect imports, it is no higher than in the U.S.S.R. The following table presents the comparative picture of production in somewhat greater detail:

Production of Crude Steel (1952-60)

(In '000 metric tons)

Country	1952	1960 (Provisional)
West Germany	18,629	34,100
Belgium	5,170	7,171
France	10,587	17,294
Italy	3,535	8,219
Luxembourg	3,002	4,954
Netherlands	993	1,940
Total Community	41,896	73,808
United Kingdom	16,681	24,694
United States	84,521	90,047
U.S.S.R.	34,492	65,000
Eastern Europe	11,225	20,400
Japan	6,988	22,143
China	1,350	18,000
Other countries	14,847	23,906
Total World (estimated)	212,000	342,000

Some other interesting facts emerging from the Report also call for mention here. One fact is that, in 1960, the Community's production of crude steel by electric furnace process amounted to 7.5 million tons, as compared with 3.1 million tons in 1953. Another fact is that the Community's production of high-grade and special steels in the first nine months of 1960 amounted to 5.5 million tons, as compared with 4.1 million tons in the whole of 1955. Thirdly, the figures regarding the Community's production of finished steel by types of product are given below:

(In '000 metric tons)

Type of product	1952	1960 (first 11 months)
Permanent way material	1,432	1,284
Heavy sections	2,723	3,678
Light sections	10,033	13,309
Wire-rod	2,844	4,937
Tube seals	973	1,808
Hoop and strip	2,273	4,245
Plate 3 mm. and over	4,285	7,189
Sheet under 3 mm.	3,947	9,439
Coils (finished)	3	623
Total ..	28,515	46,546

A fourth fact is that the Community's steel exports to third countries in the first nine months of 1960 aggregated 9.9 million tons, as compared with 7.4 million tons in the whole of 1954. Fifthly, the Community's imports of iron and steel products from third countries aggregated 2.2 million tons in the first nine months of 1960, as compared with 0.9 million tons in the whole of 1954. As for steel export prices, the trends may be noted from the following figures:

(In dollars per metric ton)

Product	Community		U.K.		U.S.A.	
	May 30, 1953	Jan. 1, 1961	May 30, 1953	Jan. 1, 1961	May 30, 1953	Jan. 1, 1961
Merchant bars ..	93	100	96	113	105	134
Sections	93	94	105	109	104	132
Plate	115	99	127	115	104	127
Sheet (cold-rolled) ..	147	148	128	145	134	157

The schedule prices of most steel products in nearly all the six countries of the Community remained below the British and American home prices. Since the introduction of the Common Market, the average steel prices have, in general, shown greater stability in the Community than in the U.K. and the U.S. In terms of a constant rate of exchange, they rose by only 4 per cent in the Community, as against 18 per cent in the U.K. and as much as 40 per cent in the U.S. Over the same period, the general wholesale price index for industrial products rose in the Community (likewise in terms of a constant rate of exchange) by 8 per cent. The Community is successfully maintaining its competitive position in the world markets, for its prices of almost all products are substantially below the British and American. But competition from Japan, it is stated, is becoming increasingly keen.

In the context of plans in India for some independent pig-iron production, the Report's comments on the position of independent blast furnaces in the Community may be followed with interest. These comments are to the effect that the position of the independent pig-iron producers remains precarious, for even peak requirements of steel-making pig are being met more and more by the installation of extra capacity at the integrated works, and that they have to fall back purely on the production of foundry pig, in which sector demand is, however, stationary and imports are on the increase. Here the Report has given the finding that, in consequence of their frequently demonstrated vulnerability and one-sided pattern of production, they are finding it exceptionally difficult to adjust themselves to present market conditions.

MINERAL AND METAL PRODUCTION IN 1960

The value of mineral production in India in 1960 increased to Rs. 159 crores from Rs. 141 crores in 1959, according to the provisional estimates released by the Indian Bureau of Mines. The value does not include petroleum and atomic minerals..

Coal, with an output of 52.6 million metric tons, was the leading commodity and was valued at Rs. 109 crores, representing about 68 per cent of the total value of mineral production. Next in order of value were manganese ore (Rs. 8.2 crores), iron ore (Rs. 7.7 crores), salt (Rs. 6.7 crores), gold (Rs. 5.7 crores), limestone (Rs. 5.6 crores), mica (Rs. 2.5 crores), copper ore (Rs. 2.4 crores) and ilmenite (Rs. 1.5 crores).

The production of iron ore reached a peak figure of 10.68 million metric tons. This marked increase in output was due to the higher internal and external demand. The despatches of iron ore for consumption in the domestic iron and steel plants rose to 7.23 million metric tons, recording an increase of 27 per cent, as compared with the despatches of 5.68 million metric tons during 1959.

As a result of large expansion in the domestic aluminium, refractory and chemical industries as well as of higher overseas demand, the output of bauxite reached the all-time peak of 384,000 metric tons, representing an increase of 75 per cent over the output in the preceding year.

The output of salt at 3.44 million metric tons and crude mica at 29,003 metric tons was higher, as compared with the preceding year. Consistent with the increase in internal demand, the output of limestone, dolomite and gypsum reached new peaks. The output of limestone was 12.7 million metric tons, recording an increase of 18 per cent over the previous year. In the case of dolomite there was an increase of 90 per cent in output while the output of gypsum was higher by 16 per cent as compared with 1959.

The State-wise analysis of mineral production indicates that Bihar was the leading State and produced minerals valued at Rs. 57 crores, which is 36 per cent of the total value of mineral production in 1960. Next in order of value of mineral output were West Bengal and Madhya Pradesh, their shares in the total value of mineral production in India being 21 per cent and 12 per cent, respectively.

The total value of metal production during 1960 was estimated at Rs. 195 crores, as against Rs. 155 crores in 1959, recording an increase of nearly 25 per cent. The increase was mainly due to higher production of ferrous metals which recorded an increase of Rs. 38 crores or 27 per cent, as compared with 1959. The production of finished steel increased from 1.8 million metric tons in 1959 to 2.2 million metric tons in 1960. The production of pig iron was 4.2 million metric tons, an increase of 35 per cent over the preceding year. The output of ferro-manganese at 86,000 metric tons was higher by 26,000 metric tons, as compared with 1959. In the case of non-ferrous metals the year was marked by record output of aluminium, antimony and copper.

ASHOK-LEYLAND'S NITRIDING PLANT

A nitriding plant, newly installed at the Ashok-Leyland factory at a cost of Rs. 1,00,000, is able to impart to crankshafts about twice the hardness of a normally hardened and tempered steel shaft. The new plant, which also makes the crankshaft twice as strong in its resistance to fatigue, consists of a 58 kw. cylindrical furnace complete with temperature control gear capable of treating 20 crankshafts at a time.

From long experience, it has been found that the rate of wear of this type of crankshaft is less than 0.001 in. per 100,000 miles, regrinds being rarely required under 250,000 miles. This low wear becomes even more significant by the fact that five regrinds are permissible in stages of 0.010 in. each. After the second and fourth regrind, the shaft is again nitrided.

All crankshafts for Leyland vehicles are nitrided and the nitriding plant now installed in the Ashok Leyland Ltd. provides another instance of the progress made by the Company not only in its manufacturing activities but in providing operators with basic essentials for low operating costs and maintenance charges.

U.K. STEEL INDUSTRY'S PLANS

The British steel industry is engaged upon a programme of unprecedented technical innovation and expansion. Its plans for meeting the demand of the mid-sixties are given in a booklet just issued by the British Iron and Steel Federation in London. According to the booklet, productive capacity by the mid-sixties will be about 34 million tons. Capital expenditure in 1960 was at the record annual level of £146 million and may be about £200 million this year.

The best estimate the industry has been able to make of future prospects is that demand in the mid-sixties may be about 30 million ingot tons—25 million ingot tons for the home market and 5 million tons for direct export. It may be recalled here that home consumption last year was 20.3 million ingot tons while exports amounted to 4.3 million tons.

NEW PRODUCTS AND PROCESSES

New Flooring Materials

TWO new flooring materials, one based on a polymer emulsion and the other on epoxy resins, have been introduced by the Stonhard Company Ltd., a member of the Berger group of companies of Britain. They are claimed to extend greatly the range of applications of the firm's flooring products. The polymer flooring is said to be immensely hard wearing and resilient and to have a high resistance to attack by oils and moisture. The epoxy flooring, while having similar durable properties, has been developed for applications where it must withstand the destructiveness of corrosive chemicals. Stonhard, as a flooring specialist, reserves the right to advise the customer on what is the best type of flooring for him and to make the actual installation itself. Whereas the firm does not hesitate to admit that the new materials are expensive in themselves, it states that the ease and quickness of their installation more than compensates for the initial cost and leads to a great saving in production time lost while the floor is relaid. The polymer flooring is capable of being laid as a concrete overlay at a thickness as low as ¼ in. The polymer emulsion, mixed with cement and granite, is used as an adhesive, which avoids the necessity for hacking and keying. The epoxy flooring contains no cement—the resin is mixed with a specially graded sand—since it is cement which breaks down most quickly under chemical attack. Both types of flooring can be supplied in a variety of colours.

New Labelling Machine

The normal method by which a semi-automatic labelling machine applies a label to a container is by pressing the gummed label onto the container from the top or from the sides by one or two press or wiping movements and in some cases, a rubber roller is employed. Faced with the problem of applying a label, gummed all over, to the top, side and bottom of a flat box, Purdy Machinery Company, Ltd., decided that this could best be achieved with a suitably modified version of their semi-automatic "Universal" machine. The problem posed was for the end sealing, with one size of label, onto boxes ranging from 17⅞" x 14⅝" x ¾" down to 3.13/16" x 2⅛" x ¾", gumming the surface of the label all over and thus providing a complete and unpilferable seal. Modification therefore, was made to the feed and wiper mechanism whereby a top and right angle press for the box together with an under wipe for the underside of the label was carried out simultaneously. The complete box size range is covered by only one adjustment on the machine. This takes the form of an adjustable guide which centralises the labels to the varying box sizes. Adjustment is a matter of seconds only. Speed of operation is naturally governed by that of the operator but speeds upto as many as 150 dozen boxes per hour can be achieved by a competent operator. Purdy tell us that to the best of their knowledge, this is the first time that a mechanism capable of carrying out these three pressings simultaneously, has been achieved by any manufacturer of a semi-automatic labeller.

Cheap Method for Acid Recovery

Hydrofluoric acid is used for many industrial processes. It is a comparatively expensive raw material. This creates problems not only in costing processes but also in the fact that the acid must be removed from the industrial effluent. A process has been developed in the U.K. which, it is claimed, not only facilitates the removal of hydrofluoric acid from industrial waste but also lowers the costs for anhydrous hydrofluoric acid. The operation of the process depends on the use of a special "pulsed column" in which the hydrofluoric acid solution in water is brought into contact with an amine. The amine takes up the acid and a little water. The water taken up by the amine is then removed by means of a "flash" evaporation process and by fractional distillation. A further process at a higher temperature is then used to separate the hydrofluoric acid from the amine. The process has the advantage that the amine can be used again since it is continuously returned to the bottom of the pulse column.

New Plating Process

An electrolytic plating technique developed in France is said to produce unusually adherent coatings. The article to be coated is first connected to an electric current supply and then immersed in a bath that includes an oxidising agent and a suitable compound of the metal to be deposited. Current is passed for less than a minute, during which time the surface of the article is coated with an oxide layer no more than a few thousandths of a millimetre in thickness. After the current has been switched off, the article is left in the bath for about an hour. When it is removed, it is coated with a thick layer of the metal previously selected for deposition. The company concerned claims that the process can be used for coating a large range of metals and alloys, but the technique is especially suited to those that are readily oxidised.

New Dumpsters for Ready-mixed Concrete

Efficient transportation of liquid concrete is a great asset to the construction engineers at factory and building sites. Keeping this in mind, the Premier Automobiles have developed a concrete dumpster to be mounted on their Dodge and Fargo 119" w.b. diesel truck chassis. The dumpster has an all-steel, welded container which can carry 2½ cub. yards ready-mixed concrete. All sides and corners of the container are radiused to prevent sticking of concrete. It has a "Telehoist," under-body, tipping mechanism operated hydraulically from driver's cabin with all controls conveniently located in the cab within driver's easy reach, which means the entire process of carrying and dumping the concrete in plastic condition is done by only one man. A great economy and time-saving feature! The 'half-egg' like shape of the container, with a narrow mouth, enables easy discharge of the contents on the site. Two of these dumpsters have been recently supplied to Messrs. Lummus & Co., Construction Engineers for Synthetics and Chemicals Ltd., Bareilly.

Plastic Milk Bottles

For an experimental period, housewives in various parts of the Netherlands are to have their milk delivered in plastic bottles. These are made from polypropylene and manufactured by a Dutch firm on an extrusion machine of its own design. Several advantages are claimed for the new plastic bottles. They are much lighter than the corresponding glass bottles and noise during stacking and transport is greatly reduced. With an average life of 400 fillings, they are also practically unbreakable and therefore safe to handle. Lastly, since their height and dimensions are the same as those of glass bottles, dairies can continue to use existing filling, cleaning and sealing machines.

New Method of Treating Wood

Treatment of greenwood with a chemical developed in the United States allows the wood to be worked without seasoning and without danger of later warping, shrinking or swelling, it is claimed. The chemical diffuses into the greenwood, replacing the natural moisture and filling the pores so that additional dampness is not absorbed. Only slight effect on the colour and working and glueing characteristics of the wood is said to result from the treatment but it does affect its reception of ordinary surface finishes and only resin-based varnishes can be used.

Robot to Help the Miner

A robot with its own built-in power supply is being developed as a by-product of fuel research work at Sheffield University. The robot could be used in working conditions dangerous to man, such as putting out fires in hot smoky conditions or mining and shovelling coal in seams too narrow and deep for miners. Professor M. W. Thring, head of the Fuel Department at Sheffield University, explained how the robot works. Its course of action is a simple chart which it scans through photoelectronic cells and impulses produced and then translated into directions to drive and steer. Prof. Thring said these impulses can also make the robot carry out set tasks at appropriate times with the aid of an electronic memory and to make corrections to the original chart from information gained on the journey.

Automatic Machine for Galvanizing

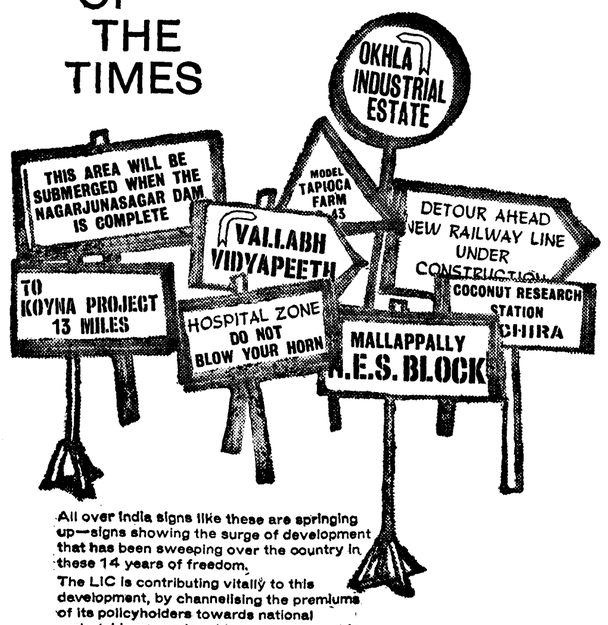
A Dutch firm has designed and started producing an apparatus which automatically performs the whole cycle of operations, namely, suspension and removal, electrolytic degreasing, cold-rinsing, acid bath, cold-rinsing, galvanizing (or cadmium- or nickel-plating), cold-rinsing, passivating (or acid bath), cold-rinsing, decolourising (or chromium- or brass-plating), cold-rinsing and finally hot-rinsing. The automatic machine has a diameter of 13' to 19½' is 8' high and divided into 16 sections. Sections 6 to 10 form one large bath in which the actual treatment of galvanizing, cadmium- or nickel-plating takes place. The mechanism for the automatic transport through the baths and over the bath rims of the racks with the articles for treatment is centrally arranged. The baths are arranged in a circle round the automatic mechanism. A lift moves up and down a central stand. A turntable round this lift consists of vertical guide faces along which move the guides carrying the rods on which the racks are suspended. The lift carries along each guide supported on a roll on the lift. The guides are then transferred in a horizontal direction over the bath rim to the next position. This cycle of raising, turning and lowering is constantly repeated.

Electrolytic Engraving

A quick and economic method for engraving trade-marks, figures or letters on hard metals and alloys in their finished condition has been patented by the Council of Scientific and Industrial Research and released free to industry. The new process has been developed at the National Physical Laboratory, New Delhi. Etching can be completed in about 20 to 30 seconds by this process. It makes use of a 12-volt battery for electricity supply. Alternating current can also be used. The process requires a heavy-duty stencil (waxed tissue paper) on which the trade-mark is stamped or typed, and a woollen felt pad in which electrolyte is soaked. The article to be etched is placed alongside the stencil, felt pad and the metal plate which complete the circuit. The available methods such as stamping or spark erosion induce undesirable stresses or involve lengthy operations.

ASP/LIC/58.16

THE SIGNS OF THE TIMES



All over India signs like these are springing up—signs showing the surge of development that has been sweeping over the country in these 14 years of freedom.

The LIC is contributing vitally to this development, by channelising the premiums of its policyholders towards national undertakings—undertakings which result in more schools, more hospitals, more roads, more bridges, more railway lines, more industries and more of everything that would ensure a good standard of living for its citizens. Thus, besides guaranteeing the financial security of an individual policyholder, the LIC is helping to erect signs of progress on the road to a better life.

Life Insurance Corporation of India

WORKERS' SUGGESTIONS IN INDUSTRY

OUTLINES OF A PRACTICAL SCHEME FOR INDIA

By Dr. J. L. Rastogi

A SUGGESTION scheme in industry is an integral part of any labour-participation programme. It is like a direct democracy in which all those constituting the firm are encouraged to offer useful suggestions. In a narrow sense it is a system whereby a firm's employees, particularly the lower grades, are encouraged to put forward ideas for improving production, equipment, handling, safety, precautions and so forth. However, the scope of a suggestion system is much wider. An opportunity is afforded to all those who can benefit the firm by using their patent and latent abilities, to help improve efficiency and production. They are also allowed to criticise freely managerial policies, decisions and actions, if they seem to be an obstacle to the firm's progress. Not only in routine matters, but even when any new scheme is chalked out or vital changes contemplated they are given a chance to express themselves. Appropriate awards are offered to those whose suggestions are found to be useful and accepted.

A suggestion scheme carries with it numerous advantages, which may not always be measured in monetary terms:—

1. As workers are allowed to offer suggestions for improvement in the working of the concern, its production, techniques and management, their latent abilities can best be utilised to benefit the firm.

2. Under such a scheme workers are free to criticise managerial policies and actions. Therefore, they can clear up their grievances, complaints and misunderstanding.

3. Such a scheme leads to better understanding on the part of the management of workers' point of view regarding production, equipment and management. Thus appropriate steps can be taken to ensure workers' co-operation.

4. Appropriate awards are given to those whose suggestions are accepted and prove beneficial. It provides a psychological satisfaction and encourages them to utilise their brain power also.

5. It broadens workers' outlook as they are encouraged to look beyond their own narrow specialised responsibilities and view the work as a whole. It leads to better understanding of firm's needs, problems and policies by the workers.

6. A suggestion scheme thus brings the parties closer, and better understanding on the part of employers and workers paves the way for harmonious relations and industrial peace, greater efficiency, low cost of production and better earnings.

Western Experience

With the growing appreciation of the benefits of a suggestion scheme, particularly in increasing productivity and reducing industrial tension, it has been recognised as an important aspect of industrial relations in the West. Each concern has its own well defined suggestion scheme. Eligibility, sphere for suggestions, procedure for measuring their effectiveness and method of calculation of awards have been clearly laid down to reduce confusion.

Generally only the workers are eligible to make suggestions. Supervisors and managerial cadres have been excluded from the jurisdiction of the scheme but they help the rank and file to express its ideas. However, with the recognition of highly specialised nature of work, supervisors and foremen are also being allowed to express their own ideas subject to certain limitations.

Generally the scope of such a scheme extends to suggestions for improving production, technique and equipment. But a suggestion to qualify for an award "(a) must not come within the scope of the person's ordinary duties; (b) must not be a repetition of an idea previously put forward either by the firm's planning office or by another suggestion. Some firms also specify that it must not come within the sphere of matters to be negotiated between the management and the unions." (Quoted from 'European Productivity' No. 33, October 1959, P. 6). Ordinarily, workers have no right to criticise management, its policies, decisions and actions. However, cases are not uncommon where proposed new methods on changes in manufacturing technique have been widely publicised to gain from workers' knowledge and experience and to ensure their co-operation.

Suggestions are to be offered on prescribed forms obtainable free. But these can also be given on any piece of paper. Each suggestion must be clearly signed by the author. The name of the suggestor is kept confidential if he so desires. For the convenience of workers suggestion boxes are placed near at hand. In certain firms suggestions may be given to foreman, or the officer concerned personally.

Each firm prescribes a set procedure for analysis and investigation of various types of suggestions. Usually a separate officer is given the responsibility of operating the scheme. Suggestions are collected periodically once or twice a month, and each of these is allotted a separate number. These are placed before the firm's suggestion committee comprising of production manager, head supervisors and an adequate number of workers' representatives. Sometimes, in bigger firms, the suggestion committee has a number of sub-committees to deal with different types of suggestions. These are then referred to appropriate departments to judge their effectiveness and the probable savings if adopted. After due consideration these are returned to suggestion committees with proper recommendations. In case any suggestion is not adopted the reason thereof is promptly communicated. Sometimes, such a suggestor is also granted an interview and is convinced of the reasons for its rejection.

Fitting Awards

Workers whose suggestions are accepted are offered appropriate awards as a token of their knowledge, ability and service to the concern. Sometimes nominal awards have also been granted for suggestions not acceptable as a recognition of initiative and efforts on the part of workers. When economy can be measured usually, award is a certain percentage of annual estimated saving. But in cases where monetary benefits cannot be directly assessed fixed awards are granted. In Germany, in cases where economic benefits can be measured, awards generally vary between 6 to 25 per cent of the amount annually saved. In certain German firms suggestions are classified on the basis of their effectiveness and awards are made accordingly; while in others, a point system has been made use of in calculating awards. In Arther Martin Co. (France), for the purposes of determining the quantum of awards, personnel covered by the suggestion scheme have been divided into (a) workers and junior staff and (b) technicians. While the former get 25 per cent of the annual savings due to their suggestions, the latter are entitled to only 10 per cent of such economy. However, for product development, office award is given on a descending scale of 10 per cent to 3 per cent according to the type of the suggestion.

In Sulzer (Switzerland) award is generally 15 per cent of the gross saving or 25 per cent of the gross saving less development costs whichever is smaller but it, in no case, can be less than 20 and more than 5,000 swiss francs. In Lucas Factories (England) the suggestion committee may award upto £100 for any adoptable suggestion. Merit awards may also be given for suggestions which, though not adopted, reveal careful and ingenious thinking.

Adopted suggestions are periodically reviewed by the Committee and, if original calculation is found to be inadequate, a supplementary award is generally recommended. Besides regular awards, additional prizes are given by certain firms to those offering a few best suggestions of the year. Sometimes annual suggestion competitions are also organised, accompanied by valuable prizes.

Success Achieved

Suggestion schemes in the West have fairly succeeded in increasing productivity and improving industrial relations. Although suggestions have been put forward for improvements in production, techniques, material and equipment handling, transport arrangement, amenities and welfare, suggestions relating to production have been more effective. In fact, workers have greatly aided in introduction of day-to-day rationalisation in industry. Very often their suggestions have afforded a saving of thousands of dollars every year. Even in cases where direct measurement has not been possible, "there is evidence of an 'invisible' but progressive activity which expresses itself in greater care of plant and tools, economy in use of consumption articles, improvement of minor details, higher average quality of manufactures, etc." (Quoted from 'Report of the Study Group on Worker Participation in Management, 1957,' P. 27).

In spite of the importance of the suggestion system in an enterprise, it remains a neglected aspect of industrial relations in India. While an increasing attention is being paid to joint consultation around the table, a beginning is yet to be made in this direction. Workers in our country are still regarded as a marketable commodity. Their role as responsible and co-operative agents has not been recognised. Even where employers have tried to introduce any such scheme, due to illiteracy and ignorance it has been generally opposed by the workers themselves.

Any scheme of labour participation in management is incomplete unless it is accompanied by a well planned suggestion scheme. In a country like India, where industrial relations are marked by frequent disputes, workers are illiterate and unorganised and management largely unenlightened, initially a suggestion scheme on an elaborate scale cannot be a success. The Indian Labour Conference should lay down broader principles and a model scheme for guidance. Within this framework each concern should lay down its own scheme according to its needs and circumstances. The purpose, scopes, benefits and features of a suggestion scheme should be clearly defined.

The suggestion scheme should have the active support of the management. The plan should be open to all types of personnel including foremen and supervisors. They should be allowed to offer suggestions on all matters which are of direct concern to them or are likely to lead to an improvement in production, technique and welfare. A certain person should be entrusted with the responsibility of operating the scheme. Suggestion boxes should be placed at short distances and special forms should be provided for the purpose.

Avoiding Delay

A definite procedure for consideration of workers' suggestions should be prescribed and a time limit for each stage should be fixed to avoid delay. Suggestion boxes should be emptied every week and the receipt of a suggestion should be immediately acknowledged. It should be placed before a joint committee of management and workers' representatives within 15 days. In a bigger concern there may be separate committees for dealing with different types of suggestions. If any suggestion calls for an expert opinion, it should be handed over to the appropriate department to judge its effectiveness and probable economies. Ordinarily such an investigation should not take more than two months.

For maintaining interest in the suggestion scheme and encouraging more and more workers to offer suggestions, the competence and efforts of those offering useful suggestions should be properly and adequately recognised. Every suggestion scheme should lay down a scientific award structure. These awards may be in cash and/or in kind. Where the probable savings can be directly measured award should be a percentage of these. However, varying percentages of awards may be prescribed for different kinds of suggestions according to their effectiveness and types of personnel making them. In cases where economies cannot be measured, fixed awards may be laid down.

Persons offering meritorious suggestions may also be provided with additional benefits like holidays with pay, better educational and training facilities, visits and excursions to religious and industrial cities, etc. However, to ensure fairness, working of each suggestion and actual economies should be periodically assessed by the factory suggestion committee and additional awards may be allowed to make up the deficiency, if any.

Moreover, in order to maintain workers' interest in the scheme, frequent suggestion competitions should be organised. Prizes for a number of best suggestions should be declared fairly in advance and be displayed at some convenient place within the factory.

A suggestion scheme cannot be effective unless workers are well-informed of their task, technique and equipment of production, financial standing of the concern and its special needs and problems. Thus they should be provided with all such information except what is likely to affect the firm adversely.

Besides, in order to make workers suggestion-conscious, the scheme should be given wide publicity within the works. Audio-visual media may be beneficially made use of. Attractive posters would go a long way in maintaining workers' interest in the scheme and inducing them to offer useful suggestions. The progress of the scheme, the number of effective suggestions made, probable economies and likely benefits to the employees should be frequently communicated to the rank and file through the factory news-bulletin or periodical progress report.

The progress of the suggestion scheme should be periodically reviewed by the Standing Labour Committee and the Indian Labour Conference. Besides, frequent seminars should be held to pool experience and solve difficulties.

...And all you do is turn the key!

TURN-KEY JOBS are a speciality of LARSEN & TOUBRO LIMITED. From the design and construction of buildings to the supply, erection and commissioning of plant and equipment, L&T can do the job for you.

LARSEN & TOUBRO LIMITED represents some of the world's foremost manufacturers of plant and equipment in every branch of engineering. L&T's own manufacturing programme at its Powai Works embraces a wide variety of equipment. The Company's qualified engineers and first-rate service stations ensure effective after-sales service.

With its ten Divisions and several subsidiary companies, LARSEN & TOUBRO LIMITED is in an excellent position to undertake turn-key jobs, including all design work, civil engineering, and the supply and erection of equipment.

STATE BANK OF TRAVANCORE

(Subsidiary of the State Bank of India)

Head Office: **TRIVANDRUM**

OFFERS INCREASED INTEREST RATES ON DEPOSITS

as under with effect from 1st April 1961:

SAVINGS BANK DEPOSITS .. 3% p.a.
FIXED DEPOSITS .. .. from 4% to 5%

Full particulars can be obtained from Head Office or the nearest Branch.

As a subsidiary of the State Bank of India we have agency and drawing arrangements with all branches of the State Bank of India and their seven subsidiaries.

ALL TYPES OF INTERNAL AND INTERNATIONAL BANKING BUSINESS TRANSACTED.

T. R. KRISHNASWAMI, *General Manager*

THE CONTEMPORARY CORPORATE SCENE IN INDIA—I

BROAD TRENDS OF CORPORATE GROWTH

By Dr. Raj K. Nigam, Ph.D. (Econ.) (London)

TODAY, the activities of the corporate sector in our country are as broad-based and diversified as they are seen to be in the economic life of the communities in the industrially advanced countries of the West where the productive and distributive agencies and financial institutions of the national economy have not passed under the ownership and control of the State and the citizens are free to initiate and develop industrial and business ventures individually and collectively according to their likes and resources. It is possible that, in these countries, outside the communist orbit, there might be economic laws which gave powers to the State to exercise a certain degree of surveillance over the private business. Today, even in the countries where the tenets and principles of capitalism still inspired the people to some extent and were accepted as fundamentals of business philosophy, the State is no more a bystander, watching over the activities of the private entrepreneurs passively and ineffectually. Instead, the State in those countries has armed itself with a very wide range of substantial powers to curb the exploiting tendencies of the private business and to so direct its operations that the society's welfare is steadily bettered and advanced.

In fact, the world has travelled a long way from the days when capitalism was the sole economic system prevalent in the world and when the doctrines of mercantilism and *laissez-faire* provided inspiration for the people and the governmental authorities, far from prescribing any strains and rigours for the business sector, most generously and freely responded to the requests for grant of special privileges and positions to the private entrepreneurs and trading communities which strengthened their economic status and well-being. The State was indifferent as to how the wealth accumulated in the hands of a few rich people while the economic status of the vast majority of the people remained unaffected at low levels. The State was quite satisfied with the fact that the nation as a whole became rich materially in terms of gold and treasures imported into the country in exchange for the wares and goods manufactured in the country. This policy of non-intervention in private business or of giving positive help to a few selected individuals created large pools of money in the hands of the rich core of the society and some resourceful and enterprising persons of this section in England thought about the idea of creating the institution of joint-stock companies which, within a short space of time, became powerful engines of industrial revolution and development all over the world and remained so till recently when some countries crossed the hinterland of capitalism and free economy and entered into the orbit of communist and collectivistic countries. The impact of the system of joint-stock companies has been so great upon us that, without the products and services of the corporate bodies, it is just inconceivable to think of the smooth functioning of the economic life of any country of the world today, even if it were comparatively a backward country steeped in traditional age-old pursuits.

Historical Perspective

The economic life of the people today is quite different from the one which prevailed 50 or 100 years ago, when the products of cottage industries were predominantly used by the people; and, as time moved onwards, with the progressive widening of the industrial activities in the western countries, particularly in the U.K., the people in our country started using machine-made goods turned out of factories, established, controlled and run by corporate bodies. Besides, a small beginning was also made in the direction of developing varied kinds of industrial goods in the country. The cumulative effect of this development has been that, today, an overwhelmingly large proportion of the industrial economy of the country is controlled and run by joint-stock companies, as compared with the importance enjoyed by joint-stock companies in the fifties of the last century when these were transplanted into this country as a result of the passing of the first Indian Companies Act in 1950. In the beginning in our country, the joint-stock companies were used as a device for raising capital for only such industries as tea, coal mining, jute and cotton textiles mills. Apart from these, some companies were also formed for banking and trading purposes. Alongside the indigenous companies registered under the Indian Companies Act, there were also some sterling companies incorporated in England which were predominantly concerned with tea plantations, coal mining, jute mills in this country. The whole range of industries such as chemical and engineering industries, food industries, textile other than cotton and jute manufactures, leather and leather products, iron and steel and non-ferrous metals, manufacture of transport equipment including repair, assembly and manufacture of ships, boats, railway equipment, bicycles, motor cars, aircrafts, coach building, etc., petroleum, cement, paper, plastics, photographic and optical goods and many other lines of manufacture and services as are today undertaken by joint-stock companies were either not conceived of at all at that time or could not be developed in the country as sufficient advance had not been made then in the scientific technology pertaining to these new industries. Besides this, the apathy of the alien rulers also tempered the growth and development of industries in the country. But more than the lack of interest of Government, it were the lack of faith of the country's entrepreneurial class, for a long stretch of time, in modern institutions and methods of production and the backwardness of the Indian people who unquestionably obeyed certain ancient laws, taboos and totems which were responsible for delaying the working of the process of large-scale industrialisation in the country, and placed the country behind the other industrially advanced countries of the West by at least fifty years, if not more. But, during the last decade, under the spur of the Five-year Plans, this ungratifying time lag has been narrowed down so much so that what the advanced countries of the West do today, we are able to adapt the same in our country with a time lag of five years or so.

Stimulates Industrialisation

But, notwithstanding all this, it is to be recognised that the adoption of the device of joint-stock companies in our country in the latter half of the last century liquified the hoarded wealth and attracted it for investment in industrial stocks and shares. The initial prosperity of the pioneer companies and the absence of corporate failures created deep impressions on the minds of the trading communities in the country who were further greatly emboldened in their business adventures by the tried commercial techniques of the foreign business community in the country which organised managing agency houses to run the industries. The contact with the foreign managing agency houses, which were concentrated in Calcutta, was a decisive factor in so far as it brought out a larger and larger number of Indian businessmen and traders into the open industrial field. Other boosting pressures responsible for the steady enlargement of the corporate sector were the growth and development of banking institutions, which loosened the physical hold of the people over their accumulated stocks of money, the economic compulsions introduced by the two World Wars, the growth of nationalistic sentiments in the country, the passing of the government of the country into the hands of the sons of the soil, etc. The complex patterns of forces, institutions and practices, aided by joint-stock companies, unleashed strong industrial forces in our country.

With the close of the fiscal year 1960-61, the joint-stock companies in our country have completed a life of 110 since the passing of the first Companies Act in 1850 and of 103 years since the incorporation of the principle of 'limited liability' in the Companies Act in 1857. In this series of articles, it is proposed to periscope the changing face of the corporate sector during the century-long period ended with 1960-61. In this rapid review of the vicissitudes through which the corporate sector in our country has passed during the period of the last hundred years, we have principally utilised the data available in the two important publications issued by the Department of Company Law Administration, namely, *The Progress of Joint Stock Companies in India* published in 1955, and the *Corporate Sector in India* published early this year. We have, in addition, also utilised the valuable data contained in the publication *Managing Agencies in India—Basic Facts: First Round* and those contained in the Information Broad-Sheets issued from time to time by the Research and Statistics Division of the Department.

Extent of Coverage

According to the latest information available in the official reports, the corporate sector in our country at the end of 1960-61, comprised 26,108 companies whose paid-up capital totalled Rs. 1,724.6 crores. Between 4½ to 5 lakhs of shareholders are believed to have contributed this total capital pool and the average annual dividend income of these investors is roughly estimated to range between Rs. 75 crores and Rs. 100 crores. Here we may, however, mention that the figures of the numerical strength of the shareholding democracy in our country are indeed very confusing, as, in sharp contrast to the foregoing estimated number of shareholders in the country, given in the brochure *Present and Future Role of Shareholders' Association in India*, issued by the Department of Company Law Administration, some non-official quarters have placed the total number of shareholders at around two lakhs. The size of tax-paying investing community, according to the Central Board of Revenue, is still smaller, that is, about a lakh and a quarter assessees. Similarly the employment potential of the corporate sector in terms of the number of persons employed is not very precisely known. What is known is that the company-owned factories in the 28 major industries in the country which filed returns with the Census of Manufactures Authorities employed 18 lakhs of persons, of which 16 lakhs were workers. The total amount of salaries and wages together with other concomitant pecuniary benefits paid to the employees aggregated Rs. 258 crores, of which the wage bill and allowances paid to the workers totalled a little over Rs. 200 crores a year. The annual wage bill paid by the whole of the corporate sector is placed around Rs. 350 crores a year.

Significant Role

According to the Census of Manufactures, 92 per cent of the total factory output in the 28 major industries of the country comes from factories owned by the companies. Thus, there is almost a complete control of the joint-stock companies over the industrial sector of the national economy of the country. The total turnover (including income of the non-industrial companies) resulting from the use of net assets aggregating Rs. 3,650 crores, has been estimated to be around Rs. 3,700 crores. Further, in the total net domestic output of the country, the share of companies worked out to 12 per cent in 1957-58; in the non-governmental sector of the national economy, the percentage share of the corporate sector was estimated at around 13 per cent. The output of the corporate sector is estimated to have risen by over 50 per cent during the ten-year period ended 1957-58. From the tax angle, in the total income-tax revenue of the Government, the share of corporate sector came to more than 50 per cent and, in the overall revenues of the Central Government from all source, the corporation income-tax paid by companies to the Government came to 12 per cent. The importance of the corporate sector is recognised in the Five-Year Plan as well. Of the total planned investment allocated to the private sector during the third Five-year Plan period, about 46 per cent is to be made in the corporate sector; and in the total investment and outlay proposed to be made in both the public and private sectors, the share of the corporate sector is estimated at around 18 per cent. Thus, notwithstanding the increasing emphasis placed on the expansion of the public sector, it is seen that the corporate sector, with its massive investment and overwhelming control over the industrial economy of the country built up steadily during the last one hundred years, plays a significant and decisive role in the country's economy and its pre-eminent position is assured for a long time to come in so far as sizable amounts of money are planned to be injected into the corporate sector under the Five-Year Plans.

The Overall Make-up

The corporate sector comprises several classes of companies, namely, public companies and private companies having share capital, companies limited by guarantees and associations not for profit. Apart from this, since 1957, a new element has been introduced in the corporate sector which destroys the concept of identification of the corporate sector with the private sector. The Companies Act, 1956, has created a new class of companies as per provisions of Section 617. However, notwithstanding this distinction as between the non-Government and Government companies, the official sources reveal that, in 1957-58, for which the details of the structural pattern of joint-stock companies at work in the country are available, there were 29,593 companies at work in the country, of which companies limited by shares totalled 28,280 whereas 542 companies were limited by guarantee and 771 were the associations not for profit. The total paid-up capital of the companies limited by share was reported at Rs. 1,306 crores. Out of the 28,280 companies at work, 8,296 were public companies having a total paid-up capital of Rs. 773 crores and 19,984 private companies with a total paid-up capital of Rs. 533 crores. An overwhelming number of the companies were the small companies, whose paid-up capital was below Rs. 5 lakhs. The actual proportion of such companies in the total worked out to be about 90 per cent accounting for only 12 per cent of the total paid-up capital of the entire corporate sector. At the other end of the scale, the big and giant-sized companies whose paid-up capital was Rs. 50 lakhs or more each, constituted in terms of number 1½ per cent of the total, but they accounted for nearly 60 per cent of the paid-up capital of all the companies at work. The actual number of the big-sized companies having a paid-up capital of Rs. 50 lakhs and under Rs. 1 crore each was 226, whereas that of the giant-sized companies, having a paid-up capital of Rs. 1 crore and more each was 156. A study of the structural pattern of the companies thus shows that the big and giant-sized companies have a dominant position in the corporate sector in our country and that the accentuation of trends towards industrial giantism and oligopolistic development is being engineered by powerful business interests in the country and by such business institutions and practices as the managing agency system, plural directorships, etc. The Table 1 below gives the distribution pattern of companies under the six main size groups in 1957-58. It may be mentioned here that the structural pattern of companies has developed a further slant in favour of the big and giant-sized companies.

TABLE 1

Size Pattern of Companies at Work, 1958

(Paid-up capital in crores of rupees)

Size-groups (Paid-up capital in crores)	Public Cos.		Private Cos.		Total	
	No.	Paid-up Capital	No.	Paid-up Capital	No.	Paid-up Capital
Under Rs. 5 lakhs	6,251	50	18,572	105	24,823	161
Rs. 5 lakhs to Rs. 10 lakhs	752	50	849	50	1,601	100
Rs. 10 lakhs to Rs. 25 ,,	699	106	370	51	1,075	157
Rs. 25 lakhs to Rs. 50 ,,	288	97	111	37	399	134
Rs. 50 lakhs to Rs. 1 crore	127	127	99	24	226	151
Rs. 1 crore and above ..	119	337	37	266	156	603
Total ..	8,296	773	19,984	533	28,280	1,306

The Government Corporate Sector

Of the 28,280 companies at work at the end of 1957-58, 91 companies were Government companies, in each of which the Government holdings (Central as well as State Governments together or separately) aggregated 51 per cent or more. The total paid-up capital of these companies came to Rs. 256.8 crores out of a total paid-up capital of Rs. 1,306.3 crores for the entire corporate sector. These companies constituted the Government sub-sector within the corporate sector. In the subsequent period of 3 years ended with 1960-61, the total number of the Government companies increased to 139 and their paid-up capital to Rs. 498.4 crores which came to about 30 per cent of the total capital of all the companies at work in 1960-61. As compared with this, the corresponding share of the Government companies in the total paid-up capital of the corporate sector in 1957-58 was only 20 per cent. At the time of the coming into force of the present Companies Act in April 1956, the total number of Government companies was 61 and their paid-up capital Rs. 66 crores. Thus, during the last 5 years, the number of Government companies has more than doubled, whereas the paid-up capital of these companies has become nearly eightfold. The year-to-year growth of the Government sub-sector since 1st April, 1956 to the end of 1960-61 is depicted in Table 2. The explanation for the diminution in the number of non-Government companies in recent years is given at a later place in this article.

TABLE 2

Break-up of Government and Non-Government Companies

(Paid-up capital in crores of rupees)

Year ending	Total		Government Companies		Non-Government Companies	
	No.	Paid-up Capital	No.	Paid-up Capital	No.	Paid-up Capital
31-3-1956 ..	29,874	10,24.2	61	66.0	29,813	9,58.2
31-3-1957 ..	29,357	10,77.6	74	72.6	29,283	10,05.0
31-3-1958 ..	28,280	13,06.3	91	256.8	28,189	10,49.5
31-3-1959 ..	27,479	15,09.8	103	4,24.2	27,376	10,85.6
31-3-1960 ..	26,921	15,93.1	125	4,68.4	26,796	11,24.7
31-3-1961 ..	26,108	17,24.6	139	4,98.4	25,969	12,26.2

Note: Figures for the years 1958-59 to 1960-61 are provisional.

The Growth of the Corporate Sector

The growth of the corporate sector in our country can be studied in relation to four major periods, namely, 1850-1900, the period preceding the industrial dawn in our country, 1900-1920, the period epitomising the first phase of industrialisation of the country, 1920-40, the inter-war period representing the second phase of industrialisation under the impact of the policy of discriminating protection which also led to the solidification of foundations of the major industries of the country and 1940-61, the period of Industrial Revolution and Diversification. During each of these four periods, the growth of companies proceeded with different degrees of accent and incline. During the first fifty years period ended 1900, the number of joint-stock companies in the country swelled up to 1,340 with a total paid-up capital of Rs. 34.7 crores. Of these, 505 companies (Rs. 15.7 crores) came into being during the first 25 years of the passing of the first Companies Act. By 1920, the total number of companies at work came to 3,668, with a total paid-up capital of Rs. 123.2 crores, recording net increases of 2,328 companies and Rs. 88.5 crores of paid-up capital during the period 1900-1920. The full impact of the processes of industrialisation started during the first twenty years of the present century and the effect of the changed industrial policy of the Government was reflected in the growth of companies during the inter-war period 1920-40, of which five years were marked by severe recession. By the end of 1940, the total number of companies at work came to 11,372 with a total paid-up capital of Rs. 303.7 crores, recording net increases of 7,704 companies and Rs. 180.5 crores of paid-up capital over 1920 and giving an average annual rate of net increase of capital of Rs. 9.0 crores. During the last period which was marked by several important developments such as the World War II, the attainment of Independence and inauguration of the planning era in the country, all of which had a tremendous effect upon the country's economy, there was a prodigious increase in companies and their paid-up capital during this period. The number of companies at work jumped up to 26,108 and their total paid-up capital to Rs. 1,724.6 crores at the end of 1960-61 recording net increases of 14,736 companies and Rs. 1,420.9 crores of paid-up capital over the levels of 1939-40. Thus, the 21-year period following 1939-40 has been the most spectacular one in the history of our country from the point of view of expansion of the corporate sector, which, in terms of the number of companies and their paid-up capital, far exceeded the total expansion recorded during the 90-year period, 1850-1940. The expansion during the last 21 years ended 1960-61 excelled the bulges recorded during the earlier 90 years ended 1939-40, by 30 per cent in number of companies and 370 per cent in paid-up capital. The net gain in the number of companies in the post-Independent period has been, in rounded terms, of the order of 4,300 companies and a paid-up capital of Rs. 1,245 crores. Table 3 below sets out the long-term trends in the growth of the corporate sector from the closing years of the last century to the end of financial year 1960-61. It will be seen from the table that, in 1956, the number of companies at work touched the all-time record level of 29,824 companies, which afterwards has come down to 26,108. This fall in the companies has been ascribed by the Department of Company Law Administration to the Government's policy of weeding out the dormant and moribund companies from the registers, which distorted the statistical record of the live companies and led to erroneous conclusions regarding the size and growth of the corporate sector in the country.

TABLE 3

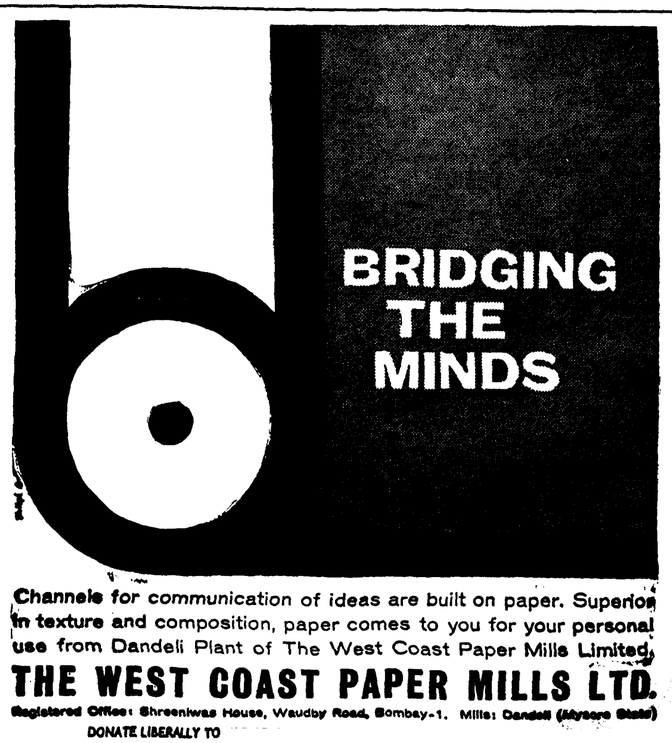
Long-term Trends in Growth of Corporate Sector in the Country

As on 31st March	No. of Cos. at work	Paid-up Capital (Rs. in crores)
1882	505	15.7
1900	1,340	34.7
1914	2,744	76.6
1920	3,668	123.2
1929	6,330	279.3
1940	11,372	303.7
1946	17,343	424.2
1947	21,853	478.7
1948	22,675	569.6
1951	28,532	775.4
1956	29,874	1,024.2
1961	26,108	1,724.6

Growth of Public and Private Companies

By their very nature, public companies are the more important component of the corporate sector, accounting for about 85 per cent of the total paid-up capital of all companies at work up to 1920, and 70 per cent at the end of 1955-56 and 51 per cent as at present. The steady increase in the share of the private companies in the total paid-up capital since the beginning of the Second World War has been due to the sharp increase in the formation of big-sized

Note: This is the first of a series of four articles. These are essentially factual articles which the author has written with a view to disseminating facts and figures relating to corporate sector in a proper context to wider circles in the country. Any views and opinions expressed in these articles are the personal views of the author and not of the organisation he belongs to.



private companies and the setting up of giant-sized Government companies as private limited companies during the period 1956-61. Excluding the paid-up capital of Government companies from the two classes of companies, the ratio between the paid-up capitals of the remaining public and private companies works out as 70 : 30 in 1960-61 which is the same as that seen during the period 1939-56. In number, the position of the two classes of companies has overwhelmingly tilted in favour of the private companies. While upto 1920, the ratio between the public and private companies was observed to be 10 : 2; this changed to 10 : 7 in 1946, to 12 : 16 in 1951 and to 10 : 20 in 1956 and finally to 7 : 20 at the end of 1960-61. The changing pattern of the public and private companies over the period from 1900 to 1961 is presented in Table 4 given below:

TABLE 4

Changing Pattern of Public and Private Companies

(Paid-up capital in crores of rupees)

Year ended 31st March	Public Companies		Private Companies		Total	
	No.	Paid-up capital	No.	Paid-up capital	No.	Paid-up capital
1920 ..	3,000	104.6	668	18.6	3,668	123.2
1939 ..	6,859	213.2	4,255	77.2	11,114	290.4
1946 ..	10,129	323.1	7,214	101.1	17,343	424.2
1951 ..	12,568	566.5	15,964	208.9	28,532	775.4
1956 ..	9,575	690.4	20,299	333.8	29,874	1,024.2
1961 ..	6,745	876.1	19,363	848.5	26,108	1,724.6
	(34)	(33.4)	(105)	(465.0)	(139)	(498.4)

Note: Figures in the brackets relate to Government Companies.

Industrial Pattern of the Corporate Sector

As said earlier, the industrial horizon of the corporate sector was restricted to only a few fields of industrial and commercial activities in the country in the initial lap of corporate development in our country. In fact, it continued to be so right up to the end of the First World War, after which new industries began to spring up in the country as a result of the change in the Government's industrial policy and also due to the adventurous spirit shown by the Indian entrepreneurs who were coaxed into investing money in industries by the experience and knowledge of huge fortunes made by foreign industrialists in India and abroad during the war. The Second World War opened up a vast vista of industrial activities in the country, particularly in the fields of chemicals and engineering products. At the beginning of the present century, six traditional industries of the country, namely, Cotton, Jute, Paper, Tea and Coffee plantations, Coal and Sugar accounted for about 88 per cent of the total paid-up capital of all companies at work in the country and at the beginning of the Second World War the overall share of these traditional industries in the total paid-up capital of the companies at work was reduced to 32 per cent, and later in 1958, which is the latest year for which detailed figures of industrial break-downs are available, it was further lowered to 22.5 per cent.

Among the industries, other than the foregoing six mentioned above, 5.1 per cent of the total paid-up capital of all companies at work in 1938-39 was accounted for by the Chemicals, Iron and Steel and Engineering Industries; and later on in 1957-58, this proportion increased to 31.8 per cent. This shift in the industrial pattern of business shows that the basic industry has come into prominence by the end of the First Five-year Plan. A further study of the industrial pattern reveals that the manufacturing industries put together accounted for 62.7 per cent of the total paid-up capital of all the companies at work in 1957-58 and this was a considerable advance over the position prevailing before the World War II. Table 5 gives the industrial pattern of companies at work based on the latest available figures for 1957-58.

TABLE 5

Broad Industrial Distribution of Companies at work in 1957-58

Main Industrial Groups	No. of Companies	Paid-up capital (in crores of rupees)	Paid-up Capital as % of total
Agriculture and Allied activities	1,186	44.1	3.4
Mining and Quarrying	935	57.1	4.4
Processing and Manufacture of Foodstuffs, Textiles, Leather and Products	8,027	289.7	22.2
Processing and Manufacture of Metals, Chemicals and products thereof	4,212	416.1	31.8
Processing and Manufacture -Not elsewhere classified	2,920	113.4	8.7
Construction and Utilities	736	56.8	4.3
Commerce (Trade and Finance)	11,121	264.7	20.3
Transport, Communication, Storage	1,509	42.4	3.2
Community, Personal, Businesses, Services	2,334	22.0	1.7
Total	22,280	1,306.3	100.0

(To be continued)

IRRIGATION AND BETTER SEEDS—II

P.E.O.'S STUDY REPORT EXAMINED

THE Programme Evaluation Organisation's study of the multiplication and distribution programme for improved seed, like its other study of the problems of minor irrigation, may have quite a few valuable lessons for the intensive agricultural districts programme with its integrated approach covering the four major factors making for higher productivity or unit-area yield, namely, secure irrigation, application of fertilisers, use of improved seeds and adoption of better cultural practices. Of these factors, irrigation by itself, other things remaining constant, can raise unit-area yield by not less than 50 per cent. Under irrigated conditions, chemical fertilisers can be used with little or no risk so as to increase the yield further. And, under conditions of secure irrigation and judicious fertilisation, improved seeds, which are generally understood in the sense of heavy yielders, can step up productivity still further without depleting soil fertility. Here again, the crucial importance of irrigation needs to be underlined. In a way, this is confirmed by some of the findings of the P.E.O. study on the improved seeds programme.

Major Limiting Factor

The relevant findings in the case of paddy (rice) cultivation are that 39 per cent of the sample cultivators and 58 per cent of the knowledgeable cultivators have used one variety or other of improved seed and that more than two-thirds of such cultivators using improved varieties have sown them on mainly or wholly irrigated land. Another related finding is that, of the cultivators not using improved strains of paddy, 34 per cent are prepared to use them, if they are provided with irrigation facilities, while 33 per cent (presumably having already the irrigation facilities) also require convincing proof of the superiority of the improved varieties. The relevant findings in the case of wheat cultivation are that 48 per cent of the sample cultivators and 67 per cent of the knowledgeable cultivators have used one variety or other of improved seed and that two-thirds of such cultivators using improved varieties have sown them on mainly or wholly irrigated land. A related finding here is that, of the cultivators not using improved strains of wheat, 45 per cent are prepared to use them if they are provided with irrigation facilities, while 46 per cent (presumably having already the irrigation facilities) also require convincing proof of the superiority of the improved varieties. It will be seen from these findings that the consideration that decisively weighs with the generality of cultivators in their current or potential use of improved seeds is availability of irrigation. That irrigation is the major limiting factor in the matter of adoption of improved seeds is also indirectly confirmed by the estimate of area covered with improved seeds of all foodgrain crops. For the country as a whole, this estimated area, as of 1960-61, represents just 20 per cent of the aggregate crop area under all foodgrains—a figure which broadly corresponds to the irrigated portion of the entire crop area.

Two Lines of Approach

If, thus, irrigation sets the broad limits to the propagation of high-yielding varieties of seeds, two different lines of approach are called for in the matter of multiplication and distribution of improved seeds. One line of approach would be to limit the dissemination of improved seeds with heavy-yielding characteristics, as far as possible, to districts (with irrigation facilities or good rainfall) coming under the 'intensive agricultural programme'. Here the improved varieties, released during the decade 1951-60 and eligible for propagation, are 12 in the case of paddy, with a yield per acre higher than 2,500 lbs.; 14 in the case of wheat, with a high yield (for which the figure is not available); 10 in the case of *jowar*, with a yield per acre higher than 1,250 lbs.; 9 in the case of cotton, with a yield per acre higher than 500 lbs.; 8 in the case of sugarcane, with a high yield (for which the figure is not available); and 8 in the case of groundnut, with a yield higher than 1,200 lbs. in terms of nuts in shell.

The other line of approach would be to propagate such improved varieties as are drought-resistant or capable of early maturity in areas of poor irrigation or low and uncertain rainfall. This approach would also be consistent with the trend, in the last decade, of a generally lesser emphasis on heavy-yielding characteristics in plant breeding work at the research stations. The result has been that, in the case of paddy and, to some extent, of wheat also, the improved varieties introduced during the last decade do not show as high a performance in respect of yield as those released earlier. If thus there has come about, at the stage of plant breeding itself, a shift in emphasis from heavy-yielding characteristics to such qualities as early maturity, resistance to pests and diseases, floods, drought, etc., it is something that is to be welcomed, for it will be more in keeping with the requirements of the Indian countryside with its preponderance of inadequately watered land. Even here, the improved varieties may well be proved to result in higher yield, if not directly, at least in the long run by preventing the decline in yields that would otherwise have taken place.

Unless these two different lines of approach —one suitable for well-watered tracts covered by the 'intensive agricultural programme' and the second for other areas—are adopted, it is doubtful whether the improved seeds programme, which is expected to account for about 25 per cent of the additional foodgrains production targeted for the third Plan, will produce the desired result. For, apart from the doubtful value of the yardsticks adopted for estimating the additional production attributable to improved seeds which are usually compared with the low-yielding local or *desi* varieties and not with the earlier improved varieties, if any, replaced by them, there is the problem of selecting the most suitable improved seeds for production in the seed farms in different localities in the first stage and for further multiplication in the farms of registered growers in the second stage. Assuming that this problem will be tackled from the point of view of the requirements of the intensive agricultural districts programme, the rest is a matter of administration and organisation. It is here that the issues raised in the P.E.O. study assume some significance.

Suggestions

These issues are in the form of suggestions for consideration by the State Governments. One suggestion is that the plans for seed multiplication and distribution should be drawn up every year so as to take account of the quantity required from year to year not only for the purpose of saturation of crop areas with improved seed but also for its periodical replacement. Secondly, it is considered desirable to include in the plan for extension of improved seed not only crops like paddy and wheat but also other foodgrain crops wherever suitable varieties of the latter are available. In the third place, it is imperative, according to the P.E.O. study, that the seed programme should be implemented with a sense of urgency. On the side of organisation, there is stated to be an urgent need for giving more attention to the operation and management of the seed farms and, in particular, to the exercise of proper supervision by technically competent officers at the district and higher levels. The system of registered growers would also need to be extended *pari passu* with the increase in the availability of foundation seed. On the distribution side, the existing arrangements leave much to be desired. If the objective of making improved seed available to the cultivators in time and close to their door is to be achieved in the third Plan period, the institutional sources of supply would have to cover a larger number of villages and cultivators than envisaged. This should be relatively easier in the districts selected for the intensive agricultural programme which places as much emphasis on adequate credit supply as on extension activities. If co-operative or other credit comes to be more fully linked with the supply of improved seeds, fertilisers and improved implements, the big results expected from this programme are most likely to be achieved. This is, of course, on the assumption that the basic or crucial factor of irrigation will be in full operation.

INDUSTRY AND COMMERCE SHOULD STUDY AIR CARGO

IMMENSE SCOPE FOR DEVELOPMENT

By Wing Commander R. Vaughan-Fowler, R.A.F. (Retd.)

AIR cargo is no longer a specialist means of transport for emergency shipments or for fast transportation of perishable goods. Airlift has reached the stage when shippers use it because it cuts down their delivery costs. Naturally, this does not apply to all kinds of cargo. Nevertheless, it will surprise many industrialists and businessmen what a wide range of products can be sent by air faster and cheaper than they can be delivered by surface means of transport.

A very common mistake is to compare air freight rates with the charges made for sending goods by rail, road and sea. This bare comparison of the rates does not produce the correct answer. Obviously, the air freight rate will be much higher than the rate charged by the railway or the road transport company. This is, however, misleading, as there are other items that have to be taken into account, for example, the cost of packing.

One of the most important things in the delivery of any product is to ensure that it reaches the customer in perfect condition. The wear and tear of a journey by surface transport can cause disastrous damage to many products. Incidentally, insurance against such damage is a heavy item in the total cost of delivery, but it does not solve the problem. Packing is the only safeguard and it has to be strong enough to withstand rough handling. Radio sets and instruments are good examples of the class of goods that require costly packing for any surface journey, because the case must not only be strong but it must also contain some form of shock absorber as a lining. By air, these delicate goods can be sent in light cardboard boxes costing a fraction of the heavy reinforced wooden packing cases necessary for surface shipment. The saving on the packing cost is frequently more than the cost of the air cargo shipment.

Another very important point that has to be taken into account, is that the products damaged in transit have to be made good. Complete replacement is by no means unknown. Cost of repairs to damaged products may be claimed through insurance, but valuable business connections are endangered and manufacturing time is lost, quite apart from all the trouble and additional expense of sorting the whole thing out. Damaged goods are something every manufacturer must regard with horror, for they upset business routine. Profits soon fade away if care is not taken to avoid this kind of business hazard.

Air Freight and Air Cargo

Before going into other cash savings made possible by use of air cargo, it is necessary to explain the difference between air freight and air cargo. Air freight is really "Express Parcel Service"—this service is for the shipper despatching single packets which travel mostly by scheduled passenger air services. The rate charged for this service is much higher than that charged for air cargo. Air cargo covers bulk shipments which are usually made under special contract rates agreed between the shipper and the airline.

Booking agents often use lightweight palets, in which they pack a number of air freight parcels destined for the same place. When they have a full palet, they despatch it under air cargo contract rate, thus making a handsome profit over and above their legitimate commission. There is no real objection to this, provided the agent has sufficient business to fill a palet every day. If this is not the case, then the express parcel may be delayed in the booking agent's office till the palet for the destination is full. Shippers should ensure that they do not run this risk.

The manufacturer or large-scale distributor is strongly advised to deal direct with the airline operator. The best terms can be obtained this way. What is even more important is that despatches can be controlled, so that delays do not occur. The cargo rates can be negotiated on the basis of annual total movement, the shipper guarantees not less than 'XXX' pounds or cubic feet of cargo space if the goods are light but bulky.

Both manufacturers and distributors selling in a large territory find it necessary to maintain considerable stocks in the areas of distribution. Millions of rupee capital can be tied up in these stocks, all of which have to be housed, looked after by storemen who must keep a host of records. Even accounting and auditing costs are increased due to this stocking of products in many places. Sometimes these goods are held against bank loans on which interest has to be paid. The company that avoids bank loans must have adequate capital reserves, on which dividends have to be paid. This splits the profits and reduces the dividend per share.

Advantages

Some manufacturers who have investigated deeply into air cargo have discovered that they can reduce their distribution depots to almost vanishing points, turning them into small stockists with the main work of onward forwarding as consignments come through. The flow of consignments being constant as well as rapidly received from the factory, large reserve stocks are no longer necessary. Enormous capital and overhead savings are immediately apparent. Even reduction in the number of employees becomes possible.

Goods in transit represent capital tied up, until they reach the distributor and are sold to the retailer that capital remains locked up. Every day it is costing the producer money. Also, capital turnover being slow, much larger capital than necessary is required to produce a given amount of products per annum. The speed of delivery achieved by air cargo actually saves cash as well as time. This is not an imaginary item of saving. It can amount to a considerable sum per annum.

Two American examples in the use of air cargo are worthy of mention. Renault Incorporated, representative in America of the French automobile of that name, flies all replacement parts to its numerous distributors throughout the U.S.A. Renault adopted this method of distribution by air in 1958, because investigation into transportation costs conclusively proved that air cargo effected a substantial saving. During the course of the first two years of this air cargo delivery service, the Renault shipments have amounted to 900 tons.

The Boeing Company, whose name requires no introduction in India, commissioned Professor Stanley H. Brewer of the University of Washington to investigate the whole problem of air cargo. He prepared an extensive report which is of tremendous value as related to the U.S. air cargo development. At the same time, the report brought the Boeing Company to the realisation that it should have the engines for the aircraft it manufactured delivered by air. Astonishing as it may seem, this change from surface transport to air cargo saved the Boeing Company no less than $750,000 on the first hundred 707 airliners.

Careful Study Necessary

The use of air cargo to a manufacturer is undoubtedly an individual problem. Putting it another way, it is rather like purchasing a suit of clothes. Not only must the suit be tailored to fit the individual but the cloth from which it is made has to be carefully selected to suit the ascetic taste of the wearer, or to meet the purpose for which the suit is particularly required. The manufacturer thinking of using air cargo should not attempt to do so without having the whole matter most carefully studied and investigated.

Much depends on the class of goods manufactured or the nature of the product to be distributed. Machinery or such like equipment virtually required no packing at all, can be safeguarded with comparatively light and very cheap packing. It is essential that the detailed cost of packing is studied right down to the last naya paisa.

All large distributors of goods have to have depots spread about the country where re-distribution is carried out. Alternatively, agents may be used who have to be allowed specially high rates of commission to cover their out of pocket expenses doing this work. The annual cost of maintaining these distribution points must be thoroughly investigated, bearing in mind that they swell the whole organisation and involve large sums of capital as well as overheads.

A manufacturer of valuable instruments discovered, when thinking of air cargo, that his distribution system had been laid out to fit the railway system of the country, and actually was not in tune with his major sales areas. In other words, many years ago, to make railway transportation convenient, the directors had located the depots at places which were not in fact ideal from the re-distribution point of view. After two years of study, this manufacturer was able to revise his whole distribution system, by closing down some depots entirely and opening new ones on a much smaller scale. The annual saving during the following years amounted to millions of dollars, even allowing for the fact that the actual amount paid for air transportation was considerably more than had ever been paid to the railways.

The particular point to be noted in this case is that the manufacturer did not solve his air cargo problem and find the correct answer without studying it in relation to his whole business organisation and it required two whole years. A special team and consultants were used to obtain the answers which are now paying substantial dividends.

Return Load

One of the greatest difficulties facing the aircraft operator carrying cargo is the return load. There is obviously a substantial volume of cargo available from any big industrial centre or shipping port. This is very satisfactory, but what about the return flight, from where are loads to be found?

In some cases, there are reasonable loads to bring back, whilst, in others, a short positioning flight will enable the aircraft to reach a point where a load can be uplifted to be brought back to the airport from where the operation commenced.

The aircraft operators should concentrate their sales effort and energy in those places where there is little cargo to be collected for the return journey. There are many ways by which loads can be created. It all revolves round the closest co-operation between industrialists, business organisations and the aircraft operators. Those who are prepared to investigate air cargo in a thorough manner will undoubtedly find that it is most rewarding.

In the case of India, it is firmly believed that the real answer rests in adopting the mixed passenger-cum-cargo regular air service over all routes. Depending on the route requirements, the load is adjusted, either more passengers and less cargo and/or vice versa. In this way, the operator is assured that there will be regular movement of both passengers and cargo in reasonable quantities. Provided the right equipment is used, the number of passengers carried can be sufficient to reach what is known as the "breakeven" point. This means that the operator can cover his whole operating costs for the journey from passenger revenue. It never works out quite like that, as there will always be some cargo or mails, whilst the full complement of passengers is unlikely to be carried on every flight.

A factor peculiar to India must be taken into account. There is such a heavy demand for travel accommodation. If the air fares can be brought down to somewhere between first and second class railway fares, there is bound to be a constant overload of passengers. With industry growing and incomes rising, demand for goods will increase, distribution already a serious problem will become a direct handicap to sales. And air transport will help to resolve this difficulty.

Let us assume that flights over route "A" to "B" invariably carry capacity payloads one way, consisting of one-third passengers and two-thirds cargo. On the return journey, the flow of passengers is 60 per cent capacity, the cargo is not particularly good as far as quantity goes, slightly less than one-third being carried. Even so, there should still be a reasonable margin of profit. A very low back load will not involve a loss to the operator if both way loads are taken into account.

Reduction in Fares Possible

It is all a matter of sales and, so long as operators do not care to educate the market in how to use air cargo, there will always be difficulty in building up more air cargo over the world airline network. This should not apply in a country such as India, where there are no restrictions on developing our own domestic air services. The cargo loads can be carried at any rate the operator cares to charge, the domestic

(Continued on page 328)

RESTRICTIVE BUSINESS PRACTICES AND MONOPOLIES IN BRITAIN

SOME RECENT FINDINGS

IN a competitive economy, the consumer is considered the King. While this is theoretically true, the actual practice, the consumer's sovereignty is taken for granted and is, therefore, subject to severe limitations. The various types of "restrictive business practices" adopted by the business community in the field of industry, trade and finance have been among the important factors limiting consumer's sovereignty. The term "restrictive business practices" is defined as those actions of the industry or its associations designed to "restrain competition, limit access to markets, or foster monopolistic control," (according to Havana Charter). These restrictive practices are generally administered by those enterprises which have reached a sufficient degree of concentration to be in a predominant position, or by ententes between legally independent enterprises which are in a position to impose collective restraint of competitive forces.

The main types of restrictive business practices, according to a classic study on the question by the G.A.T.T. (1959), are those designed (1) to influence prices or conditions of sale, purchase or lease (such as concerted price fixing, and speculative manœuvres like hoarding and cornering), (2) to restrict output, productive capacity or the number of varieties produced, (3) to allocate markets, territorially or in respect of different lines of production, (4) to establish joint purchasing or sales services and profit-pooling arrangements, (5) to hinder the development or the exploitation of technical processes, or unduly to extent the use of rights arising out of patents, trade marks, etc., and (6) to eliminate outside competition. Generally speaking, the growth of restrictive practices is rapid in the case of enterprises facing a decline in demand for their products. This is evident from the fact that restrictive business practices multiplied during the depression of the early thirties. Similarly, post-war periods may prove congenial for the growth of restrictive practices in industries which expand their capacity to meet war-time demands but which find the demands of peace much smaller. Of course, the tendency to resort to restrictive practices in a bid to restrain mutual competition even in normal times is evident in several industries is almost all countries, the object being to check the threat of possible losses or to make extra profits.

Restrictive Practices Court

Several countries have been taken stern measures, either administrative or judicial, to control the growth of restrictive business practices and thereby safeguard the interests of consumers. The U.K., for instance, has established elaborate machinery to deal with restrictive practices. Under the Restrictive Trade Practices Act, 1956, the Registrar of Restrictive Trading Agreements is entrusted with the task of keeping a public register of the particulars of a wide range of restrictive agreements (including those relating to common prices, approved list of dealers and the limitation of production) which affect the supply or processing of goods in the U.K. market. The Restrictive Practices Court, set up under the Act, with a High Court Judge as President and several non-officials as members, decides whether or not an agreement, brought forward for its consideration by the Registrar, is in public interest.

Monopolies and other arrangements, which are not within the scope of the Restrictive Practices Court, may be referred by the Board of Trade to the Monopolies Commission for investigation and report. The Commission was originally set up by the Monopolies and Restrictive Practices (Inquiry and Control) Act 1948, under the title of the Monopolies and Restrictive Practices Commission, which was bifurcated in 1956. Under the present system, while the decisions of the Restrictive Practices Court have the force of law, those of Monopolies Commission are considered by the Board of Trade and implemented only with the Parliament's approval where necessary. It may be noted here that the 1956 Act provided for the abolition of collective enforcement of resale price maintenance by the use of shoplists or boycotts. But individual suppliers are exempted from this provision.

Imperial Tobacco

The findings of the Restrictive Business Practices Court and the Monopolies Commission have evoked considerable interest among businessmen all over the world, as quite a few of them have been sensational. One of the latest instances is the report of the Monopolies Commission on the position of the Imperial Tobacco Company, announced last month. Following a four-year investigation into the U.K.'s tobacco industry, the Commission observed that the Imperial's monopoly position as such "does not operate against the public interest nor may it be expected to do so." Drawing attention to the fact that the Imperial's rate of profit on capital employed had been below average, the Commission conceded that its profits were "not unreasonable in today's conditions" and that there was "no reason to think that its rates of profit in future are likely to be excessive." The Commission also felt that the Company continued to observe restraint in exercising the power derived from its still dominant position. At present the Imperial Tobacco supplies about two-thirds of cigarettes and 60 per cent of tobaccos in the U.K. market.

The Commission, however, held that the retention of the Imperial's shareholding (42.5 per cent) in Gallaher concern, a major competitor in the U.K., and the practice of giving bonuses to distributors sought to preserve the Imperial's monopoly and were, therefore, against the public interest. Discussing the Imperial's holding in Gallaher, acquired for a consideration of £1.25 million in 1932 and now worth about £40 million, the Commission refused to accept the Company's view that its disposal might tempt reentry of American competitors into the U.K. market. In fact, the Commission thought that the Imperial's investment in Gallaher "has developed into a partial insurance against loss of profit due to loss of trade to Gallaher." It wanted the Imperial Tobacco to be continuously exposed to the most strenuous competition in order to ensure maximum efficiency in its operations.

U.K. Tobacco Market

The Commission's report is significant for the revelations of several generally unknown facts, namely, that the Imperial Tobacco owns 100 per cent of the Ardath (U.K.), and Messrs. Robert Sinclair, and Bewlays (retailers with 153 shops), and 49 per cent of the equity in the Finlay retail chain of shops and railway station kiosks. Some of the general observations on the tobacco industry in the U.K. appearing in the report will be interesting to readers in India, which exports large quantities of raw tobacco to the U.K. The Commission records that, in 1959, no less than £1,061 million, or some 7 per cent of all consumer spending, was spent on tobacco goods in the U.K. There were 22.75 million smokers, including 13.75 million women as of 1957, the latest year for which data are available. Nearly 80 per cent of smokers bought proprietary brand cigarettes, another 4 per cent "handrolled their own," while only 7 per cent smoked pipes.

The type of tobacco goods smoked in the U.K. varies between age groups. In 1956, 87 per cent of pipe tobacco was smoked by men aged 35 or over and 40 per cent by men over 60. For cigarettes, the proportion smoked by men and women of 35 and over was 66 per cent and only 11 per cent by those of 60 and over. To an appreciable extent, the gradual annual increases, since 1949, in total smoking are attributed to more smoking by women. The constant increases by the British Government in the duty from 2s. 8d. per lb. in 1900 to 64s. 6d. per lb. now has reduced the value of the Commonwealth preference on tobacco from 16⅔ per cent at the time of its introduction in 1919 to 2½ per cent now. In 1958-59, tobacco duties yielded £736 million, or one-third of all customs and excise duties, and equalling over 13 per cent of the country's total revenue.

Newspaper Distribution

The decision of the Restrictive Practices Court, taken a fortnight back, declaring void an agreement relating to the distribution of London newspapers is another very recent case, which has attracted much public attention. The relevant agreement, relating to re-entrance and new applications (R.E.N.A.), was entered into between the British Newspaper Proprietors' Association and the National Federation of British Retail Newsagents, Booksellers and Stationers. The newspapers concerned include such well-known papers as *The Times*, the *Daily Telegraph*, the *Daily Express*, the *Daily Mail*, the *Daily Herald*, the *Financial Times*, etc. The agreement, which covered as many 30,000 news agents, sought mainly to restrict the entry of newcomers in the field of distribution of papers. In substance, the agreement was one under which the members of the Association agreed not to supply any of the London daily newspapers to wholesale news agents in England and Wales except upon the terms that the newspapers should (a) not be supplied to persons desirous of starting retail news agencies at any shop, stand or other place at which newspapers were not sold in June 1944, unless such persons held permits issued by the Association, and (b) should only be supplied to persons holding such permits.

The Court was not convinced of the newspapers' argument that the agreement was necessary to serve the public well. It referred to the excellent profits at present earned by the newspaper selling agents, as compared with those engaged in the sale of other goods. It refused to believe the claim of the signatories to the agreement that, if the restrictions were removed, the business of the individual retail news agent would, in general, become so unprofitable that it would affect the efficiency of distribution. The Court added that it was not satisfied that, if the restrictions were removed, and entry into the news agency trade was left to the operation of the economic forces of free competition, the public would be deprived of any specific or substantial benefit.

INDIA'S FOREIGN TRADE IN JANUARY-JUNE 1961

India's exports rose by Rs. 27 crores to Rs. 325 crores during the first half of 1961, as compared with the corresponding period in 1960, according to provisional figures released by the Department of Commercial Intelligence and Statistics, Calcutta. (Government of India). Imports, however, declined by Rs. 24 crores to Rs. 497 crores. As a result, the adverse balance of trade narrowed down by as much as Rs. 51 crores to Rs. 172 crores.

The following table shows at a glance the trend of trade from month to month in the first half of 1961, as compared with the same period in 1960, on the basis of provisional figures:

(In crores of rupees)

	Imports†	Exports (including re-exports)	Balance of trade
1961*			
January	88.79	54.34	— 29.45
February	73.60	53.43	— 20.07
March	81.38	57.32	— 24.06
April	85.90	53.86	— 32.54
May	85.57	57.12	— 28.45
June	87.84	49.88	— 37.46
Total ..	497.48	325.45	—172.03
1960†			
January	70.71	51.35	— 19.36
February	78.28	48.75	— 29.53
March	96.42	52.87	— 43.55
April	98.57	46.63	— 51.94
May	92.97	49.84	— 43.13
June	84.52	48.91	— 35.61
Total ..	621.47	298.35	—228.12

* Provisional.
† Excludes certain consignments on Government account awaiting adjustments.
‡ Revised.

Although the overall trade figures have now been announced for the period upto June 1961, detailed country-wise figures will not be available from Central Government sources for another two or three months. A broad picture can, however, be had from the foreign trade figures published by other countries, such as the U.K., which have an expeditious system for collecting, processing and disseminating such data. The pattern of India's trade with the U.K. was in line with the overall trend of trade during the period under review; its exports to the U.K. went up, while its imports suffered a modest setback. According to figures released by the British Board of Trade for the period January-June 1961, India's exports to the U.K., its major overseas market, moved up (on c.i.f. basis) to £75.04 million, from £70.02 million in the first half of 1960. Almost over ninety per cent of the increase in exports was accounted for by the major export item, namely, tea, the earnings from which were higher by £4.82 million at £28.04 million. Exports of miscellaneous textile manufactures, too, rose from £5.40 million to £6.12 million. But the U.K.'s offtake of India-made leather and leather manufactures fell by £1.68 million to £5.84 million. Export earnings from cotton yarns and woven fabrics were lower at £7.83 million, as compared with £7.94 million.

India's imports from the U.K. (on f.o.b. basis) declined by £2.75 million to £75.95 million. Almost all the major items of imports shared in this setback. Imports of general machinery items were only £22.29 million, as against £23.14 million in January-June 1960. The value of road vehicles and aircrafts bought by India moved down from £11.61 million to £8.26 million and electric machinery from £8.03 million to £6.75 million.

BENGAL PAPER MILL COMPANY LIMITED

SPEECH OF CHAIRMAN, MR. N. D. BANGUR, AT ANNUAL GENERAL MEETING

PLEA FOR UPWARD REVISION OF PAPER PRICES

ADDRESSING the annual meeting of the Bengal Paper Mill Co., Ltd., held at Calcutta on 31st July 1961, Mr. N. D. Bangur, Chairman of the Company, made an earnest plea for an upward revision of paper prices. He pointed out that, if the paper industry were to expand and modernise by ploughing back retained profits or by attracting new capital, a fair return on the existing capital was not only desirable from the economic point of view but very essential. He observed that the present price was uneconomic and too low to leave a sufficient margin for the industry to expand. Mr. Bangur expressed the hope that the Government would give consideration to the industry's needs in fixing the new selling prices.

The following is the full text of Mr. Bangur's speech:

"GENTLEMEN,

"I have great pleasure to welcome you to this Annual General Meeting of the shareholders of The Bengal Paper Mill Co., Ltd.

"The Directors' report, the balance-sheet and the audited accounts for the year ended 31st December, 1960 have been in your hands and with your permission, I take the same as read.

"During the year, the gross profit of your Company is Rs. 50,83,093, as against Rs. 49,05,060 for the previous year and production also increased from 15,927 tons in 1959 to 18,105 tons during the year 1960, thus the progress of the working of your mill can be considered quite satisfactory.

Price Policy and Cost of Production

"I would like to emphasise the urgent need for the Government to review the present price structure which is followed on the recommendations of the Tariff Commission. The Tariff Commission decided that 12 per cent would constitute a fair return on the Industry's capital and stated that this return would be sufficient to cover the following items:

(1) Labour Bonus.
(2) Interest on Debentures and Loans.
(3) Managing Agents' or Secretaries and Treasurers' Remuneration.
(4) Directors' Remuneration.
(5) Taxation.
(6) Reserves, including Development Rebate Reserve.
(7) Interest on Working Capital.

"After meeting the above liabilities, the surplus left with the Company will be hardly sufficient to make a reasonable return to the shareholders, and in my opinion the return of 12 per cent allowed by the Tariff Commission is quite inadequate particularly when the new preference shares are being issued at 9 per cent interest and the general tendency of the rate of interest being on the increase in the country. If the industry is to be kept in a position to meet all its liability and also provide for large scale expansion, modernisation and rehabilitation involving either of ploughing back of retained profits or by attracting new capital, an allowance of a fair return to it is not only desirable from the economic point of view but also essential for the industry's very survival.

"The price of manufactured goods of those industries are regulated which are of basic importance to the national economy and it does not seem logical how the development of these industries could be promoted by the enforcement of such uneconomic prices on these industries which do not allow them to have necessary saving for their modernisation and expansion. This matter of ensuring adequate and reasonable return to the basic industries, whose prices are controlled and regulated in the national interest, should be revised in a manner conducive to the proper growth and development of these industries.

"There has been considerable increase in the cost of production due to fresh levies of excise on chemicals, namely, soda caustic, and soda ash, increase in the railway freight, increase in the prices of raw materials and stores, and a further increase in the cost of coal by way of fresh levy. Whereas the paper price has not been allowed to be increased correspondingly and the paper industry has to absorb these increases with adverse affect on its economy. It is suggested that the Government should evolve some formula whereby an increase in the cost of production due to reasons beyond the industry's control is allowed to the industry to be added to its selling prices. I may also mention that the cases of old mills whose cost of production is higher due to old and worn out machines have not been given due consideration by the Tariff Commission. Due to old and worn out machines your mill is adversely affected. The profit level has, however, been maintained by increase in production and renovation of the machines.

"A memorandum to the Government of India has already been submitted by the paper industry for upward revision of the price of paper. I hope the Government will give due consideration to the industry's difficulties in deciding the new selling prices.

Raw Materials

"The year 1960 had been a difficult one as far as supplies of raw materials and their transportation was concerned. The widespread incidence of bamboo flowering all over India has already affected bamboo supply position. The supplies of sabai grass were also not upto expectation and due to various development work going on in the country, the cost of exploitation also increased. Inadequate rail transport facility resulted in depletion of raw materials stocks at your mills and it is hoped that the railway will improve the wagon supply position to help the paper industry to attain increase in production.

"Because of shortage of bamboo and sabai grass, bagasse is becoming exceedingly important as a raw material for paper making. I am glad to say that your Company has successfully used bagasse in large quantity during the year and I trust the Government will make alternative fuel available to the sugar industry to enable them to release more bagasse to the paper industry.

Sales

"I would like to point out that the increase in the levy of excise duty on certain varieties of paper is excessive. The incidence of excise duty on cheap varieties of packing and wrapping paper works out to about 32 to 35 per cent of the prices of paper. In order to improve the general pattern of packing in the country, wrapping paper has been extensively used as raw materials by the various other industries and there should not be such a heavy excise duty on the low-graded varieties of paper.

"You will be glad to know that the quality of various types of paper manufactured by your Company has been enjoying good response from the market. Your Company also undertook manufacture of special quality paper of different varieties and these special varieties too have been found quite popular with the consumers. It is the constant endeavour of your Company to maintain the high standard of quality of its products and further improvement will take place when the multi-stage bleaching plant will be installed under the expansion and modernisation scheme.

Expansion

"I have pleasure to inform you that satisfactory progress is being made in the implementation of Expansion and Modernisation scheme of the mill. During the year Brown Stock Washing Plant was put into commission and in the current year a Recausticising Plant, Water Clarification Plant and other machines also started functioning. These new additions which have been installed at a cost of Rs. 36 lakhs approximately have resulted in reducing washing losses and substantially improved caustic recovery.

"Order for the sixth paper machine has already been placed with Messrs. Walmsleys (Bury) Ltd., of England, shipment of which is expected to begin from the second half of 1962. Orders for multi-stage bleaching plant and other equipment from the U.S.A. will be finalised on receipt of approval of the D.L.F. loan.

"The third Plan sets the industry targets of 900,000 tons and 700,000 tons for capacity and production respectively, or exactly double the targets in the second Plan. The rate of industrial development, the growth of literacy and proposed implementation of free and compulsory education is expected to absorb the increased production.

Fresh Issue

"I am glad to inform you that your Company has decided to issue bonus shares for Rs. 9 lakhs in the ratio of 1 to 5 based on the existing equity paid-up capital subject to the sanction of the Controller of Capital Issue. In due course the share of Rs. 25 paid-up of your Company will be subdivided into Rs. 10 paid-up share. To finance the expansion and modernisation of the plant additional capital will have to be arranged and further capital in the form of right shares and convertible loan stock will be issued.

"Messrs. Balmer Lawrie & Co., Ltd., resigned the office of Secretaries and Treasurers with effect from 28th April, 1960 and I wish to place on record the valuable services rendered by them to the Company.

"Our Mill Manager, Dr. J. C. Aggarwal has been selected leader of the National Productivity Team on Pulp and Paper and the team is now on a foreign tour to study the development of pulp and paper industry in the other countries.

"The relation with the Staff and Worker remained cordial and I would like to express our appreciation of the services rendered to the Company by all of them."

Note: This does not purport to be a record of the proceedings of the annual general meeting.

PRINTING AND STATIONERY DEPARTMENT, CALCUTTA

TENDER NOTICE

Chief Controller of Printing and Stationery, on behalf of the President of India, invites sealed tenders from well-equipped Printing Presses which are governed by the Factories Act, 1948, as amended up to date, for the printing and binding of stock forms and books of the Indian Posts and Telegraphs Department for the requirements of the Calcutta, Madras and Bombay regions.

There are about 805 different books and forms to be produced and the annual requirements thereof involve substantial quantities running into lakhs in many cases.

A book containing the conditions of tender, conditions of contract, details of books and forms required and other relevant information can be had from the Assistant Controller, Printing, O.P. Branch, 1, Council House Street, 3rd Floor, North Wing, Calcutta-1, at Rs. 16 per copy (non-refundable). Samples of various books and forms are available for inspection at the Office of the Assistant Controller, Printing, O.P. Branch, 1, Council House Street, 3rd Floor, North Wing, Calcutta-1, or if desired, complete sets of samples can be had from the abovementioned Officer at Rs. 50 per set, refundable on return of the set in a satisfactory condition.

Paper and certain binding materials required for execution of the work under the contract will be supplied by the Government.

Each tender, whether for one or more items will have to be accompanied by a deposit receipt for Rs. 2,750 as Earnest money. Tenders received without the deposit receipt will be liable to summary rejection.

Sealed tenders for the above work prepared in the prescribed manner will be received upto 2 p.m. on 11-9-61 at the Office of the abovementioned Assistant Controller of Printing. Tenders will be opened one hour after the closing time in the presence of attending tenderers.

DA-6961/61

SOUTH MADRAS ELECTRIC

CAPITAL PROJECTS MAKE HEADWAY

BY extending its transmission lines by a further 79 miles, opening 15 new sub-stations and adding 9 more villages to those already supplied with electrical energy, all at a total cost of Rs. 17.46 lakhs, the South Madras Electric Supply Corporation Ltd. (Managing Agents: Messrs. Seshasayee Brothers Private Ltd., Tiruchirapally) has completed yet another phase of its programme of rural and urban electrification in its area of franchise. Modest as these extensions might appear, particularly in the light of increasing demand for power which is rapidly outstripping the supply, it would be relevant to recall the remarks of the Chairman, Mr. K. A. P. Visvanatham, at the last annual meeting of the Company. Speaking on the occasion he had said: "The backlog of works are heavy. Even about a crore of rupees will not suffice to completely satisfy the demand (for power) in our area of supply. And even if such a sum of money were made available, we would not be able to utilise the sum in a year for want of material and skilled manpower. It is my hope that, with our resources and loans from the Electricity Board, we may execute every year between Rs. 15 and Rs. 20 lakhs of new works, thus satisfying the consumers to the extent possible. Apart from our own difficulties, it is a well-known fact that adequate power supply is not available from the Electricity Board's existing power houses and grid. I expect it will easily take another two or three years for the supply to catch up with the demand...." Having regard to this background, the progress made by the Company in the implementation of its capital projects during the year ended 31st March 1961 appears to be quite satisfactory.

Owing to the aforesaid extensions, the sale of energy during 1960-61 has recorded an increase of a little more than Rs. 7 lakhs over its previous levels, to Rs. 96.95 lakhs. The performance of the Company could easily have been even more heartening had it not been for two factors that tended to restrict the increase in sales. First, the supply of high tension power to the factory at Dalmiapuram was taken over directly, with effect from October last, by the Madras State Electricity Board and this resulted in a 30 per cent reduction in the supply of electricity to this point. Secondly, slight adjustments were made in the Company's tariff structure, with the result that rates of supply of power to certain categories of consumers were lowered. As a consequence, the gross profit has failed to increase in consonance with the sales and shows a rise of Rs. 4.56 lakhs only to Rs. 30.25 lakhs. After deducting from this amount the essential provisions for the Managing Agents' commission (maintained at Rs. 80,000) depreciation (at Rs. 8.40 lakhs as compared with Rs. 8.20 lakhs) and taxation (at Rs. 8.70 lakhs against Rs. 6.80 lakhs), the net profit discloses a rise of Rs. 2.46 lakhs to Rs. 12.35 lakhs. Transfer to the various reserves, as required by the statute, and other provisions has been raised to Rs. 3.68 lakhs including the credit of Rs. 1 lakh to the staff gratuity reserve. This leaves a balance of Rs. 8.70 lakhs, inclusive of the carry forward from the previous year, for distribution among the shareholders.

The progress made by the Company during the past four years is presented in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale proceeds of energy	96.95	89.93	69.29	66.60
Other income	3.43	3.02	4.51	3.22
Cost of distribution	46.62	44.77	35.47	34.35
Other expenses	23.51	22.49	18.17	17.32

* Subject to deduction of tax.

The controversy regarding the payment of preferred dividends having been settled by the passing of the Preference Shares (Regulation of Dividends) Act 1960, preference dividends for the year have been declared in conformity with the provisions of the said Act and absorb Rs. 2.15 lakhs. An additional amount of Rs. 14,100 has also become payable to the preference shareholders as arrears for the year 1959-60. Thus, for the year under review, the preference shareholders are to get Rs. 2.29 lakhs as compared with Rs. 2 lakhs distributed last year. The ordinary dividend has been maintained at 9 per cent subject to tax, absorbing Rs. 6.30 lakhs, leaving Rs. 11,885 to be carried forward.

The following quotation from the latest Directors' report on the effects of abolition of grossing under the 1960 Finance Act will be of interest to readers:

"The shareholders will be aware that, in terms of the Finance Act, 1960, the rate of tax payable by the Company has been reduced from 51.5 per cent to 45 per cent and the benefit of grossing up was abolished. To compensate this, the saving of 6.5 per cent in tax should formally accrue to the shareholder. Unfortunately this benefit of reduced income-tax payable by the Company will not be available to an Electricity Supply Undertaking due to restrictions imposed by Clause XVII 2 (c) ii of the Sixth Schedule to the Electricity Supply Act. The Federation of Electricity Undertakings of India have informed us that the Central Government have recommended to the State Governments to approve of the special appropriation of an amount equivalent to 6.5 per cent of the taxable income of the year. We have applied to the Madras Government to approve the special appropriation and it is hoped the necessary sanction will be obtained."

Barring an addition of Rs. 9.98 lakhs to the long-term loan taken from the Government of Madras there has been no major change in the Company's financial position, as at 31st March 1961. The paid-up capital of Rs. 1 crore made up of Rs. 70 lakhs in ordinary shares and Rs. 30 lakhs in 5½ per cent cumulative preference shares is supplemented by Rs. 25.10 lakhs of reserves and surplus. Secured loans amount to Rs. 32.17 lakhs, current liabilities and provisions for taxation and proposed dividend Rs. 68.89 lakhs, giving a total indebtedness of Rs. 101.06 lakhs.

As stated earlier, the additions during the year to fixed assets amounted to Rs. 17.46 lakhs. Inclusive of this sum, the gross block is valued in the Company's books at Rs. 222.91 lakhs and has been written down to Rs. 148.63 lakhs. Current assets, investments and loans and advances are all expected to realise Rs. 77.53 lakhs and are just sufficient to cover the current liabilities, excluding secured loans.

The present market quotation for the Company's Rs. 10 fully paid equity shares is Rs. 10.15 *cum*-final dividend of 45 nP gross. The net yield on an *ex-div.* basis works out to a little over 6.30 per cent per annum.

A NEW $5-MILLION HOTEL AT NEW DELHI

The East India Hotels Limited and the Inter-continental Hotels Corporation of New York have announced plans for the completion of a new $5,000,000 air-conditioned 350-room hotel at New Delhi. The finance for the new hotel is being provided by the Export-Import Bank, by the Finance Corporation of India, and by private sources in India and the U.S. The Export-Import Bank is financing the project in dollars and in foreign currency.

The hotel, owned by East India, will be a member of the Inter-continental group of hotels and will be named the Oberoi Inter-continental. Inter-continental, a wholly-owned subsidiary of Pan American World Airways and one of the largest operators of hotels outside the U.S., will provide technical assistance for the completion and furnishing of the new hotel and will have general supervisional responsibility for its operation and management, in addition to handling sales and reservations for the hotel on a world-wide basis. The features of the hotel will include a banquet room, grill room, night club, coffee shop, swimming pool, and large public room facilities for conferences and meetings. The hotel is in a residential area of the capital, adjoining the golf course, and a mile from the Central Secretariat and the business and shopping areas of the city at Connnaught Circus.

(Concluded from next column)

While the Company has much scope for expansion, the uncertainty, whether or not it will be allowed to remain in the private sector as at present, still stands. The Kerala Government's move to acquire the Company is being contested in the Kerala High Court.

COCHIN STATE POWER

STEADY GROWTH BEING MAINTAINED

THE progress achieved by the Cochin State Power and Light Corporation Ltd. (Managing Agents: Messrs. Chandrie & Co. (Private) Ltd., Madras) during the last twenty-five years of its existence is satisfactory. The Company was incorporated in January 1936 and commenced production on 30th August of the same year. It had to pass through a very difficult period in the early years as the demand for power was poor, but, since the end of the Second World War, the demand has been shooting up due to various development programmes under the Five-year Plans.

The sale of energy for domestic and industrial purposes, as well as for street lighting and temporary supplies, has grown steadily to touch Rs. 12.63 lakhs during the year ended 31st March 1961, as against Rs. 11.94 lakhs in the previous year, Rs. 10.85 lakhs in 1958-59 and Rs. 9.42 lakhs for 1957-58. The purchase of energy has also likewise increased to Rs. 3.48 lakhs as against Rs. 3.45 lakhs in the previous year, Rs. 2.94 lakhs for 1958-59 and Rs. 2.57 lakhs for 1957-58. The gross profit has gone up from Rs. 4.23 lakhs for 1959-60 to Rs. 4.46 lakhs for 1960-61. The ratio of gross profit to sales has been maintained at a little over 35 per cent. Out of this profit, the provisions for depreciation and taxation have been made at slightly higher levels, Rs. 1.26 lakhs and Rs. 1.28 lakhs, as compared with Rs. 1.11 lakhs and Rs. 1.12 lakhs, respectively, in the previous year. The dividend on the Rs. 10 paid-up equity shares has been maintained at 12½ per cent subject to deduction of tax, which is equivalent to a net dividend of Re. 0.875 per share.

The financial results of the Company for the last four years are depicted in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sale of energy	12.63	11.94	10.85	9.42
Other income	0.72	0.69	0.67	0.62

* Subject to deduction of tax.

The Directors say, in their report to the shareholders that the Kerala State Electricity Board has made excellent progress in development and generation of electric power and that, very shortly, it may have a surplus of power which could be sold to the neighbouring States. This means that the Company will be in a good position to meet the ever-growing demand for power, in contrast to shortage of power that is being experienced by electricity distributing companies in most of the other States of India.

There was no change in the tariff rates for supply to consumers during the year under review. The number of units purchased in bulk during the year rose by 4 per cent, from 10,447,018 units to 10,867,142 units. The total number of units sold increased by 5.02 per cent from 9,336,962 to 9,806,013 and the gross revenue by 5.71 per cent.

The transmission and distribution systems of the Company were maintained in good order. During the year, 4.034 kilometres at low tension mains were constructed to cater to the needs of new consumers. The capacity of the sub-stations has been increased and the aggregate capacity of the distribution transformers is 3,775 KVA.

As against the paid-up capital of Rs. 10 lakhs, all in ordinary shares of Rs. 10 each, the reserves and surplus stand at Rs. 9.10 lakhs. The total of current liabilities at Rs. 6.92 lakhs shows an excess of Rs. 0.49 lakh over the current assets of Rs. 6.43 lakhs. The gross block of Rs. 28.78 lakhs stands depreciated at Rs. 19.66 lakhs, the depreciation provided being Rs. 9.12 lakhs.

The current market quotation for the Rs. 10 paid-up ordinary shares of the Company is Rs. 13.37 *cum*-dividend. At this rate, the net yield works out to 6.5 per cent.

(Continued in previous column)

BENGAL CHEMICAL FARES WELL

RESERVES EQUAL PAID-UP CAPITAL

THE financial results of the Bengal Chemical and Pharmaceutical Works Ltd. (Chairman and Managing Director: Mr. B. N. Ghose, Calcutta) for the twelve months ended 31st March 1961 clearly reflect steady progress by the Company. The sales crossed the Rs. 2-crore mark during the year under review, the exact amount being Rs. 208.84 lakhs as against Rs. 196.90 lakhs in the previous year and Rs. 175.39 lakhs in 1958-59. The closing stocks were also higher at Rs. 26.21 lakhs, as compared with Rs. 23.05 lakhs a year before. The gross profit, however, has not registered any marked improvement. It is only a shade better at Rs. 24.28 lakhs, as against Rs. 23.99 lakhs for 1959-60 and the profit margin (the ratio of sales to gross profit) has actually declined from 12.1 per cent to 11.6 per cent. This is primarily due to the sharp rise in the value of raw materials consumed from Rs. 91.80 lakhs in 1959-60 to Rs. 101.04 lakhs, as also in other expenses from Rs. 82.78 lakhs to Rs. 88.17 lakhs.

The remuneration for the Managing Director (salary plus commission) has remained unchanged at Rs. 60,000. But the provision for taxation has been reduced from Rs. 9.53 lakhs to Rs. 8.50 lakhs. The depreciation provision has, however, been raised from Rs. 5 lakhs to Rs. 5.62 lakhs. The net profit has risen by just Rs. 70,000 to Rs. 9.56 lakhs. The amount available for distribution is of the order of Rs. 23.77 lakhs, including the large sum of Rs. 13.90 lakhs brought in. This would have enabled the Directors to distribute a much larger dividend to the ordinary shareholders, but they have chosen to transfer as much as Rs. 15.50 lakhs to reserves. In addition, a sum of Rs. 28,000 has been credited to the development rebate reserve. The preference dividends on the 4½ per cent and 7½ per cent preference shares have taken up Rs. 1.77 lakh. Out of the balance, the Directors have only been able to maintain the ordinary dividend at 10 per cent (taxable), giving a net dividend of Rs. 7 per share which is the same as that for the two previous years.

The progress of the Company since 1957-58 is shown in the following comparative table:

(In lakhs of rupees)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales	208.84	196.90	175.39	174.30
Closing stocks	26.21	23.05	23.12	26.40
Consumption of raw materials ..	101.04	91.80	79.20	88.00
Other expenses	88.17	82.78	73.39	74.93

	(10%)*	(10%)*	(7%)	(5%)
Carry forward	1.31	13.90	13.80	13.00

* Subject to deduction of tax.

The financial position of the Company, as disclosed by its balance-sheet as at 31st March 1961 is quite sound. The paid-up of Rs. 71.89 lakhs, comprising Rs. 9.00 lakhs in 90,000 seven and a half per cent cumulative preference shares of Rs. 10 each, Rs. 11.90 lakhs in 11,901 4½ per cent preference shares of Rs. 100 each and Rs. 50.99 lakhs in ordinary shares of Rs. 100 each is supplemented by Rs. 70.15 lakhs in reserves and surplus, a sum which is almost equal to the total paid-up capital and nearly Rs. 20 lakhs more than the equity capital. This suggests that, in future, the Company could afford to pay higher dividend, by setting aside slightly smaller amounts to reserves, granted that its profitability could be comfortably maintained in future years. The secured and unsecured loans stand at Rs. 41.27 lakhs of which Rs. 15 lakhs are debentures (at 5 per cent interest) and Rs. 21 lakhs are from the I.F.C.; in addition there are current liabilities and provisions aggregating Rs. 39.81 lakhs, bringing the total indebtedness to Rs. 81.08 lakhs. As against this, the current assets, including investments, are of the order of Rs. 146.71 lakhs. There is thus a clear surplus of current assets over total indebtedness, the exact margin being Rs. 65.63 lakhs. The total value of the block account at cost is Rs. 153.54 lakhs (as against Rs. 147.58 lakhs as at 31st March 1960), which has been well written down to Rs. 76.41 lakhs, the total depreciation built up being of the order of Rs. 77.13 lakhs.

The Company has already taken up expansion schemes for enhancing the productive capacity of its chemical manufacturing division. As regards the outlook for the current year, the Directors say that the working results for 1961-62 have so far been fair and that they expect to complete the year satisfactorily, provided other things remain the same as hitherto.

The Rs. 100 paid-up ordinary shares of the Company are currently quoted at Rs. 108 on the Calcutta Stock Exchange. At this rate, the net yield on the shares works out to Rs. 6.93 per cent per annum.

TATA OIL'S EXPANSION PLANS

In a statement addressed to the shareholders reviewing the problems confronting the Tata Oil Mills Company Ltd., Mr. J. R. D. Tata, Chairman, has given an account of the expansion projects which the Company intends to undertake in the current year. With a view to diversifying its activities, the Company has decided to set up under an arrangement with the Central Government a plant at its Bombay factory for manufacturing groundnut flour for human consumption. This plant, it may be noted, was supplied to the Government of India by the United Nation's Children Fund. It is expected to go into commission during the current year. The Government of India has also agreed to buy 75 per cent of the flour produced by the Company for distribution to flour mills. The remaining 25 per cent will be marketed by the Company directly. If this experiment proves successful, it will open for the Company a useful new field for development.

The Company has entered into an agreement with the National Research Development Corporation of India for the exploitation of a process evolved by the Central Food Technological Research Institute, Mysore, for the extraction of vegetable protein from oilseeds. The Corporation has agreed to install, at its cost, at the Tata Oil's Bombay factory a semi-commercial unit to which the Company will supply the necessary power, steam, labour and technical supervision. If the process works satisfactorily, the Tata Oils will have an option to purchase this plant and expand it. Although the venture is of a pioneering nature and will call for a certain amount of development work, the Company considers the project of great potential value not only to itself but to the country as a whole, in view of the serious protein deficiency in the diet of most Indians.

Finally, the Company proposes to set up at Tatapuram a plant to manufacture fruit juices in powder form by a process developed and in use in Japan. The Tata Oil Company has already made an application to the Government of India for permission to install such a plant at a cost of about Rs. 5 lakhs. This project, too, is deemed to be a promising one, because of the availability of a large variety of fruits in our country, combined with the difficulty involved in their transportation and storage. The success of this project, however, will obviously depend on the attitude of consumers to the new product.

At the annual general meeting of the shareholders of the Company, held on the 3rd inst. Mr. Tata struck an optimistic note regarding the outlook for the Company. He was confident that the Company's performance in the current year would turn out to be better than in 1960-61. The sales would be considerably higher when the new units were commissioned. He also revealed that the Company's new plant at Delhi would go into operation by October 1962.

Notice

THE GWALIOR RAYON SILK MFG. (WVG.) COMPANY, LIMITED

NOTICE IS HEREBY GIVEN THAT THE Register of Members and Transfer Books of the Equity Shares of the above Company will remain closed from 21st August 1961 to 15th September 1961, both days inclusive, for the purpose of paying dividend.

The dividend on Equity Shares when sanctioned for the year ended 31st March 1961, will be made payable at the United Commercial Bank Ltd. on or after 18th September 1961 to those Shareholders whose names stand on the register of the Company on 15th September 1961, to whom dividend warrants will be posted.

By Order of the Board,

V. N. BAGRODIA,
Secretary.

Registered Office:
BIRLAGRAM, NAGDA,
29th July 1961.

PERIAKARAMALAI TEA

DIVIDEND HIGHER

IN keeping with the general increase in tea crop in South India during the past year, the results of the Periakaramalai Tea and Produce Company Ltd. (Managing Agents: Messrs. Peirce Leslie & Co., Ltd., Coimbatore) for the year ended 31st March 1961 are highly satisfactory. The tea crop harvested by the Company in the year under review was a record high, being 2.33 million kilograms, as against the previous best of 2.23 million kilograms which was in 1957-58. As compared with the previous year the increase was 16.7 per cent and and this brought down the cost of production from Rs. 3.02 per kilogram to Rs. 2.81 kilogram. At the same time, the average price realised was higher at Rs. 4.29 per kilogram, as against Rs. 4.21 per kilogram.

Due to the substantial increase in tea crop and realisation of slightly better prices, the sale proceeds improved from Rs. 100.69 lakhs to Rs. 115.62 lakhs, or a rise of 14.8 per cent. The gross profit has improved sharply by 47 per cent from Rs. 23.01 lakhs to Rs. 33.82 lakhs. The higher profit has enabled the Directors to recommend a bigger dividend of 20 per cent subject to deduction of tax, as compared with 13.5 per cent (taxable) for the previous year.

Although the tea crop harvested by the Company was a record, the profit was not. In 1954-55, for instance, the profit before taxation was as high as Rs. 42.01 lakhs when the crop was no more than 1.80 million kilograms. In the following year, the profit was still quite high at Rs. 36.26 lakhs, when the crop was 1.81 million kilograms. These data clearly show the considerable extent to which the increases in cost of production has brought down the profit margin.

The following comparative table vividly brings out the better performance of the Company in the year under review, as compared with that in the more recent years:

(Rupees in lakhs)

	For the year ended 31st March			
	1961	1960	1959	1958
Sales of tea	115.62	100.69	106.52	93.44
Sales of other crops ..	0.27	0.40	0.65	0.84
Other income	0.26	0.24	0.54	0.56

Dividend	11.59*	7.82*	7.34	5.79
	(20%)*	(13.5%)*	(12.5%)	(10%)
Carry forward	0.65	0.80	1.46	1.18
Tea crop (in million kgms.) ..	2.33	1.99	2.21	2.23

* Subject to deduction of tax.

It will be noted that, though the gross profit is substantially higher, the net profit is markedly lower, chiefly because of the steep rise in the provision for taxation and a modest increase in the transfer to depreciation account. Nevertheless, the dividend is fully covered, as, unlike in the past year, no adjustment in regard to sales tax liability had to be made this year.

The paid-up capital of the Company is Rs. 57.95 lakhs, all in ordinary shares of Rs. 2 each fully paid. Reserves and surplus were increased during the year by Rs. 2.07 lakhs to Rs. 30.90 lakhs. As against current liabilities and provisions at Rs. 34.15 lakhs, the current assets total Rs. 47.31 lakhs. The better performance during the year is also reflected in a sharp increase in cash and bank balances from Rs. 4.20 lakhs to Rs. 15.98 lakhs. The net block of the Company stands at Rs. 75.03 lakhs, the depreciation provided so far being Rs. 39.13 lakhs.

The tea crop for the current year is estimated at 2.32 million kilograms, which is a shade lower than the crop harvested during the year under review. The cost of production and all-in-cost is expected to be higher at 284 cents and 318 cents per kilogram respectively. The capital expenditure for the year 1961-62 is estimated higher at Rs. 6.74 lakhs.

The current market quotation for the Rs. 2 paid-up ordinary shares at Rs. 3.90 gives a gross yield of a little over 10 per cent per annum.

STATISTICAL OUTLINE OF THIRD PLAN

TABLE I

OUTLAY DURING SECOND PLAN AND COST OF PHYSICAL PROGRAMMES IN THIRD PLAN

(Rupees lakhs)

Head of development	Estimated outlay in Second Plan					Estimated cost of programmes in Third Plan				
	States	Union territories	States and Union territories	Centre	Total	States	Union territories	States and Union territories	Centre	Total

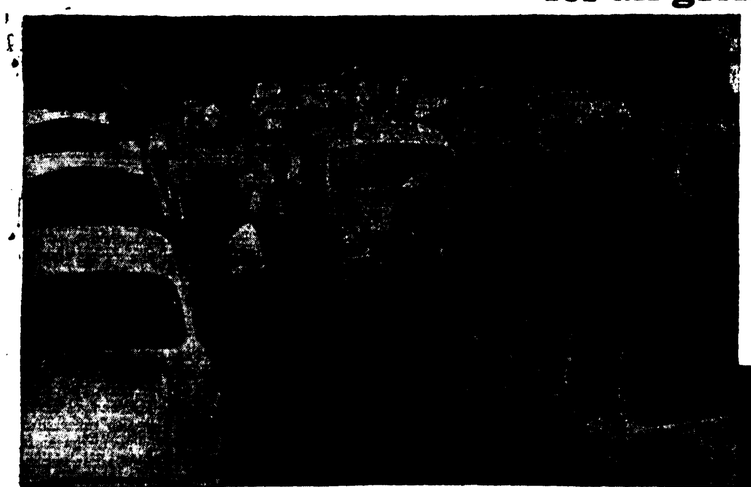
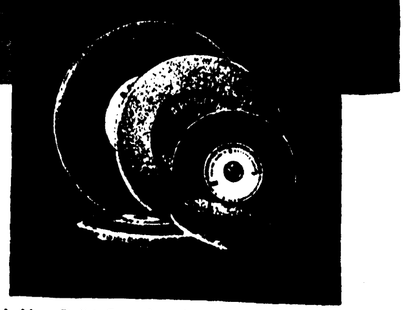
(a) Includes expenditure for local development works. (b) In the second Plan, outlay for flood control is shown at the Centre. (c) Includes part provision for D.V.C. power programme and Bandel Thermal Station. (d) For Andaman and Nicobar Islands. (e) In addition to this amount, outlay for public co-operation will have to be found within the agreed third Plan ceiling by suitable adjustment in the following states: Rs. 6 lakhs each in Andhra Pradesh, Bihar, Madras, Madhya Pradesh and West Bengal; Rs. 5 lakhs in Mysore and Rs. 1 lakh in Assam. (f) Includes also anticipated outlay on account of Department of Atomic Energy, schemes of the Ministry of Finance and office and residential buildings under the programmes of Ministry of Works, Housing and Supply. (g) The distribution of outlays in West Bengal is subject to adjustments: (i) on account of West Bengal's share in the D.V.C., and (ii) increase in resources estimated at Rs. 43 crores, which the State Government expect to raise above the level of Rs. 96 crores. (h) This excludes provision of Rs. 200 crores for Inventories.

STANDARD MOTORS rely on
CARBORUNDUM UNIVERSAL ABRASIVES
for all grinding operations



"The moving parts in a motor car must be ground to very close limits of accuracy and with good finishes, so as to prevent friction and so prolong the life of the parts. Carborundum Universal grinding wheels enable us to obtain the perfect accuracy and fine surface finishes so essential for the production of these moving parts. Also, the consistent good quality of Carborundum Universal abrasives, assures us of the high standard of every grinding operation."

– STANDARD MOTOR PRODUCTS OF INDIA LTD., MADRAS



We now manufacture
CARBOFLEX Reinforced Depressed Centre Wheels *for foundries and for weld dressing operations*

In any industry ... for any grinding operation ...
you can rely on Grinding Wheels made by

CARBORUNDUM UNIVERSAL LTD.

Head Office: 52/53, Jahangir Street, Madras-1 Telephone 2941 (6 lines)
Works: Tiruvottiyur

Distributors: MESSRS. WILLIAM JACKS & CO., LTD., Ahmedabad, Calcutta-1, Bombay-1, Madras-1, New Delhi, Bangalore-1, Kanpur, Hyderabad.
For Specialties only: MESSRS. H. S. COX & CO. PRIVATE LTD., 24, Rampart Row, Bombay.

Transfer to depreciation	1,14	1,11
" " Managing Agents' remuneration	36	36
" " taxation	27	Nil
" " development rebate reserve	33†	...
Net profit (+) or loss (—)	(+) 1,33	(—) 1,28
Adjustments—credit (+) or debit (—)	(+) 69	(+) 53
Appropriations:		
Total available balance	(+) 2,02	(—) 75
To adjustment of loss brought forward	60	Nil
Proposed dividends (taxable) Preference	81*	...
" " " Ordinary	45	Nil
	(3%)	...
Carried forward	(—) 18‡	(—) 75

N.B.—Adjustments include balance brought forward if any and other credit items.

§ Loss after providing for depreciation and Managing Agents' remuneration.

† Includes Rs. 18,500 being provision for development rebate reserve for 1959.

* Includes dividend on preference shares for 1959—Rs. 40,625.

‡ Adjusted against reserves.

Extracts from the Directors' report: As per Tripartite agreement the wages to workers and salaries of the staff have become effective from 1st January 1960. As a result of the price cutting and implementation of the Wage Board Award the working result was much affected. In the current year however in spite of heavy load on account of the full implementation of the Wage Board Award and price cutting the working result so far is not unsatisfactory.

The directors are pleased to inform that since the report was made last year their effort in obtaining licence for installation of 4,000 spindles has materialised as the Government have been pleased to sanction installation of 4,000 additional spindles.

The company has already taken up the scheme and the building construction work for housing the machineries has started and orders for some machineries have been placed with the suppliers and steps are being taken for financing the scheme.

Under the preference shares (Regulation of Dividend Act 1960) the company has to pay 30 per cent in excess of the dividend stipulated to be paid tax-free. As the dividend on preference shares of this company is cumulative the dividend for 1959 has also to be paid along with the dividend for 1960. As the dividend is being declared after the said Act has come into force 30 per cent in excess of the dividend has also to be paid for the year 1959. The excess amount involved is Rs. 18,750.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	20,00,000	Gross block	40,82,445
Debentures	7,00,000	—Depreciation	27,11,989

† Subject to adjustment.

* Includes provision for depreciation for the years 1958 and 1959.

‡ This represents refund of taxes, for assessment years 1950-51 and 1949-50.

§ This represents '*Ad hoc*' reduction in stock-in-trade, no longer required.

Extracts from the Directors' report: Managing Agents' Commission:—As the shareholders are aware, no application was made for the renewal of the managing agency and accordingly under Section 330 of the Companies Act, 1956, the managing agency expired on 15th August, 1960. In the circumstances, the managing agents' remuneration has been calculated on *pro rata* basis payable upto 15th August, 1960. The amount is subject to final adjustment when bonus and certain other items of expenditure are finalised.

Taxation:—The Income-tax Officer had increased the assessable profit for the year 1949-50 by about Rs. 76 lakhs, being, according to him, the unaccounted income for that year. This was upheld by the Appellate Assistant Commissioner. The Company had appealed against this and the directors are glad to report that the Income-tax Tribunal has decided the appeal in favour of the Company by deleting the amount of Rs. 76 lakhs added by the Income-tax Officer. Accordingly the additional tax of Rs. 34,43,843 which the Company had to pay 'on account' initially has now been refunded. The Department having preferred a reference application in the matter, the Board has set aside provisionally this amount of refund received, as contingency reserve.

The Company's appeal before the Appellate Assistant Commissioner in respect of the Assessment year 1950-51 has also been decided substantially in favour of the Company, and a refund of Rs. 90,420 has been received in respect of that appeal. This amount has been credited to the appropriation account.

The Company's appeals for the years 1950 to 1953 have similarly been decided by the Appellate Assistant Commissioner substantially in favour of the Company, and the directors are glad to report that the Company has received a refund of Rs. 13,42,478 in respect of these appeals. There are, however, some items on which the Company has preferred further appeal before the Tribunal. The amount of Rs. 13,42,478 received is, in the opinion of the directors, adequate to cover the tax liabilities for previous years. As these have been received during the current year, they are not shown in the accounts for the year under report.

The assessments for the years 1954 and 1955 are completed. Appeals have been preferred on certain items in respect of these assessments. In the opinion of the directors, the provisions already made for taxes are adequate to cover the liabilities.

Cloth Sales: Total bales packed and delivered during the year were respectively 1,16,120 and 1,08,887. The opening stock comprised of 8,087 bales sold and 5,963 bales unsold, and the closing stock 11,466 bales sold and 9,817 bales unsold. The present position is considerably improved and the stocks of bales as on 8th August 1961 were 7,274 bales sold and 1,726 bales unsold.

Machinery: The financial position of the Company is slowly improving and it is now proposed to have a phased programme for renovation and rehabilitation. One new *Stenter* and one *Yarn Mercerising Machine* have already been received. An order has been placed for one more *Stenter*. Negotiations are going on for 100 *Ring Frames* and 4 *Blow Room lines* which will cost about Rs. 65 lakhs. Lighting and humidity conditions are also being improved. The Company proposes to spend, subject to finance permitting, about one Crore of Rupees on installation and renovation of machines, during the next 12 months. If, as it is hoped, the 1961 results are encouraging, the Company has a programme to place orders for further 100 *Ring Frames*, one set of *Combers*, *Cheese Dyeing Plant* and *J-Box* for modern bleaching.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	2,50,00,000	Gross block	5,28,11,146
Reserves and surplus	51,40,495	—Depreciation	4,01,32,001
Other liabilities	3,25,70,708		
		Net block	1,26,79,145
		Block in progress	3,13,639
		Current assets	4,84,58,686
		Investments	3,13,585
		Cash	9,48,136
	Rs. 6,27,11,203		Rs. 6,27,11,203

* The paid-up capital consists of 20 lakhs of equity shares of Rs. 10 each fully paid up and 50 lakhs of deferred shares of Re. 1 each fully paid up.

Saran Engineering Co., Ltd.

(*Secretaries and Treasurers*: The British India Corporation Ltd., Kanpur, U.P.)

Annual General Meeting—29th August.

Working Results:

	For the year ended 31st March (In thousand rupees)	
	1961	1960
Sales	37,42	33,85
Closing stock	4,11	4,07
Gross profit	8,41	6,81
Transfer to Managing Agents' remuneration	21	41
" " Secretaries' and Treasurers' remuneration	35	Nil
" " depreciation	1,10	1,15
" " taxation	4,00	2,60
" " development rebate reserve	*	Nil
Net profit	2,75	2,65
Adjustments	23	37
Appropriations:		
Total available balance	2,98	3,02
Transfer to reserves	2,20	2,00
To expenses (for previous years)	2	32
Proposed dividend (taxable)	60	52
	(10%)	(8.7%)
Carried forward	16	18

N.B.—Adjustments include the balance brought forward from the previous year; profit on sale of motor car if any, and provision for gratuity no longer required.

* Only Rs. 600.

Extracts from the Directors' report: It transpires that the depreciation provided by the Company on its fixed assets in the previous years, was in excess of the statutory scale by Rs. 2,22,000 which amount has, accordingly, been written back and transferred to capital reserve.

The trading conditions, during the year, have been good and the results are reflected in the accounts. The Company has uptill now stood up well to the competition offered by other sugar-mill machinery manufacturers. Due to difficult supply position of imported roller shafts, the production of new rollers by the Company has not been upto the full capacity of the Works. The import policy of the Government has had a mixed effect on the Company's trading—favourable because it led to an increase in demand for indigenous machinery and disadvantageous in as much as replacements of Works' plant and machinery have been seriously handicapped. In view of great demand for the Company's products and the contemplated expansions and rehabilitations at many sugar factories, the prospects of trading during the coming years appear to be fairly satisfactory despite competition becoming more intense.

Improvements in various directions have been effected at the Company's Engineering Works and the Company's property has been maintained in good repair.

In pursuance of Section 330 of the Companies Act 1956, Messrs. Begg, Sutherland & Co. Private Ltd., ceased to be the Managing Agents of the Company with effect from 15th August 1960 and The British India Corporation, Ltd., have, instead, been appointed as the Secretaries and Treasurers. This does not, however, involve any material change in the management of the Company as the technical and administrative set-up remains unchanged, thereby ensuring continuity of policy and efficient management.

Accounts in brief as at 31st March 1961 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	6,00,000	Gross block	31,20,671
Reserves and surplus	15,71,702	—Depreciation	20,15,012
Other liabilities	23,24,438		
		Net block	11,05,659
		Block in progress	1,093
		Current assets	33,04,762
		Investments	49,875
		Cash	34,751
	Rs. 44,96,140		Rs. 44,96,140

* The Company's paid-up capital consists of 1,50,000 ordinary shares of Rs. 4 each fully paid up.

Sutna Stone & Lime Co., Ltd.

(*Secretary*: Mr. S. N. Berl, Calcutta.)

Annual General Meeting—29th August.

Working Results:

	For the year ended 31st December (In thousand rupees)	
	1960	1959
Sales	24,33	26,44
Closing stock (limestone)	8	2
Gross profit	6,04	4,76
Transfer to depreciation	1,27	95
" " provision for taxation	2,20	1,72
" " development rebate reserve	25	80
Net profit	2,36	1,31
Adjustments	1,04*	31
Appropriations:		
Total available balance	3,40	1,62
Transfer to reserves	1,75	30
Proposed dividend (taxable)	1,33	97
	(27.5%)	(20%)
Carried forward	32	35

N.B.—Adjustments include the balance brought forward from the previous year.

* Includes Rs. 52,669 being excess provision for taxation in previous years no longer required and Rs. 16,397 being excess provision for liabilities in previous years no longer required.

Extracts from the Directors' report: The programme of expansion both at the Factory and at the Quarries is proceeding satisfactorily. To meet heavy demands from the various Steel Works in the country the directors have intensified their drive for the complete mechanisation both at the Quarries and at the Factory in stages phased to suit the requirements of expansion. To finance such a scheme the directors have already issued right shares at par in the proportion of 2 shares for one held as on 8th May 1961. They have called only Rs. 5 per share in the first instance. The balance Rs. 5 per share will be called later when further funds are needed.

In addition to this the directors have already approached the Madhya Pradesh Financial Corporation for a loan of Rs. 10 lakhs and are hopeful to get this accommodation from the Corporation.

While the directors are pleased to report the above all round progress of the Company they regret to inform that the Company is passing through a rather difficult period. The main problem confronting the Company is transport. The Company does not get regular supply of empty wagons to fulfil its commitment to its valuable customers. Again because of inadequate wagon supply there is a constant fear of shortage of coal at the Kilns which may necessitate closure of the kilns resulting in heavy losses. On the Labour front also there are problems to face. The political parties are always anxious to serve their own ends by misguiding the innocent and illiterate workers of the Company. In spite of the best efforts of the directors to maintain cordial relations with the workers, there was tension at the quarries for a short period. This has, however, not affected the policy of the Company to look to the welfare of the workers by spending substantial amounts by way of medical aid and according facilities for their cultural and social uplift.

Accounts in brief as at 31st December 1960 are as under:—

Liabilities	Rs.	Assets	Rs.
Capital*	4,83,840	Gross block	21,29,19[illegible]
Reserves and surplus	7,79,909	—Depreciation	8,12,00[illegible]
Other liabilities	8,54,529		
		Net block	13,17,10[illegible]
		Block-in-progress	29,75[illegible]
		Current assets	5,71,67[illegible]
		Investments	14,08[illegible]
		Cash	1,84,71[illegible]
	Rs. 21,17,278		Rs. 21,17,27[illegible]

* The Company's paid-up capital consists of 48,384 ordinary shares of Rs. 10 each fully paid up. To finance the expansion scheme the directors have already issued during the current year *Right* shares at par in the proportion 2 shares for one held as on 8th May 1961. Only Rs. 5 per share, has been called on this *Right* issue.

IMPERIAL TOBACCO CO. OF INDIA LTD. Annual General Meeting, Calcutta, 26th September 1961. Dividend: 4 per cent or Re. 0.40 per ordinary share (final dividend), subject to deduction of tax payable on 28th September 1961. With the two interim dividends each of 2½ per cent the total dividend for 1961 amounts to 9 per cent or Re 0.90 per share, subject to deduction of tax. The Directors also intent to declare a taxable interim dividend of 2½ per cent in respect of the year to 31st March 1962, payable on 28th September 1961. Transfer books will remain closed from 4th to 26th September 1961, both days inclusive.

Notices

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

AT A MEETING OF THE DIRECTORS HELD on 3rd August 1961, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on 26th September 1961, the payment of a final dividend for the year ended 31st March 1961, of 4% (subject to tax) on the issued Ordinary shares, payable on 28th September 1961.

The net profit for the year, after deducting all charges and expenses, and after providing for taxation amounting to Rs. 1,71,18,802, is Rs. 1,87,99,207 (previous year Rs. 1,41,62,230).

Two interim dividends, each of 2½% (subject to tax) amounting in total to Rs. 75,80,000 in respect of the year to 31st March 1961, were paid on 24th September 1960 and 12th April 1961 respectively.

After paying the final dividend amounting to Rs. 60,64,000 and allocating to Rs. 19,770 to Capital Reserves, Rs. 1,16,914 to Development Rebate Reserve and Rs. 48,00,000 to Fixed Asset and Stock Replacement Reserve, the amount carried forward will be Rs. 26,96,288.

The Directors also intend to declare a first interim dividend of 2½% (subject to tax) in respect of the year to 31st March 1962, payable on 28th September 1961.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on 26th September 1961 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatees on 27th September 1961. The share transfer books of the Company will be closed from 4th to 26th September 1961, both days inclusive, and transfers received in order at the registered office of the Company up to 2nd September 1961 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,

B. GRANGER PEARSON,
Secretary.

VIRGINIA HOUSE,
37 CHOWRINGHEE,
CALCUTTA.
4th August 1961.

CENTRAL INDIA COALFIELDS LIMITED

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta, on Tuesday, the 5th September, 1961 at 3.00 p.m. for the following purposes:—

(1) To consider and adopt the Directors' Report and Audited Accounts of the Company for the year ended 31st March, 1961.

(2) To consider declaration of dividend.

(3) To elect Directors in place of Shri L. N. Birla and Shri N. L. Kanoria who retire by rotation but being eligible offer themselves for re-election.

Shri L. N. Birla, a Director of the Company whose period of office is liable to determination by retirement by rotation, is an Officer of the Managing Agents of the Company. Since it is desirable to avail of the valuable advice of Shri L. N. Birla by retaining him as director of the Company the following special resolution as required by Section 261 of the Companies Act, 1956 will be proposed, special notice of which has been received by the Company and is also hereby given to the Shareholders:—

As Special Resolution:

"Resolved that Shri L. N. Birla an Officer of the Managing Agents of the Company under the Companies Act, 1956, be and is hereby re-elected a director of the Company."

(4) To appoint auditors for the current year and to fix their remuneration. Messrs. Singhi & Co., the retiring auditors being eligible offer themselves for reappointment.

(5) As Special Business to consider and if thought fit to pass with or without modification the following resolutions:—

As Ordinary Resolutions:

(a) Resolved that Shri K. N. Mookerjee be and is hereby appointed a Director of the company.

(b) Resolved that Shri C. C. Dalal be and is hereby appointed a Director of the company.

(c) Resolved that the Board of Directors of the Company be and are hereby authorised to borrow from time to time moneys for the purposes of the company upto a maximum of Rs. 75 lakhs outstanding at any time on account of principal notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the company (excluding temporary loans taken from Banks in the ordinary course of business) will exceed the aggregate of the paid up capital of the company and its free reserves, that is to say, reserves not set apart for any specific purpose.

(d) Resolved that the Board of Directors be and are hereby authorised to contribute and/or subscribe to any institution or fund for any national, charitable, benevolent, public or general purposes, not directly relating to the business of the company or to the welfare of its employees from time to time such amounts upto a total of Rs. 50,000 in any financial year notwithstanding that such amounts in any financial year will exceed Rs. 25,000 or 5 per cent of the company's average net profits as determined in accordance with the provisions of the Companies Act, 1956 during the three financial years immediately preceding whichever is greater.

The Register of Members will remain closed from the 21st August, 1961 to the 5th September, 1961 both days inclusive.

By Order of the Board,

HINDUSTHAN INVESTMENT CORPORATION LTD.,

By Mg. Director,
R. K. CHHAOCHHARIA,
Managing Agents.

8, INDIA EXCHANGE PLACE,
CALCUTTA-1, *Dated the 1st August* 1961.

Note: (i) The dividends, if declared at the meeting, will be posted to the Registered addresses of the shareholders whose names appear on the company's register on the 5th September, 1961, or to their order or to their bankers.

(ii) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE ABOVE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(iii) The instrument appointing a proxy shall be deposited at the Registered Office of the company not less than 48 hours before the time for holding the aforesaid meeting.

(iv) Explanatory Statement with regard to the Special Business as required under Section 173 of the Companies Act 1956 is being forwarded to the Members of the Company.

THE BENGAL PAPER MILL COMPANY, LIMITED

AN APPLICATION WAS MADE BY THE Company to the Controller of Capital Issues for issue of right shares at par. After negotiations, the Controller of Capital Issues has given consent to the Company for issue of 72,000 Equity shares of Rs. 25 each at a premium of Rs. 30 per share and to the issue of 6½% Taxable Convertible Loan Stocks of Rs. 30,00,000. The Board, however, considers it more convenient to sub-divide its equity capital into Shares of Rs. 10 each and with that in the view it has decided in its meeting held on 31st July 1961, to apply to the Controller of Capital Issues for sanction to issue Bonus Equity shares of Rs. 9,00,000 to be issued to the Equity shareholders in the ratio of 1 Equity share for every 5 Equity shares held. After issue of the Bonus shares, the aforesaid sub-division will be effected and thereafter it is intended that the Right shares will be offered to the shareholders at a premium of Rs. 12 per share in the ratio of 1 Equity share of Rs. 10 for every 3 Equity shares of Rs. 10 each. Application will be made to Controller of Capital Issues for consequential modification to the aforesaid Consent order.

By Order of the Board,

THE BENGAL PAPER MILL CO., LTD.,

H. P. DHANUKA,
Director.

THE INDIAN IRON AND STEEL COMPANY, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN THAT THE Annual General Meeting (being the Forty-fourth Ordinary General Meeting) of the Company will be held at the Royal Exchange Hall of the Bengal Chamber of Commerce and Industry at 6, Netaji Subhas Road, Calcutta-1, at 3 p.m., on Tuesday the 5th September 1961, for the following purposes.

1. To receive and adopt the Audited Accounts for the year ended 31st March 1961, and the Directors' and Auditors' Reports thereon.

2. To declare a dividend for the year ended 31st March 1961, on the Ordinary Share Capital.

3. To appoint a Director in place of Maharajadhiraja Sir U. C. Mahtab Bahadur of Burdwan who retires by rotation and is eligible for re-appointment.

4. To appoint a Director in place of Maharaja Sir P. C. Bhanj Deo of Mayurbhanj who retires by rotation and is eligible for re-appointment.

5. To appoint a Director in place of Maharajadhiraja Sir Kameshwara Singh of Darbhanga who retires by rotation and is eligible for re-appointment.

6. To appoint Auditors and fix their remuneration.

(*Special business*). To consider and if thought fit, to pass the following resolution as a Special Resolution.

7. *Special Resolution*

That pursuant to sub-sections (4) and (7) of Section 309 of the Companies Act 1956 and subject to the limitation imposed by Clause 113 of the Articles of Association of the Company each of the Directors be and is hereby authorised to continue to receive in respect of each of the five financial years of the Company up to and including the financial year ending on the 31st March 1966 a share in a commission of one per cent of the net profits of the Company computed in the manner referred to in sub-section (1) of Section 198 of the said Act.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,

MARTIN BURN LIMITED,

F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Annual General Meeting — Notice to the Shareholders

NOTICE is hereby given that the Fifteenth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, No. 1, Ceramic Factory Road, Kundara, on Saturday the 30th September 1961, at 11-30 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and audited Balance Sheet of the Company as at 31st March 1961, and Profit and Loss Account for the year ended 31st March 1961.

2. To declare a dividend.

3. To appoint a Director in the place of Shri Parayath E. Raman Menon who retires by rotation under Article 102 of the Articles of Association of the Company, and who is eligible for re-election.

4. To appoint a Director in the place of Shri S. Narayanaswamy who retires by rotation under Article 102 of the Articles of Association of the Company, and who is eligible for re-election.

5. To appoint a Director in the place of Shri K. C. Sood who retires by rotation under Article 102 of the Articles of Association of the Company and who is eligible for re-election.

6. To appoint auditors for the Company for the year 1961-62 and to fix their remuneration. The retiring auditors Shri T. Velu Pillai, Alwaye, and Messrs. K. Venkitachalam Aiyer & Co., Trivandrum, are eligible for re-appointment.

7. To consider and, if thought fit, to pass the following resolution as an ordinary resolution :—

"Resolved that the consent of the Company be and is hereby accorded for the appointment of Messrs. Allied Engineering Corporation, New Delhi, as sole selling agents for the bare aluminium conductors and accessories manufactured by the Company for a period of two years from 1st July 1961 for the territories of the State of Gujarat on a commission of ¾ per cent (three-quarter per cent) on the F.O.R/F.O.B/Ex-factory value (excluding any rebates or allowances allowed by the Company to the customers), on orders secured by them and executed by the Company."

8. To consider and, if thought fit, to pass the following resolution as an ordinary resolution :—

"Resolved that the consent of the Company be and is hereby accorded to the Board of Directors of the Company for borrowing from time to time all such sums of moneys as they may deem requisite or proper for the purpose of the business of the Company notwithstanding that the moneys to be borrowed together with the moneys already borrowed by the Company (apart from the temporary loans obtained from the Company's bankers in the ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say reserves not set apart for any specific purpose.

Provided that the total amount upto which moneys be borrowed by the Board of Directors apart from the temporary loans obtained from the Company's bankers in the ordinary course of business shall not exceed Rs. 3,20,00,000."

9. To consider and, if thought fit, to pass the following resolution as a special resolution.

SPECIAL RESOLUTION.

(*a*) "A fee of Rs. 2 shall be charged for each transfer deed in respect of shares."

(*b*) "Resolved that clause 33 of the Articles of Association be altered to read as under."

"33. A fee of Rs. 2 shall be charged for each transfer deed and the said transfer fee shall be paid at the time the instrument of transfer is deposited with the Company and before the registration of transfer."

10. To consider and, if thought fit, to pass the following resolution as a special resolution :—

SPECIAL RESOLUTION :

(*a*) "Every person whose name is entered as a member in the register of members shall, without payment, be entitled to one certificate under the common seal of the Company specifying the number of share or shares held by him, the distinctive number or numbers and the amount paid on such share or shares. Any member requiring additional certificate shall pay for each additional certificate a sum of rupee one."

(*b*) "Resolved that clause 19 of the Articles of Association be altered to read as under":

"19. Every person whose name is entered as a member in the register of Members shall, without payment, be entitled to one certificate under the common seal of the Company specifying the number of share or shares held by him, the distinctive number or numbers and the amount paid on such share or shares. Any member requiring additional certificate shall pay for each additional certificate a sum of rupee one ; provided that in respect of a share or shares held jointly by several persons, the Company shall not be bound to issue more than one certificate, and the delivery of such certificate to the first named of the joint holders shall be sufficient delivery to all."

All shareholders are requested to be present in person or by proxy. A member entitled to attend and vote at a meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member.

(*By Order of the Board*)

SEshasayee Brothers (Travancore) Private Ltd.,
Managing Agents,
B. V. D. MENON,
Managing Director.

KUNDARA, 2nd *August*, 1961.

Note :—The share transfer books of the Company will be closed from the 26th to the 30th September 1961 (both days inclusive). The dividend, if sanctioned, will be made payable on or after the 30th September 1961 to those shareholders whose names stand on the Register as on the 30th September 1961.

EXPLANATORY STATEMENTS

annexed to the Notice of the Fifteenth Annual General Meeting of the Company

(*As required by Section* 173 *of the Companies Act*, 1956)

ITEM 7 : Messrs. Allied Engineering Corporation, New Delhi is a Firm engaged in the sales of engineering goods. They have been selling the products of this Company on a commission basis in the past in the territories of the States of Assam (including Manipur and NEFA territories), Bengal (including Nepal, Sikkim and Bhutan), Bihar, Jammu and Kashmir, Madhya Pradesh, Punjab (including Himachal Pradesh), Rajasthan and Uttar Pradesh. It is considered desirable in the interests of the Company to have them appointed as sole selling agents for the territories mentioned in the proposed resolution for a period of two years from 1st July 1961 to look after the work of canvassing orders, following up tenders, collecting payments and generally acting as liaison between the customer and the Company. A resolution is necessary for such appointment by Section 294 of the Companies Act, 1956.

ITEM 8 : Article 57 of the Articles of Association of the Company even now fix the limit of borrowing powers of the Directors at twice the authorised capital and free reserves. The existing article has been specifically approved by the Company in General Meeting at the Eleventh Annual General Meeting of the Company.

Section 293 (1)(*d*) read with explanation II of the Companies Amendment Act 1960 stipulates that the Board of Directors of the Company shall not borrow monies in excess of the paid-up capital and free reserves of the Company except with the consent of the General Meeting. Borrowings by the Company from the Bankers in the ordinary course of business are for financing purchase of raw materials etc., and such borrowings are outside the purview of 'borrowings' as defined by the Act. In order, however, to remove any possible doubts whether Article 57 of the Articles of Association of the Company already passed by the General Meeting is inconsistent with the provisions of the Companies Act, it is considered desirable to have an ordinary resolution passed on the subject.

"The Bankers to the Company are also expressing doubts as to whether even the cash credit arrangements with the Bank will or will not come within the purview of Section 293. Considering the installed manufacturing capacity of the Company which currently represents a raw material consumption of the order of Rs. 370 lakhs, it is necessary for the Company to have recourse to large credit facilities from Banks and other institutions. By way of abundant caution, therefore, and in order to enable these facilities to be obtained from the Banks and to ensure the smooth and prompt working of the concern, it is proposed to move the resolution appended."

ITEM 9 : At present the Company collects transfer fees calculated at 1/16 per cent of the nominal value of shares subject to a minimum of Re. 1 and maximum of rupees 2. This special resolution has become necessary in order to avoid calculations in respect of every transfer of odd lots of shares. This will help the public to assess the transfer charges without recourse to involved calculations.

ITEM 10 : The Company now charges fifty naye paise for each additional share certificate issued. On account of the increased cost of printing the share certificates, it has become necessary to enhance the fee for each additional certificate from fifty naye paise to one rupee.

KUNDARA, 2nd *August*, 1961.

BANKING

(*Concluded from page* 300)

1965. In 1960-61, the Sub-Committee expects, the State Bank and its subsidiaries will have opened about 80 branches. For the next few years, the Sub-Committee wants the programme of expansion to be so paced that it will gather momentum in the last two years. It observes that it has deliberately recommended a lower rate of branch expansion during 1961-62 and 1962-63, because effective steps should be taken during these two years to improve the organisational methods, and to recruit and train up the personnel that may be required to man the old as well as the new branches. The State Bank and its subsidiaries, according to the estimate made by the Sub-Committee, would require about 300 supervisory staff, about 300 head cashiers, 600 to 700 cashiers and 600 to 700 clerks to manage the branches.

It is heartening to hear, in this connection, that the State Bank has decided to open an institution in Hyderabad for strengthening the arrangements already made for training supervisory staff and some 15 to 20 schools in each of its four circles for training raw recruits for clerical duties.

Appraisal

Judged as a whole, the programme of expansion for the five years 1960-65, laid down by the Karve Sub-Committee, is quite well conceived. It recognises the pitfalls of too rapid expansion. For one thing, the new branches opened in the past five years have not yet proved financially successful. Consolidation of efforts already made is as important as, if not more important than, the need for making further progress. For another, it is essential that adequate measures are taken to tackle the bottlenecks which experience has revealed. In accepting all the main recommendations of the Karve Sub-Committee, the Central Board of Directors of the State Bank have, therefore, done a wise thing.

The commercial banks in the private sector should have no apprehensions on account of the expansion programme stipulated by the Karve Sub-Committee, because, most of the branches planned to be established will be set up in centres where no banking facilities are available today. In fact, in can be reasonably expected that the opening of more branches by the State Bank will result in the creation of appropriate *milieu* for expansion of branch banking of other banks, as the offices of State Bank provide remittance facilities, besides blazing the trail. Some may argue that this is not quite true. They may console themselves from the fact that a slower rate of branch expansion by the State Bank and its subsidiaries in the next four years than in the previous four years means better scope for the rest of the commercial banks.

INDUSTRY AND COMMERCE SHOULD STUDY AIR CARGO

(*Concluded from page* 317)

operator is not bound by international agreements controlling air fares and cargo rates.

At no time would I advocate developing all-cargo air services, except over certain route sectors where there is a known cargo demand such as between Calcutta and Assam.

There are, of course, difficulties in handling the mixed service, but they are organisational. Efficient management can overcome the difficulties.

The most important factor is that, by developing a reasonably priced air cargo service on scheduled air services together with passengers, it immediately becomes possible to reduce the charges to both shipper and passenger. This alone induces more traffic. *Investigations so far made conclusively indicate that, if passenger-cum-cargo scheduled air services are operated throughout the whole country, a reduction of at least fifteen per cent could be offered on the present air fares.*

At the same time, the country would have an entirely new and modern transportation system which would serve the growing industrial life of the nation. This whole prospect is far too important to ignore. It must be investigated, so that its very real value can be clearly seen, not only by Government but by the country as a whole. Once the picture is there and the facts are on the table, it is a certainty that the demand for air transportation will become an ever increasing industrial activity throughout the country.—*All Rights Reserved.*

CALL RATE HARDENS

(From Our Own Correspondent)

BOMBAY, *9th August*

After remaining quiet on the first three days, when the inter-bank call money rate among Exchange and Indian banks ruled at 2 per cent, conditions in the short-term money market distinctly turned favourable to lenders during the latter part of the week under review. On Monday the 7th inst. onwards, there was a better demand for funds and this exerted an upward pressure on the inter-bank call rate raising it first to 2½ per cent and then to 3¼ per cent at which rate it finished today. Even at this rate borrowers found it difficult to meet all their requirements. It is said that a considerable amount of floating funds moved out to Calcutta and Madras where there was a sudden rise in the demand for money. Market circles expect the rate to firm up further in the coming days. Other short-term interest rates remained steady. For reference, they are given below:

	Per cent
Notice Money:	
3 days or more	3
Term deposits:	
(i) 3 to 30 days (inclusive)	3
(ii) 31 to 60 days	3¼
(iii) 61 to 90 days	3½
(iv) 91 days and more but less than 12 months	3¾
(v) 12 months	4

The results of the 91 days' Treasury Bills of the Government of India sold through weekly tenders showed no new features. As against the invitation for Rs. 2 crores, the total amount offered and accepted was the same. The average rate of accepted tenders was only a shade higher at 2.400 per cent per annum, as compared with 2.398 per cent per annum last week. 91 days' intermediate Treasury Bills sold from the 1st to the 5th inst. amounted to Rs. 1.47 crores. Their sales are being continued from the 9th inst. upto 12th inst.

The statement of affairs of the Reserve Bank of India for the week ended 4th August 1961 shows an expansion of Rs. 13.22 crores in notes in circulation as compared with the previous week. As the notes held in the Banking Department have declined by Rs. 14.27 crores, the total notes issued have receded by Rs. 1.05 crore. In refreshing contrast to the declining trend in the past few weeks, the foreign securities held by the Issue Department have gone up by Rs. 23.85 crores to Rs. 116.86 crores. Balances held abroad have also risen substantially by Rs. 30.78 crores to stand at Rs. 35.81 crores, so that the total foreign assets now stand at the impressive figure of Rs. 152.67 crores. This is mainly the result of the credit equivalent to $250 million secured by our country from the I.M.F. Since out of this credit India had to repay foreign obligations that were due to the tune of $127.5 million, the net addition to the country's foreign assets is of the order of only $122.5 million or Rs. 58.3 crores.

Deposits of banks with the Reserve Bank of India have declined albeit slightly by Rs. 27.05 lakhs. Deposits of others, however, have improved by as much as Rs. 89.15 crores, while those of the Central Government have declined by Rs. 23.83 crores. Investments held on the assets side of the Banking Department have risen by Rs. 48.39 crores. This is due apparently to the Reserve Bank's subscription to the new loans of the Central Government. Other loans and advances have improved by just Rs. 73.62 lakhs, but those advanced to scheduled banks against usance showed a small recession of Rs. 16 lakhs.

A contraction of Rs. 6.30 crores in demand deposits and an expansion of Rs. 59.77 lakhs in time deposits are disclosed by the statement of the scheduled banks for the week ended 28th July 1961. The total deposits of the State Bank also receded during that week by Rs. 3.82 crores. The borrowings of scheduled banks from the Reserve Bank of India have risen by Rs. 47.35 lakhs, but such against usance bill show a small decline of Rs. 9.50 lakhs. Their borrowings of demand nature from the State Bank of India dwindled by Rs. 54.04 lakhs, but those of time nature from the same institution went up by Rs. 1.48 crore. Advances and bills (Bank credit) have declined further by Rs. 10.46 crores to Rs. 1,235.68 crores. Of this fall, the State Bank accounted for Rs. 4.14 crores. Investment of the scheduled banks as a whole rose by Rs. 3.75 crores, but as investments held by the State Bank were lower by Rs. 6.81 crores, it is clear that investments of the scheduled banks in the private sector must have risen by Rs. 10.56 crores.

The gilt-edged market was on the whole steady. Inquiry was mainly confined to short-dated issues of both Central and State Governments. In the Central loans section the Conversion Loan gained 35 nP to Rs. 72.35. 2½ per cent 1962 gathered 15 nP to Rs. 99.25. 3 per cent 1966-68 Funding Loan, 3½ per cent 1965 second national plan bonds and 3½ per cent 1967 third national plan bonds each put on 10 nP to Rs. 96.35, Rs. 100 and Rs. 99.10, respectively. 3½ per cent 1964, 4 per cent 1972 and 1973 issues gained 5 nP to Rs. 100.05, Rs. 100.35 and Rs. 100.30. The State loan section was dull. Only the prices of 3 per cent 1962 Maharashtra, 3½ per cent 1962 Madhya Pradesh and 3¼ per cent 1962 U.P. loans registered improvement ranging from 25 nP to 50 nP. 4 per cent 1969 Gujarat, however, eased by 20 nP to Rs. 99.25, 4 per cent 1969 U.P. loan lost 15 nP to Rs. 98.75. It is learned that the Government of Gujarat is likely to float a loan of about Rs. 6 crores. The Government of Andhra Pradesh has also proposed to float a loan of Rs. 12 crores. The terms of the Gujarat loan are expected to be announced by the 14th inst.

Further improvement has taken place in the external value of the rupee *vis-a-vis* the U.S. dollar following the gain in the found sterling. Banks' selling and buying rates for ready T.T. on New York were Rs. 477.25 and Rs. 474, respectively, as compared with Rs. 478.75 and Rs. 475.25 last week. In the New York exchange market, the pound sterling appreciated further, thanks to the massive credit of $2,000 million given by the I.M.F. to the United Kingdom for meeting its balance of payment difficulties. On the 4th inst., it was quoted actually above par at 280.100-280.150 cents in the spot. On the following days, the rate rose further and was quoted today at 280.430-280.460 cents for spot and at 277.570-277.600 cents for three months' forward. As compared with the previous week, the pound sterling has gathered 0.75 cent in the spot and 0.49 cent in the forward.

BULLION LOOKS UP

(From Our Own Correspondent)

BOMBAY, *9th August*

Both gold and silver registered a further rise in values during the week under review. The rise followed good buying support which stemmed from hopes of enlarged demand for the two precious metals. The hopes were based on the ground that the massive investment programme involving Rs. 11,600 crores in the third Plan period would result in large-scale inflation and that, as a hedge against such inflation, people would prefer to keep a part of their savings in the form of bullion. There were, of course, reports suggesting some contraband arrivals, but these did not have much effect.

The daily average offtake of gold during the week was higher than in the previous week, being 4,000 tolas, as against 3,000 tolas, whole arrivals were lower at 3,700 tolas, as against 3,800 tolas. In silver, daily offtake was at an average of 5 bars, same as last week, but arrivals were larger at 30 bars, as against 22 bars. The floating stocks are estimated at 30,000 tolas of gold and 800 bars of silver.

Adjustment rates fixed today were Rs. 121.20 per 10 grams of gold and Rs. 202.25 per kilogram of silver. The corresponding rates on Wednesday last week were Rs. 120.20 and Rs. 201.05, respectively.

In gold, the *Bhadrapad* (25th September) settlement evoked excellent support and moved up from Rs. 120.70 to Rs. 122 yesterday. At this level, profit-taking set in and the settlement eased to Rs. 121.60, but recovered again to Rs. 121.90 today before finishing at Rs. 121.65. The net rise over the week was 95 nP.

Ready gold was quoted at a discount under the forward throughout the week, though the actual discount declined from 40 nP on Thursday the 3rd inst. to 15 nP yesterday and 20 nP today. The closing rate for the metal was Rs. 121.45, as against Rs. 120.45 last week-end. The highest level touched was Rs. 121.85 yesterday.

The *Bhadrapad* (26th September) settlement in silver was well favoured, the quotation moving up from Rs. 202.30 to Rs. 203.95 yesterday. After declining to Rs. 203.30, the settlement recovered to Rs. 203.06 today before closing at Rs. 203.25.

Ready silver began the week at Rs. 201.10, as against the previous close of Rs. 201.05, and edged forward to touch a high of Rs. 202.85 yesterday. Some selling ensued subsequently and the quotation was taken down to Rs. 202.20. The metal, however, rallied to Rs. 202.25 today, though towards the close it was easier at Rs. 202.25. The net gain over the week was Re. 1.20. The ready metal continued to be quoted at a discount under the forward. The actual discount today was Re. 1, as against Re. 1.25 on Wednesday last week.

The world price of gold in the London bullion market shed half a cent to $35.14 per fine ounce. In sympathy with this fall and following the distinct firmness of the pound sterling *vis-a-vis* the dollar, ready gold declined from 251*s.* 5*d.* to 250*s.* 7*d.* Ready and forward silver, however, were unchanged at 79*d.* and 80*d.*, respectively, as also silver in New York at 91.375 cents.

The following table shows the trend of prices during the week under review:

	9-8-1961 (closing)	High	Low	2-8-1961 (closing)
	Rs.	Rs.	Rs.	Rs.
GOLD				
Ready (.99 fine)	121.45	121.85	120.10	120.45
Forward: Bhadrapad* ..	121.65	122.00	120.50	120.70
Sovereign	94.00	94.00	93.75	93.75
SILVER				
Ready (.999 fine)	202.25	202.85	201.05	201.05
Forward: Bhadrapad† ..	203.25	203.95	202.25	202.30
London—				
Silver Ready	79½d.	—	—	79½d.
Silver Forward	80¼d.	—	—	80¼d.
Gold	252*s.* 7½*d.*	251*s.* 1½*d.*	250*s.* 7½*d.*	251*s.* 5½*d.*
New York—				
Silver	91.375 cents	—	—	91.375 cents

* 25th September settlement. † 26th September settlement.

N.B.—The quotation for gold is per 10 grams (about 0.85 tola) and that for silver is per kilogram (85.7 tolas). London and New York quotations are per ounce.

KIPS QUIET

(From Our Own Correspondent)

MADRAS, *7th August*

The East India kips market ruled quiet, due to annual holidays in the U.K. Certain importers tried to bring down price, but sellers were adamant. Arrivals of tanned cow hides were small with fair clearances. Tanned cow calf and buff calf ruled steady. Buff hides had better enquiries, but prices were one to two pence above U.K. buyers ideas.

Tanned superfine goat skins declined considerably. Yet they failed to evoke any interest. Prime tanned sheep skins ruled firmer. Best middle class sheep skins run, III/IV had good call from the Continent. Raw market ruled easy.

COTTON FUTURES IRREGULAR

(From Our Own Correspondent)

BOMBAY, *9th August*

The cotton futures market was in an indecisive mood during the week under review. Prices followed an uncertain course, not knowing whether to move up or down. The uncertainties regarding weather and the outcome of the survey of the lots tendered on the first and second notice days discouraged operators from entering into firm commitments either way. Early in the week, there were reports that the crop was adversely affected by the wet spell; later, however, came the news that no damage was done so far. Cotton futures see-sawed on alternate bouts of buying and selling prompted by these reports. The survey results and tenders were not such as to produce any definite trend in the market. Tenders against the August contract aggregated only 250 bales (100 bales of Laxmi "A", 100 bales of Cambodia "B" and 50 bales of Buri American) on the first notice day and 200 bales (100 bales of Surti, 50 bales of Laxmi "A" and 50 bales of Cambodia "C") on the second notice day. Tenders on both days were thus small but the survey result of the first lot of 100 bales of Laxmi "A" tendered, which was passed as 29/32" in survey.

Indicated the possibility of more tenders. This was interpreted to mean that there might be more tenders of this variety of cotton which was said to be easily available. Reacting to this survey report, the market staged a decline on Monday. Prices receded further in yesterday's trading, thanks to selling prompted by bearish crop news. The downward revision of the final third Plan targets for raw cotton (from 7.2 million bales to 7 million bales) had no effect on the market. Evidently, operators have long-eased to attach much importance to Plan targets for cotton. There was a partial recovery today. Over the week, the August contract has recorded a net fall of 25 nP and the March contract a net fall of Rs. 3.75. The following table indicate the trend of the market during the week:

(In rupees per three quintals)

	9-8-61	*High*	*Low*	2-8-61
I.C.C. August ...	568	570	563	508.45
I.C.C. March ...	587.50	592.50	585.50	591.25

Demand for ready cotton was moderate. Prices receded by Rs. 10 to Rs. 20 per candy. Popular styles like Vijay, Digvijay, Surti, 197/3, Kalyan, L.147, CO2, etc., received some attention. Ahmedabad mills were reported as buyers of L.147. Southern mills purchased fair quantities of Surti cotton.

Export demand for Bengal *Deshi* and 1" cotton continued to be meagre. Shippers are concerned over the snail-pace of utilisation of the recent quota. This is due to the absence of foreign demand. Shippers have been finding it difficult to find buyers even at substantially reduced prices. Offers from Japan are at extremely low prices. Continental countries have not so far evinced much interest. Exporters blame the delayed announcement of the quota for this poor response from overseas buyers. Many of them have been forced to liquidate stocks which has led to a sharp fall in prices. Prices of Bengal *Deshi* have declined by Rs. 20 per candy over the week under review and by Rs. 50 since the announcement was made on 27th July.

Interest in foreign cottons was confined to ready lots of East African, Sudan and U.S. growths. The Government of India is reported to be planning to import 420,000 bales of long-staple cotton, on a global basis, during the 1961-62 season beginning on 1st September 1961, in addition to importing about 200,000 to 300,000 bales of U.S. cotton (excluding short-staple) under P.L. 480.

The following are the latest available spot quotations—in rupees per candy of 784 lbs.—from Sewri, the figures in brackets being last week-end closings:

Bengal *Deshi* 630 (630); Jarilla 740 (750); Vijay 930 (940); Surti 920 (920) and Kalyan 810 (810).

A divergent trend was witnessed on the Karachi cotton exchange during the week under review. While the January contract improved on scattered support, the March position receded, thanks to lack of buyers. The news that negotiations were going on for the import of a further quantity of U.S. cotton (in addition to the 10,000 bales of long-staple cotton already contracted for) discouraged buying. Export demand too was slack. In order to stimulate exports the Government has removed all restrictions on the export of raw cotton. Till now exports were subject to full payment being received in advance from consignees abroad in an appropriate manner or under a confirmed or irrevocable letter of credit. This restriction has been rescinded now. No such advance payment will henceforth be required, according to a circular issued by the State Bank of Pakistan.

While futures trading in Alexandria continued to be suspended during the week under review, report of large-scale worm attack on the crop has caused considerable concern among trade quarters. The entire crop is said to be affected. In view of the serious nature of the threat posed to the crop the Government has ordered a general mobilisation of the country's resources and energies to fight the pest.

The Sudanese Government has denied Press reports that Sudan is contemplating drastic changes in its cotton marketing policy. The Ministry of Finance and Economics has now unequivocally declared that there will be no change in its cotton marketing policy and that there is no plan to set up a selling organisation outside Sudan for selling Sudan cotton direct to spinners abroad.

Cotton futures in Liverpool scored modest gains during the week. Higher advices from New York and better local support pushed value higher. Both the American and American type contracts at Liverpool edged higher. Better activities in the yarn and piecegoods market further helped sentiment. Sudan contracts at Liverpool were quoted unchanged at last week-end levels. The following are the latest available quotations—in pence per lb.—from Liverpool:

American cotton one inch staple contract: October 24.50; December 24.90; March 25.40; May 25.75.

American cotton mixed growth contract: October 24.95; December 25.35; March 25.80; May 26.15.

Sudan: September, November, January 31.25.

The most important development of the week as far as the New York cotton futures market was concerned was the publication, on the 8th inst., of the second crop (first production estimate) report for the 1961-62 season. The estimate put the crop at 13.92 million bales (500 lbs. each) as compared with last season's output of 14.27 million bales and the ten-year (1949-58) average of 13.71 million bales. The yield per acre was estimated at 427 lbs., as against 446 lbs. last season and the ten-year average of 344 lbs.

Pending the publication of the report, trading in New York cottons futures market was cautious. Prices moved narrowly in thin trading. The market's reaction to the crop estimate is not known till the time of writing.

The following are the latest available quotations from New York, as compared with those a week and a fortnight ago:

(In cents per lb.)

	8-8-61	31-7-61	25-7-61
New York Spot	35.05	35.00	35.00
New Orleans Spot ...	32.90	32.90	32.75
October	34.56	34.48	34.48
December	35.08	34.97	34.90

OILSEEDS EASY

(From Our Own Correspondent)

BOMBAY, *9th August*

The oilseeds market continued to rule distinctly easy during the week under review also. For crop reports from the oilseeds growing regions were bearish and export enquiries were absent. Operators noted that the third Plan production target for the five major oilseeds (namely, groundnuts, castorseeds, linseed, sesame, and rape and mustard) had been raised to 9.8 million tons, as against 9.2-9.5 million tons originally envisaged in the Draft Outline. Although this increase is marginal, the upward revision of the target itself was considered to reflect the Planning Commission's awareness of the acute shortage of oils and fats in the country. In the Commission's own words, "increase in the production of oilseeds is one of the critical targets in the third Plan both to meet higher domestic demands and to provide surplus for export." The consumption of edible oils is proposed to be stepped up from 0.4 oz. in 1960-61 to 0.5 oz. in 1965-66. An important feature of the programme for oilseeds is the accent laid on securing an increase in yield per acre, which is to be stepped up from an average of 451 lbs. in the second Plan period to 500 lbs. by 1965-66. The Commission is of the view that, unless the development of major seeds is supplemented by other means to tap new sources of supply, exports of oils will not be feasible. In order to achieve this end, the Commission has proposed three measures, namely, (1) stepping up of the rate of cottonseed available for extraction upto at least one-half of its total output, (2) promotion of solvent extraction of expeller cakes and (3) development of non-edible oilseeds like *mahuva* and neem, as also rice bran.

Groundnuts were particularly depressed on account of persistent liquidation by Saurashtra interests. Whether reports from Gujarat and Nizam areas indicated favourable conditions for the growth of new crop groundnuts. *Vanaspati* manufacturers were hesitant buyers, in view of adequate stocks they had already accumulated and expectations of a further decline in values. Following the weakness of oils, crushers were reluctant to lend support even at lower levels. Groundnut January 1962 contract was marked down by Rs. 3.87 to Rs. 215.25. Both Coromandels and Khandesh eased by Rs. 3.25 to Rs. 50.50. Nizam bold lost Rs. 2.75 to Rs. 50.50. Oil ex-mill dropped a rupee to Rs. 21.15 and Railway receipts 75 nP to Rs. 21.15. Oil January 1962 contract declined by 45 nP to Rs. 17.80.

Castorseeds ruled easy. The easiness was due to protracted absence of U.S. and U.K. enquiries for Indian castor oil. There were, of course, scattered rumours suggesting a possible entry of France and the U.S. into the Indian castor oil market, but these rumours did not prove correct. September 1961 contract receded by Re. 1.50 to Rs. 168.62, mainly on fears of heavy tenders. January 1962 contract gave way from Rs. 170.75 to Rs. 169.87, at a loss of 88 nP over the week. Madras small lost 25 nP to Rs. 34. Oil Commercial decreased by 10 nP to Rs. 14.10 and B.S.S. by 5 nP to Rs. 15.45.

In sympathy with groundnuts and castorseeds, linseed drifted downwards. September 1961 contract fell by Re. 1.56 to Rs. 38.19. March 1962 contract was lower by 97 nP at Rs. 37.03. Bold ready eased by Re. 1.50 to Rs. 37.75. Linseed oil was done at Rs. 16.20, as against Rs. 16.80.

Cottonseeds, too, tended to look down. September 1961 contract declined from Rs. 98.25 to Rs. 94, before closing at Rs. 94.50. January 1962 contract lost Re. 1.50 to Rs. 91. Whites shed 15 nP to Rs. 20.10 (per 50 kgs.). Both Berars and Non-whites softened by 10 nP to Rs. 19.20.

Sesame bold fell from Rs. 350 to Rs. 340 (per 250 kgs.). Sesame oil decreased by Re. 1.50 to Rs. 24.50.

The following table shows the closing prices of oilseeds and oils today, as compared with those of the two previous weeks:

	9-8-1961	2-8-1961	26-7-1961
Groundnut	Rs.	Rs.	Rs.
January 1962	215.25	219.12	221.75
Nizam bold	50.50	53.25	54.00
Coromandel ready	50.50	53.75	54.25
Khandesh quality	50.50	53.75	54.25
Oil ex-mill ready*	21.25	22.25	22.50
Railway receipts*	21.15	21.90	22.50
Oil January 1962	17.80	18.25	18.55
Castorseed			
September 1961	168.62	170.12	171.12
March 1962	169.87	170.75	170.62
Ready Madras	34.00	34.25	34.25
Ready Kanpur	33.00	33.00	33.25
Oil B.S.S.†	15.45	15.60	15.60
Oil commercial†	14.10	14.20	14.50
Linseed			
September 1961	38.19	39.75	40.19
March 1962	37.03	38.00	38.81
Bold ready	37.75	39.25	39.62
Oil ready†	16.20	16.80	16.90
Cottonseed			
September 1961	94.50	96.25	95.75
January 1962	91.00	92.50	92.75
Niger seed	41.00	41.50	42.00
Kardi seed	26.00	26.00	26.75

* Rates include excise duty but exclude sales tax.
† Rates exclude both excise duty and sales tax.
N.B.—All quotations for futures contracts are per 250 kilograms, except linseeds for which rates are per 50 kilograms. Spot quotations of seeds are per 50 kilograms and oil per 10 kilograms.

GOOD DEMAND FOR TEA

[Messrs. Forbes, Ewart and Figgis (Private) Ltd.]

COCHIN, *9th August*

A total of 380,000 kilograms was offered in sale No. 31 held on Tuesday, 1st August 1961. Offerings from the Nilgiris showed a distinct improvement and there were some attractive lines on offer. From other districts the standard was about maintained. There was good general demand. Highgrowns received keen competition and some attractive prices were realised for improved quality. The few lines showing little change sold at last levels. Good mediums and mediums sold well around last rates with a few lines selling at enhanced prices. Low mediums and the plainer sorts were sometimes easier but were absorbed readily at these levels. Whole leaf grades received less support, especially F.Ps, and were slightly easier. C.T.C. and Legg-cut types sold well but at irregular rates.

Quotations were:

	1961	1960
	Rs.	Rs.
Low mediums	4.45/4.55	3.65/4.00
Mediums	4.55/4.65	4.00/4.15
Good mediums	4.65/5.20	4.10/4.55
Nilgiri B.O.P.	4.75	6.50

The average price realised in Sale No. 31 was Rs. 4.68 per kilo, as against Rs. 4.64 in the previous week and Rs. 4.14 in the corresponding sale last year.

Dust Sale No. 31: Offerings amounted to approximately 202,000 kilograms in dust sale No. 31 held on Thursday, 3rd August 1961. There was fair demand. Improved highgrowns were fully firm to dearer whilst the remaining sold well at around last levels. Medium descriptions were well supported at irregularly easier rates whilst those with fibre declined by 20 nP per kilo. Residuals continued weak. C.T.C. and Legg-cut types generally followed the downward trend of the market.

The average price realised in dust sale No. 31 was Rs. 4.62 per kilo as compared with Rs. 4.76 a week ago and Rs. 3.96 in the corresponding sale last year.

Export Quota: The market is still quoted nominally at 2½ nP per kilo at which rate there are sellers. It is understood that there are small buyers in North India at 1 to 1½ nP per kilo.

Colombo: In this week's export sale the market opened to strong demand with improved highgrowns selling at dearer rates, whilst Dimbulas were firm. Mediums declined by 5 to 10 cents with lowgrowns easier by 3 to 8 cents.

London: North Indian and other growths: In this week's North Indian sale there was fair demand for the few best liquoring Assams, but others were somewhat irregular and generally lower.

Ceylon and South Indian: 28,914 packages were offered in Tuesday's sale of which 9,786 packages originated from South India. There was fair general demand and prices were generally fully steady.

As we go to press, Messrs. Forbes, Ewart and Figgis (Private) Ltd., wire:

"*Sale No. 32*: 341,000 kilograms. Useful demand plain and low mediums irregular and sometimes 5 to 10 nP easier. Mediums slightly easier. Poorer highgrowns easier. Improved quality dearer—particularly fannings."

YARNS IRREGULAR

(From Our Own Correspondent)

BOMBAY, *9th August*

There were two developments of import to the yarn market during the week under review. One pertained to the reported move of the State Trading Corporation to start distributing art silk yarn and nylon yarn from its stocks within the next two weeks. The other development was the announcement, by the Textile Commissioner, of a scheme governing the issue of import licences for art silk yarn under export promotion scheme immediately on shipment of art silk fabrics. The relevant details of these developments are as follows:

S.T.C. and yarn: It is understood that the S.T.C. has on hand art silk yarn and nylon yarn worth Rs. 27 lakhs and it expects to get an additional quantity valued at Rs. 10 lakhs from Hungary by the end of this month. The S.T.C. has commenced issuing circulars to allottee association asking them to make payments within two weeks in respect of allotments to which they become entitled. The allotments have been made on the basis of 30 nP per loom per shift worked during April-September 1960 and mostly in accordance with the selection made by associations on behalf of their members.

Export promotion scheme: Provisional entitlement for import of art silk under the scheme will be worked out by the Silk and Rayon Export Promotion Council. There will be a deduction of 30 per cent from the estimated entitlement for import of rayon grade wood pulp and 25 per cent for the issue of licences at a later stage after the verification of documents. The Council will then communicate to the Joint Chief Controller of Imports and Exports, Bombay, the amount of provisional entitlement. The Controller will, thereupon, issue an import licence for art silk yarn for that amount. The import licence thus issued will be subsequently adjusted against the entitlement which becomes ultimately available to the manufacturer-exporters under the export promotion scheme. The manufacturer-exporters of art silk fabrics will be granted quotas for indigenous art silk yarn to compensate them for the surrender of 30 per cent of their yarn entitlements for the import of rayon grade pulp. The allocation will be made to manufacturer-exporters of art silk fabrics at the rate of 0.75 nP per lb. of indigenous viscose yarn for every rupee of export entitlement surrendered by them in respect of actual exports effected during the April-June 1961 quarter at the following prices (ex-factory selling prices per lb. of first quality yarn, inclusive of excise duty): 100 D bright Rs. 3.65; D bright Rs. 2.20; 120 D dull Rs. 3.26; 150 D bright Rs. 3.20 and 150 D dull Rs. 3.26. The indigenous manufacturers will supply first quality yarn as far as possible. If, however, second quality yarn is supplied, the above prices will be reduced by 7 nP per lb. In case the material is supplied in cakes, instead of hanks or cones, the above prices will be lowered by 16 nP per lb.

The aforesaid developments would appear to have had no marked effect on the yarn market which presented a mixed trend during the week. Thus, imported art silk yarns attracted good support and registered a rise in values, while Cupressa Bemberg yarn (60 x 1) ruled quiet and J.P. yarn (40 x 1) suffered a setback. Staple fibre yarns drifted downward, thanks to selling induced by reports of large stocks in several consuming centres. Cotton yarns continued to be dull, in the absence of any encouraging news. Transactions put through were limited and values moved narrowly.

The following table gives the prices of rayon, staple fibre and cotton yarns today, as compared with those prevailing a week ago:

	9-8-1961	2-8-1961
	Rs.	Rs.
Art silk yarn—		
60/1 Cupressa Bemberg (100 kg.)—		
August	2,800.00	2,800.00
October	2,810.00	2,810.00
Spot	2,811.00	2,811.00
40 x 1 J.P.		
August	3,000.00	3,149.00
October	3,113.00	3,163.00
120 Japan (per 100 kg.)	2,112.00	2,053.00
150 Japan (per 100 kg.)	2,260.00	2,205.00
150 Italy	1,955.00	1,874.00
Staple fibre yarn (40 x 2)—		
August (per 90.72 kg.)	912.00	940.00
October	901.00	945.00
City (per kg.)	10.95	11.00
Cotton yarn (per bundle of 10 lbs.)—		
10s Podar	17.25	17.25
20s Gokak	22.87	22.87
30s New Great	27.00	27.00
40s Madura	32.50	32.25

80s Moderns	68.25	69.00

BLACK PEPPER RECEDES

(Messrs. Parekh and Co.)

BOMBAY, *9th August*

Malabar black pepper, after moving irregularly with undertone steady but quiet during the fortnight ended the 2nd inst., developed an easy tone this week, with values going down almost daily, in view of stale liquidation by bulls. This was due to proximity of the maturing date of the August delivery contracts and continuous absence of demand from the U.S.A. The bulls were expecting pre-autumn demand during August from the U.S.A., but it did not develop, as the dealers there preferred to await development regarding the prospect of Lampong new crop. Some New York dealers tried to use cheaper offers from Brazil as a stick to soften a main holder of Lampong in Singapore. Brazilian new crop is estimated at 4,000 tons, of which half is generally used by South America, about 1,500 tons by Europe and about 500 tons by the U.S.A. Precise news as to the extent of damage to the Malabar crop by heavy rain and flood are still lacking. A section of the market men, however, is doubting the previous magnified report of damage as the trend of the market since then failed to sustain.

There are reports of dissolution of the U.S.A.-India Conference and some steamship companies are said to be nominally quoting the freight for New York at $50, but nothing is definitely known in the direction, as no new booking at the reduced rate is reported so far.

Ungarbled at Cochin, after touching the highest at Rs. 414.50, has slowly come down to Rs. 387, while garbled receded from Rs. 424 to

Rs. 396. August delivery fell from Rs. 444 to Rs. 407 and October delivery from Rs. 458 to Rs. 421. Ungarbled at Calicut dropped from Rs. 410 to Rs. 390.

At the time of writing, the undertone of the market is unsettled under the impact of bull liquidation in August delivery. Despite limited arrivals at all the terminal markets on the Coast, market remained weak, as foreign support was conspicuous by its absence.

Singapore was fairly steady. The undertone there, too, remained quiet, as foreign inquiries were few and far between. A prominent stockist of Lampong is reported to be holding back in anticipation of higher price, possibly the party is waiting for a definite news regarding the coming Lampong crop which, according to the Indonesian Government, is estimated at not more than 10,000 tons. Black at Singapore hovered between Str.$150 and Str.$152½ and white between Str.$182½ and Str.$180. Arrivals of Sarawak are improving, while arrivals of Lampong are poor.

Spot in New York, after touching $0.47, came down to $0.45¾, as grinders' demand was lacking. Grinders are said to be awaiting new development before entering the market. Interest for both, actual and forward is lacking, as New York pepper trade at present is confined to two or three regular dealers who as a rule buy hand-to-mouth and do only replacement business. They seem to have no opinion for the future. As such they remain selective buyers. One of the dealers is said to be doubting the holding capacity of the main stockist of Lampong in Singapore. As such, they try to depress the New York market by selling few cart loads here and there below the replacement cost.

The future of Malabar depends upon the buying attitude of the U.S.A. dealers or renewed inquiries from the East European countries.

Ready pepper in Bombay is nominally quoted from Rs. 218 to Rs. 225 per 50 kilos according to the quality.

TEA DECLINES

(From Our Own Correspondent)

CALCUTTA, *8th August*

The pronounced fall in demand for quality teas was a feature during the export sale held yesterday, and prices recorded sizable declines leading to heavy withdrawals. On the other hand, in the internal sale held last week, prices of quality teas were firm but those for common grades eased. Tea bookings from the Calcutta port maintained the rising trend, and, as a result, several liners meant for the United Kingdom were declared full immediately after opening for booking. The increased shipments have begun to be reflected in U.K. stocks, and for the week ended 28th July these amounted to 124 million lbs. showing a fall of only 1.78 million lbs. as compared to the week earlier.

Dusts on offer in the internal sale held last week totalled 18,777 packages, the good qualities of which met with good demand. Among C.T.Cs, prices for the bright liquoring teas rose after being firm; however, the plainer varieties were easy. Among non-wither legg-cut teas, the plain thin kinds eased, but the bright lines were firm. Plain orthodox teas eased, but prices of bright Assams improved depending on quality. Darjeelings recorded heavy losses. The quotations per 1 kg. inclusive of excise duty were: good Assam C.T.C. dust Rs. 6.80 to Rs. 7.20, medium Assam C.T.C. dust Rs. 6.30 to Rs. 6.70, medium Assam dust Rs. 4.90 to Rs. 5.50, legg-cut dust Rs. 4.70 to Rs. 5.50, and plain orthodox dust Rs. 4.35 to Rs. 4.60.

Leaf on offer amounting to 71 packages were irregular.

Export offerings during the sale held yesterday amounted to 69,855 packages. There was a pronounced fall in demand, and as a result prices eased leading to a number of withdrawals. Tippy teas and whole leaf grades shared in the general trend. Darjeelings were irregular, and withdrawals were reported. Medium and best C.T.Cs eased up to 50 nP. Poorer and fibrous teas recorded a lesser decline. Plain orthodox brokens had buyers at prices which were lower by 10 nP; similar fannings were supported at 10 to 15 nP lower than last rates. Other orthodox teas eased in an irregular way, with medium B.O.Ps moving down by Re. 1. Legg-cut Dooars eased by 20 nP. The quotations per 1 kg. inclusive of excise duty were: best Assam C.T.C. fannings Rs. 7.00 to Rs. 7.50, best Assam C.T.C. B.P. Rs. 6.70 to Rs. 7.00, medium Assam C.T.C. fannings Rs. 5.80 to Rs. 6.20, clean plain pekoe Rs. 5.05 to Rs. 5.15, medium Assam C.T.C. B.P. Rs. 5.70 to Rs. 6.10, plain B.P. Rs. 4.70 to Rs. 4.55, and plain fannings Rs. 4.45 to Rs. 4.55.

JUTE STEADY

(From Our Own Correspondent)

CALCUTTA, *8th August*

Jute and jute goods were maintained steady during the major part of the week under review. But following heavy rains later in the week in several jute districts of West Bengal and availability of sufficient water for retting purposes in tanks and canals, fibre prices eased. Over the week-end, prices of goods also eased, as genuine support was not forthcoming at higher levels. Earlier, although genuine buying of goods was limited, bazar dealers showed interest in anticipation of imminent demand. A remarkable development during the week was that the crisis facing the mills took deeper roots. Representation by the Indian Jute Mills Association to the State Government to reconsider its decision not to allow mills to shut 15 per cent of looms was of no avail. The State Labour Minister, Mr. Abdus Sattar, said that fibre was available in the market in sufficient quantities and that shortage of fibre in mills' godowns was not an indication of shortage as such. Trade circles could not agree with the Minister. Although new crop might be available, quality should also be considered. Due to shortage of steeping water, quality has been affected, and in fact many a cultivator had postponed harvesting. However, it should be noted that, during the week, it rained heavily. It is expected that harvesting would now receive an impetus and that new fibre should be arriving in adequate quantities by the beginning of next month.

In the meantime, on behalf of the industry, it is contended in a statement released by the I.J.M.A. that current arrivals of the new crop, though they are higher as compared to a couple of weeks ago, are far below normal for this time of the year. It is in view of this factor that the mills have been unable to utilise their purchase quotas in full. The unutilised portion of their quotas average almost three weeks' consumption. Arrivals of the old crop have new ceased.

On Tuesday last, in the goods market, ready delivery rose, as activities in the futures market became keener. What deals took place were of an inter-bazar nature, as genuine buyers were disinclined to support the rise. Ready B. twills rose from Rs. 158.50 to Rs. 159.00 and ready hessian 40" 10 oz. from Rs. 53.00 to Rs. 53.50. The bullish trend was also aided by rumours of the move to seal looms. On Wednesday, prices recorded further gains with B. twills at Rs. 161.00 and hessian 40" 10 oz. at Rs. 54.50. This followed the news that the I.J.M.A. representatives were meeting the State Labour Minister with a view to pleading for the reconsideration of the Government's decision on the industry's plea for adjusting production. Soon, it was known that the Government rejected the Industry's plea and reiterated its earlier stand. This led to easiness in prices of goods on Thursday. B. twills declined to Rs. 160.00 and hessian 40" 10 oz. to Rs. 54.25. On Friday, the statement by I.J.M.A. in which it marshalled facts and figures to emphasise the crisis facing mills and in which it feared that the alternative to planned readjustment of production over the industry as a whole would be closure in several units owing to paucity of fibre was issued. This did not result in a hardening trend and, in fact, prices eased. It was realised that any of the course, that is, if mills as a whole reduced production or if some of the mills closed down leaving others in the current rate of working, would lead to the same result. On Friday, therefore, B. twills eased to Rs. 158.75 and hessian 40" 10 oz. to Rs. 53.60. With genuine business lacking, prices eased further over the week-end, with B. twills quoting at Rs. 157.50 and hessian 40" 10 oz. at Rs. 53.00. The highest extent of reduction in prices was in evidence during yesterday, following pronounced easiness in fibre. Ready B. twills eased to Rs. 155.00 and hessian 40" 10 oz. to Rs. 52.25.

Fibre prices, after remaining steady at opening rates for most part of the week, eased subsequently. The following table portrays the movement. There were only small offers in ready delivery jute. Sellers were eager for business for forward delivery. Heavy rains have improved crop prospects.

(In Rs. per maund, delivery 15 days)

	Opening	*Closing*	*Decline*
Daisee bottoms ...	52.50	51.00	1 50
Assam bottoms ...	50.50	48 50	2.00
Northern bottoms ...	50.50	48.50	2.00

BASE METALS FIRM

(From Our Own Correspondent)

CALCUTTA, *8th August*

Prices of base metals were maintained firm during the week under review. The feature on the London Metal Exchange was the rise in tin from £915 a ton to £921. For a time, it looked as though the price would get stabilised at £915. The forthcoming meeting of the signatories to the International Tin Agreement was keenly awaited. At this meeting the question as to whether the current floor price of £730, at which the Buffer Stock Manager is expected to buy tin, should be revised would be considered. It is, however, apparent that if producing countries should be encouraged to increase raisings, the floor price must be raised. In view of the attractive price which is ruling for tin at present in world markets, marginal producers may as well be encouraged to open new mines and/or re-work abandoned mines, if only they can be assured that in case of depression a fair price in relation to increased cost of production necessary to open new mines and/or re-work abandoned mines would be realised. In the meanwhile, current world shortage is expected to ease but the price is not expected to show any significant change in downward direction. The recent release of 500 tons by the United States along with the 10,000 tons released a few weeks ago by the Buffer Stock Manager is expected to see consumption through. It has been good news that exports from Malaya have been showing a small increase and that production in Congo is returning towards normalcy.

Copper scrap supplies were tight during the week under review in Calcutta. Prices for berry scrap and utensil scrap were maintained firm at around previous levels. Despite the grant of a stand-by credit by the I.M.F. to the country, trade circles feared that the copper ingot quota for actual users in the next licensing period would be reduced in view of Government's policy to gradually replace copper, wherever possible, by aluminium. In London, spot copper opened at £231 a ton and eased to close at £228½. This was attributed to an increase in warehouse stocks. Zinc in London eased from £78 a ton to £77½ following a fall in outside demand. The local price was maintained firm at Rs. 321.75 per 100 kgs., though demand was insignificant.

SLACK TRADING IN FOODGRAINS

(From Our Own Correspondent)

HAPUR, *7th August*

Quietly depressed conditions were witnessed in the foodgrains market during the week. Trading was slack, due to heavy rains. *Kharif* crop prospects were better, but excessive rains in some areas have damaged the standing *kharif* crops and sunny weather is now badly needed for the healthy progressing of these crops. Wheat here registered a slight decline to be quoted on Monday at Rs. 14.37 to Rs. 15 a maund for average *dara* quality and Rs. 15.50 to Rs. 16.25 a maund for better farm produce. Daily arrivals of wheat at an average of 75 to 100 maunds due to rains were being lifted by consumers and local stock of wheat with trade was put at 25,000 maunds. Despite losses to crops due to drought in east U.P. and floods in many areas, overall food position is considered to be satisfactory, as stocks with State and Central Governments were heavy and large-scale imports are to follow under previous commitments.

Rice continued to rule quiet with coarse quality recording an easy trend, as demand was slack. Sowings of new paddy have begun here, thanks to fairly heavy rains. The week-end prices were:—*mainpuri sela* Rs. 23; *ginda kutcha* Rs. 22.25; *ramajwayan sela* Rs. 24.50; *raimunia sela* Rs. 25.50; *basmati sela* Rs. 29 to Rs. 31; superior Rs. 35 to Rs. 38 a maund.

Gram recorded a fall of about 50 nP per maund during the week, thanks to heavy local stocks at 40,000 maunds and easy Punjab advices. The week-end prices were Rs. 13.87 to Rs. 14 a maund for Punjab variety and Rs. 13.50 for local inferior produce. Daily arrivals of gram were poor. Barley continued to be quoted at Rs. 11 to Rs. 11.12 a maund, *bejhar* inferior at Rs. 10.75 and *moongia* variety at Rs. 11.75 a maund. *Methi* continued steady at Rs. 27 to Rs. 28 a maund, thanks to good buying support from Calcutta and Rajasthan in the face of poor arrivals. *Juwar* drifted lower to Rs. 9 to Rs. 11 a maund and *guwar* was now quoted lower at Rs. 14 to Rs. 14.25, due to selling pressure and poor demand. Old maize was still quoted at Rs. 11 to Rs. 12 and *bajra* at Rs. 15 a maund.

In pulses, peas ruled quiet at Rs. 11 to Rs. 11.25 for *dara* green quality and Rs. 12.25 to Rs. 13 for superior white farm quality. Loading continues restricted and small arrivals were being lifted by grinders for *dal* and local stock is stationary around 77,000 maunds. Demand for *arhar* was dormant and local stock was unchanged at 45,000 maunds and prices ruled quiet during the week. Other pulses were almost stagnant and week-end prices on Monday (in rupees per maund): *arhar* 12 to 12.25; *arhar dal* 15.75; peas *dal* 13.25; gram *dal* 16.12; *urd* 21 to 21.50; *moong* 20 to 24; *moong dal* 24 to 27; *masoor* 13.25 to 15; *masoor dal* 16.50.

SUGAR DEPRESSED

(From Our Own Correspondent)

HAPUR, *7th August*

Sugar ruled depressed during the week at Rs. 105.75 per bag of 2 maunds and 30 *seers* and retail 97 nP per *seer*, thanks to easy supply position following the further release of the monthly sugar quota of 2 lakh tons. Sugar production during the season at 29.8 lakh tons, beating all previous records, has created a serious problem of disposal which can only be tackled by stepping up both exports and consumption. Export performance as yet has not been very satisfactory and the Union Government, it is reported, is soon removing most of the restrictions on the distribution of sugar as that would help bringing more supplies into market.

Sugar displayed an easy trend in the Muzaffarnagar market during the week due to comfortable supply position in face of poor offtake. Allottees of sugar quota were anxious sellers even at a discount, but buyers were not coming forth. Damaged sugar which evoked demand from *khandsari* manufacturers moved between Rs. 99 to Rs. 101 per bag. Spot prices were for Mansurpur C 29, D-29 and E-29 were quoted at Rs. 107.25, Rs. 106.50 and Rs. 106 per bag of 2 maunds and 30 *seers*, respectively. Mill delivery quotations for C-29 and E-29 were Rs. 105.94 and Rs. 104.38 a bag, respectively.

Khandsari ruled weak during the week, due to lack of adequate demand from the consuming areas of the Punjab and Rajasthan. Local stock in the great manufacturing market of Muzaffarnagar were now 15,000 maunds, the corresponding from *Galawat* was being 60,000 maunds. Production from *Galawat* was being done and week-end prices were:—*galawat* Rs. 27 to Rs. 31.50; non-crystal Rs. 32.50 to Rs. 37; crystal Rs. 35 to Rs. 38 per maund.

Ready *gur* was quietly depressed, as trading here was almost of a standstill during the major part of the week, due to heavy rains and loading restrictions by railways. Some despatches were, however, made to east U.P. and Rajasthan. Local stock is put at 15,000 maunds. Cane crop conditions were now reported fair, but initial damage due to pest has not been made good. Week-end prices were:—selected dry Rs. 17; dry-wet Rs. 15.50; wet Rs. 14.75; *shakker* Rs. 18 to Rs. 18.25 per maund.

In the absence of demand, *gur* ruled quiet in the Muzaffarnagar, due to poor demand from Gujerat side. Prices eased fractionally to be quoted at week-end at:—*Chaku kotha* medium Rs. 17.75 to Rs. 19; wet Rs. 15; dry Rs. 19.25 to Rs. 19.50; *shakker dara* Rs. 17.50 to Rs. 19.25; *masala* Rs. 21 to Rs. 23 per maund.

Note —Outstandings relate to end of period and do not include Indian Union's share of pre-partition liabilities; repayments, however, include those from the pre-partition holdings of Indian investors. A—Discontinued from July 1, 1953. B—Discontinued from June 1, 1957. C—Issued from June 1, 1957. D—Issued from May 10, 1954 to May 30, 1957. E—Progressive net repayments at the end of period from August 15, 1947. F—No sales from June 1, 1957. G—1st series issued from July 1954 to 1957 and 2nd series issued from January 1958. H—Outstandings in respect of items in column 9 marked 'E' are not included. J—Commenced from 2nd January 1959. N.B.—Five-year price bonds were issued from 1st April 1960 and the total outstandings at the end of April 1961, amount to 15.82 crores of rupees.

SPEED IN PLAN IMPLEMENTATION

THE Planning Commission has laid down, in the Seventeenth Chapter of the final report of the third Plan, an imperative, as it were, that "the primary aim must be to ensure high standards of integrity, efficiency and speed in implementation." Not once has the word 'integrity,' in the sense of honesty, been repeated in the chapter, while the other two words—'efficiency' and 'speed'—have been profusely used again and again. In so far as the chapter has nothing to say about the ways and means of ensuring higher standards of integrity in administration and Plan implementation, it is itself sadly lacking in integrity in the sense of wholeness or soundness. Even that second desideratum, namely, 'efficiency,' which the planners have described as "the most important," is admitted to be "the most difficult." As for 'speed,' its fortunes could be better inferred from these words of the planners themselves: "As large burdens are thrown on the administrative structure, it grows in size; as its size increases, it becomes slower in its functioning. Delays occur and affect operations at every stage and the expected outputs are further deferred." *Speed in implementation* and efficiency (in the sense of higher productivity) are inter-related to some extent, but, in the context of *development*, the former presents difficult issues in regard to organisation and administration and the latter in regard to management of personnel. To say all this is not to suggest that the task of improving administrative efficiency is a heart-breaking one and that, therefore, it may as well be abandoned. There can be no such suggestion even by remote implication, for there is greater need now than ever before for making the administration "much more action-oriented." The administrative inadequacies and organisational shortcomings of the first two Plans and the expected greater demands of the third Plan on the structure and machinery of administration at all levels emphasise precisely this need, as will be seen from the following passage in the final report of the third Plan:

> "In the recent past, certain aspects of administration have attracted pointed attention. These include the slow pace of execution in many fields, problems involved in the planning, construction and operation of large projects, especially increase in costs and non-adherence to time schedules, difficulties in training men on a large enough scale and securing personnel with the requisite calibre and experience, achieving co-ordination in detail in related sectors of the economy and, above all, enlisting widespread support and co-operation from the community as a whole. In the larger setting of the third Plan, these problems are accentuated and gain greater urgency. It is widely realised that the benefits that may accrue from the third Plan will depend, *in particular in its early stages* (italics ours), upon the manner in which these problems are resolved."

It is a very promising development that the Government of India has just taken a series of decisions, at the beginning of the third Plan itself, for promoting this administrative efficiency, more or less on the lines suggested by the Planning Commission which itself has had the benefit of expert advice in the second report (1956) of Dr. Paul H. Appleby on administrative reform. These decisions seem to have been taken in the light of the recognition that, "while changes in organisation and procedures can go some distance to remove causes of delay and to achieve greater speed, they have to be supported by greater attention to the training of personnel, to supervision, and to reporting and evaluation." By far the most important decision pertains to the responsibility for financial management. This responsibility, according to the relevant decision, will now be given in greater measure than before to both the administrative ministries and the executive agencies. The scheme drawn up and approved for this purpose has three main features, namely, (i) formulation of a programme for intensive pre-budget scrutiny between the Ministry of Finance and the Administrative Ministry, necessitating the preparation of budget estimates earlier than usual in cases in which actuals of the last year are not an important consideration, (ii) further liberalisation of financial powers to the administrative Ministries, in order to avoid references to the Finance Ministry in the post-budget period except on vital matters, and (iii) the exercise of control of important financial aspects by the Finance Ministry through an adequate reporting system and test checks. To begin with, this scheme will shortly be tried in the Union Ministries of Commerce and Industry, Information and Broadcasting and Community Development and Co-operation and in

such internal processes as evaluation, review of progress, reduction of costs, raising productivity and checking of performance have all been duly emphasised.

The various decisions, now taken by the Government and announced by the Prime Minister in the Lok Sabha on 10th August 1961, may not necessarily mean that the suggested measures of reform will be introduced expeditiously in the specified fields. Obviously, the administrative Ministries which have been charged with the responsibility of administrative improvement will take their own time. It is here that the recently-established Standing Committee on Administration, which will be assisted by the Organisation and Methods Division of the Cabinet Secretariat, is expected to locate administrative deficiencies, facilitate decisions for their removal and assist the Ministries in speeding action on the decisions without taking over any of their functions. A high-powered Committee of the kind, reporting periodically to the Cabinet, is certainly a better arrangement than the present Central Economy Board (with its limited functions) which will be shortly abolished.

PRIVATE SECTOR AND THIRD PLAN

MR. Karam Chand Thapar, President of the Federation of Indian Chambers of Commerce and Industry, and Mr. Vallabhdas V. Mariwala, President of the Indian Merchants' Chamber, have just issued separate press statements on the final report of the third Plan. These statements are broadly alike in the welcome accorded to the overall size of the Plan and the proposed shares of the public and private sectors in the aggregate investment of Rs. 10,400 crores. They have both raised the doubt whether the private sector would be able to raise the resources required for its investment. Here Mr. Thapar's statement is confined to the private sector in industry, whereas Mr. Mariwala has dealt with the private sector as a whole, covering agriculture, power, transport, small industries, large industries and housing. Notwithstanding this difference, they are agreed on the point that, since both the public and private sectors have to draw their resources from a common pool of savings, the high allocation of investment in the former and the methods of financing it may have the effect of curtailing the quantum of resources available to the latter. The question of additional taxation has been specifically mentioned by both. Mr. Thapar's view, in this connection, is that additional taxation of the order of Rs. 1,710 crores, representing a large diversion of public savings, "may dry out an important source of finance to the organised private sector." Similarly, Mr. Mariwala is of the opinion that "there is practically little scope left for additional taxation in the sphere of direct taxes."

It may be thought that there is an element of exaggeration in the fears of the business community on the score of additional taxation, especially in the field of direct taxes. Similar fears, it may be said, were also expressed early in the second Plan period—fears which have been 'belied', partially at least, by the revised estimate of actual investment (Rs. 725 crores, excluding investment by way of modernisation and replacement) in the private sector of 'large and medium industries and minerals' in the second Plan period, as compared with the relevant original estimate of Rs. 575 crores. The revised estimates of investment in the private sector as a whole (*vide* table below) may be quoted in support of the view that the 'heavy' additional taxation in the second Plan period has not affected investment in the private sector to the extent feared earlier.

Investment in the Private Sector

(Including investment financed out of resources transferred from the public sector)

(In Rs. crores)

Group	Second Plan Estimates		Third Plan Estimates
	Original	Revised	
Agriculture (including irrigation)	375	675	850
Power	40	40	50
Transport	85	135	250
Village and small industries	100	225	325
Large and medium industries and minerals	575	725*	1,100*
Housing and other construction	925	1,000	1,125
Inventories	400	500	600
Total	2,400	3,300	4,300

* These figures do not include investment by way of modernisation and replacement.

The above estimates have been described as "exceedingly rough" in the final report of the third Plan, although the upward revision of figures pertaining to the second Plan period is supposed to have been done in the light of latest available data. Since there is no light in the report on the basis of estimation adopted in respect of each group, it is rather doubtful if the figures in the above table can be used in support of the contention that the heavy additional taxation in the second Plan period has not affected investment in the private sector. Taking the group of 'large and medium industries' alone, the improvement noted in the revised estimate (Rs. 725 crores) of investment, as compared with the original estimate of Rs. 575 crores, might well have been greater if the reliefs and concessions granted in the field of direct taxes in the latter half of the second Plan period had been less half-hearted and more generous. For, then, the incentive to save and invest would have had fuller scope and the internal resources of corporate enterprises would also have increased still further. The Planning Commission's view that the tax incentives and concessions given for investment "have contributed in no small measure to high levels of private investment over the last five years" is only partly correct, in that it ignores the fact that a good part of the private sector investment is based on borrowed funds, instead of on equity capital and retained profits.

In this context, Mr. Thapar's view that the public sector should secure the required resources "without placing any further burden on the sources from which the private sector will draw sustenance" amounts to saying that the present incidence of direct taxes is already pretty heavy. While the final report of the third Plan does recognise that, "in the field of (personal) income-tax, the scope for raising the rates generally is limited", it makes no such explicit admission in the matter of corporate tax rates. The fears of the business community on the score of additional taxation cannot, therefore, be described as exaggerated. Since the planners themselves have recognised that "all investment is in a sense financed from a common pool of savings", they should logically come to the conclusion that the resource needs of both the sectors would have to be considered together. But their statement that, "in a planned economy, private investment, especially investment that draws on the organised capital market, has to be regulated with due regard to the limitation of aggregate resources for investment and the requirements of the public sector" betrays a certain bias in favour of the public sector. It is difficult to reconcile this statement with the welcome flexibility that has been imparted in the last one year to the application of the Industrial Policy Resolution of 1956 under which "the roles of the public and private sectors are conceived of as supplementary and complementary to one another." It is to be hoped that the greater contribution expected from the private sector in the fields of fertiliser production, pig iron manufacture, coal mining, processing of bulk drugs, automobile transport, coastal shipping and, Mr. K. D. Malaviya willing, oil exploration and exploitation will lead to the realisation that the resource needs of the private sector are as crucial to the success of the Plan as those of the public sector.

TEXTILE MACHINERY

THE praise that Mr. Manubhai Shah, Union Minister for Industry, showered on the textile machinery industry, in his speech at the Second Annual Meeting of the Textile Machinery Manufacturers Association held at Bombay last week-end, is certainly well deserved. For the production performance of the industry in the past decade has been quite impressive, both quantitatively and qualitatively. The actual value of the various items of textile machinery manufactured has gone up from less than a crore of rupees ten years ago to as much as Rs. 13-14 crores (estimated) in 1961, besides the different spares, components and stores worth about Rs. 20 crores. Even after making allowance for the rise in prices, the increase in production is very substantial. The next four-five years are expected to witness a further notable rise in output. Addressing the meeting, Mr. Prabhu V. Mehta, Chairman of the Association, expressed confidence that the industry would be able to reach the third Plan production target (Rs. 16 crores worth of preparatory, spinning and weaving machinery and Rs. 5 crores worth of processing equipment) by the middle of 1964. The quality of the products is also claimed to be generally satisfactory. "Indian machines," Mr. Mehta said, "have produced satisfactorily to satisfy performance standards.... It will be our constant endeavour to ensure satisfaction to our consumer industry.... The textile industry is being supplied with the new items of machinery to replace imported ones and, in many cases, to the imported specifications and performance standards."

There is, however, a common complaint against the textile machinery industry, namely, late delivery. The delay is attributed to shortage of raw material supplies and components, indigenous as well as imported. Drawing attention to these handicaps, Mr. Mehta pleaded for higher allocation of foreign exchange for imports of materials such as special steels, stainless steels and other ancillary equipments. Apropos this plea, the Minister for Industry held out the assurance that the Government would not deny foreign exchange for any materials absolutely required, though he laid stress on the need for exports to finance imports of vital necessity. While this qualification is pertinent, it must be recognised that there is growing competition in the world textile machinery markets, especially from the U.K., Japan, W. Germany, Switzerland and Czechoslovakia. It may be noted here that the value of textile machinery exported, which had risen from Rs. 1.61 lakh in 1958 to Rs. 9.90 lakhs in 1959, declined to Rs. 3.47 lakhs in 1960. Before the Indian industry thinks of building up an export market, it will do well to concentrate on the task of meeting the domestic textile industry's expanding requirements of a wide range of machinery and accessories. Besides, constant attention must still be devoted to the improvement in quality and maintenance of reasonable prices.

It must be borne in mind that, unless the efficiency of textile machinery is of high order, the goods manufactured on it will not be able to compete effectively in the world markets and, for India, textiles constitute a vital foreign exchange earner. It is here that the importance of intensive research in textile engineering comes in. Drawing attention to this aspect, Mr. Mehta pointed out that indigenous design and research had not progressed as well as it should have. He described how, in various other countries, the manufacturers of dyes and chemicals, textile industry and other specialised manufacturers and their research organisation all co-operated together in designing the final machine. He also alluded to the latest move of the U.K. Board of Trade and the Department of Scientific and Industrial Research to carry out a study of research and development in the field of textile machinery. Commending a similar approach in India, Mr. Mehta said:

> "We in India will be very happy to co-operate with the Council of Scientific and Industrial Research as well as with the Textile Commissioner's Office and three research organisations of textile industry in this behalf. As a first step towards co-operation, I would suggest that these research organisations undertake the machine productivity studies in various textile mills and then communicate their suggestions to us. After a due study and consideration, we would be happy to meet these research organisations for further discussions in the modification of the design and the machine to achieve highest productivity. In the first instance, I believe, such a step would yield assessable results and also perhaps assist us in drawing up a further programme for the development of this particular aspect of the machinery manufacturing industry. These efforts ultimately may culminate into co-operative research organisations. I do visualise such a day in the near future."

Mr. Manubhai Shah, too, emphasised the need for a similar co-operative research organisation in this country. He gave the welcome assurance that the Government would be prepared to grant financial assistance to the extent of 50 per cent, if the Textile Machinery Manufacturers Association were to form a co-operative research institute in collaboration with other associations like the Indian Cotton Mills Federation. Equally welcome was his assurance that the help of the Council of Scientific and Industrial Research would always be available. The pace at which technological developments are being applied to the production of textile machinery is so rapid in many countries that, unless the Indian industry makes every endeavour from now alone to keep pace with such developments, the performance of men and machines in the industry cannot attain the same standards as those elsewhere in the world.

MARKET GOSSIP

THE criticism that, in recent months, the share markets were indulging in overoptimism and taking many things for granted has had further evidence this week. One of the favourable grounds of speculators for pushing up equity values was that this company or that company would soon issue either bonus shares or right shares on attractive terms. But much of this was wishful thinking. Some weeks ago, Mr. Kasturbhai Lalbhai said he had no scheme in mind for raising the paid-up capital of the Atul Products, as it would be uneconomical to do so at this stage of the Company's growth. A similar reply was given by Mr. J. R. D. Tata on Thursday last in regard to T.E.L.Co. He said, in effect, that it would be prudent to increase the size of equity capital only when the expansion schemes of the Company yielded production and profit and that, till then, it would be profitable to shareholders themselves to rely on debentures and other borrowings. This means that, at least for another two years, the Company might not go in for issue of new ordinary shares and that, in the meantime, it may be in a position to effect further modest increases in dividend. The Chairman of the Indian Copper has also discounted the possibility of issue of additional capital in the near future, as the Company has sufficient resources at its command to take care of its expansion plans. As for issue of bonus shares, he has expressed the view that even at the reduced rate of taxation on capitalisation of reserves such an alteration in capital structure is not worthwhile.

Checking Unhealthy Speculation

The report that the Government has shelved its proposals for restraining speculation in share markets, leaving the problem to be tackled by the governing boards of stock exchanges, sounds too good to be true. Even the final report of third Plan stresses the need for taking more effective steps to keep speculation under check. The stock exchange authorities would no doubt like to be left alone and they have been trying their level best for the past three months, if not more, to convince the Government that it would be best to entrust the task to themselves, with faith in their good sense. It is hard to believe they have succeeded in their attempts. It is, however, possible that, as both the Finance Minister and the Secretary for Economic Affairs (Mr. L. K. Jha) would shortly be going abroad on official work, the matter may be kept pending for some more time. It is, however, to be hoped that the present subdued temper of the markets has not been taken as a justification for not doing anything. On the contrary, a situation such as the present one, when neither the bulls nor the bears have built up a heavy position, is the most opportune for tightening the controls on speculation, for it would cause little or no dislocation. Further, both bulls and bears would know the handicaps they would be subjected to in case they choose to indulge in excessive speculation again. The popular sayings that prevention is better than cure and that a stitch in time saves nine are quite appropriate in this context. Some foresee a socialist deluge after the General Elections, if not on the eve of Elections. Others anticipate a bright future, with a further marked rise in equity values. Both may be right or both may be wrong; or only one may be right. Just as a bull phase is followed by a bear phase, so also the reverse takes place. The assumption that the stock exchange authorities have now realised the necessity for taking, on their own volition, fresh measures to prevent recurrence of unhealthy speculation, or that there would be no revival of such speculation at all is just delusion.

State Loans

Although the State Governments had failed to raise the taxes expected of them in their budgets for 1961-62, they have arranged their borrowing programme at least according to the requirements worked out in the third Plan. The provision in the Plan is for a net borrowing of Rs. 325 crores in the five-year period. Since there are maturities of the order of Rs. 88.29 crores, the gross borrowings over the Plan period should be Rs. 413.29 crores, or an annual average of Rs. 82.66 crores. As against this, the aggregate amount of new loans announced by State Governments this week is Rs. 80 crores. Since the loans that are due for repayment by the end of this month are Rs. 12.96 crores, and these have been given, as usual, the facility for convers on into the new loans of the respective States, the net intake will be a minimum of Rs. 67.04 crores, or a maximum of Rs. 75.04 crores, if the subscriptions to all State loans are sufficiently large to enable every borrowing State to exercise its option to retain an excess of 10 per cent of the notified amount.

As will be seen from the Governments' invitation to investors collectively published on the next page, thirteen out of fifteen States are borrowing, the two States not approaching the market being Assam and Jammu and Kashmir. The heavy est borrowers are Andhra, Madras and Maharashtra, each wanting Rs. 10 crores. Then come Mysore and West Bengal with Rs. 7 crores each, followed by Gujarat and Uttar Pradesh with Rs. 6 crores each. Orissa wants Rs. 5 crores and so also Madhya Pradesh. The target of Kerala and Rajasthan is Rs. 4 crores each. Bihar and Punjab are willing to be content with Rs. 3 crores each. All of them want this money for financing their development programmes. All the loans carry a uniform rate of interest—4½ per cent per annum and are of uniform duration—11 years. The issue price however, varies slightly in keeping with the preference of investors and, therefore, the yield, too. On the loans issued at par, the yield is 4.25 per cent both running and redemption. In the case of loans at Rs. 99.75 (Andhra, Madras, Mysore, Uttar Pradesh and West Bengal), the running yield is 4.26 per cent and the redemption yield 4.28 per cent, the corresponding rates in the case of loans at Rs. 99.50 (Bihar, Kerala, M.P., Orissa, Punjab, Rajasthan) being 4.27 per cent and 4.31 per cent, respectively. As in the case of Central loans floated last month and in accordance with the Government's policy of gradually adjusting the terms of borrowing to the prevailing cost of money, the terms of the aforesaid issues are slightly more favourable than they were a year ago and the yields available on the existing loans of comparable maturity. Thus, last year, the rate of interest offered was 4 per cent and the duration nine years. The yields on the existing 4 per cent 1971 loans before the announcement of the new loans ranged from 4.03 to 4.08 per cent running and 4.09 and 4.25 per cent redemption. Again, the 4½ per cent 1971 loan of Maharashtra was giving a running yield of 4.20 per cent and a redemption yield of 4.10 per cent, as against 4.25 per cent now offered. Because of the relatively higher yield as compared with that available on Central loans, the State loans are nowadays quite popular with investors who have to invest a part or a whole of their funds in gilt-edged securities. This consideration, coupled with currently prevailing comfortable money conditions, and the active canvassing that is being done by the State Governments, warrants the conclusion that the State loans will be fully subscribed, when the list opens on 4th September; it is due to close on 9th September the latest. The L.I.C. is reported to have specially prepared the ground for taking up a large block of these loans by selling last week itself some of its short-dated loans to commercial banks. This is doubtless a good arrangement, as it is to the mutual benefit of both.

Politics Dominates Sugar

There is either muddled thinking, or reluctance to face the inconvenient facts, about sugar in official circles, not excluding those who are reputed for taking a well-balanced view of things. How else is one to explain some of the contradictory statements made by Mr. S. K. Patil, Union Minister for Food and Agriculture, in Lok Sabha in the past few days? Replying to the debate on sugar situation on Thursday the 10th inst., Mr. Patil categorically declared that the Government was not contemplating any reduction in the price of sugarcane, though he confessed that the cane price accounted for as much as 70 per cent of the cost of producing sugar. Indeed, he said that it was his intention to devise a formula for the future which "would give the cane grower more money for his produce." Just two days prior to this statement, Mr. Patil had disclosed in the Lok Sabha itself that, with a view to reducing the present high cost of sugar production, the question of lowering the cane prices was under the consideration of the Government. He, however, qualified this statement by saying that the proposed reduction "would apply only to the export part of sugar." He went so far as to say that the cane grower, too, should make some sacrifice for winning export market for sugar. To quote him: "I propose to persuade cane growers to agree to a reduction and there is nothing, wrong in my doing so." The same Mr. Patil had also stated a few days earlier, while inaugurating the recent annual meeting of the Indian Sugar Mills' Association, that the Government was examining the feasibility of rationalising sugarcane prices.

Why did Mr. Patil make such conflicting statements? It is not difficult to answer this question, for the answer is quite obvious. There is too much politics in sugar. Mr. Patil, being a shrewd politician, must have quickly realised that his earlier statements were likely to be exploited by his political opponents for winning the favours of cane growers, who have a powerful say in the elections, especially in the States of Uttar Pradesh and Bihar. The Governments of these States themselves have been pleading for a further upward revision in the minimum price of cane from the present high level of Re. 1.62 per maund. He, therefore, took the earliest opportunity to take the sting out of his earlier pronouncements, even though he would look ludicrous in that process. Surely, his being ridiculed by columnists and newspaper commentators for saying one thing today and another to-morrow is less important than creating a hornet's nest for him and his party.

With hardly six months to go for the forthcoming General Elections, it is not surprising that almost every member of the Lok Sabha who participated in the brief debate sought to urge that the interests of cane growers should not be allowed to suffer at any time. The speeches of practically all members were confined only to the issue of sugarcane price and no one cared for the interest of consumers who outnumber the cane growers. Nor did any one of them offer any solution to the urgent problem of disposing of the huge sugar stocks lying unsold in the mills' godowns and locking up an enormous amount of bank finance which could be conveniently used for more gainful purposes.

The anxiety to safeguard the interests of cane growers is no doubt understandable, but it should not be extended too far to overlook completely economic considerations. In view of the heavy incidence of the price of cane in the cost of making sugar and considering that the other elements of production cost, namely, wage bill and manufacturing expenses, are very rigid, there is absolutely no scope for a reduction in production cost except through a cut in cane price and the tax on sugar consumed. The latter could be reduced to a sizable extent, but there is a limit to such a reduction because of the Government's need for more revenue. So the time has come when the cane grower, too, will have to make some sacrifice. It may be noted, in this connection, that, out of the Rs. 25.15 required to produce one maund of sugar, the cane cost accounts for over Rs. 17.60. Another point to be borne in mind is that the sugar industry has implemented the Wage Board award which entails an additional expenditure of Rs. 5-6 crores annually. Viewed thus, the statement of Mr. Shibbanlal Saksena that the Tariff Commission had increased the margin of profits for sugar mills is not convincing. Mr. Patil no doubt disputed this contention by saying that the Commission had, in fact, reduced the margin from 6.6 to 6 per cent, but expressed his readiness to ask the Tariff Commission to investigate the cost of sugar production if the members so wished. Surely, it would be waste of time and money to have another investigation. A detailed enquiry into the cost of structure of sugar was conducted by the Commission only two years ago. The facts are clear and there is no need for another enquiry.

The categorical declaration by Mr. Patil that the Government would on no account reduce the price of sugarcane is deplorable. This means that he too has not the political courage to face the hard economic facts and that the political exigencies are such that he has to tolerate the premium on inefficiency in agriculture. The old price of Re. 1.44 per maund of cane was itself very attractive as compared with the prices fetched by several other agricultural commodities. In fact, the monetary yield of cane on the basis of the enhanced price of Re. 1.62 is actually much more, because, in addition to the minimum, the growers receive a share in the prices of sugar realised by the factories in excess of what is regarded by the Government as fair ex-mill prices. The revised cane price has been so attractive that there has been a marked increase in the area devoted to this crop, from 4.81 million acres in 1958-59 to 6.10 million acres in 1960-61. Even if the minimum price of cane is reduced, the cane growers will not suffer any monetary loss, provided, of course, they endeavour their best to raise the per-acre yield of cane with higher sucrose-content. Mr. Patil himself said that, instead of enlarging the area under cane, the farmers should rely on intensive cultivation. But why should the farmers be interested in such cultivation so long as they are assured of a price that takes no account whatever of the quality aspect? If the problem of getting more sugar per acre is to be tackled successfully, it is imperative that the price of cane must be linked to both weight and the quantum of sugar recovered from it. All impediments in the way of implementing this fundamental, long overdue reform must be removed. Mr. Patil will have won an important victory and placed the sugar industry on a sound basis if he succeeds in putting through this reform. But, as he is not willing to covet this honour, the sugar muddle will continue.

India Forge: A Promising New Issue

A promising and well-planned engineering company, the India Forge and Drop Stampings Ltd., has invited subscription to a part of its preference and equity capital, *vide* the announcement appearing elsewhere in this issue. The authorised capital is Rs. 1 crore and the issued capital Rs. 50 lakhs—Rs. 40 lakhs in equity and Rs. 10 lakhs in preference. Of this, the directors and their friends have taken up Rs. 15 lakhs equity capital. The L.I.C. has agreed to subscribe to Rs. 5 lakhs of preference shares (dividend: 9.226 per cent taxable) and to Rs. 5 lakhs of ordinary shares. The present issue to the public is, therefore, only Rs. 20 lakhs of ordinary shares and Rs. 5 lakhs of preference shares; the whole issue has been underwritten.

While fuller details can be had from the announcement, the main features of this new Company may be highlighted here. The principal promoter, Mr. K. C. Sood, is a qualified metallurgical engineer, with 16 years' experience in forge shop technique. The Company has secured technical collaboration with a first class British company, Messrs. B. and S. Massey Ltd. The factory will be located near Madras City, where it has an assured market for its manufactures and obtained facilities for land and power. Foreign exchange for plant and machinery has been ensured. The Company's dependence on imported steel is only small and even that will disappear once the proposed tool and alloy steel units commence production. The Company, accordingly to promoters, is scheduled to go into production in 1962. The proportion of preference capital to the total is modest and the equity capital of Rs. 40 lakhs has an attractive gearing, in that it is related to an effective block of Rs. 63 lakhs, which indicates good earning potential and fair dividend prospects.

Select Committee On Income-Tax Bill

Even a cursory glance at the report of the Select Committee on the new Income-tax Bill, 1961, presented to the Lok Sabha on the 10th inst., would convince one that the Committee has made a commendable effort to soften the severity of a number of provisions of the Bill. Admittedly, many of the original clauses of the Bill were quite harsh to the assessees, individuals and corporations alike, and, if they had been allowed to go into the Statute Book, they would have certainly affected the process of capital formation and perpetuated many inequities. The Select Committee has suggested that, in order to accelerate the growth of industries, the list of industries which are liable to exemption from super tax should be expanded to include new industries which have assumed importance in the context of the industrial development of the country. A revised list has been

(Continued on page 364)

SHARE MARKET WEAK

ALL-ROUND FALL IN VALUES

(From Our Own Correspondents)

BOMBAY, 17*th August*

THE share market had only four working sessions during the week under review, as it remained closed on Tuesday the 15th inst. (Independence Day) and today (on account of the demise of a Jain Sadhu). This brief period witnessed an all-round decline in values of both cash and forward scrips. The sentiment of the market was affected by the note of pessimism about the future of steel industry struck by the Indian Iron and Steel Company Chairman and reports of labour troubles in T.E.L.Co. works. Fresh buying support was lacking, in view of the proximity of the end of the account period. Even the report of the Select Committee on Income-tax Bill which was considered to be on the whole favourable, especially the recommendations designed to reduce the severity of original clauses in a number of directions, failed to have any significant effect. Consequently, equities staged a retreat and finished on a distinctly weak note.

Steel shares suffered further setback in values. Tata Steels eased by Rs. 2 to Rs. 152. Indian Irons shed 30 nP to Rs. 25.70. Mukand Irons dropped 60 nP to Rs. 25.65.

Textiles, too, were depressed. Centurys fell by Rs. 14.50 to Rs. 673.50, following heavy bull liquidation. Standards declined by Rs. 36 to Rs. 1,344. Khataus were subjected to selling and receded by Rs. 21.25 to Rs. 547.50. Kohinoors softened by Rs. 7 to Rs. 286.50. Morarjees lost a like amount to Rs. 410.

Cements were neglected. Associated Cements eased by Re. 1.50 to Rs. 159. Digvijays lost Rs. 2 to Rs. 166. Orissas lost 16 nP to Rs. 14.96. Andhras were dull at Rs. 11.04.

Sugars were quiet. Belapurs were unaltered at Rs. 252, after being higher at Rs. 253.50 at one time on Saturday the 12th inst. Bhopals were dull at Rs. 24.80 and Changdeos at Rs. 23.92. Phaltans lost Rs. 4.25 to Rs. 130. Walchandnagars shed Re. 1.50 to Rs. 163.50.

A feature of trading in the engineering section was the sharp drop of Rs. 26.50 to Rs. 341.50 in the quotation for T.E.L.Cos. following heavy bull liquidation; at one time on Wednesday the rate was as low as Rs. 139. T. Manekials were hammered down from Rs. 527.50 to Rs. 505. Premier Construct ons receded by Rs. 6 to Rs. 183, despite reported buying by the L.I.C. New Standard Engineerings dropped Re. 1.50 to Rs. 186.50. Alcock Ashdowns fell by Rs. 2 to Rs. 273. Larsen and Toubros shed Re. 1.25 to Rs. 37. Mahindras lost 24 nP to Rs. 19, K rloskar Brothers by a rupee to Rs. 45 and Brady Engineerings by Re. 1.50 to Rs. 82. But Asian Cables advanced by Rs. 7.50 to Rs. 111.50 on special support.

Chemicals encountered selling and drifted downward. Indian Dyestuffs suffered a loss of Rs. 18.75 to Rs. 451.25. Colour-Chems fell by Rs. 12.50 to Rs. 327.50. Dhrangadhras receded by Rs. 5.50 to Rs. 123.50. Alembic Chemicals eased by Rs. 3.25 to Rs. 228.75. Polychems lost Re. 1.25 to Rs. 205 and Dharamsis shed a like amount to Rs. 277.50. Tata Chemicals were neglected at Rs. 17.52 and Kemps at Rs. 298.

In the shipping group, Scindias eased by 36 nP to Rs. 13.24 and Great Easterns by 28 nP to Rs. 13.48. Among automobiles, Premier Automobiles declined by Rs. 2 to Rs. 156.50, despite encouraging working results for the year ended June 1961. The total turnover of the Company for 1960-61 aggregated Rs. 22.72 crores, as against Rs. 20.95 crores in the previous year. The Company sold 6,913 cars and 6,073 trucks, as compared with 5,729 cars and 5,797 trucks. Hindustan Motors declined by 68 nP to Rs. 20.56 c.d.

Rayon shares drifted lower in keeping with the general trend of the market. South India Viscoses dropped Rs. 9 to Rs. 181. National Rayons shed Rs. 6.50 to Rs. 532. Baroda Rayons eased by Rs. 2.50 to Rs. 139.50. Gwalior Rayons lost a rupee to Rs. 48.50. But Indian Rayons put on 50 nP to Rs. 74.

Among miscellaneous industrials, Bombay Oxygens were done lower at Rs. 58.50, as against Rs. 59.50 last week, notwithstanding the statement by the Chairman of the Company that the plant would go into production by April 1962. Bombay Burmahs encountered selling and receded by Rs. 6.50 to Rs. 588. Voltas dropped Rs. 5 to Rs. 284. This scrip, too, is said to have been fancied by the L.I.C. Ceat Tyres eased by Rs. 3.75 to Rs. 207.50 and Premier Tyres by Rs. 2 to Rs. 123.50. New India Industries (not New India Fisheries as was wrongly reported last week), which had spurted by Rs. 8.75 to Rs. 388.75, remained neglected at this level. Tata Oils were quiet, losing Re. 1.80 to Rs. 74.20.

Madras Stock Exchange

MADRAS, 16*th August*

The upward trend of equities noted last week was halted during the week under review. In fact, equities drifted lower, barring a few select scrips especially in the textile and rubber sections, which elicited good investment support. The easiness was due to lack of encouraging advices from Bombay and Calcutta. The Union Finance Minister's statement in the Lok Sabha that the foreign exchange situation was satisfactory, did not have any perceptible effect on the market. His statement on the U.K.'s possible entry into the Common Market, though it stressed the need for ensuring transitional safeguards for Commonwealth goods, chilled the enthusiasm of operators. Sugars were subdued, following the Union Food Minister's categorical statement that cane prices would not be reduced except for the export part of sugar. Coffees ruled easy in the absence of follow-up support. Teas were generally dull, but a few popular scrips came in for enlarged enquiries. Rubbers, however, were active. Among textiles, forward scrips encountered persistent selling, while a few leading cash scrips met with selective support. Miscellaneous shares were quiet.

In the planting section, Balamcor Coffees suffered a loss of 25 nP to Rs. 15.35. Cochin Malabars fell by 18 nP to Rs. 7.32. Cowcoodys eased by 15 nP to Rs. 4.45. Periakaramalais lost 9 nP to Rs. 3.88. Ouchterlony Valleys shed 5 nP to Rs. 3.70. Blue Mountains, after r sing from Rs. 3.15 to Rs. 3.18, declined subsequently to Rs. 3.14. Kadur Coffees were neglected at Rs. 2.85, reflecting the disappointment of operators over the lower dividend of 5 per cent (taxable) for the year ended May 1961, as compared with 7.50 per cent d stributed in the previous year. Badra Coffees were quiet at Rs. 3.60. The Directors of the Company have maintained the div.dend for the year ended May 1961 at the previous year's level of 15 per cent (taxable). Malankaras were featureless at Rs. 18, notwithstanding the announcement of a dividend of 16 per cent (taxable) for the year ended March 1961, which compares favourably with 15 per cent for 1959-60. Samgameshwars, however, picked up 3 nP to Rs. 2.06.

In the textile section, South India Viscoses were marked down by Rs. 9 to Rs. 184. Lakshmis receded by Rs. 2 to Rs. 168. Madurais declined by 65 nP to Rs. 37.10 and Travancore Rayons by 50 nP to Rs. 38.90. Bangalore Woollens, however, advanced by Rs. 5.50 to Rs. 213.50 and Buck.ngh.ms by Rs. 4 to Rs. 245.

Among miscellaneous industrials, Western India Plywoods gave way from Rs. 223 to Rs. 218. Tube Investments decreased by Rs. 3 to Rs. 259. Aluminium Indu tries lost 35 nP to Rs. 23. The Company has announced a final div dend of 9 per cent, making a total of 18 per cent (taxable) for the year ended March 1961, same as that paid in the previous year.

PYRITE DEPOSITS

Recent investigations by the Indian Bureau of Mines on the technical and economic aspects of utilising the pyrite deposits of Amjore in Bihar for the production of sulphuric acid are reported in the latest (July) issue of *Research and Industry*, a monthly periodical published by the Council of Scientific and Industrial Research. In India, almost all the units producing sulphuric acid are based on elemental sulphur which is now entirely imported. The projects for producing sulphur locally assume considerable importance in view of the rapidly mounting requirements of sulphur for the production of sulphuric acid. By 1965-66, it is estimated, India would be importing 400,000 tons of sulphur for product on of sulphur c acid. The Amjore pyrite deposits form the most promising source of sulphur in India. This locality is estimated to have a reserve of about 384 million tons of sulphide ore in an area of 48 square miles. About 78 million tons of these are proved reserves containing on an average 40 per cent sulphur.

4¼ per cent

STATE GOVERNMENT LOANS 1972

	Name of State	*Amount*	*Issue price per cent*
(1)	Andhra Pradesh	Rs. 10 crores	Rs. 99.75
(2)	Bihar	Rs. 3 crores	Rs. 99.50
(3)	Gujarat	Rs. 6 crores	Rs. 100.00
(4)	Kerala	Rs. 4 crores	Rs. 99.50
(5)	Madhya Pradesh	Rs. 5 crores	Rs. 99.50
(6)	Madras	Rs. 10 crores	Rs. 99.75
(7)	Maharashtra	Rs. 10 crores	Rs. 100.00
(8)	Mysore	Rs. 7 crores	Rs. 99.75
(9)	Orissa	Rs. 5 crores	Rs. 99.50
(10)	Punjab	Rs. 3 crores	Rs. 99.50
(11)	Rajasthan	Rs. 4 crores	Rs. 99.50
(12)	Uttar Pradesh	Rs. 6 crores	Rs. 99.75
(13)	West Bengal	Rs. 7 crores	Rs. 99.75

All the State Governments reserve the right to retain subscriptions upto ten per cent. in excess of the notified amount.

All the above loans will be repaid at par on 4th September 1972.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 4TH SEPTEMBER 1961 AND CLOSE ON 9TH SEPTEMBER 1961 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 4th September 1961.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

Securities of 3 per cent Tapi Irrigation Development Loan 1961 and 3½ per cent Cochin Loan 1956-61 will be accepted AT PAR for conversion into the new loans of the Governments of Maharashtra and Kerala respectively. Securities of Mysore Government 3 per cent Loan 1956-61, Madras Government 2½ per cent Loan 1961 and 2½ per cent Uttar Pradesh Loan 1961 will also be accepted for conversion AT PAR into the new loans of the respective State Governments.

Interest due on the securities of the loans tendered for conversion will be paid as under:

	Name of Loan	*Rate of Interest per cent per annum*
(1)	3% Tapi Irrigation Development Loan 1961	At 3% upto and including 30th April 1961 and at 4½% from 1st May 1961 upto 3rd September 1961 inclusive.
(2)	3½% Cochin Loan 1956-61	At 3½% upto and including 31st May 1961 and at 4½ per cent from 1st June 1961 to 3rd September 1961 inclusive.
(3)	Mysore Government 3% Loan 1956-61	At 3% upto and including 19th April 1961 and at 4½% from 20th April 1961 to 3rd September 1961 inclusive.
(4)	Madras Government 2½% Loan 1961	At 2½% upto and including 31st August 1961 and at 4½% from 1st September 1961 to 3rd September 1961 inclusive.
(5)	2½% Uttar Pradesh Loan 1961	

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the office of the Reserve Bank of India at Nagpur in the case of Maharashtra Loan.

(ii) At the branches of the State Bank of India and at treasuries and sub-treasuries in the case of Andhra Pradesh, Bihar, Gujarat, Kerala, Madhya Pradesh Madras, Maharashtra, Orissa, Punjab, Rajasthan and Uttar Pradesh loans.

(iii) At the branches of the State Bank of India in the case of West Bengal loan.

(iv) At the branches and treasury pay offices of the State Bank of Hyderabad in the case of Andhra Pradesh and Maharashtra State Loans.

(v) At the branches and treasury pay offices of the State Bank of Mysore (except at Bangalore, Mangalore and Gulbarga), the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in Mysore State in the case of Mysore State Loan.

(vi) In the case of Gujarat Loan the State Bank of Saurashtra at Bhavnagar and its branches in the State of Gujarat will collect applications and forward them to the nearest receiving office.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

Applicants tendering their applications at the offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras and New Delhi will, in the event of oversubscription to the loan applied for, be given the option of transferring their cash refunds to any of the other State Government loans which may not be fully subscribed by that time. To avail of this facility, the persons tendering their applications should complete the SPECIAL OPTION FORM copies of which are available on application from any of the abovementioned offices of the Reserve Bank of India.

STEPS TO PROMOTE INTEGRATION

VALUE OF ENGLISH LANGUAGE RECOGNISED

From Our Special Correspondent

NEW DELHI, 16*th August*

THE meeting of Chief Ministers of States, convened to consider the question of national integration, overshadowed the proceedings of the monsoon session of the Lok Sabha last week. The latter appeared to lack some of the usual excitement during and after question hour: this is attributed to a general preoccupation of members with the coming General Elections and the politics of tickets: further moves in regard to the Deputy Leadership of the Congress Party also diverted some interest from the House. The debates on the third Plan and foreign affairs will probably attract more attention; the debate on sugar and the discussion on the affairs of the Aligarh University generated some heat but not much light, since Ministers were kept on the defensive and had to make equivocal pronouncements to please all sections of opinion. The Finance Minister's two statements on the state of our foreign exchange reserves and on India's position in an enlarged Common Market added little that was not known already.

DELHI LETTER

The Chief Ministers' discussion, judged by the *communiques* issued at the end of the meetings, must have been non-controversial; indeed, it is surprising that, with such broad understanding and agreement on the general approach among them to the problems of integration, there is so much trouble in the country. It has taken nearly six years for such responsible men to recognise the value of the safeguards recommended by the States Reorganisation Commission. Better late, perhaps, than never. An unexpected outcome was the ready agreement among Chief Ministers for constituting all-India services for engineering, medical and forest departments, though they have resisted an extension of that principle to Education and Agriculture. In effect, this would mean the appointment to such posts of a certain proportion of persons from outside each State. State Governments, however, wish to have greater control over these officers than they now have over I.A.S. and I.P.S. personnel; this question has been skilfully shelved for the present, but the value of an all-India cadre in these departments will depend very much on the protection which the members of these services can enjoy against local pressures. The Prime Minister is reported to have stated that the I.A.S. or I.P.S. need not provide the pattern for the others. Some via media seems, therefore, likely and any step, however moderate, may be an advance over the present exclusiveness in recruitment which breeds parochialism. There is naturally a fear that some States may be over-represented on these all-India cadres and suggestions have been made for fixing quotas. In any case, these should not cause much difficulty; the present move will only revive cadres which existed before independence and the old rules should be generally acceptable.

One of the grievances of State Governments often expressed is that senior civilians seconded to the Centre from the State cadres are rarely sent back, with the result that the State administrative apparatus has to function with new and relatively untrained hands. Chief Ministers have now insisted on a regular rotation of officers, though this might have the effect of depriving the Centre of some highly experienced men. The risk is worth taking and should be taken now since the work of implementation suffers more at the State level. So far, State politicians have not been wholly averse to getting rid of senior administrators who may check their over-zealous schemes; but, now, even they realise that, without efficient execution and a clean administration, they cannot win local popularity in the face of criticisms by opposition parties. It is now up to the States to provide some attractions in emoluments to get back their men. A freer circulation of officers among the States and the Central departments will be a considerable gain at all levels of the administration and, though this will not be enough to achieve integration, it can break the present exclusiveness which has been partly encouraged by the Centre. For example, there is nothing to prevent the Centre even now from insisting on recruitment of a proportion of Judges from outside each State. It was quite common before independence and the States Reorganisation Commission had urged the revival of this practice. Difficulties of language and differences of social and other laws and customs should not prove more insurmountable than in the case of European Judges, especially those recruited from the English bar in the past, who dispensed justice to the satisfaction of the public. There has been lack of firmness in such matters and one must hope that the Chief Ministers' meeting will make a beginning of a broader recruitment policy by starting with the High Courts.

Two important steps now taken may help to check the trend towards disintegration, if not positively to promote integration. The first is intended to declare as a corrupt practice attempts to promote communal feelings for gaining electoral advantage; this is an important landmark in the history of our democracy, for it is well known that Congress party members have sinned as much as those of other groups in appealing to communal feelings. Tickets have often been given to candidates with an eye on the communal complexion of each constituency. The second step is to declare as an offence the promotion of hatred between different classes; but this is of less importance in the present context, because existing laws are quite adequate (especially preventive Detention), if there is a will to enforce them and very often those who incite communal passions are always ready for the martyrdom which a trial and imprisonment confers on them. On the other hand, a finding on the adoption of corrupt practices by an Election Tribunal will render an election invalid defeating the main object of the candidates and will, therefore, restrain them in future in their electioneering speeches, particularly in the South where the evil has so far gone unchecked. There is a further proposal that advocacy of secession from the Indian Union should also be made a penal offence after the elections are over but this also suffers from the same disadvantage as the second that punishment will not deter expression of such views if a sufficiently large body of persons are determined to propagate them.

Hindi and English

The *communique* issued by the Chief Ministers at the end of their meeting is remarkable for the recognition it shows of some of the chief dangers of the present language policy. Originally, the champions of Hindi, who wished to have it quickly substituted as the official language of the Union, thought that its claims will be accepted if linguistic States were created as a *quid pro quo* and allowed to foster their respective regional languages. The excess of zeal displayed by some States—especially Madras which has sought to make Tamil the medium of University education, has been causing some concern. Though the architects of our language policy should have known better, they realise now that India may in future be producing highly educated persons who will not be able to understand one another for want of a common medium of communication. The most straightforward and honest cause in the circumstances would have been to say that English should continue to be the common medium, since it is also recognised as the best means of communication with the outside world (as the next paragraph in the *communique* makes it clear). Instead of doing so, the Chief Ministers' *communique* states that, although English will continue as such medium for some time to come, "it is clear that urgent steps should be taken to promote Hindi so as to fulfil that purpose as early as possible."

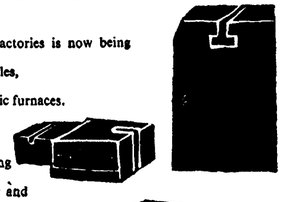
If this means that persons educated in each State in the regional language should be familiar with the common Hindi terminology in the various sciences and humanities, their education should also be in that medium—which is a direct contradiction of the status hitherto accorded to the regional language. Also it means that, while Hindi has so far been promoted only as an *official* language under the Constitution for Union purposes, it is now being given a still higher importance and status as a national language. This will naturally provide grist to the mills of the opponents, besides being wholly unrealistic to expect Hindi to become so soon a medium of inter-State communication as to replace English. Read with the other view of the Chief Ministers that Devanagari should also become a common script for all the Indian languages, the *communique* gives ground for the criticism that, in the name of integration, everything is being made safe and convenient for Hindi-knowing people.

The value of the Chief Ministers' meeting lies in the recognition of the importance of English and the need for it being taught along with Hindi at a very early stage in a child's career. There has been a reiteration of the view (confirmed in the Presidential Order) that English will continue to be used as an associate language for all-India official purposes even after Hindi becomes the Union Official Language. In view of such declaration, it will be permissible in future for the use of English or Hindi in official correspondence between a State and District headquarters, even though the State's official language is some other language (as in Assam). There is also provision for the recognition as an official language of a particular district if one of the national languages is spoken by at least 60 per cent of its population. The public will in any case be entitled to submit petitions in all languages and to get replies to them in such languages. A very real fear, that the adoption of a State language will deprive persons not knowing it of jobs, has been removed by the proposed rule that option should be given to candidates for using Hindi or English as a medium of examination for recruitment and proficiency in the State language should be required after selection during probation.

The agreement on the medium of university education is somewhat ambiguous, since it will validate even the retrograde step recently taken in Madras, though it emphasises the importance of the common link and the immediate need to retain English as such. Instead of bluntly saying so, the *communique* reveals much equivocation, because of a desire to placate the advocates of both Hindi and the regional languages while emphasising the value of English. If these matters had been stated more plainly, the cause of integration could have been well served; one must be thankful, however, for the growing recognition that the setback to integration has been due to the hasty attempts to reduce the importance of English in education and administration.

Refractories for all purposes...

The Kumardhubi range of refractories is now being increasingly used for boilers, coke ovens, ladles, high temperature fire furnaces and electric furnaces.



Backed by over 50 years of manufacturing experience, Kumardhubi Fireclay and Silica Works contribute a vital operational requirement in a number of industries.

I.B.R.D. LOAN FOR PRIVATE COLLIERIES

UNDER the third Plan, the private sector in coal industry is expected to step up its production from 44-45 million tons, as of 1960-61, to 61-62 million tons in 1965-66, that is, by an additional 17 million tons per annum. As the major portion (11 million tons) of this additional production will be from existing mines, the private sector's expansion programme (covering both existing mines and new sinkings in existing leasehold areas) will involve a capital outlay of the order of Rs. 60 crores only, as compared with the investment of Rs. 103 crores required for establishing an additional annual production of 20 million tons in the public sector by the end of the third Plan. But even that outlay of Rs. 60 crores has a foreign exchange component of Rs. 28 crores. It is a gratifying, though not wholly unexpected, development that the private sector in coal industry has just been granted a loan, equivalent to $35 million and representing nearly 60 per cent of its entire foreign exchange requirement, by the World Bank. Of this loan, $30 million will be used by the private companies for importing spare parts, replacements and equipment required during the first two years of the third Plan period for the expansion of existing mines and $5 million for the opening of certain new mines which will take about four years to complete. The entire loan is for a term of 15 years bearing interest at the rate of 5¾ per cent per annum, including the customary 1 per cent commission which is allocated to the Bank's Special Reserve; its amortisation will begin in May 1966.

Although the World Bank's loan will meet only 60 per cent of the foreign exchange requirements of the private sector in coal industry, it does represent a significant achievement for which the industry's representatives (Mr. P. Prashad, Chairman, Indian Mining Association; Mr. S. N. Mookherjee, Vice-Chairman, Indian Mining Federation; Mr. U. H. Worah, Member of the Committee of the Indian Colliery Owners' Association; and Mr. F. G. Massman, Chief Mining Engineer of Andrew Yule Co., Ltd.), who had been to Washington early last month to conduct negotiations with the Bank, can justly claim the credit. Having done its part to the maximum extent possible in the matter of securing foreign assistance, the private sector will now expect the Government of India to provide the balance ($25 million) of its foreign exchange requirement in the later part of the third Plan period.

Much of the advantage expected from the availability, so early in the beginning of the third Plan, of the World Bank loan may, however, be lost, if the Government either delays the screening of the project reports submitted by the collieries and thereby the release of the foreign exchange by the World Bank or fails to implement, within the first two years of the Plan period, its programme for the construction of ropeways for sand-stowing operations. Now that the World Bank loan has been granted, it may be hoped that the Government may not unduly delay the screening of the project reports. But there is likely to be delay in the construction of the ropeways, unless, of course, the Government accords a high priority to the provision of foreign exchange for the purpose. How crucially important this "ropeways programme" is and what the element of uncertainty in its implementation is, may be seen from the following paragraph in the final report of the third Plan:

"Stowing as a measure of conservation will need to be intensified during the third Plan period since a part of the additional production is to come from existing mines by depillaring operations. While the larger collieries have their own arrangements for gathering sand and transporting it, for technical and financial reasons the smaller collieries are not able to establish these facilities. With a view to removing this handicap and to increasing the supplies of sand for stowing purpose, the Coal Board will establish seven ropeways, four in the Jharia coalfield and three in the Raniganj coalfield. Sand will be gathered from the Damodar and Ajai rivers and transported to points within convenient reach of groups of collieries which have been selected with due regard to the urgency of stowing operations, the quality of coal, etc. The cost of these ropeways has been tentatively estimated at Rs. 16 crores. The ropeways are programmed to be completed within the first two years of the Plan period, but this time schedule may be upset by foreign exchange difficulties."

The availability of sand has an important bearing on the expansion of coal production, because most of the operations of the private sector in India are underground, requiring a special technique of mining in view of the extraordinary thickness of the coal seams—some upto 100 feet. In this technique of mining, when coal is taken out, it must be replaced with sand to permit the maximum to be recovered without cavein. Unless the proposed seven ropeways are constructed as a matter of high priority, as many as 50 mines belonging to smaller collieries in the private sector will not be in a position to take the fullest advantage of the World Bank loan in the first two years of the third Plan period.

COMMONWEALTH PREFERENCES

There was hardly anything new in Mr. Morarji Desai's statement to the Lok Sabha last week on India's approach to the question of the U.K.'s possible entry into the Common Market. Neither in letter nor in spirit, Mr. Desai's observations reflected the evolution of a positive Government policy on this vitally important question. He did, of course, stress the need for suitable transitional arrangements or safeguards for Indian exports, if the U.K. were to abolish Commonwealth preferences on them. But it was surprising that he did not spell out, in specific terms, the nature and extent of the contingent safeguards needed. One would have thought that only such a clear-cut approach could stand the Government in good stead in a bargaining counter, for instance, in the event of further U.K. consultations with India and other Commonwealth countries. The only noteworthy feature of Mr. Desai's statement was his strong plea to the Common Market countries for a reduction in their tariffs on imports from developing countries like India. It was good that this plea was made, though its outcome might be uncertain, in spite of the G.A.T.T.'s well-known support to a policy of import liberalisation by the industrialised countries.

Mr. Desai, of course, held the view that the end of Commonwealth preferences would cause a setback to India's trade, although he admitted that it was difficult to assess precisely its impact on India's export at this stage. The actual effect would depend upon the kind of tariffs and commercial policies ultimately evolved. But, according to Mr. Desai, one thing which could be said with certainty was that all trade preferences now enjoyed by India in the U.K. market would disappear. Instead, while India's products would bear an import duty, similar goods from the Common Market or its associated territories would be imported duty-free; there would thus be a "reverse preference" operating against India's exports to the U.K. market.

Another difficulty is that, once the U.K. joins the Six, the Common tariff (which will be applicable in both U.K. and other member countries) will approximate to the relatively high tariffs on Indian exports prevailing in the Common Market countries. This situation will be in distinct contrast to the various advantages at present enjoyed by Indian products in the U.K. market. India, according to Mr. Desai, has three main advantages in its trade with the U.K. Firstly, as India is a member of the Commonwealth, almost all products enter the U.K. market duty-free. Secondly, India, being a member of the Sterling area, its products are free from quantitative restrictions in the U.K. market. Thirdly, a number of products enjoy preferential tariff in the U.K., partly as a result of trade agreements between the two countries and partly by virtue of the fact that, as Commonwealth products are duty-free, the imposition of any U.K. tariff on non-Commonwealth imports results in a preferential position for all Commonwealth countries. In the Common Market countries, on the other hand, India's principal exports, with a few exceptions, are subject to fairly high tariffs and other taxes. As Mr. Desai pointed out, even a commodity like tea, which is not produced in Western Europe, is subject to such impositions. In addition, there are quantitative restrictions, often of a discriminatory character, on India's manufactured goods, such as cotton textiles, jute fabrics, vegetable oils and coir mattings. If the U.K. becomes a member of the Common Market, the same high tariffs and other restrictions will automatically be extended to the former.

On the question of trade preferences, India's attitude is in consonance with principles embodied in the G.A.T.T., of which it is a member. The G.A.T.T. is against the creation of any new preferences. It has recognised that, in order not to disturb patterns of trade established through decades of preferential treatment, the preferential concessions in operation prior to the coming into force of the G.A.T.T. should be allowed to continue. Besides, if preferences are reduced, countries which benefit from such a move should offer tariff concessions. From this standpoint, Mr. Desai's plea that the Common Market should reduce tariffs and abolish quantitative restrictions is strong and sound. While it is necessary to spare no efforts in securing, if possible, such safeguards for Indian exports designed to avoid any abrupt disruption of established channels of trade, it must not be forgotten that, in the long run, the competitive capacity of Indian industry and agriculture will depend upon their productive efficiency. Mr. Desai has, therefore, done well to remind the domestic industry that the possible disappearance of preferences in the U.K. market should be considered a challenge to Indian industries to adjust themselves to face competition, "provided such competition is on equal terms and our exports do not encounter unreasonable restrictions."

PROBLEMS OF GENERAL INSURANCE

As an authoritative survey of the problems and progress of the general insurance in the country, the speech of Mr. T. M. Telang, Chairman of the Indian Insurance Companies' Association, deserves the serious attention of every one connected with general insurance in the country. In spite of the difficulties that beset general insurance, Mr. Telang is optimistic about the future of general insurance in the country. The enlargement and diversification of the industrial structure will give, according to him, ample opportunities for insurers to extend the scope of their service. With the increasing tempo of economic activity, there will be, for instance, a growing demand for machinery erection, breakdown, contractors' guarantee or performance bonds and a number of other miscellaneous types of insurance so common in all the developed countries. There is, in his opinion, a need for an efficient field organisation which could create insurance mindedness among the public and give expert advice on the type of covers available. This organisation could be aided by a well-planned and imaginative publicity campaign to educate the public in the value and importance of general insurance as a shock absorber of industry and business and as protection against catastrophic and unforeseen risks.

Although the rate of growth of insurance in 1959, the latest year for which figures are available, was higher than that in the previous year, considering the growth of industrial production and the progress made by insurance in other countries, there was still a large leeway to be made up. There could be no room for complacency, the Chairman emphasised, when not even a fringe of the potential business in the country had been touched. He, however, felt that certain conditions were to be satisfied before such a large potential market could be tapped. The most important was the presence of an integrated market composed of financially sound, viable and healthy units operating in an atmosphere where every unit had an opportunity to expand. This called for a radical rationalisation of the working of the industry and suitable changes in the present set up of controls and regulations. Mr. Telang welcomed, in this connection, the non-diversion and mutual assistance agreement signed by 17 leading Indian general insurance companies in the country as a first step towards putting the individual units and the industry on a sound footing.

While conceding that it was primarily the responsibility of the trade to take necessary steps to place Indian insurance on a satisfactory basis, Mr. Telang also recognised that understanding on the part of the authorities and their support and guidance were of valuable assistance in the solution of the problems facing insurers. He, however, felt, along with his colleagues in the profession, that a more practical approach on the part of the Department of Insurance, without in any way compromising the spirit of the statutory regulations, would lead to the solution of many of the problems. As an instance of lack of understanding, he cited the Government's failure to act upon the recommendation of the Taxation Enquiry Commission regarding the facilities to be allowed to general insurance companies for building up their reserves and to revise the formula limiting the expenses of management with a view to bringing it in line with the enhanced cost of living and the general price levels in the country.

Referring to the amendment to the Insurance Act, which requires all insurers to make a fixed cession, up to a maximum of 30 per cent, with approved Indian reinsurers, Mr. Telang said that a hundred per cent increase overnight in the volume of premium to be ceded on account of the Government-controlled unit coming into the picture was likely to affect the profits of insurance companies, notwithstanding the provision for retrocession of premium by the reinsurers. He also warned that undue emphasis on local reinsurance arrangements might militate against the international character of general insurance business and handicap companies developing balanced portfolios based on a geographic spread of risks. Now that compulsory reinsurance has become a *fait accompli*, all that one can do is to hope that both the reinsurance companies will bear this point in mind while transacting their business.

A UNIQUE VENTURE

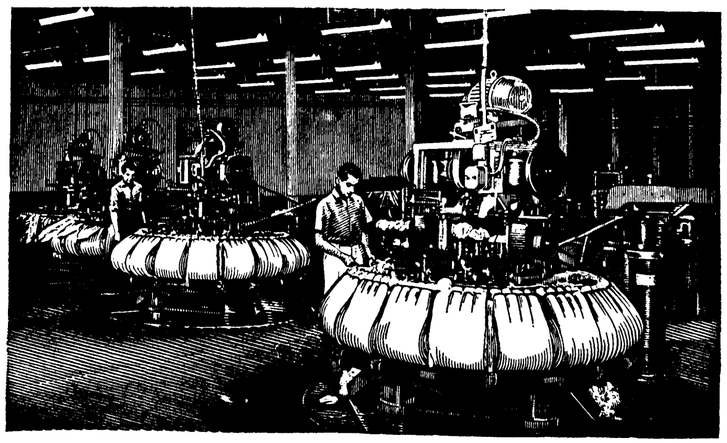
By the end of this year, a giant factory at Durgapur will be commencing manufacture of cement-making machinery, mining equipment and "Babcock" steam-raising plant. This is the heavy engineering unit that is being set up by the Associated Cement Companies Ltd. in collaboration with two well-known firms of Britain, namely, Vickers Ltd. and Babcock and Wilcox Ltd. The project is, indeed, a unique venture for three important reasons. One, the production of the items mentioned above will meet a sizable part of the country's requirements of a range of machinery (boilers, pressure vessels and ancillary equipment, cement-making machinery, general mining machinery and certain items of coal-mining machinery, thus saving for the country quite a bit of precious foreign exchange. Two, there is the scope for wide employment opportunities in relation to investment. After the completion of the first stage of the project, about 1,500 persons are expected to be employed. Three, the project is a notable example of Indo-British partnership, in that there is both financial and technical collaboration.

The licensed annual capacity of the Durgapur plant is 6,500 tons of boilers, ancillary equipment and pressure vessels and 2,230 tons of cement-making, general mining, coal mining and other general machinery. Taking the average value per ton of machinery as Rs. 2,500, the aggregate value of production comes to Rs. 2.18 crores. The total capital outlay on the project is estimated at more than Rs. 10 crores. The authorised capital of the Company is Rs. 10 crores, of which about Rs. 5.4 crores will be subscribed and fully paid-up over a period of three years, commencing from January 1959. The A.C.C's share of paid-up capital is to the extent of 49.8 per cent and the two overseas shareholding companies account for 24.9 per cent each. The balance of 0.4 per cent is to be held by the four firms which are the principal shareholders in the Cement Agencies (Private) Ltd. The total capital issued upto January 1961 was Rs. 3.0 crores (300,000 shares of Rs. 100 each).

The construction of the works is said to be well ahead of schedule. Pilot production is expected to commence by the end of this year and full-scale production from early 1962. The target of full capacity will be attained by 1965. The workshops, designed on modern lines by Messrs. Balfour Beatty and Company Ltd., a firm of British consultants, have been built partly from Indian steel and partly from steel imported from the U.K. All the shops have been so designed as to permit progressive expansion without dislocating production. The factory is being equipped with up-to-date machinery.

Although the Company is yet to commence production, it has already secured several orders for the supply of its products. One such order is for four water-tube boilers to the Maharashtra Government for the power station at Khaperkheda. These will be Babcock Radiant-type boilers fired by automatic spreader-stokers with a total steam-raising capacity of 326,000 kg. per hour at 62 kg per sq. cm. with a super-heated steam temperature of 496° C. At least 20 per cent of this order will be manufactured in India, the balance being imported from the U.K. The order, it is said, will provide the A.V.B. workshops with an "initial load." Subsequent orders will contain a much higher percentage of components manufactured in India. The Company has also secured orders for the supply of cement-making machinery which will be manufactured according to the designs developed by the A.V.B. in collaboration with the A.C.C. and Vickers Ltd. and by adopting the designs of the Fuller Company of America for certain specialised items.

THE ISAAC HOLDENS MILL AT JAGATDAL, WEST BENGAL



LIGHTING BY PHILIPS

At Jagatdal, near Calcutta, the Isaac Holdens Wool Combing Mill—the first and only one of its kind in the country—stands out as an important landmark covering 114,000 sq. ft.... twice the size of a hockey field. Workers here are engaged in wool selection, washing, breaking and combing—operations that require a high and even level of illumination.

Naturally, the mill management specified Philips lighting.

Philips' modern, streamlined fittings provide the right amount of illumination and thereby contribute towards the overall efficiency and high productivity achieved in this mill.

Philips' exclusive lighting—consisting of lamps, fittings and accessories—ensures ultimate economy by providing the maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of research and development aimed to meet the ever-growing demand for better lighting. And hand-in-hand with Philips' unrivalled quality comes the invisible *plus* of Philips' international experience and know-how.

FREE: *For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other specialised application—consult Philips Lighting Service Bureau.*

Awards For Public Sector Enterprises

IN the early part of January last, we saw the announcement that the Union Government had decided to introduce annual awards by the President to industrial enterprises of the Central Government to exceed their production targets and achieve all-round performance. The awards will consist of shields in copper and silver and will be given to five undertakings for outstanding performance in financial working, cordial labour relations and special contribution made to the nation's economy through research, discovery of new processes, design of machinery or equipment, etcetera. It seems to me the time has arrived for us to take a safe bet on predicting the names of three undertakings which are in the run for the awards and also choosing, with a measure of certainty, the name of the unit which will collar the silver shield. The basis for the prognosis is not inside knowledge of their working results, but what is provided in the large-scale advertisements which have appeared in the daily papers during the last few weeks, proclaiming the spectacular achievements of the three industrial enterprises to which I refer, namely, the Hindustan Machine Tools, the Hindustan Antibiotics and the Hindustan Cables. The Machine Tools Factory splashed full-page advertisements of its progress in a number of newspapers on the occasion of the opening of its second unit. It has added a feather to its cap by acquiring a watch making plant under its roof. Its 'gift to the nation' has been applauded by the Prime Minister, and in laudatory write-ups (or should I say writes-up) in all the important newspapers. Its premier position seems well nigh unimpeachable; ergo, it should acquire the silver shield. A few days later, there appeared similar full page advertisements plashing the success story of Hindustan Antibiotics: Production target exceeded, Income Tax and Development Rebate Reserve of Rs. 65 lakhs, net surplus carried forward to reserves Rs. 79 lakhs, loan payable to Government reduced from Rs. 70 lakhs (1957-58) to *nil*, number of employees increased from 761 (1957-58) to 1,205, yearly *per capita* income of worker increased from Rs. 1,956 (1957-58) to Rs. 2,220. Well, well, what are we waiting for? It has to have a copper shield. And, a couple of days ago, we saw half-page advertisements of Hindustan Cables, announcing a net profit of 19.44 per cent on capital, a dividend of 6 per cent, repayment of Government loan of Rs. 15 lakhs, increase in the number of employees from 332 (1954-55) to 821. Why did it give evidence of some inferiority complex by reserving only half-pages for advertisements? Ah, well. It should also have a copper shield.

The prosperity of these three undertakings has resulted in some increase in the incomes of newspapers also (*Commerce*, unfortunately, is not one of them); each full page advertisement would have been paid for, I expect, at anywhere between Rs. 1,000 to Rs. 2,000 per issue. They say that 'advertisement pays'. Whom?

On Fasts

In my column dated 8th July last, I suggested that there should be a ban on fasts undertaken for forcing political settlements, for, they were unsuited to the workings of a democratic society in which agreement is normally reached through discussion, argument and persuasion, and might eventually destroy the basis of democratic Government and lead to a dictatorship. In his address to the Youth Congress delivered on the 9th instant, the Prime Minister is reported to have stated: "We have a Parliament in which we try to explain our respective points of view to each other and come to decisions. Should we close down Parliament and put a lock on it and undertake hunger strikes to come to decisions? This would only mean that whoever was able to undertake the longer hunger strike would win and get his demand accepted. It is neither democracy nor anything else. It is an utterly wrong path." I will be guilty of brazen impertinence if I assume that the Prime Minister has had time to take note of the observations of an obscure columnist like me, but I am entitled to flatter myself that both of us seem to have said almost the same things!

And now, the Punjab Government has imposed a blanket ban on all newspapers in the State publishing any news of the fast or the controversy that precipitated it: and some leading newspapers in the country have protested against this move. No doubt, there is sufficient evidence of a general feeling that the nation's interests will be harmed and emotional integration will be greatly jeopardised if the agitation for a Punjabi Suba *in its present form* is allowed to continue. A well-informed columnist has written in a leading daily that "the fast is the meanest of all political weapons and it has done as much to vulgarise our politics as our still experimental democracy can cope with. Somewhere we must demonstrate that fasting cannot pay." And this is with particular reference to the proposed fast of Master Tara Singh. But he has not focussed attention on the imperative need for building public opinion against the use of fasts for political purposes, and, as I feel it, that it could be done by the organs of public opinion themselves. Cultured people do not need Government directives to adopt a cultured way of life.

The obvious solution, in the circumstances, would be for all newspapers in the country to arrive at a common understanding to the effect that no fast will be announced, commented on or publicised in any newspaper, and that all news relating to fasts will be blacked out. A self-denying ordinance of this type will save the situation and will remove the sting from a Governmental blanket ban like the Punjab Government's present move. Such a decision may be difficult to arrive at within the short period available on this occasion, but must be considered for the future. And, if not, the Central Government must enact legislation prohibiting public fasts and hunger strikes and all publication of news concerning them anywhere in the country. If democracy has to be saved, there is no alternative to this. The writing on the wall is quite clear.

Dead Fish in the Water Main

The Hydraulic Engineer of the Bombay Municipal Corporation does not think that water in the city's pipe lines became harmful because of dead fish found in them. Even when the fish was eight to nine inches long and was in a decomposed state, the water was still drinkable; its objectionable feature was only in its being smelly. When that happened, immediate steps were taken to heavily chlorinate the water to, say, up to ten per cent, and it would not harm consumption. The odour of chlorine covers a multitude of other foul smells, and imparts a psychological feeling of biological security. As long as one does not actually see a dead or decomposed fish (or fowl or good red herring for that matter) in one's pail of drinking water, one does not have to bother,—at least, not after the assurance of the Hydraulic Engineer. From this angle, it would seem that, in order to ensure tranquility, those who are in the habit of drinking unfiltered water should give up the use of transparent glass tumblers and revert to the ancient habit of drinking out of narrow mouthed metal goblets. It is only when they *see* something objectionable that their psychology gets upset, and, as long as they see nothing, their serenity is undisturbed. The eye is the most mischievous of human organs, although, of course, the most useful and critical. The most sensible of the three wise monkeys was the one that refused to *see* evil.

There is, of course, the story of the canny Scotchman who refused to permit his eye interfere with his pragmatic sense. In a glass of good whiskey which his host had poured for him was noticed a dead fly, rather large and bloated with the intoxicating liquor. The host carefully lifted it out with a spoon and was going to toss it out, when the Scotchman quickly grabbed it with his thumb and forefinger, put it between his lips and sucked it dry of the whiskey and then threw it away. He knew the value of good grog and was was not particularly finicky about the composition of the container.

The Second Cosmonaut

Seventeen times round the world, covering a distance of 435,000 miles, for a flight duration of 25 hours and eighteen minutes, during which he slept for eight hours (37 minutes longer than planned), and had three square(?) meals, spaceman Gherman Titov has done it. I shall no longer brag of my having been driven in a racing car in Germany reaching a speed of 95 miles per hour for a couple of minutes, but, unlike Titov, I had my wife with me, for we had decided to try anything once, for good or for evil, jointly and not severally. Of course, Titov explains that "in the cosmos, it is so comfortable that it is better to be without the wife." At one time, he was journeying with his feet up and his head down; his wife would probably have screamed, if she had been with him and had been tossed into the same posture. We in India know that Lord Shiva beat Goddess Parvathi in the Cosmic Dance only by demonstrating a posture impossible of assumption by a modest woman!

Immediately after Major Titov's return to earth, Mr. Khrushchev was jubilant and talked only of peace on earth and goodwill towards men. All that the Soviet Union had demonstrated by way of scientific and technical superiority would be directed towards the attainment of everlasting peace in the whole world. There was no single discordant note, and no 'But' to it. Three days later, he reverted to pattern, which was, as usual, very tiring and sickening. "We have spent money on rockets and bombs, and they are not for cutting sausages. We are not threatening anybody (sez he!), but, if anyone attacks us, we will consider it an act of suicide. We will destroy him by counter blows. We could create a bomb equal to 100 million tons of TNT—only one bomb."

Even the cosmonaut seems to have gradually acquired the belligerency of Mr. Khrushchev. For the first two days after his star performance, he was talking only of world peace and friendly greetings to all nations. He was utterly suave and affable. But, on the third day, he assumed the role of proclaimer of stern warnings. The report of reception to him in Moscow says that, after an encouraging pat on the shoulder from Mr. K., he spoke in a firm voice from the Mausoleum that, "if enemies of peace unleash war, the Soviet Union has the means to rebuff any aggressor." It was, probably, the K. pat on the shoulder that brought out the warning. And it was something that was totally unnecessary even from a Cosmonaut who did not know, for sometime, whether he was standing on his head or on his feet.

The Major thinks that the time is not far off when people would go into space on holidays and feel just as well as at the sea side. This, I venture to believe, is pure poppycock. Parodying an anonymous poem, I would say:

Spaceman, I'll drink to you or eat with you,
Or anything except travel with you;
Buy tickets worth their weight in gold
To watch you revolve round the world,
And reassure myself anew,
That you're not me and I'm not you!

NATIONAL PRODUCTIVITY COUNCIL
PRODUCTIVITY JOURNAL
Special issue on PERSONNEL MANAGEMENT

August-September 1961 issue of the PRODUCTIVITY JOURNAL of NPC is special issue on Personnel Management. It contains competent analysis of various aspects of Personnel Management by top experts of India and other countries. A Special Supplement on Personnel Administration is free with this issue. All Managements in the country can derive benefit from this Journal. Old subscription rates (Rs. 25/- for three years and Rs. 9/- for one year) available till October 15. Thereafter the rates will be Rs. 32/- for three years and Rs. 12/- for one year. We solicit your subscription to the Journal. Please write to the Information Officer, National Productivity Council, 38-Golf Links, New Delhi.

THE INNER RESERVES

BANKS ARE SINGING AN OUTMODED TUNE

By "Kuber"

THE problem inner reserves *versus* published reserves has lately assumed considerable importance and, for the next three or four months, that is, till the Reserve Bank reaches a decision on the recent banking proposals, we will be hearing about them a great deal more. An important thing about it is that every banker seems to have his own version of what is meant by inner reserves and how to create them. My discussion with some of the bankers gave me the impression that some of them are quite excited about it, as if they have made some sort of a new discovery in the art of banking. The amazing part of it is that all these years nobody did as much loud thinking on the subject as is being done now. When I asked one of the bankers as to what prevented him from building up the inner reserves all these years while the going was good and the conditions were so favourable, he was taken aback a bit and frankly confessed to me that he was not in need of them and that it was only now that he realised the desirability of doing so! We, in India, appear to be in the habit of taking to things British, only when they become outmoded in Britain. For instance, in the last 3 or 4 years, we have been talking a lot about the bill market, when it has ceased to exist in England—the place where the bill market was born and developed is, alas, no more!

At a conference of leading bankers held in the city to consider the Reserve Bank's proposals for strengthening banking structure, several bankers are reported to have stressed the need for tax exemption in respect of profits transferred to secret reserves. According to these bankers, Government should have *no objection* whatever to their demand for the principle underlining it appears to have been conceded to industries which are granted tax exemption in respect of development rebate. They feel that transfer to inner reserves is more or less akin to the provision for development rebate and to deny the banks a similar tax exemption will be to discriminate against them. Whether the provision for inner reserves is the same thing as the provision of development rebate in the case of industries, is a debatable point. I believe that, to a large extent they are very much different, as the function of inner reserves is to provide for certain *unforeseen contingencies*, whereas the main function of the development rebate is to enable the industries to modernise their machinery and thus help them produce more.

The inner reserves, or secret reserves as they are sometimes called, are those reserves which are provided out of revenue of a bank before arriving at its published profits and without disclosing the amount so deducted. Secondly, a bank is not obliged to distinguish between reserves and provisions or to disclose transfers to and from such accounts. Thirdly, a bank need not state the market value of its investments, but can simply describe them as "at or under cost." Fourthly, a bank need not disclose the method adopted in the valuation of fixed assets. In this manner, a bank builds up reserves out of current profits by showing the values of its assets at less than the market price or, to put it differently, the bank's assets are really worth very much more than the figure disclosed in the balance sheet.

Now, why is it that only the banking companies appear to be in need of inner reserves? About ten years ago, the banks in Britain succeeded in having their stand for inner reserves recognised by the Cohen Committee in 1945 on the following grounds:

1. In the case of banks, the interests of depositors outweigh those of shareholders.

2. Unquestioning confidence in the stability of the banking system is a national asset of the first importance.

3. The earnings of the banks are subject to wide fluctuations from year to year, since the results may be much affected by changes in the value of their investment holdings and by their experience in respect of bad debts.

4. Full disclosure in the account might embarrass the banks in their policy of making large provisions in good years, while the spectacle of heavy drafts on those reserves at other times might undermine that unquestioning confidence in the stability of the banks which is acknowledged to be a national asset of the first importance.

Lately, however, another committee was appointed in the U.K., called the Company Law Committee, which was presided over by Lord Jenkins, and which went into this matter again. The British bankers more or less tried to get away, once again, by repeating the grounds put forward by them before the Cohen Committee 16 years ago. But this time they encountered heavy weather; some of the well-known bankers of the status of Sir Oliver Franks and others tried their best to put their case on behalf of the bankers, but they did not cut much ice with the new committee and the case presented by the big banks in England was found less convincing than before.

The main arguments advanced against the case for inner reserves are on the following lines:

1. The investor cannot tell if he is getting a reasonable return on his share of the Company's assets, and the power to conceal reserves and profits might be used to conceal inefficiency.

2. If the shareholders are not given sufficient information to exercise intelligent control over the banks' directors, the latter are really responsible to no one but themselves.

3. The shareholder would be at the mercy of the speculative bidder, because he would not know the value of his shares.

4. The employee is put at a disadvantage, because he cannot bargain effectively, inasmuch as he does not know how much the bank can afford to pay him.

5. The customer cannot tell if he has been charged too much for the services he receives.

6. There would really be no great harm to the bank, if it had to show the market value of its assets, even if such value were lower than the balance-sheet value.

On the whole, on every point put forward by the British banks, they appear to have come out very badly. In fact, the bankers' case is now being questioned more widely and more seriously than on any former occasion. It is felt that to allow any public interest to adopt, for whatever purposes, deliberately secret practices and to conceal their true profits would be out of harmony with the modern trend which is towards giving more and more detailed information not only in company affairs and matters of investments, but in the sphere of financial and economic statistics in general. Curiously enough, it was the financial journalists, along with various bodies of investors and trade unions who were the most vehement critics of the bankers' case. In the end, even Sir Oliver Franks was forced to admit that the bankers' case for inner reserves does not rest on any matter of principle, but is simply a question of expediency. Most of the critics conceded the bankers' view as regards the primacy of national interest, but questioned whether it could any longer be best served by concealment. Their view point was aptly summed up by one of the members of the Committee thus: "You (the British banks) are in an awkward position, because you want to look both richer than you are and poorer than you are." In fact, one of the best known financial journalists was of the opinion that "the case put forward by the banker has no merit in it whatsoever—that it is, in fact, sheer sophistry." I believe I have given enough to show that, as far as the banks in Britain are concerned, there is nothing left in their stand for inner reserves.

If that is the latest trend of thinking in Britain, why is it that suddenly it has become fashionable among the Indian bankers to talk about the inner reserves and the necessity to strengthen them? Is there anything in the Indian conditions which makes it desirable to still hang on to the concept of inner reserves in preference to published reserves? The answer is not so simple as it seems. There is no doubt whatever that the Indian banks are up against lower income, mainly because of poor yield on their investments in Government securities; the banks in Britain get twice the return which the banks in India are getting on these investments. In fact, British banks get more on their government securities than they do even on their loans and advances, supposed to be the most remunerative asset of commercial banks, and that with very much less bother and expenditure. It is also true that the Indian banks are subjected to several other handicaps, such as keener competition and risks of run, which do not hinder the progress of British banks. No one will deny for a moment the difficulties which the Indian banks have to face, particularly in these days of ever increasing costs. In these circumstances, if the Indian banks can get some tax relief on a part of their annual earnings which may be utilised by them for building up their reserves, it will do no harm to the banks; on the contrary, it may do some good to them. The Government will also not lose very much, considering the fact that the banks are compelled to invest large funds in Government securities on which they get so little.

Although conditions in India are undoubtedly different from those in Britain, I wonder whether bankers in this country have to put forward the plea for inner reserves as something which is indispensable. At best, it is a red herring. It is not going to make so much difference to the banks as they imagine. What is vitally important is the building up of reserves and not whether the reserves should be concealed or disclosed. In any case, there is not much scope left to the banks for building up inner reserves to any appreciable extent. The only source of building up inner reserves, namely, an appreciation in investments, is a thing of the past and may not recur in the foreseeable future. The banks, on the whole, will be lucky, if they make enough to pay their shareholders, wipe out their losses on Government securities which are all the time downwards in value, built up the published reserves as may be required by the recent proposal of the Reserve Bank, etc., etc. I doubt very much whether anything will be left over in their profit to build up the inner reserves after meeting all these calls. The fundamental problem of banks will still remain and that is how to increase their income and reduce their costs. Indeed, the real problem seems to be one of avoiding "inner losses" rather than augmenting inner reserves.

AMERICAN LETTER

BOOM PSYCHOLOGY BUILDING UP

PROBE INTO STOCK MARKET OPERATIONS ORDERED

From Our Special Correspondent

NEW YORK, 11*th August*

AMIDST the continuing thunder of threats of war, a boom psychology is building up in the United States. Rising stock market prices helped to fortify this sentiment, as well as falling quotations for bonds.

Expectations of a boom-to-come are easily understandable. Overall business statistics have been improving steadily. Personal income is now running at an annual rate of $416,700 million, against $406,100 million a year ago. There has been a noticeable gain in corporate profits since May and the first half-year dividends set a record, although the performance was spotty among the industrial groups.

The total of all cash dividends rose 2 per cent in the first six months of the year to $4,926,167,370. Payments to shareholders of utility companies showed the largest gain of 6.7 per cent, as compared with the first half of 1960. Other industrial groups on the upside were amusement shares, tobaccos, financial, services, foods' commodities, paper and publishing, office equipment, which includes calculating machines and computers, and petrol and natural gas.

The biggest fall-out was registered by shipbuilding and shipping companies. They paid 18.9 per cent less than last year. Smaller dividends were paid also by building companies, foreign stocks, the railroads, textile concerns, iron and steel and electrical companies.

Wall Street and the entire community of brokers buying or selling listed or unlisted securities, however, continue to be under a cloud. A committee of the House of Representatives has approved of a resolution calling for a probe into stock market operations. The investigation, if approved by the Senate, would be made by the Securities and Exchange Commission, with a special appropriation of $750,000.

A Major New Element

The outlook, as seen by the economists of the Federal Reserve system, is that the step-up in military and civilian defence spending by Washington has injected a major new element into the business picture. This is bound to be in the nature of a strong expansionary force.

No predictions can be made at this time to what extent the new proposals are likely to speed the return to full utilisation of the American economy and its resources; also, at what point, together with the recovery forces already under way, a definite upward pressure on prices will occur. At this point, capacity is still ample, deliveries prompt and prices stable.

In addition to the defence build-up, there are related measures envisaged, such as the wholesale construction of shelters throughout the country to protect millions of people from possible nuclear fall-out in the event of an attack. This alone would constitute, in effect, a government subsidised miniature national housing project. For these and other reasons, the full effect and the implications of the new appropriations will revolve on their overall impact on business and consumer expectations.

Central bank economists admit privately they were surprised about the strength of the recovery movement in the second quarter of the year and the persistent continuation of gains since then, with the exception of the usual summer lull. However, concern still exists about unemployment. Despite a larger number of people who were gainfully employed at the latest count, the number of jobless and those seeking work has crept up to 6.9 per cent of the labour force. Demands of trade union leaders are also causing concern.

Auto Workers' Threatened Strike

Despite the offer of American Motors to include a workers' profit-sharing arrangement in the next wage contract, the automobile industry as a whole is still faced with a strike deadline at the end of this month. American Motors' offer of sharing the profits was a dramatic move which caused much comment—favourable from those who are interested in long-term labour peace and non-committal, if not unfavourable, by other companies' managements who assert they could not afford to follow suit. At any rate, the pattern of the new automobile contracts will undoubtedly be the basis of negotiations next year for a new steel contract.

There is speculation how the present world tension will affect labour-management relations. President Kennedy avoided declaring a "national emergency" up to this writing, but there can be no question that the present state could be described as a "national alert," because many defence units have been placed on an 'alert' basis. When Mr. Walter Reuther, President of the Automobile Workers of America, was asked whether he felt influenced and restrained by this state of affairs, he replied: "there is no national emergency and I will cross that bridge when I come to it."

United Nations News

The crises over Berlin, Tunisia and Cuba, to mention just three major trouble spots, and their economic and political implications, continue to be the focal points of discussion here. The opinions expressed are rather interesting. The increasing number of members among the Afro-Asian bloc of nations, with very few exceptions, say, in effect, "yes, we'll support the West, if the intent is to assure the self-determination of people, but we shall not support you, if your actions are based on the allegation that Western motivation is based on the so-called rights guaranteed by previous treaties."

Also, the non-Communists in the U.N. seem to believe that Premier Khrushchev overreached himself a bit in his latest efforts. There are particularly grave questions about Major Titov's alleged feat to have flown for 24 hours in space around the Earth just to fortify the Kremlin's propaganda efforts at this time. There are too many holes in the story out of Russia about the Major's exploit, particularly his peaceful sleep for eight hours. No outside corroboration exists and circumstantial evidence points to the suspicion that all oral reports and conversations were pre-recorded and then broadcast from the satellite, while the Major was kept in hiding somewhere.

The International Bank for Reconstruction and Development, a U.N. affiliate, reported additions of $95.3 million to its reserves during the fiscal year ended 30th June 1961 to a total of $601.8 million. Additions were made up of $63.2 million of net earnings; $3.3 million from revaluations of three members' currencies and loan commissions of $28.8 million. Total loan commitments were $5,790.5 million at the mid-year term.

Juvenile Delinquency

Another topic discussed at length by the U.N. Educational, Scientific and Cultural Organisation, at its current second world conference at Montreal, covered delinquency and adult education which has strong economic undertones. Professor Adam Schaff of Warsaw University, among others, observed that juvenile delinquency is increasing all over the world and traditional systems of values and ideals are being rejected more and more by certain types of socially maladjusted young people. Alcoholism and drug addiction among youths were regarded as the major problem. Such conditions, it was pointed out, exist not only in countries beset by economic difficulties, such as Poland, but also acutely so in Sweden where, by contrast, there is excessive comfort and over-stable conditions leading to boredom and the desire for "kicks." Another paper on the subject was presented by Mr. D. V. Kulkarni, Director of Social Welfare of the New Delhi Administration, under the title "Social Maladjustment and the Role of the Social Educator."

The International Monetary Fund has agreed to a drawing equivalent to $41.25 million by the Government of Indonesia, and has entered into a stand-by arrangement which authorises additional drawings up to $41.25 million over the next twelve months. The initial drawing is to be made, $25 million in United States dollars, $10 million in deutsche mark, and $6.25 million in Italian lire.

The Indonesian Government drew $15 million from the Fund in 1954 and $55 million in 1956, and has fully repaid both of these drawings. In November 1959, the Indonesian quota was increased by $55 million to its present level of $165 million, of which 25 per cent has been paid in gold.

The International Monetary Fund has entered into a stand-by arrangement which authorises the Government of Guatemala to draw up to $15 million over the next twelve months in currencies held by the Fund.

In June 1960, the Guatemalan Government permitted an earlier stand-by arrangement with the Fund to expire without drawing upon it. During the period of this arrangement, the Guatemalan Government effected a modest increase in its international reserve position. In the face of continued strains on the country's economy, which are associated in part with conditions for the export of coffee, the Government is pursuing credit and fiscal policies aimed at maintaining internal and external equilibrium. The Fund's assistance will give support to this programme, and to the continued convertibility of the Guatemalan currency.

WANTED: A BIGGER I.M.F.

From Our Own Correspondent

LONDON, 11*th August*

LONDON LETTER

THE International Monetary Fund has been in existence for 15 years. This week it has had to support sterling by the biggest single payment it has ever made. This in turn was made necessary by the biggest single concentrated gold outflow Britain has ever had to face. The whole operation has shown that the machinery for Central Bank co-operation, whether directly between Central Banks or between individual Central Banks and the I.M.F., is inadequate.

Let us take first the British gold outflow. The record figure at the beginning of this year of British gold reserves was £1,154 million. The bottom figure recorded at the end of July was £876 million. That gives a gold drain of £278 million; but to this must be added the special receipts which the U.K. had during the past months. The special loan made by the European Central Banks to the Bank of England—known as the Basle Credits—was of some figure in excess of £200 million (this last is what the Bank of England is about to repay), but there was at least a further £50 million which is staying behind in this country to take advantage of the high interest rates. If to this is added the German debt repayment of £35 million and a similar sum drawn by Australia by way of credit from the I.M.F., then the total of outside assistance may be as high as £350 million. This means that the drawing on the reserves must be of some figure above £600 million.

The International Monetary Fund is now advancing in cash £535 million, but it will be seen that this is substantially less than the amount of the gold drain. However, Britain has got credits of nearly another £180 million with the I.M.F. to be drawn on in case of need. The cash operations taking place this week therefore add £535 million to the reserves as they stood at the beginning of this month and from this is being repaid £200 million to the European Central Banks. We thus arrive, for the time being, at a figure of £1,211 million which is a little higher than the reserves at the beginning of the year.

Fund Short of Cash

The advances by the European Central Banks in March were timely and where short-term help is required that assistance has some advantage over assistance from the I.M.F. But, in the end, large-scale long-term assistance does come back to the I.M.F. and the present operation has shown the inadequacy of the latter's resources. For one thing, the I.M.F. has had to scrape up all sorts of currencies to help the U.K. A little less than one-third of the advance has been made in U.S. dollars; about £100 million has been made in German marks, and oddly enough the same amount in French francs. Italy, Holland, Belgium, and Switzerland have all provided a quota of currencies, and finally Canadian dollars and Japanese yen have come in to help. The depletion of the Fund's liquid reserves has obliged it to sell $500 million (one-fifth of its total gold stock) in gold to replenish currency stocks. Indeed, when one considers that the total amount of aid made available to the U.K. in cash and credit is $2,000 million against the total gold stock held by the Fund of $2,500 million, the inadequacy of the latter is obvious.

It seems likely that, at the next meeting of the I.M.F. in Vienna, arrangements will be made to increase the Fund's resources by establishing lines of credit with the member-countries on which the Fund can draw at short notice when crises of the kind through which Britain has been passing require to be made.

FAITH IN CONVERTIBILITY OF CURRENCIES

I.M.F.'S SURVEY OF EXCHANGE RESTRICTIONS

THE twelfth annual report of the I.M.F. on exchange restrictions, released a few days ago, clearly shows that the majority of the free world is not only rapidly moving to a system of convertible currencies but also determined to defend the ground already covered in this direction. It will be recalled that, during 1960 and in the first quarter of 1961, as many as eleven member-countries—Belgium, France, West Germany, Ireland, Italy, Luxembourg, the Netherlands, Peru, Saudi Arabia, Sweden and the U.K., which had earlier availed themselves of the transitional period arrangements of Article XIV of the Fund Agreement (permitting member-countries to maintain and adapt exchange restrictions without the prior approval of the Fund), accepted the obligations of convertibility for their currencies as set forth in Article VIII, sections 2, 3 and 4 of the Fund's articles of agreement. Under the latter article, the member-countries are required to avoid restrictions on current payments, multiple exchange rates, and discriminatory currency practices. If at all they wish to resort to such measures, in future, the article enjoins on them the obligation to consult with the Fund and obtain its prior sanction. The removal of restrictions on current external payments by the eleven countries represented, the report under reference observes, the culmination of efforts on their part to strengthen their internal economies and to achieve balance of payments and reserve positions, which would enable them to remove restrictions on the making of payments and transfers for current international transactions. Their acceptance of the obligations of convertibility also reflected their confidence that they would be able to avoid the reimposition of restrictions in the predictable future. This conclusion has been strikingly borne out by the U.K.'s action a fortnight ago to meet the enormous stress to which the pound sterling was subjected in recent weeks. The U.K. Government did not reimpose exchange controls or place any import restrictions. Instead, it took steps designed to readjust domestic demand for consumption goods and to restrain wage demands and maintained the convertibility of sterling by borrowing from the I.M.F.

Exchange Control Eschewed

Earlier, in the first half of 1961, also, there were impressive evidence of the member-countries' determination not to return to the days of exchange controls. Thus, West Germany, followed by Holland, revalued its currency by 5 per cent to reinforce its earlier attempts to check influx of hot money. Again, the central banks of European countries met at Basle in March and decided to co-operate with one another to maintain exchange stability and convertibility of currencies. Accordingly, "the key development in 1960-61 was the successful defence of the system of convertibility" by countries whosed currencies are widely used in international trade.

Although the aforesaid eleven countries have eliminated all, or nearly all, restrictions on current payments and transfers, most of them still retain restrictions on some capital payments at official rates. Two of them, namely, West Germany and Saudi Arabia, however, permit transfer of capital also at market rates which fluctuate between official limit. It is noteworthy that these two countries became members of the Fund only a few years ago.

Except for the eleven countries mentioned above, the countries which recently established external convertibility have felt that their balance of payments prospects make it advisable for them to await further developments before assuming formally the obligations of Article VIII. Even so, virtually every currency which is used in financing international trade is now convertible in terms of the Fund Agreement, and almost the entire trade of the other members of the Fund is conducted in these convertible currencies. The Report, therefore, rightly surmises that, "though important obstacles to international trade still persist, only bilateral payment arrangements remain as a major impediment to conducting that trade on the basis of multilateral payments system."

Mere abolition of exchange controls is not sufficient, if international trade is to be on a multilateral basis. Import controls, too, must go. What has been the progress in this respect? Here is the answer as provided in the report:

"The successful maintenance of widespread convertibility has continued to provide the basis and incentive for further reductions in both trade and payments restrictions during the past year. Import restrictions were reduced or simplified in at least 17 countries scattered throughout the world. Discrimination against imports from Canada and the U.S. was virtually eliminated, in Australia, Austria, Finland, France, Greece, Japan, Malaya, Norway and Sweden. Discrimination against imports from Japan and non-dollar, non-O.E.E.C. countries, however, continues to be exercised by a number of countries. Ceylon, Cuba, Jordan, the U.A.R. (Syrian region), and Venezuela found it necessary, for various reasons, to increase or introduce restrictions on imports."

The maintenance of the progress made in regard to convertibility of currencies was also made possible by the increase in world trade which was of the order of 10 per cent. in 1960. This improvement was notable, because despite a slight weakening in the general level of raw material prices, the exports of primary producers themselves were higher by 6 per cent. Another factor that sustained the faith of nations in convertibility of currencies was the increase in the resources of the I.M.F. itself. It is a moot point whether all the eleven countries mentioned above would have abolished the exchange restrictions on current payments had they not been sure that, in times of need for short-term assistance, they could fall back on the Fund as a lender in the last resort.

The cumulative effect of several years of relaxation of restrictions on trade and payment was, the report goes on to add, manifest in the developments in foreign exchange markets. As more and more special markets for transferable currencies were eliminated, as exchange allocations were increasingly enlarged and as surrender requirements were steadily relaxed, the economic and political prospects of member-countries have come to be reflected more prominently in official exchange markets. International monetary developments, which in earlier years gave rise to intensification of restrictions or wide fluctuations in special exchange rates, can now be traced in a relatively small movements of rates in official markets (that is, within the margins specified by the Fund) and relatively large movement of liquid funds through these markets. But this exchange stability has not been possible without official intervention. Such intervention was quite frequent during 1960-61. Another significant development during the period under review was a substantial increase in trading in the so-called Euro-dollars and Euro-sterling. Short-term loans of balances held by European banks in these currencies formed at times an important element in international movements of funds.

Multiple Currency Practices

As regards multiple currency practices, the I.M.F. report records that eleven Fund members undertook major reforms of complex multiple rate systems and replaced them with single exchange rates. Most of these exchange reforms were accompanied by fundamental revisions of monetary and fiscal policies designed to bring inflationary pressures under control. As a result, the countries concerned have found that their economic activities are now better oriented and that they are able to cope with balance of payments problems without extensive reliance on restrictions on external trade and payments. This is illustrated by experience in Argentina, Chile, Spain and Thailand. Some members of the I.M.F. still maintain multiple rate systems which can be regarded as relatively complex. The report is of the view that early and substantial steps to simplify complex exchange rate systems are desirable even from the point of view of the countries concerned.

Decline in Bilateral Agreements

The continuous decline in the number of bilateral payments arrangements noted in earlier years was carried further during the year under review. Some 50 bilateral payment agreements were allowed to lapse and the payments between the countries concerned were placed on a convertible currency basis. On the other hand, 18 new bilateral payment agreements were introduced by Fund members, but, except for three agreements, the partner countries were not members of the Fund. The new agreements with non-member countries represent, in most cases, the primary producing countries' attempts to diversify their export outlets. The report notes that members still maintain some 225 bilateral agreements—75 with other members and 150 with non-members—and that the majority of members has one or more bilateral agreements, though, for most of them, the arrangements account for less than 10 per cent of their total trade. There are ten countries all relatively underdeveloped, of which India is one, each of which has more than 10 bilateral payments agreements. The Fund is opposed, in principle, to these agreements and has even helped several of its members to abolish them. In this connection, the report says:

"The Fund will continue to work with its members to achieve reduced reliance on bilateral payments arrangements, in the belief that persistence of bilateralism may detract from the benefits of convertibility and that it may involve discrimination. In cases where the partner country is a non-member, the Fund is concerned that such arrangements do not prejudice the interest of members.

Even though bilateral trade agreements are dictated by the exigencies of the situation in the developing countries, they are also encouraged to go in for them by the Communist countries. Nevertheless, nations like India should carefully study the net results of these arrangements, as they do not appear to be as favourable as is generally believed.

FOREIGN EXCHANGE SITUATION

The statement on the foreign exchange situation tabled in the Lok Sabha on the 9th inst. by the Union Finance Minister, Mr. Morarji Desai, provides a clear-cut analysis of the payment difficulties facing the country. Expressing his concern over the sharp decline in foreign balances in the past four months, which has necessitated the drawing of $250 million from the international short term lender, namely, the I.M.F. Mr. Desai pointed out that the I.M.F. credit was only in the nature of a short term relief. In order to avoid the recurrence of payment difficulties in future, long-term measures which were somewhat difficult, involving general economic policies would have to be taken. As one of the major steps in this direction, Mr. Desai announced that the Governmen of India would not permit any more deals involving short term foreign credits and similar deferred payment arrangements which create an embarrassing accumulation o repayment liabilities. This statement is on a par with recent survey of the World Bank in which the vital nee for the developing countries to eschew short-term credit has been stressed.

Mr. Desai's statement also contained a succinc account of the factors responsible for the foreign exchang difficulties, confronting the country. The rapid pace o industrialisation, he observed, was swelling the impor bill. But the country's exports had not been rising com mensurately, because increased production got absorbe in higher levels of domestic consumption. It was precisel for this reason that the statement underlined the nee for increasing exports and restraining consumption o goods and materials with a foreign exchange element.

The second major factor responsible for the deteriora tion in the country's external balances, according to th official statement, was the fact that India had to mak payments out of its own resources for a mass of import required for development for which no external aid wa available during the second Plan. As the bulk of th assistance available or promised for this Plan was onl for financing import of capital goods, the great bul of maintenance imports had to be paid for from India own resources. It is heartening to know from the state ment of Mr. Morarji Desai that this position is likely t change slightly for the better during the third Plan, a foreign loans of a flexible character would be provide by the donors.

Referring specifically to the foreign exchange com ponent of the third Plan, Mr. Desai said that, even afte taking into account the generous foreign aid that w expected to be received from the Aid-India consortiu members, there remained a good part of the foreig exchange content which would have to be financed fro export earnings. The Minister also appreciated the fa that the consortium had recognised the principle that sh development of the kind on which India had embarke could not be financed by short-term loans carrying com mercial rates of interest. It was largely because of thi recognition that the I.D.A. credits to India were grante on a long-term basis and without any interest payment It was also a happy portent that the U.K. had agreed increased the period of leading from 15 and 20 years 25 years, with a seven-year moratorium and that German was willing to accept a rate of interest of just 3 per ce on a part of the loans.

THE CONTEMPORARY CORPORATE SCENE IN INDIA—II

REGIONAL DISTRIBUTION—MANAGING AGENCY

By Dr. Raj K. Nigam, Ph.D. (Econ.) (London)

NEXT to the industrial distribution pattern of companies, an important aspect to study is the geographical dispersal of companies over the country. The States of West Bengal, Bombay, Madras and Delhi are the old focal points of heavy concentration of companies all along the history of corporate enterprise in our country. There has, of course, been some lessening of the concentration in these areas, with the spread of the corporate enterprise in the other parts of the country, but the registration of new companies in the above States continues even today on gratifying scale. As early as in 1900, the three Presidency States of Bengal, Bombay and Madras were reported to account for nearly 93 per cent of the total paid-up capital of all companies at work in the country. After a run of over 50 years, the foregoing three Presidency provinces, which were reorganised into the States of West Bengal, Bombay and Madras, accounted for 66 per cent of the total paid-up capital of the corporate sector in 1957-58 and the Union Territory of Delhi accounted for another 15 per cent in that year. The dispersal of joint-stock enterprises has been a slow process, but, with an increased emphasis placed on the need to bring down the disparities in regard to the industrial and social developments of the States within a ponderable range, it is expected that more and more companies would come into being in the relatively backward States of the country.

Another interesting factor which is now seen on the corporate scene in the country is that, due to various facilities offered by the State Governments, the entrepreneurs are now registering companies in the State where the factories or establishments are actually to be located instead of registering them in the commercial towns of Calcutta or Bombay where the financial resources could easily be raised for the new corporate ventures. The following Table 5A gives the latest state-wise distribution of companies for the years 1957-58 and 1959-60:

TABLE 5A

State-wise Distribution of Companies

Management Pattern of Companies

The saga of the growth of corporate enterprise in our country would not be complete without a mention of the managing agency system, an institution which is at present in a state of self-diminution. Truly speaking, this system deserves credit for firmly planting the institution of joint-stock companies in the country and bringing it to the present stage of the biggest centres of non-Governmental power in our society. It may well be that, besides the managing agencies, certain economic forces and compulsions which were in operation from time to time helped the joint-stock enterprises to take root and flourish in our country. But all these pressures would have, indeed, proved weak, if the managing agency system had not exercised a dynamising influence. Born of certain historical and geographical necessities, the managing agency system, for a long time, guided the destinies of the important core of the corporate sector in the country; and it was after over 80 years of free-wheeling in the corporate sector that the system was shackled by a few restrictions in 1936 and later their activities came to be closely hemmed in by a series of legal restraints and conditions detailed in the relevant provisions of the Companies Act in 1956. It is not the purpose of this article to dilate on the virtues or demerits of this system which have already come under the close focus of attention in the various official and non-official studies. In this article, we would direct the readers' attention to the statistical position of the managing agencies before and after the present Companies Act came into operation.

According to a survey conducted in 1957 to take stock of the position of managing agencies before the coming into force of the present Companies Act, there were 3,944 managing agencies at work managing 5,055 companies, having a total paid-up capital of Rs. 465.4 crores. In terms of the number of companies at work at the time to which the survey relates, the coverage of the managing agency system extended to one-sixth of the corporate sector; and in terms of the paid-up capital, nearly 48 per cent of the corporate sector was covered by managing agencies. However, excluding banking and insurance companies, which are prohibited from being managed by managing agents under the respective Acts governing them, and also excluding the Government companies which, under the present Companies Act, cannot have managing agents, the coverage of the managing agency system worked out as 54 per cent. The managing agency control was more pronounced in public companies. The survey revealed that 40.7 per cent of the total number of public companies at work, accounting for 66.3 per cent of the total paid-up capital of the total number of public companies at work was managed by managing agents. As against this, 4.9 per cent of the private companies, accounting for 8.6 per cent of the paid-up capital of all private companies at work was covered by them. Excluding the two groups of the banking and insurance companies, the proportions of number and paid-up capital of the public companies managed by them went up to 44.6 per cent and 71.2 per cent respectively.

A Waning System

Since the last survey was taken, as a result of the operation of the provisions of Section 330 of the Companies Act, 1956, the shadow of managing agency system over the corporate sector has considerably diminished. Section 330 mentioned above provided that, in the case of companies having managing agents at the commencement of the Act (i.e., before 1st April 1956) the term of office of such managing agents shall, if it does not expire earlier, expire on the 15th August 1960, unless before that date they are reappointed for a fresh term in accordance with the provisions of the Act. According to the latest available reports, measured in terms of number of companies, only 5 per cent of the corporate sector was now covered by the managing agency system. It is reported that, as on 16th August 1960, only 1,308 companies were managed by managing agencies out of which 1,105 were public companies and 203 private companies. The total number of managing agencies at work in 1960 was 919 as against 3,944 before the 1956 Act came into operation. Thus, a comparison of figures of the managing agencies at work and the companies managed by them as on the two landmark dates shows that there has been a 75 per cent reduction in respect of both the managing agencies and managed companies. Table 6 below contrasts the present position of managing agencies with that existing before the Companies Act came into force:

TABLE 6

Managing Agencies before and after the Companies Act, 1956

Class of Managing Agencies	Position before the 1956 Act came into force				Position as on 15-8-'60
	Managing Agencies		Total companies managed		Managing Agencies
	No.	Paid-up capital (Rs. in crores)	No.	Paid-up capital (Rs. in crores)	No.
Unincorporated Managing agencies.	2,522	..	2,771	95.2	474
Private Managing Agency Companies.	1,238	32.0	1,780	255.0	360
Public Managing Agency Companies.	184	44.1	504	115.2	85
Total	3,944	76.1	5,055	465.4	919

The sharp reduction in the number of managing agency managed companies is the direct consequence of the operation of the provisions of the present Companies Act which has placed many an onerous obligation and prohibition on the managing agents and their managed companies. Under the present Act, the managing agency agreements, the terms and remuneration of managing agencies, etc., are very closely fenced and these, together with other matters, are also to be approved by the Central Government. Taking all the restrictions and prohibitions together, many an agency did not feel it worthwhile to continue as managing agents of the companies and voluntarily retired from the scene, placing the companies managed by them under the alternative forms of management namely under the management of the Board of Directors, or Secretaries and Treasurers, or Managers, or Managing Directors, and so on. Also where certain managing agencies managed more than the number of companies permissible under Section 332 of the Act, that is, ten companies, they surrendered the excess agencies before the 1st August, 1960. Some of these retiring managing agents got themselves appointed as secretaries and treasurers of the companies of which they had ceased to be the managing agents. Thus, the renunciation of the agencies by managing agents changed the pattern of frequency distribution out of recognition. The following Table 7 sets out the position briefly before 1956 and as on the 15th August, 1960. It will be seen that 16 managing agencies managed more than 10 companies before the new Act came into force and the total number of companies managed by these agencies was 349.

TABLE 7

Frequency Distribution of Managing Agencies

No. of companies managed	Before 1956 No. of Managing Agencies	As on 15th August 1960
1	3,526	776

Total	3,944	919

* *Note.*—Martin Burn has 11 companies, but one of these is a private company which is not covered within the meaning of Section 332.

Position of Prominent Houses

The following Table 8 gives the number of companies managed by 25 prominent managing agencies of the country before 1956 and as on the 15th August 1960. It shows that between themselves these 25 well-known agencies managed 430 companies before 1956, as against which they acted as managing agents for only 198 companies in 1960 and in addition to these within the four corners of the Act, they acted as Secretaries and Treasurers for another 135 companies, bringing the total number of companies under their management to 333 companies. Including these 25 well-known agencies the first 50 leading managing agencies are reported to have managed 578 companies in 1956 as against which, in 1960, they were managing 452 companies in their combined capacity of Managing Agents and Secretaries and Treasurers. Thus, there is a marked diminution in the control of prominent managing agencies over the companies in 1960.

TABLE 8

Total	430	198	135	333

* *Note.*— Includes companies managed by Kilburn & Co., Ltd.

Here we may briefly also refer to the new institution of Secretaries and Treasurers which was introduced in the present Companies Act with the sole purpose of providing a suitable substitute for the managing agencies which of late had run into heavy waters. Though the Government had not taken any decision to abruptly end this system, the business circles felt the provisions of the new Act to be too suffocating and strangulating for them to act as managing agents of companies and in the circumstances the better thing for them to do was to reconcile themselves to the policy of self-abnegation and self-effacement. To avoid the possible breakdown of industrial management structure by the withdrawal of managing agencies, the Government created the institution of secretaries and treasurers with the hope that it would provide a popular alternative for the managerial class in the country. The relaxed control over this new form of management would, it was thought, encourage a large number of Secretaries and Treasurers to spring up and fill the vacuum created by managing agencies. Unfortunately, these hopes have not been realised to any great extent as it is found that, as on 15th August 1960, there were only 45 Secretaries and Treasurers who managed a total of no more than 179 companies. It was also seen that, out of the 45 Secretaries and Treasurers, 23 were actually secretaries-cum-managing agents. In this dual role, these 23 bodies managed 290 companies of which they acted as Secretaries and Treasurers for 144 companies and as managing agents for 146 companies. The remaining 22 bodies acted as only Secretaries and Treasurers, the number of companies under their charge being only 35. It is further observed that 12 Secretaries and Treasurers managed more than 10 companies each under them in their dual capacity. However, as the managing agency system is gradually undergoing transformation, the future of the institution of Secretaries and Treasurers is to be watched with interest. The following Table 9 summarises the overall position of Secretaries and Treasurers as on the 15th August, 1960.

TABLE 9

Overall position of the Secretaries and Treasurers as on 15th August, 1960

Total	45	28.0	179	27.8

Financial Growth of Companies

The study of the growth of corporate sector would not be complete without casting a glance at the various financial indicators of their growth also. Unfortunately, a long and continuous series of data for the study of the various financial indicators of the public and private companies are not available in our country. It is only recently that attention has come to be focussed on the question of company finance and a voluminious stock of data has become available to us in the studies made by the Reserve Bank of India. A few important indicators reflecting the current financial standing of the public and private companies are set out in Table 10 below. It will be seen that the resource accumulation and assets formation have been proceeding at high rates and the corporate enterprises presented a happier picture. The index of profits for the public companies in 1958 stood at a higher level than it did at the beginning of the First Five-year Plan. The Reserve Bank Index for profits before tax for 1958 stood at 157, in relation to the 1950 level taken as 100. This state of affluence in profits is seen in almost all the principal industries of the country. The most remarkable increases in profits were noticed in shipping, paper, engineering, chemicals, silk and woollen fabrics, and vegetable oils industry. With the moving of the national economy to higher and higher gyrations of development, one could expect a prolonged spell of prosperity for the Indian industry and the setbacks which might occasionally come in the way of some industries would only be temporary and shortlived.

TABLE 10

Financial Position of Companies

	Public companies (750/1000 companies)		Private companies (333 companies) 55-58
	1950-55	1955-58

8. Dividend as percentage of paid-up capital	8.2	9.1	7.2

Notes :—(i) Figures for 1 to 4 are the average percentage increases per annum and for 5 to 8 are the average annual percentages.
(ii) The Reserve Bank study on Company Finances during 1959 is expected to be out shortly.

Trends During Post-Independence Period

The post-Independence period is a unique phase in the history of our country. It is a period of intense, economic, political and social activity. In the annals of the corporate enterprise of our country, there was never such a burst of new company formations and a tremendous increase in the paid-up capital of companies—old and new ones—as seen during the post-Independence period. In so far as the corporate activities are concerned, the post-Independence period proved to be the most spectacular period unmatched and unequalled by any segment of time in the past. During the 13-year period following the Independence, ended with the fiscal year 1960-61, as many as 22,783 new companies were formed all over the country. Since the beginning of the present century, upto the end of 1960-61, in all a total of 58,815 new companies were incorporated in the country and, out of this, nearly two-fifths were formed during the post-Independence period of 13 years which covered one-fifth of the total span of 61 years of the present century. The new company formations of the post-Independence period exceeded the registration records of companies of the first 40 years of the present century when 20,616 new companies had been formed all over the country which included at that time also the territories now forming parts of Burma and Pakistan. In comparison with the post-Independence total, the new company registrations of the two most hectic periods of industrial activities in the country, namely, the First World War and the years immediately following it and the Second World War and the immediate post-war years, were very modest totals. During 1915-25, new company registrations totalled only 4,829, whereas, during 1936-46, they aggregated 18,281. During the Second World War years, as many as 10,254 companies had been formed and, during the period 1940 to August, 1947, 15,516 companies were formed. It will thus be seen that, in comparison with the various periods of buoyant industrial activity in the country, the post-Independence record was the most spectacular.

The Joint-stock companies, both old and new, recorded a net increase in paid-up capital to the tune of Rs. 1,155 crores during the post-Independence period. This gave an average net capital formation, inclusive of the capitalisation of reserves, by companies of Rs. 89 crores a

TEXTILES AND BRITAIN'S MEMBERSHIP OF COMMON MARKET

MILLOWNERS' FEARS REGARDING EXCESS IMPORTS

From Our Special Correspondent

MANCHESTER, *8th August*

FEARS that the British home market might become "a receptacle" for excessive quantities of duty-free low-cost imports of textile goods against which the rest of the Common Market would be largely insulated if the United Kingdom is to join the European Common Market have been expressed by the United Textile Manufacturers' Association in Manchester. "It would clearly create an unfair and intolerable position if the other European countries also gained free entry into the United Kingdom," said the statement. "Such a situation in which the British industry would find itself faced with the worst of the two worlds must, of course, not be allowed to arise in the course of the forthcoming negotiations."

MANCHESTER LETTER

The Association pointed out that such a development would be entirely contrary to the intentions of the proposals for a more equitable regulation of low-cost cotton textile imports amongst all Western countries as put forward by President Kennedy and recently endorsed at the conference in Geneva in which the United Kingdom Government played a full part. The British cotton and man-made fibre manufacturing industry, it was added, had no illusions about the strength and vigour of the competition to be faced at home and in Europe from other industries, if the United Kingdom joined the Common Market. It would be prepared to accept the challenge, provided competition was on a genuinely fair and equal basis and that the declared intention about "harmonisation of taxation, social charges and working conditions" became a reality.

Hong Kong Cotton Statement

Although Lancashire traders are pleased to hear that the Hong Kong millowners have accepted in principle the proposal made by the British Government that the inter-industry pact should be extended for a further eleven months, they are directly opposed to any substantial rise in the ceiling for imports, as suggested by the Colony. "The whole situation has changed since 1958," a spokesman for one of Lancashire's big mill groups said. "Arrivals of grey cloth in the whole of that year amounted to 337 million yards, of which Hong Kong supplied 116 million yards. Now, in the first half of 1961, imports have already been 335 million yards. On that basis, the Colony wants to send us more than 230 million yards a year, as well as large quantities of garments."

Informed quarters in Lancashire believe that the question of Hong Kong's future shipments to the United Kingdom should be kept strictly on a Government-to-Government basis. Delays in reaching a settlement may cause uncertainty in the Manchester market, but, in the meantime, the possibility of Britain's participation in the European Common Market might change the complexion of the negotiations, to the Colony's disadvantage.

Egypt's Changed Policy

Across the world in Egypt, the raw cotton situation is being watched with intense interest, as the United Arab Republic is trying to recapture some of its lost business not only with Lancashire but with other countries outside the Eastern European bloc. Rumours of another deal to follow the semi-barter arrangement involving the importation of some 25,000 bales of Egyptian cotton into the United Kingdom have lately been circulating.

The negotiations are believed to be following a similar pattern to the earlier agreement and, in this case, will provide for the purchase of about 12,500 bales of cotton in exchange for manufactured goods made in this country. The reversal of policy adopted by the Egyptian Government is likely to have a marked bearing on the sales of Sudan cotton, which has lately been extensively used as a substitute for the Egyptian staple, providing the price levels are sufficiently competitive.

Users of long-staple varieties now face the possibility of a price war developing between their two chief suppliers, a trend which might create nervousness and affect the fine spinning section adversely. On the other hand, consumption of this type of cotton has fallen in recent years, partly because technical changes have made it possible to substitute cheaper medium staple varieties without impairing the finished article. Only limited opportunities for extending this trade by Egypt seem likely at the moment as the Sudan will certainly make every effort to retain her very considerable share of the market.

Low Spot Stocks

During the past four seasons, the rate of arrivals of raw cotton has fluctuated, although with some degree of regularity. Imports in 1957-58 reached nearly 1,500,000 bales, a comparable total to that achieved in 1959-60. In the alternate seasons, including that just completed, the quantity of the raw material entering British ports has been around 1,150,000 bales, reflecting, to some extent, the lower level of activity in the industry.

Although the mills in Lancashire were still actively engaged in turning out goods twelve months ago and remained reasonably busy for the rest of the season, the drying up of demand which was encountered from the beginning of this year has made users reluctant to anticipate their requirements, so that there has been no incentive for merchants to import supplies on a speculative basis. The following table shows arrivals of raw cotton by growths during the past three seasons:

(In bales)

	1960-61	1959-60	1958-59
American	450,551	566,906	259,703
Mexican	43,983	78,997	125,337
Nicaraguan	14,848	18,379	35,080
Brazilian	71,488	47,674	42,646
Argentine	13,132	9,642	2,985
Peruvian	46,017	66,750	64,297
Egyptian	9,320	19,174	9,478
Sudan	127,696	213,509	223,288
East African	30,127	36,268	37,710
Nigerian	86,366	92,071	97,991
Congo	2,821	17,794	10,344
Turkish	85,084	78,890	52,023
Syrian	11,689	16,187	18,071
Iranian	99,382	51,345	*
Pakistan	5,597	23,382	34,897
Indian	2,719	2,827	11,683
Russian	36,438	41,726	36,179
Others	76,565	73,516	104,546
Total	1,150,413	1,449,107	1,160,253

* Included in "others."

Some reduction in supplies obtained from the North American Continent was noticeable in the past season, but far more marked was the fall in the quantity of cotton taken from the Sudan. This reflects the substitution of medium quality staples for the longer varieties which were once extensively used in Lancashire. The only important examples of bigger takings were in the case of Brazil and Iran, most other countries supplying similar quantities to the previous season, although shipments from Turkey and Pakistan tended to decline.

The visible supply situation now merits some attention as the quantity of raw cotton held in stock either in Liverpool or Manchester together with cargoes in transit, is at its lowest level since statistics were revived following the reopening of the Liverpool market in 1954. The latest official figures at the end of the season show 94,000 bales in Liverpool, 16,000 bales in Manchester and 28,000 bales afloat, making a total of 138,000 bales. Only towards the middle of 1956, when the comparable figure was 142,000 bales, has this meagre supply position been approached, while at other times well over 300,000 bales have been available.

Of the stocks held, Liverpool has 22,000 bales of American, 10,000 bales of Sudan and 18,000 bales of Iranian cotton, while Manchester supplies are mainly made up of 11,000 bales of American staple. In view of the restricted call for additional cotton while the mills are working off their existing contracts, it is hardly surprising that importers are curtailing their purchases, but spot stocks are certainly very low, even for the time of the year.

Forwardings to spinners during the past season at 1,186,640 bales were some 30,000 bales larger than actual arrivals. Users took about 45,000 bales more American cotton than was imported, but the consumption of Iranian cotton was nearly 20,000 bales below arrivals.

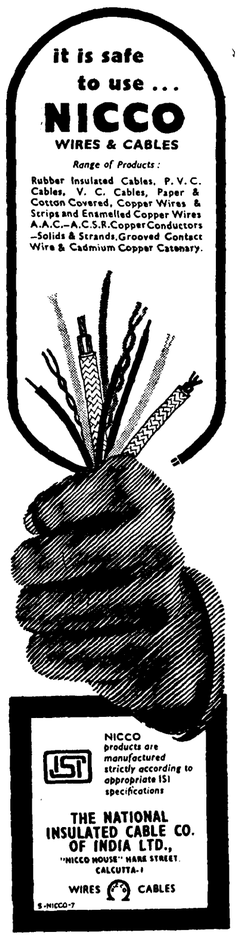
Record Plant Sales

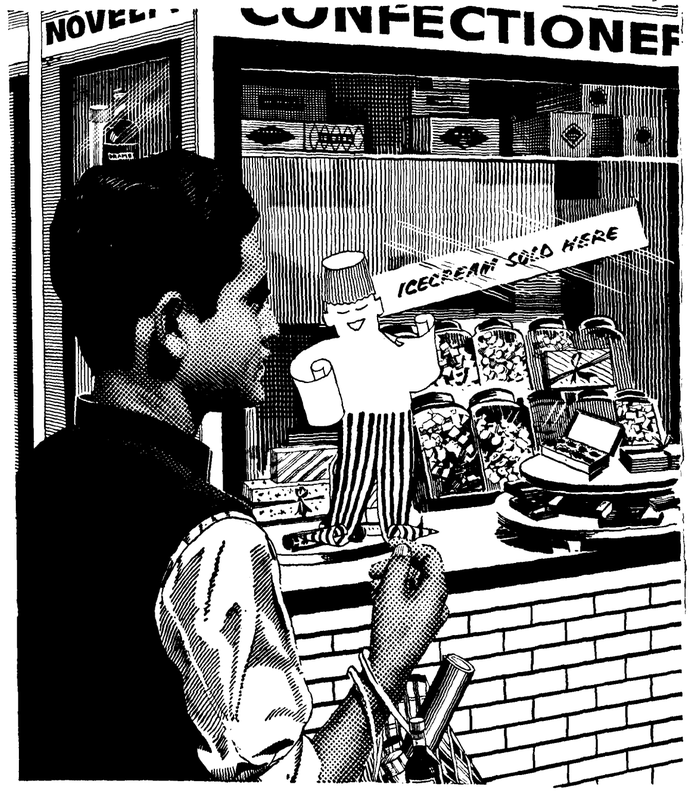
Thanks mainly to the very much larger shipments of textile machinery now being despatched to the Soviet Union, the half-year's returns covering export sales of textile plant make a far more satisfactory showing than those for the goods produced on such machines. In the first six months of 1961, exports to all countries amounted to 780,310 cwt., as compared with 694,019 cwt. in the same period last year and were nearly 200,000 cwt. higher than in 1959. Earnings from this trade for the half-year aggregated £32,169,000, a rise of over £5,000,000 on the 1960 level and nearly £11,000,000 more than in the first half of 1959. Unless there is a remarkable slump in the second half of the year, the value of textile machinery shipments will certainly set up new records by a large margin, as the 1960 total of £51,806,000 was itself a new peak.

Shipments to Russia so far this year have reached 114,000 cwt., as against 80,000 cwt. in the first half of 1960, their value exceeding £5,000,000. The other main markets have been India (67,000 cwt., as against 79,000 cwt.), Australia (54,000 cwt., as against 29,000 cwt.), Italy (33,000 cwt., as against 23,000 cwt.) and Western Germany (32,000 cwt., as against 24,000 cwt.). One of the few consuming areas which has taken smaller quantities of textile plant this year is Poland, whose imports have slumped from 41,000 cwt. to less than 3,000 cwt., but undesignated "other Commonwealth countries," outside South Africa, India, Pakistan, Australia, New Zealand and Canada, have stepped up their orders substantially. Shipments so far exceeded 40,000 cwt. against 16,000 cwt. last year.—*All Rights Reserved.*

COTTON TEXTILE PRODUCTION

The cotton textile mills' production in India during the month of June 1961 is provisionally placed at 71 million kilograms of cotton yarn and 393 million metres of cotton cloth. At the end of June, the composite mills of the cotton textile industry held an estimated stock of 132,000 metric bales (of 1,500 yards each) as unsold cloth and 159,000 metric bales as sold but not lifted.





MR. AL FOIL WRAPS CONFECTIONS TO PERFECTION

"Why not say it 'sweetly' Sir," said Mr. Foil helping out the worried gentleman. "Delicious chocolates and toffees to tempt sweet sixteen, soft candies to please Grand-Ma and ice-cream or biscuits to delight the kids at home . . . your choice in sweet presents is wide. Only be sure that they are all foil wrapped. Confectionery protected by aluminium foil looks attractive and tastes wonderful as only fresh sweetmeats do . . . because foil packing keeps in the tasty goodness while keeping out dirt, damp and dangerous contamination."

Long and extensive experience as Manufacturers of Aluminium Foils for packing goods in Cigarette, Pharmaceutical, Confectionery, Tea and many other industries.

EXPANSION OF SUGAR INDUSTRY

GOVERNMENT SUSPENDS ISSUE OF LICENCES FOR NEW UNITS

THE decision of the Government of India not to permit the establishment of any more new sugar mills was first announced in a rather casual manner by Dr. Panjabrao Deshmukh, Union Minister for Agriculture, at Poona on Sunday the 6th inst. The Government, Dr. Deshmukh said, had suspended the issuing of licences for setting up new sugar factories, even in the co-operative sector, in view of the present surplus sugar production and the difficulties encountered in finding export markets for the commodity. He did not reveal the extent of the additional capacity to which licences had already been granted. It was, however, made known subsequently in the Lok Sabha that, including the licences given for the erection of new sugar plants and the expansion of existing ones, the aggregate sugar production capacity would come to 3.15 million tons.

The casual manner in which such important decisions are announced is, indeed, strange. It is all the more strange, because Mr. S. K. Patil, the Minister for Food and Agriculture, had an appropriate opportunity to disclose the Government's decision at the meeting of the Indian Sugar Mills Association held at New Delhi, just six days prior to Dr. Deshmukh's statement. In fact, the Association's President, Mr. D. D. Puri, had specifically raised the issue. Mr. Puri had then stated that the production target of 3.5 million tons fixed for white sugar by the Union Food Ministry (the same capacity is mentioned in the final report also) was a very liberal one and urged that the existing capacity must be reassessed. He also warned that any failure to rectify the situation would spell ruin to the sugar industry. Here is the relevant extract from his speech:

"The installed capacity of the industry is computed on a very conservative and, if I may say so, erroneous basis. Against a duration of 120 days which forms the basis of the Plan calculations, the average duration during the last five years was 136 days. That is why, against the theoretical capacity of 21.5 lakh tons in 1959-60, actual production was 24.20 lakh tons, and this year, against the estimated capacity of 22.8 lakh tons, actual production is nearly 30 lakh tons. This clearly calls for re-assessment of the existing capacity on the basis of actual duration and, in the meantime, a complete suspension of licences for new factories as well as for expansions, except in so far as these may be necessary for bringing up sub-economic capacities to minimum economic levels. We should not be in a hurry to install fresh capacity and let it follow consumption and in no case expand it in advance of consumption.

"Capacity is being licensed and installed far in excess of requirements. This is based on a threefold error, of Government having underestimated the installed capacity, overestimated consumption and added an *ad hoc* five lakh tons for exports. I respectfully submit that all these are steps in the wrong direction which, if not rectified immediately, will bring ruin to the industry."

Mr. Patil's vague reference to this subject, as reported in a section of the daily Press, gave the impression that the Government was not in favour of tampering with the target for white sugar in the third Plan.

Duration of Season

Be that as it may, it will be recalled that the Draft Outline of the third Plan envisaged a production target of three million tons. The target was subsequently raised to 3.5 million tons, in view of the need for exporting sugar arising from scarcity of foreign exchange. The target was based on a normal duration of 120 days crushing. Mr. Puri said that the basis was not correct, in asmuch as the average duration in the last five years had been 136 days. It will not, however, be strictly correct to take such an average, because the actual duration depends on both the size of the cane crop and the relative prices commanded by brown sugars (*gur* and *khamdsari*). There have been seasons when the all-India average duration was very short, as, for instance, just 86 days in 1953-54, 90 days in 1949-50 and 101 days in 1950-51.

One may justifiably contend that the years of short crushing season mentioned here belong to an era which is unlikely to be repeated, in view of the distinct advance made by the country in regard to irrigation, fertilisers, improved types of seed-cane, etc., during the past six or seven years and the consequent improvement in per-acre yields in most parts of the country. Even so, it is better to be on the safe side by taking a conservative average duration of crushing season, as the country is still very much susceptible to the vagaries of Nature, including floods. Another relevant point that must be borne in mind is that the price of sugarcane is so high that a lot of sub-marginal lands has been brought under this crop. It is not in the interest of the country as a whole to permit this unsatisfactory affairs to continue endlessly. It is better to cut the price of sugarcane to more reasonable levels, so that a part of the land may be diverted to other crops. If this is done, the size of sugarcane crop may not be as large as it has been in the past two years.

Other Factors

This aspect apart, the adequacy or otherwise of the production target for sugar should be judged largely from the point of view of domestic consumption requirements and export needs. One cannot, of course, be dogmatic about the actual level of demand—internal and export—for sugar that will prevail five years hence, since that would depend on a number of factors which cannot be sized up at present with any degree of accuracy. The chief determining factor will be the general level of prices, particularly of commodities with which sugar is consumed, such as milk, butter, ghee, coffee, tea, cocoa and other beverages. The prices of substitutes for white sugar, such as *gur* and *khandsari*, also influence the demand for crystal sugar. The offtake of white sugar for domestic consumption will decline if either the prices of milk, ghee, coffee, tea, etc., increase or the prices of *gur* and *khandsari* decline. Then, there is taxation on consumption of sugar. Any increase in it is accompanied by a fall in the offtake for sugar. Actually, all these factors have been in operation in the last two years and account, to a large extent, for the static level of white sugar consumption, despite the marked rise in population.

The I.S.M.A. President stated that the trend of sugar consumption called for a production target lower than that envisaged now (3.5 million tons). This assessment does not seem to be correct. It will be recalled that the consumption of sugar had touched as high as 2,042,000 tons in 1957-58, though the population was 393 million estimate made then for that year). Such a high level of consumption was possible chiefly because there were no controls on prices, movement and distribution (except for the fixation of ex-factory prices for North Indian sugar towards the end of June 1958). The *per capita* consumption then worked out to 11.7 lbs. Taking the average retail price of 48 nP per lb. prevailing then, the average amount of money spent on sugar by one person came to Rs. 5.62 per annum. This expenditure accounted for 2.04 per cent of the *per capita* income of Rs. 275.6 (1948-49 prices). The *per capita* income (at 1960-61 prices) is expected to rise from Rs. 330 in 1960-61 to Rs. 385 in 1965-66. The 2 per cent of this income of Rs. 385, or nearly Rs. 8, will represent the average *per capita* expenditure on sugar. Even assuming that the present level of sugar prices (average of 52 nP per lb.) will continue, the *per capita* consumption of sugar will be about 15.4 lbs. per annum. Taking the projected estimate of population, namely, 492 million in 1965-66 (as against 438 million in 1960-61), the total domestic requirement of sugar will work out to more than 3.38 million tons—3,382,500 tons, to be precise.

Consumer Preference

The estimate of 3.38 million tons will be higher still if account is taken of the continued shift in the consumer preference from brown sugar (*gur* and *khandsari*) to white sugar, as a result of the improvement in the living standards of the masses, following the implementation of the series of development schemes, the spread of urban habits to rural areas, and the increase in consumption of soft drinks. A look at the trend of consumption of the different sweetening agents over the seven-year period from 1950-51 to 1957-58 will reveal that the *per capita* consumption of sugar went up from 6.7 lbs. to 11.7 lbs., while that of *gur* declined from 21.0 lbs. to 17.0 lbs.; the consumption of *khandsari* did not show any marked variation, the figure for 1957-58 being 1.2 lb., as against 0.8 lb. in 1950-51.

Again, it is necessary to take into account the nutritional requirements of sugar, which, on the basis of experts' suggestions, come to nearly 23 lbs. (white sugar alone) *per capita*, as against 10.5 lbs. for 1960-61. Another important factor that has to be borne in mind is the vast scope that exists for increased industrial consumption of sugar, as in the U.S. and other industrially advanced countries. Then, there is the issue of exports. Replying to a question in the Lok Sabha last week, Mr. Patil declared that India aimed at exporting half a million tons of sugar annually in the near future. In view of all these factors, the production target of 3.5 million tons envisaged in the final report of the third Plan cannot be considered to be as unduly large. One of the objects of industrialisation is to exploit the raw material resources in the most efficient and economic manner. Even if the present level of acreage diverted to sugarcane is reduced, there will be plenty of sugarcane, as the yield per acre will go up. There is no exaggeration in this assumption; otherwise, all the efforts that are now being made to raise the productivity of land will be meaningless. What is to be done with this increase in sugarcane production, if it is not to be crushed into white sugar? The planners, administrators and industrialists should, therefore, think of the ways and means of exploiting the scope that exists for expanding consumption of white sugar and not in terms of restricting consumption. In saying this, we do not suggest that appropriate steps should not be taken for correcting the present excess in sugar production. This is a purely temporary phenomenon and should be viewed as such.

FOOD MINISTRY'S NOTE ON SUGAR

A special note on the sugar position with particular reference to exports prepared by the Union Food and Agriculture Ministry was presented to the Lok Sabha on Wednesday the 9th inst. The sugar position during the current season (1960-61), as assessed by the Ministry recently, is as follows:

(In thousand tons)

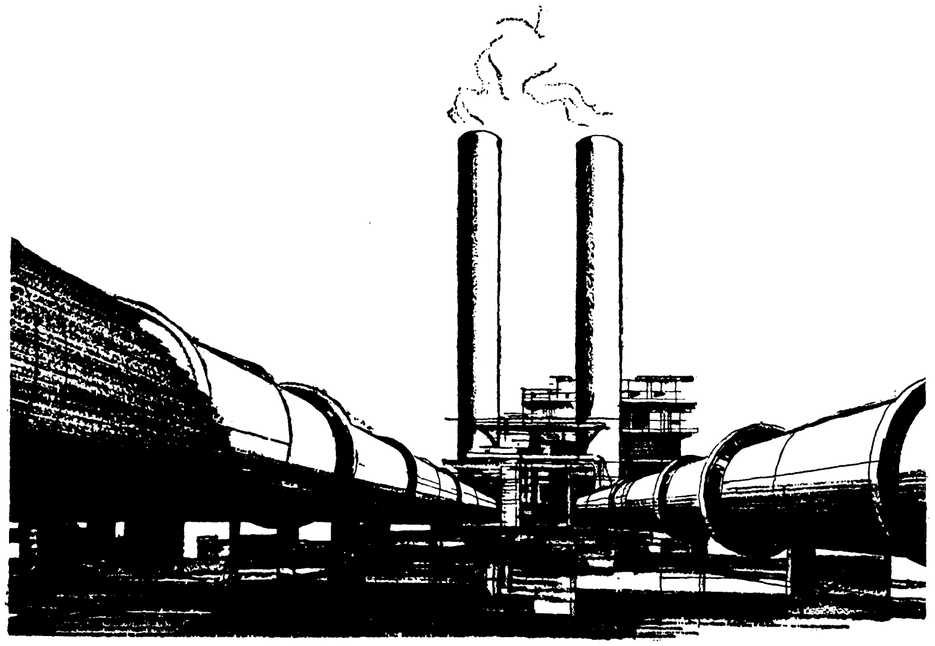
Carryover from 1959-60	540
Estimated production in 1960-61	2,980
Total available supply ...	3,520
Less—Estimated consumption ...	2,050
Balance	1,470
Less—Exports	300 or 317*
Of which quantity already sold to countries other than U.S.	100
To be sold to U.S.	187
To be sold to other countries	30
Estimated balance on 31st October 1961	1,170
Essential carryover	500
Surplus	670

*Including 17,000 tons which may be exported, during November-December 1961.

Out of the 100,000 tons already sold to countries other than the U.S., 70 per cent has been sold to the Federation of Malayan States, 20 per cent to the Middle East countries and the balance of 10 per cent to Ceylon and Burma. The average f.o.b. realisation on these exports is estimated at £31 per ton or Rs. 415 per ton, as against the f.o.b. cost of Rs. 800 per ton, after allowing drawback of excise duty and cane cess (taking the specific case of U.P. and North Bihar, the ex-factory price inclusive of excise duty and cane cess is Rs. 37.85 per maund).

It may be mentioned that the cost of cane, at the statutory minimum price of Re. 1.62 per maund, works out approximately to Rs. 17.20 per maund of sugar on the basis of recovery in the 1960-61 season. This will be roughly 68 per cent of the cost of sugar, excluding cane cess and excise duty. (To arrive at the f.o.b. cost, the excise duty and the cane cess have to be excluded, while internal freight and handling charges at ports have to be added). Considering the inadvisability of raising the consumer price and the fact that the industry would have to implement the Wage Board report, the Ministry of Food and Agriculture announced in the Lok Sabha during the budget debate on 18th April 1961 that the losses on further exports, that is, beyond the first 100,000 tons, would be borne mainly by the Government.

The Food Ministry's note points out that, since sugar prices vary from time to time, it is very difficult to estimate what price may be realised and what losses incurred on different exports. On the whole, the Government hopes to realise about Rs. 12 crores as foreign exchange on U.S. and Malayan sales, and the loss borne by the Government may be about Rs. 5.5 crores. It is proposed to try for an enhancement of the export quota under the International Sugar Agreement, as also the quota which may be given to India under the U.S. Sugar Act for the next year. The quotas allotted to exporting countries under the International Sugar Agreement will come up for review at the conference to be held in Geneva next month. India will participate in the conference. India's export quota for the current year under the Agreement works out to 112,[illegible] tons. Of this quota, India has still about 30,[illegible] tons left for export during the current year.



AVB
CEMENT-MAKING MACHINERY
equal to the World's Best
TREMENDOUS BOOST TO CEMENT AND ALLIED INDUSTRIES

ACC-VICKERS-BABCOCK LTD., the powerful new engineering enterprise, will 'tailor-make' for industry the very latest cement-making machinery.

The AVB Plant at Durgapur is in the final stages of construction. It is equipped with some of the world's most up-to-date machine tools and staffed by highly skilled technicians and experienced design engineers.

AVB are now ready to accept orders for cement-making machinery which will be 'tailor-made' to specific requirements.

Now in a position to make a major contribution to the cement industry, AVB will help the nation achieve the Third Five Year Plan target of 15,000,000 tons of cement every year.

AVB will be able to draw on the vast technical knowledge and rich experience of three famous engineering concerns:

THE ASSOCIATED CEMENT COMPANIES LTD.,
INDIA'S PIONEERS IN THE MANUFACTURE OF CEMENT AND CEMENT-MAKING MACHINERY AND

VICKERS LTD., London, WORLD-RENOWNED MANUFACTURERS OF HEAVY EQUIPMENT FOR MANY LEADING INDUSTRIES

IN CLOSE COLLABORATION WITH

FULLER COMPANY, CATASAUQUA, PA., U.S.A., THE WORLD-FAMOUS MANUFACTURERS OF FULLER COOLERS AND OTHER FULLER EQUIPMENT WHO HAVE UNRIVALLED ENGINEERING AND RESEARCH FACILITIES

INDIAN COPPER CORPORATION LIMITED

CHAIRMAN'S SPEECH AT ANNUAL GENERAL MEETING

RECORD PRODUCTION OF COPPER—NO INCREASE IN CAPITAL FOR THE PRESENT

A RECORD production of 8,769.30 long tons of copper was the outstanding feature of the working of the Indian Copper Corporation Limited, during the year ended 31st December 1960. This was highlighted by Mr. Patrick E. G. W. Parish, O.B.E., Chairman of the Company, in his speech at the Thirty-seventh Annual General Meeting of the shareholders, held at Calcutta on Wednesday, 9th August 1961. The higher production, which was partly the result of the postponement of the annual shutdown of the works for overhaul till January this year, coupled with a reasonable and stable world copper price, resulted in satisfactory financial results for 1960. Mr. Parish, however, expressed concern over the continuing shortage of power and irregular supply of coal. He ruled out the possibility of bonus shares by the Company and added that no issue of right shares was under contemplation for the present.

The following is the full text of Mr. Parish's address:

"GENTLEMEN,

"The report of your Directors and the accounts for the year ended 31st December 1960 have been in your hands for several weeks. This meeting gives me a suitable opportunity to give you some more details of the progress which your Company has made during the year, a review of copper prices and, perhaps, an indication of what lies ahead.

"As I have explained before on similar occasions, the prices at which our products are sold must inevitably follow the trend of prices of copper in the world markets. During 1960, the world price opened at about £253 per ton, rose to £279 in February, fluctuated rather sharply between £279 and £237, with an average of about £250 from March to August, whereafter it fell to about £220/230 for the remainder of the year. So far this year world prices have remained steady around £220/240, with an average of about £228, as compared to £266.6 for the whole of 1960. In comparison with some years, these fluctuations have been relatively small.

"World production of copper could very easily exceed world consumption, but during the year there have been a number of strikes in producing countries and some of the major producers have at times voluntarily reduced output in order to avoid flooding the market. These factors have had a stabilising effect on the price which consumers would pay.

"After a year of relatively stable prices but in an unstable world it is impossible to predict what eventualities may occur to influence prices during the next few months. The world price at the end of last month stood at about £230 per ton.

Production

"Production of copper in 1960 was 8,769.30 long tons, which is a record for the Company and 1,216 long tons higher than last year. This satisfactory figure is partly due to the fact that the annual shut-down at the Works for overhaul was postponed until January 1961 so that more days were worked in 1960.

"Besides mining, producing and rolling copper, your Company rolls brass and yellow metal sheets and circles. This requires a mixture of copper and zinc, of which the latter metal has to be imported. During 1960 sufficient import licences were issued by Government to maintain supplies of our requirements, but I must tell you that, in 1961, owing to the serious foreign exchange position, we have not been able to obtain our full quota of zinc with the result that output has been adversely affected in recent months and there are little prospects of any improvement at present.

"Active prospecting throughout the property has continued during the year and, although no startling discoveries have been made, your new small mine at Surda is contributing towards our efforts to increase production. Prospecting, as you well know, is a very expensive business, but it is essential for the future of the Company and is vital if we are to increase production of this metal with a view to reducing the amount of copper which has to be imported and thus save valuable foreign exchange.

"Ore reserves increased by 88,695 short tons and at the end of the year stood at 4,292,242 short tons, which is a sound and satisfactory position for a Company mining deep copper ore deposits.

"Although during 1960 we suffered no ill effects from electric power shortage, this is a matter which, since the power cuts in the early months of this year, is causing us some anxiety; but it is hoped that the substantially increasing offtake we shall need in future will be available.

"Coal supplies, partly utilised for augmenting electric power requirements, have in recent months, owing to transport difficulties, been erratic, which has resulted in stocks at times falling below a safe working level.

"Despatches of finished products, which have a direct relationship to profits, were maintained at a satisfactory level in 1960, but this year, owing to transport difficulties, heavy stocks have accumulated at the Works. However, provided the required number of wagons from the railway are forthcoming, the shortfall in despatches can be made good.

"The satisfactory financial result for 1960 is due to higher output and a reasonable and stable world copper price level. Expenses, however, continue to rise partly as a result of increased labour costs and partly because we are now mining at greater depths. I think, however, you will agree that the Company has had a successful year in 1960.

"Last year I outlined the additional plant and machinery that will be required during the next few years for the processing of the expected increased output of ore from the mine. Although investigations concerning the most suitable and up-to-date equipment have not as yet been finalised, I am pleased to report that a start has been made by the completion of modifications to the aerial ropeway to carry the anticipated output from the mine to the Works.

Satisfactory Labour Relations

"It is pleasing to report that on the whole relations with labour have been satisfactory. In November 1960 a settlement was reached with the joint mines and works unions increasing basic pay and dearness allowance, which has been favourably received.

"Although we cannot assist in the country's export drive so far as our copper is concerned, our efforts do help to conserve considerable sums of foreign exchange which would otherwise have to be spent on importing copper. On the other hand, the export of kyanite is a useful foreign exchange earner and we are doing our best to increase sales abroad. Despatches abroad during 1960 amounted to 21,242 long tons. I must mention, however, that our efforts are frequently thwarted for lack of railway wagons from the mine to Calcutta docks.

"The appeal in the Supreme Court still remains pending, but attempts are being made to arrive at a compromise settlement.

"Work has now started on the foundations of the new buildings and satisfactory progress made on the ordering of equipment. At the moment we are delayed by the shortage of cement, which is chronic throughout the country, but it is hoped that this will not prevent completion of the project on schedule.

"The profit for the year before providing for taxation, depreciation and reserves amounts to £1,307,982, as compared with a profit in 1959 of £1,202,259. Income-tax and super-tax on profits amount to £500,477. Your Directors have decided to place £175,000 to depreciation and £200,000 to general reserve. £50,625 goes to development rebate reserve.

"There is a balance available of £489,001 and your Directors are recommending that the same dividend as last year, that is, 27 per cent subject to tax, be maintained, absorbing £370,251, leaving £118,750 to be carried forward.

Bonus Share Issue

"A number of shareholders have written to us suggesting that the Company should issue bonus shares and there have been rumours in the market from time to time that your Directors were about to make such an issue. We have, of course, considered this matter, but our opinion is that for the present there is no advantage in so doing. On the contrary, it would involve the Company in paying tax of 12½ per cent on the bonus shares, which we do not think is justified as we require all the money we have got for the various expansion plans which lie before us. It is true that in this year's Budget the tax on bonus shares was reduced from 30 per cent to 12½ per cent, but even this tax is, in our opinion, unreasonable when reserves, which have been built up out of taxed profits, are converted into bonus shares. Let us rather conserve our funds for improvements and extensions which will earn increased profits in the future.

"The matter of a rights issue has also been discussed by your Directors, but the Company has sufficient cash for its immediate plans. In due course if further funds are required the question of making a rights issue will again be considered.

"I am fully aware of the reasons which prompt shareholders to hope for a bonus issue, but unless profits are increased there can be no benefit of a better yield and, as I have said, to pay out 12½ per cent in tax when the money can be profitably used in extension projects seems to us unjustifiable.

"It remains for me to thank the General Manager, Mr. N. A. B. Hill, and the staff both at the Mines and at the Works, and the workers. I am sure that I speak on your behalf in expressing our appreciation of their work which has led to another year's successful results."

Note: *This does not purport to be a record of the proceedings of the annual general meeting.*

BRITISH COMPANIES WORKING FOR INDIA

ISIC 29

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

A copy of the Prospectus together with the documents specified therein has been duly filed with the Registrar of Companies, Madras for registration as required by Section 60 of the Companies Act 1956.

Consent of the Central Government has been obtained to this issue by an order of which a copy is open for inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed in regard to them.

A licence bearing No. L/1-A(3) (88)/M.E.I/61 dated 18-1-1961 has been obtained from the Central Government for the establishment of this new industrial undertaking a copy of which is open for inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed in regard to them.

THE SUBSCRIPTION LISTS WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 24-8-1961 AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 31-8-1961 OR EARLIER AS SOON AS SUBSCRIPTIONS APPROXIMATING TO THE AMOUNTS ISSUED TO THE PUBLIC HAVE BEEN RECEIVED, BUT NOT EARLIER THAN THE CLOSE OF BANKING HOURS ON 28-8-1961.

Applications will be made to the Madras and Calcutta Stock Exchanges for permission to deal in and for an official quotation for the shares of the Company.

INDIA FORGE & DROP STAMPINGS LTD.

(Incorporated on 27-6-1960 under the Companies Act, 1956)

On allotment : Rs. 25.00 per share
Balance : Rs. 50.00 per share in two equal calls with an interval of not less than 3 months between calls to be made subsequently but not earlier than 3 months after allotment.

Rs. 100.00 per share

Failure to pay allotment money or any call when due will render the shares liable to forfeiture.

THE ENTIRE ISSUE NOW OFFERED TO THE PUBLIC IS UNDERWRITTEN.

DIRECTORS

1. **Sir Dhirendra Nath Mitra**, Industrialist. 7, Ballygunge Circular Road, Calcutta. Reserve Bank of India (Director, Central Board and Chairman, Local Board, Eastern Area); Life Insurance Corporation of India (Member); Director of: Hindustan Wires Ltd. (Chairman); The Oriental Fire & General Insurance Co., Ltd. (Vice-President); Mahindra & Mahindra Ltd.; Philips Carbon Black Ltd.; Angelo Brothers Ltd.; Hindustan Motors Ltd.

2. **Sri M. A. Chidambaram**, Industrialist. "Adyar House," Madras-25. Director of: State Bank of India (Member, Local Board); The Indian Aluminium Co., Ltd.; Automobile Products of India Ltd.; Southern Industrial Corporation Ltd. (Chairman).

3. **Sri S. Narayanaswamy**, Stockbroker. "Seshadri," 6, Chittaranjan Road, Teynampet, Madras-18. Director of: The Aluminium Industries Ltd. (Chairman); Seshasayee Industries Ltd.; Mettur Chemical & Industrial Corporation Ltd.; Seshasayee Paper & Boards Ltd.

4. **Sri V. Rangachari**, Stockbroker. Mercantile Bank Buildings, Madras-1. Director of: Swinton Estates Co., Ltd.; Teekoy Rubbers (India) Ltd.; Radio & Electricals Ltd., etc.

5. **Sri G. R. Dhawan**, Merchant. 29, Jessore Road, Dum-Dum, Calcutta-28. Director of: Sudsons (Manufacturing) Private Ltd. (Managing Director); Dipak Corporation Private Ltd.; Investors Syndicate Private Ltd.

6. **Sri K. C. Sood**, Industrialist. 3, Esplanade East, Calcutta-1. Director of: The Aluminium Industries Ltd.; Seshasayee Paper & Boards Ltd.; Madras Rubber Factory Ltd.; Sudsons (Manufacturing) Private Ltd.

MANAGING AGENTS

It is proposed that **Messrs. Dipak Corporation Private Ltd.**, shall be appointed the Managing Agents of the Company. The Central Government have already accorded approval by their letter No. 9(790)-CIII/60 dated 16th March, 1961, for such appointment. Their Registered Office is at 29, Jessore Road, Dum-Dum, Calcutta.

REGISTERED OFFICE

"KUBERA BUILDINGS," 21, SUNKURAMA CHETTY STREET, MADRAS-1.

BANKERS

1. **STATE BANK OF INDIA, Madras.**
2. **THE PUNJAB NATIONAL BANK LTD., Madras.**
3. **THE UNITED COMMERCIAL BANK LTD., Madras.**
4. **THE INDIAN OVERSEAS BANK LTD., Madras.**

UNDERWRITERS

The following institutions and firms have agreed to underwrite the issue :

Underwriters	Equity shares	Preference shares
	Rs.	Rs.
1. Madras Industrial Investment Corporation Ltd., Madras ..	10,00,000	5,00,000
2. Life Insurance Corporation of India, Bombay ..	5,00,000	5,00,000
3. Concord of India Insurance Co., Ltd., Calcutta	5,00,000	..
4. Messrs. Maconochie & Co., Madras	1,00,000	..
5. Messrs. Chitra & Co., Madras..	1,00,000	..
6. Messrs. G. M. Pyne, Calcutta..	1,00,000	..
7. Messrs. Batlivala & Karani, Bombay	1,00,000	..
8. Messrs. P. R. Subramanyam, Bombay	1,00,000	..

In the opinion of the Directors the resources of the Underwriters are sufficient to discharge their obligations.

BROKERS TO THE ISSUE

MADRAS.

1. **Messrs. Maconochie & Co.**, Mercantile Bank Buildings, Post Box No. 291, Madras-1.
2. **Messrs. Chitra & Co.**, 322-323, Linghi Chetty Street, Bombay Mutual Building Annexe, Post Box No. 1557, Madras-1.

2. **Sri B. M. BAGARIA**, 6, Old Post Office Street, Calcutta-1.

UNDERWRITING COMMISSION AND BROKERAGE

The Underwriters are entitled to an underwriting commission of 2½ per cent on the Capital underwritten by them.

Brokerage at the rate of ten Naye Paise per Equity share and Re. 1 per Preference share will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised Broker including the Underwriters and Brokers to the issue.

OBJECTS

To start and work an up-to-date commercial Forge Shop and Drop Stamping Works near the city of Madras for mass production of commercial, steel and non-ferrous, Forgings and Stampings for supply to automobile and internal combustion engine industry, railways, motor cycle and cycle industry, defence and aircraft industry, electrical industry and all other allied industries and carry out the business of iron and steel founders, mechanical engineers, wagon and coach builders, tool and die makers, etc.

PROSPECTS

The Steel Forging industry is one of the basic industries which supplies the raw materials essential to a number of industries, viz., Automobile, Internal Combustion Engine, Defence and Aircraft, Motor Cycle and Cycle, Railways and Rail Roads, Tractors and Heavy Earth Moving Equipment, Agricultural Machinery, Electrical and General Engineering Industries, etc. The requirements of the automobile and allied industry alone are expected to be in the neighbourhood of 1,00,000 tons per annum at the end of the Third Five Year Plan. The majority of the manufacturers of engineering products, the automobile industry and others, are importing the bulk of their requirements of steel Forgings and Stampings. After a careful market research, Madras has been chosen for locating the present Factory and this has received the approval of the Government of India. Madras has also the advantage of availability of skilled labour. The proposed unit at Madras will be the first Public Limited Company to be established in the country, for mass production of commercial steel Forgings and Drop Stampings, similar to the units established in Europe and other industrially advanced countries.

FOREIGN EXCHANGE LOAN

The Industrial Credit and Investment Corporation of India Ltd., Bombay, have agreed in principle, subject to the consent of the International Bank of Reconstruction and Development, to grant to the Company a loan in Foreign Exchange to the extent of U.S. $570,000 (equivalent to Rs. 27 lakhs approximately) secured by a first mortgage of the Company's assets and repayable in 15 half-yearly instalments starting from November 1963 and ending in November 1970, which will bear interest at 7½ per cent per annum. So long as the loan or any part thereof is outstanding, The Industrial Credit and Investment Corporation of India Ltd., shall be entitled to appoint a Director on the Board of the Company, who shall not be liable to retire by rotation nor shall be required to hold qualification shares.

TECHNICAL COLLABORATION AGREEMENT

The Company with the approval of the Government of India proposes to enter into a Consultants and Technical Collaboration Agreement with Messrs. B. & S. Massey Ltd., Manchester, England, for a period of three years covering the design, erection and start-up of the plant and also for providing the technical know-how with regard to the design and manufacture of Drop Stamping Dies of various types and produce in their own Works at Manchester approximately 7,000 tons of Drop Stampings per annum.

Messrs. B. & S. Massey have a wide experience in the design and manufacture of Drop Stamping Dies of various types and produce in their own Works at Manchester approximately 7,000 tons of Drop Stampings per annum.

SITE, RAW MATERIALS, POWER AND WATER SUPPLY

Application has been made to the Government of Madras for acquiring the necessary land in Padi and Mugappar villages about 8 miles from Madras, on the Madras-Avadi Road. Acquisition proceedings are in progress.

Plain Carbon steel and medium carbon steel billets and bars will be the principal raw materials required in the next few years. Adequate supply of these is available from the Indian Steel units. Alloy steel will also be required and will have to be imported until such time as the proposed Tool and Alloy Steel plants go into production in the Third Five Year Plan.

The sanction for supply of 150 KVA electric power has already been obtained from the Madras Electricity System who have also promised to give 500 KVA by the end of 1961.

Adequate water is available at the site.

PRODUCTION AND PROFITABILITY

Production is expected to commence in 1962. The Directors have indications that the consumer demand will absorb the entire output of the proposed plant.

Adequate provision has been made in the plant layout to take care of future expansion. The estimates of profit margins are such as to ensure a reasonable return on the equity capital.

PRELIMINARY EXPENSES AND EXPENSES OF ISSUE

The Preliminary expenses incurred by the Promoters in respect of the Registration of the Company, procurement of Industrial licence, etc., etc., have amounted to Rs. 33,230 which amount has been reimbursed by the Company.

The estimated amount of expenses of this Issue including underwriting commission and brokerage is Rs. 2,00,000 and will be borne by the Company.

RIGHT OF PREFERENCE SHARES

The Preference Shares will confer upon the holders thereof the right to a fixed cumulative preferential dividend of 9·286 per cent (free of Company's tax, but subject to deduction of tax at source at the prescribed rates) on the capital for the time being paid up. The said shares are redeemable at par at Company's option at any time after 10 years but not later than 15-6-1972. Any further issue of preference shares ranking *pari passu* with this issue shall be made only with the consent of the holders of not less than three-fourths of the value of Preference Shares outstanding.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The minimum subscription in respect of the public issue on which the Directors will proceed to allot is Rs. 25,00,000. Subscription of the amount is assured as the entire public issue has been underwritten. The total capital required to reach a capacity (on single shift basis) of 3,000 tons per annum of Steel Forgings and Drop Stampings is estimated to be as follows :

	Rs.
(a) Lands, Buildings and other facilities ..	6,80,000
(b) Plant and machinery including cost of erection	47,30,000
(c) Pre-operation expenses from the date of its incorporation until commencement of production	6,90,000
(d) Underwriting Commission, brokerage and other expenses of this issue ..	2,00,000
(e) Working Capital	25,00,000
Total ..	88,00,000

SOURCE OF FUNDS

	Rs.
(1) Equity shares	40,00,000
(2) Preference shares	10,00,000
(3) Loan from Industrial Credit and Investment Corporation of India Ltd.	27,00,000

It is intended that the balance of Rs. 11,00,000 and any increase in the actual cost over estimated cost, including provision for working capital will be raised by loans from the Company's Bankers or other sources.

APPLICATION FOR SHARES

Applications for equity shares must be for 50 and for preference shares for 5 or multiples thereof. Applications together with cheques/drafts must be delivered before the closing of the subscription list to the Registered Office of the Company, or the Office of the underwriters or brokers to the issue or to any of the bankers at their offices mentioned below : **Ahmedabad, Bangalore, Bombay, Calcutta, Cochin, Hyderabad, Kanpur, Mangalore, Nagpur, New Delhi, Surat, Trichy.**

INDIAN INSURANCE COMPANIES' ASSOCIATION

SPEECH OF CHAIRMAN, MR. T. M. TELANG

NON-DIVERSION AGREEMENT WELCOMED

A COMPREHENSIVE survey of the trends in, and problems of, general insurance in the country was made by Mr. T. M. Telang, Chairman of the Indian Insurance Companies' Association, in his speech at the Thirty-third Annual General Meeting of the Association held at Bombay on Monday, 14th August 1961. Mr. Telang welcomed the agreement on Non-Diversion and Mutual Assistance entered into by 17 leading general insurance companies in the country. If implemented in the right spirit, the agreement would, according to him, go far in bringing down the cost of management of the companies, enable them to consolidate their position and pave the way for the development of general insurance on sound and healthy lines.

The following are extracts from Mr. Telang's speech which, in his unavoidable absence, was read out by Mr. P. U. Patel:

"The progressive implementation of the various schemes under the third Plan and the enlargement and diversification of the industrial structure will give ample opportunities to insurance companies to extend the scope of their service, providing new kinds of insurance covers to meet the many and varied demands of rapid industrialisation. The emphasis will have to be on uncovering new insurance prospects rather than on exploiting fields that are already uncomfortably crowded. With the increasing tempo of economic activity, there will be, for instance, a growing demand, for machinery erection and breakdown insurance, contractors guarantee or performance bonds and a number of other miscellaneous types of insurances which are sold, as a matter of course, in other countries.

"To tap successfully the vast existing field which remains unexplored, the industry would require the services of an efficient field organisation who could create insurance-mindedness among the people and suggest appropriate covers to the public to suit specific needs. Another matter which deserves consideration in this context is proper publicity to spread the gospel of general insurance in the country. It could take the form of a well-planned and intelligent propaganda, designed to educate the public in the value and importance of general insurance, as the shock-absorber of industry and trade, business and profession, telling the people what facilities are available for protecting themselves against perils beyond their control.

"It would be necessary for certain conditions to be satisfied before the vast potentialities for business could be realised. A well-organised and integrated market, composed of financially sound, viable and healthy units, operating in a proper atmosphere, where every unit has an opportunity to expand, is a desideratum for this purpose. This calls for a radical rationalisation of the working of the industry in its various aspects and suitable changes in the present set up of controls and regulations governing the industry.

"I have referred to the steady growth of the share of Indian insurers as a whole in the business in India during the period 1953 to 1959. Taking the companies groupwise, however, one cannot fail to notice the wide disparity in the results achieved by the large units as compared to the small units. This is not a healthy trend in the market. The drastic reduction of the share allowed to companies in the private sector, in the business of the Indian Insurance Companies' Association Pool, as a result of the lion's share given to the Government-controlled companies, has perhaps added to the difficulties, especially of smaller companies.

Formula for Expenses of Management

"Views would naturally differ as to the factors that might be considered responsible for the present state of affairs. The existing provision linking the quantum of expenses of management permissible to companies to the gross premium income written direct in India, under Section 40C of the Insurance Act read with Rule 17E, readily comes to mind in this connection. By restricting the quantum to direct business, the provision has lead to a scramble for direct business resulting in indiscriminate underwriting by companies and heavy acquisition costs. The limits for overall expenses were prescribed in the year 1950. An examination of the cost under various heads would show that the overall expenses of companies have since gone up by as much as 20 to 30 per cent. The limits provided are not consistent with the cost of living and general price level currently obtaining. I hope the newly-constituted Executive Committee will take up the matter forthwith and suggest a more realistic basis, fair and equitable to the various sectors of the trade.

Wanted—A More Practical Approach

"We realise that it is primarily the responsibility of the trade itself to take necessary steps to place Indian insurance business on a sound footing. A sympathetic understanding on the part of the authorities and their support and guidance can however be of valuable assistance in the solution of the problem facing the trade. There have been occasions when the approach of the trade has been at variance from that of the Department of Insurance. The Department implements scrupulously the law governing the insurance trade, but we do some times feel that a more practical approach on the part of the Department in respect of our difficulties may lead to their solutions without in any manner compromising the spirit of the statutory regulations.

"I welcome, in this connection, the Scheme of Non-Diversion and Mutual Assistance recently sponsored by some leading insurance companies. Conditions in the trade have become difficult lately and the move could not have been more timely. A large number of companies, as you may know, have already become parties to the Scheme and their number is likely to grow. The idea is to create a sense of security among the members joining the Scheme. The Non-Diversion Scheme assures the members that they need entertain no fears about their business being taken away by other members. It also provides for the creation of a pool of business, to which all members are to contribute in accordance with an agreed formula, to assist those companies which do not show adequate progress during any year. Free from the fear of losing the business already on their books, companies should be able to divert their attention more profitably to the large insurance potential which remains untapped at present. The Scheme, coming into operation from 1st July 1961, offers a practical solution to the serious problems afflicting the industry for the past many years. If implemented in a true spirit, it should go far to bring down the cost of management and enable companies to consolidate their position. Given goodwill, co-operation and mutual trust, I feel confident, the Scheme would pave the way for the rapid development of general insurance companies on sound and healthy lines.

Compulsory Reinsurance

"I would now pass on to another matter of far-reaching consequence which greatly exercised the minds of general insurers in the country during recent months. The Insurance (Amendment) Bill, 1961 was passed by the Indian Parliament and the Amendment Act came into force from 1st April 1961. The new legislation requires all insurers operating in India to make fixed obligatory cession, upto a maximum of 30 per cent, with approved Indian reinsurers, namely, the India Reinsurance Corporation Ltd. and the Indian Guarantee and General Insurance Co., Ltd. The hundred per cent increase overnight in the volume of premium to be ceded, on account of the Government-controlled unit coming into the picture, is likely to affect the trading profits of insurance companies, notwithstanding the provision for retrocession of premium by the reinsurers. It is also felt that undue emphasis on local reinsurance arrangements might militate against the international character of general insurance business and handicap companies developing balanced portfolios based on a geographic spread of risks. Beyond this, I do not propose to say anything now that the industry has been confronted with a *fait accompli*, and I only hope that the professed objective of arresting the foreign exchange drain will be achieved and the two professional reinsurers will succeed in bringing to the Indian market, an increasing volume of profitable business from abroad, for the common benefit of all concerned."

BENGAL CHEMICAL AND PHARMACEUTICAL WORKS LTD.

SPEECH OF CHAIRMAN, DR. B. N. GHOSE

SHORTAGE OF RAW MATERIALS HINDERS PRODUCTIVE OPERATIONS

THE Sixty-first Annual General Meeting of the Bengal Chemical and Pharmaceutical Works Ltd. was held at Calcutta on Thursday, 10th August 1961. Addressing the meeting, Dr. B. N. Ghose, Chairman of the Company, described how the productive operations of the Company were being hampered to a considerable extent by shortage of some raw materials. Dr. Ghose stated that it was "a matter of great concern" that the Company had failed over a long period to secure even modest supplies of crude coal tar from the steel projects and Durgapur coke oven. He also alluded to the acute shortage of wagons for moving coal, as well as to the unsuccessful efforts of the Company to get licences for the import of a few replacement items of machinery which, he said, was impeding production in some plants, including manufacture of surgical dressings and printing, rotary and offset inks.

The following is the full text of Dr. Ghose's speech at the meeting:

"GENTLEMEN,

"It gives me great pleasure to extend a hearty welcome to you all to this Sixty-first Annual General meeting of your Company. The Directors' report and the audited accounts of the Company for the year ended 31st March 1961 have been with you for some time and, with your permission, I take them as read.

"The Company's working results and appropriation of profits of the year have been adequately explained in the Directors' report. I may assure you that the results of the year under review are quite encouraging, and your Directors hope to report better results next year, provided other conditions remain as before. The increase in sales by nearly Rs. 12 lakhs over the previous year's figure could not bring in proportionate profits as compared to last year for various reasons. The rate of dividend on all classes of ordinary shares has been maintained, but the dividends on tax-free cumulative preference shares have been grossed up in accordance with the provisions of Preference Shares (Regulation of Dividends) Act, 1960 which have resulted in the payment of dividends on income-tax-free preference shares at rates less than those stipulated in the Company's Articles of Association. Your Directors are, however, considering to give the preference shareholders the additional dividends to make up the deficiency for deduction of tax at source as aforesaid after all necessary formalities in this connection are duly complied with and after getting the approval of the shareholders in an extraordinary general meeting at a later date.

Memorial for P. C. Ray

"Gentlemen, as you all know, this year is the centennial birth anniversary of Acharya P. C. Ray, the founder of your Company. You may well remember that your considered opinion was invited last year regarding the amount to be donated for the purpose to celebrate the occasion in a befitting manner. To perpetuate the memory of our revered Acharya Prafulla Chandra Ray, it has been decided at the initiative of Indian Chemical Manufacturers Association, of which Acharya P. C. Ray was the Founder President, to establish Sir P. C. Ray Memorial Research-cum-Testing Laboratory in Calcutta at a capital cost of Rs. 20 lakhs. Your Directors propose to contribute a sum of Rs. 50,000 to this institution. I hope you would gladly accord your sanction to it. Besides this, your Board of Directors has also recommended payment of half month's basic salary as bonus to all the permanent employees of the Company who have served the Company for at least one year and are still on the rolls of this Company. This bonus is being given as a gesture of goodwill on this happy occasion. Of course, this is in addition to any other bonus that the Directors of your Company may be pleased to sanction after the Annual General Meeting.

"The management has all along been keen not only to modernise the plant and machinery but also to expand the different productive units of your Company. But the import restrictions and the licensing policy of the Government is standing in the way.

"Our productive operations specially at Panihati were hampered to a considerable extent due to shortage of some raw materials. In the early part of the year under review, we had to face a crisis in the production of alum because of the failure on the part of the Railways to allot wagons for moving bauxite from the Ranchi area. Strong representations were made by us to the Railway administration and the Deputy Minister for Railways, as a result of which, we are glad to say, the transport problem was eased for the time being. It is a matter of great concern to us that we have failed over a long period to secure even modest supplies of crude coal tar from the steel projects and Durgapur coke oven authorities and, in consequence, our tar distillation unit is running far short of its installed capacity.

"The acute shortage of wagons for moving coal in our area is known to all and so far the problem has baffled us. The major portion of our requirements of coal has to be transported from the coal fields by lorries at a premium of about 20 per cent which amounts to an unwarranted levy on our industries. The present state of affairs is a sad reflection on the efficiency of the Railways and the Ministry of Steel, Fuels and Mines.

Import Licences

"In the matter of import licences, the authorities concerned are not in general unhelpful so far as the grant of licences for the import of raw materials for manufacturing purposes is concerned. But we have not yet succeeded in getting licences for the import of some replacement items of machinery which is impeding production in some plants, including the plant for the manufacture of surgical dressings and the one for the manufacture of printing, rotary and offset inks. Despite a good export potentiality and consequential foreign exchange earning thereby, the manufacture of surgical cotton has been considerably suffering in the competitive market for the non-availability of import licence for certain items for replacement and other component parts. The licensing authorities are further unwilling to grant us licences in sufficient quantities for the import of carbon black, an essential ingredient for the manufacture of printing inks.

"We can at this point strike a more cheerful note regarding the future of some of our productive units. After long and sustained efforts, we have been able to secure import licences covering the requirements of plants and equipment to be obtained from abroad in connection with our projects for doubling the existing capacity of our alum plant and the installation of an additional sulphuric acid plant producing 50 tons per day. Certain minor formalities still remain to be completed and we hope that both the projects will be successfully launched within a reasonable period of time. Incidentally, we may mention that import licences for alum and sulphuric acid plants were received after about a year of filing applications for the same.

Excise Duties

"The year under review is marked by the imposition of new Central excise duties on some categories of goods which came into effect from 1st March 1961, that is (in the last month of the year) and which embrace within their sweep a very wide range of our products creating difficult problems for us in various directions. New excise duties which have affected us most in the year are those on patent and proprietory medicines not containing alcohol and on cosmetics and toilet preparations levied at the rates of 10 per cent and 25 per cent *ad valorem* respectively. Excise duties have been imposed, among other items, on glass containers, cellophane paper, etc. The incidence of excise duty on our products amounts, in fact, to much more than the *ad valorem* rates prescribed, for patent and proprietory medicines, etc., because in calculating the assessable value, the excise authorities do not allow any deductions on account of deferred discounts, rebates, etc., to which wholesale buyers of our products are entitled at the end of year nor for freight and other charges when these are included in our net selling prices. We have to pay excise duty once at the time of buying our requirements of glass containers and packing materials, such as wrapping paper, straw boards, corrugated boards and duplex boards and again on the value of these articles which forms a part in the selling prices of our finished products.

"As a result of the new excise levies, we had to add the new excise duties to the selling prices of our numerous products and we have encountered a certain degree of consumer resistance which makes us rather apprehensive about the future. It is a sore point with us that samples supplied free of charge to private medical practitioners for clinical trial have not been exempted from the excise levy and thus we have to pay a considerable amount of excise duty which cannot be passed on to consumers. In addition to excise duties, there has been substantial enhancement of customs duty on a number of items for which we have to depend wholly or partially on overseas supplies. For instance, customs duty has been increased on natural and synthetic oils from 50 per cent to 75 per cent *ad valorem*, on sulphur from 5 per cent to 10 per cent and on power-operated machines and parts thereof from 10 per cent to 15 per cent.

Overseas Business

"There has been a setback in our business in Singapore in the year (1960-61) as the Chinese products, specially absorbent cotton wool, are being sold there at competitive rates. Our exports to Kuala Lumpur have, however, improved to a certain extent. It is expected that the business in this market will be further developed in future.

"Business in Burma is not upto our expectation. The Burma Government have set up 'Burma Pharmaceutical Industry Ltd.' which have been manufacturing pharmaceutical drugs and medicines conforming to recognised standards. The Union Government of Burma issue permits for a selected number of items only.

"Since 1959, we have been experiencing difficulties in shipping our products to Colombo and there has not been any improvement in this regard as yet. Recently, a consignment containing 36 cases of medicines was lying packed in our godown for about three months. After protracted correspondence with the authorities concerned, it was possible to effect its shipment with the help of the State Trading Corporation. As a result of irregular shipments, our business in this area could not be improved.

"Some amount of business was made in East Pakistan, but, owing to strict import policy, business could not be increased. The position has not improved as yet.

Demand for Fine Chemicals

"With planned Industrial Development in our country, demand for fine chemicals is growing rapidly. The rigid control over the quality of fine chemicals manufactured by us helps consumers to manufacture better products and maintain their standard. This has resulted in an increased demand for our fine chemicals.

"To reorient our production programme, equipment specially made to order worth several lakhs of rupees has been installed in the Chemical Department Maniktala Factory, to improve the existing ones. This fact was reported to you last year. A separate unit has now been installed to produce reagent grade chemicals of the highest degree of purity. Our Analytical Laboratory has been provided with requisite apparatus to have strict control over the quality of our products. We have been so long supplying our fine chemicals, reagent quality chemicals and pharmaceutical chemicals to colleges, public institutions, Government laboratories, etc., but, very soon, we will be in a position to meet the entire demands of the country.

Alum Plant at Panihati Factory

"As I have mentioned before, expansion work at Panihati for alum plant could not progress as per schedule, due to delay in getting the import licence for foreign equipment from Government of India. It may be noted here that the percentage of foreign equipment required for the proposed alum plant and the installation of 50 TPD sulphuric acid plant is only 25 of the total cost involved. The rest will be fabricated locally. Foundations for plants and equipment are complete. Arrangement for placing indents for foreign machinery are being made and all possible steps are being taken to complete the scheme as early as possible. On completion of the scheme, capacity of the plant will increase from 30 to 60 tons a day.

"Apart from sulphuric acid, the other raw material for manufacture of alum is bauxite, annual consumption of which will increase to 9,000 tons. Substantial progress has been made during second Plan period in establishing different hydro-electric projects and more power stations will be coming into existence in the third Plan. This has increased the value of bauxite as a potential reserve for aluminium industry and it has already attracted the interest of other industrialists. It may be necessary on our part to try to secure prospecting licence for bauxite deposits from the State Governments in case good workable mines are available.

Road Tar and Non-availability of Crude Tar

"Our road tar industry is one of the oldest in the country. Its future is very uncertain. With more steel plants in the public and private sectors going into production, it was expected that enough crude tar would be available, but, instead, crude coal tar is being burnt as a fuel as it comes from coke ovens. In some factories, of course, it is burnt after recovery of naphthalene, etc. All our efforts to procure adequate quantity of tar have so far proved fruitless. The Committee on By-products of Coal Carbonisation, before whom a representation was made last year by I.C.M.A., has not yet submitted any report for safeguarding the existing industry. It is our earnest desire that the Government will give its due consideration and allow this industry in the private sector to exist and thrive.

Cotton

"Demand for surgical cotton has increased both for internal consumption as well as for export. But production has become almost static as import control has almost stopped granting licences for maintenance as well as for replacement of old machinery so vital for manufacturing quality products. This item has also got export potentialities and Government's attention is particularly drawn to the fact of changing their import policy and to grant import licences at least equivalent to the value of the goods which have been exported. Incidentally, the policy of the Government for exporting raw cotton creates an artificial seller's market and increases the price of the raw cotton in the internal market. Already the industry is facing the competition from the other countries and, unless a revision is made, the export trade of surgical cotton may have a setback.

Coal

"Panihati Branch requires a large quantity of coal, but quota has been fixed at only 36 wagons per month. Two years back, the major portion of this coal was of "B" grade quality. Now the entire quantity has been lowered to Grade No. II which has more ash. Moreover, chemical industry has been placed in the eighth place as regards supply of wagon for coal. We had to keep our factory going depending on transport of coal by road. More consideration of the authorities concerned should be shown to keep this important basic industry going.

Electricity

"Everybody is aware of restricted supply of electrical energy for the last few months. Industry had to make a sacrifice to avert national calamity. Charges of electricity due to increased price of coal has been enhanced.

"Movement of finished goods from Panihati Factory has become difficult, due to short supply of wagons. Almost in all cases, priority sanction is required to get allotment of wagons. Development of different industries in Panihati area has exceeded the capacity of the Sodepore railway station to accommodate the allotted number of wagons. As situation stands, although we are one of the oldest firms carrying on business at Sodepore station, we have recently been forced to extend our activities to Titaghur station at a greater expense.

Cement

"During the year under review, position of availability of cement has again become scarce. Even for maintenance job, cement from normal market is not available and time required for procuring a permit is rather indefinite, causing inordinate delay in our day-to-day work.

Profit and Loss Account

"I now pass on to review the annual accounts. The profit for the year after providing for depreciation, bad debts and all other charges is Rs. 18,06,053.31 to which has been added Rs. 30,744.45 brought forward from previous year's account. The distribution of profits and usual transfers to various reserves leave Rs. 1,21,106.24 which has been carried forward in the balance-sheet as undistributed profits. Your Directors have recommended a dividend of 10 per cent on all classes of ordinary shares subject to deduction of tax at 30 per cent, 9.75 per cent on 7½ per cent cumulative preference shares and 5.85 per cent on 4½ per cent cumulative II preference shares subject to deduction of tax in accordance with the provisions of the Preference Shares (Regulation of Dividend) Act, 1960. I hope this will receive your approval.

"Gentlemen, last year, I told you that a scheme to manufacture some important basic chemicals by utilising the by-products of Durgapur coke oven plants was under active consideration of the State Government. I have now pleasure in informing you that Industrial licence for implementing the project has already been obtained by the Government of W. Bengal. You will be glad to learn that Sri N. Adhikari representing your Company had recently been to Paris to negotiate the deal with the French collaborators along with Dr. B. C. Roy, the Chief Minister of W. Bengal, and Sri A. B. Ganguli, I.C.S., Administrator, Durgapur Project.

"In this connection, I may add that implementation of the proposed scheme at Durgapur having been delayed for reasons beyond our control, application for consent of Controller of Capital Issues, Government of India, to increase the share capital of the Company in terms of the special resolutions passed at the last extraordinary general meeting has not been possible. Let me assure you that attempts will duly be made in this direction as soon as our proposed scheme at Durgapur crystalises to a well-defined shape.

"The year under review has shown a better turnover in respect of the Company's branches at Bombay and Kanpur. The sales figures of both these branches have increased to a considerable extent. The factory at Kanpur has been modernised and steps are being taken to undertake there large-scale manufacture of various pharmaceutical products.

Office Building

"The extension of City office building of the Company by addition of four more floors on the existing structure which was reported to you last year is progressing. As you all know, scarcity in the supply of cement has been recently affecting the constructional work adversely. Anyway, we hope the building will be complete by the end of the current financial year.

"Lastly, I feel it my duty to express my grateful thanks to my colleagues for their ungrudging help and mature guidance. I must also recognise the unstinted co-operation that I received from all members of the staff and workers, and above all our stockists and distributors, patrons and customers without which the excellent results would not have been possible."

BOMBAY SUBURBAN ELECTRIC SUPPLY LTD.

SPEECH OF CHAIRMAN, MR. A. N. HAKSAR

RELAXATION OF FINANCIAL REGULATIONS NEEDED

FUTURE development of electric supply involves considerable investment, but investment in the electric supply industry is being impeded by the financial regulations governing it. This view was expressed by Mr. A. N. Haksar, Chairman of the Bombay Suburban Electric Supply Ltd., at the Annual General Meeting of the Company held at Bombay on Wednesday, 9th August 1961. Mr. Haksar stressed that the return at present prescribed by the Electricity (Supply) Act, namely, 2 per cent over the Reserve Bank rate of 4 per cent, which again was subject to deduction of tax, was definitely inadequate for financing expansion. He, therefore, urged the need for suitably amending the Electricity (Supply) Act at least by April 1962, in order to give the necessary relief to the industry.

The following is the full text of Mr. Haksar's speech:

"The Report and Accounts already before you reflect a satisfactory record of operations during the year ended 31st March 1961. Increase in sales energy has kept up the trend of the past average of 20 per cent. The pace of increase in the coming year should, if anything, be steeper; this is, of course, assuming that bulk power in sufficient quantity will be available to meet the needs in the Company's area of supply.

Development Plan

"From a preliminary study of the power requirements in the Company's system, it is estimated that the demand by 1976 would be in the region of 200 MW. In this context, studies are, therefore, now under way to formulate a 15-year development plan. This involves appraisal, both technical and financial, of the future design of the whole system. Substantial progress in the study of the problem is expected to be made during the current year.

"All these future developments involve considerable investment; but investment in the Electric Supply Industry is being impeded by the financial regulations governing it. The fact that the return at present prescribed by the Electricity (Supply) Act, namely, two per cent over the Reserve Bank rate of four per cent, which again is subject to deduction of tax, is definitely inadequate, has been obvious for some time, and persistent efforts are being made to obtain a measure of relief. This involves important amendments to the Electricity (Supply) Act.

Electric (Supply) Act

"Indications at present are that the proposals to amend the Electricity (Supply) Act may be brought into effect from 1st April 1962, and I earnestly hope that this expectation will materialise. In the meantime, in some of the States, including Maharashtra, the State Governments have permitted undertakings, as a special appropriation, the tax saving represented by the difference between the pre-1959 tax rate of 51.5 per cent and the new rate of 45 per cent based on the Finance Act of 1959. This interim relief, is, I think, an earnest of the authorities' acceptance of the Industry's case for a fair deal.

Rehabilitation

"I would now like to make some comments on the extent of relief required to rehabilitate the industry, and enable it to raise capital for development. Two primary factors have tended to depress equity values in the Electric Supply Industry. These, in broad terms are—

"1. The change in the tax pattern introduced by the Finance Act, 1959, whereby the grossing up of dividends in the hands of shareholders was abolished and, in addition, the law provided for deduction of tax at source at the prescribed rate (currently 30 per cent.) While this is a common feature affecting industry at large, the Electric Supply Industry is placed in a position of not being able to take advantage of the tax relief offered by the Finance Act in other directions, in that whereas in other industries this relief has accrued to the benefit of the investor, in the case of the Electric Supply Industry this has not been so. This certainly is not in conformity with the scheme of the Electricity (Supply) Act. One would have thought that, with the Electricity (Supply) Act providing for all taxes on income and profits being charged up to the consumer's account, taxation in all forms on the Electric Supply Industry would have automatically become the consumer's liability. As things have shaped, this position has not been achieved. The priority from the industry's point of view, therefore, is the need for such changes in the Electricity (Supply) Act as would make the return free of all tax liability, be it to the undertaking or to the investor.

"2. The second issue has directly arisen out of the official Bank Rate (to which is linked the return permitted to the investor in the industry) lagging behind the realistic interest rates. In a capital intensive industry like Electric Supply, greater reliance has to be placed on long-term finance as the industry's requirements for development finance are, by and large, insatiable. Consequently, the return fixed from time to time should be at such level as would, firstly, arrest disinvestment and, secondly, continue to attract capital for expansion. The recent change in the Reserve Bank's lending rate to Schedule Banks as an instrument of the credit squeeze involves three-tier interest rates: first, Rs. 50 lakhs at 4 per cent, follow on Rs. 50 lakhs at 5 per cent, and the balance at 6 per cent, producing a resulting average lending rate of about 5 per cent. This, by itself, has put the official Bank Rate out of focus in relation to money market conditions. Another aspect which has significant relevance is that inflation has had its effect in diluting the limited return permitted to the investor in the industry. In the light of these considerations it is only proper that the permissible return should be upgraded suitably.

Power Supply

"I have, in my opening remarks, referred to your Company's expansion being dependent on the quantum of bulk power which would be available in the years to come. For the present, the power supply position is far from easy, and releases of power to consumers is subject to control under the Bombay Electricity (Special Powers) Act. A measure of decontrol is, however, in existence in that the licensees in the area have been empowered to connect up small demands up to 20 kW. for industries and domestic connections are permitted freely up to 5 kW. These decontrol measures provide a degree of normal growth. To what extent relief will be available after the commissioning of the first set of the Koyna Hydro-Electric Project early next year is too early to say. At one stage it was thought that the bulk of the power from the Koyna Project would be available for use in Bombay-Poona area, but currently there are indications that a sizable portion of the Koyna power will be reserved for use in Western Maharashtra. This has led to the possibility of the Tata Hydro Companies being permitted to extend their Trombay Thermal Station and, in addition, the Maharashtra Electricity Board considering installation of a new thermal station. This trend emphasises that the power needs of the Bombay-Poona area on which base area much perforce depend industrial development elsewhere in the State, will be met. Your Company's plans for expansion should, therefore, proceed on the basis that it, along with other licensees in the region, will be able to obtain sufficient bulk power releases.

Finance

"From this premise will arise the question: How best the Company can finance its future development? For the present, development has been sustained by Bank finance and before the current financial year is out, the need for raising further finance will arise in all seriousness. By that time, the proposals to modify the Electricity (Supply) Act will, we hope, have reached finality and, I hope, will produce a measure of incentive to the investor in the industry. Your Board will then be in a better position to consider this matter further.

"The large-scale development in the Company's power system, involving massive investment in the coming years, will pose the problem as to whether the rates for supply now in force will produce a sufficiency of earnings to service adequately the capital employed, and meet in addition the enlarged operational expenses inherent in development. While there is no doubt that the enlarged scope of operations will tend to spread overhead costs, one must reckon with the inflationary factor. One way to hold the price line in electric supply is to diversify the sale so as to obtain a higher-load factor, that is secure the beneficial utilisation of the power facilities more fully. There are, of course, limitations in this direction, as consumer choice is not a thing which can be rigidly endorsed. A strict watch on expenditure is yet another remedy to control operational costs, but here again there are limits beyond which a public utility cannot go. For example, in a basic service like electric supply, continuity of supply overshadows all other considerations, and no undertaking can risk diluting its service facilities for economic considerations which are marginal. The need to supply power at the lowest economic cost must, therefore, be circumscribed by the greater need to maintain reliability and continuity of supply. This assumes greater importance in your Company's area of supply which has to contend with rigorous monsoon weather and unfavourable atmospheric conditions. A higher standard of maintenance of the Company's supply system is, therefore, necessary.

Fuel Cost

"In the immediate years ahead, the distributing licensees in the Bombay-Poona area may have to face an increase in the bulk supply rate consequent to the injection of the Koyna power into the system. There is also the likelihood of higher fuel costs applicable to bulk power supply which might tend to curtail net earnings, as the Company's rate for supply do not contain an escalator clause to take care of adjustments in fuel prices. This has been so because, until recently, bulk supply in the area has been from hydro sources, but this situation has been altered by the coming into being of a larger thermal component than existed before. To what extent the first cause may have its impact on your Company's overall earnings is too early to visualise at this stage. The second cause is the more immediate one to be reckoned with, and your management is now considering how best the situation can be met. It is possible that your Company may have to consider introducing a fuel adjustment clause to ensure that the rise or fall in fuel costs applicable to bulk supply will automatically be on account of the consumer.

Appropriation to Reserves

"Dealing with the Accounts, I would like to clarify the Reserve created to augment production facilities, and the appropriations so far made to that Reserve. The first instalment of appropriation to this Reserve was made in the year 1959-60 consequent to the Maharashtra Government permitting the Company, along with other licensees in the State, a special appropriation of 6¼ per cent of the tax saving about which reference has been made earlier. When the accounts for 1959-60 were finalised, it was not certain as to what form the relief available would take. It was then thought that the amount permitted as special appropriation would be available for distribution to shareholders, but as events developed the scope of the sanction was limited to ploughing back the sum into the business without deduction from the Capital Base. It was in this context that the sum of Rs. 1,01,656 was taken into the Dividend Equalisation Reserve in the Accounts for 1959-60 and which amount has since been transferred to a Reserve to augment production facilities in the light of the subsequent Government sanction. This Reserve now stands at Rs. 2,06,130 taking into account the sum of Rs. 1,04,474 appropriated for the year under review, for which the sanction of the State Government is yet to be secured. Although the amount standing in this Reserve is not available for distribution, the benefit which will be derived by the shareholders is not slight, as the assets acquired will remain the property of the Company and the return on the amount ploughed back will also be available for the benefit of the shareholders."

Note: *This does not purport to be the proceedings of the annual general meeting which can be seen by any shareholder on request.*

Don't throw away parts and money...

It sounds like an impossibility, we know, but it is none the less true. Many hard-to-replace parts costing valuable money are literally thrown away because they have been ruined due to faulty lubrication.

Machinery shutdown means loss in production, time and money. Correct lubrication is therefore essential to ensure the protection and efficient operation of costly machinery. Planned lubrication is vital for increased production at lower costs.

The service is yours for the asking—call in your Caltex Lubrication Engineer—arrange for a correct lubrication programme for your plant. Let us help you in conserving parts and money.

Company executives can obtain a free copy of this booklet by writing on their official letterhead to their nearest Caltex office.

RAISING RATE OF PROVIDENT FUND CONTRIBUTION

MEHER COMMITTEE'S REPORT

THE report of the five-man Technical Committee (Chairman: Mr. M. R. Meher, President, Industrial Court, Bombay), which was appointed in May last year to make an assessment of the capacity of four industries, namely, iron and steel, paper, cigarettes and engineering to bear the additional burden involved in the proposed enhancement of the rate of provident fund contribution from the present 6¼ per cent of 'total earnings' of workers to 8⅓ per cent was placed on the table of the Lok Sabha last week. The Committee has recommended that these four industries have the capacity to bear the higher rate. The profit position of all of them, according to the Committee, was favourable during 1958 and 1959.

Even the relatively small units employing less than 250 persons were in sound financial position. The Committee has estimated that the additional burden will not amount to more than 0.2 per cent of the total sales in any of the four industries. It is of the view that none of the units, which made profits in 1959, would be adversely affected by the proposed increase. For purposes of convenience in calculation in decimals, the Committee has suggested that the rate of contribution be increased to 8 per cent, instead of to 8⅓ per cent, and that the enhanced rate should be applicable only to units employing 50 persons and more. Smaller units should be brought within the purview of the higher rate only after ascertaining that they too are in a position to pay the increased rate. There is no justification, in the Committee's opinion, for exempting any unit from the proposed enhanced rate on the ground that it has a gratuity scheme. But it adds that, when the increase is given effect to, workers should bear that in mind while making demands for raising the benefits of the existing gratuity schemes. The existence of production bonus or other incentive schemes should not be recognised, the Committee goes on to say, as an adequate ground for claiming or granting exemptions from the applicability of enhanced rates. Its line of reasoning is that, in as much as these schemes benefit the employers and the employees alike, they cannot be said to affect the financial capacity of the industries.

Employers' Stand

The employers' representative on the Committee, Dr. R. C. Cooper, has, however, disagreed with the views of the majority. In a minute of dissent, Dr. Cooper has argued that, except for the cigarette industry, the other three industries are not in a position to bear the additional burden. Obviously, his views have failed to carry conviction to the majority of members of the Committee.
